L: Lecture Hour T: Tutorial Hour CIA:
P: Practical Hour C: No. of Credits ESE: End Semester Examination
V AC: Value Added Course

Total Credits earned: 23+24+23+24+23+24+21+22=184

against the specified range –[175-185 Credits]

* Credits for **Mandatory Courses (MC)** are not counted for computation of CGPA. The passing minimum for **Mandatory Courses (MC)** is 50 marks out of 100 Marks. There will be two tests, of which one will be class test covering 50% of syllabus for 50 marks and other class test covering next 50% of syllabus for 50 marks.[Total 50+50=100 Marks].

Interested students can opt one self study course in the Seventh semester from open electives which will be reflected in the mark sheets, only if he/she passes in the course.

****--Skill Development**

****--Employability**

****--Entrepreneurship**

PROGRAM OUTCOMES: On successful completion of the programme,

a	Apply the Mathematical knowledge and the basics of Science and Engineering to solve the problems pertaining to Electronics and Instrumentation Engineering.
b	Identify and formulate Electrical and Electronics Engineering problems from research literature and be able to analyze the problem using first principles of Mathematics and Engineering Sciences.
c	Come out with solutions for the complex problems and to design system components or process that fulfill the particular needs taking into account public health and safety and the social, cultural and environmental issues.
d	Draw well-founded conclusions applying the knowledge acquired from research and research methods including design of experiments, analysis and interpretation of data and synthesis of information and to arrive at significant conclusion.
e	Form, select and apply relevant techniques, resources and Engineering and IT tools for Engineering activities like electronic prototyping, modeling and control of systems and also being conscious of the limitations.
f	Understand the role and responsibility of the Professional Electrical and Electronics Engineer and to assess societal, health, safety issues based on the reasoning received from the contextual knowledge.
g	Be aware of the impact of professional Engineering solutions in societal and environmental contexts and exhibit the knowledge and the need for Sustainable Development.
h	Apply the principles of Professional Ethics to adhere to the norms of the engineering practice and to discharge ethical responsibilities.
i	Function actively and efficiently as an individual or a member/leader of different teams and multidisciplinary projects.
j	Communicate efficiently the engineering facts with a wide range of engineering community and others, to understand and prepare reports and design documents; to make effective presentations and to frame and follow instructions.
k	Demonstrate the acquisition of the body of engineering knowledge and insight and Management Principles and to apply them as member / leader in teams and multidisciplinary environments.
l	Recognize the need for self and life-long learning, keeping pace with technological challenges in the broadest sense.

PROGRAM SPECIFIC OUTCOMES:

m	Apply the Mathematical knowledge and the basics of Science and Engineering to solve the problems pertaining to Electronics and Instrumentation Engineering
n	Identify and formulate Electrical and Electronics Engineering problems from research literature and be able to analyze the problem using first principles of Mathematics and Engineering Sciences.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO 1	Have successful technical and professional careers in their chosen fields such as circuit theory, Field theory, control theory and computational platforms.
PEO 2	Engross in life long process of learning to keep themselves abreast of new developments in the field of Electronics and their applications in power engineering

MAPPING

SEMESTER I

17BECC101

ENGLISH FOR ENGINEERS

L T P C 3 0 0 3

Course Objectives :

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To study formal context

Course Outcomes

Students undergoing this course will be able to

1. To use English language for communication: verbal & non-verbal.
2. To enrich comprehension and acquisition of speaking & writing ability.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To hone their listening, speaking, Reading and writing skills.
5. To gain confidence in using English language in real life situations.
6. To improve word power: lexical, grammatical and communication competence.

Unit- I LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)

9

Listening –Types of listening- Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, **Course Objectives**, conversational and argumentative. **Writing** – Formal and Informal letters- Letters to the Editor.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Tenses -Articles. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit – II LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)

8

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and

answering questions. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Unit-III LSRW SKILLS & GRAMMAR

WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)

8

Listening – Listening for specific task – fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** –comprehension passages based on general topics or matters of current affairs. **Writing** - Autobiographical writing & Biographical writing.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Preposition – Infinitive & Gerund. **Vocabulary** – Foreign words used in English – British and American usage.

Unit- IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)

10

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) & Instruction writing.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Parts of Speech , Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)

10

Listening –Distinction between native and Indian English (Speeches by TED and Kalam). **Speaking**-Extempore talk –Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2

periods per each unit.

TOTAL: 45 HOURS

TEXT BOOK:

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Sangeeta Sharma , Meenakshi Raman	Technical Communication: Principles And Practice 2 nd Edition	OUP, New Delhi.	2015

REFERENCES:

www.usingenglish.com – Writing/ Grammar

www.englishclub.com – Vocabulary Enrichment/ Speaking

www.ispeakyouspeak.blogspot.com – Vocabulary Enrichment/ Speaking

www.teachertube.com – Writing Technically

www.Dictionary.com – Semantic / Grammar

Course Objectives:

1. To develop analyzing skills for solving different engineering problems.
2. To understand the concept of Matrices.
3. To remember the basics of differential calculus and its applications.
4. To apply the problems in differential equations.
5. To Create knowledge about vector differentiation.
6. To study the algebraic manipulation

Course Outcomes:

The student will be able to

1. Acquire the basic knowledge and understanding of mathematics.
2. Apply advanced matrix knowledge to engineering problems.
3. Understand the concepts of differential calculus problems.
4. Improve their ability in evaluating geometrical applications of differential calculus problems.
5. To solve the problems by applying the differential Equations.
6. Evaluating engineering problems involving vector differentiation.

UNIT I MATRICES**12**

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS**12**

Limits, Continuity (Concepts only)- Differentiation- Differentiation Techniques: standard formulae, product rule, quotient rule, chain rule, method of substitution, implicit functions and successive differentiation.

UNIT III GEOMETRICAL APPLICATIONS OF DIFFERENTIAL CALCULUS 12

Curvature – centre, radius and circle of curvature in Cartesian co- ordinates – Evolutes – Envelope – Evolute as envelope of normals.

UNIT IV DIFFERENTIAL EQUATIONS**12**

Introduction to Ordinary differential equations: Linear ordinary differential equations of second and higher order with constant coefficients.

Introduction to Partial differential equations: Linear Partial differential equations of second and higher order with constant coefficients.

UNIT V VECTOR DIFFERENTIATION

12

Vectors-Differentiation of vectors – scalar and vector point functions –vector operator – vector operator applied to scalar point functions: Gradient; vector operator applied to vector point

functions: Divergence and curl; Physical interpretation of divergence and curl, Directional derivative, solenoidal and irrotational vectors.

TOTAL: 60 HOURS

4. [www. Intmath.com/calculus/calculus-intro.php](http://www.Intmath.com/calculus/calculus-intro.php)

Course Objectives:

1. To understand the properties of matter and thermodynamics with its applications.
2. To introduce the concepts of light, laser and fiber optics for diverse applications.
3. To study the fundamentals of quantum physics and their applications.
4. To comprehend the properties of crystal and its various crystal structures.
5. To study the basics of sound and ultrasonics with appropriate applications.
6. To study the quantum mechanics.

Course Outcomes:

Upon completion of this course, the students will be able to

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects.
- Make use of the concepts of sound waves for medical applications.
- Illustrate the basic ideas of nuclear reactors for energy resources.

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS 9

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), Poisson's ratio- Torsional pendulum- bending of beams - bending moment – uniform and non uniform bending

Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS 9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS 9

Introduction to quantum theory – Black body radiation - dual nature of matter and radiation – de Broglie wavelength, uncertainty principle –Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electron microscope

UNIT IV CRYSTAL PHYSICS 9

Lattice – unit cell – Bravais lattice – calculation of number of atoms per unit cell, atomic radius,

coordination number, packing factor for SC, BCC, FCC and HCP structures, crystal defects
– point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS

9

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A, B and C – scan displays, Medical applications – Sonogram. Introduction – basics about nuclear fission and fusion, Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

WEBSITES:

- www.nptel.ac.in
- www.physicsclassroom.com
- www.oyc.yale.edu
- www.physics.org

Course Objectives:

- To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and combustion.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry.

- To get the knowledge of fuels and combustion

Course Outcomes:

At the end of this course, students will be able to

1. Outline the basic principles of chemistry for water treatment (K).
2. Examine the electrochemical properties to design non – conventional energy storage devices (S).
3. Apply the concepts combustion of different fuels (S).
4. Identify the concepts of corrosion and its protection in the engineering field (S).
5. Apply the concepts of surface chemistry in the field of engineering (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (S).

UNIT I WATER TECHNOLOGY**9**

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination (No problems) – Hardness – Types and estimation by EDTA method (No problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES**9**

Electrolytic conductance-application (conductometric titration)- Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) – Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2 - O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION**9**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel- Introduction-GCV-NCV- Problems on Calculation of GCV & NCV - Flue gas analysis.

UNIT IV CORROSION SCIENCE**9**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating of Cu over Fe and Electro less plating (Ni) - Surface conversion coating - Hot dipping.- Anodizing of Al

UNIT V SURFACE CHEMISTRY AND PHASE RULE**9**

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

Course Objectives

- To impart the basic knowledge about the DC Electric circuits.
- To study the working of various Electrical Machines.
- To study the basic concepts of Electrical safety and wiring
- To get the knowledge of Magnetic circuits and its properties
- To impart the basic knowledge about the DC Electric circuits.
- To study the basic of power system

Course Outcomes:

At the end of this course, students will be able to

1. To understand and analyse basic electric and magnetic circuits.
2. Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
3. Attributing the electrical machines and transformer.
4. Evaluate the various digital circuits in real time applications.
5. Analysis various semiconductor devices in real time applications.
6. Reproduce the Measuring Instruments and Electrical Installation.

UNIT I – FUNDAMENTALS OF DC CIRCUITS**9**

Introduction to DC and AC circuits, Active and passive two terminal elements, Ohms law, Voltage-Current relations for resistor, inductor, capacitor, Kirchhoff's laws, Mesh analysis, Nodal analysis –equivalent resistor, current division, voltage division

UNIT II – MAGNETIC CIRCUITS**9**

Introduction to magnetic circuits-Simple magnetic circuits-Faraday's laws, Lenz law-Flemings rules - induced emfs and inductances-self and mutual inductance.

UNIT III – AC CIRCUITS (Elementary treatment only)**9**

Generation of AC, Average and RMS values, Form and peak factors, concept of phasor representation, J operator – representation of AC in rectangular and polar form – power and power factor - Introduction to three phase systems - types of connections, relationship between line and phase values.

UNIT IV–ELECTRICAL MACHINES (Elementary treatment only)**9**

Working principle, construction, types and applications of DC machines and AC machines –single phase transformers - single phase induction motors: capacitor start and capacitor start & run motors

UNIT V–ELECTRICAL SAFETY, WIRING AND INTRODUCTION TO POWER SYSTEM**9**

Safety measures in electrical system- types of wiring- wiring accessories staircase, fluorescent lamps & corridor wiring- Basic principles of earthing-Types of earthing- protection devices MCB- Fuses and its types –calculation of fuses.

WEBSITES

1. www.nptel.com
2. www.electrical4u.com

Course Objectives

- To impart the basic knowledge about the basic electronic components.
- To get the operation and characteristics of various semiconductor devices.
- To get the operation and characteristics of various transducers.
- To study the OPTO electronic devices
- To study the different operation of OPTO devices
- To understand the basic concepts of digital electronics.

Course Outcomes:

The students shall develop an

- intuitive understanding of basic electronic components,
- intuitive understanding of basic concepts of semiconductor devices,
- intuitive understanding of basic concepts of Transducers.
- intuitive understanding of basic concepts of digital electronics
- able to apply them in practical situation.
- Analysis the real time application of it.

UNIT I- ELECTRONIC COMPONENTS**9**

Passive components – resistors, capacitors and inductors -properties, common types, relationship and uses.

I-V**UNIT II- SEMICONDUCTOR DEVICES****9**

Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, zener diode, BJT, JFET.

UNIT III – OPTOELECTRONIC DEVICES**9**

Construction and Operation: LED, LCD, 7-Segment Display, LDR, Photodiode, Phototransistor, Solar cell, Opto couplers

UNIT IV- TRANSDUCERS**9**

Transducers - Instrumentation – general aspects, classification of transducers, basic requirements of transducers, passive transducers - strain gauge, thermistor, Hall-Effect transducer, LVDT, and active transducers – piezoelectric and thermocouple.

UNIT V- DIGITAL ELECTRONICS**9**

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressions using logic gates - standard forms of Boolean expression.

2	Rajput.R.K	Basic Electrical and Electronics Engineering	LaxmiPublications, First Edition	2007

WEBSITES

1. www.nptel.com
2. www.electrical4u.com

Course Objective

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To learn the bandgap of semiconductor

Course Outcome

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

Course Objective

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned in materials
- To study the molecular weight and degree of polymerization using viscometry

Course Outcome

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
2. Estimate the amount of alkalinity ions, hardness, chloride in water sample
3. Measure molecular/system properties of conductance of solutions, EMF etc
4. Acquaint the students with the determination of molecular weight of a polymer by viscometry
5. Determine the corrosion rate of steel by weight loss method.
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using BaCl_2 vs Na_2SO_4 .
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

Course Objectives

- to prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- to prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- To prepare for understanding operations of CNC machines
- To prepare for assembling different components in engineering division
- To prepare for carpenter working tools handling
- To prepare students for handling the tools in engineering and furnace division

Course Outcomes

At the end of this course, students will be able to

1. Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
2. Students will be able to fabricate components with their own hands.
3. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
4. By assembling different components, they will be able to produce small devices of their interest.
5. Acquire knowledge of various different tools handling in engineering division
6. Knowledge gathering in casting and welding process too

PART – A (MECHANICAL)**i. WELDING**

- i. Preparation of arc welding of butt joints, lap joints and tee joints.

ii. BASIC MACHINING

- i. Simple Turning and Taper turning
- ii. Drilling and Tapping
- iii. Sheet Metal Work
- iv. Model making – Trays, funnels, etc.

iii. DEMONSTRATION ON

- i. Smithy operations
- ii. Foundry operations
- iii. Plumbing Works
- iv. Carpentry Works

PART –B (ELECTRICAL & ELECTRONICS)**iv. ELECTRICAL ENGINEERING**

- i. Study of electrical symbols and electrical equipments.
- ii. Construct the wiring diagram for Stair case wiring.
- iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
- iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
- v. Measurement of energy using single phase energy meter.

v. ELECTRONICS ENGINEERING

- i. Study of Electronic components– Resistor (color coding), capacitors and inductors.

- ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
- iii. Study of logic gates AND, OR, NOT, NOR and NAND.

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Jeyachandran, K., Natarajan, S. and Balasubramanian, S	A Premier on Engineering Practices Laboratory	Anuradha Publishers, Kumbakonam	2007
2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices Lab Manual	Vikas Puplishing House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

Course Objectives

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools using algorithm
- Understand, analyze and implement software development tools using linux
- Acquire and analyse the roots of equations
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in “C” language

Course Outcomes:

The course will enable the students.

- 1.To formulate simple algorithms for arithmetic and logical problems.
- 2.To translate the algorithms to programs(in C language).
- 3.To test and execute the programs and correct syntax and logical errors.
- 4.To implement conditional branching, iteration and recursion.
- 5.To decompose a problem in to functions and synthesize a complete program using divide and conquer approach. and use arrays, pointers and structures to formulate algorithms and programs.
- 6.To apply programming to solve matrix addition and multiplication problems and searching and sorting problems.

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings-Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming
3. C Programming:
Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

TOTAL: 45 HOURS

Course Objective:

- To get knowledge about Concept of yoga
- To get knowledge about systems of yoga
- To get knowledge of different asanas
- To get knowledge of different advance asanas
- To get knowledge of pranayama
- To get knowledge mudras

Course Outcomes:

Yoga Education Helps to Develop

- The Self Discipline,
- Self Control,
- Physical health,
- Concentration
- Higher Level Of Consciousness.
- Mental Health

UNIT- I

Introduction To Yoga- Meaning Of Yoga – Concept Of Yoga- Aim And **Course Objectives** Of Yoga
–History Of Yoga - Systems Of Yoga.- Stages (Or) Limbs Of Yoga

UNIT- II

Asanas-Surya Namashkar- Thadasana- Veerabadhra Asana- Trikonasana- Utkatasana- ArdhaChakrasana- Ardha Kati Chakrasana- Thandasana- Gomugasana- Padmasana- Vajrasana- Paschimottasana- Matsyendrasana-BavanaMukthasana- SuptaPadhangusthasana-Sethubhandhasana- Navasana- ArdhaBavanamukthasana- Mathasyasana- Naukasana- Bujangasana- Salabasana- Makkarasana-Dhanurasana.

UNIT- III

Advance Asanas- Sirasasana- Garudasana- Natrajasana- Rajakoptasana- Chakrasana- Kukutasana- Virikshasana- Sarvagasana- Halasana-. Mayurasana .

UNIT- IV

Pranayama- Meaning- Types Of Pranayama- Bhastrika- Bhramari- Udgeeth- Kabalbhati- Bahya- AnulomVilom- Pranay Pranayama- Benefits Of Pranayama. Neti - JalaNeti , Sutra Neti, Nouli-Three Types, Douthy-Three Types

UNIT- V

Mudras- Uses Of Mudras- Gyan- Shoonya- Apaana- Prana- Vayu- Prithvi- Linga- Apana- Adi Mudra- - Agni Mudra- Surya Mudra- Varuna- Hakini Mudra.

SEMESTER II

17BECC201A

BUSINESS COMMUNICATION

L T P C

3 0 0 3

Course Objectives:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To enable students to acquire decision making skills, problem solving skills and assertive

Course Outcomes:

Students undergoing this course will be able to

- Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyze audiences and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- To gain confidence in using English language in real life situations.
- Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.

UNIT I

7

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

10

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- interpretation of graphs using expressions of comparison and contrast .

UNIT III

9

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone

Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body language – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV**9**

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V**10**

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

- <http://mybcommlab.com> to test your understanding of the concepts presented in each chapter and explore additional materials that will bring the ideas to life in videos, activities, and an online multimedia e-book.

Course Objectives:

1. To motivate learners to acquire listening & speaking skills in both formal and informal context.
2. To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
3. To improve their reading habit and to train them in critical and analytical reading.
4. To equip them to write for academic as well as work place context.
5. To enable students to face interviews.
6. To study the receptive and productive skills

Course Outcomes:

Students undergoing this course will be able to

- To acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- To enhance their reading texts critically and analytically.
- To develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- To enrich the ability to face interviews with confidence.
- To help students develop listening skills for academic and professional purposes.
- To enable students write letters effectively in informal and business situations.

UNIT-1 LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)****9**

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Regular & Irregular verbs - Kinds of sentences - Question tags. Homonyms and Homophones.

UNIT-II LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)****9**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks -

Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar & Vocabulary (Function Grammar & Technical Vocabulary)**

Modal verbs – Conjunction - Expression of cause and effect. Phrasal verbs - Idioms.

UNIT – III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **9**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Active and Passive voice - Purpose expression. Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **9**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Checklist preparation.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Grammar - Numerical expressions – Collocations. Singular and Plural (Nouns)

UNIT- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) **9**

Listening – Types of listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing-

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Transformation of sentences (Simple, Compound & Complex).Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

TOTAL: 45 HOURS

Course Objectives:

1. To have knowledge in integral calculus.
2. Determine mathematical tools needed in evaluating multiple integrals and their usage.
3. Utilize Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
4. Apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their analyze as a function of a complex variables.
5. Develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, to specify some difficult integration that appear in applications can be solved by complex integration in application areas such as fluid dynamics and flow of the electric current.
6. To learn Basic concepts of multiple and vector integrals.

Course Outcomes:

The student will be able to

1. The student will be able to solve problems in Fluid Dynamics, Theory of Elasticity, Heat and Mass Transfer etc.
2. The students will be able to understand mathematical tools needed to evaluate the areas and volumes using multiple integrals.
3. To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage. Use Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
4. To find the Analytic functions using the Cauchy Riemann equations and they will learn mapping properties of elementary functions and mapping properties of some special transcendental functions.
5. Students will understand relations between conformal mappings and quadratic differentials and how geometric structures are changing under conformal mappings.
6. To evaluate complex integrals using the Cauchy integral formula and the residue Theorem and to appreciate how complex methods can be used to prove some important theoretical results.

UNIT I INTEGRAL CALCULUS**12**

Definite and indefinite integrals – Techniques of integration – Substitution rule, Trigonometric integrals, Integration by parts , Integration of rational functions by partial fraction, Integration of irrational functions – Improper Integrals.

UNIT II MULTIPLE INTEGRALS**12**

Double integral – Cartesian coordinates – Polar coordinates – Area as double integrals- Change the

order of integration – Triple integration in Cartesian co-ordinates.

UNIT III VECTOR INTEGRATION

12

Integration of vectors – line integral- surface integral- volume integral- Green's theorem - Gauss divergence theorem and Stoke's theorems (Statement Only), hemisphere and rectangular parallelopeds problems.

UNIT IV ANALYTIC FUNCTIONS

12

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: $w = z+a$, az , $1/z$ and bilinear transformation.

UNIT V COMPLEX INTEGRATION

12

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi-circle (excluding poles on the real axis).

2. www.mathcentre.ac.uk
3. www.sosmath.com/diffeq/laplace/basic/basic.html
4. www.mathworld.wolframe.com

Course Objectives:

- To understand the properties of matter and thermodynamics with its applications.
- To introduce the concepts of light, laser and fiber optics for diverse applications.
- To study the fundamentals of quantum physics and their applications.
- To comprehend the properties of crystal and its various crystal structures.
- To study the basics of sound and ultrasonics with appropriate applications.
- To inculcate the characteristics of electronic materials through basics.

Course Outcomes

Upon completion of this course, the students will be able to

1. Identify the elastic nature of materials and its thermodynamic properties.
2. Infer the characteristics of laser and optical fibers for engineering applications.
3. Develop the idea of quantum mechanics through applications.
4. Identify the different atomic arrangements of crystals and its defects.
5. Make use of the concepts of sound waves for medical applications.
6. Illustrate the basic ideas of nuclear reactors for energy resources.

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS 9

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), Poisson's ratio- Torsional pendulum- bending of beams - bending moment – uniform and non uniform bending

Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS 9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS 9

Introduction to quantum theory – Black body radiation - dual nature of matter and radiation – de Broglie wavelength, uncertainty principle –Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electron microscope

UNIT IV CRYSTAL PHYSICS**9**

Lattice – unit cell – Bravais lattice – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures, crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS**9**

– Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A, B and C – scan displays, Medical applications-Sonogram.

Introduction – basics about nuclear fission and fusion, Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

- www.physics.org

Course Objectives:

1. To make the students conversant with basics of water technology.
2. To make the student acquire sound knowledge of electrochemistry and storage devices.
3. To acquaint the student with concepts of fuels and combustion.
4. To develop an understanding of the basic concepts of corrosion science.
5. To acquaint the students with the basics of surface chemistry.
6. To comprehend the basic organic chemistry and to synthesis simple drug.

Course Outcomes

Upon completion of the course the students will be able to

1. Outline the basic principles of chemistry for water treatment (K).
2. Examine the electrochemical properties to design non – conventional energy storage devices (S).
3. Apply the concepts combustion of different fuels (S).
4. Identify the concepts of corrosion and its protection in the engineering field (S).
5. Apply the concepts of surface chemistry in the field of engineering (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (S).

UNIT I WATER TECHNOLOGY**9**

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination (No problems) – Hardness – Types and estimation by EDTA method (No problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES**9**

Electrolytic conductance-application (conductometric titration)- Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) — Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2 - O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION**9**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel- Introduction-GCV-NCV- Problems on Calculation of GCV & NCV - Flue gas analysis.

UNIT IV CORROSION SCIENCE

9

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating of Cu over Fe and Electro less plating (Ni) - Surface conversion coating - Hot dipping.- Anodizing of Al

UNIT V SURFACE CHEMISTRY AND PHASE RULE

9

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

4. <http://ocw.mit.edu/courses/#chemistry>
5. <http://www.chem.qmul.ac.uk/surfaces/sec>

Course Objectives:

1. To give a comprehensive insight into natural resources.
2. To impart knowledge on ecosystem and biodiversity.
3. To educate the ways and means of the environment.
4. To protect the environment from various types of pollution.
5. To impart some fundamental knowledge on human welfare measures.
6. To motivate public to participate in environment protection and improvement.

Course Outcomes (COs)

Upon completion of the course the students will be able to

1. Recognize the importance of natural resources (S).
2. Associate themselves with the various ecosystems (S).
3. Describe the importance of biodiversity (S).
4. Identify and minimize the difference pollutions (S).
5. Prioritize and analyses the social issues (S).
6. Integrate the environmental principles in the projects undertaken in field of engineering and technology (A).

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 9

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources- Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM**9**

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY**9**

Introduction to biodiversity, Definition- Geneticdiversity, Species diversity and Ecosystem diversity,

Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION

9

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution– Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT

9

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

Course Objectives

- To gain knowledge on the principles and procedure for the Analysis of Circuits.
- To enable the students to understand the DC circuit analysis and network theorems.
- To learn the Sinusoidal steady state analysis.
- To Obtain the solution of first and Second order system
- To learn and analyse the electrical circuits using Laplace Transforms.
- To understand transients and resonance in RLC circuits and coupled circuits.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Apply network theorems for the analysis of electrical circuits.
2. Obtain the solution of first and Second order system
3. Analyse the electrical circuits using Laplace Transforms.
4. Obtain the transient and steady-state response of electrical circuits.
5. Analyse circuits in the sinusoidal steady-state (single-phase and three-phase).
6. Analyse two port circuit behavior.

UNIT I BASIC CIRCUITS ANALYSIS**12**

Ohm's Law – Kirchhoff's laws – DC and AC Circuits – Resistors in series and parallel circuits – Mesh current and node voltage method of analysis for D.C and A.C. circuits.

UNIT II NETWORK REDUCTION AND NETWORK THEOREMS FOR DC**12**

Network reduction: voltage and current division, source transformation – star delta conversion. Thevenin's and Norton & Theorem – Superposition Theorem – Maximum power transfer theorem – Reciprocity Theorem.

UNIT III RESONANCE AND COUPLED CIRCUITS**12**

Series and parallel resonance – their frequency response – Quality factor and Bandwidth - Self and mutual inductance – Coefficient of coupling – Tuned circuits – Single tuned circuits.

UNIT IV TRANSIENT RESPONSE FOR DC CIRCUITS**12**

Transient response of RL, RC and RLC Circuits using Laplace transform for DC input and A.C. with sinusoidal input.

UNIT V ANALYSING THREE PHASE CIRCUITS**12**

Three phase balanced / unbalanced voltage sources – analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, balanced & unbalanced – phasor diagram of voltages and currents – power factor measurements in three phase circuits.

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Sudakar A. and Shyam Mohan S.Palli	Circuits and Networks (Analysis and Synthesis)	Tata McGraw Hill Book Co	2007
2	A.Chakrabarti	Circuit Theory – Analysis and Synthesis	Dhanpat Rai & Co. New Delhi, Fifth Edition	2006

REFERENCES:

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Arumugam and Prem Kumar	Electric Circuit Theory	Khanna Publishers, New Delhi	2000
2	Joseph Edminister	Electric Circuits	Schaum's outline series, Tata McGraw Hill Book Company, Third Edition	2013
3	Hayt W.H and Kemmerley J.E	Engineering Circuit Analysis	Tata McGraw Hill Book Co., Fifth Edition	2002

Course Objective

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To learn the bandgap of semiconductor

Course Outcome

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser

8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

Course Objective

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned in materials
- To study the molecular weight and degree of polymerization using viscometry

Course Outcome

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
2. Estimate the amount of alkalinity ions, hardness, chloride in water sample
3. Measure molecular/system properties of conductance of solutions, EMF etc
4. Acquaint the students with the determination of molecular weight of a polymer by viscometry
5. Determine the corrosion rate of steel by weight loss method.
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using BaCl_2 vs Na_2SO_4 .
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the different electrical measurements.
- To understand the working of oscilloscope.
- To acquire the knowledge of network theorems
- To observe and analyse the electrical parameters in RLC resonance circuits
- To experiment the basic laws in voltage and current

Course Outcomes (Cos)

At the end of this course, students will demonstrate the ability

1. To understand and analyze basic electric circuits.
2. Getting basic practical knowledge about the DC Electric circuits.
3. Getting knowledge about the testing of different network theorems using simple circuits.
4. To introduce basic electrical equipments in the lab
5. To enable the students to analysis the basic laws using simple circuits.
6. Apply the knowledge in real time application.

LIST OF EXPERIMENTS

1. Study of Electrical Measurements and the Oscilloscope.
2. Study of Potentiometers and Rheostats.
3. Study and verify of Series Circuits, Parallel Circuits and Series-Parallel Circuits in DC Circuits.
4. Study and verify of Ohm's Law and Kirchoff's law.
5. Study and verify of Mesh Analysis.
6. Study and verify of Nodal Analysis.
7. Verification of Superposition Theorem
8. Verification of Thevenin's Theorem
9. Verification of Maximum Power Transfer Theorem
10. Verification of Series RLC Resonance and Parallel RLC Resonance.

Course Objectives

- to prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- to prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- To prepare the students for creating drawings in engineering
- To prepare the students for getting experience in engineering graphics
- To prepare the students for getting experience in engineering solid modelling and computer aided design
- To prepare the students to get better understandings in projection of solids

Course Outcomes:

1. Introduction to engineering design and its place in society
2. Exposure to the visual aspects of engineering design
3. Exposure to the visual aspects of engineering graphics standards
4. Exposure to solid modeling and computer-aided geometric design .
5. Exposure to creating working drawings and engineering communication
6. Exposure to known about projection of solids

UNIT I INTRODUCTION**9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES**8**

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING**9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES**8**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS**8**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

Course Objectives

- To explain relevance of Ethics while taking business decisions.
- To get knowledge of Entrepreneurship
- To get knowledge of business plan process
- To get knowledge of business plan components
- To learn about management and organization
- To study about government policy

Course Outcomes

- To develop a business plan connected with ethics.
- To become Entrepreneur
- To analysis business plan process
- To analysis business plan components
- To build up management and organization plan
- To implement government policy

Unit I

Entrepreneurship – Types- Entrepreneurial Competencies -Business Plan – Meaning - Basic parameters - Project parameters - Factors of successful business - Term Loans and Working Capital Management.

Unit II

Business Plan Process - Sources of Information – Online Resources - Offline Resources - Sources of Market Research - Benefits of market study - Coverage of market study.

Unit III

Business Plan components - Company description - Industry Analysis - Target Market - Competition - Strategic position - Risk assessment - Technology plan - Management and Organization – Government policy

SEMESTER III

17BEEE301A

METHODS OF APPLIED MATHEMATICS

L T P C

3 2 0 4

Course Objectives:

- To make the student understand the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems and also to acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- Some standard functions and some of the properties of the Fourier transform.
- Study Partial Differential equations in gravitation, electromagnetism, perfect fluids, elasticity, heat transfer and quantum mechanics.
- To study the difference equations
- To develop the use of Z - Transform techniques which is needed by Engineers for practical applications.

Course Outcomes:

Upon Completion of this course the students will be able to:

1. Apply Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.
2. To solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
3. To be able to solve equations using Fourier transform
4. Better understanding in problems related to heat condition, communication systems, electro optics and electromagnetic theory using the techniques will be learnt in this course.
5. To solve problems using Z -Transform techniques for discrete time systems.
6. Apply the concept of Laplace, Fourier, Z- Transforms, Fourier Series and Applications of Partial Differential Equations in Engineering field.

UNIT- I LAPLACE TRANSFORM

13

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions.

UNIT- II FOURIER SERIES

12

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT -III FOURIER TRANSFORM

12

Fourier integral theorem (Statement Only) – Fourier transform pair –Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation

between Fourier and Laplace transforms

UNIT- IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNIT- V Z -TRANSFORM AND DIFFERENCE EQUATIONS 11

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

84

UNIT IV HYPERBOLIC FUNCTIONS, BETA AND GAMMA FUNCTIONS 12

Hyperbolic Functions: Hyperbolic functions and Inverse Hyperbolic functions – Identities – Real and imaginary parts – solving problems using hyperbolic functions.

Beta and Gamma Functions: Definitions – Properties – Relation between beta and gamma integrals – Evaluation of definite integrals in terms of beta and gamma functions.

UNIT V BESSEL FUNCTIONS 12

Bessel Functions – Preliminaries – Definitions – Bessel Differential Equation – Differential recurrence relations – the pure recurrence relation – A generating function – Bessel's integral – Index half and odd integer.

2. www.nptel.ac.in
3. www.mathworld.wolfram.com

Course Objectives

- To study the working principles of electrical machines using the concepts of electromechanical energy conversion principles and derive expressions for generated voltage and torque developed in all Electrical Machines.
- To study the concepts of magnetic fields
- To study the concepts of magnetic circuits.
- To study the working principles of DC machines as Generator types, determination of their no- load/load characteristics, starting and methods of speed control of motors.
- To estimate various losses taking place in D.C. Motor
- To study the different testing methods to arrive at their performance.

Course Outcomes (COs)

At the end of this course, students will demonstrate the ability to

1. Understand the concepts of magnetic fields
2. Understand the concepts of magnetic circuits.
3. Understand the operation of dc machines.
4. Analyse the differences in operation of different dc machine configurations.
5. Analyse the single phase transformers circuits.
6. Analyse the three phase transformers circuits.

UNIT I DC GENERATORS**9**

Definitions – Basic laws and rules – Construction and operation - types - Emf equation - Commutation – Armature reaction Applications

UNIT II DC MOTORS**9**

Definitions – Basic laws and rules - Operation - types – Back Emf equation - Torque equation - Starters – Speed control - Applications

UNIT III TESTING OF DC MACHINES**9**

Losses and efficiency – Swinburne's, Hopkinson's and load tests – Retardation test – Electric braking.

UNIT IV SINGLE PHASE TRANSFORMER**9**

Principle of operation – Types and construction–EMF equation-. Phasor diagram - Open Circuit and Short circuit test– Equivalent circuit – Load test – Regulation and efficiency -All day efficiency – Sumpner's test- applications.

UNIT V THREE PHASE TRANSFORMER**9**

Principle of operation – Types and construction -Three phase transformers connections – Scott connection – Parallel operation - Auto transformers- Inrush current phenomenon and its prevention – Off-load and On-load tap changing- applications

WEBSITE

1. http://nptel.iitm.ac.in/courses/IIT-MADRAS/Electrical_Machines_I/index.php

3 Course Objectives

- To introduce the basic mathematical concepts related to electromagnetic vector fields
- To impart knowledge on the concepts of electrostatics, electrical potential, energy density and their applications.
- To impart knowledge on the concepts of magnetostatics, magnetic flux density, scalar and vector potential and its applications.
- To impart knowledge on the concepts of Faraday's law, induced emf and Maxwell's equations
- To impart knowledge on the concepts of Concepts of electromagnetic waves and Pointing vector.
- To study the different thermodynamic fields

Course Outcomes (COs)

At the end of the course, students will demonstrate the ability

- 1.To understand the basic laws of electromagnetism.
- 2.To obtain the electric and magnetic fields for simple configurations under static conditions.
- 3.To understand the concept of Conductors, Dielectrics and Capacitance.
- 4.To analyse time varying electric and magnetic fields.
- 5.To understand Maxwell's equation in different forms and different media.
- 6.To understand the propagation of EM waves.

UNIT I INTRODUCTION**9**

Sources and effects of electromagnetic fields – Vector fields – Different co- ordinate systems – Divergence theorem – Stoke's theorem.

UNIT II ELECTROSTATICS**9**

Coulomb's Law – Electric Field Intensity – Field Due to Point, Line, Surface and Volume Charges – Electric Flux Density - Gauss's law and its Application – Electrical Potential – Electrical Field in Free space, conductors – Electric Field due to infinite long Conductors, circular loop – Boundary Conditions, Poisson's and Laplace's equations – Capacitance – Energy Stored in Capacitance – Energy Density .

UNIT III MAGNETOSTATICS**9**

Lorentz law of force, Magnetic Field Intensity- Biot Savarts law – Ampere's Law – Magnetic Field due to Straight Conductors, circular loop,– Magnetic flux density (B) – B in free space, conductor, Magnetic Materials- Magnetization – Magnetic Field in Multiple Boundary Conditions – Magnetic Force – Self Inductance and Mutual Inductance – Inductance of Solenoids, Toroids.

UNIT IV ELECTRODYNAMIC FIELDS**9**

Faraday's laws, Maxwell's Equations (differential and integral forms) – Conduction Current and Displacement Current – Relation between Field Theory and Circuit Theory.

UNIT V ELECTROMAGNETIC WAVES**9**

Generation – Electromagnetic Wave Equations –Wave Propagation in Free Space, Dielectrics and conductors – Skin Depth, Pointing Theorem – Plane Wave Reflection and Refraction.

2. <http://ocw.mit.edu/OcwWeb/Electrical-Engineering-and-Computer-Science/6013Electromagnetics-and-ApplicationsFall2002/CourseHome/index.html>

3 Course Objectives

- Understand electronic systems with a continuously variable signal
- Understand proportional relationship between a signal and a voltage or current that represents the signal.
- To learn function of basic component's use in linear circuits.
- Understand component symbol, working principle, classification and specification.
- To get more understanding about amplifiers and oscillators
- To learn different theorems for simplification of basic linear electronics circuits.

Course Outcomes

- To impart knowledge on semiconductor devices,
- Understand the working of amplifiers,
- Understand the working of oscillators,
- Understand the working of pulse circuits.
- Analysis the real time application of semiconductor diode
- Analysis the application of amplifier, transistor and special devices

UNIT I SEMICONDUCTOR DIODE 9

Theory of p-n junction – p-n junction as diode – p-n diode currents – Volt-amp characteristics – Diode resistance – Temperature effect of p-n junction – Transition and diffusion capacitance of p-n diode – zener diode – Diode switching times.

UNIT II TRANSISTOR 9

Junction transistor – Transistor construction CE, CB and CC configurations – Transistor switching times Voltage rating – Junction field effect transistor – pinch off voltage – output and transfer characteristics

UNIT III AMPLIFIER 9

CE, CC and Common base amplifiers – Differential amplifiers – Push-pull amplifiers – Negative feedback amplifiers – Voltage / current, series/shunt – Single and double tuned amplifier.

UNIT IV SPECIAL DEVICES 9

Construction and operation: 7-Segment Display, tunnel diode and laser diode, UJT, thermistors, piezo electric devices, MOSFETS – FET as a variable resistor.

UNIT V OSCILLATORS AND PULSE CIRCUITS 9

Oscillators – Colpitts, Hartley, Phase shift, Wien Bridge and crystal oscillators. RC Diode clippers and clippers, Wave shaping circuits: Multivibrators types – Schmitt triggers – UJT based saw tooth oscillators

3	Donald L.Schilling and Charles Belove	Electronic Circuits	Tata McGraw Hill	2011

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the successful completion of this course, the student is expected to have/be able to:

- List and generally explain the main sources of energy and their primary applications in the US, and the world.
- Describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the environment.
- Discuss remedies/potential solutions to the supply and environmental issues associated with fossil fuels and other energy resources.
- List and describe the primary renewable energy resources and technologies.
- Analyze the different energy sources
- Students gathered the real time inter connected system modeling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines . Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydropower, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEBSITES

1. www.energycentral.com
2. www.catelectricpowerinfo.com

Course Objectives

- To learn the economics connected with power generation.
- To understand the measurements of various parameter in power plant and their control.
 - To study about Powerplant instrumentation
 - To acquire knowledge of renewable power system
 - To study about technologies of distributed system
 - To study layout and working of thermal, nuclear and hydropower plants.

Course Outcomes

At the end of the course the student will gain knowledge about

1. Economics of power generation, layout and working of thermal, nuclear and hydropower plants.
2. Distributed generation, boiler turbine monitoring system.
3. Assess the instrumentation available in the plant
4. Demonstrate the monitorin control in the plant
5. Analyse the various cost arrivals for various TARIFF consumers
6. Anlysis the real time application of it.

UNIT I ECONOMICS OF POWER GENERATION 9

Choice of power plant; Load management; Number and size of generating unit; Cost of electrical energy; All types of tariff – Calculation – Power factor improvement.

UNIT II THERMAL POWER PLANT 9

Plant layout; Selection of site – Types of thermal power plants; Steam power plant based on fossil fuels; Thermal power plant equipment: Boiler, economizer, super heater, condenser, combustion chamber and gas loops, turbines, auxiliaries; Instrumentation and control; Heat balance.

UNIT III GAS POWER PLANT 9

Open and close cycles; Regeneration; Inter-cooling and reheating; Steam – gas power plant; Combined cycle power plant ; Plant protection ; Instrumentation and Control; Plant management; Plant layout; Optimized Generation; Load flow.

UNIT IV HYDRO POWER PLANT 9

Mass curve and storage capacity; Classification; Components; Turbines – Characteristics and their selection; Governor; Plant layout and design; Auxiliaries; Underground, automatic, remote controlled, and pumped storage plants. Optimized Generation.

UNIT V NUCLEAR AND DIESEL – ELECTRIC POWER PLANTS 9

Nuclear reactors and fuels; Radioactivity; Mass defect and binding energy; Chain reaction; Materials used in nuclear plants; Types of reactors. Diesel–electric Power Plant: Fields of use; Sub–systems; Starting and stopping; Heat balance; Plant layout and design; Remote operation; Auxiliaries.

WEBSITES

1. www.energycentral.com
2. www.catelectricpowerinfo.com

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.
- To observe the speed control experiments in DC motor
- To acquire the knowledge of energy consumption measurements in single phase system
- To observe and analyse the electrical parameters in R load
- To experiment the basic laws in voltage and current

Course Outcomes (Cos)

At the end of this course, students will demonstrate the ability

- To understand and analyze basic electric and magnetic circuits.
- Getting basic practical knowledge about the Electric circuits.
- Getting knowledge about the testing of Electrical Machines and Transformers.
- To observe the speed control experiments in DC moto
- To study the working principles of electrical machines and power converters.
- Gathered knowledg of commercial system energy calculations

LIST OF EXPERIMENTS

1. Open circuit characteristics and load test on separately excited DC generator.
2. Open circuit characteristics and load test on DC compound generator.
3. Open circuit characteristics and load test on DC shunt generator.
4. Load test on DC shunt motor.
5. Load test on DC series motor.
6. Load test on DC compound motor.
7. Swinburne's test and speed control on DC shunt motor.
8. OC and SC tests on single phase transformer.
9. Load test on single phase transformer.
10. Sumpner's test.

Course Objectives

- To introduce the fundamentals of BJT
- To impact FET input and output characteristics
- To impact JFET input and output characteristics
- To learn knowledge of transistor
- To study about oscillator
- To study the design and implementation of various electronic circuits

Course Outcomes

- To analysis FET input and output characteristics
- To analysis JFET input and output characteristics
- To demonstrate the knowledge of transistor
- To analysis real time application of oscillator
- To design and implementation of various electronic circuits
- To analysis the real time application of it

LIST OF EXPERIMENTS

1. Static characteristics of semiconductor diode.
2. Characteristics of Zener diode and study of simple voltage regulator circuits.
3. Static Characteristics of transistor configuration.
4. Static and transfer characteristics of JFET.
5. Differential amplifier using FET.
6. Static characteristics of UJT.
7. Characteristics of Photodiode and Phototransistor.
8. Colpitts oscillator.
9. RC Phase shift oscillator.
10. Frequency response of common emitter amplifier.

Course Objectives

- To impart knowledge on the MATLAB software
- To study about Simulink creation using MATLAB
- To study Electrical CAD
- To get knowledge about proteus
- To get knowledge about PLC
- To study about PLC language

Course Outcomes (COs)

- To analysis real time project in MATLAB software
- To analysis real time project using MATLAB coding
- To analysis real time project in Electrical CAD
- To analysis real time project in proteus
- To analysis real time project in PLC
- To analysis real time project using PLC language

LIST OF EXPERIMENTS

1. Introduction to MATLAB, Starting and Quitting MATLAB, Basic Commands, Working with Matrices.
2. MATLAB Expressions, Relational and Logical Operations, Plotting Function Complex and Statistical Functions, Input / Output of Variables Flow Control.
3. MATLAB Simulink Basic; Starting Simulink - Basic Elements - Building a System - Gathering Blocks - Modifying the Blocks - Connecting the Blocks - Running Simulations.
4. Introduction to Electrical CAD : Schematic components and Symbol Builder.
5. Electrical CAD: Circuit Builder Component tools and Wire/Wire number tools.
6. Introduction to Proteus: Create and name a new file, Insert segment(s) into the session, Edit each segment and Segment Parameters.
7. Proteus: Test segments in real time, save the finished session and Transfer it to Proteus.
8. Proteus: Create a model and test it.
9. Introduction to Programmable Logic Controller (PLC): Program Files, Data Files and input/ output table file operation.
10. Programmable Logic Controller (PLC): Program Scan, Scan Process, Data flow overview, Scan Patterns and PLC Programming Language.

Course Objectives
Students will

- Understanding the basic concepts of solar power plant.
- Learn the working of PV cell
- Learn the different types of modules
- Learn the application of it
- Gain information regarding maintenance of solar power plant.
- Gain information regarding installation of solar power plant.

Course Outcomes

The students will able to

- Acquire knowledge on PV Module and equipment present in solar power plant
- Understand the installation and maintenance procedures of PV plant
- Design and Select batteries and inverters for PV module.
- Sizing and selection of PV panels
- Arriving the models of accessories needed for solar power plant
- Analysis the real time application

UNIT I INTRODUCTION

Introduction about Solar Energy- History of Photovoltaic System- PV module (Solar Cell) – Types of PV Module – Manufacturing of PV Module – Testing of PV Module – Working Principle of PV Cell – Overview of Solar Power Plant – working Principle of Solar Power Plant – Grid Tie System – Stand Alone System – India 2030 – Selection of PV Module – Inverter – Selection of Inverter – Battery – Selection of Battery – Cable – Selection of Cable – Charger Controller Unit – MPPT – Junction Box.

UNIT II PV SYSTEM

Load List Preparation – Design Sizing & Calculation on PV Panels – Series & Parallel Connection – Site selection – Detailed Introduction on Installation – Installation Techniques – Maintenance of PV Panel & Battery – Importance of Maintenance – Application of photovoltaic system – Advantages & Disadvantages of photovoltaic system.

UNIT III SELECTION & DESIGN

Hands on Practice – Sizing & Calculation on PV Panels to find the number of Panels required for given load - Design & Selection of Battery – Selection of Inverters.

Course Objectives

- To learn about Embedded system.
- To learn about IOT
- To learn about technologies in IOT
- To get knowledge about standards and tools of IOT
- To study case studies about IOT
- To study the application of it

Course Outcomes

- Understand the basics of Embedded System, IoT and the development model
- Apply the tools, techniques and skills acquires towards development of projects
- Understand the Internet of Things Standards and Frameworks
- Understand the 252 IT-2013 SRM (E&T)Techniques
- Analysis the real time application
- Analysis the case studies of IOT

UNIT I INTRODUCTION TO EMBEDDED SYSTEMS AND INTERNET OF THINGS (IOT)

Architecture of Embedded Systems- Embedded Systems Development process- Architecture of Internet of Things- Applications of Embedded Systems and IoT-Challenges in designing an Embedded System

UNIT II - IOT: TECHNOLOGIES, STANDARDS AND TOOLS

Fundamental characteristics and high level requirements of IoT- IoT Reference model-IoT ecosystem and Business models- Introduction to Protocols of IoT: D2D, D2S, S2S- Comparison between MQTT, CoAP, LWM2M, ETSI M2M- Introduction to simulation tools.

UNIT III CASE STUDIES AND APPLICATION DEVELOPMENT FOR IOT USING EMBEDDED SYSTEMS

Smart cities-Smart environment-Smart Water- Smart metering- Security and emergencies-Smart agriculture-Techniques for writing Embedded code - Examples for Application development for IoT.

SEMESTER IV

17BEEE401

ELECTRICAL MACHINES- II

L T P C 3 2 0 4

Course Objectives

- To learn Construction and performance of salient and non-salient type synchronous generators.
- To get the knowledge of operation and performance of synchronous motor.
- To study and understand the concept of AC machine windings.
- To study and understand the concepts of rotating magnetic fields.
- To study the operation and performance of 3 Phase induction motors and its starting and speed control.
- To study the Construction, principle of operation and performance of single phase induction motors and few special machines

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the concept of AC machine windings.
2. Understand the concepts of rotating magnetic fields.
3. Understand the operation of ac machines.
4. Analyse performance characteristics Induction Machines.
5. To understand the different types of single phase induction motor based on its starting methods.
6. Understand the operation of synchronous motor and analyze the performance of motor under different loading and excitation conditions.

UNIT I ALTERNATORS

12

Alternators - Types and constructional features - Emf equation-parallel operation - Armature reaction - Load characteristics – Phasor diagram - Predetermination of regulation by EMF, MMF and ZPF methods.

UNIT II TWO REACTION THEORY

12

Basic ideas of two reaction theory - Direct and quadrature axis reactances and their determination - Phasor diagram and regulation of salient pole alternators - Parallel operation - Synchronizing torque - Expression for synchronizing power.

UNIT III SYNCHRONOUS MOTORS

12

Synchronous motors - Principle of operation - Synchronous machines on infinite bus bars - Phasor diagram - V and inverted V curves - Current and power circle diagrams - Hunting and its suppression - Starting methods – Synchronous condenser.

UNIT IV INDUCTION MOTORS

12

Polyphase induction motors - Types and constructional features - Principle of operation - Torque - slip characteristics -Effect of rotor resistance - Equivalent circuit - Circle diagram - Starting and speed control of Induction motor-Introduction to Induction generator.

UNIT V SINGLE PHASE INDUCTION MOTOR

12

Construction and Principle of operation of single phase induction motor- Double revolving field

theory –Methods of starting – types- Applications.

2. www.gtbit.org/downloads/emecsem3/emecsem3n4qbank.pdf

Course Objectives

- To develop expression for computation of fundamental parameters of lines.
- To categorize the lines into different classes and develop equivalent circuits for these classes.
- To study the voltage distribution in insulator strings and cables and methods to improve the same
- To learn the modeling of transmission line parameters.
- To study the different insulation materials
- To learn about the use of cables in transmission line parameters

Course Outcomes

At the end of the course the students will be able

- To understand the transmission and distribution systems of electric power,
- To understand electrical and mechanical design parameters of lines.
- To understand the transmission line parameters
- To analyse and modeling the transmission line parameters
- To understand the different cables for transmission lines
- To understand the different insulation materials for transmission lines

UNIT I INTRODUCTION**12**

Structure of electric power system: Generation, transmission and distribution; HVDC and EHV AC transmission: comparison of economics of transmission, technical performance and reliability, application of HVDC transmission system.

UNIT II TRANSMISSION LINE PARAMETERS**12**

Parameters of single and three phase transmission lines with single and double circuits: Resistance, inductance and capacitance of solid, stranded and bundled conductors: Symmetrical and unsymmetrical spacing and transposition; skin and proximity effects; interference with neighboring communication circuits. Typical configuration, conductor types and electrical parameters of 400, 220, 110, 66 and 33 kV lines.

UNIT III MODELING AND PERFORMANCE OF TRANSMISSION LINES 12

Classification of lines: Short, medium and long line; equivalent circuits, attenuation constant, phase constant, surge impedance; transmission efficiency and voltage regulation; real and reactive power flow in lines: Power-angle diagram; surge-impedance loading, load ability limits based on thermal loading, angle and voltage stability considerations; shunt and series compensation; Ferranti effect and corona loss. Sag computations. FACTS (qualitative treatment only): SVC, TCSC, STATCOM and UPFC.

UNIT IV INSULATORS AND CABLES

12

Insulators: Types, voltage distribution in insulator string and grading, improvement of string efficiency. Underground cables: Constructional features of LT and HT cables, capacitance, dielectric stress and grading, thermal characteristics.

UNIT V SUBSTATION, GROUNDING SYSTEM AND DISTRIBUTION SYSTEM 12

Types of substations: bus-bar arrangements; substation bus schemes: single bus scheme, double bus with double breaker, double bus with single breaker, main and transfer bus, ring bus, breaker-and-a-half with two main buses, double bus-bar with bypass isolators. Resistance of grounding systems: Resistance of driven rods, resistance of grounding point electrode, grounding grids, design principles of substation grounding system; neutral grounding. Radial and ring-main distributors, interconnectors. AC distribution: AC distributor with concentrated load; three-phase four wire distribution system sub-mains; stepped and tapered mains.

WEBSITE

1. <http://www.adamiano.com/>

Course Objectives

- To study the units, dimensions and standards.
- To study the different types of measuring instruments.
- To provide adequate knowledge in electrical and electronic measurement techniques and instruments.
- To make the students to have a clear knowledge of the basic laws governing the operation of the instruments, relevant circuits and their working.
- Introduction to general instrument system, error, calibration etc.
- Emphasis is laid on analog and digital techniques used to measure voltage, current, energy and power, etc.

Course Outcomes

At the end of the course the students will have

1. Learn units, dimensions and standards.
2. Learn basics of different types of measuring instruments to measure different electrical quantities
3. Apply their knowledge to measure electrical quantities using standard analog and digital measuring instruments
4. basic knowledge of measurement systems towards measurements, including error analysis, interpretation, experimental uncertainty, calibration, etc.
5. To apply basic concepts of measurement systems with electrical signals, including signal conditioners (gain, attenuation), indicating and recording devices
6. Measure different electrical parameters using conventional bridges and acquire data through digital measuring instruments and interpret the data.

UNIT I INTRODUCTION**9**

Functional elements of an instrument – Units and standards of measurements – Static and dynamic characteristics – Sources of Errors in measurement – DC and AC bridges – Wheatstone, Kelvin's double, Maxwell, Anderson, Wien and Schering bridges – Measurement of high resistance – Standards and calibration.

UNIT II MEASURING INSTRUMENTS**9**

Classification of instruments – working principle of potentiometers – Principle of operation and construction of PMMC, MI, type instruments – Principle types and working of analog and digital voltmeters, ammeters and multimeters – Determination of B-H curve and measurement of iron loss – Instrument transformers – CT and PT – Instruments for measurement of frequency and phase.

UNIT III MEASUREMENT OF POWER AND ENERGY**9**

Dynamometer type wattmeter – Single and three phase wattmeters – Induction type instruments – Single and three phase energy meters – calibration of energy meters – direct and phantom loading – Grounding techniques – Megger - Power factor meter- Principle of operation, construction and types of digital frequency meters, Digital Energymeters.

UNIT IV STORAGE, DISPLAY DEVICES AND TRANSDUCERS**9**

Magnetic measurements – Magnetic disk and tape-recorders – Strip chart recorder – XY recorder.

Digital plotters and printers – Cathode ray Oscilloscope– digital CRO and dot matrix display.
 Classification of transducers – Selection of transducers – Resistive – capacitive and inductive transducers – LVDT – Piezo-electric, optical and digital transducers.

UNIT V VIRTUAL INSTRUMENTATION

9

Concept of VIs and sub VI - Display types – Digital – Analog – Chart and Graphs. Loops - structures - Arrays – Clusters. Local and global variables – String and file I/O. Timers and dialog control.

TOTAL: 45 HOURS

WEBSITES

1. <http://www.elect.mrt.ac.in>

Course Objectives :

- To impart knowledge about the principles and analysis of sensors.
- Discussion of errors and error analysis.
- Emphasis on characteristics and response of transducers.
- To have an adequate knowledge in resistance transducers.
- Basic knowledge in inductance and capacitance transducers and exposure to other transducers
- To get the knowledge of recent development in it

Course Outcomes :

At the end of the course the student will be able to

1. understand all types of sensors and transducers.
2. Justify the concept and working principle of different transducers and sensors
- 3 Justify the transducers that will be utilised in the electrical industries
4. Identify recent developments in transducer domain
5. Discover the knowledge for small technology up gradations in it
6. Analysis the real time application.

**UNIT I SCIENCE OF MEASUREMENTS AND INSTRUMENTATION
OF TRANSDUCERS****9**

Units and standards – Calibration methods – Static calibration – Classification of errors – Error analysis – Statistical methods – Odds and uncertainty – Classification of transducers – Selection of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS**9**

Static characteristics – Accuracy, precision, resolution, sensitivity, linearity etc.

Dynamic characteristics – Mathematical model of transducer – Zero, I and II order transducers.

Response to impulse, step, ramp and sinusoidal inputs.

UNIT III VARIABLE RESISTANCE TRANSDUCERS**9**

Principle of operation, construction details, characteristics and application of resistance potentiometer, strain gauge, resistance thermometer, thermistor, hot-wire anemometer, piezo resistive sensor and humidity sensor.

**UNIT IV VARIABLE INDUCTANCE AND VARIABLE CAPACITANCE
TRANSDUCERS****9**

Induction potentiometer – Variable reluctance transducers – EI pick up – LVDT – Capacitive transducer and types – Capacitor microphone – Frequency response.

UNIT V OTHER TRANSDUCERS**9**

Piezoelectric transducer, magnetostrictive – IC sensor – Digital transducers – Smart sensor – Fibre optic transducer.

Course Objectives

- To study the IC fabrication procedure.
- To study characteristics; realize circuits; design for signal analysis using Op-amp ICs.
- To study the applications of Op-amp.
- To study internal functional blocks and the applications of special ICs like Timers,
- To study PLL circuits, regulator Circuits, ADCs.
- To get the knowledge of recent development in it

Course Outcomes

- Ability to understand and analyse, linear and digital electronic circuits.
- Understand the IC fabrication procedure.
- Understand the characteristics; realize circuits; design for signal analysis using Op- amp ICs.
- Analysis the applications of Op-amp.
- Analysis the internal functional blocks and the applications of special ICs like Timers,
- Analysi the real time time application of PLL circuits, regulator Circuits, ADCs.

UNIT I IC FABRICATION**9**

IC classification, fundamental of monolithic IC technology, epitaxial growth, masking and etching, diffusion of impurities. Realisation of monolithic ICs and packaging. Fabrication of diodes, capacitance, resistance and FETs.

UNIT II CHARACTERISTICS OF OP-AMP**9**

Ideal OP-AMP characteristics, DC characteristics, AC characteristics,, differential amplifier; frequency response of OP-AMP; Basic applications of op-amp – Inverting and Non-inverting Amplifiers-V/I & I/V converters ,summer, differentiator and integrator.

UNIT III APPLICATIONS OF OP-AMP**9**

Instrumentation amplifier, Log and Antilog Amplifiers, first and second order active filters, , comparators, multivibrators, waveform generators, clippers, clampers, peak detector, S/H circuit, D/A converter (R- 2R ladder and weighted resistor types), A/D converters using op-amps.

UNIT IV SPECIAL ICs**9**

Functional block, characteristics & application circuits with 555 Timer Ic-566 voltage controlled oscillator Ic; 565-phase lock loop Ic ,Analog multiplier ICs.

UNIT V APPLICATION ICs**9**

IC voltage regulators –LM78XX,79XX Fixed voltage regulators - LM317, 723 Variable voltage regulators, switching regulator- SMPS- LM 380 power amplifier- ICL 8038 function generator IC.

TOTAL : 45 PERIODS

3	Jacob Millman, Christos C.Halkias	Integrated Electronics - Analog and Digital circuits system	Tata McGraw Hill	2003
4	Robert F.Coughlin, Fredrick F. Driscoll	Op-amp and Linear ICs	PHI Learning, 6th edition	2012

Course Objectives

Students will learn

- Basic concepts and first law of thermodynamics
- Second law of thermodynamics
- Gas power cycles
- Refrigeration and Air conditioning systems.
- Different modes of Heat Transfer
- Different modes of energy conservation

Course Outcomes

- To impart the basic knowledge of various basic fields of mechanical engineering.
- To Study about basic manufacturing processes.
- To study about basic machining process.
- To study about power plants.
- To study about automobile engineering
- To understand the application of it.

UNIT I BASIC CONCEPTS AND FIRST LAW

9

Basic concepts - Classical and Statistical approaches - Thermodynamic systems - closed, open, isolated. Property – State - Process-adiabatic - Quasi-static process – Cycle - Point and Path function – Energy - Work transfer - Concept of temperature and heat- Zeroth law of thermodynamics - Concept of ideal gases - First law of thermodynamics –PMM1, internal energy, specific heat capacities, enthalpy, and its application to closed system and open system-steady flow energy equation.

UNIT II SECOND LAW AND ENTROPY

9

Physical description of the second law - Kelvin-Planck and Clausius statements –Equivalence - Reversible processes and cycles- Carnot cycle – Corollaries - Absolute temperature scale – Clausius Theorem, inequality - Entropy- Principle, transfer, generation, balance - Third law of thermodynamics

UNIT III HEAT TRANSFER

9

One-dimensional Heat Conduction in cartesian coordinate system : Plane wall – Cylinder - Composite walls –Heat transfer through extended surfaces (simple fins). Convection: Free convection and forced convection - Internal and external flow. Radiation: Black–Gray bodies - Cooling of electronic components: Thermoelectric cooling – Chip cooling.

UNIT IV REFRIGERATION

9

Study of household refrigerator, window air conditioner, split air conditioner Ratings and selection criteria of above devices. Refrigerants and their impact on environment.

Boiler – Fire tube boiler, Water tube boiler, Turbine -Impulse & Reaction turbine, Hydraulic turbines - Pelton wheel, Francis turbine and Kaplan turbine. I.C. engines – Working of two stroke, four stroke, spark ignition and compression ignition engines. Pumps – positive and non positive displacement pump.

COURSE OBJECTIVE

Students will learn

- various types of materials
- Ferrous metals and their properties
- Non ferrous metals and their properties
- Ceramic materials and their properties
- Polymers and composites
- the applications of it in engineering and technology

COURSE OUTCOMES

At the end of the course the student will be able

- To understand the concepts of engineering materials
- To acquire the difference need of ferrous and non ferrous materials in various applications
- To understand the properties of ceramic and glasses in real time need
- Future requirement of microstructural activities and its need in real time world
- Valued the mechanical behaviour of various composites
- Observe the temperature deviation in various metals

UNIT I INTRODUCTION TO ENGINEERING MATERIALS**9**

Atomic bonding and Crystal structure of engineering materials. Chemical and Physical properties of engineering materials. Mechanical Properties and Behaviours of Materials – Stress - Strain Relationships, Tensile Strength, Hardness, Impact Strength, Fatigue & Stress Rupture, Creep & Stress Rupture, Comparison of Material Properties

UNIT II FERROUS METALS AND THEIR PROPERTIES**9**

Iron - Carbon Equilibrium Diagram, Carbon Steel & AISI Numerical Identification Systems. Properties, processing and applications of Alloy Steel, Tool Steel, Stainless Steel. General characteristics of metal alloys, Fundamentals of heat treatment and the use of TTT diagrams. Production, forming, and joining of metals.

UNIT III NONFERROUS METALS**9**

Properties, processing and applications of Aluminum, Magnesium & Titanium, Copper and its Alloys, Low Melting Temperature Alloys. Production, forming, and joining of metals. The Chemistry and prevention of corrosion

UNIT IV CERAMIC MATERIALS**9**

Microstructural features of ceramics and glasses - Mechanical properties of ceramics and glasses - Production, forming, and joining of ceramics

UNIT V POLYMERS AND COMPOSITES**9**

Microstructural features of polymers and composites - Mechanical behaviour of polymers and composites - Production, forming, and joining of polymers and composites.

WEB REFERENCES

1. www.nptel.ac.in
2. www.physicsclassroom.com
3. www.oyc.yale.edu
4. www.physics.org

Course Objectives

- To expose the students to the operation of synchronous machines and induction motors and give them experimental skills
- To study the operation of synchronous motor on infinite bus for different excitation condition
- To Study the performance of single phase induction motor by conducting direct and indirect testing
- To study the performance of three phase induction motor by conducting direct and indirect testing
- To study the importance of various components in alternators
- To study the importance need of ZPF methods

Course Outcomes (COs)

1. Compare the different indirect testing methods to predetermine the voltage regulation of three phase salient and non-salient pole alternator
2. Determine the positive, negative and zero sequence impedance of alternators
3. Analyze the operation of synchronous motor on infinite bus for different excitation condition
4. Assess the performance of three phase induction motor by conducting direct and indirect testing
5. Assess the performance of single phase induction motor by conducting direct and indirect testing
6. Choose the appropriate induction motor starter for various industrial and commercial applications

LIST OF EXPERIMENTS

1. Regulation of Alternator by EMF and MMF Methods
2. Load test on three phase Alternator
3. Regulation of salient pole Alternator by Slip Test
4. Regulation of Alternator by ZPF method
5. Parallel operation of alternator with bus bar
6. V and Inverted V curves of Synchronous Motor
7. Equivalent Circuit of three phase Induction Motor
8. Load Test on three phase Induction Motor
9. Performance characteristics of three phase Induction Motor by Circle Diagram

10. Load Test on single phase Induction Motor
11. Speed control of Induction Motor
12. Study of different types of starting of Induction Motors

Course Objectives:

- To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP, BVP.
- To implement the methods using the spread sheet in Excel
- To implement solution of numerical integration
- To implement solution of initial value problems governed by ODE
- To implement solution of BVP governed by PDE
- To implement solution of transcendental equation.

Course Outcomes:

1. To develop analytical skills for solving different engineering problems.
2. To understand the concepts of Matrices, sequences and series.
3. To solve problems by applying Differential Calculus and Differential equations.
4. To analysis initial value problems governed by ODE
5. To analysis BVP governed by PDE
6. To analysis transcendental equation.

LIST OF EXPERIMENTS

1. Solution of Transcendental equation
 - i) Newton – Raphson Method
 - ii) Bisection method
 - iii) Iterative method by reducing the equation to the form $x = f(x)$
2. Solution of algebraic simultaneous equations
 - i) Gauss Jacobi method
 - ii) Gauss Seidel method
3. Numerical integration
 - i) Gauss 2 point and 3 point formulae
 - ii) Trapezoidal method
 - iii) Simpson's 1/3 rule
4. Solution of initial value problems governed by ODE
 - i) Runge - Kutta 4th order method
 - ii) Modified Euler's method

- iii) Milne's method
- iv) Adam – Bashforth method

5. Solution of BVP governed by PDE

- i) Laplace Equation
- ii) One – dimensional heat equation
 - a) Explicit method : Bender – Schmidt's method
 - b) Implicit method : Crank - Nicolson's method
- iii) One dimensional wave equation
 - Implicit method

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Steven C. Chapra, Raymond P. Canale	Numerical Methods for Engineers	McGraw - Hill Pub. Co. Ltd	2014
2	Curtis F. Gerald and Patrick O. Wheatley	Applied Numerical Analysis	Pearson Education, South Asia	2009

Course Objectives

- To deal with measurement of inductance and capacitance.
- To deal with measurement of resistance.
- To deal with calibration of current transformer
- To deal with calibration of single phase energy meter.
- To get the knowledge of two watt meter method to measure 3 phase power and power factor
- To deal with calibration of voltmeter, ammeter and wattmeter.

Course Outcomes (COs)

At the end of this course, students will demonstrate the ability to

1. Train the students in the measurement of displacement, resistance, inductance, torque and angle etc.,
2. Give exposure to ac, dc bridges
3. Give knowledge on transient measurement.
4. Understand the procedure and usage of instruments
5. Acquire knowledge of principle of calibration of a measuring instrument and Plotting of calibration curves
6. Acquire hand-on experience on measurement of parameters and verification of Laws of illumination

LIST OF EXPERIMENTS

1. Calibration of Pressure and Displacement Transducer.
2. Measurement of inductance & capacitance.
3. Measurement of resistance using wheatstone bridge
4. Calibration of current transformer and Study of instrument transformers.
5. Calibration of single phase energy meter.
6. Conversion of Galvanometer into Voltmeter and Ammeter.
7. Measurement of three phase power and power factor using two wattmeter method.
8. Measurements of resistance using Kelvin's bridge.
9. Calibration of Voltmeter, Ammeter and Wattmeter
10. Study of phantom loading.
11. Study of Smart Energy Meter.

Course Objectives

- Understanding the basic knowledge of electricity standards.
- Gain information regarding various electricity equipment standards.
- Learn the battery norms and standards
- Learn the harmonic norms and standards

Course Outcomes

The Students will able to

- Acquire knowledge on various Indian and International standards.
- Understand the standards used for transformer and their sizing.
- Understand the information regarding various electricity equipment standards.
- Understand the battery norms and standards
- Understand the harmonic norms and standards
- Analysis the real time implementation

UNIT I INDIAN AND INTERNATIONAL STANDARDS

Indian Standards – IS – International Standards – ANSI – IEEE – IEC – Transformers – IEC 60076 & IS 2026, Rotating Machines – IEC 60034 & IS 34.

UNIT II STANDARDS FOR SIZING

Battery – IEEE 1115 – Instrument Transformers – IEC 60044 & IS 2705 – Short Circuit study – IEC 60909 & IEC 61363 – Harmonic Study – IEEE 519.

SEMESTER V

17BEEE501

POWER ELECTRONICS

L T P C 3 0 0

3 Course Objectives

- To introduce the application of electronic devices for conversion, control and conditioning of electric power.
- To get an overview of different types of power semi-conductor devices and their switching characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers and basic topologies of DC-DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand the harmonic reduction methods.
- To know the practical application for power electronics converters in conditioning the power supply.
- To get the knowledge of real time application of it

Course Outcomes

- At the end of this course students will demonstrate the ability to
1. Understand the differences between signal level .
 2. Understand the differences between power level devices.
 3. Analyse controlled rectifier circuits.
 4. Analyse the operation of DC-DC choppers.
 5. Analyse the operation of voltage source inverters.
 6. Understand different modulation techniques.

UNIT I POWER SEMI CONDUCTOR DEVICES

9

Silicon Controlled Rectifier(SCR), TRIAC, DIAC - Structure, V-I Characteristics- Two Transistor Model, Structure and characteristics of Power Diode, Power BJT, MOSFET, IGBT, GTO, Comparisons of Power Semiconductor Devices-Firing circuits.

UNIT II PHASE CONTROLLED CONVERTERS

9

Operation and Analysis of Single Phase Half and Fully Controlled Converter using R, RL load- Three Phase Half and Fully Controlled Converter using R, RL load-Effects of Source Impedance, Dual converter (only Block diagram approach).

UNIT III CHOPPERS

9

Step-Down and Step-up Choppers-Control Strategies of Chopper- Multi Quadrant Operation of Chopper- Switched Mode Regulators: Buck, boost, Buck-Boost Regulator- Applications of DC Chopper.

UNIT IV DC-AC CONVERTER

9

Single phase half bridge and full bridge inverters - three phase bridge inverters (120 and 180 degree modes of operation)- Multilevel inverter (block diagram Approach only)- PWM techniques- single PWM, multiple PWM, Sinusoidal PWM, Current source inverter(CSI).

UNIT V AC-AC CONVERTER AND APPLICATIONS**9**

Single phase cyclo converter, Single phase AC voltage controller- Applications- Uninterrupted Power Supply topologies (On line and Off line) – Flexible AC Transmission Systems –Unified Power Flow Controller– HVDC Transmission.

Course Objectives

- To present the Digital fundamentals, Boolean algebra and its applications in digital systems
- To familiarize with the design of various combinational digital circuits using logic gates
- To introduce the analysis and design procedures for synchronous and asynchronous sequential circuits
- To study the design of an asynchronous sequential circuit and describe the race conditions, hazards and errors in digital circuits
- To explain the various semiconductor memories and related technology
- To introduce the electronic circuits involved in the making of logic gates

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Use numerical methods to analyse a power system in steady state.
2. Understand stability constraints in a synchronous grid.
3. Understand methods to control the voltage, frequency.
4. Understand methods to control the power flow.
5. Understand the monitoring and control of a power system.
6. Understand the basics of power system economics

UNIT I NUMBER SYSTEM AND BOOLEAN ALGEBRA 9

Review of number system; types and conversion, codes. Boolean algebra: De-Morgan's theorem, switching functions and simplification using K-maps and Quine McCluskey method.

UNIT II COMBINATIONAL CIRCUITS 9

Design of Logic gates. Design of adder, subtractor, comparators, code converters, encoders, decoders, multiplexers and demultiplexers. Function realization using gates and multiplexers.

UNIT III SYNCHRONOUS SEQUENTIAL CIRCUITS 9

Flip flops - SR, D, JK and T. Analysis of synchronous sequential circuits; design of synchronous sequential circuits – Counters, state diagram; state reduction; state assignment.

UNIT IV ASYNCHRONOUS SEQUENTIAL CIRCUIT 9

Analysis of asynchronous sequential machines, state assignment, asynchronous design problem.

UNIT V PROGRAMMABLE LOGIC DEVICES, MEMORY AND LOGIC FAMILIES 9

Memories: RAM, ROM, PROM, EPROM, EEPROM, PLA, PAL, PLD, FPGA, and Digital logic families. GATE implementations.

TOTAL: 45 HOURS

TEXT BOOKS

2	William Keitz	Digital Electronics-A Practical Approach with VHDL	Pearson	2013
3	Anand Kumar	Fundamentals of Digital Circuits	PHI	2013

Course Objectives

- To understand the use of transfer function models for analysis physical systems and introduce the control system components.
- To provide adequate knowledge in the time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed-loop frequency responses of systems.
- To introduce stability analysis
- To introduce state variable representation of physical systems
- To introduce the design of compensators.

Course Outcomes

1. Derive the transfer function of electrical and mechanical systems using various reduction techniques
2. Analyze the response of the control system by investigating steady state error and time domain specifications
3. Construct the root locus to find the stability of the system and explain the effects of different types of controller
4. Construct the frequency response of the system using various plots and correlate the time and frequency domain specifications and effect of compensation
5. Design the different types of compensators using frequency response plots to stabilize the control system
6. Explain the state variable representation of physical systems with the effects of state feedback its assessment for linear-time invariant systems.

UNIT-I CONTROL SYSTEM MODELLING**12**

System concept, differential equations and transfer functions. Modeling of electric systems, translational and rotational mechanical systems, Simple electromechanical systems. Block diagram representation of systems – Block diagram reduction methods – Closed loop transfer function, determination of signal flow graph. Mason's gain formula – Examples.

UNIT-II TIME DOMAIN ANALYSIS**12**

Test signals – time response of first order and second order systems – time domain specifications – types and order of systems – generalized error co-efficient – steady state errors – concepts of stability – Routh-Hurwitz stability – root locus.

UNIT-III FREQUENCY DOMAIN ANALYSIS**12**

Introduction – correlation between time and frequency response – stability analysis using Bode plots, Polar plots, Nichols chart and Nyquist stability criterion – Gain margin – phase margin.

UNIT-IV COMPENSATORS**12**

Realization of basic compensators – cascade compensation in time domain and frequency domain and feedback compensation – design of lag, lead, lag-lead compensator using Bode plot. Introduction to P, PI and PID controllers.

UNIT-V CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS**12**

Stepper motors – AC servo motor – DC servo motor – Synchros – sensors and encoders – DC tacho generator – AC tacho generator – Hydraulic controller – Pneumatic controller – Typical application of control system in industry.

3	Richard C.Dorf Robert H.Bishop	Modern Control Systems	Prentice Hall of India,12 th Edition New	2011

Course Objectives

- To study the characteristics of switching devices and its applications in rectifier inverter, chopper and resonant converter.
- To study about power electronic circuits
- To study about industrial control of power electronic circuits
- To study about the various characteristic of SCR and TRIAC
- To study about the various characteristic of PWM inverter
- To study power electronic circuits for different loads

Course Outcomes (COs)

At the end of this course, students will demonstrate the ability to

1. The students will be able to demonstrate the all power semiconductor devices.
2. To expose students to operation and characteristics of power semiconductor devices and passive components, their practical application in power electronics.
3. To provide a practical exposure to operating principles, design and synthesis of different power electronic converters.
4. To introduce students to industrial control of power electronic circuits as well as safe electrical connection and measurement practices.
5. Able to analyze power electronics circuits
6. Able to apply power electronic circuits for different loads

LIST OF EXPERIMENTS

1. Demonstrate the characteristics of SCR.
2. Demonstrate the characteristics of MOSFET.
3. Demonstrate the characteristics of IGBT.
4. Design and Simulation studies on single half and fully controlled convertor using R, RL load.
5. Design and simulation studies on boost convertor using power semiconductor devices..
6. Design and Simulation studies on buck convertor using power semiconductor devices..
7. Design and Simulation studies on single phase invertors using power semiconductor devices.
8. Implementation of single phase half controlled converter using SCR.
9. Implementation of single phase fully controlled convertor using SCR

10. Implementation of DC-DC Boost convertor using MOSFET.
11. Implementation of DC-DC Buck convertor using MOSFET.
12. Implementation of three phase induction motor using PWM inverter

Course Objectives

- To understand Basic Analog Circuits and their applications using Active Devices
- To learn basic function of single stage amplifier, multistage amplifier and power Amplifier and their working principle.
- To understand the Boolean functions, Adder and subtractor circuits.
- To understand Basic Analog Circuits and their applications using Active Devices
- To understand basic construction of feedback circuits and their application in Oscillators
- Understand basic amplifier and oscillator circuits and their application in analog circuits.

Course Outcomes (COs)

1. Determine the output wave forms of Full Wave Rectifiers with and without filters.
2. Draw the equivalent circuit of MOSFET and sketch the V-I characteristics.
3. Design the Darlington amplifier and develop the circuit.
4. Compare the theoretical and practical frequency response of Wein bridge oscillators.
5. Design of Astable and Monostable multivibrators for generation of different waveforms
6. Design of clipper and clamper.

LIST OF EXPERIMENTS

1. Verification of truth table of Logic Gates and Flip Flops.
2. Implementation of Boolean Functions, Adder and Subtractor circuits.
3. a. Code converters, Excess 3, 2's Complement, Binary to gray code, Parity generator and parity checker using suitable ICs.
b. Encoders and Decoders.
4. Counters: Design and implementation of 4-bit modulo counters as synchronous and asynchronous types using FF IC's and specific counter IC.
5. Shift Registers: Design and implementation of 4-bit shift registers in SISO, SIPO, PISO, PIPO modes using suitable IC's.
6. Multiplexer and De-multiplexer (4:1, 8:1 and 1:4, 1:8)
7. Study of NE/SE 555 timer in Astable and Monostable operation.
8. Inverting and non-inverting amplifiers, Adder and comparator using Op-Amps.
9. Integrator and Differentiator using Op-Amps.
10. Study of Analog to Digital Converter and Digital to Analog Converter:
Verification of A/D conversion using dedicated ICs.
11. Voltage to frequency characteristics of NE/ SE 566 VCO IC.
12. Frequency multiplication using NE/SE 565 PLL IC.

Course Objectives

Students will learn

- To provide a platform for understanding the basic concepts of linear control theory and its application to practical systems
- the transfer function of DC Shunt Motor.
- to find the frequency response of different compensators
- to find the step response of P Controller.
- to find the step response of PI & PID Controller.
- to identify the type of damping from the given Characteristic equation.
- the speed control of Dc motor..

Course Outcomes (COs)

1. Determine the transfer function of DC Shunt Motor.
2. Ability to find the frequency response of different compensators
3. Ability to find the step response of P Controller.
4. Ability to find the step response of PI & PID Controller.
5. Ability to identify the type of damping from the given Characteristic equation.
6. Evaluate the speed control of Dc motor.

LIST OF EXPERIMENTS

1. Transfer function of separately Excited DC generator.
2. Transfer function of armature controlled DC shunt motor.
3. Transfer function of field controlled DC shunt motor.
4. Transfer function of AC servomotor.
5. Step response of P, PI, and PID controllers.
6. Identification of type of damping from the given characteristic equation of second order system.
7. Simulation of step response & step response of second order under damped system using „C“ and MATLAB simulink.
8. Frequency response of Lead compensator network.
9. Frequency response of Lag compensator network.
10. DC Motor speed control.

Course Objectives

- Make use of various types of control circuit elements like industrial switches, relays, timers, solenoids, contactors and interlocking arrangement.
- Construct various types of automatic starters for electrical motors.
- Construct control circuits for braking, jogging, reversing operations.
- To make use of PLCs for control applications.
- To study PLCs for controlling the motors.
- To study the single phase preventer circuits using PLC

Course Outcomes

The students will be able to

- Analysis the types of automatic starters for electrical motors.
- Analysis control circuits for braking, jogging, reversing operations.
- Analysis PLCs circuit for control applications.
- Program PLCs for controlling the motors.
- Analysis the single phase preventer circuits using PLC
- Analysis various types of control circuit elements like industrial switches, relays, timers, solenoids, contactors and interlocking arrangement.

LIST OF EXPERIMENTS

1. Conduct acidity test on transformer oil.
2. Wire and test the control circuit for DOL starter and jogging in cage motor.
3. Wire and test the control circuit for automatic and semi-automatic star-delta starter.
4. Wire and test the control circuit for dynamic braking of cage motor.
5. Wire and test the control circuit for Synchronization of Three Phase Alternators by bright lamp method.
6. Test the working of single phase preventer.
7. Wire and test the DOL starter using PLC.
8. Wire and test the Star-Delta starter using PLC.
9. Wire and test the control circuit for jogging, forward and reverse operations using PLC.
10. Wire and test the single phase preventer using PLC.

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder
- To understand the principles of spray process system

Course Outcome

At the end of the course the student will be able

- to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION

PLC- Introductions to the purpose, functions - Identification of various components of the PLC - Typical areas of Application- operations of the PLC in industrial applications.

UNIT II PLC LADDER LOGIC PROGRAMMING

Basic ladder logic symbols – Basic Steps in Ladder logic diagram - Ladder logic evaluation - Start/stop logic – Ladder Logic for simple applications.

UNIT III APPLICATIONS

Ladder logic for motor control - Star Delta PLC Ladder Diagram - Ladder Diagram for DOL Motor Starter.

Course Objectives

- To study and understand the operation of electric drives controlled from a power electronic converter and to introduce the design concepts of controllers.
- To understand the stable steady-state operation and transient dynamics of a motor-load system.
- To study and analyze the operation of the converter/chopper fed dc drive and to solve simple problems.
- To study and understand the operation of both classical and modern induction motor drives.
- To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.
- To analyze and design the current and speed controllers for a closed loop solid-state d.c motor drives.

Course Outcomes

- At the end of the course the students will be able to
- understand the concept of drive characteristics and various converters used for drives.
- understand the operation of electric drives controlled from a power electronic converter.
- understand the stable steady-state operation and transient dynamics of a motor-load system.
- analyze the operation of the converter/chopper fed dc drive and to solve simple problems.
- Understand the operation of both classical and modern induction motor drives.
- Understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.

UNIT I DRIVE CHARACTERISTICS

9

Concept of Electric Drives –parts of electrical Drives – Dynamics of electric drive – torque equation – Selection of power rating of motor-Four quadrant operation of electric drives– Loads with rotational and translational motion – Steady state stability- components of load torques- Modes of operation and Characteristics.

UNIT II CONVERTER AND CHOPPER FED DC MOTOR DRIVES

9

Steady state analysis of the single and three phase converter fed separately excited DC motor drive – continuous and discontinuous conduction -Chopper controlled DC drives - Time ratio control and current limit control - Single, two and four quadrant operations.

UNIT III INDUCTION MOTOR DRIVES

9

Three phase induction motor drives-AC Voltage controlled drives- variable frequency control –V/f control -Slip Power recovery schemes- rotor frequency control -VSI fed induction motor drive and CSI fed induction motor drive- Basic of vector control.

UNIT IV SYNCHROUNOUS MOTOR DRIVES

9

V/f control and self control of synchronous motor: Margin angle control and power factor control - permanent magnet synchronous motor –Sinusoidal and Trapezoidal types, closed loop control of synchronous motor, Basics of Traction drives.

UNIT V CONTROLLER FOR DRIVES

9

Transfer function for DC motor / load and converter – closed loop control with current and speed feedback , design of controllers; current controller and speed controller-converter selection and Characteristics.

WEBSITE

<http://nptel.iitm.ac.in/courses/Webcourse-contents/IIT-Delhi/Industrial Drives/index.htm>

Course Objectives

- To become familiar with different aspects of modeling of components and system
- To study different methods of analysis of power system for power system planning and operation.
- To model steady-state operation of large sized power system
- To understand the power flow problem using efficient numerical methods suitable for computer application.
- To model and analyse power systems under abnormal (fault) conditions.
- To model and analyse the dynamics of power system for small signal and large signal disturbances and to design the system for enhancing stability.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the concepts of power systems.
2. Understand the various power system components.
3. Evaluate fault currents for different types of faults.
4. Understand the generation of over-voltages and insulation coordination.
5. Understand basic protection schemes.
6. Understand concepts of HVdc power transmission and renewable energy generation.

UNIT I THE POWER SYSTEM – AN OVERVIEW AND MODELING 12
 Modern Power System - Basic Components of a power system - Per Phase Analysis
 Generator model - Transformer model - line model. The per unit system -Change of base.

UNIT II POWER FLOW ANALYSIS 12
 Introduction - Bus Classification - Bus admittance matrix, Nodal method, Singular transformation method without mutual coupling - Solution of non-linear Algebraic equations - Gauss Seidal method - Newton Raphson method - Fast decoupled method - Flow charts and comparison of the three methods.

UNIT III FAULT ANALYSIS - BALANCED FAULT 12
 Introduction – Balanced three phase fault – short circuit capacity – systematic fault analysis using bus impedance matrix – algorithm for formation of the bus impedance matrix.

UNIT IV FAULT ANALYSIS – SYMMETRICAL COMPONENTS AND UNBALANCED FAULT 12
 Introduction – Fundamentals of symmetrical components – sequence impedances – sequence networks – single line to ground fault – line fault - Double line to ground fault – Unbalanced fault analysis using bus impedance matrix.

UNIT V POWER SYSTEM STABILITY 12
 Basic concepts and definitions – Rotor angle stability – Voltage stability – Mid Term and

Long Term stability – Classification of stability – An elementary view of transient stability – Equal area criterion – Responses to a short circuit fault- factors influencing transient stability – Numerical integration methods – Euler’s method – modified Euler’s method – Runge Kutta methods.

WEBSITE

<http://www.powerqualityanddrives.com>

Course Objectives

- To study the Architecture of 8085 and 8051.
- To study the addressing modes and instruction set of 8085 and 8051.
- To introduce the need and use of Interrupt structure.
- To develop skill in simple program writing.
- To introduce commonly used peripheral/interfacing ICs and Advanced Processors.
- To study the advanced processors

Course Outcomes

1. At the end of this course, students will demonstrate the ability to Explain about the architecture of 8051 microprocessor, pin configuration, interrupts and the timing diagram of 8085
2. Develop the assembly language program using mnemonics and corresponding machine code based on architecture of 8051 microprocessor
3. Define the 8051 microcontroller with its architecture, pinouts, memory organization, interrupts and compare the programming concepts with 8051
4. Illustrate the interfacing of 8085 with various peripheral devices for transmission, reception and control of data
5. Make use of the data conversion technique such as ADC and DAC and to interface with 8085 processor and 8051 microcontroller
6. Develop the microcontroller assembly language program for various real time applications

UNIT I 8085 PROCESSOR 9

Architecture – Functional block diagram – Signals – Memory interfacing – I/O ports and data transfer concepts – Timing Diagram – Interrupt structure.

UNIT II INSTRUCTION SETS 9

Instruction format and addressing modes – Assembly language format – Data transfer, data manipulation and control instructions.

UNIT III PERIPHERAL INTERFACING 9

Study of Architecture and programming of ICs: 8255 PPI, 8259 PIC, 8251 USART, 8279 Key board / display controller and 8253 Timer/ Counter – Interfacing with 8085 – A/D and D/A converter interfacing.

UNIT IV 8051 MICRO CONTROLLER 9

Architecture – Functional block diagram – Instruction format and addressing modes – Interrupt structure – Timer – I/O ports – Serial communication.

UNIT V ADVANCED PROCESSORS 9

Architecture of PIC 16C7X MICROCONTROLLER - memory organization – Addressing modes – Instruction set – Introduction to TMS320C47 DSP controller and ARM Processors.

2. <http://www.berk.tc/micropro/microlinks.htm>
3. <http://www.arm.com/products/processors/instruction-set-architectures/index.php>

Course Objectives

- To expose the students to the fundamentals of microcontroller based system design.
- To teach I/O and RTOS role on microcontroller.
- To impart knowledge on PIC Microcontroller based system design. To introduce Microchip PIC 8 bit peripheral system Design
- To give case study experiences for microcontroller based applications
- To study interface systems for 8051

Course Outcomes

- At the end of the course the student will be able to understand the concepts of PIC
- Define the 8051 microcontroller with its architecture, pinouts, memory organization, interrupts and compare the programming concepts with 8051
- Illustrate the interfacing of 8085 with various peripheral devices for transmission, reception and control of data
- Make use of the data conversion technique such as ADC and DAC and to interface with 8085 processor and 8051 microcontroller
- Develop the microcontroller assembly language program for various real time applications
- To analyse the real time application of it.
-

UNIT I 8051 ARCHITECTURE**9**

Architecture – memory organization – addressing modes – instruction set –Timers - Interrupts - I/O ports, Interfacing I/O Devices – Serial Communication.

UNIT II 8051 PROGRAMMING**9**

Assembly language programming – Arithmetic Instructions – Logical Instructions –Single bit Instructions – Timer Counter Programming – Serial Communication Programming Interrupt Programming – RTOS for 8051 – RTOSLite – FullRTOS – Task creation and run – LCD digital clock/thermometer using FullRTOS

UNIT III PIC MICROCONTROLLER**9**

Architecture – memory organization – addressing modes – instruction set – PIC programming in Assembly & C –I/O port, Data Conversion, RAM & ROM Allocation, Timer programming, MP- LAB.

UNIT IV PERIPHERAL OF PIC MICROCONTROLLER**9**

Timers – Interrupts, I/O ports- I2C bus-A/D converter-UART- CCP modules -ADC, DAC and Sensor Interfacing –Flash and EEPROM memories.

UNIT V SYSTEM DESIGN – CASE STUDY**9**

Interfacing LCD Display – Keypad Interfacing - Generation of Gate signals for converters and Inverters - Motor Control – Controlling DC/ AC appliances – Measurement of frequency - Stand alone Data Acquisition System.

TOTAL: 45 HOURS

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Muhammad Ali Mazidi, Janice G. Mazidi and Rolin D. McKinlay	The 8051 Microcontroller and Embedded Systems"	Prentice Hall,	2005.

2	John Iovine	PIC Microcontroller Project Book	McGraw Hill	2000
3	Myke Predko	Programming and customizing the 8051 microcontroller	Tata McGraw Hill	2001

Course Objectives

- To provide sound knowledge about constructional details and design of various electrical machines.
- To study mmf calculation and thermal rating of various types of electrical machines.
- To design armature and field systems for D.C. machines.
- To design core, yoke, windings and cooling systems of transformers.
- To design stator and rotor of induction machines.
- To design stator and rotor of synchronous machines and study their thermal behaviour.

Course Outcomes

- At the end of this course, students will demonstrate the ability to
1. Understand the construction of electrical machines.
 2. Understand the various factors which influence the design: electrical, magnetic and thermal loading of electrical machines
 3. Understand the principles of electrical machine design
 4. carry out a basic design of an AC and DC machine.
 5. Use software tools to do design calculations.
 6. Understand performance characteristics of electrical machines

UNIT I MAGNETIC CIRCUITS AND COOLING OF ELECTRICAL MACHINES 9

Major consideration in electrical machine design –electrical engineering materials –design limitations and specifications- concept of magnetic circuit – mmf calculation for various types of electrical machines – Gap Contraction Factor –Net Length of Iron -real and apparent flux density of rotating machines -direct and indirect cooling methods – cooling of turbo alternators.

UNIT II DC MACHINES**9**

Constructional details – output equation – main dimensions - choice of specific loadings – choice of number of poles – armature design – winding diagrams – design of field poles and field coil – design of commutator and brushes

UNIT III TRANSFORMERS**9**

Constructional details of core and shell type transformers – output rating of single phase and three phase transformers — design of core, yoke and windings of transformers – equivalent circuit parameters from designed data – design of tank and cooling tubes of transformers.

UNIT IV THREE PHASE INDUCTION MOTORS**9**

Constructional details of squirrel cage and slip ring motors – output equation – main dimensions –

choice of specific loadings – design of stator – winding diagrams - design of squirrel cage and slip ring rotor - introduction to computer aided design.

UNIT V SYNCHRONOUS MACHINES

9

Output equation – choice of specific loadings – main dimensions – short circuit ratio – design of stator and rotor of cylindrical pole and salient pole machines - design of field coil - performance calculation from designed data - introduction to computer aided design.

2. www.advancedmotortech.com/images/InductionMachine_Jan2012.pdf

OBJECTIVES

On completion of the course, students are able to:

- To understand the basic architecture of 8- bit microprocessors.
- Able to write programs on 8085 microprocessor based systems.
- Identify the addressing modes of an instruction.
- Develop programming skills in assembly language
- .To understand the basic architecture of microcontroller.
- To study about interfacing system.

COURSE OUTCOMES(COs)

1. Apply the basic arithmetic and logical operations using 8085 microprocessor with the help of assembly language programming
2. Analyze the performance of different weighted and non weighted codes, its conversions with logic diagram using 8085 microprocessor
3. Illustrate the interfacing of 8085 with various peripheral devices for serial and parallel communication of data
4. Demonstrate the basic instructions with 8051 microcontroller execution including conditional jumps, looping and calling subroutines
5. Make use of the basic conversion techniques of ADC and DAC to interface it with 8085 processor and 8051 microcontroller
6. Develop a model using processor to apply computing platform and software for engineering problems

LIST OF EXPERIMENTS**8-bit Microprocessor**

1. Simple arithmetic operations
 - Multi precision addition / subtraction / multiplication / division
2. Programming with control instructions
 - Increment / Decrement
 - Ascending / Descending order
 - Maximum / Minimum of numbers
 - Rotate instructions.
 - Hex / ASCII / BCD code conversions
3. Interface Experiments
 - A/D Interfacing
 - D/A Interfacing
 - Traffic light controller
4. Simple Interfacing experiments using 8251, 8279 and 8254
5. Programming practice on assembler and simulator tools

8-bit Micro controller

6. Demonstration of basic instructions with 8051 Micro controller execution, including
 - Conditional jumps, looping
 - Calling subroutines
 - Stack parameter testing
7. Parallel port programming with 8051 using port 1 facility
 - Stepper motor and D/A converter
8. Programming Exercise on
 - RAM direct addressing
 - Bit addressing
9. Programming practice using simulation tools and C - compiler
 - Initialize timer
 - Enable interrupts
10. Study of micro controllers with flash memory.

Additional Experiments Using 8051 Microcontroller:

1. A/D Conversion with LCD display.
2. Speed control of DC Motor using PWM technique.
3. Programming with flash controller (EPROM, EEPROM).
4. Interfacing Monitor and Keyboard.
5. Seven Segment display interface.
6. Interfacing of I/O devices (Relay, LED and Buzzer).
7. PLC programming using 8051 microcontroller.
8. Study of “In Circuit Debugger”.

To be able to deal with motor rewinding and transformer winding connections.

Course Objectives

- To introduce the basic electrical Estimation in the lab.
- To be able to deal with motor rewinding and transformer winding connections.
- To study the electrical design of party hall.
- To study the electrical design of saw mill.
- To study the electrical design of primary health centre.
- To study the electrical design of university building.

Course Outcomes

At the end of the course the students will be able

- To do wiring and winding for all electrical equipment"s.
- To analysis the electrical estimation for residential flat
- To analysis the electrical estimation for University building
- To analysis the electrical estimation for Primary health centre
- To analysis the electrical estimation for Party hall
- To analysis the electrical estimation for Saw mill

LIST OF EXPERIMENTS**ELECTRICAL ESTIMATION:**

1. Residential single bed room Flat.
2. Industrial power wiring having 2 or 3 machines and Irrigation Pump motor (5hp) wiring.
3. University building having 6 class rooms with Computer centre having 35 computers, a/c unit, UPS, light and fan.
4. Primary Health Centre having minimum 6 rooms.
5. Lighting scheme of a party hall having minimum 20 twin TL fittings and Street Light service having 12 lamp light fittings
6. Erection of one no. 15hp induction motor in Saw mill / Flour mill and 3 phase Service connection to a building having 5 KW load.

REWINDING:

7. Design and wind 230/12-0-12 volt, 500mA Transformer and test it.
8. Design and wind a No volt coil used in starter.
9. Study about the winding connection diagram for Single Phase Induction Motor.

10. Study about the winding connection diagram for Three Phase Induction Motor.
11. Wind and insert the coils for ceiling fan motor (minimum 2 coils).
12. Give end connection for a 3 phase Induction motor winding for a 2 pole/ 4 pole operations and run it. Measure the No load current and speed.

Course Objectives

Students will learn

- Specification and classification of PCBs
- PCB Fabrication
- Different application of PCB
- Service to domestic appliances
- Installation to domestic appliances
- Repair of domestic appliances

Course Outcomes

Students will able to analysis

- Techniques of PCBs
- PCB Fabrication
- Real time application of PCB
- Service to domestic appliances
- Installation to domestic appliances
- Repair of domestic appliances

UNIT I PCB BASIC PRINCIPLE

Specification and classification of PCBs - Techniques of layout design - Artwork generation
Methods - General design factor for digital and analog circuits .

UNIT II PCB FABRICATION

Introduction to PCB technology - PCB Fabrication techniques-single, double sided and multilayer -
Etching: chemical principles and mechanisms - Post operations- stripping, black oxide coating and
solder masking - PCB component assembly processes

UNIT III INSTALL, SERVICE AND REPAIR OF DOMESTIC APPLIANCES

Installation procedure of electric iron, mixer grinder, ceiling and table fan - Working of Ceiling and
Table Fan - circuit description, fault finding - removal of faulty component

SEMESTER VII

17BECC701 PROFESSIONAL ETHICS, PRINCIPLE OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT

L T P C 3 0 0

3

SECTION 5.06 Course Objectives

- To enable the students to create an awareness on Engineering Ethics, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.
- To study ethics in society and realize the responsibilities and rights in the society
- To study advanced philosophical knowledge of the profession of recreation and leisure
- To study synthesis of trends and issues as related to current professional practice
- To evaluation of organizational theories and human resource management principles
- To study the ethical practice and ethical management

Course Outcome

At the end of this course, students will be able to

- Apply ethics in society and realize the responsibilities and rights in the society
- Discuss the ethical issues related to engineering
- Advanced philosophical knowledge of the profession of recreation and leisure
- Synthesis of trends and issues as related to current professional practice
- Evaluation of organizational theories and human resource management principles
- Ethical practice and ethical management

UNIT I ENGINEERING ETHICS

9

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES

9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING

9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – **Course Objectives** – Setting **Course Objectives** – Process of Managing by **Course Objectives** – Strategies, Policies and Planning Premises– Forecasting – Decision-making – Formal and informal organization
– Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING

9

Human Factors – Creativity and Innovation – Harmonizing **Course Objectives** – Leadership – Types

of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION

9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, **Course Objectives**.

WEBSITES

1. www.pdf-search-engine.com/protection-and-switchgear-pdf.html - 69k
2. <https://subjects.ee.unsw.edu.au/elec9712/>.

Course Objectives

- To acquire software development skills and experience in the usage of standard package necessary for analysis and simulation of power system required for its planning, operation and control.
- The various line parameters.
- The voltage regulation and efficiency of different types of transmissions.
- A network under unsymmetrical fault conditions and interpret the results.
- The bus impedance and admittance matrix.
- A network under symmetrical fault conditions and interpret the results

t

Course Outcomes (COs)

1. Apply load flow analysis to an electrical power network and interpret the results using Gauss-Seidel and Newton Raphson Methods.
2. Apply load flow analysis to an electrical power network and interpret the results using Fast-Decoupled Methods.
3. Explain the transient stability analysis of single and multi machine infinite bus system
4. Examine the electromagnetic transients and its impact in power system studies
5. Evaluate the frequency dynamics, economic dispatch of single and two area power systems.
6. Evaluate the Economic dispatch in power systems

LIST OF EXPERIMENTS

1. Computation of Parameters and Modeling of Transmission Lines.
2. Formation of Bus Admittance and Impedance Matrices and Solution of Networks.
3. Load Flow Analysis - I: Solution of Load Flow and related Problems
using Gauss-Seidel Method
4. Load Flow Analysis - II: Solution of Load Flow and related Problems using Newton-Raphson and Fast-Decoupled Methods
5. Study of symmetrical and unsymmetrical Fault Analysis.
6. Transient and Small Signal Stability Analysis: Single-Machine Infinite Bus System
7. Transient Stability Analysis of Multi-machine Power Systems
8. Electromagnetic Transients in Power Systems.
9. Load – Frequency Dynamics of Single- Area and Two-Area Systems.
10. Economic Dispatch in Power Systems without considering transmission losses.
11. Economic Dispatch in Power Systems with transmission losses.

Course Objectives

Students will learn

- Component block of ETAP
- to Draw Single Line Diagram of Power System
- Component block of PSCAD
- Case study of it

Course Outcomes

Students will analysis

- Component block of ETAP
- Single Line Diagram of Power System
- Component block of PSCAD
- Case study of it

UNIT I INTRODUCTION – ETAP

Introduction – Study of components block – To draw Single Line Diagram of Power System.

UNIT II APPLICATION

Load flow Analysis of three bus System and Fault Analysis.

UNIT III INTRODUCTION – PSCAD

PSCAD- Introduction, Features- Study of components block- Creating a small simulation case using PSCAD.

SEMESTER VIII

17BEEE801A ENERGY MANAGEMENT, UTILIZATION AND ENERGY AUDITING

L T P C 3 0 0 3

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behavior changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

9

Economics analysis – Depreciation Methods, time value of money, Calculation of simple payback, net present value, internal rate of return, present worth method, replacement analysis, life cycle costing analysis.

UNIT III ILLUMINATION, HEATING AND WELDING

9

Nature of radiation – definition – laws – photometry – lighting calculations – design of illumination systems (for residential, industrial, commercial, health care, street lightings, sports, administrative complexes) - types of lamps - energy efficiency lamps. Methods of heating, requirement of heating material – design of heating element – furnaces – welding generator – welding transformer and its characteristics.

UNIT IV ELECTRIC TRACTION

9

Introduction – requirements of an ideal traction system – supply systems – mechanics of train movement – traction motors and control – multiple units – braking – current collection systems – recent trends in electric traction.

UNIT V BASIC PRINCIPLES OF ENERGY AUDIT**9**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

- To study about the characteristics of smart grid, models and operating principles.
- To study about energy storage and communication systems used in smart grid.
- To study the models and operating principles of smart grid
- To study the different batteries technology
- To get knowledge about communication system in smart grid
- To study about reliability and stability process

Course Outcomes

At the end of the course the student will be able to

1. Gain the knowledge about Distributed Generations.
2. Acquire the knowledge about Island mode of operation.
3. Understand the basic knowledge about storage devices
4. Analysis the different batteries technology.
5. Understand the communication system in smart grid
6. Analysis the reliability and stability process

UNIT I INTRODUCTION : SMART GRID AND EMERGING TECHNOLOGIES 9

Defining a smart grid – Characteristics of smart grid - Values of a smart grid – The economic Case – The environmental Case – Benefits to utilities – Benefits to consumers – Power system components – Power system protection: Traditional Vs Smart – Case study – Generation fundamentals – Traditional Generations – Distributed Generations – micro grid generation – Generator Protection – Challenges and Opportunities – Cost of smart grid – Government Regulations – Emerging Technologies - FACTS – optimizing integration systems – Multi generation buildings – Case study.

UNIT II SMART GRID: MODELS AND OPERATING PRINCIPLES 9

Solar Photovoltaic models and grid Integration – Design of a 2 MVA PV station – DG system as part of utility power system
– The smart grid PV - UPS DG system – Split DC Bus UPS – PV DG system – Island mode of operation – Parallel operation of Inverters – Power Quality. Wind turbine model and grid Integration – Micro turbine model & Grid Integration. Electric Vehicle model and Grid Integration.

UNIT III SMART GRID: DISTRIBUTED GENERATION SYSTEMS 9

Power Converter System – Control System Development – Current limit and Saturation Control, Simulation using simulate and MATLAB. Inverter Parallel operation – Load sharing control Algorithm – Distributed Generation System and Newton Raphson method in power flow – Plant modeling and 3 phase 4 wire DG unit topology – Single distributed generation System –MIMO Linear system Stability robustness – PWM rectifier control – 3 Phase AC – DC – AC topology.

UNIT IV ENERGY STORAGE AND COMMUNICATION**9**

State-of-the art storage devices – Battery types – Ultra capacitors based Energy Storage System – Flywheel – Wide Area Network – Substation Information System – Wireless Networks – Distribution Automation – AMI Networks – Utility monitoring and Control – Inter-system Coordination – Industrial systems – Consumer Residential Systems – Network Protection – Channel model Fundamental – Low, medium, High voltage, main Topologies – Residential and Business Indoor wiring Topologies – The Power line Channel model – Digital Transmission Techniques - Threats – IEC61850 Considerations.

UNIT V SMART GRID: RELIABILITY, STABILITY AND COMPONENT INTEGRATION**9**

Smart Grid Programming – Virtual Power Producer – Intelligent reconfiguration using SCADA – Problems in distributed grids – Solutions. Integration of Mini – Micro generation in distribution Grids – Power supply Quality generic standards – Renewable Energies specific standards – Smart Grid stability analysis schemes – Supply guarantee and Power quality – Integration in power systems – Distributed Generation advantages and needs.

LIST OF DEPARTMENT ELECTIVES

ELECTIVE – I (ONLY APPLICABLE FOR FIFTH SEMESTER)

17BEEE5E01 NETWORK ANALYSIS AND SYNTHESIS L T P C 3 0 0 3

Course Objectives

- To understand the concept of network analysis.
- To understand the basic principles of network theorems.
- To study the electrical circuits using Laplace Transforms
- To study the transient and steady-state response of electrical circuits.
- To study the sinusoidal steady-state (single-phase and three-phase).
- To get the knowledge of two port circuit behavior.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Apply network theorems for the analysis of electrical circuits.
2. Obtain the solution of first and Second order system
3. Analyse the electrical circuits using Laplace Transforms.
4. Obtain the transient and steady-state response of electrical circuits.
5. Analyse circuits in the sinusoidal steady-state (single-phase and three-phase).
6. Analyse two port circuit behavior.

UNIT-I INTRODUCTION

9

Circuits elements, Independent and dependent sources, signals and wave forms; periodic and singularity voltages, step, ramp, impulse, Doublet. Development of circuit concept, Conventions for describing networks.

UNIT-II GRAPH THEORY

9

Graph of a Network, definitions, tree, co tree, link, basic loop and basic cut set, Incidence matrix, cut set matrix, Tie set matrix Duality, Loop and Node methods of analysis.

UNIT-III NETWORK THEOREMS (APPLICATIONS TO AC NETWORKS)

9

Super-position theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, Reciprocity theorem. Millman's theorem, compensation theorem, Tellegen's theorem.

UNIT-IV FILTERS SYNTHESIS

9

Classification of filters, Ladder network, T section, IT section, terminating half section. Pass bands and stop bands. Design of constant-K, m-derived filters. Composite filters.

UNIT-V NETWORK SYNTHESIS

9

Positive real function, definition and properties; Properties of LC, RC and RL driving point functions, synthesis of LC, RC and RL driving point admittance functions using Foster and Cauer first and second forms.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	S Chakraborty Ghosh A	Network Analysis & Synthesis	Tata Mc graw Hill 1 st edition	2009

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	M.E. Van Valkenburg	Network Analysis	Phi Learning - 3rd Edition	2014
2	Gobind Daryanani	Principles of Active Network Synthesis & Design	Wiley India Pvt Ltd	2009

3 Course Objectives

- To study the state variable analysis
- To provide adequate knowledge in the phase plane analysis and also describing function analysis.
- To study the analysis discrete time systems using conventional techniques.
- To analyze the stability of the systems using different techniques.
- To study the design of optimal controller.
- To study the types of compensators

Course Outcomes

At the end of the course the student will be able to

- understand the state variable analysis, Z- transform, state equation
- Construct the frequency response of the system using various plots
- Correlate the time and frequency domain specifications and effect of compensation
- Design the different types of compensators using frequency response plots to stabilize the control system
- Explain the state variable representation of physical systems with the effects of state feedback its assessment for linear-time invariant systems.

UNIT 1 STATE VARIABLE ANALYSIS**9**

Concept of state – State Variable and State Model – State models for linear and continuous time systems – Solution of state and output equation – controllability and observability - Pole Placement – State observer Design of Control Systems with observers

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS**9**

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearising non-linear systems - Construction of phase portraits – Singular points – Limit cycles Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM**9**

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT IV STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM**9**

State equation – Solutions – Realization – Controllability – Observability – Stability – Jury's test.

UNIT V OPTIMAL CONTROL**9**

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control – Optimal estimation – Multivariable control design.

Course Objectives

- To study the basic concepts of electric hybrid vehicles.
- To study about energy storage system for hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives

Course Outcomes

At the end of the course the student will be able to understand the concepts of electric hybrid vehicle.

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION**9**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS**9**

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT**9**

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE**9**

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES**9**

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies,

implementation issues of energy management strategies.

2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley	2003

Course Objectives

- To introduce the fundamental techniques of analog, digital and data communication.
- To explain satellite and fibre optic communication and Networking systems.
- To understand basic signals, analog modulation, demodulation and radio receivers.
- To explain the characteristics and model of transmission medium
- To study the recent techniques.
- To get the knowledge about the application of it

Course Outcomes

- 1.Ability to understand and analyse analog circuits.
- 2.Gain Knowledge on digital modulation techniques.
- 3.Understand coding techniques
- 4.Analysis the real time application of it.
- 5.Analysis the model of transmission medium.
6. to able to modulation and demodulation techniques.

UNIT I MODULATION SYSTEMS**9**

Time and frequency domain representation of signals, amplitude modulation and demodulation, frequency modulation and demodulation, super heterodyne radio receiver. Frequency division multiplexing. Pulse width modulation.

UNIT II TRANSMISSION MEDIUM**9**

Transmission lines – Types, equivalent circuit, losses, standing waves, impedance matching, bandwidth; radio propagation – Ground wave and space wave propagation, critical frequency, maximum usable frequency, path loss, white Gaussian noise.

UNIT III DIGITAL COMMUNICATION**9**

Pulse code modulation, time division multiplexing, digital T-carrier system. Digital radio system. Digital modulation: Frequency and phase shift keying – Modulator and demodulator, bit error rate calculation.

UNIT IV DATA COMMUNICATION AND NETWORK PROTOCOL**9**

Data Communication codes, error control. Serial and parallel interface, telephone network, data modem, ISDN, LAN, ISO–OSI seven layer architecture for WAN.

UNIT V SATELLITE AND OPTICAL FIBRE COMMUNICATION**9**

Orbital satellites, geostationary satellites, look angles, satellite system link models, satellite system link equations. Advantages of optical fibre communication – Light propagation through fibre, fibre loss, light sources and detectors.

2. www.discogs.com/artist/Nephlim+Modulation+Systems

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To study about the perception concept in design
- To study about the design using ART phenomena
- To study about the vector quantization
- To have a solid understanding of Basic Neural Network

Course Outcomes

- At the end of the course the student will be able to solve problems using neural
1. Understand the basic concepts of neural networks and its applications in various domains
 2. Gain knowledge about learning process in Neural Networks
 3. Apply perception concept in design
 4. Design using ART phenomena
 5. Gain knowledge on SOM concepts
 6. Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS**9**

Biological Neuron, artificial neuron-comparison, neuron model, architectures-Feedforward and recurrent types. Perceptron -learning rule-graphical, algorithm, limitations, multilayer network.

UNIT II BACKPROPAGATION NETWORKS**9**

Backpropagation algorithm-derivation of up-dation rules, drawbacks. Variants of Backpropagation algorithm-momentum, variable learning rate-simple problems. Data based modeling using backpropagation algorithm – applications - example.

UNIT III ASSOCIATIVE AND SELF-ORGANIZING NETWORKS**9**

Associative Learning –supervised and unsupervised types- Instar , outstar and Kohonen networks, Bidirectional associative memories, Hopfield Network. Self organizing map algorithm –Simple problems.

UNIT IV SUPERVISED AND UNSUPERVISED LEARNING NETWORKS**9**

Supervised Learning Neural Networks – Radial Basis Function Networks - Reinforcement Learning – Unsupervised Learning Neural Networks – Adaptive Resonance architectures – Advances in Neural networks.

UNIT V APPLICATIONS**9**

Applications – Electric drives-Speed control of DC Shunt motor- Neural Network Toolbox in Mat lab-Steepest Descent Backpropagation.

2	Laurene V. Fausett	Fundamentals of Neural Networks-architecture, algorithm and application	Pearson Education	2004

Course Objectives

- To study the various representations of data, register transfer language for micro operations and organization and design of a digital computer.
- To teach the concept of micro-programmed control unit, the central processing unit, stack and instruction formats.
- To Study the various arithmetic operation's algorithms
- To study the hardware implementations and concept of pipelining and vector processing.
- To illustrate the techniques to communicate with input and output devices.
- To study the recent techniques.

Course Outcomes

1. Understand the concepts of microprocessors, their principles and practices.
2. Write efficient programs in assembly language of the 8086 family of microprocessors.
3. Organize a modern computer system and be able to relate it to real examples.
4. Develop the programs in assembly language for 80286, 80386 and MIPS processors in real and protected modes.
5. Implement embedded applications using ATOM processor.
6. Analysis the real time application of it.

UNIT I DATA REPRESENTATION, MICRO-OPERATIONS, ORGANIZATION AND DESIGN
9

Data representation: Data types, complements, fixed-point representation, floating-point representation, other binary codes and error detection codes. Register transfer and micro operations: Register transfer language, bus and memory transfers, arithmetic micro-operations, logic micro-operations, shift micro-operations, arithmetic logic shift unit. Basic computer organization and design: Instruction codes, computer registers, computer instructions, timing and control, instruction cycle, memory reference instructions, input-output and interrupt. Complete computer description, design of basic computer, design of accumulator.

UNIT II CONTROL AND CENTRAL PROCESSING UNIT
9

Micro programmed control: memory, address sequencing, micro-program example, design of control unit. Central processing unit: General registers and organization, stack and pointer organization, instruction formats, modes, data transfer and manipulation, program control, reduced Instruction set computer.

UNIT III COMPUTER ARITHMETIC, PIPELINE AND VECTOR PROCESSING
9

Computer arithmetic: Addition, subtraction, multiplication and division algorithms, floating-point arithmetic operations, decimal arithmetic unit, decimal arithmetic operations. Pipeline and vector processing: Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, RISC pipeline, vector processing array processors.

UNIT IV INPUT-OUTPUT ORGANIZATION
9

Input-output organization: Peripheral devices, input-output interface, asynchronous data transfer (UART and USART), modes of transfer, priority interrupt, direct memory access, input-output processor, serial communication.

Memory organization: Memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management.

2. ece.eng.wayne.edu/~gchen/ece4680/lecture-notes/lecture-notes.html

Course Objectives

Students will learn

- Application of stacks and queues
- Different types of ADT
- Different data analysis
- Different algorithm design and analysis
- Different algorithm for graphs
- Recent trends

Course Outcomes

Students will understand

- design and applications of linear, tree, and graph structures
- Application of stacks and queues
- Different types of ADT
- Different data analysis
- Different algorithm design and analysis
- Different algorithm for graphs

UNIT I LINEAR STRUCTURES 9

Abstract Data Types (ADT) – List ADT – array-based implementation – linked list implementation – cursor-based linked lists – doubly-linked lists – applications of lists – Stack ADT – Queue ADT – circular queue implementation – Applications of stacks and queues

UNIT II TREE STRUCTURES 9

Need for non-linear structures – Tree ADT – tree traversals – left child right sibling data structures for general trees – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT

UNIT III BALANCED SEARCH TREES AND INDEXING 9

AVL trees – Binary Heaps – B-Tree – Hashing – Separate chaining – open addressing – Linear probing

UNIT IV GRAPHS 9

Definitions – Topological sort – breadth-first traversal - shortest-path algorithms – minimum spanning tree – Prim's and Kruskal's algorithms – Depth-first traversal – biconnectivity – euler circuits – applications of graphs

UNIT V ALGORITHM DESIGN AND ANALYSIS 9

Greedy algorithms – Divide and conquer – Dynamic programming – backtracking – branch and bound – Randomized algorithms – algorithm analysis – asymptotic notations – recurrences – NP complete problems

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models
- To study about the development of fuzzy controllers
- To Understand the concepts of adaptive fuzzy control
- To study the fuzzy based model system

COURSE OUTCOMES

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT I FUZZY SETS AND RELATIONS**9**

Classical sets, fuzzy sets-operation, properties. Fuzzy relations-Equivalence and tolerance relation, Fuzzification- membership function-types, methods.

UNIT II FUZZY INFERENCE SYSTEM**9**

Building Blocks of a Fuzzy system, fuzzification, fuzzy Rule-based Systems. Composition of rules, types of inference, defuzzification methods.

UNIT III FUZZIFICATION AND FUZZY ARITHMETIC**9**

Lambda-cuts for fuzzy sets-lambda cuts for fuzzy relations- defuzzification methods - Extension principle-functions of fuzzy sets- fuzzy transform-fuzzy numbers-approximate methods of extension-vertex method-DSW algorithm

UNIT IV FUZZY LOGIC AND FUZZY RULE BASED SYSTEMS**9**

Fuzzy logic –approximate reasoning-fuzzy tautologies-contradictions-equivalence-and logical proofs-other forms of implication operation and composition operation-linguistic hedges-rule based systems-fuzzy associative memories- multi objective decision making.

UNIT V APPLICATIONS**9**

Fuzzy Tool box in Mat lab – Case Study – Temperature Control in a Shower-Water level Control in a Tank.

TOTAL 45 HOURS**TEXTBOOKS**

Course Objectives

- To study about the distributed generation system.
- To study about the relaying and protections in the distributed system.
- To get the knowledge of distributed generation, boiler turbine monitoring system.
- To get the knowledge in Planning of distributed system
- To know the control of DG inverter
- To gather knowledge of protection of distributed systems

Course Outcomes

At the end of the course the students will

- Understand the distributed generation system , boiler turbine monitoring system.
- Understand the Planning of distributed system
- Analysis the control of DG inverters
- Analysis the protection of distributed systems
- Understand the rel time system
- Analysis the norms and standards used in it

UNIT I INTRODUCTION TO DISTRIBUTED GENERATION 9

Introduction to the concept of distributed generation - Distributed generation advantages and needs - Radial distribution system protection: Fuse, circuit breakers, reclosers- Per-unit analysis, fault analysis, sequence component analysis, sequence models of distribution system components. Implications of DG on distribution system protection coordination.

UNIT II DISTRIBUTION SYSTEM LOADING 9

Introduction – Distribution system loading, line drop model, series voltage regulators and on line tap changers- Power quality requirements and source switching using SCR based static switches- Loop and secondary network distribution grids and impact of DG operation.

UNIT III RELAYING AND PROTECTION 9

Relaying and protection, distributed generation interconnection relaying, sensing using CTs and PTs- Intentional and unintentional islanding of distribution systems. Passive and active detection of unintentional islands, non detection zones - EMI considerations in DG applications.

UNIT IV DISTRIBUTED GENERATION PLANNING 9

DG planning and forecasting techniques - Load characteristics: Definitions - tariffs and metering of energy, cost implications of power quality, cost of energy and net present value calculations and implications on power converter design- Distribution Transformers: Types. Distribution sub-stations and primary systems: Voltage drop and power loss calculations: Distribution feeder costs.

UNIT V DG INVERTERS CONTROL**9**

Control of DG inverters, phase locked loops, current control and DC voltage control for stand alone and grid parallel operations. Protection of the converter.

TOTAL: 45 HOURS**TEXT BOOK**

3 Course Objectives

- To introduce the concept of analyzing discrete time signals and systems in the time and frequency domain.
- To classify signals and systems and their mathematical representation.
- To analyse the discrete time systems.
- To study various transformation techniques and their computation.
- To study about filters and their design for digital implementation.
- To study about a programmable digital signal processor and quantization effects.

Course Outcomes

1. Represent signals mathematically in continuous and discrete-time, and in the frequency domain.
2. Analyse discrete-time systems using z-transform.
3. Understand the Discrete-Fourier Transform (DFT) and the FFT algorithms.
4. Design digital filters for various applications.
5. Apply digital signal processing for the analysis of real-life signals.
6. Analyse the real time application of it

UNIT I INTRODUCTION

9

Classification of systems: Continuous, discrete, linear, causal, stable, dynamic, recursive, time variance; classification of signals: continuous and discrete, energy and power; mathematical representation of signals; sampling techniques, quantization, quantization error, Nyquist rate, aliasing effect, analog to digital conversion.

UNIT II DISCRETE TIME SYSTEM ANALYSIS

9

Discrete Fourier series, Fourier transform of discrete sequence, Z-transform and its properties, inverse z-transforms; difference equation – Solution by z-transform, application to discrete systems - Stability analysis, frequency response – Convolution.

UNIT III DISCRETE FOURIER TRANSFORM & COMPUTATION

9

Discrete Fourier Transform and its properties - Computation of DFT using FFT algorithm – DIT & DIF - FFT using radix 2 – Butterfly structure.

UNIT IV DESIGN OF DIGITAL FILTERS

9

FIR design: Windowing Techniques - Rectangular, Hamming, Hanning – Need and choice of windows – Linear phase characteristics.

IIR design: Analog filter design - Butterworth filter design using impulse invariant and bilinear transformation - Warping, prewarping - Frequency transformation.

UNIT V PROGRAMMABLE DSP CHIPS**9**

Architecture and features of TMS 320C54 signal processing chip – Overview of instruction set and addressing modes of TMS 320C54

WEBSITES

1. <http://www.dspguide.com>
2. <http://www.dsptutor.freeuk.com>

Course Objectives

- To study and gain knowledge about various sensors.
- To study and gain knowledge about controllers.
- To study the concept of sensors,
- To study the concept of actuators
- To study the various tuning controllers
- To study the application of SCADA.

Course Outcomes (COs)

At the end of the course the student will be able to

1. Understand the concept of sensors,
2. Understand the concept of actuators
3. Analyse the various tuning controllers
4. Analyse the various advanced control techniques used in industrial automation.
5. Understand the application of SCADA.
6. Analyse the SCADA usage in Industries.

UNIT I SENSORS, ACTUATORS**9**

Sensors, Actuators and Signal conditioning Sensors: Displacement sensors, Force sensors, Ultrasonic sensors, Temperature sensors, Pressure sensors etc Actuators: Dc motors, Servo motors, Stepper motors, Piezo electric actuators, Pneumatic actuators etc. Signal Conditioning: Filtering, Amplifying, Isolation, ADC, DAC, Sensor protection circuits, Signal transmission and noise suppression, Estimation of errors and calibration.

UNIT II CONTROLLER TUNING**9**

PI controller, PD controller, PID controller and tuning methods: Ziegler-Nichols tuning method, Cohen coon tuning method, Implementation of PID controllers (digital and analog).

UNIT III AUTOMATION**9**

PLC (Programmable logic controllers): Overview, operation and architecture, PLC programming, Application examples. DCS (Distributed control systems): Overview, Advantages, Functional requirements of Distributed control systems, Communication for distributed control

UNIT IV APPLICATIONS**9**

Application examples SCADA (supervisory control and data acquisition): Introduction to SCADA, SCADA system components, architecture and communication, SCADA applications.

UNIT V ADVANCED CONTROL TECHNIQUES**9**

Feed forward control, Ratio control, Cascade control, Adaptive control, Duplex or split range control, Override control, internal mode control.

2	Ogata	Modern Control Engineering	5 th edition, , Prentice Hall of India	2010

Course Objectives

- It deals with various types of Sensors & Transducers and their working principle
- It deals with resistive transducers
- It deals with capacitive transducers
- It deals with inductive transducers
- It deals with some of the miscellaneous transducers
- It deals with characteristics of transducers

Course Outcomes

- At the end of the course the student will be able to
1. understand all types of sensors and transducers.
 2. Justify the concept and working principle of different transducers and sensors
 - 3 Justify the transducers that will be utilised in the electrical industries
 4. Identify recent developments in transducer domain
 5. Discover the knowledge for small technology up gradations in it
 6. Analysis the real time application.

UNIT I INTRODUCTION OF TRANSDUCERS**9**

Transducer – Classification of transducers – Basic requirement of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS**9**

Static characteristics – Dynamic characteristics – Mathematical model of transducer – Zero, first order and second order transducers – Response to impulse, step, ramp and sinusoidal inputs.

UNIT III RESISTIVE TRANSDUCERS**9**

Potentiometer –Loading effect – Strain gauge – Theory, types, temperature compensation – Applications – Torque measurement – Proving Ring – Load Cell – Resistance thermometer – Thermistors materials – Constructions, Characteristics – Hot wire anemometer.

UNIT IV INDUCTIVE AND CAPACITIVE TRANSDUCER**9**

Self inductive transducer – Mutual inductive transducers– LVDT Accelerometer – RVDT – Synchros – Microsyn – Capacitive transducer – Variable Area Type – Variable Air Gap type – Variable Permittivity type – Capacitor microphone.

UNIT V MISCELLENEOUS TRANSDUCERS**9**

Piezoelectric transducer – Hall Effect transducers – Smart sensors – Fiber optic sensors – Film sensors – MEMS – Nano sensors, Digital transducers.

Course Objectives

- To study about the concept of intellectual property laws.
- To study about the trade marks and copy rights.
- To study trade marks and its importance
- To get the knowledge of principles of copyrights and the legal process
- To acquire the knowledge of Trade secrets and its security
- To gain various practical case studies of patent programme

Course Outcomes

At the end of the course the student will be able to

- understand the concepts of IPR.
- understand need of trade marks and its importance
- understand principles of copyrights and the legal process
- understand trade secrets and its security
- analysis various practical case studies of patent programmes
- handling higher level management legality in patent and trading

UNIT I INTRODUCTION**9**

Introduction to Intellectual Property Law – The Evolutionary Past - The IPR Tool Kit Para -Legal Tasks in Intellectual Property Law – Ethical obligations in Para Legal Tasks in Intellectual Property Law - Introduction to Cyber Law – Innovations and Inventions Trade related Intellectual Property Right.

UNIT II TRADE MARK**9**

Introduction to Trade mark – Trade mark Registration Process – Post registration Procedures – Trade mark maintenance - Transfer of Rights - Inter partes Proceeding – Infringement - Dilution Ownership of Trade mark – Likelihood of confusion - Trademarks claims – Trademarks Litigations – International Trade mark Law.

UNIT III COPY RIGHTS**9**

Introduction to Copyrights – Principles of Copyright Principles -The subjects Matter of Copy right – The Rights Afforded by Copyright Law – Copy right Ownership, Transfer and duration – Right to prepare Derivative works – Rights of Distribution – Rights of Perform the work Publicity Copyright Formalities and Registrations - Limitations - Copyright disputes and International Copyright Law – Semiconductor Chip Protection Act.

UNIT IV TRADE SECRET**9**

Introduction to Trade Secret – Maintaining Trade Secret – Physical Security – Employee Limitation - Employee confidentiality agreement - Trade Secret Law - Unfair Competition – Trade Secret Litigation – Breach of Contract – Applying State Law.

UNIT V CASE STUDIES**9**

Case Studies on – Patents (Basumati rice, turmeric, Neem, etc.) – Copyright and related rights – Trade Marks – Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition.

ELECTIVE – III AND ELECTIVE- IV (ONLY APPLICABLE FOR SIXTH SEMESTER)

17BEEE6E01 COMPUTER ORGANIZATION AND ARCHITECTURE L T P C 3 0 0 3

Course Objectives

- To study the various representations of data, register transfer language for micro operations and organizations and design of digital computer
- To teach the concept of micro program control unit ,CPU, stack and instruction formats
- To study the concepts of microprocessors, their principles and practices
- To study the write efficient programs in assembly language of the 8086 family of microprocessors.
-
- To illustrate the technique to communicate with input and output devices
- To study the organization and operation of various memories and memory management hardware

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the concepts of microprocessors, their principles and practices.
2. Write efficient programs in assembly language of the 8086 family of microprocessors.
3. Organize a modern computer system and be able to relate it to real examples.
4. Develop the programs in assembly language for 80286, 80386 and MIPS processors in real and protected modes.
5. Implement embedded applications using ATOM processor.
6. Analysis the real time application of it.

UNIT I DATA REPRESENTATION, MICRO-OPERATIONS, ORGANIZATION AND DESIGN **9**

Data representation: Data types, complements, fixed–point representation, floating-point representation, other binary codes, error detection codes. Register transfer and micro operations: Register transfer language, register transfer, bus and memory transfers, arithmetic micro- operations, logic micro-operations, shift micro-operations, arithmetic logic shift unit-Basic computer organization and design: Instruction codes, computer registers, computer instructions, timing and control, instruction cycle, memory reference instructions, input output and interrupt. Complete computer description, design of basic computer, design of accumulator logic.

UNIT II CONTROL AND CENTRAL PROCESSING UNIT **9**

Micro programmed control: Control memory, address sequencing, micro-program example, design of control unit-Central processing unit: General register organization, stack organization, instruction formats, addressing modes, data transfer and manipulation, program control, reduced instruction set computer.

UNIT III COMPUTER ARITHMETIC, PIPELINE AND VECTOR PROCESSING 9

Computer arithmetic: Addition and subtraction, multiplication algorithms, division algorithms, floating-point arithmetic operations, decimal arithmetic unit, decimal arithmetic operations- Pipeline and vector processing: Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, RISC pipeline, vector processing array processors.

UNIT IV INPUT-OUTPUT ORGANIZATION 9

Input-output organization: Peripheral devices, input-output interface, asynchronous data transfer, modes of transfer, priority interrupt, direct memory access, input-output processor, serial communication.

UNIT V MEMORY ORGANIZATION 9

Memory organization: Memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management hardware.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Morris Mano	Computer System Architecture	3rd Edition, Pearson Education	2008
2	Vincent P.Heuring and Harry F.Jordan	Computer Systems Design and Architecture	Pearson Education Asia Publications, II Edition	2008.

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Andrew S.Tanenbaum	Structured Computer Organization“	V Edition, Prentice Hall of India/Pearson Education	2006
2	William Stallings	Computer Organization and Architecture“	VII Edition, Prentice Hall of India/Pearson Education	2008

Course Objectives

- To provide a clear understanding of Embedded system terminologies and its devices.
- Various Embedded software Tools
- Design and architecture of Memories.
- Architecture of processor and memory organizations.
- Input/output interfacing
- Various processor scheduling algorithms.
- Basics of Real time operating systems.
- Introduction to PIC and its applications

Course Outcomes

At the end of the course the students will be able to

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEMS**9**

Introduction to embedded real time systems – The build process for embedded systems – Types of memory – Memory management methods.

UNIT II EMBEDDED SYSTEM ORGANIZATION**9**

Structural units in processor , selection of processor & memory devices – DMA – I/O devices : timer and counting devices – Serial communication using I²C , CAN USB buses – Parallel communication using ISA , PCI ,PCI/X buses – Device drivers.

UNIT III PROGRAMMING AND SCHEDULING**9**

Intel I/O instructions – Synchronization - Transfer rate, latency; interrupt driven input and output - Non-maskable interrupts, software interrupts, Preventing interrupts overrun - Disability interrupts. Multithreaded programming –Context Switching, Preemptive and non-preemptive multitasking, semaphores. Scheduling-thread states, pending threads, context switching.

UNIT IV REAL-TIME OPERATING SYSTEMS**9**

Introduction to basic concepts of RTOS, Unix as a Real Time Operating system – Unix based Real Time operating system - Windows as a Real time operating system – POSIX – RTOS-Interrupt handling - A Survey of contemporary Real time Operating systems:PSOS, VRTX, VxWorks,

QNX, µC/OS-II, RT Linux – Benchmarking Real time systems – Basics.

UNIT V PIC MICROCONTROLLER BASED EMBEDDED SYSTEM DESIGN 9

PIC microcontroller – MBasic compiler and Development boards – The Basic Output and digital input – Applications.

17BEEE6E03 PROGRAMMABLE LOGIC CONTROLLER AND ITS APPLICATIONS

L T P C 3 0 0 3

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcomes

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION

9

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING

9

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS

9

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEBSITES

<http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>, - Introduction to programmable Logic controller

- To study about various network architecture
- To study and analyze about various switching.
- To study about web security and its need
- To study about protocols and its controls
- To study about subnetting and domains basics
- To study about real time need of network management

Course Outcomes

- At the end of the course the student will be able to understand the computer networks and network protocols.
- To gain switching mechanisms of various interlink networks
- To know web securities and its need in real time digital world
- To gather D-link concepts
- To acquire wireless communication software and its related devices
- Gather protocols of dealing network accessories

UNIT I INTRODUCTION

9

Network architecture – layers – Physical links – Channel access on links – Hybrid multiple access techniques - Issues in the data link layer - Framing – Error correction and detection – Link-level Flow Control

UNIT II WIRELESS NETWORKS

9

Medium access – CSMA – Ethernet – Token ring – FDDI - Wireless LAN – Bridges and Switches

UNIT III SWITCHING

9

Circuit switching vs. packet switching / Packet switched networks – IP – ARP – RARP – DHCP – ICMP – Queueing discipline – Routing algorithms – RIP – OSPF – Subnetting – CIDR – Interdomain routing – BGP – Ipv6 – Multicasting – Congestion avoidance in network layer

UNIT IV NETWORK PROTOCOLS

9

UDP – TCP – Adaptive Flow Control – Adaptive Retransmission - Congestion control – Congestion avoidance – QoS

UNIT V WEB SECURITY

9

Email (SMTP, MIME, IMAP, POP3) – HTTP – DNS- SNMP – Telnet – FTP – Security – PGP - SSH

Course Objectiv

- To understand the various types of over voltages in power system and Protection methods.
- To study about generation of over voltages in laboratories. To
- know about measurement of over voltages.
- To study about the nature of Breakdown mechanism in solid, liquid and gaseous Dielectrics
- To study about discussion on commercial insulates.
- To study about testing of power apparatus and insulation coordination

Course Outcomes

1. Identify the causes of over voltages and its effects and estimate the reflection and refractions of travelling waves in transmission lines
2. Discuss the various types of breakdown mechanisms and analyze the breakdown mechanisms in solid, liquid, gases and composite dielectrics
3. Explain the generation and design of different types of Generating circuits for high voltage and currents of AC, DC and impulse
4. Measure AC and DC high voltage and current using high resistance with series ammeter, dividers, peak voltmeter and generating voltmeters
5. Discuss the testing methodologies related to various high voltage equipment with reference to national and international standards
6. Estimate the AC and DC high voltage and current using CVT, electrostatic voltmeters, sphere gaps, high current shunts and digital techniques in high voltage measurement

UNIT I OVER VOLTAGES IN ELECTRICAL POWER SYSTEMS 9

Causes of over voltages and its effect on power system – Lightning, switching surges and temporary over voltages – protection against over voltages.

UNIT II ELECTRICAL BREAKDOWN IN GASES, LIQUIDS AND SOLIDS 9

Gaseous breakdown in uniform and non-uniform fields – corona discharges – Vacuum breakdown – conduction and breakdown in pure and commercial liquids – breakdown mechanisms in solid and composite dielectrics.

UNIT III GENERATION OF HIGH VOLTAGES AND HIGH CURRENTS 9

Generation of High DC, AC, impulse voltages and currents. Tripping and control of impulse generator.

UNIT IV MEASUREMENT OF HIGH VOLTAGES AND HIGH CURRENTS 9

Measurement of High voltages and High currents – digital techniques in high voltage measurement.

UNIT V HIGH VOLTAGE TESTING AND INSULATION COORDINATION 9

High voltage testing of electrical power apparatus – power frequency, impulse voltage and DC testing – International and Indian standards – Insulation Coordination.

2. www.newagepublishers.com

Course Objectives

- To expose the students to the concepts of special electrical machines and analyze their performance and to impart knowledge on
- Construction and performance of synchronous reluctance motors.
- Principle of operation and performance of stepping motors .
- To study the knowledge on construction and operation of permanent magnet brushless D.C. motors.
- To study the real time need of special machines
- Construction, principle of operation and performance of switched reluctance motors, permanent magnet synchronous motors.

Course Outcomes

At the end of this course students will demonstrate the ability to

1. Analyze and design controllers for special Electrical Machines.
2. Acquire the knowledge on construction and operation of stepper motor.
3. Understand the concept of construction and operation of stepper switched reluctance motors.
4. Acquire the knowledge on construction and operation of permanent magnet brushless D.C. motors.
5. Acquire the knowledge on construction and operation of permanent magnet synchronous motors.
6. Determine a special Machine for a particular application.

UNIT I SYNCHRONOUS RELUCTANCE MOTORS**9**

Constructional features – Types – Axial and radial air gap motors – Operating principle – Reluctance – Phasor diagram – Characteristics – Vernier motor – Driver circuits – Applications of AC motors.

UNIT II STEPPING MOTORS**9**

Construction and Principle of operation – Types: Permanent Magnet, Hybrid and Variable reluctance motor – Single and multi stack configurations – Theory of torque predictions – Dynamic Characteristics – Driver circuits – Applications of stepper motors.

UNIT III SWITCHED RELUCTANCE MOTORS**9**

Construction and Principle of operation – Torque prediction – Power controllers – Non-linear analysis – Microprocessor based control – Characteristics – Driver circuits.

UNIT IV PERMANENT MAGNET BRUSHLESS DC MOTORS**9**

Construction and Principle of operation – Electronic Commutator – Difference between electronic and Mechanical Commutator – Types of PMBLDC motors – Magnetic circuit analysis – EMF and torque equations – Power controllers – Motor characteristics and control – Applications of DC motors.

UNIT V PERMANENT MAGNET SYNCHRONOUS MOTORS**9**

Construction and Principle of operation – EMF and torque equations – Torque-speed characteristics – Reactance – Phasor diagram – Power controllers – Volt-ampere requirements of Converter – Self, Vector and Current control schemes.

Course Objectives

- To expose the students to the basic concepts of optical fibres and their properties.
- To provide adequate knowledge about the Industrial applications of optical fibres.
- To expose the students to the Laser fundamentals.
- To study the source and detectors in optical system
- To provide adequate knowledge about Industrial application of lasers.
- To provide adequate knowledge about holography and Medical applications of Lasers.

Course Outcomes

- At the end of the course the student will be understand
- the concept of fibre optics and about laser instruments.
 - Introduce the characteristics of laser for engineering applications.
 - Develop the idea of quantum mechanics through applications.
 - Gain knowledge in industrial application about optical fibre
 - Develop the new strategies in laser technology in industries
 - Acquire knowledge in advanced medical system utility under this technology

UNIT I OPTICAL FIBRES AND THEIR PROPERTIES**9**

Principles of light propagation through a fibre - Different types of fibres and their properties, fibre characteristics – Absorption losses – Scattering losses – Dispersion – Connectors and splicers – Fiber termination – Optical sources – Optical detectors.

UNIT II INDUSTRIAL APPLICATION OF OPTICAL FIBRES**9**

Fibre optic sensors – Fibre optic instrumentation system – Different types of modulators – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

UNIT III LASER FUNDAMENTALS**9**

Fundamental characteristics of lasers – Three level and four level lasers – Properties of laser – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers – Gas lasers, solid lasers, liquid lasers, semiconductor lasers.

UNIT IV INDUSTRIAL APPLICATION OF LASERS**9**

Laser for measurement of distance, length, velocity, acceleration, current, voltage and Atmospheric effect – Material processing – Laser heating, welding, melting and trimming of material – Removal and vaporization.

UNIT V HOLOGRAM AND MEDICAL APPLICATIONS**9**

Holography – Basic principle - Methods – Holographic interferometry and application,

Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser and tissue interactive – Laser instruments for surgery, removal of tumors of vocal cords, brain surgery, plastic surgery, gynaecology and oncology.

- To understand the mobile channel environment, communication techniques and wireless standards for mobile communication.
- To learn cellular concept including handoff mechanism, cell coverage and capacity.
- To understand the mobile radio propagation models for indoor and outdoor conditions.
- To study the digital modulation and equalization techniques suitable for mobile communication.
- To learn speech coding and multiple access techniques for mobile communication.
- To familiarize with the international wireless network standards.

Course Outcomes

1. Understand past, present and future trends in mobile communication.
2. Gain knowledge about mobile cellular communication
3. Understand various standards in use for wireless communication and its application.
4. Demonstrate some basic application of GPS.
5. Gain knowledge about RADAR working and its applications
6. Gathered knowledge in digital modulation and equalization techniques suitable for mobile communication.

UNIT I CELLULAR CONCEPT AND SYSTEM DESIGN FUNDAMENTALS 9

Introduction to wireless communication: Evolution of Mobile Communication, mobile radio systems – Examples, trends in cellular radio and personal communications. Cellular concept: Frequency reuse, channel assignment hand off, interference and system capacity, tracking and grade of service, improving coverage and capacity in cellular systems.

UNIT II MOBILE RADIO PROPAGATION

9

Free space propagation model, reflection, diffraction, scattering, link budget design, outdoor propagation models, indoor propagation models, small scale multipath propagation, impulse model, small scale multipath measurements, parameters of mobile multipath channels, types of small scale fading.

UNIT III MODULATION TECHNIQUES AND EQUALIZATION

9

Modulation techniques: Minimum Shift Keying (MSK), Gaussian MSK, M-array QAM, Performance of MSK modulation in slow-flat fading channels. Equalization: Survey of equalization techniques, linear equalization, non-linear equalization, algorithms for adaptive equalization. Diversity Techniques, RAKE receiver.

UNIT IV CODING AND MULTIPLE ACCESS TECHNIQUES

9

Coding: Vocoder, linear predictive coders, selection of speech coders for mobile communication, GSM coders. Multiple access techniques: FDMA, TDMA, CDMA, SDMA, capacity of cellular CDMA.

UNIT V WIRELESS SYSTEMS AND STANDARDS**9**

Second generation and third generation wireless network and standards, WLL, blue tooth, GSM, IS-95 and DECT.

Course Objectives

- To study and gain knowledge about switched mode power conversion.
- To study about technology in SMPS
- To study the technology in various functions
- To study the resonant converter and its applications
- To study the basic power converters and its techniques
- To gather information about harmonics and its impacts

Course Outcomes

- At the end of the course the student will be able to understand the concept of capacitors and inductor design.
- To understand the working of Power Converters and components of low-voltage electrical installation
- To acquire knowledge of Steady state and dynamic functions in various applications
- To acquire knowledge about industrial UPS applications
- To know the importance of power quality system in advanced equipments
- To know the design of conversion ratio

UNIT I INTRODUCTION**9**

Reactive elements in power electronics system- electromagnetics – design of inductor- design of transformer – capacitors for power electronic applications – types of capacitor

UNIT II POWER CONVERTERS**9**

Switched mode power converters – continuous and discontinuous mode of operation in buck, boost and boost-buck converter – isolated DC to DC: forward converter- pushpull converter – fly back converter

UNIT III STEADY STATE AND DYNAMIC FUNCTIONS**9**

Pulse width modulated converter: average modeled of the converter – steady state solution – transfer function of the converter- generalized state space model of the converter – linear small signal model – dynamic functions of the converter.

UNIT IV RESONANT CONVERTERS**9**

Resonant converters – ZCS Resonant converters – L and M type – ZVS Resonant converters- comparison between ZCS and ZVS converters – resonant switch converters – buck converter with zero current switching – operation of the circuit – conversion ratio of the converter – boost converter with zero voltage switching

UNIT V HARMONICS**9**

Sub harmonic instability in current programmed control – determination of duty ratio for current programmed control – power circuit of UPF rectifiers – average current mode control – resistor emulator UPF rectifiers

Course Objectives

- The course is designed to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance
- To study about instruments for physiological measurements
- To study about devices of non-electrical devices.
- To study about modern methods of imaging techniques.
- To study about nervous system
- To study about medical assistance / techniques and therapeutic equipment.

Course Outcomes

- At the end of the course the student will be to
- Acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Methods of different transducers used.
 - Understand the student to the various sensing and measurement devices of electrical origin.
 - Analysis the latest ideas on devices of non-electrical devices.
 - Analysis the important and modern methods of imaging techniques.
 - Analysis latest knowledge of medical assistance / techniques and therapeutic equipment.
 - Analysis the real time application of it

UNIT I PHYSIOLOGY AND TRANSDUCERS**9**

Cell and its structure – Action and resting potential – Potential propagation of action potential – Sodium pump – Nervous system – CNS – PNS – Nerve cell – Synapse – Cardio pulmonary system – Physiology of heart and lungs – Circulation and respiration – Transducers – Different types – Piezo electric, ultrasonic, resistive, capacitive and inductive transducers – Selection criteria.

UNIT II ELECTRO – PHYSIOLOGICAL MEASUREMENTS**9**

Basic components of a biomedical system – Electrodes – Micro, needle and surface electrodes – Amplifiers – differential, chopper, Isolation and Pre-amplifiers. ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms.

UNIT III NON-ELECTRICAL PARAMETER MEASUREMENTS**9**

Measurement of blood pressure – Cardiac output – Cardiac rate – Heart sound – Respiratory rate – Gas volume – Flow rate of CO₂, O₂ in exhaust air – pH of blood, ESR and GSR measurements – Plethysmography.

UNIT IV MEDICAL IMAGING AND PATIENT MONITORING SYSTEM**9**

X-ray machine – Radiographic and fluoroscopic techniques – Computer Tomography – MRI – Ultrasonography – Endoscopy – Thermography – Different types of biotelemetry systems and patient monitoring – Electrical safety.

UNIT V ASSISTING AND THERAPEUTIC EQUIPMENT**9**

Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators – Diathermy – Heart-Lung machine – Audio meters – Dialyzers.

2. www.britannica.com/EBchecked/topic/674616/transducer

Course Objectives

- To study the power semiconductor switches.
- To study about the characteristics and applications of Power diode, power BJT, Thyristor, GTO, IGBT, MOSFET.
- To study the real time application of it.
- To study the basics of thyristor technologies
- To study the new semiconductor material of power devices
- To study the safe operating area of the power devices

Course Outcomes

At the end of the course the student will be able to

- Understand the concepts of modern semiconductor devices
- Understand the different characteristics of conductor devices
- Analysis the real time application of it.
- To learn deep knowledge of thyristor technologies
- To study about real time applications of inverters and rectifiers
- To learn about protection of device circuits

UNIT I OVERVIEW OF POWER SEMICONDUCTOR SWITCHES 9

Introduction - Diodes, Thyristors, BJTs, JFETs, MOSFETs, GTOs, IGBTs, Comparison of these as switching devices, Drive and Protection circuit for these devices – New Semiconductor materials for Power devices.

UNIT II POWER DIODE AND POWER BJT 9

Basic structure and I-V & Switching characteristics of Power diode, Schottky diode - Structure and switching characteristics of Power BJT - Breakdown voltage considerations - Safe operating area - Drive circuits for BJT – Snubber design for Power diode.

UNIT III THYRISTORS AND GTOs 9

Basic structures - I-V characteristics - Physics of device operation - Switching characteristics of Thyristors and GTOs – Drive circuits - Snubber circuits for Thyristors and GTOs - Over current protection of GTO.

UNIT IV IGBT AND POWER JFET & MOSFETS 9

Basic structures - I-V characteristics, physics of device operation - Switching characteristics – Safe operating area of IGBT and Power JFET & MOSFET - Drive circuits and Protection.

UNIT V APPLICATIONS 9

Single phase rectifiers and Three phase rectifiers using Diodes and Thyristors, Choppers, Inverters using GTOs-IGBTs and power JFETs & MOSFETs.

3	Kassakian,J.G.et.al	Principles of Power Electronics	Pearson Education India	2010

Course Objectives

- To model the power system under steady state operating condition
- To understand and apply iterative techniques for power flow analysis
- To model and carry out short circuit studies on power system
- To model and analyze stability problems in power system
- To study the monitoring and control of a power systems.
- To study the basics of power system economics.

Course Outcomes (COs)

At the end of this course, students will demonstrate the ability to

1. Use numerical methods to analyse a power system in steady state.
2. Understand stability constraints in a synchronous grid.
3. Understand methods to control the voltage, frequency.
4. Understand methods to control the power flow.
5. Understand the monitoring and control of a power system.
6. Understand the basics of power system economics.

UNIT I INTRODUCTION**9**

System load variation: System load characteristics, load curves - daily, weekly and annual, load-duration curve, load factor, diversity factor. Reserve requirements: Installed reserves, spinning reserves, cold reserves, hot reserves. Overview of system operation: Load forecasting, unit commitment, load dispatching. Overview of system control: Governor Control, LFC, EDC, AVR, system voltage control, security control.

UNIT II REAL POWER - FREQUENCY CONTROL**9**

Fundamentals of speed governing mechanism and modeling: Speed-load characteristics – Load sharing between two synchronous machines in parallel; concept of control area, LFC control of a single-area system: Static and dynamic analysis of uncontrolled and controlled cases, Economic Dispatch Control. Multi-area systems: Two-area system modeling; static analysis, uncontrolled case; tie line with frequency bias control of two-area system derivation.

UNIT III REACTIVE POWER–VOLTAGE CONTROL**9**

Typical excitation system, modeling, static and dynamic analysis, stability compensation; generation and absorption of reactive power: Relation between voltage, power and reactive power at a node; methods of voltage control: Injection of reactive power. Tap-changing transformer, numerical problems - System level control using generator voltage magnitude setting, tap setting of OLTC transformer and MVar injection of switched capacitors to maintain acceptable voltage profile and to minimize transmission loss.

UNIT IV UNIT COMMITMENT AND ECONOMIC DISPATCH**9**

Statement of Unit Commitment (UC) problem; constraints in UC: spinning reserve, thermal unit constraints, hydro constraints, fuel constraints and other constraints; UC solution methods: Priority-list methods, forward dynamic programming approach, numerical problems only in priority-list method using full-load average production cost. Incremental cost curve, co-ordination equations

without loss and with loss, solution by direct method and λ -iteration method. (No derivation of loss coefficients) Base point and participation factors. Economic dispatch controller added to LFC control.

UNIT V COMPUTER CONTROL OF POWER SYSTEMS

9

Energy control centre: Functions – Monitoring, data acquisition and control. System hardware configuration – SCADA and EMS functions: Network topology determination, state estimation security analysis and control. Various operating states: Normal, alert, emergency, inextremis and restorative. State transition diagram showing various state transitions and control strategies.

PROFESSIONAL ELECTIVE- V

(ONLY APPLICABLE FOR SEVENTH SEMESTER)

17BEEE7E01 ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEMS L T P C 3 0 0 3

Course Objectives

- To study about representing knowledge.
- To study the reasoning and decision making in uncertain world. 'construct plans and methods for generating knowledge.
- To study the concepts of expert systems.
- To study the knowledge about the various searching strategies
- To study about first order logic
- To study the need of real time world about robotics

Course Outcomes

- At the end of the course the student will be able to
- understand concepts about artificial intelligence, reasoning and also about expert system tools.
 - To understand about representing knowledge.
 - To acquire knowledge about the reasoning and decision making in uncertain world. To construct plans and methods for generating knowledge.
 - To acquire knowledge about the concepts of expert systems.
 - To acquire knowledge about the various searching strategies for solutions

UNIT I INTRODUCTION 9

Introduction to AI: Intelligent agents – Perception – Natural language processing – Problem solving agents – Searching for solutions: Uniformed search strategies – Informed search strategies.

UNIT II KNOWLEDGE AND REASONING 9

Adversarial search – Optimal and imperfect decisions – Alpha, Beta pruning – Logical agents: Propositional logic – First order logic – Syntax and semantics – Using first order logic – Inference in first order logic.

UNIT III UNCERTAIN KNOWLEDGE AND REASONING 9

Uncertainty – Acting under uncertainty – Basic probability notation – Axioms of probability – Baye's rule – Probabilistic reasoning – Making simple decisions.

UNIT IV PLANNING AND LEARNING 9

Planning: Planning problem – Partial order planning – Planning and acting in non-deterministic domains.

Learning: Learning decision trees – Knowledge in learning – Neural networks – Reinforcement learning – Passive and active.

Definition – Features of an expert system – Organization – Characteristics – Prospector – Knowledge Representation in expert systems – Expert system tools – MYCIN – EMYCIN.

2. www.pes.edu

Course Objectives

- To study about HVDC systems
- To study about HVDC control systems
- To Study the control strategies used in HVdc transmission system.
- To Study the improvement of power system stability using an HVdc system.
- To Study and Analysis the components of HVDC system
- To study about aspects of EHVAC systems

Course Outcomes

- At the end of the course the student will
1. Justify the advantages of dc transmission over ac transmission.
 2. Reproduce the operation of Line Commutated Converters and Voltage Source Converters.
 3. Evaluate the control strategies used in HVdc transmission system.
 4. Identify and propose the improvement of power system stability using an HVdc system.
 5. gain knowledge about HVDC transmission, converters used and about EHVAC systems.
 6. Analysis the real time application of it.

UNIT I EHV TRANSMISSION**9**

Introduction-Necessity for EHV Transmission-Problems involved in EHV Transmission-Operational Aspects of EHV power transmission-Compensation of EHV systems-Gas insulated EHV lines-Environmental and biological aspects.

UNIT II GENERAL BACKGROUND OF EHVAC TRANSMISSION SYSTEMS**9**

Standard Voltage levels for Transmission lines-Hierarchical levels of Transmission Network-Average values of line parameters-Power handling capacity and line losses-Cost of Transmission line and Equipments-Mechanical consideration in line performance-Comparison of Overhead and Underground lines-Examples of Giant power pools in the world.

UNIT III ASPECTS OF EHVAC SYSTEM**9**

Power Transferability of Ac line – Line losses-Conductor cost -Transient stability of Ac line – control of power flow through line Right – of- way(Row)-Corona- Towers(support)-Insulation Coordination and surge arrester protection-Line insulation-Clearance and Creepage distances.

UNIT IV HVDC TRANSMISSION SYSTEMS**9**

Choice of HVDC Transmission - Comparison of AC and DC Transmission – Economics of DC power Transmission, Technical Performance and Reliability – Description of HVDC Converter station- Types of HVDC Links- Merits and Limitations of HVDC System - Applications -Modern Trends in HVDC transmission –Case Studies of HVDC links in the world.

UNIT V CONVERTERS AND HVDC SYSTEM CONTROL**9**

Pulse number – Choice of Converter Configuration – Simplified analysis of Graetz circuit – Principles of HVDC link Control –DC Breaker - Harmonic Elimination – AC and DC Filter design –Protection Systems in HVDC Substation-HVDC Simulator.

WEBSITES

1. iopscience.iop.org
2. www.newagepublishers.com

Course Objectives

- To study about the economic aspects.
- To study about the economic dispatch and operation.
- To study about stability constraints in a synchronous grid.
- To study the methods to control the voltage, frequency.
- To study the problem formulation of power flow
- To study the basics of power system economics

Course Outcomes

- At the end of the course student will be able to .
1. understand the concept of power generation economics
 2. Understand stability constraints in a synchronous grid.
 3. Understand methods to control the voltage, frequency.
 4. Understand methods to control the power flow.
 5. Understand the monitoring and control of a power system.
 6. Understand the basics of power system economics.

UNIT I ECONOMIC CONSIDERATIONS**9**

Cost of electrical energy-expressions for cost of electrical energy-capital-interest-depreciation-different methods-factors affecting cost of operation-number and size of generating units-importance of high load factor-importance of power factor improvement-most economical power factor-meeting the KW demand on power stations-power system tariffs.

UNIT II ECONOMIC DISPATCH**9**

Economic scheduling of generators in a plant-economic coordination of generation among a number of plants-losses neglected, with generator limits, losses included-losses of economy in incremental cost data- automatic load dispatch in power systems-analog and digital computers for application to load dispatch.

UNIT III ECONOMIC OPERATION**9**

General loss formula-evolution of incremental transmission loss rate-method of calculation of loss coefficients-systematic development of transmission loss formula-Transmission loss as a function of plant generation, voltage and phase angle-economic dispatch computers.

UNIT IV ECONOMIC CONTROL**9**

Interconnected operation-economic operation of hydro thermal power plants- λ - γ iteration scheme-gradient approach-modeling and solution approach to short term and long term hydro-thermal scheduling problem using dynamic programming.

UNIT V OPTIMAL POWER FLOWS**9**

Problem formulation-cost minimization-loss minimization-solution using NLP and successive LP methods.

2	I J Nagrath and D P Kothari	Modern Power System Analysis	Tata McGraw Hill, New Delhi.	-

Course Objectives

- To study about key issues in electric utilities restructuring.
- To study about open access same time information systems.
- Gain the knowledge about power system restructure.
- To study about ISO and its types, roles.
- To know about electricity markets
- To study about knowledge of various trades

Course Outcomes

- At the end of the course student will be able to
- Analysis about electric energy trading, electric pricing.
 - Analysis about open access same time information systems.
 - Gain the knowledge about power system restructure.
 - Analysis the real time application of it
 - Acquiring knowledge of embedded cost and pricing models in various countries
 - Acquiring knowledge of various trades

UNIT I**9**

Deregulation Of Electric Utilities - Introduction-Unbundling-Wheeling-Traditional Central utility model-Reform motivations-Separation of Ownership and operation- competition and direct access in the Electricity market –ISO-components of ISO-types of ISO-role of ISO-Electric utility market in different countries.

UNIT II**9**

Transmission Expansion In The New Environment - Introduction – role of transmission planning – vertically integrated utility – three models of electricity market – Profit transmission planning – pool – bilateral trades – multilateral trades.

UNIT III**9**

Transmission Pricing In Open Access System - Introduction – rolled in pricing methods – marginal pricing method – embedded cost recovery – pricing models in different countries.

UNIT IV**9**

Total transfer capability – CBM and TRM – Available transfer capability (ATC) – methods to compute ATC – concept of congestion management – inter and inter zone congestion – congestion pricing management – Transmission congestion contracts – Ancillary services.

UNIT V**9**

Salient features of Indian Electricity Act 2003 – TSO – Availability based tariff – Electric supply industry structure under deregulation in India – regulatory and policy development in Indian power Sector – Opportunities for IPPs and CPPs under electricity Act 2003.

3	M.Shahidehpour and M.Alomoush	Restructuring Electrical Power Systems	Marcel Decker Inc.	2001

Course Objectives

- To study the production of voltages sags, over voltages and harmonics and methods of control.
- To study various methods of power quality monitoring.
- To understand the concept of power and power factor in single phase and three phase systems supplying non linear loads
- To understand the conventional compensation techniques used for power factor correction and load voltage regulation.
- To understand the active compensation techniques used for power factor correction.
- To understand the active compensation techniques used for load voltage regulation.

Course Outcomes

- At the end of the course the student will be able to
- 1.Evaluate the characteristics of ac transmission
 - 2.Reproduce the effect of shunt and series reactive compensation.
 - 3.Justify the working principles of FACTS devices and their operating characteristics.
 - 4.Reproduce the basic concepts of power quality.
 - 5.Rewrite the concept of Harmonics
 - 6.Reproduce and justify the working principles of devices to improve power quality.

UNIT I INTRODUCTION TO POWER QUALITY**9**

Terms and definitions: Overloading, under voltage, sustained interruption; sags and swells; waveform distortion, Total Harmonic Distortion (THD), Computer Business Equipment Manufacturers Associations (CBEMA) curve.

UNIT II VOLTAGE SAGS AND INTERRUPTIONS**9**

Sources of sags and interruptions, estimating voltage sag performance, motor starting sags, estimating the sag severity, mitigation of voltage sags, active series compensators, static transfer switches and fast transfer switches.

UNIT III OVER VOLTAGES**9**

Sources of over voltages: Capacitor switching, lightning, ferro resonance; mitigation of voltage swells: Surge arresters, low pass filters, power conditioners – Lightning protection, shielding, line arresters, protection of transformers and cables, computer analysis tools for transients, PSCAD and EMTF.

UNIT IV HARMONICS**9**

Harmonic distortion: Voltage and current distortion, harmonic indices, harmonic sources from commercial and industrial loads, locating harmonic sources; power system response characteristics, resonance, harmonic distortion evaluation, devices for controlling harmonic distortion, passive filters, active filters, IEEE and IEC standards.

UNIT V POWER QUALITY MONITORING**9**

Monitoring considerations: Power line disturbance analyzer, power quality measurement equipment, harmonic / spectrum analyzer, flicker meters, disturbance analyzer, applications of expert system for power quality monitoring.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Roger C Dugan, Mark, F., McGranaghan, Surya Santoso, Wayne Beaty, H	Electrical Power Systems Quality	McGraw Hill, New York	2003
2	C. Sankaran	Power Quality	CRC Press, Florida	2002

Course Objectives

- To learn about the controlling of excitation system and speed governing system.
- To impart knowledge on dynamic modeling of a synchronous machine in detail
- To describe the modeling of excitation and speed governing system in detail.
- To understand the fundamental concepts of stability of dynamic systems and its classification.
- To understand and enhance small signal stability problem of power systems. Model different power system components for the study of stability
- To Study the methods to improve stability.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the problem of power system stability and its impact on the system.
2. Analyse linear dynamical systems and use of numerical integration methods.
3. Model different power system components for the study of stability.
- Understand the methods to improve stability.
4. Understand real time difficulties in machine analysis
5. To get known about modelling system and its control
6. To understand the transient and dynamic stability of power systems.

UNIT I INTRODUCTION**9**

Concept and importance of stability in power system operation and design- distinction between transient and dynamic stability- complexity of stability problem in large system- Need for reduced models- stability of interconnected systems.

UNIT II MACHINE MODELING**9**

Park's transformation- flux linkage equations, current space model- per unit conversion- normalizing the equations- equivalent circuit- flux linkage state space model- Simplified models (one axis and constant flux linkage)- steady state equations and phasor diagrams.

UNIT III MACHINE CONTROLLERS**9**

Exciter and voltage regulators- function of excitation systems, types of excitation systems- typical excitation system configuration-block diagram and state space representation of IEEE type 1 excitation system- saturation function- stabilizing circuit- Function of speed governing systems- block diagram and state space representation of IEEE mechanical hydraulic governor and electrical hydraulic governors for hydro turbines and steam turbines.

UNIT IV TRANSIENT STABILITY**9**

State equation for multi machine simulation with one axis model- transient stability simulation of multi machine power system with one axis machine model including excitation system and speed governing system using R-K method of fourth order (Gill's technique)- power system stabilizer.

UNIT V DYNAMIC STABILITY**9**

System response to small disturbances- Linear model of the unregulated synchronous machine and its modes of oscillation- regulated synchronous machine- distribution of power impact- linearization of the load equation for the one machine problem – Simplified linear model- effect of excitation on dynamic stability- approximate system representation- supplementary stabilizing signals- dynamic performance measure- small signal performance measures.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Anderson.P.M and Fouad.A.A	Power System Control and Stability	Galgotia Publications, New Delhi	2003

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Pai. M.A and Sauer.W	Power System Dynamics and Stability	Pearson Education Asia, India	2002

Course Objectives

- To study the structure and behaviour of processors, memories and input and output units and to study their interactions.
- To get basic knowledge on geometric modeling
- To study the graphic transformation needs
- To study about the basics of parametric design and object representation
- To get basic knowledge in product design and development.
- To study about 3D design introduction

Course Outcomes

At the end of the course the student will be able to

- Draw electrical drawings using CAD.
- Acquire basic knowledge on geometric modeling
- Acquire knowledge on graphic transformation needs
- Gaining CAD software application in engineering
- Gaining basics of parametric design and object representation
- Analyse the real time application of it

UNIT I INTRODUCTION 9

Conventional design methodology overview – Computer aided design aspects – Need for CAD – Nature of design problems- Analysis and synthesis approaches-advantages.

UNIT II FINITE ELEMENT ANALYSIS 9

Mathematical formulation – Discretisation – Shape functions – Stiffness matrix – Solution techniques – Post processing.

UNIT III CAD PACKAGES 9

Recent developments – Preprocessing – Modeling - Meshing – Boundary conditions -Material characteristics – Problem formulation – Solution – Post processing.

UNIT IV CAD SOFTWARE 9

Program files – Installation – Screen menu structure_ Fixing the size of a drawing – Set up option- On line help- Text fonts, Shapes – Blocks – Copy – Array- Erasing facilities -Editing – Fill – Zoom pan – Hatching – Isoplane – Elevation – View point – Dimension techniques – Introduction to 3D drawing.

UNIT V DESIGN EXAMPLES 9

Design of actuator – Solenoid -Transformer - Induction motor – Synchronous machines - Switched reluctance motor.

1	Sham Tickoo	AutoCAD 2002 with applications	Tata McGraw Hill Publishing Company limited, New Delhi	2001

Course Objectives

- To introduce design concept and VHDL.
- To study implementation techniques using various PLDs.
- To study the design of various combinational, synchronous and asynchronous circuits.
- To study about design combinational and sequential circuits.
- To study about CAD tools
- To expose the students to design and testing.

Course Outcomes

- At the end of the course the student will be able to understand the VHDL principles.
- Students will be able to design combinational and sequential circuits.
- Understand the implementation techniques using various PLDs.
- To analysis the design of various combinational, synchronous and asynchronous circuits.
- To analysis the students to design and testing.
- Analysis the real time application of it

UNIT I INTRODUCTION TO DESIGN**9**

Design concepts – Design Process, design of Digital hardware, Variables and functions, truth tables, Boolean Algebra – Synthesis using Gates – Introduction to CAD Tools – VHDL.

UNIT II IMPLEMENTATION TECHNOLOGY**9**

MOS Logic gates – PLDs – practical aspects, implementation details for SPLDs, CPLDs and FPGAs, optimized implementation of logic functions - multilevel synthesis, analysis of multilevel circuits – minimization techniques.

UNIT III DESIGN OF COMBINATIONAL CIRCUITS**9**

Number representation – signed, unsigned, combinational circuits – adder, multiplier, multiplexer, decoder and encoder, code converters - using signal assignment statements - concurrent and sequential – process and case statements, operators.

UNIT IV DESIGN OF SEQUENTIAL CIRCUITS**9**

Latch – Flip-flops, registers and counters, finite state machines using CAD tools. Basic design steps with examples - Design of simple processor, vending machine controller.

UNIT V DIGITAL SYSTEM DESIGN**9**

Building block circuits – Design examples – clock synchronization, testing of logic circuits – fault model, test set – path sensitizing, testing of sequential circuits.

2	J.Bhasker	A VHDL primer	Prentice-Hall India Learning Private Limited	2003

Course Objectives

- To have knowledge on optimization techniques applied to power systems
- To understand the different evolutionary computation techniques
- To study about optimal power flow problems
- To study about evolution computation techniques
- To study about the basics of MOOP
- To study about the solution of OPF

Course Outcomes

- At the end of the course the students will be able to understand the various optimization techniques.
- To get knowledge in optimization problems
- Acquire knowledge about power flow problem and solutions
- Experience in various algorithm and programming
- Gaining knowledge in velocity updation principle
- Gain knowledge about Economic emission dispatch

UNIT I OPTIMIZATION FUNDAMENTALS**9**

Definition- Classification of optimization problems- Unconstrained and Constrained optimization- Optimality conditions- Classical Optimization techniques.

UNIT II OPTIMAL POWER SYSTEM OPERATION**9**

Economic Dispatch problem-Unit commitment-Optimal Power Flow Problem- Solution Using Classical methods

UNIT III EVOLUTIONARY COMPUTATION TECHNIQUES**9**

Evolution in nature-Fundamentals of Evolutionary algorithms-Working Principles of Genetic Algorithm- Evolutionary Strategy and Evolutionary Programming-Genetic Operators-Selection, Crossover and Mutation-Issues in GA implementation-GA solution of economic dispatch and unit commitment.

UNIT IV PARTICLE SWARM OPTIMIZATION**9**

Fundamental principle-Velocity Updating-Advanced operators-Hybrid approaches Implementation issues-Solution of OPF problem

UNIT V MULTI OBJECTIVE OPTIMIZATION**9**

Concept of pareto optimality-Conventional approaches for MOOP-Multi objective GA-Fitness assignment-Sharing function-Economic Emission dispatch using MOGA

2	Kwang Y.Lee,Mohammed A.El Sharkawi	Modern heuristic optimization techniques	John Wiley and Sons	2008

Course Objectives

- To create an awareness on Operating Systems.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To study about memory management
- To study about integration of hardware and software
- To know about application procedures of RTOS

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM**9**

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) -Categories of Embedded Systems - Embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - Hardware/software partitioning - Iterations and implementation - Hardware software integration - Product testing techniques – ARM 7.

UNIT II OPERATING SYSTEM OVERVIEW**9**

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-pre-emptive Kernels - Pre-emptive Kernels – Re-entrancy- Re-entrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management -Time Management – Clock Ticks.

UNIT III TASK MANAGEMENT**9**

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialisation. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List.

UNIT IV SEMAPHORE MANAGEMENT**9**

Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a

Mailbox- Status of Mailbox Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT V MEMORY MANAGEMENT

9

Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II – μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II.

1	David Seal	ARM Architecture Reference Manual	Addison Wesley	2000
2	Steve Furbe ,	ARM System-on-Chip Architecture	Pearson Education, II Edition	2001

Course Objectives

- To study basics of Fuzzy logic and modeling.
- To study various Genetic algorithms
- To educate how to use Soft Computing to solve real-world problems
- To study about the perception concept in design
- To study basics of various Neural networks.
- To expose the students to Neuro fuzzy modeling and its applications.

Course Outcomes

- At the end of the course the students will gain knowledge in various soft computing techniques and also analyse the genetic algorithm approach.
- The students will know the applications of various soft computing techniques.
- Gaining knowledge about use of Soft Computing to solve real-world problems
- Acquire knowledge about the perception concept in design
- Experience in fuzzy models preparation
- Experience about automobile fuel efficiency improvements

UNIT I FUZZY LOGIC**9**

Introduction to Neuro – Fuzzy and soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set-theoretic operations – Member Function Formulation and parameterization – Fuzzy Rules and Fuzzy Reasoning - Extension principle and Fuzzy Relations – Fuzzy If-Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models-Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT II GENETIC ALGORITHM**9**

Derivative-based Optimization – Descent Methods – The Method of steepest Descent – Classical Newton's Method – Step Size Determination – Derivative-free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT III NEURAL NETWORKS**9**

Introduction -Supervised Learning Neural Networks – Perceptrons - Adaline – Back propagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

UNIT IV NEURO FUZZY MODELING**9**

Adaptive Neuro-Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – learning Methods that Cross-fertilize ANFIS and RBFN – Coactive Neuro-Fuzzy Modeling – Framework –

Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT V APPLICATIONS

9

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency prediction – Soft Computing for Color Recipe Prediction.

PROFESSIONAL ELECTIVE- VI (ONLY APPLICABLE FOR VIII SEMESTER)

17BEEE8E01

FLEXIBLE AC TRANSMISSION SYSTEMS

L T P C 3 0 0

Course Objectives

- To study the various FACTS controllers and its applications.
- To study the characteristics of ac transmission
- To study the effect of shunt and series reactive compensation.
- To study the controllers of FACTS
- To study the coordination of FACT controlling systems
- To study about the reactive compensation according to the need

Course Outcomes

- At the end of the course the student will gain knowledge about various FACTS controller and its applications.
- Evaluate the characteristics of ac transmission
- Reproduce the effect of shunt and series reactive compensation.
- Justify the working principles of FACTS devices and their operating characteristics
- Getting knowledge in FACTS controller and its coordination
- Real time application studied about FACTS

UNIT I INTRODUCTION TO FACTS

9

Reactive power control in electrical power transmission lines - series compensation -Concepts of SVC, TCSC and UPFC.

UNIT II SVC AND ITS APPLICATIONS

9

Objective of shunt compensation – Principle and operating characteristics of Thyristor Controlled Reactor(TCR) – Thyristor Switched Capacitor(TSC)-Voltage control by SVC – Advantages of slope in dynamic characteristics – Applications: Enhancement of transient stability – steady state power transfer – Enhancement of power system damping – prevention of voltage instability.

UNIT III TCSC AND ITS APPLICATIONS

9

Series compensation and it **Course Objectives**-Operation of the TCSC – Different modes of operation Application: Improvement of the system stability limit -Enhancement of system damping –Voltage collapse prevention

UNIT IV EMERGING FACTS CONTROLLERS

9

Static Synchronous Compensator (STATCOM) – Principle of operation – V-I Characteristics – Unified Power Flow Controller (UPFC) – Principle of operation –Modes of Operation-

Applications – Modeling of UPFC for Power Flow – Studies.

UNIT V COORDINATION OF DIFFERENT FACTS CONTROLLERS 9

Controller interactions – SVC – SVC interaction – Co-ordination of multiple controllers using linear control techniques – Control coordination using genetic algorithms.

WEBSITES

1. www.uni-due.de
2. www.chetanasprojects.com

Course Objectives

- To study the generation of switching transients and their control using circuit – theoretical concept. To study the mechanism of lightning strokes and the production of lightning surges.
- To study the propagation, reflection and refraction of travelling waves.
- To study the problem of power system stability and its impact on the system.
- To study the different power system components for the study of stability.
- To Understand the methods to improve stability.
- To study the impact of voltage transients caused by faults, circuit

Course Outcomes

- At the end of the course the student will be able to understand and observe the generation of switching transients and their control using circuit – theoretical concept.
- The students will be able to analyse mechanism of lighting strokes and the production of lighting surges and design the propagation, reflection and refraction
- Understand the problem of power system stability and its impact on the system.
- Analyse linear dynamical systems and use of numerical integration methods.
- Model different power system components for the study of stability. Understand the methods to improve stability.
- Understand real time difficulties in machine analysis
- To get known about modelling system and its control

UNIT-I

Concept and importance of stability in power system operation and design. Steady state, transient and dynamic stability. The swing equation of machines connected to infinite bus bar and machines connected together

UNIT -II

Swing curves-Solution by point by point and Euler's method. Qualitative treatment of stability studies on Network analyzers and digital computers..

UNIT -III

Equal area criterion, calculation of critical clearing angle by equal area criterion of various fault conditions. Effect of reclosure. Factors affecting transient stability and its improvement.

UNIT-IV

Types of excitation systems, AVR, calculation of exciter response by graphical integration and step-by-step methods. Effect of speed governing system inertia and damping on steady state and transient

stability.

UNIT-V

Significance of steady state stability, power limit of transmission systems. Clarke's diagram of two machine systems with and without losses. Steady stability of one machine connected to an infinite bus bar.

2	Olle.I.Elgerd	Electric Energy Systems Theory-An Introduction	Tata McGraw-Hill Pub.co.Ltd., New Delhi	2003
3	S.S.Vadhera	Power System Analysis and Stability	Hanna Publishers, New Delhi.	-

Course Objectives

- To learn generation of electrical power from different types of power plants like thermal nuclear and hydro power stations.
- To understand the concepts of generation of electrical power using non conventional energy resources.
- To learn the economics connected with power generation.
- To understand the measurements of various parameter in power plant and their control.
- To study about Powerplant instrumentation
- To acquire knowledge of renewable power system

Course Outcomes

- At the end of the course the student will gain knowledge about economics of power generation, layout and working of thermal, nuclear and hydropower plants.
- The student also gain knowledge about distributed generation, boiler turbine monitoring system.
- To get knowledge in Powerplant instrumentation
- Students acquire knowledge of renewable power system
- Acquire knowledge about economics in power generation
- Knowledge in Load demand and factor

UNIT I ECONOMICS OF GENERATION**9**

Load and load duration curve – Load, demand and diversity factors – Plant capacity and plant use factors – choice of type of generation – choice of size and number of unit – cost of energy generated – Tariffs.

UNIT II THERMAL, NUCLEAR AND HYDRO POWER PLANTS**9**

Location, Layout and working of steam, diesel and gas power plants - Principles of nuclear power generation, Types of nuclear power plants and their comparison, Layout and working of nuclear power plants, Advantages and disadvantages of nuclear energy- Layout and working, Types of hydroelectric power plants, Advantages of hydro generation, Environmental issues.

UNIT III POWER PLANT INSTRUMENTATION**9**

Importance of instrumentation in power plants, UP & I diagram of boiler- Measurements of non electrical parameters, flow of feed water, air, steam, radiation detector, smoke density measurement-analyzers, flue gas oxygen analyzer, chromatography, PH meter, pollution monitoring instruments.

UNIT IV BOILER, TURBINE-MONITORING AND CONTROL**9**

Combustion control - furnace draft control-drum level control- de-aerator control- boiler interlocks-speed, vibration, temperature monitoring control of turbine lubrication and cooling system of turbine.

UNIT V DISTRIBUTED GENERATION AND NON CONVENTIONAL PLANTS**9**

Introduction to the concept of distributed generation –basics on distributed generation Technologies- Effect on system operation. Basic concepts, Principle of working and layout of

Course Objectives

- To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- To understand the statistical approach for quality control.
- To create an awareness about the ISO and QS certification process and its need for the industries.
- To study the fundamentals of quality controls.
- To study the concepts of total quality management.
- To study the concepts of total education

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the principles and basic concepts.
2. Understand the fundamentals of quality controls.
3. Explain the concepts of total quality management.
4. Explain the concepts of total education
5. Diagnose problems in the quality improvement process, SPC etc.
6. Diagnose problems in the production planning, control and decision making.

UNIT I INTRODUCTION**9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management (TQM), Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT II TQM PRINCIPLES**9**

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDCA Cycle, 5S Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy and Performance Measures.

UNIT III STATISTICAL PROCESS CONTROL**9**

The seven QC tools, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT IV TQM TOOLS**9**

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT V QUALITY SYSTEMS**9**

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, QS 9000, ISO 14000 – Concept, Requirements and Benefits.

WEBSITE

www.management.about.com

Course Objectives

- To introduce concepts of Lab view software.
- To study graphical programming, interfacing instruments and its protocols.
- To introduce data acquisition methods.
- To introduce signal processing and network automation tools.
- To study about data cards in instrumentation
- To study the interface bus and signals

Course Outcomes

- At the end of the course the student will be able understand the concepts of virtual instrumentation.
- Knowledge about VI programming
- Gain experience in Standards and protocols of instrumentation
- Real time automation activity in instrumentation
- DSP based instrumentation control and its applications
- Gain Knowledge of automated control in instrumentation

UNIT I REVIEW OF DIGITAL INSTRUMENTATION**9**

Representation of analog signals in the digital domain – Review of quantization in amplitude and time axes, sample and hold, sampling theorem, ADC and DAC.

UNIT II GRAPHICAL PROGRAMMING AND LABVIEW**9**

Concepts of graphical programming – LABVIEW software – Concept of VIs and sub VI - Display types – Digital – Analog – Chart and Graphs. Loops - structures - Arrays – Clusters. Local and global variables – String and file I/O. Timers and dialog controls.

UNIT III INSTRUMENT INTERFACES AND PROTOCOLS**9**

RS232, RS 422, RS 485 and USB standards - IEEE 488 standard – Introduction to bus protocols of MOD bus and CAN bus. Electronic standards for signals – noise and EMI effects. Signal conditioning chassis and extension modules. Image acquisition cards.

UNIT IV PC BASED DATA ACQUISITION**9**

Concept of PC based data acquisition – Typical on board DAQ card – Resolution and sampling frequency - analog inputs and outputs – Single-ended and differential inputs –DAQ cards terminal boxes - Use of timer-counter and analog outputs on the universal DAQ card.

UNIT V SIGNAL PROCESSING AND NETWORK BASED AUTOMATION**9**

Mathematical tools for statistical calculation – Signal processing tools- Windowing and filtering tools –Control system tools – PID controller – CRO – function generator –illustration and case study – Web publishing tool –configuring VI server.

**LIST OF OPEN ELECTIVES OFFERED BY OTHER
DEPARTMENTS SCIENCE AND HUMANITIES**

LTPC300

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To study statistical methods of the sample data.

1. To use English language for communication: verbal & non-verbal.
2. To enrich comprehension and acquisition of speaking & writing ability.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To hone their listening, speaking, Reading and writing skills.
5. To gain confidence in using English language in real life situations.
6. To improve word power: lexical, grammatical and communication competence.

9

Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT -III TWO DIMENSIONAL RANDOM VARIABLES**9**

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IV CLASSIFICATION OF RANDOM PROCESS**9**

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -V CORRELATION AND SPECTRAL DENSITIES**9**

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

3. [www.mathworld](http://www.mathworld.wolfram.com). Wolfram.com

Course Objectives

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To study and acquire the knowledge to comprehend the concepts of fuzzy relations

Course Outcomes

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS**9**

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS**9**

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS**9**

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES**9**

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE**9**

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

Course Objectives

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces

Course Outcomes

The student will be able to

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics.

UNIT I VECTOR SPACES**9**

General vector spaces, real vector spaces, Euclidean n -space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS**9**

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS**9**

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS**9**

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigen values and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES**9**

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

WEBSITES

1. www.sosmath.com

2. www.nptel.ac.in
3. www.mathworld.wolfram.com

Course Objectives

- To disseminate the fundamentals of acoustic waves.
- To inculcate the characteristics of radiation and reception of acoustic waves.
- To divulge knowledge on the basics of pipe resonators and filters.
- To introduce the features of architectural acoustics.
- To impart the basic knowledge of transducers and receivers
- To study about the pipes resonants and filters

Course Outcomes

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION**9**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**9**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS**9**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**9**

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms –

acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

9

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electro-dynamics microphone piezoelectric microphone – calibration of receivers

TOTAL : 45 HOURS

2. www.acoustics-engineering.com
3. www.nptel.ac.in
4. www.ocw.mit.edu

Course Objectives

- To make the students conversant with basics of Solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand about the solid waste

Course Outcomes:

- Outline the basic principles of Solid waste and separation of wastes (K).
- Identify the concepts of treatment of solid wastes (S).
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I SOLID WASTE**9**

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT**9**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL**9**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT**9**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE**9**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production

from biological conversion products, other biological transformation processes. Chemical transformation processes.

4. nzic.org.nz/ChemProcesses/environment/

Course Objectives

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
3. To acquaint the student with concepts of green technology.
4. To develop an understanding of the basic concepts of renewable energy resources.
5. To acquaint the students with the basic's information on catalysis.
6. To gain knowledge on the green technology and renewable energy resources

Course Outcomes

1. Outline the basic principles of green chemistry (K).
2. Examine the different atom efficient process and synthesis elaborately (S).
3. Apply the concepts combustion of green technology (S).
4. Identify and apply the concepts of renewable energy (S).
5. Apply the concepts of green catalysts in the synthesis (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**9**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES**9**

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY**9**

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e- green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES**9**

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY**9**

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy

requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

Course Objectives

- To get the information on electrochemical material.
- To study about the conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To gain knowledge on the batteries and power sources.
- To develop energy storage devices.
- To study and Identify the concepts of storage devices and its applications. (S)
-

Course Outcomes

1. Outline the basic principles of chemistry in **electrochemical material (K)**.
2. Examine the properties of conducting polymers (S).
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING**9**

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS**9**

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I**9**

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II**9**

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

9

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

Course Objectives

1. To make the students conversant with **cement and lime** and its uses.
2. To make the student acquire sound knowledge of abrasives and refractories.
3. To acquaint the student with concepts of inorganic chemicals.
4. To develop an understanding of the basic concepts **explosives**.
5. To acquaint the students with the basics of **agriculture chemicals**.
6. To study the concepts of explosives and smoke screens(S)

Course Outcomes

1. Outline the basic chemistry of **cement and lime (K)**.
2. Examine the uses of abrasives and refractories (S).
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens (S).
5. Identify the usage of the **agriculture** chemicals (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I CEMENT AND LIME**9**

Manufacture of Portland cement – setting of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement
Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesium lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES**9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**9**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

3. <http://fas.org/man/dod-101/navy/docs/fun/part12.htm>
4. <http://toxics.usgs.gov/topics/agchemicals.html>

Course Objective:

1. Develop abilities to write technically and expressively.
2. Recognize writing as a constructive, meaningful process.
3. Practice using reading strategies for effective writing.
4. Design effective technical documents for both print and digital media.
5. Identify the qualities of good technical writing.
6. To study the reading ability for effective writing

Course Outcomes:

Students undergoing this course are able to

1. Construct simple sentences, correct common grammatical errors in written English.
2. Develop confidence in English language by imbibing lexical and syntax rules.
3. Enrich their reading ability for effective writing.
4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer’s block

– Prioritizing for effective writing– Avoiding plagiarism.

UNIT II PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT III LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT IV THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT V REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts & techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client-side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNIT I INTRODUCTION**9**

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML**9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL**9**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING**9**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY**9**

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TOTAL: 45 HOURS**TEXT BOOKS**

2	Robert W. Sebesta	Programming the World Wide Web	Pearson Education	2016

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I INTRODUCTION**9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH**9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers
- Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS**9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV MOTION CAPTION**9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development**9**

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TOTAL: 45 HOURS

TEXT BOOKS

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Malay K. Pakhira	Computer Graphics, Multimedia and Animation	PHI Learning PVT Ltd	2010

REFERENCES

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION

2	Ashok Banerji, Ananda Mohan Ghosh	Multimedia Technologies	McGraw Hill Publication	--
3	Pankaj Dhaka	Encyclopedia of Multimedia and Animations	Anmol Publications	2011

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I INTRODUCTION**9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques

– Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES**9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW**9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE**9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting**9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

1	Peter Abel, Niyaz Nizamuddin	IMB PC Assembly Language and Programming	Pearson Education	2007
2	Scott Mueller	Repairing PC's	PHI	1992

COURSE OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop Java programs using OOP principles
- Develop Java programs with the concepts of inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA**9**

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES**9**

Arrays – Strings - Packages – Java-Doc comments -- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS**9**

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING**9**

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS**9**

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

17BEECOE01
Course Objectives

REAL TIME EMBEDDED SYSTEMS

L T P C 3 0 0 3

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To impart knowledge on task management

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT - I INTRODUCTION TO EMBEDDED SYSTEM

9

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT - II OPERATING SYSTEM OVERVIEW

9

Introduction – Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT - III TASK MANAGEMENT

9

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks – Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List.

UNIT - IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

9

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a

Queue – Flushing a Queue.

UNIT - V MEMORY MANAGEMENT

9

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS- II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II.

TOTAL: 45 HOURS

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES**9**

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT – II TELEVISION STANDARDS AND SYSTEMS**9**

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT – III OPTICAL RECORDING AND REPRODUCTION**9**

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT – IV TELECOMMUNICATION SYSTEMS**9**

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT – V HOME APPLIANCES**9**

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

TOTAL: 45 HOURS

TEXT BOOK

S. NO	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	S.P.Bali	Consumer Electronics	Pearson Education	2005

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes:

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problem.

UNIT I INTRODUCTION TO NEURAL NETWORKS

9

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS

9

Error – correction learning – memory based learning - hebbian learning-competitive learning- Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION

9

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm- Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART

9

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

TOTAL: 45 HOURS

2	Satish Kumar	Neural Networks : A Classroom Approach	TMH	2008
3	Freeman J.A., Skapura D.M.	Neural networks, algorithms, applications, and programming techniques	Addition Wesley	2005
4	Laurene Fausett	Fundamentals of Neural Networks: Architectures, Algorithms, and Applications	Pearson/ Prentice Hall	
5	Robert J Schalkoff	Artificial Neural Networks	McGraw Hill	1997

3 Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy inference and defuzzy inference procedures

Course Outcomes:

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Analyse the real time application of it
- Understand the ANFIS

UNIT – I**9**

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT – II**9**

Theory Of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT – III**9**

Fuzzy Knowledge Based Controllers (FKBC): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzification and defuzzification procedures – Design of Fuzzy Logic Controller

UNIT – IV**9**

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Self organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS**9**

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications-Introduction to ANFIS.

BIO TECHNOLOGY

17BTBTOE01

BIOREACTOR DESIGN

L T P C 3 0 0 3

Course Objectives

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes

- Summarize the basic concepts in bioprocess Engineering.
- Ability to design the bioreactors for various operations.
- Ability to develop the heat transfer equipments for Bioprocess Engineering.
- Ability to construct the equipments used in mass transfer operations.
- To acquire the knowledge of regulatory constraints in bioprocess
- Categorize the equipments used in separation process.

UNIT I ENGINEERING PROPERTIES AND STORAGE TANK

9

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNIT II REACTOR DESIGN

9

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS

9

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS

9

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V SEPARATION EQUIPMENTS

9

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

1	Pauline. M. Doran	Bioprocess Engineering Principles	Academic Press	2013

Course Objectives

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING**9**

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS**9**

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS**9**

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING**9**

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES**9**

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS**9**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**9**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS**9**

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS**9**

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction &

prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS

9

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

Course Objectives

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION**9**

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANO PARTICLES**9**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS**9**

Nanomedicine, Nanobiocensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodesigns and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIO TECHNOLOGY**9**

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinal chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY**9**

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

MECHANICAL ENGINEERING

17BEMEOE01

COMPUTER AIDED DESIGN

L T P C 3 0 0 3

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcomes

Upon completion of the course, the students will be able to

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filletting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property

calculations.

Course Objective

- To recognize and evaluate occupational safety and health hazards in the workplace.
- To determine appropriate hazard controls following the hierarchy of controls.
- To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

At the end of the course, student will be able to

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS**9**

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN**9**

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS**9**

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign
- Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES**9**

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM**9**

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II,

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcomes

Upon completion of this course, the students can be able to

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT

9

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

WEBSITES

1. <https://laulima.hawaii.edu/portal>

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcomes

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

9

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–
Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical
Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle -
Neuromuscular Control

TOTAL: 45 HOURS

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICAT ION
1	Duane Knudson	Fundamentals of Biomechanics	Springer Science+ Business Media, LLC	2007
2	C. Ross Ethier Craig A. Simmons	Introductory Biomechanics	Cambridge University Press	2007

Course Objectives

- To impart the knowledge on constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give the knowledge on wheels, tyres and brakes of automobiles.
- To provide the information on current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes

Upon successful completion of the course, the students should be able to

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND FUEL FEED SYSTEMS**9**

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT II TRANSMISSION SYSTEMS**9**

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. **Course Objectives** of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT III SUSPENSION SYSTEM**9**

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT IV BRAKES**9**

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNITV ELECTRICAL SYSTEM**9**

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION**9**

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS**9**

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION**9**

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES**9**

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks.

Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

9

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

TOTAL: 45 HOURS

TEXT BOOKS:

SL.N O.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	Irving P.E.	Motor Cycle Engineering.	Temple Press Book, London.	1992
2.	Srinivasan.S.	Motor cycle, Scooter, Mobeds.	New century book house.	1988

2.	Bruce A. Johns, David D. Edmundson and Robert Scharff	Motorcycles: Fundamentals, Service, Repair	Goodheart-Willcox	1999

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES 9

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE 9

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE 9

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE 9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

**UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS,
LUBRICATION SYSTEM AND VEHICLE BODY**

9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TOTAL: 45 HOURS

TEXT BOOKS

SL.N O.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATI ON
1.	John Doke	Fleet Management	McGraw Hill Co	1984
2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

Course Objectives

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes

Upon successful completion of the course, the students should be able to

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS 9

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles
– Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS 9

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY 9

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION 9

Reduction of noise - Internal & external pollution control through alternate fuels/power plants
– Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS 9

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

TOTAL: 45 HOURS

TEXT BOOKS

SL. NO	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	LjuboVlacic, Michael Saren and Fumio Harashima	Intelligent Vehicle Technologies	Butterworth-Heinemann publications, Oxford	2001
2.	Ronald K.Jurgen	Navigation and Intelligent Transportation Systems –Progress in Technology	Automotive Electronics Series,SAE, USA.	1998

REFERENCES

SL. NO	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION

2.	Bechhold,	Understanding Automotive Electronics	SAE	1998
3.	Robert Bosch	Automotive HandBook, 5 th Edition	SAE	2000

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING

9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, **Course Objectives** and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES

9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS

9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL**9**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TOTAL: 45 HOURS**TEXT BOOKS**

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Meera Mehta and Dinesh Mehta	Metropolitan Housing Markets	Sage Publications Pvt. Ltd., New Delhi	2002

2	-	UNCHS, National Experiences with Shelter Delivery for the Poorest Groups	UNCHS (Habitat), Nairobi	2000

Course Objectives

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

Course Outcome

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Laws of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS**9**

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour –

Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non- combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	E.R.Ambrose	Heat Pumps and Electric Heating	John and Wiley and Sons, Inc., New York	2002
2	-	Handbook for Building Engineers in Metric systems	NBC, New Delhi	2005

REFERENCES

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	-	Philips Lighting in Architectural Design	McGraw-Hill, New York	2000
2	A.F.C. Sherratt	Air-conditioning and Energy Conservation	The Architectural Press, London	2005

Course Objectives

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

Course Outcome

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector. _

UNIT I IRRIGATION SYSTEM REQUIREMENTS**9**

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING**9**

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III MANAGEMENT**9**

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION**9**

Operational plans – Main canals, laterals and field channels – Water control and regulating structures –
Performance indicators – Case study

UNIT V INVOLVEMENT OF STAKE HOLDERS**9**

Farmer's participation in System operation – Water user's associations – Farmer councils –
Changing paradigms on irrigation management – Participatory irrigation management

TOTAL: 45 HOURS**TEXT BOOKS**

- To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
- To study different methods of construction to successfully achieve the structural design with recommended specifications.
- To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
- To study of construction equipment's, and temporary works required to facilitate the construction process
- To provide a coherent development to the students for the courses in sector of Advanced construction technology.
- To present the new technology of civil Engineering and concepts related Advanced construction technology.

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

DEPARTMENT**

17BEEEOE01

ELECTRIC HYBRID VEHICLE

L T P C 3 0 0 3

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.

- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION

9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES**9**

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL: 45 HOURS**TEXT BOOK**

17BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING L T P C 3 0 0 3

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V	POWER	FACTO	IMPROVEMEN	LIGHTIN	AN	ENERG
		R	T,	G	D	Y
INSTRUMENTS						9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

2	W.C.Turner Steve Doty	Energy Management Handbook	(b) Lulu Enterprises, Inc. - 8th Edition Volume II	2013

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

2	W.Bolton	Programmable Logic controller	Elsevier Newnes Publications, 5 th Edition	2009

WEBSITE

<http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>,- Introduction to programmable Logic controller

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

Total number of credits: 189

L:LectureHour

T:TutorialHour

CIA: Continuous Internal Assessment

P:PracticalHour

C: No.ofCredits

ESE: End SemesterExaminations

Note:

1. The passing minimum for value added course is 50 marks out of 100 marks. There will be two tests, of which one will be class test covering 50% of syllabus for 50 marks and other for 50 marks.
2. Credits for value added courses are not counted for computation of CGPA.
3. Interested students can opt oneself study course in eighth semester from open electives which will be reflected in the mark sheet only if he / she passes

Programme Educational Objectives (PEO's)

- **PEO1:** Graduates will more conscious about their profession with social awareness and responsibility.
- **PEO2:** Graduates will be engineering experts, who would help solve industry's technological problems.
- **PEO3:** Graduates will be engineering professionals, consultants or entrepreneurs engaged in technology development.
- **PEO4:** Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.

Programme Outcomes (PO's)

- **PO1:** Ability to apply knowledge of mathematics and science in solving engineering problems.
- **PO2:** In-depth knowledge on the fundamental principles, construction and auxiliary systems of mechanical sciences.
- **PO3:** To understand the principles involved in evaluating the structural, functional and safety requirements of mechanical systems.
- **PO4:** Hands on knowledge to develop analytical skills for designing and analyzing various mechanical components and processes.
- **PO5:** To understand and apply appropriate techniques and IT tools for the design and analysis of mechanical systems.
- **PO6:** Understanding the mechanism of pollutant formation and its control techniques.
- **PO7:** Understanding of human and ethical responsibilities towards the profession and society.
- **PO8:** Ability to understand the economics and cost analysis in order to take economically sound decisions.

- **PO9:** Ability to apply modern techniques and tools necessary for engineering practice with appropriate considerations for public health, safety, cultural and environmental limitations.
- **PO10:** Understand the impact of engineering solutions in a societal context and to be able to respond effectively to the needs for sustainable development.
- **PO11:** Function effectively as an individual, and as a member or a leader in diverse teams, and in multi-disciplinary situations.
- **PO12:** To recognize the need for, and have the ability to engage in independent and lifelong learning.

Programme Educational Objectives	Programme Objectives											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO1			✓			✓	✓	✓	✓	✓		
PEO2	✓	✓	✓	✓	✓				✓			
PEO3	✓	✓	✓	✓	✓				✓		✓	✓
PEO4								✓			✓	

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
2. To make the students to meet the growing demand in the field of Global communication.
3. To help students acquire their ability to speak effectively in real life situations.
4. To inculcate the habit of reading and to develop their effective reading skills.
5. To ensure that students use dictionary to improve their active and passive vocabulary.
6. To enable students to improve their lexical, grammatical and communicative competence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non-verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Ensure students proficiency in professional communication.
4. Developed their active and passive vocabulary.
5. Gain confidence in using English language in real life situations.
6. Improve word power: lexical, grammatical and communication competence.

UNIT I

9

Listening – Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Formal and Informal letters - Free writing on any topic – My favorite place, hobbies, dreams, goals, etc - To fill in different application forms. **Grammar** – Articles - WH questions – Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

UNIT II

10

Listening – Understanding the passage in English – Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing** – Coherence and cohesion in writing – Short paragraph writing – Writing short messages. **Grammar** – Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

UNIT III

10

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

UNIT IV

8

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

UNIT V

8

Listening - Listening to different accents, speeches/presentations. **Speaking**- Extempore talk – Just-a-minute talk. **Reading**- Reading strategies – Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences – Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

5. www.teachertube.com – WritingTechnically

COURSE OBJECTIVES

1. To introduce the basic concepts of PDE for solving standard partial differential equations
2. To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
3. To provide an overview of probability and statistics to engineers
4. To introduce the basic concepts of two-dimensional random variables
5. To acquaint the knowledge of testing of hypothesis for small and large samples.
6. To apply testing of hypothesis in important role in real life problems.

COURSE OUTCOMES

After successfully completing the course, the student will have a good understanding of the following topics and their applications

1. The fundamental concepts of partial differential equations and the various solution procedures for solving the first order non-linear partial differential equations.
2. Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional wave equations.
3. Understand the basic concepts of one knowledge of the concepts of probability and have knowledge of standard distribution which can describe real life phenomenon.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
6. Apply the concept of testing of hypothesis for small and large samples in real life problems.

UNIT I MATRICES**12**

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS**12**

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III DIFFERENTIAL EQUATIONS**11**

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

UNIT IV FUNCTIONS OF SEVERAL VARIABLES**12**

Partial derivatives – Euler's theorem for homogeneous functions – Total derivatives – Differentiation of implicit functions – Jacobians – Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNIT V SEQUENCES AND SERIES**13**

Sequences: Definition and examples – **Series:** Types and Convergence – Series of positive terms – Tests of convergence: Comparison test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

3. www.intmath.com/matrices-determinants

COURSE OBJECTIVES

1. To introduce the basic physics concepts relevant to different branches of Engineering and Technology.
2. To acquire the knowledge of Electromagnetic field theory.
3. To make the student to learn scientific, mathematical and engineering principles.
4. To make the students to understand the basics of vacuum science.
5. To make the students to understand the process of production and measurement.
6. To make the students to understand the working of Gauges like Pirani, McLeod and Penning

COURSE OUTCOMES

1. Formulate potential problems within electrostatics, magneto statics.
2. Formulate stationary current distributions in linear, isotropic media.
3. Acquire knowledge on properties of matter, quantum physics.
4. Understand the basics of vacuum science.
5. Understand the process of production and measurement.
6. Understand the working of Gauges like Pirani, McLeod and Penning

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS

9

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), poisson ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS

9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle – derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS

9

Introduction to quantum theory – Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS

9

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS

9

Production of ultrasonics by piezoelectric method – Non Destructive Testing – pulse echo system through transmission and reflection modes- A, B and C- scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition – Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

3	M.N. Avadhanulu and PG Kshirsagar	A Text book of Engineering Physics	S.Chand and company, Ltd., New Delhi	2011

WEB REFERENCES

1. www.nptel.ac.in
2. www.physicsclassroom.com
3. www.oyc.yale.edu

COURSE OBJECTIVES

1. To understand the terminologies of atomic and molecular structure
2. To study the basics of Periodic properties, Intermolecular forces
3. To study about spectroscopic technique
4. To understand the working of electromagnetic spectrum and spectroscopic techniques
5. To understand the thermodynamic functions
6. To comprehend the basic organic chemistry and to synthesis simple drug.

COURSE OUTCOMES

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
4. Understand the concept of various spectroscopic techniques.
5. Rationalise bulk properties and processes using thermodynamic considerations.
6. List major chemical reactions that are used in the synthesis of molecules.

UNIT I WATER TECHNOLOGY**9**

Sources-Characteristics – Specification for drinking water, BIS & WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation, UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES**9**

Electrochemical cells – EMF – Measurement of EMF – Single electrode potential – Nernst equation – Reference electrodes – Standard Hydrogen electrode - Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) – Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell-Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2 - O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION**9**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSION SCIENCE**9**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions – Inorganic coatings- Metallic coatings - Electroplating (Au) and Electroless plating (Ni) - Surface conversion coating - Hot dipping.

UNIT V SURFACE CHEMISTRY AND PHASE RULE**9**

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

1. <http://www.studynotes.ie/leaving-cert/chemistry/>
2. <http://www.rejinpaul.com/2011/04/engineering-chemistry-ii-second.html>

COURSE OBJECTIVES

1. To impart the basic knowledge of various basic fields of mechanical engineering.
2. To Study about basic manufacturing and machining processes.
3. To study about power plants.
4. To study about automobile engineering
5. To study about boiler and hydraulic machines.
6. To study about Refrigeration and Air conditioning

COURSE OUTCOMES

1. Design different sheet metal working processes
2. Select appropriate Joining Processes to join Work piece.
3. Differentiate various metal forming processes such as Hot and Cold Working, Rolling, Forging, Extrusion and Drawing Processes.
4. Students will be able to apply these basics in the designing of the automotive components and engines.
5. Students will be able to get employed in Private Companies like Automotive Sector involving Manufacturing and Design as Graduate Trainees Engineer also in government firms like pollution control board.
6. Students should be able to calculate cooling load for air conditioning systems used for various applications

INTRODUCTION (Not included for examination)**3**

Engineering and Technology - History of Mechanical Engineering- Mechanics - Statics and dynamics - Broad areas in Mechanical Engineering.

UNIT I MANUFACTURING PROCESSES**8**

FOUNDRY - Principles - Patterns - Types, Molding Processes, Cupola and Induction Furnaces. METAL FORMING - Principles - Hot and cold working of metals - Forging, rolling, extrusion and wire drawing, sheet metal operations. WELDING - Principles - Oxy-Acetylene Welding and Manual Metal Arc Welding, Brazing and Soldering.

UNIT II METAL FORMING AND JOINING PROCESSES**8**

Metal forming process – Rolling, forging, drawing, extrusion and sheet metal operations-fundamentals only. Metal joining processes – Welding-arc and gas welding, Soldering and Brazing.

UNIT III MACHINING OPERATIONS**8**

Machining principles - Construction and working principles of basic machine tools - Lathe, Drilling, Shaper, Planer and Milling machine. Introduction to CNC machines.

Working principle of petrol and diesel engines - Four stroke and two stroke cycles - Comparison between four stroke and two stroke engines - Working principle of simple carburetor - Lubrication system and cooling system.

UNIT IV POWER PLANTS**9**

Classification of power plants - Working principle of steam, Gas, Diesel, Hydro - Electric and Nuclear Power Plants - Merits and demerits. Solar – Wind power plants.

UNIT V REFRIGERATION AND AIR-CONDITIONING**9**

Terminology of Refrigeration and Air Conditioning - Basic principles of Vapour Compression and Absorption Refrigeration System – Window and Split Room Air Conditioners.

TOTAL**45****TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Shanmugam, G	Basic Mechanical Engineering	Tata McGraw Hill Publishing company Limited, New Delhi	2008
2	Rajput, R.K	Basic Mechanical Engineering	Laxmi Publications (P) Ltd, New Delhi	2008

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	K.R.Gopalkrishna	A text Book of Elements of Mechanical Engineering	Subhash Publishers, Bangalore	2012
2	Pravin Kumar	Basic Mechanical Engineering	Pearson	2013

COURSE OBJECTIVES

1. To provide an overview of various analog device
2. To provide an overview of Digital concepts
3. To learn working of amplifier and its application.
4. To understand the concept of RC-timing circuits.
5. To learn cellular concept and block diagram of GSM system.
6. To provide a review of communication system

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the principles of semiconductor devices and their applications.
2. Understand the concept of voltage regulators
3. Design an application using Operational amplifier.
4. Understand the working of timing circuits and oscillators.
5. Understand logic gates, flip flop as a building block of digital systems.
6. Learn the basics of Electronic communication system.

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS 9

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS 9

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS 9

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – A/D and D/A Conversion (single concepts).

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mittle, V.M	Basic Electrical Engineering	Tata McGraw Hill Edition, New Delhi	2004
2	Sedha R.S	Applied Electronics	S. Chand & Co	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Muthusubramanian R, and Muraleedharan K A	Basic Electrical, Electronics and Computer Engineering	Tata McGraw Hill, Second Edition	2006
2	Nagsarkar T K and Sukhija M S	Basics of Electrical Engineering	Oxford press	2005
3	Mahmood Nahvi and Joseph A. Edminister	Electric Circuits	Schaum' Outline Series, McGraw Hill	2002
4	Premkumar N	Basic Electrical Engineering	Anuradha Publishers	2003

COURSE OBJECTIVES

1. To know about different materials and their properties
2. To know about engineering aspects related to buildings
3. To know about importance of surveying and the transportation systems
4. To get exposed to the rudiments of engineering related to dams, water supply, and sewage disposal
5. To know about importance of drawings
6. To know about importance of electrical fittings.

COURSE OUTCOMES

1. Students are able to understand the property, use, advantage and disadvantage of different material used in construction
2. Students are able to understand the component of building with their function
3. Students are able to understand construction procedure of different components
4. After completion of this students will be able to understand basic principles of building design and planning.
5. They will explore building drawing as a way of discovering and developing ideas for designing residential, commercial and public buildings.
6. Students will identify suitable method of irrigation and drainage of waterlogged area.

UNIT I BUILDING MATERIALS**9**

Introduction – Civil Engineering – Materials: Bricks – composition – classifications – properties – uses. Stone – classification of rocks – quarrying – dressing – properties – uses. Timber – properties – uses – ply wood. Cement – grades – types – properties – uses. Steel – types – properties – uses – market forms. Concrete – grade – properties – uses.

UNIT II BUILDING COMPONENTS**9**

Building – selection of site – classification – components. Foundations – functions – classifications – bearing capacity. Flooring – requirements – types – cement concrete – marble – terrazzo floorings. Roof – types and requirement

UNIT III SURVEYING**9**

Surveying – objectives – classification – principles of survey – survey instruments, their care and adjustments – Ranging and Chaining. Compass – types – Prismatic Compass. Bearing – types. Levelling – Levels and staves – types. Contouring

UNIT IV WATER SUPPLY AND SEWAGE DISPOSAL**9**

Dams – purpose – selection of site – types – gravity dam (cross section only). Water supply – objective – quantity of water – sources – standards of drinking water – distribution system. Sewage – classification – septic tank – components and functions.

UNIT V BUILDING DRAWING**9**

Types of drawing with appropriate scale & Uses of index map, key plan, village map, site plan, Layout plan – Types of Projection adopted in Building Drawing (Plan, Elevation and sections) – Scales for various types of Drawings – Working drawing, large scale drawing – Symbols, Conventions and Abbreviations for – Electrical fittings, water supply, sanitary fittings, materials of construction – Sizes of various standard papers.

3	Engineering Materials	Rangwala S.C	Charotar Publishing House, Anand	2012

COURSE OBJECTIVES

1. To learn the basic concepts in physics relevant to different branches of Engineering and Technology.
2. To study the concept of semiconductor and conductivity.
3. To learn the properties of materials.
4. To learn the basic concept of Numerical Aperture and acceptance angle.
5. To make the students to determination of wavelength using grating.
6. To learn the basic concept about viscosity of liquids.

COURSE OUTCOMES

1. Understand the basic concepts in physics relevant to different branches of Engineering and Technology.
2. Understand the concept of semiconductor and conductivity.
3. Acquire knowledge on the properties of materials.
4. Understand the basic concept of Numerical Aperture and acceptance angle.
5. Understand the students to determination of wavelength using grating.
6. Acquire knowledge on the basic concept about viscosity of liquids.

LIST OF EXPERIMENTS

PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

TOTAL

45

COURSE OBJECTIVES

1. To understand the terminologies of atomic and molecular structure
2. To study the basics of Periodic properties, Intermolecular forces
3. To study about spectroscopic technique
4. To understand the working of electromagnetic spectrum and spectroscopic techniques
5. To understand the thermodynamic functions
6. To comprehend the basic organic chemistry and to synthesis simple drug.

COURSE OUTCOMES

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
4. Understand the concept of various spectroscopic techniques.
5. Rationalise bulk properties and processes using thermodynamic considerations.
6. List major chemical reactions that are used in the synthesis of molecules.

LIST OF EXPERIMENTS

CHEMISTRY

1. Estimation of alkalinity of Water sample
2. Estimation of hardness of Water by EDTA
3. Estimation of Chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Determination of molecular weight and degree of polymerization using viscometry.
6. Conductometric Titration (Simple acid base).
7. Conductometric Titration (Mixture of weak and strong acids).
8. Conductometric Titration using BaCl_2 vs Na_2SO_4 .
9. pH Titration (acid & base).
10. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Estimation of Ferric ion by spectrophotometry.
13. Determination of Chemical Oxygen Demand.

TOTAL

45

COURSE OBJECTIVES

1. To prepare the students to design a system, component, or process.
2. To meet desired needs within realistic constraints such as economic, environmental, social, and ethical.
3. To make the component with health and safety, manufacturability, and sustainability
4. To prepare the students to communicate effectively and to use the techniques, and skills.
5. To make the students to use modern engineering tools necessary for engineering practice.
6. To make the students to assemble different components.

COURSE OUTCOMES

1. The students will gain knowledge of the different manufacturing processes.
2. Fabricate components using different materials.
3. Students will be able to fabricate components with their own hands.
4. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances
5. By assembling different components with different processes.
6. They will be able to produce small devices of their interest.

PART – A (CIVIL & MECHANICAL)

- | | |
|--|----------|
| 1. WELDING | 6 |
| i. Preparation of arc welding of butt joints, lap joints and tee joints. | |
| 2. BASIC MACHINING | 6 |
| i. Simple Turning and Tap turning | |
| ii. Drilling and Tapping | |
| 3. SHEET METAL WORK | 6 |
| i. Model making – Trays, funnels, etc. | |
| 4. DEMONSTRATION | 4 |
| i. Smithy operations | |
| ii. Foundry operations | |
| iii. Plumbing Works | |
| iv. Carpentry Works | |

PART –B (ELECTRICAL & ELECTRONICS)

- | | |
|---|-----------|
| 5. ELECTRICAL ENGINEERING | 10 |
| i. Study of electrical symbols and electrical equipments. | |
| ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring. | |
| iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energymeter. | |
| iv. Measurement of electrical quantities – voltage, current, power & power factor in Rload. | |
| v. Measurement of energy using single phase energymeter. | |
| 6. ELECTRONICS ENGINEERING | 13 |
| i. Study of Electronic components– Resistor (color coding), capacitors and inductors. | |
| ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB. | |
| iii. Study of logic gates AND, OR, NOT, NOR and NAND. | |
| iv. Study of HWR and FWR. | |

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Jeyachandran, K. and Balasubramanian, S	A Premier on Engineering Practices Laboratory	Anuradha Publications, Kumbakonam	2007
2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices Lab Manual	Vikas Pupliching House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

COURSE OBJECTIVES

1. To make the students to design a system, component, or process to meet desired needs.
2. To prepare the students to design the components with realistic constraints.
3. To make the students to consider economic, environmental, ethical, health and safety when they design.
4. To make the students to design the components with considering manufacturability, and sustainability
5. To prepare the students to communicate effectively using the techniques, skills, and modern engineering tools.
6. To make the students to understand to use necessary for engineering practice

COURSE OUTCOMES

The student will also learn:

1. Introduction to engineering design and its place in society
2. Exposure to the visual aspects of engineering design and engineering graphics standards
3. Exposure to engineering communication effectively.
4. Exposure to 3D free hand sketching.
5. Acquired the knowledge of projections of points, lines and plane surfaces.
6. Understand the basic concept of projection of solids.

UNIT I INTRODUCTION**9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES**8**

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING**9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES**9**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces – Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS**9**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

COURSE OBJECTIVES

1. To know the value of being a human being and the value of being a useful citizen
2. To develop a critical ability to distinguish between essence and form, or between what is of value and what is superficial, in life.
3. To move from discrimination to commitment.
4. To recognize and determine the role of engineers in the economic and social development of the society.
5. To develop social responsibility & human professional ethics.
6. To develop the knowledge of social impact of economic liberalization and technology.

COURSE OUTCOMES

1. Identify and analyze an ethical issue in the subject matter under investigation or in a relevant field
2. Identify the multiple ethical interests at stake in a real-world situation or practice
3. Articulate what makes a particular course of action ethically defensible. Assess their own ethical values and the social context of problems
4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects
5. Demonstrate knowledge of ethical values in non-classroom activities, such as service learning, internships, and field work
6. Integrate, synthesize, and apply knowledge of ethical dilemmas and resolutions in academic settings, including focused and interdisciplinary research

UNIT-I**3**

Introduction to Yoga-Meaning of Yoga – Concept of Yoga-Aim and Objectives of Yoga – History of Yoga -Systems of Yoga. -Stages(Or)Limbs of Yoga

UNIT-II**3**

Asanas-Surya Namaskar- Thadasana- Veerabhadra Asana- Trikonasana- Utkatasana- Ardha Chakrasana- Ardha Kati Chakrasana- Thandasana- Gomugasana-Padmasana- Vajrasana- Paschimottasana- Matsyendrasana-Bavana Mukthasana- Supta Padhangusthasana- Sethubandhasana- Navasana- Ardha Bavanamukthasana- Mathasyasana- Naukasana- Bujangasana- Salabasana- Makkarasana-Dhanurasana.

UNIT-III**3**

Advanced Asanas-Sirasasana-Garudasana-Natrajasana-Rajakoptasana-Chakrasana-Kukutasana-Virikshasana-Sarvagana-Halasana-. Mayurasana.

UNIT-IV**3**

Pranayama-Meaning-Types of Pranayama-Bhastrika-Bhramari-Udgeeth-Kabalbhati-Bahya-Anulom Vilom-Pranayana-Benefits of Pranayama. Neti-Jala Neti, Sutra Neti, Nauli- Three Types, Douthy-Three Types

UNIT-V**3**

Mudras-Uses of Mudras- Gyan-Shoonya-Apana-Prana-Vayu-Prithvi-Linga-Apana-Adi Mudra- -Agni Mudra-Surya Mudra-Varuna-Hakini Mudra.

COURSE OBJECTIVES

1. To help students comprehend the role of listening skills in effective communication
2. To familiarize students with verbal and non-verbal communication
3. To expose students to neutral accent
4. To develop emotional intelligence skills in them for enhancing their self-esteem
5. To assist them in setting goals and developing positive attitude
6. To enable students to acquire decision making skills, problem solving skills and assertive skills

COURSE OUTCOMES

1. CO1. To be familiar with the complete course outline/Course Objectives/Learning Outcomes/ Evaluation Pattern & Assignments
2. To participate in an online learning environment successfully by developing the implication-based understanding of Paraphrasing, deciphering instructions, interpreting guidelines, discussion boards & Referencing Styles.
3. To demonstrate his/her ability to write error free while making an optimum use of correct Business Vocabulary & Grammar.
4. To distinguish among various levels of organizational communication and communication barriers while developing an understanding of Communication as a process in an organization.
5. To draft effective business correspondence with brevity and clarity.
6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

UNIT I**9**

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II**9**

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III**9**

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body language – Etiquette- Organization of presentation – brain storming-Negotiations.

UNIT IV**9**

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT V**9**

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

2. www.ispeakyouspeak.blogspot.com
3. <https://alison.com/subjects/6/Personal-Development-Soft-Skills>

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
2. To make the students to meet the growing demand in the field of Global communication.
3. To help students acquire their ability to speak effectively in real life situations.
4. To inculcate the habit of reading and to develop their effective reading skills.
5. To ensure that students use dictionary to improve their active and passive vocabulary.
6. To enable students to improve their lexical, grammatical and communicative competence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non-verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Ensure students proficiency in professional communication.
4. Developed their active and passive vocabulary.
5. Gain confidence in using English language in real life situations.
6. Improve word power: lexical, grammatical and communication competence.

UNIT I**10**

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a Covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentence - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT II**8**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome Address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT III**9**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid Reading – Skimming, Scanning and Surveying. (SQ3R) **Writing**- Essay writing -Minutes of Meeting - Agenda – **Grammar** - Active and Passive voice - Purpose Expression. **Vocabulary** - Same words used as noun and verb - often misspelt and confused words.

UNIT IV**8**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non-verbal communication. **Reading** – Reading Comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job Application - Resume Writing - Checklist Preparation. **Grammar** - Numerical Expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT V**10**

Listening – Types of Listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - voice, quality, volume, pitch etc., **Reading** -Note Making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation Writing – Short Essays Writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabulary with their meanings.

TOTAL**45**

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

COURSE OBJECTIVES

The objective of this course is

1. To familiarize the prospective engineers with techniques in Multivariate integration.
2. To familiarize the concept of ordinary and partial differential equations and complex variables.
3. To equip the students to deal with advanced level of mathematics and applications.
4. To make the students to formulate and solve problems involving random variables.
5. To equip the students to Understand the basic concepts of one- and two-dimensional random variables.
6. To understand the concept of testing of hypothesis for small and large samples in real life problems.

COURSE OUTCOMES

The students will learn:

1. The mathematical tools needed in evaluating multiple integrals and their usage.
2. The effective mathematical tools for the solutions of differential equations that model physical processes.
3. The tools of differentiation and integration of functions of a complex variable that are used in various techniques dealing engineering Problems.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
6. Apply the concept of testing of hypothesis for small and large samples in real life problems.

UNIT I MULTIPLE INTEGRALS**11**

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT II VECTOR CALCULUS**13**

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS**11**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT IV ANALYTIC FUNCTIONS**12**

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: $w = z+a$, az , $1/z$, and bilinear transformation.

UNIT V COMPLEX INTEGRATION**13**

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

COURSE OBJECTIVES

1. To create the awareness about environmental problems among people.
2. To develop an attitude of concern for the environment.
3. To motivate public to participate in environment protection and improvement.
4. To demonstrate proficiency in quantitative methods, qualitative analysis, and critical thinking.
5. To develop writing and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.
6. To Learn about the systems concepts and methodologies to analyze and understand interactions.

COURSE OUTCOMES

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 9

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources- Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM 9

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY 9

Introduction to biodiversity, Definition-Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity- Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION 9

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT 9

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights-Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

3. www.unesco.org/ext/field/beijing/scienceb.htm,
4. www.infinitepower.org/education.htm

COURSE OBJECTIVES

1. To provide an awareness to Computing and C Programming
2. To know the correct and efficient ways of solving problems
3. To learn to develop algorithm for simple problems solving.
4. To Study, analyze and understand logical structure of a computer program
5. To be able to declare pointers of different types and use the mind defining self-referential structures.
6. To be able to create, read and write to and from simple textfiles.

COURSE OUTCOMES

1. Formulate the algorithms for simple problems
2. Translate given algorithms to a working and correct program
3. Be able to correct syntax errors as reported by the compilers
4. Be able to identify and correct logical errors encountered at runtime
5. Be able to write iterative as well as recursive programs
6. Be able to represent data in arrays, strings and structures and manipulate them through a program

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords- General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops- Definition and types- Functions- Arrays- Introduction to Strings- Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming
3. C Programming:
Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	E. Balagurusamy	Computing Fundamentals and C Programming	TMH Education, 5th Edition	2014
2	Yashavant Kanetkar	Let us C	BPB Publications	2013

COURSE OBJECTIVES

1. To prepare the students to make section of solids like Prism, Cylinder, and Pyramid.
2. To prepare true shape of section.
3. To gain the knowledge on lateral surfaces.
4. To acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
5. To gain the knowledge on 2D drawing using CAD software.
6. To acquire the knowledge on basics of 3D modeling packages.

COURSE OUTCOMES

1. The students to draw section of solids like Prism, Cylinder, and Pyramid.
2. Students can prepare true shape of section.
3. Students gain the knowledge on lateral surfaces.
4. Students acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
5. Students gain the knowledge on 2D drawing using CAD software.
6. Students acquire the knowledge on basics of 3D modeling packages.

UNIT I SECTION OF SOLIDS**9**

Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.

UNIT II DEVELOPMENT OF SURFACES**9**

Development of lateral surfaces of simple and truncated solids – Prisms, pyramids, cylinders and cones – Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNIT III ISOMETRIC PROJECTIONS**9**

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones.

UNIT IV PERSPECTIVE PROJECTIONS**9**

Perspective projection of prisms, pyramids, cylinders and cone by visual ray method and vanishing point method.

UNIT V COMPUTER GRAPHICS**9**

Introduction to 3D modeling packages. Drafting practices - modeling of simple engineering components, sections and extraction of 2D drawings.

TOTAL**45****TEXT BOOKS**

4. IS 11669 – 1986 and SP 46 – 2003: Dimensioning of TechnicalDrawings.
5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – ProjectionMethods.

COURSE OBJECTIVES

1. To introduce the basic concepts of PDE for solving standard partial differential equations
2. To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
3. To provide an overview of probability and statistics to engineers
4. To introduce the basic concepts of two-dimensional random variables
5. To acquaint the knowledge of testing of hypothesis for small and large samples.
6. To apply testing of hypothesis in important role in real life problems.

COURSE OUTCOMES

After successfully completing the course, the student will have a good understanding of the following topics and their applications

1. The fundamental concepts of partial differential equations and the various solution procedures for solving the first order non-linear partial differential equations.
2. Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional wave equations.
3. Understand the basic concepts of one knowledge of the concepts of probability and have knowledge of standard distribution which can describe real life phenomenon.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
6. Apply the concept of testing of hypothesis for small and large samples in real life problems.

UNIT I LAPLACE TRANSFORM**13**

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions.

UNIT II FOURIER SERIES**12**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT III FOURIER TRANSFORM**12**

Fourier integral theorem (Statement Only) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation between Fourier and Laplace transforms

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS**12**

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNIT V Z - TRANSFORM AND DIFFERENCE EQUATIONS**11**

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

2. <http://mathworld.wolfram.com/FourierSeries.html>
3. www.nptel.ac.in

COURSE OBJECTIVES

1. To develop capacity to predict the effect of force and motion.
2. To understand the importance of free body diagram for complex machine structure.
3. To perform force analysis using law of mechanics.
4. To introduce the concepts of static equilibrium condition for particles and rigid bodies
5. To Understand the concepts of kinematics of particles and friction.
6. To make the students conversant to solve the problems using equation of motions.

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of force and laws of mechanics.
2. Develop free body diagram for complex machine structure and to perform force analysis.
3. Apply static equilibrium condition for particles and rigid bodies.
4. Locate the center of gravity and moment of inertia for planes and solids.
5. Understand the concepts of kinematics of particles and friction.
6. Solve the problems using equation of motions.

UNIT I STATICS OF PARTICLES**12**

Forces – system of forces – concurrent forces in plane and space– resultant – problems involving the equilibrium of a particle–free body diagram–equilibrium of particle in space.

UNIT II STATICS OF RIGID BODIES IN TWO DIMENSIONS**12**

Rigid bodies–moment of force about an axis–moments and couples–equivalent system of coplanar forces– Rigid body in equilibrium–problems involving equilibrium of rigid body–types of supports–reactions of beams.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENT OF INERTIA**12**

Centroids of areas, composite areas, determination of moment of inertia of plane figures, polar moment of inertia – radius of gyration – mass moment of inertia of simple solids.

UNIT IV KINEMATICS OF PARTICLES**12**

Introduction – plane, rectilinear motion – time dependent motion – rectangular coordinates – projectile motion.

IMPULSE AND MOMENTUM: Concept of conservation of momentum – Impulse–Momentum principle– Impact – Direct central impact – Oblique central impact – Impact of elastic bodies.

UNIT V KINETICS OF PARTICLES AND FRICTION**12**

KINETICS OF PARTICLES: Equations of motion–rectilinear motion–Newton's II law – D'Alembert's principle – Energy – potential energy–kinetic energy–conservation of energy–work done by a force – work energy method.

Laws of friction – coefficient of friction–problems involving dry friction – wedge and ladder friction.

3. <http://web.mit.edu/emech/dontindex-build/index.html>
4. <http://www.indiabix.com/engineering-mechanics/questions-and-answers/>

COURSE OBJECTIVES

1. To familiarize the students to apply suitable molding and casting methods for producing components.
2. To develop an understanding of types of metal joining processes.
3. To explain types of deformation processes.
4. To understand the concept of sheet metal operations and metal forming processes.
5. To provide an overview of various plastic component manufacturing processes for various applications.
6. To Study and acquire knowledge of process variables to manufacture defect free products

COURSE OUTCOMES

1. Apply suitable molding and casting methods for producing components.
2. Decide the type of metal joining processes.
3. Select the type of deformation processes.
4. Work with various sheet metal operations and metal forming processes.
5. Select the various plastic component manufacturing processes for various applications.
6. Identify the effect of process variables to manufacture defect free products.

UNIT I METALCASTING PROCESSES**9**

Introduction to Sand casting – Sand moulds – Type of patterns – Pattern materials – Pattern allowances – Types of Moulding sand – Properties – Core making – Types – CO₂ process - Moulding machines – Types of moulding machines – Types of melting furnaces (cupola, induction) – Working principle of Special casting processes – Shell moulding, Investment casting, Pressure die casting, Centrifugal casting – Casting defects – Inspection methods.

UNIT II JOINING PROCESSES**9**

Fusion welding processes – Types of Gas welding – Equipments used – Flame characteristics – Filler and Flux materials and properties – Arc welding equipments – Electrodes – Coating and specifications – Principles of Resistance welding – Gas metal arc welding – Submerged arc welding – TIG, MIG welding – Friction Stir Welding – Weld defects – Brazing and soldering process.

UNIT III BULK DEFORMATION PROCESSES**9**

Hot working and cold working of metals – Ingots – Forging processes – Open, impression and closed die forging – Types of Forging Machines – Rolling of metals – Types of Rolling mills – Defects in rolled parts – Principle of rod and wire drawing – Tube drawing — Principles of Extrusion – Types of Extrusion – Hot and Cold extrusion — Equipments used.

UNIT IV SHEET METAL PROCESSES**9**

Sheet metal characteristics – Press – Types of press – Principle of punching, blanking, coining, piercing, notching, embossing – Typical shearing operations, bending, drawing and deep drawing operations – Metal spinning, Stretch forming operations – Formability of sheet metal – Test methods.

UNIT V MANUFACTURING OF PLASTIC COMPONENTS**9**

Types of plastics – Characteristics of the forming and shaping processes – Moulding of Thermoplastics – Working principles and typical applications of – Injection moulding – Plunger and screw machines – Compression moulding, Transfer moulding – Typical industrial applications – Introduction to Blow moulding – Rotational moulding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics.

WEB REFERENCES

1. www.themetalcasting.com
2. www.industrialmetalcastings.com
3. www.purolator-lp.com
4. www.manufacturercompanies.com/manufacturers

COURSE OBJECTIVES

1. To enrich the understanding of fluid properties
2. To make the students conversant with types of flow and calculate Major and minor losses in pipes.
3. To acquaint the student with the concepts of Buckingham's π theorem.
4. To explain the working of different pumps
5. To explain the working of different turbines.
6. To equip students with skills to produce analytical solutions to various simple problems

COURSE OUTCOMES

1. Demonstrate basic knowledge of fluid properties
2. Find types of flow and calculate Major and minor losses in pipes.
3. Apply Buckingham's π theorem for problem solving.
4. Understand the working of different pumps
5. Understand the working of different turbines.
6. produce analytical solutions to various simple problems

UNIT I FLUID PROPERTIES AND FLOW CHARACTERISTICS 12

Fluid properties: Mass density, weight density, specific gravity, viscosity, compressibility, surface tension and capillarity. Buoyancy and floatation – metacentre and metacentric height (definition only)

Flow characteristics: concepts of system and control volume, application of control volume to continuity equation, energy equation, momentum equation and moment of momentum equation.

UNIT II FLOW THROUGH CIRCULAR PIPES 12

Hydraulic and energy gradient – Types of fluid flow – Laminar flow through circular conduits – Boundary layer concepts – types of boundary layer thickness – Darcy Weisbach equation – friction factor – Moody diagram – commercial pipes – minor losses – Flow through pipes in series and parallel.

UNIT III DIMENSIONAL ANALYSIS 12

Dimension and units, dimensional homogeneity, applications of Buckingham's π theorem, model and similitude, similarity laws.

UNIT IV HYDRAULIC TURBINES 12

Classification of turbines – heads and efficiencies – velocity triangles. Axial, radial and mixed flow turbines. Pelton wheel, Francis turbine and Kaplan turbines- working principles - work done by water on the runner – draft tube. Specific speed - unit quantities – performance curves for turbines – governing of turbines.

UNIT V HYDRAULIC PUMPS 12

Classification of pumps – centrifugal pump – working principle – head, discharge, efficiencies and losses – performance curves – specific speed. Reciprocating pump – components and working – slip – indicator diagram – air vessel – Jet pump – Gear pump – Submersible pump.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Streeter V.L, Wylie E.B	Fluid Mechanics	McGraw-Hill, New Delhi	1998
2	Kumar K.L	Engineering Fluid Mechanics	S. Chand	2010

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Bansal. R.K	Fluid Mechanics and Hydraulics Machines	Laxmi publications (P) Ltd, New Delhi	2015
2	White. F.M	Fluid Mechanics	Tata McGraw–Hill, New Delhi	2010
3	Fox and McDonald	Fluid Mechanics	John Wiley	2015

WEB REFERENCES

1. www.imeche.org
2. openlibrary.org
3. nptel.iitg.ernet.in
4. www.tecquipment.com

COURSE OBJECTIVES

1. To understand the basic concepts of different types of electrical machines and their performance.
2. To study the different methods of starting D.C motors and induction motors.
3. To study the conventional and solid-state drives
4. To expose students to the operation, application and control of power conversion systems employing electric drive to cater to industrial needs.
5. To familiarize the operation principles, and design of starting, braking, and speed control arrangements for electric motors and their applications.
6. To provide strong foundation to assess performance of different industrial drives considering issues such as, energy efficiency, power quality, economic justification, environmental issues, and practical viabilities.

COURSE OUTCOMES

1. Examine various applications in industrial and domestic areas where use of electric drives is essential.
2. Classify types of electric drives systems based on nature of loads, control objectives, performance and reliability.
3. Combine concepts of previously learnt courses such as, electrical machines, Control and power electronics to cater to the need of automations in industries.
4. Select most suitable type and specification of motor drive combination for efficient conversion and control of electric power.
5. Identify the critical areas in application levels, and derive typical solutions.
6. Design and justify new control and power conversion schemes for implementing alternative solutions considering the critical and contemporary issues.

UNIT I INTRODUCTION**9**

Basic Elements – Types of Electric Drives – factors influencing the choice of electrical drives – Loading conditions and classes of duty – Selection of power rating for drive motors with regard to thermal overloading and Load variation factors. Multi quadrant operation.

UNIT II DRIVE MOTOR CHARACTERISTICS**9**

Mechanical and electrical characteristics of various types of load and drive motors – Braking of Electrical motors – DC Shunt, series Motors – Three phase induction motors.

UNIT III STARTING METHODS**9**

Types of D.C Motor starters – Typical control circuits for shunt and series motors – Three phase squirrel cage and slip ring induction motors.

UNIT IV SPEED CONTROL OF D.C. DRIVES**9**

Speed control of DC series and shunt motors – Armature and field control, Ward-Leonard control system – Using controlled rectifiers and DC choppers – applications.

UNIT V SPEED CONTROL OF A.C. DRIVES**9**

Speed control of three phase induction motor – Voltage control, voltage / frequency control, Rotor resistance control – slip power recovery scheme – **Using inverters, Cyclo converter and AC voltage regulators – static slip power recovery schemes – applications.**

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Vedam Subramaniam	Electric Drives (concepts and applications)	Tata McGraw-Hill, New Delhi.	2001
2	Nagrath I.J. and Kothari D.P,	Electrical Machines	Tata McGraw- Hill, New Delhi	2004

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Pillai.S.K,	A first course on Electric drives	Wiley Eastern Limited, New Delhi.	1998.
2	Singh M.D and Khanchandani K.B,	Power Electronics	Tata McGraw-Hill, New Delhi.	2003
3.	Gopal K.Dubey	Fundamentals of Electrical drives	Narosa Publishing House	2003

COURSE OBJECTIVES

1. To provide an overview of various analog device
2. To provide an overview of Digital concepts
3. To learn working of amplifier and its application.
4. To understand the concept of RC-timing circuits.
5. To learn cellular concept and block diagram of GSM system.
6. To provide a review of communications system

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the principles of semiconductor devices and their applications.
2. Understand the concept of voltage regulators
3. Design an application using Operational amplifier.
4. Understand the working of timing circuits and oscillators.
5. Understand logic gates, flip flop as a building block of digital systems.
6. Learn the basics of Electronic communications system.

UNIT I SEMICONDUCTORS AND RECTIFIERS**9**

Classification of solids based on energy band theory-Intrinsic semiconductors-Extrinsic semiconductors-P type and N type-PN junction-Zener effect-Zener diode characteristics-Half wave and full wave rectifiers -Voltage regulation

UNIT II TRANSISTORS AND AMPLIFIERS**12**

Bipolar junction transistor- CB, CE, CC configuration and characteristics-Biasing circuits Class A, B and C amplifiers- Field effect transistor-Configuration and characteristic of FET amplifier-SCR, DIAC, TRIAC, UJT-Characteristics and simple applications-Switching transistors-Concept of feedback-Negative feedback-Application in temperature and motor speed control.

UNIT III DIGITAL ELECTRONICS**9**

Binary number system - AND, OR, NOT, NAND, NOR circuits-Boolean algebra Exclusive OR gate - Flip flops-Half and full adders-Registers-Counters-A/D and D/A conversion.

UNIT IV 8085 MICROPROCESSOR**9**

Block diagram of microcomputer-Architecture of 8085-Pin configuration-Instruction set Addressing modes-Simple programs using arithmetic and logical operations.

UNIT V INTERFACING AND APPLICATIONS OF MICROPROCESSOR**6**

Basic interfacing concepts - Interfacing of Input and Output devices-Applications of microprocessor Temperature control, Stepper motor control, traffic light control.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Milman and Halkias	Integrated Electronics	Tata McGraw-Hill publishers	1995
2	Ramesh Goankar	Microprocessor Architecture - Programming and Applications with 8085	Wiley Eastern	1998

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Malvino and Leach	Digital Principles and Applications	Tata McGraw-Hill	1996
2	Mehta V.K	Principles of Electronics	S. Chand and Company Ltd	1994
3.	DouglasV.Hall	Microprocessor and Interfacing	Tata McGraw-Hill	1999
4	Salivahanan S, Suresh Kumar N, Vallavaraj A	Electronic Devices and Circuits	Tata McGraw-Hill	1999

COURSE OBJECTIVES

1. To supplement the theoretical knowledge gained in Fluid Mechanics and Machinery with practical testing
2. To understand the concepts of coefficient of discharge for Orifice meter and Venturi meter.
3. To explain the Calibration of Rotameter.
4. To understand the importance of friction factor for flow through pipes.
5. To impart knowledge on the performance of various pumps.
6. To impart knowledge on the performance of turbines

COURSE OUTCOMES

1. Calculate the coefficient of discharge for Orifice meter and Venturimeter.
2. Calibrate the Rotameter
3. Estimate the friction factor for flow through pipes.
4. Asses the performance of centrifugal pump and submersible pump.
5. Asses the performance of reciprocating pump and gear pump.
6. Asses the performance of turbines

LIST OF EXPERIMENTS

1. Determination of the Coefficient of discharge of given Orificemeter.
2. Determination of the Coefficient of discharge of givenVenturimeter.
3. Calculation of the rate of flow using Rotameter.
4. Determination of friction factor for a given set ofpipes.
5. Conducting experiments and drawing the characteristic curves of centrifugalpump
6. Conducting experiments and drawing the characteristic curves of submersiblepump
7. Conducting experiments and drawing the characteristic curves of reciprocatingpump.
8. Conducting experiments and drawing the characteristic curves of Gearpump.
9. Conducting experiments and drawing the characteristic curves of Peltonwheel.
10. Conducting experiments and drawing the characteristics curves of Francisturbine.

TOTAL**45**

COURSE OBJECTIVES

1. To explain the surfaces for sheet metal working applications.
2. To Understand the representation of details in machine drawing.
3. To introduce tolerances and fits of machine elements.
4. To equip them with skills to Construct an assembly drawing using part drawings of machine components.
5. To equip them with skills to Construct an assembly drawing of machine components using 2D drafting.
6. To equip them with skills to Construct an assembly drawing of jigs and fixtures

COURSE OUTCOMES

1. Draw the surfaces for sheet metal working applications.
2. Understand the representation of details in machine drawing.
3. Represent tolerances and fits of machine elements.
4. Construct an assembly drawing using part drawings of machine components.
5. Construct an assembly drawing of machine components using 2D drafting
6. Construct an assembly drawing of machine components of jigs and fixtures.

INTRODUCTION**3**

Introduction to machine drawing. Importance of sectional views. Computer-aided drafting.

CONVENTIONS**6**

Code of practice for engineering drawing-conventional representation of details- drilled and tapped holes, countersunk and counter bored holes, internal and external threads, undercuts, grooves, chamfers, fillet radii and keyways. Conventions to represent standard components-bolts, nuts, washers, screws, cotters, pins, circlips, bearings, gears, springs and flanges.

FITS AND TOLERANCES**6**

Limits, fits and tolerances-need, types, representation of tolerances on drawing, calculation of minimum and maximum clearances and allowances. Geometric tolerance-uses, types of form and position tolerances, symbols, method of indicating geometric tolerances on part drawings. **Surface finish symbols- methods of indicating the surface roughness. Blue print reading exercises.**

ASSEMBLY DRAWING PRACTICE**15**

Making free hand sketches of typical subassemblies-flange coupling, stuffing box, journal bearings, rolling element bearings, keyed joints, cotter joints, C clamp.

ASSEMBLY USING 2D DRAFTING**15**

Assembly drawing with sectioning and bill of materials from given detailed drawings of assemblies: Lathe Tail stock, Machine vice, Pedestal bearing and Drill jigs and Milling fixture.

TOTAL**45****REFERENCES**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Gopalakrishna K R	Machine Drawing	Subhas Stores, Bangalore	2003
2	Bhatt N. D and Panchal V.M	Machine Drawing	Charotar Publishing House, Chennai	2007
3	ASME Y 14.5M-1994	Dimensioning and Tolerancing	ASME, New York	1995

COURSE OBJECTIVES

1. To provide students the creative application of scientific principles to design or develop structures, machines, apparatus or works.
2. To train students with good scientific and technical breadth so as to embody inventions and put his ideas in concrete terms and design something that promotes and helps in fulfilling the ever expanding energy requirements.
3. To inculcate in students professional and ethical attitude, Communication Skills, teamwork Skills, computer programming skill and an ability to relate engineering issues to broader social context.
4. To provide the excellent learning environment, which can enhance the learning ability of student to generate awareness of surrounding, attentiveness to details, experimental analysis.
5. To impart knowledge on Performance of the fundamental control practices associated with AC and DC machines (starting, reversing, braking, plugging, etc.) using power electronics
6. To evaluate the use of computer-based analysis tools to review the major classes of machines and their physical basis for operation

COURSE OUTCOMES

1. Graduates will demonstrate an ability to identify, formulate, pinpoint and solve Electrical engineering problems keeping in view the present-day power and energy requirement and its future prospect.
2. Graduates will demonstrate an ability to design study and analyze the digital and analog systems and components that serve as the fundamental components of the power engineering methods being increasingly used with the new technological advances.
3. Graduate will understand the impact of engineering solutions on the society and also be aware of contemporary issues relating to the exhausting resources and alternatives to continue uninterrupted power supply.
4. Graduate will be able to communicate effectively in both verbal and written form. They will develop a better presentation skill on academic and personal grounds that will enhance their personality in all aspects.
5. Graduates will demonstrate knowledge of professional and computer language skills that will eventually develop them into skilled researchers in an atmosphere that is technically advanced and conducive.
6. Graduates will demonstrate knowledge of advanced mathematics, science and electrical engineering with the ability to apply the theoretical knowledge and concepts to the disciplines of electrical engineering.

LIST OF EXPERIMENTS**ELECTRICAL MACHINES**

1. Load Test on DC ShuntMotor
2. Load Test on DC SeriesMotor
3. Load Test on DC CompoundMotor
4. Speed control of D.C. motor. (Armature and Fieldcontrol)
5. Speed control of three phase Induction motor. (VoltageControl)
6. Speed control of three phase Induction motor. (Voltage / frequencyControl)
7. Load test on single phase InductionMotor.
8. Load test on three phase InductionMotor.
9. Speed control of three phase slip ring Induction Motor.

MICROPROCESSOR

1. Addition of two 8 – bit numbers, sum of 8 – bits and 16bits.
2. 8 - bitsubtraction.
3. Additional of two 16 – bit numbers, Sum: 16 bits or more.
4. 8 – bit Multiplication.
5. 8 – bit Division.

TOTAL	45
--------------	-----------

COURSE OBJECTIVES

1. To understand the basic concepts of QUANTITATIVE ABILITY
2. To understand the basic concepts of LOGICAL REASONING Skills
3. To acquire satisfactory competency in use of VERBAL REASONING
4. To solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. To solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. To compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

COURSE OUTCOMES

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. Solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

UNIT I**5**

Introduction, Speed Math's, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT II**5**

Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT III**5**

Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

TOTAL**15****REFERENCES**

SEMESTER IV**17BEME401****STRENGTH OF MATERIALS****3 1 0 4100****COURSE OBJECTIVES**

1. To understand the concepts of stress and strain on deformation of solids.
2. To introduce the Concepts of safe working stresses and load carrying capacity of beams.
3. To enrich the understanding of deflection in beams and columns in engineering applications.
4. To understand the importance of the effect of torsion on shafts and springs.
5. To provide knowledge on principal stresses and analyze thin cylinders and shells subjected to pressure forces.
6. To provide knowledge on components subjected to various loadings with the help of various theories of failures.

COURSE OUTCOMES

1. Determine stress and strain on deformation of solids.
2. Compute safe working stresses and load carrying capacity of beams.
3. Estimate the deflection in beams and columns in engineering applications.
4. Analyze the effect of torsion on shafts and springs.
5. Determine principal stresses and analyze thin cylinders and shells subjected to pressure forces.
6. Design the components subjected to various loadings with the help of various theories of failures.

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS**12**

Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses; Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress – Elastic constants – Strain energy and unit strain energy – Strain energy in uniaxial loads.

UNIT II BEAMS – LOADS AND STRESSES**12**

Types of beams: Supports and Loads – Shear force and Bending Moment in beams – Cantilever, Simply supported and Overhanging beams – Relationship between load, shear force and bending moment – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section – **Effect of shape of beam section on stress induced – Shear stresses in beams – Shear flow.**

UNIT III BEAM DEFLECTION**12**

Elastic curve of Neutral axis of the beam under normal loads – Evaluation of beam deflection and slope: Macaulay Method – Columns – End conditions – Equivalent length of a column – Euler equation – Slenderness ratio – Rankine's formula for columns

UNIT IV TORSION**12**

Analysis of torsion of circular bars – Torsional Shear stress – Bars of solid and hollow circular section – Stepped shaft – Torsional rigidity – Compound shafts – Fixed and simply supported shafts – Application to close-coiled helical springs – Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Design of helical coil springs – stresses in helical coil springs under torsion loads

UNIT V ANALYSIS OF STRESSES IN TWO DIMENSIONS**12**

Biaxial state of stresses – Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses – **Mohr's circle for biaxial stresses – Maximum shear stress – Strain energy in bending and torsion.**

COURSE OBJECTIVES

1. To Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
2. To understand the concept of constructional features of different types of lathe and their operations.
3. To provide knowledge on construction & working of shaping, milling & drilling machines and gear cutting & finishing process.
4. To expose students to various types of grinding machines and broaching machines.
5. To Explain the construction features of different types of CNC machine and manual part programming for a given component.
6. To Perform part programming for CNC machines.

COURSE OUTCOMES

1. Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
2. Discuss about the constructional feature of different types of lathe and their operations.
3. Describe the construction & working of shaping, milling & drilling machines and gear cutting & finishing process.
4. Illustrate the various types of grinding machines and broaching machines.
5. Explain the construction feature of different types of CNC machine and manual part programming for a given component.
6. Perform part programming for CNC machines

UNIT I THEOREY OF METAL CUTTING AND CUTTING TOOLS**9**

Introduction: material removal processes, types of machine tools – theory of metal cutting: chip formation, orthogonal cutting, oblique cutting – Cutting tool materials, tool wear, tool life, surface finish, cutting fluids, heat generation, Merchant circle.

UNIT II CENTRE LATHE AND SEMIAUTOMATIC LATHES**9**

Centre lathe– constructional features, various operations, taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Capstan and turret lathes – automats – single spindle, Swiss type, automatic screw type, multi spindle – Tool layout for Capstan, Turret and Automats.

UNIT III RECIPROCATING MACHINE TOOLS & MILLING MACHINES**9**

Shaper – construction, working, work and tool holding device, quick return mechanism, planer – construction, working, mechanism, operations. Slotter – construction, working.

Milling machine – constructions, types, Indexing mechanism, operations, milling cutter, gear hobbing – principle.

UNIT IV OTHER MACHINE TOOLS**9**

Drilling – types, radial drilling machine, construction, operations, Boring, types, Jig boring machine – construction, operations, Broaching – types, construction, Grinding – grinding wheel, specifications and selection, cylindrical grinding, surface grinding, centreless grinding – honing, lapping, super finishing, polishing and buffing.

UNIT V CNC MACHINES**9**

CNC Machines – Construction – Types of control systems, Manual Part Programming – Computer assisted part programming – Computer aided part programming, Machining centers – principle, Turning centers – principle, CAD/CAM & Integration, Application of CNC Machines.

COURSE OBJECTIVES

1. To understand the Model of physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
2. To provide knowledge on entropy change in thermodynamic processes.
3. To Study and acquire knowledge on various thermodynamic properties of pure substances in real time problems.
4. To establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
5. To facilitate the understanding of properties of air using psychometric chart.
6. To acquaint the student with the concepts and applications of the thermodynamics to the various real-life systems

COURSE OUTCOMES

1. Model the physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
2. Determine entropy change in thermodynamic processes.
3. Identify the various thermodynamic properties of pure substances in real time problems.
4. Establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
5. Calculate the properties of air using psychometric chart.
6. Explain the basic principles and applications of the thermodynamics to the various real-life systems

UNIT I BASIC CONCEPTS AND FIRSTLAW**12**

Basic concepts - Classical and Statistical approaches - Thermodynamic systems - closed, open, isolated. Property – State - Process-adiabatic - Quasi-static process – Cycle - Point and Path function – Energy - Work transfer - Concept of temperature and heat- Zeroth law of thermodynamics - Concept of ideal gases - First law of thermodynamics –PMM1, internal energy, specific heat capacities, enthalpy, and its application to closed system and open system-steady flow energy equation.

UNIT II SECOND LAW AND ENTROPY**12**

Physical description of the second law - Kelvin-Planck and Clausius statements –Equivalence - Reversible processes and cycles- Carnot cycle – Corollaries - Absolute temperature scale – Clausius Theorem, inequality - Entropy- Principle, transfer, generation, balance - Third law of thermodynamics

UNIT III PROPERTIES OF PURE SUBSTANCE AND GAS MIXTURES**12**

Pure substance-Phase change process-Property diagrams-PVT surface-Steam-types, dryness fraction-Avogadro's law - Ideal Gas - Equations of state-Vander Waal's equation - Real Gas - Compressibility and its chart - Mixtures of Gases – Properties.

UNIT IV THERMODYNAMIC AVAILABILITY AND RELATIONS**12**

Basics-Dead state, quality of energy, degradation of energy - Reversible processes – Maximum work - Exergy – Closed system - Steady flow system – Irreversibility - Exergy Balance - Second law efficiency – Exact differentials - Tds Relations - Maxwell's Relation – Clausius – Clapeyron Equation - Joule-Thompson Coefficient.

UNIT V PSYCHROMETRY**12**

Psychrometry - Psychrometric charts - Property calculations of air vapour mixtures- Psychrometric process-Adiabatic mixing - Evaporative cooling.

TOTAL**60**

(Permitted to use standard thermodynamic table, Mollier diagram, and Psychometric chart in the examination)

COURSE OBJECTIVES

1. To understand the metallurgical aspects of metals.
2. To provide knowledge to identify suitable heat treatment processes for various applications.
3. To Understand the properties of ferrous and non-ferrous materials.
4. To expose students to suitable strengthening mechanisms for non-ferrous alloys.
5. To enrich the understanding of properties of non-metallic materials.
6. To provide knowledge on suitable materials for various applications.

COURSE OUTCOMES

1. Identify the metallurgical aspects of metals.
2. Identify suitable heat treatment processes for various applications.
3. Understand the properties of ferrous and non-ferrous materials.
4. Identify suitable strengthening mechanisms for non-ferrous alloys.
5. Understand the properties of non-metallic materials.
6. Select the suitable material for various applications.

UNIT I CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS 9

Constitution of alloys – Solid solutions, substitutional and interstitial – phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions, Iron – Iron carbide equilibrium diagram -Classification of steel and cast Iron, microstructure, properties and applications.

UNIT II HEAT TREATMENT 9

Definition – Full annealing, stress relief, recrystallisation and spheroidizing –normalising, hardening and tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on TTT diagram, CCT - Hardenability, Jominy end quench test – Austempering, martempering – case hardening - carburising, nitriding, cyaniding, carbonitriding – Flame and Induction hardening, Microstructure study and specimen preparation.

UNIT III FERROUS AND NONFERROUS METALS 9

Effect of alloying elements on steel (Mn, Si, Cr, Mo, V, Ti & W) - stainless and tool steels – HSLA - maraging steels – Gray, White malleable, Spheroidal Graphite irons - Copper and Copper alloys – Brass, Bronze and Cupronickel – Aluminum and Al-Cu – precipitation, strengthening treatment – Bearing alloys.

UNIT IV NON-METALLIC MATERIALS 9

Polymers – types of polymer, commodity and engineering polymers – Properties and Applications of thermoplastics (PP, PVC, ABS, and PMMA) and thermosetting plastics (PF, UF, MF) –Engineering Ceramics.

UNIT V TESTING OF MECHANICAL PROPERTIES AND INSPECTION 9

Mechanism of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and shear loads – Hardness tests (Brinell, Vickers and Rockwell), Impact test - Izod and Charpy, Fatigue and creep test, S-N curve.

Non Destructive Testing: Non Destructive Testing basic principles and testing method of Radiographic testing, Ultrasonic testing, Magnetic particle test and Liquid penetrant test, Eddy current testing.

2. ocw.MIT.edu
3. www.istl.org
4. metalurgy-screw-tutorial.tobyavujo.com

COURSE OBJECTIVES

1. To impart knowledge on metallurgical aspects of metals.
2. To understand heat treatment processes on different grades of steel.
3. To familiarize on selection of ferrous and non-ferrous materials for various applications.
4. To impart knowledge on non-metallic materials.
5. To learn about the strengthening mechanisms for Non-ferrous alloys.
6. To comprehend the significance of Non Destructive Testing (NDT) methods.

COURSE OUTCOMES

Learners should be able to

1. Identify the metallurgical aspects of metals.
2. Identify suitable heat treatment processes for various applications.
3. Select appropriate ferrous and non-ferrous materials for various applications.
4. Identify and select suitable non-metallic materials.
5. Identify suitable strengthening mechanisms for Non-ferrous alloys.
6. Work with non destructive testing methods.

UNIT I INTRODUCTION TO ENGINEERING MATERIALS**9**

Atomic bonding and Crystal structure of engineering materials. Chemical and Physical properties of engineering materials. Mechanical Properties and Behaviours of Materials – Stress - Strain Relationships, Tensile Strength, Hardness, Impact Strength, Fatigue & Stress Rupture, Creep & Stress Rupture, Comparison of Material Properties

UNIT II FERROUS METALS AND THEIR PROPERTIES**9**

Iron - Carbon Equilibrium Diagram, Carbon Steel & AISI Numerical Identification Systems. Properties, processing and applications of Alloy Steel, Tool Steel, Stainless Steel. General characteristics of metal alloys, Fundamentals of heat treatment and the use of TTT diagrams. Production, forming, and joining of metals.

UNIT III NONFERROUS METALS**9**

Properties, processing and applications of Aluminum, Magnesium & Titanium, Copper and its Alloys, Low Melting Temperature Alloys. Production, forming, and joining of metals. The Chemistry and prevention of corrosion

UNIT IV CERAMIC MATERIALS**9**

Microstructural features of ceramics and glasses - Mechanical properties of ceramics and glasses - Production, forming, and joining of ceramics

UNIT V POLYMERS AND COMPOSITES**9**

Microstructural features of polymers and composites - Mechanical behaviour of polymers and composites - Production, forming, and joining of polymers and composites.

2	James F Shackelford	Introduction to materials Science for Engineers	Macmillan Publication Company, New York	2014
3	Charles Kittel	Introduction to Solid State Physics	John Wiley & sons, Singapore.	2007

WEB REFERENCES

1. www.nptel.ac.in
2. www.physicsclassroom.com
3. www.oyc.yale.edu
4. www.physics.org

COURSE OBJECTIVES

1. To understand the mobility of mechanism in practice.
2. To understand the mechanism for displacement, velocity and acceleration at any point in a link.
3. To enrich the understanding of cam-follower principles for practical applications.
4. To make the students conversant in selecting appropriate gear trains for engineering applications.
5. To understand the friction concepts in machine parts and assembly.
6. To give exposure to the basic components and layout of linkages in the assembly of a system.

COURSE OUTCOMES

1. Compute the mobility of mechanism in practice.
2. Analyze a mechanism for displacement, velocity and acceleration at any point in a link.
3. Apply cam-follower principles for practical applications.
4. Select appropriate gear trains for engineering applications.
5. Analyze friction concepts in machine parts and assembly.
6. Understand the basic components and layout of linkages in the assembly of a system.

UNIT I BASICSOFMECHANISMS**9**

Terminology and Definitions–Degree of Freedom – Mobility–Kutzbach criterion–Grashoff's law–Kinematic Inversions of four bar chain and slider crank –Mechanical Advantage–Transmission angle –Single, double and offset slider mechanisms – Quick return mechanisms – Ratchets and escapements – Indexing Mechanisms – Straight line generators.

UNIT II KINEMATICS**9**

Displacement, velocity and acceleration – analysis in simple mechanisms – Graphical Method –velocity and acceleration polygons – Kinematic analysis by Complex Algebra methods–Vector Approach, Instantaneous center – Coriolis Acceleration.

UNIT III KINEMATICSOFCAM**9**

Classifications – Displacement diagrams–parabolic, Simple harmonic and Cycloidal motions – Layout of plate cam profiles – Derivatives of Follower motion – High speed cams – circular arc and tangent cams – Standard cam motion – Pressure angle and undercutting.

UNIT IV GEARS**9**

Spur gear - Terminology and definitions–Fundamental Law of toothed gearing and involute gearing–Interchangeable gears–gear tooth action – Terminology – Interference and undercutting–Non standard gear teeth– Helical, Bevel, Worm, Rack and Pinion gears (Basics only)–Gear trains–Parallel axis gear trains–Epicyclic gear trains.

UNIT V FRICTIONINDRIVES**9**

Surface contacts–Sliding and Rolling friction – Friction drives – Friction in screw threads – Friction clutches–Belt and rope drives, Friction aspects in Brakes.

- IS 5267 : 2002 Vocabulary of Gear Terms – Definitions Related to Worm Gear Geometry.
- IS 12328 : Part 1: 1988 Bevel Gear Systems Part – 1 Straight Bevel Gears.
- IS 12328 : Part 2: 1988 Bevel Gear Systems Part – 2 Spiral Bevel Gears

COURSE OBJECTIVES

1. To Understand and apply the principles of science, technology, engineering, and math to solve industry– related problems.
2. To Understand the concepts and terminologies in Industries
3. To Study and acquire knowledge in creating an industrial design layout
4. To introduce the methods involved in material handling
5. To understand the knowledge in analysis of work processing happening in industries
6. To equip them with skills to perform work measurement in an industry

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Understand the concepts and terminologies in Industries
2. apply their knowledge in creating an industrial design layout
3. understand the methods involved in material handling
4. apply their knowledge in analysis of work processing happening in industries
5. perform work measurement in an industry
6. understand the role of human involvement in industrial work system design

UNIT I INTRODUCTION TO INDUSTRIAL ENGINEERING 9

for layout study – types of layout. Plant location analysis – factors, costs, location decisions – simple problems in single facility location models, network location problems.

UNIT II LAYOUT DESIGN 9

Design cycle – SLP procedure manpower, machinery requirements – computer algorithms – ALDEP, CORELAP, CRAFT

UNIT III QUANTITATIVE METHODS AND MATERIAL HANDLING 9

Group technology – Production Flow analysis (PFA), ROC (Rank Order Clustering) – Line balancing. Principles, unit load concept, material handling system design, handling equipment types, selection and specification, containers and packaging, Material Handling—Automatic Storage and Retrieval System (ASRS)

UNIT IV OPERATIONS ANALYSIS AND WORK MEASUREMENT 9

Productivity and living standards, Productivity measurement, work design and Productivity – process planning – types. Total time for a job or operation, total work content and ineffective time, methods and motions, graphic tools. **Stop watch time study – time study through video graphy, Standard data, methods time measurement (MTM), Development of Production Standards, learning effect.**

UNIT V HUMAN FACTORS IN WORK SYSTEM DESIGN 9

Human factors Engineering/Ergonomics, human performance in physical work, anthropometry, design of work station, design of displays and controls.

COURSE OBJECTIVES

1. To understand the concept of measurements in practical applications.
2. To expose students to linear and angular measurements.
3. To facilitate the understanding of profile measurements in engineering components.
4. To Study and acquire knowledge of measurements in practice using LASER and CMM.
5. To equip students with skills to perform measurements on mechanical and thermal quantities.
6. To equip students with skills to select suitable measuring methods for different applications.

COURSE OUTCOMES

1. Apply the concept of measurements in practical applications.
2. Measure linear and angular measurements.
3. Carry out profile measurements in engineering components.
4. Exhibit measurements in practice using LASER and CMM.
5. Perform measurements on mechanical and thermal quantities.
6. Select suitable measuring methods for different applications

UNIT I CONCEPT OF MEASUREMENT**9**

General concept – Generalised measurement systems – units and standards–measuring instruments–sensitivity, readability, range of accuracy, precision–static and dynamic response–repeatability–systematic and random errors – correction, calibration, interchangeability – Basics of Measurement System Analysis.

UNIT II LINEAR AND ANGULAR MEASUREMENT**9**

Definition of metrology–Linear measuring instruments: Vernier, micrometer, interval measurement, Slip gauges and classification, limit gauges– Comparators: Mechanical, pneumatic and electrical types, applications – Angular measurements: –Sine bar, auto-collimeter, angle Decker.

UNIT III FORM MEASUREMENT**9**

Measurement of screw threads – Thread gauges, floating carriage micrometer–measurement of gears–tooth thickness – constant chord and base tangent method – Eccentricity Measurements – radius measurements–surface finish, straightness, flatness and roundness measurements.

UNIT IV LASER AND ADVANCES IN METROLOGY**9**

Precision instruments based on laser–Principles– laser interferometer–application in linear, angular measurements and machine tool metrology - Coordinate measuring machine (CMM) – computer aided inspection - Nano metrology, techniques and applications-**TEM, SEM, STM, XRD, AFM.**

UNIT V MEASUREMENT OF POWER, FLOW AND TEMPERATURE RELATED PROPERTIES**9**

Force, torque, strain:–mechanical and electrical type – Flow measurement: Venturi, orifice, rotometer, – Electrical pressure transducers, Temperature: Thermocouples, Resistance temperature detectors, bimetallic strip thermometers, thermistor, pyrometry

COURSE OBJECTIVES

1. To understand the concept of measurements in practical applications.
2. To expose students to linear and angular measurements.
3. To facilitate the understanding of profile measurements in engineering components.
4. To Study and acquire knowledge of measurements in practice using LASER and CMM.
5. To equip students with skills to perform measurements on mechanical and thermal quantities.
6. To equip students with skills to select suitable measuring methods for different applications.

COURSE OUTCOMES

1. Apply the concept of measurements in practical applications.
2. Measure linear and angular measurements.
3. Carry out profile measurements in engineering components.
4. Exhibit measurements in practice using LASER and CMM.
5. Perform measurements on mechanical and thermal quantities.
6. Select suitable measuring methods for different applications

UNIT I BASICS OF MEASUREMENT, DEVICES AND QUALITY STANDARDS 12

Definition of metrology, economics of measurement, measurement as a comparative process, dimensional properties, terminology and accuracy of measurement, measuring errors, Abbe's Principle, Principle of interferometry- flatness testing, optical interferometer, laser interferometer. Holography and speckle metrology.

General cares and rules in measurement, International standardization, SI units and quantities, BIS- NPL – advantages, ISO 9000 quality standards, QS 9000 standards, Environment standards, metrology room measuring standards room.

UNIT II LINEAR MEASUREMENTS 8

Material length standards –line and end measurement – calibration of end bars, datum and reference surfaces, surface plates, gauges – feeler gauges, micrometers, dial test indicator, slip gauges, care of gauge blocks, Comparators- mechanical, electrical, optical and pneumatic, optical projector.

UNIT III GEOMETRICAL MEASUREMENT 9

Angular measurement – plain vernier and optical protractors, sine bar, optical instruments, flatness, parallelism and roundness measurement, need for limit gauge, design of plug gauge, Taylor's principle, three basic types of limit gauges, surface texture, reasons for controlling surface texture, parameters used , specification of surface texture, drawing and symbols, Tomilson surface meter.CMM.

UNIT IV METROLOGY OF MACHINE ELEMENTS 8

Types of screw threads, terminology, proportions of ISO metric thread, measurement of major, minor and effective diameters. Gear terminology and standard proportions, spur gear measurement, checking of composite errors, base pitch measurement, clean room environment.

UNIT V MACHINE INSTALLATION AND TESTING 8

Equipment erection, commissioning, testing procedure for lathe, milling, continuous process line. First aid, safety precautions in installation of equipment, protocol for repair and testing, inspection check list.

2	KaniskaBedi	Quality Management	Oxford University Press, Chennai	2007

WEB REFERENCES

1. www.tms.org
2. www.arci.res.in/
3. www.fbh-berlin.com
4. www.lasermetrology.com/
5. www.lasermetrology.com/

COURSE OBJECTIVES

1. To understand the the principles of solid mechanics and to determine the behavior of components for applied load.
2. To facilitate the understanding of shear force and bending moment for different types of beams with various load conditions.
3. To give exposure to strain energy, stress distribution & deformation in spring and shaft.
4. To understand the importance of microstructure of hardened and tempered samples.
5. To familiarize the students to understand the effect of various treatments.
6. To Explain about low carbon steel and medium carbon steel.

COURSE OUTCOMES

1. Apply the principles of solid mechanics, to determine the behavior of components for applied load.
2. Compute the shear force and bending moment for different types of beams with various load conditions.
3. Calculate the strain energy, stress distribution & deformation in spring and shaft.
4. Examine the microstructure of hardened and tempered samples.
5. Compare the effect of various treatments.
6. Explain about low carbon steel and medium carbon steel.

LIST OF EXPERIMENTS

1. Tensile test on metals–stress strain characteristics
2. Cupping test on metal sheets–load deformation characteristics, cupping load, cupping number.
3. Hardness test on metals–Brinell and Rockwell Hardness tests.
4. Impact test on metals–Charpy, Izod impact tests.
5. Shear test on metals–direct shear strength, single shear, double shear.
6. Tests on helical springs–compression, tension springs–load deformation characteristics, stiffness, shear stress, modulus of rigidity, energy.
7. Torsion test on beams–torque and angle of twist characteristics, shear stress, modulus of rigidity, energy.
8. Microscopic examination of i) Hardened samples ii) Hardened and tempered samples.
9. Tempering – Improvement of Mechanical properties –Comparison for i) Unhardened specimen ii) Quenched specimen iii) Quenched and tempered specimen.
10. Study of low carbon steel and medium carbon steel.

TOTAL**45**

COURSE OBJECTIVES

1. To facilitate the understanding of shaping operation in shaper.
2. To provide practical knowledge on Preparing a flat and contour surface using milling machine.
3. To provide practical knowledge on Preparing holes with higher finish by Drilling / Tapping / Reaming.
4. To facilitate the understanding of surface and cylindrical grinding operations for surface finish.
5. To introduce single and multi point cutting tools.
6. To impart knowledge on the operations in Capstan and Turret Lathe.

COURSE OUTCOMES

1. Perform shaping operation in shaper.
2. Prepare a flat and contour surface using milling machine.
3. Prepare holes with higher finish by Drilling / Tapping / Reaming.
4. Perform surface and cylindrical grinding operations for surface finish.
5. Prepare the single and multi point cutting tools.
6. Perform operations in Capstan and Turret Lathe.

EXERCISES

1. Exercises in shaping.
2. Exercises in Milling.
3. Exercises in slotting.
4. Exercises in Drilling / Tapping / Reaming.
5. Exercises in Surface grinding and cylindrical grinding process.
6. Exercises in Tool grinding – single point and multi point tools.
7. Exercises in Capstan and Turret Lathe.

TOTAL**45**

COURSE OBJECTIVES

1. To gain knowledge in sequence of process planning and cost estimation of various products.
2. To introduce the concepts of dimensional and tolerance analysis
3. To expose students to manufacturing drawings
4. To equip them with skills to apply their knowledge in re-dimensioning and tolerance charting
5. To understand the process chart for a given component
6. To Estimate the cost of a given component

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Apply the various standards and conventions used in a drawingsheet
2. Perform dimensional and tolerance analysis
3. Understand the manufacturing drawings
4. Apply their knowledge in re-dimensioning and tolerance charting
5. Prepare process chart for a given component
6. Estimate the cost of a given component

UNIT I **5**
Geometric Dimensioning and Representation - Tolerancing, Tolerancing of form, orientation, location and run-outs, Datums and Datum Systems.

UNIT II **5**
Surface texture indication on drawing. Welds - Symbolic representing of drawings. Preparation of process - Chart for a given component.

UNIT III **5**
Cost Estimation of setting time and machining time - estimation of material cost, labour cost and overhead cost based on supplied data.

SEMESTER V**17BEME501****HEATPOWERENGINEERING****3 0 0 3100****COURSE OBJECTIVES**

1. To make the students conversant on performance of various gas power cycles and IC engines.
2. To make the student acquire sound knowledge on working principles of different types of steam generators, mountings and accessories.
3. To understand the importance of shape of blades, work output of typical turbine stages with its velocity diagram.
4. To provide knowledge on difference in working principle and performance of reciprocating and rotary compressors.
5. To expose students to Perform the cooling and heating load calculations of refrigeration
6. To expose students to Perform the cooling and heating load calculations of air conditioning.

COURSE OUTCOMES

1. Analyze the performance of various gas power cycles and IC engines.
2. Understand the working principles of different types of steam generators, mountings and accessories.
3. Understand the shape of blades, work output of typical turbine stages with its velocity diagram.
4. Show the difference in working principle and performance of reciprocating and rotary compressors.
5. Perform the cooling and heating load calculations for a specified application.
6. Apply the basic thermodynamic concepts in various engineering applications.

UNIT I GAS POWER CYCLES AND IC ENGINES 9

Otto, Diesel, Dual, Brayton cycles – Calculation of mean effective pressure and air standard efficiency – actual and theoretical PV and TS diagrams of two stroke and four stroke engines – valve timing diagram and port timing diagram – calculation of engine performance, heat balance sheet, retardation – Morse test.

UNIT II BOILER AND STEAM POWER CYCLES 9

Generation of steam, Boiler – Classification, fire tube boiler, water tube boiler, comparison, boiler mountings and accessories, performance of steam boilers – dryness fraction, properties of steam, T–S diagram, Mollier diagram, steam tables, Rankine Cycle – incomplete evaporation – superheated steam – modified cycle.

UNIT III STEAM NOZZLES AND STEAM TURBINES 9

Steam nozzles – flow through steam nozzles, effect of friction, critical pressure ratio, super saturated flow – Steam turbines – impulse and reaction turbine, compounding, velocity diagram, condition for maximum efficiency – multi stage turbines, cycles with reheating and regenerating heating – reheat factor, degree of reaction - governing of turbines.

UNIT IV AIR COMPRESSORS 9

Classifications of compressors – Reciprocating air compressor – performance characteristics, effect of clearance volume, free air delivery and displacement, intercooler, after cooler – Rotary compressor – vane type, centrifugal and axial, flow performance characteristics.

UNIT V REFRIGERATION AND AIR CONDITIONING 9

Fundamentals of refrigeration – COP – Vapour compression refrigeration system – cycle, p–h chart, Vapour absorption system – comparison, properties of refrigerants. Fundamentals of air conditioning system, cycle, controls, air handling and distribution, simple cooling and heat load estimation

TOTAL 45

(Permitted to use standard thermodynamic table, Mollier diagram, Psychometric chart and Refrigeration property table in the examination)

4. www.machinerylubrication.com
5. www.tpub.com

COURSE OBJECTIVES

1. To understand the various types of stresses induced in different machine members.
2. To Study and acquire knowledge on design shaft and couplings for effective transmission of power.
3. To study the features of welded joints and fasteners required for various industrial applications.
4. To give exposure to design springs and flywheels for various engineering applications.
5. To understand the importance design bearings and levers for engineering applications.
6. To make the students conversant to implement design procedure for designing a machine.

COURSE OUTCOMES

1. Determine various types of stresses induced in different machine members.
2. Design shaft and couplings for effective transmission of power.
3. Select the type of welded joints and fasteners required for various industrial applications.
4. Design springs and flywheels for various engineering applications.
5. Design bearings and levers for engineering applications.
6. Implement design procedure for designing a machine.

UNIT I	STEADY STRESSES AND VARIABLE STRESSES IN MACHINE MEMBERS	12
---------------	---	-----------

Introduction to the design process – factors influencing machine design, selection of materials based on mechanical properties – Factor of safety. Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – Design of curved beams – crane hook and ‘C’ frame – theories of failure – stress concentration – design for variable loading – Soderberg, Goodman and Gerber relations.

UNIT II	DESIGN OF SHAFTS AND COUPLINGS	12
----------------	---------------------------------------	-----------

Design of solid and hollow shafts based on strength, rigidity and critical speed – Design of keys and keyways – Design of rigid and flexible couplings – Introduction to gear and shock absorbing couplings – design of knuckle joints.

UNIT III	DESIGN OF FASTENERS AND WELDED JOINTS	12
-----------------	--	-----------

Threaded fasteners – Design of bolted joints including eccentric loading – Design of welded joints for pressure vessels and structures – theory of bonded joints.

UNIT IV	DESIGN OF SPRINGS AND FLYWHEEL	12
----------------	---------------------------------------	-----------

Design of helical, leaf, disc and torsional springs under constant loads and varying loads – Concentric torsion springs – Belleville springs – *Design of flywheels involving stresses in rim and arm.*

UNIT V	DESIGN OF BEARINGS AND LEVERS	12
---------------	--------------------------------------	-----------

Selection of bearings – sliding contact and rolling contact types – Cubic mean load – Selection of journal bearings – McKees equation – Lubrication in journal bearings – calculation of bearing dimensions – *Design of Levers.*

TOTAL	60
--------------	-----------

(Permitted to use PSG design data book in the examination)

5. www.efunda.com

COURSE OBJECTIVES

1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified output motions.
2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machine components.
3. To understand the force-motion relationship in components subjected to external forces and analysis of standard mechanisms.
4. To understand the undesirable effects of unbalances resulting from prescribed motions in mechanism.
5. To expose students to vibration phenomenon and its types along with the vibration terminologies.
6. To understand the effect of Dynamics of undesirable vibrations.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Identify the type and mechanism and will be able to perform velocity and acceleration analysis
2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
3. Specify the gear terminology and to select appropriate gear trains for engineering applications.
4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocating masses.
5. Describe the vibration phenomenon and its types along with the vibration terminologies.
6. Analyze the systems subjected to vibration

UNIT I FORCE ANALYSIS**9**

Rigid Body dynamics in general plane motion – Equations of motion – Dynamic force analysis – Inertia force and Inertia torque – D'Alemberts principle – The principle of superposition – Dynamic Analysis in Reciprocating Engines – Gas Forces – Equivalent masses – Bearing loads – Crank shaft Torque – Turning moment diagrams – Fly wheels.

UNIT II BALANCING**9**

Static and dynamic balancing – Balancing of rotating masses – Balancing a single cylinder Engine – Balancing Multi-cylinder Engines – Partial balancing in locomotive Engines.

UNIT III FREE VIBRATION**9**

Basic features of vibratory systems – idealized models – Basic elements and lumping of parameters – Degrees of freedom – Single degree of freedom – Free vibration – Equations of motion – natural frequency – Damping Types of Damping – Damped vibration, critical speeds of simple shaft.

UNIT IV FORCED VIBRATION AND TORSIONAL VIBRATION**9**

Response to periodic forcing – Harmonic Forcing – Forcing caused by unbalance – Support motion – Force transmissibility and amplitude transmissibility – Vibration isolation.

Torsional systems; Natural frequency of free torsional vibrations, Natural frequency of two and three rotor systems.

UNIT V MECHANISMS FOR CONTROL**9**

Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.

Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

3. http://www.efunda.com/formulae/vibrations/sdof_free_damped.cfm
4. http://www.roytech.co.uk/Useful_Tables/Vibrations/Free_Vibrations.html

COURSE OBJECTIVES

1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified output motions.
2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machine components.
3. To understand the force-motion relationship in components subjected to external forces and analysis of standard mechanisms.
4. To understand the undesirable effects of unbalances resulting from prescribed motions in mechanism.
5. To expose students to vibration phenomenon and its types along with the vibration terminologies.
6. To understand the effect of Dynamics of undesirable vibrations.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Identify the type and mechanism and will be able to perform velocity and acceleration analysis
2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
3. Specify the gear terminology and to select appropriate gear trains for engineering applications.
4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocating masses.
5. Describe the vibration phenomenon and its types along with the vibration terminologies.
6. Analyze the systems subjected to vibration

UNIT I KINEMATIC ANALYSIS 9

Introduction- General concepts, Introduction of Simple mechanism, Different types of Kinematics pair, Grublers rule for degree of freedom, Grashof's Criterion for mobility determination.

Kinematic Analysis- Concepts of vectorial analysis. Velocity and Acceleration Analysis of planar mechanisms

UNIT II CAMS AND GEARS 9

Cams- Classifications – Displacement diagrams–parabolic, Simple harmonic and Cycloidal motions – Layout of cam profiles – Knife and Roller followers.

Gears- Geometry of tooth profiles, Law of gearing, Involute profile, interference, helical, spiral and worm gears, simple, compound gear trains. Epicyclic gear trains

UNIT III DYNAMIC ANALYSIS 9

Dynamic Analysis of Slider-crank mechanisms, turning moment computations.

Balancing- Static and Dynamic balancing Balancing of revolving & reciprocating masses in single and multi-cylinder engines.

UNIT IV VIBRATION 9

Vibration analysis of SDOF systems, Natural, damped forced vibrations, Base-excited vibrations, transmissibility ratio.

UNIT V MECHANISMS FOR CONTROL 9

Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.

Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

3. http://www.efunda.com/formulae/vibrations/sdof_free_damped.cfm
4. http://www.roymech.co.uk/Useful_Tables/Vibrations/Free_Vibrations.html

COURSE OBJECTIVES

1. To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP,BVP.
2. To implement the methods using the spread sheet inExcel.
3. To make students familiar with the concepts of programming and the get them accustomed with high-level languages like Matlab, Mathematica, etc.
4. To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and symbolic integration
5. To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and differential equations and simulation.
6. To make students to get knowledge about real-time problem-solving skill.

COURSE OUTCOMES

1. Apply numerical methods to find our solution of algebraic equations using different methods.
2. Understand the different conditions, and numerical solution of system of algebraic equations.
3. Apply various interpolation methods and finite difference concepts.
4. Can apply numerical differentiation and integration whenever and wherever routine methods are not applicable.
5. Work numerically on the ordinary differential equations using different methods through the theory of finite differences.
6. Work numerically on the partial differential equations using different methods through the theory of finite differences.

LIST OF EXPERIMENTS

1. Finding solution of Transcendentalequation
 - i) Newton – RaphsonMethod
 - ii) Bisectionmethod
 - iii) Iterative method by reducing the equation to the form $x=f(x)$
2. Finding the dominant eigenvalue and eigenvector by powermethod
3. Numericalintegration
 - i) Gauss 2 point and 3 pointformulae
 - ii) Trapezoidal method
 - iii) Simpson's 1/3rule
4. Solution of initial value problems governed byODE
 - i) Runge - Kutta 4th ordermethod
 - ii) Modified Euler'smethod
 - iii) Milne'smethod
 - iv) Adam – Bashforthmethod
5. Solution of BVP governed byPDE
 - i) LaplaceEquation
 - ii) One – dimensional heatequation
 - a) Explicit method : Bender – Schmidt'smethod
 - b) Implicit method : Crank - Nicolson'smethod
 - iii) One dimensional wave equation Implicitmethod

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Curtis F. Gerald and Patrick O. Wheatley	Applied Numerical Analysis	Pearson Education, South Asia	2009
2	Steven C. Chapra, Raymond P. Canale	Numerical Methods for Engineers	McGraw - Hill Pub. Co. Ltd	2014

COURSE OBJECTIVES

1. To Understand the working of various governors.
2. To introduce jump speed and profile of the cam
3. To understand the importance of moment of inertia by oscillation method for connecting rod and flywheel.
4. To introduce the concepts to Characterize and calibrate measuring devices.
5. To expose students to measuring taper angle straightness, flatness, surface finish and thread parameters.
6. To explain the limits of dimensional tolerances using comparators.

COURSE OUTCOMES

1. Understand the working of various governors.
2. Determine of jump speed and profile of the cam
3. Determine moment of inertia by oscillation method for connecting rod and flywheel.
4. Characterize and calibrate measuring devices.
5. Measure taper angle straightness, flatness, surface finish and thread parameters.
6. Examine the limits of dimensional tolerances using comparators.

LIST OF EXPERIMENTS**DYNAMICS**

1. Governors–Determination of sensitivity, effort, etc. for Watt, Porter, Proell, and spring-controlled Governors
2. Cam – Determination of jump speed and profile of the cam.
3. Motorized Gyroscope–Verification of laws –Determination of gyroscopic couple.
4. Whirling of shaft–Determination of critical speed of shaft with concentrated loads.
5. Balancing of rotating and reciprocating masses.
6. Determination of moment of inertia by oscillation method for connecting rod and flywheel.
7. Vibrating system – spring mass system – Determination of damping co-efficient of single degree of freedom system
8. Determination of torsional frequencies for compound pendulum and flywheel system with lumped moment of inertia.
9. Transverse vibration –free– Beam. Determination of natural frequency and deflection of beam.
10. Strain gauge measurement system.

METROLOGY

1. Calibration of Vernier / Micrometer / Dial gauge
2. Checking dimensions of part using slip gauges
3. Measurement of gear tooth dimensions – addendum, dedendum, pitch circle diameter and tooth thickness
4. Measurement of taper angle using sine bar / tool makers microscope
5. Measurement of straightness and flatness
6. Measurement of thread parameters
7. Checking the limits of dimensional tolerances using comparators (Mechanical / Pneumatic / Electrical)
8. Surface finish measurement

TOTAL**45**

COURSE OBJECTIVES

1. To impart knowledge on valve timing diagram and port timing diagram for single cylinder four stroke diesel engine and two stroke petrol engines.
2. To understand the importance of mechanical efficiency of four stroke SI engine by Morse test.
3. To provide an overview of performance of four stroke single cylinder CI engine.
4. To provide an overview of performance of steam generator and steam turbines.
5. To expose students to the flash and fire point of various fuel
6. To expose students to the flash and fire point of various lubricants

COURSE OUTCOMES

1. Sketch the valve timing diagram for four stroke diesel engine and petrol engines.
2. Sketch the port timing diagram for single cylinder two stroke diesel engine and petrol engines.
3. Calculate the mechanical efficiency of four stroke SI engine by Morse test.
4. Evaluate the performance of four stroke single cylinder CI engine.
5. Evaluate the performance of steam generator and steam turbines.
6. Measure the flash and fire point of various fuel/lubricants.

LIST OF EXPERIMENTS

1. Valve Timing and Port Timing Diagrams.
2. Performance Test on 4-stroke Diesel Engine.
3. Heat Balance Test on 4-stroke Diesel Engine.
4. Load test on 4-stroke Diesel Engine.
5. Morse Test on multicylinder Petrol Engine.
6. Retardation Test to find Frictional Power of a Diesel Engine.
7. Determination of Viscosity – Red Wood Viscometer.
8. Determination of Flash Point and Fire Point.
9. Study of Steam Generators and Turbines.
10. Performance and energy balance test on a steam generator

TOTAL**45**

COURSE OBJECTIVES

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

Students will undergo industrial training for four weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department within a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

COURSE OBJECTIVES

1. To understand the concepts of geometrical dimensioning and Tolerancing
2. To study the physical importance of them in industrial point of view
3. To know the various types of Tolerancing, its measurement and design.
4. To translate geometric callouts into plain English with one meaning.
5. To explain the major rules found in ASME Y14.5-2009
6. To understand the hierarchy of geometric tolerancing.

COURSE OUTCOMES

1. Ability to learn and apply geometric dimensioning and tolerance standards to communicate design intent
2. Ability to Learn how the knowledge of certain processes can affect part design and documentation
3. Gain added insight on working in a team design environment.
4. Translate geometric callouts into plain English with one meaning.
5. Explain the major rules found in ASME Y14.5-2009
6. Understand the hierarchy of geometric tolerancing

UNIT I INTRODUCTION TO GD AND T**5**

Introduction to Geometric dimensioning and Tolerancing – working of geometric system – Terms and definitions – Common symbols and Terminology – Fundamental Rules (Drawing)– Feature definition – With Size and Without Size – Material Condition (Maximum, Least, Regard of Material Condition)– Limit Tolerancing – Dimension Origin – Limits of Size, Rule 1 or Envelope Principle – Go– No Go Gauges.

UNIT II FORM AND ORIENTATION TOLERANCE**5**

and design considerations – Flatness and Circularity measurement concepts – Orientation tolerance specification and application design.

UNIT III POSITION AND RUNOUT TOLERANCE**5**

Profile of surface and line tolerance design and application – Location tolerance, Position, applied and material condition consideration – Coaxial controls and design – Concentricity, Symmetry – Measurement and application – Design considerations – Position, Composite tolerance concept, design and Measurement – Runout, Total Runout tolerances – Measurement and considerations.

COURSE OBJECTIVES

1. To Formulate and solve engineering and managerial situations as LPP.
2. To understand the Engineering and Managerial situations in Transportation.
3. To Study and acquire knowledge on engineering and Managerial solutions in Assignment and scheduling problems.
4. To give exposure to inventory in industry.
5. To make the student acquire sound knowledge on sequences to perform operation among various alternatives.
6. To provide an overview of various tools in various sections of industries like marketing, material handling etc.

COURSE OUTCOMES

At the end of the course, student will be able to understand the

1. Formulate and solve engineering and managerial situations as LPP.
2. Solve Engineering and Managerial situations in Transportation.
3. Give Engineering and Managerial solutions in Assignment and scheduling problems.
4. Manage inventory in industry.
5. Select better sequence to perform operation among various alternatives.
6. Apply the various tools in various sections of industries like marketing, material handling etc.

UNIT I INTRODUCTION TO OPERATIONS RESEARCH 12

Operations research and decision-making – types of mathematical models and constructing the model – Role of computers in operations research – Linear Programming Techniques: Formulation of linear programming problem, applications and limitations, graphical method, simplex method – The Big –M method – the two-phase method.

UNIT II TRANSPORTATION PROBLEMS 12

Least cost method, North west corner rule, Vogel's approximation method, modified distribution method, optimization models, unbalance and degeneracy in transportation model.

UNIT III ASSIGNMENT MODELS AND SCHEDULING 12

Assignment models - Hungarian algorithm, unbalanced assignment problems - maximization case in assignment problems, traveling salesman problem. Scheduling – processing n jobs through two machines, processing n jobs through three machines, processing two jobs through 'm' machines, processing n jobs through m machines.

UNIT IV INVENTORY CONTROL AND QUEUEING THEORY 12

Variables in inventory problems, inventory models with penalty, shortage and quantity discount, safety stock, multi item deterministic model.

Queueing Models: Queues – Notation of queues, performance measures, The M/M/1 queue, The M/M/m queue, batch arrival queueing system, queues with breakdowns.

UNIT V PROJECT MANAGEMENT, GAME THEORY, REPLACEMENT MODELS 12

Basic terminologies, constructing a project network, network computations in CPM and PERT, cost crashing – Replacement Models: Replacement of Items due to deterioration with and without time value of Money, Group replacement policy, Staff replacement

4. <http://www.projectmanagement.com/>

COURSE OBJECTIVES

1. To Study and acquire knowledge on design the power transmission components like belts, pulleys, ropes, chains and sprockets.
2. To Study and acquire knowledge on design spurs and parallel axis helical gears.
3. To give exposure to dimensions for bevel and worm gears.
4. To provide an overview of design procedures of gear boxes for industrial applications.
5. To provide an overview of clutches and brakes for engineering applications.
6. To make the student acquire sound knowledge of mechanical system

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Design the power transmission components like belts, pulleys, ropes, chains and sprockets.
2. Design spurs and parallel axis helical gears.
3. Estimate the dimensions for bevel and worm gears.
4. Practice the design procedures of gear boxes for industrial applications.
5. Design clutches and brakes for engineering applications.
6. Design a mechanical system

UNIT I DESIGN OF TRANSMISSION SYSTEMS FOR FLEXIBLE ELEMENTS 9

Design of V belts and pulleys – Selection of Flat belts and pulleys – Wire ropes and pulleys – Selection of Transmission chains and Sprockets – Design of sprockets.

UNIT II DESIGN OF SPUR AND HELICAL GEARS 9

Gear Terminology – Speed ratios and number of teeth – Force analysis – Tooth stresses – Dynamic effects – Fatigue strength – Factor of safety – Gear materials – Module and Face width – power rating calculations based on strength and wear considerations – Parallel axis Helical Gears – Pressure angle in the normal and transverse plane – Equivalent number of teeth – forces and stresses – Estimating the size of the helical gears.

UNIT III DESIGN OF BEVEL AND WORM GEARS 9

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits – terminology – Thermal capacity, materials – forces and stresses, efficiency, estimating the size of the worm gear pair – Cross helical: Terminology – helix angles – Estimating the size of the pair of cross helical gears.

UNIT IV DESIGN OF GEARBOXES 9

Geometric progression – Standard step ratio – Ray diagram, kinematics layout – Design of sliding mesh gear box – Constant mesh gear box. – Design of multi speed gear box.

UNIT V DESIGN OF CLUTCHES AND BRAKES 9

Design of plate clutches – axial clutches – cone clutches – internal expanding rim clutches – internal and external shoe brakes.

TOTAL 45

(Permitted to use PSG design data book in the examination)

4. <http://www.cs.cmu.edu/~rapidproto/mechanisms/chpt6.htm>

COURSE OBJECTIVES

1. To Study and acquire knowledge on heat transfer for conduction.
2. To introduce the concepts of heat transfer coefficients for natural and forced convection for different fluid flows.
3. To understand the performance of heat exchanger.
4. To study the features of radiation heat transfer between the surfaces.
5. To give exposure to mass transfer.
6. To make the students conversant to solve complex problems where heat and mass transfer takes place.

COURSE OUTCOMES

1. Determine the rate of heat transfer for conduction.
2. Evaluate heat transfer coefficients for natural and forced convection for different fluid flows.
3. Analyze performance of heat exchanger.
4. Estimate the radiation heat transfer between the surfaces.
5. Calculate the coefficient of mass transfer.
6. Solve complex problems where heat and mass transfer takes place.

UNIT I CONDUCTION**12**

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – General Differential equation of Heat Conduction – Fourier Law of Conduction – Cartesian and Cylindrical Coordinates – One Dimensional Steady State Heat Conduction – Conduction through Plane Wall, Cylinders and Spherical systems – Composite Systems – Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction – Lumped Analysis – Use of Heislers Chart.

UNIT II CONVECTION**12**

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates, Cylinders and Spheres – Internal Flow – Laminar and Turbulent Flow – Combined Laminar and Turbulent – Flow over Bank of tubes – Free Convection – Dimensional Analysis – Flow over Vertical Plate, Horizontal Plate, Inclined Plate, Cylinders and Spheres.

UNIT III PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS**12**

Nusselts theory of condensation – pool boiling, flow boiling, correlations in boiling and condensation. Types of Heat Exchangers – LMTD Method of heat Exchanger Analysis – Effectiveness – NTU method of Heat Exchanger Analysis – Overall Heat Transfer Coefficient – Fouling Factors.

UNIT IV RADIATION**12**

Basic Concepts, Laws of Radiation – Stefan Boltzman Law, Kirchoff Law – Black Body Radiation – Grey body radiation - Shape Factor Algebra – Electrical Analogy – Radiation Shields – Introduction to Gas Radiation.

UNIT V MASS TRANSFER**12**

Basic Concepts – Diffusion Mass Transfer – Fick's Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations

TOTAL**60**

(Permitted to use standard Heat and Mass Transfer Table in the examination)

3. http://en.wikipedia.org/wiki/Heat_transfer

COURSE OBJECTIVES

1. To enable students to understand the fundamental economic concepts applicable to engineering
2. To learn the techniques of incorporating inflation factor in economic decision making.
3. To Understand the measures of national income, the functions of banks and concepts of globalization
4. To Apply the concepts of financial management for project appraisal
5. To Understand accounting systems and analyze financial statements using ratio analysis
6. To Understand Financial planning, economic basis for replacement.

COURSE OUTCOMES

1. Evaluate the economic theories, cost concepts and pricing policies.
2. Understand the market structures and integration concepts
3. Understand the measures of national income, the functions of banks and concepts of globalization
4. Apply the concepts of financial management for project appraisal
5. Understand accounting systems and analyze financial statements using ratio analysis
6. Understand the impact of inflation, taxation, depreciation. Financial planning, economic basis for replacement, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems

UNIT I FUNDAMENTALS OF ENGINEERING ECONOMICS**9**

Introduction to Engineering Economics – Definition, Scope and Significance – Demand and supply analysis – Definition – Law of Demand – Elasticity of Demand – Demand Forecasting – Supply – Law of supply – Elasticity of Supply.

UNIT II COMMERCIAL BANKING**9**

Law of contracts, negotiable instruments, its types and regulations there on – New Industrial Policy – MSME sector – Development financial institutions and their relevance – Export Promotion - DICGC, ECGCI, EXIM Bank - Import and export concepts - Letter of credit, forward contracts / hedging.

UNIT III CAPITAL MARKET**9**

Stock Exchanges – Functions – Listing of Companies – Role of SEBI – Capital Market Reforms. Money and banking - Money – Functions – Inflation and deflation – Commercial Bank and its functions – Central bank and its functions.

UNIT IV FINANCIAL CONCEPTS**9**

Introduction, scope and objectives of basic financial concepts – time value of money – Interest - simple & compound interest, annuity and effective rate of interests. Appraisal of project for profitability, internal rate of return – payback period – net present value. NPV comparison – cost benefit analysis. Sources of finance – internal and external.

UNIT V COST ANALYSIS AND BREAK-EVEN ANALYSIS**9**

Cost analysis - Basic cost concepts – Financial accounting, account posting rules, Trial balance, Profit and loss account and Balance sheet aspects – Cost output in the short and long run. Depreciation -meaning – Causes – Methods of computing Depreciation (simple problems in Straight Line Method, Written Down Value Method). Meaning – Break Even Analysis - Managerial uses of BEA.

**17BEME611 COMPUTER AIDED MODELING AND SIMULATION
LABORATORY**
0 0 3 2100**COURSE OBJECTIVES**

1. To gain practical experience in handling 2D drafting and 3D modeling software systems.
2. To impart training on SOLID WORKS for modelling
3. To provide knowledge on assembly of components
4. To facilitate the understanding of manufacturing drawings from the models created
5. To understand the importance of MAT Lab for simulating different systems
6. To acquaint the student with the concept of mat lab for performing various mathematical operations

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. use computer and CAD software's for modeling of mechanical components
2. use various options in SolidWorks for modeling of given components
3. create assembly of components
4. prepare manufacturing drawings from the models created
5. Use MAT Lab for simulating different systems like hydraulic and pneumatic circuits
6. Use mat lab for performing various mathematical operations

COMPUTER AIDED DESIGN

1. 3D modeling of various machine elements using various options like protrusion, cut, sweep, draft, loft, blend, rib.
2. Assembly – creating assembly from parts – assembly constraints
3. Conversion of 3D solid model to 2D drawing – different views, sections, isometric view and dimensioning.
4. Introduction to Surface Modeling.
5. Introduction to File Import, Export – DXF, IGES, STL, STEP

Note: Any one of the 3D MODELING software's like SOLIDWORKS, CREO, CATIA, NX Software, AutoCAD etc.

COMPUTER AIDED SIMULATION

1. Simulation of Air conditioning system with condenser temperature and evaporator temperatures as input to get COP using Software
2. Simulation of Hydraulic / Pneumatic cylinder using Software
3. Simulation of cam and follower mechanism using Software
4. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and two variables
5. Use of MATLAB to solve simple problems in vibration

TOTAL**45**

COURSE OBJECTIVES

1. To impart knowledge on thermal conductivity of various engineering materials.
2. To acquaint the student with the concepts of heat transfer rate in free and forced convection environment.
3. To Study and acquire knowledge of grey surface.
4. To study the features of Stefan–Boltzmann constant.
5. To provide an overview of the effectiveness of parallel and counter flow heat exchanger.
6. To provide an overview of COP of refrigeration and air conditioning system and performance of air compressor and fluidized bed cooling tower

COURSE OUTCOMES

1. Conduct a test to find thermal conductivity of various engineering materials.
2. Measure heat transfer rate in free and forced convection environment.
3. Measure emissivity of grey surface.
4. Determine Stefan–Boltzmann constant.
5. Measure the effectiveness of parallel and counter flow heat exchanger.
6. Measure COP of refrigeration and air conditioning system and performance of air compressor and fluidized bed cooling tower.

LIST OF EXPERIMENTS**HEAT TRANSFER**

1. Heat transfer through a compositewall
2. Thermal conductivity measurement by guarded platemethod
3. Natural convection heat transfer from a verticalcylinder
4. Heat transfer from pin–fin (natural and forced convectionmodes)
5. Effectiveness of Parallel/counter flow heatexchanger
6. Determination of Stefan–Boltzmannconstant
7. Determination of emissivity of a greysurface

REFRIGERATION AND AIR CONDITIONING

1. Performance test on single/two stage reciprocating aircompressor.
2. Determination of COP of a refrigerationsystem
3. Experiments on air–conditioningsystem

TOTAL**45****COURSE OBJECTIVE**

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSEOUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students may be grouped into 2 to 4 and work under a project supervisor. The device/system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

17BEME652

TECHNICALPRESENTATION

1 0 0 -100

COURSE OBJECTIVES

1. To equip the students with effective technicalpresentation
2. To understand the barriers and bridges tocommunication
3. To improve the public speaking capabilities, body language andposture.
4. To improve the literature survey skill.
5. To develop presentation skill using power point presentation
6. To improve skill to face viva voce examination.

COURSE OUTCOMES

1. Develop the ability to fabrication skill.
2. Ability to make literature review till the successful solution.
3. Ability to identify specific problems.
4. Gain the knowledge about data collection and conducting experiments.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

During the seminar session each student is expected to prepare and present a topic on engineering/technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models.

TOTAL

15

SEMESTER VII

17BECC701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT 3 0 0 3100

COURSE OBJECTIVE

1. To understand objectives, Strategies, Policies and Plan.
2. To introduce plans by directing and controlling.
3. To Understand the need of Engineering Ethics.
4. To Understand the forces that shape culture.
5. To develop the entrepreneurial skills.
6. To make the students conversant to execute an engineering plan with ethics.

COURSE OUTCOMES

1. Prepare objectives, Strategies, Policies and Plan.
2. Execute plans by directing and controlling.
3. Understand the need of Engineering Ethics.
4. Understand the forces that shape culture.
5. Show the entrepreneurial skills.
6. Execute an engineering plan with ethics.

UNIT I HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises – Forecasting – Decision-making – Formal and informal organization – Organization Chart –.

UNIT II DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT III ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT IV FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth – Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

3. <http://lfkbb.tripod.com/eng24/gilliganstheory.html>
4. <http://www.developingeyes.com/five-types-of-entrepreneurs/>

COURSE OBJECTIVES

1. To introduce the concepts of sensors and transducers.
2. To familiarize the students to understand the actuation systems.
3. To understand the importance of architecture of microprocessors.
4. To Study and acquire knowledge of the PLC program using ladder logic.
5. To introduce the concepts of design mechatronic system.
6. To provide an overview of develop the controller model for electrical, mechanical and thermal systems

COURSE OUTCOMES

1. Implement the concepts of sensors and transducers.
2. Design the actuation systems.
3. Understand the architecture of microprocessors.
4. Create the PLC program using ladder logic.
5. Design mechatronic system.
6. Develop the controller model for electrical, mechanical and thermal systems.

UNIT I MECHATRONICS SENSORS AND TRANSducers 9

Introduction to Mechatronics – Systems – Measurement Systems – Control Systems – Traditional design – Microprocessor based Controllers. Introduction to sensors – Performance Terminology – Static and Dynamic characteristics – Displacement – Position and Proximity – Velocity and Motion – Fluid Pressure – Temperature Sensors – Light Sensors – Selection of Sensors – Signal processing – Servosystems.

UNIT II ACTUATORS AND SYSTEM MODELS 9

Pneumatic and Hydraulic Systems – Directional Control Valves – Rotary Actuators. Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings. Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – D.C Motors – A.C Motors – Stepper Motors.

Introduction to system models – Building block of Mechanical, Electrical, Fluid and Thermal Systems.

UNIT III MICROPROCESSORS IN MECHATRONICS 9

Introduction – Architecture – pin configuration Instruction set – Programming of Microprocessors using 8085 instructions – Interfacing. Input and output devices – interfacing D/A converters and A/D converters – Application – Temperature control – Stepper motor control.

UNIT IV CONTROLLERS 9

Introduction – Continuous and discrete process Controllers – Control Mode – Two – Step mode – Proportional Mode – Derivative Mode – Integral Mode – PID Controllers – Digital Controllers – Adaptive Control – Digital Logic Control – Micro Processors Control. Introduction to PLC – Basic Structure – Input / Output Processing – Programming – Mnemonics – Timers, Internal relays and counters – Data Handling – Analog Input / Output – Selection of a PLC.

UNIT V DESIGN OF MECHATRONIC SYSTEMS 9

Stages in designing Mechatronics Systems – Traditional and Mechatronic Design – Possible Design Solutions – Case Studies of Mechatronics Systems, Pick and place robot – automatic Car Park Systems – Engine Management Systems – Introduction to MEMS.

OPENELECTIVEII		3 0 0 3100
17BEME711	CAE /CAMLABORATORY	0 0 3 2100

(i) COURSE OBJECTIVES

1. To perform simple structural analysis and thermal analysis using simulation software's.
2. To perform structural analysis of bars and trusses.
3. To perform structural analysis of beams and frames.
4. To perform 2D analysis of plate and shells
5. To perform modal analysis of simple systems
6. To perform thermal analysis of simple systems

COURSE OUTCOMES

Upon completion of this course, the Students will be able to

1. Perform structural analysis of bars and trusses
2. Perform structural analysis of beams and frames
3. Perform 2d analysis of plate and shells
4. Perform modal analysis of simple systems
5. Perform thermal analysis of simple systems
6. Perform fluid and failure analysis of simple systems

LIST OF EXPERIMENTS

COMPUTER AIDED ENGINEERING (Simple Analysis using ANSYS Tool)

1. Stress analysis of rectangular L bracket
2. Stress analysis of beams (Cantilever, Simply supported, Fixed ends)
3. Mode frequency analysis of beams (Cantilever, Simply supported, Fixed ends)
4. Harmonic analysis of a 2D component
5. Thermal stress analysis of a 2D component
6. Modeling a 3D component. (Single point cutting tool, I beams, etc.,)

COMPUTER AIDED MANUFACTURING (CAM)

1. MANUAL PART PROGRAMMING (Using G and M Codes) in CNC Machine.
2. Part programming for Linear, Circular interpolation, and Contour motions.
3. Part programming using standard canned cycles for Thread cutting, Drilling, Peck drilling, and Boring.
4. NC code generation using software's like Edge CAM, CREO, etc. CNC Controllers like FANUC, Siemens, and Hiedenhain etc.

TOTAL 45

COURSE OBJECTIVES

1. To introduce the program for arithmetic functions and the program for sorting, code conversion functions.
2. To enrich the understanding of the program codes to interface with stepper motor.
3. To understand the importance of set speed with actual speed of DC motor by interfacing suitable speed sensors.
4. To introduce the concepts of hydraulic, pneumatic by using simulation software.
5. To introduce the concepts of electro pneumatic circuits by using simulation software
6. To understand the concept of displacement, force and temperature measurement

COURSE OUTCOMES

1. Create the program for arithmetic functions
2. Create the program for sorting, code conversion functions.
3. Formulate the program codes to interface with stepper motor.
4. Compare the set speed with actual speed of DC motor by interfacing suitable speed sensors.
5. Integrate all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
6. Perform the displacement, force and temperature measurement

LIST OF EXPERIMENTS

1. Design and testing of fluid power circuits to control
(i) Velocity (ii) direction and (iii) force of single and double acting actuators
2. Design of circuits with logic sequence using Electro pneumatic trainer kits.
3. Simulation of basic Hydraulic, Pneumatic and Electric circuits using software
4. Circuits with multiple cylinder sequences in Electro pneumatic using PLC.
5. Servo controller interfacing for open loop
6. PID controller interfacing
7. Stepper motor interfacing with 8051 Microcontroller
(i) Full step resolution (ii) Half step resolution
8. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LABVIEW
9. Computerized data logging system with control for process variables like pressure, flow and temperature
10. Measurement of displacement using LVDT
11. Measurement of temperature using Thermocouples
12. Measurement of Force using Strain Gage

TOTAL**45****COURSE OBJECTIVES**

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL 120

COURSE OBJECTIVES

1. To develop the student's knowledge in various robot structures and their workspace.
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To develop student's skills in perform kinematics analysis of robot systems.
4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
6. To provide the student with some knowledge and skills associated with robot control.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the fundamentals of therobots
2. Describe the robot celldesign
3. Know the safety considerations in roboticapplications.
4. The student with knowledge of the singularity issues associated with the operation of robotic systems.
5. The student with some knowledge and analysis skills associated with trajectory planning.
6. The student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALS OFROBOT**5**

Robot – Definition – Robot Anatomy – Co–ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications. Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features. End Effectors – Grippers. Requirements of a sensor, Principles and Applications of sensors – Position of sensors, Proximity Sensors, Touch Sensors – Camera, Frame Grabber, Sensing and DigitizingImage.

UNIT II ROBOTCELLDESIGN**5**

Robotcelldesign–simulationsoftware(RoboWave).Robotcelllayouts–Multiplerobotsandmachineinterference–robot cell planning – robot cycle time analysis for assembly, welding and painting shop.

UNIT III SAFETY CONSIDERATIONS**5**

Safety Considerations for Robot Operations, Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method.

TOTAL**15****REFERENCES**

1	Klafter R.D., and Negin M	Robotic Engineering - An Integrated Approach	Prentice Hall	2003
2	Groover M.P	Industrial Robotics -Technology Programming and Applications	McGraw Hill	2012

COURSE OBJECTIVES

1. To understand the working principles of pumps
2. To understand the working principles and motors
3. To develop the system curve
4. To calculate the Net Positive Suction Head
5. To calculate the pump Total Head versus Rate of Flow characteristic
6. To match pumps to variable, parallel and series pumping systems

COURSE OUTCOMES

1. Understand the working principles of pumps.
2. Understand the working principles and motors.
3. Develop the system curve.
4. Calculate the Net Positive Suction Head.
5. Calculate the pump Total Head versus Rate of Flow characteristic.
6. Match pumps to variable, parallel and series pumping systems.

UNIT I SINGLE PHASE INDUCTION MOTOR

5

Constructional details of single phase induction motor – Principle of operation – Types – Losses and Efficiency – Performance analysis – Starting methods of single-phase induction motors. – Design aspects of motors for usage in submersible pumps – Motors Rating and selection criteria.

UNIT II THREE PHASE INDUCTION MOTOR

5

Constructional details – Types of rotors – Principle of operation – Need for starters – Types of starters – DOL, Stator resistance and reactance, rotor resistance, autotransformer and star-delta starters – Speed control – Change of voltage, torque, number of poles and slip – Losses and Efficiency – Performance analysis – Design aspects of motors for usage in submersible pumps – Motors Rating and selection criteria.

UNIT III PUMPS

5

Pumps: definition and classifications – Sewage, fire fighting and Pressure boosting pumps
Classification, working principle, indicator diagram, work saved by air vessels and performance curves – cavitations in pumps – rotary pumps: working principles of gear and vane pumps

SEMESTER VIII

17BEME801

TOTALQUALITYMANAGEMENT

3 0 0 3100

COURSE OBJECTIVES

1. To introduce the concepts of essentiality of quality.
2. To understand the importance of various TQM principles.
3. To introduce the concepts of the various TQM principles.
4. To Understand the techniques for quality management.
5. To introduce the standard quality systems in industries.
6. To familiarize the students to understand the various techniques to improve the quality in industries

COURSE OUTCOMES

1. Understand the essentiality of quality.
2. Summarize various TQM principles.
3. Understand the various TQM principles.
4. Understand the techniques for quality management.
5. Implement standard quality systems in industries.
6. Apply various techniques to improve the quality in industries.

UNIT I ESSENTIALS OF TQM

9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT II TQM PRINCIPLES

9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDCA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III TQM TOOLS

9

The new seven management tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma – APQP.

UNIT IV TQM TECHNIQUES

9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT V QUALITY AND ENVIRONMENT SYSTEMS

9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2002 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 and ISO 18001 – Concept, Requirements and Benefits.

17BEME891**PROJECT WORK - PHASE II&VIVA-VOCE****0 0 32 16300****COURSE OBJECTIVES**

1. To understand the concept and basics of thrust areas of Mechanical Engineering.
2. To explain the Review literature to identify gaps and define objectives & scope of the work.
3. To make the student appreciate the purpose of innovative ideas for social benefit.
4. To understand the importance of a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
5. To familiarize the students to understand the methods and materials to carry out experiments/develop code.
6. To Reorganize the procedures with a concern for society, environment and ethics

COURSE OUTCOMES

1. Identify thrust areas of Mechanical Engineering.
2. Review literature to identify gaps and define objectives & scope of the work.
3. Generate and implement innovative ideas for social benefit.
4. Develop a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
5. Identify methods and materials to carry out experiments/develop code.
6. Reorganize the procedures with a concern for society, environment and ethics

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. DEPARTMENT ELECTIVES

17BEME5E01

MATERIAL ASPECTS IN DESIGN

3 0 0 3100

COURSE OBJECTIVES

1. To select Material Properties have to suit the purpose of an application.
2. To designing a machine or component, many factors have to be considered and optimised.
3. To covers most issues for mechanical design optimisation.
4. To know about the selective assembly process
5. To know about the fracture mechanism.
6. To know about spring design.

COURSE OUTCOMES

1. Students able to select material properties have to suit the purpose of an application.
2. create designing a machine or component, many factors have to be considered and optimised.
3. Solve most issues for mechanical design optimisation.
4. selective assembly process
5. Finding of fracture mechanism of given material
6. Create spring design for Absorption system.

UNIT I MATERIAL SELECTION IN DESIGN 9

Introduction – relation of materials selection to design – general criteria for selection – performance characteristics of materials – materials selection process – design process and materials selection – economics of materials – recycling and materials selection

UNIT II MATERIALS PROCESSING AND DESIGN 9

Role of Processing in Designing – classification of manufacturing processes – types of processing systems – factors determining process selection. Design for manufacturability, assembly, machining, casting, forging and welding

UNIT III MANUFACTURING CONSIDERATIONS IN DESIGN 9

Surface finish – texture – dimensional tolerances in fitting – interchangeability – selective assembly – geometric tolerance. Selection of fits and tolerances

UNIT IV MATERIALS PROPERTIES AND DESIGN 9

Stress – Strain diagram – design for strength, rigidity – design under static loading, variable loading, eccentric loading – stress concentration. Design examples with shaft design, spring design and C frames.

UNIT V MATERIALS IN DESIGN 9

Design for brittle fracture, fatigue failure, corrosion resistance. Designing with plastics, brittle materials

TOTAL 45

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Dieter George E	Engineering Design, A materials and processing approach, 3 rd Edition	McGraw Hill	2000
2	Bhandari	Design of Machine Elements	Tata McGraw Hill	2010

COURSE OBJECTIVES

1. To understand the application of computers in various aspects of Manufacturing viz., Design, proper planning, Manufacturing cost, Layout & Material Handlingsystem.
2. To know the application of principles of group technology in computer aided processplanning.
3. To impart knowledge on working of the shop floorcontrol
4. To Study and acquire knowledge on data collection system in FMS.
5. To familiarize the students to understand CIM architecture for practicalapplication.
6. To expose students to generate database for computer integrated manufacturingprocesses.

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Implement computer integrated manufacturing concepts inindustries.
2. Apply the principles of group technology in computer aided processplanning.
3. Understand the working of the shop floorcontrol
4. Implement automated data collection system in FMS.
5. Develop CIM architecture for practicalapplication.
6. Generate database for computer integrated manufacturingprocesses.

UNIT I INTRODUCTION**9**

The meaning and origin of CIM– the changing manufacturing and management scene – External communication – islands of automation and software–dedicated and open systems–manufacturing automation protocol – product related activities of a company– marketing engineering – production planning – plant operations – physical distribution– business and financial management.

UNIT II GROUP TECHNOLOGY**9**

Group technology– – part families – Classification and coding – Approaches to computer aided process planning –variant approach and generative approaches

UNIT III SHOP FLOOR CONTROL AND INTRODUCTION OF FMS**9**

Shop floor control–phases –factory data collection system –automatic identification methods– Bar code technology–automated data collection system. FMS–components of FMS – types –FMS workstation –material handling and storage systems– FMS layout –computer control systems–application and benefits.

UNIT IV CIM IMPLEMENTATION AND DATA COMMUNICATION**9**

CIM and company strategy – system modeling tools –IDEF models – activity cycle diagram – CIM open system architecture (CIMOSA)– manufacturing enterprise wheel–CIM architecture – Product data management–CIM implementation software. Communication fundamentals– local area networks –topology – LAN implementations – network management and installations –MRP, ERP concepts

UNIT V OPEN SYSTEM AND DATABASE FOR CIM**9**

Open systems–open system inter connection – manufacturing automations protocol and technical office protocol (MAP /TOP).

Development of databases –database terminology– architecture of database systems–data modeling and data associations –relational data bases – database operators – advantages of data base and relational database.

1. http://en.wikipedia.org/wiki/Computer-integrated_manufacturing
2. <http://www.technologystudent.com/rmgrp07/intman1.html>
3. <http://www.computerintegratedmanufacturing.com/>

COURSE OBJECTIVES

1. To make the student acquire sound knowledge on the types of vehicle structures, cooling and lubrication systems required.
2. To acquaint the student with the concepts of type of engines to be used for modern automobiles.
3. To familiarize the students to Distinguish between the manual transmissions systems with automatic transmission systems.
4. To provide knowledge on appropriate transmission systems for the optimal power transmission.
5. To provide knowledge on steering, brakes and suspension systems for effective functioning.
6. To acquaint the student with advanced technologies in automotive Engineering.

COURSE OUTCOMES

1. Identify the types of vehicle structures, cooling and lubrication systems required.
2. Determine the type of engines to be used for modern automobiles.
3. Distinguish between the manual transmissions systems with automatic transmission systems.
4. Select appropriate transmission systems for the optimal power transmission.
5. Select steering, brakes and suspension systems for effective functioning.
6. Implement the advanced technologies in automotive.

UNIT I AUTOMOBILE ARCHITECTURE AND PERFORMANCE 9

Automotive components, subsystems and their positions – Chassis, frame and body, front, rear and four wheel drives – Operation and performance – Traction force and traction resistance, Power required for automobile – Rolling, air and gradient resistance.

UNIT II TYPES OF ENGINES 9

Types of engines – multi valve engine – in-line engine, vee-engine, Petrol engine – direct – single point and multipoint injection, diesel engine – common rail diesel injection, supercharging and turbo charging – **alternate fuels – ethanol and ethanol blend, compressed natural gas, fuel cells, hybrid vehicles.**

UNIT III TRANSMISSION SYSTEMS 9

Clutch : Types – coil spring and diaphragm type clutch, single and multi plate clutch, centrifugal clutch, Gear box : Types – constant mesh, sliding mesh and synchromesh gear box, layout of gear box, gear selector and shifting mechanism, overdrive, automatic transmission, Propeller shaft, universal joint, slip joint, differential and real axle arrangement, hydraulic coupling.

UNIT IV WHEEL AND TYRES AND SUSPENSION SYSTEM 9

Types of wheels, construction, wired wheels, Tyres – construction, Radial, bias and belted bias, slip angle, Tread patterns, Tyre retreading - cold and hot, Tubeless tyres, Types – front and rear suspension, conventional and independent type suspension, leaf springs, coil springs, dampers, torsion bars, stabilizer bars, arms, air suspension systems – Balancing of Wheels.

UNIT V STEERING SYSTEM AND BRAKING SYSTEM 9

Types of steering systems, Ackermann principle, Davis steering gear, steering gear boxes, steering linkages, power steering, wheel geometry – caster, camber, toe-in, toe out etc., wheel Alignment. Braking System – Forces on vehicles, tyre grip, load transfer, braking distribution between axles, stopping distance, Types of brakes, Mechanical, Hydraulic, Air brakes, Disc and Drum brakes, Engine brakes and **Anti lock braking system.**

COURSE OBJECTIVES

1. To recognize symbols and fundamentals in fluid power generation and distribution.
2. To identify power source for hydraulic systems.
3. To select appropriate components used in various hydraulic systems.
4. To design hydraulic circuits for given applications.
5. To distinguish the components used in pneumatic circuits.
6. To create the logic circuits for controlling electro-hydraulic/ pneumatic systems.

COURSE OUTCOMES

At the end of the course, the students will be able to

1. Recognize symbols and fundamentals in fluid power generation and distribution.
2. Identify power source for hydraulic systems.
3. Select appropriate components used in various hydraulic systems.
4. Design hydraulic circuits for given applications.
5. Distinguish the components used in pneumatic circuits.
6. Create the logic circuits for controlling electro-hydraulic/ pneumatic systems.

UNIT I FLUID POWER SYSTEMS AND FUNDAMENTALS 9

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids – General types of fluids – Fluid power symbols. Basics of Hydraulics – Applications of Pascal's Law – Laminar and Turbulent flow – Reynold's number – Darcy's equation – Losses in pipe, valves and fittings.

UNIT II HYDRAULIC SYSTEM AND COMPONENTS 9

Sources of Hydraulic Power: Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump, Pressure boosting pumps, construction and working of pumps – pump performance – Variable displacement pumps. Fluid Power Actuators: Linear hydraulic actuators – Types of hydraulic cylinders – Single acting, Double acting special cylinders like tandem, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder, Rotary actuators – **Fluid motors, Gear, Vane and Piston motors, Rotary distributor.**

UNIT III DESIGN OF HYDRAULIC CIRCUITS 9

Construction of Control Components : Direction control valve – 3/2 way valve – 4/2 way valve – Shuttle valve – check valve – pressure control valve – pressure reducing valve, sequence valve, Flow control valve – Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram. Accumulators and Intensifiers: Types of accumulators – Accumulators circuits, sizing of accumulators, intensifier – Applications of Intensifier – Intensifier circuit.

UNIT IV PNEUMATIC SYSTEMS AND COMPONENTS 9

Pneumatic Components: Properties of air – Compressors – Filter, Regulator and Lubricator UNIT Air control valves, Quick exhaust valves, pneumatic actuators. Fluid Power Circuit Design, Speed control circuits, synchronizing circuit, Pneumatic hydraulic circuit, Sequential circuit design for simple applications using cascade method.

UNIT V DESIGN OF PNEUMATIC CIRCUITS 9

Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Fluidics – Introduction to fluidic devices, simple circuits, Introduction to Electro Hydraulic Pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control. **Fluid power circuits; failure and troubleshooting.**

2. http://www.engineeringtoolbox.com/classification-pumps-d_55.html

COURSE OBJECTIVES

1. To impart knowledge on the principles of locating and clamping devices in machining process.
2. To familiarize the students to understand design of jigs for a given component.
3. To Study and acquire knowledge on design fixtures for a given component.
4. To make the student acquire sound knowledge on appropriate type of press tool for a given component.
5. To expose students to drawing die for a given component.
6. To give exposure to the use computer aids for sheet metal forming analysis

COURSE OUTCOMES

1. Summarize the principles of locating and clamping devices in machining process.
2. Design jigs for a given component.
3. Design fixtures for a given component.
4. Design an appropriate type of press tool for a given component.
5. Develop a drawing die for a given component.
6. Use computer aids for sheet metal forming analysis

UNIT I PURPOSE TYPES AND FUNCTIONS OF JIGS AND FIXTURES**9**

Tool design objective – Production devices – Inspection devices – Materials used in Jigs and Fixtures – Types of Jigs – Types of Fixtures–Mechanical actuation–pneumatic and hydraulic actuation–**Analysis of clamping force–Tolerance and error analysis.**

UNIT II JIGS**9**

Drill bushes –different types of jigs–plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs–Automatic drill jigs–Rack and pinion operated. Air operated Jigs components. Design and development of Jigs for given components.

UNIT III FIXTURES**9**

General principles of boring, lathe, milling and broaching fixtures– Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures– Modular fixtures, Quick change fixtures. **Design and development of fixtures for given component.**

UNIT IV PRESS WORKING TERMINOLOGIES AND ELEMENTS OF DIES AND STRIP LAY OUT**9**

Press working terminology–Presses and press accessories–Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies: Die block–die shoe. Bolster plate–punch plate–punch holder–guide pins and bushes – strippers – knockouts–stops –pilots–Selection of standard die sets strip lay out–strip lay out calculations, SMED technique.

UNIT V DESIGN AND DEVELOPMENT OF DIES**9**

Design and development of progressive and compound dies for Blanking and piercing operations. Tool and DIE Materials, Bending dies – development of bending dies–forming and drawing dies–**Development of drawing dies. Design considerations in forging, extrusion, casting and plastic dies.**

COURSE OBJECTIVES

1. To explain importance of renewable energy resources.
2. To understand the importance of basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
3. To understand the importance of principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
4. To study the features of design principles of biogas plants.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. To give exposure to power plants working with non-conventional energy

COURSE OUTCOMES

1. Understand the importance of renewable energy resources.
2. Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
3. Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
4. Implement design principles of biogas plants.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. Get exposure on the power plants working with non-conventional energy.

UNIT I ENERGY AND ENVIRONMENT**9**

Primary energy sources – world energy resources–Indian energy scenario–energy cycle of the earth – environmental aspects of energy utilisation, CO₂ emissions and Global warming–renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy resources.

UNIT II SOLAR ENERGY**9**

Principles of solar energy collection – solar radiation – measurements – instruments – data and estimation–types of collectors – characteristics and design principles of different type of collectors – performance of collectors – testing of collectors. Solar thermal applications – water heaters and air heaters – performance and applications – simple calculations – solar cooling – solar drying – solar ponds – solar tower concept – solar furnace.

UNIT III WIND, TIDAL AND GEOTHERMAL ENERGY**9**

Energy from the wind – general theory of windmills – types of windmills – design aspects of horizontal axis windmills – applications. Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants – power from geothermal energy – principle of working of geothermal power plants.

UNIT IV BIOENERGY**9**

Energy from bio mass and bio gas plants –various types – design principles of biogas plants – applications. Energy from wastes – waste burning power plants – utilization of industrial and municipal wastes – energy from the agricultural wastes.

UNIT V OTHER RENEWABLE ENERGY SOURCES**9**

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) – thermoelectric generators – thermionic generators – fuel cells – solar cells – types, Emf generated, power output, losses and efficiency and applications. Hydrogen conversion and storage systems

COURSE OBJECTIVES

1. To understand the anatomy, basic concepts and applications of robot.
2. To learn the drives and end effectors used in robot.
3. To study the various types of sensors used in robot.
4. To familiarize robot kinematics and robot programming
5. To provide knowledge on simple offline robot program
6. To impart knowledge on economic analysis of robots

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Identify the various types of robots.
2. Select appropriate drive systems and end effectors for industrial application.
3. Decide the types of sensors required according to the applications of robot.
4. To identify the different types of machine vision technologies
5. Develop simple offline robot program for different applications.
6. Calculate the economic analysis of robots.

UNIT I FUNDAMENTALS OF ROBOT**9**

Robot – Definition – Robot Anatomy – Co-ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS**9**

Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features, Applications and Comparison of all these Drives
End Effectors – Grippers – Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations

UNIT III SENSORS AND MACHINE VISION**9**

Requirements of a sensor, Principles and Applications of the following types of sensors – Position sensors (Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, Pneumatic Position Sensors), Range Sensors (Triangulation Principle, Structured, Lighting Approach, Time of Flight Range Finders, Laser Range Meters), Proximity Sensors (Inductive, Hall Effect, Capacitive, Ultrasonic and Optical Proximity Sensors), Touch Sensors, (Binary Sensors, Analog Sensors), Wrist Sensors, Compliance Sensors, Slip Sensors
Camera, Frame Grabber, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques. Image Processing and Analysis – Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms. Applications – Inspection, Identification, Visual Servicing and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING**9**

Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional), Four Degrees of Freedom (In 3 Dimensional) – Deviations and Problems.

Teach Pendant Programming, Lead through programming, Robot programming Languages – VAL Programming – Motion Commands, Sensor Commands, End effector commands, and Simple programs

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS**9**

RGV, AGV; Implementation of Robots in Industries – Various Steps; Safety Considerations for Robot Operations; Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method, Process application of Robots and Collaborative robots.

3	Janakiraman. P.A	Robotics and Image Processing	Tata McGraw–Hill, New Delhi	1995

WEB REFERENCE

1. www.learnaboutrobots.com/industrial.htm

COURSE OBJECTIVES

1. To provide foundations on design of experiments and statistical analysis of experimental data obtained from laboratory and/or industrial processes.
2. To understand the important concepts of single factorial designs
3. To Study and acquire knowledge on various methodologies involved in single factorial designs
4. To know the application of testing of factorial experiment
5. To enrich the understanding of special experimental designs
6. To impart knowledge on basic concepts of Taguchi method in parameter design

COURSE OUTCOMES

Upon successful completion of the course, students will be able to:

1. Understand the knowledge of various techniques for experimental planning
2. Understand the concepts of single factorial designs
3. List the various methodologies involved in single factorial designs
4. Apply the concept of testing of factorial experiment
5. Solve the partial and ordinary differential equations special experimental designs
6. Apply the basic concepts of Taguchi method in parameter design

UNIT I INTRODUCTION**9**

Planning of experiments – Steps – Need - Terminology: Factors, levels, variables, experimental error, replication, Randomization, Blocking, Confounding.

UNIT II SINGLE FACTOR EXPERIMENTS**9**

ANOVA rationale - Sum of squares – Completely randomized design, Randomized block design, effect of coding, Comparison of treatment means – Newman Kuel's test, Duncan's Multiple Range test, Latin Square Design, Graeco-Latin Square Design, Balanced incomplete design.

UNIT III FACTORIAL EXPERIMENTS**9**

Main and interaction effects – Two and three Factor full factorial Designs, 2 k designs with Two and Three factors - Unreplicated design - Yate's Algorithm

UNIT IV SPECIAL EXPERIMENTAL DESIGNS**9**

Blocking in factorial design, Confounding of 2k design, nested design - Response Surface Methods.

UNIT V TAGUCHI TECHNIQUES**9**

Fundamentals of Taguchi methods, Quality Loss function, orthogonal designs, application to Process and Parameter design.

2. <http://www.itl.nist.gov/div898/handbook/>
3. <http://home.ubalt.edu/ntsbarsh/stat-data/Topics.htm>

COURSE OBJECTIVES

1. To give exposure to accessories and layout required for a steam power plant depending upon the requirements.
2. To study performance of steam power plant.
3. To make the student acquire sound knowledge of working of nuclear and hydel power plant.
4. To study the features of gas turbine power plant.
5. To make the student acquire sound knowledge of economics of the power plant.
6. To make the student acquire sound knowledge on renewable energy technologies and availability.

COURSE OUTCOMES

1. Select the accessories and layout required for a steam power plant depending upon the requirements.
2. Compute performance of steam power plant.
3. Explain the working of nuclear and hydel power plant.
4. Compute performance of gas turbine power plant.
5. Calculate the economics of the power plant.
6. Apply appropriate type of renewable energy technologies depending upon the application and availability.

UNIT I INTRODUCTION TO POWER PLANTS AND BOILERS**9**

Layout of Steam, Hydel, Diesel, MHD, Nuclear and Gas Turbine Power Plants – Combined Power Cycles – Comparison and Selection, Load Duration Curves.

Steam Boilers and Cycles – High Pressure and Super Critical Boilers – Fluidised Bed Boilers – Industrial Standards.

UNIT II STEAM POWER PLANT**9**

Fuel and Ash Handling, Combustion Equipment for burning coal, Mechanical Stokers, Pulveriser, Electrostatic Precipitator, Draught – different types, Surface Condenser Types, Cooling Towers

UNIT III NUCLEAR AND HYDEL POWER PLANTS**9**

Nuclear Energy – Fission, Fusion Reaction, Types of Reactors, pressurized water reactor, Boiling Water Reactor, Waste Disposal and safety.

Hydel Power Plant – Essential Elements, Selection of Turbines, Governing of Turbines – Micro Hydel developments.

UNIT IV DIESEL AND GAS TURBINE POWER PLANT**9**

Types of Diesel Plants, Components, Selection of Engine Type, Applications Gas Turbine Power Plant – Fuels – Gas Turbine Material – Open and Closed Cycles – Reheating – Regeneration and Intercooling – Combined Cycle.

UNIT V OTHER POWER PLANTS AND ECONOMICS OF POWER PLANTS**9**

Geo thermal – OTEC – Tidel – Pumped storage – Solar thermal central receiver system.

Safety aspects and Cost of Electric Energy – Fixed and operating Costs – Energy Rates – Types of Tariffs – Economics of load sharing, comparison of economics of various power plants.

3. ga.water.usgs.gov
4. www.mapsofindia.com

COURSE OBJECTIVES

1. To provide knowledge on different aspects of powder metallurgy parameters.
2. To understand the importance of principle of advanced welding processes and its application.
3. To understand the importance of advanced forming processes and its application.
4. To familiarize the students to advanced manufacturing process for processing of different materials.
5. To acquaint the student to apply the suitable rapid prototyping mechanism for industry need.
6. To provide knowledge on optimum parametric for advanced manufacturing process

COURSE OUTCOMES

1. Understand different aspects of powder metallurgy parameters.
2. Understand basic principle of advanced welding processes and its application.
3. Understand basic principle of advanced forming processes and its application.
4. Select the best suitable advanced manufacturing process for processing of different materials.
5. Apply the suitable rapid prototyping mechanism for industry need.
6. Select the optimum parametric for advanced manufacturing process.

UNIT I POWDERMETALLURGYPROCESS 9

Introduction to powder metallurgy process – preparation of powders – types and functions of binders – green compaction – sintering process and its effect on the product.

UNIT II ADVANCEDWELDINGPROCESSES 9

Percussion Welding– Electro Slag Welding, Plasma Arc Welding – Thermit Welding – Electron Beam Welding – Friction and Inertia Welding – Friction Stir Welding – Under Water WeldingProcess.

UNIT III SHEET METAL ANDFORMINGPROCESS 9

Sheet metal process –Laser welding and Cutting, Working principle and application of special forming process – Hydro Forming– Rubber Pad Forming– Explosive Forming – Magnetic Pulse Forming– Peen Forming – Super Plastic Forming – Deep Drawing Process.

UNIT IV ADVANCEDMACHININGPROCESS 9

Modern machining process: Abrasive Jet Machining, Water Jet Machining, Abrasive Water Jet Machining, Ultrasonic Machining, Electro chemical Machining, Electro chemical Grinding, Electro Discharge Machining, wire cut EDM, Electron Beam Machining, plasma arc machining, Laser Beam Machining. Ultrasonic Machining, High speed machining process – deep hole drilling process

UNIT V RAPIDPROTOTYPING 9

Introduction to Rapid Prototyping – Need for RPT– Stereo–lithography – Selective Laser Sintering, Fused Deposition Modeling, Laminated Object Manufacturing, Solid Ground Curing, Ballistic Particle Manufacturing

4. <http://file.guacnc.com.br/data/PDF/PrototypeBook2.pdf>

COURSE OBJECTIVES

1. To introduce Governing Equations of viscous fluidflows
2. To introduce numerical modeling and its role in the field of fluid flow and heattransfer
3. To enable the students to understand the various discretization methods, solution procedures and turbulence modeling.
4. To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high speed computers.
5. To equip them with skills to solve convection and diffusion problems
6. To understand the importance continuity and momentum equations for different types of fluid flow

COURSE OUTCOMES

Upon completion of this course, the students can able

1. Identify, solve engineering problems by computational fluid dynamics.
2. Understand the importance of governing equations involved in CFD
3. Formulate and solve problems in the field of fluid flow and heat transfer.
4. Solve the heat conduction problems using finite difference method.
5. Analyze and provide solutions for convection and diffusion problems.
6. Develop continuity and momentum equations for different types of fluid flow

UNIT I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS 9

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time-averaged equations for Turbulent flow – Turbulence – Kinetic – Energy Equations – mathematical behavior of PDEs on CFD: Elliptic, Parabolic and Hyperbolic equations.

UNIT II DISCRETIZATION AND SOLUTION METHODOLOGIES 9

Methods of Deriving the Discretization Equations – Taylor Series formulation – Finite difference method – Control volume Formulation – Spectral method.

Solution methodologies: Direct and iterative methods, Thomas algorithm, Relaxation method, Alternating Direction Implicit method.

UNIT III HEAT CONDUCTION 9

Finite difference and finite volume formulation of steady/transient one-dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems

UNIT IV CONVECTION AND DIFFUSION 9

Finite volume formulation of steady one-dimensional convection and Diffusion problems, Central, upwind, hybrid and power-law schemes – Discretization equations for two dimensional convection and diffusion.

UNIT V CALCULATION OF FLOW FIELD 9

Representation of the pressure – Gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and velocity corrections – Pressure – Correction equation, SIMPLE algorithm and its variants. Turbulence models: mixing length model, two equation ($k-\epsilon$) models.

COURSE OBJECTIVES

1. To gain knowledge in production, gear material selection
2. To introduce the concepts of gear manufacturing
3. To Study and acquire knowledge on mechanism involve in conical gears
4. To Study and acquire knowledge on the procedures that involves in gear material selection
5. To expose students to detailed view of gear finishing methods
6. To impart knowledge modern gear production methods

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Understand the overview on classification of gears and its terminology
2. Explain the various methods of gear manufacturing
3. Understands the concepts and mechanism involve in conical gears
4. Understand the procedures that involves in gear material selection
5. Attain a detailed view of gear finishing methods
6. Understanding the modern gear production methods

UNIT I INTRODUCTION TO GEARS**9**

Types of gears-classification, application of gears, gearboxes, drawings for gears, gear production method an overview, types of blanks and blank preparation. Production Of Cylindrical Gears: Procedure of cutting gears and obtainable quality in hobbing and gear shaping, cutter selection and work holding methods, setting calculations. Rack type gear shaping machine description and application. Internal gear cutting methods, CNC gear hobbing and gear shaping machines.

UNIT II PRODUCTION OF CONICAL GEARS**9**

Production of straight bevel gears by bevel gear generator, duplex rotary cutter method, Gleason Reva cycle method, spiral and hybrid bevel gear generation. Description of machine, cutter and machine setting.

UNIT III GEAR MATERIAL SELECTION AND HARDENING METHODS**9**

Properties of gear materials-non-metallic, non-ferrous and plastic gears, selection of material for power transmission, high speed application. Selection of material for worm and wheel. Hardening by through hardening, case hardening, induction hardening, flame hardening, nitriding and carburizing, hardening defects.

UNIT IV GEAR FINISHING METHODS**9**

Gear finishing advantages, finishing of gears by grinding, shaving, lapping and honing methods, cold rolling of gears - description of process, machine, cutters and process parameters setting.

Gear Inspection: Type of gear errors-gear quality standards and allowable limits-tooth thickness, base tangent length measurement, pitch error, radial run out, involute profile error measurements methods and analysis, composite error measurement, computerized gear inspection, gear failure reasons and remedies.

UNIT V MODERN GEAR PRODUCTION METHODS**9**

Gear production by stamping, die casting, powder metal process, injection and compression moulding of plastic gears, cold and hot rolling. Mass production methods, shear speed shaping, gear broaching, Gleason G-TRAC – gear generation methods. Economical and Quality Production of Gears: Gear production systems – batch production, gear production cells, lean and agile production practices, automobile gear and gear boxes, heavy engineering gear production, gear for instruments and appliances, process and cutter selection for quantity, cost and quality criteria.

COURSE OBJECTIVES

1. To understand the importance of the DFM approach and guidelines
2. To enrich the understanding of the selective assembly and Datum systems
3. To introduce the concepts of demonstrate true Position tolerancing theory.
4. To develop an understanding of the standard techniques and redesigning cast members using weldments and plastic component manufacturing.
5. To equip them with skills on Tolerance Charting Technique.
6. To Study and acquire knowledge of the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

COURSE OUTCOMES

Upon completion of this course, the students will be able to,

1. Understand the DFM approach and guidelines
2. Understand the selective assembly and Datum systems
3. Demonstrate true Position tolerancing theory.
4. Understand redesigning cast members using weldments and plastic component manufacturing.
5. Demonstrate the Tolerance Charting Technique.
6. Know the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

UNIT I	DFM APPROACH, SELECTION AND SUBSTITUTION OF MATERIALS IN INDUSTRY	9
---------------	--	----------

DFM approach, DFM guidelines, standardisation, group technology, value engineering, comparison of materials on cost basis, design for assembly, DFA index, Poka – Yoke principle; 6 σ concept; Tolerance Analysis: Process capability, process capability metrics, Cp, Cpk, cost aspects, feature tolerances, geometric tolerances, surface finish, review of relationship between attainable tolerance grades and different machining process, cumulative effect of tolerances, sure fit law, normal law and truncated normal law.

UNIT II	SELECTIVE ASSEMBLY	9
----------------	---------------------------	----------

Interchangeable and selective assembly, deciding the number of groups, Model–I: group tolerances of mating parts equal; Model–II: total and group tolerances of shaft, control of axial play.
Datum Systems: Grouped datum systems–different types, two and three mutually perpendicular grouped datum planes, grouped datum system with spigot and recess, pin and hole, and tongue–slot pair, computation of translational and rotational accuracy.

UNIT III	TRUE POSITION TOLERANCING THEORY	9
-----------------	---	----------

Comparison between co–ordinate and convention method of feature location tolerancing and true position tolerancing, zero true position tolerance, virtual size concept, floating and fixed fasteners, projected tolerance zone, functional gauges, paper layout gauging, compound assembly, examples.

UNIT IV	FORM DESIGN OF CASTINGS AND WELDMENTS	9
----------------	--	----------

Redesign of castings based on parting line considerations, minimising core requirements, redesigning cast members using weldments, use of welding symbols – design considerations for plastic component manufacturing.

UNIT V	TOLERANCE CHARTING	9
---------------	---------------------------	----------

Tolerance Charting Technique: Operation sequence for typical shaft type of components, preparation of process drawings for different operations, tolerance worksheets and centrality analysis, examples, design features to facilitate machining. Datum features – functional and manufacturing, component design–machining considerations, redesign for manufacture, examples.

2. www.design4manufacturability.com

COURSE OBJECTIVES

1. To understand the basic difference between incompressible and compressible flow.
2. To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and Rocket Propulsion.
3. To introduce the concepts of various conditions of compressible fluid flows
4. To Study and acquire knowledge on performance analysis of subsonic and supersonic inlets, combustors, afterburners and exhaust nozzles
5. To understand the concept of working of various types of rocket engines
6. To study the features of thrust equation for rocket propulsion system

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Analyze various conditions of compressible fluid flows.
2. Calculate mass flow rate in flow through variable area ducts.
3. Carry out simple performance analysis of subsonic and supersonic inlets.
4. Perform performance analysis of combustors, afterburners and exhaust nozzles.
5. Understand the working of various types of rocket engines
6. Use thrust equation for rocket propulsion system.

UNIT I BASIC CONCEPTS AND ISENTROPIC FLOWS**9**

Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Mach cone – Effect of Mach number on compressibility – Isentropic flow through variable area ducts – Nozzle and Diffusers – area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles. Use of Gas tables.

UNIT II FLOW THROUGH DUCTS**9**

Flow through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – Variation of flow properties – Isothermal flow with friction in constant area ducts – Use of tables and charts – Generalised gas dynamics.

UNIT III NORMAL AND OBLIQUE SHOCKS**9**

Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl – Meyer relations – Use of table and charts – Applications.

UNIT IV JET PROPULSION**9**

Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operation principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines – Aircraft combustors.

UNIT V ROCKET PROPULSION**9**

Types of rocket engines – Propellants – Ignition and combustion – Theory of rocket propulsion – solid and liquid propellants, comparison of different propulsion systems .Performance study – Staging – Terminal and characteristic velocity – Applications – Space flights.

TOTAL**45**

(Permitted to use standard Gas Tables in the examination)

COURSE OBJECTIVES

1. To understand the underlying principles of operation of different IC Engines and components.
2. To provide knowledge on pollutant formation, control, alternate fuels etc.
3. To Study and acquire knowledge to Identify parts, terminology and fuel supply system of internal combustion engine
4. To introduce the concepts of cooling and lubrication systems of IC Engines
5. To make the student acquire sound knowledge on combustion, knocking and super charging of internal combustion engines
6. To expose students to recent trends associated with IC Engines

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Explain the construction and operation of internal combustion engine.
2. Identify parts, terminology and fuel supply system of internal combustion engine.
3. Recognize the component used in cooling and lubrication systems of IC Engines.
4. Describe the function of combustion, knocking and super charging of internal combustion engines.
5. Implement strategies for pollution control.
6. Know about the recent trends associated with IC Engines

UNIT I SPARK IGNITION ENGINES**9**

Mixture requirements – Fuel injection systems – Monopoint, Multipoint & Direct injection - Stages of combustion – Normal and Abnormal combustion – Knock - Factors affecting knock – Combustion chambers.

UNIT II COMPRESSION IGNITION ENGINES**9**

Diesel Fuel Injection Systems - Stages of combustion – Knocking – Factors affecting knock – Direct and Indirect injection systems – Combustion chambers – Fuel Spray behaviour – Spray structure and spray penetration – Air motion - Introduction to Turbocharging.

UNIT III POLLUTANT FORMATION AND CONTROL**9**

Pollutant – Sources – Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction and Particulate Traps – Methods of measurement – Emission norms and Driving cycles.

UNIT IV ALTERNATIVE FUELS**9**

Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - Engine Modifications.

UNIT V RECENT TRENDS**9**

Air assisted Combustion, Homogeneous charge compression ignition engines – Variable Geometry turbochargers – Common Rail Direct Injection Systems - Hybrid Electric Vehicles – NO_x Adsorbers - Onboard Diagnostics.

TOTAL**45****TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Ramalingam. K.K	Internal Combustion Engine Fundamentals	Scitech Publications	2002

2	Duffy Smith	Auto Fuel Systems	The Good Heart Willcox Company, Inc.	1987
3	Eric Chowenitz	Automobile Electronics	SAE Publications	1995

COURSE OBJECTIVES

1. To explain the steps involved in FEA and also the types of weight residual methods
2. To impart knowledge to formulate and solve problems in one dimensional structures including trusses, beams and frames.
3. To enrich the understanding of two dimensional thermal and torsion problems.
4. To enrich the understanding of axisymmetric bodies, plate and shell.
5. To develop an understanding of the standard techniques on matrix solution techniques to dynamic problems.
6. To impart knowledge on FE equation for structural, heat transfer and vibration problems.

COURSE OUTCOMES

1. Explain the steps involved in FEA and also the types of weight residual methods
2. Formulate and solve problems in one dimensional structures including trusses, beams and frames.
3. Predict finite element equations for two dimensional thermal and torsion problems.
4. Predict finite element equations for axisymmetric bodies, plate and shell.
5. Apply matrix solution techniques to dynamic problems.
6. Formulate FE equation for structural, heat transfer and vibration problems.

UNIT I INTRODUCTION**9**

Historical background – Matrix approach – Application to the continuum – Discretization – Matrix algebra – Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritz method

UNIT II ONE DIMENSIONAL PROBLEMS**9**

Finite element modeling – Coordinates and shape functions – Potential energy approach – Galerkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNIT III TWO DIMENSIONAL CONTINUUM**9**

Introduction – Finite element modeling – Scalar valued problem – Poisson equation – Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galerkin approach – Stress calculation – Temperature effects

UNIT IV AXISYMMETRIC CONTINUUM**9**

Axisymmetric formulation – Element stiffness matrix and force vector – Galerkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – Applications to cylinders under internal or external pressures

UNIT V ISOPARAMETRIC ELEMENTS FOR TWO DIMENSIONAL CONTINUUM**9**

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration – Stiffness integration – Stress calculations – Four node quadrilateral element.

COURSE OBJECTIVES

1. To gain knowledge in design and material selection of various machinetools.
2. To provide an overview of regulation of speeds and feeds
3. To study the features of machine toolstructures
4. To understand the importance of constructional features of machine toolstructures
5. To expose students to design in machine tool structures, guide ways, power screws andspindles
6. To expose students to design spindles and spindlesupports

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Discuss the basics machine tool drives andmechanisms
2. Get knowledge on regulation of speeds and feeds
3. Understand the importance of machine toolstructures
4. Explain the constructional features of machine toolstructures
5. Design in machine tool structures, guide ways, power screws andspindles
6. Design spindles and spindlesupports

UNIT I INTRODUCTION TO MACHINE TOOL DRIVESANDMECHANISMS 9

Introduction to the course, Working and Auxiliary Motions in Machine Tools, Kinematics of Machine Tools, Motion Transmission

UNIT II REGULATION OF SPEEDSANDFEEDS 9

Aim of Speed and Feed Regulation, Stepped Regulation of Speeds, Multiple Speed Motors, Ray Diagrams and Design Considerations, Design of Speed Gear Boxes, Feed Drives, Feed Box Design

UNIT III DESIGN OF MACHINETOOLSTRUCTURES 9

Functions of Machine Tool Structures and their Requirements, Design for Strength, Design for Rigidity, Materials for Machine Tool Structures, Machine Tool Constructional Features, Beds and Housings, Columns and Tables, Saddles and Carriages

UNIT IV DESIGN OF GUIDEWAYS, POWER SCREWSANDSPINDLES 9

Functions and Types of Guideways, Design of Guideways, Design of Aerostatic Slideways, Design of Anti-Friction Guideways, Combination Guideways, Design of Power Screws.

UNIT V DESIGN OF SPINDLES AND SPINDLESUPPORTS 9

Functions of Spindles and Requirements, Effect of Machine Tool Compliance on Machining Accuracy, Design of Spindles, Antifriction Bearings. Dynamics of Machine Tools - Machine Tool Elastic System, Static and Dynamic Stiffness

4	D. K Pal, S. K. Basu	Design of Machine Tools	Oxford IBH	2008
5	N. S. Acherkhan	Machine Tool Design	MIR publications	1968

COURSE OBJECTIVES

1. To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturing technologies
2. To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.
3. To introduce process involved in Additive manufacturing technology
4. To understand the importance of knowledge on software's used in additive manufacturing technology
5. To enrich the understanding of the working of SLS and other techniques
6. To provide an overview of additive manufacturing technology in medical field and biostream

COURSE OUTCOMES

On completion of this course, students will be able to

1. Understand the need for additive manufacturing technology
2. Explain the process involved in Additive manufacturing technology
3. Get knowledge on software's used in additive manufacturing technology
4. Describe the working of SLS and other techniques
5. Apply the additive manufacturing technology in medical field
6. Applications of additive manufacturing technology in biostream

UNIT I INTRODUCTION**9**

Overview – History - Need-Classification -Additive Manufacturing Technology in product development- Materials for Additive Manufacturing Technology – Tooling - Applications.

UNIT II CAD & REVERSE ENGINEERING**9**

Basic Concept – Digitization techniques – Model Reconstruction – Data Processing for Additive Manufacturing Technology: CAD model preparation – Part Orientation and support generation – Model Slicing –Tool path Generation – Softwares for Additive Manufacturing Technology: MIMICS, MAGICS.

UNIT III LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS**9**

Classification – Liquid based system – Stereolithography Apparatus (SLA)- Principle, process, advantages and applications - Solid based system –Fused Deposition Modeling - Principle, process, advantages and applications, Laminated Object Manufacturing

UNIT IV POWDER BASED ADDITIVE MANUFACTURING SYSTEMS**9**

Selective Laser Sintering – Principles of SLS process - Process, advantages and applications, Three Dimensional Printing - Principle, process, advantages and applications- Laser Engineered Net Shaping (LENS), Electron Beam Melting.

UNIT V MEDICAL AND BIO-ADDITIVE MANUFACTURING**9**

Customized implants and prosthesis: Design and production. Bio-Additive Manufacturing- Computer Aided Tissue Engineering (CATE) – Case studies

2	Kamrani A.K. and Nasr E.A	Rapid Prototyping: Theory and practice	Springer	2015
3	Hilton P.D, Jacobs P.F	Rapid Tooling: Technologies and Industrial Applications	CRC press	2000

COURSE OBJECTIVES

1. To understand the fundamentals of composite material strength and its mechanical behavior
2. Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber.
3. Thermo-mechanical behavior and study of residual stresses in Laminates during processing.
4. Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronic chips.
5. To introduce the concepts of carbon-carbon composite for different industrial application
6. To impart knowledge on various advances in composites

COURSE OUTCOMES

Learners should be able to

1. Select the various types of composite matrix required for an application.
2. Choose appropriate manufacturing process for polymer matrix composite.
3. Opt appropriate manufacturing process for metal matrix composite.
4. Use the concepts of ceramic composites and its production techniques.
5. Identify the type of carbon-carbon composite for different industrial application.
6. Explain the various advances in composites

UNIT I INTRODUCTION TO COMPOSITES**9**

Fundamentals of composites – need for composites – Enhancement of properties – classification of composites

– Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – Particle reinforced composites, Fibre reinforced composites. Applications of various types of composites.

UNIT II POLYMER MATRIX COMPOSITES**9**

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non woven random mats – various types of fibres. PMC processes - Hand lay up processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass fibre reinforced plastics (GRP).

UNIT III METAL MATRIX COMPOSITES**9**

Characteristics of MMC, Various types of Metal matrix composites Alloys - MMC, Advantages of MMC, Limitations of MMC, Metal Matrix, Reinforcements – particles – fibres. Effect of reinforcement - Volume fraction – Rule of mixtures. Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeeze casting.

UNIT IV CERAMIC MATRIX COMPOSITES**9**

Engineering ceramic materials – properties – advantages – limitations – Monolithic ceramics – Need for CMC

– Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing (HIPing).

UNIT V ADVANCES IN COMPOSITES**9**

Carbon /carbon composites – Advantages of carbon matrix – limitations of carbon matrix Carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol gel technique. Composites for aerospace applications.

COURSE OBJECTIVES

1. To understand the underlying principles of operations in different Refrigeration & Air conditioning systems and components.
2. To provide knowledge on design aspects of Refrigeration & Air conditioning systems
3. To introduce the concepts on use of unconventional refrigerant system for industrial application
4. To expose students to properties of air using psychrometric chart
5. To provide knowledge on cooling load for a given system
6. To know the application of air conditioning system for industrial and domestic purpose

COURSE OUTCOMES

1. Calculate COP of various refrigeration cycles.
2. Choose appropriate refrigerants for various applications.
3. Identify the use of unconventional refrigerant system for industrial application.
4. Calculate the properties of air using psychrometric chart.
5. Calculate cooling load for a given system
6. Select the appropriate air conditioning system for industrial and domestic applications.

UNIT I REFRIGERATION CYCLE**9**

Review of thermodynamic principles of refrigeration. Concept of refrigeration system. Vapour compression refrigeration cycle – use of P–H charts – multistage and multiple evaporator systems – cascade system – COP comparison. Vapor absorption refrigeration system. Ammonia water and Lithium Bromide water systems. Steam jet refrigeration system

UNIT II REFRIGERANTS, SYSTEM COMPONENTS AND BALANCING**9**

Compressors – reciprocating and rotary (elementary treatment.) – Condensers – evaporators – cooling towers. Refrigerants – properties – selection of refrigerants, Alternate Refrigerants, Refrigeration plant controls – testing and charging of refrigeration units. Balancing of system components. Applications to refrigeration systems – ice plant – food storage plants – milk – chilling plants – refrigerated cargo ships.

UNIT III PSYCHROMETRY**9**

Psychrometric processes – use of psychrometric charts – Grand and Room Sensible Heat Factors – bypass factor – requirements of comfort air conditioning – comfort charts – factors governing optimum effective temperature, recommended design conditions and ventilation standards

UNIT IV COOLING LOAD CALCULATIONS**9**

Types of load – design of space cooling load – heat transmission through building. Solar radiation – infiltration – internal heat sources (sensible and latent) – outside air and fresh air load – estimation of total load – Domestic, commercial and industrial systems – central air conditioning systems.

UNIT V AIR CONDITIONING**9**

Air conditioning equipments – air cleaning and air filters – humidifiers – dehumidifiers – air washers – condenser – cooling tower and spray ponds – elementary treatment of duct design – air distribution system. Thermal insulation of air conditioning systems. – Applications: car, industry, stores, and public buildings

COURSE OBJECTIVES

1. To Understand the concept of SQC.
2. To enrich the understanding of control charts to analyze for improving the process quality.
3. To familiarize the students to understand different sampling plans
4. To Understand the importance of need and types of life testing.
5. To introduce the reliability of a system.
6. To introduce the concepts of quality control and reliability techniques in industries.

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Understand the concept of SQC.
2. Use control charts to analyze for improving the process quality.
3. Describe different sampling plans
4. Understand the need and types of life testing.
5. Improve the reliability of a system.
6. Implement quality control and reliability techniques in industries.

UNIT I INTRODUCTION AND PROCESS CONTROL FOR VARIABLES 9

Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost–Variation in process– factors – process capability – process capability studies and simple problems – Theory of control chart– uses of control chart – Control chart for variables – X chart, R chart and σ chart.

UNIT II PROCESS CONTROL FOR ATTRIBUTES 9

Control chart for attributes – control chart for proportion or fraction defectives – P chart and NP chart – control chart for defects – C and U charts, State of control and process out of control identification in charts.

UNIT III ACCEPTANCE SAMPLING 9

Lot by lot sampling – Types – probability of acceptance in single, double, multiple sampling techniques – O.C. curves – producer's Risk and consumer's Risk. AQL, LTPD, AOQL concepts–standard sampling plans for AQL and LTPD– uses of standard sampling plans.

UNIT IV LIFE TESTING– RELIABILITY 9

Life testing – objective: – failure data analysis, Mean failure rate, mean time to failure, mean time between failure, hazard rate, system reliability, series, parallel and mixed configuration – simple problems. Maintainability and availability – simple problems. Acceptance sampling based on reliability test – O.C Curves.

UNIT V QUALITY AND RELIABILITY 9

Reliability improvements – techniques– use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – Optimization in reliability – Product design – Product analysis – Product development – Product life cycles – Maintenance.

TOTAL 45

Note: Permitted to use approved statistical table in the examination.

COURSE OBJECTIVES

1. To impart knowledge of need for planning and control in various aspects.
2. To develop an understanding of the standard techniques in various work study methodologies.
3. To familiarize the students to understand the product and process plan.
4. To introduce the concepts of a production schedule based on different facets.
5. To enrich the understanding of the level of inventory
6. To understand the importance the recent advancements in production planning and control.

COURSE OUTCOMES

1. Indicate the need for planning and control in various aspects.
2. Understand various work study methodologies.
3. Construct product and process plan.
4. Prepare a production schedule based on different facets.
5. Estimate the level of inventory
6. Understand the recent advancements in production planning and control.

UNIT I INTRODUCTION**9**

Objectives: and benefits of planning and control–Functions of production control–Types of production–job–batch and continuous–Product development and design–Marketing aspect – Functional aspects–Operational aspect–Durability and dependability aspect–aesthetic aspect. Profit consideration–Standardization, Simplification and specialization–Break even analysis–Economics of a new design.

UNIT II WORKSTUDY**9**

Method study, basic procedure–Selection–Recording of process – Critical analysis, Development – Implementation – Micro motion and memo motion study – work measurement – Techniques of work measurement – Time study – Production study – Work sampling – Synthesis from standard data – Predetermined motion time standards.

UNIT III PRODUCT PLANNING AND PROCESS PLANNING**9**

Product planning–Extending the original product information–Value analysis–Problems in lack of product planning–Process planning and routing–Pre requisite information needed for process planning–Steps in process planning–Quantity determination in batch production–Machine capacity, balancing–**Analysis of process capabilities in a multi product system.**

UNIT IV PRODUCTION SCHEDULING**9**

Production Control Systems–Loading and scheduling–Master Scheduling–Scheduling rules–Gantt charts–Perpetual loading–Basic scheduling problems – Line of balance – Flow production scheduling–Batch production scheduling–Product sequencing – Production Control systems–Periodic batch control–Material requirement planning Kanban –**Dispatching–Progress reporting and expediting–Manufacturing lead time–Techniques for aligning completion times and due dates.**

UNIT V INVENTORY CONTROL AND RECENT TRENDS IN PPC**9**

Inventory control–Purpose of holding stock–Effect of demand on inventories–Ordering procedures. Two bin system –Ordering cycle system–Determination of Economic order quantity and economic lot size–ABC analysis–Recorder procedure–Introduction to computer integrated production planning systems–elements of JIT Systems–**Fundamentals of MRP and ERP, KANBAN system.**

COURSE OBJECTIVES

1. To study the significance of waste heat recovery systems and carry out its economic analysis
2. To know the concepts of cogeneration, its types and probable areas of applications
3. To enrich the understanding of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of this emerging technology.
4. To impart knowledge on operational issues and challenges cogeneration technologies.
5. To Understand the impact of this technology in waste heat recovery systems
6. To introduce the concepts of various systems involved in waste heat recovery process

COURSE OUTCOMES

The student will be able to

1. Understand the various methods of cogeneration.
2. Apply knowledge of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of this emerging technology.
3. Have thorough understanding, operational issues and challenges cogeneration technologies.
4. Understand the impact of this technology in waste heat recovery systems
5. Get the knowledge over various systems involved in waste heat recovery process
6. Begin a career as an engineer in an organization economic analysis

UNIT I INTRODUCTION**9**

Introduction – principles of thermodynamics – cycles – topping - bottoming – combined cycle - organic rankine cycles – performance indices of cogeneration systems – waste heat recovery – sources and types – concept of trigeneration.

UNIT II COGENERATION TECHNOLOGIES**9**

Configuration and thermodynamic performance – steam turbine cogeneration systems – gas turbine cogeneration systems – reciprocating IC engines cogeneration systems – combined cycles cogeneration systems – advanced cogeneration systems: fuel cell, Stirling engines etc.,

UNIT III ISSUES AND APPLICATIONS OF COGENERATION TECHNOLOGIES**9**

Cogeneration plants electrical interconnection issues – utility and cogeneration plant interconnection issues – applications of cogeneration in utility sector – industrial sector – building sector – rural sector – impacts of cogeneration plants – fuel, electricity and environment

UNIT IV WASTE HEAT RECOVERY SYSTEMS**9**

Election criteria for waste heat recovery technologies - recuperators - Regenerators - Economizers - plate heat exchangers - thermic fluid heaters - Waste heat boilers classification, location, service conditions, design Considerations - fluidized bed heat exchangers - heat pipe exchangers - heat pumps – sorption systems.

UNIT V ECONOMIC ANALYSIS**9**

Investment cost – economic concepts – measures of economic performance – procedure for economic analysis – examples – procedure for optimized system selection and design – load curves - sensitivity analysis – regulatory and financial frame work for cogeneration and waste heat recovery systems.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	R.Kehlhofer, B. Rukes, F. Stirnimann	Combined-cycle gas & steam turbine power plants	PennWell Books	2009

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Steve Doty, Wayne C. Turner	Energy management handbook	The Fairmont Press, Inc	2009
2	A.Thumann, D. Paul Mehta	Handbook of energy engineering	The Fairmont Press Inc	2014
3	B.F.Kolanowski	Small-scale cogeneration handbook	Fairmont Press	2013
4	M.P. Boyce	Handbook for cogeneration and combined cycle power plants	ASME Press	2010
5	Educogen	The European Educational tool for cogeneration	Fairmont Press	2001

COURSE OBJECTIVES

1. To understand and analyze the energy data of industries
2. To carry out energy accounting and balancing
3. To conduct energy audit and suggest methodologies for energy savings
4. To utilize the available resources in optimal ways
5. To make the students conversant with concepts of industrial furnaces
6. To equip them with skills to perform Energy audit

COURSE OUTCOMES

At the end of the course, student will be able to

1. Understand the Environmental aspects of energy utilization
2. Perform combustion analysis
3. Explain the concepts of industrial boiler
4. understand how to work with the steam generated from the boilers in the industrial point of view
5. Explain the concepts of industrial furnaces
6. Perform Energy audit

UNIT I ENERGY SCENARIO**9**

Present status, rate of growth, energy utilization (sector wise), concept of energy conservation, energy economics.

COMBUSTION: Fuel analysis, combustion calculations, air requirements, theoretical and excess air requirements, excess air control, flue gas analysis and measurement, types of draught, draught calculations, chimney size calculations. F.D and I.D fan draught requirements and power requirements, furnace pressure requirements.

UNIT II INDUSTRIAL BOILERS**9**

Types and characteristics of industrial boilers, heat balance in boilers, efficiency trials in boilers, energy conservation opportunities in boilers operation and maintenance, water treatment requirements, soot blowing requirements, super heaters and superheat controls, waste heat recovery systems.

STEAM: Distribution requirements of steam and streamlines, efficient utilization of steam, steam trapping and air venting, flash steam recovery, condensate recovery, thermal insulation for systems including HVAC, steam balance calculations.

UNIT III INDUSTRIAL FURNACES**9**

Furnace types and characteristics, heat balance in furnaces, furnace efficiency calculations, energy conservation opportunities in furnaces, refractories types and properties, waste heat recovery system, insulating refractories, ceramic fibers, heat loss reduction calculations, wall and stored heat loss reduction.

UNIT IV DRYING**9**

Principle of drying and types of driers, mass and heat balance in driers, energy conservation opportunities in drying operations.

EVAPORATION: Principle of evaporation and types of evaporations, mass and heat balance, single and multiple effect evaporation, capacity and steam economy calculations, vapour recompression system.

UNIT V ENERGY AUDIT AND APPLICATIONS**9**

Types, methodology, questionnaire development, specific energy consumption (unit wise/section wise), identification of energy conservation measures/ technologies, economic and cost benefit analysis, case studies, Energy rating for thermal equipment, Energy saving measurement – Star status – National awards.

OPEN ELECTIVES
(COURSES OFFERED BY OTHER DEPARTMENTS)
SCIENCE AND HUMANITIES

17BESH0E01

PROBABILITY AND RANDOM PROCESS

3 0 0 3100

COURSE OBJECTIVES

1. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
2. To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
3. To understand the basic concepts of random processes which are widely used in IT fields.
4. To understand the concept of correlation and spectral densities.
5. To understand the significance of linear systems with random inputs.
6. To understand the response of random inputs to linear time invariant systems.

COURSE OUTCOMES

Upon successful completion of the course, students should be able:

1. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
2. To understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
3. To apply the concept random processes in engineering disciplines.
4. To understand and apply the concept of correlation and spectral densities.
5. The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable.
6. To analyze the response of random inputs to linear time invariant systems.

UNIT I MEASURES OF CENTRAL TENDENCY AND PROBABILITY 9

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT II STANDARD DISTRIBUTIONS 9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma (one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT IV CLASSIFICATION OF RANDOM PROCESS 9

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT V CORRELATION AND SPECTRAL DENSITIES 9

Autocorrelation-Cross correlation-Properties-Power spectral density-Cross spectral density-Properties – Wiener-Khinchine relation – Relationship between cross power spectrum and cross correlation function Linear time invariant system - System transfer function – Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

2. www.mathcentre.ac.uk
3. [www.mathworld. Wolfram.com](http://www.mathworld.Wolfram.com)

COURSE OBJECTIVES

1. Be able to understand basic knowledge of fuzzy sets
2. Be able to understand basic knowledge of fuzzy logic
3. Be able to apply basic knowledge of fuzzy operations.
4. To know the basic definitions of fuzzy relations
5. Be able to apply basic fuzzy inference and approximate reasoning
6. To know the applications of fuzzy Technology.

COURSE OUTCOMES

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZYSETS 9

Fuzzy Sets: Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZYSETS 9

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, t-conorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZYRELATIONS 9

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZYMEASURES 9

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZYINFERENCE 9

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

4. www.calvin.edu/~pribeiro/othrlinks/Fuzzy/fuzzysets.htm

COURSE OBJECTIVES

1. To introduce the basic concepts of vector space
2. To introduce the fundamental concepts in their respective engineering fields
3. To know the fundamentals of linear Algebra
4. To solve system of linear equations
5. To study about the linear transformations
6. To introduce the concepts of inner product spaces

COURSE OUTCOMES

1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
2. To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
3. To apply the fundamental concepts in their respective engineering fields
4. To visualize linear transformations as matrix form
5. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
6. To articulate the importance of Linear Algebra and its applications in branches of Mathematics.

UNIT I VECTOR SPACES 9

General vector spaces, real vector spaces, Euclidean n -space, subspaces, linear independence, basis and dimension, row space, column space and null space

UNIT II EIGEN VALUES AND EIGEN VECTORS 9

Eigen values and Eigen vectors - diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS 9

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS 9

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations - Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES 9

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

4. www.tutorial.math.lamar.edu

COURSE OBJECTIVES

1. To disseminate the fundamentals of acoustic waves.
2. To inculcate the characteristics of radiation and reception of acoustic waves.
3. To teach the concepts of radiation and reception of acoustic waves
4. To divulge knowledge on the basics of pipe resonators and filters.
5. To introduce the features of architectural acoustics.
6. To impart the basic knowledge of transducers and receivers.

COURSE OUTCOMES

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION**9**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves -Energy density – Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**9**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS**9**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – detection threshold – the ear – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**9**

Sound in enclosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Weighted sound levels speech interference – highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION**9**

Transducer as an electrical network – canonical equation for the two simple transducers transmitters – moving coil loud speaker – loudspeaker cabinets – horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

3. www.nptel.ac.in
4. www.ocw.mit.edu

COURSE OBJECTIVES

1. To make the students conversant with basics of Solid wastes
2. To learn the solid waste classification.
3. To make the student acquire sound knowledge of different treatments of solid wastes.
4. To acquaint the student with concepts of waste disposals.
5. To develop an understanding of the basic concepts of Hazardous waste managements.
6. To acquaint the students with the basics of energy generation from waste materials.

COURSE OUTCOMES

1. Outline the basic principles of Solid waste and separation of wastes (K).
2. Identify the concepts of treatment of solid wastes (S).
3. Identify the methods of wastes disposals. (S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I SOLIDWASTE**9**

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTETREATMENT**9**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTEDISPOSAL**9**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTEMANAGEMENT**9**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE**9**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, energy recovery systems. Biological & chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

COURSE OBJECTIVES

1. To get the information on electrochemical material.
2. To study about the conducting polymers.
3. To study about electrochemistry in storage devices
4. To acquaint the student with concepts of Energy storage devices.
5. To gain knowledge on the batteries and power sources.
6. To develop energy storage devices.

COURSE OUTCOMES

1. Outline the basic principles of chemistry in electrochemical material.
2. Examine the properties of conducting polymers.
3. Apply the concepts of electrochemistry in storage devices.
4. Identify the concepts of storage devices and its applications.
5. Apply the suitable materials for the manufacturing of storage devices.
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METALFINISHING**9**

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS**9**

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers-poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I**9**

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II**9**

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE**9**

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells (PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

COURSE OBJECTIVES

1. To make the students conversant with **cement and lime**
2. To make the students to aware about uses of cement and lime.
3. To make the student acquire sound knowledge of abrasives and refractories.
4. To acquaint the student with concepts of inorganic chemicals.
5. To develop an understanding of the basic concepts **explosives**.
6. To acquaint the students with the basics of **agriculture chemicals**.

COURSE OUTCOMES

1. Outline the basic chemistry of **cement and lime**.
2. Examine the uses of abrasives and refractories.
3. Identify the usage of the inorganic chemicals.
4. Identify the concepts of explosives and smoke screens .
5. Identify the usage of the **agriculture** chemicals
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology .

UNIT I CEMENT AND LIME**9**

Manufacture of Portland cement – setting and hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES**9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**9**

Common salt and soda ash – Manufacture – Different grades – products – alkalis – Na_2CO_3 , Caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, Sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS**9**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

4. <http://toxics.usgs.gov/topics/agchemicals.html>

COURSE OBJECTIVES

1. To study concepts of Internet, IP addresses and protocols
2. To explain the concept of web page development through HTML
3. To introduce the PERL and explore its current strengths and Weaknesses
4. To write working Java code to demonstrate the use of applets for client side programming
5. To study Internet telephony and various multimedia applications
6. To Elaborate on the principles of web page development

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Learn the advanced concepts & techniques of Internet and Java.
2. Analyze the requirements for and create and implement the principles of web page development
3. Understand the concepts of PERL
4. Implement client side programming using java applets
5. Generate internet telephony based upon advanced concepts
6. Develop applications on internet programming based on java applets and scripts

UNIT I INTRODUCTION

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML**9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods

UNIT III PERL**9**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications

UNIT IV CLIENT-SERVER PROGRAMMING**9**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY**9**

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Rahul Banerjee	Internetworking Technologies, An Engineering Perspective	PHI Learning, Delhi	2011
2	Robert W. Sebesta	Programming the World Wide Web	Pearson Education	2016

COURSE OBJECTIVES

1. To impart the fundamental concepts of Computer Animation and Multimedia
2. To study the graphic techniques and algorithms using flash
3. Explain various concepts available in 3D animation
4. Explain various devices available for animation
5. To study the multimedia concepts and various I/O technologies for concept development
6. To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Develop their creativity using animation and multimedia
2. Understand the concepts of Flash and able to develop animation using it
3. Understand about various latest interactive 3D animation concepts
4. Know the various devices and software available in motion capture
5. Understand the concept development process
6. Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I INTRODUCTION**9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH**9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS**9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation

UNIT IV MOTION CAPTION**9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V CONCEPT DEVELOPMENT**9**

Story Developing –Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TOTAL 45**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Malay K. Pakhira	Computer Graphics, Multimedia and Animation	PHI Learning	2010

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Ranjan Parekh	Principles of Multimedia	TMH	2007
2	Ashok Banerji, Ananda Mohan Ghosh	Multimedia Technologies	McGraw Hill Publication	2007
3	Pankaj Dhaka	Encyclopedia of Multimedia and Animations	Anmol Publications	2011

COURSE OBJECTIVES

1. To study the basic parts of computer in detail
2. Introduce various peripheral devices available for computer and its detailed working concepts
3. Overview of various interfaces and other hardware overview
4. Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
5. To study basic concepts and methods in troubleshooting
6. To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
2. Identify various peripheral devices available and its working
3. Understand various concepts of hardware and its interface and control
4. Perform basic installation of PC. Importance of maintenance is understood
5. Understand Various faults and failures are identified and troubleshooting in detail
6. Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I INTRODUCTION**9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES**9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW**9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE**9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V TROUBLESHOOTING**9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	B. Govindarajulu	IBM PC Clones Hardware, Troubleshooting and Maintenance	TMH	2002

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Peter Abel, Niyaz Nizamuddin	IMB PC Assembly Language and Programming	Pearson Education	2007
2	Scott Mueller	Repairing PC's	PHI	1992

COURSE OBJECTIVES

1. To understand the basic history and genres of games
2. To demonstrate an understanding of the overall game design process
3. To explain the design tradeoffs inherent in game design
4. To design and implement basic levels, models, and scripts for games
5. To describe the mathematics and algorithms needed for game programming
6. To design and implement a complete three-dimensional video game

COURSE OUTCOMES

Upon completion of the course, students will be able to:

1. Develop Java programs using OOP principles
2. Develop Java programs with the concepts inheritance and interfaces
3. Build Java applications using exceptions and I/O streams
4. Develop Java applications with threads and generics classes and swings
5. Understand various aspects for motivation of generic programming
6. Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA**9**

Object oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism. – Objects and classes in Java – defining classes – methods – access specifiers – static members – constructors – finalize method

UNIT II PACKAGES**9**

Arrays – Strings – Packages – Java-Doc comments – Inheritance – class hierarchy – polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS**9**

The Object class – Reflection – interfaces – object cloning – inner classes – proxies – I/O Streams – Graphics programming – Frame – Components – working with 2D shapes

UNIT IV EXCEPTION HANDLING**9**

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS**9**

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

ELECTRICAL AND ELECTRONICS ENGINEERING

17BEEEOE01

ELECTRICHYBRIDVEHICLES

3 0 0 3100

COURSE OBJECTIVES

1. To understand the basic concepts of electric hybrid vehicle.
2. To gain the knowledge about electric propulsion unit.
3. To gain the concept of Hybrid Electric Drive-Trains.
4. To gain the different Energy Management Strategies.
5. To study about the efficiency manipulation in drives
6. To understand and gain the knowledge about various energy storage devices

COURSE OUTCOMES

1. Summarize the basic concepts in bioprocess Engineering.
2. Explain the concept of Hybrid Electric Vehicles.
3. Understand the concept of Hybrid Electric Drive-Trains.
4. Identify the different Energy Management Strategies.
5. Understand the concept of different Energy Storage devices.
6. Analyze the different motor drives used in Hybrid Electric Vehicles.

UNITI INTRODUCTION

9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNITII HYBRIDELECTRICDRIVE-TRAINS

9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNITIII ELECTRICPROPULSIONUNIT

9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNITIV ENERGYSTORAGE

9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNITV ENERGYMANAGEMENTSTRATEGIES

9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL

45

TEXT BOOK

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Iqbal Hussein	Electric and Hybrid Vehicles: Design Fundamentals	CRC Press	2010

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mehrdad Ehsani, Yimi Gao, Gay, Ali Emadi	Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design	CRC Press	2009
2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley	2012

COURSE OBJECTIVES

To gain the knowledge about energy management.

1. To understand the basic concepts in economic analysis in energy management.
2. To understand the basic principles of energy audit.
3. To gain the knowledge about the basic concept of types of Energy Audit
4. To gain and Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. To study about the behaviour changes of PF requirement in motor currents

COURSE OUTCOMES

At the end of this course, students will demonstrate the ability to

1. Understand the concept of Energy Management.
2. Analyze the different methods for economic analysis
3. Knowledge about the basic concept of Energy Audit and types.
4. Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT**9**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS**9**

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT**9**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS**9**

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS**9**

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

TOTAL**45****TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	Energy Management	Heinemann Publications	2007

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	John Wiley and Sons, 7th Edition	2013

COURSE OBJECTIVES

1. To understand the basic principles of PLC systems.
2. To gain the knowledge about data handling functions.
3. To gain the knowledge of storage techniques in PLC
4. To acquire the knowledge about how to handle the data and functions
5. To study about flow charts of ladder and spray process system
6. To understand the principles of PID.

COURSE OUTCOMES

1. At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
2. To acquire the knowledge of storage techniques in PLC
3. Students know how to handle the data and functions
4. Students known about advanced controller in PLC applications
5. Students gather real time industrial application of PLC
6. Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing, analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEB REFERENCE

1. <http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>, - Introduction to programmable Logiccontroller

COURSE OBJECTIVES

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

COURSE OUTCOMES

At the end of this course, students will demonstrate the ability to

1. Analyze the Energy Scenario in india
2. Understand the concept of Solar Energy
3. Understand the concept of Wind Energy
4. Understand the concept of Hydro Energy
5. Analyze the different energy sources
6. Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEB REFERENCE

1. www.energycentral.com
2. www.catelectricpowerinfo.com

COURSE OBJECTIVES

1. To introduce students to the embedded systems, its hardware and software.
2. To introduce devices and buses used for embedded networking.
3. To study about task management
4. To learn about semaphore management and message passing
5. To study about memory management
6. To impart knowledge on

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM**9**

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT II OPERATING SYSTEM OVERVIEW**9**

Introduction – Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT III TASK MANAGEMENT**9**

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks – Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List.

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING**9**

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue

UNIT V MEMORY MANAGEMENT**9**

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II

TOTAL**45**

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Jean J. Labrosse	MicroC/OS – II The Real Time Kernel	CMP BOOKS	2009
2	David Seal	ARM Architecture Reference Manual.	Addison-Wesley	2008
3	Steve Furbe,	ARM System-on-Chip Architecture,	Addison-Wesley Professional, California	2000

COURSE OBJECTIVES

1. To study about various speakers and microphone
2. To learn the fundamental of television systems and standards
3. To learn the process of audio recording and reproduction
4. To study various telephone networks
5. To discuss about the working of home appliances
6. To familiarize with TV services like ISDN.

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand working of various type of loud speakers
2. Acquire knowledge on various types of picture tubes
3. Demonstrate the working of various optical recording systems
4. Distinguish various standards for color TV system
5. Acquire knowledge on various telecommunication networks
6. Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES**9**

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones

UNIT II TELEVISION STANDARDS AND SYSTEMS**9**

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control

UNIT III OPTICAL RECORDING AND REPRODUCTION**9**

Audio Disc – Processing of the Audio signal – readout from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats - recording systems – Playback Systems

UNIT IV TELECOMMUNICATIONS SYSTEMS**9**

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT V HOME APPLIANCES**9**

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

TOTAL**45****TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	S.P.Bali	Consumer Electronics	Pearson Education	2005

COURSE OBJECTIVES

1. To introduce the basic concepts of neural networks and its applications in various domain
2. To educate how to use Soft Computing to solve real-world problems
3. To have a solid understanding of Basic Neural Network.
4. To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
5. To gain exposure in the field of neural networks and relate the human neural system into the digital world
6. To provide knowledge of computation and dynamical systems using neural networks

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of neural networks and its applications in various domains
2. Gain knowledge about learning process in Neural Networks
3. Apply perception concept in design
4. Design using ART phenomena
5. Gain knowledge on SOM concepts
6. Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS**9**

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS**9**

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION**9**

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART**9**

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION**9**

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

TOTAL**45****REFERENCES**

4	Laurene Fausett	Fundamentals of Neural Networks: Architectures, Algorithms, and Applications	Pearson/ Prentice Hall	1997

COURSE OBJECTIVES

1. To introduce the basic concepts of Fuzzy logic and its applications in various domain
2. To educate how to use Fuzzy computation to solve real-world problems
3. To have a solid understanding of Basic fuzzy models.
4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
5. To learn about applications on Fuzzy based systems
6. To familiarize with fuzzy logic and defuzzy logic procedures

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of Fuzzy logic and its applications in various domain
2. Gain knowledge on theory of Reasoning
3. Develop fuzzy controllers
4. Understand concepts of adaptive fuzzy control
5. Ability to develop how to use Fuzzy computation to solve real- world problems
6. Design fuzzy based model for any application

UNIT I BASICS OF FUZZY LOGIC**9**

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II THEORY OF APPROXIMATE REASONING**9**

Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III FUZZY KNOWLEDGE BASED CONTROLLERS (FKBC)**9**

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzzy Logic Controller

UNIT IV ADAPTIVE FUZZY CONTROL**9**

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS**9**

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications- Introduction to ANFIS.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	D. Diankar, H. Hellendoom	An Introduction to Fuzzy Control	Narosa Publishers India	1996
2	G. J. Klir and T. A. Folger	Fuzzy Sets Uncertainty and Information	PHI IEEE	1995

COURSE OBJECTIVES

1. To impart basic knowledge in bioprocessEngineering
2. To design the bioreactors for variousoperations.
3. To understand the principle and working of heat transferequipments.
4. To extend the knowledge in principle of heat transfer inside abioreactor
5. To construct the equipments used in mass transferoperations.
6. To learn the equipments used in separationprocess.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Summarize the basic concepts in bioprocessEngineering.
2. Design the bioreactors for variousoperations.
3. Understand the principle and working of heat transferequipments.
4. Develop the heat transfer equipments for BioprocessEngineering.
5. Construct the equipments used in mass transferoperations.
6. Categorize the equipments used in separationprocess.

UNITI ENGINEERING PROPERTIES ANDSTORAGETANK 9

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTORDESIGN 9

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFEREQUIPMENTS 9

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulationevaporator.

UNITIV MASS TRANSFEREQUIPMENTS 9

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPERATIONEQUIPMENTS 9

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	James Edwin Bailey, David F. Ollis	Biochemical Engineering Fundamentals	McGraw- Hill	2007
2	Don W. Green, Robert H. Perry	Chemical Engineer Hand book	The McGraw- Hill Companies, Inc.	2008

REFERENCE

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Pauline. M. Doran	Bioprocess Engineering Principles	Academic Press	2013

COURSE OBJECTIVES

1. To learn the scope and importance of food processing.
2. To impart basic knowledge in different food processing methods carried out in the food tech companies.
3. To extend the brief knowledge in food conservation operations.
4. To study the methods of food preservation by cooling.
5. To familiarize the students on the concepts of preservation methods for fruits.
6. To create deeper understanding on preservation methods for vegetables.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Describe the scope and importance of food processing.
2. Outline the various processing methods for foods.
3. Extend the knowledge in food conservation operations.
4. Describe the methods of food preservation by cooling.
5. Summarize the preservation methods for fruits.
6. Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING 9

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS 9

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS 9

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING 9

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES 9

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation – Food irradiation- Combined preservation techniques.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	M.A. Rao, Syed S.H. Rizvi, Ashim K. Datta	Engineering properties of foods	CRC Press	2005
2	B. Sivasankar	Food processing and preservation	PHI Learning Pvt. Ltd	2002

COURSE OBJECTIVES

1. To understand the available tools and databases for performing research in bioinformatics.
2. To expose students to sequence alignment tool in bioinformatics.
3. To construct the phylogenetic trees for evolution.
4. To get familiar with the 3D structure of protein and classification.
5. To acquire basic knowledge in protein secondary structure prediction.
6. To extend the brief knowledge in Micro array data analysis.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Summarize the basic concepts and importance of Bioinformatics in various sectors.
2. Demonstrate the sequence alignment tool in bioinformatics.
3. Construct the phylogenetic trees for evolution.
4. Analyze the three dimensional protein structure and classification using various tools.
5. Illustrate the protein secondary structure prediction by comparative modeling.
6. Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS**9**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**9**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS**9**

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS**9**

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS**9**

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

REFERENCE

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Michael J. Korenberg	Microarray Data Analysis: Methods and Applications	Springer Science & Business Media	2007

COURSE OBJECTIVES

1. To impart the skills in the field of nano biotechnology and its applications.
2. To acquire knowledge in the nano particles and its significance in various fields.
3. To extend the knowledge in types and application of nano particles in sensors.
4. To define the concepts of biomaterials through molecular self assembly.
5. To equip students with clinical applications of nanodevices.
6. To describe deeper understanding of the socio-economic issues in nanobiotechnology.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Develop skills in the field of nano biotechnology and its applications.
2. Summarize the nanoparticles and its significance in various fields.
3. Extend the knowledge in types and application of nano particles in sensors.
4. Define the concepts of biomaterials through molecular self assembly.
5. Outline the clinical applications of nanodevices.
6. Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION

9

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANOPARTICLES

9

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS

9

Nanomedicine, Nanobiocensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIOTECHNOLOGY

9

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY

9

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

4	Kohler. M. and Fritzsche. W.	Nanotechnology – An Introduction to Nanostructuring Techniques	Wiley- VCH	2004

COURSE OBJECTIVES

1. To impart knowledge on the constructional details and principle of operation of various automobile components.
2. To learn the function and working of various components in transmission and drive lines.
3. To study the concept and working of steering and suspension systems in an automobile.
4. To give knowledge on the wheels, tyres and brakes of automobiles.
5. To provide information on the current and future trends in automobiles.
6. Identify and explain the types of steering system.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Demonstrate the operating principles and constructional details of various automobile components.
2. Explain the function and working of components in transmission and drive lines.
3. Identify and explain the types of steering system.
4. Identify and explain the types of suspension system.
5. Classify and describe the types of wheels, tyres and brakes of automobiles.
6. Discuss the current and future trends in the automobiles.

UNITI ENGINE AND FUELFEEDSYSTEMS**9**

Classification of Engine , construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNITII TRANSMISSIONSYSTEMS**9**

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propellar Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNITIII SUSPENSIONSYSTEM**9**

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNITIV BRAKES**9**

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNITV ELECTRICALSYSTEM**9**

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

2	Crouse.W.H	Automobile Electrical Equipment	McGraw-Hill Book Co., Inc., New York.	1986
3	N.Newton, W. Steeds and T.K.Garrett	The Motor vehicle, 13th edition	SAE Inc	2001

COURSE OBJECTIVES

1. The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
2. Construct the frames of two and three wheelers of different layouts.
3. Demonstrate the constructional details and principle of operation of various engine components.
4. Identify and explain the types of transmission systems.
5. Identify and explain the types of steering and suspension systems.
6. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Construct the frames of two and three wheelers of different layouts.
2. Demonstrate the constructional details and principle of operation of various engine components.
3. Identify and explain the types of transmission systems.
4. Identify and explain the types of steering and suspension systems.
5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
6. Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION**9**

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS**9**

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION**9**

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES**9**

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREEWHEELERS**9**

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	M.M.Griffin.	Motor cycles from inside and outside.	Prentice Hall Inc, New Jersey.	1978
2	Bruce A. Johns and Robert Scharff	Motorcycles: Fundamentals, Service, Repair	Goodheart-Willcox	1999

COURSE OBJECTIVES

1. The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
2. Describe and differentiate the types of maintenance.
3. List the procedure for dismantling, servicing and assembling of engine components.
4. Demonstrate the servicing of transmission and driveline components.
5. Discuss the procedure for steering and suspension
6. Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Describe and differentiate the types of maintenance.
2. List the procedure for dismantling, servicing and assembling of engine components.
3. Demonstrate the servicing of transmission and driveline components.
4. Discuss the procedure for steering and suspension
5. Discuss the procedure for wheel and brake maintenance.
6. Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES 9

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE 9

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE 9

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE 9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY 9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	John Doke	Fleet Management	McGraw Hill Co	1984
2	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011

REFERENCE

1. Service Manuals from Different Vehicle Manufacturers

COURSE OBJECTIVES

1. To impart knowledge on trends in the vehicle power plants.
2. To learn the various advanced driver assistance systems.
3. To study the working of advanced suspension and braking systems in an automobile.
4. To give information about motor vehicle emission and noise pollution control.
5. To provide knowledge of the vehicle telematics.
6. To give information about the noise control techniques

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Distinguish and describe the various modern vehicle power plant systems.
2. List and explain the various driver assistant mechanisms.
3. Identify and describe the working of advanced suspension and braking systems.
4. Apply the knowledge of motor vehicle emission and noise pollution control.
5. Describe the noise control techniques
6. Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS**9**

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS**9**

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY**9**

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION**9**

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS**9**

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

HOUSING, PLAN AND MANAGEMENT

3 0 0 3100

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOMES

The students will be able to

1. Know the Importance of basic housing policies and building bye laws.
2. Use Housing Programmes and Schemes.
3. Plan and Design of Housing projects.
4. Examine Innovative construction methods and Materials.
5. Know Housing finance and loan approval procedures.
6. Understand Construction as well as managing techniques.

UNIT I INTRODUCTION TO HOUSING

9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES

9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS

9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Meera Mehta and Dinesh Mehta	Metropolitan Housing Markets	Sage Publications Pvt. Ltd., New Delhi	2002
2	Francis Cherunilam and Odeyar D Heggade	Housing in India	Himalaya Publishing House, Bombay	2001

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	CMA	Development Control Rules for Chennai Metropolitan Area	CMA, Chennai	2002
2	UNCHS	National Experiences with Shelter Delivery for the Poorest Groups	UNCHS (Habitat), Nairobi	2000

COURSE OBJECTIVES

1. Defining and identifying of engineering services systems in buildings.
2. The role of engineering services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOMES

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Laws of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS**9**

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION**9**

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	E.R.Ambrose	Heat Pumps and Electric Heating	John and Wiley and Sons, Inc., New York	2002
2	NBC	Handbook for Building Engineers in Metric systems	NBC, New Delhi	2005

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	-	Philips Lighting in Architectural Design	McGraw-Hill, New York	2000
2	A.F.C. Sherratt	Air-conditioning and Energy Conservation	The Architectural Press, London	2005
3	National Building Code			

COURSE OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

COURSE OUTCOMES

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V INVOLVEMENT OF STAKEHOLDERS 9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

2	Maloney, C. and Raju, K.V	Managing Irrigation Together - Practice and Policy in India	, Stage Publication, New Delhi, India	2000

COURSE OBJECTIVES

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

COURSE OUTCOMES

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT III MODERN CONSTRUCTION EQUIPEMENTS-I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNIT IV MODERN CONSTRUCTION EQUIPEMENTS-II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

COMPUTERAIDED DESIGN

3 0 0 3100

COURSE OBJECTIVES

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS 9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHIC TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING 9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT 9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

1	Vera B Anand	Computer Graphics and Geometric Modeling for Engineers	John Wiley & Sons, New York	2000
2	Radhakrishnan P and Subramanyan S	CAD/CAM/CIM	New Age International Pvt. Ltd	2004

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Radhakrishnan P and Kothandaraman C P	Computer Graphics and Design	Dhanpat Rai & Sons, New Delhi	2002
2	Ibrahim Zeid	CAD/CAM Theory and Practice	McGraw Hill Inc., New York	2003
3	Barry Hawhes	The CAD/CAM Process	Pitman Publishing, London	1998
4	William M Newman and Robert Sproul	Principles of Interactive Computer Graphics	McGraw Hill Inc., New York	1994
5	Sadhu Singh	Computer-Aided Design and Manufacturing	Khanna Publishers, New Delhi	1998
6	Rao S S	Optimisation Techniques	Wiley Eastern, New Delhi	2003

COURSE OBJECTIVES

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

COURSE OUTCOMES

At the end of the course, student will be able to

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Shari.P.B and Lassen.T.S	Managing the global supply chain	Viva books, New Delhi	2000
2	Ayers.J.B	Hand book of supply chain management	The St. Lencie press	2000

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Nicolas.J.N	Competitive manufacturing management - continuous improvement, Lean production, customer focused quality	McGrawHill, New York	1998
2	Steudel.H.J and Desruelle.P	Manufacturing in the nineteen - How to become a mean, lean and world class competitor	Van No strand Reinhold, New York	1992

COURSE OBJECTIVES

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

COURSE OUTCOMES

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non-Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometries in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT**9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

WEB REFERENCE

1. <https://laulima.hawaii.edu/portal>

COURSE OBJECTIVES

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEYMECHANICALCONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM**9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

SEMESTER I

17BTCC101

ENGLISH FOR ENGINEERS

3 0 0 3

OBJECTIVES:

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
2. To help students acquire their ability to speak effectively in real life situations.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To ensure that students use dictionary to improve their active and passive vocabulary.
5. To enable students to improve their lexical, grammatical and communicative competence.
6. To improve the student's communication skill at interview level.

COURSE OUTCOMES:

1. To use English language for communication: verbal & non-verbal.
2. To enrich comprehension and acquisition of speaking & writing ability.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To hone their listening, speaking, Reading and writing skills.
5. To gain confidence in using English language in real life situations.
6. To improve word power: lexical, grammatical and communication competence.

Unit- I LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening –Types of listening- Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Formal and Informal letters- Letters to the Editor.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary) Tenses -Articles.

Vocabulary - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit – II LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (8) **Listening** – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

WH questions –Yes/No Question - **Subject Verb agreement.** **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

Unit - III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (8)

Listening – Listening for specific task – fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** –comprehension passages based on general topics or matters of current affairs. **Writing** - Autobiographical writing & Biographical writing.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Preposition – Infinitive & Gerund. **Vocabulary** – Foreign words used in English – British and American usage.

Unit- IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10)

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) & Instruction writing.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Parts of Speech , Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10) **Listening** –Distinction between native and Indian English (Speeches by TED and Kalam). **Speaking**- Extempore talk –Just-a-minute talk. **Reading**-Reading strategies– Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

Technically www.Dictionary.com – Semantic / Grammar

OBJECTIVES:

1. To develop analytical skills for solving different engineering problems.
2. To understand the concept of Matrices and Theory of equations.
3. To know the basics of differential calculus and its applications.
4. To impart the knowledge of integral calculus and its applications.
5. To learn the basics of ordinary differential equations.
6. To make the student to solve various Engineering problems.

COURSE OUTCOMES:

1. Acquire the basic knowledge and understanding of mathematics.
2. Apply advanced matrix knowledge to engineering problems.
3. Improve their ability in evaluating problems by applying theory of equations.
4. Evaluating engineering problems involving differential calculus and its applications.
5. Understand the concepts involving integral calculus and its applications.
6. Applying the concept of ordinary differential Equations and solving the problems.

UNIT I MATRICES**(12)**

Fundamentals of Matrix- Inverse of a matrix- Rank of a Matrix – Consistency and Inconsistency of a system of ‘m’ linear equations in ‘n’ unknowns – Eigenvalues and Eigenvectors of a real matrix.

UNIT II THEORY OF EQUATIONS**(12)**

Relations between coefficients and roots: Irrational and imaginary roots – symmetric functions of the roots – transformation of equations – reciprocal equations and formation of equations whose roots are given.

UNIT III DIFFERENTIAL CALCULUS AND ITS APPLICATION**(12)**

Differentiation and Derivatives of simple functions – Successive Differentiation – Tangent and Normal-Radius of curvature – Velocity and acceleration.

UNIT IV INTEGRAL CALCULUS AND ITS APPLICATIONS**(12)**

Various types of integration - Reduction formula for $e^{ax} x^n$, $\sin^n x$, $\cos^n x$, $\sin^n x \cos^m x$, (Statement only). – Length, Area and Volume of solid revolution.

UNIT V ORDINARY DIFFERENTIAL EQUATIONS**(12)**

Differential equations of first order and higher degree – higher order differential equations with constant coefficients- Euler’s form of Differential equations.

2	Bali N.P., Manish Goyal	A text book of Engineering Mathematics	Laxmi publications Pvt. Ltd, New Delhi.	2014
3	Michael D. Greenberg	Advanced Engineering Mathematics	Pearson Education, India	2006

WEBSITES:

www.intmath.com
www.efunda.com
www.mathcentre.ac.uk

OBJECTIVES:

1. To understand the properties of matter and thermodynamics with its applications.
2. To introduce the concepts of light, laser and fiber optics for diverse applications.
3. To study the fundamentals of quantum physics and their applications.
4. To comprehend the properties of crystal and its various crystal structures.
5. To study the basics of sound and ultrasonics with appropriate applications.
6. To solve the relevant problems in engineering stream.

COURSE OUTCOMES:

1. Identify the elastic nature of materials and its thermodynamic properties.
2. Infer the characteristics of laser and optical fibers for engineering applications.
3. Develop the idea of quantum mechanics through applications.
4. Identify the different atomic arrangements of crystals and its defects.
5. Make use of the concepts of sound waves for medical applications.
6. Illustrate the basic ideas of nuclear reactors for energy resources.

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), Poisson's ratio- Torsional pendulum- bending of beams - bending moment – uniform and non uniform bending

Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS (9) Introduction to quantum theory – Black body radiation - dual nature of matter and

radiation – de Broglie wavelength, uncertainty principle –Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electron microscope

UNIT IV CRYSTAL PHYSICS (9)

Lattice – unit cell – Bravais lattice – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures, crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS**(9)**

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A, B and C – scan displays, Medical applications – Sonogram. Introduction – basics about nuclear fission and fusion, Radiation detectors – semiconductor detector. Reactors – essentials of nuclear reactor- power reactor.

www.nptel.ac.in
www.physicsclassroom.com
www.oyc.yale.edu
www.physics.org

OBJECTIVES:

1. To make the students conversant with basics of water technology.
2. To make the student acquire sound knowledge of electrochemistry and storage devices.
3. To acquaint the student with concepts of fuels and combustion.
4. To develop an understanding of the basic concepts of corrosion science.
5. To acquaint the students with the basics of surface chemistry.
6. To understand the chemical principles in the projects undertaken in field of engineering and technology

COURSE OUTCOMES:

1. Outline the basic principles of chemistry for water treatment (K).
2. Examine the electrochemical properties to design non – conventional energy storage devices (S).
3. Apply the concepts combustion of different fuels (S).
4. Identify the concepts of corrosion and its protection in the engineering field (S).
5. Apply the concepts of surface chemistry in the field of engineering (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (S).

UNIT I WATER TECHNOLOGY**(9)**

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination (No problems) – Hardness – Types and estimation by EDTA method (No problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation, UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES**(9)**

Electrolytic conductance-application (conductometric titration)- Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes – Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) —Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2 - O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION**(9)**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV- Problems on Calculation of GCV & NCV - Flue gas analysis.

UNIT IV CORROSION SCIENCE**(9)**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating of Cu over Fe and Electro less plating (Ni) - Surface conversion coating - Hot dipping.- Anodizing of Al

UNIT V SURFACE CHEMISTRY AND PHASE RULE**(9)**

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm-Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

Course Objectives

- To explain the basics of biology
- To summarize the overview of biotechnology and its applications
- To describe the scope of industrial biotechnology
- To elaborate the production of SCP and other metabolites
- To discuss the application of biotechnology in agriculture
- To outline the production of bioproducts and ethical considerations in Biotechnology.

Course Outcomes

- Outline the basics of biology and its importance
- Elaborate the scope of biotechnology and its application in rDNA technology
- Describe the production of primary and secondary metabolites
- Discuss how biotechnology involves in crop improvement
- Explain the various techniques and applications involved in Biotechnology.
- Discuss the development of bioproducts with social and ethical considerations.

UNIT I BASICS OF BIOLOGY**(9)**

Cell theory, Prokaryotic and eukaryotic cells- Cell structure, Biomolecules: carbohydrates, Proteins, lipids and Nucleic acid-DNA & RNA, Types of bonds involved in biomolecules.

UNIT II GENERAL BIOTECHNOLOGY**(9)**

Biotechnology: An overview – biotechnology – an interdisciplinary pursuit, old and new biotechnology, scope and importance, Isolation and screening of microorganisms, microbial growth curve, basics of rDNA technology – cloning

UNIT III INDUSTRIAL BIOTECHNOLOGY**(9)**

Production of single cell protein (SCP): advantages and nutritional value, Overview of enzymes and its applications in various fields, Production of primary and secondary metabolites from microbial source - citric acid, ethanol fermentation and penicillin.

UNIT IV BIOTECHNOLOGY IN AGRICULTURE AND HEALTH CARE**(9)**

Biotechnology methods of crop improvement – plant tissue culture, Genetically modified crops – golden rice and Bt cotton, Conventional vaccines, concept of recombinant vaccines, recombinant insulin.

UNIT V ENVIRONMENTAL BIOTECHNOLOGY AND ETHICAL CONSIDERATIONS**(9)**

Biofuels - Production, bioinsecticides - Production, biofertilizers – types, production and Biosafety-definition- levels - guidelines.

Total hours: 45

TEXT BOOKS

2	H.D. Kumar	Modern Concepts of Biotechnology	Vikas Publication House Pvt LTD	2007

OBJECTIVES

- To impart the basic knowledge about the DC Electric circuits.
- To study the working of various Electrical Machines.
- To study the basic concepts of Electrical safety and wiring
- To get the knowledge of Magnetic circuits and its properties
- To impart the basic knowledge about the DC Electric circuits.
- To study the basic of power system

INTENDED OUTCOMES

At the end of this course, students will be able to

1. To understand and analyse basic electric and magnetic circuits.
2. Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
3. Attributing the electrical machines and transformer.
4. Evaluate the various digital circuits in real time applications.
5. Analysis various semiconductor devices in real time applications.
6. Reproduce the Measuring Instruments and Electrical Installation.

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS**9**

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES**9**

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS**9**

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS**9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS**9**

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressions using logic gates - standard forms of Boolean expression.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mittle, V.M	Basic Electrical Engineering	Tata McGraw Hill Edition, New Delhi	2004
2	Sedha R.S	Applied Electronics	S. Chand & Co	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Muthusubramanian R, and Muraleedharan K A	Basic Electrical, Electronics and Computer Engineering	Tata McGraw Hill, Second Edition	2006
2	Nagsarkar T K and Sukhija M S	Basics of Electrical Engineering	Oxford press	2005
3	Mahmood Nahvi and Joseph A. Edminister	Electric Circuits	Schaum' Outline Series, McGraw Hill	2002
4	Premkumar N	Basic Electrical Engineering	Anuradha Publishers	2003

OBJECTIVES:

1. To develop basic laboratory skills and demonstrating the application of physical principles.
2. To prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. To present experimental data in various appropriate forms like tabulation, and plots.
4. To analyze, Interpret and Summarize experimental results.
5. To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. To develop the skills for understanding basic electric circuits.

COURSE OUTCOMES:

1. The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
2. Prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. Present experimental data in various appropriate forms like tabulation, and plots.
4. Analyze, Interpret and Summarize experimental results.
5. Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.

Determination of wavelength of mercury spectrum – spectrometer grating.

Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.

Determination of Viscosity of liquid – Poiseuille's method.

Spectrometer Dispersive power of a prism.

Torsional pendulum – Determination of Rigidity modulus.

Particle size determination using Diode Laser

Determination of Laser parameters – Wavelength, and angle of divergence.

Determination of acceptance angle in an optical fiber.

Determination of thickness of a thin wire – Air wedge method

Determination of Band Gap of a semiconductor material.

Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

OBJECTIVES:

1. To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
2. To estimate the amount of alkalinity ions, hardness, chloride in water sample
3. To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
4. To acquaint the students with the determination of molecular weight of a polymer by viscometry
5. To carried out different types of titrations for estimation of concerned in materials
6. To determine the corrosion rate of steel by weight loss method.

COURSE OUTCOMES:

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
2. Estimate the amount of alkalinity ions, hardness, chloride in water sample
3. Measure molecular/system properties of conductance of solutions, EMF etc
4. Acquaint the students with the determination of molecular weight of a polymer by viscometry
5. Determine the corrosion rate of steel by weight loss method.
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS – CHEMISTRY

Estimation of alkalinity of Water sample.

Estimation of hardness of Water by EDTA

Estimation of chloride in Water sample (Argentometric method)

Determination of corrosion rate by weight loss method.

Conductometric Titration (Simple acid base).

Conductometric Titration (Mixture of weak and strong acids).

Conduct metric Titration using BaCl_2 vs Na_2SO_4 .

pH Titration (acid & base).

Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).

Estimation of Ferric ion by Spectrophotometry.

Determination of water of crystallization of a crystalline salt (Copper sulphate).

Determination of molecular weight and degree of polymerization using Viscometry.

Determination of chemical oxygen demand.

OBJECTIVE

1. To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

OUTCOMES:

1. Ability to fabricate carpentry components and pipe connections including plumbing works.
2. Ability to use welding equipment's to join the structures.
3. Ability to fabricate electrical and electronics circuits.
4. Students will be able to fabricate components with their own hands.
5. will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes
6. By assembling different components, they will be able to produce small devices of their interest

PART – A (MECHANICAL)**1. WELDING**

- i. Preparation of arc welding of butt joints, lap joints and tee joints.

2. BASIC MACHINING

- i. Simple Turning and Taper turning
- ii. Drilling and Tapping
- iii. Sheet Metal Work
- iv. Model making – Trays, funnels, etc.

3. DEMONSTRATION ON

- i. Smithy operations
- ii. Foundry operations
- iii. Plumbing Works
- iv. Carpentry Works

PART –B (ELECTRICAL & ELECTRONICS)**4. ELECTRICAL ENGINEERING**

- i. Study of electrical symbols and electrical equipments.
- ii. Construct the wiring diagram for Stair case wiring
- iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
- iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
- v. Measurement of energy using single phase energy meter.

5. ELECTRONICS ENGINEERING

- i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
- ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
- iii. Study of logic gates AND, OR, NOT, NOR and NAND.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Vachandran, K. and Balasubramanian, S	Premier on Engineering Practices Laboratory	Suradha Publications, Kumbakonam	2007
2	Vapooan, T., Saravanapandian, M	Engineering Practices Lab Manual	KasPuplishing House Pvt. Ltd, Chennai	2006
3	Arora, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

COURSE OBJECTIVES:

- To understand the importance graphics in engineering
- To learn basic engineering drawing formats
- To develop the graphical skills for communication of concepts, ideas and design of engineering products through technical drawings.
- To learn to take data and transform it into graphic drawings.
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Know and understand the conventions and the method of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skill in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.

UNIT I INTRODUCTION**9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES**8**

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING**9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES**8**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS**8**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam)**3**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

OBJECTIVE:

Yoga Education Helps To Develop The Self Discipline, Self Control, Awareness, Concentration And Higher Level Of Consciousness.

AIM : To Enable The Student To Have Physical Health And Mental Health.

UNIT- I

Introduction To Yoga- Meaning Of Yoga – Concept Of Yoga- Aim And Objectives Of Yoga –History Of Yoga - Systems Of Yoga.- Stages (Or) Limbs Of Yoga

UNIT- II

Asanas-Surya Namashkar- Thadasana- Veerabadhra Asana- Trikonasana- Utkatasana- ArdhaChakrasana- Ardha Kati Chakrasana- Thandasana- Gomugasana- Padmasana- Vajrasana- Paschimottasana- Matsyendrasana-BavanaMukthasana- SuptaPadhangusthasana-Sethubhandhasana- Navasana- ArdhaBavanamukthasana- Mathasyasana- Naukasana- Bujangasana- Salabasana- Makkarasana- Dhanurasana.

UNIT- III

Advance Asanas- Sirasasana- Garudasana- Natrajasana- Rajakoptasana- Chakrasana- Kukutasana- Virikshasana- Sarvagasana- Halasana-. Mayurasana .

UNIT- IV

Pranayama- Meaning- Types Of Pranayama- Bhastrika- Bhramari- Udgeeth- Kabalbhati- Bahya- AnulomVilom- Pranay Pranayama- Benefits Of Pranayama. Neti - JalaNeti , Sutra Neti, Noul-Three Types, Douthy-Three Types

UNIT- V

Mudras- Uses Of Mudras- Gyan- Shoonya- Apan- Prana- Vayu- Prithvi- Linga- Apana- Adi Mudra- - Agni Mudra- Surya Mudra- Varuna- Hakini Mudra.

SEMESTER II

17BTCC201A

BUSINESS COMMUNICATION

3 0 0 3

OBJECTIVES:

1. To help students comprehend the role of listening skills in effective communication.
2. To familiarize students with verbal and non-verbal communication.
3. To expose students to neutral accent.
4. To develop emotional intelligence skills in them for enhancing their self-esteem.
5. To assist them in setting goals and developing positive attitude.
6. To enable students to acquire decision making skills, problem solving skills and assertive skills.
7. To develop their soft skills and inter personal skills.

COURSE OUTCOMES:

1. Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
2. Use a strategic communication model and critical thinking to identify objectives, analyze audiences and choose the most effective structure and style for delivering strategically sound written and spoken messages.
3. Practice principles of effective business writing and document design in all written documents.
4. Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
5. To gain confidence in using English language in real life situations.
6. Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- **interpretation of graphs using expressions of comparison and contrast .**

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone

Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body language – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

<http://mybcommlab.com> to test your understanding of the concepts presented in each chapter and explore additional materials that will bring the ideas to life in videos, activities, and an online multimedia e-book.

OBJECTIVES:

1. To motivate learners to acquire listening & speaking skills in both formal and informal context.
2. To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
3. To improve their reading habit and to train them in critical and analytical reading.
4. To equip them to write for academic as well as work place context.
5. To enable students to face interviews.
6. To improve the student's communication skill at business level.

COURSE OUTCOMES:

1. To acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
2. To enhance them reading texts critically and analytically.
3. To develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
4. To enrich the ability to face interviews the confidence.
5. To help students develop listening skills for academic and professional purposes.
6. To enable students write letters effectively in informal and business situations.

UNIT-1 LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)**

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Regular & Irregular verbs - Kinds of sentences - Question tags. Homonyms and Homophones.

UNIT-II LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar & Vocabulary (Function Grammar & Technical Vocabulary)**

Modal verbs – Conjunction - Expression of cause and effect. Phrasal verbs - Idioms.

UNIT – III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R) **Writing** - Essay writing -Minutes of meeting - Agenda

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Active and Passive voice - Purpose expression. Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Checklist preparation.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Grammar - Numerical expressions – Collocations. Singular and Plural (Nouns)

UNIT- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening – Types of listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing-

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Transformation of sentences (Simple, Compound & Complex).Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

OBJECTIVES:

1. Determine mathematical tools needed in evaluating multiple integrals and their usage.
2. Familiarize the student with functions of several variables which is the foundation for many branches of Engineering.
3. To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
4. Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional wave equations.
5. The objective of this course is to familiarize the students with statistical techniques.
6. To use appropriate statistical methods in the analysis of simple datasets.

COURSE OUTCOMES:

1. The students will be able to understand mathematical tools needed to evaluate the areas and volumes using multiple integrals.
2. The students will be able to familiarize functions of several variables which is used in many physical engineering problems.
3. Understand the nature of the Fourier series that represent even and odd functions and how derivation of a Fourier series can be simplified in this way.
4. To Know how to derive a Fourier series of a given periodic function by evaluating Fourier coefficients.
5. To understand the concepts of Boundary value problems.
6. The students are able to use appropriate statistical methods in the analysis of simple datasets.

UNIT I MULTIPLE INTEGRALS (12)

Double integration in Cartesian – Change of order of integration – Area as a double integral – Triple integration in Cartesian coordinates.

UNIT II FUNCTIONS OF SEVERAL VARIABLES (12)

Function of two variables – Taylor's expansion – maxima and minima – constrained maxima and minima by Lagrangian multiplier method – Jacobians.

UNIT III FOURIER SERIES (12)

Dirichlet's conditions – statement of Fourier theorem – Fourier coefficients – change of scale – Half range series – Harmonic Analysis.

UNIT IV BOUNDARY VALUE PROBLEMS (12)

Method of separation of variables – one dimensional wave equation – one dimensional heat equation – steady state conditions – zero boundary conditions.

UNIT V STATISTICS**(12)**

Measures of central tendency – Mean, Median, Mode, Standard deviation – moments – skewness and kurtosis-correlation – rank correlation.

OBJECTIVES:

1. To give a comprehensive insight into natural resources.
2. To impart knowledge on ecosystem and biodiversity.
3. To educate the ways and means of the environment.
4. To protect the environment from various types of pollution.
5. To impart some fundamental knowledge on human welfare measures.
6. To apply systems concepts and methodologies in their core fields.

COURSE OUTCOMES:

1. Recognize the importance of natural resources (S).
2. Associate themselves with the various ecosystems (S).
3. Describe the importance of biodiversity (S).
4. Identify and minimize the difference pollutions (S).
5. Prioritize and analyses the social issues (S).
6. Integrate the environmental principles in the projects undertaken in field of engineering and technology (A).

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES
(9)

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM

(9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY

(9)

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION**(9)**

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes – Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT**(9)**

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

i) Theory**Course Objectives**

- To understand the foundations of biochemistry
- To discuss the properties of water and its interactions
- To explain the structure and properties of carbohydrates
- To explain the structure and properties of amino acids, Peptides, Proteins and lipids
- To understand the chemistry and function of nucleotides and nucleic acids.
- To discuss the various functions and properties of important biomolecule.

Course Outcomes

1. Outline the cellular foundations of Biochemistry
2. Interpret different types of biomolecules and its interaction with water.
3. Analyze the function and properties of carbohydrates.
4. Explain the importance of amino acids, Peptides, Proteins and lipids.
5. Examine the structure, function and properties of nucleotides, nucleic acid, DNA.
6. Assess various functions and properties of important biomolecule.

UNIT-I THE FOUNDATIONS OF BIOCHEMISTRY (8)

Cellular foundations: the universal features of living cells, phylogeny of three domain of life, classification of organisms based on energy. Chemical foundation: essential elements, common functional groups of biomolecules, molecular component of an *E.coli* cell, macromolecules of cells. Physical foundation: Energy interconversion in living organisms, entropy, enthalpy, Gibbs theory, Genetic foundations: DNA to RNA to protein, Evolutionary foundations: genetic mutation, role of genetic mutation, stimulation of chemical evaluation, molecular anatomy revealing evolutionary relationship.

UNIT-II WATER (9)

Weak interactions in aqueous systems, Hydrogen bonding, structure of water molecules, bond dissociation energy, common hydrogen bonds in biological systems, directionality of hydrogen bond, electrostatic interaction of water with charged solutes, Polar, Nonpolar, and Amphipathic Biomolecules, Entropy changes upon dissolving crystalline substances, clathrates, micelles, Van der Waals interaction, hydrophobic interaction, four types of non covalent interactions in biomolecules in aqueous solvent, colligative properties, osmosis and the measurement of osmotic pressure, ionization of weak acid and weak bases, buffers.

UNIT-III CARBOHYDRATES AND GLYCOBIOLOGY (9)

Monosaccharides: aldose, ketose, epimers, pyranoses, furanoses, anomers, Haworth formula, conformation of pyranoses, sugars as reducing agents, Disaccharides: Glycosidic bonds, hydrolysis, Polysaccharides: starch, glycogen, dextrans, homopolysaccharides, chitin. Glyconjugates: Glycoproteins, proteoglycan, and glycolipids. Sugar code, methods of carbohydrate analysis

UNIT-IV (a) AMINO ACIDS, PEPTIDES, PROTEINS**(10)**

General structure of amino acid, properties, conventions of amino acids, classification of amino acids by R group, uncommon amino acids, Zwitterion. Peptides: Peptide bond, polypeptides, oligomers, protomers. Proteins: hierarchy, four levels of structure in protein, steps in sequencing of a polypeptide, locating di sulfide bond. Chemical synthesis of peptides, **Enzymes – Types.**

(b) LIPIDS

Fatty acids, structural lipids in membrane, galactolipids, sphingolipids, and sterols, lipid extraction.

UNIT-V NUCLEOTIDES AND NUCLEIC ACIDS**(9)**

Nucleotides and nucleic acid nomenclature, Phosphodiesterase Linkage, structure of purine and pyrimidine, Absorption spectra of the common nucleotide, Nucleic acid structure: DNA stores genetic information, DNA - Double helix, Watson-Crick structure, RNA-three dimensional structure, nucleic acid chemistry: denaturation and annealing, DNA sequences determination, chemical synthesis of DNA.

Total: 45**TEXT BOOK:**

S.NO NO.	AUTHOR (S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	D. L. Nelson, M. Cox & M. M. Cox	Lehninger Principles of Biochemistry 4th Edition	Freeman, W. H. & Company, New York	2004

REFERENCES:

S.NO NO.	AUTHOR (S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Zubay, G.L	Principles of Biochemistry	WCB Publishers, London	1996
2	Herg, J.M., J.L. Tymoczko & L. Stryer	Biochemistry. V Edition	WH-Freeman and Co, New York	2002
3	Voet, G. & A. Voet	Fundamentals of Biochemistry. II Edition	John Wiley and Sons, Inc. New York	2015

COURSE OBJECTIVES

- To familiarize with open source office packages
- To write programs for Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
- To discuss the fundamental principles of C Programming, as well as in-depth data and information processing techniques
- To solve problems, explore real-world software development challenges, and create practical and contemporary applications
- To learn about data structures
- To apply the string handling functions to solve the given problem

COURSE OUTCOMES

- Study logical structure of a computer program
- analyze logical structure of a computer program
- understand computer program, and different constructor to develop a program in 'C' language
- Utilize the basic data structures.
- Distinguish and use the fundamental data types.
- Utilize a simple programming environment, compile programs and interpret compiler errors.

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings- Pointers.

PRACTICALS:

Working with word Processing, Spreadsheet and presentation software in Linux

Programming in Scratch:

Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

C Programming:

Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

Total Hours: 45

ii) **Laboratory****Course Objectives**

- To explain the principles behind the qualitative estimation of carbohydrates.
- To explain the principles behind the qualitative estimation of amino acid & protein.
- To explain the principles behind the qualitative estimation of lipid.
- To analyze the oil properties.
- To carry out the oleic acid separation.
- To carry out the preparation of casein from milk

Course Outcomes

- Distinguish the properties of biomolecules – carbohydrates through qualitative analysis.
- Distinguish the properties of biomolecules - amino acids & proteins through qualitative analysis.
- Distinguish the properties of biomolecules - lipid through qualitative analysis.
- Interpret the properties of oil
- Demonstrate the separation of oleic acid.
- Perform the preparation of casein from milk.

LIST OF EXPERIMENTS:

Quantification of sugars (Anthrone method)

Distinguish reducing and nonreducing sugars.

Quantification of proteins (Lowry *et al* Method)

Using ninhydrin for distinguishing Imino and amino acids

Quantification of lipids

Analysis of oils- Acid number

Paper Chromatography

Estimation of DNA (DPA method / **Spectrophotometric method**)

Estimation of RNA (Orcinol method / **Spectrophotometric method**)

Scope:

Any business has to be developed from scratch. As entrepreneur one should learn various avenues of promoting the given business along with ethics which is other side of the coin. This course is meant to inculcate to develop a business plan connected with ethics.

Objective:

To explain relevance of Ethics while taking business decisions.

Unit I

Entrepreneurship – Types- Entrepreneurial Competencies -Business Plan – Meaning - Basic parameters - Project parameters - Factors of successful business - Term Loans and Working Capital Management.

Unit II

Business Plan Process - Sources of Information – Online Resources - Offline Resources - Sources of Market Research - Benefits of market study - Coverage of market study.

Unit III

Business Plan components - Company description - Industry Analysis - Target Market - Competition - Strategic position - Risk assessment - Technology plan - Management and Organization – Government policy

Reference books:

Rhonda Abrams " The Successful business Plan Secret \$ Strategies " Prentice Hall

Rhonda Abrams "The business plan in a day" Prentice Hall.

Business plan preparation - Entrepreneurship Development Institute of India

Semester III

17BTBT301

PROBABILITY AND STATISTICS

3 2 0 4

OBJECTIVES:

1. This course aims at providing the required skill to apply the statistical tools in Engineering problems.
2. To introduce the basic concepts of probability.
3. To introduce the basic concepts of random variables.
4. To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
5. To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.
6. To understand the techniques in quality control.

COURSE OUTCOMES:

1. Explain the fundamental concepts of probability and standard distributions which can describe real life phenomenon.
2. Explain the basic concepts of one- and two-dimensional random variables and their applications in engineering.
3. Apply the concept of testing of hypothesis for small and large samples in real life problems.
4. Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
5. Discuss the notion of sampling distributions and statistical techniques used in engineering and management problems.
6. Discuss about the techniques in quality control that model engineering problems.

UNIT- I PROBABILITY

(11)

Probability – Definition – Law - conditional probability-Bayes theorem- Probability mass function - Probability density functions.

UNIT- II RANDOM VARIABLES

(13)

Introduction to one dimensional random variables – Discrete – Continuous - Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression.

UNIT- III TESTING OF HYPOTHESIS

(12)

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions – Tests for independence of attributes and Goodness of fit.

UNIT – IV DESIGN OF EXPERIMENTS

(12)

Analysis of variance – one way classification – CRD – Two-way classification – RBD – Latin square.

UNIT – VRELIABILITY AND QUALITY CONTROL**(12)**

Concepts of reliability – hazard functions – Reliability of series and parallel systems – control charts for measurement (\bar{x}) - Control charts for attributes (p, c and np charts).

WEBSITES:

www.cut-theknot.org/probability.shtml
www.mathcentre.ac.uk
[www.mathworld. Wolfram.com](http://www.mathworld.Wolfram.com)

Course Objectives

- To explain the cell structure of Prokaryotes and Eukaryotes
- To understand how cells undergo mitosis
- To outline the views on transport across the cell membranes.
- To explain the signaling process involved in the cell.
- To illustrate the function of mitochondria and chloroplast.
- To recall the importance of cell signaling process to understand diseases.

Course Outcomes

1. Summarize the structure and function of cell components
2. Understand the role of the cytoskeletal proteins and link it with cell cycle.
3. Illustrate the transport process across the cell membrane.
4. Outline the basic ideas on signaling process through the receptors.
5. Explain the electron transfer in mitochondria.
6. Relate the importance of cell signaling process to understand diseases.

UNIT-I CELL STRUCTURE AND CELL ORGANELLES (9)

History of cell biology, comparison of eukaryotic and prokaryotic cells, membrane organisation, theories, components; Structure of prokaryotic cells - cilia, flagella, cell wall; Structure of eukaryotic cell organelles: cytoplasm, endoplasmic reticulum, mitochondria, chloroplast, peroxisomes, nucleus, Microscopic techniques for viewing cell organelles.

UNIT-II CYTOSKELETAL PROTEINS & CELL DIVISION (9)

Cytoskeletal proteins - Types, contractile proteins – actin & myosin, cell adhesion proteins; extracellular matrix; Types of cell division: mitosis & meiosis, Cell cycle and molecules that control cell cycle

UNIT-III TRANSPORT ACROSS CELL MEMBRANES (9)

Passive & active transport, permeases, sodium potassium pump, Ca²⁺ ATPase pumps, lysosomal and vacuolar membrane ATP dependent proton pumps, co transport symport, antiport, active group translocation; endocytosis and exocytosis; Entry of viruses and toxins into cells.

UNIT-IV RECEPTORS AND CELL SIGNALLING (9)

Cytosolic, nuclear and membrane bound receptors, examples of receptors, identify cation and purification of cell surface receptors, secondary messengers, autocrine, paracrine and endocrine modes of action

UNIT- V FUNCTION OF MITOCHONDRIA AND CHLOROPLAST (9)

Chloroplast: photosynthetic stages and light-absorbing pigments, Mitochondria: Electron transport chain, Reduction Potentials of Electron Carriers, Electron transfer from reduced cytochrome *c* to O₂, ATP synthesis.

Total Hours: 45

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	H. Lodish, A. Berk, S. L. Zipurursky, P. Matsudaria, D. Baltimore and J. Darnell	Molecular Cell Biology	Freeman press	2000
2	B. Alberts, A. Johnson, J. Lewis, M. Raff, K. Roberts, and P. Walter	Molecular Biology of the Cell	Garland PUB	2002

REFERENECE

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	S. C. Rastogi	Cell Biology	New Age International Pub. Ltd	2004
2	Karp, G and Puritt, N. L	Cell and Molecular biology, Concepts and Experiments	John Wiley and Sons Inc.,	2005
3	De Robertis, E. D. P. and De Robertis, E. M. F	Cell and Molecular biology	B. I publications pvt. Ltd.	2005

Course Objectives

- To illustrate the basic concepts of microbiology and different microbial identification techniques.
- To explain the structure and multiplication of microorganism.
- To interpret the microbial growth and its metabolism.
- To outline the mechanism for the control of microorganisms.
- To infer the application of microorganism in industries.
- To explain the role of microorganisms in bioremediation.

Course Outcomes

1. Outline the history of microbiology and microbial staining techniques.
2. Discuss the microbial structural organization and multiplication.
3. Infer the basic requirements for microbial growth towards the biosynthesis of important molecules.
4. Discuss the controlling mechanism of microorganisms.
5. Illustrate the production of various metabolites and its applications.
6. Explain the role of microorganisms in bioremediation.

UNIT- I INTRODUCTION**(8)**

History of microbiology, classification and nomenclature of microorganism, Microbes in soil, air and water, microscopic examination, light and electron microscopy, different staining techniques - gram staining, acid fast, capsular staining, flagellar staining and fungal staining.

UNIT-II MICROBES-STRUCTURE AND MULTIPLICATION**(10)**

Structural organization and multiplication - bacteria, viruses, algae and fungi, actinomycetes, yeast, mycoplasma, cyanobacteria and bacteriophage.

UNIT- III MICROBIAL NUTRITION, GROWTH AND METABOLISM**(10)**

Cultivation, Nutritional requirements and different media – bacterial culture; aerobic and anaerobic; growth curve, **preservation methods**; bioenergetics, utilization of energy, biosynthesis of important molecules.

UNIT – IV CONTROL OF MICROORGANISMS**(8)**

Physical and chemical control of microorganisms, host-microbe interactions, antibacterial, anti-fungal, anti-viral agents, mode of action, resistance to antibiotics, clinically important microorganisms.

UNIT – V INDUSTRIAL AND ENVIRONMENTAL MICROBIOLOGY**(9)**

Primary metabolites; secondary metabolites and their applications-preservation of food; Microorganism used for the production of penicillin, alcohol, vit.B-12; biogas; bioremediation; **leaching of ores by microorganisms**; bio-fertilizers and bio-pesticides; Biological Nitrogen fixation, microorganisms and pollution control.

Total Hours: 45

TEXT BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	TalaronK,Casita,Pelczar And Reid.	Foundations in Microbiology	W.C.Brown Publishers	1993
2	Pelczar MJ, Chan ECS and Krein NR	Microbiology,	Tata McGraw- Hill Edition	2007
3	Prescott LM, Harley JP, Klein DA,	Microbiology, 5th Edition	McGraw Hill	2002
4	Kolwzan, B, Adamiak, W, Grabes, K, Pawelczyk, A	Introduction to Environmental Microbiology	ebook	2006

Course Objectives

- To understand the basic laws and concepts of chemical calculations.
- To explain the first and second laws of thermodynamics.
- To explain the overall material balances of chemical reactions and its basic calculations.
- To discuss the fluid flow mechanics and its concepts.
- To understand the fluid transportation.
- To understand the basic principles of chemical calculations and measurements.

Course Outcomes

1. Outline the basic chemical calculations and the basic laws governing it.
2. Illustrate basic laws of thermodynamics.
3. Infer the overall material balances of chemical reactions and its basic calculations.
4. Outline the application of fluid flow mechanics in chemical engineering.
5. Discuss the fluid flow and its measurements.
6. Understand the basic principles of chemical calculations and measurements.

UNIT- I BASIC CHEMICAL CALCULATIONS**(9)**

SI units, stoichiometry, basic chemical calculations: mole, atomic mass and molar mass, equivalent mass, conversion of mass fraction to mole fraction, molarity, normality, density, specific gravity. Ideal gas law- Ideal mixtures and solutions – Dalton's law of additive volumes, Henry's law, Raoult's law, Concepts of Simpson's rule and their applications to different systems.

UNIT- II FIRST AND SECOND LAWS OF THERMODYNAMICS**(8)**

Entropy, Enthalpy, Free energy, Energy balances, sensible heat, latent heat, vapour pressure, steady and unsteady state calculations.

UNIT- III MATERIAL BALANCES**(10)**

Overall and component balances, material balances without and with chemical reactions, degrees of freedom, steady and unsteady state, unit operations, recycle and bypass humidity calculations.

UNIT- IV FLUID MECHANICS**(10)**

Fluids; fluid statics and applications in chemical engineering; fluid flow; laminar; Turbulent pressure drops; compressible fluid flow concepts; multiphase flow concepts.

UNIT- V TRANSPORTATION OF FLUIDS**(8)**

Pumps- Types, Working principle, Characteristics, Suction and Cavitation; Measurements of flowing fluids; Fluidization and flow through Packed Bed Column

Total Hours: 45

TEXT BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Bhatt B.I., and Vora S.M.	Stoichiometry	Tata McGraw- Hill,	2010
2	McCabe W.L., Smith J.C, and Harriot P.	Unit Operations in Chemical Engineering	McGraw-Hill Inc	1993

COURSE OBJECTIVES

- To explain the basic reactions in organic chemistry
- To discuss the kinetics of enzymes using different methods
- To illustrate the enzyme inhibition process
- To outline the various enzymatic reactions in relation with stereochemistry
- To determine the specific enzyme structure and mechanism
- To classify the protein folding kinetics

COURSE OUTCOMES

1. Interpret the basic reactions in stereochemistry
2. Derive and calculate the kinetics of enzymes in different orders
3. Summarize the enzymatic reactions in stereochemistry
4. Illustrate the mechanism behind specific enzymes
5. Explain the protein folding kinetics
6. Discuss the protein folding pathways

UNIT-I CONCEPTS IN ORGANIC CHEMISTRY (9)

Stereochemistry: optical activity, chiral center – enantiomers - *R*, *S* notation, stereo selective and stereospecific reactions-*Z* and *E* isomers, *Re*, *Si* faces, conformational analysis, ethane, n-butane

mechanisms of SN1 SN2 reactions, E1E2 reactions, ester formation and hydrolysis, reaction rates, hammond's postulate, h/d effects, catalysis: general acid – base and covalent catalysis.

UNIT-II ENZYME KINETICS AND INHIBITION (9)

Steady state kinetics, derivation and significance of Michaelis Menten equation, Line weaver-Burke Plot, single and double displacement reactions, co-operativity - oxygen binding by haemoglobin. Inhibition – reversible and irreversible – competitive, non-competitive, uncompetitive inhibition (characteristics and examples).

UNIT-III STEREOCHEMISTRY OF ENZYMATIC REACTIONS (9)

Stereospecific enzymatic reactions - fumarase catalysed reactions - NAD dependent oxidation and reduction reactions - stereochemistry of nucleophilic reactions - chiral methyl group, chiral phosphate.

UNIT-IV ENZYME STRUCTURE AND MECHANISM (9)

Dehydrogenases (alcohol dehydrogenase) - proteases (serine protease), lysozyme, Ribonucleases, Ribozymes.

UNIT-V PROTEIN FOLDING KINETICS AND FOLDING PATHWAYS (9)

Kinetics of protein folding: basic methods, two state kinetics, multistate kinetics, transition states in protein folding, $^1\text{H} / ^2\text{H}$ exchange methods, folding of peptides, CI2 folding, molecular chaperones.

Total Hours: 45

TEXT BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	Fersht A. R	Structure and Mechanism in Protein Science: A Guide to Enzyme Catalysis and Protein Folding	W H Freeman	1999
2	Morrison, R. T and Boyd, R. N	Organic Chemistry	Prentice Hall of India Pvt Ltd	1999
3.	Ernest L. Eliel and Samuel H. Wilén	Stereochemistry of Organic Compounds	Wiley	1994

REFERENCE BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	Dugas H	Bioorganic Chemistry	Springer Verlag	1999
2	Zubay G L,	Biochemistry	WCB/McGraw- Hill publishers	1998
3	Nelson, D. L. and Cox, M. M	Lehninger Principles of Biochemistry 4 th Edition	Freeman, W. H. & Company	2004
4	Palmer, T	Enzymes	Affiliated East West Press Pvt.Ltd	2004

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To understand the stages of mitosis.
- To understand the chloroplast isolation from leaves.
- To demonstrate the different types of blood cells.
- To understand about the osmosis and tonicity.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
 2. Interpret the various staining techniques to identify the cell.
 3. Outline the stages of mitosis.
 4. Understand the blood cell identification.
 5. Understand the knowledge about the cell concentration with osmosis and tonicity.
 6. Recall assay to identify the cell condition.
-
1. Identification of given plant, animal and bacterial cells and their components by microscopy.
 2. Staining Techniques: (i) Leishmann staining (ii) Giemsa staining.
Staining for different stages of mitosis in *Allium cepa* (Onion).
Separation of plant pigments by Chromatography.
Identification of different types of blood cells
Isolation of chloroplasts from spinach leaves.
Osmosis and Tonicity.
Tryphan Blue Assay.

REFERENCE BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	Bregman, A. A	Laboratory Investigations in Cell and Molecular Biology	Wiley	2001
2	Dr.S.Rajan and Mrs.R.Selvi Christy	Experimental procedures in Life Sciences	Anjanna Book House, Chennai	2011

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To discuss the different culture media preparation.
- To demonstrate the culturing, growth and control of micro organisms.
- To understand about the chemicals that controls the bacterial growth.
- To optimize the parameters on bacterial growth.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
2. Interpret the various staining techniques to identify the cell.
3. Outline the different types of media preparation techniques.
4. Understand the growth of the organism and the parameters that influences their stability to grow.
5. Understand the knowledge about the chemicals that controls the bacterial growth.
6. Recall the growth curve and the control of microorganisms.

Laboratory Safety and Aseptic Techniques

Microscopy-Light Microscopy, Phase Contrast & Fluorescent Microscopy

Culture media – Types, preparation of nutrient broth and nutrient agar

Culturing of microorganisms – in broth and in plates (spread plate, pour plate, streak plate)

Staining Techniques & Motility Test

Quantitation of Microorganisms

Chemical Control of Microorganisms & Antibiotic Sensitivity Assay

Bacterial Growth Curve

Effect of different parameters on bacterial growth (temperature/aeration/pH)

Water quality analysis – Most Probable Number Test (MPN)

COURSE OBJECTIVES

- To understand the synthesis of Aspirin and p-nitroacetanilide
- To explain the preparation method for Acetanilide from Aniline
- To experiment on sucrose hydrolysis
- To perform reactions for the preparation of alpha D-glucopyranose penta acetate and 1,2:5,6-dicyclohexylidene- alpha-D glucofuranose.
- To determine the extraction procedure for lycopene
- To discuss the methods for the preparation of oleic acid and casein

COURSE OUTCOMES

1. Analyze the protocol for aspirin synthesis and p-nitroacetanilide
2. Infer the preparation of Acetanilide from Aniline
3. Outline the inference on sucrose hydrolysis
4. Determine the protocol for preparation of alpha D-glucopyranose penta acetate and 1,2:5,6-dicyclohexylidene- alpha-D glucofuranose.
5. Perform the extraction of lycopene from different sources
6. Experiment the suitable method for the preparation of casein from milk

Synthesis of Aspirin.

Synthesis of p-nitroacetanilide.

Preparation of Acetanilide from Aniline.

Hydrolysis of Sucrose.

Extraction of Lycopene

Preparation of alpha D-glucopyranose penta acetate.

Preparation of 1,2:5,6- dicyclohexylidene- alpha-D glucofuranose.

Preparation of Oleic acid.

Preparation of casein from milk

REFERENCE BOOKS

S.NO	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	Leonard, JLygo, B and Procter, G	Advanced Practical Organic Chemistry	CRC Press	1994

OBJECTIVE

To elevate the students into productivity powerhouses who can employ life skills to better their performances

UNIT I**4**

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II**3**

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III**4**

Introduction to HRM – Questions - Do's and Don't's - Interview - Mock GD - Stress Management

UNIT IV**4**

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL**15****REFERENCES**

S. N O.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Barun K Mitra	Personality Development and Soft Skills	Oxford University Press-New Delhi	2012
2	Rajiv K. Mishra	Personality Development	Rupa & Co.	2012

Course Objectives

- To infer the basic knowledge on agitation and its flow pattern in different systems.
- To explain the concept of filtration and its industrial application.
- To understand the different modes of heat transfer and its transfer through different dimensional surfaces.
- To discuss the types of convectional heat transfer and its application.
- To explain the different types and designing parameters of heat exchangers and evaporators.
- To explain the basics of design, equipmentation and calculations of evaporators and heat exchangers.

Course Outcomes

1. Interpret the properties of mixing and agitation in different flow systems.
2. Outline the basic principle of filtration and its application in different filtration methods.
3. Discuss the modes of heat transfer.
4. Illustrate the mechanism of heat transfer through different dimensional surfaces.
5. Infer the basics of convectional heat transfer in different surfaces.
6. Appraise the basics of design, equipmentation and calculations of evaporators and heat exchangers.

UNIT- I MIXING AND AGITATION**(8)**

Agitation: purpose, equipments, flow pattern, dimensional analysis; power; agitation of liquids; gas-liquid systems; gas-solid suspensions; agitator scale up.

UNIT-II FILTRATION**(8)**

Filtration-types, filter media, selection of medium, filter aids-filter theory, constant pressure filtration, constant volume batch filtration; continuous filtration; industrial filters; settling and sedimentation; centrifugation.

UNIT- III MECHANISM OF HEAT TRANSFER**(10)**

Modes of heat transfer, principles of conduction, Fourier's Law of heat conduction, thermal conductivity, steady state conduction, combined resistances, heat flow through a cylinder and sphere, unsteady state conduction, heat transfer from extended surfaces.

UNIT- IV CONVECTION HEAT TRANSFER**(10)**

Dimensional analysis, forced and natural convection, convection in flow over surfaces - pipes boiling and condensation.

UNIT- V HEAT EXCHANGERS**(9)**

Heat exchanger- types, Equipments; overall heat transfer coefficients; design; NTU concept; Evaporators; single and multiple effects; mass and enthalpy balances.

Total Hours: 45

TEXT BOOKS

S.NO	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Geankoplis C.J.	Transport Process and Unit Operations	Prentice Hall India	2002
2	McCabe W.L., Smith J.C, and Harriot P.	Unit Operations in Chemical Engineering	McGraw-Hill Inc	1993

REFERENCE BOOKS

S.NO	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Incropera F.P.	Fundamentals of Heat and Mass Transfer	John Wiley and Sons	2000

Course Objectives

- To explain the thermodynamic properties of fluids and its calculations.
- To discuss the basic concepts of solution properties.
- To illustrate the phase equilibria concepts for various systems.
- To outline the equilibrium criteria for various chemical reactions.
- To infer the knowledge on general thermodynamic processes.
- To explain the working principles and the process involved in the refrigeration and Liquefaction system.

Course Outcomes

1. Discuss the various properties of the fluids and its calculations.
2. Explain the concept of solution thermodynamics and composition models.
3. Analyze the criteria of phase equilibria for different components system.
4. Apply the concept of chemical reaction equilibria and equilibrium conversion.
5. Analyze the thermodynamic flow process.
6. Illustrate the working principles and the process involved in the refrigeration and Liquefaction system.

UNIT-I THERMODYNAMIC PROPERTIES OF FLUIDS (9)

Volumetric properties of fluids exhibiting non ideal behavior; residual properties; estimation of thermodynamic properties - equations of state; Actual property exchanges - Calculations; Maxwell's relations and applications.

UNIT- II SOLUTION THERMODYNAMICS (9)

Partial molar properties; concepts of chemical potential and fugacity; ideal and non-ideal solutions; concepts and applications of excess properties of mixtures; activity coefficient; composition models; Gibbs Duhem equation.

UNIT- III PHASE EQUILIBRIA (9)

Criteria - phase equilibria; v-l-e calculations for binary and multi component systems; liquid-liquid equilibria and solid-solid equilibria.

UNIT- IV CHEMICAL REACTION EQUILIBRIA (9)

Equilibrium criteria - homogeneous chemical reactions; evaluation of equilibrium constant; effect of temperature and pressure on equilibrium constant; calculation of equilibrium conversion and yields for single and multiple reactions.

UNIT- V THERMODYNAMIC ANALYSIS OF PROCESSES (9)

Thermodynamics of flow processes, Concept of lost work; entropy generation; power cycle (rankine, regenerative, reheat); liquefaction and refrigeration

1	Sandler S.I.	Chemical and Engineering Thermodynamics	John Wiley	1989
2	Urs von Stockar, Luuk A. M. van der Wielen	Biothermodynamics: The Role of Thermodynamics in Biochemical Engineering	EPFL Press	2013

Course Objectives

- To explain the basic idea on scope of biotechnology and its commercial production in modern biotechnology.
- To analyse the modern biotechnological processing techniques for the production of commercial bioproducts.
- To discuss the process of primary metabolite production in different industries.
- To discuss the process of secondary metabolite production.
- To explain the basic procedures for production of bioproducts.
- To illustrate the various methods for the production of recombinant products.

Course Outcomes

1. Outline the scope of biotechnology and its commercial potential.
2. Interpret the modern biotechnological processing techniques for the production of commercial bioproducts.
3. Illustrate the production methods of primary metabolites.
4. Illustrate the production methods of secondary metabolites.
5. Infer the knowledge on commercial enzyme and bioproduct production.
6. Explain the production of various commercially available products using recombinant technology.

UNIT I INTRODUCTION TO SPECTROMETRY**(9)**

Properties of electromagnetic radiation- wave properties – components of optical instruments – Sources of radiation – wavelength selectors – sample containers – radiation transducers – Signal process and read outs – signal to noise ratio - sources of noise – Enhancement of signal to noise - types of optical instruments – Principle of Fourier Transform optical Measurements.

UNIT II MOLECULAR SPECTROSCOPY**(9)**

Molecular absorption spectrometry –Transmittance and Absorbance – Beer's law – Theory - Instrumentation - Applications - Fluorescence and Phosphorescence spectrometry- Theory, Instrumentation – Applications –Infrared absorption spectrometry – theory - instrumentation – Applications – Interpretation of data- Raman spectroscopy – Theory - Instrumentation – applications- Interpretation of data- Circular dichroism spectrometry- Theory - Instrumentation – applications-Circular Nucleic acids and Proteins-Use of spectroscopy in biological and clinical analysis.

UNIT III MAGNETIC RESONANCE SPECTROSCOPY AND MASS SPECTROMETRY (9)

Theory of NMR – environmental effects on NMR spectra – chemical shift- NMRspectrometers – applicatons of ^1H and ^{13}C NMR- Molecular mass spectra – ion sources – Mass spectrometer. Applications of molecular mass - Electron paramagnetic resonance- g values – instrumentation, application.

UNIT IVSEPARATION METHODS (9)

Chromatography – Band broadening and optimization of column performance- Liquid chromatography – Partition chromatography - Adsorption chromatography – Ion exchange chromatography -size exclusion chromatography - Affinity chromatography- Gas chromatography & HPLC- - principles - applications Capillary electrophoresis – Applications

UNIT VTHERMAL METHODS (9)

Different thermal analysis techniques. Differential scanning calorimetry - instrumentation & application. Differential thermal analysis - instrumentation & application, DTA curve. Thermogravimetry – instrumentation & application, TG curve.

Total Hours: 45

TEXT BOOK

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICA TION
1	Willard, H. H and Merrit, L. L	Instrumental Methods of Analysis	Prentice Hall of India	2005
2	Skoog, D, A. Holler, J. F and Nieman, T. A.	Principles of Instrumental Analysis	Thomsan	2006

REFERENCE BOOKS

S.NO	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	G. W. Ewing	Instrumental Methods of Chemical	McGraw-Hill	1985
2	Skoog, D, A. Holler, J. F and Nieman, T. A.	Instrumental Methods of Chemical Analysis	Krishna prakasan	2004

Course Objectives

- To outline the classical genetics concepts of eukaryotes and prokaryotes.
- To explain the structure of nucleic acids and DNA replication.
- To understand the molecular process of transcription.
- To understand the basic machinery of translation and its mechanisms.
- To understand the regulation of gene expression and various types of mutation
- To discuss the different types of mutation and DNA repair mechanisms

Course outcomes

1. Discuss the concepts related to eukaryotic and prokaryotic genetics.
2. Identify the structure of nucleic acids, DNA replication and chromosome organization.
3. Illustrate the prokaryotic and eukaryotic transcription, and its post transcriptional modifications.
4. Outline the concept of genetic code, translation process and post translational modifications.
5. Interpret the process of regulation of gene expression and its importance.
6. Identify the different types of mutation and DNA repair mechanisms.

UNIT-I CLASSICAL GENETICS**(7)**

Eukaryotic genetics- Mendelian genetics, linkage, crossing over, classical experiments – Hershey and Chase, Avery McLeod & McCarty. Prokaryotic genetics - Bacterial conjugation, transduction and transformation.

UNIT- II STRUCTURE OF NUCLEIC ACIDS AND DNA REPLICATION (10)

Conformation of DNA, Types of RNA, Replication in prokaryotes, D-loop and rolling circle mode of replication, replication of linear viral DNA. Organisation of eukaryotic chromosome – cot value, replication of telomeres in eukaryotes

UNIT-III TRANSCRIPTION**(10)**

Conformation of RNA- Prokaryotic and Eukaryotic transcription, RNA polymerase, Transcription signals, transcription factors, Features of promoters and enhancers, ribozymes. Post transcriptional modification – 5' capping, adenylation, splicing, processing of rRNA and tRNA, RNA editing.

UNIT-IV TRANSLATION**(9)**

Genetic code, Salient features - Wobble hypothesis, basic machinery of translation and its mechanism, codon usage, Post translational modifications, protein targeting.

UNIT-V REGULATION OF GENE EXPRESSION**(9)**

Regulation of genes – replication, transcription & translation factors, Lac operon, ara operon and trp operon, phage life cycle, Mutation – transition, transversion, artificial & natural mutation, suppressor mutation and repair of DNA.

REFERENCE BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Weaver, R. F	Molecular Biology	Mc Graw Hill	2005

Course Objectives

- To understand the process of fermentation and basic fermentor configuration.
- To explain the medium requirements and media optimization methods for fermentation process.
- To explain the different sterilization methods and its kinetics and design.
- To discuss and solve the problems related to metabolic stoichiometry and energetics.
- To understand the modes of operations and various kinetic models for product formation.
- To analyze the different kinetic models for microbial growth and product formation.

Course outcomes

1. Discuss the general process of fermentation and fermentor configuration.
2. Analyze the medium requirements and medium formulations for fermentation process.
3. Outline the thermal death kinetics and different sterilization methods.
4. Solve problems related to stoichiometry of cell growth and energetic.
5. Illustrate the various modes of operation in fermentation process.
6. Analyze the different kinetic models for microbial growth and product formation.

UNIT-I OVERVIEW OF FERMENTATION PROCESSES**(7)**

Overview of fermentation industry, general requirements of fermentation processes, basic configuration of Fermentor and ancillaries, monitoring and controlling – fermentation parameters processes.

UNIT-II RAW MATERIALS AND MEDIA DESIGN**(9)**

Criteria for good medium, medium requirements for fermentation processes, carbon, nitrogen, minerals, vitamins and other complex nutrients, oxygen requirements, medium formulation of optimal growth and product formation, examples of simple and complex media, design of various commercial media for industrial fermentations – medium optimization methods.

UNIT- III STERILIZATION KINETICS**(9)**

Thermal death kinetics of microorganisms, batch and continuous heat sterilization of liquid media, filter sterilization of liquid media, air sterilization and design of sterilization equipment - batch and continuous.

UNIT- IV METABOLIC STOICHIOMETRY AND ENERGETICS**(10)**

Stoichiometry of cell growth and product formation, elemental balances, degrees of reduction of substrate and biomass, available electron balances, yield coefficients of biomass and product formation, maintenance coefficients energetic analysis of microbial growth and product formation, oxygen consumption and heat evolution in aerobic cultures, thermodynamic efficiency of growth.

UNIT- V KINETICS OF MICROBIAL GROWTH AND PRODUCT FORMATION (10)

Modes of operation - batch, fed batch and continuous cultivation. Simple unstructured kinetic models for microbial growth, Monod model, growth of filamentous organisms, product formation kinetics - leudeking-piret models, substrate and product inhibition on cell growth and product formation.

Total Hours: 45

TEXT BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICAT IONS
1	Bailey and Ollis	Biochemical Engineering Fundamentals	McGraw-Hill (2nd Ed.),	1986
2	Shule and Kargi	Bioprocess Engineering	Prentice Hall	1992

REFERENCE BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATIONS
1	Pauline Doran	Bioprocess Engineering Calculation	Academic Press	2012
2	Peter F. Stanbury, Stephen J. Hall & A. Whitaker	Principles of Fermentation Technology	Butterworth- Heinemann	1999
3	Harvey W. Blanch, Douglas S. Clark	Biochemical Engineering	CRC Press	2014

Course Objectives:

- To understand the basics of bioenergetics
- To explain the metabolism of carbohydrate
- To explain the nucleic acid synthesis and regulations
- To discuss the synthesis and catabolism of amino acids pathways
- To understand the lipid metabolism and its associated genetic disorders
- To relate the importance of metabolism and how it leads to disorders.

Course Outcomes:

1. Outline the relationship of bioenergetics in biological reactions.
2. Examine the knowledge of carbohydrate metabolic pathways.
3. Describe the concept of nucleic acid synthesis and regulations.
4. Illustrate the synthesis and catabolism of amino acids pathways.
5. Explain the lipid metabolism and its associated genetic disorders.
6. Discuss the importance of metabolism and how it leads to disorders.

UNIT-I BIOENERGETICS**(8)**

Metabolism - Energy relationship between the catabolic and anabolic pathways, Five major reactions in living cells, Bioenergetics and thermodynamics. Phosphoryl group transfers; ATP hydrolysis in two steps, Ping-Pong mechanism of nucleoside diphosphate kinase.

UNIT-II METABOLISM OF CARBOHYDRATES**(9)**

Major pathways of glucose utilization: glycolysis, fermentation, gluconeogenesis: carbohydrate synthesis from simple precursors. Pentose phosphate pathway; TCA cycle: Reactions and regulations, genetic disorders affecting carbohydrate metabolism

UNIT III METABOLISM OF AMINO ACIDS**(10)**

Biosynthesis of amino acids from acetyl coA, Biosynthesis of essential amino acids (Met, Thr, Lys, Ile, Val, Leu, Phe, Trp, Tyr). Glucose-alanine cycle, Urea cycle. Pathways of degradation of aromatic, glucogenic and ketogenic amino acids. **Inborn errors of amino acid metabolism.**

UNIT IV METABOLISM OF LIPIDS**(9)**

Digestion, mobilization, and transport of fats, fatty acid entry into mitochondria via the acyl-carnitine/carnitine transporter. Biosynthesis of fatty acid, Triacylglycerol and cholesterol. The β -oxidation pathway. Oxidation of a monounsaturated and polyunsaturated fatty acid. Genetic defects in fatty Acyl-CoA dehydrogenases causing serious diseases.

UNIT V METABOLISM OF NUCLEIC ACIDS**(9)**

Biosynthesis of nucleotides, denovo and salvage pathways for purines and pyrimidines, regulatory mechanisms; catabolism of purine & pyrimidine; Metabolic disorders associated with nucleic acid metabolism.

Total Hours: 45**TEXT BOOKS**

S.NO	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Nelson, D. L. and Cox, M. M	Lehninger Principles of Biochemistry 4 th Edition	Freeman, W. H. & Company	2004

REFERENCES

4	Salway, J. G.	Metabolism at a Glance	Blackwell Science Ltd	2000

ii) Course Objectives

- To understand the basic principle of analytical techniques
- To discuss the instrumental techniques used in chemical and biochemical research labs.
- To explain the fundamentals of spectroscopy operations.
- To carry out qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
- To carry out different spectroscopic techniques.
- To carry out different chromatographic techniques.

Course Outcomes

1. Explain the basic principle of analytical techniques
2. Discuss the instrumental techniques used in chemical and biochemical research labs.
3. Explain the fundamentals of spectroscopy operations.
4. Perform the qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
5. Demonstrate the different spectroscopic techniques.
6. Demonstrate the different chromatographic techniques.

Precision and validity in an experiment using absorption spectroscopy and validating Lambert-Beer's law using KMnO_4

Determination of analytical wavelength for KMnO_4

Determination of iron concentration using 1,10 phenanthroline.

Finding the pK_a of 4-nitrophenol using absorption spectroscopy.

UV spectra of nucleic acids.

UV – spectra of proteins.

Estimation of Sulphate by nephelometry.

Estimation of Al^{+++} by fluorimetry.

Determination of R_f value using TLC.

Course Objectives

- To understand chemical engineering principles and its operations.
- To understand the concept of pressure drops in pipes
- To understand the concept of pressure drops in different reactors.
- To understand the concept of filtration and heat transfer.
- To explain the different separation techniques.
- To understand the process involved in leaching

Course outcomes

Students undergoing this course will be able to

1. Outline the chemical engineering principles and operations.
2. Calculate the flow measurements and pressure drop in pipes and different reactors.
3. Analyze the process of filtration and heat transfer.
4. Perform the distillation and extraction.
5. Demonstrate the process involved in adsorption equilibrium.
6. Demonstrate the process involved in leaching and leaching.

Flow measurement and Pressure drop in pipes.

Pressure drop across Fluidized bed.

Pressure drop across packed column

Continuous rotary filtration

Heat exchanger

Simple and steam distillation

Liquid-liquid equilibria in extraction

Adsorption equilibrium

Leaching

Course Objective

- To understand the manufacturing of industrially important bioproducts from different natural source.
- To carry out the production of ethanol from molasses and grapes
- To carry out the production of Biofertilizers
- To carry out the production of Single cell protein (Spirulina)
- To carry out the mushroom cultivation
- To carry out the production of jam from mixed fruits

Course Outcome

- Demonstrate the production of commercially valuable bioproducts from different natural source.
- Demonstrate the production of ethanol from molasses and grapes
- Demonstrate the production of Biofertilizers
- Demonstrate the production of Single cell protein (Spirulina)
- Demonstrate the mushroom cultivation
- Demonstrate the production of jam from mixed fruits

Production of ethanol from molasses and grapes

Production of Biofertilizers

Production of Single cell protein (Spirulina)

Mushroom cultivation

Production of jam from mixed fruits

Course Objectives

- To understand the process of fermentation and basic fermentor configuration.
- To explain the medium requirements and media optimization methods for fermentation process.
- To explain the different sterilization methods and its kinetics and design.
- To discuss and solve the problems related to metabolic stoichiometry and energetics.
- To understand the modes of operations and various kinetic models for product formation.
- To analyze the different kinetic models for microbial growth and product formation.

Course outcomes

7. Discuss the general process of fermentation and fermentor configuration.
8. Analyze the medium requirements and medium formulations for fermentation process.
9. Outline the thermal death kinetics and different sterilization methods.
10. Solve problems related to stoichiometry of cell growth and energetics.
11. Illustrate the various modes of operation in fermentation process.
12. Analyze the different kinetic models for microbial growth and product formation.

UNIT-I ANALYSIS OF STR (8)

Analysis of STR: Stirred tank reactor - non-ideality, RTD and stability analysis, tanks in series and dispersion models – application to design of continuous STR.

UNIT-II ANALYSIS OF OTHER CONFIGURATIONS (9)

Analysis of other configurations: Packed bed reactor, airlift reactor, fluidized bed reactor bubble column reactors – non-ideality, RTD and stability analysis.

UNIT-III BIOREACTOR SCALE – UP (8)

Bioreactor scale-up: Regime analysis of bioreactor processes, oxygen mass transfer in bioreactors - microbial oxygen demands; methods for the determination of mass transfer coefficients; mass transfer correlations. Scale up criteria for bioreactors based on oxygen transfer, power consumption and impeller tip speed.

UNIT-IV MODELLING AND SIMULATION OF BIOPROCESSES (10)

Modelling and simulation of bioprocesses: Study of structured models for analysis of various bioprocess – compartmental models, models of cellular energetics and metabolism, single cell models, plasmid replication and plasmid stability model. Dynamic simulation of batch, fed batch, steady and transient culture metabolism.

UNIT-V BIOREACTOR CONSIDERATION IN ENZYME SYSTEMS**(10)**

Bioreactor consideration in enzyme systems: Analysis of film and pore diffusion effects on kinetics of immobilized enzyme reactions; formulation of dimensionless groups and calculation of effectiveness factors. Design of immobilized enzyme reactors – packed bed, fluidized bed and membrane reactors.

Total Hours: 45**TEXT BOOKS**

1	Anton Moser	Bioprocess Technology, Kinetics and Reactors	Springer Verlag	1988
2	James E. Bailey & David F. Ollis	Biochemical Engineering Fundamentals	McGraw- Hill	1986
3	Shuler and Kargl	Bioprocess Engineering	Prentice Hall	1992

REFERENCE BOOKS

S.NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATI ONS
1	James M. Lee	Biochemical Engineering	PHI	1991
2	EMT.EL- Mansi.CFA.Bryce, A.L.Demain, AR.Allman	Fermentation Microbiology and Biotechnology	CRC Press	2011
3	Harvey W. Blanch, Douglas S. Clark	Biochemical Engineering	CRC Press	2014

Course Objectives

- To understand the basic concepts in rDNA technology.
- To explain the importance of recombinant molecules in rDNA technology.
- To understand the gene libraries construction and to perform blottings.
- To outline the concepts involved in gene library construction and differentiate between different gene libraries.
- To explain about the different types of PCR, the main concept in genetic engineering.
- To understand the vast applications of rDNA technology in diverse fields.

Course Outcomes

1. Discuss the knowledge on the basics of rDNA technology.
2. Outline the usage of recombinant molecules in research and development.
3. Understand gene libraries construction and to perform blottings.
4. Interpret the in-depth knowledge acquired to perform PCR reactions and their types.
5. Infer the importance of DNA sequencing methods.
6. Summarize the concept of rDNA technology and its importance in cloning, gene therapy and relate its applications.

UNIT-I BASICS OF RECOMBINANT DNA TECHNOLOGY (6)

Role of genes within cells, genetic elements that control gene expression, Isolation and separation of genomic and plasmid DNA; restriction and modifying enzymes, safety guidelines of recombinant DNA research.

UNIT-II CREATION OF RECOMBINANT MOLECULES (9)

Restriction mapping, design of linkers and adaptors, gene editing. Characteristics of plasmid and phage vectors, prokaryotic and eukaryotic expression vectors. Insect, Yeast and Mammalian vectors.

UNIT-III CONSTRUCTION OF LIBRARIES (10)

Construction of cDNA and genomic libraries. Screening of libraries with DNA probes and with antisera. Cloning : Characterization of recombinant clones by southern, Northern, western and PCR analysis, factors affecting foreign gene expression, over expression and purification of recombinant proteins.

UNIT-IV THEORIES OF rDNA TECHNIQUES (10)

Polymerase chain reaction: Inverse PCR, Nested PCR, Taqman assay, RT - PCR, RACE PCR, RAPD, RFLP, site directed mutagenesis (Kunkel's Method), nucleic acid sequencing- Sangers method, Maxam Gilbert sequencing and automated sequencing method.

UNIT-V APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY**(10)**

Applications of recombinant DNA Technology: Cloning in plants, Ti plasmid, Methods of producing transgenic animals and their applications, gene silencing, gene therapy.

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Old RW, Primrose SB	Principles of Gene Manipulation, An Introduction To Genetic Engineering	Blackwell Science Publications	1993
2	Ansabel FM, Brent R, Kingston RE, Moore DD.	Current Protocols in Molecular Biology	Greene Publishing Associates	1988

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Berger SI, Kimmer AR	Methods in Enzymology	Academic Press	1987

Course Objectives

- To explain the basic idea on scope of biotechnology and its commercial production in modern biotechnology.
- To analyse the modern biotechnological processing techniques for the production of commercial bioproducts.
- To discuss the process of primary metabolite production in different industries.
- To discuss the process of secondary metabolite production.
- To explain the basic procedures for production of bioproducts.
- To illustrate the various methods for the production of recombinant products.

Course Outcomes

7. Outline the scope of biotechnology and its commercial potential.
8. Interpret the modern biotechnological processing techniques for the production of commercial bioproducts.
9. Illustrate the production methods of primary metabolites.
10. Illustrate the production methods of secondary metabolites.
11. Infer the knowledge on commercial enzyme and bioproduct production.
12. Explain the production of various commercially available products using recombinant technology.

UNIT-I INTRODUCTION TO INDUSTRIAL BIOPROCESS (8)

Biotechnology: Scope and importance, Commercial potential of Biotechnology in India. Traditional and modern biotechnology. products relating to modern biotechnology, Industrially important organisms, fermentation processes – modes of operation.

UNIT- II PRODUCTION OF PRIMARY METABOLITES (10)

Production of commercially important organic acids - citric acid, lactic acid, acetic acid, amino acids - glutamic acid, phenylalanine, aspartic acid , alcohols - ethanol, butanol.

UNIT-III PRODUCTION OF SECONDARY METABOLITES (10)

Secondary metabolites: antibiotics: beta-lactams (penicillin, cephalosporin), aminoglycosides (streptomycin) macrolides (erythromycin), vitamins (B12) and steroids (progesterone).

UNIT- IV PRODUCTION OF ENZYMES AND OTHER BIOPRODUCTS (9)

Production of industrial enzymes - proteases, amylases, lipases, cellulases etc., Production of biopesticides, biofertilizers, biopreservatives (Nisin), cheese, biopolymers (xanthan gum, PHB), single cell protein.

UNIT- V PRODUCTION RECOMBINANT DNA PRODUCTS**(8)**

Production of recombinant proteins - therapeutic and diagnostic applications, production of vaccines (hepatitis B vaccine), hormones (insulin). Production of monoclonal antibodies-commercial scale, products of plant (human growth hormone) and animal cell culture (interferons).

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Casida Jr, L.E.	Industrial Microbiology	New Age International (P) Ltd	2000
2	Presscott, S. C. and Dunn, C. G	Industrial Microbiology	Agrobios (India).	2006

S.No.	Author(s) Name	Title of the book	Publisher/journal	Year of Publication
1	Cruger, W and Crueger, A	Biotechnology: A Textbook of Industrial Microbiology	Panama Publishing Corporation	2003
2	Moo, M and Young	Comprehensive Biotechnology	Pergamon	2007
3	Barta, A. <i>et al.</i>	The expression of a nopaline Synthase human growth hormone chimaeric gene in transformed tobacco and sunflower callus tissue	Plant Mol. Biol	1986

Course Objectives

- To understand the basics of operating systems and biological databases.
- To understand the basics on available tools and databases for performing research in bioinformatics.
- To explain the dynamic programming approach and methods of pair wise alignment.
- To explain the various methods for the construction of phylogenetic trees.
- To understand the machine learning techniques and protein structure analysis.
- To understand the basics of PERL programming and its functions.

Course Outcomes

1. Illustrate the basics of operating systems and biological databases.
2. Outline the various biological databases and database management system models.
3. Discuss the different algorithms for the sequence analysis.
4. Construct the phylogenetic trees using various methods and protein prediction methods.
5. Outline the machine learning techniques and various techniques for protein structure analysis.
6. Explain the basics of PERL programming and its operations and functions.

UNIT-I INTRODUCTION TO BIOLOGICAL DATABASES**(9)**

Introduction- types, Biological databases, Information Retrieval from Biological Databases: for example Nucleic acid databases: Genbank, Protein Databases- Swissprot, Sequence Formats, Sequence storage, Sequence submission to sequence Database.

UNIT-II ANALYZING DNA, RNA AND PROTEIN SEQUENCES IN DATABASES (9) Database technology, Genbank: organisms in Genbank, genomic DNA databases, cDNA databases corresponding to expressed genes, Introduction to phylogenetics- distance based trees, UPGMA, neighbour joining trees, Expressed sequence tags, Sequence tagged sites, Genome survey sequences, High throughput genomic sequence

UNIT-III PAIRWISE SEQUENCE ALIGNMENT**(9)**

Alignment Types: Local alignment, Global alignment, Scoring matrices- PAM, BLOSUM, Gaps, Dot Plots. Dynamic programming Approach: Needleman and Wunsch Algorithm, Smith and waterman Algorithm, Heuristic Approach: BLAST, FASTA

UNIT-IV MULTIPLE SEQUENCE ALIGNMENT**(9)**

Exhaustive Algorithm- Divide and Conquer alignment, Heuristic Algorithm: Progressive Alignment- ClustalW, Tcoffee, Iterative Alignment- PRRN, Block based method- Match-Box, DIALIGN2

UNIT-V INTRODUCTION TO PROTEIN STRUCTURE PREDICTION**(9)**

Secondary structure prediction for Globular and Trans-membrane proteins, 3D Protein structure file format: PDB, mmCIF, MMDB, Methods of Tertiary structure prediction: Threading and fold recognition methods, Homology modeling, Fold recognition databases.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Dan E. Krane, Michael L. Rayme	Fundamental Concepts of Bioinformatics	Pearson education	2004
2	Andreas D. Baxevanis, B. F. Francis Ouellette	Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins	Wiley- Interscience	2004
3	David W. Mount	Sequence and Genome Analysis	Cold Spring Harbor Laboratory	2004
4	Jonathan Pevsner	Bioinformatics and Functional Genomics	Wiley-Liss	2003

Course Objectives

- To understand the knowledge on enzyme mechanism of action.
- To explain the production & purification of enzymes.
- To explain about the kinetics of single substrate enzyme action
- To understand the kinetics of multi substrate enzyme action
- To illustrate on immobilization and applications.
- To understand the features of enzyme biosensors and its application.

Course Outcomes

1. Discuss the overview of enzyme mechanism of action.
2. Outline the knowledge on extraction, purification and characterization of enzymes.
3. Understand the kinetics of multisubstrate enzyme action.
4. Interpret the various enzyme immobilization techniques and its application in bioreactor.
5. Summarize the basics of enzyme engineering.
6. Explain the features of enzyme biosensors and its application.

UNIT-I INTRODUCTION TO ENZYMES**(9)**

Chemical nature, apoenzyme, coenzyme, cofactor, prosthetic group. Nomenclature – IUB system of classification – Six main classes with examples. Mechanisms of enzyme-action; Specificity, type of enzyme specificity, Active site, Models of enzyme action – Lock and key, induced fit, transition state theory. metal ion catalysis, proximity & orientation. metal-activated enzyme and metalloenzyme.

UNIT- II EXTRACTION, PURIFICATION AND CHARACTERIZATION OF ENZYMES (9)

Production and purification of crude enzyme extracts from plant, animal and microbial sources; methods of characterization of enzymes; development of enzymatic assays,

UNIT- III KINETICS OF MULTISUBSTRATE - ENZYME ACTION**(9)**

Kinetics of Single substrate reaction – estimation of Michaelis-Menten parameters and Multisubstrate reactions mechanisms; Turnover number; types of inhibition Allosteric regulation of enzymes, Monod - Changeux - Wyman model, pH and temperature effect on enzymes & deactivation kinetics.

UNIT- IV ENZYME IMMOBILIZATION**(9)**

Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, applications, advantages and disadvantages. applications. Immobilised enzyme bioreactors.

UNIT- V ENZYME ENGINEERING AND BIOSENSORS**(9)**

Chemical and genetic methods, Property alteration, Prediction of enzyme structure, design and construction of novel enzymes; Enzyme Biosensor – Classification, Design, Application - industry, healthcare, food and environment.

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Palmer, T	Enzymes	Affiliated East West Press pvt. Ltd	2004
2	Wiseman	Enzyme Biotechnology	Ellis Horwood Publishers	1995
3	Chaplin and Bucke	Enzyme Technology	Cambridge University Press	1990
4	Price and Stevens	Fundamentals of Enzymolog	Oxford University Press	2002

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	H. W. Blanch and D. S. Clark	Biochemical Engineering	Marcel Dekker, Inc.	1996
2	J. E. Bailey and D. F. Ollis,	Biochemical Engineering Fundamentals	McGraw Hill	1986
3	E. K. Pye and L. B. Wingard	Enzyme Engineering II,	Plenum Press	1974

Course Objectives

- To illustrate the genetic material and its biological significance in organization.
- To explain the basic ideas on structure and function on genetic material.
- To list the various functions of Nitrogen fixation.
- To label the basic theory of genes involved in the pathogenesis.
- To develop a picture about applications of plant biotechnology.
- To discuss the different stages of developments in gene analysis and its recombination.

Course Outcomes

1. Summarize about the importance of genetic material and its uses.
2. Determine the structure and function of the genetic material.
3. Express the functions of fixing nitrogen to soil through microbes.
4. Be aware of the conceptualization behind various genes involved in pathogenesis.
5. Describe the various functions and application of plant biotechnology through tissue culture.
6. Summarize and predict the different stages of developments in gene analysis and its recombination.

UNIT- I ORGANIZATION OF GENETIC MATERIAL (9)

Genetic material of plant cells – nucleosome structure and its biological significance; junk and repeat sequences; outline of transcription and translation.

UNIT II CHLOROPLAST & MITOCHONDRIA (9)

Structure, function and genetic material; RUBISCO synthesis and assembly, coordination, regulation and transport of proteins. Mitochondria: Genome, cytoplasmic male sterility and import of proteins.

UNIT- II NITROGEN FIXATION (9)

Nitrogen fixation Process - Nitrogenase activity, nod genes, nif genes, bacteroids- **Applications.**

UNIT- IV AGROBACTERIUM & VIRAL VECTORS (9)

Pathogenesis, crown gall disease, genes involved in the pathogenesis, Ti plasmid – t- DNA, importance in genetic engineering. Viral Vectors: Gemini virus, cauliflower mosaic virus, viral vectors and its benefits.

UNIT- V APPLICATION OF PLANT BIOTECHNOLOGY (9)

Outline of plant tissue culture, transgenic plants, herbicide and pest resistant plants, **Drought/salinity/cold tolerant plants**, molecular pharming, therapeutic products.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Gamburg OL, Philips GC,	Plant Tissue & Organ Culture fundamental Methods	Narosa Publications	1995
2	Singh BD.	Text Book of Biotechnology	Kalyani Publishers	1998

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Heldt HW	Plant Biochemistry & Molecular Biology	Oxford University Press	1997
2	Ignacimuthu .S	Applied Plant Biotechnology	Tata McGraw-Hill	1996

Course Objectives

- To understand the constituents of food and energy.
- To classify the different sources of microbes in food that assist food spoilage.
- To record the basic notion on fermented food products.
- To differentiate and organize the distinct food additives used.
- To explain the basic theory of food processing and preservation.
- To discuss the problems related to food deterioration and its preventive measures.

Course Outcomes

1. Compare and contrast different food constituents and their effectiveness.
2. Summarize the controlling measures for food spoilage.
3. Prioritize diverse properties of fermented foods.
4. Construct and design the food additives for food preservation.
5. Apply the knowledge on basics of food processing and preservation methods.
6. Examine and solve the problems related to food deterioration and its preventive measures.

UNIT I FOOD AND ENERGY**(9)**

Constituents of Food- Water : importance, water in food, activity and shelf life of food; Carbohydrates: functional properties of sugars and polysaccharides in food; Lipids: uses, physical and chemical properties; Proteins and amino acids: physical and chemical properties, distribution, functions and functional properties; Vitamins and Minerals: Dietary sources; Nutritive value of foods, food as a source of energy, food health and disease.

UNIT II FOOD MICROBIOLOGY**(9)**

Types of micro-organism normally associated with food -mold, yeast, and bacteria. Micro-organisms in natural food products. Biochemical changes caused by micro-organisms. Food poisoning and microbial toxin. Spoilage of vegetables, fruit, meat, poultry, beverages and other food products. Food safety.

UNIT III FERMENTATION PRODUCTS**(9)**

Enzymes in foods and food industry, Nature and type of starters, Role of starters in Fermented foods, Fermentation of Milk products-Fermented soy and peanut milk, Idli, Fermented fish products, Pickles, Fermented Olives ; Production of distilled beverage alcohol, wine, brandy, and beer. Mycoprotein production.

UNIT IV FOOD ADDITIVES**(9)**

Chemical and physical methods of food analysis for determination of food composition; Pigments in food, food flavours, food additives and toxicants. Natural sweeteners and artificial sweeteners - role in controlling diseases.

UNIT V FOOD PROCESSING & PRESERVATION**(9)**

Basic principles, unit operations Involved in the food processing methods; Objectives, importance and functions of quality control. Principles involved in the use of sterilization, pasteurization and blanching, thermal death curves of micro organisms, canning, frozen storage characteristics of foods, microbial activity at low temperatures, factors affecting quality of foods in frozen storage; irradiation preservation of foods.

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	James M. Jay, Martin J. Loessner, David A. Golden	Modern Food Microbiology	Springer Science & Business Media	2005
2	William C.Frazier	Food Microbiology	Tata MC Graw hill	1987

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	H.-D. Belitz, Werner Grosch, Peter Schieberle	Food Chemistry	Springer Science & Business Media	2009
2	B.Sivashankar	Food processing and preservation	Prentice – Hall of India Pvt.Ltd.New Delhi	2002.

Course Objectives

- To understand the concept of thermal death kinetics.
- To understand the concept of batch sterilization.
- To predict the design for media components using Plackett Burman and RSM.
- To perform the batch cultivation and practice $k_L a$ estimation methods.
- To understand the procedure to calculate the residence time distribution.
- To demonstrate enzyme kinetics and enzyme immobilization techniques.

Course Outcomes

1. Evaluate the thermal death kinetics.
2. Perform the batch sterilization batch cultivation.
3. Identify and perform media optimization using Plackett Burman and RSM.
4. Demonstrate the different $k_L a$ estimation methods.
5. Perform the experiment on residence time distribution.
6. Interpret enzyme kinetics and enzyme immobilization techniques.

Thermal death kinetics

Batch sterilization design

Media designing using Plackett Burman and RSM

Batch cultivation

Estimation of $k_L a$ – dynamic gassing method

Estimation of $k_L a$ – sulphite oxidation method

Estimation of $k_L a$ – power correlation method

Residence time distribution

Enzyme kinetics – Michaelis Menten parameters.

Enzyme immobilization.

Course Objectives

- To outline and evaluate the methods for isolation and purification of DNA from plant and animal samples.
- To explain the protocol to run the agarose gel electrophoresis sample analysis.
- To demonstrate the DNA ligation techniques for transformation and screening of rDNA.
- To understand the methods involved in optimization protocol for recombinant protein expression.
- To explain the importance of high throughput screening, SDS PAGE and PCR.
- To compile the overall structure of rDNA technology and implement its techniques in research and development.

Course Outcomes

1. Carry out agarose gel electrophoresis and isolation of DNA samples individually.
2. Develop the knowledge of techniques involved in DNA isolation and purification.
3. Perform the restriction enzyme digestion and ligation of DNA samples.
4. Produce recombinant DNA and implement blue white screening techniques to screen them.
5. Develop methods to produce recombinant proteins and understand their applications and perform SDS PAGE and PCR reactions.

Agarose gel electrophoresis

Isolation of plasmid & chromosomal DNA from bacterial cell

Isolation of plant cell genomic DNA from plant source

Isolation of genomic DNA from animal cell

Purification of DNA from agarose gel

Restriction enzyme digestion and ligation

Competent cells preparation (CaCl₂ method)

Transformation and screening for recombinants

Blue and white selection for recombinants

Optimization of inducer concentration and time of induction for recombinant protein expression.

SDS PAGE

PCR

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	David, L. G and Michael, K. W	Basic Methods in Molecular Biology	Prentice Hall Inc	1994
2	Sambrook, J. and Russel, D. W	Molecular Cloning Laboratory Manual	Cold Spring Harbor Laboratory Press	2001

Course Objectives

- To explain the sequence retrieving techniques from biological databases.
- To explain how to utilize the tools such as BLAST, FASTA, CLUSTAL, OMEGA, EMBOSS, PHYLIP etc.
- To illustrate the basics of pattern matching by pairwise and multiple sequence alignment.
- To understand the 3D structure of protein.
- To explain the molecular visualization tools and impart knowledge on ExPASy Server.
- To understand the basics of Perl programming

Course Outcomes

1. Outline the techniques to retrieve sequences from different biological databases.
2. Discuss the pattern matching by pairwise and multiple sequence alignment
3. Construct phylogenetic tree by using distance based and character based methods
4. Predict and validate 3D structure of protein
5. Predict the protein parameters using ExPASy proteomic tools.
6. Understand the programming using PERL language.

NCBI database.

BLAST – Similar DNA sequences search

EMBL – Nucleotide sequence database

SWISSPROT/TREMBL – Protein sequence database

Analysis of Protein sequence using PIR database

Analysis of structural features of proteins using protein data bank and SWISS PDB viewer

Eukaryotic gene prediction

Protein sequence analysis tools

Design of primers for cloning.

Multiple Sequence alignment & phylogenetic tree construction.

Course Objectives

- To explain the types of chromatography
- To illustrate the partial purification of enzymes
- To understand the ultrafiltration process
- To carry out ion exchange & gel filtration chromatography
- To carry out affinity chromatography
- To understand the application of chromatography

Course outcomes

- Outline the types of chromatography
- Explain the partial purification of enzymes.
- Elaborate the process of ultrafiltration
- Perform the ion exchange & gel filtration chromatography
- Perform the affinity chromatography
- Compile the application of chromatography

Ammonium Sulphate /TCA/ Organic solvent precipitation

Ultrafiltration using tangential-flow membrane separation

Ion Exchange Column Chromatography

Gel Filtration chromatography

Affinity chromatography

Mini project

SEPARATION OF BIOACTIVE COMPOUNDS FROM PLANT MATERIAL

1 0 0 – 100

Course Objective

- To explain the basic concepts of natural product isolations.
- To explain the principles of chromatography.
- To discuss the applications of modern NMR.
- To understand the extraction process.
- To demonstrate the extraction and isolation of caffeine from tea leaves.
- To understand the concept of separation of bioactive compounds.

Course Outcome

- Outline the general concepts of bioproduct isolation from various natural sources.
- Elaborate the principles of chromatography.
- Summarize the applications of modern NMR.
- Outline the extraction process.
- Carry out the experiments related to extraction and isolation of caffeine from Tea Leaves.
- Discuss the concept of separation of bioactive compounds.

UNIT- I GENERAL CONCEPT OF NATURAL PRODUCT ISOLATION

Natural Product Isolation, Extraction of Plant Secondary Metabolites, [Biochemical analysis of secondary metabolites](#), Selecting General Separation Conditions, Principles of Chromatography, An Introduction to Planar Chromatography, Applications of Liquid Chromatography, Isolation of Natural Products by Low-Pressure Column Chromatography, Crystallization in Final Stages of Purification, Determination of the Nature of the Compound, Applications of Modern NMR Techniques in the Structural Elucidation, Identification and Characterization

UNIT-I I LABORATORY- EXTRACTION AND ISOLATION OF CAFFEINE FROM TEA LEAVES

General background and overview of the experiment, Caffeine extraction: Solid-liquid Extraction, Overview of the extraction process, Purification, Isolation of caffeine from tea leaves

Course Objectives

- To understand the basics of molecular diffusion and mass transfer concepts.
- To explain the gas absorption and its related concepts.
- To explain the various vapour liquid operations and its concepts.
- To understand the HETP, HTU and NTU concepts.
- To outline the extraction and leaching principles.
- To outline the Solid Fluid operations.

Course Outcomes

1. Discuss the molecular diffusions and mass transfer operation in different system.
2. Outline the absorption principles and its concepts for gas liquid operations.
3. Infer the basic concept of equilibria and distillation concepts in vapour liquid operations.
4. Understand the HETP, HTU and NTU concepts.
5. Interpret the equilibria of different systems in extraction and leaching operations.
6. Outline the concepts of adsorption and drying in solid – fluid operations.

UNIT- I DIFFUSION AND MASS TRANSFER (9)

Molecular diffusion in fluids and solids; Inter phase Mass Transfer; Mass Transfer coefficients; Analogies in Transport Phenomenon.

UNIT- II GAS LIQUID OPERATIONS (9)

Principles of gas absorption; Single and Multi component absorption; Absorption with chemical reaction; Design principles of absorbers; Industrial absorbers; HTU, NTU concepts.

UNIT- III VAPOUR LIQUID OPERATIONS (9)

V-L Equilibria; Simple, Steam and Flash Distillation; Continuous distillation; McCabe- Thiele & Ponchon-Savarit Principles; Industrial distillation equipments, HETP, HTU and NTU concepts.

UNIT- IV EXTRACTION OPERATIONS (9)

L-L equilibria, Staged and continuous extraction, Solid-liquid equilibria, Leaching principles.

UNIT- V SOLID FLUID OPERATIONS (9)

Adsorption equilibria – Batch and fixed bed adsorption; Drying-Mechanism-Drying curves -Time of Drying; Batch and continuous dryers.

Total Hours: 45+15 = 60

TEXT BOOK

. S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Treybal R.E.	Mass Transfer Operations	McGraw-Hill,	1981
2	Geankoplis C.J.	Transport Processes and Unit Operations	Prentice Hall	2002
3	Coulson and Richardson	Chemical Engineering Vol. I & II	Asian Books Pvt Ltd	1998

Course objectives:

- To understand the basic knowledge of cells and organs of Immune system.
- To explain the different cellular responses and its functions.
- To understand the basic views on monoclonal antibodies and antigen- antibody interactions.
- To outline the Immune responses to various disease and different immunologic reactions in Human body.
- To explain the organ transplantation and tumor immunology.
- To outline the basics of autoimmunity.

Course outcomes:

1. Discuss the cells and components of immune system.
2. Explain the basics of B, T cells, genes and generation of antibody and its functions.
3. Infer the basic views on monoclonal antibodies and antigen- antibody interactions.
4. Discuss the concept of immunity and various immunological responses to infections.
5. Discuss the basics of Transplantation and tumor therapies.
6. To illustrate the current trends in treatment of auto immune disease.

UNIT-I INTRODUCTION**(7)**

Cells of immune system, innate and acquired immunity, primary and secondary lymphoid organs, Components of immune system: antibodies, antigens, haptens, adjuvants, types of immune responses, theory of clonal selection.

UNIT-II CELLULAR RESPONSES**(10)**

Development, maturation, activation and differentiation of T-cells and B-cells: TCR, antibodies, structure and functions; antibodies: genes and generation of diversity; antigen-antibody reactions; monoclonal antibodies: principles and applications; antigen presenting cells; major histocompatibility complex; antigen processing and presentation; regulation of T-cell and B-cell responses.

UNIT-III INFECTION AND IMMUNITY**(11)**

Injury and inflammation; immune responses to infections: immunity to viruses, bacteria, fungi and parasites, cytokines, complement, immunosuppression, tolerance, allergy and hypersensitivity, resistance and immunization: Vaccines.

UNIT-IV TRANSPLANTATION AND TUMOR IMMUNOLOGY**(10)**

Transplantation: genetics of transplantation, laws of transplantation, problems in transplantation: Basis of Graft rejection, specificity and memory of graft rejection; Role of cell mediated response in graft rejection, Transplantation antigens, Mechanisms involved in Graft rejections, tumor immunology-immune therapy

UNIT-VAUTOIMMUNITY**(7)**

Autoimmunity, Auto immune diseases and diagnosis, proposed mechanisms for induction of Autoimmunity, Treatment of Autoimmune diseases; current therapies, monoclonal antibody and diagnosis, treatment.

Total Hours: 45**TEXT BOOKS**

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ashim K. Chakravathy	Immunology	Tata McGraw- Hill	1998

Course Objectives

- To understand the foundation and advanced information on biopharmaceutical aspects in relation to drug development.
- To understand the basics of pharmacokinetics.
- To discuss the drug manufacturing, process and its application.
- To explain the manufacture of solid dosage forms of drugs.
- To understand the manufacture process of liquid orals and topical.
- To discuss the legal steps involved in progressing a new drug to market.

Course Outcomes

1. Illustrate the different pharmaceutical parameters for the current and future biotechnology related products on the market.
2. Outline the concepts of Pharmacokinetics.
3. Infer the basic knowledge on drug process, manufacturing methods and its application.
4. Discuss about the solid dosage forms of drug manufacturing.
5. Explain the manufacturing process of liquid orals and topical.
6. Interpret the legal steps involved in progressing a new drug to market.

UNIT- I INTRODUCTION**(7)**

History of pharmacy, pharmacopeia - Types, monograph- development, types of various dosage forms, economics and regulatory aspects.

UNIT- II BASICS OF PHARMACOKINETICS**(10)**

Mechanism of drug action; physico-chemical properties and principles of drug metabolism; pharmacokinetics.

UNIT- III MANUFACTURE OF DRUGS, PROCESS AND APPLICATIONS**(9)**

Drug development process- Types of reaction process – Fermentation, organic synthesis, extraction, special requirements for bulk drug manufacture- QC instrumentation, Analysis.

UNIT- IV MANUFACTURE OF SOLID DOSAGE FORMS**(9)**

Compressed tablets; dry and wet granulation; slugging or direct compression; tablet presses; coating of tablets; capsule preparation.

UNIT- V MANUFACTURE OF LIQUID ORALS AND TOPICALS**(10)**

Oral liquids – vegetable drugs – topical applications; preservation of drugs; analytical methods and other tests used in drug manufacture; packing techniques; quality management; GMP.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	David B. Troy, Paul Beringer	Remington: The science and practice of pharmacy	Lippincott Williams & Wilkins	2006
2	Gareth Thomas	Medicinal Chemistry. An introduction	John Wiley	2000
3	Katzung B.G.	Basic and Clinical Pharmacology	Prentice Hall of Intl	1995

Course Objectives

- To define the basic view of concept of molecular modelling.
- To demonstrate the computational quantum mechanics through different methods.
- To explain the general features of molecular mechanics.
- To discuss the molecular dynamics simulation methods.
- To outline the basic concept on cheminformatics molecular modeling.
- To explain the diverse techniques on molecular modeling.

Course Outcomes

1. Identify different views on global and local energy minima through molecular modeling.
2. Differentiate various calculations on molecular properties.
3. Illustrate the concept behind molecular mechanics through derivative methods.
4. Evaluate and characterize molecules simulation through dynamics methods.
5. Analyze and categorize the structure based drug design for targets.
6. Explain the diverse techniques on molecular modeling.

UNIT-I MOLECULAR MODELLING**(9)**

Introduction to concept of molecular modeling, molecular structure and internal energy, applications of molecular graphics, coordinate systems, potential energy surfaces, discussion of local and global energy minima

UNIT-II QUANTUM MECHANICS**(9)**

Introduction to the computational quantum mechanics; one electron atom, many electronic atoms and molecules, Hartree Fock equations; calculating molecular properties using ab initio and semi empirical methods.

UNIT-III MOLECULAR MECHANICS**(9)**

Molecular mechanics; general features of molecular mechanics force field, bond stretching, angle bending, torsional terms, non – bonded interactions; force field parameterization and transferability; effective pair potential, energy minimization; derivative and non – derivative methods, applications of energy minimization.

UNIT-IV MOLECULAR DYNAMICS**(9)**

Molecular dynamics simulation methods; molecular dynamics using simple models, molecular dynamics with continuous potential, setting up and running a molecular dynamic simulation, constraint dynamics; Monte Carlo simulation; Monte Carlo simulation of molecules.

UNIT-V MODELLING AND DRUG DESIGN**(9)**

Introduction to cheminformatics, Macromolecular modeling, design of ligands for known macro molecular target sites, Drug- receptor interaction, classical SAR /QSAR studies and their implications to the 3 D modeler, 2-D and 3-D database searching, pharmacophore identification and novel drug design, molecular docking, Structure-based drug design for all classes of targets.

Total hours : 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Andrew Leach	Molecular Modelling: Principles and Applications	Prentice Hall	2001
2	N. Claude Cohen	Guidebook on Molecular Modeling in Drug Design	Academic Press	1996

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Yvonne C. Martin, editor, Peter Willett	Designing bioactive molecules :three- dimensional techniques and applications	Washington, DC: American Chemical Society	1998
2	Matthew F. Schlecht	Molecular Modeling on the PC	Wiley- Blackwell; Har	1998

Course Objectives

- To illustrate the rate equation with different parameters.
- To explain the basic ideas on first order reaction in reactor design.
- To list the various functions of Non Ideal flow of fluidized bed.
- To label the basic theory of rate equation systems in heterogenous reactions.
- To develop a picture about rate controlling mechanism in solid catalyzed reaction.
- To understand the various biochemical reactions.

Course Outcomes

1. Summarize about the rate equation.
2. Determine the first order reaction in reactor design.
3. Express the functions of non ideal flow of fluidized bed.
4. Be aware of the conceptualization behind various rate equations in heterogenous systems.
5. Describe the various rate controlling mechanism in solid catalyzed reaction.
6. Summarize and predict the various reactions.

UNIT-I KINETICS OF HOMOGENOUS REACTIONS**(9)**

Concentration and temperature dependent term of rate equation – searching for mechanism– predictability of reaction rate from theory; Interpretation of batch reactor data – constant volume and variable volume batch reactors – temperature and reaction rate - development of rate equations for different homogeneous reactions (up to second order reactions both reversible and irreversible reactions).

UNIT-II REACTOR DESIGN**(9)**

Ideal batch reactors–steady state MFR & PFR – holding time for flow systems; Design for single reactions- performance equations for single reactors ; multiple reactor systems – PFR in series/ parallel – equal size and different size Mixed reactors in series; reactors of different types in series. Design for Multiple reactions (first order reactions only)

UNIT-III NON IDEAL FLOW**(9)**

RTD of fluid in vessel – relationship between F, C & E curve – conversion from tracer information; non- ideal flow models–Dispersion model and Tanks in series Model; Multi parameter models– models for fluidized beds.

UNIT-IV DESIGN FOR HETEROGENOUS SYSTEMS**(9)**

Rate equations – contacting patterns for two phase systems; fluid particle reactions – unreacted core model for spherical particles of unchanging size – rate of reaction for shrinking spherical particles – determination of rate controlling step – application to design; reactions steps; resistances and rate equations; Fluid–Fluid reactions – rate equations.

UNIT-V SOLID CATALYSED REACTIONS**(9)**

Rate equation – rate controlling mechanisms – experimental methods for finding rates – product distribution in multiple reactions–application of design; Deactivating catalysts–mechanism–rate equation.

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Missen R.W.,Mims C.A.,Saville B.A	Introduction to Chemical Reaction Engineering and Kinetics	John Wiley	1999

Course Objectives

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT-I INTRODUCTION TO NANOTECHNOLOGY (9)

Background and definition of nanotechnology, chemical bonds in nanotechnology – Scales at the bio-nano interface – Basic capabilities of nanobiotechnology and nanomedicine – Biological tradition and mechanical tradition biotechnology – Applications of Nanotechnology in biotechnology.

UNIT-II STRUCTURAL AND FUNCTIONAL PRINCIPLES OF BIONANOTECHNOLOGY (9)

Biomolecular structure and stability – Protein folding – Self-assembly – Self-organization – Molecular recognition – Information driven nanoassembly – Energetics – Chemical transformation – Biomaterials – Biomolecular motors – Traffic across membranes – Biomolecular sensing – Self-replication – Machine-phase bionanotechnology.

UNIT-III MICROFLUIDICS (9)

Concepts and advantages of microfluidic devices – Materials and methods for the manufacture of microfluidic component – Fluidic structures – Surface modifications – Lab-on-a-chip for biochemical analysis.

UNIT-IV PROTEIN AND DNA BASED NANOSTRUCTURES (9)

S-Layers – Engineered nanopores – Microbial nanoparticle production – DNA-Protein nanostructures – Biomimetic fabrication of DNA based metallic nanowires and networks – DNA-Gold nanoparticle conjugates – Nanoparticles as non-viral transfection agents.

UNIT-V NANOPARTICLES IN CANCER THERAPY**(9)**

Magnetic nano and microparticles for embolotherapy - hyperthermic therapy - delivery of chemotherapeutic drugs-brachytherapy, Thermoresponsive liposomes for hyperthermic chemotherapy assemblies and ultrasound activation.

3	Freitas Jr R.A	Nanomedicine	Landes Biosciences	2004
4	Kohler, M. and Fritzsche, W.	Nanotechnology – An Introduction to Nanostructuring Techniques	Wiley- VCH	2004

Course Objectives

- To discuss the handling techniques of animals and immunization.
- To understand the isolation and identification of cells and blood group.
- To explain the methods for the detection of antigen-antibody.
- To outline the techniques for antigen identification.
- To understand the techniques of T-cell rosetting.
- To understand the techniques of Western blotting.

Course Outcomes:

1. Infer the basic handling techniques for animal studies.
 2. Outline the basics of isolation and identification of cells and blood group.
 3. Illustrate the Immuno electrophoresis and Immuno diffusion for determination of antibody.
 4. Understand the knowledge about ELISA and western blotting for identification of various diseases.
 5. Explain the identification of typhoid antigens by Widal test.
 6. Discuss principles of T-cell rosetting.
-
1. Handling of animals, immunization and raising antisera
 2. Identification of cells in a blood smear
 3. Identification of blood group
 4. Immuno diffusion
 5. Immuno electrophoresis
 6. Testing for typhoid antigens by Widal test
 7. Enzyme Linked Immuno Sorbent Assay (ELISA)
 8. Isolation of peripheral blood mononuclear cells
 9. Identification of t cells by T-cell rosetting using sheep RBC.
 10. Western blotting

REFERENCE BOOKS

5	. Weir, D.M	Immunological Techniques	Blackwell Scientific Publications	1992

Course Objectives

- To understand the wet granulation method for granules preparation.
- To explain the dry and wet granulation protocol for tablet preparation.
- To predict the steps for the analysis of tablets for its quality control.
- To perform the preparation of liquid orals-syrup.
- To understand the procedure for the preparation of topical formulations.
- To illustrate the assay techniques for tablets and injection..

Course Outcomes

1. Perform the granules preparation using wet granulation method.
2. Experiment the tablet preparation using wet and dry granulation techniques.
3. Identify the quality of tablets using different analysis.
4. Demonstrate the protocol for liquid-orals syrup preparation.
5. Perform the assay for riboflavin tablets.
6. Interpret dextrose injection using basic assays.

Preparation of granules by wet granulation

Preparation of Tablets by wet and dry granulation

Quality control test for tablets

Preparation of liquid orals-syrup

Preparation of topical preparation-lotion, ointment, cream

Assay of Riboflavin tablets

Assay of Dextrose Injection

Course Objectives

- To understand how to visualize and understand macromolecule-ligand interactions
- To explain various computational tools used for drug design
- To predict the properties of small molecules
- To perform homology modeling of proteins
- To understand the active site prediction
- To illustrate the protein ligand docking and protein-protein docking

Course Outcomes

1. Perform the QSAR study.
 2. Experiment the visualization tools to understand the macromolecule – ligand interactions.
 3. Identify the the properties of small molecules
 4. Demonstrate the homology modeling of proteins.
 5. Perform the active site prediction.
 6. Interpret the protein ligand docking and protein-protein docking.
-
1. Explore Visualization tools
 2. Learn to calculate properties of small molecules
 3. Perform a QSAR study
 4. Homology modeling of proteins
 5. Virtual screening using Zinc database
 6. Pharmacophore mapping
 7. Active site prediction
 8. Protein ligand docking
 9. Protein-Protein docking

OBJECTIVES

To provide exposure in practical aspects

To equip the students to meet the industry standards.

The students will be directed to do a project work during VI semester and their projects will be evaluated for, forty percentages in Continuous Internal Assessment and sixty percentages in End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student after the completion of the project work.

Course Objectives:

- To equip the students for effective technical presentation
- To improve body language and posture for effective public speaking.

Course Outcomes:

1. To get familiarize in the teaching presentation skills.
2. To gain confidence in the teaching process.

During the seminar session, each student is expected to prepare and present a topic on biotechnology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present seminars. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in presentation skills and facing the interviews.

Semester VII

17BTCC701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT 3 0 0 3 100 AND ENTREPRENEURSHIP DEVELOPMENT

Course Objectives:

- To create an awareness on Engineering Ethics
- To incorporate Moral and Social Values and Loyalty
- To appreciate the rights of other
- To motivate the leadership skills
- To train to become an entrepreneur
- To learn the management skills

Course Outcomes:

1. Explain the engineering ethics
2. Outline the Moral and Social Values and Loyalty
3. Justify the rights of other
4. Illustrate the values of leadership skills
5. Assess the skills of entrepreneur
6. Discuss the management skills

UNIT I ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises – Forecasting – Decision-making – Formal and informal organization – Organization Chart –.

UNIT IV DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION**9**

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

Course Objectives:

- To understand the importance of downstream processing and various cell disruption techniques.
- To discuss the various cell disruption techniques for product release.
- To explain the physical methods of separation.
- To understand the methods for the isolation of products.
- To understand the methods for the purification of the bioproducts.
- To explain the various methods for final product formulation and finishing operations.

Course Outcomes:

1. Outline the principles involved in downstream processing and characteristics of biomolecules.
2. Discuss the various cell disruption techniques for product release.
3. Illustrate the different physical methods of separation of bioproducts.
4. Relate and apply the methods available for the isolation of products.
5. Discuss the techniques used for the product purification.
6. Outline the principles for the final product formulation and finishing operations.

UNIT-I DOWNSTREAM PROCESSING (9)

Introduction to downstream processing principles characteristics of biomolecules and bioprocesses. Cell disruption for product release – mechanical, enzymatic and chemical methods. Pretreatment and stabilization of bio-products.

UNIT-II PHYSICAL METHODS OF SEPARATION (9)

Unit operations for solid-liquid separation - filtration and centrifugation, flocculation and sedimentation

UNIT-III ISOLATION OF PRODUCTS (9)

Adsorption, liquid-liquid extraction, aqueous two-phase extraction, membrane separation, ultrafiltration and reverse osmosis, dialysis, precipitation of proteins by different methods.

UNIT-IV PRODUCT PURIFICATION (9)

Chromatography – principles, instruments and practice, adsorption, reverse phase, ion-exchange, size exclusion, hydrophobic interaction, bio-affinity and pseudo affinity chromatographic techniques.

UNIT-V FINAL PRODUCT FORMULATION AND FINISHING OPERATIONS (9)

Crystallization: principles, batch crystallizers, process crystallization of proteins; Drying: Principles, heat and mass transfers, dryers description, batch and continuous dryers, freeze and spray dryers in final product formulation.

Total Hours: 45

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	P.A. Belter, E.L. Cussler And Wei-Houhu	Bioseparations – Downstream Processing For Biotechnology	Wiley Interscience Pub	1988
2	R.O. Jenkins, (Ed.)	Product Recovery In Bioprocess Technology – Biotechnology By Open Learning Series	Butterworth-Heinemann	1992

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	J.C. Janson And L. Ryden, (Ed.)	Protein Purification – Principles, High Resolution Methods And Applications	VCH Pub Press	1989
2	R.K. Scopes	Protein Purification – Principles And Practice	Narosa Pub	1994
3	Roger.G . Harrison , Paul Todd , Scott R.Rudge and Demetri P.Petrides	Bioseparation Science and Engineering	Oxford University Press	2003

Course Objectives

- To understand the concept of purification by different precipitation process.
- To demonstrate the various methods of extraction process.
- To perform the final product finishing operations.
- To perform the process of centrifugation for cell fractionation
- To practice the fractionation of cells and dialysis process.
- To design and select the appropriate techniques for the purification of a bioproduct.

Course Outcomes

1. Perform the various methods of precipitation for the protein purification.
2. Practice and evaluate the extraction of various products from the given sample.
3. Demonstrate the finishing operations such as crystallization and drying.
4. Execute the process of centrifugation for cell fractionation.
5. Inspect the purification of given sample through dialysis.
6. Design and develop appropriate techniques for the purification of given enzyme.

Cell fractionation using centrifuge.

Ammonium sulphate precipitation.

Liquid–Liquid extraction.

Solid–Liquid extraction.

Drying of solid by heat source.

Dialysis

Protein Purification by isoelectric point precipitation.

Crystallization.

Purification of α -Amylase from *Bacillus*.

Adsorption Studies.

The students will be directed to do a project work which will be the Phase I if their main project work that will be performed in the eighth semester during. Their projects will be evaluated for forty percentages in Continuous Internal Assessment and sixty percentage in End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student after the completion of the project work.

17BTBT891

PROJECT WORK PHASE II AND VIVA-VOCE

0 0 32 16 300

The students will be performing their main project work as a continuation of the Phase I project completed in the seventh semester. Their projects will be evaluated for a total of three hundred marks, out of which one twenty marks will be for Continuous Internal Assessment and one hundred and eighty marks for End Semester Examination.

End Semester Examination evaluation will be based on the report submitted and presentation of his/her work by the student to a panel of evaluators after the completion of the project work.

PROFESSIONAL ELECTIVES

Course Objectives

- To define the basic view of tissue culture techniques.
- To illustrate the breeding of farm animals.
- To propose an opinion on transgenic animal technology.
- To explain the characterization techniques for bacterial and viral diseases in animals.
- To justify the basic concept on recombinant cytokines.
- To discuss the diverse techniques on animal cell culturing and its mechanism.

Course Outcomes

1. Identify the different views on tissue culturing.
2. Differentiate various breeding farm animals.
3. Illustrate the concept behind transgenic animal technology.
4. Evaluate the bacterial and viral diseases that attack animals.
5. Analyze and categorize the best approach on recombinant cytokines.
6. Discuss the diverse techniques on animal cell culturing and its mechanism.

UNIT I ANIMAL CELL CULTURE**(10)**

Introduction to basic tissue culture techniques, equipments and instruments in ATC - chemically defined and serum free media - animal cell cultures - maintenance and preservation – various types of cultures; suspension cultures - continuous flow cultures - immobilized cultures – somatic cell fusion - organ cultures.

UNIT II MICROMANIPULATION OF EMBRYOS**(9)**

Breeding of farm animals to biopharming - equipments - enrichment of x and y bearing sperms from semen samples - artificial insemination - germ cell manipulations – In vitro fertilization - embryo transfer - micromanipulation technology and breeding of farm animals.

UNIT III TRANSGENIC ANIMALS**(8)**

Concepts of transgenic animal technology; strategies for the production of transgenic and knock out animals– **significance in biotechnology - stem cell cultures and induced pluripotent stem cells in the production of transgenic animals.**

UNIT IV ANIMAL DISEASES AND THEIR DIAGNOSIS**(9)**

Bacterial and viral diseases in animals - monoclonal antibodies – diagnosis - molecular diagnostic techniques; PCR - in-situ hybridization - northern -southern blotting - RFLP.

UNIT V THERAPY OF ANIMAL DISEASES**(9)**

Recombinant cytokines – therapeutic applications of monoclonal antibody, vaccines - DNA, sub unit, cocktail vaccines - gene therapy for animal diseases

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Masters J.R.W	Animal Cell Culture: Practical Approach	Oxford University Press	2000

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ranga M.M.	Animal Biotechnology	Agrobios India Limited	2002
2	Ramadass P, Meera Rani S	Text Book Of Animal Biotechnology	Akshara Printers	1997

Course Objectives

- To explain basic knowledge on biotech industries in various field.
- To demonstrate the various lab construction through new ventures.
- To construct various parameters of research and development in production of bio based products.
- To explain the case studies of different industries and their strategic planning.
- To outline the basic concepts of IPR and ethics in biotechnology.
- To discuss the different techniques for entrepreneurship in biotechnology.

Course Outcomes

1. Summarize the characteristics of different biotechindustries.
2. Evaluate the different lab construction through newventures.
3. List the various parameters of research and developmental techniques.
4. Explain the opportunities to know different industrial strategic plans.
5. Recognize basic concepts of IPR and ethics in biobased product production.
6. Identify and list different techniques for entrepreneurship in biotechnology.

UNIT I OVERVIEW OF BIOTECHNOLOGY INDUSTRIES**(9)**

Scope - Biotechnology Industries in India and Abroad - Fundamentals of Biotechnology for biobusiness - Trends and key issues in Biotechnology and devices industries - Technology basis in industry segment, emerging technologies and technical convergences issues.

UNIT II NEW VENTURE CREATION – ENTREPRENEURSHIP**(9)**

Plant tissue culture lab construction – Equipment, glassware and chemical requirements - techniques in culturing of plants. Export of tissue cultured plants to abroad – Vermicomposting technology – Mushroom cultivation - single cell protein - Biofertilizer technology - production - Commercialization of R&D- Fermentation technology: Bakery, Dairy products.

UNIT III PRODUCT DEVELOPMENT**(9)**

Beer, wine and ethanol production using different sources– Enzyme: production, purification and characterization - Organic acids (Citric, lactic) production - Antibiotic production - Biogas technology - Azolla cultivation - Product development and project management, transition from R&D to business units. Institute– industry interaction and partnership/ alliances.

UNIT IV BIOBUSINESS PLANS**(9)**

Healthcare, the Biomedical Sciences, agriculture and Agrobiotechnology. Transfer and business planning - Bank loan and finance strategy – Budget plan – licensing and Branding Concerns and Opportunities, Policy and regulatory Concerns and Opportunities Financial assistance for R&D

projects and entrepreneurship. Corporate partners marketing – Model project: Case studies of different industries and their strategic planning.

UNIT V INTELLECTUAL PROPERTY, BIOETHICS AND LEGAL ISSUES (9)

Intellectual property rights in Biotech, Patent laws - Bioethics and current legal issues - Marketing and public perceptions in product development – Genetically modified products and organisms (Transgenic products) - Technology licensing and branding concerns.

Total Hours: 45

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Richard Oliver	The coming Biotech age: The business of Biomaterials	McGraw Hill Publications, New York	1999
2	Karthikeyan, S. and Arthur Ruf	Biobusiness	MJP Publications. Chennai, India	2009

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	GurinderShahi	BioBusiness in Asia: How countries Can Capitalize on the Life Science Revolution	Pearson Prentice Hall	2004
2	Ruth Ellen Bulger	The ethical dimensions of the Biological sciences	Cambridge University Press	1993

Course Objectives

- To explain descriptive views of fire and explosion.
- To illustrate Differentiating relief systems in various explosions.
- To discriminate various hazards and toxicity.
- To evaluate various spills and leakage of liquids.
- To interpret different situations of explosions and toxicity through case studies.
- To discuss the different global and local explosive issues.

Course Outcomes

1. Elaborate the concept of fire and explosion.
2. Learn and evaluate relief systems in various explosions.
3. Explain the hazards and toxicity in various situations.
4. Discuss the various spills and leakage preventive measures.
5. Identify basic views in different situations of explosions and toxicity.
6. Make up perspective techniques and create data on different global and local explosive issues.

UNIT I FIRE AND EXPLOSION

(9)

Introduction-Industrial processes and hazards potential, mechanical electrical, thermal and process hazards. Safety and hazards regulations, Industrial hygiene. Factories Act, 1948 and Environment (Protection) Act, 1986 and rules thereof.Shock wave propagation, vapour cloud and boiling liquid expanding vapours explosion (VCE and BLEVE), mechanical and chemical explosion, multiphase reactions, transport effects and global rates.

UNIT II RELIEF SYSTEMS

(9)

Preventive and protective management from fires and explosion-inerting, static electricity passivation, ventilation, and sprinkling, proofing, relief systems – relief valves, flares, scrubbers.

UNIT III TOXICOLOGY

(9)

Hazards identification-toxicity, fire, static electricity, noise and dust concentration; Material safety data sheet, hazards indices- Dow and Mond indices, hazard operability (HAZOP) and hazard analysis (HAZAN).

UNIT IV LEAKS AND LEAKAGES

(9)

Spill and leakage of liquids, vapors, gases and their mixture from storage tanks and equipment; Estimation of leakage/spill rate through hole, pipes and vessel burst; Isothermal and adiabatic flows of gases, spillage and leakage of flashing liquids, pool evaporation and boiling; Release of toxics and dispersion. Naturally buoyant and dense gas dispersion models; Effects of momentum and buoyancy; Mitigation measures for leaks and releases.

UNIT V CASE STUDIES**(9)**

Flixborough, Bhopal, Texas, ONGC offshore, HPCL Vizag and Jaipur IOC oil-storage depot incident; Oil, natural gas, chlorine and ammonia storage and transportation hazards.

Total Hours:45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Crowl D.A. and Louvar J.F	Chemical Process Safety Fundamentals with Applications	Prentice Hall.	2001
2	Mannan S.	Lee's Loss Prevention in the Process Industries	Butterworth- Heinemann	2005

Course Objectives

- To illustrate the origin of developmental biology.
- To explain the basic ideas on specifications of germ layers.
- To list the various functions of vertebrates development by its differentiation.
- To discuss the basic theory of morphogenesis and organogenesis.
- To understand embryogenesis and its functions.
- To discuss the different stages of developmental biology.

Course Outcomes

1. Summarize about the cell commitment and differentiation in developmental biology.
2. Determine the postulation of germ cells and patterning of vertebrate body plan.
3. Express the functions of cell differentiation in vertebrate development.
4. Explain the conceptuation behind morphogenesis and organogenesis.
5. Describe the various functions and stages in embryogenesis.
6. Summarize and predict the different stages of developmental biology.

UNIT I INTRODUCTION**(8)**

Origins of developmental biology; Concepts in development – Developmental signals in cell division differentiation; Role of gene expression in development; Identifying developmental genes, Cell commitment & differentiation; Determination & induction of cell fate, Concept of morphogen & positional information; Model vertebrate organisms: Mouse, Zebrafish, Model invertebrate organisms: *D. melanogaster*, *C. elegans*, Model plant: *A. thaliana*

UNIT II GERM CELLS AND PATTERNING THE VERTEBRATE BODY PLAN (9)

Genotypic & phenotypic sex-determination in mammals, *D. melanogaster* and *C. elegans*, Structure & Formation of germ cells, Fertilization; axes & germ layers; Setting up the body axes; the origin & specification of the germ layers.

UNIT III DEVELOPMENT OF VERTEBRATES**(10)**

Development of the Drosophila, Nematodes & Cellular Slime Molds: Body Plan; Specification of body axes & role of maternal genes; Polarization of body axes during oogenesis; Patterning, Segmentation- & role of pair-rule genes; cell differentiation and aggregation.

UNIT IV MORPHOGENESIS AND ORGANOGENESIS**(10)**

Morphogenesis; Kinds of cleavage & blastulation; Types of tissue movement in gastrulation; Gastrulation in amphibians & mammals; Neural tube formation & neural crest migration; Cell Differentiation & Organogenesis; Models of cell differentiation; Insect imaginal disc & wing development; metamorphosis.

UNIT V EMBRYOGENESIS**(8)**

Plant development; Pattern development in early embryogenesis of angiosperms; floral development.

Total Hours:45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Scott F. Gilbert	Developmental Biology	Sinauer Associates,	2013
2	Arumugam. A	Developmental Biology	Saras Publications	1995

Course Objectives

- To illustrate the scope and importance of crude drugs.
- To understand the basic ideas on cultivation and utilization of medicinal and aromatic plants.
- To list the various functions of plant tissue culture as a source.
- To label the basic theory of methods of drug evaluation.
- To develop a picture about applications of phytochemicals in industry and healthcare.
- To discuss the different stages of developments in using phytochemicals and medicinal plants.

Course Outcomes

1. Summarize about the importance of crude drugs in different medicinal system.
2. Determine the modern cultivation techniques through plants.
3. Express the functions of plant tissue culturing.
4. Be aware of the conceptualization behind various methods for drug evaluation.
5. Describe the various functions and application of phytochemicals in different industries.
6. Summarize and predict the different stages of developments in using phytochemicals and medicinal plants.

UNIT I CRUDE DRUGS**(9)**

Crude Drugs – Scope & Importance, Classification (Taxonomical, Morphological Chemical, Pharmacological); Cultivation, Collection & processing of Crude Drugs. Indian System of medicine: Ayurveda, Siddha and Unani and its significance

UNIT II MEDICINAL & AROMATIC PLANTS**(9)**

Cultivation and Utilization of Medicinal & Aromatic Plants in India. Genetics as applied to Medicinal herbs. Modern Biotechnological tools and its influence in Medical and Aromatic plant cultivation.

UNIT III TISSUE CULTURE OF MEDICINAL PLANTS**(9)**

Plant Tissue Culture as source of medicines, Secondary metabolite production in plants; Plant Tissue Culture for enhancing secondary metabolite production (*Withania somnifera*, *Rauwolfia serpentina*, *Catharanthus roseus*, *Andrographis paniculata*, *Dioscorea* sp.); Anticancer, Antiinflammatory, Antidiabetic, Analgesic drugs, Biogenesis of Phytopharmaceuticals.

UNIT IV ANALYSIS OF PHYTOCHEMICALS**(9)**

Methods of Drug evaluation (Morphological, Microscopic, Physical & Chemical). Preliminary screening, Assay of Drugs – Biological evaluation / assays, Microbiological methods. Types of Phytochemicals: Glycosides - extraction methods (Aloe); Volatile Oils - extraction methods (Clove); Alkaloids - extraction methods (Cinchona); Flavonoids extraction methods, Resins- extraction methods; Lectins.

UNIT V APPLICATIONS OF PHYTOCHEMICALS**(9)**

Application of phytochemicals in industry and healthcare; Biocides, Biofungicides, Biopesticides. Nutraceuticals and their significance.

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	C. K. Kokate, A. P. Purohit & S. B. Gokhale	Pharmacognosy	NiraliPrakashan	1996
2	Paul M. Dewick	Natural Products in medicine: A Biosynthetic approach	Wiley	2009

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Hornok, L.	Cultivation & Processing of Medicinal Plants	Wiley & Sons	1992
2	Trease & Evans	Pharmacognosy	Harcourt Brace & Company	1989

Course Objectives

- To explain the gene expression and its regulation.
- To determine the methods for the synthesis of primary metabolites.
- To discuss the procedure for biosynthesis of secondary metabolites.
- To distinguish the features of bioconversion.
- To tell about the regulation of enzyme production.
- To summarize the repressions in enzyme production.

Course Outcomes

1. Illustrate the gene expression and its regulation.
2. Demonstrate the primary metabolite synthesis.
3. Discuss the methods for secondary metabolites production.
4. Outline the features of bioconversion.
5. Explain the regulation of enzyme production.
6. Describe the repressions in enzyme production.

UNIT I INTRODUCTION**(9)**

Jacob Monod model for gene expression regulation – Lac operon, catabolite regulation - glucose effect cAMP deficiency. Regulation of RNA synthesis by amino acid. Feed back regulation, regulation in branched pathways-differential regulation in isozymes, concerted feedback regulation, cumulative feedback regulation, permeability control: passive diffusion, active transport, group transportation.

UNIT II SYNTHESIS OF PRIMARY METABOLITES**(9)**

Alteration of feedback regulation, limiting accumulation of end products, feedback resistant mutants, alteration of permeability for metabolites.

UNIT III BIOSYNTHESIS OF SECONDARY METABOLITES**(9)**

Producers of secondary metabolites, Precursor effects, trophophase- idiophase relationship, enzyme induction, feedback regulation, catabolite regulation by passing control of secondary metabolism.

UNIT IV BIOCONVERSIONS**(9)**

Advantages of Bioconversions, specificity, yields, factors important for bioconversion, regulation of enzyme synthesis, mutation, permeability, co-metabolism, avoidance of product inhibition, mixed or sequential bioconversions, conversion of insoluble substances.

UNIT V REGULATION OF ENZYME PRODUCTION**(9)**

Strain selection, improving fermentation, recognizing growth cycle peak, induction, feedback repression, catabolite repression, mutants resistant to repression, gene dosage.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Peter F. Stanbury, Stephen J. Hall & A. Whitaker	Principles of Fermentation Technology	Butterworth- Heinemann	2005
2	G.Stephanopoulos , AristosA. Aristidou, Jens Hoiris Nielson	Metaboli c Engineerin g: Principles and Methodologies	Academicpress	1998

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Wang D.I.C., Cooney C.L., Demain A.L., Dunnil P., Humphrey A.E.,Lilly M.D	Fermentation and Enzyme Technology	JohnWiley and Sons	1980
2	Cruger, W and Crueger, A	Biotechnology: A Textbook of Industrial Microbiology	Panima Publishing Corporation	2003
3	Zubay,G.L	Principles of Biochemistry	WCB Publishers, London	1995

Course Objectives

- To explain basic knowledge on genome organization of prokaryotes and eukaryotes.
- To discuss the effects of cytogenetic mapping.
- To construct various methods for gene finding and annotations in functional genomics.
- To explain the effects of various protein level estimation in proteomics
- To understand the different protein analysis techniques.
- To outline the post translational modification and other protein interactions.

Course Outcomes

1. Summarize the characteristics of genomic organization of prokaryotes and eukaryotes.
2. Evaluate the different physical mapping techniques.
3. Discuss the gene findings in functional genomics.
4. Explain the protein estimation through different techniques.
5. Recognize different protein analysis techniques.
6. Identify and list different protein interactions
- 7.

UNIT I OVERVIEW OF GENOMES OF BACTERIA, ARCHAE AND EUKARYOTA (9)

Genome organization of prokaryotes and eukaryotes, gene structure of bacteria, archaeobacterial and eukaryotes, Human genome project, Introduction of functional and comparative genomics.

UNIT II PHYSICAL MAPPING TECHNIQUES (9)

Cytogenetic mapping, radiation hybrid mapping, Fish, STS mapping, SNP mapping optical mapping, Top down and bottom up approach, linking and jumping of clones, gap closure, pooling strategies, genome sequencing.

UNIT III FUNCTIONAL GENOMICS (9)

Gene finding; annotation; ORF and functional prediction; Subtractive DNA library screening; differential display and representational difference analysis; SAGE.

UNIT IV TECHNIQUES IN PROTEOMICS (9)

Protein level estimation; Edman protein microsequencing; protein cleavage; 2 D gel electrophoresis; metabolic labeling; detection of proteins on SDS gels. Mass spectrometry- principles of MALDI-TOF; Tandem MS-MS; Peptide mass fingerprinting.

UNIT V PROTEIN PROFILING (9)

Post translational modification; protein-protein interactions; glycoprotein analysis; phosphor protein analysis.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Cantor and Smith	Genomics	John Wiley & Sons	1999
2	Pennington and Dunn	Proteomics	BIOS Scientific Publishers	2001
3	T.ABrown	Genomes	Bios Scientific Publishers Ltd	2002
4	Huntand Livesey	FunctionalGenomics	Oxford University press	2000

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Liebler	Introduction to Proteomics	Humana Press	2002
2	Primrose and Twyman	Principles of genome analysis and genomics	Blackwell Publishing Co	2003

Course Objectives

- To discuss the mass and energy balance.
- To explain the scale up of equipments.
- To describe the scale down of equipments.
- To explain design of equipments.
- To understand the facility design with safety.
- To outline the process economics in biological products production.

Course Outcomes

1. Calculate the mass and energy balance.
2. Evaluate the scaling up process for equipments.
3. Discuss the scale down process for equipments.
4. Describe the design of equipments.
5. Tell about the facility design in euipmentation.
6. Summarize the process economic calculations in plant design.

UNIT I MASS AND ENERGY BALANCE**(9)**

Introduction: General design information - Material and energy balance calculations - Process Flow sheeting.

UNIT II SCALE UP AND SCALE DOWN OF EQUIPMENTS**(9)**

Heat and Mass Transfer studies: Effect of scale on oxygenation, mixing, sterilization, pH, temperature, inoculum development, nutrient availability and supply. Bioreactor scale-up - constant power consumption per volume, mixing time, impeller tip speed (shear) - mass transfer coefficients. Scale up of downstream processes - Adsorption (LUB method), Chromatography (constant resolution etc.), Filtration (constant resistance etc.) - Centrifugation (equivalent times etc.) - Extractors (geometry based rules) - Scale-down related aspects.

UNIT III DESIGN OF EQUIPMENTS**(9)**

Selection of bioprocess equipment (upstream and downstream) - Specifications of bioprocess equipment - Mechanical design of reactors, heat transfer and mass transfer equipment. Design considerations for maintaining sterility of process streams and process equipment - Piping and instrumentation - Materials of construction for bioprocess plants.

UNIT IV FACILITY DESIGN**(9)**

Facility design aspects - Utility supply aspects - Equipment cleaning aspects - Culture cell banks - cGMP guidelines – Validation - Safety.

UNIT V ECONOMICS AND CASE STUDY**(9)**

Process economics - Case studies. Commodity chemicals and production of pharmaceutical products.

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications

2	Joshi M. V. and V.V.Mahajani	Process Equipment Design	Macmillan India Ltd	2000
3	Michael R. Ladisch	Bioseparations Engineering: Principles, Practice and Economics	Wiley	2001

Course Objectives

- To define the basic view of infectious diseases in host microbe interactions.
- To illustrate the diverse host defense mechanism and pathogenic strategies.
- To propose an opinion on molecular pathogenesis.
- To explain the characterization techniques for host pathogen interactions.
- To understand the basic concept on modern approaches to control pathogens.
- To explain the diverse pathogens and its controlling measures.

Course Outcomes

1. Identify different views on host microbe interactions.
2. Differentiate various host defense mechanisms.
3. Illustrate the concept behind molecular pathogenesis.
4. Evaluating and characterizing host pathogen interactions.
5. Analyze and categorize the best approach to control pathogens.
6. Explain the diverse pathogens and its controlling measures.

UNIT- I HOST-MICROBE INTERACTIONS**(7)**

Normal Flora-Protective role-dynamic nature, Principles of Infectious diseases-pathogenicity-pathogen types and modes of entry, causes of infectious disease-Koch's postulates molecular postulates-mechanisms of pathogenesis. Epidemiology - principles.

UNIT- II HOST-DEFENSE AGAINST PATHOGENS AND PATHOGENIC STRATEGIES (10)

Host defense: skin, mucosa, cilia, secretions, physical movements, limitation of free iron, antimicrobial compounds, mechanism of killing by humoral and cellular defense mechanisms, complements, inflammation process, general disease symptoms.

UNIT- III MOLECULAR PATHOGENESIS**(10)**

Virulence factors - gene regulation in virulence of pathogens - labile & stable toxins; *Vibrio Cholerae* - Cholera toxin - *E.coli* pathogens: - ETEC – EPEC - EHEC - EIEC Hemolytic Uremic Syndrome - Shigella toxin - Plasmodium Life cycle- Antimalarials based on transport processes - Influenza virus - action of amantidine, Molecular pathogenesis of *Mycobacterium tuberculosis*.

UNIT- IV EXPERIMENTAL STUDIES ON HOST-PATHOGEN INTERACTIONS**(9)**

Virulence assays: adherence, invasion, cytopathic, cytotoxic effects. Criteria & tests in identifying virulence factors, attenuated mutants, molecular characterization of virulence factors, signal transduction & host responses.

UNIT-V MODERN APPROACHES TO CONTROL PATHOGENS**(9)**

Classical approaches based on serotyping. Modern diagnosis based on highly conserved virulence factors, immuno & DNA-based techniques. New therapeutic strategies based on recent findings on molecular pathogenesis of a variety of pathogens, Vaccines - DNA, subunit and cocktail vaccines

Total Hours: 45

2	Tizard.	Immunology: An introduction	Cengage Learning	1994
3	Peter Williams, Julian Ketley & George Salmond,	Methods in Microbiology: Bacterial Pathogenesis,	Academic Press	1998
4	Abigali A. Salyers and Dixie D. Whitt,	Bacterial Pathogenesis – A molecular Approach	ASM Press, Washington	2002

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Nester, E. W. Anderson, D. G Roberts, C.E. Jr. and Nester, M. T.	Microbiology: A Human Perspective, Fifth Edition	McGraw-Hill,	2007

Course Objectives

- To explain the general concepts of pharmacology.
- To discuss the systemic pharmacology with drug action.
- To describe the experimental pharmacology in drug discovery.
- To tell about the general aspects on the pharmacognosy.
- To infer the knowledge on methods and quality control for following pharmacognosy.
- To discuss the protocol for isolation of phytochemicals.

Course Outcomes

1. Tell about the basics of pharmacology in drug action.
2. Explain the systemic pharmacology.
3. Discuss the methods for experimental pharmacology.
4. Describe the action of drugs in pharmacognosy.
5. Outline the methods for isolation of phytochemicals.
6. Understand the characterization of phytochemicals.

UNIT I BASICS OF PHARMACOLOGY**(9)**

General concepts of Pharmacology, ADME process, drug action- mechanism, factors affecting drug action. Dose-effect relationship

UNIT II SYSTEMIC PHARMACOLOGY**(9)**

Drugs Affecting the Central Nervous System, Cardiovascular and Renal Systems, Immune system, Respiratory System, Gastrointestinal System and Nutrition, Endocrine System, Integumentary system and Eyes/Ears. Drugs affecting uterine motility, Chemotherapy of parasite infections, Chemotherapy of microbial diseases. Antineoplastic agents, Immunomodulators. Drugs acting on blood and blood forming organs

UNIT III EXPERIMENTAL PHARMACOLOGY**(9)**

Experimental methodologies involved in the discovery of drugs (*in vivo*, *in vitro*, *ex vivo*). Animal handling and animal care. Methods of anaesthetising animals and methods of euthanasia. Restraining and blood collecting methods.

UNIT IV PHARMACOGNOSY**(9)**

General aspects of sources of natural medicinal products. Marine Pharmacognosy and its applications. General cultivation of medicinal plants, their merits and Demerit -a. General aspects, b. Factors involved, c. Methods used to improve the Quality and d. Pest control. Role of natural pesticides – Preparation and uses.

UNIT V ISOLATION AND CHARACTERIZATION OF PHYTOCHEMICALS (9)

General methods and Principles of extraction methods, types of extraction and their merits and demerits. Selection and purification of solvents for extraction, methods of isolation, purification and identification of phytoconstituents.

Total Hours: 45

2	Varro E.Tyler, Lynn. R.Brady, James E.Robbers	Pharmacognosy	Lee & Febiger	1988
3	T.E. Wallis	Text Book of Pharmacognosy	CBS Pub	1985

Course Objectives

- To explain descriptive properties of seawater.
- To illustrate differentiating marine organisms and their industrial applications.
- To discriminate various pollution controlling marine organisms.
- To evaluate various marine toxins used in pharmaceutical industries.
- To interpret recombinations in marine aquaculture.
- To understand the usage of marine organism for different situations.

Course Outcomes

1. Discuss the basic knowledge on biogeochemical cycles.
2. Organize and manage marine organism in different industries.
3. Organize and manage pollution controlling measures through marine organisms.
4. Perceive the basics on combining marine toxins in pharma industries.
5. Compile different proteins of marine organism to develop a new variety.
6. Explain how to use marine organism for different situations.

UNIT I INTRODUCTION TO MARINE ENVIRONMENT (9)

World oceans and seas – ocean currents – physical and chemical properties of sea water – abiotic and biotic factors of the sea – ecological divisions of the sea – history of marine biology – biogeochemical cycles – food chain and food web.

UNIT II MARINE ORGANISMS AND THEIR INDUSTRIAL APPLICATIONS (9)

Phytoplanktons – zooplanktons – nektons – benthos – marine mammals – marine algae – mangroves – coral reefs – algal products, fuels from algae, algal cell culture

UNIT III MARINE ENVIRONMENTAL BIOTECHNOLOGY (9)

Marine pollution – biological indicators (marine micro , algae) – biodegradation & bioremediation – marine fouling and corrosion.

UNIT IV MARINE PHARMACOLOGY (9)

Medicinal compounds from marine flora and fauna – marine toxins , anti cancer agents, antiviral and antimicrobial agents. Marine Toxins

UNIT V AQUACULTURE TECHNOLOGY (9)

Importance of coastal aquaculture – marine fishery resources – common fishing crafts and gears – Aqua farm design and construction, transgenic fish.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	M.Fingerman , R . Nagabhushanam	Recent advances in marine biotechnology volume 3	Mary Frances Thomson	1999
2	M.Fingerman , R . Nagabhushanam	Recent advances in marine biotechnology volume 2	Science publishers	1999
3	E. W. Becker	Microalgae: Biotechnology and Microbiology	Cambridge University Press	1994
4	Jasper S. Lee, Michael E. Newman	Aquaculture: An Introduction	Interstate Publishers, Incorporated	1992

Course Objectives

- To identify the basic structural principles of protein.
- To classify the different techniques of mutagenesis in bioimprinting.
- To record the basic notion on enzyme engineering and protein purification.
- To differentiate and organize the distinct metagenomics and ecosystem biology.
- To explain the basic theory of protein engineering in industries.
- To examine the problems related to engineering enzymes.

Course Outcomes

1. Compare and contrast structural and functional properties of proteins.
2. Summarize the diverse techniques of mutagenesis.
3. Prioritize diverse methods for protein purification.
4. Construct and design the techniques of metagenomics and ecosystem biology.
5. Apply the knowledge on applications of protein engineering in industries.

Examine and solve the problems related to engineering enzymes

UNIT- I BASIC STRUCTURAL PRINCIPLES OF PROTEINS**(9)**

Amino Acids properties (size, solubility, charge, pKa), Kyte-Doolittle (Hydropathy) Index; Peptides as building blocks of proteins; Torsional (dihedral) angles, Ramachandran Plot; Secondary Structures of proteins; Loops – Types and Functions; Biosynthesis and chemical synthesis of Peptides. Lesk, Richardson and Topology Schematics

UNIT- II TECHNIQUES OF MUTAGENESIS**(9)**

Rational Design, Non rational design, Mutagenesis library construction- Chemical, Staggered Extension, Random Elongation, Random priming, Error prone PCR, Impact of structure analysis and prediction- structure and modeling, role of biocomputing, de novo design, Effect of protein conformation and bioimprinting.

UNIT- III ENGINEERING ENZYMES**(9)**

Engineering stability (*Bacillus subtilis* natural protease, *Pseudomonas* isoamylase, carbamylase from *Agrobacterium radiobacter*), specificity and features to ease protein purification, Engineering antibodies- Engineering signal molecules (hormones/ receptors), Engineering protein to facilitate recovery. Affinity purification (Strep-Tag)

UNIT- IVMETAGENOMICS**(9)**

Metagenomics and ecosystems Biology- conceptual framework, tools and methods- Analyses of metagenomics, Single gene approach, Targeted partial metagenome sequencing, Analyses of metatranscriptome- Limitation in analysing the metatranscriptome- 17s rRNA sequencing and metatranscriptomepyrosequencing, metaproteome-molecular methods to study complex microbial communities, metabolomics- metabolome of an ecosystem and metagenomics. Metabolomics for natural product perception

UNIT-V PROTEIN ENGINEERING IN INDUSTRIES**(9)**

Protein engineering for industrial enzymology, Biosensor- chemically engineered electronic protein, genetically fused protein, Gene engineering for molecular networking and protein assembly; molecular bioscreening in oncology- mechanism based drug discovery. Protein engineering in vaccine development.

Total Hours: 45**TEXTBOOKS**

REFERENCES BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	T. E. Creighton	Proteins, Structure and Molecular properties	Freeman W. H & Company	1993
2	C. Branden and J. Tooze	Introduction to Protein Structure	Garland Publications	1999

Course Objectives

- To explain basic knowledge on antigen structure and preparation.
- To discuss the structural and functional principles of antibodies and immunodiagnosis.
- To construct various parameters of B cells and T cells.
- To explain the effects of preparation and storage of tissues in immunopathology.
- To outline the basic concepts of preparations of vaccine in molecular immunology.
- To discuss the different techniques for antigen and antibody synthesis.

Course Outcomes

1. Summarize the characteristics of different methods of antigens production.
2. Evaluate the different structural and functional principles of antibodies and immunodiagnosis.
3. List the various parameters of B cells and T cells.
4. Explain the preparation and storage of antibodies and immunodiagnosis.
5. Recognize basic concepts of vaccine preparation in molecular immunology.
6. Identify and list different techniques for antigen and antibody synthesis.

UNIT I ANTIGENS**(7)**

Types of antigens, their structure, factors affecting antigenicity, preparation of antigens for raising antibodies, handling of animals, adjuvants and their mode of action.

UNIT II ANTIBODIES & IMMUNODIAGNOSIS**(10)**

Monoclonal and polyclonal antibodies – their production and characterization, Western blot analysis, Immunoelectrophoresis, SDS-PAGE - purification and synthesis of antigens, ELISA – principle and applications, radioimmunoassay (RIA) - principles and applications, nonisotopic methods of detection of antigens-enhanced chemiluminescence assay.

UNIT III ASSESSMENT OF CELL MEDIATED IMMUNITY**(10)**

Identification of lymphocytes and their subsets in blood. T cell activation parameters, estimation of cytokines, macrophage activation, macrophage microbicidal assays, in-vitro experimentation – application of the above technology to understand the pathogenesis of infectious diseases.

UNIT IV IMMUNO PATHOLOGY**(9)**

Preparation and storage of tissues, identification of various cell types and antigens in tissues, isolation and characterization of cell types from inflammatory sites and infected tissues, functional studies on isolated cells, immune cytochemistry – immune fluorescence, immune enzymatic and immune ferritin techniques, immune electron microscopy.

UNIT V MOLECULAR IMMUNOLOGY**(9)**

Preparation of vaccines, application of recombinant DNA technology for the study of the immune system, production of anti idiotypic antibodies, catalytic antibodies, application of PCR technology to produce antibodies and other immunological reagents, immuno therapy with genetically engineered antibodies – Tetramer, recombinant vaccines.

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Talwar G.P., and Gupta S.K	A hand book of practical and clinical immunology (Vol 1&2)	CBS Publications	1992
2	Weir D.M	Practical Immunology	Blackwell Scientific Publications, Oxford	1990

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Austin J.M. and Wood K.J.	Principle of cellular and molecular immunology	Oxford university press	1993

Course Objectives

- To explain basic knowledge on soil microbes and its characteristics.
- To demonstrate the effects of xenobiotic compounds.
- To discuss various methods for industrial waste water management.
- To explain the effects of various industrial wastes and to infer basic concepts for its management.
- To outline the natural and engineered bio-treatment methods to remediate the pollutants.
- To discuss the different environmental issues using biotechnology.

Course Outcomes

1. Summarize the characteristics of soil microbes and its interactions.
2. Evaluate the different xenobiotics present and methods to degrade them.
3. Describe the industrial waste management systems.
4. List the opportunities in waste treatment industries and its management.
5. Recognize natural and engineered biotreatment methods to remediate pollutants.
6. Identify and list different environmental issues and its remedy.

UNIT I INTRODUCTION**(8)**

Microbial flora of soil, growth and ecological adaptations of soil microorganisms, interactions among soil microorganisms, biogeochemical role of soil microorganisms.

UNIT II DEGRADATION OF XENOBIOTIC COMPOUNDS**(9)**

Aromatics - benzene, pentachlorophenol, Polyaromatic hydrocarbons (PAHs) – naphthalene, , Polychlorinated biphenyls (PCBs) hexachloro biphenyl, Pesticides-DDT and Surfactants–LAS

UNIT III INDUSTRIAL WASTE WATER MANAGEMENT**(10)**

Wastewater characteristics – physical, chemical and biological, Biological processes - unit operations, aerobic treatment processes, activated sludge process–characteristics of activated sludge and process configuration, anaerobic treatment by methanogenesis

UNIT IV TREATMENT OF INDUSTRIAL WASTES**(9)**

Dairy, Paper & Pulp, Textile, leather, hospital and pharmaceutical industrial waste management, e-waste-radioactive and nuclear power waste management.

UNIT V DEVELOPMENTS PERTAINING TO ENVIRONMENTAL BIOTECHNOLOGY (9)

Solid waste management, Role of biosensors in Environmental monitoring, Heavy metal pollution and their control strategies, Prevention of environmental damage with respect to nitrogen fixation, Bioremediation, Production of bioelectricity from microbial fuel cell (MFC), Improvement of water quality by denitrification, Role of biotechnology on agricultural chemical use.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Bruce E. Rittmann and Perry L. McCarty	Environmental Biotechnology: Principle and Applications	McGraw Hill	2001
2	Metcalf and Eddy	Waste water Engineering: Treatment Disposal Reuse	Mc Graw Hill	1991
3	Des W. Connell,	Basic concepts of Environmental chemistry	Lewis publishers	2005

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Alan Scragg	Environmental Biotechnology	Oxford University press	2005
2	Prescott, Harley, Klein	Microbiology	WCB publishers	1996

Course Objectives

- To present basic knowledge about the various cloning vectors and its features.
- To demonstrate the various techniques and enzymes involved in cloning.
- To explain and practice diverse concepts on expression vectors for cloning.
- To practice the basic views on preparation of genomic and cDNA library.
- To identify and organize differing views on applications of gene cloning in rDNA research.
- To compile the basic concepts of rDNA technology.

Course outcomes

1. Compose about basic concepts about the features of cloning vectors.
2. Assemble different techniques and enzymes involved in cloning.
3. Classify about expression vectors for cloning.
4. List the techniques in preparation of genomic and cDNA library.
5. Propose knowledge on applications for rDNA research.
6. Summarize concepts of rDNA technology.

UNIT I CLONING VECTORS**(9)**

Ideal features of cloning vectors – plasmids and bacteriophages – cloning vectors for E.coli ; pBR322, pUC vectors, M13 and other plasmid vectors – Cosmids, Phagemids – vectors for Bacillus, Streptomyces Restriction mapping and analysis

UNIT II ENZYMES AND TECHNIQUES FOR CLONING**(9)**

DNA modifying enzymes – ligases – Nucleic acid probe preparation; Radioactive and nonradioactive labels – Hybridization techniques – PCR; different types and applications – DNA sequencing – DNA fingerprinting – RFLP, RAPD – chromosome walking.

UNIT III EXPRESSION VECTORS**(9)**

Expression vectors in prokaryotes – Expression vectors in Eukaryotes-Yeast cloning vectors – selectable markers for eukaryotes – SV40, Papilloma, Retrovirus, Baculoviral vectors – mammalian cell expression system – Gene transfer techniques – Agrobacterial plasmids – Ti plasmid and viral vectors – cloning in plants.

UNIT IV GENOMIC AND cDNA LIBRARY**(9)**

Different strategies for in vitro and in vivo cloning – Preparation of rDNA, Preparation of cDNA and genomic DNA libraries – screening procedures – linkers, adapters, homopolymer tailing and TA cloning – gene transfer technologies – Mutagenesis – site directed mutagenesis – application.

UNIT V APPLICATION OF GENE CLONING**(9)**

Fusion protein- down-stream processing of recombinant proteins
Applications in medicine – Gene therapy- Diagnostics, pathogenesis, recombinant vaccines –humanized antibodies and their applications
genetically modified food – bioremediation with recombinant micro organisms– forensic science – genetic diversity – Agriculture, crop improvement – production of biosensors, enzymes – safety guidelines in rDNA research – containment and disposal.

2	Sandy B. Primrose and Richard Twyman	Principles of Gene Manipulation and Genomics	Wiley	2009
3	Michael R. Green and Joseph Sambrook	Molecular Cloning: A Laboratory Manual	Cold Spring Harbor Press	2012

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	T. A. Brown	Gene Cloning and DNA Analysis: An Introduction	Blackwell	2010
2	Jocelyn E. Krebs, Elliott S. Goldstein and Stephen T. Kilpatrick	Lewin's GENES XI	Jones & Bartlett Learning	2012

Course Objectives

- To explain the fundamentals of cancer biology
- To understand the principles of carcinogenesis
- To explain the principles of molecular cell biology
- To explain the principles of cancer metastasis
- To outline the different types of cancer therapy.
- To understand the molecular tools for cancer diagnosis.

Course Outcomes

At the end of the course students will be able to

1. Understand the fundamentals of cancer biology
2. Interpret the mechanism of carcinogenesis
3. Outline the principles of molecular cell biology
4. Understand the significance of cancer metastasis
5. Summarize the different types of cancer therapy
6. Recall the molecular tools of cancer diagnosis

UNIT I FUNDAMENTALS OF CANCER BIOLOGY**(8)**

Epidemiology of cancer: environmental factors: tobacco, alcohol, diet, occupational exposure, hormones. Regulation of cell cycle, modulation of cell cycle in cancer. Different forms of cancers. Specific type of cancer hepato cellular, melanoma, breast, lung cancer. Genetic basis of cancer- DNA repair. mutations that cause changes in signal molecules, signal switches.

UNIT II PRINCIPLES OF CARCINOGENESIS**(9)**

Theory of carcinogenesis, Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x- ray radiation-mechanisms of radiation carcinogenesis.

UNIT III PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER**(10)**

Signal amplification: Current models of signal amplification– Phosphorylation of protein kinases; regulation of protein kinases: serine threonine kinase, TNF receptor families, tumor suppressor genes, Oncogenes, identification of oncogenes, detection of oncogenes. Oncogenes/proto oncogene activity. Growth factors related to transformation. Telomerases.

UNIT IV PRINCIPLES OF CANCER METASTASIS**(10)**

Clinical significances of invasion, heterogeneity of metastatic phenotype, metastatic cascade, basement membrane disruption, three step theory of invasion, proteinases and tumour cell invasion.

UNIT VCANCER THERAPY**(8)**

Cancer screening and early detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer. Advances in cancer detection. Different forms of therapy, chemotherapy, radiation therapy, immunotherapy, molecular therapy, use of signal targets towards therapy of cancer; Gene therapy.

Total Hours: 45**TEXT BOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ian F.Tannock	The Basic Science of Oncology”	McGraw Hill Professional	2005
2	Dunmock. N. J and Primrose S. B	Introduction to modern Virology,	Blackwell Scientific Publications, Oxford	1988
3	L.M. Franks, N.M. Teich	Introduction to the Cellular an Molecular Biology of Cancer	Oxford Medical Publications	1991
4	Maly B. W. J	Virology a practical approach	IRL press, Oxford	1987
5	Ruddon, R. W.	Cancer Biology	Oxford University Press	1995

Course Objectives

- To explain the various cell types and their advances in tissue engineering.
- To demonstrate the various biomaterials for tissue engineering.
- To explain and practice diverse concepts on tissue engineering and tissue creation.
- To discuss the techniques in tissue typing.
- To practice the basic views on gene therapy.
- To identify and organize differing views on advances on tissue engineering.

Course outcomes

1. Compose about basic concepts in tissue engineering
2. Assemble different biomaterials for tissue engineering
3. Classify about methods for Tissue Engineering.
4. List the techniques in tissue typing
5. Explain the principles of gene therapy
6. Summarize the concepts of tissue engineering in different fields.

UNIT I BIOLOGICAL STUDY OF DIFFERENT CELL TYPES**(9)**

Cell line, Establishment of cell lines, Different cell types: Endothelial cell, Fibroblast cells, Epithelial cell, Myoblast cells, chromaffin cell, Smooth muscle cells & plasma cell.

UNIT II BIOMATERIALS FOR TISSUE ENGINEERING**(9)**

Biomaterials: Degradable polymeric scaffolds, Acellular Bio-Matrices, Biological derived polymers in tissue engineering: Natural BD Polymers & Synthetic BD polymers, Cell seeding of scaffolds, Cell source: Allogenic cells, Autologous cells & stem cells. Bioreactors used in tissue engineering: Nail Naughton's Bioreactor, Pulsatile Bioreactor.

UNIT III TISSUE ENGINEERING AND CONCEPTS OF TISSUE CREATION**(9)**

Concepts of Tissue Creation: Sources, Stem Cells, Cells from Tissues, Culture Methods for Tissue Engineering, Maturation of Tissue Construct- Tissue Constructs, Cell therapies, Organ Modules, Cosmetic Measures.

UNIT IV PRINCIPLES AND PRACTICE OF GENE THERAPY**(9)**

Introduction to gene therapy, Requirements of gene therapy, Genetic defects, Target cells for gene therapy, process of gene therapy, Factors responsible for gene therapy for making effective treatment of genetic disease, Recent developments in gene therapy research, ethical considerations of gene therapy.

UNIT V ADVANCES IN TISSUE ENGINEERING**(9)**

Development of artificial tissues; Transplantation biology: Tissue typing, Techniques of tissue typing, Minor histocompatibility antigens, Immuno-suppression, Side effects of immuno-suppression.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Bhojwani, S. S. Razdan, M. K.	Plant Tissue Culture (Theory and Practice)	Elsevier	1996
2	Ranga, M. M	Animal Biotechnology	Agrobios	2010
3	Watson, J. D. and Gilman, M.	Recombinant DNA	Scientific American Books	1992

Course Objectives

- To explain descriptive views of clinical practices and its scope.
- To illustrate Differentiating ethical theories and foundations of clinical trials.
- To discuss various evolution and regulation of clinical research.
- To evaluate various designing protocols and amendments of clinical research.
- To interpret different biostatistics and data management.
- To create data on different clinical research.

Course Outcomes

1. Elaborate the concept of scope and types of clinical research.
2. Evaluate the ethical theories of clinical research.
3. Discuss the history and regulation of clinical research.
4. Explain the various protocol developments in clinical research.
5. Identify basic views in different situations of biostatistics in clinical trials.
6. Make up perspective techniques and create data on different clinical research.

UNIT I INTRODUCTION TO CLINICAL RESEARCH**(9)**

Definition, Types and Scope of Clinical Research, Good Clinical Practices - Introduction to study designs and clinical trials - Careers in Clinical Research.

UNIT II ETHICS IN CLINICAL RESEARCH**(9)**

Ethical Theories and Foundations, Ethics Review Committee, Ethics and Historically derived principles - Nuremberg Code, Declaration of Helsinki, Belmont Report, Equipoise, Informed consent, Integrity & Misconduct.

UNIT III REGULATIONS IN CLINICAL RESEARCH**(9)**

Evolution and History of Regulations in Clinical Research, Patents US Regulatory Structure, IND, NDA, ANDA, Post Drug Approval Activities, PMS, FDA Audits and Inspections EU Regulatory Affairs, EMEA Organization and Function, INDIAN Regulatory system, Schedule Y- Rules and Regulations, Description of trial phases (Phase 0, Phase I, II, III, and IV), Trial contexts (types of trials: pharma, devices, etc.), Trial examples

UNIT IV CLINICAL RESEARCH METHODOLOGY AND MANAGEMENT (9)

Designing of Protocol, CRF, e-CRF, IB, ICF, SOP; Study Protocol -Introduction, background, Objectives

Eligibility, Design, Randomization - Intervention details, assessments and data collection, case report forms –Violations -. Amendments. Study/ Trial Design- Phase I designs - Dose-finding designs. Phase II designs - Pilot studies, Single arm, Historical control designs. Phase III designs - Factorial designs, Crossover designs, Multicenter studies, Pilot studies. Phase IV designs- Preparation of a successful clinical study, Study management, Project management Documentation, Monitoring, Audits and Inspections, Pharmacovigilance training in clinical research budgeting in clinical research, Supplies and vendor management.

UNIT V BIOSTATISTICS AND DATA MANAGEMENT (9)

Introduction to Power and Sample Size- Hypothesis testing, P-values, confidence intervals, General power/sample size, estimating effect size, Matching sample size calculations to endpoints. Importance of statistics in clinical research Statistical considerations at the design, analysis and reporting stage Data management - Data collection, Paper or electronic, Parsimony, Data validation, SAE reconciliation, query management Software considerations. Data Monitoring, Trial Conduct - Data quality assurance, Data delinquency, Data Monitoring, d. Trial Conduct, Occurrence and control of variation and bias.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Friedman,L. M., Furberg, C. D. and DeMets, D. L.	Fundamentals of Clinical Trials (4th Edition)”	Springer	2010
2	Machin, D. and Fayers, P	Randomized Clinical Trials: Design, Practice and Reporting	Wiley-Blackwell	2010
3	Piantadosi, S.	Clinical Trials: A Methodologic Perspective	John Wiley & Sons	2005

Course Objectives

- To explain basic knowledge on definition and scope of stem cells.
- To demonstrate the structural and functional principles of in vitro fertilization.
- To discuss the various identification and cell differentiation of somatic stem cells.
- To explain the effects of stem cell in drug discovery and tissue engineering.
- To outline the basic concepts of cellular therapy and gene therapy of stem cells.
- To compile the application of stem cells.

Course Outcomes

1. Summarize the characteristics stem cells.
2. Evaluate the different structural and functional parameters of invitro fertilization.
3. List the properties of adult stem cells in differentiation.
4. Explain the uses of stem cells in drug discovery and tissue engineering.
5. Recognize various stem cell therapies.
6. Summarize the application of stem cells.

UNIT I STEM CELLS AND CELLULAR PEDIGREES**(9)**

Scope of stem cells – definition of stem cells – concepts of stem cells – differentiation, maturation , proliferation , pluripotency, self – maintenance and self – renewal – problems in measuring stem cells – preservation protocols.

UNIT II EMBRYONIC STEM CELLS**(9)**

In vitro fertilization –culturing of embryos-isolation of human embryonic stem cells – blastocyst – inner cell mass – growing ES cells in lab – laboratory tests to identify ES cells – stimulation ES cells for differentiation – properties of ES cells.

UNIT III ADULT STEM CELLS**(9)**

Somatic stem cells – test for identification of adult stem cells – adult stem cell differentiation – trans differentiation – plasticity – different types of adult stem cells – IPS and cancer stem cells.

UNIT IV STEM CELL IN DRUG DISCOVERY AND TISSUE ENGINEERING**(9)**

Target identification – Manipulating differentiation pathways – stem cell therapy Vs cell protection - stem cell in cellular assays for screening – stem cell based drug discovery, drug screening and toxicology, stem cell markers

UNIT V POTENTIAL USES OF STEM CELLS**(9)**

Cellular therapies – vaccines – gene therapy – immunotherapy – tissue engineering – blood and bone marrow – Fc cells.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	CS Potten	Stem cells	Elsevier	1997
2	Kursad and Turksen	Embryonic Stem cells	Humana Press.	2002
3	Robert Paul Lanza	Essentials of stem cell biology,	O'Reilly	2006
4	Clive Svendsen , Allison D.Ebert.	Encyclopedia of stem cell research vol 1 & 2	Sage pub	2008

Course Objectives

- To explain the variations of renewable and nonrenewable energy and its usage.
- To classify the different sources for the production of biomass and bioenergy.
- To record the basic notion on assorted properties of fuels.
- To design the bioenergy production through agricultural wastes.
- To differentiate and organize the distinct agricultural wastes used for bioenergy production.
- To understand the basic theory of bioprocess principles.

Course Outcomes

1. Compare and contrast energy use as renewable and non-renewable energy.
2. Synthesize the biomass for renewable energy production.
3. Prioritize diverse properties of fuels.
4. Construct and design the bioenergy production through agricultural wastes.
5. Apply the knowledge on downstream processing for bioenergy production.
6. Examine and solve the problems related to bioenergy production.

UNIT I OVERVIEW OF ENERGY USE (9)

Fossil fuels - past, present & future, Remedies & alternatives for fossil fuels, Today's energy use, Fossil fuels and environmental impact, Renewable energy source and devices, Solar Energy, wind energy and hydro energy.

UNIT II BIOMASS AND BIO-ENERGY (9)

Biomass potential - terrestrial, aquatic and marine - collection- storage and utilization, Dedicated bioenergy crops, Woody biomass, Liquid biofuels, Synthetic fuels from the biomass, biomass to biofuel conversion, Alcohol production - cellulose degradation.

UNIT III PROPERTIES OF FUELS (9)

Fuel properties - alcohol, biogas, producer gas, vegetable oil. Combustion - air requirement – Octane and Cetane numbers. Analysis of products of combustion. Fuel blending - fuel efficiency in dual fuel operation, Biogas and producer gas engines.

UNIT IV AGRICULTURAL BIOMASS (9)

Bioenergy from wastes, agricultural wastes and byproducts - sources and availability, utilisation pattern - as fuel, Biochemical conversion of organic wastes, anaerobic digesters, methane production - sludge treatment - suitability of wastes as fuel.

UNIT V DOWNSTREAM PROCESSING (9)

Introduction to downstream processing principles, characteristics of biomolecules and bioprocesses. Cell disruption for product release– mechanical, enzymatic and chemical methods, filtration, centrifugation, chromatography, esterification, pyrolysis.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Stout. B.A.	Biomass energy	Texas University Press, College Station	1985
2	Chahal.D.S	Food, Feed and Fuel from Biomass	Oxford & IBH Publishing Co.	1991

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Chakraverty, A	Biotechnology and other alternate technologies for utilisation of biomass	Oxford and IBH publishing Co., New Delhi	1993.
2	Donald. L.Klass and Emert H. George	Fuels from Biomass and wastes	AnnArbo Science Publishers,Inc. Michigan	1981.
3	Chavla, O.P	Advances in Biogas Technology	ICAR Pub	1986

Course Objectives

- To explain cell disruption techniques.
- To illustrate different chromatographic methods for separation of active components.
- To discriminate separation techniques for analyzing the biological samples.
- To discuss the importance of separation of biomolecules from a mixture..
- To describe the isolation, purification and behavior of biomolecules.
- To understand the basic downstream process for treating the samples.

Course Outcomes

1. Discuss the basic knowledge on forensic activities.
2. Analyze the forensic criminalities.
3. Describe the analysis for the evidences of forensic samples.
4. Perceive the procedure for forensic sample analyzing using different assays.
5. Compile different properties and functions of digital imaging in forensic.
6. Explain the forensic ethics.

UNIT I CELL DISRUPTION**(9)**

Mechanical and enzymatic methods of cell disruption, importance of cell disruption in product release, homogenization, ultrasonication, extraction, absorption, adsorption.

UNIT II CHROMATOGRAPHIC METHODS**(9)**

Chromatographic methods, paper chromatography, thin layer chromatography, gas chromatography, GLC, HPLC, affinity chromatography, ion exchange chromatography, reverse phase chromatography

UNIT III SEPARATION TECHNIQUES**(9)**

Basic separation techniques: sedimentation, centrifugation, ultra centrifugation, gradient centrifugation, filtration, micro/ ultra filtration, use of membranes (semi permeable) in purification, reverse osmosis. Separation of bioconversion products/ secondary metabolites e.g. Steroids and antibiotics.

UNIT IV PHYSICO-CHEMICAL SEPARATION**(9)**

Importance of separation techniques in biotechnology, its scope from research to industry, chemical, physical and biochemical aspects of separation and isolation, purification of biomolecules. Behavior of biomolecules in body fluids

UNIT V DOWN STREAM PROCESSES**(9)**

Leaching, crystallization, lyophilization, drying. Chemistry of extraction, selection of solvent, use of solvent extraction in antibiotic separation, affinity extraction/ chromatography. Industrial applications with examples.

Total Hours: 45

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	P.A. Belter, E.L. Cussler And Wei-Houhu	Bioseparations – Downstream Processing For Biotechnology	Wiley Interscience Pub	1988
2	R.O. Jenkins, (Ed.)	Product Recovery In Bioprocess Technology – Biotechnology By Open Learning Series	Butterworth-Heinemann	1992

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	R.K. Scopes	Protein Purification – Principles And Practice	Narosa Pub	1994
2	Roger.G . Harrison , Paul Todd , Scott R.Rudge and DemetriP.Petrides	Bioseparation Science and Engineering	Oxford University Press	2003

Course Objectives

- To illustrate the modification of biomolecules.
- To describe the chemical reactions of active biomolecules.
- To list the importance and uses of bioconjugate reagents.
- To infer the chemical modifications of enzymes and nucleic acids.
- To tell about the enzyme and nucleic acid conjugation
- To discuss the various applications of bioconjugation of molecules.

Course Outcomes

1. Tell about the modifications of common biomolecules.
2. Determine the basic chemical reactions for active groups.
3. Express the functions of bioconjugate reagents.
4. Summarize the steps for enzyme and nucleic acid modification.
5. Describe the protocol for enzyme and nucleic acid conjugation.
6. Summarize applications of bioconjugation.

UNIT I FUNCTIONAL TARGETS**(9)**

Modification of Amino Acids, Peptides and Proteins Modification of sugars, polysaccharides and glycoconjugates – modification of nucleic acids and oligonucleotides.

UNIT II CHEMISTRY OF ACTIVE GROUPS**(9)**

Amine reactive chemical reactions–Thiol reactive chemical reactions–carboxylate reactive chemical reactions – hydroxyl reactive chemical reactions–aldehyde and ketone reactive chemical reactions – Photoreactive chemical reactions.

UNIT III BIOCONJUGATE REAGENTS**(9)**

Zero length crosslinkers – Homo bifunctional crosslinkers–Hetero bifunctional crosslinkers– Trifunctional crosslinkers – Cleavable reagent systems–tags and probes.

UNIT IV ENZYME AND NUCLEIC ACID MODIFICATION AND CONJUGATION**(9)**

Properties of common enzymes – Activated enzymes for conjugation – biotinylated enzymes– chemical modification of nucleic acids – biotin labeling of DNA – enzyme conjugation to DNA – Fluorescence of DNA.

UNIT V BIOCONJUGATE APPLICATIONS**(9)**

Preparation of Hapten - carrier Immunogen conjugates – antibody modification and conjugation – Immunotoxin conjugation techniques–liposome conjugation and derivatives-Colloidal–gold-labeled proteins–modification with synthetic polymers.

Total Hours: 45

Course Objectives

- To illustrate about the biosafety in biotechnology.
- To explain basic knowledge on Intellectual property rights.
- To rephrase different views on policies of IPR.
- To solve the IPR issues and Bioethics.
- To list and examine about the case studies of copyright and patents.
- To understand the basics of IPR and ethical issues in biotechnology.

Course Outcomes

1. Classify the different techniques involved in biosafety in biotechnology based industries.
2. Manage and organize the knowledge about the intellectual property rights.
3. Label an idea about the policies of IPR.
4. Relate about the IPR issues and bioethics.
5. Diagnose about the case studies on patents.
6. Summarize the basics of IPR and ethical issues in biotechnology.

UNIT I BIOSAFETY (8)

Biosafety – Biotechnology development in India, Safety issues concerning biotechnological products, governing biosafety, Cartagena protocol on biosafety, Conservation of Biodiversity.

UNIT II INTELLECTUAL PROPERTY RIGHTS (10)

Introduction - Invention and Creativity - Intellectual Property (IP) - Importance - Protection of IPR - Basic types of property (i. Movable Property ii. Immovable Property and iii. Intellectual Property). IP - Patents - Copyrights and related rights - Trade Marks and rights arising from Trademark registration - Definitions - Industrial Designs and Integrated circuits - Protection of Geographical Indications at national and International levels - Application Procedures.

UNIT III IPR – POLICIES (9)

International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities -History - General Agreement on Trade and Tariff (GATT). Indian Position Vs WTO and Strategies - Indian IPR legislations - commitments to WTO-Patent Ordinance and the Bill - Draft of a national Intellectual Property Policy - Present against unfair competition.

UNIT IV CASE STUDIES (9)

Case Studies on - Patents (Basumati rice, curcumin, Neem, etc.) - Copyright and related rights - Trade Marks - Industrial design and Integrated circuits - Geographic indications - Protection against unfair competition.

UNIT V IPR ISSUES & BIOETHICS**(9)**

Trade Secrets, Copy Rights, Farmer's Rights, Plant Breeder's rights; Traditional knowledge and their commercial exploitation and protection. Bioethics – Disease prevention Vs right to privacy, patentability of DNA, pre implantation embryo diagnosis, Engineered organisms into environment, Genetic tests in diagnostics and therapy.

Course Objectives

- To understand the variations of stoichiometry and kinetics of biochemical operations.
- To classify the different activities of microbes in waste water treatment.
- To record the basic notion on design and evaluation of growth process.
- To differentiate and organize the distinct methods for modeling reactors..
- To explain the basic applications of bioreactors.
- To discuss the problems related to biochemical operations in different industries.

Course Outcomes

1. Compare and contrast fundamentals and properties of biochemical operations.
2. Demonstrate various waste water treatment activities through biological methods.
3. Prioritize design and evaluation of growth process in bioreactors.
4. Construct and design the methods for modeling bioreactors.
5. Apply the knowledge on applications of modeling bioreactors.
6. Examine and solve the problems related to biochemical operations in different industries.

UNIT I BIOCHEMICAL OPERATIONS (8)

Classification of Biochemical operations, fundamentals of biochemical operations, Stoichiometry and Kinetics of Biochemical Operations.

UNIT II REACTORS IN WASTE WATER TREATMENT (10)

Theory, modeling of ideal suspended Growth Reactors, Modeling Suspended Growth Systems. Aerobic Growth of Heterotrophs in a single Continuous Stirred Tank, Reactor Receiving Soluble Substrate, Multiple Microbial Activities in a Single Continuous Stirred Tank Reactor, Multiple Microbial Activities in Complex Systems, Techniques for Evaluating Kinetics and Stoichiometric parameters.

UNIT III PROCESSES IN WASTE WATER TREATMENT (9)

Applications: Suspended Growth Reactors, Design and Evaluation of Suspended Growth Processes, Activated Sludge, Biological Nutrient Removal, Aerobic – digestion, Anaerobic Processes, Lagoons.

UNIT IV MODELING OF REACTORS (9)

Theory: Modeling of Ideal Attached Growth Reactors, Bio- film Modeling. Aerobic Growth of Biomass in Packed Towers, Aerobic Growth of Heterotrophs in Rotating Disc Reactors, Fluidized Bed Biological Reactors.

UNIT V APPLICATIONS OF BIOREACTORS (9)

Attached Growth Reactors, Trickling Filter, Rotating Biological Contactor, Submerged Attached Growth Bioreactors, Future Challenges, Fate and Effects of Xenobiotic Organic Chemicals.

COURSES OFFERED BY OTHER DEPARTMENTS

**OPEN ELECTIVES OFFERED BY
DEPARTMENT OF SCIENCE AND HUMANITIES**

OBJECTIVES:

1. To gain knowledge in measures of central tendency.
2. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
3. To understand the basic concepts of probability, one- and two-dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
4. To understand the basic concepts of random processes which are widely used in IT fields.
5. To understand the concept of correlation and spectral densities.
6. To make the student to solve Electrical Engineering problems.

COURSE OUTCOMES:

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
3. To understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
4. To apply the concept random processes in engineering disciplines.
5. The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable.
6. The students will have an exposure of various distribution functions, correlation and spectral densities.

UNIT- I MEASURES OF CENTRAL TENDENCY AND PROBABILITY**(9)**

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT- II STANDARD DISTRIBUTIONS

(9) Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT -III TWO DIMENSIONAL RANDOM VARIABLES

(9) Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IV CLASSIFICATION OF RANDOM PROCESS**(9)**

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -V CORRELATION AND SPECTRAL DENSITIES

(9) Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

OBJECTIVES:

1. Be able to understand basic knowledge of fuzzy sets and fuzzy logic
2. Be able to apply basic knowledge of fuzzy operations.
3. To know the basic definitions of fuzzy relations
4. Be able to apply basic fuzzy inference and approximate reasoning
5. To know the applications of fuzzy Technology.
6. To apply fuzzy logic control to real time systems

COURSE OUTCOMES:

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS**(9)**

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS**(9)**

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS**(9)**

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES**(9)**

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE**(9)**

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

www.calvin.edu/~pribeiro/othrlnks/Fuzzy/fuzzysets.htm

OBJECTIVES:

1. To introduce the basic concepts of vector space
2. To know the fundamentals of linear Algebra
3. To solve system of linear equations
4. To study about the linear transformations
5. To introduce the concepts of inner product spaces
6. To understand the concept of Linear Algebra and its applications.

COURSE OUTCOMES:

1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
2. To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
3. To apply the fundamental concepts in their respective engineering fields
4. To visualize linear transformations as matrix form
5. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
6. To articulate the importance of Linear Algebra and its applications in branches of Mathematics.

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations - Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

OBJECTIVES:

1. To disseminate the fundamentals of acoustic waves.
2. To inculcate the characteristics of radiation and reception of acoustic waves.
3. To divulge knowledge on the basics of pipe resonators and filters.
4. To introduce the features of architectural acoustics.
5. To impart the basic knowledge of transducers and receivers.
6. To apply the knowledge inputs of the course for core engineering.

COURSE OUTCOMES:

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION**(9)**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**(9)**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance
Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS**(9)**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**(9)**

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.

Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION**(9)**

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electro-dynamics microphone piezoelectric microphone – calibration of receivers

OBJECTIVES:

1. To make the students conversant with basics of Solid wastes and its classification.
2. To make the student acquire sound knowledge of different treatments of solid wastes.
3. To acquaint the student with concepts of waste disposals.
4. To develop an understanding of the basic concepts of Hazardous waste managements.
5. To acquaint the students with the basics of energy generation from waste materials.
6. To understand the chemical principles in the projects undertaken in field of engineering and technology

COURSE OUTCOMES:

1. Outline the basic principles of Solid waste and separation of wastes (K).
2. Identify the concepts of treatment of solid wastes (S).
3. Identify the methods of wastes disposals. (S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I SOLID WASTE (9) Physical, Chemical and Biological Property – Collection – Transfer

Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT**(9)**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL**(9)**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT**(9)**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE**(9)**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

OBJECTIVES:

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
3. To acquaint the student with concepts of green technology.
4. To develop an understanding of the basic concepts of renewable energy resources.
5. To acquaint the students with the basic information on catalysis.
6. To apply the concepts of green catalysts in the synthesis

COURSE OUTCOMES:

1. Outline the basic principles of green chemistry (K).
2. Examine the different atom efficient process and synthesis elaborately (S).
3. Apply the concepts combustion of green technology (S).
4. Identify and apply the concepts of renewable energy (S).
5. Apply the concepts of green catalysts in the synthesis (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**(9)**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES**(9)**

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY**(9)**

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES**(9)**

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY**(9)**

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

OBJECTIVES:

1. To get the information on electrochemical material.
2. To study about the conducting polymers.
3. To acquaint the student with concepts of Energy storage devices.
4. To gain knowledge on the batteries and power sources.
5. To develop energy storage devices.
6. To understand the chemical principles in the projects undertaken in field of engineering.

COURSE OUTCOMES:

1. Outline the basic principles of chemistry in **electrochemical material (K)**.
2. Examine the properties of conducting polymers (S).
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING**(9)**

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS**(9)**

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I**(9)**

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II**(9)**

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE**(9)**

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

OBJECTIVES:

1. To make the students conversant with **cement and lime** and its uses.
2. To make the student acquire sound knowledge of abrasives and refractories.
3. To acquaint the student with concepts of inorganic chemicals.
4. To develop an understanding of the basic concepts **explosives**.
5. To acquaint the students with the basics of **agriculture chemicals**.
6. To understand the chemical principles in the projects undertaken in field of engineering.

COURSE OUTCOMES:

1. Outline the basic chemistry of **cement and lime (K)**.
2. Examine the uses of abrasives and refractories (S).
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens (S).
5. Identify the usage of the **agriculture** chemicals (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I CEMENT AND LIME**(9)**

Manufacture of Portland cement – setting of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement
Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES (9) Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses.

Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**(9)**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**(9)**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS**(9)**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

<http://toxics.usgs.gov/topics/agchemicals.html>

OBJECTIVES:

1. Develop abilities to write technically and expressively.
2. Recognize writing as a constructive, meaningful process.
3. Practice using reading strategies for effective writing.
4. Design effective technical documents for both print and digital media.
5. Identify the qualities of good technical writing.
6. To enrich their reading ability for effective writing.

COURSE OUTCOMES:

1. Construct simple sentences, correct common grammatical errors in written English.
2. Develop confidence in English language by imbibing lexical and syntax rules.
3. Enrich their reading ability for effective writing.
4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT – I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer's block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT – 2 PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT – 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT – 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT – 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

**OPEN ELECTIVES OFFERED BY DEPARTMENT OF
COMPUTER SCIENCE AND ENGINEERING**

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts& techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client-side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNIT I Introduction**(9)**

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML**(9)**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL**(9)**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming**(9)**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication - VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT VInternet Telephony

(9)

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

MULTIMEDIA AND ANIMATION

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I Introduction

(9)

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash

(9)

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts

(9)

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption

(9)

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development

(9)

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

TEXT BOOK:

Computer Graphics, Multimedia and Animation-Malay K. Pakhira, PHI Learning
PVT Ltd, 2010

REFERENCES:

Principles of Multimedia – Ranjan Parekh, 2007, TMH. (Unit I, Unit V)

Multimedia Technologies – Ashok Banerji, Ananda Mohan Ghosh – McGraw
Hill Publication.

Encyclopedia of Multimedia and Animations-Pankaj Dhaka, Anmol Publications-2011

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction**(9)**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices**(9)**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview**(9)**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance**(9)**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting

(9)

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

Total Hours: 45

TEXT BOOK:

B. Govindarajalu, “IBM PC Clones Hardware, Troubleshooting and Maintenance”, 2/E, TMH, 2002.

REFERENCES:

Peter Abel, Niyaz Nizamuddin, “IMB PC Assembly Language and Programming”, Pearson Education, 2007
Scott Mueller, “Repairing PC's”, PHI, 1992

COURSE OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop Java programs using OOP principles
- Develop Java programs with the concepts of inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA (9)

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES (9)

Arrays – Strings - Packages – Java-Doc comments -- Inheritance –class hierarchy – polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS (9)

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING (9)

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to Swing – Model-View-Controller design pattern –buttons – layout management – Swing Components – exception handling – exception hierarchy – throwing and catching exceptions.

Motivation for generic programming – generic classes – generic methods – generic code and virtual machine – inheritance and generics – reflection and generics - Multi-threaded programming – interrupting threads – thread states – thread properties – thread synchronization – Executors – synchronizers.

**LIST OF OPEN ELECTIVES OFFERED BY
ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT**

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION**9**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS**9**

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT**9**

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE**9**

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES**9**

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL: 45 HOURS

TEXT BOOK

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Iqbal Hussein	Electric and Hybrid Vehicles: Design Fundamentals	CRC Press – 2 nd edition	2010

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay, Ali Emadi	Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design	Standards media – 2 nd edition	2009
2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley – 2 nd edition	2012

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

**TOTAL:
45 HOURS**

TEXT BOOK

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butterworth	Energy Management	Heinemann Publications	2007

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	Lulu Enterprises, Inc. - 8th Edition Volume II	2013

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment
Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEBSITE

<http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>,- Introduction to programmable Logic controller

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

**OPEN ELECTIVES OFFERED BY
ELECTRONICS AND COMMUNICATION ENGINEERING TO OTHER DEPARTMENTS**

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To impart knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems- embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks–Real Time Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management–Memory Management–Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

Introduction– μ C/OS-II Features-Goals of μ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under μ C/OS-II –Clock Tick– μ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–Stack Checking–Task's Priority–Suspending Task–Resuming Task. Time Management: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box– Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks–Creating Partition–Obtaining a Memory Block–Returning a Memory Block. Getting Started with μ C/OS-II–Installing μ C/OS-II–Porting μ C/OS-II: Development Tools–Directories and Files– Testing a Port -IAR Workbench with μ C/OS-II– μ C/OS-II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help of μ C/OS-II.

2	Sriram V Iyer, Pankaj Gupta	Embedded Real Time Systems Programming	Tata Mc Graw Hill	2004

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNIT III OPTICAL RECORDING AND REPRODUCTION

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNIT IV TELECOMMUNICATION SYSTEMS

Telephone services–telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNIT V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; Components of air conditioning and refrigeration systems.

TEXT BOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	S.P. Bali	Consumer Electronics	PearsonEducation	2007
2	J.S.Chitode	Consumer Electronics	Technical Publications	2007

REFERENCE:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Philip Hoff,Philip Herbert Hoff.	Consumer Electronics for Engineers.	Cambridge University Press	1998

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT II LEARNING PROCESS

Error– correction learning– memory based learning- hebbian learning-competitive learning-Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm- Learning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain- Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem-ART algorithm-ARTMAP.

UNIT V SELF ORGANIZATION

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT-I

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT-II

Theory of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT-III

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy fiction and de fuzzy fiction procedures– Design of Fuzzy Logic Controller

UNIT-IV

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V

Fuzzy based systems: Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

**OPEN ELECTIVES OFFERED BY DEPARTMENT OF
AUTOMOBILE ENGINEERING**

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes:**Upon successful completion of the course, the students should be able to:**

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT-I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

3.	N.Newton, W. Steeds and T.K.Garrett	The Motor vehicle, 13th edition	SAE Inc	2001

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

2.	Bruce A. Johns, David D.Edmundson and Robert Scharff	Motorcycles: Fundamentals, Service, Repair	Goodheart-Willcox	1999

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TEXT BOOKS

SL.NO.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	John Doke	Fleet Management	McGraw Hill Co	1984
2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

Course Objectives:

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

**LIST OF OPEN ELECTIVES
OFFERED BY CIVIL ENGINEERING**

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING**9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES**9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS**9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS**9**

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TOTAL HRS : 45

TEXT BOOKS

Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 2002.

Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 2001.

REFERENCES

Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.

UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 2000.

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the bu
3. The basic principles of asset management in a building & facilities maintenance environmer
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services

– Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS

9

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN

9

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant– Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

National Building Code.

OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS**9**

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II.IRRIGATION SCHEDULING**9**

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III.MANAGEMENT**9**

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV.OPERATION

Operational plans – Main canals, laterals and field channels – Water control and regulating structures
– Performance indicators – Case study

UNIT V.INVOLVEMENT OF STAKE HOLDERS

9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL HRS : 45

TEXT BOOKS

Dilip Kumar Majumdar, "Irrigation Water Management – Principles and Practice", Prentice Hall of India Pvt. Ltd., New Delhi, 2000

Hand book on Irrigation Water Requirement, R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi

REFERENCES

Hand Book on Irrigation System Operation Practices, Water Resources Management and Training Project, Technical report No. 33, CWC, New Delhi, 2000

Maloney, C. and Raju, K.V., "Managing Irrigation Together", Practice and Policy in India, Stage Publication, New Delhi, India, 2000

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS**9**

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES**9**

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I**9**

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPMENTS -II**9**

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES**9**

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

TOTAL HRS : 45**TEXT BOOKS**

Peurifoy, R. L., Ledbetter, W.B., Construction Planning, Equipment and Methods, Mc Graw Hill Co., 2000.

3. Ataev, S.S., Construction Technology, MIR, Pub. 2000

**LIST OF OPEN ELECTIVES OFFERED
BY MECHANICAL ENGINEERING**

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcome

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS**9**

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS**9**

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING**9**

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION**9**

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT**9**

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

6	Rao S S	Optimisation Techniques	Wiley Eastern, New Delhi	2003

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS**9**

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN**9**

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS**9**

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES**9**

Structuring the SC, SC and new products, functional roles in SC - SC design framework - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM**9**

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP, - Case study, ERP Software's

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcome

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non-Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometries in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT**9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

Course Objective

2. To describe the principles of the study of human movement.
3. To describe the range of factors that influence the initiation, production and control of human movement.
4. To identify the body's lever systems and their relationship to basic joint movement and classification.
5. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
6. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
7. To relate the different body systems necessary for human movement to occur.

Course Outcome

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM**9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

**COURSES OFFERED TO OTHER
DEPARTMENT OPEN ELECTIVES OFFERED
BY DEPARTMENT OF BIOTECHNOLOGY**

Course Objectives:

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for Bioprocess Engineering.
- Elaborate the principle of heat transfer in bioreactor.
- Construct the equipments used in mass transfer operations.
- Categorize the equipments used in separation process.

UNIT I ENGINEERING PROPERTIES AND STORAGE TANK (9)

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNIT II REACTOR DESIGN (9)

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS (9)

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS (9)

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V SEPARATION EQUIPMENTS (9)

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotary drum drier and Swenson –walker crystallizer.

REFERENCE BOOKS

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Pauline. M. Doran	Bioprocess Engineering Principles	Academic Press	2013

Course Objectives

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING (9)

Properties of food- Physical, thermal, mechanical, sensory. Raw material
Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS (9)

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning-additives-fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing-Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS (9)

Sizereduction- Fibrous foods, dry foods and liquid Theory and
foods-
equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING (9)

Refrigeration, Freezing-Theory, freezing time calculation, methods freezing of freezing,
equipments, freeze drying, freeze concentration, thawing, effect of low
temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES (9)

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS**(9)**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**(9)**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS**(9)**

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS

(9)

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS

(9)

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharmainformatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

TEXTBOOK

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Dan E. Krane, Michael L. Rayme	Fundamental Concepts of Bioinformatics	Pearson education	2004
2	Andreas D. Baxevanis, B. F. Francis Ouellette	Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins	Wiley-Interscience	2004
3	David W. Mount	Sequence and Genome Analysis	Cold Spring Harbor Laboratory	2004
4	Jonathan Pevsner	Bioinformatics and Functional Genomics	Wiley-Liss	2003

REFERENCE BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Michael J. Korenberg	Microarray Data Analysis: Methods and Applications	Springer Science & Business Media	2007

Course Objectives

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION**(9)**

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT IINANO PARTICLES**(9)**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip-pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS**(9)**

Nanomedicine, Nanobiocensor and Nanofludics.Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems.Nano-Biodesives and Systems.Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IVNANOBIOTECHNOLOGY**(9)**

Clinical applications of nanodevices.Artificial neurons.Real-time nanosensors- Applications in cancer biology.Nanomedicine.Synthetic retinyl chips based on bacteriorhodopsins.High throughput DNA sequencing with nanocarbon tubules.Nanosurgical devices.

UNIT VETHICAL ISSUES IN NANOTECHNOLOGY

(9)

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

Chemical Engineering (B. Tech)

CHOICE BASED CREDIT SYSTEM (CBCS)

Syllabus 2017-2018

DEPARTMENT CHEMICAL ENGINEERING
ENGINEERING

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established under section 3 of UGC Act, 1956)

Pollachi Main Road, Eachanari (Post), Coimbatore- 641021, TamilNadu, India

Phone: 0422 –2980011 –15 FaxNo: 0422–2980022-23

Email: info@karpagam.com Web: www.kahedu.edu.in

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
2. To help students acquire their ability to speak effectively in real life situations.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To ensure that students use dictionary to improve their active and passive vocabulary.
5. To enable students to improve their lexical, grammatical and communicative competence.

To enable for reading and listening skills

COURSE COURSE OUTCOMES::

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Gain confidence in using English language in real life situations.
4. Improve word power: lexical, grammatical and communication competence.
5. Ability to reading and listening skills
6. Interpreting visual materials, Abbreviations & Acronyms.

Unit- I LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)****(9)**

Listening –Types of listening- Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, COURSE OBJECTIVES, conversational and argumentative. **Writing** – Formal and Informal letters- Letters to the Editor.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary) Tenses - Articles. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit – II LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)****(8)**

Listening –Understanding the passage in English–Pronunciation practice. **Speaking** –Asking and answering questions. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary**– Compound Nouns/Adjectives – Irregular verbs.

Unit - III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (8)

Listening –Listening for specific task–fill in the gaps.**Speaking**–Phonemes–Syllables–Roleplay – Conversation Practice.**Reading** –comprehension passages based on general topics or matters of current affairs. **Writing** - Autobiographical writing & Biographical writing.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Preposition – Infinitive & Gerund. – Foreign words used in English – British and American usage.

Unit- IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing)

Listening –Responding to questions–Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars.**Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) & Instruction writing.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Parts of Speech, Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit-V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10)

Listening –Distinction between native and Indian English (Speeches by TED and Kalam). **Speaking**–Extempore talk –Just-a-minute talk.**Reading**–Reading strategies–Intensive reading – Text analysis.**Writing** - Creative writing – Writing circulars and notices – Writing proposal.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Direct and Indirect speech – Conditional sentences - Auxiliary verbs.**Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @2 periods per each unit.

COURSE OBJECTIVES

1. To develop analytical skills for solving different engineering problems.
2. To understand the concepts of Matrices and vector differentiation.
3. To solve problems by applying Differential Calculus and Differential equations.
4. To solve problems of implicit functions and successive differentiation.
5. To understand Reduction to canonical form through orthogonal reduction.
6. To solve vector operator applied to vector point functions

COURSE COURSE OUTCOMES::

1. Apply advanced matrix knowledge to Engineering problems.
2. Improve their ability in solving geometrical applications of differential calculus problems
3. Improve their ability in vector differentiation.
4. Apply knowledge for chain rule and successive differentiation
5. Apply engineering problems -Partial differential equations
6. Improve their ability for vector operator applied to scalar point functions.

UNIT I MATRICES**(12)**

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS**(12)**

Limits, Continuity (Concepts only)- Differentiation- Differentiation Techniques: standard formulae, product rule, quotient rule, chain rule, method of substitution, implicit functions and successive differentiation.

UNIT III GEOMETRICAL APPLICATIONS OF DIFFERENTIAL CALCULUS**(12)**

Curvature – centre, radius and circle of curvature in Cartesian co- ordinates – Evolutes - Envelope – Evolute as envelope of normals.

UNIT IV DIFFERENTIAL EQUATIONS**(12)**

Introduction to Ordinary differential equations: Linear ordinary differential equations of second and higher order with constant coefficients.

Introduction to Partial differential equations: Linear Partial differential equations of second and higher order with constant coefficients.

UNIT V VECTOR DIFFERENTIATION**(12)**

Vectors-Differentiation of vectors – scalar and vector point functions –vector operator – vector operator applied to scalar point functions: Gradient; vector operator applied to vector point functions: Divergence and curl; Physical interpretation of divergence and curl, Directional derivative, solenoidal and irrotational vectors.

3. www.intmath.com/matrices-determinants
4. [www. Intmath.com/calculus/calculus-intro.php](http://www.Intmath.com/calculus/calculus-intro.php)

COURSE OBJECTIVES:

1. To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
2. For checking, judging and critiquing the applications of Electrodynamics, Optics and Relativity
3. Explain Quantum Mechanics to understand wave particle dualism. Necessity of quantum mechanics to explore the behavior of sub atomic particles. Evaluate the Eigen values and Eigen functions of a particle
4. To understand the basic elastic and dielectric properties of materials. To demonstrate the success of quantum free electron theory over classical free electron theory
5. To classify the type of the defect present in the crystal. To find out the particle size of a crystal by XRD technique
6. To know the significance of Maxwell's equations in the Engineering applications of electromagnetic waves

COURSE COURSE OUTCOMES:::

1. The students will have the knowledge on the basics of physics related to properties of matter, fiber optics, quantum, crystal physics and that knowledge will be used by them in different engineering and technological applications
2. Check, judge and critique the applications of Electrodynamics, Optics and Relativity
3. understand applications of optics using basic fundamentals of Physics
4. Explain the Modern Physics Concepts
5. familiar with Basic Elements of Quantum Theory
6. knowledge about dual nature of wave function, Applications of Schrodinger wave equation Fermi-Dirac probability function, Position of Fermi level in intrinsic and extrinsic semiconductors, Semiconductor conductivity

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Threetypes of modulus of elasticity – basic definitions, relation connecting themodulii (Derivation), Poisson's ratio- Torsional pendulum- bending of beams - bending moment – uniform and non uniform bending

Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.Total internal reflection – modes of propagation of light in optical fibers – numerical aperture andacceptance angle – derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS (9) Introduction to quantum theory – Black body radiation - dual nature of matter and radiation –de Broglie wavelength, uncertainty principle –Schrödinger’s wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electron microscope

UNIT IV CRYSTAL PHYSICS

(9)

Lattice – unit cell – Bravais lattice – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures, crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS

(9)

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A, B and C – scan displays, Medical applications – Sonogram. Introduction – basics about nuclear fission and fusion, Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

3. www.oyc.yale.edu
4. www.physics.org

COURSE OBJECTIVES

1. To understand about the water technology.
2. To get the information on electrochemical cells, batteries, fuels and combustion.
3. To study about the corrosion and protective coatings.
4. To gain knowledge on adsorption phenomena.
5. To make the student conversant with basic water technology
6. To acquaint the students with the basic of engineering materials

COURSE COURSE OUTCOMES::

1. This course will create an impact on the students and make them to realize the modern utility on electrochemical cells, batteries, fuels and combustion process, corrosion and adsorption methods.
2. Outline the basic principles of chemistry for water treatment
3. Identify the concept of corrosion and its protection in the engineering field
4. Apply the concepts combustion of different fuels
5. Apply the concepts of surface chemistry in the field of engineering
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I WATER TECHNOLOGY (9)

Sources-Characteristics – Specification for drinking water, BIS & WHO-Alkalinity – Types of alkalinity and determination (No problems) – Hardness – Types and estimation by EDTA method (No problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES (9)

Electrolytic conductance-application (conductometric titration)- Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) –Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H_2 - O_2 Fuel Cell.

UNIT III FUELS AND COMBUSTION (9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV- Problems on Calculation of GCV & NCV - Flue gas analysis.

UNIT IV CORROSION SCIENCE (9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings-Metallic coatings - Electroplating of Cu over Fe and Electro less plating (Ni) - Surface conversion coating - Hot dipping.- Anodizing of Al

UNIT V SURFACE CHEMISTRY AND PHASE RULE (9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

4. <http://ocw.mit.edu/courses/#chemistry>
5. <http://www.chem.qmul.ac.uk/surfaces/sec>

COURSE OBJECTIVES

1. To study the basic unit operations and unit processes in Chemical industry
2. To study the Process instrumentation and safety
3. To introduce the student with basic concepts of Chemical Engineering
4. To introduce the moles and pressure concept
5. To introduce the chemical process and basic concepts
6. Recognition of and commitment to the importance of continued self-improvement and the ability to engage in lifelong learning

COURSE COURSE OUTCOMES::

1. Students will be able to convert units of simple quantities from one set of units to another set of units
2. Students will be able to calculate quantities and /or compositions, energy usages, etc. in various processes and process equipment such as reactors, filters, dryers, etc.
3. Gain knowledge of chemical processes and the need of safety in industries.
4. student will able to know the knowledge of basic of chemical operation
5. Students will be able to know basic principles of chemical operation
6. Students will be able to know chemical process

INTRODUCTION (Not included for examination) 3

Introduction to chemical engineering; history of chemical engineering and chemical technology; Scope of Chemical Engineering, Nature of Industries.

UNIT IBASIC CHEMICAL CALCULATIONS 8

Basic Concepts: concept of mole, weight percent, mole percent, normality, molarity, molality, vapor pressure, partial pressure.

UNIT IUNIT PROCESSES 8

Introduction to unit processes with simple examples like sulphonation, polymerization, oxidation, hydrogenation, saponification, etherification, nitration, chlorination.

UNIT III UNIT OPERATIONS-I 8

Introduction, Definition, examples like Size reduction, sedimentation, filtration, Distillation, evaporation, absorption, extraction, fluid handling, mixing, solid handling, fluid-solid contacting, fluid-solid separation, fluid storage, crystallization, drying, leaching.

UNIT IV UNIT OPERATIONS-II 8

Heat Transfer- Conduction, Convection, Radiation concepts and Heat Exchangers.Principle of Ion exchange, techniques and applications. Solid and liquid membranes; concept of osmosis; reverse osmosis; electro dialysis; ultrafiltration Fluid properties, fluid flows, flow measurement devices.

Conversion, Yield, efficiency, flow diagram, flow sheets, & block diagram, with examples

<https://docs.google.com/file/d/0B6mmcxrKnEhdEY0ZTMzeHNVSHM/edit>

COURSE OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of various Electrical Machines.
3. To know about various measuring instruments.
4. To understand the basic concepts in semiconductor devices and digital electronics.
5. To know Dynamometer type Watt meters and Energy meters
6. To understand the Boolean expressions using logic gates

COURSE OUTCOMES:

1. The students shall develop an intuitive understanding of the circuit analysis,
2. Basic concepts of electrical machines,
3. Basics of electronics and be able to apply them in practical situation.
4. Fundamentals of Voltage Regulation. Bipolar Junction Transistor
5. Implementation of Boolean expressions using logic gates
6. Basics of Dynamometer type Watt meters and Energy meters

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS**9**

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES**9**

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS**9**

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS**9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS**9**

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressions using logic gates - standard forms of Boolean expression.

TOTAL**45**

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mittle, V.M	Basic Electrical Engineering	Tata McGraw Hill Edition, New Delhi	2004
2	SedhaR.S	Applied Electronics	S. Chand & Co	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Muthusubramanian R, and Muraleedharan K A	Basic Electrical, Electronics and Computer Engineering	Tata McGraw Hill, Second Edition	2006
2	Nagsarkar T K and Sukhija M S	Basics of Electrical Engineering	Oxford press	2005
3	Mahmood Nahvi and Joseph A. Edminister	Electric Circuits	Schaum'' Outline Series, McGraw Hill	2002
4	Premkumar N	Basic Electrical Engineering	Anuradha Publishers	2003

COURSE OBJECTIVES:

1. To develop basic laboratory skills
2. Demonstrating the application of physical principles.
3. Application of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Application of Band Gap of a semiconductor material
5. To develop basic knowledge about acceptance angle in an optical fiber
6. To know the wavelength of mercury spectrum, Viscosity of liquid

COURSE COURSE OUTCOMES:::

1. The students will have the knowledge on Physics practical experiments
2. Knowledge will be used by them in different engineering and technological applications.
3. Spectrometer Dispersive power of a prism
4. Student will be able to Determination of thickness of a thin wire – Air wedge method
5. Student will able to Determination of Band Gap of a semiconductor material
6. Student will able to Young's modulus of the material – Non uniform bending (or) Uniform bending.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

COURSE OBJECTIVES:

1. To provide students with practical knowledge of quantitative analysis of materials by classical
2. To provide students with instrumental methods for developing experimental skills in building technical competence.
3. To know practical knowledge Ferric ion by Spectrophotometry
4. To know Practical knowledge of molecular weight and degree of polymerization using Viscometers.
5. To know practical knowledge of pH Titration
6. To know of molecular weight and degree of polymerization using Viscometers

COURSE COURSE OUTCOMES:::

1. The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters
2. The students will be corrosion measurement.
3. students will be able to know the Ferric ion by Spectrophotometry
4. Students will be able to know the of molecular weight and degree of polymerization using Viscometers.
5. students will be able to know the pH Titration
6. students will be able to know the chemical oxygen demand

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using BaCl_2 vs Na_2SO_4 .
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometers.
13. Determination of chemical oxygen demand.

COURSE OBJECTIVES

1. To provide exposure to the students with hands on experience on various basic engineering practices in Mechanical, Electrical and Electronics Engineering.
2. Students able to understand different tool & equipment for work shop practice.
3. Students acquire skills for the preparation of different Carpentry/fitting/welding models.
4. Students able to understand the safety precaution in the workshop
5. Student acquires skills of Application orientated tasks.
6. Prepare the student for future Engineering positions

COURSE OUTCOMES:

1. To provide exposure to the students with hands on experience on various basic Engineering practices in Civil and Mechanical Engineering
2. To provide exposure to the students with hands on experience on various basic Engineering practices in Electrical and Electronics Engineering.
3. To develop general machining skills in the students.
4. To develop a skill in dignity of labour, precision, safety at work place, team working and development of right attitude
5. Prepare the simple job as per specification using tin smithy tools
6. Select appropriate pipe fitting tool for the required application

PART – A (MECHANICAL)**i. WELDING**

- i. Preparation of arc welding of butt joints, lap joints and tee joints.

ii. BASIC MACHINING

- i. Simple Turning and Taper turning
- ii. Drilling and Tapping
- iii. Sheet Metal Work
- iv. Model making – Trays, funnels, etc.

iii. DEMONSTRATION ON

- i. Smithy operations
- ii. Foundry operations
- iii. Plumbing Works
- iv. Carpentry Works

PART –B (ELECTRICAL & ELECTRONICS)**iv. ELECTRICAL ENGINEERING**

- i. Study of electrical symbols and electrical equipments.
- ii. Construct the wiring diagram for Stair case wiring.
- iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
- iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
- v. Measurement of energy using single phase energy meter.

v. ELECTRONICS ENGINEERING

- i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
- ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
- iii. Study of logic gates AND, OR, NOT, NOR and NAND.

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Jeyachandran, K., Natarajan, S. and Balasubramanian, S	A Premier on Engineering Practices Laboratory	Anuradha Publishers, Kumbakonam	2007
2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices LabManual	Vikas Puplishing House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

COURSE OBJECTIVES

1. To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
2. To expose them to existing national standards related to technical drawings.
3. Employ freehand 3D pictorial sketching to aid in the visualization process and to efficiently communicate ideas graphically
4. The course is aimed at developing Basic Graphic skills.
5. Develop Skills In Preparation Of Basic Drawings.
6. Skills in Reading and Interpretation of Engineering Drawings

COURSE COURSE OUTCOMES::

1. Perform free hand sketching of basic geometrical constructions and multiple views of objects.
2. Do orthographic projection of lines and plane surfaces.
3. Draw projections and solids and development of surfaces.
4. Prepare isometric and perspective sections of simple solids.
5. Demonstrate computer aided drafting.
6. Appreciate the usage of engineering curves in tracing the paths of simple machine components

UNIT I INTRODUCTION**9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning— linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES**8**

SCALES:Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING**9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES**8**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS

8

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam)

3

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

COURSE OBJECTIVES:

1. Yoga Education Helps To Develop The Self Discipline, Self Control, Awareness, Concentration And Higher Level Of Consciousness.
2. To give them a basic understanding of Definition of psychology, Methods of psychological sciences like Introspection method, Observation method, Case study method and Observation method.
3. To aware of Scope and substance of Indian Psychology, Cognitive process like Sensation, Perception, Attention, Memory, Language, Thinking, Concept formation and creativity, Extra sensory perception,
4. Fundamentals of Attitudes, learning, motivation and emotion.
5. aware of Yoga Psychology and Definition & characteristics of Personality and Indian approaches to Personalit
6. To provide the necessary knowledge of Kriyas, Asanas, Mudras, Bandas, Pranayama and meditative postures

COURSE COURSE OUTCOMES::

1. Demonstrate basic skills associated with yoga and Pilates.
2. Demonstrate the ability to perform yoga movements in various combination and forms.
3. Understand and apply the knowledge of basic choreography, and effective group management.
4. Demonstrate the ability to create and present various yoga activities. Identify opportunities for participation in yoga activities in the community.
5. Demonstrate an understanding of health-related fitness components: muscular strength, muscular endurance, and stress management.
6. Understand and correctly apply biomechanical and physiological principles elated to exercise and training.

UNIT- I

Introduction To Yoga- Meaning Of Yoga – Concept Of Yoga- Aim And COURSE OBJECTIVES Of Yoga – History Of Yoga - Systems Of Yoga.- Stages (Or) Limbs Of Yoga

UNIT- II

Asanas-Surya Namashkar- Thadasana- Veerabadhra Asana- Trikonasana- Utkatasana- ArdhaChakrasana- Ardha Kati Chakrasana- Thandasana- Gomugasana- Padmasana- Vajrasana- Paschimottasana- Matsyendrasana-BavanaMukthasana- SuptaPadhangusthasana-Sethubhandhasana- Navasana- ArdhaBavanamukthasana- Mathasyasana- Naukasana- Bujangasana- Salabasana- Makkarasana-Dhanurasana.

UNIT- III

Advance Asanas- Sirasasana- Garudasana- Natrajasana- Rajakoptasana- Chakrasana- Kukutasana- Virikshasana- Sarvagasana- Halasana-. Mayurasana.

UNIT- IV

Pranayama- Meaning- Types Of Pranayama- Bhastrika- Bhramari- Udgeeth- Kabalbhati- Bahya- Anulom Vilom- Pranay Pranayama- Benefits Of Pranayama. Neti - JalaNeti , Sutra Neti, Nooli-Three Types, Douthy-Three Types

UNIT- V

Mudras- Uses Of Mudras- Gyan- Shoonya- Apaana- Prana- Vayu- Prithvi- Linga- Apana- Adi Mudra-- Agni Mudra- Surya Mudra- Varuna- Hakini Mudra.

SEMESTER II

17BTCC201ABUSINESS COMMUNICATION

3 0 0 3

COURSE OBJECTIVES

1. To help students comprehend the role of listening skills in effective communication.
2. To familiarize students with verbal and non-verbal communication.
3. To expose students to neutral accent.
4. To develop emotional intelligence skills in them for enhancing their self-esteem.
5. To assist them in setting goals and developing positive attitude.
6. To enable students to acquire decision making skills, problem solving skills and assertive skills.

COURSE COURSE OUTCOMES::

1. Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
2. Use a strategic communication model and critical thinking to identify COURSE OBJECTIVES, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
3. Practice principles of effective business writing and document design in all written documents.
4. Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
5. Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
6. To demonstrate his verbal and non-verbal communication ability through presentations

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body language – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

www.learning-development.hr.toolbox.com
<http://www.niit.com/solution/soft-skill-training>

COURSE OBJECTIVES

1. To motivate learners to acquire listening & speaking skills in both formal and informal context.
2. To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
3. To improve their reading habit and to train them in critical and analytical reading.
4. To equip them to write for academic as well as work place context.
5. To enable students to face interviews.
6. To allow students to gain key strategies and expressions for communicating with professionals and non-specialists

COURSE COURSE OUTCOMES::

1. Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
2. Enhance them reading texts critically and analytically.
3. Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
4. Enrich the ability to face interviews with confidence.
5. Understand how to critically analyze data from research; incorporate it into assigned writing clearly, concisely, and logically; and attribute the source with proper citation.
6. Practice the unique qualities of professional rhetoric and writing style, such as sentence conciseness, clarity, accuracy, honesty, avoiding wordiness or ambiguity, using direct order organization, readability, coherence and transitional devices

UNIT-1 LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening - Difference between Hearing & Listening–Listening to informal conversation.

Speaking -Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Regular & Irregular verbs - Kinds of sentences - Question tags. Homonyms and Homophones.

UNIT-II LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and

Representing) (9)

Listening –Note Taking- Improving grasping ability.**Speaking**–Welcome address - Vote of thanks

- Master of ceremony.**Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story.**Grammar&Vocabulary(Function Grammar & Technical Vocabulary)**

Modal verbs – Conjunction - Expression of cause and effect.Phrasal verbs - Idioms.

UNIT – III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and

Representing) (9)

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R)**Writing** - Essay writing -Minutes of meeting - Agenda

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Active and Passive voice - Purpose expression. Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and

Representing) (9)

Listening –Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication.**Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company.**Writing** – Checklist preparation.

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Grammar - Numerical expressions–Collocations. Singular and Plural (Nouns)

UNIT- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and

Representing) (9)

Listening –Types of listening- Improving listening comprehension. **Speaking** - Oral presentation

-

Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products -

Recommendation writing – Short essays writing-

Grammar&Vocabulary (Function Grammar & Technical Vocabulary)

Transformation of sentences (Simple, Compound & Complex).Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @2 periods per each unit.

www.Dictionary.com–Semantic / Grammar

1. To have knowledge in integral calculus and Vector calculus
2. To expose the concept of Analytical function and Complex integration.
3. To be able to find time responses of linear systems using Laplace transforms.
4. To impart conceptual knowledge of Mathematical Sciences for formulating and analyzing the real world problems with futuristic approach.
5. To equip the students sufficiently in both analytical and computational skills in Mathematical Sciences.
6. To develop a competitive attitude for building a strong academic - industrial collaboration, with focus on continuous learning skills

1. Solve problems in Fluid Dynamics, Theory of Elasticity, Heat and Mass Transfer etc.
2. Find the areas and volumes using Multiple Integrals
3. Improve their ability in Vector calculus
4. Expose to the concept of Analytical function.
5. Apply Complex integration in their Engineering problems
6. Students will be able to remember terminologies and formulae in differential equations, multiple integration, integral calculus

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi-circle (excluding poles on the real axis).

3. www.sosmath.com/diffeq/laplace/basic/basic.html
4. www.mathworld.wolfram.com

COURSE OBJECTIVES

1. To give a comprehensive insight into natural resources, ecosystem and biodiversity.
2. To educate the ways and means of the environment
3. To protect the environment from various types of pollution.
4. To impart some fundamental knowledge on human welfare measures.
5. To nurture knowledge, respect, and love for the natural and human communities of central Maine, the place where they spend four formative years of their lives.
6. To develop skills of analysis and communication, bearing in mind disciplinary traditions and diverse publics

COURSE COURSE OUTCOMES:::

1. Students will prepare themselves to go ecofriendly and help preserving the nature and environment.
2. Reflecting upon their internalized values system, students will continue to evolve an individual vision of harmonious and sustainable interaction among humans as well as between humans and the rest of the natural world.
3. Students will have mastered foundational knowledge enabling them to make sound life decisions as well as enter a career in an environmental profession or graduate school
4. Students will be able to apply specific models of social system processes derived from various social science theories to explain environmental issues (including current and past conditions), and to propose future solutions to environmental problems
5. Students will be able to identify, interpret, and apply basic measures (metrics and formulae) of social system variables to assess socio-environmental conditions.
6. Students will be able to articulate basic understanding of various social science theories/frameworks and how they apply to environmental issues

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES**(9)**

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources-role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM**(9)**

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the

ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY (9) Introduction to biodiversity, Definition- Genetic diversity, Species diversity and

Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India– Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION (9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes – Role of an individual in prevention of pollution– Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT (9) From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights-Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

4. <http://www.sciencedaily.com/news/top/environment/>

COURSE OBJECTIVES

1. To develop capacity to predict the effect of force and motion in the course of carrying out the design functions of engineering.
2. To learn the effect of friction on equilibrium. To learn kinematics, kinetics of particle and rigid body, related principles.—
3. To implement the above know how to solve practical problems.
4. The tools learned in this course will provide the basis for later courses and a career in engineering
5. To give students practice in applying their knowledge of mathematics, science, and engineering and to expand this knowledge into the vast area of “rigid body Mechanics”.
6. To prepare the students for higher level courses such as courses in Mechanics of Solids, Mechanical Design and Structural Analysis.

COURSE COURSE OUTCOMES::

1. Ability to explain the differential principles applies to solve engineering problems dealing with force, displacement, velocity and acceleration.
2. Ability to analyse the forces in any structures.
3. Ability to solve rigid body subjected to dynamic forces.
4. Use scalar and vector analytical techniques for analyzing forces in statically determinate structures. Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, Practical problems.
5. Apply basic knowledge of mathematics and physics to solve real-world problems
6. Define, identify, and carry out equilibrium analysis of frames, machines, trusses, beams and cables.

UNIT I STATICS OF PARTICLES**9**

Forces – system of forces – concurrent forces in plane and space– resultant – problems involving the equilibrium of a particle–free body diagram–equilibrium of particle in space.

UNIT IISTATICS OF RIGID BODIES IN TWO DIMENSIONS**9**

Rigid bodies–moment of force about an axis–moments and couples–equivalent system of coplanar forces–Rigid body in equilibrium–problems involving equilibrium of rigid body–types of supports–reactions of beams.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENT OF INERTIA**9**

Centroids of areas, composite areas, determination of moment of inertia of plane figures, moment of inertia – radius of gyration – mass moment of inertia of simple solids. polar

UNIT IV KINEMATICS OF PARTICLES**9**

Introduction – plane, rectilinear motion – time dependent motion – rectangular coordinates – projectile motion.

IMPULSE AND MOMENTUM: Concept of conservation of momentum – Impulse–Momentum principle– Impact – Direct central impact – Oblique central impact – Impact of elastic bodies.

UNIT V KINETICS OF PARTICLES AND FRICTION

9

KINETICS OF PARTICLES: Equations of motion–rectilinear motion–Newton’s II law – D’Alembert’s principle – Energy – potential energy–kinetic energy–conservation of energy–work done by a force – work energy method.

Laws of friction – coefficient of friction–problems involving dry friction – wedge and ladder friction.

2. <http://nptel.iitm.ac.in/video.php?subjectId=112103108>
3. <http://web.mit.edu/emech/dontindex-build/index.html>
4. <http://www.indiabix.com/engineering-mechanics/questions-and-answers/>

COURSE OBJECTIVES:

1. To write programs for Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
2. The students will learn to interact properly with their peers in other disciplines in industry and society to establish compatibility as well as inter-industrial relationship which would help to contribute to the economic growth of the country
3. Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
4. Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
5. Be aware of the important topics and principles of software development
6. To create programs for solving problems

COURSE COURSE OUTCOMES::

- 1 Study, analyze and understand logical structure of a computer program, and different construct to develop a program in „C“ language
- 2 Apply knowledge of mathematics, science and algorithm in solving complex Computer engineering problems.
- 3 Generate solutions by conducting experiments and applying techniques to analyze and interpret data
- 4 Design component, or processes to meet the needs within realistic constraints.
- 5 Identify, formulate, and solve Software Engineering, Networking and Data Mining problems.
- 6 Comprehend professional and ethical responsibility in computing profession

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings- Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming
3. C Programming:
Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

REFERENCES:

1. E. Balagurusamy, “ Computing Fundamentals and C Programming”, TMH Education, 5th Edition, 2014
2. Yashavant Kanetkar, “ Let us C”, BPB Publications, 13th Edition, 2013

COURSE OBJECTIVES

1. To Learn the chemical process kinetics and the distribution laws
2. To gain practical knowledge of rate constant and activation energy
3. Investigate and understand the physical models underlying our current perception of atomic and molecular behavior at the most basic, fundamental level. Understand basic terminology of quantum chemistry and spectroscopy in context of these models.
4. Develop an ability to use conceptual and mathematical tools to express and predict atomic and molecular behavior
5. Analyze and interpret experimental data using quantum mechanical models.
6. Nurture a basic understanding of how computational chemistry can be used to determine atomic and molecular properties

COURSE COURSE OUTCOMES::

- 1 The student is able to determine the properties and characteristics of solvents and mixtures
- 2 Experience in some scientific methods employed in basic and applied physical chemistry
- 3 Developed skills in procedures and instrumental methods applied in analytical and practical tasks of physical chemistry
- 4 Developed skills in the scientific method of planning, developing, conducting, reviewing and reporting experiments
- 5 Developed some understanding of the professional and safety responsibilities residing in working with chemical systems.
- 6 Developed expertise relevant to the professional practice of chemistry

UNIT I CHEMICAL KINETICS

Rate of a reaction-Order of a reaction – Examples and rate equations for Zero order, First order, Second order and Third order reactions –Molecularity of a reaction – Unimolecular and Bimolecular reactions – Half-life period– Kinetics of parallel and opposing reactions – Activation energy – Arrhenius equation – Collision theory of reaction rates – Theory of absolute reaction rates – Michalis Menton kinetics of enzyme catalyzed reactions.

UNIT II COLLOIDS

Introduction to colloids – properties of colloids – coagulation of solutions – Origin of charge on colloidal particles – Determination of size of colloidal particles – Donnan Membrane equilibrium – Emulsions – Gels – Applications of colloids – Nanoparticles (Au, Ag, Pt)– Preparation – Characterization – Properties – Application in catalysis and drug delivery systems.

UNIT III THE DISTRIBUTION LAW

Distribution co-efficient - Distribution Law — Conditions for the validity of the Distribution law – I₂-CCl₄-H₂O System – Nature of interaction of the solute with one of the solvents Dissociation-Association

Experiments

1. Determination of partition co-efficient of iodine between two immiscible solvents
2. Determination of partition co-efficient of benzoic acid between two immiscible solvents
3. Determination of K_a of the weak acid
4. Conductometric experiments- Verification of Oswald's Dilution Law
5. Determination of Rate Constant (K)
6. Determination of Activation Energy (ΔE)
7. Determination of standard electrode potential (Zn, Cu, Ag)
8. To study the adsorption of Acetic acid on charcoal and construct the Isotherm.
9. Application of Phase Rule to Phenol-Water system
10. To study the inversion of cane sugar by polarimeter.
 - a. Polarimeter-Inversion of cane sugar
 - b. Refractometer

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Kund and Jain	Physical Chemistry	S.Chand and Company, New Delhi	1996
2	Puri B.H. Sharma L.R. and M.S.Prathama	Principles of Physical Chemistry	S.Chand and Company, New Delhi	2001

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Gordon M. Barrow	Physical Chemistry	Sixth Edition, Tata McGraw Hill	1998
2	Peter Atkins & Julio de Paula Atkins	Physical Chemistry	7th Edition, Oxford university press	2002
3	B.S.Bahl, Arun Bahl and G.D.Tuli	Essentials of Physical Chemistry	S.Chand and Company, New Delhi	2005

COURSE OBJECTIVES:

1. To explain relevance of Ethics while taking business decisions.
2. Basic operations management Basic Corporate and Intellectual Property Law
3. Research and analyze the individual components needed for a business plan
4. Apply skills to create a business plan for different audiences, including investors, banks, and other stakeholders
5. Explain the purpose and future of your business in easy to understand terms
6. Use accounting terms to describe the future for your business

COURSE COURSE OUTCOMES::

1. Acquiring Conceptual Clarity of Various Functional Areas Ability to analyze various functional issues affecting the organization
2. Demonstrating ability to evolve strategies for organizational benefits
3. Analysis and interpretation of the data which is used in Decision Making
4. Demonstrate the ability to develop models / frameworks to reflect critically on 5 specific business contexts Demonstrate Effectively Oral and Written Communication
6. Demonstrate Ability to work in Groups

Unit I

Entrepreneurship – Types- Entrepreneurial Competencies -Business Plan – Meaning - Basic parameters - Project parameters - Factors of successful business - Term Loans and Working Capital Management.

Unit II

Business Plan Process - Sources of Information – Online Resources - Offline Resources - Sources of Market Research - Benefits of market study - Coverage of market study.

Unit III

Business Plan components - Company description - Industry Analysis - Target Market - Competition - Strategic position - Risk assessment - Technology plan - Management and Organization – Government policy

Reference books:

1. Rhonda Abrams " The Successful business Plan Secret \$ Strategies " Prentice Hall
2. Rhonda Abrams "The business plan in a day" Prentice Hall.
3. Business plan preparation - Entrepreneurship Development Institute of India

COURSE OBJECTIVES

1. To introduce the concept of probability and Sampling techniques.
2. To understand the fundamentals of Experimental Designs and Quality Control.
3. Apply graphical methods of displaying data.
4. Construct frequency distributions, histograms, frequency polygons, pareto charts, ogives, pie charts, and box-and-whisker plots.
5. Read and analyze frequency distributions, histograms, frequency polygons, pie charts, and box-and-whisker plots.
6. Calculate combinations and permutations.

COURSE OUTCOMES::

1. The students would be exposed to statistical methods designed to contribute to the process of making scientific judgments in the face of uncertainty and variation.
2. Organize, manage and present data.
3. Analyze statistical data graphically using frequency distributions and cumulative frequency distributions. Analyze statistical data using measures of central tendency, dispersion and location.
4. Use the basic probability rules, including additive and multiplicative laws, using the terms, independent and mutually exclusive events.
5. Translate real-world problems into probability models.
6. Derive the probability density function of transformation of random variables

UNIT- I PROBABILITY**(11)**

Probability – Definition – Law - conditional probability-Bayes theorem- Probability mass function - Probability density functions.

UNIT- IIRANDOM VARIABLES**(13)**

Introduction to one dimensional random variables – Discrete – Continuous - Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression.

UNIT- IIITESTING OF HYPOTHESIS**(12)**

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions – Tests for independence of attributes and Goodness of fit.

UNIT – IV DESIGN OF EXPERIMENTS (12)

Analysis of variance – one way classification – CRD – Two-way classification – RBD – Latin square.

UNIT – V RELIABILITY AND QUALITY CONTROL (12)

Concepts of reliability – hazard functions – Reliability of series and parallel systems – control charts for measurement (\bar{x}) - Control charts for attributes (p, c and np charts).

TOTAL: 60

WEBSITES

1. www.cut-theknot.org/probability.shtml
2. www.mathcentre.ac.uk
3. www.mathworld. Wolfram.com

COURSE OBJECTIVES

1. To enable the students to learn the type of components in which organic reactions take place and also to know the preparation of the essential organic compounds.
2. Deduce the structural formula of an unknown organic compound from spectroscopic or chemical data.
3. Predict very roughly the physical properties of an organic compound given its structural formula.
4. Demonstrate some knowledge of the sources of and uses for organic compounds in the practical world.
5. Design reactions paths by which a great variety of moderately complex organic compounds could be prepared from simple, readily available compounds.
6. Be able to account for how reactions occur at the molecular level

COURSE OUTCOMES:

1. At the end of the course students will be in a position to have knowledge on various reaction mechanisms, preparation of organic compounds and their properties.
2. This will be a precursor for the study on Chemical Reaction Engineering.
3. Identify, properly use, and care for equipment and supplies used in analytical laboratory
4. Identify the requirements for adequate protection of personnel from solvents and materials used in the analysis
5. Identify, properly use, and care for equipment and supplies used in analytical laboratory
6. Identify the requirements for adequate protection of personnel from solvents and materials used in the analysis

UNIT I CARBOHYDRATES 9

Introduction – various definitions and classifications of carbohydrates – Preparation, Physical & Chemical properties, Structure and Uses of Monosaccharides (Glucose & Fructose) Interconversions – Aldo pentose to aldo hexose–Aldo hexose to aldo pentose- aldose to isomeric Ketose – Ketose to isomeric Aldose – Aldose to epimer

UNIT II HETEROCYCLIC COMPOUNDS 9

Preparation, Physical & Chemical properties and Uses of Pyrrole, Furan, Furfural, TetrahydroFuran, Thiophene, Indole, Pyridine, Quinoline and Isoquinoline.

UNIT III DYE CHEMISTRY 9

Witt's theory and modern theory of colors – Synthesis of Methyl red, Methyl orange, Congo red, Malachite green, para-rosaniline, phenolphthalein, fluorescence, Eosin dyes.

UNIT IV SYNTHETIC ORGANIC CHEMISTRY**9**

Preparation and Synthetic utilities of Grignard reagent, Ethyl aceto acetate and Malonic ester.

UNIT V PHARMACEUTICAL CHEMISTRY**9**

Synthesis of Antimalarial drugs – isopentaquine and chloroquine
Synthesis of Antibacterial drugs – Sulphanilamide and Sulphapyridine.

TOTAL : 45**TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	R.T. Morrison and R.N. Boyd	Organic Chemistry	VI Edition Prentice Hall Inc USA.	1996
2	K.S. Tiwari, N.K. Vishnoi and S.N. Malhotra	A text book of Organic Chemistry	Second Edition, Vikas Publishing House Pvt. Ltd New Delhi	1998

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Bahl B.S. and Arun Bahl	Advanced Organic Chemistry	3rd Edition, S. Chand & Co, New Delhi	2005
2	Felix A. Carroll	Perspectives on Structure and Mechanism in Organic Chemistry	John Wiley & Sons	2011

COURSE OBJECTIVES

- 1.To teach concept of degree of freedom and its application to solution of mass and energy balance equations for single and network of units and introduce to process simulators.
- 2.To perform stoichiometric calculations for chemical and non-chemical systems and to understand quantitative relationships between matter and energy involved in physiochemical processes
3. Successfully practice or apply the principles of Chemical Engineering in a variety of employment areas.
- 4.Achieve professional success with an understanding and appreciation of ethical behaviour, social responsibility, and diversity, both as individuals and in team environments.
5. Pursue continued life-long learning through professional practice, further graduate education or other training programs in engineering science or other professional fields.
6. To know and understand the units of different parameters that will be used in the chemical processes and their conversions

COURSE COURSE OUTCOMES:

1. understand and apply different systems of units and dimensions, calculate compositions of mixtures/solutions and determine pressure, volume and temperature of gases using equations of state
2. apply the law of conservation of mass for different batch and continuous unit operations
3. apply the law of conservation of mass for unit processes and evaluate yield, conversion, recycle ratio /purge /bypass of chemical reactors
4. apply energy balances for reacting systems and understand the effect of temperature and pressure on heat of reaction
5. identify practical problems that involve technology where equations were used
6. define molar mass and perform mole-mass inter-conversions for pure substances

UNIT I UNITS AND DIMENSIONS**9**

Conversion of Equations, Systems of Units, Fundamental Concepts: Basic and derived units, use of different system of units in process calculations. Introduction to Chemical Engineering Calculations:

Basis, Mole Fraction and Mole Percent, Mass Fraction and Mass Percent, Concentration of different forms, Conversion from one form to another, Raoult's Law, Henry's law, Antoine's Equation. Clausius Clapeyron Equation.

UNIT II MATERIAL BALANCE WITHOUT CHEMICAL REACTION **9**

Material Balance during Mixing, Humidity and Application of Psychrometric Chart, Solubility and Crystallization, Evaporator, Distillation Column, Absorption Column, Drier, Liquid - Liquid and Solid - Liquid Extraction Units.

UNIT III MATERIAL BALANCE WITH CHEMICAL REACTION **9**

Single Reaction, Multiple Reactions, Reactions with Recycle, Purge and By-pass, Combustion Reaction, Calculation of Excess Air, Material Balance of Unsteady State Reaction systems.

UNIT IV ENERGY BALANCE **9**

Enthalpy calculation for systems (single component and multi components) without Chemical Reaction with Mean and Temperature dependent Heat Capacity, Enthalpy calculation for systems with Chemical Reactions. Heat of Reaction from Heat of Formation and Heat of Combustion Data, Effect of Temperature and Pressure on Heat of Reaction, Hess's Law, Adiabatic Flame Temperature, Theoretical Flame Temperature.

UNIT – V COMBUSTION **9**

Fuels and combustion; Calculation of theoretical and excess air from combustion of solid, liquid and gaseous fuels. Composition of flue gases by Orsat analyzer.

Lecture:45, Tutorial:15, TOTAL:60

<http://che31.weebly.com/course-materials.html>

COURSE OBJECTIVES

1. To impart to the students the knowledge on fluid properties, fluid statics, dynamic characteristics for through pipes and porous medium, flow measurement and fluid machineries.
2. to solve simplified examples of fluid mechanics - theoretical and practical preparation enabling students to apply the acquired knowledge and skills in professional and specialist courses.
3. concept of fluid flow and its application to chemical process industries including pipe flow, fluid machinery and agitation & mixing
4. understand the dynamics of fluid flows and the governing non-dimensional parameters,
5. apply concepts of mass, momentum and energy conservation to flows,
6. grasp the basic ideas of turbulence

COURSE COURSE OUTCOMES:

1. comprehend the principles of fluid properties, fluid statics and fluid flow problems and apply the same in chemical process industries
2. analyze flow behavior of solid and liquid and to demonstrate the understanding of packed and fluidized bed
3. understand and select fluid moving machinery for different applications in process industries
4. understand and select characteristics of pumps, flow meters and valves for different applications in process industries.
5. Define the relationship between pressure and elevation as it relates to manometers, barometers and other pressure measuring devices
6. Use the general energy equation to calculate changes in fluid flow for circular and non-circular pipes for in-compressible fluids

UNIT I FLUID PROPERTIES**9**

Methods of analysis and description - fluid as continuum – Velocity and stress field - Newtonian and non-Newtonian fluids – Classification of fluid motion.

UNIT IIFLUID STATICS**9**

Fluid statics – basic equation - equilibrium of fluid element – pressure variation in a static fluid - application to manometry – Differential analysis of fluid motion – continuity, equation of motions, Bernoulli equation and Navier- Stokes equation.

UNIT III PRINCIPLES OF FLUID FLOW

9

The principle of dimensional homogeneity – dimensional analysis, Rayleigh method and the Pi-theorem - non-dimensional action of the basic equations - similitude - relationship between dimensional analysis and similitude - use of dimensional analysis for scale up studies

UNIT IV FLUID FLOWS

9

Reynolds number regimes, internal flow - flow through pipes – pressure drop under laminar and turbulent flow conditions – major and minor losses; Line sizing; External flows - boundary layer concepts, boundary layer thickness under laminar and turbulent flow conditions- Flow over a sphere – friction and pressure drag - flow through fixed and fluidized beds.

UNIT V FLOW MEASUREMENT

9

Flow measurement - Constant and variable head meters; Velocity measurement techniques; Types, characteristics and sizing of valves; Classification, performance characteristics and sizing of pumps, compressors and fans

http://nptel.ac.in/downloads/103104043/http://chemical.eng.usm.my/notes/HEKARL/notes/ekc212_notes.pdf

COURSE OBJECTIVES

1. In this course, the students will learn characterization of solids, size reduction techniques of solid – fluid separation and mixing.
2. Understand mechanical separation aspect such as screening, filtration, sedimentation, transportation of solids etc.
3. Understand energy requirements in solids handling, agitation and mixing, solid conveying and storage.
4. Hands on experience of working by conducting experiments on some of the basic unit operations such as separation and size reduction.
5. Present seminar on current separation techniques and submit the report on the samples
6. identify the important physical mechanisms occurring in processes involving particles

COURSE COURSE OUTCOMES:

1. Apply the principles of size analysis, handling, storage and transportation for handling solids in chemical process industries
2. Analyze the size reduction techniques of solids by selecting proper equipments such as crushers, grinders, etc.
3. Understand the working principles of gravity settling tank, cyclone separators, Filters and other mechanical separation devices
4. Recognize mixing and agitation equipment, power calculation and selection of mixing
5. Knowledge of filtration equipment for different chemical industries, and designing of filtration process
6. Knowledge of solid-solid and gas-solid separation techniques for various applications including coal, mineral beneficiation environmental pollution control

UNIT I CHARACTERISTICS AND SCREENING**9**

Characteristics and General characteristics of solids, different techniques of size analysis, shape factor, surface area determination, estimation of particle size. Screening methods and equipment, screen efficiency, ideal and actual screens.

UNIT II SIZE REDUCTION**9**

Laws of size reduction, energy relationships in size reduction, methods of size reduction, classification of equipments, crushers, grinders, disintegrators for coarse, intermediate and fine grinding, power requirement, work index; size enlargement - principle of granulation, briquetting, pelletisation, and flocculation.

UNIT II MECHANICAL SEPARATIONS**9**

Gravity settling, sedimentation, thickening, elutriation, double cone classifier, rake classifier, bowl classifier. Centrifugal separation - continuous centrifuges, super centrifuges, design of basket centrifuges; industrial dust removing equipment, cyclones and hydro cyclones, electrostatic and magnetic separators, heavy media separations, floatation, jigging.

UNIT IV FILTRATION**9**

Theory of filtration, Batch and continuous filters, Flow through filter cake and filter media, compressible and incompressible filter cakes, filtration equipments - selection, operation and design of filters and optimum cycle of operation, filter aids.

UNIT V MIXING AND AGITATION**9**

Mixing and agitation - Mixing of liquids (with or without solids), mixing of powders, selection of suitable mixers, power requirement for mixing. Storage and Conveying of solids - Bunkers, silos, bins and hoppers, transportation of solids in bulk, conveyer selection, different types of conveyers and their performance characteristics.

TOTAL: 45**TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	McCabe, W.L., Smith, J.C., and Harriot, P	Unit Operations in Chemical Engineering	7th Edn., McGraw-Hill	2005
2	Badger W.L. and Banchero J.T	Introduction to Chemical Engineering	Tata McGraw Hill	1997

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Coulson, J.M. and Richardson, J.F	Chemical Engineering	Vol. I, 4th Edn., Asian Books Pvt. Ltd., India	1998
2	Badger Walter L. and Banchero Julius T	Introduction to Chemical Engineering	Tata McGraw Hill Publishing Company, New Delhi	Reprint 2008.
3	Dr. CM Narayan and Dr. B.C. Bhattacharya	Mechanical Operation for Chemical Engineers.	CBS Publishers & Distributors Pvt. Ltd	2010

COURSE OBJECTIVES

1. To learn basic principles involved in analysis and synthesis of different organic derivatives
2. To understand how to draw energy diagrams.
3. To understand how to calculate bond order.
4. To understand how to calculate lattice energy through Born Haber Cycle.
5. The students will learn the laboratory skills needed to design, safely conduct and interpret chemical research.
6. The primary aim of a qualitative research is to provide a complete detailed description of the research topic. Quantitative research focuses more in counting and classifying features and constructing statistical models and figures to explain what is observed

COURSE COURSE OUTCOMES:

1. The student is able to identify what distinguishes a strong and weak nucleophile and recall the rules of reactions.
2. The student shows their mastery of nomenclature since ethyl bromide is not drawn out.
3. The student analyzes a list of compounds and determines their reactivity.
4. Able to recognize the symmetry elements and their associated operations as required to specify molecular symmetry
5. Gain knowledge about types of reactions and their reaction mechanism
6. Acquire knowledge about the formation of complexes in solutions and their stability, factors effecting the stability & HSAB principle

LIST OF EXPERIMENTS

1. Quantitative analysis of organic compounds – Identification of aliphatic/aromatic, saturated/unsaturated compounds.
2. Identification and characterization of various functional groups by their characteristic reactions:
 - a) alcohol, b) aldehyde, c) ketone, d) carboxylic acid, e) phenol, f) ester, g) primary, secondary and tertiary amines h) imide i) nitro compounds.
3. Analysis of an unknown organic compound and preparation of suitable solid derivatives
4. Analysis of carbohydrates.
5. Analysis of proteins.
6. Methodology of filtration and recrystallization.

7. Introduction to organic synthetic procedures:
- i. Acetylation – Preparation of acetanilide from aniline.
 - ii. Hydrolysis – Preparation of salicylic acid from methyl salicylate.
 - iii. Substitution – Conversion of acetone to iodoform.
 - iv. Nitration – Preparation of m-dinitrobenzene from nitrobenzene.
 - v. Oxidation – Preparation of benzoic acid from benzaldehyde/ benzyl alcohol

TOTAL: 45

COURSE OBJECTIVES

1. To learn experimentally to calibrate flow meters, find pressure loss for fluid flows and determine pump characteristics.
2. The students will learn to conduct experiments to verify fundamental principles of fluid mechanics, calibrate measuring devices, analyze experimental data and develop empirical relations when appropriate.
3. Calibration of flow measuring devices Determination of friction factor for pipes
4. Determination of minor losses in pipes
5. Verification of Bernoulli's theorem.
6. Studying the performance of hydraulic turbines and pumps

COURSE OUTCOMES:

1. Determine the coefficient of discharge for venturi / orificemeter, open drum orifice and v-notch validate the Moody's diagram for flow through straight pipe / concentric pipes and helical coil assess the frictional loss coefficient for different valves and pipe fittings appraise pressure drop through packed bed
2. Impact of jet on vanes 8. Performance test on Pelton wheel turbine
3. Performance test on Francis turbines
4. Performance characteristics of a single stage Centrifugal pump
5. Performance characteristics of multi- stage Centrifugal pump
6. Performance characteristics of a Reciprocating pump and Study of hydraulic jump

LIST OF EXPERIMENTS

1. Viscosity measurement of non Newtonian
2. Calibration of constant and variable head meters
3. Calibration of weirs and notches
4. Open drum orifice and draining time
5. Flow through straight pipe
6. Flow through annular pipe
7. Flow through helical coil and spiral coil
8. Losses in pipe fittings and valves
9. Characteristic curves of pumps
10. Hydrodynamics of fluidized bed
11. Drag coefficient of solid particle

TOTAL:**45**

LABORATORY

COURSE OBJECTIVES

1. To supplement the theoretical knowledge gained in Mechanics of Solids with practical testing for determining the strength of materials under externally applied loads.
2. This would enable the student to have a clear understanding of the design for strength and stiffness.
3. This would enable the student to have a clear understanding of the design for strength, stiffness, Analyze the beam of different cross sections for shear force, bending moment, slope and deflection.
4. To understand the concept of microscopic examination of various materials.
5. To provide basic knowledge in mechanics of materials so that the students can solve real engineering problems and design engineering systems.
6. Define direct normal stress and direct shear stress and compute their values and normal strain and shearing strain.

COURSE OUTCOMES:

1. Analyze how different types of forces are to be considered and how to quantify them.
2. Design. Study of different types of stresses and strains occurring in various components of the structure.
3. Know the advantages and disadvantages of various geometric sections available for engineering design.
4. Determine the stresses and strains in members subjected to combined loading and apply the theories of failure for static loading.
5. 5. Determine and illustrate principal stresses, maximum shearing stress, and the stresses acting on a structural member.
6. 6. Determine the deflections and rotations produced by the three fundamental types of loads: axial, torsional, and flexural

LIST OF EXPERIMENTS

1. Tensile test on metals—stress strain characteristics
2. Cupping test on metal sheets—load deformation characteristics, cupping load, cupping number.
3. Hardness test on metals—Brinell and Rockwell Hardness tests.

4. Impact test on metals–Charpy, Izod impact tests.
5. Shear test on metals–direct shear strength, single shear, double shear.
6. Tests on helical springs–compression, tension springs–load deformation characteristics, stiffness, shear stress, modulus of rigidity, energy.
7. Torsion test on beams–torque and angle of twist characteristics, shear stress, modulus of rigidity, energy.
8. Microscopic examination of i) Hardened samples ii) Hardened and tempered samples.
9. Tempering – Improvement of Mechanical properties –Comparison for i) Unhardened specimen ii) Quenched specimen iii) Quenched and tempered specimen.
10. Study of low carbon steel and medium carbon steel.

TOTAL

17BTCE351**SOFT SKILLS1 0 0 - 100****COURSE
OBJECTIVES**

- To help the students understand interpersonal skills.
- To support them in building interpersonal skills.
- To better the ability to work with others.

COURSE OUTCOMES:

- ability to communicate smartly and effectively with co-workers, relationship enhancement
 - Improvement of time management and organizational skill.
 - development of leadership teamwork, creativity, efficiency & productivity
 - development of presentation skills
 - ability to recognize stress symptom & develop stress deflecting strategies
 - brain storming & problem solving strategies to increase creativity and collaborative
- COURSE OUTCOMES:**

UNIT I 4

Overview to communication, self-Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II 3

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III 4

Introduction to HRM – Questions - Do's and Don'ts - Interview - Mock GD - Stress Management

UNIT IV 4

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL 15

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Barun K Mitra	Personality Development and Soft Skills	Oxford University Press- New Delhi	2012
2	Rajiv K. Mishra	Personality Development	Rupa & Co	2012

COURSE OBJECTIVES

1. To impart the basic concepts of chemical technology.
2. To develop understanding about unit process and operations in various chemical industries.
3. To learn manufacturing processes of organic and Inorganic Chemicals and its applications.
4. Introduce the basic information and the systematic diagrams of Unit operations involved in chemical industries.
5. Familiarize the concepts of design, operation details and schematic of industrial equipment.
6. Ascertain the right separation technology for easy separation of chemical components

COURSE OUTCOMES:

1. Understand the role of chemical engineers in process industries and develop block diagrams and flow charts for manufacture of different chemicals
2. Comprehend the unit operations/ processes in chloralkalies, nitrogen and sulphur industries
3. To gain knowledge in the manufacture of plant nutrients, agrichemicals and fertilizers
4. Apply principles of chemical engineering in wood chemicals, oils, fats/ soap manufacturing Units.
5. The student had a brief introduction of chemical process equipment
6. Application of thermodynamics, the chemical process principles, the equipment design and so on. Provided the basic inorganic chemistry background required for the undergraduate students of engineering

UNIT I PRODUCTION PROCESSES

Production of pulp, paper and rayon, Manufacture of sugar, starch and starch derivatives, Gasification of coal and chemicals from coal.

UNIT II INDUSTRIAL MICROBIAL PROCESSES AND EDIBLE OILS**9**

Fermentation processes for the production of ethyl alcohol, citric acid and antibiotics, Refining of edible oils and fats, fatty acids, Soaps and detergents.

UNIT III ALKALIES AND ACIDS**9**

Chlor - alkali Industries: Manufacture of Soda ash, Manufacture of caustic soda and chlorine - common salt. Sulphur and Sulphuric acid: Mining of sulphur and manufacture of sulphuric acid. Manufacture of hydrochloric acid.

UNIT IV CEMENT GASES, WATER AND PAINTS**9**

Types and Manufacture of Portland cement, Glass: Industrial Gases: Carbon dioxide, Nitrogen, Hydrogen, Oxygen and Acetylene - Manufacture of paints – Pigments

UNIT VFERTILISERS

9

Nitrogen Fertilisers; Synthetic ammonia, nitric acid, Urea, Phosphorous Fertilisers: Phosphate rock, phosphoric acid, super phosphate and Triple Super phosphate.

1	SrikumarKoyikkal	Chemical Process Technology and Simulation	PHI Learning Ltd	2013
2	Shukla and G.N. Pandey	Text book on Chemical Technology	Vikas publishing company	2009

COURSE OBJECTIVES

1. Students will learn PVT behavior of fluids, laws of thermodynamics, thermodynamic property relations and their application to fluid flow, power generation and refrigeration processes.
2. To evaluate thermodynamic properties of pure substances with special emphasis on fluids. Be able to use various PVT equations-of-state and heat capacities to evaluate thermodynamic properties (U, H, P, V, T, etc.)
3. To be able to calculate heat transfer rates associated with processes involving phase changes and reactions. To be able to calculate standard heats of reaction.
4. To understand the interrelationships between different thermodynamic properties and become familiar with the calculus that establishes these interrelationships.
5. To be able to use various sources of thermodynamic data and properties, including graphs and tables. To use graphs of thermodynamic properties to develop an intuition for the variation of these properties during various processes.
6. To apply the laws of thermodynamics and various methods of evaluating state properties to equipment commonly encountered in chemical engineering processes, such as turbines, pumps, engines, and refrigeration units.

COURSE OUTCOMES:

1. Apply thermodynamic concepts and the laws of thermodynamics to various systems and processes
2. Understand the properties of solution and determine the partial molar properties from mixture properties and vice-versa
3. Apply the criterion for equilibrium between phases to engineering systems with two or more co-existing phases
4. Apply chemical reaction equilibrium for thermodynamic analysis of homogeneous reactions
5. The student will describe salient features of liquid-liquid and liquid-solid phase equilibrium plots.
6. The student will compute bubble and flash point for a given data

UNIT – I LAWS OF THERMODYNAMICS**12**

Laws of Thermodynamics Laws of Thermodynamics: Basic concepts; Zeroth law; First Law - applications to non-flow and flow processes; Second Law - heat engines, Carnot cycle and theorem, Entropy calculations; Third Law of thermodynamics.

UNIT – II PROPERTIES OF REAL GASES AND THERMODYNAMICS

FORMULATIONS

Properties of Real Gases and Thermodynamics Formulations: PVT behaviour of fluids -

compressibility factor, two- and three-parameter theorems of corresponding states; Equation of states- Virial, VanderWaals, Redlich-Kwong and Peng-Robinson equations; Basic energy relations; Maxwell relations.

UNIT – III PROPERTIES OF SOLUTIONS

12

Partial molar properties; chemical potential; fugacity and activity coefficients; Gibbs - Duhem equation; enthalpy, entropy and Gibbs free energy changes in mixing of ideal solution.

UNIT – IV PHASE EQUILIBRIA

12

Phase equilibrium and stability; criteria for equilibrium between phases in single and multi - component non-reacting systems; vapor-liquid equilibrium of binary ideal and non-ideal solutions; azeotropes; Raoult's law and Henry's law; P-x-y and T-x-y diagrams using Antoine equations.

UNIT – V CHEMICAL REACTION EQUILIBRIA

12

Criteria of equilibrium; standard free energy change and reaction equilibrium constant; effect of temperature and pressure on reaction equilibrium constant; homogeneous chemical reactions - thermodynamic analysis and prediction of equilibrium compositions.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Smith, J.M., Van Ness, H.C and Abbot M.M	Introduction to Chemical Engineering Thermodynamics	McGraw Hill Publishers, VI edition	2003
2	Narayanan, K.V	A Textbook of Chemical Engineering Thermodynamics	Prentice Hall India	2004

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Kyle, B.G.	Chemical and Process Thermodynamics III Edition	Prentice Hall of India Pvt. Ltd	2005

2	Elliott J.R, Lira, C.T.	Introductory chemical engineering thermodynamics	Prentice Hall	2003
3.	Rao, Y.V.C	Chemical Engineering Thermodynamics	Universities Press	2005
4	Pradeep ahuja	Chemical Engineering Thermodynamics	PHI Learning Ltd	2009
5	Gopinath Halder	Introduction to Chemical Engineering Thermodynamics	PHI Learning Ltd	2009

.COURSE OBJECTIVES

1. To enable the students to learn heat transfer by conduction, convection and radiation and
2. Heat transfer equipments like evaporator and heat exchanger
Solve one-dimensional, steady conduction heat transfer problems in various geometries with heat sources
3. Solve multi-dimensional, steady heat transfer problems using shape factors
4. To be familiar with the partial differential equations used for transient and steady heat transfer in one or more dimensions and be able to apply solutions to these equations to find temperatures
5. Solve transient heat transfer problems known as “lumped capacity” problems where the main heat transfer resistance is from external convection
6. To apply the concepts in application.

COURSE OUTCOMES:

1. Understand the fundamental principles of conduction
2. acquire knowledge in convection and radiation heat transfer
3. familiarize with the fundamentals of boiling and condensation
4. apply the knowledge of heat transfer in the design of evaporators
5. design and analyze the performance of heat exchangers
6. Students will be able to analyze results of numerical simulation of thermal and fluid flow problems

UNIT I CONDUCTION**9**

Importance of heat transfer in Chemical Engineering operations - Modes of heat transfer - Fourier's law of heat conduction - one dimensional steady state heat conduction equation for flat plate, hollow cylinder, - Heat conduction through a series of resistances - Thermal conductivity measurement; effect of temperature on thermal conductivity; Heat transfer in extended surfaces.

UNIT II CONVECTION**9**

Concepts of heat transfer by convection - Natural and forced convection, analogies between transfer of momentum and heat - Reynold's analogy, Prandtl and Coulburn analogy. Dimensional analysis in heat transfer, heat transfer coefficient for flow through a pipe, flow past flat plate, flow through packed beds.

UNIT III BOILING AND CONDENSATION**9**

Heat transfer to fluids with phase change - heat transfer from condensing vapours, drop wise and film wise condensation, Nusselt equation for vertical and horizontal tubes, condensation of superheated vapours, Heat transfer to boiling liquids - mechanism of boiling, nucleate boiling and film boiling.

UNIT IV RADIATION AND EVAPORATION**9**

Theory and design procedure of evaporation. Concept and nature of thermal radiations - Concept

of Black and grey bodies; Stefan Boltzmann, Kirchhoff,,s, Planck,,s and Wien laws; Radiation between surfaces – configuration factor; radiation shield.

UNIT V HEAT EXCHANGERS

9

Types of heat exchangers Log mean temperature difference - use of correction factor charts; ssurface area calculations for double pipe and shell and tube heat exchangers ,heat exchangers effectiveness and number of transfer units - Chart for different configurations - Fouling factors.

1	Holman, J. P.	Heat Transfer	10 thEdn., McGraw Hill	2009
2	Ozisik, M. N.	Heat Transfer: A Basic Approach	McGraw-Hill	1984
3	Kern, D.Q	Process Heat Transfer	McGraw-Hill	2012
4	B. K. Dutta	Heat Transfer: Principles And Applications	PHI Learning Pvt. Ltd., New Delhi	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	McCabe, W.L., Smith, J.C., and Harriot, P.	Unit Operations in Chemical Engineering	6th Edn., McGraw-Hill	2013
2	Coulson, J.M. and Richardson, J.F	Chemical Engineering	Vol. I, 4 th Edn., Asian Books Pvt. Ltd, India	2013

COURSE OBJECTIVES

1. To impart knowledge on various aspects of production engineering and enable the students to understand the practical methods of production process in a chemical industry.
2. To learn about optical activity of asymmetric and dissymmetric molecules. Basic idea about aliphatic nucleophilic substitution reactions, aromaticity, aromatic nucleophilic and electrophilic substitution reactions
3. To learn about bonding in polyacids, inorganic polymers, formation, factors that affect stability of complexing stereo isomerism of inorganic complexes and crystal field theory and its limitations.
4. To learn the techniques of separation of organic mixture. To apply the skill in two stage preparation, purification and recrystallisation.
5. To learn the mechanism of addition and elimination reaction, oxidation of methylene to carbonyl, oxidation of aryl methanes, allylic oxidation of olefins, reduction and coupling reaction
6. To learn the basic concept of electro chemistry mechanism of electrode reaction. Symmetry elements points and material representation. Selection rules of Raman spectra

COURSE OUTCOMES:

- 1 understand the various unit processes in synthesis of organic compounds
- 2 understand the application of organic compounds in various industries
- 3 analyze chemical reactions and reaction conditions
- 4 identify reaction schemes and mechanisms for a number of important reactions used in organic synthesis
- 5 To learn the concept stereochemistry and its importance
- 6 To know what is aliphatic nucleophilic substitution

UNIT – I NITRATION AND AMINATION⁹

Principle of Nitration-N-Nitro compounds and Nitration esters, industrial equipment and processes. Amination; methods – reduction and Ammonolysis. Catalytic reaction and manufacture of amino compounds.

UNIT – II HYDROGENATION AND ALKYLATION⁹

Production and Properties of Hydrogen, Catalytic hydrogenation and Hydrogenolysis; Methanation and Fischer-Tropsch reactions. Types and Factors affecting alkylation, Industrial alkylation process.

UNIT – III OXIDATION, HYDROLYSIS AND ESTERIFICATION**9**

Types of Oxidation reaction-Liquid-phase and Vapor-phase; Hydrolysis-processes and equipment. Esterification of organic and inorganic acids-applications in chemical industries.

UNIT – IV HALOGENATION, SULFONATION AND SULFATION⁹

Halogenation- Chlorination reaction; Sulfonation and sulfation; Desulfonation reactions.

UNIT – V DYE AND DRUG SYNTHESIS⁹

Synthesis of Dyes - Congo red. Triphenylmethane dyes -Malachite green, Para Rosaniline, Alizarin, Eosin; Drug Synthesis - Sulphanilamide, Sulphapyridine, Chloroquinine, penicillin, erythromycin.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Groggins P.H	Unit Processes in Organic Synthesis	5th Edition (Reprint), McGraw Hill International Co	2007
2	Austin G.T	Shreve's Chemical Process Industries	5th Edition (Special Reprint Edition), McGraw Hill International Co	2005

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1.	Tiwari K.S. and Vishnoi N.K	A Textbook of Organic Chemistry	3rd Edition, Vikas Publishing House, New Delhi	2007.
2.	Graham Solomons T.W., Craig B. Fryhle and Scott A. Student Snyder	Organic Chemistry	11th Edition, International Version, John Wiley & Sons Inc., New York	2013.

COURSE OBJECTIVES

1. To impart knowledge on the structure, properties, treatment, testing and applications of metals and non-metallic materials so as to identify and select suitable materials for various engineering applications.
2. To introduce the physical origin of and demonstrate the correlation between structure and properties of materials. To introduce common crystal defects and to understand their role in materials behavior.
3. To provide overview of mechanical behavior of ceramics, metals, and polymers
4. To introduce students to the concept of phases and phase diagrams, including T-c behavior leads to different microstructures and, hence, varying mechanical behavior due to heat treatment. To understand effects of composition on structural and mechanical behavior, as well as how process history effects materials properties.
5. To introduce and utilize simple concepts of crack propagation, fast-fracture, and failure.
6. To provide failure examples and motivate importance of materials properties in design

COURSE OUTCOMES:

- 1 Comprehend the criterion for selection of materials for chemical process industries.
- 2 outline the properties and applications of smart materials and nano and bio materials
- 3 apply the knowledge about various materials used in chemical process industries
- 4 select materials for high temperature and Sour service and gain knowledge of modern engineering materials.
- 5 an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- 6 an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet COURSE OBJECTIVES

UNIT I NATURE OF MATERIALS**9**

Selection process of engineering materials (General aspects), Chemical and physical properties of materials, chemical structure, Micro and macro structure, corrosion resistance, chemical reactivity. Mechanical properties, stress, strain, strength, hardness, malleability, ductility, elasticity, plasticity, toughness, thermal stability. Types of deformation: Plastic, viscous; plastic deformation of single crystal, poly crystalline metals, slip, twinning, dislocations, viscoelasticity, creeps in metals, amorphous materials.

UNIT II METALLURGY**9**

Extractive Metallurgy: Hydro, pyro and electro metallurgy, refining of metals. Powder Metallurgy: methods of production of metal powder, mixing of metal powders, compaction of powders -

applications. Extraction process of Iron: manufacture of pig iron, blast furnace operations, chemistry of reactions. Manufacture of cast iron, varieties of cast iron, effect of impurities. Production of steel , Bessemer process ,open-hearth process ,L D methods. Classification of steel, effect of impurities. Heat treatment process: annealing, hardening, tempering, normalizing and gas carburizing. Fe-Carbon phase diagram.

UNIT III COMPOSITES AND ADHESIVES

9

Polymer composites: Introduction, Types of composites, particle reinforced, fiber reinforced, structural composites, examples. Matrix materials, reinforcement materials-, Kevlar, Polyamides, fibers, glass, carbon fibers, ceramics and metals. Techniques for producing FRP, applications.

UNIT IV BIOMATERIALS

9

Classification of bio-materials (based on tissue response) ,Comparison of properties of some common biomaterials , Metallic implant materials (stainless steel, cobalt-based and titanium-based alloys) , Polymeric implant materials (Polyamides, polypropylene, Acrylic resins and Hydro gels) ,Tissue replacement implants , Soft and hard tissue replacements ,Skin implants, Tissue engineering, Biomaterials for organ replacement (Bone substitutes), Biosensor.

UNIT V MODERN ENGINEERING MATERIALS

9

Smart materials , Shape memory alloys, Electrostatics, Irreversible Marten sites, Domain Walls, Nature of Shape Memory, Shape Memory Alloy Materials, Ferromagnetic Shape Memory Alloys, Relation to Shape Memory Alloys, Actuator and Sensor Materials Chromic materials (Thermo, Photo and Electro) ,Rheological fluids , Metallic glasses.

1	Thiruvadigal. J. D, Ponnusamy. ,Sudha.D, and Krishnamohan. M.	Materials Sciences	2 nd Edition, Vibrant Publication,Chennai	2013
2	Rajendran. V	Materials Science	3rdEdition, Tata McGraw-Hill,New Delhi,	2011

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Khanna. O.P	A Text book of Material science and Metallurgy	4 th Edition, Danpat Rai Publications	1999
2	Rajput. R.K.	A Text book of Material Science and Engineering	3 rd Edition, S.K Kataria & sons, Delhi	2003
3	Agarwal. C.V	Chemistry of Engineering materials	4 th Edition, Tata McCraws Hill	1997 .
4	William F.Smith.	Foundation of Materials Science and Engineering	2ndEdition, Tata McCraw Hill	1998

COURSE OBJECTIVES

- To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP, BVP.
 - To implement the methods using the spread sheet in Excel
 - To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and symbolic integration, differential equations and simulation.
 - To develop good programming skills and to develop problem solving skills via C-programming language.
 - To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and symbolic integration, differential equations and simulation
- to provide students with up-to-date knowledge on some methods and techniques...

LIST OF EXPERIMENTS

1. Finding solution of Transcendental equation
 - i) Newton – Raphson Method
 - ii) Bisection method
 - iii) Iterative method by reducing the equation to the form $x = f(x)$
2. Finding the dominant eigenvalue and eigenvector by power method
3. Numerical integration
 - i) Gauss 2 point and 3 point formulae
 - ii) Trapezoidal method
 - iii) Simpson's 1/3 rule
4. Solution of initial value problems governed by ODE
 - i) Runge - Kutta 4th order method
 - ii) Modified Euler's method
 - iii) Milne's method
 - iv) Adam – Bashforth method
5. Solution of BVP governed by PDE
 - i) Laplace Equation
 - ii) One – dimensional heat equation
 - a) Explicit method : Bender – Schmidt's method
 - b) Implicit method : Crank - Nicolson's method
 - iii) One dimensional wave equation Implicit method

TOTAL**60 PERIODS**

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Curtis F. Gerald and Patrick O. Wheatley	Applied Numerical Analysis	Pearson Education, South Asia	2009
2	Steven C. Chapra, Raymond P. Canale	Numerical Methods for Engineers	McGraw - Hill Pub. Co. Ltd	2014

COURSE OBJECTIVES

- 1 To provide experience on preparation, analysis and testing of chemicals used for industrial raw materials and end uses.
- 2 Interpret the characteristics of semiconductor devices.
- 3 Apply the basic knowledge semiconductor devices for basic switching applications.
- 4 Select a right semiconductor device for a given application.
- 5 Observe and validate the functioning under simulated environment.

COURSE OUTCOMES:

1. At the end of this practical course, the student would have a thorough understanding on the estimation and analysis of chemical compounds.
2. Familiarization with equipment like viscometers, flash and fire point apparatus etc.
3. Familiarization of methods for determining TDS
4. Familiarization of a few simple synthetic techniques for soap
5. Perform routine tasks and assigned procedures to support the purification, analysis and synthesis of chemical compounds and samples.
6. Use prescribed laboratory procedures to conduct basic manual and instrumental quantitative analysis and report results

LIST OF EXPERIMENTS (ANY 10 EXPERIMENTS)

1. Soap Analysis
 - a. Estimation of total fatty acid
 - b. Estimation of percentage alkali content
2. Oil Analysis
 - a. Estimation of free acid
 - b. Determination of Saponification value
 - c. Determination of iodine value
3. Cement Analysis
 - a. Estimation of Silica content
 - b. Estimation of mixed oxide content
 - c. Estimation of calcium oxide content
 - d. Estimation of calcium oxide by rapid method
4. Coal Analysis
 - a. Estimation of Sulphur present in coal
 - b. Ultimate analysis of coal

- c. Proximate analysis of coal
- 5. Analysis of Bleaching Powder
 - a. Estimation of available chlorine
- 6. Analysis of Glycerol
 - a. Estimation of purity of glycerol
- 7. Analysis of fuels
 - a. Flash point b. Fire point c. Cloud point d. Pour point e. Aniline point.
- 8. Determination of the molecular weight of the polymer by viscometry.
- 9. Calorimetric measurements
- 10. Conductivity measurement of an electrolyte solution
- 11. pH Measurements
- 12. Determination of sucrose content in sugar
- 13. Determination of dissolved oxygen in water
- 14. Determination of total nitrogen and ammoniacal nitrogen
- 15. Determination of SS, TDS, and VSS of a wastewater sample
- 16. Analysis of oil & grease in wastewater sample.
- 17. Study of analytical instruments: Spectrophotometer, pH meter, Gas Chromatograph, High Performance Liquid Chromatograph (HPLC), FTIR, Total Organic Carbon Analyser (TOC).

TOTAL: 45

COURSE OBJECTIVES

1. To enable the students to develop a sound working knowledge on different types of crushing equipments and separation characteristics of different mechanical operation separators.
2. Basic understanding of concepts and principles related to applied sciences as a foundation for further studies.
3. Development of communication and interpersonal skills for effective functioning in the world of work.
4. Understanding of basic concepts and principles of mechanical, electrical and civil engineering so as to enable the students to apply the knowledge of these principles to the field of chemical engineering.
5. Ability to read and interpret drawings related to plant layout, process equipment and components.
6. Knowledge of various materials used in chemical processes, their properties and specifications

COURSE OUTCOMES:

- 1 Estimate crushing characteristics, power requirements and constants of crushing laws using Jaw and Roll Crusher
- 2 Determine the critical speed and work index by using Ball mill
- 3 Determine average particle size and specific surface area by conducting Sieve analysis, Beaker Decantation and Air permeability experiments
- 4 Estimate specific cake and filter medium resistance using Filter press and Leaf filter
- 5 Design a thickener using batch sedimentation data and assess the efficiency of Cyclone separator
- 6 Apply separation techniques like froth floatation, sedimentation to separate a mixture.

LIST OF EXPERIMENTS

1. Sieve analysis
2. Batch filtration studies using a Leaf filter
3. Batch filtration studies using a Plate and Frame Filter press
4. Characteristics of batch Sedimentation
5. Reduction ratio in Jaw Crusher
6. Reduction ratio in Ball mill
7. Separation characteristics of Cyclone separator
8. Reduction ratio of Roll Crusher
9. Separation characteristics of Elutriator
10. Reduction ratio of Drop weight crusher
11. Size separation using Sub-Sieving

TOTAL: 45

COURSE OBJECTIVES:

- To give hands on training on the development of industrially important biotechnology products

COURSE OUTCOMES::

At the end of the course,

- The students will be able to get exposure on small scale development of biotechnology products

1. Production of ethanol from molasses and grapes
2. Production of Biofertilizers
3. Production of Single cell protein (Spirullina)
4. Mushroom cultivation
5. Production of jam from mixed fruits

COURSE OBJECTIVES

1. To impart knowledge on different types of chemical reactors, the design of chemical reactors under isothermal and non-isothermal conditions
2. to increase the student's ability to do chemical reactor design by providing the knowledge and tools required to obtain, evaluate, and improve rate equations for use in design, operation and optimization of chemical reactors
3. To train students how to analyze chemical reactors and reaction systems
4. To provide practice at developing critical and creative thinking skills related to reaction engineering.
5. To provide experience for students to solve open-ended reaction engineering problems in teams. .
6. To provide practice with computer software and simulation relating to chemical reaction engineering

COURSE OUTCOMES:

1. To gain knowledge on the selection of the reactor for the reaction and its design
2. To apply the principles of reaction kinetics and formulate rate equations and analyze the batch reactor data
3. Understand the ideal reactor concepts and to develop the performance equation to workout conversion and space time
4. Perform RTD analysis in non-ideal flow reactors and calculation of conversion
5. Evaluating the selection process of the reactor for the reaction and its design
6. Applying the principles of reaction kinetics and formulate rate equations and analyze the batch reactor data.

UNIT I RATE EQUATIONS**12**

Rate equation, elementary, non-elementary reactions, theories of reaction rate and Prediction; Design equation for constant and variable volume batch reactors, analysis of experimental kinetics data, integral and differential analysis

UNIT II DESIGN OF REACTORS**12**

Design of continuous reactors - stirred tank and tubular flow reactor, recycle reactors, combination of reactors, size comparison of reactors.

UNIT III DESIGN OF REACTORS FOR MULTIPLE REACTIONS**12**

Design of reactors for multiple reactions - consecutive, parallel and mixed reactions - factors affecting choice, optimum yield and conversion, selectivity, reactivity and yield

UNIT IV NON-ISOTHERMAL REACTOR SYSTEMS**12**

Non-isothermal homogeneous reactor systems, adiabatic reactors, rates of heat exchanges for

different reactors, design for constant rate input and constant heat transfer coefficient, operation of batch and continuous reactors, optimum temperature progression.

UNIT VNON IDEAL FLOW REACTORS

12

The residence time distribution as a factor of performance; residence time functions and relationship between them in reactor; basic models for non-ideal flow; conversion in non-ideal reactors

TOTAL:60

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Froment. G.F. & K.B.Bischoff	Chemical Reactor Analysis and Design	John Wiley and Sons	1979
2	Smith, J.M., VanNess, H.C., & Abbot M.C	Introduction to Chemical Engineering Thermodynamics	McGraw Hill VII Edition	2004
3	Narayanan K.V	A Text Book of Chemical Engineering Thermodynamics	Prentice Hall of India Pvt. Ltd	2001

COURSE OBJECTIVES

1. Students will learn to determine mass transfer rates under laminar and turbulent conditions.
2. course adheres to advanced solution methods, each solution beginning with differential forms of the equations of change
3. To teach the fundamental principles of mass transfer and separation processes including unit operations for chemical and biological engineering systems;
4. To introduce the mass transfer principles and basic concepts of mass transport
5. To analyze and solve mass transfer problems involving molecular diffusion;
6. To study the vapor liquid equilibrium and the basic concepts of mass transfer in distillation, extraction, leaching operation

COURSE OUTCOMES:

On completion of the course the students will be able to

- understand diffusional operations and theories of mass transfer
- understand the concept of interphase mass transfer
- understand the concept gas-liquid mass transfer operations like humidification
- apply the knowledge gained in mass transfer to perform simple calculations in drying
- apply the knowledge gained in mass transfer to perform simple calculations in crystallization process
- Calculate tower height and number of transfer units for absorption process

UNIT I DIFFUSION**9**

Introduction to mass transfer operations; Molecular diffusion in gases, liquids and solids; diffusivity measurement and prediction; multi-component diffusion

UNIT II INTERPHASE MASS TRANSFER**9**

Eddy diffusion, concept of mass transfer coefficients, theories of mass transfer, different transport analogies, application of correlations for mass transfer coefficients, inter phase mass transfer, relationship between individual and overall mass transfer coefficients. NTU and NTP concepts, Stage-wise and differential contractors.

UNIT III HUMIDIFICATION**9**

Humidification – Equilibrium, humidity chart, adiabatic and wet bulb temperatures; humidification operations; theory and design of cooling towers, dehumidifiers and humidifiers using enthalpy transfer unit concept.

UNIT IV DRYING**9**

Drying– Equilibrium; classification of dryers; batch drying – Mechanism and time of cross through

circulation drying, continuous dryers – material and energy balance; determination of length of rotary dryer using rate concept.

UNIT VCRYSTALLIZATION

9

Crystallization - Equilibrium, classification of crystallizers, mass and energy balance; kinetics of crystallization – nucleation and growth; design of batch crystallizers; population balance model and design of continuous crystallizers

3.	J.D. Seader and E.J. Henley	Separation Process Principles	2nd Ed., John Wiley	2006
4	BinayK.Dutta	Principles of Mass Transfer and Seperation Processes	PHI Learning Ltd	2013

ANALYSIS**COURSE OBJECTIVES**

1. To impart the importance of safety in industries and the various methods of safety measures and risk analysis in the industry
2. To provide future perspective of inherently safer processes and designs for making safe chemical plants
3. All process safety fundamentals are covered and participants will emerge with a better understanding of the key principles of process safety and its management
4. To gain knowledge about different process utilities used in the chemical process industry and issues related to hazards & safety
5. Understand the common definitions used for process safety Explore myths about process safety.
6. Identify components of a safety culture. Discuss individual risk, societal risk, and risk populations.

COURSE OUTCOMES:

On completion of the course the students will be able to

- demonstrate the awareness of plant safety standards, codes and MSDS in handling and storage of chemicals
- exhibit the skill in classifying chemical, fire, explosion hazards and to understand the occupational diseases
- investigate safety in operations and process by undergoing HAZOP and HAZAN studies
- analyze the accident causes, costs, prevention techniques, accident proneness and case studies
- examine the legal aspects related to safety and emergency studies to know the basic rules and requirements which govern the chemical industries
- Remembering safety operations and process by undergoing HAZOP and HAZAN studies

UNIT – I SAFETY PRINCIPLES**9**

Need for safety, Safety programs, Training & Education, Design for ventilation; Personal protective Equipments. Safety codes: NFPA, IS and OSHA standards; colour codes for pipe lines. Materials Safety Data sheets; safety in storage and handling of chemicals.

UNIT – II HAZARDS**9**

Hazards- fire, explosion and radiation; Designs to prevent fires and explosions; relief and relief sizing. Occupational diseases - effects.

UNIT – III SAFETY IN OPERATIONS AND PROCESSES**9**

Safety in operations and processes. Runaway reactions, unstable products; Safety Studies – HAZOPS, HAZANS, Fault tree, Event tree and risk analysis.

UNIT IV INDUSTRIAL ACCIDENTS**9**

Industrial accidents –types, nature/effects, causes, costs, prevention, investigation and analysis, accident proneness, case studies.

UNIT V LEGAL ASPECTS

9

Factories act, ESI act and Workmen's compensation act, Role of Government, safety organizations, management and trade unions in promoting industrial safety. Emergency response systems for hazardous goods basic rules and requirements which govern the chemical industries.

TOTAL: 45

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Fawcett H.H. and Wood W.S	Safety and Accident Prevention in Chemical Operation	2nd Edition, Interscience,	1982.
2	Gupta A.K	Industrial Safety and Environment	2nd Edition Reprint	2009

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	William H.	Industrial Safety Handbook ,	2nd Edition, McGraw Hill,	1968.
2	Loss Prevention and Safety Promotion in Chemical Process Industries	Vol. I, II, III Published by Institution of Chemical Engineers U.K		1983.

COURSE OBJECTIVES

1. To make the students understand the working principles of different types of instruments and their applications.
2. instrumental methods of chemical analysis and train students to perform practical work on real samples to get acquainted with instrumentation and equipment which is needed in monitoring of environmental pollution and in investigating current environmental processes.
3. Integrate a fundamental understanding of the underlining physics principles as they relate to specific instrumentation used for atomic, molecular, and mass spectrometry, magnetic resonance spectrometry and chromatography.
4. Understand and be able to apply the theory and operational principles of analytical instruments
5. Distinguish between qualitative and quantitative measurements and be able to effectively compare and critically select methods for elemental and molecular analyses.
6. Gaining factual knowledge (terminology, classifications, methods, trends and Learning fundamental principles, generalizations, or theories

COURSE OUTCOMES:

On completion of the course the students will be able to

- comprehend the principles of electromagnetic radiation and classification of instrumental methods
- grasp the principles and applications of UV, Visible, IR Spectroscopy and Photometric titrations
- appreciate the importance of AAS and NMR spectroscopy in chemical analysis
- gain knowledge about thermo gravimetric instruments and their applications
- understand the principles and applications of chromatographic methods.
- Evaluating the working principles of different types of instruments and their applications

UNIT I ELECTROMAGNETIC RADIATION**9**

Various ranges, Dual properties, Various levels, Interaction of photons matter, energy with

absorbance & transmittance and their relationship, Permitted energy levels for the electrons of an atom and simple molecules, classification of instrumental methods based on physical properties.

UNIT II MOLECULAR SPECTROSCOPY

9

Various electronic transitions in organic and inorganic compounds effected by UV, visible and infra-red radiations, various energy level diagrams of saturated, unsaturated and carbonyl compounds, excitation by UV and Visible radiations, Woodward-Fischer rules for the calculation of absorption maxima (dienes and carbonyl compounds), Effects of auxochromes and effects of conjugation on the absorption maxima; Instrumentation for UV, VISIBLE and IR spectroscopies (source, Optical parts and Detectors), Photometric titration (Experimental set-up and various types of titrations), Applications of UV, VISIBLE and IR spectroscopies.

UNIT III AAS, NMR SPECTROSCOPY

9

Atomic Absorption Spectrophotometry: Principle instrumentation and applications. Nuclear Magnetic Resonance: Introduction to NMR, principle and instrumentation (Proton NMR only). Relaxation, Chemical shift and its causes, reference compounds.

UNIT IV THERMAL METHODS

9

Thermogravimetry: Instrumentation, factors affecting shapes of thermo grams, and applications. Thermogram of important compounds ($\text{CaSO}_4 \cdot 0.5\text{H}_2\text{O}$; $\text{CaC}_2\text{O}_4 \cdot 2\text{H}_2\text{O}$) Differential Thermal Analysis: Principle, instrumentation and applications. Differences between DSC & DTA. Application of DSC (Inorganic & Polymer samples). TGA - Principle, instrumentation and applications.

UNIT V CHROMATOGRAPHIC METHODS

9

Classification of chromatographic methods; Column, Thin layer, Paper, Gas, High Performance Liquid Chromatography (principle, mode of separation and technique). Separation of organic compounds by Column and Thin Layer, Mixture of Cu, Co and Ni by Paper Chromatography. Separation of amino acids by Paper Chromatography. Estimation of organic compounds by GC and HPLC.

COURSE OBJECTIVES

1. To enable the students to develop a sound working knowledge on different types of heat transfer equipments
2. Understand the various forms of heat transfer and their applications in real life problems.
3. Analyze different methods to calculate the heat transfer coefficient in various heat transfer problems.
4. Analyze the theoretical knowledge and apply it in conducting experiments in the forms of heat transfer
5. A knowledge-based design problem requiring the formulations of solid conduction and fluid convection and the technique of numerical computation progressively
6. To gain experience in designing experiments for thermal systems, the design, fabrication, and experimentation of a thin film heat flux gage will be attempted as part of laboratory requirement

COURSE COURSE OUTCOMES:

On completion of the Lab course the student will be able to

- determine Stefan Boltzmann constant at different temperatures
- assess the heat transfer coefficient for natural and forced convection systems, double pipe heat
- exchanger / shell and tube heat exchanger and condensers
- develop temperature profile in unsteady state heat transfer system
- evaluate the convective and radiative heat transfer coefficients using radiation experiment
- appraise the fin efficiency and estimate the steam economy in an evaporator

LIST OF EXPERIMENTS

1. Performance studies on Cooling Tower
2. Batch drying kinetics using Tray Dryer
3. Heat transfer in Open Pan Evaporator
4. Boiling Heat Transfer
5. Heat Transfer through Packed Bed
6. Heat Transfer in a Double Pipe Heat Exchanger
7. Heat Transfer in a Bare and Finned Tube Heat Exchanger
8. Heat Transfer in a Condenser
9. Heat Transfer in Helical Coils
10. Heat Transfer in Agitated Vessels

TOTAL:45

COURSE OBJECTIVES

1. To develop skill to design and install process equipments used widely in the chemical industry
2. Learn basic symbols used instrumentation diagrams
3. Impart the knowledge mechanical aspects of pressure vessel design
4. Translate mechanical design specifications in to fabrication drawings for plant erection.
5. Draw detailed dimensional drawings shall include sectional front view, Full Top/side view depending on equipment.
6. It introduces the symbols of chemical engineering equipment and plants.

COURSE OUTCOMES:

On successful completion of the course the students will be able to

1. design machine elements and Piping system/presentation of PFD and PID
2. apply the skill in thermal design of heat transfer equipments like shell and tube and double pipe heat exchangers
3. perform the process design of evaporators
4. apply the skill in design of equipments like crystallizer and centrifuge
5. understand the concepts involved in design of pressure vessel, storage vessel and tall columns
6. to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability

LIST OF EXPERIMENTTS:

- Basic design and drawing considerations of machine elements
- Design of Heat Exchangers
- Design of Evaporators
- Design of Crystallizers
- Design of Pressure vessel

1	Sinnot R.K	Chemical Equipment Design: Chemical Engineering	Volume – 6, 4th Edition, Elsevier- Butterworth	2005
2	Joshi M.V. and Mahajan V.V	Process Equipment Design	3 rd Edition, Macmillan India Ltd	1996.

LABORATORY**COURSE OBJECTIVES**

1. To impart knowledge on design of reactors
2. This laboratory course mainly deals with the understanding of the basic concepts pertaining to analyze kinetics for complex reactions by performing different experiments
3. To examine reaction rate data to determine rate laws, and to use them to design chemical reactors, to simulate several types of reactors in order to choose the most appropriate reactor for a given need, To design chemical reactors with associated cooling/heating equipment.
4. Determination of rate kinetics
5. To provide in-depth of heterogeneous reaction systems.
6. learn to design experiments and interpret data to find reaction kinetics

INTENDED COURSE OUTCOMES:

On completion of the Lab course the students will be able to

1. determine the order and rate constant of the rate equations for Batch/ Mixed / Plug flow reactor
2. estimate the conversion in Batch/Semi-batch/Mixed/Plug flow reactors
3. determine the effect of temperature on rate of reaction to validate Arrhenius equation
4. evaluate the performance of combined Mixed and Plug flow reactor system
5. conduct residence time distribution studies to develop C, E & F- curve for Mixed/Plug flow reactor/Packed-bed reactor
6. Develop mathematical expressions (models) to describe the behaviour of reactors and analyse how kinetics, mass- and heat transfer affect the performance of reactors.

LIST OF EXPERIMENTS

1. Kinetic studies in a Batch reactor
2. Kinetic studies in a Plug flow reactor
3. Kinetic studies in a CSTR
4. Kinetic studies in a Packed bed reactor
5. Kinetic studies in a PFR followed by a CSTR
6. RTD studies in a PFR
7. RTD studies in a Packed bed reactor
8. RTD studies in a CSTR
9. Studies on micellar catalysis
10. Study of temperature dependence of rate constant using CSTR.
11. Kinetic studies in Sono chemical reactor
12. Batch reactive distillation
13. Kinetics of photochemical reaction
14. Demonstration of heterogeneous catalytic reaction
15. Demonstration of gas-liquid reaction

TOTAL**45**

COURSE OBJECTIVES

1. To understand the engineering principles in a pipe stress analysis
2. To study Nozzle loading and flexibility
3. Limiting the sagging of the piping system within allowable limits
4. Directing the line movements so as protect sensitive equipment against overloading
5. Resisting pipe system to collapse in case of earthquake, wind or shock loadings.
6. Providing pre-spring, cold spring, clearance required for line expansion, and additional line flexibility.

COURSE COURSE OUTCOMES:::

1. Students will be able to identify and analyze practical problems.
2. Students will be able to model the given problem and use experimentation tools required for the same.
3. That the use of codes, regulations and standards are the basics for safety and practical engineering of piping systems in process plants.
4. Piping terminology and how codes, regulations and standards are used in drafting and design of piping systems.
5. Handover and finalization process of a piping installation.
6. Commonly used components in piping systems.

1. UNIT I

Introduction to CAESAR II, General modeling in CAESAR II, Pipe stress theory, Stress analysis according to a design codes

UNIT II**3**

Load-based piping design (e.g. earthquake and wind), Flange and nozzle analysis, Structural steel, Expansion joints

UNIT III**4**

Hanger sizing, Fiberglass piping, Buried piping, Generation of isometric drawings

TOTAL 15

COURSE OBJECTIVES

- To know the basic knowledge on industry and its environment.
- To understand the psychology of the workers, their habits, attitudes and approach to problems along with the practices followed either at factory or site.

Students will undergo industrial training for four weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department within a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

COURSE OBJECTIVES

1. To enable the students to learn the gas-solid catalytic and non-catalytic reactors and gas-liquid reactors
2. the general mole balance, reactor types, conversion and reactor sizing, rate laws and stoichiometry and isothermal reactor design
3. To provide experience for students to solve open-ended reaction engineering problems in teams.
4. To provide practice with computer software and simulation relating to chemical reaction engineering.
5. Use matrix algebra to analyze large systems of reactions
6. Use knowledge of reaction rate theories and/or reaction mechanisms to derive expressions for rate of reaction

COURSE OUTCOMES:

On completion of the course the students will be able to

1. understand the ideal reactor concepts and heterogeneous reactors. .
2. understand the basics of catalysis and industrial catalytic reactors such as gas-solid reactors
3. Identify reaction rate parameters 2 List simple methods of chemical analysis 3 Determination of physic chemical parameters using simple laboratory tools
4. Design and conduct experiments on process equipment to achieve desired COURSE OUTCOMES:
5. Apply engineering analysis to experimental data
6. Identify safety concerns related to the experimental processes

UNIT ICATALYSTS**12**

Nature of catalysts, surface area and pore-volume distribution, catalyst preparation.

UNIT II HETEROGENEOUS REACTORS**12**

Rate equations for heterogeneous reactions, adsorption isotherms, rates of adsorption and desorption, surface reaction analysis of rate equation and rate controlling steps.

UNIT III GAS-SOLID CATALYTIC REACTORS**12**

Diffusion within catalyst particle, effective thermal conductivity, mass and heat transfer within catalyst pellets, effectiveness factor, Thiele Modulus, fixed bed reactors.

UNIT IV GAS-SOLID NON-CATALYTIC REACTORS**12**

Models for explaining kinetics; volume and surface models; controlling resistances and rate controlling steps; time for complete conversion for single and mixed sizes, fluidized and static reactors.

UNIT V GAS-LIQUID REACTORS**12**

Absorption combined with chemical reactions; mass transfer coefficients and kinetic constants;

application of film, penetration and surface renewal theories; Hatta number and enhancement factor for first order reaction, tower reactor design.

TOTAL: 60

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Levenspiel, O	Chemical Reaction Engineering	III Edition, John Wiley	1999
2	Fogler. H. S	Elements of Chemical Reaction Engineering	III Edition, Prentice Hall of India	1999

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Smith J.M.	Chemical Engineering Kinetics	III Edition, McGraw-Hill, New York	1981
2	Froment G.F & K.B. Bischoff	Chemical Reaction Analysis and Design	John Wiley and Sons	1979

COURSE OBJECTIVES

1. To provide introduction to physical and thermodynamic principles of mass transfer with an emphasis on how these principles affect the design of equipment and result in specific requirements for quality and capacity
- ~~2. To learn the fundamental concepts of mass transfer principles and to apply those concepts to real engineering problems.~~
3. To be familiar with equations describing molecular diffusion through gases, liquids, and solids.
4. To be familiar with techniques used to estimate mass transfer coefficients in laminar and turbulent flows.
5. To get acquainted with the general approach for the design of continuous contact and stage wise operations
6. Be familiar with principles underlying and the derivation of the design equations for basic mass transfer operations.

COURSE OUTCOMES:

On completion of the course the students will be able to

1. understand absorption and distillation operations and select methods of separation of mixtures based on mass transfer concepts
2. design a distillation tower
3. perform calculations in adsorption operation
4. apply the ternary equilibrium diagram concepts to determine the number of stages required for separation of liquid-liquid and solid -liquid mixtures
5. Ability to construct and analyze the simultaneous phase equilibrium and mass balances in continuous separation processes (absorbers, strippers, and distillation columns).
6. Ability to develops understanding of implications of factors affecting column operation, and design: effect of reflux ratio, feed conditions.

UNIT I ABSORPTION**12**

Gas Absorption and Stripping – Equilibrium; material balance; limiting gas-liquid ratio; tray tower absorber - calculation of number of theoretical stages, tray efficiency, tower diameter; packed tower absorber – rate based approach; determination of height of packing using HTU and NTU calculations

UNIT II DISTILLATION**12**

Vapour liquid equilibria - Raoult's law, vapor-liquid equilibrium diagrams for ideal and non-ideal systems, enthalpy concentration diagrams. Principle of distillation - flash distillation, differential distillation, steam distillation, multistage continuous rectification, Number of ideal stages by Mc.Cabe - Thiele method and Ponchan - Savarit method, Total reflux, minimum reflux ratio, optimum reflux ratio. Introduction to multi-component distillation, azeotropic and extractive distillation

UNIT III LIQUID-LIQUID EXTRACTION**12**

Liquid - liquid extraction - solvent characteristics-equilibrium stage wise contact calculations for

batch and continuous extractors- differential contact equipment - spray, packed and mechanically agitated contactors and their design calculations-packed bed extraction with reflux. Pulsed extractors, centrifugal extractors-Supercritical extraction

UNIT IV LEACHING

12

Solid-liquid equilibria- leaching equipment for batch and continuous operations – calculation of number of stages - Leaching - Leaching by percolation through stationary solid beds, moving bed leaching, counter current multiple contact (shank's system), equipments for leaching operation, multi stage continuous cross current and counter current leaching, stage calculations, stage efficiency.

Adsorption - Types of adsorption, nature of adsorbents, adsorption equilibria, effect of pressure and temperature on adsorption isotherms, Adsorption operations - stage wise operations, steady state moving bed and unsteady state fixed bed adsorbers, break through curves.

2	McCabe, W.L., Smith, J.C., and Harriot, P	Unit Operations in Chemical Engineering	7th Edn., McGraw-Hill	2005
3	King, C. J	Separation Processes	2nd Edn., Tata McGraw-Hill	1980

INSTRUMENTATION**COURSE OBJECTIVES**

1. To impart knowledge about the elements and techniques involved in process dynamics and control
2. characterize the dynamics and stability of processes based on mathematical analysis
3. understand the principles of feedback and feedforward controllers
4. design PID controllers using different tuning rules
5. carry out a frequency-domain analysis of control loop systems
6. understand the philosophy of and design model-predictive controllers and

COURSE OUTCOMES:

On completion of the course the students will be able to

1. understand the prerequisites of control strategies to design different process control systems
2. evaluate the suitable controllers for different chemical process
3. familiarize the closed loop response of control loops and characteristics of control valves
4. analyze and assess the control systems unto stability
5. know the tuning procedures and advanced control techniques
6. demonstrate fundamental understanding of process control. develop the mathematical model of various chemical processes.

UNIT I INSTRUMENTATION**9**

Principles of measurements and classification of process instruments, measurement of temperature, pressure, fluid flow, liquid weight and weight flowrate, viscosity, pH, concentration, electrical and thermal conductivity, humidity of gases.

UNIT II OPEN LOOP SYSTEMS**9**

Laplace transformation and its application in process control. First order systems and their transient response for standard input functions, first order systems in series, linearization and its application in process control, second order systems and their dynamics; transportation lag.

UNIT III CLOSED LOOP SYSTEMS**9**

Closed loop control systems, development of block diagram for feed-back control systems, servo and regulatory problems, transfer function for controllers and final control element, principles of pneumatic and electronic controllers, transient response of closed-loop control systems and their stability.

UNIT IV FREQUENCY RESPONSE**9**

Introduction to frequency response of closed-loop systems, control system design by frequency response techniques, Bode diagram, stability criterion, tuning of controllers Z-N tuning rules, C-C

tuning rules.

UNIT V ADVANCED CONTROL SYSTEMS

9

Introduction to advanced control systems, cascade control, feed forward control, Smith predictor, control of distillation towers and heat exchangers, introduction to computer control of chemical processes.

4	Peter Harriott	Process Control	Tata McGraw Hill Publishing Co	1964

COURSE OBJECTIVES

1. To enable students to understand the fundamental economic concepts applicable to engineering and
2. To learn the techniques of incorporating inflation factor in economic decision making, sensitivity and risk analysis.
3. the program COURSE OBJECTIVES that are most relevant are the ability to apply knowledge of chemical engineering fundamentals to identify and solve chemical engineering problems
4. a broad knowledge necessary to understand the impact of engineering solutions in a global and societal context
5. an ability to perform step-by-step design of engineered systems and chemical processes
6. an awareness of safety and environmental issues as an integral part of the chemical engineering profession

COURSE COURSE OUTCOMES::

1. Gain knowledge on cost and asset accounting, time value of money, profitability, alternative investments, and minimum attractive rate of return, sensitivity and risk analysis.
2. Practice various depreciation methods and its uses in industries for the recovery of plant cost
3. Assess the various financial ratios by taking the real time data's of the industries and comment the stability of the financial statements
4. Specify the economic balance in batch, cyclic and continuous operations and study the optimum conditions of operating variables.
5. Outline the various management principles and organization types practiced in the organization
6. Discuss the production planning control methods in industries and also role of control charts in production for the quality control.

UNIT I PRINCIPLES OF MANAGEMENT AND ORGANISATION**12**

Planning, organization, staffing, coordination, directing, controlling, communication, organization as a process and a structure; types of organizations. Method study; work measurement techniques; basic procedure; motion study; motion economy; principles of time study; elements of production control; forecasting; planning; routing; scheduling; dispatching; costs and cost control, inventory and inventory control.

UNIT II INVESTMENT COSTS AND COST ESTIMATION**8**

Time Value of money; capital costs and depreciation, estimation of capital cost, manufacturing costs and working capital, capital budgeting and project feasibility.

UNIT III PROFITABILITY, INVESTMENT ALTERNATIVE AND REPLACEMENT**9**

Estimation of project profitability, sensitivity analysis; investment alternatives; replacement policy; forecasting sales; inflation and its impact.

UNIT IV ANNUAL REPORTS AND ANALYSIS OF PERFORMANCE**8**

Principles of accounting; balance sheet; income statement; financial ratios; analysis of performance and growth.

UNIT V ECONOMIC BALANCE**8**

Economic decisions in Chemical Plant - Economics of size - Essentials of economic balance – Economic balance approach, economic balance for insulation, evaporation, heat transfer.

3	D.M.Mithani	Money, Banking, International Trade & Public Finance	Himalaya Publishing House	2004

COURSE OBJECTIVES

- | | |
|----|---|
| 1. | To train the students to develop sound working knowledge on different types of mass transfer equipment |
| 2. | the students will get the experimental exposure of different mass transfer operations such as diffusion, extraction, drying, |
| 3. | the students learn to record and present the observations made through experiments. |
| 4. | to provide students with the theoretical/analytical background to understand mass transfer operations and to tackle the sort of complex problems. |
| 5. | students the first-hand experience of verifying various theoretical concepts learnt in theory course that includes Diffusion, Equilibria, Gas Absorption, Cooling tower |
| 6. | Analyse one dimensional steady state mass transfer rate for different situations |

COURSE OUTCOMES:

O n c o m p l e t i o n	1.	Determine diffusivity and mass transfer co-efficient of a given system
	2.	Generate vapour liquid equilibrium data and liquid equilibrium data for different systems
	3.	Evaluate the performance and determine the design Parameters of Simple /Packed / Steam distillation
	4.	Appraise the performance of a simple leaching process
	5.	Conduct experiments to solve complex engineering problems effectively as an individual or team work,
	6.	Perform as a leader with good ethical principles to meet societal needs in the field of chemical engineering.

LIST OF EXPERIMENTS

1. Separation of binary mixture using Simple distillation
2. Separation of binary mixture using Steam distillation
3. Separation of binary mixture using Packed column distillation
4. Measurement of diffusivity
5. Liquid-liquid extraction
6. Drying characteristics of Vacuum Dryer
7. Drying characteristics of Tray dryer
8. Drying characteristics of Rotary dryer
9. Water purification using ion exchange columns
10. Mass transfer characteristics of Rotating disc contactor
11. Estimation of mass/heat transfer coefficient for cooling tower
12. Demonstration of Gas – Liquid absorption

COURSE OBJECTIVES

1. To enable the students to learn the methods and practices followed in the design of process equipments and to draw the designed equipments to scale.
2. The designing of process equipment such as condensers and evaporators will be learned.
3. The knowledge of fundamentals in momentum, heat and mass transfer will be utilized to design chemical process equipment.
4. The optimization of design parameters for the processes to make more economical.
5. To apply the basics of calculations related to material and energy balances in the processes.
6. Able to appreciate the importance of chemical process design in the process industries

COURSE OUTCOMES:

1. apply the skill in thermal design of heat transfer equipments like condensers and reboilers
2. estimate the design parameters of reactors
3. perform the process design of distillation column
4. apply the skill in design of absorption column
5. Compute the design parameters of distillation columns, absorption towers and rotary drier for the given duty according to standards codes.
6. Conduct experiments to solve complex engineering problems effectively as an individual or team work.

LIST OF EXPERIMENTS

- Design of Condensers
- Design of reactors
- .Design of distillation Column
- Design of Absorption Column
- Design of Dryers

TOTAL: 45

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1.	Walas, Stanley M	Chemical Process Equipment Selection and Design	3 rd Edition, Butterworth - Heinemann, Boston	2012.
2	Lloyd E. Brownell and Edwin H. Young	Process Equipment Design	John Wiley and Sons	2010

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Nicholas P. Cheremisinoff.	Handbook of Chemical Processing Equipment	Butterworth	2000
2	Uzemann	Principles of Chemical Reactor Analysis and Design	2 nd Edition, John Wiley and Sons	2009

COURSE OBJECTIVES

1. The main COURSE OBJECTIVES is to give an opportunity to the student to get hands on training of a complete working model, which is designed by them.

The students may be grouped into 2 to 4 and work under a project supervisor. The device/system/component(s) to be set as a model may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

COURSE OBJECTIVES

- To equip the students with effective technical presentation
- To understand the barriers and bridges to communication
- To improve the public speaking capabilities, body language and posture

During the seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as overhead projectors, power point presentation and demonstrative models.

TOTAL 15

SEMESTER VII

17BTCE701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT

3 0 0 3 100

AND ENTREPRENEURSHIP DEVELOPMENT

COURSE OBJECTIVES

- To enable the students to create an awareness on Engineering Ethics, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

COURSE OUTCOMES:

1. Develop managerial skills
2. Cultivate engineering ethics with oneself
3. Develop stress managing attitude and entrepreneurship.
4. Evaluate theories of the firm, and explain how they are relevant to the diverse range of ownership structures that exist in reality
5. Discuss the moral and social responsibility dimensions of corporate governance
6. Describe why systematic way failure of corporate governance can lead to failure of confidence that could spread from individual firms to entire markets or economies

UNIT I HISTORICAL DEVELOPMENT, PLANNING, ORGANISING

9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – COURSE OBJECTIVES – Setting COURSE OBJECTIVES – Process of Managing by COURSE OBJECTIVES – Strategies, Policies and Planning Premises– Forecasting – Decision-making – Formal and informal organization
– Organization Chart –.

UNIT II DIRECTING AND CONTROLLING

9

Human Factors – Creativity and Innovation – Harmonizing COURSE OBJECTIVES – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT III ENGINEERING ETHICS

9

Senses of 'Engineering Ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of

Professional Roles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNIT IV FACTORS OF CHANGES

9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT VENTREPRENEURSHIP AND MOTIVATION

9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, COURSE OBJECTIVES.

COURSE OBJECTIVES

To enable the students to understand

- Different types of fluids, their flow characteristics and different mathematical models applied to actual situations
- Mechanism of fluids in motion under different conditions.

COURSE OUTCOMES:

1. Apply the shell momentum balances and velocity distribution in laminar flow and understand
2. Equation of continuity and motion
3. Establish the shell energy balances and temperature distributions in solids and apply the equations of change to solve heat transfer problems
4. Determine the shell mass balance and concentration distributions in systems involving diffusion and reactions
5. Analyze the analogy between the transports processes of heat, momentum and mass transfer
6. Critically apply understanding of ethics of real-world contexts and gather and analyse information by way of undertaking a research project on a topic relevant to business ethics.

UNIT IFUNDAMENTALS OF TRANSPORT PHENOMENAAND**9****VELOCITY DISTRIBUTION IN LAMINAR FLOW**

Importance of transport phenomena: analogous nature of transport process, basic concepts, conservation laws. Phenomenological laws of transport properties Newtonian and Non-Newtonian fluids, Rheological models, Theories of transport properties of gases and liquids, effects of pressure and temperature. Shell Momentum Balances and Boundary conditions- Flow of a Falling Film- Flow Through a Circular Tube- Flow through an Annulus- Flow of Two Adjacent Immiscible Fluids- Creeping Flow around a Sphere.

UNIT IIEQUATION OF CHANGE FOR ISOTHERMAL PROCESS**9**

The Equations of Change in Terms of the Substantial Derivative- The Equation of Continuity- The Equation of Motion- Use of the Equations of Change to Solve Flow Problems- Dimensional Analysis of the Equations of Change.

UNIT III VELOCITY DISTRIBUTION IN TURBULENT FLOW**9**

Comparisons of Laminar and Turbulent Flows- Time-Smoothed Equations of Change for incompressible Fluids- The Time-Smoothed Velocity Profile near a Wall- Empirical Expressions for the Turbulent Momentum Flux- interphase transport in isothermal system- Definition of Friction Factors- Friction Factors for Flow in Tubes- Friction Factors for Flow around Spheres -

DISTRIBUTIONS IN SOLIDS AND LAMINAR FLOW

Shell Energy Balances; Boundary Conditions-Heat Conduction with an Electrical Heat Source-Heat Conduction with a Nuclear Heat Source- Heat Conduction with a Viscous Heat Source- Heat Conduction through Composite Walls- Heat Conduction in a Cooling Fin- Forced Convection-Free Convection-Use of equations of change to setup steady state heat transfer problems.

UNIT V CONCENTRATION DISTRIBUTIONS IN SOLIDS AND LAMINAR**9****FLOW**

Shell Mass Balances; Boundary Conditions- Diffusion through a Stagnant Gas Film- Diffusion with a Heterogeneous Chemical Reaction- Diffusion with a Homogeneous Chemical Reaction-Diffusion into a Falling Liquid Film (Gas Absorption)- Diffusion into a Falling Liquid Film (Solid Dissolution)- Diffusion and Chemical Reaction inside a Porous Catalyst- Diffusion in a Three-Component Gas System- equations for change for Multi Component Systems- The Equations of Continuity for a Multicomponent Mixture.

ENGINEERING LABORATORY**COURSE OBJECTIVES**

1. To impart computational techniques for chemical engineering calculations
2. Classification of chemical engineering process simulation models based on mathematical approaches.
3. To handle Software Packages such as EXCEL, MATLAB, FEM LAB to solve chemical engineering problems.
4. How to analyse and interpret results provided by SOFTWARE modeling approaches.
5. Solution dependence and sensitivity on process parameter specifications
6. The students are exposed to learn the basic principles, and logical skills in solving the problems using computational methods.

COURSE OUTCOMES:

1. The current rapid development of these combinatorial methods promises solutions to more complex problems, including the creation of new biosynthetic pathways.
2. Computational methods are also developing quickly.
3. The approaches will allow us to generate the efficient, effective catalysts needed by the pharmaceutical, food and chemicals industries and should open up new opportunities for producing energy and chemicals from renewable resources.
4. Apply the process simulation software like MATLAB /C Programming in the design of single and multiple effect evaporator
5. Interpret the issues, modeling and computational models in Embedded design
6. Explain the basic concepts and compare the features of real time operating systems

LIST OF EXPERIMENTS**Writing Programs and Sub Programs using C/C++and MATLAB/SCILAB for Solving**

1. Jacobi Methods, Cramer's Rule- "Multiple Effect Evaporator and Similar Problems."
2. "Phase Equilibrium Problems, Equation of State Determination of Bubble and Dew Poin't Differential Distillation- Minimum Reflux Ratio Calculations.
3. "Mass Transfer Problems- Rayleigh's Equation", NTU in Absorption, Determination of Drying time from batch drying data- Determination of reactor size.
4. "Milne's Method, Laplace Equation, Predictor-Corrector Methods".
5. "Heat conduction problems and chemical reaction" Engineering problems

COMPUTER AIDED DESIGN

Design, Rating and Simulation of Chemical Engineering Equipment Using Aspen Plus / Chemcad Software: Mixer, Flow splitter; Flash column; pipe line and pipe pressure drop; Pump; Single and multistage compressors; Heat Exchangers; Distillation Columns; Reactors etc.

COMPUTER AIDED SIMULATION

Simulation Exercises Using Aspen Plus /Chemcad: Physical property estimations; Simulation of a flow sheet:Mass and Energy balances; Handling user specifications on output streams.**4**

Introduction to HYSYS Software, HYSYS User Interface, Defining the Simulation Basis, Selecting a Unit Set, Adding a Stream, Flash Calculations □**3**

➤ Adding Utilities, The Stream Property Value, Flash Calculations of a Ethanol-Water Mixture, Gas Plant Example

4

➤ Optimization in HYSYS, Set and Adjust Logic Operations, Flash Calculation, PFD Preparation, Sizing of Columns, Oil Manager / Characterization, Pipe Sizing and Pressure Drop in HYSYS, Simulation of live Project

TOTAL

45

COURSE OBJECTIVES

1. To determine experimentally the methods of controlling the processes including measurements using process simulation techniques.
2. To control temperature, pressure, flow, level using PC with the help of different control modes.
3. To verify the operation of control valves.
4. To verify the operation of I/P & P/I converters.
5. To control the speed of DC motor.
6. To obtain the time domain specification for a second order system using PID controller.

COURSE COURSE OUTCOMES::

1. Students would have knowledge on the development and use of right type of control dynamics for process control under different operative conditions.
2. Develop the skills required for automation, control and monitoring of industrial processes in high level with automation and control systems
3. Employ high-level PLC control systems in the computer integration of manufacturing processes.
4. Integrate the industrial processes, control of sequences for automation and monitoring through distributed control systems.
5. Practice the manufacturing and inventory management systems currently used in the process industries.
6. Explain the different computer process control systems and its application.

LIST OF EXPERIMENTS

1. Single capacity liquid level process
2. Time constant of a thermocouple
3. Calibration of resistance thermometer
4. Response of a dial thermometer
5. Two capacity liquid level process without interaction
6. Two capacity liquid level process with interaction
7. Heat transfer dynamics of stirred tank
8. Computer controlled level process analyser
9. Computer controlled flow process analyser
10. Computer controlled pressure process analyser
11. Computer controlled temperature process analyser
12. Computer controlled heat exchanger system
13. Triangle simulator trainer.

TOTAL**45**

COURSE OBJECTIVES

1. To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

17BTCE891 PROJECT WORK - PHASE II & VIVA-VOCE 0 0 32 16 300

COURSE OBJECTIVES

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

PROFESSIONAL ELECTIVES

COURSE OBJECTIVES:

1. To enable the students to learn to design processing equipments for Food Industries
2. To acquaint with different groups of micro-organisms associated with food, their activities, destruction and detection in food
3. To acquaint with different groups of micro-organisms associated with food, their activities, destruction and detection in food
4. To acquaint with basic principle of Food Engineering and its Processes, with importance of various foods process and their evaluation.
5. To make students understand the need, importance and process of developing healthy and nutritious foods for special category of population groups
6. To acquaint the students about importance of nutrition, balanced diets, therapeutic diets for health and role of food and nutraceuticals in health.

COURSE COURSE OUTCOMES::

1. The students will able to describe DNA based biosensors to study the presence of heavy metals in the food products
2. The students will have knowledge about different processing and preservation methods and principle involved
3. The students will gain information about various food constituents, and changes that occur in them during food processing.
4. Students will get acquainted with analytical methods used for quality control analysis of raw material and processed food commodities
5. The students are expected to have learnt statistical tools for analyzing data
6. students will have knowledge about different groups of micro-organisms and their beneficial as well as harmful effects related to food

UNIT I AN OVERVIEW**9**

General aspects of food industry; world food needs and Indian situation.

UNIT II FOOD CONSTITUENTS, QUALITY AND DERIVATIVE FACTORS**9**

Constituents of food; quality and nutritive aspects; food additives; standards; deteriorative factors and their control

UNIT III GENERAL ENGINEERING ASPECTS AND PROCESSING METHODS**9**

Preliminary processing methods; conversion and preservation operations.

UNIT IV FOOD PRESERVATION METHODS**9**

Preservation by heat and cold; dehydration; concentration; drying irradiation; microwave heating; sterilization and pasteurization; fermentation and pickling; packing methods.

UNIT V PRODUCTION AND UTILISATION OF FOOD PRODUCTS**9**

Cereal grains; pulses; vegetables; fruits; spices; fats and oils; bakery; confectionery and chocolate products; soft and alcoholic beverages; dairy products; meat; poultry and fish products.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Heid J.L. Joslyn M.A.,	Fundamentals of Food Processing Operation	The AVI publishing Co., West port	1967
2	Potter N.N	Food Science	The AVI publishing Co., Westport	1963

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Heldman D.R.,	Food Process Engineering	The AVI publishing co	1975
2	Charm S.E	The Fundamentals of Foods Engineering	The AVI Publishing Co., Westport	1963

COURSE OBJECTIVES

1. To motivate the students by highlighting the importance of Energy technology and various energy management concepts
2. To facilitate the students to achieve a clear conceptual understanding of technical and commercial aspects of energy conservation and energy auditing.
3. To enable the students to develop managerial skills to assess feasibility of alternative approaches and drive strategies regarding energy conservation and energy auditing
4. To impart knowledge in the domain of energy conservation
5. To bring out Energy Conservation Potential and Business opportunities across different user segments under innovative business models
6. To inculcate knowledge and skills about assessing the energy efficiency of an entity/ establishment

COURSE OUTCOMES: :

1. Explain the formation of coal and its classification, ranking, analysis, testing, carbonization, gasification, liquefaction and manufacture of coke.
2. Create the knowledge about occurrence of crude oil, its composition, classification and production of petroleum products, properties and testing, handling and storage of petroleum, refining and other conversion processes.
3. State the occurrence, properties, production and storage of gaseous fuels, combustion, furnaces for different gaseous fuels and waste heat recovery.
4. Understand the concept of nuclear reactions and to infer the fuel materials, moderators and structural materials for construction of various types of nuclear reactors for contribution to the energy needs.
5. Analyze the utilization of solar energy for room and water heating, to derive energy from biomass using different biogas plants and to study application of other energy resources such as wind energy, tidal and ocean energy.
6. Students will be able to work effectively in teams and demonstrate team-working capabilities.

**Unit I FUELS
TECHNOLOGY**

Introduction – Solid fuels – Coal origin, analysis and properties, efficient utilisation, storage and applications, Liquid fuels – Petroleum- Production and consumption, refining, properties and petroleum products, Gaseous fuels – natural gas, producer gas, water gas, gasification of coal; gases from biomass

UNIT II**9**

Distinct features of combustion of solid, liquid and gaseous fuels - determination of gross and net calorific values - combustion of solid fuels including pulverized fuels, stoking and ash removal - fluidized bed combustion of solid fuels - combustion of liquid fuels - burners and nozzles - combustion of gaseous fuels - types of combustion: surface combustion, submerged combustion and pulsating combustion

UNIT III HYBRID SYSTEMS**9**

Wind-PV systems, Wind-DG systems, Wind-Hydel systems, Gasifier DG- Wind systems and Application areas, Hybrid conventional and geothermal power plants, Integrated coal gasifier and fuel cell power plant

UNIT IV ENERGY AUDIT

9

Energy Audit: Types and Methodology; Energy Audit Reporting Format; Understanding Energy Costs; Benchmarking and Energy Performance; Matching Energy Usage to Requirement; Maximising System Efficiency; Fuel and Energy Substitution; Energy Audit Instruments; Duties and responsibilities of energy auditors

UNIT V ENERGY MANAGEMENT

9

Definition and COURSE OBJECTIVES of Energy Management; Importance; Indian need of Energy Management; Energy action planning, Energy Organization, energy costing, budgeting, Equipment professionals, staffing, Monitoring and targeting – Data and Information Analysis; Relating Energy Consumption and Production, Design of energy management programs

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Gupta	Elements of fuels, furnaces and refractories	Khanna Publishers	2010
2	Rao S.& Dr. Parulakar B.B	Energy Technology	Khanna Publishers	1994
3	Samir Sarkar,	Fuels and Combustion	University Press	2009

COURSE OBJECTIVES:

1. This course mainly discusses the role of enzymes and microbes in biotechnology sectors
2. foster a unique and personalized undergraduate experience by leveraging the advantages of a small college atmosphere within a comprehensive liberal arts and research university;
3. Provide a diverse, inclusive, and equitable environment for all students
4. Enrich the undergraduate experience through cultural diversity, international opportunities, and/or experiential learning
5. Provide a solid foundation and understanding of the fundamental principles of mathematics, science, and engineering;
6. Provide students with experience in learning and applying tools, and analyzing and interpreting data to solve theoretical and open-ended chemical engineering problems

COURSE COURSE OUTCOMES:::

1. Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. Communicate effectively and Function on multidisciplinary teams
4. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
6. Acquire and apply new knowledge as needed, using appropriate learning strategies.

UNIT I INTRODUCTION**9**

Industrial biochemical processes with typical examples, comparing chemical and biochemical processes, development and scope of biochemical engineering as a discipline. Industrially important microbial strains; their classification; structure; cellular genetics.

UNIT II KINETICS OF ENZYME ACTION**9**

Kinetics of enzyme catalyzed reaction: the enzyme substrate complex and enzyme action, modulation and regulation of enzyme activity, types of inhibition. Immobilized enzyme technology: enzyme immobilization, Immobilized enzyme kinetics: effect of external mass transfer resistance.

UNIT III KINETICS OF MICROBIAL GROWTH**9**

Kinetics of cellular growth in batch and continuous culture, models for cellular growth unstructured, structured and cybernetic models , medium formulation. Thermal death kinetics of cells and spores, stoichiometry of cell growth and product formation , Design and analysis of biological reactors

UNIT IV TRANSPORT PHENOMENA**9**

Transport phenomena in bioprocess systems: Gas-liquid mass transfer in cellular systems, determination of oxygen transfer rates, power requirements for sparged and agitated vessels, scaling of mass transfer equipment, heat transfer.

UNIT V DOWN STREAM PROCESSING**9**

Downstream processing: Strategies to recover and purify products; separation of insoluble products, filtration and centrifugation; cell disruption-mechanical and non-mechanical methods; separation of soluble products: liquid-liquid extractions, membrane separation (dialysis, ultra filtration and reverse osmosis), chromatographic separation-gel permeation chromatography, electrophoresis, final steps in purification –crystallization and drying

COURSE**OBJECTIVES**

1. To enable the students to learn the fertilizer manufacturing including new or modified fertilizer products and new techniques.
2. Understand the various unit operation and unit processes and their application in different chemical industries like fertilizer, process industry, sugar and plastic etc
3. . Understand various instruments used in process control of chemical industry including use of computer.
4. Understand the organisation and his place in it. Understanding the general procedures of stores, purchase and inventory etc.
5. Understand the techniques of installation, erection and commissioning of equipments/instruments in chemical plants.
6. Understand, interpret and prepare plant layout and flow diagrams.

COURSE COURSE OUTCOMES:::

1. Understand the basic concepts of fertilizer industries.
2. Identify engineering problems in fertilizer manufacturing
3. Handle the fertilizers.
4. Select appropriate synthesis fertilizer.
5. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
6. an ability to design and conduct experiments, as well as to analyze and interpret data

UNIT I NITROGENOUS FERTILISERS**9**

Methods of production of nitrogenous fertilizer-ammonium sulphate, nitrate, urea and calcium ammonium nitrate; ammonium chloride and their methods of production, characteristics and specifications, storage and handling.

UNIT II PHOSPHATIC FERTILISERS**9**

Raw materials; phosphate rock, sulphur; pyrites etc., processes for the production of sulphuric and phosphoric acids; phosphates fertilizers – ground rock phosphate; bone meal-single superphosphate, triple superphosphate, triple superphosphate, thermal phosphates and their methods of production, characteristics and specifications

UNIT III POTASSIC FERTILISERS**9**

Methods of production of potassium chloride, potassium schoenite, their characteristics and specifications.

UNIT IV COMPLEX AND NPK FERTILISERS**9**

Methods of production of ammonium phosphate, sulphate diammonium phosphate, nitrophosphates, urea, ammonium phosphate, mono-ammonium phosphate and various grades of NPK fertilizers produced in the country.

UNIT VMISCELLANEOUS FERTILISERS**9**

Mixed fertilizers and granulated mixtures; biofertilisers, nutrients, secondary nutrients and micro nutrients; fluid fertilizers, controlled release fertilizers, controlled release fertilizers.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Handbook of fertilizer technology		Association of India, New Delhi	1977
2	Menno, M.G	Fertilizer Industry - An Introductory Survey	Higginbothams Pvt. Ltd	1973

2	Fertiliser Manual	United Nations Industrial Development Organisation	United Nations, New York	1967
3	Slack, A.V.;	Chemistry and Technology of Fertilisers,	Interscience, New York	1966

COURSE OBJECTIVES:

1. To enable the students to learn the design aspects of fluidized beds.
2. Fluidization phenomena, fluidized bed regimes and models
3. Understand the fundamental of fluidization.
4. Acquainted with the fundamentals of fluidization engineering, different regimes, classification of particles.
5. Realize the movement of bubbles mixing in bed.
6. Know the mathematical models of Fluidized Bed

COURSE OUTCOMES:

1. Remembering the fluidization behavior
2. Evaluating pressure drop, bubble size, void age, heat and mass transfer rates for the fluidized beds .
3. Applying the model equations for fluidized beds. .
4. Creating the gas-solid fluidized bed reactors
5. Understanding the fundamental of fluidization.
6. Analyzing the fundamentals of fluidization engineering, different regimes, classification of particles.

UNIT I BASICS OF FLUIDIZATION**9**

Packed bed – Velocity – Pressure drop relations – Correlations of Ergun, Kozneykarman – On set of fluidization – Properties of fluidized beds – Development of fluidization from fixed bed.

UNIT II FLUIDIZED BED TYPES**9**

Minimum fluidization conditions – Expanded bed – Elutriation – Moving solids and dilute phase – spouted bed.

UNIT III DESIGN ASPECTS**9**

Channeling – Bed expansion in liquid – Solid and gas – Solid fluidizations. Design aspects of fluidized bed systems.

UNIT IV HEAT AND MASS TRANSFER IN FLUIDIZED BEDS**9**

Heat and mass transfer in fluidized bed systems – Industrial applications and case studies of fluidized bed systems.

UNIT V OTHER TYPES OF FLUIDIZATION**9**

Single stage and multistage fluidization – Collection of fines – Use of cyclones.

1	Rowe and Davidson	Fluidization	Academic Press	1971
2	Leva, M	Fluidization	McGraw Hill Book Co	1959
3	Wen-Ching Yang.,	Handbook of Fluidization and Fluid-Particle Systems	Marcel Dekker Inc	2003

COURSE OBJECTIVES

1. To understand the formation and composition of petroleum
2. To understand the various treatment techniques of petroleum
3. Making students familiarize with upgrading process of petroleum products
4. Relate upon his/her skills in chemical process design with the elements of refinery process
5. Get acquainted with the various refinery processes and the products.
6. Understand the safety and environmental issues in designing relevant equipments.

COURSE COURSE OUTCOMES::

1. Get conversant the basic separation and conversion processes used in refining crude oil
2. Apply chemical engineering principles to the analysis of safe and efficient refinery operations
3. Use the Fenske Underwood and Gilliland method in designing oil-water separators, Design of light end units.
4. Design ADU/VDU and absorbers
5. Examine how each refinery process works and how physical and chemical principles are applied to achieve the COURSE OBJECTIVES of each refinery process
6. Assess implications of changing crude oil feedstocks on refinery configuration and propose strategies to resolve conflicts with degrading crude oil quality and increasingly stringent environmental regulations on petroleum fuels

UNIT – I FORMATION AND COMPOSITION OF PETROLEUM 9

Origin and formation of petroleum; composition; types and classification; Petroleum reserves.

UNIT – II PROPERTIES AND TESTING METHODS 9

Physical properties and testing methods – crude and petroleum products;

UNIT– III TREATMENT TECHNIQUES 9

Desalting of crudes, dehydration and fractionation methods; Thermal and catalytic cracking processes – vis-breaking, Dubbs two coil process, coking, FCC, Hydro cracking processes.

UNIT– IV UPGRADING PROCESSES 9

Solvent extraction; hydro treatment processes; Reforming and Alkylation; Isomerization; polymerization; finishing and purification processes.

UNIT – V MATERIAL AND ENERGY BALANCES 9

Material and Energy balances calculation; controlling hydrocarbon losses in refinery; application of pollution control techniques.

TOTAL: 45

TEXT BOOKS:

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	BhaskaraRao B.K	Modern Petroleum Refining Processes	5th Edition, Oxford and IBH Publishing Company, New Delhi	2008
2	Nelson W.L	Petroleum Refinery Engineering	4th Edition, McGraw Hill Publishing Company Limited	1958

REFERENCE BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Watkins R.N	Petroleum Refinery Distillation	2nd Edition, Gulf Publishing Company, Texas	1979
2	Hobson G. D	Modern Petroleum Technology	Part 1&2, 5th Edition, Wiley Publishers	1984

COURSE OBJECTIVES

1. Focused on papermaking science and technology and is to be especially valuable to students majoring in programs leading to careers in corporate or government positions which would interface with the paper related industries
2. Provide fundamental knowledge necessary to maximize bleach plant performance while extending the life span of pulp/bleaching equipment.
3. Optimize pulping operations to achieve maximum pulp bleachability and strength properties
4. Apply the fundamental chemical principles of making pulp and paper in the industry.
5. Advise pulp and paper makers on how to control environmental pollution.
6. Focused on papermaking science and technology and is to be especially valuable to students majoring in programs leading to careers in corporate or government positions which would interface with the paper related industries.

COURSE OUTCOMES:

1. Introduction to Basic Pulp and Paper Technology, Wood Harvesting, Wood as a Raw Material Wood-yard Operations.
2. Mechanical and Chemical Pulping processes, Stock Preparation Paper Machine Wet End Additives
3. Paper Machine Wet and Dry End Operations, Other Paper and Paperboard Formers and Products
4. Surface Treatments; Finishing Operations
5. Paper End Uses. Process Control Properties and Testing of Pulp and Paper
6. An Introduction to Quality; Mill Services; Water Pollution Control; Air Pollution Control.

UNIT I INTRODUCTION**9**

Introduction Basic pulp and paper technology – Wood haves dry – Wood as a raw material

UNIT II WOODYARD OPERATION**9**

Woodyard operation - Mechanical pulping – Chemical pulping – Secondary fibre pulp processing

UNIT III PAPER MACHINE**9**

Paper Machine wet and addition paper machine dry and operation – Paper machine - Wet and operation

UNIT IV PAPER AND PAPERBOARD**9**

Paper and paperboard frames and products – Surface treatments – Finishing operation– End uses

UNIT V PROPERTIES AND TESTING OF PULP AND PAPER**9**

Properties and Testing of pulp and paper Process control – Quality assurance – Water and air pollution control

TOTAL**45**

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Kenneth W. Britt	Handbook of Pulp and Paper Technology	2 nd Revised Edition, John Wiley & Sons	1971
2	Smook G.A	Handbook for Pulp & Paper Technologists	3 rd Edition, Angus Wilde Publications, Incorporation	2003

REFERENCE BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Austin, G.T	Shreve's Chemical Process Industries	5 th Edition, McGraw-Hill International Book Company, Singapore	1984
2	Kent J.A	Riggel's Hand Book of Industrial Chemistry	Van Nostrand Reinhold	1974

COURSE OBJECTIVES

1. To enable the students to compute molecular weight averages from the molecular weight distribution, Condensation polymerization and transition in polymers.
2. To provide the students with overall knowledge on the manufacturing of plastic materials, their properties, applications, processing, product design, mold design, testing & quality control, and recycling through theory as well as practical training.
3. To make the students competent to take up the challenging positions in Plastics material manufacturing industries, compounding industries, processing machinery manufacturing industries through offering specialized elective subjects and industry exposure.
4. Apart from technical oriented subjects the students are also offered management subjects like TQM, Industrial costing and management, statistical quality control, and general subjects like professional ethics, environmental science to impart leadership qualities in the students.
5. To meet the man power requirements of plastics and allied industries in India and overseas.
6. To provide the students with basic knowledge of the morphology of polymers in the solid state, amorphous and crystalline. Particular emphasis will be on the interplay between morphology and physico-chemical properties

COURSE COURSE OUTCOMES:::

1. Students will be able to understand the relationships between polymer molecular weight, molecular weight distribution, and the properties of polymeric materials.
2. Students will demonstrate an ability to distinguish different polymerization reactions and their mechanisms/kinetics, and learn how actual polymerization is performed in the laboratory. Students will also be able to analyze polymerization data and predict the conversion and molecular weight, which will lead to critical thinking about how to improve the setup for better polymerization.
3. Students will be able to determine polymer molecular weights and molecular weight distributions from different types of experiments. Students will learn about polymer solvent interaction and the effect of the solvents on the dimensions of the polymers in solution.
4. Students will improve and expand their skills in performing and analyzing the thermal and mechanical properties of polymers, and demonstrate an ability to predict how the molecular weight will affect these properties.
5. Students will be able to describe the viscoelastic behavior of polymers with respect to their chemical structures and molecular weights, and to construct a corresponding master curve from the experimental data.
6. Students will be able to run extrusion and injection molding machines, and to collect and analyze data. This will help them to make connections between the polymer molecular weight, viscoelastic properties, and processing conditions.

UNIT I INTRODUCTION**9**

History of Macromolecules – structure of natural products like cellulose, rubber, proteins – concepts of macro molecules – Staudinger's theory of macromolecules – difference between simple organic molecules and macromolecules

UNIT II ADDITION POLYMERIZATION**9**

Chemistry of Olefins and Dienes – double bonds – Chemistry of free radicals – monomers – functionality – Polymerization: Initiation – types of initiation – free radical polymerization – cationic polymerization – anionic polymerization – coordination polymerization – industrial polymerization – bulk, emulsion, suspension and solution polymerization techniques – Kinetics – Copolymerization concepts

UNIT III CONDENSATION POLYMERIZATION**9**

Simple condensation reactions – Extension of condensation reactions to polymer synthesis – functional group reactivity – polycondensation – kinetics of polycondensation- Carother's equation – Linear polymers by polycondensation – Interfacial polymerization – crosslinked polymers by condensation – gel point.

UNIT IV MOLECULAR WEIGHTS OF POLYMERS**9**

Difference in molecular weights between simple molecules and polymers – number average and weight average molecular weights – Degree of polymerization and molecular weight – molecular weight distribution – Polydispersity – molecular weight determination. Different methods – Gel Permeation Chromatography – Osmometry, Light Scattering.

UNIT V TRANSITIONS IN POLYMERS**9**

First and second order transitions – Glass transition, T_g – multiple transitions in polymers – experimental study – significance of transition temperatures – crystallinity in polymers – effect of crystallization – in polymers – factors affecting crystallization crystal nucleation and growth – relationship between T_g and T_m – Relationship between properties and crystalline structure

1	Joel,R.F	Polymer Science and Technology	Eastern Economy Edition	1999
2	Rodriguez, F., Cohen.C., Oberic.K and Arches, L.A.	Principles of Polymer Systems	5 th edition, Taylor an	2000

COURSE OBJECTIVES:

1. To give the students an understanding of the polytechnical nature of engineering and drug discovery in the pharmaceutical industry involving Chemical Engineering.
2. The students shall apply the principles of physical and chemical properties of particle science, polymer science and their use in pharmaceutical dosage forms.
3. They also learn the compression and consolidation parameters for powders and granules. Students also learn about the rheology, disperse systems, dissolution and solubility related parameters for dosage form
4. Students will know the preformulation studies, methodology, different excipients used in solid dosage forms and their evaluation with references to production technologies. The students also know the optimization techniques and their applications in pharmaceutical industries
5. They also learn the pharmacokinetic parameter like drug disposition, absorption, nonlinear and time dependant pharmacokinetics.
6. They also understand about the drug interactions & problems, practice associated in pharmacokinetic parameters calculations

COURSE OUTCOMES::

1. Students would have studied about the gross morphology, structure and functions of nervous, respiratory, urinary and reproductive systems in the human body.
2. They would have studied in detailed about energy and metabolism.
3. Students would be able to identify the various organs of different systems of human body. They would have performed
4. med and learnt about the experiments like neurological reflex, body temperature measurement
5. They would have studied elaborate on interlinked mechanisms in the maintenance of normal functioning of human body
6. 6. They would have learnt and performed the experiments like Olfaction, gustation reflex and eye sight

UNIT I INTRODUCTION

9

Development of drugs and pharmaceutical industry; organic therapeutic agents uses and economics

UNIT II DRUG METABOLISM AND PHARMACO KINETICS MICROBIOLOGICAL AND ANIMAL PRODUCTS

9

Drug metabolism; physico chemical principles; pharmacokinetics-action of drugs on human bodies. Antibiotics- gram positive, gram negative and broad spectrum antibiotics; hormones

UNIT III IMPORTANT UNIT PROCESSES AND THEIR APPLICATION**9**

Chemical conversion processes; alkylation; carboxylation; condensation and cyclisation; dehydration, esterification, halogenation, oxidation, sulfonation; complex chemical conversions fermentation.

UNIT IV MANUFACTURING PRINCIPLES & PACKING AND QUALITY CONTROL**9**

Compressed tablets; wet granulation; dry granulation or slugging; advancement in granulation; direct compression, tablet presses formulation; coating pills; capsules sustained action dosage forms; parental solutions, oral liquids; injections; ointments; standard of hygiene and manufacturing practice. Packing; packing techniques; quality control.

UNIT V PHARMACEUTICAL PRODUCTS & PHARMACEUTICAL ANALYSIS**9**

Vitamins; cold remedies; laxatives; analgesics; nonsteroidal contraceptives; external antiseptics; antacids and others. Analytical methods and tests for various drugs and pharmaceuticals – spectroscopy, chromatography, fluorimetry, polarimetry, refractometry, pHmetry

TOTAL : 45 PERIODS**TEXT BOOK**

**COURSE
OBJECTIVES**

1. This course will give an appreciation of the fundamental principles on corrosion engineering.
2. To understand the electrochemical nature of corrosion of metals and alloys.
3. To become familiar, in a general way, with the properties and behavior of different classes of materials, particularly, strength, ductility, and densities.
4. To become familiar with the basic methods of polymer synthesis and how these affect microstructure and morphology.
5. To understand that polymers can be amorphous (glassy or rubbery) or semi-crystalline and how this affects thermal and mechanical properties.
6. To become familiar with the basic mechanical properties of polymers (strength, stiffness, toughness) and how these properties compare to other materials.

COURSE OUTCOMES:

1. Students know basic elements of chain microstructure (branching, tacticity, networks, etc).
2. Students understand how microstructure affects the ability to crystallize.
3. Students know the basic elements of the morphology effect of structure on the melting and glass transition temperature.
4. Students know the effect of structure on the melting and glass transition temperature.
5. Students know how the general mechanical properties of materials depend on structure.
6. Students obtain a basic understanding of the viscoelastic nature of polymer materials

UNIT I**9**

Electrochemical and thermodynamic principles, Nernst equation and electrode potentials of metals, EMF and galvanic series, merits and demerits; origin of Pourbaix diagram and its importance to iron, aluminium and magnesium metals.

UNIT II**9**

Exchange current density, polarization - concentration, activation and resistance, Tafel equation; passivity, electrochemical behaviour of active/passive metals, Flade potential, theories of passivity.

UNIT III**9**

Atmospheric, pitting, dealloying, stress corrosion cracking, intergranular corrosion, corrosion fatigue, fretting corrosion and high temperature oxidation; causes and remedial measures.

UNIT IV**9**

Purpose of testing, laboratory, semi-plant and field tests, susceptibility tests for IGC, stress corrosion cracking and pitting, sequential procedure for laboratory and on-site corrosion investigations, corrosion auditing and corrosion map of India.

UNIT V**9**

Corrosion prevention by design improvements, anodic and cathodic protection, metallic, non-metallic and inorganic coatings, mechanical and chemical methods and various corrosion inhibitors.

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Raj Narayan	An Introduction to Metallic Corrosion and its Prevention	Oxford and IBH	1983
2	Fontana M. G., Greene N. D	Corrosion Engineering	McGraw Hill	1985

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Denny Jones	Principles and Prevention of Corrosion	Prentice Hall	1996

COURSE OBJECTIVES

1. To understand the construction and working principle of various piping design.
2. To understand basics of Piping Engineering.
3. To understand the purpose of Piping Engineering
4. Responsibilities of piping engineer in a project.
5. To understand project requirements & Methodology.
6. To learn types of calculations involved in piping engineering project.

COURSE COURSE OUTCOMES::

1. That the use of codes, regulations and standards are the basics for safety and practical engineering of piping systems in process plants.
2. Piping terminology and how codes, regulations and standards are used in drafting and design of piping systems Ways of controlling and reducing forces acting on a pipe system in operating conditions. piping relevant Norsok standards
3. Commonly used metallic piping materials and their serviceability
6. Insulation and surface treatment of piping components and systems
4. Fabrication and control of prefabricated pipe spools.
5. Installation challenges and safety issues related to pipe spools.
6. Relevant inspection, examination and testing issues related to prefabrication of pipe spools.

UNIT I INTRODUCTION TO PIPING ENGINEERING**9**

Fluid flow, types of fluids and examples, different pipe fittings. Friction factor, pressure drop for flow Newtonian and non-Newtonian fluids, pipe sizing, economic velocity. Pipe line networks and their analysis for flow in branches, restriction orifice sizing. Pressure drop calculations for non-Newtonian fluids. two phase flow, types of two phase flow, two phase flow as encountered in piping for steam, distillation column, pressure drop, vibrations in two phase flow.

UNIT II MATERIALS FOR PIPING**9**

Selection of material for piping, desirable properties of piping materials, materials for various temperature and pressure conditions, materials for corrosion resistance. Common ASTM and IS specifications for: Seamless / ERW pipes, pipe fittings, flanges, and fasteners, materials for valves. Gaskets: Functions and properties, types of gaskets and their selection.

UNIT III CONTROL & SAFETY IN PIPING**9**

Types of valves, control valves, safety valves, constructional features, criteria for selection. Piping components, pressure relieving devices, constructional features, selection criteria and application, safety features. Calculations for line sizing, steam traps, P.R.V. & condensive systems.

UNIT IV PIPING SYSTEM DESIGN**9**

Design principles, calculation of pipe diameter, thickness, important system characteristics and design principles related to steam flow at high and low pressures. Design principles and line sizing for vacuum pipelines, slurry pipelines, surge drums and flare stacks, vacuum devices including ejector system. Considerations governing pump selection, analysis of system and pump characteristics in connection with series, parallel flow, and minimum flow and equalizing lines, NPSH, allowable nozzle loads in various codes. Design principles and line sizing of pneumatic conveying of solids, components of conveying systems, dust and fume extraction systems principles.

UNIT V PIPING LAYOUTS**9**

Introduction to P & I Diagrams, Process flow diagrams, standard symbols and notations. Introduction to various facilities required guidelines for Plot Plan / Plant Layout. Introduction to equipment layout, piping layout, piping isometrics and bill of material. Typical piping system layout considerations for following systems: (i) Distillation columns and heat exchangers, (ii) Reactors, (iii) Pipe racks, (iv) Storage tanks, (v) Pumps.

TOTAL**45****REFERENCES**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	McAllister E.W.	Pipeline Rules of Thumb Handbook	Gulf Publication	2009
2	Kellogg	Design of Piping System	M.W. Kellogg Co	2009

3. Weaver R Process Piping Design Gulf Publication 1989

COURSE OBJECTIVES

1. To understand the functions and design principles of nanotechnology
2. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional scientific practice.
3. will be able to characterize major top-down and bottom-up strategies;
4. will be able to understand the physical laws active in the nano-range and as they differ from those in the micro-range;
5. will know the basics of the electronic structure of atoms, molecules, and nano-particles.
6. Also, the student will know what forces act between atoms and/or molecules when nanoparticles are generated;

COURSE COURSE OUTCOMES:

1. Understand and apply mathematical techniques for describing and deeper understanding of nano systems.
2. Understand and apply quantum mechanical methods for particles in various physical systems and processes.
3. Understand and apply inter-disciplinary concepts and computational simulation for understanding and describing the natural phenomenon.
4. Understand and apply principles of quantum mechanics for understanding the nano systems in quantum realm.
5. Provide exposure in various specialization of Nanotechnology
6. Provide exposure to advanced experimental/theoretical methods for measurement, observation, and fundamental understanding of phenomenon at nano scale and nano systems

UNIT I

Background and Definition of Nanotechnology. Why Nano? Applications in Different Fields, Chemical Approaches to Nanostructured Materials, Molecular Switches and Logic Gates, Solid State Devices.

UNIT II**9**

Carbon Nanotubes - Structure of Carbon Nanotubes, Synthesis of Carbon Nanotubes, Growth Mechanisms of Carbon Nanotubes, Properties of Carbon Nanotubes, Carbon Nanotube-Based Nano-Objects, Applications of Carbon Nanotubes, Nano wires – Synthesis, Characterization and Physical Properties of Nanowires, Applications.

UNIT III**9**

Basic Microfabrication Techniques, MEMS Fabrication Techniques, Nanofabrication Techniques, Stamping techniques - High Resolution Stamps, Microcontact Printing, Nanotransfer Printing, Applications.

UNIT IV**9**

Material aspects of NEMS and MEMS – Silicon, Germanium-Based Materials, Metals, GaAs, InP, and Related III-V Materials, MEMS Devices and Applications - Pressure Sensor, Inertial Sensor, Optical MEMS, RF MEMS, NEMS Devices and Applications, Current Challenges and Future Trends.

UNIT V**9**

Microscopy - Scanning Tunneling Microscope, Atomic Force Microscope, Scanning Electron Microscopy, Principles of Noncontact Atomic Force Microscope (NC- AFM)

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	B. Bhushan	Springer handbook of nanotechnology	Springer – Verlag	2004
2	Charles P. Poole; Frank K. J Owens	Introduction to Nanotechnology	A John Wiley and Sons	2000

COURSE OBJECTIVES:

1. To solve problems related to the production, storage, distribution and utilization of electrochemical energy and the associated environmental issues.
2. To promote students with interest in research and learning, as well as continuously striving for the forefront of technology.
3. To encourage them to set up models for an electrochemical system, based on continuity equations and transport equations for relevant variables, and with necessary boundary conditions.\
4. To train students to implement equations for production and transport of heat in electrochemical systems, and explain the temperature dependence of electrode potentials, electrode kinetics and mass transport properties.
5. Gain a basic understanding of the fundamental concepts of electrochemical science and engineering such as electrolyte solution, electrochemical cell, electric conductivity, equilibrium electrochemistry, electrochemical kinetics, and current-potential relationship.
6. Understand fundamental principles of the electrochemical energy conversion systems such as fuel cells and electrolyzers or electrochemical phenomena such as corrosion.

COURSE OUTCOMES:

1. Differentiate between galvanic and electrolytic reactions.
2. Work out / Determine limiting electrochemical thermodynamic efficiency and voltage of a device.
3. Derive key kinetic models used to characterize electrochemical devices. Identify limiting bottleneck(s) of a technology based on its current-potential behavior.
4. Compare activation, concentration, and ohmic overpotential losses of a device.
5. Propose approaches to improving device performance, Design electrodes and operating conditions with favorable performance for specific applications.
6. Critique performance of new electrochemical technologies

UNIT I**9**

Review basics of electrochemistry: Faraday's law -Nernst potential –Galvanic cells – Polarography, The electrical double layer: It's role in electrochemical processes –Electro capillary curve – Helmholtz layer–Guoy –Steven's layer – fields at the interface.

UNIT II**9**

Mass transfer in electrochemical systems: diffusion controlled electrochemical reaction –the importance of convention and the concept of limiting current. Over potential, primary-secondary current distribution –rotating disc electrode.

UNIT III**10**

Introduction to corrosion, series, corrosion theories derivation of potentialcurrent relations of activities controlled and diffusion controlled corrosion process. Potential-pH diagram, Forms of

corrosion- definition, factors and control methods of various forms of corrosion-corrosion control measures industrial boiler water corrosion control –protective coatings –Vapor phase inhibitors – cathodic protection, sacrificial anodes –Paint removers.

UNIT IV

8

Electro deposition –electro refining –electroforming –electro polishing – anodizing –Selective solar coatings, Primary and secondary batteries –types of batteries, Fuel cells.

UNIT V

9

Electrodes used in different electrochemical industries: Metals-Graphite –Leaddioxide –Titanium substrate insoluble electrodes –Iron oxide –semi conducting type etc. Metal finishing-cell design.types of electrochemical reactors, batch cell, fluidized bed electrochemical reactor, filter press cell, Swiss roll cell, plug flow cell, design equation, figures of merits of different type of electrochemical reactors.

TOTAL : 45 PERIODS

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Picket	Electrochemical Engineering	Prentice Hall	1977
2	J. S	Electrochemical systems	Prentice Hall	1973

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Barak, M. and	Electrochemical Power Sources	McGraw Hill	1980
	Stevenge U. K	- Primary and Secondary Batteries	McGraw Hill	1990
2	Mantell, C	Electrochemical Engineering	McGraw Hill	1972

COURSE OBJECTIVES:

1. To make the students to demonstrate competence in setting up computational fluid dynamics models for some industrially important applications. This technical competence in building and conducting CFD simulations is a skill which enhances employability.
2. To develop an understanding for the major theories, approaches and methodologies used in CFD
3. To build up the skills in the actual implementation of CFD methods (e.g. boundary conditions, turbulence modelling etc.) in using commercial CFD codes
4. To gain experience in the application of CFD analysis to real engineering designs, to introduce numerical modeling and its role in the field of heat transfer and fluid flow.
5. To enable the students to understand the various discretization methods and solving methodologies.
6. To create confidence to solve complex problems in the field of heat transfer and fluid dynamics by using high speed computers

COURSE OUTCOMES:

1. The student will demonstrate the ability to simplify a real fluid-flow system into a simplified model problem, to select the proper governing equations for the physics involved in the system, to solve for the flow, to investigate the fluid-flow behavior, and to understand the results.
2. The student will demonstrate the ability to communicate the results of this detailed fluid-flow study in a written format.
3. The student will demonstrate an ability to describe various flow features in terms of appropriate fluid mechanical principles and force balances.
4. Understand and be able to numerically solve the governing equations for fluid flow and apply finite difference, finite volume and finite element methods to fluid flow problems
5. Understand how grids are generated and Understand how to assess stability and conduct a grid-convergence assessment
6. Understand and apply turbulence models to engineering fluid flow problems
Understand and apply compressible flow solvers

UNIT I CONSERVATION LAWS AND TURBULENCE MODELS**9**

Governing equations of fluid flow and heat transfer –mass conservation, momentum and energy equation, differential and integral forms, conservation and non-conservation form. Characteristics of

turbulent flows, time averaged Navier Stokes equations, turbulence models-one and two equation, Reynolds stress, LES and DNS.

UNIT II FINITE DIFFERENCE APPROXIMATION

9

Mathematical behaviour of PDE, finite difference operators, basic aspects of discretization by FDM, explicit and implicit methods, error and stability analysis

UNIT III FINITE VOLUME METHOD

15

Diffusion problems – explicit and implicit time integration; Convection-diffusion problems properties of discretisation schemes, central, upwind, hybrid, QUICK schemes; Solution of discretized equations.

UNIT IV FLOW FIELD COMPUTATION

6

Pressure velocity coupling, staggered grid, SIMPLE algorithm, PISO algorithm for steady and unsteady flows

UNIT V GRID GENERATION

6

Physical aspects, simple and multiple connected regions, grid generation by PDE solution, grid generation by algebraic mapping.

TOTAL : 45 PERIODS

5	Taylor, C and Hughes, J.B	Finite Element Programming of the Navier Stock Equation	Pineridge Press Limited, U.K	1981

COURSE OBJECTIVES:

1. To focus on the wastewater transport system and the theory and design technique for the wastewater treatment process.
2. Describe the way organic wastes pollute water Identify elements of wastewater collection systems.
3. Outline the stages of wastewater treatment at the typical treatment facility. wastewater during preliminary, primary, secondary, and tertiary treatment.
4. Describe methods of solids handling, Identify and describe the different types of bar and woven screens used for screening.
5. Identify and describe common types of grit-removal equipment. List factors affecting settling rates. Figure the length of detention time needed to settle out settleable particles. Describe the three principal methods of land disposal
6. Describe what colloidal particles are and outline the problems associated with removing them from wastewater. List chemicals used as coagulants. Explain how the flocculation process works

COURSE COURSE OUTCOMES::

1. Learn how to characterize source water, and the best Department Syllabus CE – 46500 Page | 2 available technologies (BAT) for physical and chemical treatment of drinking water.
2. Name and distinguish a variety of chemical reactions and their importance. Review equilibrium chemistry and perform dimensional analysis. List and describe types of electrodes and electrode potential. Measure pH, emf and other related parameters
3. Classify colloids, discuss their properties and their environmental significance. Reproduce the two-film theory and identify the salient features. Perform different analytical techniques for measuring water quality parameters and wastewater characteristics. Apply the knowledge of instrumental analytical techniques for measuring different types of environmental pollutants.
4. Discuss the need for microbiology and identify different flora and fauna of importance in water, air and soil media. Describe bacterial cell structure, function, microbial growth and metabolism. Apply various growth models and determine biokinetic coefficients.
5. Draw and identify bacterial cell structure and morphological features. Solve numerical problems on generation time, specific growth rate and decay rate. Analyze single & multiple substrate utilization rate.
6. Distinguish between algae, fungi and virus. Classify and characterize using different methods. Formulate enzymatic relationships using kinetics. Apply the knowledge of using microbes in pollution control activities. Review emerging microbial contaminants.

UNIT I WASTE WATER TREATMENT AN OVERVIEW**9**

Terminology – Regulations – Health and Environment Concerns in waste water management –

Constituents in waste water inorganic – Organic and metallic constituents.

UNIT II PROCESS ANALYSIS AND SELECTION**9**

Components of waste water flows – Analysis of Data – Reactors used in waste water treatment –

Mass Balance Analysis – Modeling of ideal and non-ideal flow in Reactors – Process Selection.

UNIT III CHEMICAL UNIT PROCESSES**9**

Role of unit processes in waste water treatment chemical coagulation – Chemical precipitation for improved plant performance chemical oxidation – Neutralization – Chemical Storage.

UNIT IV BIOLOGICAL TREATMENT**9**

Overview of biological Treatment – Microbial metabolism – Bacterial growth and energatus Aerobic biological oxidation – Anaerobic fermentation and oxidation – Trickling filters – Rotating biological contractors – Combined aerobic processes – Activated sludge film packing.

UNIT V ADVANCED WASTE WATER TREATMENT**9**

Technologies used in advanced treatment – Classification of technologies Removal of Colloids and suspended particles – Depth Filtration – Surface Filtration – Membrane Filtration Absorption – Ion Exchange – Advanced oxidation process.

COURSE OBJECTIVES

- To facilitate the understanding of Quality Management principles and process.

1. The student manager will be able to differentiate between common and special cause of variation and/ or differentiate between attributes and variables and/ or construct and write formulae for control charts for variables and attributes.
2. Given the phase of manufacturing (design/ manufacturing/ assembly/ finished product/ service), the student manager will be able to identify potential failure modes and justify the calculation of RPN through 15 steps of FMEA procedure.
3. The student manager will be able to explain the concept of Six Sigma its DMAIC process
4. To realize the importance of significance of quality, Manage quality improvement teams
5. Identify requirements of quality improvement program, Evaluate the principles of quality management and to explain how these principles can be applied within quality management systems.
6. Identify the key aspects of the quality improvement cycle and to select and use appropriate tools and techniques for controlling, improving and measuring quality.

UNIT I INTRODUCTION**9**

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM – TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Quality statements - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Costs of quality.

UNIT II TQM PRINCIPLES**9**

Leadership - Strategic quality planning, Quality Councils – Employee involvement - Motivation, Empowerment, Team and Teamwork, Quality circles Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership- Partnering, Supplier selection, Supplier Rating.

UNIT III TQM TOOLS AND TECHNIQUES I**9**

The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA -Stages, Types.

UNIT IV TQM TOOLS AND TECHNIQUES II**9**

Control Charts - Process Capability - Concepts of Six Sigma - Quality Function Development (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.

UNIT V QUALITY SYSTEMS**9**

Need for ISO 9000 - ISO 9001-2008 Quality System - Elements, Documentation, Quality Auditing - QS 9000 - ISO 14000 - Concepts, Requirements and Benefits - TQM Implementation in manufacturing and service sectors..

**COURSE
OBJECTIVES**

1. To know the design experiments and formulate optimization models of chemical processes/equipments.
2. Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems.
3. Learn classical optimization techniques and numerical methods of optimization.
4. Know the basics of different evolutionary algorithms.
5. Explain Integer programming techniques and apply different optimization techniques to solve various models arising from engineering areas
6. To understand the theory of optimization methods and algorithms developed for solving various types of optimization problems

COURSE OUTCOMES::

1. Enumerate fundamentals of Integer programming technique and apply different techniques to solve various optimization problems arising from engineering areas.
2. Apply knowledge of optimization to formulate and solve engineering problems.
3. Understand the different methods of optimization and be able to suggest a technique for a specific problem.
4. Understand how optimization can be used to solve industrial problems of relevance to the chemical and oil industries.
5. The students will also be able to learn different techniques to solve Non- Linear Programming Problems
6. They will be able to understand the major limitations and capabilities of deterministic operations research modeling as applied to problems.

UNIT – I DEVELOPING MODELS FOR OPTIMIZATION**9**

Scope and hierarchy of optimization, Essential features of Optimization problems, Classification of Models, Building a model, Factorial experimental designs, Degree of freedom

UNIT – II BASIC CONCEPTS**9**

Formation of COURSE OBJECTIVES function, continuity of functions, NLP problem statement, convexity and applications, Interpretation of COURSE OBJECTIVES function based on its Quadratic approximation

UNIT – III OPTIMIZATION OF UNCONSTRAINED FUNCTIONS**9**

Methods for one dimensional search, Newton,,s method and Quasi – Newton methods for uni dimensional search. Polynomial approximation methods

UNIT – IV UNCONSTRAINED MULTIVARIABLE OPTIMIZATION**9**

Methods using function value only, methods using first derivative, Newton's method, Quasi – Newton methods.

UNIT – V LINEAR PROGRAMMING**9**

Simple method, Barrier method, sensitivity analysis, Linear mixed integer programs, Examples

TOTAL: 45**TEXT BOOK:**

S. NO.	AUTHOR(S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION

2	Urmila M. Diwaker	Introduction to Applied Optimization	Kluwer Academic Publication	2003

COURSE OBJECTIVES

1. To understand about the pilot plants, models, similarity and scale up methods
2. To understand the scale-up of reactors, columns and dryers, unit operations equipment and its limitations
3. The effectiveness of Pilot plant is determined by the ease with which the new product or process is brought into routine production.
4. This could be possible if a good relationship exists between the pilot plant group with other groups (Research & Development, Processing, Packaging, Engineering, Quality Assurance, Quality Control, Regulatory and Packaging) of the company.
5. The formulator who developed the product can take the product into the production.
6. The formulator continues to provide the support to the other departments even after the transition into the production has been completed.

COURSE OUTCOMES::

1. Differentiate between pilot plant and model.
2. Able to develop a prototype (Large scale plant) based on pilot plant studies.
3. Correlate the performance of geometrically similar paddle, propeller and turbine mixers.
4. Advantages and disadvantages of dimensional analysis technique over differential equation technique.
5. Designing a piece of equipment by successive approximation method (Extrapolation).
6. Able to eliminate boundary effects in various chemical systems.

UNIT – I FUNDAMENTALS OF SCALE UP, DIMENSIONAL ANALYSIS AND SCALE-UP

CRITERION 9 Principles of Similarity, Pilot Plants and Models, Introduction to Scale-up Methods, Dimensional Analysis, Regime Concept, Similarity Criterion and Scale up Methods used in Chemical Engineering.

UNIT – II SCALE-UP OF HEAT TRANSFER EQUIPMENT**9**

Typical Problems in Scale-up of Mixing Equipment and Heat Transfer Equipment.

UNIT – III SCALING UP OF REACTORS**9**

Scale-up Techniques available for Tubular Reactor, CSTR and Catalytic Reactors.

UNIT – IV SCALE-UP OF MASS TRANSFER EQUIPMENT**9**

Distillation Column and Packed Towers: Scale-up of Distillation Columns and Packed Towers for Continuous and Batch Processes and Dryers

UNIT – V SCALE UP OF MISCELLANEOUS EQUIPMENT AND LIMITATIONS**9**

Scaling up of Ball Mill, Pressure Jet Nozzle and Centrifugal Disk Atomizers and Screw Extruders, Furnaces and Kilns, Analogue Models, Limitations of Scale up Techniques.

TOTAL : 45

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Johnstone R.E. and Thring M.W	Pilot Plants Models and Scale-up methods in Chemical Engineering	McGraw Hill, New York	1962
2	Marko Zlokarnik	Scale-up in Chemical Engineering	Wiley-VCH, Germany	2002

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Marko Zlokarnik	Dimensional Analysis and Scale-up in Chemical Engineering	Springer - Verlag, Berlin, Germany	1986
2	Donald G. Jordan	Chemical Process Development, Part-1 and 2	Intersciences Publishers	1988

COURSE OBJECTIVES

1. To impart the basic concepts of industrial pollution control
2. To develop understanding about water, air, light pollution control
3. To train the students on developing practical, efficient and cost effective solutions on problems and challenges on environmental sciences and engineering.
4. To inculcate among student's sensitivity towards social and corporate responsibilities.
5. Understanding of basic concepts of air pollution.
6. Study of air pollution episodes. Reasoning of the entire episode, identification of the parameters, conditions, mechanisms.

COURSE OUTCOMES:

1. To identify environmental problems and solutions through organized research.
2. To improve the communication and writing skill so as to face the competitive world
3. Ability to identify air pollution problems and interpret criteria air quality data
4. Ability to recognize various environmental transformation processes of pollutants under extreme weather condition.
5. Ability to interpret meteorological data and develop capability to assessment of project proposal, air quality pollution index for any region
6. Ability to justify the use of pollution control equipment and their design

UNIT I INTRODUCTION**9**

Man and Environment, Types of pollution, Pollution control aspects, Pollution monitoring and analysis of pollutant. Air pollution: Sources and effects, particulate control, control of gaseous pollutants (SO_x, NO_x, oxides of carbon, hydrocarbon pollutants), Air Quality Management.

UNIT II WATER POLLUTION**9**

Types of water pollution, sources, water pollution control. Waste water treatment technologies and Recycle.

UNIT III SOLID WASTE MANAGEMENT**9**

Sources, processing methods, waste disposal methods, energy recovery from solid waste

UNIT IV NOISE POLLUTION**9**

Hazardous noise exposure, noise measuring instruments and noise pollution control technology. Regulations: ISO 14000, 9000, pollution Acts and Regulations.

UNIT V CASE STUDY**9**

Pollution (Air, Water & Solid) control in the following process industries - Fertilizers, Petroleum Refinery and Petrochemical, Pulp and Paper, Cane Sugar, Tannery, Distilleries and Pharmaceutical Industry.

TOTAL**45**

TEXT BOOKS

2	F. P. Lees	Loss prevention in process industries	Butter worth- Heinemann	1996

**COURSE
OBJECTIVES**

1. The student will acquire an introduction to concepts that link classical and statistical thermodynamics.
2. The course will also provide the student with the basic knowledge of statistical thermodynamics and its applications in chemistry and chemical engineering
3. understand the essence of the renormalization group theory
4. students a deep understanding of the fundamental principles of thermal physics. Topics include probability, ensembles, equilibrium, entropy, laws of thermodynamics, heat engines, magnetism, chemical equilibria and quantum statistics.
5. Thermal Physics forms one of the core foundations of modern natural science and plays a significant role in cutting edge research in a variety of fields ranging from condensed matter physics and materials science and engineering to molecular biology and biophysics to chemical structure and dynamics and even to high energy physics and astrophysics.
6. This course aims to introduce students to state-of-the art theoretical techniques and to communicate the excitement of cutting-edge research in a variety of fields where thermal physics plays a critical role.

COURSE OUTCOMES:::

1. Student uses the appropriate normalization for the Boltzmann factor and the appropriate degeneracies and densities of states
2. Can apply the theory on different types of gasses: ideal classic, diatomic, quantum Fermi gasses such as quarks, electrons or baryons, quantum Bose gases such as photons, gluons or mesons.
3. Can analyze phase diagrams, phase transitions and explain the concept of latent heat
4. Has thorough knowledge on different classical and quantum mechanical distribution functions
5. Can explain the procedures for deriving the relation between thermodynamic parameters such as pressure, temperature, entropy and heat capacity from the distribution functions.
6. Can explain phase transitions and magnetization in magnetic system

**UNIT I STATISTICAL-MECHANICAL ENSEMBLES AND
THERMODYNAMICS**

Ensembles and Postulates, Canonical Ensemble and Thermodynamics, Grand Canonical Ensemble, Microcanonical Ensemble, Entropy, Other ensembles, characteristic equations, Fluctuations

UNIT II GENERAL RELATIONS FOR INDEPENDENT MOLECULES**9**

Thermodynamic equivalence of ensembles, Second law, Criteria for spontaneous change, Systems of distinguishable and indistinguishable particles, Boltzmann Statistics, Translational Partition Function.

UNIT III IDEAL MONOATOMIC AND DIATOMIC GAS 9

Ideal Monatomic Gas, Density of States, Thermodynamic Functions, Internal Degrees of Freedom, Homonuclear Diatomics, Molecular Partition Functions, Ideal Diatomic Gas, Vibrational, Rotational, Gas of Homonuclear Diatomics at Low Temperature, Quantum Statistics, Polyatomic Molecules

UNIT IV CHEMICAL EQUILIBRIUM IN IDEAL MIXTURES 9

Chemical Equilibrium, General Relations, Statistical Derivation in a Special Case, Fluctuations in a Simple Chemical Equilibrium, Examples of Chemical Equilibria.

UNIT V RATES OF CHEMICAL REACTIONS IN IDEAL MIXTURES 9

Potential Surfaces, Absolute Rate Theory, A Non-Chemical Application of the Eyring Theory

TOTAL 45

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Terrell. L, Hill	An Introduction to Statistical Thermodynamics	Dover Publications	1987

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Donald. A, McQuarrie	Statistical Mechanics	University Science Books Publishers	2000

COURSE OBJECTIVES

1. Equipping the students with knowledge on the various process utilities and their importance in chemical process plants.
2. Equip the students with the basic understanding and effective utilization of utilities viz. water, steam, compressor, vacuum pumps, refrigeration and cooling units, insulator, inert gases in process industries and allied operations
3. Impart insights in relation to the different types of fuels and boilers used in process industries for the generation of steam, types of compressors and blowers for handling air and inert gases
4. Expose students to different methods of treatment of wastewater and drinking water
5. Problem representation, temperature enthalpy diagram, simple match matrix
6. Role & scope of piping, line diagram, Process flow diagram

COURSE OUTCOMES::

1. Describe the system layout, component parts and online instrumentation for typical systems for water, gas, steam, compressed air, HVAC refrigeration and electrical generation and distribution
2. Examine the hazards and risks associated with the operation of a range of utility systems
3. Explain the mechanisms for system control such as lock out, tag out and emergency shutdown
4. Describe routine systems monitoring activities for a range of utility systems
5. Explain the design, and operation principles of a range of pumps, valves and piping systems to include their application in the life sciences industries
6. Interpret the control and operational requirements of a range of pumps, valves and piping systems utilised in a process plant

UNIT I STEAM, COMPRESSORS AND VACUUM PUMPS 9

Steam generation and its application in chemical process plants, steam distribution including appropriate mechanical valves and instrumentation, steam utilization, design of efficient steam heating systems, steam nozzles. Compressed air, process pumps, compressors, vacuum pumps, pressurized air distribution systems. Types of compressors and vacuum pumps.

UNIT II REFRIGERATION SYSTEMS AND INSULATION 9 Refrigeration system and their characteristics, load calculation and load calculation and humidification and de humidification equipments, drying and cooling tower, air blending, exhaust, ventilation, cryogenics, their characteristics and production of liquid N₂ and O₂ Importance of insulation for meeting for the process equipment, insulation material and their effect on various materials of equipment piping, fitting and valves, insulation for high, intermediate, low and subzero temperatures including cryogenic insulation, determination of optimum insulation thickness.

UNIT III WATER 9

Water Resources, process water, boiler feed water, storage and distribution of water, reuse and conservation of water.

UNIT IV PIPING 9

Piping: Role & scope of piping, line diagram, Process flow diagram and piping and instrumentation diagram.

UNIT VPINCH ANALYSIS**9**

Pinch Analysis: Problem representation, temperature enthalpy diagram, simple match matrix. Heat content diagram, Temperature interval diagram. Heat Exchanger Network Synthesis using Pinch technology

TOTAL**45****TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Jack Broughton	Process Utility Systems: Introduction to Design, Operation and Maintenance	ICHEME	1994

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mahesh Rathore	Thermal Engineering	Tata McGraw Hill India	2010
2	Robin M. Smith	Chemical Process: Design and Integration	John Wiley & Sons Ltd., 2005.	2005

COURSE**OBJECTIVES**

1. To provide an opportunity to learn basic management concepts essential for business
2. Contribute to the success of companies through effective problem solving
3. Design, develop, implement, and improve integrated systems that include people, materials, information, equipment, and environments
4. Effectively manage business operations and project management teamsContinue to develop holistically, including the personal and professional skills
5. necessary to adapt to our changing societal, technological, and global environments
6. expected to meet the challenges for contemporary professional practice; be able to adapt and solve the increasingly complex problems faced by industry

COURSE OUTCOMES:::

1. An ability to apply knowledge of mathematics, science, and engineering.
2. An ability to design and conduct experiments, as well as to analyze and interpret data.
3. An ability design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. An ability to function on a multidisciplinary team.
5. An ability to identify, formulate, and solve engineering problems.
6. An understanding of professional and ethical responsibility and communicate effectively.

UNIT I INTRODUCTION**9**

Management - Definition – Functions – Evolution of Modern Management – Scientific Management Development of Management Thought. Approaches to the study of Management, Forms of Organization – Individual Ownership – Partnership – Joint Stock Companies – Co-operative Enterprises – Public Sector Undertakings, Corporate Frame Work – Share Holders – Board of Directors – Committees – Chief Executive –Trade Union

UNIT IIFUNCTIONS OF MANAGEMENT**9**

Planning – Nature and Purpose – COURSE OBJECTIVES – Strategies – Policies and Planning Premises – Decision Making – Organizing – Nature and Process – Premises – Departmentalization – Line and staff – Decentralization – Organizational culture, Staffing - selection and training – Placement – Performance appraisal – Career Strategy – Organizational Development. Leading – Managing human factor – Leadership – Communication, Controlling - Process of Controlling – Controlling techniques, productivity and operations management – Preventive control, Industrial Safety.

UNIT III ORGANIZATIONAL BEHAVIOUR**9**

Definition – Organization – Managerial Role and functions – Organizational approaches, Individual behaviour – causes – Environmental Effect – Behavior and Performance, Perception – Organizational Implications. Personality – Contributing factors - Dimension – Need Theories –

Process Theories – Job Satisfaction, Learning and Behavior – Learning Curves, Work Design and approaches.

UNIT IV GROUP DYNAMICS

9

Group Behavior – Groups – Contributing factors – Group Norms, Communication – Process – Barriers to communication – Effective communication, leadership – formal and informal characteristics – Managerial Grid – Leadership styles – Group Decision Making – Leadership Role in Group Decision, Group Conflicts – Types – Causes – Conflict Resolution – Inter group relations and conflict, Organization centralization and decentralization – Formal and informal – Organizational Structures – Organizational Change and Development – Change Process – Resistance to Change – Culture and Ethics.

UNIT V MODERN CONCEPTS

9

Management by COURSE OBJECTIVES (MBO), Management by Exception (MBE), Strategic Management - Planning for Future direction – SWOT Analysis – Information technology in management – Decisions support system – Business Process Re-engineering (BPR) – Enterprises Resource Planning (ERP) – Supply Chain Management (SCM) – Activity Based Management (ABM).

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Herald Knottz and Heinz Weihrich	Essentials of Management	Tata McGraw Hill Education Pvt. Ltd.,	2010
2	Stephen P. Robbins	Organization Behaviour	Pearson Education Inc., 13 edition	2010

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Ties, AF, Stoner and R.Edward Freeman	Management	Prentice Hall of India Pvt. Ltd. New Delhi	1992
2	Joseph J, Massie	Essentials of Management	Prentice Hall of India Pvt. Ltd	1985
3	P.C. Tripathi & P.N. Reddy	Principles of Management	Tata McGraw Hill	2006

COURSE OBJECTIVES

1. To enable the students to learn the principle and technical concept of advanced separation processes.
2. To understand the governing mechanisms and driving forces of various advanced separation processes and to perform process and design calculations for advanced separation process
3. Understand basic principles of membrane separation and characterization methods available for membranes
4. Derive various transport mechanism involved in MF, UF, NF, RO and gas separation membranes
5. Select membranes for different industrial separation and purification application
6. To be able to design distillation columns having multiple feed streams. And understand the operating principles behind the various types of modern separation methods and to be able to select appropriate method for a particular application.

COURSE OUTCOMES:

1. Knowledge of various chemical engineering separation processes
2. Ability to Select appropriate separation technique for problem
3. Ability to analyze the separation system for multi-component mixtures
4. Ability to design separation system for the effective solution of problem
5. Understanding of modern separation technique in various applications
6. Ability to analyze and design novel membranes for application

UNIT I BASICS OF SEPARATION PROCESS**9**

Review of Conventional Processes, Recent advances in Separation Techniques based on size, surface properties, ionic properties and other special characteristics of substances, Process concept, Theory and Equipment used in cross flow Filtration, cross flow Electro Filtration, Surface based solid – liquid separations involving a second liquid.

UNIT II MEMBRANE SEPARATIONS**9**

Types and choice of Membranes, Plate and Frame, tubular, spiral wound and hollow fiber Membrane Reactors and their relative merits, commercial, Pilot Plant and Laboratory Membrane permeators involving Dialysis, Reverse Osmosis, Nanofiltration, Ultrafiltration and Micro filtration, Ceramic- Hybrid process and Biological Membranes.

UNIT III SEPARATION BY ADSORPTION**9**

Types and choice of Adsorbents, Adsorption Techniques, Dehumidification Techniques, Affinity Chromatography and Immuno Chromatography, Recent Trends in Adsorption.

UNIT IV INORGANIC SEPARATIONS**9**

Controlling factors, Applications, Types of Equipment employed for Electrophoresis, Dielectrophoresis, Ion Exchange Chromatography and Eletrodialysis, EDR, Bipolar Membranes.

UNIT V OTHER TECHNIQUES**9**

Separation involving Lyophilisation, Pervaporation and Permeation Techniques for solids, liquids and gases, zone melting, Adductive Crystallization, other Separation Processes, Supercritical fluid Extraction, Oil spill Management, Industrial Effluent Treatment by Modern Techniques.

TOTAL : 45 PERIODS**REFERENCES**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	King., C. J	Separation Processes	Tata McGraw Hill	1982
2	Roussel, R. W	Handbook of Separation Process Technology	John Wiley, New York	1987
3	Nakagawal.O. V	Membrane Science and Technology	Marcel Dekkar	1992

COURSE OBJECTIVES

1. To give an overview of various methods of process modeling, different computational techniques for simulation.
 2. Summarizing the core concepts learned in the various chemical engineering courses and using them to build predictive and control models of chemical processes that reveal interesting underlying physics of the processes.
 3. A systematic approach will be developed for modeling and simulation, involving the following aspects:
 4. Choosing model parameters that best capture the physics of the process, and estimating their sensitivity on the model behavior.
 5. Developing methods of validating the model against appropriately designed experiments.
- Developing simple mathematical models of chemical systems and analyzing them, gradually leading to more complex models.

COURSE OUTCOMES:

1. Understand the important physical phenomena from the problem statement
2. Develop model equations for the given system, demonstrate the model solving ability for various processes/unit operations
3. Demonstrate the ability to use a process simulation
4. For a given chemical system, recognize the various processes taking place whose relative rates will influence system performance. Identify the characteristic scales appropriate to the system and processes and derive dimensionless groups.
5. For a given chemical system, write the appropriate conservation and constitutive equations that determine the rates of the processes or specify the equilibrium conditions for reversible processes taking place.
6. Determine appropriate specifications of model parameters for a chemical system - lumped, distributed or staged system, to solve simple design and rating problems involving the system

UNIT I INTRODUCTION

Introduction to modeling and simulation, classification of mathematical models, conservation equations and auxiliary relations.

UNIT II STEADY STATE LUMPED SYSTEMS**9**

Degree of freedom analysis, single and network of process units, systems yielding linear and non-linear algebraic equations, flow sheeting – sequential modular and equation oriented approach, tearing, partitioning and precedence ordering, solution of linear and non-linear algebraic equations.

UNIT III UNSTEADY STATE LUMPED SYSTEMS**9**

Analysis of liquid level tank, gravity flow tank, jacketed stirred tank heater, reactors, flash and distillation column, solution of ODE initial value problems, matrix differential equations, simulation of closed loop systems.

UNIT IV STEADY STATE DISTRIBUTED SYSTEM**7**

Analysis of compressible flow, heat exchanger, packed columns, plug flow reactor, solution of ODE boundary value problems.

UNIT V UNSTEADY STATE DISTRIBUTED SYSTEM & OTHER MODELLING APPROACHES 13 Analysis laminar flow in pipe, sedimentation, boundary layer flow, conduction, heat exchanger, heat transfer in packed bed, diffusion, packed bed adsorption, plug flow reactor, hierarchy in model development, classification and solution of partial differential equations. Empirical modeling, parameter estimation, population balance and stochastic modeling.

COURSES OFFERED BY OTHER DEPARTMENTS

**OPEN ELECTIVES OFFERED BY
DEPARTMENT OF SCIENCE AND HUMANITIES**

COURSE OBJECTIVES

1. To gain knowledge in measures of central tendency.
2. To provide necessary basic concepts in probability and random processes.
3. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
4. To understand the basic concepts of probability, one- and two-dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
5. To understand the basic concepts of random processes which are widely used in IT fields.
6. To understand the concept of correlation and spectral densities.

COURSE OUTCOMES::

1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
2. The students will have an exposure of various distribution functions, correlation and spectral densities
3. To understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications
4. To apply the concept random processes in engineering disciplines.
5. The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable.
6. The students will have an exposure of various distribution functions, correlation and spectral densities.

UNIT- I MEASURES OF CENTRAL TENDENCY AND PROBABILITY**(9)**

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT- II STANDARD DISTRIBUTIONS**(9)**

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT -IIITWO DIMENSIONAL RANDOM VARIABLES**(9)**

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IVCLASSIFICATION OF RANDOM PROCESS**(9)**

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -VCORRELATION AND SPECTRAL DENSITIES**(9)**

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

2. www.mathcentre.ac.uk
3. [www.mathworld. Wolfram.com](http://www.mathworld.wolfram.com)

COURSE OBJECTIVES

1. To know the fundamentals of fuzzy Algebra.
2. To know the basic definitions of fuzzy theory
3. To know the applications of fuzzy Technology.
4. To know the basic definitions of fuzzy relations
5. Be able to apply basic fuzzy inference and approximate reasoning
6. To know the applications of fuzzy Technology.

COURSE OUTCOMES:

1. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS (9)

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS (9)

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS (9)

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES (9)

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE (9)

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

2. [www.mathworld. Wolfram.com](http://www.mathworld.Wolfram.com)
3. www.calvin.edu/~pribeiro/othrlnks/Fuzzy/fuzzysets.htm

COURSE OBJECTIVES

1. To know the fundamentals of linear Algebra.
2. To study about the linear transformations
3. To introduce the concepts of inner product spaces
4. To know the basic definitions of fuzzy relations
5. Be able to apply basic fuzzy inference and approximate reasoning
6. To know the applications of fuzzy Technology.

COURSE OUTCOMES:

The student will be able to

1. Recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
2. Visualize linear transformations as matrix form
3. Articulate the importance of Linear Algebra and its applications in branches of Mathematics
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations - Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

COURSE OBJECTIVES

- | |
|--|
| <ol style="list-style-type: none"> 1. To provide mathematical basis for acoustics waves and the characteristic behaviour of sound in pipes, resonators and filters. 2. To introduce the properties of hearing and speech 3. To inculcate the characteristics of radiation and reception of acoustic waves. 4. To divulge knowledge on the basics of pipe resonators and filters. 5. To introduce the features of architectural acoustics. 6. To impart the basic knowledge of transducers and receivers. |
|--|

COURSE OUTCOMES:::

- | |
|---|
| <ol style="list-style-type: none"> 1. The students will have the knowledge on acoustics waves , the characteristic behaviour of sound in pipes, resonators and filters and that knowledge will be used by them in different engineering and technology applications 2. Apply the concepts of radiation and reception of acoustic waves. 3. Explain the basic ideas of pipe resonators and filters. 4. Illustrate the basics of architectural acoustics. 5. Illustrate the transducers and receivers and its applications in various electronic devices. 6. Apply the knowledge inputs of the course for engineering applications. |
|---|

UNIT I INTRODUCTION**(9)**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence – method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**(9)**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance

- Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS**(9)**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters

– low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**(9)**

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine,

sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.

Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION (9)

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

**Total:
45**

COURSE OBJECTIVES

- | |
|---|
| <ol style="list-style-type: none"> 1. To understand about the solid waste 2. To study about the waste treatment 3. To gain knowledge on the disposal of waste and waste management. 4. To get the information on energy conservation. 5. To develop an understanding of the basic concepts of Hazardous waste managements. |
|---|
6. To acquaint the students with the basics of energy generation from waste materials.

COURSE OUTCOMES:::

- | |
|--|
| <ol style="list-style-type: none"> 1. The students will know solid waste and energy conservation. They will understand the methodologies to disposal of solid waste and its management. 2. Identify the concepts of treatment of solid wastes (S). 3. Identify the methods of wastes disposals. (S) 4. Examine the level of Hazardousness and its management. (S) 5. Examine the possible of the energy production using waste materials. (S) |
|--|
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I SOLID WASTE**(9)**

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT**(9)**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL**(9)**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT**(9)**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE**(9)**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

COURSE OBJECTIVES

1. To understand about the green chemistry
2. To study the atom efficient process and synthesis elaborately.
3. To gain knowledge on the green technology and renewable energy resources.
4. To get the information on catalysis
5. To develop an understanding of the basic concepts of renewable energy resources.
6. To acquaint the students with the basic's information on catalysis.

COURSE OUTCOMES:::

1. Students will know the chemistry and application of green technology for energy sources. They will understand the role of green catalyst in industries.
2. Examine the different atom efficient process and synthesis elaborately (S).
3. Apply the concepts combustion of green technology (S).
4. Identify and apply the concepts of renewable energy (S).
5. Apply the concepts of green catalysts in the synthesis (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES (9)

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluoruous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES (9)

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY (9)

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air.Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES (9)

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY (9)

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

COURSE OBJECTIVES

1. To get the information on electrochemical material.
2. To study about the conducting polymers
3. To understand about the fuel
4. To gain knowledge on the batteries and power sources.

COURSE OUTCOMES:::

1. Students will understand about the fuel. They will get knowledge on the batteries and power sources.
2. Identify the usage of the **agriculture** chemicals (S).
3. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).
4. Recognize writing as a constructive, meaningful process.
5. Practice using reading strategies for effective writing
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING (9)

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS (9)

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT IIIBATTERIES AND POWER SOURCES-I (9)

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IVBATTERIES AND POWER SOURCES-II (9)

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE (9)

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

2. <http://hyperphysics.phy-astr.gsu.edu/hbase/electric/battery.html>
3. http://inventors.about.com/od/sstartinventions/a/solar_cell.htm

COURSE OBJECTIVES

1. To understand about the fuel
2. To study about the abrasives and lubricants.
3. To gain knowledge on inorganic chemicals and explosive materials.
4. To get the information on agriculture chemicals.
5. To develop an understanding of the basic concepts **explosives**.
6. To acquaint the students with the basics of **agriculture chemicals**.

COURSE OUTCOMES:::

1. The student will acquire basic knowledge on cement. The student will understand the interaction of engineering materials and their utilization in industries.
2. Examine the uses of abrasives and refractories (S).
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens (S).
5. Identify the usage of the **agriculture** chemicals (S).
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A).

UNIT I CEMENT AND LIME**(9)**

Manufacture of Portland cement – setting and hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES**(9)**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**(9)**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**(9)**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS**(9)**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

COURSE OBJECTIVES:

- | |
|--|
| <ol style="list-style-type: none"> 1. Develop abilities to write technically and expressively. 2. Recognize writing as a constructive, meaningful process. 3. Practise using reading strategies for effective writing. Design effective technical documents for both print and digital media. 4. Identify the qualities of good technical writing. |
|--|
5. Recognize writing as a constructive, meaningful process.
- | |
|--|
| <ol style="list-style-type: none"> 6. Practice using reading strategies for effective writing |
|--|

COURSE OUTCOMES::

Students undergoing this course are able to

- | |
|---|
| <ol style="list-style-type: none"> 1. Construct simple sentences, correct common grammatical errors in written English. 2. Build confidence in English language by imbibing lexical and syntax rules. 3. Enrich their reading ability for effective writing. 4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance 5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation. 6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing. |
|---|

UNIT – I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer’s block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT – 2 PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT – 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT – 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT – 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -COURSE OBJECTIVES of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

**OPEN ELECTIVES OFFERED BY DEPARTMENT OF
COMPUTER SCIENCE AND ENGINEERING**

COURSE OBJECTIVES

- To introduce the Java programming language and explore its current strengths and Weaknesses
- To study the way that object-oriented concepts are implemented in the Java programming language
- To write working Java code to demonstrate the use of applets for client side programming
- To study the way that exceptions are detected and handled in the Java programming language
- To write working Java code that demonstrates multiple threads of execution
- To understand about various Internet applications

COURSE OUTCOMES:

1. Know Java programming language and explore its current strengths and Weaknesses
2. Learn about object-oriented concepts
3. Learn Java code to demonstrate the use of applets for client side programming
4. To study the way that exceptions are detected and handled in the Java programming language
5. know Java code that demonstrates multiple threads of execution
6. To understand about various Internet applications

UNIT I INTRODUCTION

9

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Sub netting and addressing- Classful and Classless Addressing, Sub netting

UNIT II HTML

9

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Color name, Color value. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL

9

Introduction, Variable, Condition, Loop, Array, implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING

9

Client-Server programming in Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY

9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Paul Deitel, Harvey Deitel and Abby Deitel	Internet and World Wide Web-How to Program 5thEdition	Dorling Kindersley pvt Ltd	2011
2.	N.P. Gopalan and J. Akilandeswari	Web Technology: A Developer's Perspective	PHI Learning	2013

REFERENCES:

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Rahul Banerjee	Internetworking Technologies, An Engineering Perspective	PHI Learning, Delhi	2011
2.	Robert W. Sebesta	Programming the World Wide Web	Pearson Education	2016

COURSE OBJECTIVES:**study the graphics techniques and algorithms**

1. To study the multimedia concepts and various I/O technologies. □□□
2. To enable the students to develop their creativity □□□
3. To impart the fundamental concepts of Computer Animation and Multimedia.
4. To understand Techniques of Animation
5. To Learn about different 3D Animation

COURSE OUTCOMES::**After the course the student will be able to:**

1. Get Familiarised With Animation
2. Types Of 3D Animation
3. Know about motion caption
4. Work With The Timeline And Tween-Based Animation
5. Learn about 3D Animation
6. Master the techniques of computer animation and multimedia

UNIT I INTRODUCTION 9

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH 9

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS 9

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV MOTION CAPTION 9

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V CONCEPT DEVELOPMENT 9

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TEXTBOOK:

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Malay K. Pakhira	Computer Graphics, Multimedia and Animation	PHI Learning	PVT Ltd 2010

REFERENCES:

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Ranjan Parekh	Principles of Multimedia	TMH	2007
2.	Ashok Banerji, Ananda Mohan Ghosh	Multimedia Technologies	McGraw Hill	Publication 2010
3.	Pankaj Dhaka	Encyclopedia of Multimedia and Animations	Anmol Publications	2011

COURSE COURSE OBJECTIVES

1. Assemble/setup and upgrade personal computer systems
2. Perform installation, configuration, and upgrading of microcomputer hardware and software.
3. Install/connect associated peripherals.
4. Diagnose and troubleshoot microcomputer systems hardware and software, peripheral equipment.
5. Know Multitasking and Multiprogramming
6. Familiarise Various Types of faults

COURSE COURSE OUTCOMES:**After the course student will be able to:**

1. Familiarise Special Peripherals.
2. Know Computer Organization
3. Know about Memory Space
4. Familiarise Motherboard Logic
5. Know Programmable LSI's
6. Know about Data Recovery

UNIT I INTRODUCTION**9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES**9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW**9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE**9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V TROUBLESHOOTING**9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

17BEC SOE04 JAVA PROGRAMMING L T P C3 0 0 3

COURSE OBJECTIVES

Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.

1. Understand fundamentals of object-oriented programming in Java, including defining classes,
2. invoking methods, using class libraries, etc.
3. Be aware of the important topics and principles of software development.
4. Have the ability to write a computer program to solve specified problems.
5. Be able to use the Java SDK environment to create, debug and run simple Java programs
6. To understand Object oriented programming concepts

COURSE OUTCOMES::

After the course student will be able to:

1. Familiar with programming such as variables, conditional and iterative execution, methods, etc
2. Understand fundamentals of object-oriented programming in Java and work with 2D shapes
3. Be familiar with Arrays – Strings - Packages
4. Have the ability to write a computer program to solve specified problems.
5. Work on Java SDK environment to create, debug and run simple Java programs
6. To understand abstract classes

UNIT I INTRODUCTION TO JAVA

9

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES

9

Arrays – Strings - Packages – Java-Doc comments – Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

9

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

9

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS

9

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

LIST OF OPEN ELECTIVES OFFERED BY
ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT

17BEEEOE01

ELECTRIC HYBRID VEHICLES

L T P C 3 0 0 3

COURSE OBJECTIVES

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To understand and gain the knowledge about various energy storage devices.
- To know the concept of electric hybrid vehicle
- Understand the various energy storage schemes
- Know about the various fuel efficiency schemes

COURSE OUTCOMES::

- At the end of the course the student will be understand the concept of electric hybrid vehicle and its energy storage schemes.
- Battery based energy storage and its analysis,
- Familiarise Fuel Cell based energy storage and its analysis
- Super Capacitor based energy storage and its analysis,
- Understand Flywheel based energy storage and its analysis,
- Know Hybridization of different energy storage devices.

UNIT I INTRODUCTION

9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motr drives, drive system efficiency.

UNIT IV ENERGY STORAGE

9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Total: 45

17BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING**L T P C
3 0 0 3****COURSE OBJECTIVES**

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

COURSE OUTCOMES::

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT**9**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS**9**

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT**9**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS**9**

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS**9**

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice-lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

Total: 45**TEXTBOOK:**

S. NO.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	Energy Management	Heinemann Publications	2007

REFERENCES:

2	W.C.Turner Steve Doty	Energy Management Handbook	Lulu Enterprises, Inc. - 8th Edition Volume II	2013

COURSE OBJECTIVES

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

COURSE OUTCOMES::

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

|---|

COURSE OBJECTIVES

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course COURSE OUTCOMES:

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

LIST OF OPEN ELECTIVES OFFERED BY
ELECTRONICS AND COMMUNICATION ENGINEERING

17BEECOE01 REAL TIME EMBEDDED SYSTEMS

L T P C 100
3 0 0 3

COURSE OBJECTIVES

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

9

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems- embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW

9

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks-Real Time Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management– Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

9

Introduction-µ C/OS-II Features-Goals of µ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under µ C/OS-II –Clock Tick-µ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks– Stack Checking–Task’s Priority–Suspending Task–Resuming Task. Time Management: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

9

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT**9**

Memory Management: Memory Control Blocks–Creating Partition–Obtaining a Memory Block–Returning a Memory Block. Getting Started with μ C/OS-II–Installing μ C/OS-II–Porting μ C/OS-II: Development Tools–Directories and Files– Testing a Port -IAR Workbench with μ C/OS-II– μ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help of μ C/OS-II.

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	K.V.K.K.Prasad	Embedded Real-Time Systems: Concepts, Design & Programming	Dream Tech Press	2005
2	Sriram V Iyer, Pankaj Gupta	Embedded Real Time Systems Programming	Tata McGraw Hill	2004

COURSE OBJECTIVES

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNITII TELEVISION STANDARDS AND SYSTEMS 9

Components of a TV system–interlacing–composite video signal.Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNITIII OPTICAL RECORDING AND REPRODUCTION 9

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNITIV TELECOMMUNICATION SYSTEMS 9

Telephone services-telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network.Wireless Local Loop.VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNITV HOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software; Components of air conditioning and refrigeration systems.

17BEECOE03 NEURAL NETWORKS AND ITS APPLICATIONS L T P C
1003 0 0 3

COURSE OBJECTIVES

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve

UNIT I INTRODUCTION TO NEURAL NETWORKS 9

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT II LEARNING PROCESS 9

Error– correction learning– memory based learning- hebbian learning-competitive learning- Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION 9

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm- Learning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT IV ATTRACT OR NEURAL NETWORK AND ART 9

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain- Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT V SELF ORGANIZATION**9**

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

COURSE OBJECTIVES

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy inference and defuzzy inference procedures

COURSE OUTCOMES:

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT I**9**

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II**9**

Theory of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III**9**

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy inference and defuzzy inference procedures–Design of Fuzzy Logic Controller

UNIT IV**9**

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V**9**

Fuzzy based systems: Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V

PRODUCT DESIGN AND DEVELOPMENT

9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

6	Rao S S	Optimisation Techniques	Wiley Eastern, New Delhi	2003

COURSE OBJECTIVES

- To recognize and evaluate occupational safety and health hazards in the workplace.
- To determine appropriate hazard controls following the hierarchy of controls.
- To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- To prevent or mitigate harm or damage to people, property, or the environment.

COURSE OUTCOMES::

- Recognize and evaluate occupational safety and health hazards in the workplace.
- Determine appropriate hazard controls following the hierarchy of controls.
- Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- Prevent or mitigate harm or damage to people, property, or the environment

UNIT I INTRODUCTION TO LOGISTICS**9**

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN**9**

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS**9**

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES**9**

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM**9**

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,, - Case study, ERP Software's

COURSE OBJECTIVES

- To generalize equations for mass, momentum and heat.
- To understand the concepts of Reynolds and Gauss theorems.
- To learn combined diffusive and convective transport.
- To apply Film- and penetration models for mass and heat transfer.
- To apply Stefan-Maxwells equations for multi-component diffusion.
- To Solve the given set of equations either analytically or numerically.

COURSE OUTCOMES::

- Generalized equations for mass, momentum and heat.
- Understand the concepts of Reynolds and Gauss theorems.
- Learn combined diffusive and convective transport.
- Apply Film- and penetration models for mass and heat transfer.
- Apply Stefan-Maxwells equations for multi-component diffusion.
- Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non-Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometries in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT**9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective

mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

COURSE OBJECTIVES

- To describe the principles of the study of human movement.
- To describe the range of factors that influence the initiation, production and control of human movement.
- To identify the body's lever systems and their relationship to basic joint movement and classification.
- To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES::

- Describe the principles of the study of human movement.
- Describe the range of factors that influence the initiation, production and control of human movement.
- Identify the body's lever systems and their relationship to basic joint movement and classification.
- Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V**MECHANICS OF THE MUSCULOSKELETAL SYSTEM****9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit
- Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle
- Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

**LIST OF OPEN ELECTIVES OFFERED BY
AUTOMOBILE ENGINEERING DEPARTMENT**

COURSE OBJECTIVES

To impart knowledge on the constructional details and principle of operation of various automobile components.

To learn the function and working of various components in transmission and drive lines.

To study the concept and working of steering and suspension systems in an automobile.

To give knowledge on the wheels, tyres and brakes of automobiles.

To provide information on the current and future trends in automobiles.

Identify and explain the types of steering system..

COURSE COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

Demonstrate the operating principles and constructional details of various automobile components.

Explain the function and working of components in transmission and drive lines.

Identify and explain the types of steering system.

Identify and explain the types of suspension system.

Classify and describe the types of wheels, tyres and brakes of automobiles.

Discuss the current and future trends in the automobiles

UNIT I ENGINE AND FUEL FEED SYSTEMS**9**

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburetor working principle, requirements of an automotive carburetor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT II TRANSMISSION SYSTEMS**9**

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. COURSE OBJECTIVES of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT III SUSPENSION SYSTEM**9**

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT IV BRAKES**9**

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

COURSE OBJECTIVES

- The COURSE OBJECTIVES of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Construct the frames of two and three wheelers of different layouts.
2. Demonstrate the constructional details and principle of operation of various engine components.
3. Identify and explain the types of transmission systems.
4. Identify and explain the types of steering and suspension systems.
5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
6. Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION**9**

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS**9**

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburetor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION**9**

Types of clutches for 2 and 3 wheelers.Design of clutch system.Gears for two and three wheelers.Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES**9**

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS**9**

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

Total: 45**TEXTBOOKS:**

COURSE OBJECTIVES

- The COURSE OBJECTIVES of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Describe and differentiate the types of maintenance.
2. List the procedure for dismantling, servicing and assembling of engine components.
3. Demonstrate the servicing of transmission and driveline components.
4. Discuss the procedure for steering and suspension
5. Discuss the procedure for wheel and brake maintenance.
6. Explain the fault diagnosis in the electrical and air conditioner systems

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

9

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

9

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

9

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts,

Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

Total: 45

TEXTBOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1.	John Doke	Fleet Management	McGraw Hill Co	1984
2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011

COURSE OBJECTIVES

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques.

COURSE COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Distinguish and describe the various modern vehicle power plant systems.
2. List and explain the various driver assistant mechanisms.
3. Identify and describe the working of advanced suspension and braking systems.
4. Apply the knowledge of motor vehicle emission and noise pollution control.
5. Describe the noise control techniques
6. Describe the vehicle telematics and its applications

UNIT I TRENDS IN POWER PLANTS**9**

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS**9**

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti-spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY**9**

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION**9**

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS**9**

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

**LIST OF OPEN ELECTIVES OFFERED BY
CIVIL ENGINEERING DEPARTMENT**

COURSE OBJECTIVES:

- Teach them introduction to housing
- Make them aware of Formulation of Housing Projects
- Impart knowledge about construction techniques and cost-effective materials
- Learn about Formulation of Housing Projects
- Understand Site analysis
- Learn about Layout design

COURSE COURSE OUTCOMES::

At the end of the this course the students should have learnt

- the basic terms of housing programmes,
- planning and designing of housing projects,
- Know construction techniques and
- Understand cost effective materials and
- familiarise housing finance
- Know Project appraisal techniques.

UNIT I INTRODUCTION TO HOUSING**9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, COURSE OBJECTIVES and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES**9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS**9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS**9**

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL**9**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

COURSE OBJECTIVES

- Defining and identifying of eng. services systems in buildings.
- The role of eng. services systems in providing comfort and facilitating life of users of the building.
- The basic principles of asset management in a building & facilities maintenance environment
- Importance of Fire safety and its installation techniques
- To Know the principle of Refrigeration and application
- To Understand Electrical system and its selection criteria

COURSE OUTCOMES::

The students will be able to

- Machineries involved in building construction
- Understand Electrical system and its selection criteria
- Use the Principles of illumination & design
- Know the principle of Refrigeration and application
- Importance of Fire safety and its installation techniques
- Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Laws of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS**9**

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners –

Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V

FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

Total: 45

TEXTBOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1.	E.R.Ambrose	Heat Pumps and Electric Heating	John and Wiley and Sons, Inc., New York	2002
2.	Handbook for Building Engineers in Metric systems	NBC, New Delhi	2005	

REFERENCES:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1.	Philips Lighting in Architectural Design	McGraw-Hill, New York	2000	
2.	A.F.C. Sherratt	Air-conditioning and Energy Conservation	The Architectural Press London	2005
3.	National Building Code			

COURSE OBJECTIVES

- To enable the students for a successful career as water management professionals.
- To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
- To expose the students the need for an interdisciplinary approach in irrigation water management
- To providing a platform to work in an interdisciplinary team.
- To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
- To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

COURSE COURSE OUTCOMES::

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I	IRRIGATION SYSTEM REQUIREMENTS	9
---------------	---------------------------------------	----------

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation.

UNIT III MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV	OPERATION	9
----------------	------------------	----------

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study.

UNIT V**INVOLVEMENT OF STAKE HOLDERS****9**

Farmer's participation in System operation – Water user's associations – Farmer councils –

Changing paradigms on irrigation management – Participatory irrigation management

Total: 45**TEXTBOOKS:**

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1.	Dilip Kumar Majumdar	Irrigation Water Management – Principles and Practice	Prentice Hall of India Pvt. Ltd., New Delhi	2000
2.	Hand book on Irrigation Water Requirement R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi			

REFERENCES:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1.	Maloney, C. and Raju, K.V	Managing Irrigation TogetherPractice	Stage Publication, New Delhi, India	2000

COURSE OBJECTIVES:

- To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
- To study different methods of construction to successfully achieve the structural design with recommended specifications.
- To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
- To study of construction equipment's, and temporary works required to facilitate the construction process
- To provide a coherent development to the students for the courses in sector of Advanced construction technology.
- To present the new technology of civil Engineering and concepts related Advanced construction technology.

COURSE OUTCOMES::

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS**9**

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES**9**

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines.

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I**9**

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting.

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS-II**9**

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant.

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES**9**

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

FACULTY OF ARCHITECTURE

B.ARCH

BACHELOR OF ARCHITECTURE

[5 YEAR FULL TIME UNDER GRADUATE DEGREE PROGRAM]

RECOGNISED BY THE COUNCIL OF ARCHITECTURE, NEW DELHI

REGULATIONS, CURRICULUM AND SYLLABUS

2017 – 2018Batch (New Syllabus)

CHOICE BASED CREDIT SYSTEM

(CBCS)

FACULTY OF ARCHITECTURE

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University Established Under Section 3 of UGC Act 1956)

Pollachi Main Road, Eachanari Post, Coimbatore – 641 021. INDIA

B.ARCH SYLLABUS : 2017-2018 BATCH

SEMESTER 1

17ART101	THEORY OF ARCHITECTURE I									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE

- To introduce architecture as a discipline and to sensitize the students to the various functional aspects of architecture
- To make them understand the meaning of Architecture and its visual aesthetic sense
- To introduce the students to the ordering elements, principles of architecture
- To gain Knowledge about the organization principles of Form and Space
- To gain Knowledge about the theoretical aspects of Design
- To gain knowledge and understand the vocabulary of the architectural language through the analysis of selected buildings.

COURSE OUTCOME:

1. Student will understand on the definition of architecture; elements of architectures of form.
2. Student will be exposed to the principles of architecture and applications of the same in buildings and spaces.
3. Student will understand the meaning of character and style of buildings with examples.
4. Student will understand on ideologies and philosophies of architectures of contemporary
5. Student will understand about the theoretical aspects of Architectural Design
6. Student will gain Knowledge in the Vocabulary of the Architectural Terms and language

UNIT-1

Introduction to Design and Architecture

Definitions of Design, Architecture-context for architecture as satisfying human needs-functional, aesthetic and psychological –architecture as a discipline-introducing the various functional aspects of architecture: site, structure, skin, services, use, circulation etc.

UNIT- 2

Ordering Elements

Point, line, plane, form, shape, motif, pattern, light, color, texture – understanding the elements with respect to architecture- Detailed study of the visual and emotional effects of geometric forms and their derivatives: sphere, cube, pyramid, cylinder and cone

UNIT- 3

Principles of Architecture

– Transformation of forms, Articulation of forms – mass-space/solid-void effects, articulation of edges, corners, surfaces -Proportion, scale, balance, rhythm, axis, symmetry, hierarchy, datum, unity, harmony, dominance with respect to architecture

UNIT- 4

Organisation of Form and Space

Spatial relationships: space within space, interlocking spaces, adjacent spaces, space linked by a common space -spatial organization: centralized, linear, radial, clustered, grid -form-space relationships-

UNIT- 5

Circulation and Organisation

Circulation as organizing element: building approach, building entrance, configuration of the path, path space relationship, form of circulation space

SUGGESTED READINGS

1. Francis D.K.Ching, Architecture-Form, Space and Order, Van Nostrand Reinhold Company, New York, 1979.
2. Lorraine Farrelly. 2007 The Fundamental of Architecture. AVA Publishing SA 2007. Switzerland.
3. Ernest Burden - Elements of Architectural Design - A visual resource, Van Nostrand Reinhold, 1994.
4. V.S.Pramar, Design Fundamentals in Architecture, Somaiya Publications Pvt. Ltd., New Nelhi, 1973
5. Edward D. Mills – Planning:The Architects Hand Book -Bitterworth, London, 1985
6. G.Muthu Shoba Mohan 2008 Principles of Architecture Oxford & IBH publishing co. pvt. ltd. New Delhi.
7. Francis D.K. Ching 1995 A Visual Dictionary of Architecture. John Wiley & Sons, INC. New Delhi.
8. Paul Alan Johnson - The Theory of Architecture - Concepts and themes, Van Nostrand Co., New York, 1994.
9. Pierre Von Meiss, Elements of Architecture, Spon Press, New York, 2007.

17ART102	HISTORY OF ARCHITECTURE I									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE :

- To Gain the understanding of the Architecture from the prehistoric age
- To gain knowledge of the ancient civilization of the World
- To gain knowledge of the ancient civilization of Egypt
- To gain knowledge on the Social fabric, Relevance design principles
- To gain knowledge of the construction materials and methods
- To gain knowledge on the different architectural styles across the world

COURSE OUTCOME :

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An understanding of the diversity of architecture in the world
3. An understanding to appreciate particular culture, symbolic, spatial and material qualities
4. An understanding about architecture and cities as givers of meaning and continuity.
5. An Understanding about the Greek Style through examples
6. An Understanding about the Egyptian, Mayan and Chinese architecture styles

UNIT -1

INTRODUCTION AND WEST ASIAN ARCHITECTURE

Relevance of History - Old Stone Age - the Middle Stone age – The New Stone Age - Development of Shelter. – catalhuyuk, Indus Civilization (Harappa and mohenjadaro)

West Asia: Evolution of Sumerian and Persian cultures - Outline of architectural character – Ziggurat at Urnammu - Palace of Sargon, Khorsabad- Palace at Persepolis.

UNIT -2

EGYPT

Egypt: Factors influencing Architecture - Outline of Architectural Character, Evolution of Pyramids – Great Pyramid of Cheops, Giza, , Architecture characteristics of Egyptian temples - Great temple of Ammon, Karnak, Temple of ramses, Abu Simbel.

UNIT-3

MAYAN

Mayan: Outline of Architectural Character – City of Chichen Itza- El Castillo, Temple of Warriors, The Great Ballcourt – Tikal and Teotihuacan - Pyramid of the Sun, Pyramid of the Moon.

UNIT-4

CHINA

China: Outline of Architectural Character - Great Wall of China, Fogong Temple, Temple of Heaven, Forbidden City (Palace Museum)

UNIT-5

GREEK

Outline of architectural character - Orders in architecture - Doric Ionic, Corinthian, Acropolis, Athens ; Parthenon, Erechthion, , Theatre Epidauros.

SUGGESTED READINGS:

1. Sir Banister Fletcher, A History of Architecture, University of London, The Antholone Press, 1986.
2. S.Lloyd and H.W.Muller, History of World Architecture - Series, Faber and Faber Ltd., London, 1986
3. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey, 2007

.17ART103	MATHEMATICS IN ARCHITECTURE									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE :

- To develop analytical skills needed for problem solving a
- To develop creative thinking as well as an understanding of Geometry
- To develop the application of mathematical concepts in architecture.
- To develop the skill of Parametric architecture
- To develop the Skill of programming by Mathematical Approach
- To develop an understanding of platonic solids through physical model making

COURSE OUTCOME:

1. Student will be trained on the basis of the topics of Mathematics necessary for effective understanding of architecture subjects.
2. Students will understand the advanced level applications by using coordinate geometry
3. Students will understand the Statistical charts and and variance for applications in architecture
4. Students will develop the skill and understating of Area & volume calculations for Applications in Architectural design
5. Students will understand the historical applications of mathematics and use of it in current context
6. Student would have an understanding of the basics of parametric design concept in architecture

UNIT-1

CO-ORDINATE GEOMETRY

Points, vectors and coordinate systems – Vector Algebra – Points vs Vectors – Rotation about an arbitrary axis – Parametric, Implicit and Explicit Equations – Lines – Parametric equations of lines – Implicit equation of lines – Distance from a point to a line – Conic sections – Parametric equation of conics.

UNIT-2

BASIC STATISTICS

Arithmetic Mean, Median, Mode, Standard Deviation and Variance – Graphical display of data in statistics through charts and graphs such as bar charts, histograms etc

UNIT-3

AREA AND VOLUME CALCULATIONS

Surface Area and Volume Calculations for simple 3D objects such as cube, cuboid, cylinder, cone, sphere, pyramid, prisms and their frustrums.

UNIT-4

GEOMETRY IN ARCHITECTURE

Ratio and Systems of proportion – definition and derivation of golden ratio – Fibonacci series. Geometry of Muqarnas. – Making models for understanding the dimensions .

UNIT-5

PLATONIC SOLIDS

Geometry of Platonic Solids. (Concept and Application). Physical modeling of simple and complex geometric forms. - Making models for understanding the dimensions.

SUGGESTED READINGS:

1. T Veerarajan, Engineering Mathematics, Tata McGraw-Hill Publishing Company Ltd, NewDelhi, 2002.
2. B.S.Grewal, Engineering Mathematics, Khanna Publishers, Delhi 1998.
3. P.Kandaswamy, P.Thilakavathy and K.Gunavathy, Engineering Mathematics Vol I and II, S.Chandan Publishers, 1998.
4. Kappraff Jay, Connections: The Geometric bridge between art and science, McGraw Hill, USA,1991.
5. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
6. Computer aided geometric design by Thomas W.Sederberg 2014

17ARP111	ART,MODEL MAKING AND PRESENTATION									SEMESTER-I	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To introduce the vocabulary of art and the principles.
- To inform students about the various art forms through the ages within the cultural contexts.
- To develop presentation skills, visual expression and representation
- To Improve the imaginative thinking and creativity
- To develop the knowledge of Visualisation by simple Two & Three dimensional exercises
- To develop the art skill by hands on working with various mediums and materials.

COURSE OUTCOME:

1. Student will understand the vocabulary of art and form principles
2. Student will understand to appreciate the art forms and analyse and apply the concept in architecture
3. Student will gain mastery in sketching, visualizing and expression through manual drawing, sensitized to culture, craft and context.
4. Student will gain Skill Development in Handling Materials and in Making Products and models.
5. Student will gain knowledge about various mediums of presentation
6. Student will gain deep understanding about the art Appreciation and essence of the Aesthetic value

Unit 1 to 5

Exploration in mixed media & collage to convey specific theme and meaning. Analytical Studies will be undertaken in two and three dimensions using various media.

Use of hand tools and materials: working with wood, metals, plaster, plastic, foam boards etc; techniques, safety & practice.

Suggestive exercises are:

Type 1: Making mount board models employing cubes cuboids, pyramid, cylinder and cones.

Type 2: Space frame models using match sticks straw, steel wires, bamboo splits.

Type 3: Building exterior – models – composition of forms

Type 4: Building interiors – Anthropometry – Space standards

Making Scaled models based on architectural concepts, anthropometric, proportions, Interiors etc

Making compositions of Design presentations using manual rendering techniques and computer aided techniques.

Suggested Presentation exercises :

Type 1 : Poster Design

Type 2 : Sketch of building , form exploration and concept sketches – manual presentation

Type 3 : Presentations using Design softwares

SUGGESTED READINGS:

1. Design Methods (Architecture) (Paperback), by John Chris Jones (Author).
2. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khouli (Author).
3. Design Drawing, Francis D. K. Ching.
4. The Nature of Design, Peg Faimon& John Weigand.
5. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
6. John W.Mills- The Technique of Sculpture, B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
7. C.Lawrence Bunchy - Acrylic for Sculpture and Design, 450, West 33rd Street, New York, N.Y.10001, 1972.
8. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White (Author)
9. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
10. Model to design – Damdi, Damdi Publications
11. Architectural Models2 ,Damdi, Damdi Publications

17ARS121	ARCHITECTURAL DESIGN- I									SEMESTER-I	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To provide a comprehensive introduction to the discipline of Architectural Design Fundamentals
- To develop the skill in Visual Arts.
- To encourage creative thinking and design analysis by various Exercises
- To develop the dialogue & Communication visually & Verbally
- To develop the graphic thinking ability and provide a platform for graphical representation.
- To develop an understanding of the design process and develop aesthetic judgment.

COURSE OUTCOME:

1. Student will understand the qualities of different elements as well as their composite fusions.
2. Student will be able to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Student will develop these required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings
4. Student will be able to develop the confidence to communicate effectively by explaining their own design product
5. Student will develop the art of Design Communication through his expression
6. Student will understand with whole design process from the concept to the final product.

UNIT-1 DESIGN DEFINITION:

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

UNIT -2 BASIC ELEMENTS OF DESIGN

Introduction to Elements of design. -Properties, qualities, and characteristics of (i) line, (ii) direction, (iii) shape, (iv) size, (v) texture, (vi) space (vii) time and motion (viii) value and (vii) colour. Exercises involving the same. Focus on Composition and Character of the elements of design addressed visually and conceptually (Exploration in any 2- Dimensional media). Exploration in mixed media & collage to convey a specific theme and meaning. Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

UNIT -3 PRINCIPLES OF DESIGN:

The principles of design relationships/ Composition – Unity & Harmony, Balance, Scale & Proportion, Contrast and Emphasis, and Rhythm. Exercises involving the same. The analysis of design elements - Exercises involving the same. -Focus on Composition and Character of Basic elements of design addressed visually, and conceptually (Exploration in any 2- Dimensional media). -Exploration in mixed media & collage to convey specific theme and meaning. -Analytical Studies will be undertaken in two and three dimensions using various media.

UNIT- 4 DESIGN EXERCISES AND MODEL:

Design thought process – Sketching various process designs- Subjective – Objective – principles of design – oriented design – design context – Shape grammar – Fluidity – Parametric – Biomimicry etc -evolution of design – model making

UNIT -5 INTRODUCTION TO ARCHITECTURAL DESIGN:

Lecture introduction into the discipline of architecture, highlighting fundamentals that contribute to the complex totality that constitute a work of architecture: Placing Architecture (Site, Orientation, Climate, City and Landscape); History & Precedent; Materials & Construction; Representation and Realization. - Focus on design fundamentals realized artistically and practically in works by selected architects. Study of basic interrelationships of material, construction, site and program.

SUGGESTED READINGS:

1. Design Methods (Architecture) (Paperback), by John Chris Jones (Author).
2. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khouli (Author).
3. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
4. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White
5. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
6. Ching, F.D.K., "Design Drawing", Van Nostrand Reinhold, 1998
7. Neufert, P., "Architects" Data", 3rd Ed., Blackwell Science, 2000

17ARS122	BUILDING MATERIALS AND CONSTRUCTION- I									SEMESTER-I	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To provide an understanding of the building materials
- To develop the knowledge of construction detailing.
- To develop basic knowledge of the various components of a built structure.
- To develop the knowledge of the Material properties
- To develop the Knowledge of the techniques in material usages
- To develop an understanding of the design execution methods

COURSE OUTCOME:

1. Students will learn about the properties of various building materials
2. Students will understand the properties of stone, brick and its usage through drawing
3. Student will be able to recognize the apt usage of materials through proper research
4. Students will be able to understand and submit drawing plates comprising of technical plan, elevation and section along with sketches and details.
5. Student will be able to understand the technical details and construction details of the subject
6. Students will gain knowledge in cost and availability by their field Survey and Site visits

UNIT-1

SOIL AND STONE

Soils: Formation – grain size distribution – soil classification systems - earth -

Stone: Classification of rocks - Building stones - their uses –physical properties - brief study of tests for stone – deterioration - preservation of stone - various stone finishes - cutting and polishing of granites.

UNIT-2

TRADITIONAL & RURAL MATERIALS

Mud as a building material - Soil stabilization, soil blocks - Cast- in-situ walls - flooring - roofing - plastering. **Bamboo, Casuarina, Coconut, palm, Hay, Coir, Jute** – properties and uses. Types of foundations - walls - simple roof trusses floors for rural structures Lime – types - properties and uses – Manufacturing process – Mortar: functions – requirements - mixes. – Market study

UNIT-3

BRICKS AND CLAY PRODUCTS – MATERIALS

Bricks - brief study on manufacture of bricks – properties and uses - suitability - types of bricks - uses in buildings, structural tiles, ceramics, terracotta – properties and uses.- market study

UNIT-4

BUILDING COMPONENTS

Functional requirements of a building and its components - Drawings of foundations, plinth, superstructure, roofing. Openings: Doors, Windows and Ventilators.- Market Study- Typical Section of a building –

UNIT-5

BUILDING MATERIALS

Introduction to basic building materials- Observation of work at site – mixture ratio – material standards – material sample collections from market – Market study – local materials – imported materials – assignments – Introduction to bill of quantities – small material volume- basic – calculations

1. **SUGGESTED READINGS:**

2. J.S.Spencke and D.J.Cook, Building Materials in Developing Countries, John Wiley and Sons, 1983.
3. Kumar, S.K., “Building Construction”, 19th Ed., Standard Publishers Distributors, 2001
4. Allen, E. and Iano, J., “Fundamentals of Building Construction: Materials and Methods”, Wiley, 2004
5. Mehta, M., Scarborough, W. and Armpriest, Diane, “Building Construction: Principles, Materials and Systems”, Pearson Prentice Hall, 2008

17ARS123	ARCHITECTURAL GRAPHICS- I								SEMESTER-I		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To make them understand the nature of geometrical forms in terms of drawing plane and solid projections.
- To make them understand the representation of 2 dimensional and 3 Dimensional forms
- To make them understand the plans, sections, isometric and axonometric drawings of forms
- To develop the skill of doing perspectives
- To develop the Skill of technical Architectural Representation
- To develop the Skill of creating measure drawings

COURSE OUTCOME:

1. Student will be able to understand the 2 dimensional & the 3 dimensional perspective of the objects
2. Student will be able to construct the 3d views and perspective drawings of the buildings.
3. Student will be able to draw the perspective drawings with sciography
4. Student will be able to do Architectural Rendering
5. Student will be able to do architectural detailed drawing for a smaller scale project.
6. Student will be able to do read and Do a technical Architectural Drawing

UNIT 1

GEOMETRICAL DRAWING – PLANE GEOMETRY -REPRESENTATION

Introduction to fundamentals of drawing/ drafting – Construction of Lines, Planes, form – grade of pencils and usage-Understanding the scale with units and dimensions – Construction of plane, object – Hollow and solid geometry – Development of surfaces and multifaceted forms – Understanding the graphical representations of arrows, lettering techniques, composition etc – Lineweights, Line type etc

UNIT 2

GEOMETRICAL DRAWING – ORTHOGRAPHIC PROJECTION

Isometric, Axonometric, Oblique and multiview orthographic projections to scale of various forms- Simple and complex objects- straight, curvilinear etc – Sections, Elevations of solid geometry – hollow objects etc

UNIT 3

PERSPECTIVE -SIMPLE & COMPLEX OBJECTS – SCIENTIFIC METHOD AND SHORT CUT METHOD

Introduction to perspective projections – One point perspective, Two point perspective, Three point perspective, - - Cone of Vision –scientific method and short cut method

UNIT 4

SCIOGRAPHY AND RENDERING

Introduction to Sciography – Plan sciography, elevation sciography, perspective sciography-Light source Shade and shadow of the object- Manual rendering techniques- color pencils- watercolor- poster color

UNIT 5

MEASURED DRAWING OF FURNITURE/ OBJECT

Introduction to Furniture drawings- drafting and detailing of simple and complex components of the furniture

SUGGESTED READINGS:

1. Robert S. Oliver,, The Complete Sketch, Van Nostrand Reinhold, New York, 1989.
2. Tokyo Musashino Academy of Art - Introduction to Pencil Drawing, Graphic - Shaw Publishing Co. Ltd., Japan, 1991.
3. Freehand Drawing for Architects and Interior Designers (Paperback) by Magali Delgado Yanes (Author), Ernest Redondo Dominguez (Author)
4. Alwyn Cranshaw, Learn to paint with Water colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes, William Collins Sons and Co. Ltd., London, 1981.
5. Francis D. K. Ching, Architectural Graphics, Van Nostrand Rein Hold Company, New York, 1964.
6. Bhatt, N.D. and Panchal, V.M., “Engineering Drawing – Plane and Solid Geometry”, 48th Ed., Charotar Publishing House, 1996
7. Griffin, A.W. and Brunicardi, V.A., “Introduction to Architectural Presentation Graphics”, Prentice Hall, 1998
8. Ciriello, M., “Architectural Design Graphics”, McGraw-Hill, 2002

SEMESTER – 2

17ART201	THEORY OF ARCHITECTURE II								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To impart knowledge about the various design philosophies
- To create an understanding of the evolution of various design processes in architecture
- To learn to apply the process of architectural design.
- To learn to use design as a problem solving exercise
- To gain knowledge about various aspects in architectural design process
- To learn different styles of architecture

COURSE OUTCOME:

1. A thorough understanding on the architectural design process
2. An insight of the different tools used in the design process
3. An exposure to students on ideologies and philosophies of famous architects
4. Students will gain an understanding of different proportioning systems
5. Students will learn about the different aspects in site analysis
6. Students will learn representation methods of various site features

UNIT-1

ARCHITECTURAL DESIGN PROCESS AND METHODOLOGY

Definition of design, understanding of design, purpose of design, nature of good design and evaluation of design, types of design classifications, role of designer, design in history. Context for architectural design problems, design process, stages in the design process, different considerations, different ideas of design methodology-Bubble diagrams-Proximity charts- Time Space activity analysis- analytical thinking

UNIT-2

EVOLUTION OF DESIGN AND APPROACH

Evolution of design from history-architecture/Product – evidence – Pragmatic – Iconic- canonic – analogic – mathematical expressions -approach to architectural design

UNIT-3

PROPORTIONING SYSTEMS

Mathematics in Architecture-Proportions of Architecture -Manufactured proportions – human proportions– Golden ratio- Ken system- modular- fibonacci-anthropometry-Recent geometric simulations- parametric etc

UNIT-4

ARCHITECTURAL DESIGN CONCEPTS, PHILOSOPHIES AND STRATEGIES

Concept – definition – ideologies -types- based on context such as biomimicry, shapegrammar, fluidity, parametric– perspectives of various designers – critical evolution of concept – theoretical review -personal Philosophy and strategies of individual designers – Futuristic thinking- analysis and interpretation using the case of a building, architectural style, work(s) of the contemporary architects- Raj Rewal, Charles Correa, Santiago Calatrava, Zaha Hadid, Peter Eisenmann, Daniel Libeskind- etc

UNIT-5

SITE ANALYSIS and CLIMATOLOGY

Site –Inventory – site features – on site – off site- climate analysis-Site Analysis and Process for design-Climate- fundamentals-Sun movement- wind – daylighting-climate responsiveness architectural concepts

SUGGESTED READINGS:

1. Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981
2. Nigel Cross - Developments in Design Methodology, John Wiley & Sons, 1984
3. Bryan Lauson - How Designers Think, Architectural Press Ltd., London, 1980.
4. Tom Heath - Method in Architecture, John Wiley & Sons, New York, 1984
5. Site Analysis – Edward .T.White

17ART202	HISTORY OF ARCHITECTURE II								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture in the chronology 400B.C to 800 A.D
- To understand the social Fabric, Relevance, Design Principles & Construction materials and Methods.
- To understand about the Roman Architecture
- To Gain knowledge in Romanesque Architecture
- To understand about evolution of Gothic Architecture
- To Gain knowledge in Italian Renaissance

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Roman architecture.
3. Student will understand about the spatial and stylistic qualities associated with Romanesque architecture.
4. Student will understand about the spatial and stylistic qualities associated with Italian Renaissance and Baroque architecture
5. Student will understand the Styles and Details of Gothic Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching & reading

UNIT -1

ROMAN

Outline of architectural character: roman orders (Doric, ionic, Corinthian, Tuscan and composite)

Building Systems - Use of arches, vaults and columns

Building Typology: Religious Buildings – Temple (Pantheon); Civic Buildings – Baths (Thermae of Caraculla), Theatres (Colloseum), Circus (Circus Maximus), Palace (Forum Romanum); Engineering works – Aqueducts, bridges

UNIT-2

ROMANESQUE

Factors influencing architecture - Building Systems - Use of arches, vaults, columns, piers, buttresses and roofs. Outline of architectural character of Italy, France and England - Examples: Pisa complex, Italy Abbey aux Hommes, Caen, Tower of London.

UNIT-3

GOTHIC

Outline of Architectural character - evolution of vaulting and development of structural systems - Examples: Notre Dame, Paris - Westminster Abbey, Hampton Court Palace, London, Doges Palace, Venice, Milan Cathedral.

UNIT-4

ITALIAN RENAISSANCE

Renaissance – Introduction. Italian Renaissance - three phases – early Renaissance (Alberti - S. Andrea, Brunelleschi - Cathedral of Florence, Pazzi Chapel, Basilica San Lorenzo) , High Renaissance (Bramante - Santa Maria delle Grazie) , Late Renaissance (Michelangelo, Palladio -St. Peter'sBasilica, Villa Capra La Rotonda)

UNIT-5

NORTHERN RENAISSANCE AND BAROQUE

Northern Renaissance – Introduction; Characteristics of English Renaissance – Works of Sir Christopher Wren, Inigo Jones.

Baroque – Features and Elements of Baroque - St Paul's Cathedral, Palace of Versailles, Winter Palace in Saint Petersburg.

SUGGESTED READINGS:

1. Sir Bannister Fletcher, A History of Architecture, University of London, The Antholone Press, 1986.
2. Robert Chitham, The Classical Orders of Architecture, Elsevier, London, 2005
3. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey, 2007.
4. S.Lloyd/H.W.Muller, History of World Architecture - Series, Faber Ltd., London, 1986.
5. Spiro Kostof, A History of Architecture - Settings and Rituals, Oxford University Press, London, 1985.
6. Pierre Pichard, TanjavurBrhadisvara, Ecole Francaise D' Extreme Orient, New Delhi, 1995

17ART203	MECHANICS OF STRUCTURES - I								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To gain understanding of basic structural form of any building
- To gain understanding of structural details of various materials and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the forces and structural systems
- To gain understanding about the Structural sections
- To gain understanding about material properties

COURSE OUTCOME:

1. Student will understand the concepts of action of forces on a body and should be able to apply the equilibrium concepts.
2. Student will understand the basic geometric properties and the behavior of materials under effect of forces
3. Student will understand the various structural components of the building and its usage for strength of the structure.
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Steel Structures in Architectural Design
6. Student will be able to relate various building structural components

UNIT-1

INTRODUCTION TO STRUCTURES AND STRUCTURAL SYSTEMS

Overview of Structures - Concept of Structure in Architecture -Types of Structural Systems - Components of a Structure - Materials and their Structural Properties

UNIT-2

FORCES AND STRUCTURAL SYSTEMS

Types of force systems - Resultant of parallel forces - principle of moments - principle of equilibrium - simple problems

UNIT-3

ANALYSIS OF PLANE TRUSSES

Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered trusses by method of joints.

UNIT-4

PROPERTIES OF SECTION

Centroid- Moment of Inertia - Section modules - Radius of gyration - Theorem of perpendicular axis - Theorem of parallel axis

UNIT-5

ELASTIC PROPERTIES OF SOLIDS

Stress strain diagram for mild steel, High tensile steel and concrete - Concept of axial and volumetric stresses and strains - Elastic constants - Relation between elastic constants - Application to problems. Total: 45 hrs/ semester

SUGGESTED READINGS:

1. S.S.Bhavikatti, "Strength of Materials", VIKAS Publishing House Pvt. Ltd., Chennai, 1997.
2. S.Ramamrotham, Strength of materials - Dhanpatrai & Sons, Delhi, 1990.
3. W.A.Nash, Strength of Materials - Schaums Series - Mcgraw Hill Book Company, 1989.
4. Building Structures--From Concepts to Design. Second Edition, by Malcolm Millais. Spon Press, London 2005
5. Buildings from Caves to Skyscrapers, Mario G Salvadori, Holiday House, 1985

17ARP211	COMPUTER APPLICATION -I								SEMESTER-II	
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To introduce computer operation principles and explore image editing through a graphical composition.
- To impart training in computer aided 2D drafting and 3D modelling through projects.
- To enable the use of computer applications to develop a design from the initial stages to the final outcome
- To enable the rendering of a building so as to create a photo realistic image.
- To develop the skill of Digital Applications in Architecture
- To develop the skill of programming in Architecture

COURSE OUTCOME:

1. Student will be able to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering
2. Student will be able to draw measured drawings using the software
3. Student will be able to detail the building components using the software
4. Student will be able to produce accurate drawings faster using the software
5. Student will be able to give a rendered image of the Architectural Design by software
6. Student will be able to conceptualise, visualise and Produce digital drawings at ease

UNIT-1

SIMPLE APPLICATIONS

Creating technical documents and reports, Cost estimates with simple calculations, Presentations with graphics. – Charts – tables- Statistics-estimations

UNIT-2

SKETCHING TOOLS

Introduction to Sketch up models – Simple Buildings – Material Application– Vray rendering

UNIT-3

COMPUTER AIDED DRAFTING

Introduction to 2D application – Plan ,section, elevation drawings,3D applications

UNIT-4

IMAGE EDITING AND ANIMATION

Introduction to image editing- color enhancement

UNIT-5

ADVANCED PROGRAMMING

Simple Programming languages.

SUGGESTED READINGS:

1. Sketchup – latest Version - Tutorials
2. AutoCAD architectural users guide - Autodesk Inc.,
3. AutoCAD 2016 User Manual, Autodesk
4. Adobe Photoshop-Tutorials
5. Corel Draw – tutorials
6. Adobe premier

17ARS221	ARCHITECTURAL DESIGN - II								SEMESTER-II		
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding a Simple Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualise a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver a Architectural Design .
6. Student will be able to Communicate effectively through the design ideas

UNIT-1

Design Process: Basics: Drawing skills, Conventions, Abstraction and Expression; Application: Analysis, Exploration, Discovery and Verification; Communication: Process, Individual Design, Team Design, and Public Design. Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process.

UNIT-2

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

UNIT-3

Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas. Methods: Nature & Geometry as generators; Music and Mathematics as models; Accident and the unconscious as sources; Rationalist Approaches; Precedent; Responses to Site; Generative Processes. Traditional Methods, New Methods, The Three Stage Process – Divergence, Transformation, Convergence; Choosing Design Strategies.

UNIT-4

Horizontal movement - single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as : Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar;

UNIT-5

The problems involve simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as : Residence, petrol bunk, fire station, police station, Cottage for an elderly couple.

The basics of building anatomy from parapet to foundation and an overview of the different building materials shall be explained at the beginning of the design studio.

SUGGESTED READINGS:

1. Paul Laseau, Graphic Thinking for Architects.
2. E and O.E. Planning, Liffé Books Ltd., London, 1973.
3. De. Chiara and Callender, Time-saver Standards for Building Types, McGraw Hill Co., New York, 1973.
4. Sid Del Mar Leach, Techniques of Interior Design Rendering and presentation, McGraw Hill Co., New York, 1973.
5. Mike K. Lin, Drawing and Designing with Confidence: A Step by Step Guide.
6. Rendow Yee, Architectural Drawing: A visual Compendium of types and Methods.
7. Francis D Ching, Design Drawing.
8. Francis D Ching, Drawing a Creative Process.
9. Mike. W. Lin, Architectural Rendering Techniques: A Colour Reference.
10. Richard M. Mc Garry, Marker Magic: The Rendering Problem Solver for Designers.
11. Michael. E. Doyle, Color Drawing: Design drawing Skills & Techniques for Architects, Landscape Architects & Interior Designers.

17ARS222	BUILDING MATERIALS AND CONSTRUCTION- II								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To provide an understanding of the construction materials
- To provide an understanding of the construction methods through construction detailing
- To develop basic knowledge of the various components of a built structure
- Ability to understand by field study on all Topics
- Ability to understand materials like brick, clay and timber
- Ability to gain Knowledge about the techniques of Timber Construction

COURSE OUTCOME:

1. Student will gain Knowledge of properties and construction methods of brick, clay products and timber products.
2. Student will be able to detail structural and nonstructural components of simple buildings using the above materials.
3. Student will understand to integrate knowledge of properties and construction methods of basic building materials in the design of simple projects.
4. Student will understand about the Timber construction techniques for doors and windows.
5. Student will be able to gain advanced knowledge about Timber Roof Constructions.
6. Student will understand the building construction techniques of the timber staircases.

UNIT-1

BRICKS PRODUCTS - CONSTRUCTION

Structural members in brickwork – Brick piers, footings, Brick manufacture and process
Reinforced brick masonry - Arches - Lintels – Corbels - copings.

UNIT-2

CLAY PRODUCTS CONSTRUCTION

Hollow clay blocks - for walls - partitions - roofs
Roofing - Flat Roofs - Terrace roofs - Sloping roofs

UNIT-3

TIMBER CONSTRUCTION – DOOR, WINDOWS AND PANELLING

Fundamentals of timber- manufacture – uses – current developments – physical properties - Drawings of timber joinery for Windows, doors, ventilators, Timber partitions

UNIT-4

TIMBER CONSTRUCTION – STAIRCASE

Timber staircase and design

UNIT-5

TIMBER CONSTRUCTION – TRUSS

Timber trusses - Lean to - close couple - Kingpost - Queen post - Trusses.

SUGGESTED READINGS:

1. Don A.Watson, Construction Materials and Processes, McGraw Hill Co., 1972.
2. W.B.Mckay, 'Building Construction', Vol.1, 2, 3 Longmans, U.K. 1981.
3. Alanwerth, Materials, The Mitchell Pub. Co. Ltd., London, 1986.
4. R.Chudleu, 'Building Construction Handbook', British Library Cataloguing in Publication Data, London, 1990.
5. S.C.Rangwala, Engineering Materials, CharotarPub.House, Anand, 1997.

17ARS223	ARCHITECTURAL GRAPHICS- II								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To involve students in a number of exercises that will help them develop the skill of representation in advanced drawing techniques
- To make them understand the measured drawing method
- To make them understand to document buildings of architectural interest
- To understand and Develop the skill of measured drawing of Sections & Elevations
- To understand and develop the set of Architectural working drawings
- To develop them in making the working drawings for the Site Execution

COURSE OUTCOME:

1. Student will be able to construct and draw detailed architectural working drawings
2. Student will understand the 3d views and perspective drawings of the buildings.
3. Student will understand the detailed specifications of a small construction drawing
4. Student will learn to Collect the building data and document accordingly
5. Student will develop the skill of making a Architectural Working Drawing
6. Student will develop the skill of reading a Interior working Drawing

UNIT-1

ARCHITECTURAL DRAWING & REPRESENTATION

Introduction to Architectural drawings – composition of various drawings- list of drawings –simple plans , sections , elevations – dimension – scale drawings- details – representations – arrows – stairs – material hatches etc

UNIT-2

ORTHOGRAPHIC PROJECTION – EXTERIOR AND INTERIOR SPACES

Isometric, Axonometric, Oblique and orthographic projections to scale of Exterior and interior spaces- multi level spaces in buildings –interior furniture etc. – shade and shadow

UNIT-3

BUILDING PERSPECTIVE-MANUAL & DIGITAL RENDERING

Perspective of large spaces and buildings – One point perspective, Two point perspective, Three point perspective – scientific method, short cut method -pencil ,pen rendering ,stippling-Shade and shadow- Sciography of plan ,elevation, isometric, axonometric views-rendering of the building silhouette by manual and digital techniques.

UNIT- 4

MEASURED DRAWING OF A BUILDING

Introduction to fundamentals of measured drawing, line value, lettering, drawing representation, methods and technique of measuring objects by measuring tape –photographs – aesthetic components and details

UNIT-5

DETAILED DOCUMENTATION OF A BUILDING

Documentation of a complete building of a special interest in terms of history, building Construction- architectural excellence or technology – examples like Post office, Police Station, Public School

SUGGESTED READINGS:

1. Francis Ching, Architectural Graphics, Van Nostrand and Reinhold Company, New York, 1975.
2. Edward J. Muller, James G. Fauselt, Philip A. Graw Architecture Drawing and Light Construction Prentice hall Publishers Columbus. 1999.
3. Ernest Norling, Perspective drawing, Walter Foster Art Books, California, 1986.
4. Bernard Alkins- 147, Architectural Rendering, Walter Foster Art Books, 1986.
5. Learn to paint with Water Colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes.
Author: Alwyn Cranshaw, Publisher: William Collins Sons & Co. Ltd., London, 1981.
6. Architectural Rendering, A Technique of Contemporary Presentation, Author: Albert O. Halse, Publisher, Mc Graw Hill Book Company, New York, 1972.
7. Elisabetta Drudi, Figure Drawing for Fashion Design, The Pepin Press Singapore. 2001.
8. K. Venugopal, Engineering Drawing and Graphics + AutoCAD, New Age International Publishers, New Delhi, 2007.
9. Kendra Schank Smith, Architects' Drawings, Architectural Press- An imprint Elsevier Burlington 2006.

SEMESTER 3

17ART301	SURVEYING, LEVELLING &SITE PLANNING								SEMESTER-III		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To understand the principles of surveying, classification, types of surveys
- To understand the applications of surveying
- Know about techniques of surveying.
- Understand the concepts of levelling and its applications.
- Get exposed to total station surveying, GIS and GPS.
- To understand the site, its premises and various factors involved

COURSE OUTCOME:

1. Student will understand the various systems of Surveying
2. Student understand the concept of levelling and its applications on site for various types of buildings.
3. Student will understand about the larger survey context using the total station and GIS mapping
4. Student will understand about the Site Inventory and Site analysis
5. Student will learn about Hill survey and method of Contouring
6. Student will learn about the site planning principles, methods and its applications in architectural design.

UNIT 1

CHAIN SURVEY AND LEVELLING

Chain survey- principles- classification- instruments used, ranging, reciprocal ranging, Leveling , methods of leveling, booking and reduction of levels, longitudinal leveling, cross sectioning, errors in leveling, problems in leveling, contouring- plane table survey – radiation , Intersection, traversing and resection (experiment – 2nos)

UNIT 2

THEODOLITE SURVEY

To understand Theodolite survey, measurement of horizontal and vertical angles, problems tackled like centre line of building, setting out angles- Rise and fall method- Dumpy level etc.

UNIT 3

CONTOURING

Characteristics of contours, direct and indirect methods of contouring

UNIT 4

TOTAL STATION

Total Station Survey- Different types - Introduction of GIS and GPS

UNIT 5

SITE INVENTORY, SITE ANALYSIS AND SITE PLANNING

Importance of site analysis - factors involved in accessibility - site characteristics - land, contours, water shed, climate and topography, preparation of site analysis diagram

SUGGESTED READINGS:

1. Site Analysis – Edward T. White
2. Site Planning
3. B.C. Punmia – Surveying and Levelling

17ART302	HISTORY OF ARCHITECTURE – III								SEMESTER-III		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To Gain the understanding of the regional Architecture
- To understand the social Fabric, Relevance and Design Principles
- To understand various Construction materials and Methods used in different architectural styles
- To understand about the Dravidian Architecture
- To Gain knowledge in Buddhist Architecture
- To understand about evolution of Islamic & Mughal Architecture

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Dravidian architecture.
3. Student will understand about the spatial and stylistic qualities associated with Buddhist architecture.
4. Student will understand about the spatial and stylistic qualities associated with Islamic architecture
5. Student will understand the Styles and Details of Mughal Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching & reading

UNIT-1

HINDU & INDO-ARYAN STYLES

Evolution of Hindu temple - Early shrines of the gupta and chalukyan periods - Tigawa temple, Ladh Khan and Durga temple, Aihol, Papanatha and Virupaksha temples, Pattadakal.

Indo-Aryan: Salient features of an Indo Aryan temple - Lingaraja Temple, Bhuvaneswar- Sun temple, Konarak. Kunds and Vavs — Adalaj - Surya kund, Modhera.

UNIT-2

DRAVIDIAN STYLE

Dravidian culture - Rock cut productions of Pallavas –Shore temple, Mahabalipuram- Dravidian Order – Brihadeeswara Temple, Tanjore - Evolution and form of gopuram - Complexity in temple plan due to complexity in Ritual -Minakshi temple, Madurai.

UNIT-3

BUDDHIST STYLE

Hinayana and Mahayana Buddhism - Interaction of Hellenic & Indian Ideas in Northern India - Architectural Production during Ashoka's rule - Ashokan Pillar, Saranath, Rock cut caves at Barabar, Sanchi Stupa.

Salient features of a Chaitya hall and Vihara, Rock cut architecture in the Western and Eastern ghats- Karli, Viharas at Nasik, Rani gumpha, Udaigiri. Takti Bahai, Gandhara.

UNIT-4

INTRODUCTION TO ISLAMIC ARCHITECTURE

History of Islam- Influences on Islamic Architecture - character of Islamic architecture with examples. sources of Islamic Architecture in India and influences on them - Brief history development of architectural style during the rule of the slave, Khilji, Tuqlaq Sayyid and Lodhi Dynasties - important examples for each period.

UNIT-5

PROVINCIAL & MUGHAL STYLES

Development of the provincial styles in different regions - Punjab, Jaunpur, Bengal, Gujarat, Malwa, the Deccan (Bijapur, Golconda, Bidar and Gulbarga) - important examples for each style.

Development of the Mughal style under the different rulers - Babur, Shershah, Humayun, Akbar, Jahangir, Shahjahan, Aurangzeb- important examples - development of the Mughal garden - important examples.

SUGGESTED READINGS

1. Percy Brown, Indian Architecture (Buddhist and Hindu Period), Taraporevala and Sons, Bombay, 1983.
2. Satish Grover, The Architecture of India (Buddhist and Hindu Period), Vikas Publishing Housing Pvt. Ltd., New Delhi, 1981.
3. Christopher Tadgell, The History of Architecture in India from the Dawn of civilization to the end of the Raj, Longman Group U.K.Ltd., London, 1990.
4. Islamic Architecture, Form, Function and Meaning, Robert Hillenbrand, Edinburgh University Press, 1994.
5. Brown Percy, Indian Architecture (Islamic Period) Taraporevala and Sons, Bombay, 1983.
6. Satish Grover, The Architecture of India (Islamic) Vikas Publishing House Pvt. Ltd., New Delhi, 1981.
7. Christopher Tadgell- The History of Architecture in India - Penguin Books (India) Ltd., New Delhi 1990.
8. Francis D.K. Ching, A Global History of Architecture, John Wiley & Sons Publishers, New Jersey, 2007.

17ART303	MECHANICS OF STRUCTURES- II								SEMESTER-III		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To gain understanding of structural concepts in architecture
- To gain understanding of structural details of various Forces and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the R.C.C structural elements
- To gain understanding about the Indeterminate Structures
- To gain understanding about the forces acting on structural elements

COURSE OUTCOME:

1. Student will understand the concepts of action of forces like bending moment and shear force
2. Student will understand the basic geometric properties and the behavior of beams under effect of stress
3. Student will understand the various structural components of the building like columns
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Indeterminate Structures in Architectural Design
6. Student will be able to relate various building structural components and their behavior

UNIT-1

SHEAR FORCE AND BENDING MOMENT

Concept of shearing forces and Bending Moments - shear force and bending Moment diagrams for cantilever and simply supported beams subjected to point load, uniformly distributed loads and their combinations

UNIT-2

STRESSES IN BEAMS

Theory of simple bending - bending stresses in beams, shear stresses in beams - examples on simple sections. Stress distribution diagrams.

UNIT-3

DEFLECTION OF BEAMS

Slope and deflection at a section - Double Integration and Macaulay's method for simply supported and cantilever beams

UNIT-4

THEORY OF COLUMNS

Short and long columns - Euler's method and its limitations - Derivations of Euler's formula (for different end conditions) - Rankine's formula for columns, examples, effect of eccentric loading

UNIT-5

INTRODUCTION TO INDETERMINATE STRUCTURES

Introduction – Determination of degree of statical indeterminacy for beams and frames – Concept of Analysis (No Problems)

SUGGESTED READINGS:

1. S.S.Bhavikatti, "Strength of Materials", VIKAS Publishing House Pvt. Ltd., Chennai, 1997.
2. S.Ramamrotham, Strength of materials - Dhanpatrai & Sons, Delhi, 1990.
3. W.A.Nash, Strength of Materials - Schaums Series - McGraw Hill Book Company, 1989.
4. R.K.Bansal - Engineering Mechanics and Strength of Materials - Lakshmi Publications, Delhi, 1990.
5. R.K. Rajput - Strength of Materials, S. Chand & Company Ltd., New Delhi 1996.

17ARP311	COMPUTER APPLICATION- II								SEMESTER-III	
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of three dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

UNITS

1. COMPUTER AIDED 3D MODELLING

Working in 3 Dimensions, Viewing 3D Objects, Basic Wireframe Models, Regions and 3D Faces, Extruding and Lofting, Revolved objects, Boolean operations ;

2. COMPUTER AIDED 3D RENDERING

Concept of shading; Rendering; Material mapping; Environment attributes, Project: Building Model.

3. INTRODUCTION TO BUILDING INTEGRATED MODELLING

New Features , Editing and Working with Families in a Project, Concepts, creating a shared

Family, Project and System settings.

4. BASIC MODELLING AND DOCUMENTATION

Creating the Basic Model, Adding Doors and Windows, Floors and Floor Openings, Roof and Ceiling,

5. RENDERING AND PRESENTATION

Applying Materials and textures, creating a perspective view, rendering an Exterior view, rendering an Interior view, Creating and Recording Walkthroughs, creating 3D cutaways with Section Boxes

3 Dimensional Drafting ,detailing and rendering softwares

SUGGESTED READINGS:

1. AutoCAD 2016 User Manual, Autodesk 2011.
2. Sketch up Tutorials
3. 3D max tutorials

17ARS321	ARCHITECTURAL DESIGN-III								SEMESTER-III		
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver the Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

TOPICS

Single level planning in small scale, small span, horizontal movement and simple vertical movement, data collection, case studies, analysis and presentation of studies – Data collection with respect to design and detailing for physically handicapped persons - Concepts and presentation of design with scaled models -Examples: Residential buildings, Villas, Institutional buildings: banks, Nursery or Primary /Secondary schools, primary health center, school for children with learning disabilities, neighborhood market, Municipal office, Cafeteria, Multicuisine Restaurant etc.

Design Process to be approached stage wise through Architectural Programming

SUGGESTED READINGS:

1. De Chiara and Callender, Time Saver Standards Building Types, McGraw Hill Co., 2nd Edition, 1980.
2. Edward D. Mills, Planning - The Architects Handbook - 10th Edition, British Library Cataloguing in Publication Data, 1985.
3. Wakita Linde, The Professional practice of Architectural working, drawing John Wiley & Sons, 1984.
4. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGraw Hill Book Co., 1982.
5. Julius Panero & Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design Publication, 1979.
6. Neufert Architect's Data, Rudolph Herg, Crosby Lockwood and Sons Ltd., 1970.

17ARS322	BUILDING MATERIALS AND CONSTRUCTION -III									SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours		6
Instruction Hours /week		L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To give an introduction to cement and concrete as materials for building construction.
- To help understand the principles, types, methods of construction
- To understand about applications of concrete
- To understand about structural and non-structural building components
- To understand and enable design and detail using concrete in buildings
- To understand about concrete staircase.

COURSE OUTCOME:

1. Student will learn about the concrete as a versatile material in different contexts.
2. Student will understand the concepts of concrete as a building construction material.
3. Student will be able to design and detail specific components in concrete in Architectural Design
4. Student will understand about concrete Footing, column by doing detailed drawings
5. Student will understand about concrete Slab, beams by doing detailed drawings
6. Student will understand about concrete Lintel, Sill by doing detailed drawings
7. Student will understand about concrete Staircase by doing detailed drawings

UNIT 1

CONCRETE, ITS INGREDIENTS MANUFACTURE & PROPERTIES

Ingredients - suitability requirements for aggregates, grading of aggregates - role of water in concrete - reinforcement - admixtures - properties of concrete.

Manufacture of concrete and concreting - mix proportioning - batching, mixing, transporting, placing, compaction, curing formwork - quality control - outline of tests for concrete - joints in concrete - concrete finishes.

UNIT 2

SPECIAL CONCRETE AND CONCRETING METHODS

Lightweight, high density, fibre reinforced, polymer concrete - outline of manufacture properties and uses of the above - ready mixed concrete - gunning - cold weather and underwater concreting - current developments in concrete products and methods of concreting.

FOUNDATIONS

Pile foundation, different types of piles, precast and cast insitu with reinforcement details for different types of grids, details of pile capping, jointing of precast piles and columns – Raft foundation

UNIT 3

CONCRETE CONSTRUCTION

Introduction to framed structures. Concrete in foundations - types of footings - isolated, combined, continuous, strap.

Concrete floors, walls and partitions, roof. Concrete lintels, arches, sunshades - Concrete slabs - types - concrete beams and columns.

UNIT 4

CONCRETE STAIRCASES

Factors involving staircase design - types of staircases like straightflight, doglegged, quarterturn, bifurcated, spiral helical, etc. - different support conditions like inclined slab, cranked slab, continuous, cantilever - foundations finishes for staircases - detailing out of handrails and balusters. Designing and detailing for physically handicapped.

UNIT 5

D.P.C- WEATHERING COURSE – WATER PROOFING

Introduction to DPC – Damp Proof Course – Water Proofing – Details and techniques – types

Exercises involving simple bill of Quantities

SUGGESTED READINGS:

1. M.S.Shetty, Concrete Technology, S.Chand& Co. Ltd., New Delhi, 1986.
2. Dr.B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.
3. Arthur Lyons, Materials for Architects and Builders - An introduction, Arnold, London, 1997.
4. W.B.Mckay, Building Construction, Longmans, UK, 1981.
5. Francis D.K.Ching, Building Construction Illustrated VNR, 1975.

17ARS323	BUILDING SERVICES - I								SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To get a Brief understanding about the list of Services involved in Building
- To understand the sequence and importance of the services in a Building during the planning
- To develop basic technical knowledge in water supply & Applications in Architecture
- To develop the technical knowledge in Electrical Supply & Applications in Architecture
- To develop sanitation, electrical, air conditioning, mechanical and firefighting systems.
- To develop basic technical knowledge in acoustics of a space

COURSE OUTCOME:

1. Student will understand about Building services and its integration in a building
2. Student will learn about water supply, sewage, drainage and waste systems in buildings.
3. Student will learn about the various electrical systems and applications in building
4. Student will understand about Heating, ventilation and air-conditioning systems in a building.
5. Student will learn about the Fire safety & Services in a building
6. Student will understand the importance of application of services in a building.

UNIT-1

WATER CHARACTERISTICS AND QUALITY

Surface and ground water sources - quality/quantity - nature of impurities

UNIT-2

FUNDAMENTALS OF SEWAGE TREATMENT AND SEWERAGE SYSTEMS

Environmental sanitation -Sanitation in buildings. Arrangement of sewerage systems in Housing, large factories, towns and cities - sewage pumping station - Rainwater harvesting and disposal

UNIT-3

ELECTRICAL SYSTEMS AND ILLUMINATION

A) Basics of electricity - Single/Three phase supply - Protective devices in electrical installations - Earthing for safety - Types of earthing - ISI specifications.

b) Principles of illumination: Modern theory of light - Synthesis of light - Additive and subtractive synthesis of color - Luminous flux - Candela - Solid angle illumination - Utilization factor - depreciation factor - MSCP - MHCP - Laws of illumination.

UNIT-4

MECHANICAL SYSTEMS

a) Pumps – uses & types and their selection, installation and maintenance, Hot Water Boilers.

b) Basic refrigeration principles: Thermodynamics - Heat - Temperature, measurement transfer - Change of state - Sensible heat - Latent heat of fusion, evaporation, sublimation - Saturation temperature - Super-heated vapor - sub cooled liquid - pressure temperature relationship for liquids – Refrigerants

UNIT-5

FUNDAMENTALS OF ACOUSTICS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies.

Types of noises, transmission of noise, transmission loss, noise control and sound insulation and remedial measures, determination of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

SUGGESTED READINGS:

1. William H. Severns and Julian R. Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D. Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD, New Delhi, 2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.

SEMESTER 4

17ART401	CLIMATE RESPONSIVE ARCHITECTURE								SEMESTER-IV		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To study about climatic factors and its influence
- To understand about the of external and internal factors of Climate for a certain location
- To understand deeply about the Microclimatic influences in a building
- To understand about the Solar geometry and its impacts in a building
- To understand the Air movement & its principles and Applications for human comfort
- To understand about the Classification of climate and Design strategies recommendations for each climatic Zone

COURSE OUTCOME:

1. Student will understand the whole climatic scenario of the world
2. Student will learn about the Solar geometry, sun path its irradiation effects and control
3. Student will learn about heat transfer in buildings due to materials and design implications.
4. Student will understand about the Various ventilation principles and techniques for good ventilation
5. Student will understand hybrid design strategies and its design applications for different climatic zones
6. Student will develop the skill of doing a climatic design for any building with optimum recommendations.

UNIT 1

CLIMATE & MICROCLIMATE

Introduction of the earth formation, sun-Latitude, longitude, Altitude-Factors that determine climate -Climatic zones of the world, India -Climate classifications -characteristics-Thermal comfort-Mahony's tables, Psychrometric chart, Bioclimatic chart and fanger point scale- Microclimate-Urban heat Island-Built forms - Natural and manmade features - vegetation

UNIT 2

SOLAR GEOMETRY- HEAT TRANSFER-BUILDING ENVELOPE CONCEPTS

Movement of sun- Sun path diagram - Solstice-Overheated period-Solar shading-Shadow angles - Types of shading devices and materials, techniques-Transfer of heat through solids -Wall, roof, ground, glass, other materials- Definitions-Conductivity, Resistivity, Emissivity, Absorbance- Surface resistance and air cavities- Air to air transmittance (U value) -Time lag and decrement factor - Material Properties-calculations

UNIT 3

AIR MOVEMENT STRATEGIES -VENTILATION PRINCIPLES

The wind -wind patterns - Air currents around the building - Air movement through the buildings - Fenestration techniques- Thermally induced air currents - Stack effect, Venturi effect, Bernoulli's theory, Finwalls, wind towers etc

UNIT 4

DESIGN STRATEGIES -PASSIVE, ACTIVE AND DAYLIGHTING

Heating: principles - Passive and Active solar-Direct gain systems - Glazed walls, Bay windows, sun space- Indirect gain systems-Trombe wall, Solar Chimney, Roof pond, Roof radiation trap, Solarium etc. Cooling: General principles - Evaporative cooling, Nocturnal radiation cooling, induced ventilation, earth sheltering, Berming, Wind Towers, earth air tunnels, Curved Roofs & Air Vents, Insulation, Vary Thermal wall etc.- Daylighting concepts - Natural - Artificial - WWR - Light shelf etc

UNIT 5

DESIGN RECOMMENDATIONS FOR CLIMATE & SUSTAINABILITY IN ARCHITECTURE

Design strategies recommended in warm humid, hot and dry, Moderate, composite and cold climates- Fundamentals of Sustainability- green buildings - rating systems -Biomimicry -Case studies of buildings -Exercises involving design strategies recommended

SUGGESTED READINGS:

1. MiliMajunder, Teri – Energy – Efficient Bldgs in India – Thomson Press , New Delhi – 2001
2. Arvind Krishnan & Others – Climate Responsive Architecture, Tata Mcgraw –Hill New Delhi 2001.
3. Heating,Cooling and Lighting – Norbert Lechner
4. How Buildings Work- Natural order of Architecture – Edward Allen
5. Charles. J. Kibert, ‘Sustainable Construction’ John Wiley and sons Inc, USA.
6. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.
7. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India.
8. Sun wind and light- Mark Dekay , G. Z. Brown
9. Man Climate and architecture –Baruch Givoni(1981)

17ART402	CONTEMPORARY ARCHITECTURE I								SEMESTER-IV		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To give exposure to the critiques of modern architecture.
- To understand about influence of new materials in modern architecture
- To study in detail the different post modern directions in architecture
- To study about the influence of industrial revolution in Architecture
- To understand about the Modern era of Architecture
- To understand the evolution of Western Architecture

COURSE OUTCOME:

1. Student will understand the spread and varied later directions of modern architecture across the world.
2. Student will understand the architectural production from the 1960s as driven by large scale changes across the world.
3. Student will become familiar with contemporary forces and directions in architecture across the world.
4. Student will understand the basis of Architecture revolutions and its changes in every decade
5. Student will understand the Ideologies of various Architects & their Works
6. Student will impart this Knowledge in his Architectural Design

UNIT-1

EVOLUTION OF MODERN ARCHITECTURE & INFLUENCE OF NEW MATERIALS

Reasons for the evolution of Modern Architecture, origins-Neo Classicism Industrial revolution and its impact – Emergence of new building typologies, New Materials and Technologies- steel, glass and concrete

UNIT-2

REVIEWING INDUSTRIALISATION

Arts & Crafts movement in Europe and America; Art nouveau, and the works of Horta, Guimard, Gaudi and Macintosh; Organic Architecture -Early works of F.L.Wright. Chicago school; Art deco Architecture in Europe and America.

UNIT-3

EVOLUTION OF MODERNISM, POST MODERNISM AND CRITIQUE

Viennese secession, Adolph Loos and debates on ornamentation ; Futurism, Expressionism works of Mendelssohn & Taut, Cubism, Constructivism, De stijl and their influence on Architecture. Bauhaus school & Walter Gropius, Modernism and the International style, Brutalism, Writings of Venturi - Jane Jacobus - Aldo Rossi - Christopher Alexander.

UNIT-4

WESTERN ARCHITECTURE

Ideas and works of Richard Meier (Smith House, Connecticut and Getty Centre, Brent Wood, Los Angeles), Charles Moore (Architect's Own House at Orinda and Piazza d'Italia, New Orleans), Bernard Tschumi (Kyoto Railway Station Project and Parc de la Villette, Paris), Frank Gehry (AeroSpace Museum, Santa Monica and Guggenheim Museum, Bilbao), Norman Foster (Hong Kong Shanghai Bank and Renault Distribution Centre, Swindon, England),

UNIT-5

MODERN ARCHITECTURE

Zaha Hadid (The Peak Club, Hong Kong and IBA Housing Block 2, West Berlin), Daniel Libeskind (Jewish Museum, Berlin and World Trade Centre, New York), Rem Koolhaas (Dance Theatre, The Hague and Netherlands Sports Museum), Santiago Calatrava (Lyon- Satolas Railway Station and Olympic Stadium at Athens), Renzo Piano (Pompidou Centre, Paris and Menil Museum, Houston) - Deconstructivist Theory – Parametric.

SUGGESTED READINGS:

1. Charles Jencks, *The Language of Post-Modern Architecture*, 1984.
2. D.Ghirardo, *Architecture After Modernism*, Thames and Hudson, London, 1990.
3. Kenneth Frampton, *Modern Architecture: A Critical History*, Thames and Hudson, London, 1994.
4. Miki Desai et.al, *Architecture and Independence*, Oxford University Press, New Delhi, 1998.
5. Peter Szalapaj, *Contemporary Architecture* ,Architectural Press- An imprint Elsevier, Burlington, 2008.
6. Catherine Slessor *Contemporary Architecture Images Publishers Australia*. 2002.

17ART403	DESIGN OF STRUCTURES I								SEMESTER-IV		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To get introduced to basic structural members in timber and steel.
- To give knowledge to design different timber components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet joints
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of welded joints
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To Understand the concept of Structural system of Steel & Timber

COURSE OUTCOME:

1. Student will understand about Various Timber sections
2. Student will understand about the design timber beams and columns by applying the code provisions.
3. Student will understand about the Steel Sections and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the code provisions.
6. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

UNIT 1

TIMBER – BEAMS

Grading of Timber – Permissible Stresses – Design of timber beams – Madras terrace roof.

UNIT 2

STEEL SECTIONS AND WELDED JOINTS

Properties of rolled steel sections, Types of welded joints – Advantages and disadvantages – Design of Fillet welds (Excluding eccentric connections).

UNIT 3

TENSION MEMBERS

Introduction – Net sectional area – permissible stresses. Design of Axially loaded Tension member

UNIT 4

COMPRESSION MEMBERS

Introduction – various sections – built up section – Design of columns (excluding Lacing, Battening and other connections.)

UNIT 5

STEEL BEAMS

Allowable stresses, General specifications, Design of laterally supported beams.

SUGGESTED READINGS:

1. Ramachandra S., Design of Steel Structures, Standard Book House, Delhi, 1984.
2. A.S.Arya, Structural Design in Steel, Masonry and Timber, Nemchand and Bros, Roorkee, 1971.
3. National Building Code of India, 1983, Part VI, Structural Design.
4. Gurucharan Singh, Design of Steel Structures, Standard Publishers, New Delhi, 1982.
5. Negi "Design of steel Structures" - Tata Mcgraw Hill Book Company, New Delhi 1997.
6. Elias G.Abu-Saba Design of Steel Structures CBC Publishers New Delhi. 1997.
7. IS Code of practice for BIS 800:2007IS Code of practice for Timber design.

17ARP411	COMPUTER APPLICATION -III								SEMESTER-IV	
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of two dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

TOPICS

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Animations and Walkthroughs
3. Simulating gravity, wind and other effects in the scene, distributed rendering
4. Application of videography in architecture
5. Basics of developing and hosting websites

REVIT,BIM,ECOTECH and recent softwares

SUGGESTED READINGS:

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009

17ARS421	ARCHITECTURAL DESIGN -IV								SEMESTER-IV		
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To create understanding of human built environment as a holistic, living entity from macro to micro scales, and shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- Understanding the Design Programme and the Components of the Design Problem&Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media&Ability to conceptualise a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings
- To enable a comprehensive study of rural settlement and architecture in order to understand them as exemplar of collective design that evolved through various parameters.

COURSE OUTCOME:

1. Student will be able collect data, assimilate and integrate knowledge in a holistic manner.
2. Student will learn about the Sensitivity towards the nature and values of unselfconscious and collective design aswellas the interconnectedness of human society and environment
3. Student will learn about traditional techniques and concepts of Architecture.
4. Student will learn about the evolution and transformation of the rural settlements according to the time and cultural context.
5. Student will understand the essence of rural planning
6. Student will develop the skill of design process for the Rural settlements

CONTENT:

Rural settlements offer an opportunity to understand basic aspects of human built environment and what goes into its making/ influences it. The interrelationship between built form and society will be studied, understood and established, starting from either end as required. Study of specific modes of rural/vernacular/traditional architecture including their morphology, local materials and construction techniques, details, meaning, etc., will be done to give an insight into the particulars and universals of architecture.

Appropriate tools and processes can be used to aid the understanding. These include different methods of historical and socio-cultural study, oral history, discussions, information collection, surveys, maps, perceptual sketches, documentation through drawings, demographic study, assimilation and analysis.

Problems related to Rural Housing - Visits to selected village – based on Rural surveys on socio-economic, physical, housing and visual surveys, etc. to study existing conditions - analysis of survey data - preparation of report and presentation in a seminar - preparation of design brief solutions for housing and community facilities.

SUGGESTED READINGS:

1. De Chiara and Callender, Time Saver Standard for Building Types, McGraw Hill Co., 2nd Edition, 1980.
2. Edward D.Mills, Planning - The Architects Handbook - 10th Edition, British Library Cataloguing in Publication Data, 1985.
3. Wakita Linde, The Professional Practice of Architectural Working, Drawing John Wiley & Sons, 1984.
4. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGraw Hill Book Co., 1982.
5. Julius Panero& Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design Publication, 1979.
6. Neufert Architect's Data, Rudolf Herg, Crosby Lockwood and Sons Ltd., 1970.

17ARS422	BUILDING MATERIALS AND CONSTRUCTION -IV								SEMESTER-IV		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To give an introduction to metals as material for building construction.
- To give knowledge about the principles, methods of construction and applications of metals for structural and non-structural building components.
- To provide familiarity with market forms of metals and finishes for them.
- To gain Knowledge about Steel floor & Steel Staircase
- To understand about Door, windows & partitions
- To provide familiarity with market forms of metals and finishes for them.

COURSE OUTCOME:

1. Knowledge of properties of ferrous and non ferrous metals as materials for buildings.
2. An understanding of possibilities of steel as an important building construction material.
3. Ability to design and detail structural and non structural components of simple buildings using metals.
4. Ability to use metal innovatively in building projects.
5. Student will gain Knowledge about Steel Floors & Staircase
6. Student will understand about the details of Door, windows & Partitions by detailed Drawings.

UNIT 1

FERROUS METALS

Brief study on manufacture, properties and uses of cast iron, wrought iron, pig iron and steel - anticorrosive measures for steel - mechanical and heat treatment of steel - market forms of steel - structural steel, stainless steel, steel alloys - properties and uses - current developments.

UNIT 2

STEEL CONSTRUCTION

Structural steel sections - types of connections in steel - steel in foundations, columns and beams - different types of steel roof trusses including northlight truss - space frames - materials for roof covering. Steel staircases and handrails, balusters..

UNIT 3

STEEL STAIRS, DOORS, WINDOWS

Steel doors and windows – safety doors, dock doors, cold storage doors, revolving doors - collapsible gates - rolling shutters. Steel in furniture and other interior uses

UNIT 4

NON FERROUS METALS

Aluminum and Aluminum Alloys - brief study on manufacture, properties and uses - Aluminum products - extrusions, foils, castings, sheets, etc. - brief study of other non-ferrous metals like copper, bronze brass, tin and lead, properties and uses - current developments.

UNIT 5

CONSTRUCTION USING NON-FERROUS METALS

Aluminum doors - revolving, sliding, pivoted. Aluminum windows and ventilators - sliding, fixed, pivoted, top hung, bottom hung, louvered, fixed. Aluminum partitions, false ceiling, Aluminium roofing - northlight glazing bar. Use of other nonferrous metals like copper, bronze, brass, etc. in architectural construction.

SUGGESTED READINGS:

1. S.C.Rangwala, Engineering Materials, Charotar Publishing House, India, Recent Edition
2. B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, recent edition
3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold, London, 1997.
4. Harold B.Olin, Construction Principles Materials and Methods, The Institute of Financial Education, Chicago, 1980.
5. W.B.Mckay Building Construction, Longmans, U.K. 1981.
6. Building Construction Illustrated – Francis D.K. Ching
7. Barry – Buildin Construction

17ARS423	BUILDING SERVICES -II								SEMESTER-IV		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To inform about the principles and laws of Water distribution systems in buildings.
- To inform about the principles and laws of sewerage systems in buildings.
- To inform about the principles and laws of plumbing systems
- To inform about the electrical layout for residential Building
- To understand about compressors, evaporators and refrigerant control devices
- To Inform about the integration of service with the Architectural Design

COURSE OUTCOME:

1. Student will gain Knowledge of design of Water distribution systems in buildings
2. Student will learn and understand about the sewerage systems in buildings.
3. Student will learn and understand about the plumbing systems
4. Student will understand the electrical layout for residential Building
5. Student will gain basic knowledge about compressors, evaporators and refrigerant control devices
6. Student will understand the Applications of building Services in advanced level by detailed Drawings

UNIT-1

WATER DISTRIBUTION

Water supply systems – Domestic – Commercial – usages - Distribution systems in buildings - Types of pipes used - Laying, jointing, testing - prevention of water wastage and reuse of water - Internal water supply in buildings

UNIT- 2

SEWAGE AND SOLID WASTE MANAGEMENT

Arrangement of sewerage systems in buildings - sewage treatment plant- Solid waste Disposal: Collection, conveyance and disposal of town Solid waste

UNIT- 3

PLUMBING SYSTEMS

Materials and construction details of sewers and connections – plumbing fixtures - testing for water tightness - plumbing system for building types. – Toilets kitchen etc.

UNIT- 4

ELECTRICAL SYSTEM AND LIGHTING DESIGN

Study of electrical layout for residential Building - Types of wires, wiring systems and their choice - Main and distribution boards - Electrical load calculation – Details - Classification of lighting - Artificial light sources - spectral energy distribution - luminous efficiency - colour temperature - colour rendering – lighting fixtures.

UNIT- 5

AIR CONDITIONING SYSTEM AND APPLICATION

Vapour compression cycle - compressors - evaporators - Refrigerant control devices - Air handling units - Cooling towers.

Window type and packaged air-conditioners - chilled water plant - fan coil systems - water piping - cooling load - Airconditioning systems for different types of buildings.

SUGGESTED READINGS:

1. Robert D.Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
2. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
3. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD, New Delhi, 2007.
4. S.P.Arora, S.P.Bindra, Building Construction, dhanpat rai publication, New Delhi. 2009.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.
10. William H.Severns and Julian R.Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
11. D.J.Groomet- Noise, Building and People -Pergumon Press - 1977.

SEMESTER 5

SEMESTER-V											
17ART501	CONTEMPORARY ARCHITECTURE-II								SEMESTER-V		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To provide the student an in-depth knowledge of modern design philosophies in the evolution of innovative architectural forms and designs in the Indian context.
- To give an outline of architectural approaches across the world from late 20th century.
- To study in detail the different post-modern directions in architecture. +
- To provide information about the Alternate Practice
- To understand about the evolution of Architectural design of pre – independence
- To understand the Recent trends in Architecture

COURSE OUTCOME:

1. Student will learn about the spread and varied later directions of modern architecture across the world.
2. Student will become familiar with contemporary forces and directions in architecture across the world and in India
3. Student will understand about the post-independence architecture in India contemporaneous with the rest of the world, along with its own particular influences.
4. Student will understand about the Post- independence revolution of design in India
5. Student will know about the Alternate practices
6. Student will gain knowledge in recent trends of Architecture & Design

UNIT-1

ALTERNATIVE PRACTICE

Ideas and Works of Fathy - Baker - Ando - Soleri – Bawa – Buckminster fuller
Architects of Auroville .

UNIT-2

PRE – INDEPENDENT ARCHITECTURE IN INDIA

Monumental buildings of Early colonial period – Examples – St.Pauls Cathedral, Calcutta& Bombay Townhall –Architectural character of Indo-Saracenic and Classical revival –University of Madras Senate House & Victoria Memorial hall, Calcutta – Later Colonial period – Contribution of Edwin Lutyens & Herbert Baker to the lay-out and Architecture of New Delhi – Rashtrapathi Bhavan & Parliament House.

UNIT-3

POST-INDEPENDENT ARCHITECTURE IN INDIA

Post-Independence Architecture in India – Works of Corbusier in Chandigarh and Ahmedabad (Legislative Assembly Complex including High Court, Legislative assembly and Secretariat, Chandigarh and Mill Owners' Building, Ahmadabad) Louis Kahn's contributions – the IIM, Ahmedabad, Koenigsberger and the Bhubaneswar experiment.

UNIT-4

CONTEMPORARY INDIAN ARCHITECTS AND THEIR WORKS

Ideas and works of BV Doshi (Institute of Indology Ahmedabad, IIM-Bangalore and Gufa, Ahmedabad), Charles Correa (RamaKrishna House, Ahmedabad, Kanchenjunga Apartments, Mumbai and MRF Headquarters, Chennai), Raj Rewal (Pragati Maidan, New Delhi and Asian Games Village, New Delhi), Achyut Kanvinde(IIT, Kanpur and Nehru Science Centre, Mumbai), Uttam Jain(Lecture Theatres, Jodhpur and Engineering College, Kota), Laurie Baker(Centre for Development Studies, Thiruvananthapuram and St. John Cathedral at Tiruvalla) and Anant Raje(IIFM, Bhopal and Management Development Centre, IIM-Ahmedabad)

UNIT-5

RECENT TRENDS IN INDIAN ARCHITECTURE

Recent developments in architecture of India – works of Selected architects – Current architecture practice.
Sanjay Mohe, Christopher benninger, Hafeez contractor, Chitra viswanath,

SUGGESTED READINGS:

1. Morgan, Ann Lee & Taylor Colin, 1987, Contemporary Architecture, 2nd Edition, St.James Press
2. Sarabjit Bahga. S, Modern Architecture in India,
3. Ar.Pramod Beri, 2009, Form follows feeling, Anjali Prakashan, New Delhi

17ART502	DESIGN OF STRUCTURES-II								SEMESTER-V		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To introduce the material properties of reinforced cement concrete
- To enable students to carry out limit state method of design of flat slabs, beams, columns and foundation using BIS codes and hand books.
- To introduce the concepts in limit state design
- To enable use of limit state design for the analysis and design of columns.
- To enable the learning of design of structural elements like footings, retaining walls and masonry walls.
- To enable use of limit state design for design of staircases

COURSE OUTCOME:

1. Students will get introduced to the material properties of steel and concrete
2. An understanding of the different concepts in designing footings and columns and masonry walls using LSD methods.
3. An understanding of the concepts in limit state design
4. An understanding of how to use of limit state design for the analysis and design of columns
5. An understanding of design of structural elements like footings, retaining walls and masonry walls
6. An understanding of how to use limit state design for design of staircases

UNIT-1

PROPERTIES OF STEEL AND CONCRETE

Structural properties of concrete - Grades and Strength of Concrete - durability - code provisions and design requirements of steel and concrete.

UNIT-2

LIMIT STATE DESIGN - INTRODUCTION

Various limit states - characteristic load and characteristic strength of materials - partial safety factor - stress-strain relationship of steel and concrete - safety and serviceability requirements.

UNIT-3

LIMIT STATE DESIGN OF BEAMS & SLABS

Analysis and Design of rectangular sections for bending - singly and doubly reinforced. Design of one way and two way slabs using IS Code coefficients for various edge conditions.

UNIT-4

LIMIT STATE DESIGN OF COLUMNS

Types of columns – Analysis and Design of Short Columns for Axial, Uniaxial and biaxial bending – Use of Design aids.

UNIT-5

LIMIT STATE DESIGN OF STAIRCASE

Types of staircases - Design of doglegged staircase.

SUGGESTED READINGS:

1. P.Dayaratnam, Design of Reinforced Concrete Structures, Oxford and IBH Publishing Co., 1983.
 2. N.C.Sinha and S.K.Roy, Fundamentals of Reinforced Concrete, S.Chand& Co., New Delhi, 1983.
 3. S.N. Sinha,' Reinforced Concrete Design ' Tata McGraw Hill, New Delhi 1998.
 4. Dr.B.C.Punmiya, Reinforced Concrete Structures, Standard Laxmi publication , Delhi, 1994.
 5. Chu-Kia Wang, Charles G.Salmon, Reinforced Concrete Design, Addison Wesley Educational Publishers, New Delhi,1998.
 6. SS Mahadevan , Reinforced Concrete Design, The Science & Technology Book Publishers, Chennai. 2007.
- S.Unnikrishna Pillai, Devdas Menon, Reinforced Concrete Design, Tata McGraw-Hill Publishing Company Ltd, New Delhi. 2008.

17ARP511	COMPUTER APPLICATION-IV								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To develop the advanced knowledge and skills in computer application related to building visualization and rendering
- To create simple multimedia presentations, brochures, videos as required in architectural practice.
- To develop the skills of two-dimensional rendering
- To develop the Skill related to building visualization
- To develop the skill of video presentations as required in architectural practice.
- To develop the skill and knowledge of the Building information Modelling

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualisation and rendering
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

TOPICS

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Animations and Walkthroughs
3. Simulation features of radiation, wind – Computational fluid dynamics, shadows, daylighting

Example:

RHINO, GRASSHOPPER, VECTORWORKS,

PLUGINS-LADYBUG, OPENSTUDIO, DAYSIM, RADIANCE, SEFAIRA

ECOTECH, REVIT SIMULATIONS

SUGGESTED READINGS:

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009

17ARS521	ARCHITECTURAL DESIGN -V								SEMESTER-V		
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	11	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Mixed-use Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

TOPICS

Small complexes - multi planning circulation analysis - massing problems involving building technology - Design and detailing for movement of physically handicapped and elderly persons within and around buildings. examples, shopping centre (Commercial) , Apartments (residential) Nursing home (institutional) home for aged. Construction and manipulation of three dimensional building data bases, Rendering 3D images. Presentation techniques, preparing scaled models using different materials.

Design Process to be approached stage wise through Architectural Programming. Site Planning fundamentals as relevant to small projects to be introduced in the design.

SUGGESTED READINGS:

1. Edward D.Mills, Planning, 4 volumes, Newnes, Butterworths, London, 1976.
2. E and O.E. Planning. Liffie Books Ltd., London, 1973.
3. National Building Code IST
4. De Chiara Callender, Time Saver Standard for Building Types, McGraw Hills Co., 1973.

17ARS522	BUILDING MATERIALS AND CONSTRUCTION -V									SEMESTER-V		
Marks	Internal	80	External				120	Total	200	Exam Hours		6
Instruction Hours /week		L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To give an introduction to glass as a material in architectural construction
- To give an introduction about plastic
- To give an introduction about composite materials
- To understand about the design of timber furnitures, paneling, partition etc.
- To give an introduction to cladding, flooring and painting in building construction.
- To provide familiarity with advanced building construction techniques (shell structures) and materials as well as design with them.

COURSE OUTCOME:

1. Student will learn about the Composition, manufacturing method, treatment, properties and uses of glass
2. Student will learn about Plastic building products
3. Student will learn about Timber floors , build in furnitures , interior details
4. Student will gain Knowledge of glass, plastics, paints and finishes in building construction.
5. Student will become familiar with Secondary Building products – windows, doors, sky light domes
6. Student will gain knowledge about Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.

UNIT I

GLASS

Composition of glass - brief study on manufacture, treatment, properties and uses of glass - special types of glass, sheet glass, plate glass, safety glass, tint coated glass -Glass blocks - properties and applications in the building industry - current developments

UNIT II

PLASTICS, COMPOSITE MATERIALS

Primary Plastic building products – walls, partitions and roofs – design and construction details

Secondary Building products – windows, doors, sky light domes – handrail - design and construction details

UNIT III

TIMBER, ALLIED PRODUCTS

Timber floors , build in furnitures , interior details- wall paneling, false ceiling – partition

UNIT IV

CLADDING, FALSE CEILING, FLOORING AND PAINTING

Stone, ACP, wood, Glass, curtain wall, Structural glazing, (reflected ceiling plan), Flooring and painting

UNIT V

INTRODUCTION TO CURRENT DEVELOPMENTS IN BUILDING INDUSTRY

Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.

Recycled and ecological materials and energy saving materials: card board, earthsheltered structures, recycled plastics, recycled tyres, paper-crete

Exercises of the above through case studies and drawings

SUGGESTED READINGS:

1. S.C.Rangwala, Engineering Materials, Charotar Publishing House, India, 1997.
2. B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.
3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold, London, 1997.
4. Harold B.Olin, Construction Principles Materials and Methods, The Institute of Financial Education, Chicago, 1980.
5. W.B.Mckay Building Construction, Longmans, U.K. 1981.

List of electives

17ARET531	Landscape Architecture
17ARET532	Structures in Architecture
17ARET533	Acoustics
17ARES534	Product design
17ARES535	Building services for special buildings

17ARET531	LANDSCAPE ARCHITECTURE									SEMESTER-V		
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours /week		L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To introduce the various aspects of outdoor design and site planning
- To teach them to enhance & improve the quality of built environment, functionally and aesthetically.
- To stress on the role of landscape design in sustainability, to provide an overview of ecological balance and impacts of human activities and the need for environmental protection and landscape conservation.
- To study the historical method of garden Design
- To understand the significance of urban landscape.
- To provide familiarity with the various elements of landscape architecture and the principle of landscape design.

COURSE OUTCOME:

1. Student will understand the role of landscape design with respect to macro scale of sustainability and ecology
2. Student will understand the micro scale of shaping of outdoor environments.
3. Student will gain Knowledge about the elements of landscape design and their scope.
4. Student will know about the Sensitivity towards evolution of different garden and landscape design across time and context.
5. Student will understand the historical method of landscape design
6. Student will understand the urban scale landscape design.
7. Student will be able to do landscape design with respect to site planning and different functional typologies of spaces

UNIT-1**INTRODUCTION**

Introduction to landscape architecture; role of landscape design in architecture; Introduction to site planning, site analysis & landscape design. Site selection criteria for landscape projects.

UNIT-2**ELEMENTS IN LANDSCAPE DESIGN**

Hard and soft landscape elements, Plant materials, classification, characteristics, use and application in landscape design; Water and Landform.

UNIT-3**GARDEN DESIGN IN HISTORY**

Landscape and garden design in history - French, English, Japanese, Renaissance and Moghul . Study of notable examples.

UNIT-4**URBAN LANDSCAPE**

Significance of landscape in urban areas; road landscaping; waterfront development, landscaping of residential areas , Industrial landscaping .

UNIT-5**LANDSCAPE DESIGN**

Basic principles of planting design; Spatial development in landscape design; Detailed landscape design of any small project including paving and street furniture design

SUGGESTED READINGS:

1. Michael Laurie ,An Introduction to Landscape Architecture, Elsevier, 1986.
2. Geoffrey And Susan Jellicoe, The Landscape of Man, Thames And Hudson, 1987.

17ARET532	STRUCTURES IN ARCHITECTURE								SEMESTER-V		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To outline the evolution of structural systems in the pre industrial era
- To outline the evolution of structural systems in the post industrial era
- To introduce concepts of structural design through works of architects/ engineers.
- To learn about the contemporary structural concepts
- To create understanding about the relationship between architectural expression/ form and structure.
- To learn different structural expressions through case studies

COURSE OUTCOME:

1. Familiarity with concepts of structural design and its influence on the functional and aesthetic domains of architectural design relating to historic periods.
2. Students will gain knowledge about structural systems in pre and post industrial era
3. Students will gain familiarity about structural concepts in contemporary period
4. Familiarity with the works of famous architects and engineers in the structural front
5. Gain knowledge on performing case studies on structurally relevant buildings
6. Understanding of architectural expression and its relation to form, structure and changing technology.

UNIT 1

HISTORY OF STRUCTURAL DESIGN IN THE PRE INDUSTRIAL ERA

Development of monolithic and rock cut structures- trabeated construction-arcuate construction vaults And flying buttresses- tents and master structures and bridges through ancient and medieval history.

UNIT 2

HISTORY OF STRUCTURAL DESIGN IN THE POST INDUSTRIAL PERIOD

Post Industrial modular construction of large span and suspension structures in steel and concrete-projects of Pier Nervi, Maillart, Candella, Buckminster Fuller and Eero Saarinen.

UNIT 3

CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY

The select case studies could include KCR Terminal at Hung Hom, Hong Kong, B3 Offices in Stockley Park , Sainsbury Centre for Visual Art, Renault Centre and Swindon UK by Norman Foster and Stansted Airport Terminal, London, UK by Fosters/Arup British Pavilion EXPO 1992, Seville, Spain and Waterloo International Terminal by Nicholas Grimshaw

UNIT 4

CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY – II

The select case studies could include Inmos Microchip Factory, Centre Commercial St. Herblain, PA Technology, Princeton and Fleetguard, Quimper UK by Richard Rogers Athens Olympic Stadium and Village, Bridges and Public Bus Stop in St. Gallen , Railway Station, Lyon, France and Stadelhofen Railway station, Zurich Schweiz by Santiago Calatrava Kansai International Airport, UNESCO Workshop, the Jean-Marie Tjibaou Cultural Center, Menil Museum, Thomson Optronics Factory, IBM Traveling Exhibition Pavilion, Columbus International Exposition, Genoa Italy and Lowara Officers, Montecchio Maggiore Italia by Renzo Piano Building Workshop

UNIT 5

SEMINAR

Seminar to present a study of architectural form and structural expression through select cases which will aid understanding of structural philosophy and analysis, building envelope and services and construction sequence.

SUGGESTED READINGS:

1. “Paper Arch” and Japan Pavilion at Expo 2000 in Hannover by Shigeru Ban
2. Greene King Draught Beer Dept and Schlumberger Cambridge Research Centre, UK by Michael Hopkins
3. Design Center, Linz, Austria and Two Family House in Pullach Thomas Herzog
4. King Abdul Aziz International Airport, Haj Terminal by SOM
5. Pavilion of the Future, Expo 92, Seville by Martorell, Bohigas& Mackay (MBM)
6. Darling Harbour Expo Center, Sydney Australia by P. COX
7. Olympic Archery Building by Enric Miralles& Carme Pinos
8. Eagle Rock House by Ian Ritchie
9. Le Grande Arche de La Defense by J O Spreckelsen

17ARET533	ACOUSTICS									SEMESTER-V		
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours /week		L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To understand the science behind acoustical design
- To expose students to understand noise control, sound transmission
- To familiarize the students with various building and interior elements for Acoustics
- To familiarize the students with the basic principles of acoustic design
- To familiarize the student with the applications of Acoustical materials
- To familiarize the students with construction methods used in insulation

COURSE OUTCOME:

1. Student will understand the theoretical concepts of acoustics
2. Student will understand the theoretical ideas and concepts sound transmission and absorption
3. Student will be able to understand the basics of noise reduction and design applications of noise control
4. Student will be able to understand the construction methods for noise control
5. Student will understand about basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences
6. Student will understand about efficient insulation of fittings and gadgets, machine mounting and insulation of machinery

UNIT 1

FUNDAMENTALS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies, human ear characteristics - Tone structure.

UNIT 2

SOUND TRANSMISSION AND ABSORPTION

Outdoor noise levels, acceptable indoor noise levels, sonometer, determinate of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

UNIT 3

NOISE CONTROL AND SOUND ABSORPTION

Types of noises, transmission of noise, transmission loss, noise control and sound insulation, remedial measures and legislation.

UNIT 4

CONSTRUCTIONAL MEASURES

Walls/partitions, floors/ceilings, window/doors, insulating fittings and gadgets, machine mounting and insulation of machinery.

UNIT 5

ACOUSTICS AND BUILDING DESIGN

Site selection, shape, volume, treatment for interior surfaces, basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences. Call Centers, Office building and sound reinforcement systems for building types.

SUGGESTED READINGS:

1. Dr.V.Narasimhan - An Introduction to Building Physics - Kabeer Printing Works, Chennai-5 - 1974.
2. D.J.Groomet - Noise, Building and People - Pergumon Press - 1977.
3. Thomas D.Northwood - Architectural Acoustics - Dowden, Hutchinson and Ross Inc. – 1977.
4. B.J.Smith, R.J.Peters, Stephanie Owen - Acoustics and Noise Control - Longman Group Ltd., - New York, USA 1982.
5. David Eagan concepts in Architectural Acoustics.
6. Harold Burris – Meyer and Lewis Good friend, Acoustics for Architects – Reinhold

17ARES534	PRODUCT DESIGN									SEMESTER-V	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To gain Knowledge about the various styles of furniture
- To gain knowledge about the manufacturing of various materials/ product
- To learn about visual codes & Symbols
- To understand the importance of Artefacts, murals and Artwork
- To learn about various products for the Physically challenged
- Understanding the methods and techniques involved in furniture and product design.

COURSE OUTCOME:

1. Student will gain knowledge about the various furniture and products
2. Student will understand the needs of the industry demand and product value
3. Student will gain knowledge in Composite materials and Products
4. Student will gain knowledge about Packaging design
5. Student will gain knowledge about the House hold items / products
6. Student will be able to do a Product design for the client

UNIT-1

INTRODUCTION

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

UNIT-2

HUMAN FACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability. Information input and processing. Human control systems. Applied anthropometry – Human response to climate.

UNIT-3

ASPECTS OF PRODUCT DESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays, Visual codes and symbols.

UNIT-4

PRODUCT DESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

UNIT-5

DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery. Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc. Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc. Element design for the physically and mentally different people.

SUGGESTED READINGS:

1. Time Saver Standards for Interior Design
2. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGrawhill Co., USA, 1982.
3. Francis D.K.Ching, Interior Design Illustrated, VNR Publications, New York, 1987.
4. An invitation to Design, Helen Marie Evans.

17ARES535	BUILDING SERVICES FOR SPECIAL BUILDINGS									SEMESTER-V	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To impart advanced technical and practical knowledge in building services
- To gain knowledge of special services through preparation of service drawing and details.
- To understand about the water distribution for high rise structures
- To gain understanding about the Sewage & Drainage for high rise buildings
- To gain knowledge about the Sewage treatment plant
- To gain knowledge about Electrical installation for high rise buildings

COURSE OUTCOME:

1. Student will be able to understand and design high rise buildings with essential services
2. Student will gain knowledge in advanced services
3. Student will understand about Safety standards for special buildings
4. Student will gain knowledge about Fire safety service standards for all types of buildings
5. Student will gain knowledge in Building management systems
6. Student will gain Knowledge about the integration of services for Multi storied structures

UNIT 1

Water Distribution for High rise / campus development

External water distribution layout- header pipe- U G sump – Puddle flange – water riser pipes – water calculation for campus – water meter – water irrigation – vision for landscaping- water management –

Internal water distribution layout – toilet details- plumbing – kitchen –and utilities – types of pipes and joints – fixtures and fittings – shaft details

UNIT -2

Sewage and drainage for high rise and campus development

External sewage and drainage layout – Gully trap -Collection chamber – manholes – invert level – sewage treatment plant – grey water supply and calculation –saucer drain – rain water harvesting and terrace rain water piping system

Internal sewage systems – toilet details – Trap details – pipes and joints –vent pipes – plumbing system types- fixtures details

UNIT -3

Electrical installation for high rise and campus design

Electrical panel details- basic SLD(single line diagram)-external cable layout – external lighting layout –false ceiling layout - internal lighting layout – internal raw and UPS power layout – cable tray and cable trunk layout - Vertical shaft details -

UNIT -4

Heating Ventilation and Air conditioning Systems in High rise and campus design

Different types of chillers and layout –external chiller piping system – AHU details – false ceiling layout – supply and return air diffuser details – ducting layout – Vertical shaft – VRV – VAV systems- Sound attenuator.

UNIT -5

Fire Fighting and BMS systems in High rise and campus design

UG sump for Fire fighting- fire hydrant systems – external routing – internal hydrant systems – hose reel hydrant – foam hydrant -overhead tank – False ceiling layout -Fire detection – smoke detectors -Sprinklers - Glass break system - fire alarm system –Internal fire piping layout

IBMS(Integrated Building Management Systems)- types of IBMS- Control room details – Internal Routing details – sensors – CCTV – access control – burglar control etc

Drawings : Integrated Service layout – Internal and External – cross section details

SUGGESTED READINGS:

1. William H. Severns and Julian R. Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D. Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Delhi, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD, New Delhi, 2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP: 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP: 7 – 1992?
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.

SEMESTER 6

SEMESTER-V											
17ART601	BUILDING CODES AND REGULATIONS									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To develop understanding of the duties and liabilities of an architect
- To gain knowledge of bye-laws that relate to the building
- To understand about the environment in the Indian context.
- To Understand about legislation of corporation areas
- To understand about the Legislation of panchayat
- To understand about legislation of Industries

COURSE OUTCOME:

1. Student will be able to read and understand government related documents and incorporate it in practice
2. Student will be able to understand the building regulations and follow accordingly
3. Student will understand about the legislation of corporation areas
4. Student will understand about the legislation of panchayat
5. Student will understand about the legislation of Industries
6. Student will be able to design buildings as per the recent norms and standards

UNIT-1

LEGISLATION - CORPORATION AREAS

Chennai Corporation Building Rules 1972, Development control Rules for Chennai Metropolitan Area 1990

UNIT-2

LEGISLATION - PANCHAYATS

The Panchayat Building Rules 1942

UNIT-3

LEGISLATION - INDUSTRIES AND FACTORIES

The Tamil Nadu Factory Rules 1950

UNIT-4

EMERGING AREAS OF IMPORTANCE

Role of urban Arts Commissions - need for special rules on architectural control and development

UNIT-5

SPECIAL LEGISLATION

Environmental Acts and Laws - Special Rules governing Hill Area Development - coastal area development and management - Heritage Act of India - Consumer protection act and their relevant provisions- OTHER norms- HAKA, CRS norms, MOEF, FMB DRAWINGS- Approval drawings .

SUGGESTED READINGS:

1. Publications of COA, IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
2. D.C. Rules for Chennai Metropolitan Area 1990
3. T.N.D.M. Building Rules, 1972
4. T.N.P. Building Rules 1942
5. Chennai City Corporation Building Rules 1972
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The Tamil Nadu Hill Areas Special Building Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

17ART602	PHYSICAL PLANNING								SEMESTER-VI		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To introduce the vocabulary, elements and classification of human settlements.
- To learn about the planning theories
- To give exposure to planning concepts at different scales of settlements.
- To understand about the planning aspects by means of Survey
- To gain understanding about the land use planning
- To give an understanding of planning addressing current issues.

COURSE OUTCOME:

1. Student will understand morphology of settlements and their generating forces and characteristics.
2. Student will understand the role of planning processes in making positive changes to settlements.
3. Student will gain knowledge and awareness of planning interventions with respect to the current world.
4. Student will gain understanding about the city evolution process due to planning
5. Student will gain Knowledge about existing settlements by Survey studies
6. Student will gain vast knowledge about Landsue patterns and planning theories

UNIT-1

HUMAN SETTLEMENTS AND PLANNING THEORIES

Origins, evolution and growth of settlements. Relation between urban and rural settlements

Urbanisation, Industrialisation and urban growth, definitions and inter relationship. Trends in urbanization in India since Independence. Growth of metropolitan cities and their management.

UNIT-2

PLANNING THEORIES

Enunciated by Ebenezer Howard, Patrick Geddes, Soria Y Mata, Doxiadis, Le-Corbusier, Clarence Stein, Clarence Arthur perry, Hilberseimer.

UNIT-3

EVOLUTION OF CITY

Evolution of city and Components of a city - Central business district of a city, Special economic zone, coastal regulatory zone, fringe area.

UNIT-4

LANDUSE PLANNING

Land use classification for cities, analysis of land uses in Indian cities. Demography pattern, social & physical infrastructure, environmental and pollution, traffic and road network.

UNIT-5

PLANNING TECHNIQUES

Study and analysis of existing settlements, methodology of conducting diagnostic surveys and studies, land use survey, socio economic survey, traffic surveys and presentation of data

SUGGESTED READINGS:

1. Gallion and Eisner, The Urban Pattern: City Planning and Design, Van Nostrand, 5th Edition, 1986
2. Chapin, Urban Land Use Planning, University of Illinois Press, Chicago, 1995.

17ARS621	ARCHITECTURAL DESIGN VI								SEMESTER-VI		
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	11	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualise a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Campus Design.
6. Student will be able to Communicate effectively through the design ideas

TOPICS

Design of large structures - Multiuse multi span - non masonry building types involving buildings – Design and detailing for movement and use by physically handicapped people within and around building technology and services. Examples: college (Institutional) office buildings Resorts - etc. Preparation of working drawings using CAD for the design exercises.

Design Process to be approached stage wise through Architectural Programming. Advanced concepts of Site Planning as relevant to small and medium sized campuses to be introduced in the design.

SUGGESTED READINGS:

1. Edward D mills, planning, 4 volumes, Newnes Butterworths, London 1976
2. E and OE planning 11ffe Books Ltd., London, 1973
3. National Building Code 151
4. De Chara and Callendar, Tune, saver standards for building types. McGraw Hall Col. 1983.

17ARS622	ARCHITECTURAL DETAILING AND WORKING DRAWING								SEMESTER-VI		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To enable students to appreciate the challenges in detailing for both the newly designed buildings as well as while carrying out additions and alterations to existing buildings.
- To enable students to understand the various Fittings, Furniture & Equipment (FFE) that are needed in buildings and their installation methods.
- To create architectural drawings for construction
- To understand the structural & services drawings
- To refer & integrate all the architectural and supporting working drawings
- To design, incorporate and detail architectural and interior components of the architectural design project

COURSE OUTCOME:

1. Student will gain understanding of all the aspects that go into the making of a building through study of drawings related to construction.
2. Student will gain the ability to resolve spatial concerns with technical aspects and services of a building.
3. Student will understand to design and detail components within a building.
4. Student will gain knowledge in interior detailing and planning
5. Student will gain knowledge in Interior furniture, fixtures as per the functionality
6. Student will gain understanding in the installation methods of cladding, integrated services by means of detailed drawings etc

UNIT 1 to 5

DETAILING OF RESIDENTIAL BUILDING

Detailing of a residence – Building marking drawing, Working Drawings- Plan, Section- Longitudinal, Transverse sections, chord sections, Door Window schedule, centre line column marking drawing, door and window joinery details – Flooring layout – toilet layout – Electrical layout and Plumbing layout – Terrace RWP details -Staircase details – Interior details -Detailing of built-in elements like kitchen counters, cupboards, cabinets, toilets, toilet fitting, Exercises of the above through case studies and drawings.

DETAILING OF COMMERCIAL BUILDINGS

A) Detailing of a commercial building – Building marking drawing, Working Drawings- Plan, Section- Longitudinal, Transverse sections, chord sections, Door Window schedule, centre line column marking drawing, door and window joinery details – Flooring layout – toilet layout – Electrical layout and Plumbing layout – Terrace RWP details -Staircase details – Interior details -Detailing of built-in elements like cabinets, toilets, toilet fitting, Structural Glazing, Staircase, Flooring. Exercises of the above through case studies and drawings.

B) Detailing of shop-fronts, office spaces for commercial buildings including detailing of crucial elements such as entrance porches, main doors, show-windows, enclosed and air-conditioned atrium spaces.

C) Detailing of façade and selected spaces for apartment buildings, hotels and hostels.

Exercises of the above through case studies and drawings.

SUGGESTED READINGS:

1. De Chiara and Callendar, Time Saver Standard Building Types, McGraw Hill Co, 1980.
2. Richardson Die truck, Big Idea and Small Building, Thames and Hudson, 2002
3. Edward D Mills, Planning – The Architecture Handbook, British Library Cataloguing in Publication Data, 1985
4. Susan Dawson, Architect's Working Details (Volume 1-10), 2004
5. Swimming Pools, Lane Book Company, Menlo Park, California
6. Nelson L Burbank, House Carpentry Simplified, Simmons-Board- Man
7. Publishing Corporation, New York,
8. Landscape Construction
9. Grant W. Reid, Landscape Graphics, Whitney Library of Design, 1987

17ARS623	SUSTAINABLE ARCHITECTURE								SEMESTER-VI		
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To understand the concept of sustainability
- To understand the impacts of environment today and to follow the steps to sustainability
- To work towards sustainable development and to understand low impact construction practices,
- To understand the life cycle costs and alternative energy resources.
- To familiarize the students with the various rating systems for building practices with case studies.
- Through case studies to understand the concept of sustainable communities and the economic and social dimensions.

COURSE OUTCOME:

1. Student will understand about climate change and the need for the sustainable buildings
2. Student will understand the energy-based concepts and resource optimisation
3. Student will understand about the environmental impacts of today and Follow the Sustainable approach
4. Student will gain ability to design energy efficient buildings
5. Student will understand the green concepts and apply them in every aspect and approach towards sustainable architecture
6. Student will understand about the building simulation for energy analysis and for various design solutions

UNIT 1

Concept of Sustainability – Carrying capacity, sustainable development– Ethics and Visions of sustainability. Eco system and food chain, natural cycles – Ecological foot print – Climate change and Sustainability-World population – Gdp – Carbon emissions–steps by the organisations etc

UNIT 2

Energy – resources availability – Renewable and non – renewable energy resources – Embodied energy – energy efficiency – cost savings – technologies – net zero energy – Zero waste – Integrated energy design –Low energy building design- Life cycle assessments and Energy Audits -related Case studies

UNIT 3

Materials -Selection of materials Eco building materials and construction- Green materials – Biomimicry, Low impact construction, and recyclable products-Adaptive reuse and regeneration -related case studies

UNIT 4

Green building systems – Rating system –LEED-INDIA,GRIHA,etc., with related case studies

UNIT 5

Design Analysis and Simulation studies –Building performance analysis–Modelling tools and techniques – daylighting, shading , ventilation , insulation effects – Design Strategies – Passive ,Active ,Hybrid systems – Thermal comfort analysis – Psychological Effective Temperature(PET)- Percentage People dissatisfied(PPD)- PMV etc –

Usage of simulation softwares are recommended – ECOTECT,DAYSIM- RADIANCE,HEED,CLIMATE CONSULTANT and recent softwares updated

SUGGESTED READINGS:

1. Sustainable Architecture and Urbanism: Concepts, Technologies and examples by Gauzin- Muller(D) – Birkhauser 2002.
2. Eco-Tech : Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997.
3. Ecodesign : A manual for Ecological Design by Yeang(K) – Wiley Academy 2006.
4. Sustainable Architecture : Low tech houses by Mostaedi (A) – CarlesBroto 2002.
5. HOK guide book to sustainable design by Mendler (S) & Odell (W) – John willey and sons 2000.
6. Environmental brief : Path ways for green design by Hyder(R) – Taylor and Francis 2007.
7. Green Architecture: Design for a sustainable future by Brenda and Vale (R) – Thames and Hudson 1996.
8. Sun , Wind and light – Arch design strategies – Mark Dekay and G.Z.Brown
9. Heating, Cooling ,Lighting – Norbert Lechner
10. Man,Climate and Architecture- Baruch Givoni.
11. Arvind Krishnan & Others – Climate Responsive Architecture, Tata Mcgraw –Hill New Delhi 2001.
12. How Buildings Work- Natural order of Architecture – Edward Allen
13. Charles. J. Kibert, ‘Sustainable Construction’ John Wiley and sons Inc, USA.
14. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.
15. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India.

List of Electives

17ARET631	Vernacular Architecture
17ARET632	Progressive Architecture
17ARES633	Interior Design
17ARES634	Digital Architecture

17ARET631	VERNACULAR ARCHITECTURE								SEMESTER-VI		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To introduce the study of vernacular architecture as a process and not a product.
- To provide an overview of the various approaches and concepts to the study of vernacular architecture.
- To study the various vernacular architecture forms in the different regions of the country.
- To gain Knowledge about the methods & techniques of Vernacular Architecture
- To gain understanding about the climatic considerations & Design aspects of vernacular Architecture
- To gain understanding about socio- economic aspects of the vernacular & Traditional Architecture

COURSE OUTCOME:

1. Student will understand the Indian vernacular architecture as a process and to also provide an overview of various approaches and concepts towards its study.
2. Student will gain Knowledge of vernacular architectural forms in different regions.
3. Student will gain understanding of the impact of colonial rule on vernacular architecture in India
4. Student will understand about the the climatic consideration & Design aspects
5. Student will understand the socio economic aspects existed in the various regions through the study of vernacular Architecture
6. Student will gain knowledge in the vernacular methods of construction and ways to incorporate in this modern architecture.

UNIT 1

INTRODUCTION

Definition and classification of Vernacular architecture – Vernacular architecture as a process – Survey and study of vernacular architecture: methodology- Cultural and contextual responsiveness of vernacular architecture: an overview

UNIT 2

APPROACHES AND CONCEPTS

Different approaches and concepts to the study of vernacular architecture: an over view – Aesthetic, Architectural and anthropological studies in detail

UNIT 3

VERNACULAR ARCHITECTURE OF THE WESTERN NORTHERN REGION OF INDIA

Forms spatial planning, cultural aspects, symbolism, colour, art, materials of construction and construction technique of the vernacular architecture of the following: - Deserts of Kutch and Rajasthan; Havelis of Rajasthan

- Rural and urban Gujarat; wooden mansions (havelis); Havelis of the Bohra Muslims - Geographical regions of Kashmir; house boats

UNIT 4

VERNACULAR ARCHITECTURE OF SOUTH INDIA

Forms, spatial planning, cultural aspects, symbolism, art, colour, materials of construction and construction technique, proportioning systems, religious beliefs and practices in the vernacular architecture of the following - Kerala: Houses of the Nair & Namboothri community; Koothambalam, Padmanabhapuram palace.

- Tamil Nadu: Houses and palaces of the Chettinad region; Agraharams.

UNIT 5

WESTERN INFLUENCES ON VERNACULAR ARCHITECTURE OF INDIA

Colonial influences on the Tradition Goan house

Evolution of the Bungalow from the traditional bangla, Victoria Villas – Planning principles and materials and methods of construction. Settlement pattern and house typologies in Pondicherry and Cochin.

SUGGESTED READINGS:

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997.
2. Amos Rapoport, House, Form & Culture, Prentice Hall Inc. 1969.
3. R W Brunskill: Handbook on Vernacular Architecture
4. V.S. Pramar, Haveli – Wooden Houses and Mansions of Gujarat, Mapin Publishing Pvt. Ltd., Ahmedabad, 1989.
- 5.. Kulbushanshan Jain and Minakshi Jain – Mud Architecture of the Indian Desert, Aadi Centre, Ahmedabad 1992.
6. G.H.R. Tillotsum – The tradition of Indian Architecture Continuity, Controversy – Change since 1850, Oxford University Press, Delhi, 1989.
7. Carmen Kagal, VISTARA – The Architecture of India, Pub: The Festival of India, 1986.
8. S. Muthiah and others: The Chettiar Heritage; Chettiar Heritage 2000
9. Vernacular Architecture – contemporary traditions – Aiswarya Tipnis - TERI
10. Lessons from vernacular architecture – Willi Weber- Routledge publishers

17ARET632	PROGRESSIVE ARCHITECTURE								SEMESTER-VI		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To understand and acquire knowledge in advanced architectural concepts and ideologies.
- To gain Knowledge about the future concepts of eminent architects
- To understand about the material usage in the current trend of architecture
- To gain knowledge about the Concept of biomimicry
- To understand about the adaptive reuse
- To gain understanding about energy integration and zero energy developments

COURSE OUTCOME:

1. Student will be able to understand and evolve futuristic design ideas and concepts
2. Student will be able to integrate various aspects of design thinking of future
3. Student will understand about the parametric design concepts and applications
4. Student will understand about the concept of Biomimicry
5. Student will gain knowledge about the Adaptive reuse
6. Student will gain knowledge about energy integration and zero energy development.

UNIT-1

Futuristic Vision

Future concepts as envisioned by Antonio Sant'Elia, Frank Lloyd Wright, Corbusier.

UNIT-2

Futuristic Trends

Future trends being evolved by Marcos Novak, Neil Denari, Greg Lynn, Toyo Ito and others.

UNIT-3

Architectural Concepts and Ideas

Evolution of contemporary architectural concepts such as biomimicry, adaptive reuse, low cost development and urban regeneration.

UNIT-4

Materials, Technology and Systems

Futuristic building materials, building tectonics and systems of the future.

UNIT-5

Energy Integration

“Zero energy” and “Energy +” buildings with emphasis on an integrated approach.

SUGGESTED READINGS:

1. Bell, J., “21st Century House”, Laurence King Publishing, 2006
2. Jodidio, P., “Building a New Millennium”, Vol.1 Taschen, 2003
3. Jodidio, P., “Architecture Now”, Vol. 2, Taschen, 2004

17ARES633	INTERIOR DESIGN									SEMESTER-VI	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To provide familiarity with the characteristics of interior spaces
- To gain knowledge in all types furniture across history.
- To introduce the profession of interior design and bring out its role.
- To inform about the various components of interior space and give an understanding of the design aspects involved in each
- To provide knowledge in Interior services
- To provide knowledge in interior specification & costing

COURSE OUTCOME:

1. Student will gain knowledge and understanding in Interior design
2. Student will understand the various elements in Interior Design
3. Student will gain knowledge in terms of Interior design lighting and accessories
4. Student will gain an overall exposure to the ways in which interior spaces can be enriched through the design of specific interior components.
5. Student will be able to do specification for an Interior Design layout
6. Student will be able to design a Interior project with all working drawings

UNIT-1

INTRODUCTION TO INTERIOR DESIGN

Definition of interior design -design of interior spaces as related to typologies and functions, themes and concepts - Study of the history of interior design through the ages relating to historical context, design movements and ideas etc.

UNIT-2

ELEMENTS OF INTERIOR DESIGN

Introduction to various elements in interiors like floors, ceilings, walls, staircases, openings, interior service elements, incidental elements etc. and various methods of their treatment involving use of materials and methods of construction in order to obtain certain specific functional, aesthetic and psychological effects - design projects.

UNIT-3

INTERIOR DESIGN SERVICES - LIGHTING, ACCESSORIES, LANDSCAPE

Study of interior lighting - different types of lighting, their effects, types of lighting fixtures. Other elements of interiors like accessories used for enhancement of interiors - paintings, objects de art, Interior landscaping - elements like rocks, plants, water, flowers, fountains, paving, artefacts, etc. their physical properties, effects on spaces and design values.

UNIT-4

FURNITURE DESIGN

Study of relationship of furniture to spaces and human movements furniture design as related to human comfort, function, materials and methods of construction, changing trends and lifestyles, innovations and design ideas - study on furniture for specific types of interiors like office furniture, children's furniture, residential furnitures, display systems, etc. - projects on furniture design.

UNIT-5

CASE STUDIES AND PROJECT

Study of Contemporary design in India and abroad with reference to interior design and decoration. Study of projects related to Residential Interiors, Commercial Interiors, Hospital Interiors etc. as regards to design scheme, functionalism, aesthetics, services integration, interior materials and details. Small scale interior projects such as Interior of an Office, Restaurant, Kids bedroom etc.

SUGGESTED READINGS:

1. Francis D.K.Ching, Interior Design Illustrated, V.N.R. Pub. NY 1987.
2. An Invitation to design, Helen Marie Evans.
3. Steport- De - Van Kness, Logan and Szebely, Introduction to Interior Design Macmillan Publishing Co., NY 1980.
4. Inca/Interior Design Register, Inca Publications, Chennai 1989.
5. Kathryn B.Hiesinger and George H.Marcus, Landmarks of twentieth Century Design; Abbey Ville Press, 1993.
6. SyanneSlesin and Stafford Ceiff- Indian Style, Clarkson N.Potter, Newyork, 1990.
7. The Impulse to adorn - Studies in traditional Indian Architecture. - Editor Dr.Saranya Doshi, Marg Publications, 1982.

17ARES634	DIGITAL ARCHITECTURE									SEMESTER-VI	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To develop the advanced knowledge and skills in Digital application
- To develop knowledge in building visualization
- To develop knowledge in digital rendering
- To develop knowledge in walk through Animations
- To get familiarized & create simple multimedia presentations & brochures
- To learn about the videos & Presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will learn about the Latest digital applications used in the architectural practice
2. Student will gain knowledge about parametric applications in design
3. Student will learn about the building visualization & Simulation
4. Student will learn about Advanced rendering techniques
5. Student will learn about animation and visualization techniques used in the architecture industry
6. Student will learn about the video presentations and realistic animations of buildings

TOPICS

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Advanced techniques in building information modeling
3. Advanced Animations and Walkthroughs
4. Advanced Simulating gravity, wind and other effects in the scene, distributed rendering
5. Advanced Building Performance Analysis on Building Model using softwares.

Example :Advanced level of animations -Auto desk Revit, 3ds Max, rhino, lumion, vector works, BIM, Ecotect, v-ray rendering techniques,Grasshopper, Sketch up – Sefaira, Open studio and recent softwares

SUGGESTED READINGS:

1. Rendering Techniques for mixed reality, Thomas Grlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009s

SEMESTER 7

SEMESTER-V											
17ARP711	PRACTICAL TRAINING								SEMESTER-VI		
Marks	Internal	400	External				600	Total	1000	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	0	Credits			14

COURSE OBJECTIVE:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice
- To work from initiation of project, development of concepts into schematic drawings, approval process, presentations and release of working drawings
- To get involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process
- To coordinate with the various levels of workman/contractors etc for execution of the Project

COURSE OUTCOME:

1. Student will get and overall idea of the nuances of architectural practice.
2. Student will understand about the total process that takes place in an Architectural firm
3. Student will understand the Specifications of a project, time involved and the execution process
4. Student will gain knowledge in architectural working drawings
5. Student will gain experience of client meetings & site Execution
6. Student will gain the maturity of Architectural design, and the experience gained from internship will be helpful in the thesis project

TOPICS

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by eminent architects. The choice of the office shall be approved by the Training Committee of the Faculty of Architecture. The practical training, primarily involves learning in the office and on the site. The progress of training shall be assessed periodically by reports from the employers of trainees and by the Training Committee of the Faculty of Architecture.

The evaluation of the practical training will be based on the following features.

- Client meeting and interaction
- Site visits, verification and measurements
- Concept and scheme development
- Construction documents / drawings
- Training portfolio

SEMESTER 8

SEMESTER-VI											
17ART801	HOUSING								SEMESTER-VIII		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- Understanding of the various issues involved in urban housing
- Understand the various issues of Rural housing
- Understand about the planning and design solutions for low income groups.
- Understanding about the housing Policies & Agencies involved
- Understanding about the housing design aspects in a Larger scale
- Understanding about the Socio-economic Aspects

COURSE OUTCOME:

1. Student will learn the various schemes and policies in Housing in India
2. Student will understand the importance of socio-economic aspects of the People and need for Housing
3. Student will learn about housing standards
4. Student will learn about the Housing design Process
5. Student will learn about government housing, orivate& cooperative housing
6. Student will be able to arrive at design ideas for large scale Housing Projects

UNIT-1**INTRODUCTION**

Review of housing typology, Housing demand and supply – Calculation of future need.

Housing resources and options available in housing

UNIT-2**HOUSING AGENCIES AND POLICIES**

Housing Agencies and their contributions to housing development – HUDCO, State Housing Boards, Housing Co-operatives and Banks. Housing Policies in India and other countries.

UNIT-3**SOCIO ECONOMIC ASPECTS**

Social factors influencing Housing Design, affordability, economic factors and housing concepts – Slum – rehabilitation and resettlement schemes

UNIT-4**HOUSING STANDARDS**

Different types of Housing standards – Methodology of formulating standards – Relevance of standards in Housing Development.

UNIT-5**HOUSING DESIGN PROCESS**

Different stages in project development – Layout design including utilities and common facilities – Housing design as a result of environmental aspects, development of technology and community interests. Case studies of Public Sector housing, Government housing, Private and Co-operative housing – their Advantages and disadvantages.

SUGGESTED READINGS:

1. Babur Mumtaz and Patweikly, Urban Housing Strategies, Pitman Publishing, London, 1976.
2. GeoffreyK.Payne, Low Income Housing in the Development World, John Wiley and Sons, Chichester, 1984.
3. John F.C.Turner, Housing by people, Marison Boyars, London, 1976.
4. Martin Evans, Housing, Climate and Ocmfort, Architectural Press, London, 1980.
5. Forbes Davidson and Geoff Payne, Urban Projects Manual, Liverpool University Press, Liverpool, 1983.

17ART802	URBAN DESIGN								SEMESTER-VIII		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To provide knowledge of design of urban spaces including renewal and development.
- To provide knowledge of public spaces
- To provide knowledge of organizing and articulation of spaces for residential, commercial, industrial and recreational areas
- To provide knowledge of Causes and consequences of urban blight and obsolescence
- To provide knowledge of methods of conducting surveys and analysis
- To provide knowledge of programs for urban redevelopment

COURSE OUTCOME :

- Ability to gain knowledge in urban space planning
- Ability to handle large scale urban renewal projects
- Understanding of organizing and articulation of spaces for residential, commercial, industrial and recreational areas
- Ability to analyse the Causes and consequences of urban blight and obsolescence
- Ability to conduct surveys and analysis
- Understanding of programs for urban redevelopment

UNIT-1

INTRODUCTION

Relationship between Architecture, Urban Design and Town Planning - Perception of city form and pattern – Townscape elements

UNIT-2

ROLE OF PUBLIC SPACE IN URBAN AREAS

Introduction to public spaces. Evolution of public spaces. Comparative analysis of public spaces, their organization and articulation.

UNIT-3

ORGANIZATION OF SPACE

Understanding, organizing and articulation of spaces for residential, commercial, industrial and recreational areas.

UNIT-4

URBAN RENEWAL

Causes and consequences of urban blight and obsolescence – slums and shanties – methods of conducting surveys, analysis and presentation of data, prevention of formation of slums and squatter settlements. Environmental and management issues.

UNIT-5

URBAN REDEVELOPMENT

Objectives, surveys programs of urban redevelopment and public involvement and participation.

SUGGESTED READINGS:

1. Gordon Cullen - The concise TOWNSCAPE - The Architectural Press- 1978
2. Lawrence Halprin- CITIES - Reinhold Publishing Corporation N.Y. 1964.
3. Gosling and Maitland - URBAN DESIGN -St.Martin's Press, 1984.
4. Jonathan Barnett - An Introduction to Urban Design - Harper & Row, Publishers, N.Y.,1982

17ARS821	ARCHITECTURAL DESIGN - VII								SEMESTER-VIII		
Marks	Internal	200	External				300	Total	500	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	14	Credits			8

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualise a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Urban Design proposal
6. Student will be able to Communicate effectively through the design ideas.

TOPICS

Design of advanced and complex problems – URBAN LEVEL - comprising group multi storeyed structures and infrastructure - with regard to climatic conditions, orientation, services, circulation problems relating to large developments Design and detailing for movement and use by handicapped persons within and around building and campuses to be addressed – examples: campus design, urban centers, Housing for Senior citizens- Urban and regional planning etc

SUGGESTED READINGS:

1. Edward D Mills, planning, 4 volumes, newness Butterworths, London 1976
2. E and OE Planning London, Books Ltd 1973
3. National Building Code ISI
4. De Chira and Callendar- Time saver standards for Building Types - Mc Graw Hill Co., 1973.

17ARS822	ESTIMATION AND SPECIFICATION								SEMESTER-VIII		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To provide the student adequate knowledge to write the specifications for a given item of work
- To gain knowledge in specification
- To gain Knowledge in Estimation of Civil Work
- To gain knowledge in estimation of Carpentry work
- To gain Knowledge in the estimation of Plumbing work
- To unde to work out the unit cost of individual items based on their specifications and arrive at the overall cost of the project.

COURSE OUTCOME:

1. Student will be able to understand and write specification for the given item of work
2. Student will gain knowledge & Understanding of Estimation of civil work
3. Student will gain knowledge about estimation of Carpentry work
4. Student will gain knowledge about estimation of plumbing work
5. Student will be able to do calculate the quantities on site with Field measurement book
6. Student will learn about various calculation of bill of quantities for Interiors

UNIT-1

SPECIFICATION

Necessity of specification, importance of specification, - How to write specification, - Types of Specification, - Principles of Specification writing, - Important aspects of the design of specification – sources of information – Classification of Specification.

UNIT-2

SPECIFICATION WRITING

Brief Specification for 1st class, 2nd class , 3rd class building. Detailed specification for earthwork excavation, plain cement concrete, Reinforced concrete, first class and second class brickwork, Damp proof course, ceramic tiles/marble flooring and dado work, woodwork for doors, windows frames and shutters, cement plastering, painting & weathering course in terrace.

UNIT-3

ESTIMATION

Types & purpose, Approximate estimate of buildings – Bill of quality, - Requirement for preparing estimation, factors to be considered, - principles of measurement and billing, contingencies, Elementary billing and measurement of basic materials like brick, wood, concrete and unit of measurement for various items of work – abstract of an estimate.

UNIT-4

DETAILED ESTIMATE – PART-1

Deriving detailed quantity estimates for various items of work of a building. Like earthwork excavation, brick work, plain cement concrete, Reinforced cement concrete works, wood work, iron works,

UNIT-5

DETAILED ESTIMATE – PART-2

.Deriving detailed estimate for items of work such as -plastering, painting, flooring, weathering course for a single storied building using centre line method and long and short wall method.

SUGGESTED READINGS:

1. Data, Estimating and Costing, S.Dutta and Co., Lucknow
2. S.C.Rangwala, Elements of Estimating and Costing, Charoter Publishing House, India.
3. W.H.King and D.M.R.Esson, Specification and Quantities for Civil Engineers, The English University Press Ltd.
4. T.N.Building Practice, Vol.1, Civil, Govt. Publication.P.W.D. Standard specifications, Govt. Publication.

List of Electives

17ARET831	Architectural Conservation
17ARET832	Construction technology
17ARET833	Disaster management
17ARET834	Vaastu and principles of Traditional Indian Architecture
17ARES835	Architectural Journalism
17ARES836	Green Buildings

17ARET831	ARCHITECTURAL CONSERVATION									SEMESTER-VIII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To introduce the various issues and practices of Conservation
- To familiarize the students with the status of conservation in India
- To teach them about the various agencies involved in the field of conservation worldwide and their policies.
- To outline the status of conservation practice in the country
- To Know about the various guidelines for the preservation, conservation and restoration of buildings.
- To inform the students about the character and issues in our heritage towns through case studies

COURSE OUTCOME:

1. Student will understand the importance of heritage, issues and practices of conservation through case studies.
2. Student will become familiar with historic materials and their properties, different technologies for investigating masonry, foundation and also traditional and modern repair methods
3. Student will gain knowledge about the government agencies involved in Conservation
4. Student will understand the methods of urban Conservation.
5. Student will gain knowledge about various methods of Conservation techniques and Design
6. Student will gain knowledge about various policies involved in Conservation and practice in India

UNIT 1

INTRODUCTION TO CONSERVATION

Conservation- Need, Debate and purpose.

Defining Conservation, Preservation and Adaptive reuse. Distinction between Architectural and Urban Conservation. International agencies like ICCROM, UNESCO and their role in Conservation

UNIT 2

CONSERVATION IN INDIA

Museum conservation – monument conservation and the role of Archeological Survey of India – role of INTACH – Central and state government policies and legislations – inventories and

projects- select case studies of sites such as Hampi, Golconda, Mahabalipuram -craft Issues of conservation

UNIT 3

CONSERVATION PRACTICE

Listing of monuments- documentation of historic structures- assessing architectural character – historic structure report- guidelines for preservation, rehabilitation and adaptive re-use of historic structures- Case studies of Palaces in Rajasthan, Chettinad and Swamimalai dwellings, seismic retrofit and disabled access/ services additions to historic buildings-heritage site management

UNIT 4

URBAN CONSERVATION

Over view of urban history of India and Tamil Nadu- understanding the character and issues of historic cities – select case studies of towns like Srirangaram, Kumbakonam and Kanchipuram - historic districts and heritage precincts.

UNIT 5

CONSERVATION PLANNING

Conservation as a planning tool.- financial incentives and planning tools such as Transferable Development Right(TDR)-urban conservation and heritage tourism-case studies of sites like for Cochin, Pondichery French town.- conservation project management

SUGGESTED READINGS:

1. Donald Appleyard, The Conservation of European Cities, M.I.T. Press, Massachusetts
2. James M. Fitch, Historic Preservation: Curatorial Management of the Built World by University Press of Virginia; Reprint edition (April 1, 1990)
3. A Richer Heritage: Historic Preservation in the Twenty-First Century by Robert E. Stipe
4. Conservation Manual , Bernard Fielden; INTACH Publication

17ARET832	CONSTRUCTION TECHNOLOGY								SEMESTER-VIII		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To study the advancements in construction with concrete for large span structures.
- To familiarize the students with the various classifications in buildings
- To familiarize the students with the manufacture, storage and transportation of concrete.
- To inform the various equipment used in the construction industry
- To learn about the criteria for choice of equipment.
- To familiarize the students with an overview of construction management, planning and scheduling

COURSE OUTCOME:

1. Ability to understand the practice of construction technology
2. Ability to understand the construction systems for high rise buildings
3. Ability to understand the process of manufacture, storage and transportation of concrete
4. Ability to understand the various equipment used in the construction industry
5. Ability to understand the criteria for choice of equipment
6. Students will gain an overview of construction management, planning and scheduling

UNIT 1

GENERAL BUILDING REQUIREMENTS

Classification of buildings - Sites and Services - Requirements of parts of buildings.

UNIT 2

CONSTRUCTION SYSTEMS

Planning - Cast in situ construction (ready mixed pumped etc.) Reinforced concrete and prestressed concrete constructions precast concrete and pre- fabrication system - Modular coordination – Structural schemes.

UNIT 3

CONSTRUCTION PRACTICE

Manufacture, storage, transportation and erection of precast component forms, moulds and scaffoldings in construction - safety in erection and dismantling of constructions.

UNIT 4

CONSTRUCTION EQUIPMENT

Uses of the following: Tractors, bulldozers, shovels draglins, cableways and belt conveyors, batching plants - Transit mixers and agitator trucks used for ready mix concrete pumps Guniting equipments - Air compressors - welding equipment - cranes and other lifting devices Choice of construction equipment for different types of works.

UNIT 5

CONSTRUCTION MANAGEMENT

Overview of construction management topics including estimating, cost control, quality control, safety, productivity, value engineering, claims, and legal issues - planning and scheduling

SUGGESTED READINGS:

1. R. Chudley, Construction Technology, Longman Group Limited, England, 1985
2. R. Barry, The Construction of Buildings, The English Language Book Society and Crosby Lockwood, Staples, London, 1976
1. National Building Code of India, 1983
2. Frank R. Dagostino, Materials of Construction – Details given Reston Publishing Company, nc. Virginia, 1976.
3. M. Mohsin, Project Planning and Control, Vikas Publishers, New Delhi, 1983

17ARET833	DISASTER MANAGEMENT									SEMESTER-VIII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To create awareness about natural disasters-factors
- To be aware of the disaster cause them-and to foster knowledge about strategies
- To learn about the methods of disaster prevention and management-
- To understand the fragile Eco-systems and factors that cause global climatic changes.
- Overview of major natural disasters-design & planning solutions for disaster mitigation-organizational
- To understand about the Disaster management aspects.

COURSE OUTCOME:

1. Student will be able to understand the cause and effects of natural disasters
2. Student will understand about climate change & disaster influences due to natural calamities
3. Student will learn to understand the prevention and design resistant structures
4. Student will understand the strategies to be implemented for disaster Mitigation.
5. Student will learn about Disaster management & recovery
6. Student will gain knowledge in design and Planning solutions of disaster proof structures

UNIT-1

INTRODUCTION TO NATURAL HAZARDS

Understanding the effects of natural calamities such as floods, tropical cyclones, earthquakes, landslides, heat waves, droughts & Tsunami. Climate changes, global sea rise, coastal erosion, environmental degradation, large dams & earth tremors, roads buildings & landslides, urbanization & desertification, cyclone effects on coastal towns.

UNIT-2

CASE STUDIES OF NATURAL DISASTERS IN INDIA

Earthquakes at Bhuj, Latur, etc., Cyclones in coastal Andhra Pradesh & Orissa, Landslides in Nilgiris, Himachal etc, Floods in Bangladesh, and Droughts in Rajasthan & Tsunami in Tamil Nadu.

UNIT-3

STRATEGIES FOR DISASTER PREVENTION & MITIGATION

Pre disaster, emergency, transition, and recovery. Disaster management plan, Natural crisis management committee [NCMC], State crisis management group [SCMG].

UNIT-4& UNIT - 5

DESIGN & PLANNING SOLUTIONS

Design guidelines for disaster proof construction at appropriate situations.-Engineering, architectural, landscape & planning solutions for different types of calamities.- Norms, standards and practice procedures for shelter & settlement. Seismic repairs & retrofitting of damaged and undamaged buildings.

SUGGESTED READINGS:

1. Earthquake Resistant Design for Built Environment. Compiled notes by Department of Architecture and Planning, IIT-Roorkee. December 2003.
2. Das P.K, A.R.Ramanathan, An Introduction to Seismic Safety in Architecture, 2007
3. Paul D.K. Singh, Yogendra, Short Term Training Course on Earthquake Resistant Design of Buildings, ADPC, IIT Roorkee & DMMC, Dehradun, 2002
4. S.Rajagopal - *Problems of housing in cyclone prone areas* - SERC, Vol.2, Chennai, 1980
5. Office of the UN Disaster Relief Co-ordinator - *Disaster prevention and mitigation*, Vol 12, Social and Sociological aspects - UNO, NY, 1986
5. F.C. Cony et.al - *Issue and problems in the prevention of disaster and housing* - A review of experiences from recent disasters - Appropriate reconstruction and training information centre, 1978
6. S.Ramani, *Disaster management - Advanced course on modern trends in housing* - SERC, Vol 2, Chennai, 1980

17ARET834	VAASTU AND PRINCIPLES OF TRADITIONAL INDIAN ARCHITECTURE									SEMESTER-VIII			
Marks	Internal	40	External				60	Total	100	Exam Hours		3	
Instruction Hours /week		L	3	T	0	P/S	0	Credits					3

COURSE OBJECTIVE:

- To introduce the principles of Vastu and Vaastu and relationship between building and site.
- To familiarize the students with the units of measurement in traditional architecture.
- To introduce concepts of orientation and Cosmo gram according to the Vaastu Purusha Mandala.
- To learn about the planning aspects of all residential, commercial & other buildings
- To study the detailing and design of various building components and their material and method of construction.
- To learn about the vasstu detailing

COURSE OUTCOME:

1. Student will be able to understand the principles of vastu and Vaastu
2. Student will understand the traditional site planning principles and its application in the present context.
3. Student will understand the relevance of vasstu and Architecture
4. Student will gain Knowledge in various material usage as per the principles of vasstu
5. Student will gain knowledge in Architectural design in accordance with vasstu
6. Student will learn about the landscape design as per Vaastu

UNIT -1

INTRODUCTION

Vastu and Vaastu -its definition and classification -Relationship to earth.

Features of good building site -good building shapes -macro, micro, enclosed and material spaces - relationship between built space, living organism and universe -impact of built space on human psyche.

UNIT -2

MEASUREMENT AND RESONANCE TO VIBRATION

Units of measurement -Tala system and Hasta system of measures -Theory of vibration -vibration as time, equation of time and space -Time space relationship and measurement of the same.

UNIT-3

SITE PLANNING AND COSMOGRAM

Orientation of building, site, layout and settlement -positive and negative energies -importance of cardinal and ordinal directions -The celestial grid or mandala and its types. The Vaastu Pursha Mandala and its significance in creation of patterns, and lay-outs, Types of lay-outs. Simple design of residential buildings.

UNIT 4

COMPONENTS AND DETAILING

Building heights -Base and basement -wall and roof specifications -column and beam designs - Pitched roof and domical roofs -significance of pyramid.

UNIT 5

MATERIALS AND CONSTRUCTION

Use of wood, stone, metal, brick and lime -marking technology, corbelling technology, jointing technology -foundations for heavy and light structures -Landscaping in and around buildings Aesthetics in Indian Architecture.

SUGGESTED READINGS:

1. Dr.V.GanapatiSthapati -:Sthapatya Veda” Dakshina Publishing House, Chennai-41, India, 2001.
2. Stella Kramrisch -The Hindu Temple Vol.I Motilal Banarsidass Publishers Pvt. Ltd., Delhi -1991.
3. K.S.SubramanyaSastri -Maya Matam -Thanjavur Maharaja Sarjoji Saraswathi Mahal Library - Thanjavur -1966.
4. Dr.V.GanapatiSthapati -:Sthapatya Veda” Dakshina Publishing House, Chennai-41, India, 2001 .
5. Bruno Dagens -Mayamatam, Vol.I& II IGNCA and Motilal Banarsidass Publishers Pvt. Ltd., Delhi -1994.
6. Dr.V.Ganapati Sthapati -Vastu Purusha Mandalam, Dakshina Publishing House, Chennai, 1998.
7. Ananda Kentish Coomaraswamy, Symbolism of Indian Architecture” – Historical Research Documentation Programme, Jaipur, 1983

17ARES835	ARCHITECTURAL JOURNALISM									SEMESTER-VIII			
Marks	Internal	80	External				120	Total	200	Exam Hours		6	
Instruction Hours /week		L	2	T	0	P/S	5	Credits					4

COURSE OBJECTIVE:

- To introduce general skills necessary for the practice of professional journalism.
- To introduce the fundamentals of writing, explain different strategies and their criticism.
- To give good exposure to architectural journalism.
- To make them understand the importance of writing articles
- To introduce photojournalism, bring out importance/ contributions of photography
- To gain knowledge in modern photography techniques.

COURSE OUTCOME:

1. Student will gain the ability to critically think and analyse about the effects of architecture on society as well as the tools to enable recording of the same
2. Student will be able to express by means of effective communication, writing and video documentation
3. Student will learn about the composition of content in Architecture Journals
4. Student will learn about Photography and Photo Journalism
5. Student will be able to document, analyse and critic the work by means of interview and data collection
6. Student will develop the proficiency in Field program, interviews and Architectural Document writing

UNIT-1

PHOTOGRAPHY & TECHNIQUES

Concept of color; concepts of lighting, distance, visual angle, frames; media; Types of camera, properties and priorities; Exposure, Aperture, Speed; Photographic films. Techniques of photography relevant to architecture.

UNIT-2

JOURNALISM

Analysis of recent historical and contemporary examples of written and journalistic criticism of architecture, including selected writings by Indian and overseas critics; discursive techniques, analysis of major critical themes, thematic categories in architectural writing over the past three centuries.

UNIT-3

ANALYSIS OF WORKS

Works of Indian and international writers and critics will be presented and discussed. Seminars on Indian architectural writers, journalists and critics

UNIT-4

FIELD PROGRAM

Exercise on integrating photography in architectural journalism.

UNIT-5

DOCUMENTING AND REPORTING

Preparation of documentaries and reports in any media such as Video, Still images, Reports, presentations etc., and present as a Seminar.

SUGGESTED READINGS:

1. Dave Saunders, Professional Advertising Photography, Merchurst, London 1988
2. Roger Hicks, Practical photography, Cassell, London 1996
3. Julian Calder and John Garrett, The 35mm Photographer's Handbook, Pan Books, London 1999
4. Julie Adair King, Digital Photography for Dummies, COMDEX, New Delhi 1998

17ARES836	GREEN BUILDINGS									SEMESTER-VIII	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To develop and acquire knowledge about environment and ecosystems
- To understand about Energy usage & energy efficient technologies
- To learn about the use of natural materials and water conservation technique.
- To Understand about Water Efficiency & regeneration
- To understand about the Rating of current buildings
- To understand the Bio degradability materials & recycling

COURSE OUTCOME:

1. Student will understand the basic concept of sustainability in Architecture
2. Student will gain knowledge in passive and Hybrid design strategies for designing a green building
3. Student will understand the energy usage of various types of buildings
4. Student will learn about energy efficiency and ways to minimize the energy.
5. Student will learn about the environmental impacts and assessment
6. Student will gain knowledge about the green rating systems and codes in India

UNIT 1

SUSTAINABILITY AND GREEN BUILDING

Understanding of food and energy cycle – Principles of sustainability – Natural ecosystem – Elements of green development – Introduction to green architecture – green building design – benefits – rating systems – LEED, GRIHA, codes -ECBC

UNIT 2

SUSTAINABLE STRATEGIES AND DEVELOPMENT

Sustainable design concepts – strategies – Design principles – Active and passive techniques – land use patterns – site development – site selection – adaptive reuse – existing buildings up gradation

UNIT 3

ENERGY – USAGE AND REGENERATION

Water – consumption – domestic usage – efficiency in usage – low flow plumbing fixtures – water appliances – rain water harvesting – reuse of gray water – energy efficiency – optimizing building envelopes configuration – renewable power- Towards net zero energy building - use of photovoltaic- automation for efficient usage – smart buildings

UNIT 4

BIO DEGRADABLE MATERIALS AND RECYCLING

Concept of embodied energy – performance and life cycles – building materials – selection of sustainable materials – recycling waste – collection and disposal – appropriate technologies – use in landscape.

UNIT 5

ENVIRONMENTAL IMPACT ASSESMENT.

Environmental Impact Assessment – Internal frame works & Assessment Tools.

SUGGESTED READINGS:

1. Anna ray – Jone – Sustainable architecture in japan – The green buildings of Nikken seiki, Wiley – academy 2000
2. Architecture and the environment – bio climatic building design – David Lloyd (Laurence king publishers, London 1998)
3. Sustainable Architecture low tech houses – Charles Broto & Arian Mostedi Pub : joseph Ma Minguet 2002.
4. Energy efficient buildings in India – Milli majundar. TER publication and ministry of non conventional energy sources, 2001
5. Ecology of the sky – Ivor Richards , The Image publishing groups , 2009

SEMESTER 9

17ART901	PROFESSIONAL PRACTICE -1									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To give an introduction to the architectural profession
- To know about the role of professional bodies and statutory bodies as well as ethics of the profession.
- To give familiarity with basic aspects of running an architectural practice.
- To know about the tenders & market Evaluations in Architectural practice
- To give exposure to the processes involved in taking up and completing an architectural project.
- To inform about legal aspects and legislations associated with the profession.

COURSE OUTCOME:

1. Student will gain knowledge of the role of professional and statutory bodies.
2. Student will become familiar with the process involved in an Architecture Project
3. Student will gain knowledge about the Scale of Services and Fees for an Architect
4. Student will understand the code of conduct and ethical values of the Profession
5. Student will understand about the Tender & Contract
6. Student will understand about the participation, award in an Architectural competition

UNIT -1 ARCHITECT AND PROFESSION

Role of architect in society - relationship with client and contractor - code of conduct – management of an architect's office - elementary accountancy

UNIT-2 ARCHITECT'S SERVICES AND SCALE OF FEES

Conditions of engagement of an architect - normal additional, special and partial services – scale of fees for various services - claiming of fees

UNIT-3 ARCHITECTURAL COMPETITIONS

Open and closed competitions - appointment of assessors - duties of assessors - instructions to participants - rejection of entries - award of premium - guidelines prescribed by COA AND IIA for promotion and conduct of competition.

UNIT -4 LEGISLATION

Salient features of various acts such as Architects Act 1972
 Chennai corporation building rules 1972
 The panchayat building rules
 Tamilnadu factory rules
 Development control rules for Chennai metropoliton

UNIT-5 EMERGING AREAS OF IMPORTANCE

Role of urban arts commission – need for special rules on architectural control and development

SUGGESTED READINGS:

1. J.J. Scott, Architect's Practice, Butterworth, London 1985
2. Publications of COA IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
3. Derek Sharp, The Business of Architectural Practice William Collins Sons & Co. Ltd, 8 Erafton St., London W1 1986
4. Roshan Namavathi, Professional Practice, Lakshmi Book Depot, Mumbai 1984
5. Publication of IIA
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The TamilNaduHillAreasSpecialBuilding Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

17ART902	RESEARCH METHODS AND FIELD STUDIES									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To learn the importance of and undertake research and field studies
- To understand the research applications in architectural design.
- To understand the different methods and the techniques as relevant to the design profession
- To understand the experimental research methods
- To apply research in evaluation and appraisal of architectural design projects.
- To understand about different survey methods

COURSE OUTCOME:

1. Student will understand the research methodology and research methods
2. Student will understand the various analytical methods
3. Student will understand the experimental methods of Research
4. Student will learn about the survey methods and documentation
5. Student will know to collect relevant data, compile and document
6. Student will be able to critically analyse the data and present it as a document

UNIT 1

Importance. Purpose and scope of research and field studies. Application in architecture in terms of design , technology, environment, economic and behavioral areas.

UNIT 2

Sequence and methods of research, Identification of problem, Hypothesis formulation objectives and methodology.

UNIT 3

Understanding and applying qualitative analytical interpretative correlation, quasi experimental, experimental, simulation and modeling techniques in Architectural design.

UNIT 4

Pilot studies field surveys and collection of samples – physical, Architectural, Environmental organizational, preparation and Analysis of Data sheets and Questionnaires.

UNIT 5

Preparation and analysis of data sheets and questionnaires. Arriving at conclusions from the research at fields studies. Report writing and publications.

SUGGESTED READINGS:

- 1.Knight. A and Ruddock L., “Advanced Research Methods in build Environment”, John Wiley & Sons 2008.
- 2.Groat L, and Wang D, “Architectural Research Methods”. John Wiley & Sons, 2002.
- 3.Gibbs J P “ Urban Research Methods”, (rev.ed) Von Nostrand 1988.
- 4.Kothari C R, Research Methodology – Methods and Techniques”, New Age Interntional 2004.
- 5.Khanzode V V, “ Research Methodology – Techniques and Trends”, APH Publishing, 1995.

17ARS921	DISSERTATION									SEMESTER-IX	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture
- To develop perspectives on the same through reading, study, analysis and thought.
- To develop the skill of experimentation by their own course of study
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

COURSE OUTCOME:

1. Student will learn to research on a specific interested topic and collect appropriate data
2. Student will develop the skill of analytical approach towards the related topic
3. Student will be able to develop a coherent line of thought based on point of view,
4. Student will be able to do observation, analysis and study
5. Student will be able to prepare a dissertation report which is based on accepted norms of technical writing.
6. Student will become prepared for the larger thesis project.

Unit I to Unit V

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

- 1.Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
- 2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
- 3.Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
- 4.All relevant Local, National and International Codes related to the Dissertation topic.
5. All relevant Books and Publications related to the Dissertation topic.

17ARS922	ARCHITECTURAL DESIGN - VIII									SEMESTER-IX	
Marks	Internal	200	External				300	Total	500	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	14	Credits			8

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

7. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
8. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
9. Student will be able to transform the theoretical ideas to the tangible output of design.
10. Student will be able to understand the space organization, space- volume design approach in large scale projects
11. Student will be able to research, Analyse and Deliver a Urban Design proposal
12. Student will be able to Communicate effectively through the design ideas.

TOPICS

Design of large scale township -Neighbourhood Planning -large structures - Multiuse multi span- Pavilions – transport hub– Design and detailing for movement and use by physically handicapped people within and around building technology and services. Examples: Large scale projects – neighbourhood, Integrated Township , IT park, Satellite town ,Sports complex,Apparelpark,SEZetc

Design Process to be approached stage wise through Architectural Programming. Advanced concepts of Site Planning as relevant to small and medium sized campuses to be introduced in the design.

SUGGESTED READINGS:

- 1.Edward D mills, planning, 4 volumes, Newnes Butterworths, London 1976
2. E and OE planning 11ffe Books Ltd., London, 1973
- 3.National Building Code 151
- 4.De Chara and Callendar, Time saver standards for building types. McGraw Hall Col. 1983.

List of electives

17ARET931	Project Management
17ARET932	Earth quake resistance Architecture
17ARET933	Advanced concrete technology
17ARET934	Real estate management
17ARES935	Industrial Architecture
17ARES936	High rise buildings

17ARET931	PROJECT MANAGEMENT									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To introduce different Project management techniques
- To learn about project control, updating & Monitoring
- To Know about network concepts, network elements and inter - relationships
- To know about PERT network
- To understand about the project Costing
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.

COURSE OUTCOME:

1. Student will understand a project from concept to commissioning,
2. Student will understand the feasibility study & facility programme, design, construction to commissioning.
3. Student will be able to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
4. Student will understand about the Project Costing
5. Student will understand about the various softwares of project management.
6. Student will gain understanding of principles of management, construction scheduling, scope definition and team roles

UNIT-1

INTRODUCTION TO PROJECT MANAGEMENT

Introduction to project Management concepts - background of management, purpose, goal and objectives, characteristics of projects and different aspects of management.

Traditional management system, Gantt's approach load chart, progress chart, bar chart merits and limitation. Schedule time, estimates units

UNIT-2

PROJECT PROGRAMMING

Project programming, resources balancing, phasing of activities, programs, scheduling, project control, reviewing, updating and monitoring. Exposure to relevant software such as MS Project, Primavera, Introduction to modern management, concepts, uni-dimensional management techniques - Introduction to PERT and CPM introduction to network concepts, network elements and inter-relationships.

UNIT-3

NETWORK TECHNIQUES

Network techniques, network logic - interrelationships, activity information, data sheets, development of network. CPM for management, CPM network analysis, identification of critical path float computation result sheets.

UNIT-4

PERT NETWORK

PERT Network, introduction to the theory of probability and statistics, probabilistic time estimation for the activities of PERT network

UNIT-5

PROJECT COST

Introduction to two dimensional network analysis, activity cost information. Cost time relationship, crashed estimates for the activities, compression potential, cost slope, utility, data sheet, project direct cost and indirect cost. Crashed programmes, network compression least cost solution least time solution, optimum time solution. Network techniques, PERT/CPM, generating alternative strategies using computers

SUGGESTED READINGS:

1. Project management for design professionals By William Ramroth
2. Jerome D. Wiest and Ferdinand K. Levy, A Management Guide to PERT/CPM, Prentice Hall of Indian Pub.Ltd. New Delhi, 1982.

17ARET932	EARTH QUAKE RESISTANCE ARCHITECTURE									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To understand the fundamentals of Earthquake and the basic terminology
- To familiarize the students with design codes and building configuration
- To understand the site planning and performance of ground & Buildings
- To understand the seismic design codes & configurations
- To understand the impacts in urban level due to earth quake and solution for mitigation
- To understand the various types of construction details to be adopted in a seismic prone area.

COURSE OUTCOME:

1. Student will be able to understand the formation and causes of earthquakes
2. Student will gain understanding of the factors to be considered in the design of buildings
3. Student will understand the services to resist earthquakes.
4. Student will become familiar with the Seismic Design Codes & configurations
5. Student will understand about designing earth quake resistant structures
6. Student will learn about urban level planning strategies for earth quake resistance

UNIT 1

Fundamentals of earthquakes

- a) Earths structure, seismic waves, plate tectonics theory, origin of continents, seismic zones in India.
- b) Predictability, intensity and measurement of earthquake
- c) Basic terms- fault line, focus, epicentre, focal depth etc.

UNIT 2

Site planning, performance of ground and buildings

- a) Historical experience, site selection and development
- b) Earthquake effects on ground, soil rupture, liquefaction, landslides.
- c) Behaviour of various types of building structures, equipments, lifelines, collapse patterns
- d) Behaviour of non-structural elements like services, fixtures in earthquake-prone zones

UNIT 3

I. Seismic design codes and building configuration

- a) Seismic design code provisions – Introduction to Indian codes
- b) Building configuration- scale of building, size and horizontal and vertical plane, building proportions, symmetry of building- torsion, re-entrant corners, irregularities in buildings like short stories, short columns etc.

UNIT 4

II. Various types of construction details

- a) Seismic design and detailing of non-engineered construction- masonry structures, wood structures, earthen structures.
- b) Seismic design and detailing of RC and steel buildings
- c) Design of non-structural elements- Architectural elements, water supply, drainage, electrical and mechanical components

UNIT 5

III. Urban planning and design

- a) Vulnerability of existing buildings, facilities planning, fires after earthquake, socioeconomic impact after earthquakes.
- b) Architectural design assignment- Institutional masonry building with horizontal spread and height restriction, multi-storeyed RC framed apartment or commercial building .

SUGGESTED READINGS:

1. Guidelines for earthquake resistant non-engineered construction, National Information centre of earthquake engineering (NICEE, IIT Kanpur, India)
2. C.V.R Murthy, Andrew Charlson. "Earthquake design concepts", NICEE, IIT Kanpur India.
3. Ian Davis (1987) "Safe shelter within unsafe cities" Disaster vulnerability and rapid urbanisation, Open House International, UK
4. Socio-economic developmental record- Vol.12, No.1, Jan-Feb 2005
5. Learning from Practice- A review of Architectural design and construction experience after recent earthquakes- Joint USA-Italy workshop, Oct.18-23, 1992, Orvieto, Italy.

17ARET933	ADVANCED CONCRETE TECHNOLOGY									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To learn about the classification and specifications in concrete
- To learn about the Chemical composition and Testing of concrete
- To learn about the properties and durability of concrete
- To learn about the Principles and Methods of concrete mix design
- To learn about the Statistical quality control- sampling and acceptance criteria
- To learn the advanced level concrete technological applications.

COURSE OUTCOME:

1. An understanding of the classification and specifications in concrete
2. An understanding of special types of concrete and concreting methods
3. An understanding of the Chemical composition and Testing of concrete
4. An understanding of properties and durability of concrete
5. An understanding of Statistical quality control- sampling and acceptance criteria
6. An understanding of the advanced level concrete technological applications

UNIT 1

CONCRETE MAKING MATERIALS

Aggregates classification, IS Specifications, Properties, Grading, Methods of combining aggregates, specified gradings, Testing of aggregates. Cement, Grade of cement, Chemical composition, Testing of concrete, Hydration of cement, Structure of hydrated cement, special cements. Water Chemical admixtures, Mineral admixture.

UNIT 2

CONCRETE

Properties of fresh concrete, Hardened concrete, Strength, Elastic properties, Creep and shrinkage, Variability of concrete strength, durability of concrete.

UNIT 3

MIX DESIGN

Principles of concrete mix design, Methods of concrete mix design, Testing of Concrete. Statistical quality control- sampling and acceptance criteria.

UNIT 4

SPECIAL CONCRETE

Light weight concrete, Fly ash concrete, Fibre reinforced concrete, Sulphur impregnated concrete, Polymer Concrete, Super plasticised concrete, Hyper plasticized concrete, Epoxy resins and screeds for rehabilitation - properties and applications - high performance concrete. High performance fiber reinforced concrete, self-compacting-concrete.

UNIT 5

CONCRETING METHODS

Process of manufacturing of concrete, methods of transportation, placing and curing. Extreme weather concreting, special concreting methods. Vacuum dewatering - underwater concrete, special form work.

SUGGESTED READINGS:

1. Neville, A.M., Properties of Concrete, Prentice Hall, 1995, London.
2. Shetty M.S., Concrete Technology, S.Chand and Company Ltd. Delhi, 2003.
3. A.R.Santhakumar ;"Concrete Technology",Oxford University Press,2007.
4. Rudhani G. Light Weight Concrete Academic Kiado,Publishing Home of Hungarian Academy of Sciences, 1963

17ARET934	REAL ESTATE MANAGEMENT									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To give an overview of real estate development
- To understand about the market potential in the current scenario
- Stimulating an awareness of the issues involved in international real estate
- To learn about urban level policy & Decisions
- To learn about various differences in Real Estate market conditions all over the world
- To gain knowledge about the leverage that the real estate could provide in the overall development

COURSE OUTCOME:

1. Student will gain knowledge in the concepts of Real estate development
2. Student will understand about Property development
3. Student will learn about urban level policies in Real estate management
4. Student will learn about the corporate Real estate management
5. Student will gain knowledge in Project financing and development
6. Student will understand the Current scenario through case studies

UNIT 1

REAL ESTATE DEVELOPMENT

Fundamentals of real estate development – concepts – techniques – recognizing institutional elements – issues encountered in various phases of development like the site evaluation and land procurement – lease hold and free hold property – development team assembly – market potential – demand estimation study – development scheme – construction and project management – Project marketing

UNIT 2

DEVELOPMENT AND PROJECT FINANCING

Project feasibility – options – development financing – asset disposal and redevelopment options – analysis of development sites and case studies – integrated case study on specific development project – reviewing and analysis – problems and strategic issues

UNIT 3

URBAN POLICY AND REAL ESTATE MARKET

Impact of government regulations and public policies on real estate markets – urban land rate and location theories – Land use structures – community and neighborhood dynamics – degeneration and renewal in urban dynamics – private public participation- government policies – public and private housing and fiscal policy – Property taxation – local government finance

UNIT 4 and 5

CORPORATE REAL ESTATE MANAGEMENT

Strategic plans to align real estate needs with corporate business plans – performance measurement techniques – identify assets acquisition or disposal – methods for enhancing values through alternative – efficient source utilization or improving user satisfaction

17ARES935	INDUSTRIAL ARCHITECTURE									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To introduce about Industrial design building and architecture
- To understand about the types of industrial space
- To understand about precast building types & practice
- To gain knowledge in on site & off-site prefabrication systems
- To gain deep understanding about the Modular - technologies
- To understand about the overall structural system of Industrial buildings

COURSE OUTCOME:

- Student will understand the application of Industrial buildings
- Student will gain understanding about the pre fabrication systems
- Student will gain Knowledge in Industrial construction
- Student will understand about the modular components & coordination of Industrial Buildings
- Student will understand about the overall structural system of Industrial buildings
- Student will be able to design large scale Industrial buildings

UNIT 1

INTRODUCTION

Five year plans and thrust in housing – Issues in Urban Housing – use of modern building materials – application of modern technology – meaning of industrial building system.

UNIT 2

APPLICATION OF INDUSTRIAL BUILDING SYSTEM

Feasibility of using industrial building system in Residential and Non-Residential buildings – manufacturing of building components – Technology requirements for industrial building system – use of Industrial building system as an option for disaster mitigation.

UNIT 3

MODULAR CO-ORDINATION AND INDUSTRIALISED SYSTEM

Concept and definition of Modular dimensional discipline – Advantages and Limitations of modular principle – Components of residential buildings – precast elements.

UNIT 4

PRE-FABRICATION SYSTEM

Objective and necessity – Off site on site prefabrication elements and construction joints – architectural and technical limitations.

UNIT 5

PROCEDURES AND ORGANISATION

Equipments used – manufacturing processes – transportation of components – assembly and finishing – Structural, social and economic issues related to industrial building system.

SUGGESTED READINGS:

1. Industrial Building and Modular Design Henrik Missen – C & CK, UK 1972.
2. Albert G.H.Dietz, Laurence Secotter – “Industrialized Building Systems for Housing” – MIT, special summer session, 1970 USA.
3. “Industrialized Building Construction” – Proceedings of National Seminar, Nov-17-18, 2000, Indian Concrete Institute, Mumbai.
4. “Innovative Construction Materials” – Proceedings of Seminar, Jan 20-21, 2001, Veermata Jeejabai Technical Institute, Mumbai.

17ARES936	HIGH RISE BUILDINGS									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To understand the various types of multistoried buildings
- To understand the structural systems of High -rise buildings
- To understand deeply about the building service systems of high- rise buildings
- To deeply understand about the Structural Systems in High Rise Buildings
- To understand about the Safety Systems in high Rise buildings
- To understand about the Bye – laws & codes of design of high -rise buildings

COURSE OUTCOME:

1. Student will learn about the Design and planning aspects of High-rise structures
2. Student will gain knowledge about the National building Codes of high rise structures
3. Student will understand about the various development control regulations all over India
4. Student will gain knowledge about the Structural aspects of High-Rise buildings
5. Student will gain knowledge about various technical services involved in High rise buildings
6. Student will gain knowledge about functionality of the high-rise structures

UNIT 1 Introduction to High rise structures

Urban environment and physical planning considerations – architectural design considerations – space planning-building services – advanced service systems – automation – Bye laws and codes applicable – for every structure and service section

UNIT 2 Tall building types and floor systems

Classification of tall buildings – types – shear frames ,interacting systems – Tubular systems.

Composite steel floor systems , pre stressed and post tensioned concrete floor systems – examples

UNIT 3 Lateral load resisting systems

Braced frames – moment resisting frame systems – core and out trigger systems – benefits and drawbacks – tubular system – Hybrid systems – examples

UNIT 4 Services for Tall buildings

Express elevators- Sky lobbies – service floor etc – Water supply system- skip stage plumbing – energy conservation methods – location and sizing of water tanks – wet risers, sumps , smoke detectors , alarms

UNIT- 5 Fire Escape

fire escape stairs – fire resistant doors – Fire resistant materials – fire fighting equipments, sprinkler systems

SUGGESTED READINGS: :

1. Bennetts , Ian et al – tall building structural systems
2. Proceedings of the council for tall buildings – Vol 1 to 10
3. NBC

SEMESTER 10

SEMESTER -X											
17ART1001	PROFESSIONAL PRACTICE -II									SEMESTER-X	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To give an introduction to easements and its types
- To know about the role of tenders and the processes involved within
- To give familiarity with a contract and the conditions therein
- To give exposure to the Arbitration in disputes
- To inform about legal aspects like Environmental acts and laws
- To know about the consumer protection act and their relevant provisions

COURSE OUTCOME:

1. Student will gain knowledge of the easements and its types
2. Student will become familiar with the tenders and the processes involved within
3. Student will gain knowledge about a contract and the conditions therein
4. Student will understand the Arbitration in disputes
5. Student will understand about the legal aspects like Environmental acts and laws
6. Student will understand about the consumer protection act and their relevant provisions

UNIT-1**EASEMENTS**

Definition – types of easements- acquisition , extinction and protection of easements

UNIT-2**TENDER**

Definition – types of easements- acquisition , extinction and protection of easements

Calling for tenders - tender documents - open and closed tenders - item rate, lumpsum, labor and demolition tender - conditions of tender - submission of tender - scrutiny and recommendations

UNIT-3**CONTRACT**

Conditions of contract - Form of contract articles of agreement - Contractor's bill certification

UNIT-4**ARBITRATION**

Arbitration in disputes - arbitration agreement - sole arbitration - umpire - excepted matters - award .

UNIT-5**LEGISLATION**

Environmental acts and laws- special rules governing Hill area development – coastal area development and management – Heritage act of India – consumer protection act and their relevant provisions

SUGGESTED READINGS:

1. J.J. Scott, Architect's Practice, Butterworth, London 1985
2. Publications of COA IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
3. Derek Sharp, The Business of Architectural Practice William Collins Sons & Co. Ltd, 8 Erafton St., London W1 1986
4. Roshan Namavathi, Professional Practice, Lakshmi Book Depot, Mumbai 1984
5. Publication of IIA
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The Tamil Nadu Hill Areas Special Building Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

17ARS1021	ARCHITECTURAL THESIS									SEMESTER-X	
Marks	Internal	400	External				600	Total	1000	Exam Hours	6
Instruction Hours /week		L	4	T	0	P/S	27	Credits			18

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme
- To develop the skill of Design in the context of a project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project
- To enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently
- To develop the career of Architecture by exhibiting the skill in thesis

COURSE OUTCOME:

1. Student will gain an overall understanding of an Architectural project
2. Student will be able to research, Analyse, synthesise and present his ideas
3. Student will apply his skills developed in the previous years in this Project
4. Student will gain the ability to handle major architectural project of a larger scale
5. Student will be able to design with all Socio, economic and Environmental aspects.
6. Student will become an expertise in his domain of architectural design

UNITSI to UNIT V

The main areas of study and analysis shall be Architecture, Urban design, Urban renewal and Human settlements, Environmental Design, Conservation, Landscape Design, Housing etc.. However, the specific thrust should be architectural design of built environment.

Research Methods as applicable to architectural studies is to be taught as part of Thesis.

METHOD OF SUBMISSION

The Thesis Project shall be submitted in the form of drawings, project report, physical/ digital models, presentations and walkthroughs.

SUGGESTED READINGS:

1. E and OE Planning London Books Ltd 1973
 2. National Building Code ISI
 3. De Chiasa and Callendar- Time saver standards for Building Types - Mc Graw Hill Co., 1973.
- Edward D Mills, planning, 4 volumes, newness Butterworths, London 1976

17IDT101	THEORY OF INTERIORS								SEMESTER-I	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- Understanding various aspect such as form, scale, light, dimension, height, transitional elements etc affecting interior space.
- Understanding and applying design vocabulary such as Point ,Line, shape, color, texture, area, mass, volume etc.
- Understanding and applying design principles such as ratio, proportion, scale, balance, harmony, unity, variety, rhythm, emphasis.
- Understanding the process involved in design including analysis, synthesis and evaluation.
- Evaluating Design typology
- Understanding the usage of the elements of design in the projects in future.

COURSE OUTCOME:

1. A In depth understanding of the definition of Interior design.
2. Elements of Design and forms in design to be analyzed and used.
3. An exposure to the principles of Interiors and the application of the same in built environments
4. An understanding the meaning of character and style of the interiors in buildings with examples.
5. An exposure to the students on ideologies and philosophies of Interiors and its contemporary.
6. The students will be able to apply the theory into the design problems and be design ready

UNIT – I

INTERIOR SPACE

9

Space–definition; Interior space–spatial qualities: form, scale, outlook; structuring space with interior design elements; spatial form; spatial dimension – square, rectangle, curve linear spaces; height of space; spatial transitions – openings within wall planes, doorways, windows, stairways.

UNIT – II

DESIGN VOCABULARY

6

Form – point, line, volume, shape, texture and color – in relation to light, pattern etc .and application of the same in designing interiors.

UNIT – III

DESIGN PRINCIPLES

9

Ratio; proportions – golden section; relationships; scale; Balance – symmetrical, radial, occult; harmony; unity; variety; rhythm; emphasis.

UNIT- IV

ANTHROPOMETRICS

9

Definition, theory of standard dimension based on human figures for activities, functions, circulation, furniture design, spatial requirements etc.

Study of Ergonomics

Design of Furniture for Living, Dining, Kitchen, Office etc.

UNIT – V

DESIGN CONTROL

12

Designprocess–Analysis,synthesis,designevaluation;Designcriteria–functionandpurpose,utility andeconomy,formandstyle;humanfactors-humandimensions,distancezones,activityrelationships; fitting the space – plan arrangements, function, aesthetics

REFERENCE BOOKS

1. Francis. D. K. Ching, Interior design Illustrated, VanNostrand Reinhold
2. John. F. Pile, Interior Design, Harry Abrams Inc.
3. Sam. F. Miller, Design process – a primer for Architectural and Interior Design, VanNostrand Reinhold.
4. Gary Gordon, Interior lighting for designers, John Wiley & Sons Inc.
5. Harold Linton, Colour in Architecture, McGrawHill
6. Jonathan Poore, Interior Colour By Design, Rock Port Publishers.
7. Sherrill Winton, Interior Design and Decoration, Prentice Hall.
8. Johannes Itten, The Art of Colour, John Wiley and Son

17IDT102	HISTORY OF INTERIORS - I									SEMESTER-I			
Marks	Internal	40	External				60	Total	100	Exam Hours		3	
Instruction Hours/Week		L	2	T	0	P/S	0	Credits					2

COURSE OBJECTIVE:

- To help the student understand the designs from Prehistoric Period to the Middle Ages.
- To know more on the Modern Movements in Interior design from the beginnings of 20th century.
- To allow students to learn from the rich heritage the elements of aesthetic design.
- To understand the construction techniques of the ancient times.
- To understand the skilled labor and the presence of the same in the olden days.
- To understand the same scene in the contemporary era and its challenges to execute the same finesse.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.
3. The individual will be exposed to the present to the ancient day's comparison in techniques..
4. To use the techniques of the ancient times and to overcome the challenges faced by the same.
5. To respect the wide heritage that can be offered with respect to the various Architecture eras.
6. An understanding of the influences of lifestyle and culture of the respective times..

UNIT – I EARLY CLASSICAL PERIOD

Prehistoric Cave paintings – Primitive Designs – Interiors during Egyptian, Greek, Roman, Gothic, Early Christian and Renaissance Periods.

UNIT – II MIDDLE AGES

Interiors in Romanesque, Gothic, and renaissance periods

UNIT – III COLONIAL TO THE BEGINNING OF THE 20th CENTURY

Colonial, Victorian designs, Arts & Crafts movement, Art Nouveau, Eclecticism, Frank Lloyd Wright.

UNIT – IV BAUHAUS TO POST WAR MODERNISM

Walter Gropius/ Bauhaus, De Stijl, Mies Van DerRohe, Le Corbusier, Art Deco, Postwar Modernism.

UNIT – V PROJECTS

Projects based on Historical Styles in Interiors & Assignments.

TOTAL 45

REFERENCE BOOKS

1. InteriorDesign Course, Mary Gilliat Coyran, OctopusLtd., London
2. InteriorDesign & Decoration, SherrilWhiton, PrenticeHall
3. InteriorDesign, FrancisD.K. Ching, John Wiley & Sons, New York
4. History of Architecture, Sir Banister Fletcher, CBS Publishers & distributors, New Delhi
5. Time Saver Standards for Interior Design, JosephDeChiara, McGrawHill, New York

17IDP111	SPACE PLANNING AND ERGONOMICS								SEMESTER-I	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosure, various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand design with relation to a human being with respect to size, shape, and color.
- To understand a human bodies and its various movements and to accommodate the same into design standards.
- To understand spatial parameters with respect to the function and implications inflicted regarding the same.
- To introduce a self to design methodology..

COURSE OUTCOME:

1. The students understand the relationship of human being with its environment and implement the study into design.
2. The students are taught to be able to design spaces based on patterns of circulation, proximity and levels of privacy zones.
3. The students understand the different postures and positions with dimensions of the human body and will be able to recognize activities and relate the need of human measurements in the design principles.
4. To bring a relation with design principles and the human being using the design principle.
5. To be able to create a project in direct relation to this subject and hence be able to apply theoretical knowledge into practical construction
6. To introduce the student to visual analyses and hence be practically well equipped.

UNIT –I

Basic anthropometrics – average measurements of human body in different postures – its proportion and graphic representation, application in the design of simple household and furniture.

UNIT-II

Role of mannequins in defining spatial parameter of design. Basic human functions and their implications for spatial planning. Minimum and optimum areas for various functions. Preparing user profile, bubble and circulation diagrams.

UNIT –III

Introduction to design methodology. Detailed study of spaces such as living, dining, bedrooms, kitchen, toilet etc. including the furniture layout, circulation, clearances, lighting and ventilation, etc. Case study of existing house and analysis of the spaces.

UNIT – IV

Visual analysis of designed spaces noted for comfort and spatial quality; analysis of solid and void relations, positive and negative spaces.

UNIT-V

Integration of spaces and function in the design of bus shelter, milk booth, watchman's cabin, traffic police kiosk, flower stall, ATM center, etc.

Note: In the end exam, which is a viva-voce, the students have to present the entire semester's work for assessment.

17IDP112	ART AND CRAFT - I									SEMESTER-I	
Marks	Internal	60	External			90	Total	150	Exam Hours		3
Instruction Hours/Week		L	1	T	0	P/S	3	Credits			3

COURSE OBJECTIVE:

- To encourage a critical orientation to design thinking and action.
- To understand the word critical meaning that everything must be open to enquiry and alternative view point.
- By design thinking and action it means that the process if observation and study of natural and manmade objects and systems,
- Ideation, free exploration , and development of personal skills and attitudes.
- To bring a creative interactive movement of students that will mould the respective skill.
- Skill based learning with adept technology support for the same.

COURSE OUTCOME:

1. The students are exposed to various mediums, techniques and tools.
2. The students gain mastery in sketching, visualizing and expression through manual drawing.
3. Sensitized to culture, craft and context.
4. Skill Development in Handling Materials and in Making Products
5. To be updated to the art world and to hone a skill that precedes the student in an overall development.
6. To imbibe qualities of confidence and orator ship.

REFERENCES:

5. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
6. John W.Mills - The Technique of Sculpture, B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
7. C.Lawrence Bunchy - Acrylic for Sculpture and Design, 450, West 33rd Street, New York, N.Y.10001, 1972.
8. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White (Author)
9. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson

17IDS121	BASIC INTERIOR DESIGN - I									SEMESTER-I		
Marks	Internal	160	External				240	Total	400	Exam Hours		6
Instruction Hours/Week		L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the translation of the drawing from board to reality and unification of the spaces.
- To understand the basic concepts for the size of the project.
- Develop an eye for design thinking that will encourage students to explore their creative capacities.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.

UNIT I TO V

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

INTRODUCTION TO ELEMENTS OF DESIGN

Properties, qualities, and characteristics of (i) line, (ii) direction, (iii) shape, (iv) size, (v) texture, (vi) space (vii) time and motion (viii) value and (vii) colour. Exercises involving the same

Exploration in mixed media & collage to convey a specific theme and meaning.

Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

The principles of design relationships/ Composition – Unity & Harmony, Balance, Scale & Proportion, Contrast and Emphasis, and Rhythm. Exercises involving the same.

Lecture introduction into the discipline of interior design and the transformation from basic design to interior design - Placing Interiors (Building, Site, Orientation, Climate, City and Landscape); History & Precedent; Materials & Construction; Representation and Realization.

4. How Designers Think, Fourth Edition: The Design Process Demystified (Paperback) by Bryan Lawson.
5. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khouli (Author).
6. Graphic Thinking for Architects, Paul Laseau.
7. Design Drawing, Francis D. K. Ching.
8. The Nature of Design, Peg Faimon & John Weigand.
9. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
10. John W.Mills - The Technique of Sculpture, B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
11. C.Lawrence Bunchy - Acrylic for Sculpture and Design, 450, West 33rd Street, New York, N.Y.10001, 1972.
12. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White (Author)
13. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson

17IDS122	INTERIOR MATERIALS AND CONSTRUCTION - I								SEMESTER-I		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities

UNIT – I INTRODUCTION TO MATERIALS

10

Wood-Soft and hardwood, plywood, laminated wood and particle boards – properties, manufacture & uses.

Synthetic Materials – Different types of Glass, their properties, manufacturing processes and uses. Plastics – injection molding & other manufacturing methods, etc.

Fabrics – textile, Jute, leather etc. different types and their uses

UNIT – II BUILDING COMPONENTS

15

Drawings of the components of a building indicating

- Foundation – brick footing, stone footing & RCC column footing
- concrete flooring, plinth beam & floor finish
- superstructure- brickwork with sill, lintel, windows & sunshade
- Flat RCC roof with weathering course, parapet & coping.

UNIT – III TILED ROOFS

10

Drawings indicating various types of sloped & hipped roof. Types of sloping roof – lean to & couple roof with Mangalore tiles, country tiles & pan tiles.

UNIT – IV STRUCTURAL SYSTEMS

10

Structures – Components of a load bearing wall & RCC slab roof system – RCC beams, columns and framed structure

UNIT – V BASIC SERVICES

15

Components of a toilet & bathroom – sanitary ware – w.c, wash basin, bidet, bathtub, jacuzzi etc. Sanitary fittings – taps, mixers, shower units

TOTAL 60

TEXT BOOKS

1. S. C. Rangwala - Engineering materials - Charotar Publishing, Anand
2. Francis D. K. Ching - Building Construction Illustrated, VNR, 1975,

REFERENCES:

1. Parker , Harry, 1957, Materials and Methods of Architectural Construction, John Wiley & Sons, London
2. S.C.Rangwala, Engineering Materials, Charotar Publishing House, Anand, 1997.
3. Understanding Buildings: A Multidisciplinary Approach (Paperback) by Esmond Reid
4. R.J.S.Spencke and D.J.Cook, Building Materials in Developing Countries, John Wiley and Sons, 1983.
5. HUDCO - All you want to know about soil stabilized mud blocks, HUDCO Pub., New Delhi, 1989.
6. UNO - Use of bamboo and reeds in construction - UNO Publications.
7. Rural Construction - NBO, New Delhi

17IDS123	INTERIOR GRAPHICS - I									SEMESTER-I	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours/Week	L	1	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To help students to learn & understand the techniques of various methods of drawing
- To make them understand the use of colors & their effects in drawings.
- To understand various geometrical shapes.
- To be able to scale geometry and understand the sizes.
- To understand sciography and its representation.
- To be able to improve different lettering.

COURSE OUTCOME:

1. Ability to construct the 3d views and perspective drawings of the Interiors
2. Understanding of advanced documentation and measured drawing techniques.
3. Ability to express design in all dimensions
4. Ability to improve drawing skills.
5. To be able to understand the various measurements of the drawings.
6. To be able to express and exhibit drawings to the best understanding for professional practice

UNIT-I INTRODUCTION TO FREE HAND DRAWING

12

Basic exercises, Still life, Basic forms, effect to fine store present textures- Understanding of different types of perspective views using vanishing points, Shading exercises etc.

UNIT – II SKETCHING

12

Outdoor sketching including Lawns, bushes, Water Bodies, Plants & trees in different media. Indoor sketching – furnitures, lights, corridor, lobby, class room etc.

UNIT – III MEASUREDDRAWING

12

Lettering- types, Scale, Measured drawing of furniture, Wall paneling, flooring pattern, ceiling pattern, doors and windows.

UNIT – IV GEOMETRICAL DRAWING

12

Orthographic projections- Projection of lines, planes and solids, section of primary solids such as pyramids, cones, cylinder, prism, sphere, cuboid, etc.

UNIT – V ISOMETRIC DRAWING

12

Isometric projection of all platonic solids such as cube, cuboid, hexagonal prism, pyramids, cone and sphere etc – isometric projection of singly and doubly curve surfaces.

TOTAL 60

REFERENCE BOOKS

1. Drawing – A creative Process, Francis D.K. Ching, John Wiley Sons, New York
2. How to paint & draw, Bodo W. Jaxtheimer, Thames & Hudson, London
3. Geometrical drawing for art students, 2nd revised edition- I.H. Morris, Orient Longman, Calcutta, 1995.
4. Architectural drafting and design, 4th edition – Ernest R. Weidhaas, Allyn and Bacon, Boston, 1981.
5. Building drawing, 3rd edition – M G Shah, C M Kale, Tata Mcgraw– Hill publishing, New Delhi.

5. Alwyn Cranshaw, Learn to paint with Water colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes, William Collins Sons and Co. Ltd., London, 1981.
6. IH. Morris, Geometrical Drawing for Art Students - Orient Longman, Madras, 1982.
7. Francis D. K. Ching, Architectural Graphics, Van Nostrand Rein Hold Company, New York, 1964.
8. C. Leslie Martin, Architectural Graphics, The Macmillan Company, New York, 1964.
9. Architectural Drawing: A Visual Compendium of Types and Methods (3rd edition) by Rendow Yee

17IDT201	PSYCHOLOGY OF INTERIORS								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To create environments and spaces that encourage balance, achievement, positive interaction, and personal wealth for yourself and your clients.
- To exercise creativity and expertise and sculpt beautiful, and profoundly meaningful places and spaces.
- To create spaces that are psychologically pleasing and also understand the need to understand the requirements of the clients.
- To understand the hidden meanings behind the clients thoughts
- To understand psychology in various platforms like scale, color, volume and other such parameters.
- To understand the human behavior in various psychological settings.

COURSE OUTCOME:

1. Ability to construct, relate and understand the basic principles of psychological analysis on human mind.
2. To research and utilize techniques that is related to the social, economic and community behavior of human behind and to adapt the findings in utility and aesthetic designs.
3. To introduce the understanding of the research for the design process for the individual taste of every client in the professional practice.
4. Ability to understand spaces in relation to the color, scale , volume and other parametric of the design theory.
5. To develop the ability to understand the psych of the client in relation to his expectations and analyze possibilities of design application.
6. To have a successful design practice.

UNIT – I RECENT DIRECTIONS

10

Design movements such as Late Modernism, High Technology, Post Modernism, and De-Constructivism and Minimalism

UNIT – II NON EUROPEAN TRADITIONS

10

Interiors in China, Japan & the Islamic World–Influences of Pre-Columbian American art & culture, African influences in interiors

UNIT – III SCANDINAVIAN TRADITIONS

8

Interior Design in Sweden, Finland, Norway. Contributions of Architects such as Aalvar Alto, etc.

UNIT – IV INDIAN TRADITIONAL DESIGNS

10

Traditional Styles of design & decoration of homes & accessories across the states in India including Rajasthan, Gujarat, Andhra, Tamil Nadu, Madhya Pradesh etc.

UNIT – IV PROJECTS

7

Assignments on recent directions & Non European traditions, Traditional designs of India.

TOTAL 45

TEXT BOOK

1. Interior Design, John F. Pile, Harry Abrams Inc.

REFERENCE BOOKS

1. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London
2. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York
3. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York.
4. Publications on Traditional Arts & Crafts of India, Ministry of Handicrafts Development, Government of India.

17IDST02	HISTORY OF INTERIORS - II								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To help the student understand the Modern movement in design in the later part of the 20th century.
- To make the students understand the traditional styles of decoration done in various states of India.
- To understand the global history and its applications in design.
- To appreciate technology of the ancient times and to relate adaptations in the current situation. To allow students to learn from the rich heritage the elements of aesthetic design.
- To understand the construction techniques of the ancient times.
- To understand the skilled labor and the presence of the same in the olden days.
- To understand the same scene in the contemporary era and its challenges to execute the same finesse.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.
3. The individual will be exposed to the present to the ancient day's comparison in techniques..
4. To use the techniques of the ancient times and to overcome the challenges faced by the same.
5. To respect the wide heritage that can be offered with respect to the various Architecture eras.
6. An understanding of the influences of lifestyle and culture of the respective times

UNIT – I

Perception of space through understanding associative aspects relating to space. Understanding cognitive theories and Gestalt principles of psychology related in the field of space making to develop an understanding of place making.

UNIT – II

Relationship of spatial elements like floor, column, wall, window, door, stair, roof, light, color, textures to the psychology and perception of space.

UNIT – III

Kinesthetic – Understanding perception while in movement and space organization around such a phenomena.

UNIT – IV

Analysis of human mind and his/her image of the world - social behavior patterns, traditional thinking and behavior and reflection of social world into physical environment.

UNIT – V

Human being and his behavior in various public and private areas – change of patterns in various cultures. Human behavior in a group. Activities and its relationship with grouping of people

Assignment : Space planning for public areas- restaurant, café, theatre lounge, waiting rooms, hotel foyer etc based on analysis of human behavior and perception of space.

5. Roger Downs, David Stea, Kenneth . E. Boulding, Image and environment, Transaction Publishers, 2005.

17IDP211	COMPUTER APPLICATIONS - I								SEMESTER-II	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.

UNIT I

Command programming – modifying commands, selection sets, Zoom, accurate inputs.

Introduction to Layers, Texts and Scale. Suggested Software - AutoCAD

UNIT II

Command programming - transparent overlays, hatching utilities, assigned color and line types.

UNIT III

Use of multiline, style, block, symbols and libraries.

UNIT IV

Advance exercise in 2D drafting of various complex building drawings, incorporating Linetypes and Linetypes Styles.

UNIT V

XREFS, Tables, Modifying and creating Dimensions and customizing AutoCAD; Understanding concepts of Vport, concept of object linking, and editing session.

Suggested Software - AutoCAD

17IDP212	MODEL MAKING									SEMESTER-II	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	4	Credits				3

COURSE OBJECTIVE:

- Acquisition of hands on experience in model – building.
- To understand the suitability of different materials for different design requirements.
- To understand scale of a building and its structural challenges.
- To understand the relation of the building with its surrounding areas.
- To understand the nuances of design detailing in model making.
- The use of replicable materials to attain the best to real model.

COURSE OUTCOME:

1. To get hands on experience to handle model making materials.
2. To inculcate in students and understanding of ideas in 3d and physical models.
3. To understand the difference in executing blocks models and detailed models.
4. To understand scale in a building and its relation to a human user.
5. To be able to understand the properties of materials.
6. To understand various site and building levels.

UNIT – I

INTRODUCTION TO MODEL MAKING

8

Introduction to concepts of model making and various materials used for model making

UNIT - II

BLOCK MODELLING

12

Preparation of base for models using wood or boards. Introduction to block models of buildings (or 3D Compositions) involving the usage of various materials like Thermocol, Soap/Wax, Boards, Clay etc.

UNIT - III

DETAILED MODELLING

20

- Making detailed models which include the representation of various building elements like Walls, Columns, Steps, Windows/glazing, Sunshades, Handrails using materials like Mount board, Snow-white board, acrylic sheets.
- Representing various your face finishes like brick/stone representation, stucco finish etc.
- Various site elements – Contour representation, Roads/Pavements, Trees/Shrubs, Lawn, Water bodies, Street furniture, Fencing etc.

UNIT - IV

INTERIOR MODELS OF INTERIOR SPACES

25

Making models of the various interior spaces such as

- Residences
 - Offices
 - Retail Spaces
 - Recreational Spaces
- Scaled models of furniture.

UNIT – V

CARPENTRY

25

Introducing the techniques of planning, chiseling & jointing in timber to learn the use of hand tools.

Exercise involving the design of simple furniture and making a model of the same.

TOTAL 90

REFERENCE BOOKS

1. BENN, The book of the House, Ernest Benn Limited, London
2. Janssen, Constructional Drawings & Architectural models, Karl Kramer Verlag Stuttgart, 1973.
3. Harry W. Smith, The art of making furniture in miniature, E.P. Dutton Inc., New York, 1982

17IDS221	INTERIOR DESIGN - II										SEMESTER-II		
Marks	Internal	160	External				240	Total	400	Exam Hours		6	
Instruction Hours/Week		L	2	T	0	P/S	10	Credits					7

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the basic concepts for the size of the project.
- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring, floor coverings, curtains, windows, doors and other elements of residential interiors.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.
7. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
8. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

UNIT I to V

Design Process: Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process. Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas.

Horizontal movement - single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as: Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar.

Design problems involving simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as: Residence, petrol bunk, fire station, police station, Cottage for an elderly couple

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

17IDS222	INTERIOR MATERIALS AND CONSTRUCTION - II									SEMESTER-II				
Marks	Internal		80	External			120	Total		200	Exam Hours		6	
Instruction Hours/Week			L	1	T	0	P/S	5	Credits					4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.

UNIT-I WALLS-TYPES OF MASONRY

15

Different types-Stonewalls-random rubble, coursed rubble, square rubble, polygonal rubble & Ashlar etc
Brick masonry-Types of bonds-single & double Flemish bond, header bond, stretcher bond, rattrap bond, ornamental bonding.

UNIT – II FLOORS

10

Floor coverings--softwood , hardwood-resilient flooring-linoleum, asphalt tile, vinyl, rubber, cork tiles- terrazzo , marble & granite- properties, uses & laying.
Floor tiles – ceramic glazed, mosaic and cement tiles - properties, use sand laying, details for physically handicapped.

UNIT – III FALSE CEILING

15

Construction of various kinds of false ceiling such as thermacol, plaster of paris, gypsum board, metal sheets, glass and wood. Construction of domes, vaults, & other special ceilings

UNIT-IV WALL PANELING

10

Paneling—Using wooden planks, laminated plywood, cork sheets, fibreglass wool & fabric for sound insulation and wall paneling for thermal insulation.

UNIT- IV FINISHES

10

Paints- enamels, distempers, plastic emulsions, cement based paints- properties, uses and applications- painting on different surfaces –defect in painting, clear coatings & stains-varnishes, lacquer, shellac, wax polish & stains- properties, uses and applications. Special purpose paints-bituminous, luminous, fire retardant and resisting paints- properties, uses and applications

TOTAL 60

TEXTBOOKS

1. S.C Rangwala – engineering materials– Charotar publishing, Anand 1982
2. W.B McKay, building construction, VOL 1-4 , Longmans, u.k 1981
3. Laxmi publications Pvt. Ltd., New Delhi, 1993.

REFERENCE BOOKS

1. Dr. B.C Punmia , buildingconstruction, Laxmi publications Pvt. Ltd., New Delhi, 1993.
2. M.S Shetty ,concrete technology , S. Chand & co . Ltd ., New Delhi , 1986.

17IDS223	INTERIOR GRAPHICS - II									SEMESTER-II	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours/Week	L	1	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To help students to learn & understand the techniques of various methods of drawing
- To make them understand the use of colors & their effects in drawings.
- To understand various geometrical shapes.
- To be able to scale geometry and understand the sizes.
- To understand sciography and its representation.
- To be able to improve different lettering.

COURSE OUTCOME:

1. Ability to construct the 3d views and perspective drawings of the Interiors
2. Understanding of advanced documentation and measured drawing techniques.
3. Ability to express design in all dimensions
4. Ability to improve drawing skills.
5. To be able to understand the various measurements of the drawings.
6. To be able to express and exhibit drawings to the best understanding for professional practice

UNIT I - MEASURED DRAWING

Measured drawing of simple objects (like furniture, entrance gates, etc.) and building components (like columns, cornice, door, window, etc.). Detailed measured drawing/documentation of simple monument or building.

UNIT II - PERSPECTIVE

Perspective projection concepts, Types of Perspective views, Picture plane, vanishing points, station point, horizon, cone of vision, line of vision, etc. Perspective Projection of simple & complex geometrical forms. Two point perspective of simple objects, outdoor and indoor view of a building, etc. One point and three point perspective of interiors, Human Figures, Landscape elements and Vehicles in Perspective

UNIT III - SCIOGRAPHY

Principles of shades and shadows - Shadows of basic shapes and solids; Shadows of architectural elements, etc; Shadows of circular solids; Shadows of buildings, etc.

UNIT IV - RENDERING TECHNIQUES

Colour Pencils Rendering, Water Colour Rendering, Pen & Ink Rendering, Marker Rendering Techniques, Using Digital & Mixed Media Rendering Techniques, Free hand drawings

UNIT V - GRAPHICAL PRESENTATION

Visual representation of the design scheme – interior and exterior perspective views – shades and shadows – use of various rendering techniques.

17IDT301	FURNITURE DESIGN									SEMESTER-III	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	5	Credits				2

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To understand different types of lighting ad to use apt luminaries and fixture.
- To make different styles of furniture both in modular and in customized.

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have to ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To be able to make electrical drawings with apt representation and accommodating different types of lighting details.
6. To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics.

UNIT – I

Furniture categories, exploration of the idea of furniture, role of furniture in interior design, Design approaches in furniture design.

Assignment: Measured drawing of a piece of furniture – plan, elevation and drawings on full scale

UNIT – II

Brief overview of the evolution of furniture from Ancient to present: Various stylistic transformations. Furniture designers and movements. Analysis of furniture in terms of human values, social conditions, technology and design criteria.

UNIT - III

Functional and formal issues in design: study and evaluation of popular dictums such as “Form follows function”, Form and function are one”, “God is in Details” etc.

Evaluation of visual design: study of Gestalt theory of design – law of enclosure, law of proximity, law of continuity etc.

Human factors, engineering and ergonomic considerations: principles of universal design and their application in furniture design.

UNIT – IV

An introduction of various manufacturing processes most frequently adopted in furniture design such as Injection Molding, investment casting, sheet metal work, die casting, blow- molding, vacuum - forming etc.

UNIT – V

Seating Design: Different types of seating with a focus on the following –

- Functionality
- Aesthetics
- Style
- Human factors and ergonomics

The other component to be considered is the cost of the designed furniture piece.

Assignment: Design with wood, metal and combination of materials. Drawings, details and prototype making. Market survey of available products and economics of products.

UNIT – VI

Storage systems: Functional analysis of storage systems and thereby deriving types of cabinets needed for interior spaces – kitchen cabinets, wardrobes closets, book cases, show cases , display systems etc.

Assignment: Exercise to design kitchen cabinets for a given kitchen.

UNIT –VII

Modular approach to furniture design – various materials, combination of materials and its application – design parameters, ergonomics etc. Drawings and prototype. Survey of several modular systems available for different functions in the market. Exploration of wood, metal, glass, plastics, FRP as materials for system design. Cost criteria of furniture design.

Assignments : Typology of furniture with respect to the different states in India.

Design for middle and lower middle income groups- elements of living units, education institutes, health facilities, street elements etc.

17IDT302	INTERIOR SERVICES									SEMESTER-III	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	5	Credits				2

COURSE OBJECTIVE:

- To understand hennaed and applications of water supply and sanitation in buildings with exposure to various fixtures and fittings,
- water supply and sanitary installations at work sites.
- To understand the practical course of water sanitation needs both outdoors and indoor.
- To arrive at various calculation of tanks and sumps to physically build it in the site.
- To understand the basic toilet design
- To understand the services piping in large scale projects.

COURSE OUTCOME:

1. Understanding of water supply, sewage, drainage and waste systems in buildings.
2. Ability to conceptually plan/ design the above for a given simple context.
3. Awareness of sustainable principles and best practices.
4. To be able to understand the need and execution of dry ad wet concepts in toilets.
5. To understand the differences and treatments for water, sewage and sullage disposal systems.
6. To understand the technical issues during the servicing of the pipes, and the importance of ducts in larger scale of buildings.
7. To understand various water sources and its uses.

UNIT I WATER SUPPLY IN BUILDINGS

12

Standard of portable water and methods of removal of impurities, Consumption order of water for domestic purposes, Service connection from mains, House-service design, tube well, pumping of water, types of pumps, cisterns for storage

UNIT II BUILDINGDRAINAGE

12

Layout, Principles of drainage, Trap type, materials and functions, Inspection chambers, Design of Septic tanks and soak pits, Ventilation of house drains
Anti-syphonage or vent pipes, One and two pipe systems
Sinks, bath tub, water closets, flushing cisterns, urinals, wash basins, bidet, shower panel etc.

UNIT III PLUMBING

12

- Common hand tools used for plumbing and their description and uses, Joints for various types of pipes, Sanitary fitting standards for public conveniences
- Different types of pipes and accessories for water supply, controlling fixtures like valves, taps, etc. Fittings and Choice of materials for piping: cast iron, steel, wrought iron, galvanized lead, copper, cement
- concrete and asbestos pipes, PVC pipes
- Sizes of pipes and taps for house drainage, Testing drainage pipes for leakage-smoke test, water test etc, CI pipes for soil disposal and rain water drainage, Wrought iron, steel and brass pipes.
- Rainwater disposal drainage pipes spouts, sizes of rainwater pipes

UNIT IV SOLID WASTEDISPOSAL

5

Solidwastescollectionandremovalfrombuildings.On-siteprocessinganddisposalmethods.Aerobic and Anaerobic decomposition

UNIT V SERVICES STUDIO**4**

Preparation of plumbing layout of a single storey building & working drawings of various fittings and fixtures of water supply and sanitary installations.

TOTAL 45

TEXTBOOK

1. S.C. Rangwala, Watersupply and sanitary engineering, Charotar publishing house

17IDP311	COMPUTER APPLICATIONS - II								SEMESTER-III	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to BIM

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.

UNIT – I INTRODUCTION TO COMPUTER AIDED 2D DRAFTING

10

Understanding the use of drawing tools, object editing, drawing objects, filing and setting drawing units, scales, limits that size and dimensioning, lettering. Setting up of drawing of various simple objects with complete text and dimensioning.

UNIT – II ADVANCE COMPUTER AIDED 2D DRAFTING

Advance command programming– Transparent overlays, hatching utilities, assigned color and line type, use of multi-line, style, block, symbol library, manipulation for accurate drawings, incorporating the above mentioned utilities.

UNIT – III PRODUCTIVITY TOOLS

15

Introduction to tools of productivity–Blocks, slide facilities, script files and attributes. Understanding concepts of View port, concept of object linking and editing session.

UNIT – IV INTRODUCTION TO 3D DRAFTING

15

Introduction to 3D modeling techniques and construction planes, drawing objects, 3D surfaces, setting up elevation and thickness, and use of dynamic projections. Solid modeling with driving, primitive command and Boolean operations. Use of region modeling & solid modifiers.

17IDP312	WORKSHOP - I								SEMESTER-III		
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	4	Credits				3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design.

COURSE OUTCOME:

1. Ability to understand and construct furniture to live size
2. understanding the scale of drawing to life size
3. To use tools related to wood glass and alternative substitution to wood.
4. To understand properties and usage of materials henceforth.
5. To understand modular furniture through engineered wood.
6. To understand the various capacities of hardware for the various materials.

To understand wood joints and its usage in various circumstances

UNIT – I:

Types of wood –natural and artificial and its properties

Engineered wood – plywood, MDF , HDF, Etc

Working with wood and wood products to understand material parameters. Wooden joinery and its strength. Wood polishes and other finishes – color and surface quality. Laminates also should be treated as one of the wood finishes with lipping and other technics

UNIT – II:

Making of elements of various scales in the built form such as interior space making elements, furniture forms, various products, Art & Artifacts by using wood.

UNIT – III:

Introduction to cane, bamboo, working with bamboo/cane and their products to understand material parameters. Bamboo and cane joinery and its strength. Polishes and other finishes. Understanding the material and tools by making objects which allow students to explore the forms, surfaces, textures and patterns. Explore different joinery, support conditions, and woven surfaces.

UNIT – IV:

Working with glass and understand blowing techniques, hardware fixing, polishing, etching, sand blasting techniques of the glass material. Understanding of the properties and using the same in an exercise to create 3d model with glass. Also understanding the usage and fising of glass in varius interior models.

Marks	Internal	160	External				240	Total	400	Exam Hours		6	
Instruction Hours/Week		L	2	T	0	P/S	10	Credits					7

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the basic concepts for the size of the project.
- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring, floor coverings, curtains, windows, doors and other elements of residential interiors.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.
7. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
8. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

- Anthropometry
- Design methodology
- Conceptual exploration and representation.
- Creativity
- Scale/proportion
- Documenting space
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development

The list of suggested topics to be covered as design problems:

Single room residence, Doctor's clinic, kindergarten school, Architect's studio, Small cafeteria, Bank extension counter, Departmental store, local police station, local post office, products used by architects in the studio, products for children in kindergarten etc.

Note: At least two major exercises and two minor design/time problems should be given.

In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

17IDS322	ADVANCED MATERIALS AND APPLICATIONS								SEMESTER-III	
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.
- To understand the various components of interior space as doors, windows, staircases.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.

To inculcate in students and understanding of ideas in 3d and physical models

10

Types including, open able, sliding, folding pivoted Lodged and braced, paneled doors, glazed doors, Joinery details for doors.

UNIT – II PARTITIONS

10

Details of fixed, sliding and sliding and folding partitions with wood, steel and aluminum frames & panels in glass, particle board, MDF, gypboard and plywood.

UNIT – III TIMBERWINDOWS

10

Types –Casement, fixed, horizontal sliding, vertical sliding, pivoted, and top hung types

Ventilators- top hung, bottom hung, pivoted, louvered, fixed types. Joinery details for windows, ventilators

UNIT – IV WINDOWS IN STEEL AND ALUMINIUM

15

Details of sliding and open able windows in aluminum and steel frames with glazed panels

UNIT – V STAIRCASE

15

Types according to profile– straight flight, doglegged, quarter turn, half turn, bifurcated, spiral& helical.

Types based on materials (timber, wood, steel, synthetic materials). Details of handrails & balusters.

Designing and detailing for physically handicapped

TEXTBOOKS

17IDS323	INTERIOR LANDSCAPE									SEMESTER-III	
Marks	Internal	80	External			120	Total	200	Exam Hours		6
Instruction Hours/Week		L	1	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To develop an understanding about the design of interior landscape
- To give special emphasis on the choice and care of plant materials used in the interior spaces.
- To study about the various landscaping elements and their application in interior spaces.
- To develop and understanding between outdoor and indoor landscape areas.]
- To have apt knowledge of the regional or vernacular plantation to use in particular regions and climates.
- To understand the various features using natural and manmade elements in landscape detailing.

COURSE OUTCOME:

1. Awareness of the role of landscape design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of landscape design and their scope.
3. Sensitivity towards evolution of different garden and landscape design across time and context.
4. An understanding of landscape design with respect to site planning and different functional typologies of spaces
5. To use landscape according to the region, climate location and other detail.
6. To understand and provide physical requirements for plants to keep it in the living condition and maintenance of the same.

UNIT – I INTERIOR LANDSCAPING

8

Definition, classification of plants, indoor plants and their functions, layout & components, Floriculture–commercial, orna mental, Selection of plants & pest control.

UNIT – II PHYSICAL REQUIREMENTSOF PLANTS

9

Physicalrequirementsofplants–light,temperature,water,plantingmedium,soilseparator, weightof plants, acclimatization &maintenance.

Techniques to meet physical requirements.

UNIT – III INTERIOR LANDSCAPINGELEMENTS& PRINCIPLES

9

Various interior landscaping elements – water bodies- pools, fountains, cascades

Plants,rocks,artifacts,paving&lighting,Designguidelines-planttexture&colour,plantheight,plant spacing.

UNIT – IV ROOF AND DECK LANDSCAPE

9

Protectionoftheintegrityoftheroofandstructure,provisionsfordrainage,lightweightplantingmedium, irrigation, selection of materials, water proofing, provision for utilities and maintenance.

UNIT – V EXERCISE ON INTERIOR LANDSCAPE

10

- Courtyard design
- An outdoor room design
- Terrace garden

REFERENCE BOOKS

1. Time saver standards for landscape architecture.
2. Planting design by Theodore D.Walker,VNR PublicationsNew York.
3. LandscapingPrinciples and Practices byJack E.Ingels,Delmar Publishers.

17IDT401	COLOUR AND LIGHTING IN INTERIORS									SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To understand different types of lighting and to use apt luminaries and fixture.
- To make different styles of furniture both in modular and in customized.

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have the ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To be able to make electrical drawings with apt representation and accommodating different types of lighting details.
6. To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics.

UNIT- I INTRODUCTION TODAY LIGHTING

8

Nature of light –Wavelength, Photometric quantities–intensity, Flux, illumination and luminance, visual efficiency, sources of light, day light factor concept, design sky concept, day lighting requirements.

UNIT – II ARTIFICIAL LIGHTING

9

Electric lamps – incandescent, fluorescent, sodium vapour, mercury, halogen and neon. Different types of lights in interior and exterior – task lighting, special purpose lighting. Calculation of artificial lighting, guidelines for lighting design, Glare in artificial lighting.

UNIT – III EFFECT OF COLOR IN LIGHTING

8

Colors, color schemes - Monochromatic, analogous, complementary color schemes, triadic and tetradic schemes, effects of color in different areas, color temperature, psychological effects of color in interiors, factors affecting color, Prang theory – Color wheel, Munsell system and Oswald system.

UNIT - IV LUMINAIRES & FIXTURES

10

Definition, different luminaires for lighting, lighting control system- benefits & application, Impact of lighting, fixture types - free standing or portable, fixed, light fixture control.
Lighting accessories - switches, sockets, fused connection units, lamp holders, ceiling roses etc.

UNIT - V CASE STUDY

10

Study of projects based on different lighting concepts used in interiors and exteriors.

TOTAL 45

REFERENCE BOOK

1. The Art of living- Randallwhitehead,
2. Lighting design, sourcebook- Randall whitehead,
3. Light right- M.K.Halpeth,T.Senthil kumar, G.Harikumar
4. Conceptsof lighting, Lighting design in Architecture- Torquil Barker

17IDT402	INTERIOR SERVICES - II									SEMESTER-IV		
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To understand the need and application so air conditioning,
- To understand the need and aptness for areas that requires acoustics.
- To provide details of electrification and mechanical services in buildings with exposure to various systems, methods and fixtures.
- To be able to provide fire safety standards to buildings that are specified in the byelaws.
- To understand sound insulation methods and to be able to insulate rooms based of the decibel levels that will be required to be maintained.
- To understand the refrigeration process and to be able to execute the best system based on the function and need of the AC in buildings.

COURSE OUTCOME:

1. Understanding basic concepts of air-conditioning and to be able to produce suitable drawings for execution of the same in the building drawings.
2. To be able to calculate the load on air-condition and to be able to suggest the power and input required for the cooling system.
3. To produce suitable electrification and mechanical methods for the cooling system.
4. To understand the need of heating system and to understand the provision of the same and to understand the difference between the cooling and heating systems.
5. Ability to conceptually plan/ design the above for a given simple context.
6. Awareness of sustainable principles and best practices along with acoustics and detailing.

UNIT I BASICCONCEPTS AND SYSTEM COMPONENTS IN AIR CONDITIONING 8

Vapour compression cycle – Compressors – Evaporators –Refrigerant control devices – Electric motors
– Air handling units – Cooling towers.

UNIT – II AIR-CONDITIONING SYSTEM AND APPLICATIONS 10

Windowtypeandpackagedairconditioners–Chilledwaterplants–Fancoiledsystems–Waterpiping– Cooling load.-
Air-conditioning systems for different types of buildings – Duct lay out etc.

UNIT III FIRE SAFETY 9

Mechanism of fire spread in building and prevention – Fire safety standards – Concepts in fire protection – Fire fighting installation and requirements - Heat sensitive detectors –Smoke detectors –Automatic water sprinkler system- Foam systems.

UNIT IV ACOUSTICS AND SOUND INSULATION 9

Room acoustics - resonance, reverberation, echo, reverberation time, simple exercise using Sabine's formula.-
Acoustical requirements of different types of building. – Sound absorption, absorption co-efficient and their measurements, Absorbing materials used and their choices, exercises involving reverberation time and absorption co-efficient. Sound insulation materials

UNIT V ELECTRICAL SYSTEMS 9

Single/Three phase supply– Protective devices in electrical installation — ISI Specifications - Types of wires,
Wiring systems and their choice –Planning electrical wiring for building interiors – Main and distribution boards- Typical Electrical layout for interiors.

TOTAL 45

REFERENCE BOOKS

1. M.H.Lulla, Air conditioning
2. V.K.Jain, Fire Safety in Buildings.
3. Peter templeton & Saunders – Detailing for architectural acoustics –Architecturalpress, 1994
4. R.G.Hopkinson andJ.D.Kay, the Lighting of Buildings, Faber andFaber, London,196

Note: Detailed acoustic design and lighting should be done for any one type of building.

17IDT411	COMPUTER APPLICATION - III								SEMESTER-IV	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM
- To help the student understand the technology of computer and its terminology.
- To enable the student to understand the applications of the software and graphic system.

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.
7. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering

UNIT – I

Starting Auto CAD: Introduction to the menu, starting drawings from scratch. Creating and using templates- starting drawings with setup wizards. Saving and closing a file.

UNIT – II

Using co-ordinate systems – The UCS. Working with Cartesian and polar coordinate systems. Using displays with shortcuts.

UNIT – III

Setting up the drawing environment – setting the paper size, setting units, grid limits, drawing limits, snap controls. Use of paper space and model space.

UNIT – IV

Basic commands dealing with drawing properties: Layer control, change properties, line weight control, etc.

UNIT – V

Inquiry methods: Using data base information for objects, calculating distance, angle, areas etc.

UNIT – VI

Dimensioning commands and blocks: Dimensioning the objects in linear, angular fashions along with quick time dimensioning etc. Creating and working with blocks, creating symbols, use of blocks in creating a layout, of a residential area- one exercise to be done as lab assignment.

UNIT – VII

Orientation towards 3D : 2D to 3D conversion, perspective view, walk through the layout.

UNIT – VIII

3D-Max : Understanding 3D, theory behind 3D modeling. Preparing for construction of 3D models. Construction of 3D surface models- extrusion, wire frame, creation of a shell, elaborate surfaces.

UNIT –IX

Solid modeling : concepts behind solid modeling, composite solids creation and modification, solids display and inquiry.

UNIT – X

Rendering and presentation. Printing and plotting.

17IDS421	INTERIOR DESIGN IV								SEMESTER-IV	
Marks	Internal	160	External			240	Total	240	Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	10	Credits		7

COURSE OBJECTIVE:

- Space planning process (block diagram, concept statement)
- Furniture
- Historic style
- Structural integration
- Material selection
- Color
- Rendering
- Design Process/methodology
- Creativity /originality
- Documenting space (sketch and photo documentation)
- Anthropometry and ergonomics
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
5. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
6. To be able to describe an understanding that is both in representation and verbally present the same.
7. To update and to introduce various other methodologies to enhance the skill set.
8. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
9. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

- Space planning process (block diagram, concept statement)
- Furniture
- Historic style
- Structural integration
- Material selection
- Color
- Rendering
- Design Process/methodology
- Creativity /originality
- Documenting space (sketch and photo documentation)

- Anthropometry and ergonomics
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development

The list of suggested topics to be covered as design problems:

- Thematic space making with Art and craft forms of our own culture in India – East, West, North, Central and so on.
- Design of living units of various geographical locations and culture by involving historical periods, styles and use of craft in its inherent quality and form – craft and living environment.
- Applications of art / craft at public level spaces- lounge (hotel), restaurant of specific ethnic characteristics.
- Response to today's situation of urban society – For a given building create contemporary homes of modern society – needs, realities, value system etc.

Note: At least two major exercises and two minor design/time problems should be given.

In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

17IDS422	FURNITURE CONSTRUCTION									SEMESTER-IV		
Marks	Internal	80	External			120	Total	200	Exam Hours		6	
Instruction Hours/Week		L	1	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To make different styles of furniture both in modular and in customized.
- During this semester students will focus on the craft of the Furniture -Maker, utilizing state of-the-industry procedures and equipment. Emphasis will be on wood and wooden products as a construction medium

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have to ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics.
6. Ability to construct the and understand the furniture design and detailing..
7. Understanding the anthropometry of the furniture and materials used to crate comfort and aesthetics.

UNIT – I INTRODUCTION TO WOOD

8

Wood as a building material: Identification, selection, application, types of wood, commercial Classification, nomenclature, structure Anatomy and Ultra structure, Conversion figure and natural defects, availability of wood products, wood based panels such as plywood ,MDF,HDF, Particle board , pre laminated boards etc.

UNIT – II THE BASICS OF FURNITURE CONSTRUCTION & TOOLS

8

Measurement and measurement systems, Furniture Construction: Drawers, Cadenza, dining chairs, sofa, settee, cots detail. Preparation for finishing, Furniture Materials Specifying timber, finishes etc . Detailed construction drawings & explaining construction and material finishes.

UNIT – III PLYWOOD CONSTRUCTION TECHNIQUES

9

Plywood as a building material, Layout techniques and machining plans. Fabrication techniques - stapling, gluing.

Furniture Joinery - screw joinery, nail joinery, Mortise & tenon joints, Dovetail joints, Dowel joints, Edge joints.

UNIT – IV MODULAR KITCHENS

10

Modular kitchens, components basis of Construction involving layouts, carcass, hardware selection, fixing details finishes and special types such as tall units, grain trolleys, and carousels fold out etc.

A detailed project involving the design of a small kitchen using modular components.

UNIT – V FURNITURE MODEL MAKING

10

Preparation of block models of furniture using wood, boards, leather, fabric, thermacol, clay, soap/wax etc.

TOTAL 45

TEXT BOOKS

1. S. C. Rangwala - Engineering materials - CharotarPublishing, Anand
2. Francis D. K. Ching - Building Construction Illustrated, VNR, 1975,
3. Fevicol Furniture series

17IDS423	LIFESTYLE ACCESSORIES DESIGN								SEMESTER-IV	
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		4

COURSE OBJECTIVE:

- To introduce students to all accessories that could be used in each and every space in design.
- To make students understand the need for aesthetics in design
- To use all above said materials in the most creative fashion that they could use.
- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To be able to experiment new materials and to understand the properties of the materials.

COURSE OUTCOME:

1. Ability to decide the other factors of design which has no limitations and understand the importance of appropriate accessories to fill in the space as per design requirements.
2. Understanding the luxury element in interior design which leads to a picture perfect assimilation of items in design principles.
3. To understand the development and technology of the product and the procedure of manufacturing.
4. To be able to approach the design with the utmost importance to the function and the aesthetics to be incorporated.
5. To be able to physically make a product that faces all challenges laid for the execution and design of the same.
6. To be able to assess the working of the project and to be able to redesign with the errors o be minimized as much as possible

UNIT – I

Insight of various products and lifestyle accessories in the interiors. Role of accessories in interiors. Integration of accessories in interior design. Design approaches in product and lifestyle accessories design with a focus on functionality, ergonomics, aesthetics, multiple usages etc.

UNIT – II

Stylistic development of decorative accessories from the past to present with insight into technological advances and the influences of social, economic and political factors on their design. Brief study of period room settings with the context of decorative accessories complementing the architecture and interior design.

UNIT – III

Study of materials and processes adopted in accessories design. Basic understanding of construction principles, anthropometrics, principles of sizes and proportions, modeling, rapid prototyping, color, texture etc. with broad orientation to socio-cultural and historical context of the sector. Orientation to Indian as well as global context of interiors, trends and market.

UNIT – IV

Design approach with limited constraints inherent in accessory products. Evolving the strategy of design with integration of technical complexities and lifestyle influences. Development of the design of products and accessories to specific interiors and prevailing trends. Broad based approach towards innovative design and application to multi products and multi materials in manufacturing interior products and lifestyle accessories.

UNIT – V

A detailed study involving all the design aspects of any of the following lifestyle accessories: luminaire design, glassware, lighting, textiles, mirrors, clocks, wall coverings etc.

17IDPE431A	ELECTIVE - WORKSHOP METAL								SEMESTER-IV	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc. to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design. To understand the basic methods of furniture making with focus on hands on methods regarding workshop practices in metal
- To understand the joineries and also understand the properties in these materials. This will help them add new elements into their design which could be their own personal ideas.

COURSE OUTCOME:

1. Ability to understand and construct furniture to live size
2. understanding the scale of drawing to life size
3. To use tools related to wood glass and alternative substitution to wood.
4. To understand properties and usage of materials henceforth.
5. To understand modular furniture through engineered wood.
6. To understand the various capacities of hardware for the various materials.
7. To understand wood joints and its usage in various circumstances.
8. Ability to understand and construct furniture to live size understanding the scale of drawing to life size
9. To use tools related to metal and alternative substitution to metal and combination of wood, glass and metal.

UNIT –I TO 5

Types of metals, properties of metals, definitions of terms with reference to properties and uses of metals, various methods of working with metals, fixing and joinery in metals, finishing and treatment of metals., finishes on metals. Standard specifications.

Metals in built form activity – horizontal, vertical and inclined surfaces – in interior environment elements- products and furniture forms- doors, windows, jallies, railing, stair etc. Metals and other materials – form and joinery.

Note: Learning should be by feel and working with metals to explore design.

17IDPE431B	ELECTIVE - WORKSHOP WEAVING								SEMESTER-IV	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design. To understand the basic methods of furniture making with focus on hands on methods regarding workshop practices in metal
- To understand the joineries and also understand the properties in these materials. This will help them add new elements into their design which could be their own personal ideas.

COURSE OUTCOME:

1. Ability to understand and construct furniture to live size
2. understanding the scale of drawing to life size
3. To use tools related to wood glass and alternative substitution to wood.
4. To understand properties and usage of materials henceforth.
5. To understand modular furniture through engineered wood.
6. To understand the various capacities of hardware for the various materials.
7. To understand wood joints and its usage in various circumstances.
8. Ability to understand and construct furniture to live size understanding the scale of drawing to life size
9. To use tools related to metal and alternative substitution to metal and combination of wood, glass and metal.

UNIT – I TO 5

Introduction to fibers and yarns, table loom and floor loom, preparing warp, setting up loom for weaving. Basic weaves and their variations.

Variation weaves and design quality, weaves as light controlling device, weaves and its quality for upholstery, curtains and floor coverings.

Rugs and durries – motifs design, patterns and color variations.

Note: Extensive market survey of available fabrics for interior spaces – product specifications and manufacturers

REFERENCES

17IDT501	CONTEMPORARY INTERIORS									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To help the student understand the designs from the industrial age to the present information age.
- To know more on the Modern Movements in Interior design from the beginnings of 20th century.
- To help students acquire knowledge of the current happenings and the classification of the importance of a particular information.
- To be understand and execute various styles like modernism, post modernism, contemporary, etc,
- To be able to understand the concepts of minimalism, and international design style.
- To be able to design a particular style of the interiors based on these understandings.

COURSE OUTCOME:

1. An awareness of the spread and varied later directions of modern interiors across the world.
2. An understanding of interior production from the 2060s as driven by large scale changes across the world.
3. Familiarity with contemporary forces and directions in interiors across the world.
4. To be fore thought and to be able to design for the future with an understanding of the recent history.
5. To be able to appreciate and be a critic to all works of famous architects under each movement.
6. To understand different regions and its interior design style to be able to regain global cultures understanding.

UNIT – I EARLY PIONEERS

9

Art nouveau, the post Industrial era works of Charles Renée Mackintosh, Antonio Gaudi, Gerrit Rietveld and their expressionist interior design.

UNIT – II BAUHAUS AND POST WAR MODERNISTS

9

Walter Gropius/ Bauhaus, De Stijl, Mies Van Der Rohe, Art Deco, Postwar Modernism.

UNIT – III MODERNISM

9

Interiors of LeCorbusier, Frank Lloyd Wright, Louis Khan, Kenzo Tange and Oscar Niemeyer

UNIT – IV INTERNATIONAL STYLE

9

The works of Alvar Alto, Phillip Johnson, Charles and Ray Eames, Eero Saarinen, Eero Aarnio, Arne Jacobsen.

UNIT – V POST MODERNISM AND MINIMALISM

9

Interiors of Zaha Hadid, Santiago Calatrava, Frank Gehry and Peter Eisenmann.

TOTAL 45

REFERENCE BOOKS

1. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London
2. Interior Design & Decoration, Sherril Whiton, Prentice Hall
3. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York
4. History of Architecture, Sir Banister Fletcher, CBS Publishers & distributors, New Delhi
5. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York.

17IDT502	INTERIOR SERVICES - III									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To understand the need and application so fair conditioning, acoustics, electrification and mechanical services in buildings with exposure to various systems, methods and fixtures.
- To understand human comfort and to be able to produce environments for human comfort.
- To be able to understand various seasons and climatic zones in the world.
- To be able to produce sustainable interiors to ensure the conservation of natural resources.
- To be able to use natural sources of energy in design and to produce the effects desired both climatically and aesthetically.
- To understand the solar energy and its various uses.

COURSE OUTCOME:

1. An understanding of heat balance in human beings.
2. An understanding of the effect of sun and wind in the inside of buildings.
3. An understanding of material effects inside the buildings.
4. Ability to design buildings with interiors with respect to climate.
5. To be able to modify small building elements to improve the condition of a particular climate.
6. To appreciate various methods suited for natural heating and cooling in building systems

UNIT – I

ENVIRONMENTAL CONTROL - Introduction – Climate and built form interaction. Global climatic factors, elements of climate, impact and issues of climatic balance in traditional and contemporary built environments, issues of ecological balance, implications of climatic forces in nature of spaces and forms. Patterns of organization and elements of built form at individual building.

UNIT – II

Thermal comfort and heat flow: Thermal comfort factors, physiological aspects. Body heat balance. Building climatological site analysis, application of comfort diagrams.

UNIT- III

Sustainable interiors – Meaning, methods, and types. Climatic influence and expression of the sustainable interiors. Basic calculations of thermal comfort and understanding of biodegradable materials.

UNIT – IV

Sun and Design process – Solar charts, sun angles and shadow angles, orientation for sun, sun control, design of shading devices, radiation, glare.

UNIT- V

Solar energy and its technical applications. Climate and material choices, color and texture choices for interior spaces.

5. Olgay and Olgay, Solar Control and Shading Devices.

17IDP511	ADVANCED COMPUTER GRAPHICS								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of software.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM
- To help the student understand the technology of computer and its terminology.
- To enable the student to understand the applications of the software and graphic system.

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.
7. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering

UNIT I INTRODUCTION TO 3DS MAX

12

An over view of GUI, types of modeling, transforming objects, Compound objects, modifiers & modifier stack.

UNIT II MODELLING TECHNIQUES

12

Lathing, displacement, lofting, Boolean operations using standard and compound primitives, modeling with lofts, low polygon modeling and nurbs modeling.

UNIT III TEXTURES AND TEXTURE MAPPING

12

Using material editor, material browser, mapping textures

UNIT IV RENDERING

12

Lighting, cameras and render effects, environment mapping, fog and atmospheres.

UNIT V PHOTOSHOP

12

Photoshop interface, creating and saving images, basic image editing, Photoshop tool box and tools, using layers, special effects.

TEXT BOOKS

1. 3DS MAX- Advanced 3D modeling and animation–C & M, CADD Centre

REFERENCE BOOKS

1. 3DS MAX 8 Bible – Kelly C. Murdock
2. Photoshop CS Bible – Deke McClelland
3. Adobe Photoshop 7.0 classroom in a book – Adobe creative team

17IDS521	INTERIOR DESIGN - V								SEMESTER-V	
Marks	Internal	160	External			240	Total	400	Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	10	Credits		7

COURSE OBJECTIVE:

- Space planning process (block diagram, concept statement)
- Furniture
- Historic style
- Structural integration
- Material selection
- Color
- Rendering
- Design Process/methodology
- Creativity /originality
- Documenting space (sketch and photo documentation)
- Anthropometry and ergonomics
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development
- To create understanding of human built environment as a holistic, living entity from macro to micro scales,
- shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and Interior design in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyze their nature and causes for them

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Ability to project future transformations and give possible/ appropriate ways to address issues, if any
5. Ability to collect, assimilate and integrate knowledge in a holistic manner.
6. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
7. Ability to observe and analyze changes in the above.
8. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
9. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
10. To be able to describe an understanding that is both in representation and verbally present the same.
11. To update and to introduce various other methodologies to enhance the skill set.
12. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
13. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

- Introduction to building codes
- Way finding, Signage and graphics
- Universal Design
- Accessible design
- Design Disabled
- Materials, furniture and finish selections
- Introduction to construction detailing
- Ergonomics and Human Factors
- Digital representation (3 D modeling)
- Space planning process
- Color
- Interior environmental control issues
- Rendering
- The list of suggested topics to be covered as design problems:
- Institutional spaces in urban, semi-urban and rural contexts with an aim to explore and understand transformation and adaptive re-use.
- Historic and abandoned sites provide scope for rejuvenation through multi dimensional programs covering functions like museums, cultural and resource centers, libraries, convention centers, exhibitions etc. that also aim in making a social contribution.
- Recreational spaces such as auditoriums, halls, cinema houses, stage design etc. Knowledge of audio visual communication, color and light interaction, sound control system, design of interior elements, products and furniture forms.

Design issues in addition to the primary focus for the above are statement of institution character through interior environment responses to site and context, integration of interior architectural elements to other interior elements, dialogue between the existing and the newly added insert, interpretation of institutional activities and their spatial correlation.

Note: At least two major exercises and two minor design/time problems should be given.

In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

17IDS522	ESTIMATION AND COSTING IN INTERIORS									SEMESTER-V	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To equip the students to prepare the Estimate in order to fore see the cost of the work
- To implement an interior design project & also to monitor / control project cost.
- To be able to make specification of the materials used and hence regulate the cost to keep it in the budget specified by the client.
- To understand various finishes and its rates to be executed as per the budget and the designers choice.
- To be able to provide a rough estimate and a detailed estimate as in need of the project.
- To be able to learn to control the cost and time with respect to the project.

COURSE OUTCOME:

1. Ability to understand and write specification for the construction projects
2. Ability to do estimate of building interiors with various quantities
3. To be update about the latest materials available in the market ad to be able to substitute materials to attain cost goals.
4. To understand the various methods of estimation that can be made and to be able to use the same during the execution of the project.
5. To have the knowledge of the budget limits of the client and hence will be able to make suitable suggestions to the client.
6. To be able to alter the specification and to adjust the final cost though the changes.

UNIT – I

INTRODUCTION TO ESTIMATION

10

Estimation –definition, purpose, types of estimate, and procedure for estimating the cost of work in order to implement an interior design project or to make products related to interior design like furniture, Arti facts etc.

UNIT – II

RATE ANALYSIS & ESTIMATION FORMAT

7

Rate Analysis – definition, method of preparation, quantity & labor estimate for wood work, steel work, Aluminum work, glass & its rate for different, thickness & sections, finishing (enamel paint, duco paints, melamine, DU coats, Hand polishing, veneering and laminating) for walls & ceilings. Electrical & plumbing products, wiring, ducting etc., and laying of tiles & wall paneling in the estimate format of the project.

UNIT – III

DETAILED ESTIMATE

9

Detailed Estimate–data required, factors to be considered, methodology of preparation, abstract of Estimate, contingencies, labor charges, bill of quantities, different methods of estimate for interior design works, methods of measurement of works.

UNIT – IV

COSTING OFFIXTURES & FITTINGS

9

Cost of the following items: electrical fitting like, luminaries, fan, cables, switches, etc., tiles in skirting & dado, cement plaster, joinery in wood, steel & aluminum, painting to walls – cement paint, oil paints, distemper acrylic emulsion, enamel paint painting to joinery, varnishing, French polishing plumbing. Equipments like piping, shower panels, cubicles, tubs, Jacuzzis, taps, motors, fountains, false ceiling of Aluminum panels, steel & wooden frame work, thermocol etc. wall paneling of ceramic tiles & other tiles of materials suitable for the same, partitions made of materials like aluminum wood, steel etc

UNIT – V

INTRODUCTION TO SPECIFICATION

10

Specification – Definition, purpose, procedure for writing specification for the purpose of calling tenders, types of specification. Specification for different items related to interior design project – wood work for Furniture window frames & pelmets, partition set also of materials like steel aluminum glass of various kind. Wall paneling & false ceiling of materials like aluminum, steel, wood, electrical, plumbing, air conditioning & fire fighting equipments.

TEXTBOOKS

1. M. Chakraborti, .Estimation, Costing, Specification and Valuation in Civil engineering.
2. Dutta, Estimating and Costing, S. Dutta and Co., Lucknow 1983

17IDS523	WORKING DRAWINGS AND DETAILS								SEMESTER-V	
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		4

COURSE OBJECTIVE:

- Reading of working drawing, their co-relation and cross-referencing in various technical projections.
- To produce detailed measured drawings in plans, elevations, sections, detailing etc.
- To understand the various parameters involved in the detail drawing and to be able to produce the same.
- To incorporate all service drawings with respect to fire and safety, water supply and plumbing, electrical, acoustics and any such that will be accounted for.
- To be able to detail out each part into sub parts and to be able to provide construction execution details of the same.
- To be able to produce circulation patterns in the plan and to be able to detail out the standards that are used in the design.

COURSE OUTCOME:

1. An understanding of all the aspects that go into the making of interiors through study of drawings related to construction.
2. Ability to resolve spatial concerns with technical aspects of a the interiors
3. Ability to design and detail components within a building interiors.
4. Ability to understand the structural components of the buildings and to be able to make changes only if necessary and hence impact studies to be carried out.
5. To understand designs in all parameters such as plans sections elevations and detailed drawings.
6. Joinery details to be detailed and produced as fit for construction.

UNIT – I

Preparation of working drawings – Suitable scales of drawings, methods of giving dimensions and standards on plans, sections, elevations, details etc.

UNIT – II

Preparation of plans – Architectural plans, furniture layout floor plans with clearances, different level floor plans, detailed floor plans of each room.

UNIT – III

Elevations and Sections – Detailed sectional elevations of all the walls in the interior with al the required dimensions and specifications.

UNIT - IV

Details of all services – layouts for flooring, ceiling, electrical, plumbing, lighting, fire fighting etc., toilet details, kitchen details, staircase details, furniture details, Interior finishing details, material, color and texture details,

Fixture and fixing and joinery details.

UNIT – V

Specifications writing: Writing detailed clause by clause specifications for materials pre and post execution, tests, mode of measurements, manufacturers details and specifications etc.

Manufacturer's specifications – Database of manufacturers specifications for the following materials based on surveys –

Glass, plywood and laminates, hardware, electrical, wiring, accessories, plumbing fitting and fixtures, flooring, cladding etc.,

Note : Students shall prepare at least two working drawing sets, one for a small residence and one for a large building.

17IDPE531A	ELECTIVE - SIGNAGE AND GRAPHICS								SEMESTER-V		
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- Knowledge about the various styles of signage manufactured in various materials is vital to an designer.
- Understanding the methods and techniques involved in signage and graphics.
- Understanding the signage location and using apt design and material is important.
- To understand the visibility factor and the importance of the signage.
- To be able to differentiate the various types of signage and to se it aptly in strategic locations.
- As a designer it is important to come up with unique and legible ideas for signage.

COURSE OUTCOME:

1. Ability to design products in signage using graphics.
2. Ability to understand the needs of the industry and give better products in design
3. Ability to experiment with different materials
4. Ability to provide proper lighting for the signage to be legible.
5. Ability to produce signage for large spaces and to be unique in design
6. To be able to understand the hardware system and to be integrated to the project in total

UNIT – I

Introduction – environmental graphic Design, wayfinding, Need, importance etc.

UNIT – II

Information content system – kinds of sign information, hierarchy of content, developing the sign information content, Navigation – message hierarchy and proximity, Other factors affecting sign information content, pictorial information content, signage master plans.

UNIT – III

The Graphic system - Typography overview, choosing a typeface, typographic treatment, typographic considerations in signage for nonsighted and low sighted people, symbols and arrows, other graphic elements, color, layout, overview of signage graphic process.

UNIT – IV

The hardware system – shape, connotations of form, sign mounting considerations, sign size considerations, sign lighting overview, sign materials overview, basic sign materials, electronic message displays, stock sign hardware systems, sign materials and codes, overview of coatings and finishes applied to signs.

UNIT – V

Signage Design – Eyelevel, light, Fonts, typographical systems and type area, pictograms, arrows, color – contrast, language, systems, tones, Coding, privacy and protection, Room identification.

UNIT – VI

Signage Planning – contract, obtaining information, preliminary design, design, construction, work plan and prototypes, tenders, specifications, on-site management, completion.

17IDPE531B	ELECTIVE - PRODUCT DESIGN								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- Knowledge about the various styles of furniture manufactured in various materials is vital to a Designer.
- Understanding the methods and techniques involved in furniture and product design.
- To understand the importance of a digital product and then to create a digital product.
- The process involved in the design of a product to be understood.
- To understand the detailing of the furniture and its feasibility for production
- To understand mass production techniques and the production line formation of the same.

COURSE OUTCOME:

1. Ability to design products
2. Ability to understand the needs of the industry and give better product design.
3. To understand the need and to be able to justify the product to be designed.
4. To follow design procedure and to understand the process to make a product.
5. To understand various materials and to execute the best possible material for a particular design.
6. To create a digital product and to be able to display the product details of the same.

UNIT – I

INTRODUCTION

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

UNITY – II

HUMAN FACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability.

Information input and processing. Human control systems. Applied anthropometry – Human response to climate.

UNIT – III

ASPECTS OF PRODUCT DESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays, Visual codes and symbols.

UNIT – IV

PRODUCT DESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

UNIT V

DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery.

Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc.

Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc.

Element design for the physically and mentally different people.

REFERENCES:

4. An invitation to Design, Helen Marie Evans.

17IDPE531C	ELECTIVE - SET DESIGN								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- Knowledge about the various styles of sets manufactured in various materials is vital to an designer for a foray into the film industry.
- Understanding the methods and techniques involved in set designs.
- To understand the defiance of temporary structures.
- To acquire knowledge of materials and construction techniques used in temporary structures.
- To understand the area and field specific for the film industry.
- To be able to design and imagine various backgrounds for the set design

COURSE OUTCOME:

1. Ability to design products and sets suitable to situations in concern
2. Ability to understand the needs of the industry and give better product in design
3. The student will be able to enter into the film industry in the foray of Design
4. The student will acquire knowledge various temporary structural methods.
5. To understand to set up stage and platforms for future
6. To understand history and security in the film industry and to be able to use the techniques already introduced
7. To understand theater sit up and the rolling screen design.

UNIT-I

FILM AND SOCIETY

Examination of the twentieth-century culture and society through film. Critical analysis of cultural and social conflicts are portrayed and worked out in popular films, and examination of how motion pictures create a window into modern society. Film as cultural texts to better understand history and culture manifestations.

UNIT-II

HISTORY AND THEATER FILM SET DESIGN

Investigation the production methods, dramatic theory and conventions, and scene design of various performance media since the popularization of the motion picture, and how it has influenced all entertainment design in the 20th and 21st centuries.

UNIT-III

GRAPHIC DESIGN AND TYPOGRAPHY FOR EXHIBIT DESIGN

Principles of layout for creating effective visual signage and explore the unique problems, technique, theory, and approaches of signage in film, theatre, and other forms of mediated exhibition. Introduction to the design applications for building signage.

UNIT-IV

SET DESIGN AND CONCEPT WRAP

Introduction to the basic concepts, through theory and practice, of scene design in theatre, film, and other fine arts and entertainment media. Students will learn how to analyze scripts for proper scenery, how to conceptualize designs that will translate into actual sets, and develop visual thinking within the creative process.

UNIT-V

STAGE DESIGN

Stage design process from inception to performance, script analysis, visual arts analysis, research skills, and the application of principles and elements of design. Understanding stage setting through language, color, and architectural analysis.

REFERENCES

17IDP611	PRACTICAL TRAINING								SEMESTER-VI	
Marks	Internal	400	External			600	Total	1000	Exam Hours	6
Instruction Hours/Week		L	0	T	0	P/S	0	Credits		15

COURSE OBJECTIVE:

- To introduce the challenges of interior design practice.
- To enable overall understanding of different stages in real life interior design projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific interior design practice –
- initiation of project,
- development of concepts into schematic drawings,
- approval process,
- presentations and working drawings,
- involvement in office discussions and client meetings,
- integrating structural and service concerns,
- estimation and tendering processes,
- site supervision and coordination in the construction process

COURSE OUTCOME:

1. An overall idea of the nuances of interior design practice.
2. An understanding about the total process that goes into the making of an interior in a building.
3. Maturity in using the experience gained from internship in the thesis project.
4. To have the ability to handle clients and translate the design requirements in to design projects.
5. To be able to experience hands on experience in the site during site visits and gain practical knowledge.
6. To be able to do professional detailing and to be able to produce drawings that are good for construction.

Every student must work in an interior designer's office as a full time trainee for a period of 20 calendar weeks (excluding viva – voce) from the date of commencement of training. The chief Interior Designer in the firm should have a minimum of 5 years of practical/ professional experience after his /her graduation.

The student should involve herself /himself in various aspects of work in an office like working drawings, presentation drawings, quantity estimation, site supervision etc. Students should understand professional practice methods of various interior designers, design process from client contacts to production documents, tender documents, production drawings for various works, site supervision etc. for various works. They should also know the Coordination of various agencies – client, members of design team, consultants, contractors, craftsmen and construction supervisors.

Detailed instructions regarding the training, the frequency of reporting to the department etc will be issued at the end of Seventh semester, which the student must strictly follow.

After completion of training, every student will have to submit a detailed report with a set of drawings on at least two projects in which he / she has worked during the twenty calendar weeks of the practical training period. This report will be evaluated at viva – voce by a jury consisting of one external, one internal and head of the department or his nominee. After submission of the report the department at its convenience will arrange for the conduct of the viva – voce examination.

17IDP621	FIELD STUDY AND DOCUMENTATION								SEMESTER-VI	
Marks	Internal	200	External			0	Total	200	Exam Hours	6
Instruction Hours/Week		L	0	T	0	P/S	6	Credits		3

The choice of the building shall be Contemporary, Heritage, Vernacular or even a settlement/small area in the city of training. This field study and documentation shall be submitted in the form of an architectural report with sketches, pictures and drawings and presented in the form of videos, presentation, slideshow etc covering the following aspects:

- History and Cultural Impact
- Style and Function
- Form and Spatial Studies
- Key Elements and Features
- Materials and Technology

17IDT701	PROFESSIONAL PRACTICE									SEMESTER-VII
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVES:

- To develop understanding of the duties and liabilities of an Interior designer
- To obtain knowledge of bye-laws that relate to the building & the environment in the Indian context.
- To learn and understand the Professional ethics and practice.
- To understand the code of conduct for interior Designers.
- To understand and undertake duties of an interior designer.
- To enable students to be ready for the professional world as practicing interior designers.

COURSE OUTCOME:

1. Ability to understand the professional standards
2. Ability to understand the tender documents and contract
3. Ability to understand and abide the duties of an interior designer.
4. Ability to understand and execute the code of conduct for an interior designer.
5. Ability to tender for Government projects and be able to estimate the cost of the same.
6. Ability to conduct various valuation for interior projects.

UNIT – I

Role of Interior Designer in society: Interior Design Profession as compared to other professions. Difference between profession and business. IIID and other organizations related to interior design profession.

Interior Designers approach to works, ways of getting works: types of works, works partly executed by other Interior Designers. : various precautions to be taken before taking up the work, conditions of engagement between interior Designer and client: commencement of work.

UNIT – II

Issues of professional practice: Professional behavior, Ethics, Types of clients, Contracts, Tenders, Arbitration etc. as defined in terms of Interior Design field and current day context. Career opportunities, styles of interior design practice, relationship between client and professional, type of fees, process of fees negotiations, billing methods, tax liabilities, contracts – types of contracts – item rate, labour, lumpsum, cost plus percentage etc.

UNIT – III

Interior Designer's duties : drawings to be prepared : Interior Designer's relation with other parties connected with works such as client, contractor, sub contractors, consultants and authorities.

UNIT - IV

IIID Code of professional conduct: scale of charges: units and mode of measurements, clerk of work and his duties, inspection of work, certificate of payment to contractor, bill of quantities, schedule of rates, tenders, public, limited and negotiated tender documents and allied formalities.

Preliminary knowledge of Consumer protection Act and other related acts on Interior Designers.

UNIT – V

Types of offices for interior design practice: staff structure, filing of records, correspondence and drawings, maintenance of accounts, presentations in meetings, recording minutes of meeting.

Note: a report to be prepared by each student after visiting an interior designer's office.

Knowledge of role of consultants and coordination between different consultants on a big project.

17IDT702	PROJECT MANAGEMENT										SEMESTER-VII										
Marks	Internal		40		External			60		Total		100		Exam Hours		3					
Instruction Hours/Week			L		2		T		0		P/S		0		Credits					2	

COURSE OBJECTIVE:

- To introduce different management techniques suitable for planning and construction projects.
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.
- To understand the elements of network and be able to take the project completion analysis.
- To understand various methods for the analysis and hence arrive at the management procedures.
- To handle and calculate risk in delays and hence suggesting corrections to beat time lag in projects.
- To update project in the process and be able to control manpower management.

COURSE OUTCOME:

1. Ability to understand a project from concept to commissioning, feasibility study & facility programme, design, construction to commissioning.
2. Ability to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
3. An understanding of principles of management, construction scheduling, scope definition and team roles
4. To differentiate the management into time, labor, ad materials mainly apart from other contingencies.
5. To allocate various job works to different vendors and vendor management
6. To enable the smooth functioning of the project and to move towards completion in time.

UNIT – I

INTRODUCTION

Project planning and project scheduling and project controlling, Role of Decision in project management, Method of planning and programming, Human aspects of project management, work breakdown structure, Life cycle of a project, disadvantages of traditional management system

UNIT – II

8

ELEMENTS OF NETWORK

Event, activity, dummy, network rules, graphical guidelines for network, numbering of events

UNIT – III

8

CRITICAL PATH METHOD AND PERT ANALYSIS

CPM network analysis & PERT time estimates, time computation & network analysis

UNIT – IV

9

PROJECT TIME REDUCTION AND OPTIMIZATION

Project cost, Indirect project cost, direct project cost, slope of the direct cost curve, total project cost and optimum duration, contracting the network for cost optimization, steps in cost-time optimization

UNIT – V

PROJECT UPDATING AND ALLOCATION

When to update? Data required for updating, steps in the process of updating

Resource usage profile: Histogram, Resource smoothing and Resource leveling, Computer applications in project management.

TEXT BOOK

1. Dr. B.C.Punmia et al. Project planning and control with PERT and CPM, Laxmi Publications,

REFERENCE BOOKS

17IDP711	PHOTOGRAPHY AND JOURNALISM IN INTERIORS								SEMESTER-VII	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVES:

- To help the student understand the principles and technology of photography.
- To enable the student to understand the applications of photographs in interior
- To enable students to learn and understand the methods for blogging and vlogging
- To build the ability in students to create a website and be able to host it as well.
- To enable students to be updated and also to bring the interest of technology into the work.
- To ensure the student understands the various aspect of composition lighting , color
- And integration of all these aspects into one project.
- To understand and acquire knowledge in interior journalism, Documentation and analysis of works.

COURSE OUTCOME:

1. To develop a keen eye for compositions through photography.
2. To admire and capture the essence of aesthetics in Interior design projects.
3. To appreciate the various compositions in the nature and in natural elements.
4. To understand of the play in interiors through various interior lighting ideas.
5. To understand and apply color theory through color wheel and color psychology.
6. To be able to integrate all aspects of design in the process.
7. To develop a keen eye for compositions through photography.
8. To admire and capture the essence of aesthetics in Interior design projects.
9. To be able to deliver and write in adapt the design language to explain the nuances of the design through journalism.

To be able to choose the stream of interior journalism as an alternative career path in Interior Design

UNIT-2

JOURNALISM

Analysis of recent historical and contemporary examples of written and journalistic criticism of interior, including selected writings by Indian and overseas critics; discursive techniques, analysis of major critical themes, thematic categories in interior writing over the past three centuries.

UNIT-3

ANALYSIS OF WORKS

Works of Indian and international writers and critics will be presented and discussed. Seminars on Indian interior design writers, journalists and critics

UNIT-4

FIELD PROGRAM

Exercise on integrating photography in interior journalism.

UNIT-5

DOCUMENTING AND REPORTING

Preparation of documentaries and reports in any media such as Video, Still images, Reports, presentations etc., and present as a Seminar.

REFERENCES

17IDP712	ADVANCED WORKSHOP								SEMESTER-VII	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design.
- To understand and acquire knowledge in interior workshops for hands on experience in build and construct design processes.

COURSE OUTCOME:

1. Understanding the scale of drawing to life size
2. To use tools related to wood glass and alternative substitution to wood.
3. To understand properties and usage of materials henceforth.
4. To understand modular furniture through engineered wood.
5. To understand the various capacities of hardware for the various materials.
6. To understand wood joints and its usage in various circumstances.
7. To develop a keen eye for compositions through workshops.
8. To use all materials in coordination with other materials and create an understanding of multi material compositions.

UNIT – I

Development of textile design in different cultures from primitive art to contemporary designs. Criteria of design of the elements and principles of textile design. Analysis of a motif, developing repeat as a basic unit of design in textile printing.

UNIT – II

Block printing – developing block, understanding the material used, colors, types and their mixing process, various color printing.

UNIT – III

Screen printing – design evolution for wall hangings, preparing screen and understanding the technique, printing on paper and printing on fabric.

17IDP721	INTERIOR DESIGN - VI								SEMESTER-VII	
Marks	Internal	160	External			240	Total	400	Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	10	Credits		7

COURSE OBJECTIVE:

- To create understanding of human built environment as a holistic, living entity from macro to micro scales,
- shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and Interior design in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyze their nature and causes for them
- Understanding a Design Programme and the Components of the Design Problem.
- To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
- To enable an understanding of interior design as integrating diverse functional concerns in a building through analysis and innovation.

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Ability to project future transformations and give possible/ appropriate ways to address issues, if any
5. Ability to collect, assimilate and integrate knowledge in a holistic manner.
6. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment.
7. Understanding a Design Programme and the Components of the Design Problem.
8. To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
9. To enable an understanding of interior design as integrating diverse functional concerns in a building through analysis and innovation.
10. Ability to critically understand and address issue of resources.
11. Ability to balance diverse aspects/concerns of buildings by making informed choices and innovative design in the context of buildings with intense or complex programmes.
12. Ability to apply knowledge intensively in realms such as sustainable built environment, services

The primary focus should be on –

- Interior Construction Detailing
- Way finding/signage and graphic identification
- Decorative Accessories
- Building Codes.
- Rendering (hand and computer generated).
- Custom designed furniture and cabinetry
- Specification Writing
- Cost estimating

17IDP722	INTEGRATED PROJECT WORK									SEMESTER-VII		
Marks	Internal	80	External			120	Total	200	Exam Hours		6	
Instruction Hours/Week		L	1	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- The student has to submit a project feasibility report on the project done in the design studio by integrating the knowledge and skills acquired from all the subjects studied till date.
- The student has to exhibit the capacities of an interior design in full ideology and should be ready for the professional challenges in future.
- The project understanding in totality will be expected from each student.
- It will help understand the importance of each subject in the previous years and its applications henceforth
- To understand the environmental impact assessment and to analyze the feasibility of the project in any given site.
- To check the feasibility of the project in the services.

COURSE OUTCOME:

1. Ability to integrate all the knowledge acquired so far and to exhibit the same through drawings and renderings.
 2. Ability to integrate all aspects of the project to give a final report.
 3. To be ready for large scale projects before the thesis.
 4. To conduct research and to present the research with analysis of the feasibility of the project.
 5. To understand the socio economic implication of the project in the given location.
 6. To check the technical feasibility of the project with parameters such as soil, water and other natural elements.
 7. To assess the building for seismic zone and hence design according to the reading and understanding.
- Selection of sustainable/green materials
 - The list of suggested topics to be covered as design problems:
 - Hospitality Design, Retail Design, Healthcare Design and Office systems
 - Urban Interiors – Shopping malls, streets, Town squares, Fair grounds
 - Interior Ports – air ports, Bus stops, Railway stations, boats/ports
 - Exhibition displays – urban level and National level.
 - Mobile units – buses, cars, railway coaches etc.

Note: One major design in detail and two minor design/time problems should be given.

The report may consist of the following -

- Environmental impact assessment of the project following the standards and specifications
- Socio-economic appraisal of the project and the design considering factors such as behavioral aspects, security considerations, costs for different user groups, aesthetic preferences etc.
- Technical feasibility – through execution and detailing of different spaces and elements of design, checking the feasibility of layout for service systems and specifications

- Costing of the project – bill of quantities, schedule of rates, specifications etc. economic viability and financial viability
- Space planning aspects/ issues – user activity spaces, access to physically challenged, fire safety, other services, green rating etc.

The student has to submit a project feasibility report on the project done in the design studio by integrating the knowledge and skills acquired from all the subjects studied till date.

The report may consist of the following -

- Environmental impact assessment of the project following the standards and specifications
- Socio-economic appraisal of the project and the design considering factors such as behavioral aspects, security considerations, costs for different user groups, aesthetic preferences etc.
- Technical feasibility – through execution and detailing of different spaces and elements of design, checking the feasibility of layout for service systems and specifications
- Costing of the project – bill of quantities, schedule of rates, specifications etc. economic viability and financial viability
- Space planning aspects/ issues – user activity spaces, access to physically challenged, fire safety, other services, green rating etc.

Note : The report has to be presented for internal assessment

17IDP731A	ELECTIVE - INTERIOR DESIGN PHOTOGRAPHY									SEMESTER-VII	
Marks	Internal	80	External				120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits			4

COURSE OBJECTIVES:

- To help the student understand the principles and technology of photography.
- To enable the student to understand the applications of photographs in interior
- To enable students to learn and understand the methods for blogging and vlogging
- To build the ability in students to create a website and be able to host it as well.
- To enable students to be updated and also to bring the interest of technology into the work.
- To ensure the student understands the various aspect od composition lighting , color
- And integration of all these aspects into one project.

COURSE OUTCOME:

1. To develop a keen eye for compositions through photography.
2. To admire and capture the essence of aesthetics in Interior design projects.
3. To appreciate the various compositions in the nature and in natural elements.
4. To understand of the play in interiors through various interior lighting ideas.
5. To understand and apply color theory through color wheel and color psychology.
6. To be able to integrate all aspects of design in the process

UNIT – I

PRINCIPLES OF COMPOSITION

Rule of thirds, perspective-worm's eye view, normal eye view, bird's eye view, one-point perspective, two-point perspective, three point perspective, exercises in composition

UNIT – II

PRINCIPLES OF PHOTOGRAPHY

Technical definitions, understanding a camera, anatomy of a SLR camera, technical setting in a SLR camera, different types of lenses

UNIT – III

PRINCIPLES OF INTERIOR LIGHTING

Technical definitions, lighting sources, types of lighting fixtures, types of lamps, calculating lighting levels, flash photography, types of flashes, controlling lighting levels with flash photography
Exercise in interior lighting photography with artificial light and black and white photos

UNIT – IV

PRINCIPLES OF COLOUR

Color rendering in photographic medium, color rendering in photographs under different lighting condition, lighting colors and its effect on a photograph, color filters in a camera
Exercise on color photography of interiors

UNIT – V

INTEGRATION

Project work/exercise in integrating all prior units

Reference Books;

- 1.Point view- The art of architectural photography , E.Manny A Ballan, VNR
- 2.Professional photography –photographing buildings, David Wilson, Rotovision

17IDP731B	ELECTIVE -MARKETING TECHNIQUES								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		4

COURSE OBJECTIVES:

- To understand the need of techniques to market the creative ideas of the studio.
- To understand various methods of marketing that can be applied during the client meetings.
- To understand and build a marketing strategy.
- To be able to understand the customers and hence provide design by understanding the psychology of the client.
- To understand the hierarchy of the management chain and to execute project with a strategy
- To understand the organizational capabilities and to understand the responsibility in a marketing position.

COURSE OUTCOME:

1. To be able to market and obtain techniques to sell the knowledge gained and
2. to be able to build the requirements of the clients through proper communication and understanding.
3. To be able to modulate and design a technology to market a service or a product
4. To understand the various tools that are used in marketing and to use the most suitable one in the presentation and execution.
5. To be sensitive to the customers needs and to be able to organize and delegate the process to the next team for the carry over.
6. To be able to understand the position in marketing and hence behavioral pattern to be regulated

To understand the need and applications of water supply and sanitation in buildings with exposure to various fixtures and fittings, water supply and sanitary installations at work sites.

UNIT I

WHAT IS MARKETING?

Introduction, definition, Organizational conditions and USP, Environmental factors, marketing concept – marketing strategy – marketing tactics, Planning, operation and Implementation.

UNIT II

BUILDING A MARKETING STRATEGY 6

Competitive settings, marketing decisions in a competitive setting, formulating overall marketing strategy, factors in selecting marketing inputs, the three C's of a marketing strategy, Components of a product/market strategy, hierarchy of strategies, how to develop a product/market strategy, finding a suitable market strategy.

UNIT III

UNDERSTANDING CUSTOMERS 6

How marketing influences society – economic aspects, buyers behavior, the environment, how society influences marketing – public opinion and political pressure, legislative action, pitfalls of neglecting customers, management mistakes, benefits of understanding customers, types of benefits, feature Vs benefits.

UNIT IV

MANAGING VALUE 5

Components of perceived value, perceived value analysis, measuring perceived value, customer management, role of perceived value in competition, strategic themes, increasing perceived value.

UNIT V

ORGANISATIONAL CAPABILITIES AND MARKETING POSITIONING 8

Analyzing competitors, capabilities and market strategies, types of capabilities, evaluating capabilities, competitive advantage and benefit advantage, macro trends, market segmentation, characteristics of market segment, determining a target market, role of segments and target market in marketing strategy, segment identification analysis, segments and decision making, market selection criteria, types of market segments, what is positioning, competitive advantage analysis, determining positioning, positioning and perceived value.

REFERENCE BOOKS

1. Marketing 101, Don Senton, Wiley.
2. Fundamentals of Modern marketing, Edward w. cundiff, Richard R.Still, Norman A.P Goroni, PHI.
3. Marketing Management, Phillip Kotter, PHI.

17IDP731C	ELECTIVE - CREATIVE ART AND CRAFT								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		4

COURSE OBJECTIVES

- Detailed study of the characteristics of Indian arts and crafts and its application in the interiors.
- To enable students to understand various art cultures in various cities of our country
- To appreciate art and craft based on the various eras in the history of art and craft.
- To bring different thinking levels of art like decoupage framing etc.
- To enable students to create products that is rich in art and the culture of the given state.
- To enable students to conceptualize interior design in various art forms.

COURSE OUTCOME

1. To be able to appreciate the various styles of Interior detailing through art and craft in the world over.
2. To understand the unconventional methods of practicing art in various states of our country.
3. To understand and learn from the history of art and craft
4. To create objects with respect the applications of knowledge gained.
5. To understand various styling of art and craft from various parts of the world.
6. To understand various art movements and its importance in the revolution of art and craft.

UNIT – I

INTRODUCTION TO CREATIVE ARTS AND CRAFTS 5

Introduction to creative arts and crafts in India – its application in interior design – materials – Art movements through history – Traditional arts and crafts of India – Folk arts of India

UNIT – II

TRADITIONAL ARTS AND CRAFTS OF INDIA 5

Traditional arts and crafts of various states of India including – Tamilnadu, Karnataka, Kerala, Andhra Pradesh, Goa, Rajasthan, Gujarat, Kutch, Uttarpradesh, West Bengal, Orissa, Bihar, Jammu and Kashmir, etc.

UNIT – III

ART MOVEMENTS IN POST MODERN INDIA 6

Art Movements in Post Modern India and their influences in Interior design – Abstract Expressionism, Pop art, Minimal art, Conceptual art – Neo Expressionism – Computers in Arts.

UNIT – IV

CREATIVE ART OBJECTS 7

Creating decorative art objects –picture framing, macramé, decoupage, wall hangers, ceramic painting, murals etc

UNIT – V

PROJECTS 7

Assignment or projects on application of the Art in interior spaces such as – Reception, Lobby spaces, Theme Boutiques, Hotel, Restaurants, etc.

TEXT BOOKS

1. Francis D.K.Ching, Interior Design Illustrated VNR Publication, New York 1987
2. Edith Thomory, A History of fine arts in India and the west, Orient Longmann publishers Pvt Ltd, New Delhi.

REFERENCE BOOKS

1. Publication on Traditional arts and crafts on india, Ministry of Handicrafts Development, Government of India.
2. Johhanes Itten, The Art of colour, John Wiley and Sons, USA, 1973.

17IDS821	DESIGN THESIS								SEMESTER-VIII	
Marks	Internal	400	External			600	Total	1000	Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	28	Credits		16

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme in the context of a design project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project or to enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently as a precursor to professional life.
- To encompass the capacities to handle large scale projects and to be able to choose the scale of the project based on the knowledge acquired.
- To be given a chance to research the area that is of the students choice and to analyze the data and to be able to produce sensible design parameters based on the analysis.
- To be introduced to the professional practice nuances with respect to the design field.

COURSE OUTCOME:

1. Skill, knowledge and expertise in the domain of interior design.
2. Ability to handle a major interior design project independently through all stages
3. To be able to scale project size based on the parameters asserted by the futuristic clients.
4. To be able to design in relationship to the surroundings and also have a pragmatic and vernacular approach to the design chosen.
5. To be able to handle complex design problems
6. To introduce them into the professional world of design and detailing

Each student is expected to prepare a design thesis based on the preliminary work undertaken in the Interior design studio under an approved guide.

Thesis should reflect the knowledge gained from all the courses undertaken by the student in all the previous semesters.

The particulars of the schedule, content, presentation, format etc is to be decided by the department from time to time and shall be strictly followed.

At the end of the semester each student is expected to submit all original drawings prepared as per the department specifications. Three copies of the report in the specified format should be submitted to the department after the approval of the respective guides.

The department shall schedule the viva voce at its convenience only after the receipt of the thesis by the student. The performance sheet submitted by the guide and thesis committee should be the basis for allowing the student to appear for the final viva voce.

The end exam is to be conducted by a jury comprising of an external examiner. One internal examiner and head of the department or his nominee.

17IDS831	DISSERTATION / SPECIAL STUDY								SEMESTER-VIII	
Marks	Internal	400	External			600	Total	1000	Exam Hours	6
Instruction Hours/Week		L	2	T	0	P/S	28	Credits		16

COURSE OBJECTIVE:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture
- To develop perspectives on the same through reading, study, analysis and thought.
- To develop the skill of experimentation by their own course of study
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

COURSE OUTCOME:

1. Student will learn to research on a specific interested topic and collect appropriate data
2. Student will develop the skill of analytical approach towards the related topic
3. Student will be able to develop a coherent line of thought based on point of view,
4. Student will be able to do observation, analysis and study
5. Student will be able to prepare a dissertation report which is based on accepted norms of technical writing.
6. Student will become prepared for the larger thesis project.

Dissertation/Special studies subjects will be the choice of the individual related to the thesis project chosen. This Study process should increase the value of design understanding. The dissertation topic must be a research based study to understand in depth the subject in consideration. The individual must use these dates obtained in their thesis and a report of the same must be produced by the student.

Note: The work will be periodically reviewed. The study has to be presented in the form of a report with illustrations and as a seminar for final assessment, along with the final product.

DETAILED SYLLABUS
M.ARCH (ADVANCE DESIGN)
2017-2018 BATCH

17MARS111	RESEARCH METHODOLOGY - I									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To learn the importance of research methodology
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey
- To Develop the skill of preparation of report and Documentation

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I INTRODUCTION TO RESEARCH

Importance, Purpose and Scope of Research and Field Studies. Application in architecture in terms of design, technology, environment, economic and behavioral areas.

UNIT-II RESEACRH OBJECTIVES AND METHODOLOGY

Sequence and Methods of Research. Identification of Problem, Hypothesis Formulation, Objectives and Methodology.

UNIT-III APPLICATION OF RESEARCH

Understanding and Applying Qualitative, Analytical, Interpretative, Correlational, Quasi- Experimental, Experimental, Simulation and Modelling techniques in Architectural Design.

UNIT-IV FIELD STUDIES

Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, Organizational. Preparation and Analysis of Data Sheets and Questionnaires.

UNIT-V ANALYSIS, PREPARATION AND DOCUMENTATION

Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

- 1.Knight, A. and Ruddock., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
- 2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
- 3.Gibbs, J.P., " Urban Research Methods", (rev) Von Nostrand. 1988.

17MARS112	DESIGN SYSTEMS	SEMESTER-I
------------------	-----------------------	-------------------

Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To understand various design systems
- To Understand the different civilizations in different parts of the world through study of their source,
- To Understand the origin, context, grammar, intent and application in architectural design.
- To Understand the Contemporary design process and relevant case studies
- To Understand & develop the skill of Design thinking as per the Current change in Architectural Style
- To understand the Concept of design Systems by various literature/case studies.

COURSE OUTCOME:

1. Student will be able to understand the various design systems in the Architecture era
2. Student will be able to understand the vernacular architecture and its importance
3. Student will Understand the contemporary design process
4. Student will develop the skill of Design thinking as per the Current situation
5. Student will develop the skill of presentation of his ideas by Seminar and presentation
6. Student will be able to envision the futuristic architecture

UNIT-I HISTORIC DESIGN SYSTEMS

Pragmatic, Iconic, Analogic and Canonic systems. Relationship between mathematics and architecture and hierarchies of geometry in design. Design systems through the middle ages to the renaissance period.

UNIT-II VERNACULAR DESIGN SYSTEMS

Vernacular architecture of the world and relevance of the climate in which they have evolved. Enduring nature of the vernacular in contemporary times, De-coding vernacular narratives regarding the cultures they represent.

UNIT-III CONTEMPORARY DESIGN SYSTEMS

Evolution of design systems since the modern period following industrial revolution to the advent of the digital age and representation of design.

UNIT-IV FUTURISTIC DESIGN SYSTEMS

Evolution of futuristic ideas since the 1960s in the field of design. Emerging areas of programming, expert systems and 3-D printing in design. New materials, technologies and bio mimicry- oriented design evolutions of future.

UNIT – V SEMINAR

Seminar on all the design systems -vernacular architecture – futuristic ideas and discussions

SUGGESTED READINGS:

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997
2. Bernard Rudofsky, 'Architecture without Architects', MoMA, 1964.
3. Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981
4. Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010
5. Weber.W & Yannis.S, 'Lessons from Vernacular Architecture', Routledge, 2014.
6. Vernacular Architecture – contemporary traditions – Aishwarya Tipnis – TERI

17MARS113	DESIGN RESEARCH & FIELD STUDIES									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To comprehend the importance of research in design
- To understand the methods of field survey/study in terms of context like sustainability, Housing etc
- To Understand the survey by analysis of results as the basis of research.
- To Develop the Art of data collection and Collection of Samples
- To Undertake field study of the core subject and learn from research-based publications
- To refer reputed journals/magazines and gain the skill & Importance of good presentation methods.

COURSE OUTCOME:

1. Student will be able to collect data and information as per the context
2. Student will understand the methods of Field Survey
3. Student will understand the method of collection and compilation of Data of Survey & Field Study
4. Student will be able to format all the data into types and to prepare and publish
5. Student will be able to critically find solutions with the analytical skills of research
6. Student will develop the Skill of Report Writing

UNIT-I DESIGN RESEARCH

Design as an area for research. Theorising on causal relationships and factors, the scientific method, behavioural methods. Approaches to the design, and research problem – need and importance of study.

UNIT-II FORMATION OF RESEARCH

Formation of design hypothesis and concepts, and their relevance. Understanding ideas of creativity in design. Behavioural basis for design and research.

UNIT-III DATA COLLECTION

Data - types, collection methods, comprehension. Literature study – previous publication, information sources - Areas of the research - frame work and methodology of study, outcome of the results. Field study – by means of survey/questionnaire – by equipment/instruments, etc. – Manual readings/reports. Compilation of data – organizing the collected data – analysis, inference, conclusions. Types of analytical methods.

UNIT-IV REPORT WRITING

Reports - authentication of sources. Document styles, formats – figures, charts, tables.

UNIT-V EDITING AND PUBLISHING

Publication of papers / articles in reputed magazines/journals. Preparing, editing and publishing reports, dossiers, documents, and portfolio of masters' course work, off/on-line dissemination of information in media - web, blogs, et

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods" second edition, John Wiley & Sons. 2013.
3. Gibbs, J. P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
4. Booth, Wayne C., Gregroy G. Colomb, and Joseph M. Williams. 2008. The Craft of Research, 3rd edition. Chicago: University of Chicago Press.
5. Zeisel, J., "Inquiry by Design", Revised edition. New York: Norton, 2006.
6. Joo-Hwa Bay and Boon- Lay ong, "Tropical Sustainable Architecture", Elsevier Ltd, 2006.

17MARS114	ADVANCED DESIGN STUDIO I								SEMESTER-I		
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	9	Credits			8

COURSE OBJECTIVE:

- To learn the importance of and undertake the design process at advanced level t
- To learn the design aspects and considerations in large scale projects
- To understand the Urban Reformation and Renewal systems through Design
- To Categorize the Physiological and Psychological aspects in advanced level of Design
- To understand the various design systems, guidelines and considerations as undertaken in the research and field studies and apply them in architectural design.
- To understand the future need for the city & design accordingly

COURSE OUTCOME:

1. Student will be able to design complex structures with advanced level planning principles
2. Student will be able to understand the Urban Renewal and urban level design
3. Student will be able to Design large scale projects
4. Student will understand the Physiological and Psychological aspects in advanced level of Design
5. Student will be able to give a wholesome product of design in all aspects
6. Student can give futuristic proposals for the urban Architecture.

UNIT-I to UNIT - V

CONTENT:

Design of advanced and complex built environments having strong linkages with the urban scale and focusing on architectural, spatial, landscape, environmental, structure, services and technology features.

Examples: Campus Design, Urban Centers, Mixed Use Development etc.

SUGGESTED READINGS:

1. Agkathidis, A., Hudert, M. and Schillig, G., "Form Defining strategies: Experimenting Architectural Design", Wasmuth International. 2007.
2. Ching, F.D.K., "Architecture: Form, Space and Order", 3rd ed., John Wiley & Sons. 2007.
3. Morgan, C.L., "Jean Nouvel - The Elements of Architecture", Thames and Hudson. 1998. Neufert, P., "Architects' Data", 3rd ed., Blackwell Science. 2000.

17MARS211	RESEARCH METHODOLOGY II								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To learn the importance of research methodology
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey in focus area such as Sustainability, housing etc
- To Develop the skill of preparation of report and Documentation in the focus area

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I RESEARCH METHODS – PART -1

Importance, Purpose and Scope of Research methodology specific to the focus area. Understanding and Applying Qualitative, Analytical, Interpretative research in Architectural Design

UNIT-II RESEARCH METHODS – PART -2

Importance, Purpose and Scope of Research methodology specific to the focus area. Understanding and Applying Quasi- Experimental, Experimental, Simulation and Modelling techniques in the focus area of Architectural Design.

UNIT-III FIELD STUDIES AND EXPERIMENT

Focus area and specialization specific Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, and Organizational

UNIT-IV FIELD STUDY ANALYSIS

Preparation and Analysis of Data Sheets and Questionnaires. Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies.

UNIT-V PROJECT REPORT

Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

- 1.Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
- 2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
- 3.Gibbs, J.P., " Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
- 4.Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
- 5.Khanzode, V.V., "Research Methodology -Techniques and Trends", APH Publishing. 1995.

Books and Magazines/Journals specific to the focus area.

17MARS212	DOCUMENTATION & PRESENTATION								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To understand importance of data collection and documentation methods
- To develop the skill of reading the case studies and comparison with the own experiments
- To develop skills of formal learning through participation in seminars, workshops and conferences.
- To undertake research-based publications in reputed magazines /journals as outcomes of the courses.
- To make a Broad groundwork for dissertation/thesis.
- To formulate / frame the research-based topic for the Dissertation / Thesis

COURSE OUTCOME:

1. Student will be able to review the literature and analyse every aspect of the study
2. Student will understand the importance and method of Experimentation.
3. Student will be able to organize formal seminars
4. Student will be able to present with technical ideas and analysis
5. Student will be able to do paper presentation in journals, magazines and write review.
6. Student will be able to make a good frame work of his Dissertation / Thesis

UNIT-I DESIGN RESEARCH PROCESS

Importance of design and research processes to understand/identify issues and factors of significance.

UNIT-II LITERATURE REVIEW ANALYSIS

Literature review and sources of information; analysis of documents and data; scope and limitations of design and research. Documentation of differing data and information

UNIT-III PRESENTATION TECHNIQUES

Effective presentation techniques of oral / written material and information, for professionals in the design field.

UNIT-IV PRESENTATION AND SEMINAR

Paper Presentation - organizing & participating in technical seminars, exhibitions, workshops, conferences related to architecture & allied fields. Publication and dissemination of analysis/inferences from experiments/surveys.

UNIT-V PUBLICATION

Preparing and publication of technical papers /articles in reputed journals /magazines. Preparing, editing and publishing reports, dossiers, documents, magazines and portfolios of masters' course work. On/off-line dissemination of information in media - web, blogs, etc.; familiarity with information systems and current media/methods.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Gibbs, J.P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
4. Denzin, N. K., and Lincoln, Y. S. eds. 2000. Handbook of Qualitative Research. 2nd ed. Thousand Oaks, California: Sage Publications.
5. Creswell, J. W., "Research Design: Qualitative, Quantitative, and Mixed Methods Approaches". Thousand Oaks, Sage. 2009.
6. Related journals

17MARS213	ADVANCED DESIGN STUDIO – II							SEMESTER-II			
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	9	Credits			7

COURSE OBJECTIVE:

- To learn the importance of and undertake the design process at advanced level t
- To learn the design aspects and considerations in large scale projects
- To understand the Urban Reformation and Renewal systems through Design
- To Categorize the Physiological and Psychological aspects in advanced level of Design
- To understand the various design systems, guidelines and considerations as undertaken in the research and field studies and apply them in architectural design.
- To understand the future need for the city & design accordingly

COURSE OUTCOME:

1. Student will be able to design complex structures with advanced level planning principles
2. Student will be able to understand & design as per the Sustainability aspects
3. Student will be able to Design large scale projects
4. Student will understand the Physiological and Psychological aspects in advanced level of Design
5. Student will be able to give a wholesome product of design in all aspects
6. Student can give futuristic proposals for the urban Architecture.

UNIT-I to UNIT - V

CONTENT:

Design of advanced and complex built environments having strong linkages with the urban scale and focusing on architectural, spatial, landscape, environmental, structure, services and technology features.

Examples: Campus Design, Urban Centers, Mixed Use Development etc.

SUGGESTED READINGS:

1. Agkathidis, A., Hudert, M. and Schillig, G., "Form Defining Strategies: Experimenting Architectural Design", Wasmuth International. 2007.
 2. Ching, F.D.K., "Architecture: Form, Space and Order", 3rd ed., John Wiley & Sons. 2007.
 3. Morgan, C.L., "Jean Nouvel - The Elements of Architecture", Thames and Hudson. 1998.
 4. Neufert, P., "Architects' Data", 3rd ed., Blackwell Science. 2000.
- Any other books, documents and standards relevant to the focus area.

17MARS311	DISSERTATION -I							SEMESTER-III			
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Wholesome Technical Study report based on Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture.

UNIT-I to UNIT - V

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas. **Experimental study topics with field study is allowed**
Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
4. Wayne C Booth, Joseph M Williams, Gregory G. Colomb, 'The Craft of Research', 2nd Edition, University of Chicago Press, 2008.
5. Ranjith Kumar, 'Research Methodology- A Step by Step Guide for Beginners', Sage Publications, 2005.
6. John W Creswell, 'Research Design: Qualitative, Quantitative and Mixed Methods Approaches', Sage Publications, 2002.

17MARS411	DISSERTATION -II							SEMESTER-III			
Marks	Internal	320	External				480	Total	800	Exam Hours	6
Instruction Hours /week		L	16	T	0	P/S	20	Credits		16	

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Design report based on previous Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture by Design

UNIT-I to UNIT - V

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas. **Proposal of design along with inferences of previous study** Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
4. Wayne C Booth, Joseph M Williams, Gregory G. Colomb, 'The Craft of Research', 2nd Edition, University of Chicago Press, 2008.
5. Ranjith Kumar, 'Research Methodology- A Step by Step Guide for Beginners', Sage Publications, 2005.
6. John W Creswell, 'Research Design: Qualitative, Quantitative and Mixed Methods Approaches', Sage Publications, 2002

LIST OF ELECTIVES		
FOCUS AREA: SUSTAINABLE ARCHITECTURE		
Elective 1	Introduction to Sustainable Architecture	17MARESS1
Elective2	Building Performance Analysis	17MARESS2
Elective 3	Sustainable Design Strategies	17MARESS3
Elective 4	Sustainable Building Systems	17MARESS4
Elective 5	Sustainable Trends and Theories	17MARESS5
FOCUS AREA: HOUSING DESIGN		
Elective 1	Introduction to Housing Design	17MARESH1
Elective2	Housing Policies and Schemes	17MARESH2
Elective 3	Sustainable Housing	17MARESH3
Elective 4	Community Participation in Housing	17MARESH4
Elective 5	Special Types of Housing	17MARESH5

17MARESS1	INTRODUCTION TO SUSTAINABLE ARCHITECTURE							SEMESTER-I			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To orient towards the United nations Sustainable Development goals
- To Understand the environmental impact of building as well as to safeguard the environment
- To Understand the Sustainable Design principles in Architecture
- To Understand the Climatic impacts due to urbanization and ways for mitigation.
- To Understand & work for the health & well- being of the building and its occupants.
- To Understand the broad guideline of various green Building Systems

COURSE OUTCOME:

1. Student will understand the fundamentals of sustainable concepts and applications
2. Student will understand the Site planning principles and its applications
3. Student will understand the climate and its impacts in indoor thermal comfort
4. Student will understand the energy usage ratio and the effective steps of conservation and utilization of energy.
5. Student will understand the Green building Rating Systems in a Broader context
6. Student will understand the Effective methods to propose green buildings through Case Studies

UNIT-I INTRODUCTION TO SUSTAINABILITY

Sustainable Design Concepts and Strategies - Energy and Environment in Architecture, Green building systems, Energy efficiency. Relevant Literature/Case studies.

UNIT-II SUSTAINABLE DESIGN PRINCIPLES

Sustainable Design Principles - Site planning, Resources, Built form, Climate responsiveness, Energy usage, Occupant behaviour and comfort. Relevant Literature/Case studies.

UNIT-III CLIMATE AND BUILT ENVIRONMENT

Climate and Built Form - Overview of Passive techniques for Day lighting, Ventilation, Solar Control and Thermal Comfort. Modelling methods and simulation for assessing building performance. Relevant Literature/Case studies.

UNIT-IV ENERGY AND ITS IMPACTS

Zero Energy and Zero Waste - Methods to achieve zero energy and zero waste in buildings, life cycle assessments and energy audits, renewable energy technologies, integrated energy design. Relevant Literature/Case studies and codes such as ECBC.

UNIT-V GREEN BUILDING SYSTEMS

Green buildings systems - GRIHA, LEED, BREEAM, GREEN STAR. Comparative Studies and analysis, relevance to India.

SUGGESTED READINGS:

1. Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
2. Arvind Krishnan & Others - Climate Responsive Architecture, Tata Mcgraw -Hill New Delhi. 2001.
3. Ralph M. Lebens - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.
4. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
5. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006
6. GRIHA manuals, TERI press
7. Norbert Lechner, "Heating, Cooling, Lighting", John wiley and sons
8. Mark Dekay and G.Z. Brown, "Sun, Wind and Light- Architectural Design Strategies", John Wiley and Sons
9. Szokolay, Koenigsberger, "Manual of Tropical Housing and building" 2014

17MARESS2	BUILDING PERFORMANCE ANALYSIS							SEMESTER-II			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Understand the principles of Sustainable building through Simulation process
- To learn the simulation techniques with digital applications, and to get quantifiable results by usage of various building simulation analysis software.
- To Understand the Effective methods of Daylighting through Simulation
- To Understand the Effective methods of Reduction of Solar Radiation through Simulation
- To Understand the effects of Indoor thermal comfort through Simulation.
- To Understand the Energy performance Index of a Building

COURSE OUTCOME:

1. Student will understand the effects of indoor comfort through software simulation and analysis
2. Student will be able to achieve a quantitative result of thermal analysis by software simulations
3. Student will be able to effectively use the modelling tools and techniques
4. Student will be able to design a building with good thermal comfort with optimum design solutions
5. Student will be able to give quantitative results of Daylighting and Ventilation of a building
6. Student will be able to give an energy performance index of a building.

UNIT-I BUILDING PERFORMANCE-DATA FILES

Building Performance Analysis - Design Optimization and Visualization using Building Information Modelling. - use of Epw file – TMY data extraction – IMD files

UNIT-II DAYLIGHTING, IRRADIATION AND WIND ANALYSIS

Building Performance Analysis - Daylighting, Shading and Ventilation.

UNIT-III ENERGY ANALYSIS

Building Performance Analysis - Whole building energy analysis.

UNIT-IV MODELLING TOOLS

Building Performance Analysis - Modelling Tools and Techniques.

UNIT-V SIMULATION TOOLS

Building Performance Analysis - Simulation Tools and Techniques.

Suggested software: CLIMATE CONSULTANT, HEED, SBEED, OPAQUE, ECOTECH, SKETCHUP – OPEN STUDIO, OPTIVENT, ENERGY PLUS, DAYSIM -RADIANCE, COOLVENT, RHINO-GRASSHOPPER-LADY BUG, DIVA, DRAGONFLY, SEFAIRA, IES-VE, VELUX and recent software.

SUGGESTED READINGS:

1. Autodesk Manuals for BIM tools such as CAD, REVIT, ECOTECH
2. Rhino tutorials
3. Sefaira tutorials
4. Climate consultant Tutorials
5. IES tutorials
6. Computational fluid Dynamics – Tutorials
7. Open Studio – Tutorials

17MARESS3	SUSTAINABLE DESIGN STRATEGIES								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To understand the sustainable strategies and its principles in the design.
- To focus on passive means, reduction of active methods in building Function
- To gain a broad understanding of hybrid strategies and Mixed mode building
- To Understand in depth the green building Rating Systems all over India & Abroad
- To Understand the Design Aspects of Daylighting techniques for large scale projects
- To Understand the Design Aspects of heating & Ventilation techniques for large scale projects

COURSE OUTCOME:

1. Student will be able to apply the Sustainable design strategies in architecture, Design and environment
2. Student will be able to give design solutions of Thermal comfort for various climatic locations
3. Student will understand the application of Passive, Active and Hybrid Design strategies.
4. Student will become expertise in terms of green building aspects and applications.
5. Student will understand the in – depth Analysis of Daylighting
6. Student will understand the In- depth analysis of Ventilation technique.

UNIT-I DAYLIGHTING AND VENTILATION STRATEGIES

Sustainable Strategies - Day lighting -WWR – Daylight Factor, Daylight levels – ERC, SC, IRC, Visible light Transmittance – Code compliance – Indian Standards – Lighting Standards. Ventilation – Fenestrations- Methods and calculations – Orientation strategies- Wing walls – Permeable buildings – Stack- Chimney – Cross ventilation etc

UNIT-II SOLAR CONTROL AND SHADING STRATEGIES

Sustainable Strategies - Solar Control -Sun Path – Shading concepts – radiation control – Heat balance – thermal properties of materials- Heat Dissipation – Albedo effect etc. Thermal Comfort – ASHRAE standards, Adaptive comfort model, Operative temperature, Tropical Summer Index, Comfort indices – Shading methods for Indoor thermal Comfort etc

UNIT-III STRATEGIES ASSESMENT BY SIMULATION

Sustainable Strategies - Modelling methods and simulation for assessing building performance – Simulation software – Daylight, Irradiation, Mean radiant temperature calculations etc

UNIT-IV GREEN BUILDING SYSTEM AND RATING- APPLICATIONS

Sustainable Strategies - Green buildings systems such as GRIHA, LEED, ECBC, BREEAM, and GREEN STAR. - Rating systems and applications in Residential, Commercial and Industrial buildings etc

UNIT-V CASE STUDY AND COMPARITIVE STUDIES

Sustainable Strategies - Comparative Studies of the different Case studies of buildings with rating systems and their analysis with relevance to India.

SUGGESTED READINGS:

1. GRIHA, LEED, BREEAM and GREEN STAR manuals.
2. Mark deKay and G. Z. Brown, "Sun Wind and light – Architectural Design Strategies ", John Wiley and sons, New York. 2013
3. Norbert Lechner, 'Heating, cooling and Lighting ', 2011
4. Edward Allen, "How Buildings Work-The Natural Order of Architecture", Oxford University Press
5. Mili Majumder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
6. Arvind Krishnan & Others - Climate Responsive Architecture, Tata McGraw -Hill New Delhi. 2001.
7. Ralph M. Leach - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.

17MARESS4	SUSTAINABLE BUILDING SYSTEMS							SEMESTER-III			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Understand the low Energy Building Concepts with case studies
- To Understand the Indoor Environmental Quality aspects through survey & Case studies
- To Gain understanding & knowledge about the green Materials
- To learn & provide a comfortable, healthy, and productive environment and landscape with minimal energy and better environmental impact.
- To Gain Understanding about the Smart technologies for the Energy management
- To Gain Understanding & Knowledge about the Energy & Cost Audit

COURSE OUTCOME:

1. Student will be able to gain knowledge and application of low energy building design
2. Student will understand the thermal quality standards and its importance in various countries
3. Student will understand the use of green materials and products for a sustainable future.
4. Student will be able to calculate the energy consumption features and the cost audits.
5. Student will be able to understand the integrated building management systems for a controlled environment.
6. Student will be able to understand the energy and cost audits

UNIT-I LOW ENERGY BUILDING

Sustainable Building - Low energy building design and operation. -types of energy – consumption-renewable/ non-renewable-Hybrid design strategies-

UNIT-II INDOOR ENVIRONMENTAL QUALITY

Indoor Environment - Quality and Standards, Indoor Air Quality-indoor thermal comfort- levels – activity analysis- carbon emissions etc

UNIT-III GREEN MATERIALS

Building Systems - Green Materials and green Products- Manufacture- reuse- reduce-recycled materials

UNIT-IV SMART TECHNOLOGIES

Building Systems – Smart Materials and systems- Integrated buildings- Energy saving – Automations

UNIT-V ENERGY AND COST AUDITS

Building Services - Energy and Cost audits.

SUGGESTED READINGS:

1. Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
 2. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
- N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.

2006

17MARESS5	SUSTAINABLE TRENDS AND THEORIES							SEMESTER-III			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Understand the various Sustainable Policies & mechanisms
- To Gain in-depth knowledge about vernacular & traditional practices
- To Gain knowledge about biomimicry and applications in building design
- To Gain Knowledge about Adaptive reuse & Urban regeneration
- To Understand about Resource Optimisation – Water Efficiency- Operational procedure
- To familiarize with the historic, contemporary and futuristic trends of sustainable building.

COURSE OUTCOME:

1. Student will be able to understand the policy level mechanisms and design process and product accordingly.
2. Student will understand the vernacular / traditional building types and its applications to the modern context by its systems and materials.
3. Student will understand to use the site in an optimum manner and know about the operational and maintenance practices.
4. Student will gain knowledge about biomimicry and its importance in sustainable design
5. Student will gain knowledge about futuristic design systems and new material applications.
6. Student will Understand about the Adaptive Reuse & urban Generation

UNIT-I POLICY AND REGULATORY MECHANISMS

Sustainable Design: Policies and regulatory mechanisms, Design practices

UNIT-II VERNACULAR AND TRADITIONAL PRACTICES

Sustainable Trends: Vernacular ways of sustainable building, Preservation of the regional and cultural identity, documentation and continuity of vernacular/traditional ways of building and detailing

UNIT-III RESOURCE OPTIMISATION

Sustainable Trends: Contemporary ideas and trends, Optimization Of site potential, Minimization of energy consumption, Protection and conservation of water resources, Use of environmentally friendly materials and products, Provision of a healthy and convenient indoor climate, Optimization of operational and maintenance practices

UNIT-IV DIGITAL APPLICATIONS AND FUTURISTIC APPROACH

Sustainable Trends: Futuristic thoughts and approaches, New materials and technologies, Application of digital technologies

UNIT-V ADAPTIVE REUSE AND URBAN REGENERATION

Sustainable Theories: Biomimicry, Adaptive Reuse, Urban regeneration

SUGGESTED READINGS:

1. Eco-Tech: Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997
2. Sustainable Architecture: Low tech houses by Mostaedi (A) – Carles Broto 2002
3. Eco-design: A manual for Ecological Design by Yeang(K) – Wiley Academy 2006
4. O.H. Koenigsberger and others (2014), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India,
5. “Sun wind and light”- Mark Dekay, G. Z. Brown, Feb 2014

17MARESH1	INTRODUCTION TO HOUSING DESIGN							SEMESTER-I			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Gain Knowledge about the Housing Typologies all over the world
- To Understand the principles of Community living & Neighbourhood
- To Understand the social, economic, environmental, and psychological implications of housing process and products.
- The goal is to familiarize with housing as a process and a product in the context of the individual, the family, and the community.
- To introduce various stakeholders involved in the housing scenario.
- To Understand about the Housing Finance

COURSE OUTCOME:

1. Student will be able to gain knowledge about housing typologies
2. Student will understand about the theories and concepts of community and Neighbourhood
3. Student will understand about the emerging trends in housing
4. Student will understand about the housing finance schemes and management
5. Student will understand the relation of housing and real estate management in the global and local scenario.
6. Student will Understand the Basis of Housing Demand all over the world

UNIT-I HOUSING TYPOLGY

Housing typologies - Identification of stakeholders, roles responsibilities of various stakeholders, classification of various typologies.

UNIT-II COMMUNITY AND NEIGHBOURHOOD

Community and neighborhood - Theories and concepts, Understanding the scale of housing.

UNIT-III CONTEMPORARY HOUSING

Architectural styles and preferences - Trends in contemporary housing types, greater role for the architect in housing.

UNIT-IV HOUSING FINANCE

Housing finance - Economic consideration and feasibility studies. Various housing financial institutions

UNIT-V HOUSING AND REAL ESTATE

Housing markets - Real estate scenario, Land availability & Acquisition, suburban and rural trends.

SUGGESTED READINGS:

1. Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006
2. Joseph DeChiara, Julius Panero. Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001
3. Robert E. Stevens, Philip K. Sherwood. How to prepare a feasibility study Prentice-Hall, 1982
4. Susan S. Fainstein, Scott Campbell, Readings in Planning Theory, Wiley, 2011

17MARESH2	HOUSING POLICIES AND SCHEMES							SEMESTER-II			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To learn about the housing schemes and policies
- To learn about the Urban housing scenario
- To learn about the Rural housing scenario
- To explore about the stakeholders in the housing
- To gain knowledge about the Central government schemes
- To gain Knowledge about the State Government Schemes

COURSE OUTCOME:

1. Student will learn and gain knowledge the housing schemes and policies
2. Student will gain knowledge about the urban housing scenario
3. Student will gain knowledge about the rural housing scenario
4. Student will gain knowledge about the stakeholders in the housing
5. Student will gain knowledge about the systematic approach for the future housing demand.
6. Student will gain knowledge about the Schemes of Central & State government

UNIT-I HOUSING POLICY IN INDIA

Housing Policy in the India - Government policies on housing, Government Agencies in housing sector, Classification of housing Stock

UNIT-II CENTRAL GOVERNMENT SCHEMES

Central Government Schemes - Identification and review of schemes with housing component.

UNIT-III STATE GOVERNMENT SCHEMES

State government Schemes - Identification and review of schemes with housing component.

UNIT-IV URBAN HOUSING

Urban housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

UNIT-V RURAL HOUSING

Rural Housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

SUGGESTED READINGS:

1. National Urban Housing and habitat policy, 2007
2. <http://www.tnhb.gov.in/dept.aspx>
3. <http://mhupa.gov.in/policies/>
4. http://nhb.org.in/Urban_Housing/Housingpolicies.php

17MARESH3	<u>SUSTAINABLE HOUSING</u>								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Understand about the Site Analysis
- To gain Knowledge about Affordable housing
- To gain Knowledge about Resource Mapping
- To gain Knowledge about advanced level of Building services for housing
- To learn and understand the current interventions in housing sector and propose a sustainable approach towards the housing.
- To learn about High Performance Housing

COURSE OUTCOME:

1. Student will be able to understand the sustainable site planning with site inventory and analysis
2. Student will understand about Affordable housing techniques
3. Student will learn about cost effective techniques in housing.
4. Student will be able to understand the resource mapping
5. Student will be able to understand the advance level building services
6. Student will be able to understand & design high performance houses

UNIT-I SITE ANALYSIS

How Site and climate related issues affect the design parameters and decisions. -Site Inventory and Analysis- Location, Access- Circulation, Traffic, Climate, Sensory – Analysis

UNIT-II AFFORDABLE HOUSING

Exploring the social and economic choices, options and decision of housing, various technologies available.

UNIT-III RESOURCE MAPPING

Identifying the resources (construct techniques & technology, Manpower & Material) predominant in that area. Understanding the Availability and Cost implication of the resources.

UNIT-IV BUILDING SERVICES

An in depth understanding of building system, how houses work as a system.

UNIT- V HIGH PERFORMANCE HOUSING

Exploring the science and technology required to build high performance houses.

SUGGESTED READINGS:

1. Thomas Russ, Site Planning and Design Handbook, Second Edition, McGraw-Hill Education, 2009
2. Joseph De Chiara, Julius Panero Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001.
3. Clayton Bennett Greening Your Home: Sustainable options for every system in your house McGraw-Hill Professional 2008
4. Global Green USA, "Blueprint for Greening Affordable Housing" Island Press. 2007
5. Jessica Kellner Housing Reclaimed: Sustainable Homes for Next to Nothing New Society Publishers 2011

17MARESH4	COMMUNITY PARTICIPATION IN HOUSING							SEMESTER-III			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To gain knowledge about the Community participation in Housing
- To gain deep understanding about the Planning Aspects in Housing
- To gain knowledge about the planning process
- To Learn and determine the involvement end users in various stage of housing process across.
- To learn about the community participation for various typologies
- To learn about various best practices in community Housing Through Case studies

COURSE OUTCOME:

1. Student will be able to develop a model for both the end user and the service provider
2. Student will be able to involve in planning in design stages
3. Student will be able to understand the intricacies of Community participation in Housing
4. Student will be able to give design solution for the future community housing
5. Student will gain Knowledge about the best practices in Community housing
6. Student will gain knowledge in housing Design

UNIT-I COMMUNITY PARTICIPATION PLANNING

Awareness and importance of Community participation, Planning and design stages - Zoning studies, spatial analysis, customs & cultural practices and user -based studies

UNIT-II PLANNING ASPECTS

People-based planning - Identifying & incorporating Aspiration, Needs & Affordability, incorporating special needs of the elderly and children, concept of better living. Degrees of customizations

UNIT-III PLANNING PROCESS

Familiarization with development and planning process of various agencies (Public, Private (Multifamily), Private (single family), Co-operative, NGO), view on community participation, organizational structure, Project and product brief, Identification of beneficiaries.

UNIT-IV COMMUNITY PARTICIPATION MODELS AND CASE STUDIES

Existing models of community participation across various typologies, best practices, Case studies.

UNIT-V TYPOLOGY

Developing models for community participation for various typologies and stages.

SUGGESTED READINGS:

1. Sylvia J.T. Jansen, Henny C.C.H. Coolen and Roland W. Goetgeluk, "The Measurement and Analysis of Housing Preference and Choice" Springer 2011
2. Andrew Beer, Debbie Faulkner, Chris Paris, Terry Clower - Housing transitions through the life course: Aspirations, needs and policy 2011
3. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
4. Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ: Pearson Prentice Hall. 2006
5. Juilenne Hanson, Decoding Homes and Houses Cambridge University Press 20

17MARESH5	SPECIAL TYPES OF HOUSING								SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To gain Knowledge about the Vernacular housing in Chettinad Region
- To Gain knowledge about the Vernacular housing in Hill region
- To understand the Various techniques involved in the vernacular construction
- To understand about Disaster prone areas and methodologies for housing in those regions
- To learn about the influences of social, economic and environmental factors in housing
- Exploring housing typologies which tends to lean more on a aspect more than the rest.

COURSE OUTCOME:

1. Student will learn and understand the Vernacular Architecture of various regions of world
2. Student will learn and understand the Vernacular Architecture of various regions of India
3. Student will learn and understand the Vernacular Architecture of various regions of Tamilnadu
4. Student will learn about design aspects and historical methods of construction which can be adopted for a particular context
5. Student will learn and understand the types of housing in disaster prone areas
6. Student will be able to Propose the housing trend for the Future.

UNIT-I VERNACULAR- CHETTINAD REGION

Vernacular Architecture - Typology 1 - Chettinad region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-II VERNACULAR-HILL REGION

Vernacular Architecture - Typology 2 - Hill region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-III VERNACULAR – DESERT REGION

Vernacular Architecture - Typology 3 - Desert region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-IV HOUSING – DISASTER PRONE AREAS

Housing in Disaster prone areas - Classification of Disaster, Disaster Management Cycle, Housing interventions.

UNIT-V HOUSING – FUTURE CONCEPTS

Future concepts - Development trends, Product categories, material trends, People preferences

SUGGESTED READINGS:

1. Richard Hyde, Bioclimatic Housing: Innovative Designs for Warmer Climates, Earthscan
2. Willie Webber, Simos Yannas (ed.) Lessons from vernacular Architecture, Earthscan
3. Ilay Cooper, Traditional Buildings of India, Thames and Hudson, 1998
4. Monisha Bharadwaj, India Style, Bay Soma Publishing -200

M. PLAN (TOWN AND COUNTRY PLANNING)

MASTER OF PLANNING

[2 YEAR FULL TIME POST GRADUATE DEGREE PROGRAM]

REGULATIONS

2017 – 2018 Batch (New Syllabus)

**CHOICE BASED CREDIT SYSTEM
(CBCS)**

FACULTY OF ARCHITECTURE

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN101	Planning Theory and Practice	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. This course is an introduction to the history and theories of the planning profession.
2. Selectively draw on the literature in planning theory and history to examine a series of questions fundamental to planning practice.
3. The discussions, exercises, and readings on these questions will highlight alternative approaches to planning practice,
4. The discussions, exercises, and readings on these questions will highlight the approaches of current issues in the field of planning.
5. To study the methods of collecting data base and base map preparation
6. To study about the different planning concepts and inclusive planning

COURSE OUTCOME:

1. The above course introduces the history of spatial planning
2. the students will have the ability to understand various modes of planning.
3. They will earn the skill to apply basic analytical and optimizing techniques needed.
4. Methods of population forecast in settlement
5. Ability to plan project management
6. They learn about emerging trends in planning of cities and towns

UNIT I PLANNING PRINCIPLES AND PROCESS

9

Process of evolution of human settlement planning - Principles in planning - Rationality in planning,- Blueprint and process mode - Disjointed incremental mode of planning - Normative versus functional mode of planning

UNIT II PLANNING SYSTEM

8

Planning system in India - Introduction to master plan, structure plan, detailed development plans, city corporate plan and smart plan - Comparison of planning systems in UK and USA.

UNIT III PLANNING SURVEYS

10

Type of planning surveys, data identification for various plan preparation - Aerial photo and remote sensing techniques in planning - Formulation of standards for various urban functions

UNIT IV ANALYTICAL TECHNIQUES

10

Delphi, trade off-game, simulation models, gravity analysis, and Lowry model - Threshold analysis and multivariate analysis - Techniques of delineation of planning areas and planning regions - Land use models.

UNIT V OPTIMIZATION TECHNIQUES

8

Optimization and economic analysis methods in project formulation and implementation, CPM, PERT, PBBS, Goal achievement matrix, Introduction to Cost-Benefit analysis. Research writing and article writing to be a part of Units I (Planning principle and Process) and II (Planning system).

TOTAL : 45 PERIODS

	Semester I	Instruction hrs			C	Marks		
		L	T	P		CIA	ESE	TOTAL
17MPN102	Socio – Economic and Spatial aspects of Human Settlements and Planning	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To teach the students the social sciences inputs (Urban and Rural Sociology, Urban and Regional Economics and Urban and Human Geography)
2. analyzing human settlements evolution, growth & development and incorporating them while planning of human settlements at the rural, urban and regional levels.
3. To understand the socio cultural background of Indian communities
4. To learn about the socio economic problems and issues in india
5. Study about the economic growth in Indian settlements
6. To study about the different communities and sociological theories in community development

COURSE OUTCOME:

1. The course illustrates that the students think and analyze the spatial planning attributes from the social and economic perspective.
2. This subject facilitates graduates towards sensitize about society and environment.
3. Teaches the importance of socio cultural profile in building up communities
4. Earn knowledge in urban economics and its aspect
5. Types of societies and its significances in economic growth
6. They learn about sociological theories in the community development

UNIT I SOCIO-SPATIAL ASPECTS

10

Sociological concepts and social groups - Socio-spatial structures and Institutions related to urban and rural communities - Human and urban geography of urban areas – Human interaction and spatial form of cities- Ecological processes and socio-spatial structures in Indian Cities.

UNIT II ECONOMIC BASE

8

Economic concepts and frameworks - Macro and micro economics - Agglomeration economics - Economics of scale - Multiplier effect-concepts and scope – Urban economics - intersection of geography and economics introducing the role of space into economic considerations- Economic base of cities and region - Understanding economic base and changing spatial structure of urban areas - role of public and private policies that impact the urban form, structure and economy.

UNIT III SOCIO - ECONOMIC, AND GEOGRAPHIC CONCERN AND DEVELOPMENT

10

Geographical, sociological and economic aspects of rural and urban Development - Government, non-government and community participation in the local and regional area planning and development.

UNIT IV URBAN LAND USE AND SETTLEMENTS ORGANIZATION

7

Land use determinants - Location dynamics of urban Land use - Spatial organization of urban settlement - Social and economic Impacts of urban growth and expansion.

UNIT V URBAN STRUCTURE, URBANIZATION & IMPACTS ON LIVELIHOOD

10

City-region, urban sprawl, and urban fringe - Urbanization in the World and India at a glance - Urban development in Tamil Nadu and Chennai city with reference to settlements, population distribution, economic activities and governance. Sustainable livelihoods — vulnerabilities and social exclusion – agenda for the urban poor - livelihood strategies, resilience and transformability. Research writing and article writing to be a part of Units I (Socio-spatial aspects), II (Economic base), III (socio - economic, and geographic concern and development), IV (urban land use and settlements organization) and V (urban structure, urbanization & impacts on livelihood)

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN103	Traffic and Transportation Planning	3	0	0	3	40	60	100

OBJECTIVES:

1. Traffic and transportation planning is an integral part of spatial planning at any level. Therefore, it is proposed to give an overall framework of this course to the students of M. Plan programme in the first semester itself.
2. The objective of this course is to give an historical perspective of road development in India, salient features of road geometric and intersections, traffic surveys, planning aspects of different mass transportation systems and introductory part dealing with highway capacity.
3. To understand the different transport system and approaches in design
4. To understand basic principles and techniques in transport planning
5. To analyse, designing and forecasting for the future demand
6. To study about the transport planning process

COURSE OUTCOME:

1. In the urban transportation planning process, discuss its relationship to transportation facilities development, treat specific techniques of analysis and evaluation for urban transportation planning, and discusses possible means of achieving project and societal objectives.
2. Learn about urban transport and road safety planning
3. Survey techniques used to analyze the existing traffic conditions and plan for future demand
4. Integrated understanding of modes of transport and transport infrastructure planning
5. Understand the planning process involved in road network, infrastructure, and safety planning
6. They learn about the transport planning process

UNIT I TRANSPORT DEVELOPMENT IN INDIA

8

Economic, political and social significance of transport development - Development of rail, water and air transport policies and programmes in India - Scope and content of Nagpur, Bombay and Lucknow road development plans - Current trends in the road development sector in India.

UNIT II GEOMETRIC DESIGN

10

Highway classification - Traffic characteristics – Horizontal and Vertical alignment – Sight distance – Cross-sectional elements – At grade and grade separated intersections.

UNIT III TRAFFIC SURVEYS

10

Volume Count – Origin and Destination – Parking and Public Transport Surveys – Inventory of Transport facilities – Methods of Survey – Analysis – Inferences.

UNIT IV MASS TRANSPORTATION SYSTEMS

8

Different modes – Capacities – Limitations – Planning aspects – Coordination – Para transit modes – Private transport.

UNIT V HIGHWAY CAPACITY

9

7. Traffic and transportation planning is an integral part of spatial planning at any level. Therefore, it is proposed to give an overall framework of this course to the students of M. Plan programme in the first semester itself.
8. The objective of this course is to give an historical perspective of road development in India, salient features of road geometric and intersections, traffic surveys, planning aspects of different mass transportation systems and introductory part dealing with highway capacity.
9. To understand the different transport system and approaches in design
10. To understand basic principles and techniques in transport planning
11. To analyse, designing and forecasting for the future demand
12. To study about the transport planning process

Concept of PCU and level of service – Capacity of uninterrupted flow conditions – Flow affecting capacity and level of service – Capacity of rural and urban roads. Research writing and article writing to be a part of Units I (Transport development in India) and IV (Mass transportation systems)

TOTAL :45 PERIODS

REFERENCES:

1. Dimitriou H.T, Urban Transport Planning, A Development Approach, Routledge, London, 1992.

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPN121	Planning Studio I	3	0	10	8	160	240	400

COURSE OBJECTIVES

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

The Planning project II intends to expose the students to

1. Development of communication skills – Map preparation, report writing and presentation skills
2. Understanding of various surveys relating to preparation of plans for urban and rural Settlements
3. Preparation of plans for micro-level units
4. Study at Village level - Structure of village, problems, current rural improvement programmes and structure of administration.
5. Study on Urban Land uses Land use Zones – Land use activities – Their functional and spatial characteristics – Issues related to functions, spaces and Infrastructure
6. Action planning - Planning at Residential Layout Level Review of literature, site analysis, and study of existing layouts - Design criteria's – Existing act and byelaws - Alternative designs - Finalization of designs, Cost of the projects and model.

TOTAL: 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE1A	Public Transport Planning	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To introduce students to Public Transport System including its performance and Economic Aspects.
2. To study Infrastructure required for Bus Stops, Terminals and Depots.
3. To study about the main factors that affects usage of public transport
4. To learn about the modern techniques, government policies and economical aspects in transport development
5. Understand advantages of sustainable and efficient modes of transport
6. To study about the different economic factors involved in public transport planning

COURSE OUTCOME:

1. Learn about the different principles of public transport design
2. The importance of public transport network planning
3. Earn ability in working out Project management for different modes of transport
4. Evaluate and critically analyze the existing pattern of public transport modes in India
5. Advanced systems in public network planning like Multi Modal transport system
6. Learn about the different infrastructure requirement in public transport planning

UNIT - 1 INTRODUCTION TO PUBLIC TRANSPORT SYSTEMS

36

Urban passenger transport system characteristics, public transport modes, genesis of public transport system, mass transit system, Para transit system, technological features, Demand for public transport, public transport demand and supply indicators, determinants of public transport supply and demand, public transport supply and demand characteristics in cities of various sizes and socio economic setting.

UNIT - 2 PUBLIC TRANSPORT PERFORMANCE AND ECONOMIC ASPECTS (Part 1)

24

Physical and financial performance indicators for public transport, performance characteristics of various public transport modes including para-transit modes,

UNIT - 3 PUBLIC TRANSPORT PERFORMANCE AND ECONOMIC ASPECTS (Part 2)

24

Public transport fare types and pricing criteria, costs, services; price elasticity of demand; subsidy issues; regulation, privatization impacts and integration issues on public transport performance; public transport financing;

UNIT - 4 PUBLIC TRANSPORT NETWORK PLANNING AND SCHEDULING

36

Public transport based city forms and structure, Transit Oriented Development (TOD); Impact of city density, size, activity concentration on public transport patronage. Form, type and density of bus route network, bus route network planning principles; Types of bus priority measures, merits and limitations, case studies; bus operation design; bus scheduling and time table principles.

UNIT - 5 BUS STOPS, TERMINALS AND DEPOT INFRASTRUCTURE

30

Bus stops – types and characteristics , planning guidelines, pedestrian –public transport interface ; Bus Terminals – types, assessment of facilities and land areas for terminals; interchange- concepts, function and planning guidelines; bus depot -concepts, function, activity and land requirements, planning guidelines. Research writing and article writing to be a part of Units I (introduction to public transport systems), II (public transport performance and economic aspects (part 1)), III (public transport performance and economic aspects (part 2)), IV (public transport network planning and scheduling) and V (bus stops, terminals and depot infrastructure)

TOTAL : 150 PERIODS

REFERENCE BOOKS:

- 1 White, P. Public Transport Planning, Management and Operation 1988 London, Hutchinson
2. Nash, C.A. The Economics of Public Transport London, Longman
3. Vuchic, V.R. Urban Public Transportation 1982
4. Chakraborty and Das, A Transport Planning and Highway Engineering 2003 PHI

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE1B	Transport Economics	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To study Transport Demand and Supply, including Costing and Pricing of Services.
2. To study Principles of Economic Appraisal of Transport Projects.
3. To learn about the issues related to transport funding and public transport economy
4. Evaluate and criticize the current economic policy in transport development
5. To know about large transport project and its funding management
6. Imbibe knowledge on costing and pricing of transport services

OUTCOME:

1. Creative and innovative solutions for transport funding and operational system
2. Develop the software skills in data analysis
3. Interpret economic data required for the transport demand
4. Interpret transport and road pricing
5. They learn about transport regulation
6. Various methods of evaluation for ongoing transport development

UNIT - 1 TRANSPORT DEMAND AND SUPPLY 30

Movement, transport and location, transport and economic development; Demand for transport, factors influencing demand; elasticity of demand, measures of elasticity; supply of transport, elasticity of supply; demand forecasting.

UNIT - 2 COSTING AND PRICING OF TRANSPORT SERVICES (Part 1) 30

Fixed and variable cost, joint and common cost, cost allocation, user cost internal cost, external cost, economic cost;

UNIT - 3 COSTING AND PRICING OF TRANSPORT SERVICES (Part 2) 30

Principle of pricing, marginal cost pricing, price discrimination, operational objectives of pricing; revenues, transport subsidies.

UNIT - 4 PRINCIPLES OF ECONOMIC APPRAISAL 30

Importance of infrastructure; basic principles of appraisal, benefit valuation, cost benefit analysis, multi criteria analysis.

UNIT - 5 REGULATION OF TRANSPORT 30

Theory of regulation, priorities in transport policies, regulatory reforms, coordination. Research writing and article writing to be a part of Units I (transport demand and supply), II (costing and pricing of transport services (part 1)), III (costing and pricing of transport services (part 2)), IV (principles of economic appraisal) and V (regulation of transport)

TOTAL : 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE1C	Disaster Management	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To generate interest in students to understand the causes and consequences of disasters
2. study its importance in planning and managing cities and towns towards mitigation and rehabilitation.
3. Provide the basic concepts and understandings of various disasters
4. To study about disaster resilient community design
5. Study and build skills for disaster response
6. To build disaster resilient communities and develop strategies for disaster management

COURSE OUTCOME:

1. The topics of the subjects attempt to sensitize the students about the ill effect of the disasters as well as the importance of preparedness.
2. It also inculcates the students that technology as well as community effects are important to mitigate disaster.
3. Mitigation measures related to environment and settlements
4. Learn about disaster resilient community design
5. Learn about the legal aspects and policies for disaster risk reduction
6. Creates disaster awareness in the future development

UNIT I DISASTER

15

Concepts and processes - Disaster cycle-myths and realities- Disaster-types, causes and consequences - Impacts of disasters on living things, properties, nature and community - Disaster- its importance towards multi-disciplinary perspective.

UNIT II NATURAL AND MAN-MADE DISASTERS

30

Disaster and natural environment - Disaster and man-made environment - Industrial pollution and health Hazards - Industrial pollution and natural resource damage - Social vulnerability and damage to people and property - Case studies related to natural disaster and man-made disasters at the national and international levels.

UNIT III DISASTER: PHYSICAL PLANNING AND RESOURCE MANAGEMENT

30

Physical planning imperatives on the development of villages, towns and cities and regions - Urban and regional land use planning and settlement growth - Planning standards, building byelaws, legal, administrative and institutional support systems and disaster management - Disaster prevention and mitigation - Disaster preparedness and rehabilitation - National Disaster Management Act 2005.

UNIT IV DISASTER AND TECHNOLOGY

60

Technology-building materials, disaster prone design, planning and management of cities and villages - Communication systems and technological inputs towards disaster management.

UNIT V DISASTER EDUCATION AND COMMUNITY BUILDING

15

Community awareness and action - Participatory management of community and disasters - NGO role and disaster preparedness and management, national and international perspectives – Government-roles and various levels in terms of proactive and reactive measures towards managing disasters - Gender perspectives-women, children, aged, physically disabled and disaster management. Research writing and article writing to be a part of Units I (disaster), II (natural and man-made disasters), III (disaster: physical planning and resource management), IV (disaster and technology) and V (disaster education and community building)

TOTAL: 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE1D	Real Estate And Housing Markets	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. This course applies the latest economic thinking and research to the task of analyzing real estate markets
2. Forecasting supply or demand for the future
3. Theories in housing markets and development
4. To gain knowledge on various real estate models for project formulation, implementation etc
5. Understand the land legislation and acquisition in real estate projects
6. Professional services, sale and marketing aspects of Housing and real estate

COURSE OUTCOME:

1. The outcome of this course is to provide students with a comprehensive understanding of major functional areas of real estate, including legal aspects, finance, economics, real estate practice and appraisal.
2. Economic concept of land, land pricing and acquisition
3. Urban reforms, acts and policies related to real estate markets
4. They learn about real estate development in public, private, partnership sectors
5. Tools and techniques used in land acquisition, land pooling and housing
6. Estimation and costing of real estate projects

UNIT I INTRODUCTION

15

Introduction to real estate - Definition, principles of real estate - Value concepts - Methods of valuation - Introduction to real property ownership - Leasing property and succession - Methods of sale/purchase and title search

UNIT II INVESTMENT AND LAWS

15

Real estate investment analysis and portfolio management - Foreign direct investment (FDI) - Role of NRIs and PIOs in the investment market - Marketing and brokerage - Introduction to various laws related to real estate.

UNIT III REAL ESTATE PROJECT FORMULATION

15

Real estate project formulation - Real estate development process - Asset management, property insurance, taxation and fiscal incentives - Government policies and industry organization - Public-private partnerships and joint ventures, rating, and risk assessment.

UNIT IV HOUSING MARKETS

30

Concepts and definitions, housing market, area, the purpose - Nature of housing market studies-factors affecting housing prices, housing market behavior - Estimation of housing need, housing demand and identification of housing stress - Factors affecting local housing market - Housing demand and supply market process - Housing search residential mobility and filtering causes and consequences - Policy influence on housing market - The formal and informal housing markets and their impact on urban poor, public - Co-operative and private sector housing market, process and supply institutional frame work.

UNIT V CASE STUDIES

75

Case studies of real estate development in public, private, partnership sectors - Real Estate as facilitator of development - Development of real estate as a tool for controlling land and property prices - Transaction and renting of real estate - Lease deeds/ sale deeds, sale documents, registration - Mortgage and pledging. Research writing and article writing to be a part of Units IV (housing markets) and V (case studies)

TOTAL: 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE1E	Materials, Technology and Infrastructure	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To expose the students to Traditional and Conventional Building Materials.
2. To study Cost Reducing and Environment friendly Technologies for Housing Projects.
3. Understand Elements of physical infrastructure and its implementation in urban and rural areas
4. To study about the new technologies in the field of infrastructure development
5. Study on Modern materials and construction technologies
6. to gain knowledge in Significance of Housing construction industry and its characteristics

COURSE OUTCOME:

1. To study various Technologies for Housing Development along with Physical Infrastructure.
2. Learn about alternate material and construction technique
3. Different components of physical planning and design of infrastructure
4. Emerging technologies and concepts in housing
5. Cost optimization techniques in Indian housing scenario
6. They learn about Role of BMTPC and other organizations in promotion of new and alternative technologies

UNIT - 1 INTRODUCTION TO MATERIALS AND TECHNOLOGY

15

Building materials traditional and conventional, low cost materials, significance of technology for housing development, conventional technologies and modern technologies, appropriate technology, technology for housing in the context of housing development in India and the third world.

UNIT - 2 PREFABRICATION AND INDUSTRIALIZATION

15

Concept of prefabrication, industrialization and system building, various open and closed systems, choice of various systems of building, concept of intelligent building;

UNIT - 3 CONSTRUCTION INDUSTRY

15

Organization of the construction industry in India-Significance of Housing construction industry, its characteristics and role of various factors involved; Small scale enterprises in the housing construction industry-building material manufacturers, sellers and small contractors. Significance of resources and manpower in housing construction, need for imparting in housing building, concept of Nrimithi Kendras.

UNIT - 4 COST OPTIMIZATION

15

Cost reducing techniques, environmental friendly technologies, role of technology in housing projects formulation-cost time and other implications, Emerging technological perspectives for house construction, infrastructure and housing area planning.

UNIT - 5 ALTERNATIVE TECHNOLOGIES

90

Role and significance of Physical infrastructure in housing development, characteristics of various components of physical planning and design of infrastructure, appropriate technology for infrastructure development, rain-water harvesting, use of solar energy, wind energy and other appropriate technologies; Role of BMTPC and other organizations in promotion of new and alternative technologies. Research writing and article writing to be a part of Units I (introduction to materials and technology), II (prefabrication and industrialization), III (construction industry), IV (cost optimization) and V (alternative technologies)

TOTAL: 150 PERIODS

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN201	City Planning	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. This course is planned to offer the students, the actual process of plan making at different levels i.e. city level and zonal levels and giving the case studies and their overview.
2. The other aspects which are proposed to be dealt in this course are the development control rule which gives the required legal support to the city plans and also contain elementary aspects of urban renewal.
3. Study the growth and evolution of cities with respect to their socio economic setup
4. Understand the context, location and linkage factors
5. To study the problems and issues of metropolitan cities
6. To study about the process of preparing Master plan

COURSE OUTCOME:

1. As an outcome of the above course the graduates will have the ability to conceptualize, analytically define, and treat mater plan, zonal plans and detailed development plan professionally
2. They would earn skills in preparing and reviewing the above plan.
3. Learn to prepare development plans for different scale of cities
4. Understand the city sprawl, and peri urban development
5. Urban development policies and programmes
6. They learn about Urban renewal and redevelopment

UNIT I INTRODUCTION

8

Contemporary theories and concepts in city planning - Political influence and polarization of economic, socio-cultural and administrative activities.

UNIT II MASTER PLAN

12

Plan making process, delineation of planning area, assessment of developmental issues - Plan period and phasing - Projection of requirements - Formulation of aim and objectives - Development proposals and land use planning - Delineation of zones - Resource mobilization - Implementation mechanism - Monitoring and review, Public participation - Deficiency of master plan.

UNIT III ZONAL PLAN AND DEVELOPMENT CONTROL RULES

9

Concept, priority in the preparation - Difference between master plan and zonal plan - Plan making process - Assessment of developmental issues - Projection of requirements - Land use zones and sub classification - Permissible activities, appellant activities, and prohibited activities - Appeals, appellant authority, and unauthorized developments.

UNIT IV CASE STUDIES

6

Method of preparation, issues and proposals, and critical appraisal. Research writing and analytical writing

UNIT V URBAN RENEWAL

10

Urban renewal as a part of metropolitan plan - Techniques of identification of urban renewal areas - Conservation, rehabilitation and redevelopment - Management of urban renewal areas - Incentive zoning and transfer of development rights. Research writing and article writing to be a part of Units I (introduction), II (Master plan), III (zonal plan and development control rules), IV (case studies) and V (urban renewal)

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN202	Regional Planning	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To make the students understand the concept of regional planning and make them skillful in applying various methods and techniques of regional planning.
2. To provide knowledge on different types of regions and its linkages
3. Understand the Paradigm shift in regions and planning
4. To study about different methods to analyse region and its growth
5. Scale, complexity and its impacts in different type of regions
6. Study about tools and techniques available for planning regions in india

LEARNING OUTCOME

1. The students will understand the need for Planning at various levels & especially the thrust and focus of regional planning.
2. The students will become familiar with the contents, approach and methodology of preparation of regional plans.
3. They will also learn important concepts & techniques in regional planning.
4. Expected to learn about the region and its dynamics
5. Impacts of globalization in the regions
6. They Learn about different case examples

UNIT I CONCEPT OF REGIONAL PLANNING

9

Concept and need for regional planning and regional development – Sustainable regional development and its components – Region & its types - Regionalization - Evolution of regional planning.

UNIT II TECHNIQUES OF REGIONAL ANALYSIS

9

Input-output analysis - Shift and share analysis - Concentration and dispersal - Industrial location theory.

UNIT III GROWTH MODELS

9

Growth pole and growth center - Core periphery concept - Central place theory - Agricultural land use model - Models of industrialization and regional development - Resource allocation models.

UNIT IV REGIONAL DEVELOPMENT PATTERN

9

Regional disparities - Resources in regional development - Multi-level planning - District planning - Special area development programmes and schemes - Rural development schemes.

UNIT V CASE STUDIES

9

Regional planning in India - Regional planning-National & International case studies. Research writing and analytical writing to be a part of Units I (Concept Of Regional Planning), II (Techniques Of Regional Analysis), III (Growth Models), IV (Regional Development Pattern), V (case studies)

TOTAL: 45 PERIODS

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN203	Research Methodology	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To develop a research culture among the students and study, use and understand appropriate methods in formulating problems and conduct surveys, analyze data and prepare a research report.
2. To develop critical thinking and research ability and apply the knowledge gained
3. Develop the data collecting and primary survey skills to provide exposure in research methodology
4. Understand the research operations
5. Develop knowledge on deterministic and probabilistic models in survey data analysis
6. To study about methods of data collection

COURSE OUTCOME:

1. Students are able to learn various methods and techniques on how to study and understand the problems of the urban and rural society in relation with environment
2. development skills to manage field work, data analysis and report working.
3. Understand the theoretical and practical significance of research
4. Types of research in formulating a research plan
5. Interpret and infer data from statistical analysis
6. They gain knowledge in report writing

UNIT I RESEARCH AND PLANNING

8

Research- definitions, types, purposes and application - Research as a way of thinking - Research processes and planning processes - Commonalities and differences between research processes and planning processes - Research design- definition, types, features, and Ideal Research design - Planning projects Vs research projects.

UNIT II SOURCES OF DATA

8

Data and information - Access to Information-nature, types and sources. - Census and sample surveys and case studies - Secondary data sources and its availability in terms of form, time and reliability - Organizations deals with secondary data generation and dissemination - Primary data-types, sources and generation -Secondary data and Literature studies - Literature survey and formulation of theoretical framework – Hypothesis-definition, formulation and relevance to research studies

UNIT III METHODS OF DATA COLLECTION

10

Observation–participant and non-participant techniques of observation, Preparation for field observation of people, buildings, places and activities. Merits and Demerits of observation - Interview-structured and unstructured interviews, telephone interviews, rapport building, merit and demerits of Interview - Questionnaire-mailed questionnaire - Formation of questions, sequencing and constructing questions, merits and demerits – Schedule - Difference between questionnaire and schedule - Administration of field survey- pre requisites and preparations.

UNIT IV DATA ANALYSIS

10

Criteria for analysis–descriptive and comparative - Processing raw data-coding, tabulating and illustrative - Secondary data analysis and primary data analysis and making interface between the two - Univariate, bi-variate and multi-variate analysis of data - Draw conclusions and interpretation of the analysis - Link interpretation to policy, design and planning.

UNIT V REPORT WRITING

9

Contents, and preliminaries - Writing reports when to start and finish - Language structure, and report format - Presentation of graphs, tables, maps and illustrations - Citation, referencing and Indexing - Format for preparing bibliography - Production of report.

TOTAL : 45 PERIODS

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPN221	Planning Studio II	3	0	10	8	160	240	400

COURSE OBJECTIVES

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.

Ability to understand ethical and professional responsibilities

The Planning Studio II attempts to train students in **the preparation of development plan** conceived within the framework of the approved perspective plan of a medium town having a plan period of 5 or 10 years.

The students are focused to learn to review and prepare plan for a medium urban settlement such as **Development Plan / Master Plan / Structure Plan**. The components such as

- Physical characteristics,
- Natural resources,
- Demographic characteristics,
- Economic base, employment,
- Shelter,
- Transportation,
- Social and infrastructure facilities,
- Finance,
- Institutional set-up etc. are to be learned.

Depending on the selection criteria an urban settlement would be selected and the information regarding the components stated above would be collected both from the primary and secondary sources and analyzed. Stakeholders consultative meeting are also conducted during the field visit. A report / maps / charts are the media through which the case study is expected to be presented.

TOTAL : 170 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE2A	Rural and urban housing	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To study Urban and Rural Housing Policies and Programmes in India and the Developing World.
2. To introduce the basic premises for Policy Preparation and Content of various Housing Policies and Programmes.
3. To familiarize the students with the Real-World Issues and Evaluate Success and Failure of Policies and Programmes
4. Introduce different housing schemes for rural areas
5. Understand different models and theories in rural housing
6. To study about global housing scenario in rural and urban areas

COURSE OUTCOME:

1. The outcome of this course is to provide students with a comprehensive understanding of various housing policies in rural and urban housing scenario.
2. Understand norms and planning principles for rural communities
3. To learn about importance of community development and citizen participation
4. Impacts of large development in to the villages
5. Learn about the different construction techniques in rural housing
6. They learn about Various urban and rural housing programmes including the current JNNURM, RAY, Bharat Nirman, PURA, etc.

UNIT I INTRODUCTION URBAN AND RURAL HOUSING POLICIES

15

Urban and Rural Housing Policies and its role in national development, objectives of policy in relation to settlement planning, basic components of housing policy and programmes formulation in urban and rural areas, housing policies in India and abroad, its impact and consequences on housing development,

UNIT II HOUSING POLICIES

15

Housing policy and their focus in different developing and developed countries, their significance in provision of housing programmes for low-income groups, their formulation implementation and evaluation role of international and national funding agencies in housing programmes special housing programmes in different countries.

UNIT III HOUSING IN RURAL

20

India Socio-economic profile of rural India and rural housing conditions-types of traditional building materials and construction methods, house types, rural housing norms, standards and design, access to infrastructure, improvement in quality of life in rural areas, rural health and sanitation, environmental improvement in villages, concept of integrated rural housing development, rural housing schemes, impact of large development projects and community development in rural areas, special needs for housing for tribal.

UNIT IV GLOBAL OVERVIEW

15

Review of urban and rural housing policies in various countries with particular focus on South East Asian countries

UNIT V CASE STUDIES OF POLICIES AND PROGRAMMES

70

Various urban and rural housing programmes including the current JNNURM, RAY, Bharat Nirman, PURA, etc.

Research writing and analytical writing to be a part of Units I (Introduction Urban And Rural Housing Policies), II (Housing Policies), III (Housing In Rural), IV (Global Overview), V (Case Studies Of Policies And Programmes)

TOTAL: 135 PERIODS

REFERENCES:

1. Government of India, National Urban Housing and Habitat Policy, 2007, Ministry of Housing and Urban Poverty Alleviation
2. Glaesar, Bernhard, Housing, Sustainable Development and Rural Poo,r 1995, Sage, New Delhi
3. Friedrichs, J, Affordable Housing and the Homeless, 1988, Walter de Gruyten & Co, Berlin

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE2B	Planning Legislation and Professional Practice	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To make the students aware and understand the relevance of constitution and legislation in relation to spatial planning.
2. The course also facilitates students to experience implications of the existing legislations relating to planning and its importance and shortcomings.
3. The students are exposed to problems and prospects of town planning in terms of professional practice.
4. To study the inclusion in planning and development process
5. To review policies, programmes and legislation in planning
6. To study about the acts and rules of governing bodies

COURSE OUTCOME:

1. Knowledge acquired in various Acts/Laws relating to spatial planning will enable the students to apply them in professional practice as well as apply in their day to day life.
2. Orientation towards the significance of planning rules and regulations would help students to deal urban and regional planning issues within framework of human rights and environmental protection.
3. They know about the role of state and central in planning
4. Learn about the legislations related to urban planning and development
5. Understand the basic concept of law and Indian constitution acts, regulations related to urban planning
6. Gain knowledge in Professional role responsibility and planning consultancy service

UNIT I CONCEPT OF PLANNING LEGISLATION

30

The concept of law, Indian constitution. national goals - Rights of ownership and development of property - Statutory control as a positive tool in plan preparation and implementation - Evolution, scope and significance of planning legislation - History and survey of development of planning legislation in India.

UNIT II ACTS AND RULES GOVERNING LOCAL BODIES

30

Panchayat Act, Municipality Act, Corporation Act, TNULB Act, - Provisions in the above acts related to functions, powers, role and responsibilities of local bodies including elected representatives and officers – The 73rd and 74th CAA and their implications on planning and development - Local government finance, revenue, expenditure and resource mobilization.

UNIT III ACTS RELATED TO PLANNING AND IMPLICATIONS OF LAWS AND LEGISLATION ON DEVELOPMENT

30

Review of Town and Country Planning Act of Tamil Nadu, Urban Development Act, Public Health Act, Slum Improvement Act, Housing Act, and Pollution Act - Acts related to Environment - Legal aspects of ownership - Lease and tenancy transfers - Development management - Law relating to utilities and services - Implications of land ceiling, betterment levy and development charges - Concept of arbitration.

UNIT IV PROFESSIONAL PRACTICE

30

Professional role responsibility and planning consultancy service - Professional ethics-code of conduct and professional charge - Role of inter disciplinary group - Consultancy agreements, and contracts - Project proposals formulation - Changing professional practice in India and abroad.

UNIT V PROFESSIONAL INSTITUTIONS

15

Aim and objectives of professional institutions - Private and international town planning organizations - Institution buildings and setting up private practice and work - Career options and prospects – Case studies. GIS

	Semester II – Elective	Instruction Hrs			C	Marks		
		L	T	P		CIA	ESE	Total
17MPNE2C	GIS Modeling in Urban and Regional Planning	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To train the candidate in building GIS models for urban and regional planning applications with hands on experience of spatial data, attribute data input and experiment with GIS analysis. Note: This is offered as a practical in the computer lab and does not involve setting of question paper as in theory paper.
2. Study the principles and applications of remote sensing
3. To study the sources of demographic data in GIS application
4. Study about automated mapping and facility management through GIS
5. Evolve ideas of land use suitability analysis
6. To study about the objectives and functions of GIS models in urban and regional planning

COURSE OUTCOME:

1. The outcome of this course is to provide students with a comprehensive understanding of the concepts, techniques, methods used by an urban planner to treat spatially cities by preparing urban land use models using GIS.
2. Learn about the data bases for different survey techniques
3. They learn about data tabulation and interpretation of data gathered
4. Automated maps and report generation using GIS mapping
5. They learn about Analytical planning Techniques and presentation
6. They learn about urban land use mapping

UNIT I INTRODUCTION

15

Classification of spatial and non-spatial data application of spatial data in urban and regional plans – objectives and functions of GIS models in urban and regional planning.

UNIT II SPATIAL DATA INPUT

15

Defining the objectives of GIS planning problems – Identification of required spatial data layers – coding schemes – digitization of spatial data – editing spatial data usable for the given planning problem.

UNIT III ATTRIBUTE DATA INPUT

15

Role of attribute data in defining geographic features – adding attribute data file – topology generation – Joining attribute data to its geographic features.

UNIT IV SPATIAL ANALYSIS USING GIS

15

Performing overlay functions – manipulating attribute data – GIS modeling – map and report generation – case problems on regional analysis, impact assessment study, project formulation and land suitability analysis.

UNIT V URBAN LAND USE MODELING

75

Need for model – Land suitability analysis – Urban land use modeling – Change demand modeling – Transition potential modeling and land allocation modeling

TOTAL: 135 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P		CIA	ESE	Total
17MPNE2D	Urban Development And Management	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To comprehend the various Facets of Urban Development and Management.
2. To understand the how decisions pertaining to Supply of Land and Built Environment are taken.
3. To understand socio economic/political and technological forces and their consequences in urban settlements
4. To study various approaches to urban development and management
5. To know about the different factors affect urban development
6. Study about land and real estate development and its impact on supply and demand

COURSE OUTCOME:

1. To study the Processes and Management of Urban Planning and Development.
2. Learn about Regulations and laws related to urban development and planning
3. Gain knowledge on Land economics and land related policies
4. Develop skills in research writing
5. They learn about development-based information system and urban reforms
6. They learn about Real estate development

UNIT I INTRODUCTION TO DEVELOPMENT MANAGEMENT 30

Concept, approaches, components, interfaces with national goals and political economic system.

UNIT II URBAN DEVELOPMENT MANAGEMENT 30

Strategies, Tools and Techniques; organizations involved.

UNIT - III LAND AND REAL ESTATE (PART 1) 30

Development Economic concepts of land, Land Pricing / valuation; Economic principles of land use; demand forecasting for land use; factors affecting land supply and demand; Land development methods, Supply Management, Demand side Management;

UNIT IV LAND AND REAL ESTATE (PART 2) 30

Real estate markets, type of property development and its impact on supply and demand, method of development, environmental considerations.

UNIT V INFORMATION SYSTEM AND URBAN REFORMS 15

Spatial and Non - spatial information systems; Urban reforms and acts and policies. Research writing and analytical writing to be a part of Units I (Introduction To Development Management), II (Urban Development Management), III (Land And Real Estate (Part 1)), IV (Land And Real Estate (Part 2)), V (Information System And Urban Reforms)

TOTAL: 135 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPNE2E	Inclusive urban planning	2	0	8	6	120	180	300

COURSE OBJECTIVES

1. To study Significance of Inclusion in Planning and Development Process.
2. To study Policies, Programmes and Legislation for Participatory Planning.
3. To study about the informal sectors and contribute inclusive planning in their development
4. Understand about different communities and societies involved in different settlement structures
5. Introduce citizen participation in inclusive planning
6. To study about Different social groups and weaker sections

COURSE OUTCOME:

1. To study the various Forms, Arenas and Uses of Inclusion in the Processes of Urban and Regional Planning.
2. Learn about importance of citizen participation in developing inclusive communities
3. Different approaches in participatory planning and processes
4. Understand the equal opportunities in accesses infrastructure provision of all communities
5. Learn about the linkage's aspects in communities growth
6. They learn about informal settlements and their infrastructure accessibility

UNIT I UNDERSTANDING INCLUSIVE URBAN PLANNING 15

Inclusive Planning Definitions and components

UNIT II STAKEHOLDERS PROFILE AND NEEDS, ACCESS TO SHELTER, SERVICES AND LIVELIHOODS (PART 1) 30

Urban Poor, Informal Sector, Gender, Children, Elderly, Disabled, Displaced people, etc.; Slums - dimensions, causative factors, determinants, location characteristics of settlements;

UNIT III STAKEHOLDERS PROFILE AND NEEDS, ACCESS TO SHELTER, SERVICES AND LIVELIHOODS (PART 2) 30

Informal sector - growth, characteristics, functions, economic contributions, linkages with formal sector, impact on Urban Development

UNIT IV PARTICIPATORY PLANNING PROCESS AND POLICIES, PROGRAMMES AND LEGISLATION 30

Methods, role of stakeholders (including civil society organizations), etc.; Related Acts, Five year plans, policies and programmes at various levels.

UNIT V PLANNING INTERVENTIONS 30

Inclusive zoning, development and building regulations, Slum Improvement. Research writing and analytical writing to be a part of Units I (Understanding Inclusive Urban Planning), II (Stakeholders Profile And Needs, Access To Shelter, Services And Livelihoods (Part 1)), III (Stakeholders Profile And Needs, Access To Shelter, Services And Livelihoods (Part 2)), IV (Participatory Planning Process And Policies, Programmes And Legislation), V (Planning Interventions)

TOTAL : 135 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN301	Environmental Planning	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. Environmental planning plays a vital role in balancing the needs of society by creating and carrying out programs, policies and regulations which consider the current and future impact of human development on the natural environment.
2. This course will expose you to conceptual tools for understanding the two principal avenues through which the natural and built environment are managed – the rule –making procedures of environmental policy and the future-imaging of environmental planning.
3. To study about the environmental issues such as open spaces, encroachments etc
4. To develop knowledge about sustainable environmental planning
5. To evaluate the existing policy framework and the environment
6. Study about different concepts and measures in environmental standards

COURSE OUTCOME:

1. The outcome of this course is to provide the students with professional knowledge, skills and techniques necessary to plan, manage and maintain a balanced, sustainable and productive environment.
2. They learn about different environmental impacts in India
3. Earn knowledge in developing sustainable urban planning and environment goals
4. Gain knowledge in global environmental initiatives
5. To Develop strategies for environmentally sustainable infrastructure development
6. They learn about Mitigation measures in environmental management plan

UNIT I DEVELOPMENT CONSEQUENCES ON ENVIRONMENT

9

Components of environment – Classification of environmental resources - Purpose and objectives in environmental protection, planning and management – Consequence of development over urban and rural settlements – Environmental concerns at local, regional and global levels.

UNIT II ENVIRONMENTAL MANAGEMENT AND STANDARDS

6

Institutional and legal support in management of environment – Environmental policies, and protocols - Global environmental initiatives - Environmental Indicators - Concepts and measures in environmental standards 11

UNIT III ENVIRONMENTAL IMPACT ASSESSMENT

9

Overview of environmental impact assessment practice in India - Types, conceptual approach and phases of EIA – Impact identification methodologies – Prediction and assessment of social, cultural and economic environments

UNIT IV ENVIRONMENTAL DECISION MAKING

9

Generation and evaluation of alternatives – Decision methods – Mitigation and environmental management plan – Public participation in the process of environmental decision making process

UNIT V ENVIRONMENTAL APPROACH IN PLANNING

12

Environmental concepts – Sustainability and environmental carrying capacity – Environmental strategies in land use, transportation, infrastructure planning and management - Legislative requirements, public awareness and community participation – Environmental management options. Urban and rural housing

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN302	Project Formulation and Implementation	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. This course aims at examining techniques and procedures relevant for project planning and implementation in developing countries, including project identification, feasibility analysis, design and implementation monitoring.
2. It also considers how to evaluate economic and distributive effects of completed or ongoing infrastructure development projects.
3. Specific attention has been given to show how institutional setting and other practical influences affect the use of conventional analytical tools.
4. To study relationship between projects and planning at various levels
5. To study about Management, implementation and evaluation of projects
6. To understand organizational aspects in project management

COURSE OUTCOME:

1. Plan identifies projects and the success of plans depends on Implementation of identified projects.
2. In this context, students will develop knowledge on important aspects of project formulation, criteria for project appraisal and project management.
3. They learn about project monitoring
4. The resource management for project funding, operation and maintenance
5. Learn about preparing feasibility reports for project planning
6. Presentation skill development

UNIT I INTRODUCTION TO PROJECT FORMULATION

9

Overview of the project cycle – Planning process and project planning – Search for project ideas – Strategies in capital allocation - Key elements in project formulation – Methods and tools for project formulation – Project identification and selection –Preparation of feasibility reports.

UNIT II PROJECT ANALYSIS

9

Capital cost estimation - Market and demand analysis – Technical analysis – Environmental analysis – Financial and economic analysis – Cash flow generation.

UNIT III PROJECT APPRAISAL

10

Time and value of money – Investment criteria-internal rate of return, net present value, costbenefit analysis, and social cost benefit analysis – Project risk analysis – Appraisal of marketing strategy - Pricing and credit worthiness and management capabilities.

UNIT IV PROJECT FINANCING AND IMPLEMENTATION

9

Funding options for urban development projects - Tender procedure- Tamil Nadu transparency in tender rules - Organizational aspects in project management – Network techniques for project management.

UNIT V PROJECT MONITORING AND EVALUATION

8

Need and techniques for monitoring – Performance and process monitoring – Monitoring schedules. Research writing and article writing stating case studies.

TOTAL :45 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	Total
17MPN321	Planning Studio III	3	0	10	8	160	240	400

COURSE OBJECTIVES

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

Elaboration of the principals and techniques adopted and learnt themes and planning projects.

Application of themes and techniques of planning in the preparation of development plans at regional, district, blocks, central village and village level, along with community action and participation plans. Review regional plan contents, methods and practices at local, national and international levels.

Studies and analysis would consist of survey, local renewable development, settlement distribution pattern, environmental protection, institutional and implementation framework. Conducting Stake holders meeting to assess the community needs becomes very important input for the preparation of development plans. Identification of projects programmes and schemes with funding sources.

TOTAL: 150 PERIODS

	Semester III	Instruction Hrs				MARKS		
		L	T	P	C	CIA	ESE	TOTAL
17MPN322	Dissertation	3	0	6	6	120	180	300

COURSE OBJECTIVES

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Students to get opportunities to publish research paper, display exhibits, present papers in conferences and seminars.
6. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
7. Ability to understand ethical and professional responsibilities.

Dissertation is a formal report written systematically on a particular topic as related to town and country planning. This exercise is taken up as to widen and enrich the literature pertaining to a topic of research. It may focus upon cross section of literature of a topic of research. The material written systematically may be useful in fourth semester when the same topic with literature reviewed systematically be confined as a part of thesis. Also the outcome of literature review done during the dissertation could be helpful to formulate the Thesis during the IVth semester.

TOTAL: 105 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPNE3A	Environmental Design	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To understand Approach to Environmental Design as applicable to Built Environment and Landscape Development.
2. To study Urban Climatology and Effects of Climate Change on City Planning.
3. To study about the concepts of urban ecology and sustainable growth practice
4. Evaluate the influence of climate change in designing cities
5. Study of environmental theories and practice
6. To study about urban forest management

COURSE OUTCOME:

1. To study Evolution of Environmental Design, Theory and Practice.
2. Learn about different climatic based design and practices
3. Application of sustainable principles in reducing energy in urban infrastructure
4. Understand the different climate change and its mitigation measures
5. Gain knowledge on different concepts of urban ecology
6. They learn about Acoustics and climate change

UNIT – 1 EVOLUTION OF ENVIRONMENTAL DESIGN, THEORY AND PRACTICE 15

Design as a determinant of Environmental quality; evolution of Environmental design, theories and practice of design.

UNIT – 2 APPROACH OF ENVIRONMENTAL DESIGN AS APPLICABLE TO BUILT ENVIRONMENT

(Part 1) 30

Criteria of Urban Environmental design issues-pedestrian-vehicular conflict, City Centre Environment, Housing areas, dereliction, environmental upgradation programmes; built environment aesthetics of ensemble of buildings, techniques of study of building condition, conservation aspects of built-up areas. Environmental approaches to design and planning of rural settlements, use of alternate technology in design of human settlements.

UNIT – 3 APPROACH OF ENVIRONMENTAL DESIGN AS APPLICABLE TO LANDSCAPE

DEVELOPMENT (Part 2) 20

Landscape as an environmental asset, techniques of landscape assessment at different levels, use of landscape design for environmental improvement.

UNIT – 4 URBAN CLIMATOLOGY, ACOUSTICS AND CLIMATE CHANGE 20

Urban climatology, effects of thermal pollution, factors causing heat sink effects, direct radiation, climatic effects on Urban areas, control techniques Urban acoustics:- source of noise, methods of control, design techniques.

UNIT – 5 URBAN CLIMATOLOGY, ACOUSTICS AND CLIMATE CHANGE II 20

Climate Change and City Planning, application of Energy code, Clean Development Mechanism. Research writing and analytical writing to be a part of Units I (Evolution Of Environmental Design, Theory And Practice), II (Approach Of Environmental Design As Applicable To Built Environment (Part 1)), III (Approach Of Environmental Design As Applicable To Landscape Development (Part 2)), IV (Urban Climatology, Acoustics And Climate Change), V (Urban Climatology, Acoustics And Climate Change II)

TOTAL : 105 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPNE3B	Environmental Impact Assessment	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To study Assessment of Impacts on Resources.
2. To Assess the Role of Public Participation in EIA.
3. To impart knowledge on environmental impact assessment and environmental management
4. Evaluate the acts and policies related to environmental impact assessments
5. Introduce different applications for appropriate techniques in assessing impact data
6. to study about constitutional provisions and policy regulation

COURSE OUTCOME

1. To study Role, Definition, Scope and Methods of EIA.
2. Carryout scope in environmental projects and social awareness
3. Gain knowledge on different methodologies for environmental impact prediction and assessment
4. Enhance writing skills on environment reports
5. Obtain knowledge on environment management plans
6. They learn about impacts on resources

UNIT – 1 ROLE, DEFINITION AND SCOPE OF EIA 10

Role of EIA in the Planning and decision making process. Definition and need, evolution and objectives, tasks and scope.

UNIT – 2 METHODS OF EIA 10

Methods of EIA; advantages and limitations.

UNIT – 3 ASSESSMENT OF IMPACTS 10

Assessment of impacts on resources (Including air, water, flora and fauna); assessment of impacts on Land use. Assessment of social and health impacts.

UNIT – 4 ROLE OF PUBLIC PARTICIPATION IN EIA 15

Public Participation in EIA; definition and concepts, objectives, techniques, advantages and limitation, PRA techniques.

UNIT – 5 CASE STUDIES 60

Prepare, Review and analysis of an EIA for eco sensitive area. Research writing and article writing with case studies

TOTAL: 105 PERIODS

REFERENCE BOOKS:

1. Asian Development Bank Environmental Impact Assessment for developing Countries in Asia Vol. I and II. 1997 ADB Publication

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPNE3C	Environmental legislation, evaluation and practices	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To familiarize students about various Acts related with Environment Protection.
2. To familiarize students about Ministry of Environment and Forest Guidelines, Notifications and Rules related with Environment Protection and Management.
3. Evaluate the different roles and responsibilities different institutions
4. To study the different regulations and bye laws related to environment legislation
5. To know about the importance of community participation in policy planning
6. To study about the planning legislation
7. To impart knowledge of Legislations related to Environmental Planning, Monitoring, and Impact Assessment.

COURSE OUTCOME:

1. Common rules and laws protecting environment
2. Legislative measures to address climate change and impacts
3. Roles and responsibilities of state and central government organization
4. To gain knowledge on land development controls
5. To formulate and contribute new rules to the planning legislative acts
6. They gain knowledge about planning legislation

Contents

UNIT 1	20
• EP Act 1986., Air (Prevention and Control of pollution) Act., Water (Prevention and Control of pollution) Act	
UNIT 2	20
• Mines and Mineral Act., Factories Act., Pesticides Act	
UNIT 3	20
• Indian Forest Act., Wildlife Act	
UNIT 4	20
• Ancient Monuments and Archaeological Sites and Remains Act., Hazardous Waste Management and Handling Rules / Biomedical Rules / Solid Waste	
UNIT 5 MANAGEMENT RULES	25
• Environment Tribunal Act	
• Climate change Protocols and Conventions	
• MOEF Guidelines and Notifications	
• Appellate Authority Act	
• Other related Notifications	
• Research writing and article writing for Units I, 2, 3, 4 and 5	

TOTAL : 105 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPNE3D	Web based applications to urban and regional planning	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. This course is designed based on advanced applications, and the candidates are expected to be through in INTERNET, Windows / NT OS, HTML etc.)
2. Students to gains insights and understanding of e- governance.
3. To teach the student the working and process followed in Governance.
4. To keep the students in touch with the recent updates in the industry.
5. To train the candidate in the use of web for urban and regional planning applications
6. To train them to build case based web development.

COURSE OUTCOME:

1. As an outcome of the above course the students will have the ability to independently develop web based solutions for the application of urban and regional planning.
2. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning and create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
5. Ability to review, comprehend and report technological developments in the profession of planning
6. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.

Role Of Web Based Technology In Planning 60

Information need and the role of web in planning – Public participation – Information transparency – Current trends.

1. INFORMATION DISSEMINATION THROUGH INTRA AND INTERNET 20
INFOCITY – Knowledge sharing – e- Governance – Information kiosks – Digital planning
2. PLANNING INFORMATION ACROSS INTERNET 25
Web sites and information sources in urban and regional planning .

	Semester III	Instruction hrs	Marks
--	--------------	-----------------	-------

		L	T	P	C	CIA	ESE	TOTAL
17MPNE3E	Planning for tourism	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To study Tourism and its Relevance in Urban Development.
2. To study Policies and Programmes of Tourism so as to ascertain parameters for Planning for Tourism Sector.
3. Evaluate the relationships between tourism and urban development
4. Basic awareness of the importance of tourism and its impact on urban development
5. To study about the Tourism policies at various levels
6. To study about impacts in the tourism development

COURSE OUTCOME:

- 1.To study the Role of Tourism in Urban and Regional Planning.
- 2.Scope and evolution of tourism development in India
- 3.Strategic action plans for tourism in India
4. Policies related to tourism development
5. development of sustainable tourism measures
- 6.They learn about National level tourism policies and programs

UNIT I INTRODUCTION TO TOURISM

9

Definitions, scope, nature, classification and dimension, tourism as an industry, tourism in developed and developing world.

UNIT II TOURISM SECTOR – IMPACTS

9

Relationship between Tourism and Urban Development, Tourism multiplier and forecasting methods: capacity building and carrying capacity planning for tourism projects, tourism and cultural and social change: Socio-cultural problems, environmental degradation.

UNIT III PLANNING FOR TOURISM (PART 1)

9

Nature and scope of a tourism plan- key issues and stages, data requirements, surveys, role of key players / stake holders in tourism policy and planning, sustainable tourism development planning;

UNIT IV PLANNING FOR TOURISM (PART 2)

9

Community planning and tourism; implementation and management, role of travel and tourism promoting agencies, monitoring the tourism development; Tourism marketing - concept, techniques and strategies.

UNIT V POLICIES AND PROGRAMMES

9

Tourism policies at various levels. Research and journal article writing for Units I (Introduction To Tourism), II (Tourism Sector – Impacts), III (Planning For Tourism (Part 1)), IV (Planning For Tourism (Part 2)), V (Policies And Programmes)

TOTAL: 105 PERIODS

	Semester IV	Instruction hrs	Marks
--	-------------	-----------------	-------

		L	T	P	C	CIA	ESE	TOTAL
17MPN401	Urban Governance and institutional Management	3	0	0	3	40	60	100

COURSE OBJECTIVES

1. To make students understand the governance systems of urban and rural local government with respect to the role, structure and functions of planning agencies.
2. To understand the organizational change and management principles and its application to planning and implementing organization in the context of urban and rural development management.
3. To study the role of government, private sector and third sector for governance of cities and regions
4. To study about the Role of states in urban and regional planning at national ,state and local levels
5. To study the decision making processes and organizations responsible for the planning, finance and delivery
6. To understand essential concepts in regional and metropolitan planning

COURSE OUTCOME:

1. Students are able to understand the government system and its governance processes.
2. The understanding from the lessons develops leadership qualities and motivational skills in turn build confidence in doing things.
3. Understand the role of participatory governance in urban development
4. Learn about Risks involved in urban development
5. Gain knowledge about e-governance
6. They learn about e governance and municipal finance

UNIT I URBAN GOVERNANCE

7

Basic concepts of government and governance - Governance and urban governance - Definitions, principles and practice regarding urban governance. -Evolution and processes - Governance and change - New forms of governance

UNIT II LOCAL GOVERNMENT ADMINISTRATION AND MANAGEMENT

10

Concepts, theories and practices in local administration - Central and state system of local administration - Urban and rural administration in developed, developing, and underdeveloped countries with case studies. The 73rd and 74th Constitutional amendment and its institutional mechanisms for governance in India. Role of planning and development agencies in India and other countries.

UNIT III GOVERNANCE TO E-GOVERNANCE

7

E-Governance-concepts, theories and practices - e-Governance indices-technology, legal, organizational and community related aspects of e-governance - Description to Institution and Institutional development - e-Governance efforts in India and abroad - e-Readiness indices and e-Governance

UNIT IV ORGANIZATION AND MANAGEMENT

12

Organizations-types, concepts, theories and functions - Approaches to understanding organizations - Organizational change and development - Management-concepts, theories and practice - Human resource planning and management – Work, tasks, job analysis, work culture, interpersonal communication, and performance appraisal - Organizations governing urban and rural development - State departments, development authorities, and local self governments.

UNIT V PARTICIPATORY GOVERNANCE AND URBAN DEVELOPMENT

9

People's participation-theories, concepts and methods - Participatory governance-meaning, processes and methods - Role of people's participation in planning processes - People, NGO and civil society and urban development - Public relations-concepts types, methods and planning public relations - Best practices - national and international on participation, infrastructure and urban development. Research and analytical article writing for Units I (Urban Governance), II (Local Government Administration And Management), III (Governance To E-Governance), IV (Organization And Management), V (Participatory Governance And Urban Development)

TOTAL: 45 PERIODS

	Semester IV	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
17MPN421	Thesis (Viva Voce)	4	0	28	18	320	480	800

COURSE OBJECTIVES

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

Students shall be required to undertake thesis work in the areas of relevance and concern in the urban and regional development process. The broad areas of study would include

1. Planning for region, urban development and renewal
2. Planning for infrastructure development
3. Urban governance, management and finance
4. Environmental and sustainable development
5. Housing, heritage conservation and tourism
6. Planning implications of Smart cities, Green cities, Digital Cities, Eco-Cities.
7. E-Governance and urban local governments and e-Participation of communities in city infrastructure planning and development
8. Any other emerging areas in the field of urban and regional planning

The thesis shall be submitted in the form of thesis report, presentation drawing sheets, slides and posters etc. Thesis work submission also includes all relevant information in a CD.

TOTAL: 405 PERIODS

FACULTY OF PHARMACY

HUMAN ANATOMY AND PHYSIOLOGY-I (Theory)**4H****4C**

Instruction hours/ week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- The subject provides the basic knowledge required to understand the various disciplines of pharmacy.
- To know various homeostatic mechanisms and their imbalances
- Students can Illustrate the body fluids coagulation, blood grouping, Rh factors and disorders of blood
- Knows about bones, Joints and their functions in the human body

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Illustrate the body fluids coagulation, blood grouping, Rh factors and disorders of blood.
5. Appreciate coordinated working pattern of different organs of each system.
6. Explain all the bones, Joints and their functions in the human body

Course Content:**UNIT-I****Introduction to human body:** Definition and scope of anatomy and physiology, levels of structural organization and body systems, basic life processes, homeostasis, basic anatomical terminology.**Cellular level of organization:** Structure and functions of cell, transport across cell membrane, cell division, cell junctions. General principles of cell communication, intracellular signaling pathway activation by extracellular signal molecule, Forms of intracellular signaling: a) Contact-dependent b) Paracrine c) Synaptic d) Endocrine.**Tissue level of organization:** Classification of tissues, structure, location and functions of epithelial, muscular and nervous and connective tissues.**UNIT- II****Integumentary system:** Structure and functions of skin.**Skeletal system:** Divisions of skeletal system, types of bone, salient features and function of bones of axial and appendicular skeletal system Organization of skeletal muscle, physiology of muscle contraction, neuromuscular junction.**Joints -** Structural and functional classification, type of joints movements and its articulation.

UNIT-III

Body fluids and blood: Body fluids, composition and functions of blood, hemopoiesis, formation of hemoglobin, anemia, mechanisms of coagulation, blood grouping, Rh factors, transfusion, its significance and disorders of blood, Reticuloendothelial system.

Lymphatic system: Lymphatic organs and tissues, lymphatic vessels, lymph circulation and functions of lymphatic system.

UNIT-IV

Peripheral nervous system: Classification of peripheral nervous system, Structure and functions of sympathetic and parasympathetic nervous system. Origin and functions of spinal and cranial nerves.

Special senses: Structure and functions of eye, ear, nose and tongue and their disorders.

UNIT-V

Cardio vascular system: Heart– anatomy of heart, blood circulation, blood vessels, structure and functions of artery, vein and capillaries, elements of conduction system of heart and heartbeat, its regulation by autonomic nervous system, cardiac output, cardiac cycle. Regulation of blood pressure, pulse, electro cardiogram and disorders of heart.

Reference Books (Latest Editions):

1. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MIUSA.
2. Text book of Medical Physiology-Arthur.C, Guyton and John.E. Hall. Miamisburg, OH, U.S.A.
3. Human Physiology (vol1 and2) by Dr.C.C. Chatterrje, Academic Publishers Kolkata.

17BP107P

SEMESTER-I

HUMAN ANATOMY AND PHYSIOLOGY-I (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Practical physiology is complimentary to the theoretical discussions in physiology.
- Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings.
- To Identify epithelial, connective tissue, muscular, nervous tissues Microscopically and the axial, appendicular bones.
- Know about the bleeding time and clotting time.
- Know to Record the heart rate, pulse rate, blood pressure.
- Understand the WBC count and RBC count

Course Outcomes (CO's): On successful completion of the course the student will

1. Identify epithelial, connective tissue, muscular, nervous tissues Microscopically and the axial, appendicular bones.
2. Determine the bleeding time, clotting time.
3. Record the heart rate, pulse rate, blood pressure.
4. Demonstrate the WBC count and RBC count.
5. Identify the axial, appendicular bones.
6. Estimate the blood group and erythrocyte sedimentation rate.

Content:

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones
6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC)count
9. Determination of bleeding time
10. Determination of clottingtime
11. Estimation of hemoglobincontent
12. Determination of bloodgroup.
13. Determination of erythrocytesedimentationrate (ESR).
14. Determination of heart rate and pulserate.
15. Recording of blood pressure.

Suggested Readings:

1. Essentials of Medical Physiology by K.Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill livingstone, New York
3. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MIUSA
4. Text book of Medical Physiology-Arthur C. Guyton and John E. Hall. Miamisburg, OH, U.S.A
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
6. Text book of Human Histology by Inderbir Singh, Jaypee brother's medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L. Ghai, Jaypee brother's medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

Reference Books (Latest Editions):

1. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MIUSA
2. Text book of Medical Physiology-Arthur C. Guyton and John E. Hall. Miamisburg, OH, U.S.A.
3. Human Physiology (vol 1 and 2) by Dr. C.C. Chatterjee, Academic Publishers Kolkata

17BP102T

SEMESTER - I

PHARMACEUTICAL ANALYSIS (Theory)**4H 4C**

Instruction hours/week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs
- To Understand the basic concepts and Pharmacopeial standards of pharmaceutical analysis
- To Identify the errors in analysis
- To Understand the principles of volumetric analysis
- To Understand the principles of electrochemical analysis
- Know the applications of volumetric analysis.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the basic concepts and Pharmacopeial standards of pharmaceutical analysis
2. Identify the errors in analysis
3. Understand the principles of volumetric analysis
4. Understand the principles of electrochemical analysis
5. Applications of volumetric analysis.
6. Applications of electrochemical analysis.

Course Content:**UNIT-I**

(a)Pharmaceutical analysis: Definition and scope i) Different techniques of analysis ii) Methods of expressing concentration iii) Primary and secondary standards. iv)Preparation and standardization of various molar and normal solutions- oxalic acid sodium hydroxide, hydrochloric acid, sodiumthio sulphate, sulphuric acid, potassium permanganate and ceric ammonium sulphate.

(b)Errors: Sources of errors, types of errors, methods of minimizing errors, accuracy, precision and significant figures.

(c)Pharmacopoeia, Sources of impurities in medicinal agents, limit tests.

UNIT-II

Acid base titration: Theories of acid base indicators, classification of acid base titrations and theory involved in titrations of strong, weak, and very weak acid and bases, neutralization curves.

Nonaqueous titration: Solvents, acidimetry and alkalimetry titration and estimation of Sodium benzoate and Ephedrine HCl.

UNIT-III

Precipitation titrations: Mohr's method, Volhard's, Modified Volhard's, Fajans method, estimation of sodium chloride.

Complexometric titration: Classification, metal ion indicators, masking and demasking reagents, estimation of Magnesium sulphate, and calcium gluconate.

Gravimetry: Principle and steps involved in gravimetric analysis.

Purity of the precipitate: co-precipitation and postprecipitation, Estimation of barium sulphate. Basic Principles, methods and application of diazotisation titration.

UNIT-IV

Redox titrations: (a) Concepts of oxidation and reduction (b) Types of redox titrations (Principles and applications) Cerimetry, Iodimetry, Iodometry, Bromatometry, Dichrometry, Titration with potassium iodate.

UNIT-V

Electrochemical methods of analysis Conductometry: Introduction, Conductivity cell, Conductometric titrations, applications.

Potentiometry-Electrochemical cell, construction and working of reference (Standard hydrogen, silver chloride electrode and calomel electrode) and indicator electrodes (metal electrodes and glass electrode), methods to determine endpoint of potentiometric titration and applications.

Polarography - Principle, Ilkovic equation, construction and working of dropping mercury electrode and rotating platinum electrode, applications.

Suggested Readings:

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London.
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis.
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry.
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry.
5. John H. Kennedy, Analytical chemistry principles.
6. Indian Pharmacopoeia.

17BP108P

SEMESTER – I

PHARMACEUTICAL ANALYSIS (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Analyze the limit test for samples.
- Understand how to prepare the solutions for volumetric and electro-analytical methods.
- To Standardize the solutions by volumetric and electro-analytical methods.
- Know how to Perform the assay for chemical substances.
- To Standardize the titrant used for the assay.
- To Determine the strength of the solutions by electro-analytical methods.

Course Outcomes (CO's): On successful completion of the course the student will

1. Analyze the limit test for samples.
2. Prepare the solutions for volumetric and electro-analytical methods.
3. Standardize the solutions by volumetric and electro-analytical methods.
4. Perform the assay for chemical substances.
5. Standardize the titrant used for the assay.
6. Determine the strength of the solutions by electro-analytical methods.

Content:**I Limit Test of the following:**

- (1) Chloride.
- (2) Sulphate.
- (3) Iron.
- (4) Arsenic.

II Preparation and standardization of:

- (1) Sodium hydroxide.
- (2) Sulphuric acid.
- (3) Sodiumthio sulfate.
- (4) Potassium permanganate.
- (5) Cericammonium sulphate.

III Assay of the following compounds along with Standardization of Titrant:

- (1) Ammoniumchloride by acid basetitration.
- (2) Ferroussulphate by Cerimetry.
- (3) Coppersulphate by Iodometry.
- (4) Calciumgluconate by complexometry.
- (5) Hydrogenperoxide by Permanganometry.
- (6) Sodiumbenzoate by non-aqueoustitration.
- (7) SodiumChloride by precipitationtitration.

IV Determination of Normality by electro-analytical methods:

- (1) Conductometric titration of strong acid against strong base.
- (2) Conductometric titration of strong acid and weak acid against strong base.
- (3) Potentiometric titration of strong acid against strong base.

Suggested Readings:

1. A.H.Beckett & J.B.Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahline Press of University of London.
2. A.I.Vogel, Text Book of Quantitative Inorganic analysis.
3. P.GunduRao, Inorganic Pharmaceutical Chemistry.
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry.
5. John H.Kennedy, Analytical chemistry principles.
6. Indian Pharmacopoeia.

17BP103T

SEMESTER - I

PHARMACEUTICS (Theory)**4H****4C**

Instruction hours/week: L: 3 T: 1 P:0

Marks: Internal: 25 External: 75 Total: 100

s

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the preparatory pharmacy with arts and science of preparing the different conventional dosage forms.
- Students can Understand the history of profession of pharmacy
- To know the basics of different dosage forms.
- To Understand the professional way of handling the prescription
- Students will know how to Prepare various conventional dosage forms
- Students will develop a clear idea about Pharmaceutical incompatibility and different pharmaceutical calculations in pharmacy.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the history of profession of pharmacy
2. Understand the basics of different dosage forms.
3. Understand the professional way of handling the prescription
4. Prepare various conventional dosage forms
5. Develop a clear idea about Pharmaceutical incompatibility and different pharmaceutical calculations in pharmacy.
6. Predict the instability problems in semi solid dosage forms

Course Content:**UNIT– I**

Historical background and development of profession of pharmacy: History of profession of Pharmacy in India in relation to Pharma cyeducation, industry and organization, Pharmacy as a career, Pharmacopoeias: Introduction to IP,BP, USP and Extra Pharmacopoeia.

Dosage forms: Introduction to dosage forms, classification and definitions.

Prescription: Definition, Parts of prescription, handling of Prescription and Errors in prescription.

Posology: Definition, Factors affecting posology. Pediatric dose calculations based on age, bodyweight and body surface area.

UNIT– II

Pharmaceutical calculations: Weights and measures – Imperial & Metric system, Calculations involving percentagesolutions,alligation,proofspirit and isotonic solutions based on freezing point and molecular weight.

Powders: Definition, classification, advantages and disadvantages, Simple & compound Powders–official preparations ,dusting powders ,effervescent, efflorescent and hygroscopic

powders, eutectic mixtures. Geometric dilutions.

Liquid dosage forms: Advantages and disadvantage soft liquid dosage forms. Excipients used in formulation of liquid dosage forms. Solubility enhancement Techniques.

UNIT– III

Monophasic liquids: Definitions and preparations of Gargles, Mouthwashes, Throat Paint, Eardrops, Nasal drops, Enemas, Syrups, Elixirs, Liniments and Lotions.

Suspensions: Definition, advantages and disadvantages, classifications, Preparation of suspensions; Flocculated and Deflocculated suspension & stability problems and methods to overcome.

Emulsions: Definition, classification, emulsifying agent, test for the identification of type of Emulsion, Methods of preparation & stability problems and methods to overcome.

UNIT– IV

Suppositories: Definition, types, advantages and disadvantages, types of bases, methods of preparations. Displacement value & its calculations, evaluation of suppositories.

Pharmaceutical in compatibilities: Definition, classification, physical, chemical and therapeutic in compatibilities with examples.

UNIT– V

Semisolid dosage forms: Definitions, classification, mechanisms and factors influencing dermal penetration of drugs. Preparation of ointments, pastes, creams and gels. Excipients used in semi solid dosage forms. Evaluation of semi solid dosages forms.

Suggested Readings:

1. H.C. Anseletal, Pharmaceutical Dosage Form and Drug Delivery System, Lippincott Williams and Walkins, New Delhi.
2. Carter S.J., Cooper and Gunn's-Dispensing for Pharmaceutical Students, CBS publishers, New Delhi.
3. M.E. Aulton, Pharmaceutics, The Science & Dosage Form Design, Churchill Living stone, Edinburgh.
4. Indian pharmacopoeia.
5. British pharmacopoeia.
6. Lachmann Theory and Practice of Industrial Pharmacy, Lea & Febiger Publisher, The University of Michigan.
7. Alfonso R. Gennaro Remingt on .The Science and Practice of Pharmacy, Lippincott Williams, New Delhi.
8. Carter S.J., Cooper and Gunn's. Tutorial Pharmacy, CBS Publications, New Delhi.
9. E.A. Rawlins, Bentley's Text Book of Pharmaceutics, English Language Book Society, Elsevier Health Sciences, USA.
10. Isaac Ghebre Sellassie: Pharmaceutical Pelletization Technology, Marcel Dekker, INC, New

York.

11. DilipM.Parikh: Handbook of Pharmaceutical Granulation Technology, Marcel Dekker, INC, NewYork.
12. Françoise Nieloud and Gilberte Marti-Mestres: Pharmaceutical Emulsions and Suspensions, Marcel Dekker, INC New York.

17BP109P

SEMESTER-I

PHARMACEUTICS (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand the professional way of preparing a prescription
- To know various liquid dosage forms preparations.
- To Prepare various solid dosage forms
- To Perform quality control tests for various dosage forms
- To Acquire the knowledge of using equipment's in pharmaceutical industry

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the professional way of preparing a prescription
2. Prepare various liquid dosage forms
3. Prepare various solid dosage forms
4. Perform quality control tests for various dosage forms
5. Acquire the knowledge of using equipment's in pharmaceutical industry

1. SYRUPS

a) Syrup IP'66

b) Compound syrup of Ferrous Phosphate BPC'68

2. Elixirs

a) Piperazine citrate elixir

b) Paracetamol pediatric elixir

3. Linctus

a) TerpinHydrateLinctusIP'66

b) Iodine Throat Paint(Mandles Paint)

4. SOLUTIONS

a) Strong solution of ammonium acetate

b) Cresol with soap solution

c) Lugol's solution

5. Suspensions

a) Calamine lotion

b) Magnesium Hydroxide mixture

c) Aluminium Hydroxide gel

6. Emulsions

- a) Turpentine Liniment
- b) Liquid paraffin emulsion

7. Powders and Granules

- a) ORS powder (WHO)
- b) Effervescent granules
- c) Dusting powder
- d) Divided powders

8. Suppositories

- a) Glycero gelatin suppository
- b) Cocoa butter suppository
- c) Zinc Oxide suppository

9. Semisolids

- a) Sulphur Ointment
- b) Non staining Iodine ointment with methyl salicylate
- c) Carbopal gel

10. Gargles and Mouth Washes

- a) Iodine gargle
- b) Chlorhexidine Mouthwash

Suggested Readings:

1. H.C.Anseletal., Pharmaceutical Dosage Form and Drug Delivery System, Lippincott William sand Walkins, New Delhi.
2. Carter S.J., Cooper and Gunn's-Dispensing for Pharmaceutical Students, CBS publishers, New Delhi.
3. M.E. Aulton, Pharmaceutics, The Science & Dosage Form Design, Churchill Livingstone, Edinburgh.
4. Indian pharmacopoeia.
5. British pharmacopoeia.
6. Lachmann. Theory and Practice of Industrial Pharmacy, Lea & Febiger Publisher, The University of Michigan.
7. AlfonsoR. Gennaro Remington. The Science and Practice of Pharmacy, Lippincott Williams, New Delhi.
8. Carter S.J., Cooper and Gunn's. Tutorial Pharmacy, CBS Publications, NewDelhi.
9. E.A.Rawlins, Bentley's Text Book of Pharmaceutics, English Language Book Society, Elsevier Health Sciences, USA.
- 10.Isaac Ghebre Sellassie: Pharmaceutical Pelletization Technology, Marcel Dekker, INC, New York.
11. DilipM.Parikh: Hand book of Pharmaceutical Granulation Technology, Marcel Dekker, INC, New York.
12. Francoise Nieloud and Gilberte Marti-Mestres: Pharmaceutical Emulsions and Suspensions, Marcel Dekker, INC, New York.

17BP104T

SEMESTER-I

PHARMACEUTICAL INORGANIC CHEMISTRY (Theory)**4H****4C**

Instruction hours/week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objective:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- To Understand the sources of impurities.
- Knowing the methods to determine the impurities
- Explain the medicinal and pharmaceutical importance of buffers, electrolytes and dental products
- Know about medicinal and pharmaceutical importance of gastrointestinal agents
- To Discuss the medicinal and pharmaceutical importance of expectorants, hematinics, emetics, antidotes and astringents.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the sources of impurities.
2. Explain the methods to determine the impurities in inorganic drugs and pharmaceuticals
3. Explain the medicinal and pharmaceutical importance of buffers, electrolytes and dental products
4. Describe the medicinal and pharmaceutical importance of gastrointestinal agents
5. Discuss the medicinal and pharmaceutical importance of expectorants, hematinics, emetics, antidotes and astringents.
6. Elaborate the medicinal and pharmaceutical importance of Radiopharmaceuticals.

Course Content:**UNIT - I**

Impurities in pharmaceutical substances: History of Pharmacopoeia, Sources and types of impurities, principle involved in the limit test for Chloride, Sulphate, Iron, Arsenic, Lead and Heavy metals, modified limit test for Chloride and Sulphate.

General methods of preparation: Assay for the compounds superscripted with **asterisk (*)**, **properties** and medicinal uses of inorganic compounds belonging to the following classes.

UNIT - II

Acids, Bases and Buffers: Buffer equations and buffer capacity in general, buffers in pharmaceutical systems, preparation, stability, buffered isotonic solutions, measurements of tonicity, calculations and methods of adjusting isotonic city.

Major extra and intracellular electrolytes: Functions of major physiological ions, Electrolytes used in the replacement therapy: Sodium chloride*, Potassium chloride, Calcium gluconate* and Oral Rehydration Salt (ORS), Physiological acid base balance.

Dental products: Dentifrices, role of fluoride in the treatment of dental caries, Desensitizing agents, Calcium carbonate, Sodium fluoride, and Zinc eugenolcement.

UNIT - III

Gastro intestinal agents Acidifiers: Ammonium chloride* and Dil. HCl

Antacid: Ideal properties of antacids, combinations of antacids, Sodium Bicarbonate*, Aluminum hydroxide gel, Magnesium hydroxide mixture

Cathartics: Magnesium sulphate, Sodium orthophosphate, Kaolin and Bentonite.

Antimicrobials: Mechanism, classification, Potassium permanganate, Boric acid, Hydrogen peroxide*, Chlorinated lime*, Iodine and its preparations.

UNIT - IV

Miscellaneous compounds Expectorants: Potassium iodide, Ammonium chloride*.

Emetics: Copper sulphate*, Sodium potassium tartarate.

Haematinics: Ferrous sulphate*, Ferrous gluconate.

Poison and Antidote: Sodiumthio sulphate*, Activated charcoal, Sodium nitrite333.

Astringents: Zinc Sulphate, Potash Alum.

UNIT - V

Radio Pharmaceuticals: Radio activity, Measurement of radioactivity, Properties of α, β, γ radiations, Half life, radio isotope sand study of radio isotopes - Sodium iodide I131, Storage conditions, precautions & pharmaceutical application of radio active substances.

Suggested Readings:

1. A.H.Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahlone Press of University of London, 4th edition.
2. A.I.Vogel, Text Book of Quantitative Inorganic analysis.
3. P.GunduRao, Inorganic Pharmaceutical Chemistry, 3rdEdition.
4. M.L Schroff, Inorganic Pharmaceutical Chemistry.
5. Bentley and Driver's Text book of Pharmaceutical Chemistry.
6. Anand & Chatwal, Inorganic Pharmaceutical Chemistry.
7. Indian Pharmacopoeia.

PHARMACEUTICAL INORGANIC CHEMISTRY (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Know how to Perform Limit test for ions
- To Perform Limit test for metals
- Know how to Identify inorganic pharmaceuticals
- To Test the inorganic sample for its purity.
- To determine the physical properties of inorganic pharmaceuticals.
- Understand inorganic pharmaceuticals preparation.

Course Outcomes (CO's): On successful completion of the course the student will

1. Perform Limit test for ions
2. Perform Limit test for metals
3. Identify inorganic pharmaceuticals
4. Test the inorganic sample for its purity.
5. Determine the physical properties of inorganic pharmaceuticals.
6. Prepare inorganic pharmaceuticals.

Course content:**I. Limit tests for following ions:**

- Limit test for Chlorides and Sulphates.
- Modified limit test for Chlorides and Sulphates.
- Limit test for Iron.
- Limit test for Heavy metals.
- Limit test for Lead.
- Limit test for Arsenic.

II Identification test:

- Magnesium hydroxide, Ferrous sulphate, Sodium bicarbonate, Calcium gluconate and Copper sulphate.

III Test for purity:

- Swelling power of Bentonite.
- Neutralizing capacity of aluminum hydroxide gel.
- Determination of potassium iodate and iodine in potassium iodide.

IV Preparation of inorganic pharmaceuticals:

- Boric acid, Potash alum Ferrous sulphate.

Suggested Reading:

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahlone Press of University of London, 4th edition.
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis.
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry, 3rd Edition.
4. M.L. Schroff, Inorganic Pharmaceutical Chemistry.
5. Bentley and Driver's Text book of Pharmaceutical Chemistry.
6. Anand & Chatwal, Inorganic Pharmaceutical Chemistry.
7. Indian Pharmacopoeia.

COMMUNICATION SKILLS (Theory)**2H****2C**

Instruction hours/week: L:2 T:0 P:0

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 2 Hours

Course Objectives:

- This course will prepare the young pharmacy student to interact effectively with doctors, nurses, dentists, physiotherapists and other health workers.
- At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.
- Students will develop interview skills
- Understand Leadership qualities and essentials
- They Develop presentation and group discussion skills

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the behavioral needs for a Pharmacist to function effectively in the areas of pharmaceutical operation
2. Communicate effectively (Verbal and Non-Verbal)
3. Effectively manage the team as a team player
4. Develop interview skills
5. Develop Leadership qualities and essentials
6. Develop presentation and group discussion skills

Course content:**UNIT– I**

Communication Skills: Introduction, Definition, The Importance of Communication The Communication Process – Source, Message, Encoding, Channel, Decoding Receiver, Feedback, Context.

Barriers to communication: Physiological Barriers, Physical Barriers, Cultural Barriers, Language Barriers, Gender Barriers, Interpersonal Barriers, Psychological Barriers, Emotional barriers.

Perspectives in Communication: Introduction, Visual Perception, Language, Other factors affecting our perspective-Past Experiences, Prejudices, Feelings, Environment

UNIT– II

Elements of Communication: Introduction, Face to Face Communication- Tone of Voice, Body Language (Non-verbal communication), Verbal Communication, Physical Communication.

Communication Styles: Introduction, The Communication Styles Matrix with example for each - Direct Communication Style, Spirited Communication Style, Systematic Communication Style, Considerate Communication Style.

UNIT– III

Basic Listening Skills: Introduction, Self-Awareness, Active Listening, Becoming an Active Listener, Listening in Difficult Situations.

Effective Written Communication: Introduction, When and When Not to Use Written Communication-Complexity of the Topic, Amount of Discussion's Required, Shades of Meaning, Formal Communication.

Writing Effectively: Subject Lines, Put the Main Point First, Know Your Audience Organization of the Message.

UNIT– IV

Interview Skills: Purpose of an interview, Do's and Don'ts of an interview.

Giving Presentations: Dealing with Fears, Planning your Presentation, Structuring Your Presentation, Delivering Your Presentation, Techniques of Delivery.

UNIT– V

Group Discussion: Introduction, Communication skills in group discussion, Do's and Don'ts of group discussion

Suggested Readings:

1. Basic communication skills for Technology, Andreja.J.Rutherford, 2nd Edition, Pearson Education, 2011
2. Communication skills, Sanjay Kumar, Pushpalata, 1st Edition, Oxford Press, 2011
3. Organizational Behaviour, Stephen.P.Robbins, 1st Edition, Pearson, 2013
4. Brilliant-Communication skills, Gill Hasson, 1st Edition, Pearson Life, 2011
5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5th Edition, Pearson, 2013.
6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010
7. Communication skills for professionals, Konarnira, 2nd Edition, Newarrivals-PHI, 2011
8. Personality development and soft skills, Barun K Mitra, 1st Edition, Oxford Press, 2011
9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning india pvt.ltd, 2011
10. Soft skills and professional communication, rancis Peters SJ, 1st Edition, McGraw Hill Education, 2011
11. Effective communication, John Adair, 4th Edition, Pan Mac Millan, 2009.
12. Bringing out the best in people, Aubrey Daniels, 2nd Edition, McGraw Hill, 1999.

COMMUNICATION SKILLS (Practical)**2H****1C**

Instruction hours/week: L:0 T:0 P:2

Marks: Internal: 10 External: 15 Total:25

External Semester Exam: 2 Hours

Course Objectives:

- Students can able to communicate effectively to meet the people, ask question and make friends
- To Understand the do's and don't's of effective communication.
- Know about Pronounce the sounds effectively.
- To Explain the figures of speech and direct/indirect speech.
- Know to Write effectively mails and other written communications.
- Will be able to Present a topic in a gathering.

Course Outcomes: On successful completion of the course the student will

1. Communicate effectively to meet the people, ask question and make friends
2. Understand the do's and don't's of effective communication.
3. Pronounce the sounds effectively.
4. Explain the figures of speech and direct/indirect speech.
5. Write effectively mails and other written communications.
6. Present a topic in a gathering.

Course Content**Basic communication covering the following topics:**

MeetingPeople

AskingQuestions

MakingFriends

Whatdidyoudo? Do'sand

Dont's

Pronunciationscoveringthefollowingtopics

Pronunciation (ConsonantSounds)

PronunciationandNouns

Pronunciation (VowelSounds)

AdvancedLearning

ListeningComprehension/ DirectandIndirectSpeech

FiguresofSpeech

EffectiveCommunication

WritingSkills

EffectiveWriting

InterviewHandlingSkills

E-Mailetiquette PresentationSkills

Suggested Readings:

1. Basic communication skills for Technology, Andreja.J.Ruther Ford, 2nd Edition, Pearson Education, 2011.
2. Communication skills, SanjayKumar, Pushpalata, 1st Edition, OxfordPress, 2011.
3. Organizational Behaviour, Stephen.P.Robbins, 1st Edition, Pearson, 2013.
4. Brilliant-Communication skills, GillHasson, 1st Edition, Pearson Life, 2011.
5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5th Edition, Pearson, 2013.
6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010.
7. Communication skills for professionals, Konarnira, 2nd Edition, New arrivals–PHI, 2011.
8. Personality development and soft skills, Barun KMitra, 1st Edition, Oxford Press, 2011.
9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning india pvt.ltd, 2011.
10. Soft skills and professional communication, rancis Peters SJ, 1st Edition, McGraw Hill Education, 2011.
11. Effective communication, John Adair, 4th Edition, Pan Mac Millan, 2009.
12. Bringing out the best in people, Aubrey Daniels, 2nd Edition, McGraw Hill, 1999.

REMEDIAL BIOLOGY (Theory)**2H****2C**

Instruction hours/week: L: 2 T:0 P: 0

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the components of living world, structure and functional system of plant and animal kingdom.
- To know the classification and salient features of five kingdoms of life and morphology of flowering plants.
- To understand the circulatory, digestive and respiratory systems.
- To know the Nervous, Excretory and reproductive systems.
- To Understand the photosynthesis and plant and mineral nutrition.
- Will be able to know the respiration, growth of plants

Course Outcomes: On successful completion of the course the student will

1. Explain the classification and salient features of five kingdoms of life and morphology of flowering plants.
2. Describe the circulatory, digestive and respiratory systems.
3. Discuss the Nervous, Excretory and reproductive systems.
4. Understand the photosynthesis and plant and mineral nutrition.
5. Discuss the respiration, growth of plants
6. Elaborate the cell and tissues of plant and animal.

UNIT-I**Livingworld:** Definition and characters of living organisms. Diversity in the living world.

Binomial nomenclature. Five kingdoms of life and basis of classification. Salient features of Monera, Protista, Fungi, Animalia and Plantae, Virus.

Morphology of Flowering plants: Morphology of different parts of flowering plants Root, stem, inflorescence, flower, leaf, fruit, seed. General Anatomy of Root, stem, leaf of monocotyledons & Dicotyledones.**UNIT-II****Body fluids and circulation:**

- ☐ ☐ Composition of blood, blood groups, coagulation of blood
- ☐ ☐ Composition and functions of lymph
- ☐ ☐ Human circulatory system
- ☐ ☐ Structure of human heart and blood vessels
- ☐ ☐ Cardiac cycle, cardiac output and ECG

Digestion and Absorption:

- ☐ ☐ Human alimentary canal and digestive glands
- ☐ ☐ Role of digestive enzymes

- ☐ ☐ Digestion, absorption and assimilation of digested food

Breathing and respiration:

- ☐ ☐ Human respiratory system
- ☐ ☐ Mechanism of breathing and its regulation
- ☐ ☐ Exchange of gases, transport of gases and regulation of respiration
- ☐ ☐ Respiratory volumes

UNIT-III**Excretory products and their elimination:**

- ☐ ☐ Modes of excretion
- ☐ ☐ Human excretory system-structure and function
- ☐ ☐ Urine formation
- ☐ ☐ Renin angiotensin system

Neural control and coordination:

- ☐ ☐ Definition and classification of nervous system
- ☐ ☐ Structure of a neuron
- ☐ ☐ Generation and conduction of nerve impulse
- ☐ ☐ Structure of brain and spinal cord
- ☐ ☐ Functions of cerebrum, cerebellum, hypothalamus and medulla oblongata

Chemical coordination and regulation:

- ☐ ☐ Endocrine glands and their secretions
- ☐ ☐ Functions of hormones secreted by endocrine glands

Human reproduction:

- ☐ ☐ Parts of female reproductive system
- ☐ ☐ Parts of male reproductive system
- ☐ ☐ Spermatogenesis and Oogenesis
- ☐ ☐ Menstrual cycle

UNIT-IV**Plants and mineral nutrition:**

- ☐ ☐ Essential mineral, macro and micro nutrients
- ☐ ☐ Nitrogen metabolism, Nitrogen cycle, biological nitrogen fixation

Photosynthesis:

- ☐ ☐ Autotrophic nutrition, photosynthesis, Photosynthetic pigments, Factors affecting photosynthesis.

UNIT V

Plant respiration: Respiration, glycolysis, fermentation (anaerobic).

Plant growth and development:

- ☐ Phases and rate of plant growth, Condition of growth, Introduction to plant growth regulators.

Cell –The unit of life:

- ☐ ☐ Structure and functions of cell and cell organelles cell division.

Tissues:

- ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ Definition, types of tissues, location and functions.

Suggested Readings:

1. Text book of Biology by S.B. Gokhale.
2. A Text book of Biology by Dr.Thulajappa and Dr.Seetaram.
3. A Text book of Biology by B.V.Sreenivasa Naidu.
4. A Text book of Biology by Naidu and Murthy.
5. Botany for Degree students By A.C.Dutta.
6. Outlines of Zoology by M.Ekambaranathaayyer and T.N. Ananthakrishnan.
7. A manual for pharmaceutical biology practical by S.B. Gokhale and C.K.Kokate.

REMEDIAL BIOLOGY (Practical)**2H****1C**

Instruction hours/week: L: 0 T:0 P: 2

Marks: Internal: 10 External: 15 Total:25

External Semester Exam: 2 Hours

Course Objectives :

- Students will be able to Understand the microscope, cutting sections, mount, stain and slide preparation.
- To know about cell and its organelles
- To understand the parts of plant and their modifications
- Able to know the system using software
- Able to Identify types of bones.
- To Determine blood group, blood pressure and tidal volume.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the microscope, cutting sections, mount, stain and slide preparation.
2. Study cell and its organelles
3. Study the parts of plant and their modifications
4. Study the system in from using software
5. Identify types of bones.
6. Determine blood group, blood pressure and tidal volume.

Course Content

1. Introduction to experiments in biology
 - a) Study of Microscope
 - b) Section cutting techniques
 - c) Mounting and staining
 - d) Permanent slide preparation
2. Study of cell and its inclusions
3. Study of Stem, Root, Leaf, seed, fruit, flower and their modifications
4. Detailed study of frog by using computer models
5. Microscopic study and identification of tissues pertinent to Stem, Root Leaf, seed, fruit and flower
6. Identification of bones
7. Determination of blood group
8. Determination of blood pressure
9. Determination of tidal volume

Suggested readings:

1. Practical human anatomy and physiology by S.R.Kale and R.R.Kale.
2. A Manual of pharmaceutical biology practical by S.B.Gokhale, C.K.Kokate and S.P.Shriwastava.
3. Biology practical manual according to National core curriculum. Biology forum of Karnataka. Prof.M.J.H.Shafi

17BP106RMT

SEMESTER-I

REMEDIAL MATHEMATICS**2H****2C**

Instruction hours/week: L:2 T:0 P: 0

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 2 Hours

Course Objectives:

- This is an introductory course in mathematics.
- This subject deals with the introduction to Partial fraction, Logarithm, matrices and Determinant, Analytical geometry, Calculus, differential equation and Laplace transform.
- Able to Perform calculations using matrices and determinants.
- Able to Solve problems using differential and integral calculus.
- To Calculate the equation for straight line and coordinates.
- Students can able to apply differential equations and Laplace transformation for solving problems

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the partial fraction, logarithms, function and limits.
2. Perform calculations using matrices and determinants.
3. Solve problems using differential and integral calculus.
4. Calculate the equation for straight line and coordinates.
5. Apply differential equations and Laplace transformation for solving problems
6. Appreciate the important application of mathematics in Pharmacy

Content**UNIT- I****Partial fraction**

Introduction, Polynomial, Rational fractions, Proper and Improper fractions, Partial fraction, Resolving into Partial fraction, Application of Partial Fraction in Chemical Kinetics and Pharmacokinetics.

Logarithms

Introduction, Definition, Theorems/Properties of logarithms, Common logarithms, Characteristic and Mantissa, worked examples, application of logarithm to solve pharmaceutical problems.

Function:

Real Valued function, Classification of real valued functions,

Limits and continuity:

Introduction, Limit of a function, Definition of limit of a function (□-

□□□□

definition) $\lim_{x \rightarrow a} \frac{x^n - a^n}{x - a} = na^{n-1}$, $\lim_{x \rightarrow a} \frac{\sin x - \sin a}{x - a} = \cos a$, $\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$, $\lim_{x \rightarrow 0} \frac{e^x - 1}{x} = 1$

□□□□

UNIT- II

Matrices and Determinant:

Introduction matrices, Types of matrices, Operation on matrices, Transpose of a matrix, Matrix Multiplication, Determinants, Properties of determinants, Product of determinants, Minors and co-Factors, Adjoint or adjugate of a square matrix, Singular and non-singular matrices, Inverse of a matrix, Solution of system of linear equations using matrix method, Cramer's rule, Characteristic equation and roots of a square matrix, Cayley Hamilton theorem, Application of Matrices in solving Pharmacokinetic equations.

UNIT- III

Calculus Differentiation:

Introductions, Derivative of a function, Derivative of a constant, Derivative of a product of a constant and a function, Derivative of the sum or difference of two functions, Derivative of the product of two functions (product formula), Derivative of the quotient of two functions (Quotient formula)–**Without Proof**, Derivative of x^n w.r.t. x , where n is any rational number, Derivative of e^x , Derivative of $\log_e x$, Derivative of a^x , Derivative of trigonometric functions from

first principles (**without Proof**), Successive Differentiation, Conditions maximum or a minimum at a point.

UNIT -IV

Analytical Geometry:

Introduction: Signs of the Coordinates, Distance formula.

Straight Line : Slope or gradient of a straight line, Conditions for Parallel and perpendicularity of two lines, Slope of a line joining two points, Slope-intercept form of a straight line.

Integration:

Introduction, Definition, Standard formulae, Rules of integration, Method of substitution, Method of Partial fractions, Integration by parts, definite integrals, application.

UNIT -V

Differential Equations: Some basic definitions, Order and degree, Equations in separable form, Homogeneous equations, Linear Differential equations, Exact equations, **Application in solving Pharmacokinetic equations.**

Laplace Transform: Introduction, Definition, Properties of Laplace transform, Laplace Transforms of elementary functions, Inverse Laplace transforms, Laplace transform of derivatives, Application to solve Linear differential equations, **Application in solving Chemical kinetics and Pharmacokinetics equations.**

Suggested Readings:

1. Differential Calculus by Shanthi narayan.
2. Pharmaceutical Mathematics with application to Pharmacy by Panchaksharappa Gowda D.H.
3. Integral Calculus by Shanthinarayan.
4. Higher Engineering Mathematics by Dr.B.S.Grewal.

17BP201T

SEMESTER - II

HUMAN ANATOMY AND PHYSIOLOGY-II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- The subject provides the basic knowledge required to understand the various disciplines of pharmacy.
- To perform the hematological tests like blood cell counts, haemoglobin estimation, bleeding/clotting time etc and also record blood pressure, heart rate, pulse and respiratory volume.
- It also gives coordinated working pattern of different organs of each system
- Able to the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of human body.

Course Outcomes: On successful completion of the course the student will

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Perform the hematological tests like blood cell counts, haemoglobin estimation, bleeding/clotting time etc and also record blood pressure, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of human body.

Course Content:**UNIT - I**

Nervous system: Organization of nervous system, neuron, neuroglia, classification and properties of nerve fibre, electrophysiology, action potential, nerve impulse, receptors, synapse, neurotransmitters.

Central nervous system: Meninges, ventricles of brain and cerebrospinal fluid. Structure and functions of brain (cerebrum, brain stem, cerebellum), spinal cord (gross structure, functions of afferent and efferent nerve tracts, reflex activity)

UNIT - II

Digestive system: Anatomy of GI Tract with special reference to anatomy and functions of stomach, (Acid production in the stomach, regulation of acid production through parasympathetic nervous system, pepsin role in protein digestion) small intestine and large intestine, anatomy and functions of salivary glands, pancreas and liver, movements of GIT, digestion and absorption of nutrients and disorders of GIT.

Energetics: Formation and role of ATP, Creatinine Phosphate and BMR.

UNIT - III

Respiratory system: Anatomy of respiratory system with special reference to anatomy of lungs, mechanism of respiration, regulation of respiration. Lung Volumes and capacities transport of respiratory gases, artificial respiration, and resuscitation methods.

Urinary system: Anatomy of urinary tract with special reference to anatomy of kidney and nephrons, functions of kidney and urinary tract, physiology of urine formation, micturition reflex and role of kidneys in acid base balance, role of RAAS in kidney and disorders of kidney.

UNIT - IV

Endocrine system: Classification of hormones, mechanism of hormone action, structure and functions of pituitary gland, thyroid gland, parathyroid gland, adrenal gland, pancreas, pineal gland, thymus and their disorders.

UNIT - V

Reproductive system: Anatomy of male and female reproductive system, Functions of male and female reproductive system, sex hormones, physiology of menstruation, fertilization, spermatogenesis, oogenesis, pregnancy and parturition.

Introduction to genetics: Chromosomes, genes and DNA, protein synthesis, genetic pattern of inheritance.

Suggested Readings:

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York.
3. Physiological basis of Medical Practice-Best and Taylor. Williams & Wilkins Co, Baltimore, MIUSA.
4. Text book of Medical Physiology-Arthur C. Guyton and John. E. Hall. Miami, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
6. Text book of Human Histology by Inderbir Singh, Jaypee brothers medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L. Ghai, Jaypee brothers medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

17BP207P

SEMESTER - II

HUMAN ANATOMY AND PHYSIOLOGY (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Practical physiology is complimentary to the theoretical discussions in physiology.
- Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings.
- This is helpful for developing an insight on the subject.
- To Determine the tidal volume, vital capacity and total blood count by cell analyzer.
- Able to Record the body temperature, basal mass index.
- Will understand how to demonstrate positive and negative feedback mechanism.

Course Outcomes: On successful completion of the course the student will

1. Identify nervous system, endocrine system, digestive, respiratory with the help of specimens, charts and models.
2. Identify the cardiovascular systems, urinary and reproductive systems with the help of specimens, charts and models.
3. Demonstrate the function of olfactory nerve, visual acuity, reflex activity, and different types of taste
4. Determine the tidal volume, vital capacity and total blood count by cell analyzer.
5. Record the body temperature, basal mass index.
6. Demonstrate positive and negative feedback mechanism.

Course Content:

1. To study the Integumentary and special senses using specimen, models, etc.,
2. To study the nervous system using specimen, models, etc.,
3. To study the endocrine system using specimen, models,etc
4. To demonstrate the general neurological examination.
5. To demonstrate the function of olfactory nerve.
6. To examine the different types of taste.
7. To demonstrate the visual activity.
8. To demonstrate the reflex activity.
9. Recording of body temperature.

10. To demonstrate positive and negative feed back mechanism.
11. Determination of tidal volume and vital capacity.
12. Study of digestive, respiratory, cardio vascular systems, urinary and reproductive systems with the help of models, charts and specimens.
13. Recording of basal mass index.
14. Study of family planning devices and pregnancy diagnosis test.
15. Demonstration of total blood count by cell analyser.
16. Permanent slides of vital organs and gonads.

Suggested Readings:

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York.
3. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MIUSA.
4. Text book of Medical Physiology-Arthur C, Guyton and John. E. Hall. Miamisburg, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
6. Text book of Human Histology by Inderbir Singh, Jaypee brothers medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L. Ghai, Jaypee brothers medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

Reference Books:

1. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MI USA
 2. Text book of Medical Physiology- Arthur C, Guyton and John. E. Hall. Miamisburg, OH, U.S.A.
 3. Human Physiology (vol 1 and 2) by Dr. C.C. Chatterrje ,Academic Publishers Kolkata
- 17BP202T SEMESTER - II

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with classification and nomenclature of simple organic compounds, structural isomerism, intermediates forming in reactions, important physical properties, reactions and methods of preparation of these compounds.
- The syllabus also emphasizes on mechanisms and orientation of reactions.
- Know how to schematize the reaction/reaction mechanism and name the reaction
- Able to explain the orientation of reactions.
- Understand the reactivity/stability of compounds.
- To Identify/confirm the organic compounds.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the classification and nomenclature of organic compounds, and the concepts of isomerism.
2. Write the structure, name and the type of isomerism of the organic compound.
3. Schematize the reaction/reaction mechanism and name the reaction
4. Explain the orientation of reactions.
5. Account for reactivity/stability of compounds.
6. Identify/confirm the organic compounds.

Course Content:

General methods of preparation and reactions of compound superscripted with asterisk (*) to be explained to emphasize on definition, types, classification, principles/ mechanisms, applications, examples and differences.

UNIT-I

Classification, nomenclature and isomerism: Classification of Organic Compounds Common and IUPAC systems of nomenclature of organic compounds. (up to 10 Carbons open chain and carbocyclic compounds) Structural isomerisms in organic compounds.

UNIT-II

Alkanes*, Alkenes* and Conjugated dienes*: sp^3 hybridization in alkanes, Halogenation of alkanes, uses of paraffins. Stabilities of alkenes, sp^2 hybridization in alkenes E1 and E2 reactions – kinetics, order of reactivity of alkyl halides, rearrangement of carbocations, Saytzeff's orientation and preferences. E1 versus E2 reactions, Factors affecting E1 and E2 reactions. Ozonolysis, electrophilic addition reactions of alkenes, Markownikoff's orientation, free radical addition reactions of alkenes, Anti Markownikoff's orientation. Stability of conjugated dienes, Diels-Alder, electrophilic addition, free radical addition reactions of conjugated dienes, allylic rearrangement.

UNIT-III

Alkyl halides: SN1 and SN2 reactions-kinetics, order of reactivity of alkyl halides, stereochemistry and rearrangement of carbocations. SN1 versus SN2 reactions, Factors affecting SN1 and SN2 reactions. Structure and uses of ethyl chloride, Chloroform, trichloroethylene, tetrachloroethylene, dichloromethane, tetrachloromethane and iodoform.

Alcohols*: Qualitative tests, Structure and uses of Ethyl alcohol, Methyl alcohol, chlorobutanol, Cetosteryl alcohol, Benzyl alcohol, Glycerol, Propylene glycol.

UNIT- IV

Carbonyl compounds*(Aldehydes and ketones): Nucleophilic addition, Electromeric effect, aldol condensation, Crossed Aldol condensation, Cannizzaro reaction, Crossed Cannizzaro reaction, Benzoin condensation, Perkin condensation, qualitative tests, Structure and uses of Formaldehyde, Paraldehyde, Acetone, Chloralhydrate, Hexamine, Benzaldehyde, Vanillin, Cinnamaldehyde.

UNIT-V

Carboxylic acids*: Acidity of carboxylic acids, effect of substituents on acidity, inductive effect and qualitative tests for carboxylic acids, amide and ester. Structure and Uses of Acetic acid, Lactic acid, Tartaric acid, Citric acid, Succinic acid. Oxalic acid, Salicylic acid, Benzoic acid, Benzyl benzoate, Dimethyl phthalate, Methylsalicylate and Acetylsalicylic acid.

Aliphatic amines*: Basicity, effect of substituent on Basicity. Qualitative test, Structure and uses of Ethanolamine, Ethylenediamine, Amphetamine.

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L.Finlar , Volume-I.
3. Text book of Organic Chemistry by B.S.Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

17BP208P

SEMESTER-II

PHARMACEUTICAL ORGANIC CHEMISTRY-I (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Students will be able to perform qualitative analysis of unknown organic compounds.
- Will be able to detect special elements in an organic sample.
- Understand how to Confirm unknown compounds by m.p./b.p.
- Will be able to Prepare derivatives of organic compounds.
- To know how to prepare the solid derivatives from organic compounds.
- Able to Construct molecular models.

Course Outcomes (CO's): On successful completion of the course the student will

1. Systematically perform qualitative analysis of unknown organic compounds.
2. Detect special elements in an organic sample.
3. Confirm unknown compounds by m.p./b.p.
4. Prepare derivatives of organic compounds.
5. Prepare the solid derivatives from organic compounds.
6. Construct molecular models.

Course Content:

1. Systematic qualitative analysis of unknown organic compounds like preliminary test:
 1. Color, odour, aliphatic / aromatic compounds, saturation and unsaturation, etc.
 2. Detection of elements like Nitrogen, Sulphur and Halogen by Lassaigne's test.
 3. Solubility test.
 4. Functional group test like Phenols, Amides/ Urea, Carbohydrates, Amines, Carboxylic acids, Aldehydes and Ketones, Alcohols, Esters, Aromatic and Halogenated Hydrocarbons, Nitro compounds and Anilides.
 5. Melting point / Boiling point of organic compounds.
 6. Identification of the unknown compound from the literature using melting point / boiling point.
 7. Preparation of the derivatives and confirmation of the unknown compound by melting point / boiling point.
 8. Minimum 5 unknown organic compounds to be analysed systematically.
2. Preparation of suitable solid derivatives from organic compounds.
3. Construction of molecular models.

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L.Finar , Volume-I.
3. Text book of Organic Chemistry by B.S.Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampmanand Kriz.

17BP203T

SEMESTER-II

BIOCHEMISTRY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- Will be able to know bioenergetics and energy rich compounds.
- To know the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the types and importance of biomolecules
2. Explain the bioenergetics and energy rich compounds.
3. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
4. Elaborate the biological oxidation emphasizing electron transport chain and oxidative phosphorylation.
5. Describe the genetic organization of mammalian genome and functions of DNA in the synthesis of RNAs and proteins.
6. Discuss the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Content:**UNIT-I**

Biomolecule: Introduction, classification, chemical nature and biological role of carbohydrate, lipids, nucleic acids, amino acids and proteins.

Bioenergetic: Concept of free energy, endergonic and exergonic reaction, Relationship between free energy, enthalpy and entropy; Redox potential. Energy rich compounds; classification; biological significances of ATP and cyclic AMP.

UNIT-II

Carbohydrate metabolism: Glycolysis– Pathway, energetic and significance Citric acid cycle– Pathway, energetics and significance HMP shunt and its significance; Glucose-6-Phosphate dehydrogenase (G6PD) deficiency Glycogen metabolism Pathways and glycogen storage diseases (GSD) Gluconeogenesis- Pathway and its significance Hormonal regulation of blood glucose level

and Diabetes mellitus Oxidative phosphorylation & its mechanism and substrate phosphorylation Inhibitors ETC and oxidative phosphorylation / Uncouplers level.

Biological oxidation

Electron transport chain (ETC) and its mechanism, Oxidative phosphorylation & its mechanism and substrate level phosphorylation □ Inhibitors ETC and oxidative phosphorylation/Uncouplers.

UNIT-III

Lipid metabolism: β - Oxidation of saturated fatty acid (Palmitic acid) Formation and utilization of ketone bodies; ketoacidosis De novo synthesis of fatty acids (Palmitic acid) Biological significance of cholesterol and conversion of cholesterol into bile acids, steroid hormones and vitamin D Disorders of lipid metabolism: Hypercholesterolemia, atherosclerosis, fatty liver and obesity.

Amino acid metabolism: General reactions of amino acid metabolism: Transamination, deamination & decarboxylation, urea cycle and its disorders Catabolism of phenylalanine and tyrosine and their metabolic Disorders (Phenylketonuria, Albinism, alcaptonuria, tyrosinemia) Synthesis and significance of biological substances; 5-HT, melatonin, dopamine, noradrenaline, adrenaline Catabolism of heme; hyperbilirubinemia and jaundice.

UNIT-IV

Nucleic acid metabolism and genetic information transfer: Biosynthesis of purine and pyrimidinenucleotides Catabolism of purinenucleotides and Hyperuricemia and Gout disease Organization of mammalian genome Structure of DNA and RNA and their functions DNA replication(semi conservative model) Transcription or RNA synthesis Genetic code, Translation or Protein synthesis and inhibitors.

UNIT-V

Enzymes □ Introduction, properties, nomenclature and IUB classification of enzymes Enzyme kinetics(Michaeli plot, Line Weaver Burkeplot) Enzyme inhibitors with examples Regulation of enzymes: enzyme induction and repression, allosteric enzymes regulation Therapeutic and diagnostic applications of enzymes and isoenzymes Coenzymes—Structure and biochemical functions.

Suggested Readings

1. Principles of Biochemistry by Lehninger.
2. Harper's Biochemistry by Robert K. Murry, Daryl K. Granner and Victor W. Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D. Satyanarayan and U. Chakrapani.
5. Text book of Biochemistry by Rama Rao.
6. Text book of Biochemistry by Deb.
7. Outlines of Biochemistry by Connand Stumpf.
8. Practical Biochemistry by R.C. Gupta and S. Bhargavan.
9. Introduction of Practical Biochemistry by David T. Plummer. (3rd Edition).
10. Practical Biochemistry for Medical students by Rajagopal and Ramakrishna.
11. Practical Biochemistry by Harold Varley.

17BP209P

SEMESTER - II

BIOCHEMISTRY (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To know the Qualitative analysis of the biomolecules.
- Will be able to Quantitatively analyze biochemical parameters and their importance in diagnosis of disease.
- To understand how to analyse the urine for abnormal constituents.
- Understand how to identify the biomolecules using chemical tests.
- To Determine the enzymatic activity.
- To Study the effect of physical parameters on the enzymatic activity.

Course Outcomes(CO's): On successful completion of the course the student will

1. Qualitatively analyze the biomolecules.
2. Quantitatively analyze biochemical parameters and their importance in diagnosis of disease.
3. Systematically analyse the urine for abnormal constituents.
4. Identify the biomolecules using chemical tests.
5. Determine the enzymatic activity.
6. Study the effect of physical parameters on the enzymatic activity.

Course Content:

1. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch).
2. Identification tests for Proteins (albumin and Casein).
3. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method).
4. Qualitative analysis of urine or ab normal constituents.
5. Determination of blood creatinine.
6. Determination of blood sugar.
7. Determination of serum total cholesterol.
8. Preparation of buffer solution and measurement of PH.
9. Study of enzymatic hydrolysis of starch.
10. Determination of Salivary amylase activity.
11. Study the effect of Temperature on Salivary amylase activity.
12. Study the effect of substrate concentration on salivary amylase activity.

Suggested Readings:

1. Principles of Biochemistry by Lehninger.
2. Harper's Biochemistry by Robert K.Murry, DarylK. Granner and Victor W.Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D.Satyanarayan and U.Chakrapani.
5. Text book of Biochemistry by Rama Rao.
6. Text book of Biochemistry by Deb.
7. Outlines of Biochemistry by Connand Stumpf.
8. Practical Biochemistry by R.C.Gupta and S.Bhargavan.
9. Introduction of Practical Biochemistry by David T.Plummer.(3rdEdition).
10. Practical Biochemistry for Medical students by Rajagopal and Ramakrishna.
11. Practical Biochemistry by Harold Varley.

17BP204T

SEMESTER-II

PATHOPHYSIOLOGY (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes.
- This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications
- Understanding of basic pathophysiological mechanisms
- Hence it will not only help to study the syllabus of pathology,
- To get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.
- To Understand the etiology and pathogenesis of diseases.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the description about the types of system and related disorders
2. Name the signs and symptoms of the diseases.
3. Mention the complications of the diseases.
4. Describe the mechanism of the diseases.
5. Understand the etiology and pathogenesis of diseases.
6. Discuss about the Sexually transmitted diseases.

Course content:**UNIT-I**

Basic principles of Cell injury and Adaptation: Introduction, definitions, Homeostasis, Components and Types of Feedback systems, Causes of cellular injury, Pathogenesis (Cellmembranedamage, Mitochondrial damage, Ribo some damage, Nuclear damage), Morphology of cell injury–Adaptive changes (Atrophy, Hypertrophy, hyperplasia, Metaplasia, Dysplasia), Cell swelling, Intracellular accumulation, Calcification, Enzyme leakage and Cell Death Acidosis & Alkalosis, Electrolyte imbalance.

Basic mechanism involved in the process of inflammation and repair: Introduction, Clinical signs of inflammation, Different types of Inflammation, Mechanism of Inflammation – Alteration in vascular permeability and blood flow, migration of WBC's, Mediators of inflammation, Basic principles of wound healing in the skin, Pathophysiology of Atherosclerosis.

UNIT-II

Cardiovascular System: Hypertension, congestive heart failure, ischemic heart disease (angina, myocardial infarction, atherosclerosis and arteriosclerosis).

Respiratory system: Asthma, Chronic obstructive airways diseases.

Renal system: Acute and chronic renal failure.

UNIT-III

Haematological Diseases: Iron deficiency, megaloblastic anemia (VitB12 and folic acid), sickle cell anemia, thalassemia, hereditary acquired anemia, hemophilia.

Endocrine system: Diabetes, thyroid diseases, disorders of sex hormones.

Nervous system: Epilepsy, Parkinson's disease, stroke, psychiatric disorders: depression, schizophrenia and Alzheimer's disease.

Gastrointestinal system: Peptic Ulcer.

UNIT- IV

Inflammatory bowel diseases, jaundice, hepatitis (A, B, C, D, E, F) alcoholic liver disease.

Disease of bones and joints: Rheumatoid arthritis, osteoporosis and gout.

Principles of cancer: classification, etiology and pathogenesis of cancer.

Diseases of bones and joints: Rheumatoid Arthritis, Osteoporosis, Gout.

Principles of Cancer: Classification, etiology and pathogenesis of Cancer.

UNIT-V

Infectious diseases: Meningitis, Typhoid, Leprosy, Tuberculosis Urinary tract infections.

Sexually transmitted diseases: AIDS, Syphilis, Gonorrhea.

Suggested Readings:

1. Vinay Kumar, Abul K. Abas, Jon C. Aster; Robbins & Cotran Pathologic Basis of Disease; South Asia edition; India; Elsevier; 2014.
2. Harsh Mohan; Text book of Pathology; 6th edition; India; Jaypee Publications; 2010.
3. Laurence B, Bruce C, Bjorn K.; Goodman Gilman's The Pharmacological Basis Of Therapeutics; 12th edition; New York; McGraw-Hill; 2011.

17BP205T

SEMESTER-II

COMPUTER APPLICATIONS IN PHARMACY (Theory)**3H****3C**

Instruction hours/week : L: 3 T:0 P:0

Marks: Internal: 25 External:50 Total:75

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the introduction Database, Database Management system, computer application in clinical studies and use of databases.
- To Describe the various types of application of computers in pharmacy
- To Understand the various types of databases
- Able to know the applications of databases in pharmacy
- To Understand the concept of bioinformatics and explain the data analysis in Preclinical development
- Able to elaborate the applications of bioinformatics in Vaccine Discovery

Course Outcomes: On successful completion of the course the student will

1. Describe the various types of application of computers in pharmacy
2. Understand the various types of databases
3. Discuss the applications of databases in pharmacy
2. Understand the concept of bioinformatics
3. Explain the data analysis in Preclinical development
4. Elaborate the applications of bioinformatics in Vaccine Discovery

Course content:**UNIT– I**

Number system: Binary number system, Decimal number system, Octal number system, Hexa decimal number systems, conversion decimal to binary, binary to decimal, octal to binary etc, binary addition, binary subtraction– One's complement, Two's complement method, binary multiplication, binary division

Concept of Information Systems and Software: Information gathering, requirement and feasibility analysis, data flow diagrams, process specifications, input/ output design, process life cycle, planning and managing the project

UNIT–II

Web technologies: Introduction to HTML, XML, CSS and Programming languages, introduction to web servers and Server Products Introduction to databases, MYSQL, MSACCESS, Pharmacy Drug database.

UNIT– III

Application of computers in Pharmacy: Drug information storage and retrieval, Pharmacokinetics, Mathematical model in Drug design, Hospital and Clinical Pharmacy, Electronic Prescribing and discharge (EP) systems, barcode medicine identification and automated dispensing of drugs, mobile technology and adherence monitoring Diagnostic System, Lab-diagnostic System, Patient Monitoring System, Pharma Information System.

UNIT– IV

Bioinformatics: Introduction, Objective of Bioinformatics, Bioinformatics Databases, Concept of Bioinformatics, Impact of Bioinformatics in Vaccine Discovery

UNIT-V

Computers as data analysis in Preclinical development: Chromatographic data analysis (CDS), Laboratory Information management System (LIMS) and Text Information Management System (TIMS).

Suggested Readings:

1. Computer Application in Pharmacy– William E. Fassett– Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.
2. Computer Application in Pharmaceutical Research and Development– Sean Ekins– Wiley-Inter science, A John Wiley and Sons, INC., Publication, USA.
3. Bioinformatics (Concept, Skills and Applications)– S.C. Rastogi- CBS Publisher and Distributors, 4596/1-A, 11 Darya Gani, New Delhi – 110002 (INDIA).
4. Microsoft office Access -2003, Application Development Using VBA, SQL Server, DAP and Infopath– Cary N. Prague– Wiley Dream tech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi-110002.

COMPUTER APPLICATIONS IN PHARMACY (Practical) 2H 1C

Instruction hours/week : L: 0 T:0 P:2

Marks: Internal: 10 External:15 Total:25

External Semester Exam: 2 Hours

Course Outcomes (CO's): On successful completion of the course the student will

1. Describe the various types of application of computers in pharmacy
2. Understand the various types of databases
3. Information about online tools for drug interaction
4. Work in MS Office
5. Create database for patients
6. Know Drug information storage and retrieval using MS Access.

Course content:

1. Design a questionnaire using a word processing package to gather information about a particular disease.
2. Create a HTML web page to show personal information.
3. Retrieve the information of a drug and its adverse effects using online tools.
4. Creating mailing labels Using Label Wizard, generating label in MSWORD.
5. Create a data base in MS Access to store the patient information with the required fields Using access.
6. Design a form in MS Access to view, add, delete and modify the patient record in the database.
7. Generating report and printing the report from patient database.
8. Creating in voice table using– MS Access.
9. Drug information storage and retrieval using MS Access.
10. Creating and working with queries in MS Access.
11. Exporting Tables, Queries , Forms and Reports to web pages
12. Exporting Tables, Queries, Forms and Reports to XML pages

Suggested Readings

1. Computer Application in Pharmacy– William E. Fassett– Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.
2. Computer Application in Pharmaceutical Research and Development– Sean Ekins– Wiley-Inter science, A John Wiley and Sons, INC., Publication, USA.
3. Bioinformatics (Concept, Skills and Applications)– S.C. Rastogi- CBS Publisher and Distributors, 4596/1-A, 11 Darya Gani, New Delhi – 110002 (INDIA).
4. Microsoft Office Access -2003, Application Development Using VBA, SQL Server, DAP and InfoPath– Cary N. Prague– Wiley Dream Tech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi-110002.

17BP206T

SEMESTER-II

ENVIRONMENTAL SCIENCES (Theory)**3H****3C**

Instruction hours/week : L: 3 T:0 P:0

Marks: Internal: 25 External:50 Total:75

External Semester Exam: 1 Hours

Course Objectives:

- Environmental Sciences is the scientific study of the environmental system and the status of its inherent or induced changes on organisms.
- It includes not only the study of physical and biological characters of the environment but also the social and cultural factors and the impact of man on environment.
- Able to Develop an attitude of concern for the environment.
- To Motivate learner to participate in environment protection and environment improvement.
- Understand the skills to help the concerned individuals in identifying and solving environmental problems.
- Able to Strive to attain harmony with Nature.

Course Outcomes (CO's): On successful completion of the course the student will

1. Create awareness about environmental problems among learners.
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate learner to participate in environment protection and environment improvement.
5. Acquire skills to help the concerned individuals in identifying and solving environmental problems.
6. Strive to attain harmony with Nature.

Course content:**UNIT-I**

The Multi disciplinary nature of environmental studies Natural Resources Renewable and non-renewable resources: Natural resources and associated problems a) Forest resources; b) Water resources; c) Mineral resources; d) Food resources ;e)Energy resources; f)Land resources: Role of an individual in conservation of natural resources.

UNIT-II**Ecosystems:**

i) Concept of an ecosystem.

ii) Structure and function of an ecosystem.

Introduction, types, characteristic features, structure and function of the ecosystems: Forest ecosystem; Grass land ecosystem; Desert ecosystem; Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

UNIT-III

Environmental Pollution: Air pollution; Water pollution; Soil pollution.

Suggested Readings:

1. Y.K. Sing, Environmental Science, New Age International Pvt, Publishers, Bangalore.
2. Agarwal, K.C.2001Environmental Biology, Nidi Publ.Ltd. Bikaner.
3. Bharucha Erach, The Biodiversity of India, Mapin Publishing Pvt. Ltd., Ahmedabad – 380013,India.
4. BrunnerR.C.,1989, Hazardous Waste Incineration, McGrawHillInc. 480p.
5. ClarkR.S., Marine Pollution, Clanderson PressOxford.
6. Cunningham, W.P. Cooper, T.H. Gorhani, E &Hepworth, M.T. 2001, Environmental Encyclopedia, Jaico Publ.House, Mumbai,1196p.
7. DeA.K., Environmental Chemistry,Wiley Eastern Ltd.
8. Down of Earth,Centre for Science and Environment.

SEMESTER III

17BP301T

SEMESTER-III

PHARMACEUTICAL ORGANIC CHEMISTRY –II (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with general methods of preparation and reactions of some organic compounds.
- Reactivity of organic compounds are also studied here.
- The syllabus emphasizes on mechanisms and orientation of reactions.
- Chemistry of fats and oils are also included in the syllabus.
- Students can Emphasize the synthesis, reactions and uses of Polynuclear hydrocarbons and its derivatives.
- Students can able to explain the synthesis, reactions and stability of cycloalkanes.

Course Outcomes: On successful completion of the course the student will

1. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
2. Understand the acidic/basic properties, qualitative tests, structure and uses of Phenols, Aromatic amines, Aromatic acids and its derivatives.
3. Explain the effect of substituents on acidity and basicity of phenols, aromatic acids and aromatic amines.
4. Describe the Definition/difference, properties and analytical constants pertaining to Fats and Oils.
5. Emphasize the synthesis, reactions and uses of Polynuclear hydrocarbons and its derivatives.
6. Explain the synthesis, reactions and stability of cycloalkanes.

Course Content:

- General methods of preparation and reactions of compounds super scripted with asterisk (*) to be explained.
- To emphasize on definition, types, classification, principles/mechanisms, applications, examples and differences.

UNIT- I**Benzene and its derivatives:**

A. Analytical, synthetic and other evidences in the derivation of structure of benzene, Orbital picture, resonance in benzene, aromatic characters, Huckel's rule.

B. Reactions of benzene - nitration, sulphonation, halogenation- reactivity, Friedel crafts alkylation- reactivity, limitations, Friedel crafts acylation.

C. Substituent's, effect of substituent's on reactivity and orientation of mono substituted benzene compounds towards electro philic substitution reaction.

D. Structure and uses of DDT, Saccharin, BHC and Chloramine.

UNIT- II

Phenols* - Acidity of phenols, effect of substituents on acidity, qualitative tests, Structure and uses of phenol, cresols, resorcinol, naphthols.

Aromatic Amines* - Basicity of amines, effect of substituent's on basicity, and synthetic uses of aryl diazonium salts.

Aromatic Acids* –Acidity, effect of substituent's on acidity and important reactions of benzoic acid.

UNIT- III

Fats and Oils:

- Fatty acids – reactions.
- Hydrolysis, Hydrogenation, Saponification and Rancidity of oils, Drying oils.
- Analytical constants – Acid value, Saponification value, Ester value, Iodine value, Acetyl value, Reichert Meissl (RM) value – significance and principle involved in their determination.

UNIT- IV

Poly nuclear hydrocarbons:

- Synthesis, reactions.
- Structure and medicinal uses of Naphthalene, Phenanthrene, Anthracene, Diphenylmethane, Triphenylmethane and their derivatives.

UNIT- V

Cyclo alkanes*: Stabilities – Baeyer's strain theory, limitation of Baeyer's strain theory, Couls on and Moffitt's modification, Sachse Mohr's theory (Theory of strainless rings), reactions of cyclopropane and cyclobutane only.

Suggested Readings:

- Organic Chemistry by Morrison and Boyd.
- Organic Chemistry by I.L. Finar , Volume-I.
- Text book of Organic Chemistry b y B.S. Bahl & Arun Bahl.
- Organic Chemistry by P.L.Soni.
- Practical Organic Chemistry by Mann and Saunders.
- Vogel's text book of Practical Organic Chemistry.
- Advanced Practical organic chemistry by N.K. Vishnoi.
- Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

17BP305P

SEMESTER-III

PHARMACEUTICAL ORGANIC CHEMISTRY -II (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Students able to Demonstrate recrystallization and its applications.
- Students able to Demonstrate steam distillation and its applications.
- To Determine the qualitative parameters of oil.
- To Prepare few compounds using basic chemical reactions.
- Able to Synthesize organic compounds using named reactions.
- To Understand the use and application of synthesized organic compounds.

Course Outcomes(CO's): On successful completion of the course the student will

1. Demonstrate recrystallization and its applications.
2. Demonstrate steam distillation and its applications.
3. Determine the qualitative parameters of oil.
4. Prepare few compounds using basic chemical reactions.
5. Synthesize organic compounds using named reactions.
6. Understand the use and application of synthesized organic compounds.

I Experiments involving laboratory techniques:

i) Recry stallization

ii) Steam distillation

II Determination of following oil values (including standardization of reagents):

i) Acid value

ii) Saponification value

iii) Iodine value

III Preparation of compounds:

i) Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol /Aniline by acylation reaction.

ii) 2,4,6-Tribromo aniline/Para bromo acetanilide from Aniline/**Acetanilide by halogenation (Bromination) reaction.**iii) **5-Nitro salicylic acid/Meta dinitro benzene from Salicylic acid / Nitro benzene by nitration reaction.**iv) **Benzoic acid from Benzyl chloride by oxidation reaction.**

- v) Benzoic acid/ Salicylic acid from alkyl benzoate/ alkyl salicylate by hydrolysis reaction.
- vi) 1-Phenylazo-2-naphthol from Aniline by diazotization and coupling reactions.
- vii) Benzil from Benzoin by oxidation reaction.
- viii) Dibenzal acetone from Benzaldehyde by Claisen Schmidt reaction
- ix) Cinnamic acid from Benzaldehyde by Perkin reaction
- x) *p*-Iodo benzoic acid from *p*-amino benzoic acid

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L. Finar , Volume-I.
3. Text book of Organic Chemistry by B.S. Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

17BP302T

SEMESTER-III

PHYSICAL PHARMACEUTICS-I (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To understand the physicochemical properties, and principles involved in dosage forms/formulations.
- To get a better insight into various areas of formulation research and development,
- To know stability studies of pharmaceutical dosage forms.
- To gain a clear idea about solubilisation and techniques for identifying the phenomenon.
- To understand complexation and protein binding and its effect in the formulation of new dosage forms.
- To Identify the importance of pH and buffers in pharmaceutical systems.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand various physicochemical properties of drug molecules in the design of dosage forms.
2. Know the principles of chemical kinetics & to use them for stability testing and determination of expiry date of formulations.
3. Develop a clear idea about solubilisation and techniques for identifying the phenomenon.
4. Discover the term complexation and protein binding and its effect in the formulation of new dosage forms.
5. Identify the importance of pH and buffers in pharmaceutical systems.
6. Achieve a better insight into various areas of formulation, research and development.

Course Content:**UNIT-I**

Solubility of drugs: Solubility expressions, mechanisms of solute solvent interactions, ideal solubility parameters, solvation & association, quantitative approach to the factors influencing solubility of drugs, diffusion principles in biological systems. Solubility of gas in liquids, solubility of liquids in liquids, (Binary solutions, ideal solutions) Raoult's law, real solutions. Partially miscible liquids, Critical solution temperature and applications. Distribution law, its limitations and applications.

UNIT-II

States of Matter and properties of matter: State of matter, changes in the state of matter, latent heats, vapor pressure, sublimation critical point, eutectic mixtures, gases, aerosols- inhalers, relative humidity, liquid complexes, liquid crystals, glassy states, solid- crystalline, amorphous & polymorphism.

Physicochemical properties of drug molecules: Refractive index, optical rotation, dielectric constant, dipole moment, dissociation constant, determinations and applications.

UNIT-III

Surface and interfacial phenomenon: Liquid interface, surface & interfacial tensions, surface free energy, measurement of surface & interfacial tensions, spreading coefficient, adsorption at liquid interfaces, surface active agents, HLB Scale, solubilisation, detergency, adsorption at solid interface.

UNIT-IV

Complexation and protein binding: Introduction, Classification of Complexation, Applications, methods of analysis, protein binding, Complexation and drug action, crystalline structures of complexes and thermo dynamic treatment of stability constants.

UNIT-V

pH, buffers and Isotonic solutions: Sorensen's pH scale, pH determination (electrometric and calorimetric), applications of buffers, buffer equation, buffer capacity, buffers in pharmaceutical and biological systems, buffered isotonic solutions.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin.
2. Experimental Pharmaceutics by Eugene, Parott.
3. Tutorial Pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical Calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, Marcel Dekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical Dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C and Manavalan R.
8. Laboratory Manual of Physical Pharmaceutics, C.V.S. Subramanyam, J. Thimma settee
9. Physical Pharmaceutics by C.V.S. Subramanyam
10. Text book of Physical Pharmacy, by Gaurav Jain & Roop K. Khar

17BP306P

SEMESTER-III

PHYSICAL PHARMACEUTICS – I (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand the physicochemical parameters of a drug.
- To Identify methods to enhance solubility of a new drug moiety
- To Know the importance of stability in pharmaceutical preparations.
- To build practical skills for new drug development process.
- To determine the physicochemical parameters for drug formulation.
- To determine the physical constants of a drug.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug.
2. Identify methods to enhance solubility of a new drug moiety
3. Discover the importance of stability in pharmaceutical preparations.
4. Build practical skills for new drug development process.
5. Determine the physicochemical parameters.
6. Determine the physical constants of a drug.

1. Determination the solubility of drug at room temperature.
2. Determination of pKa value by Half Neutralization/ Henderson Hassel balch equation.
3. Determination of Partition co- efficient of benzoic acid in benzene and water.
4. Determination of Partition co- efficient of Iodine in CCl₄ and water.
5. Determination of % composition of NaCl in a solution using phenol-water system by CST method.
6. Determination of surface tension of given liquids by drop count and drop weight method.
7. Determination of HLB number of a surfactant by saponification method.
8. Determination of Freundlich and Langmuir constants using activated char coal.
9. Determination of critical micellar concentration of surfactants.
10. Determination of stability constant and donor acceptor ratio of PABA-Caffeine complex by solubility method.
11. Determination of stability constant and donor acceptor ratio of Cupric-Glycine complex by pH titration method.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin

2. Experimental Pharmaceutics by Eugene, Parott.
3. Tutorial Pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical Calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, MarcelDekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical Dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C and ManavalanR.
8. Laboratory Manual of Physical Pharmaceutics, C.V.S. Subramanyam, J. Thimma settee
9. Physical Pharmaceutics by C.V.S. Subramanyam
10. Test book of Physical Pharmacy, by Gaurav Jain & Roop K. Khar

17BP303T

SEMESTER-III

PHARMACEUTICAL MICROBIOLOGY (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To study of all categories of microorganisms especially for the production of alcohol antibiotics, vaccines, vitamins enzymes etc.
- To understand methods of identification, cultivation and preservation of various microorganisms.
- To understand the importance and implementation of sterilization in pharmaceutical processing and Industry.
- To Learn sterility testing of pharmaceutical products.
- To Carry out microbiological standardization of Pharmaceuticals.
- To understand the cell culture technology and its applications in pharmaceutical industries.

Course Outcomes: On successful completion of the course the student will

1. Understand methods of identification, cultivation and preservation of various microorganisms.
2. To understand the importance and implementation of sterilization in pharmaceutical processing and Industry.
3. Learn sterility testing of pharmaceutical products.
4. Carry out microbiological standardization of Pharmaceuticals.
5. Understand the cell culture technology and its applications in pharmaceutical industries.
6. Develop knowledge on different types of microscopes in pharmaceutical industry.

Course content:**UNIT -I**

Introduction, history of microbiology, its branches, scope and its importance. Introduction to Prokaryotes and Eukaryotes Study of ultra-structure and morphological classification of bacteria, nutritional requirements, raw materials used for culture media and physical parameters for growth, growth curve, isolation and preservation methods for pure cultures, cultivation of anaerobes, quantitative measurement of bacterial growth (total & viable count). Study of different types of phase contrast microscopy, dark field microscopy and electron microscopy.

UNIT -II

Identification of bacteria using staining techniques (simple, Gram's & Acid fast staining) and biochemical tests (IMViC). Study of principle, procedure, merits, demerits and applications of physical, chemical gaseous, radiation and mechanical method of sterilization. Evaluation of the efficiency of sterilization methods. Equipments employed in large scale sterilization. Sterility indicators.

UNIT- III

Study of morphology, classification, reproduction/replication and cultivation of Fungi and Viruses. Classification and mode of action of disinfectants Factors influencing disinfection, antiseptics and their evaluation. For bacterio static and bactericidal actions Evaluation of bactericidal & Bacterio static. Sterility testing of products (solids, liquids, ophthalmic and other sterile products) according to IP , BP and USP.

UNIT -IV

Designing of aseptic area, laminar flow equipments; study of different sources of contamination in an aseptic area and methods of prevention, clean area classification. Principles and methods of different microbiological assay. Methods for standardization of antibiotics, vitamins and amino acids. Assessment of a new antibiotic.

UNIT- V

Types of spoilage, factors affecting the microbial spoilage of pharmaceutical products, sources and types of microbial contaminants, assessment of microbial contamination and spoilage. Preservation of pharmaceutical products using antimicrobial agents, evaluation of microbial stability of formulations. Growth of animal cells in culture, general procedure for cell culture, Primary, established and transformed cell cultures. Application of cell cultures in pharmaceutical industry and research.

Suggested Readings:

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hilledn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdilletal: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. I.P., B.P., U.S.P.- latest editions.
10. Ananthnarayan : Text Book of Microbiology, Orient-Longman, Chennai
11. Edward: Fundamentals of Microbiology.
12. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi.
13. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company

17BP307P

SEMESTER-III

PHARMACEUTICAL MICROBIOLOGY (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To discuss about the instruments used in experimental microbiology
- To understand the sterilization methods followed in laboratory.
- To know the staining techniques used in microbiology.
- To carry out assay of different antibiotics
- To understand the mechanism of action of antibiotics.
- To perform different sterility tests and bacteriological analysis of water

Course Outcomes (CO's): On successful completion of the course the student will

1. Discuss about the instruments used in experimental microbiology
 2. Understand the sterilization methods followed in laboratory.
 3. Discover the staining techniques used in microbiology.
 4. Carry out assay of different antibiotics
 5. Understand the mechanism of action of antibiotics.
 6. Execute different sterility tests and bacteriological analysis of water
-
1. Introduction and study of different equipments and processing, e.g., B.O.D. incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, refrigerator, microscopes used in experimental microbiology.
 2. Sterilization of glassware, preparation and sterilization of media.
 3. Sub culturing of bacteria and fungus. Nutrient stabs and slants preparations.
 4. Staining methods- Simple, Grams staining and acid fast staining (Demonstration with practical).
 5. Isolation of pure culture of micro-organisms by multiple streak plate technique and other techniques.
 6. Microbiological assay of antibiotics by cup plate method and other methods.
 7. Motility determination by Hanging drop method.
 8. Sterility testing of pharmaceuticals.
 9. Bacteriological analysis of water.
 10. Biochemical test.

Suggester Readings:

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hilledn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. I.P., B.P., U.S.P.- latest editions.
10. Ananthnarayan : Text Book of Microbiology, Orient-Longman, Chennai.
11. Edward: Fundamentals of Microbiology.
12. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi.
13. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company.

17BP304 T

SEMESTER-III

PHARMACEUTICAL ENGINEERING (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the art and science of various unit operations used in pharmaceutical industry.
- To understand the material handling techniques.
- To perform various processes involved in pharmaceutical manufacturing process.
- To appreciate and comprehend significance of plant lay out design for optimum use of resources.
- To know the various preventive methods used for corrosion control in Pharmaceutical industries.
- To execute various tests to prevent environmental pollution.

Course Outcomes (CO's): On successful completion of the course the student will

1. Know various unit operations used in Pharmaceutical industries.
2. Understand the material handling techniques.
3. Perform various processes involved in pharmaceutical manufacturing process.
4. Appreciate and comprehend significance of plant lay out design for optimum use of resources.
5. Appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.
6. Execute various tests to prevent environmental pollution.

Course content:**UNIT-I**

Flow of fluids: Types of manometers, Reynolds number and its significance, Bernoulli's theorem and its applications, Energy losses, Orifice meter, Venturimeter, Pitot tube and Rotometer.

Size Reduction: Objectives, Mechanisms & Laws governing size reduction, factors affecting size reduction, principles, construction, working, uses, merits and demerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & end runner mill.

Size Separation: Objectives, applications & mechanism of size separation, official standards of powders, sieves, size separation Principles, construction, working, uses, merits and demerits of Sieve shaker, cyclone separator, Air separator, Bag filter & elutriation tank.

UNIT-II

Heat Transfer: Objectives, applications & Heat transfer mechanisms. Fourier's law, Heat transfer by conduction, convection & radiation. Heat interchangers & heat exchangers.

Evaporation: Objectives, applications and factors influencing evaporation, differences between evaporation and other heat process. principles, construction, working, uses, merits and demerits of Steam jacketed kettle, horizontal tube evaporator, climbing film evaporator, forced circulation evaporator, multiple effect evaporator & Economy of multiple effect evaporator.

Distillation: Basic Principles and methodology of simple distillation, flash distillation, fractional distillation, distillation under reduced pressure, steam distillation & molecular distillation.

UNIT- III

Drying: Objectives, applications & mechanism of drying process, measurements & applications of Equilibrium Moisture content, rate of drying curve. principles, construction, working, uses, merits and demerits of Tray dryer, drum dryer spray dryer, fluidized bed dryer, vacuum dryer, freeze dryer.

Mixing: Objectives, applications & factors affecting mixing, Difference between solid and liquid mixing, mechanism of solid mixing, liquids mixing and semisolids mixing. Principles, Construction, Working, uses, Merits and Demerits of Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer, planetary mixers, Propellers, Turbines, Paddles & Silvers on Emulsifier,

UNIT-IV

Filtration: Objectives, applications, Theories & Factors influencing filtration, filter aids, filter medias. Principle, Construction, Working, Uses, Merits and demerits of plate & frame filter, filter leaf, rotary drum filter, Meta filter & Cartridge filter, membrane filters and Seitz filter.

Centrifugation: Objectives, principle & applications of Centrifugation, principles, construction, working, uses, merits and demerits of Perforated basket centrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & super centrifuge.

UNIT- V

Materials of pharmaceutical plant construction, Corrosion and its prevention: Factors affecting during materials selected for Pharmaceutical plant construction, Theories of corrosion, types of corrosion and there prevention. Ferrous and nonferrous metals, inorganic and organic non metals, basic of material handling systems.

Suggeted Readings:

1. Introduction to chemical engineering – Walter L Badger & Julius Banchemo, Latest edition.
2. Solid phase extraction, Principles, techniques and applications by Nigel J.K. Simpson- Latest edition.
3. Unit operation of chemical engineering – McCabe Smith, Latest edition.
4. Pharmaceutical engineering principles and practices – C.V.S Subrahmanyam et al., Latest edition.
5. Remington practice of pharmacy- Martin, Latest edition.
6. Theory and practice of industrial pharmacy by Lachmann., Latest edition.
7. Physical pharmaceuticals- C.V.S Subrahmanyam et al., Latest edition.
8. Cooper and Gunn's Tutorial pharmacy, S.J. Carter, Latest edition.

17BP308P

PHARMACEUTICAL ENGINEERING (Practical)

SEMESTER-III

4H 2C

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand different methods like moisture content, drying curve.
- To Identify different techniques like filtration, size reduction, crystallization.
- To Know about distillation and steps to be followed in steam distillation.
- To Summarize different instruments handled for engineering operations.
- To Determine the physical constants for a formulation.
- To Demonstrate the various machines used in pharmaceutical industry.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand different methods like moisture content, drying curve.
2. Identify different techniques like filtration, size reduction, crystallization.
3. Know about distillation and steps to be followed in steam distillation.
4. Summarize different instruments handled for engineering operations.
5. Determine the physical constants for a formulation.
6. Demonstrate the various machines used in pharmaceutical industry.

- I. Determination of radiation constant of brass, iron, unpainted and painted glass.
- II. Steam distillation – To calculate the efficiency of steam distillation.
- III. To determine the overall heat transfer coefficient by heat exchanger. IV. Construction of drying curves (for calcium carbonate and starch).
- V. Determination of moisture content and loss on drying.
- VI. Determination of humidity of air – i) From wet and dry bulb temperatures –use of Dew point method.
- VII. Description of Construction working and application of Pharmaceutical Machinery such as rotary tablet machine, fluidized bed coater, fluid energy mill, de humidifier.
- VIII. Size analysis by sieving – To evaluate size distribution of tablet granulations – Construction of various size frequency curves including arithmetic and logarithmic probability plots.
- IX. Size reduction: To verify the laws of size reduction using ball mill and determining Kicks, Rittinger's, Bond's coefficients, power requirement and critical speed of Ball Mill.
- X. Demonstration of colloid mill, planetary mixer, fluidized bed dryer, freeze dryer and such other major equipment.

- XI. Factors affecting Rate of Filtration and Evaporation (Surface area, Concentration and Thickness/ Viscosity).
- XII. To study the effect of time on the Rate of Crystallization.
- XIII. To calculate the uniformity Index for given sample by using Double Cone Blender.

Suggested Readings:

1. Introduction to chemical engineering – Walter L Badger & Julius Banchero, Latest edition.
2. Solid phase extraction, Principles, techniques and applications by Nigel J.K. Simpson- Latest edition.
3. Unit operation of chemical engineering – McCabe Smith, Latest edition.
4. Pharmaceutical engineering principles and practices – C.V.S Subrahmanyam et al., Latest edition.
5. Remington practice of pharmacy- Martin, Latest edition.
6. Theory and practice of industrial pharmacy by Lachmann., Latest edition.
7. Physical pharmaceutics- C.V.S Subrahmanyam et al., Latest edition.
8. Cooper and Gunn's Tutorial pharmacy, S.J. Carter, Latest edition.

SEMESTER -IV

17BP401T

SEMESTER-IV

PHARMACEUTICAL ORGANIC CHEMISTRY –III (Theory) 4H 4C

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject imparts knowledge on stereo-chemical aspects of organic compounds and organic reactions, important named reactions, chemistry of important hetero cyclic compounds.
- It also emphasizes on medicinal and other uses of organic compounds.
- To understand the methods of preparation organic compounds.
- To understand the properties of organic compounds.
- To know the medicinal uses and other applications of organic compounds.
- To elaborate the reactions of synthetic importance.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the stereo chemical aspects of organic compounds and stereo chemical reactions.
2. Discuss heterocyclic compounds based on nomenclature, classification, synthesis and reactions.
3. Understand the methods of preparation organic compounds.
4. Understand the properties of organic compounds.
5. Know the medicinal uses and other applications of organic compounds.
6. Elaborate the reactions of synthetic importance.

Course Content:**Note: To emphasize on definition, types, mechanisms, examples, uses/applications:****UNIT-I**

Stereo isomerism: Optical isomerism – Optical activity, enantiomerism, diastereoisomerism, meso compounds elements of symmetry, chiral and achiral molecules DL system of nomenclature of optical isomers, sequence rules, RS system of nomenclature of optical isomers reactions of chiral molecules Racemic modification and resolution of racemic mixture. Asymmetric synthesis: partial and absolute.

UNIT-II

Geometrical isomerism: Nomenclature of geometrical isomers (Cis Trans, EZ, Synthesis Anti systems) methods of determination of configuration of geometrical isomers. Conformational isomerism in Ethane, n-Butane and Cyclohexane. Stereo isomerism in biphenyl compounds (Atropisomerism) and conditions for optical activity. Stereospecific and stereoselective reactions.

UNIT-III

Heterocyclic compounds: Nomenclature and classification Synthesis, reactions and medicinal uses of following compounds/ derivatives Pyrrole, Furan, and Thiophene relative aromaticity and reactivity of Pyrrole, Furan and Thiophene.

UNIT-IV

Synthesis, reactions and medicinal uses of following compounds/derivatives Pyrazole, Imidazole, Oxazole and Thiazole. Pyridine, Quinoline, Isoquinoline, Acridine and Indole. Basicity of pyridine. Synthesis and medicinal uses of Pyrimidine, Purine, azepines and their derivatives.

UNIT-V

Reactions of synthetic importance: Metal hydride reduction (NaBH_4 and LiAlH_4), Clemmensen reduction, Birch reduction, Wolff Kishner reduction. Oppenauer-oxidation and Dakin reaction. Beckmanns rearrangement and Schmidt rearrangement. Claisen-Schmidt condensation.

Suggested Readings:

1. Organic chemistry by I.L. Finar, Volume-I & II.
2. A text book of organic chemistry – Arun Bahl, B.S. Bahl.
3. Heterocyclic Chemistry by Raj K. Bansal.
4. Organic Chemistry by Morrison and Boyd.
5. Heterocyclic Chemistry by T.L. Gilchrist.

Instruction hours/week : L: 3 T:1 P:0

Marks:Internal:25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.
- Describe the Classification, therapeutic value and chemistry of cholinergic agonist and antagonist drugs.
- Brief the Classification, Synthesis, therapeutic value and Structural activity relationship of drugs acting on Central nervous system particularly sedatives, hypnotics, antipsychotics and anticonvulsants.
- Enlight the Classification, and chemical aspects including structural activity relationship of drugs acting on Central nervous system particularly general anesthetics and analgesics.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the drug metabolic pathways.
2. State the chemistry of drugs with respect to their biological activity.
3. Explain the Classification, Synthesis, therapeutic value and Structural activity relationship of adrenergic agonist and antagonist drugs.
4. Describe the Classification, therapeutic value and chemistry of cholinergic agonist and antagonist drugs.
5. Brief the Classification, Synthesis, therapeutic value and Structural activity relationship of drugs acting on Central nervous system particularly sedatives, hypnotics, antipsychotics and anticonvulsants.
6. Enlight the Classification, and chemical aspects including structural activity relationship of drugs acting on Central nervous system particularly general anesthetics and analgesics.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

UNIT- I**Introduction to Medicinal Chemistry:**

History and development of medicinal chemistry, Physicochemical properties in relation to biological action: Ionization, Solubility, Partition Coefficient, Hydrogen bonding, Protein binding, Chelation, Bioisosterism, Optical and Geometrical isomerism.

Drug metabolism: Drug metabolism principles- Phase I and Phase II. Factors affecting drug metabolism including stereo chemical aspects.

UNIT- II

Drugs acting on Autonomic Nervous System Adrenergic Neurotransmitters:

- i) Biosynthesis and catabolism of catecholamine.
- ii) Adrenergic receptors (Alpha & Beta) and their distribution.

Sympathomimetic agents: SAR of Sympathomimetic agents:

Direct acting: Nor-epinephrine, Epinephrine, Phenylephrine*, Dopamine, Methyldopa, Clonidine, Dobutamine, Isoproterenol, Terbutaline, Salbutamol*, Bitolterol, Naphazoline, Oxymetazoline and Xylometazoline.

1. Indirect acting agents: Hydroxylamphetamine, Pseudoephedrine, Propylhexedrine.
2. Agents with mixed mechanism: Ephedrine, Metaraminol.

Adrenergic Antagonists:

Alpha adrenergic blockers: Tolazoline*, Phentolamine, Phenoxybenzamine, Prazosin, Dihydroergotamine, Methysergide.

Beta adrenergic blockers: SAR of beta blockers, Propranolol*, Metibranolol, Atenolol, Betaxolol, Bisoprolol, Esmolol, Metoprolol, Labetolol, Carvedilol.

UNIT-III

Cholinergic neurotransmitters:

1. Biosynthesis and catabolism of acetylcholine.
2. Cholinergic receptors (Muscarinic & Nicotinic) and their distribution.

Parasympathomimetic agents:

SAR of Parasympathomimetic agents:

Direct acting agents: Acetylcholine, Carbachol*, Bethanechol, Methacholine, Pilocarpine.

Indirect acting/ Cholinesterase inhibitors (Reversible & Irreversible): Physostigmine, Neostigmine*, Pyridostigmine, Edrophonium chloride, Tacrine hydrochloride, Ambenonium chloride, Isoflurophate, Echothiophate iodide, Parathion, Malathion.

Cholinesterase reactivator: Pralidoxime chloride.

Cholinergic Blocking agents: SAR of cholinolytic agents:

Solanaceous alkaloids and analogues: Atropine sulphate, Hyoscyamine sulphate, Scopolamine hydrobromide, Homatropine hydrobromide, Ipratropium bromide*.

Synthetic cholinergic blocking agents: Tropicamide, Cyclopentolate hydrochloride, Clidinium bromide, Dicyclomine hydrochloride*, Glycopyrrolate, Methantheline bromide, Propantheline bromide, Benztropine mesylate, Orphenadrine citrate, Biperidine hydrochloride, Procyclidine hydrochloride*, Tridihexethyl chloride, Isopropamide iodide, Ethopropazine hydrochloride.

UNIT- IV

Drugs acting on Central Nervous System:

A. Sedatives and Hypnotics:

Benzodiazepines: SAR of Benzodiazepines, Chlordiazepoxide, Diazepam*, Oxazepam, Chlorazepate, Lorazepam, Alprazolam, Zolpidem.

Barbiturates: SAR of barbiturates, Barbitol*, Phenobarbital, Mephobarbital, Amobarbital, Butobarbital, Pentobarbital, Secobarbital.

Miscellaneous: Amides & imides: Glutethimide. Alcohol & their carbamate derivatives: Meprobamate, Ethchlorvynol. Aldehyde & their derivatives: Triclofos sodium, Paraldehyde.

B. Antipsychotics:

Phenothiazines: SAR of Phenothiazines - Promazine hydrochloride, Chlorpromazine hydrochloride*, Triflupromazine, Thioridazine hydrochloride, Piperacetazine hydrochloride, Prochlorperazine maleate, Trifluoperazine hydrochloride.

Ring Analogues of Phenothiazines: Chlorprothixene, Thiothixene, Loxapine succinate, Clozapine.

Fluoro buterphenones: Haloperidol, Droperidol, Risperidone.

Beta amino ketones: Molindone hydrochloride.

Benzamides: Sulpieride.

C. Anticonvulsants: SAR of Anticonvulsants, mechanism of anticonvulsant action.

Barbiturates: Phenobarbitone, Methobarbital. **Hydantoins:** Phenytoin*, Mephentoin, Ethotoin. **Oxazolidine diones:** Trimethadione, Paramethadione. **Succinimides:** Phensuximide, Methsuximide, Ethosuximide.

Urea and monoacylureas: Phenacemide, Carbamazepine.

Benzodiazepines: Clonazepam

Miscellaneous: Primidone, Valproic acid, Gabapentin, Felbamate

UNIT – V

Drugs acting on Central Nervous System General anesthetics:

Inhalation anesthetics: Halothane*, Methoxyflurane, Enflurane, Sevoflurane, Isoflurane, Desflurane.

Ultra short acting barbiturates: Methohexital sodium*, Thiamylal sodium, Thiopental sodium.

Dissociative anesthetics: Ketamine hydrochloride.*

Narcotic and non-narcotic analgesics:

Morphine and related drugs: SAR of Morphine analogues, Morphine sulphate, Codeine, Meperidine hydrochloride, Anileridine hydrochloride, Diphenoxylate hydrochloride, Loperamide hydrochloride, Fentanyl citrate*, Methadone hydrochloride*, Propoxyphene hydrochloride, Pentazocine, Levorphanol tartarate.

Narcotic antagonists: Nalorphine hydrochloride, Levallorphan tartarate, Naloxone hydrochloride.

Anti-inflammatory agents: Sodium salicylate, Aspirin, Mefenamic acid*, Meclofenamate, Indomethacin, Sulindac, Tolmetin, Zomepirac, Diclofenac, Ketorolac, Ibuprofen*, Naproxen, Piroxicam, Phenacetin, Acetaminophen, Antipyrine, Phenylbutazone.

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicher, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

Instruction hours/ week : L:0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Synthesize few drugs and their intermediates.
- Synthesize drug intermediates.
- Synthesize some basic nucleus of drug candidates.
- Estimate the purity of drugs.
- Estimate the quantity of drugs present in tablet.
- Determine the partition coefficient of the drugs.

Course Outcomes (CO's): On successful completion of the course the student will

1. Synthesize few drugs and their intermediates.
2. Synthesize drug intermediates.
3. Synthesize some basic nucleus of drug candidates.
4. Estimate the purity of drugs.
5. Estimate the quantity of drugs present in tablet.
6. Determine the partition coefficient of the drugs.

I Preparation of drugs/ intermediates:

- 1,3-pyrazole
- 1,3-oxazole
- Benzimidazole
- Benztriazole
- 2,3-diphenylquinoxaline
- Benzocaine
- Phenytoin
- Phenothiazine
- Barbiturate

II Assay of drugs:

- Chlorpromazine
- Phenobarbitone
- Atropine
- Ibuprofen
- Aspirin
- Furosemide

III Determination of Partition coefficient for any two drugs

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicher, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

17BP403T

SEMESTER-IV

PHYSICAL PHARMACEUTICS-II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.
- To demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms.
- To understand the stability enhancement techniques in pharmaceutical industry.
- To discover the importance of accelerated stability testing in new drug formulation.
- To achieve a better insight into various areas of formulation, research and development.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand various physicochemical properties of drug molecules in the designing the dosage forms.
2. Demonstrate the principles of chemical kinetics & to use them for stability testing and determination of expiry date of formulations.
3. Demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms.
4. Understand the stability enhancement techniques in pharmaceutical industry.
5. Discover the importance of accelerated stability testing in new drug formulation.
6. Achieve a better insight into various areas of formulation, research and development.

Course Content:**UNIT-I**

Colloidal dispersions: Classification of dispersed systems & their general characteristics, size & shapes of colloidal particles, classification of colloids & comparative account of their general properties. Optical, kinetic & electrical properties. Effect of electrolytes, coacervation, peptization & protective action.

UNIT-II

Rheology: Newtonian systems, law of flow, kinematic viscosity, effect of temperature, non-Newtonian systems, pseudoplastic, dilatant, plastic, thixotropy, thixotropy in formulation, determination of viscosity, capillary, falling Sphere, rotational viscometers.

Deformation of solids: Plastic and elastic deformation, Heckel equation, Stress, Strain, Elastic Modulus.

UNIT-III

Coarse dispersion: Suspension, interfacial properties of suspended particles, settling in suspensions, formulation of flocculated and deflocculated suspensions. Emulsions and theories of emulsification, microemulsion and multiple emulsions; Stability of emulsions, preservation of emulsions, rheological properties of emulsions and emulsion formulation by HLB method.

UNIT-IV

Micromeretics: Particle size and distribution, mean particle size, number and weight distribution, particle number, methods for determining particle size by different methods, counting and separation method, particle shape, specific surface, methods for determining surface area, permeability, adsorption, derived properties of powders, porosity, packing arrangement, densities, bulkiness & flow properties.

UNIT-V

Drug stability: Reaction kinetics: zero, pseudo-zero, first & second order, units of basic rate constants, determination of reaction order. Physical and chemical factors influencing the chemical degradation of pharmaceutical product: temperature, solvent, ionic strength, dielectric constant, specific & general acid base catalysis, Simple numerical problems. Stabilization of medicinal agents against common reactions like hydrolysis & oxidation. Accelerated stability testing in expiration dating of pharmaceutical dosage forms. Photolytic degradation and its prevention.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin, Sixth edition.
2. Experimental pharmaceutics by Eugene, Parott.
3. Tutorial pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, Marcel Dekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C, and Manavalan R.

17BP407P

SEMESTER-IV

PHYSICAL PHARMACEUTICS- II (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total: 50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand the Preformulation parameters to be carried out in a new drug.
- To Discover different reaction rates.
- To Interpret the values from accelerated stability studies.
- To Build practical skills for new drug development process.
- To Demonstrate the sedimentation rate of various drug products.
- To Express the evaluation methods used in rheology.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the Preformulation parameters to be carried out in a new drug.
 2. Discover different reaction rates.
 3. Interpret the values from accelerated stability studies.
 4. Build practical skills for new drug development process.
 5. Demonstrate the sedimentation rate of various drug products.
 6. Express the evaluation methods used in rheology.
-
1. Determination of particle size, particle size distribution using sieving method.
 2. Determination of particle size, particle size distribution using Microscopic method.
 3. Determination of bulk density, true density and porosity.
 4. Determine the angle of repose and influence of lubricant on angle of repose.
 5. Determination of viscosity of liquid using Ostwald's viscometer.
 6. Determination sedimentation volume with effect of different suspending agent.
 7. Determination sedimentation volume with effect of different concentration of single suspending agent.
 8. Determination of viscosity of semisolid by using Brookfield viscometer.
 9. Determination of reaction rate constant first order.
 10. Determination of reaction rate constant second order.
 11. Accelerated stability studies.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin, Sixth edition.
2. Experimental pharmaceutics by Eugene, Parott.
3. Tutorial pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, Marcel Dekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C, and Manavalan R.

17BP404T

SEMESTER-IV

PHARMACOLOGY-I (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the information about the drugs like, mechanism of action, physiological and biochemical effects (pharmacodynamics) as well as absorption, distribution, metabolism and excretion (pharmacokinetics) along with the adverse effects, clinical uses, interactions, doses, contraindications and routes of administration of different classes of drugs.
- To Illustrate the Adverse drug reactions, Drug interactions, Pharmacovigilance and Drug discovery cycle.
- To demonstrate the Organization, function of ANS, classification of neurotransmitters and the drugs acting on it.
- To summarize the Pharmacology of drugs acting on various CNS diseases.
- To describe the Local anesthetic agents and the drugs used in myasthenia gravis, glaucoma.

Course Outcomes: On successful completion of the course the student will

1. Explain the basics of pharmacology such as scope, historical landmarks of, drugs concept, Agonists, antagonists, spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy and various pharmacokinetic parameters.
2. Defend the Pharmacodynamics, Principles, various types of receptors and mechanisms of drugs on it, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action.
3. Illustrate the Adverse drug reactions, Drug interactions, Pharmacovigilance and Drug discovery cycle.
4. Demonstrate the Organization, function of ANS, classification of neurotransmitters and the drugs acting on it.
5. Summarize the Pharmacology of drugs acting on various CNS diseases.
6. Describe the Local anesthetic agents and the drugs used in myasthenia gravis, glaucoma.

Course Content:**UNIT-I****1. General Pharmacology:**

a. Introduction to Pharmacology- Definition, historical landmarks and scope of pharmacology, nature and source of drugs, essential drugs concept and routes of drug administration, Agonists, antagonists(competitive and non competitive), spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy.

b. Pharmacokinetics- Membrane transport, absorption, distribution, metabolism and excretion of drugs. Enzyme induction, enzyme inhibition, kinetics of elimination.

UNIT-II

General Pharmacology

- a. Pharmacodynamics- Principles and mechanisms of drug action. Receptor theories and classification of receptors, regulation of receptors. drug receptors interactions signal transduction mechanisms, G-protein-coupled receptors, ion channel receptor, transmembrane enzyme linked receptors, transmembrane JAK-STAT binding receptor and receptors that regulate transcription factors, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action.
- b. Adverse drug reactions.
- c. Drug interactions (pharmacokinetic and pharmacodynamic)
- d. Drug discovery and clinical evaluation of new drugs -Drug discovery phase, preclinical evaluation phase, clinical trial phase, phases of clinical trials and pharmacovigilance.

UNIT-III**2. Pharmacology of drugs acting on peripheral nervous system:**

- a. Organization and function of ANS.
- b. Neurohumoral transmission, co-transmission and classification of neurotransmitters.
- c. Parasympathomimetics, Parasympatholytics, Sympathomimetics, sympatholytics.
- d. Neuromuscular blocking agents and skeletal muscle relaxants (peripheral). e. Local anesthetic agents.
- f. Drugs used in myasthenia gravis and glaucoma.

UNIT-IV**3. Pharmacology of drugs acting on central nervous system:**

- a. Neuro humoral transmission in the C.N.S.special emphasis on importance of various neurotransmitters like with GABA, Glutamate, Glycine, serotonin, dopamine.
- b. General anesthetics and pre-anesthetics.
- c. Sedatives, hypnotics and centrally acting muscle relaxants. d. Anti-epileptics
- e. Alcohols and disulfiram.

UNIT-V**3. Pharmacology of drugs acting on central nervous system:**

- a. Psychopharmacological agents: Antipsychotics, antidepressants, anti-anxiety agents, anti-manics and hallucinogens.

- b. Drugs used in Parkinson's disease and Alzheimer's disease.
- c. CNS stimulants and nootropics.
- d. Opioid analgesics and antagonists.
- e. Drug addiction, drug abuse, tolerance and dependence.

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert,
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
10. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan.

17BP408P

SEMESTER-IV

PHARMACOLOGY-I (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To understand the instruments used in experimental pharmacology.
- To maintain the laboratory animals as per CPCSEA guidelines.
- To demonstrate the Blood withdrawal, serum and plasma separation, anesthetics.
- To administer the drugs in different routes.
- To explain the euthanasia used for animal studies.
- To screen the drugs with the use of various pharmacological instruments.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the instruments used in experimental pharmacology.
2. Maintain the laboratory animals as per CPCSEA guidelines.
3. Demonstrate the Blood withdrawal, serum and plasma separation, anesthetics.
4. Administer the drugs in different routes.
5. Explain the euthanasia used for animal studies.
6. Screen the drugs with the use of various pharmacological instruments.

1. Introduction to experimental pharmacology.
2. Commonly used instruments in experimental pharmacology.
3. Study of common laboratory animals.
4. Maintenance of laboratory animals as per CPCSEA guidelines.
5. Common laboratory techniques. Blood withdrawal, serum and plasma separation, anesthetics and euthanasia used for animal studies.
6. Study of different routes of drugs administration in mice/rats.
7. Study of effect of hepatic microsomal enzyme inducers on the phenobarbitone sleeping time in mice.
8. Effect of drugs on ciliary motility of frog oesophagus.
9. Effect of drugs on rabbit eye.
10. Effects of skeletal muscle relaxants using rota-rod apparatus.
11. Effect of drugs on locomotor activity using actophotometer.
12. Anticonvulsant effect of drugs by MES and PTZ method.

13. Study of stereotype and anti-catatonic activity of drugs on rats/mice.
14. Study of anxiolytic activity of drugs using rats/mice.
15. Study of local anesthetics by different methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology,. Churchill Livingstone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill.
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig& Robert.
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
- 10.Kulkarni SK. Hand book of experimental pharmacology. Vallabh Prakashan.

17BP405T

SEMESTER-IV

PHARMACOGNOSY AND PHYTOCHEMISTRY I (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To explain the classification of crude drugs, Quality control of Drugs of Natural Origin, Quantitative microscopy of crude drugs.
- To elaborate the techniques in the cultivation and production of crude drugs.
- To demonstrate the plant tissue culture.
- To understand the traditional system of medicine.
- To explain the Plant Products Primary metabolites Proteins, Enzymes, Lipids, Marine drugs.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the history, scope and development of Pharmacognosy.
2. Explain the classification of crude drugs, Quality control of Drugs of Natural Origin, Quantitative microscopy of crude drugs.
3. Elaborate the techniques in the cultivation and production of crude drugs.
4. Demonstrate the plant tissue culture.
5. Understand the traditional system of medicine.
6. Explain the Plant Products Primary metabolites Proteins, Enzymes, Lipids, Marine drugs.

Course Content:**UNIT-I****Introduction to Pharmacognosy:**

(a) Definition, history, scope and development of Pharmacognosy.

(b) Sources of Drugs – Plants, Animals, Marine & Tissue culture.

(c) Organized drugs, unorganized drugs (dried latex, dried juices, dried extracts, gums and mucilage's, oleoresins and oleo- gum -resins).

Classification of drugs: Alphabetical, morphological, taxonomical, chemical, pharmacological, chemo and sero taxonomical classification of drugs.**Quality control of Drugs of Natural Origin:** Adulteration of drugs of natural origin. Evaluation by organoleptic, microscopic, physical, chemical and biological methods and properties. Quantitative microscopy of crude drugs including lycopodium spore method, leaf constants, camera lucida and diagrams of microscopic objects to scale with camera lucida.**UNIT-II**

Cultivation, Collection, Processing and storage of drugs of natural origin: Cultivation and Collection of drugs of natural origin Factors influencing cultivation of medicinal plants. Plant hormones and their applications. Polyploidy, mutation and hybridization with reference to medicinal plants.

UNIT-III

Plant tissue culture: Historical development of plant tissue culture, types of cultures, Nutritional requirements, growth and their maintenance. Applications of plant tissue culture in pharmacognosy. Edible vaccines.

UNIT- IV

Pharmacognosy in various systems of medicine: Role of Pharmacognosy in allopathy and traditional systems of medicine namely, Ayurveda, Unani, Siddha, Homeopathy and Chinese systems of medicine.

Introduction to secondary metabolites: Definition, classification, properties and test for identification of Alkaloids, Glycosides, Flavonoids, Tannins, Volatile oil and Resins.

UNIT- V

Study of biological source, chemical nature and uses of drugs of natural origin containing following drugs

Plant Products:

Fibers - Cotton, Jute, Hemp.

Hallucinogens, Teratogens, Natural allergens.

Primary metabolites: General introduction, detailed study with respect to chemistry, sources, preparation, evaluation, preservation, storage, therapeutic used and commercial utility as pharmaceutical Aids and/or Medicines for the following Primary metabolites:

Carbohydrates: Acacia, Agar, Tragacanth, Honey.

Proteins and Enzymes : Gelatin, casein, proteolytic enzymes (Papain, bromelain, serratiopeptidase, urokinase, streptokinase, pepsin).

Lipids (Waxes, fats, fixed oils) : Castor oil, Chaulmoogra oil, Wool Fat, Bees Wax.

Marine Drugs: Novel medicinal agents from marine sources.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.
2. Tyler, V.E., Brady, L.R. and Robbers, J.E., Pharmacognosy, 9th Edn., Lea and Febiger, Philadelphia, 1988.
3. Text Book of Pharmacognosy by T.E. Wallis

4. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
5. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
6. Herbal drug industry by R.D. Choudhary (1996), Ist Edn, Eastern Publisher, New Delhi.
7. Essentials of Pharmacognosy, Dr.SH.Ansari, IInd edition, Birla publications, New Delhi, 2007
8. Practical Pharmacognosy: C.K. Kokate, Purohit, Gokhlae.
9. Anatomy of Crude Drugs by M.A. Iyengar.

17BP409P

SEMESTER-IV

PHARMACOGNOSY AND PHYTOCHEMISTRY I (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Analyze the crude drugs by chemical tests.
- Determine the stomatal number and index and vein islet number, vein islet termination and palisade ratio.
- Determine the starch grains, calcium oxalate crystals by eye piece micrometer.
- Perform the Fiber length and width starch grains by Lycopodium spore method.
- Analyze the purity of crude drugs by ash value and extractive value.
- Determine the moisture content, swelling index and foaming index.

Course Outcomes(CO's): On successful completion of the course the student will

1. Analyze the crude drugs by chemical tests.
 2. Determine the stomatal number and index and vein islet number, vein islet termination and palisade ratio.
 3. Determine the starch grains, calcium oxalate crystals by eye piece micrometer.
 4. Perform the Fiber length and width starch grains by Lycopodium spore method.
 5. Analyze the purity of crude drugs by ash value and extractive value.
 6. Determine the moisture content, swelling index and foaming index.
-
1. Analysis of crude drugs by chemical tests: (i) Tragacanth (ii) Acacia (iii) Agar (iv) Gelatin (v) starch (vi) Honey (vii) Castor oil.
 2. Determination of stomatal number and index.
 3. Determination of vein islet number, vein islet termination and palisade ratio.
 4. Determination of size of starch grains, calcium oxalate crystals by eye piece micrometer.
 5. Determination of Fiber length and width.
 6. Determination of number of starch grains by Lycopodium spore method.
 7. Determination of Ash value.
 8. Determination of Extractive values of crude drugs.
 9. Determination of moisture content of crude drugs.
 10. Determination of swelling index and foaming.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.

2. Tyler, V.E., Brady, L.R. and Robbers, J.E., Pharmacognosy, 9th Edn., Lea and Febiger, Philadelphia, 1988.
3. Text Book of Pharmacognosy by T.E. Wallis
4. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
5. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
6. Herbal drug industry by R.D. Choudhary (1996), 1st Edn, Eastern Publisher, New Delhi.
7. Essentials of Pharmacognosy, Dr.SH.Ansari, 11th edition, Birla publications, New Delhi, 2007
8. Practical Pharmacognosy: C.K. Kokate, Purohit, Gokhlae.
9. Anatomy of Crude Drugs by M.A. Iyengar.

SEMESTER V

17BP501T

SEMESTER – V

MEDICINAL CHEMISTRY – II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.
- To Understand the drug metabolic pathways, adverse effect and therapeutic value of drugs.
- To Know the Structural Activity Relationship of different class of drugs.
- To study the chemical synthesis of selected drugs.

Course Outcomes(CO's): On successful completion of the course the student will

1. Illustrate the classification of drugs.
2. Explain the mechanism of action of drugs.
3. Understand the chemistry of drugs with respect to their pharmacological activity.
4. Understand the drug metabolic pathways, adverse effect and therapeutic value of drugs.
5. Know the Structural Activity Relationship of different class of drugs.
6. Study the chemical synthesis of selected drugs.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

UNIT- I**Antihistaminic agents:** Histamine, receptors and their distribution in the human body

H1-antagonists: Diphenhydramine hydrochloride*, Dimenhydrinate, Doxylamines succinate, Clemastine fumarate, Diphenylpyraline hydrochloride, Tripelenamine hydrochloride, Chlorcyclizine hydrochloride, Meclizine hydrochloride, Buclizine hydrochloride, Chlorpheniramine maleate, Triprolidine hydrochloride*, Phenidamine tartarate, Promethazine hydrochloride*, Trimeprazine tartrate, Cyproheptadine hydrochloride, Azatidine maleate, Astemizole, Loratadine, Cetirizine, Levocetrazine Cromolyn sodiu

H2-antagonists: Cimetidine*, Famotidine, Ranitidin.**Gastric Proton pump inhibitors:** Omeprazole, Lansoprazole, Rabeprazole, Pantoprazole**Anti-neo plastic agents:**

Alkylating agents: Mecllorethamine*, Cyclophosphamide, Melphalan, Chlorambucil, Busulfan, Thiopeta

Antimetabolites: Mercaptopurine*, Thioguanine, Fluorouracil, Floxuridine, Cytarabine, Methotrexate*, Azathioprine

Antibiotics: Dactinomycin, Daunorubicin, Doxorubicin, Bleomycin

Plant products: Etoposide, Vinblastin sulphate, Vincristin sulphate

Miscellaneous: Cisplatin, Mitotane.

UNIT – II

Anti-anginal:

Vasodilators: Amyl nitrite, Nitroglycerin*, Pentaerythritol tetranitrate, Isosorbide dinitrate*, Dipyridamole.

Calcium channel blockers: Verapamil, Bepridil hydrochloride, Diltiazem hydrochloride, Nifedipine, Amlodipine, Felodipine, Nicardipine, Nimodipine.

Diuretics: Carbonic anhydrase inhibitors: Acetazolamide*, Methazolamide, Dichlorophenamide. Thiazides: Chlorthiazide*, Hydrochlorothiazide, Hydroflumethiazide, Cyclothiazide, Loop diuretics: Furosemide*, Bumetanide, Ethacrynic acid. Potassium sparing Diuretics: Spironolactone, Triamterene, Amiloride. Osmotic Diuretics: Mannitol.

Anti-hypertensive Agents: Timolol, Captopril, Lisinopril, Enalapril, Benazepril hydrochloride, Quinapril hydrochloride, Methyldopa hydrochloride, * Clonidine hydrochloride, Guanethidine monosulphate, Guanabenz acetate, Sodium nitroprusside, Diazoxide, Minoxidil, Reserpine, Hydralazine hydrochloride.

UNIT- III

Anti-arrhythmic Drugs: Quinidine Sulphate, Procainamide hydrochloride, Disopyramide phosphate*, Phenytoin sodium, Lidocaine hydrochloride, Tocainide hydrochloride, Mexiletine hydrochloride, Lorcaïnide hydrochloride, Amiodarone, Sotalol.

Anti-hyperlipidemic agents: Clofibrate, Lovastatin, Cholestamine and Cholestipol

Coagulant & Anticoagulants: Menadione, Acetomenadione, Warfarin*, Anisindione, clopidogrel

Drugs used in Congestive Heart Failure: Digoxin, Digitoxin, Nesiritide, Bosentan, Tezosentan.

UNIT- IV

Drugs acting on Endocrine system: Nomenclature, Stereochemistry and metabolism of steroids

Sex hormones: Testosterone, Nandrolone, Progestones, Oestriol, Oestradiol, Oestrone, Diethyl stilbestrol.

Drugs for erectile dysfunction: Sildenafil, Tadalafil.

Oral contraceptives: Mifepristone, Norgestrel, Levonorgestrol

Corticosteroids: Cortisone, Hydrocortisone, Prednisolone, Betamethasone, Dexamethasone

Thyroid and antithyroid drugs: L-Thyroxine, L-Thyronine, Propylthiouracil, Methimazole.

UNIT – V

Antidiabetic agents: Insulin and its preparations

Sulfonyl ureas: Tolbutamide*, Chlorpropamide, Glipizide, Glimepiride. Biguanides: Metformin.

Thiazolidinediones: Pioglitazone, Rosiglitazone. Meglitinides: Repaglinide, Nateglinide.

Glucosidase inhibitors: Acarbose, Voglibose.

Local Anesthetics: SAR of Local anesthetics

Benzoic Acid derivatives; Cocaine, Hexylcaine, Meprylcaine, Cyclomethycaine, Piperocaine.

Amino Benzoic acid derivatives: Benzocaine*, Butamben, Procaine*, Butacaine, Propox ycaine, Tetracaine, Benoxinate.

Lidocaine/Anilide derivatives: Lignocaine, Mepivacaine, Prilocaine, Etidocaine.

Miscellaneous: Phenacaine, Diperon, Dibucaine.*

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1 to 5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

17BP502T

INDUSTRIAL PHARMACY-I (Theory)

SEMESTER V

4H**4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- To discover various formulation considerations in development of pharmaceutical dosage forms like tablets, capsules, etc.
- To Understand the quality control tests for the dosage forms.
- To know parenterals, stringent procedures in the preparation and its evaluation.
- To Understand clearly about packaging and cosmetic preparations.
- To Interpret the various pharmaceutical additives to be included in all dosage forms.

Course Outcomes(CO's): On successful completion of the course the student will

1. Acquire knowledge about the various pharmaceutical dosage forms and their manufacturing techniques.
2. Discover various formulation considerations in development of pharmaceutical dosage forms like tablets, capsules, etc.
3. Understand the quality control tests for the dosage forms.
4. Detail on parenterals, stringent procedures in the preparation and its evaluation.
5. Understand clearly about packaging and cosmetic preparations.
6. Interpret the various pharmaceutical additives to be included in all dosage forms.

Course content:**UNIT-I**

Preformulation Studies: Introduction to preformulation, goals and objectives, study of physicochemical characteristics of drug substances.

a. Physical properties: Physical form (crystal & amorphous), particle size, shape, flow properties, solubility profile (pKa, pH, partition coefficient), polymorphism

b. Chemical Properties: Hydrolysis, oxidation, reduction, racemisation, polymerization

BCS classification of drugs & its significant

Application of preformulation considerations in the development of solid, liquid oral and parenteral dosage forms and its impact on stability of dosage forms.

UNIT-II

Tablets:

- a. Introduction, ideal characteristics of tablets, classification of tablets. Excipients, Formulation of tablets, granulation methods, compression and processing problems. Equipments and tablet tooling.
- b. Tablet coating: Types of coating, coating materials, formulation of coating composition, methods of coating, equipment employed and defects in coating.
- c. Quality control tests: In process and finished product tests

Liquid orals: Formulation and manufacturing consideration of syrups and elixirs suspensions and emulsions; Filling and packaging; evaluation of liquid orals official in pharmacopoeia

UNIT-III**Capsules:**

a. **Hard gelatin capsules:** Introduction, Production of hard gelatin capsule shells. size of capsules, Filling, finishing and special techniques of formulation of hard gelatin capsules, manufacturing defects. In process and final product quality control tests for capsules.

b. **Soft gelatin capsules:** Nature of shell and capsule content, size of capsules, importance of base adsorption and minim/gram factors, production, in process and final product quality control tests. Packing, storage and stability testing of soft gelatin capsules and their applications.

Pellets: Introduction, formulation requirements, pelletization process, equipments for manufacture of pellets

UNIT-IV**Parenteral Products:**

a. Definition, types, advantages and limitations. Preformulation factors and essential requirements, vehicles, additives, importance of isotonicity.

b. Production procedure, production facilities and controls, aseptic processing

c. Formulation of injections, sterile powders, large volume parenterals and lyophilized products.

d. Containers and closures selection, filling and sealing of ampoules, vials and infusion fluids. Quality control tests of parenteral products.

Ophthalmic Preparations: Introduction, formulation considerations; formulation of eye drops, eye ointments and eye lotions; methods of preparation; labeling, containers; evaluation of ophthalmic preparations

UNIT-V

Cosmetics: Formulation and preparation of the following cosmetic preparations: lipsticks, shampoos, cold cream and vanishing cream, tooth pastes, hair dyes and sunscreens.

Pharmaceutical Aerosols: Definition, propellants, containers, valves, types of aerosol systems; formulation and manufacture of aerosols; Evaluation of aerosols; Quality control and stability studies.

Packaging Materials Science: Materials used for packaging of pharmaceutical products, factors influencing choice of containers, legal and official requirements for containers, stability aspects of packaging materials, quality control tests.

Suggested Readings:

1. Pharmaceutical dosage forms - Tablets, volume 1 -3 by H.A. Liberman, Leon Lachman &J.B.Schwartz.
2. Pharmaceutical dosage form - Parenteral medication vol- 1&2 by Liberman & Lachman.
3. Pharmaceutical dosage form disperse system VOL-1 b y Liberman & Lachman.
4. Modern Pharmaceutics by Gilbert S. Banker & C.T. Rhodes, 3rd Edition.
5. Remington: The Science and Practice of Pharmacy, 20th edition Pharmaceutical Science (RPS).
6. Theory and Practice of Industrial Pharmac y b y Liberman & Lachman.
7. Pharmaceutics- The science of dosage form design b y M.E.Aulton, Churchill livingstone, Latest edition.
8. Introduction to Pharmaceutical Dosage Forms by H. C.Ansel, Lea &Febiger, Philadelphia, 5thedition, 2005.
9. Drug stability - Principles and practice by Cartensen & C.J. Rhodes, 3rd Edition, Marcel Dekker Series, Vol 107.

17BP506P

SEMESTER V

INDUSTRIAL PHARMACY-I (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To manufacture tablets.
- To understand the strict formulation considerations in parenteral and ophthalmic manufacturing.
- To demonstrate the evaluations of different packaging materials in pharmaceutical industry.
- To achieve skills in making a pharmaceutical product.
- To demonstrate the manufacturing of capsules.
- To exploit the formulation of various cosmetics.

Course Outcomes (CO's): On successful completion of the course the student will

1. Manufacture tablets.
 2. Understand the strict formulation considerations in parenteral and ophthalmic manufacturing.
 3. Demonstrate the evaluations of different packaging materials in pharmaceutical industry.
 4. Achieve skills in making a pharmaceutical product.
 5. Demonstrate the manufacturing of capsules.
 6. Exploit the formulation of various cosmetics.
-
1. Preformulation studies on paracetamol/asparin/or any other drug.
 2. Preparation and evaluation of Paracetamol tablets.
 3. Preparation and evaluation of Aspirin tablets.
 4. Coating of tablets- film coating of tables/granules.
 5. Preparation and evaluation of Tetracycline capsules.
 6. Preparation of Calcium Gluconate injection.
 7. Preparation of Ascorbic Acid injection.
 8. Qulaity control test of (as per IP) marketed tablets and capsules.
 9. Preparation of Eye drops/ and Eye ointments.
 10. Preparation of Creams (cold / vanishing cream).
 11. Evaluation of Glass containers (as per IP).

Suggested Readings:

1. Pharmaceutical dosage forms - Tablets, volume 1 -3 by H.A. Liberman, Leon Lachman &J.B.Schwartz.
2. Pharmaceutical dosage form - Parenteral medication vol- 1&2 by Liberman & Lachman.
3. Pharmaceutical dosage form disperse system VOL-1 b y Liberman & Lachman.
4. Modern Pharmaceutics by Gilbert S. Banker & C.T. Rhodes, 3rd Edition.
5. Remington: The Science and Practice of Pharmacy, 20th edition Pharmaceutical Science (RPS).
6. Theory and Practice of Industrial Pharmac y b y Liberman & Lachman.
7. Pharmaceutics- The science of dosage form design b y M.E.Aulton, Churchill livingstone, Latest edition.
8. Introduction to Pharmaceutical Dosage Forms by H. C.Ansel, Lea &Febiger, Philadelphia, 5thedition, 2005.
9. Drug stability - Principles and practice by Cartensen & C.J. Rhodes, 3rd Edition, Marcel Dekker Series, Vol107.

17BP503T

SEMESTER V

PHARMACOLOGY-II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on different systems of body and in addition, emphasis on the basic concepts of bioassay.
- To demonstrate the Pharmacology of drugs acting on various cardio vascular disease.
- To explain the drug used in the therapy of shock, Pharmacology of coagulants, anticoagulants, Fibrinolytics, anti-platelet drugs, Diuretics and Anti-diuretics.
- To Illustrate the Pharmacology of Autocoids, Non-steroidal anti-inflammatory agents, Anti-gout drugs and Antirheumatic drugs.
- To know the Pharmacology of drugs acting on endocrine system.
- To describe the Principles, applications of bioassay and bioassay of various drugs.

Course Outcomes: On successful completion of the course the student will

1. Demonstrate the Pharmacology of drugs acting on various cardio vascular disease.
2. Explain the drug used in the therapy of shock, Pharmacology of coagulants, anticoagulants, Fibrinolytics, anti-platelet drugs, Diuretics and Anti-diuretics.
3. Illustrate the Pharmacology of Autocoids, Non-steroidal anti-inflammatory agents, Anti-gout drugs and Antirheumatic drugs.
4. Outline the Pharmacology of drugs acting on endocrine system.
5. Describe the Principles, applications of bioassay and bioassay of various drugs.
6. Summarize the drugs acting on the uterus and oral contraceptives.

Course Content:**UNIT-I****1. Pharmacology of drugs acting on cardio vascular system:**

- a. Introduction to hemodynamic and electrophysiology of heart.
- b. Drugs used in congestive heart failure.
- c. Anti-hypertensive drugs.
- d. Anti-anginal drugs.
- e. Anti-arrhythmic drugs.

f. Anti-hyperlipidemic drugs.

UNIT-II

1. Pharmacology of drugs acting on cardio vascular system:

- a. Drug used in the therapy of shock.
- b. Hematinics, coagulants and anticoagulants.
- c. Fibrinolytics and anti-platelet drugs.
- d. Plasma volume expanders.

2. Pharmacology of drugs acting on urinary system:

- a. Diuretics.
- b. Anti-diuretics.

UNIT-III

3. Autocoids and related drugs:

- a. Introduction to autacoids and classification.
- b. Histamine, 5-HT and their antagonists.
- c. Prostaglandins, Thromboxanes and Leukotrienes.
- d. Angiotensin, Bradykinin and Substance P.
- e. Non-steroidal anti-inflammatory agents.
- f. Anti-gout drugs.
- g. Antirheumatic drugs.

UNIT-IV

5. Pharmacology of drugs acting on endocrine system

- a. Basic concepts in endocrine pharmacology.
- b. Anterior Pituitary hormones- analogues and their inhibitors.
- c. Thyroid hormones- analogues and their inhibitors.
- d. Hormones regulating plasma calcium level- Parathormone, Calcitonin and Vitamin-D.
- d. Insulin, Oral Hypoglycemic agents and glucagon.

e. ACTH and corticosteroids.

UNIT-V

5. Pharmacology of drugs acting on endocrine system

- a. Androgens and Anabolic steroids.
- b. Estrogens, progesterone and oral contraceptives.
- c. Drugs acting on the uterus.

6. Bioassay

- a. Principles and applications of bioassay.
- b. Types of bioassay.
- c. Bioassay of insulin, oxytocin, vasopressin, ACTH, d-tubocurarine, digitalis, histamine and 5-HT.

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill.
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradle y R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert.
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
10. Kulkarni SK. Handbook of experimental pharmacology. Vallabh Prakashan.

17BP507P

SEMESTER V

PHARMACOLOGY-II (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To explain the in-vitro pharmacology, PA₂ and PD₂ values.
- To Record the Effect of drugs on frog, dog heart and blood pressure.
- To Record the DRC of acetylcholine, estimate the Bioassay of histamine, oxytocin, serotonin by interpolation bioassay method.
- To Estimate the Bioassay of histamine, oxytocin, serotonin by matching bioassay.
- To demonstrate the Anti-inflammatory activity and Analgesic activity in animal models.
- To explain the three point and four-point bioassay

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the in-vitro pharmacology, PA₂ and PD₂ values.
 2. Record the Effect of drugs on frog, dog heart and blood pressure.
 3. Record the DRC of acetylcholine, estimate the Bioassay of histamine, oxytocin, serotonin by interpolation bioassay method.
 4. Estimate the Bioassay of histamine, oxytocin, serotonin by matching bioassay.
 5. Demonstrate the Anti-inflammatory activity and Analgesic activity in animal models.
 6. Explain the three point and four-point bioassay
-
1. Introduction to in-vitro pharmacology and physiological salt solutions.
 2. Effect of drugs on isolated frog heart.
 3. Effect of drugs on blood pressure and heart rate of dog.
 4. Study of diuretic activity of drugs using rats/mice.
 5. DRC of acetylcholine using frog rectus abdominis muscle.
 6. Effect of physostigmine and atropine on DRC of acetylcholine using frog rectus abdominis muscle and rat ileum respectively.
 7. Bioassay of histamine using guinea pig ileum by matching method.
 8. Bioassay of oxytocin using rat uterine horn by interpolation method.
 9. Bioassay of serotonin using rat fundus strip by three point bioassay.
 10. Bioassay of acetylcholine using rat ileum/colon by four point bioassay.
 11. Determination of PA₂ value of prazosin using rat anococcygeus muscle (by Schilds plot method).

12. Determination of PD₂ value using guinea pig ileum.
13. Effect of spasmogens and spasmolytics using rabbit jejunum.
14. Anti-inflammatory activity of drugs using carrageenan induced paw-edema model.
15. Analgesic activity of drug using central and peripheral methods.

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Living stone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill.
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradle y R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig& Robert.
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
10. Kulkarni SK. Handbook of experimental pharmacology. Vallabh Prakashan.

17BP504T

SEMESTER - V

PHARMACOGNOSY AND PHYTOCHEMISTRY II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of subject is to impart the students the knowledge of how these secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially.
- Also this subject involves the study of producing the plants and phytochemicals through plant tissue culture, drug interactions and basic principles of traditional system of medicine
- To explain the modern extraction techniques, characterization and identification of the herbal drugs and Phytoconstituents
- To understand the preparation and development of herbal formulation.
- To understand the herbal drug interactions.
- To isolate and identify the Phytoconstituents.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the Composition, chemistry & chemical classes, biosources, therapeutic uses and commercial applications.
2. Metabolic pathways in higher plants and their determination
3. Explain the modern extraction techniques, characterization and identification of the herbal drugs and Phytoconstituents
4. Understand the preparation and development of herbal formulation.
5. Understand the herbal drug interactions.
6. Isolate and identify the Phytoconstituents.

Course Content:**UNIT-I**

Metabolic pathways in higher plants and their determination: a) Brief study of basic metabolic pathways and formation of different secondary metabolites through these pathways- Shikimic acid pathway, Acetate pathways and Amino acid pathway. b) Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

UNIT-II

General introduction, composition, chemistry & chemical classes, biosources, therapeutic uses and commercial applications of following secondary metabolites:

Alkaloids: Vinca, Rauwolfia, Belladonna, Opium,

Phenylpropanoids and Flavonoids: Lignans, Tea, Ruta

Steroids, Cardiac Glycosides & Triterpenoids: Liquorice, Dioscorea, Digitalis

Volatile oils: Mentha, Clove, Cinnamon, Fennel, Coriander,

Tannins: Catechu, Pterocarpus

Resins: Benzoin, Guggul, Ginger, Asafoetida, Myrrh, Colophony

Glycosides: Senna, Aloes, Bitter Almond

Iridoids, Other terpenoids & Naphthaquinones: Gentian, Artemisia, taxus, carotenoids

UNIT-III

Isolation, Identification and Analysis of Phytoconstituents

- a) Terpenoids: Menthol, Citral, Artemisin b) Glycosides: Glycyrrhetic acid & Rutin
c) Alkaloids: Atropine, Quinine, Reserpine, Caffeine d) Resins: Podophyllotoxin, Curcumin

UNIT-IV

Industrial production, estimation and utilization of the following phytoconstituents: Forskolin, Sennoside, Artemisinin, Diosgenin, Digoxin, Atropine, Podophyllotoxin, Caffeine, Taxol, Vincristine and Vinblastine

UNIT V

Basics of Phytochemistry: Modern methods of extraction, application of latest techniques like Spectroscopy.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.
2. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
3. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhale (2007), 37th Edition, Nirali Prakashan, New Delhi.
4. Herbal drug industry by R.D. Choudhary (1996), 1st Edn, Eastern Publisher, New Delhi.
5. Essentials of Pharmacognosy, Dr.SH.Ansari, 11th edition, Birla publications, New Delhi, 2007
6. Herbal Cosmetics by H.Pande, Asia Pacific Business press, Inc, New Delhi.
7. A.N. Kalia, Textbook of Industrial Pharmacognosy, CBS Publishers, New Delhi, 2005.
8. R Endress, Plant cell Biotechnology, Springer-Verlag, Berlin, 1994.
9. Pharmacognosy & Pharmacobiotechnology. James Bobbers, Marilyn KS, VE Tylor.
10. The formulation and preparation of cosmetic, fragrances and flavours.
11. Remington's Pharmaceutical sciences.
12. Text Book of Biotechnology by Vyas and Dixit.
13. Text Book of Biotechnology by R.C. Dubey.

17BP508P

SEMESTER - V

PHARMACOGNOSY AND PHYTOCHEMISTRY II (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Perform the histology and powder characteristics & extraction & detection of Phytoconstituents.
- To Isolate and detect the active principles.
- To Separate the sugars by Paper chromatography.
- To Perform TLC of herbal extract
- To Distillate the volatile oils and detects the Phytoconstituents by TLC.
- To Analysis of crude drugs by chemical tests.

Course Outcomes (CO's): On successful completion of the course the student will

1. Perform the histology and powder characteristics & extraction & detection of Phytoconstituents.
 2. Isolate and detect the active principles.
 3. Separate the sugars by Paper chromatography.
 4. Perform TLC of herbal extract
 5. Distillate the volatile oils and detects the Phytoconstituents by TLC.
 6. Analysis of crude drugs by chemical tests.
-
1. Morphology, histology and powder characteristics & extraction & detection of: Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander.
 2. Exercise involving isolation & detection of active principles.
 - a. Caffeine - from tea dust.
 - b. Diosgenin from Dioscorea.
 - c. Atropine from Belladonna.
 - d. Sennosides from Senna.
 3. Separation of sugars by Paper chromatography.
 4. TLC of herbal extract.
 5. Distillation of volatile oils and detection of phytoconstituents by TLC.
 6. Analysis of crude drugs by chemical tests: (i) Asafoetida (ii) Benzoin (iii) Colophony (iv) Aloes (v) Myrrh.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.
2. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
3. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
4. Herbal drug industry by R.D. Choudhary (1996), 1st Edn, Eastern Publisher, New Delhi.
5. Essentials of Pharmacognosy, Dr.SH.Ansari, 11th edition, Birla publications, New Delhi, 2007
6. Herbal Cosmetics by H.Pande, Asia Pacific Business press, Inc, New Delhi.
7. A.N. Kalia, Textbook of Industrial Pharmacognosy, CBS Publishers, New Delhi, 2005.
8. R Endress, Plant cell Biotechnology, Springer-Verlag, Berlin, 1994.
9. Pharmacognosy & Pharmacobiotechnology. James Bobbers, Marilyn KS, VE Tylor.
10. The formulation and preparation of cosmetic, fragrances and flavours.
11. Remington's Pharmaceutical sciences.
12. Text Book of Biotechnology by Vyas and Dixit.
13. Text Book of Biotechnology by R.C. Dubey.

17BP505T

SEMESTER – V

PHARMACEUTICAL JURISPRUDENCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge on important legislations related to the profession of pharmacy in India.
- To demonstrate various Indian pharmaceutical Acts and Laws.
- To understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.
- To elicit the code of ethics during the pharmaceutical practice.
- To acquire clear idea on drug price control order and its implication in India.
- To acquire information regarding the licenses to be achieved for a new drug discovery process.

Course Outcomes (CO's): On successful completion of the course the student will

1. Exploit the Pharmaceutical legislations and their implications in the development and marketing of pharmaceuticals.
2. Demonstrate various Indian pharmaceutical Acts and Laws.
3. Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.
4. Elicit the code of ethics during the pharmaceutical practice.
5. Acquire clear idea on drug price control order and its implication in India.
6. Acquire information regarding the licenses to be achieved for a new drug discovery process.

Course Content:**UNIT-I**

Drugs and Cosmetics Act, 1940 and its rules 1945: Objectives, Definitions, Legal definitions of schedules to the Act and Rules Import of drugs – Classes of drugs and cosmetics prohibited from import, Import under license or permit. Offences and penalties. Manufacture of drugs – Prohibition of manufacture and sale of certain drugs, Conditions for grant of license and conditions of license for manufacture of drugs, Manufacture of drugs for test, examination and analysis, manufacture of new drug, loan license and repacking license.

UNIT-II

Drugs and Cosmetics Act, 1940 and its rules 1945: Detailed study of Schedule G, H, M, N, P, T, U, V, X, Y, Part XII B, Sch F & DMR (OA) Sale of Drugs – Wholesale, Retail sale and Restricted license. Offences and penalties Labeling & Packing of drugs- General labeling requirements and specimen labels for drugs and cosmetics, List of permitted colors. Offences and penalties. Administration of the Act and Rules – Drugs Technical Advisory Board, Central drugs Laboratory,

Drugs Consultative Committee, Government drug analysts, Licensing authorities, controlling authorities, Drugs Inspectors.

UNIT-III

Pharmacy Act –1948: Objectives, Definitions, Pharmacy Council of India; its constitution and functions, Education Regulations, State and Joint state pharmacy councils; constitution and functions, Registration of Pharmacists, Offences and Penalties.

Medicinal and Toilet Preparation Act –1955: Objectives, Definitions, Licensing, Manufacture In bond and Outside bond, Export of alcoholic preparations, Manufacture of Ayurvedic, Homeopathic, Patent & Proprietary Preparations. Offences and Penalties.

Narcotic Drugs and Psychotropic substances Act-1985 and Rules: Objectives, Definitions, Authorities and Officers, Constitution and Functions of narcotic & Psychotropic Consultative Committee, National Fund for Controlling the Drug Abuse, Prohibition, Control and Regulation, opium poppy cultivation and production of poppy straw, manufacture, sale and export of opium, Offences and Penalties.

UNIT-IV

Study of Salient Features of Drugs and Magic Remedies Act and its rules:

Objectives, Definitions, Prohibition of certain advertisements, Classes of Exempted advertisements, Offences and Penalties.

Prevention of Cruelty to animals Act-1960: Objectives, Definitions, Institutional Animal Ethics Committee, CPCSEA guidelines for Breeding and Stocking of Animals, Performance of Experiments, Transfer and acquisition of animals for experiment, Records, Power to suspend or revoke registration, Offences and Penalties.

National Pharmaceutical Pricing Authority: Drugs Price Control Order (DPCO)-2013. Objectives, Definitions, Sale prices of bulk drugs, Retail price of formulations, Retail price and ceiling price of scheduled formulations, National List of Essential Medicines (NLEM)

UNIT-V

Pharmaceutical Legislations – A brief review, Introduction, Study of drugs enquiry committee, Health survey and development committee, Hathi committee and Mudaliar committee.

Code of Pharmaceutical ethics Definition, Pharmacist in relation to his job, trade, medical profession and his profession, Pharmacist's oath.

Medical Termination of Pregnancy Act

Right to Information Act

Introduction to Intellectual Property Rights (IPR)

Suggested Readings:

1. Forensic Pharmacy by B. Suresh.
2. Text book of Forensic Pharmacy by B.M. Mithal.
3. Hand book of drug law-by M.L. Mehra.
4. A text book of Forensic Pharmacy by N.K. Jain.
5. Drugs and Cosmetics Act/Rules by Govt. of India publications.
6. Medicinal and Toilet preparations act 1955 by Govt. of India publications.
7. Narcotic drugs and psychotropic substances act by Govt. of India publications.
8. Drugs and Magic Remedies act by Govt. of India publication.
9. Bare Acts of the said laws published by Government. Reference books (Theory).

SEMESTER - VI

17BP601T

SEMESTER-VI

MEDICINAL CHEMISTRY – III (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasis on modern techniques of rational drug design like quantitative structure activity relationship (QSAR)
- To understand the prodrug concept, combinatorial chemistry and Computer aided drug design (CADD).
- The subject also emphasizes on the chemistry, mechanism of action, metabolism,
- To know adverse effects, Structure Activity Relationships (SAR) and therapeutic uses
- To synthesis of important drugs.

Course Outcomes(CO's): On successful completion of the course the student will

1. Illustrate the classification of drugs.
2. Explain the mechanism of action of drugs.
3. Understand the chemistry of drugs with respect to their biological activity.
4. Know the metabolism, adverse effects and therapeutic value of drugs.
5. Discuss the importance of SAR of drugs.
6. Understand the importance of drug design and different techniques of drug design.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted by (*)

UNIT – I

Antibiotics: Historical background, Nomenclature, Stereochemistry, Structure activity relationship, Chemical degradation classification and important products of the following classes.

β-Lactam antibiotics: Penicillin, Cephalosporins, β- Lactamase inhibitors, Monobactams
Aminoglycosides: Streptomycin, Neomycin, Kanamycin.

Tetracyclines: Tetracycline, Oxytetracycline, Chlortetracycline, Minocycline, Doxycycline

UNIT – II

Antibiotics: Historical background, Nomenclature, Stereochemistry, Structure activity relationship, Chemical degradation classification and important products of the following classes.

Macrolide: Erythromycin Clarithromycin, Azithromycin.

Miscellaneous: Chloramphenicol*, Clindamycin.

Prodrugs: Basic concepts and application of prodrugs design.

Antimalarials: Etiology of malaria.

Quinolines: SAR, Quinine sulphate, Chloroquine*, Amodiaquine, Primaquine phosphate, Pamaquine*, Quinacrine hydrochloride, Mefloquine.

Biguanides and dihydro triazines: Cycloguanil pamoate, Proguanil.

Miscellaneous: Pyrimethamine, Artesunate, Artemether, Atovaquone.

UNIT – III

Anti-tubercular Agents: Synthetic anti tubercular agents: Isoniazid*, Ethionamide, Ethambutol, Pyrazinamide, Para amino salicylic acid.*

Anti tubercular antibiotics: Rifampicin, Rifabutin, Cycloserine Streptomycin, Capreomycin sulphate.

Urinary tract anti-infective agents Quinolones: SAR of quinolones, Nalidixic Acid, Norfloxacin, Enoxacin, Ciprofloxacin*, Ofloxacin, Lomefloxacin, Sparfloxacin, Gatifloxacin, Moxifloxacin.

Miscellaneous: Furazolidine, Nitrofurantoin*, Methanamine.

Antiviral agents: Amantadine hydrochloride, Rimantadine hydrochloride, Idoxuridine trifluoride, Acyclovir*, Gancyclovir, Zidovudine, Didanosine, Zalcitabine, Lamivudine, Loviride, Delavirdine, Ribavirin, Saquinavir, Indinavir, Ritonavir.

UNIT – IV

Antifungal agents:

Antifungal antibiotics: Amphotericin-B, Nystatin, Natamycin, Griseofulvin.

Synthetic Antifungal agents: Clotrimazole, Econazole, Butoconazole, Oxiconazole, Tioconazole, Miconazole*, Ketoconazole, Terconazole, Itraconazole, Fluconazole, Naftifine hydrochloride, Tolnaftate*.

Anti-protozoal Agents: Metronidazole*, Tinidazole, Ornidazole, Diloxanide, Iodoquinol, Pentamidine Isethionate, Atovaquone, Eflornithine.

Anthelmintics: Diethylcarbamazine citrate*, Thiabendazole, Mebendazole*, Albendazole, Niclosamide, Oxamniquine, Praziquantel, Ivermectin. Sulphonamides and Sulfones Historical development, chemistry, classification and SAR of Sulfonamides: Sulphamethizole, Sulfisoxazole, Sulphamethizine, Sulfacetamide*, Sulphapyridine, Sulfamethoxazole*, Sulphadiazine, Mefenide acetate, Sulfasalazine.

Folate reductase inhibitors: Trimethoprim*, Cotrimoxazole.

Sulfones: Dapsone*.

UNIT – V

Introduction to Drug Design: Various approaches used in drug design. Physicochemical parameters used in quantitative structure activity relationship (QSAR) such as partition coefficient, Hammett's electronic parameter, Taft's steric parameter and Hansch analysis. Pharmacophore modeling and docking techniques.

Combinatorial Chemistry: Concept and applications chemistry: solid phase and solution phase synthesis.

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicher, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

17BP607P

SEMESTER-VI

MEDICINAL CHEMISTRY- III (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To prepare drugs and medicinally important compounds by traditional and microwave method.
- To prepare drug intermediates by traditional and microwave method.
- To perform assay of drug substances.
- To draw structures of chemicals using softwares.
- To determine physicochemical properties for drugs using software.
- To screen drug likeliness.

Course Outcomes(CO's): On successful completion of the course the student will

1. Prepare drugs and medicinally important compounds by traditional and microwave method.
2. Prepare drug intermediates by traditional and microwave method.
3. Perform assay of drug substances.
4. Draw structures of chemicals using softwares.
5. Determine physicochemical properties for drugs using software.
6. Screen drug likeliness.

I Preparation of drugs and intermediates:

- 1 Sulphanilamide
- 2 7-Hydroxy, 4-methyl coumarin
- 3 Chlorobutanol
- 4 Triphenyl imidazole
- 5 Tolbutamide
- 6 Hexamine

II Assay of drugs:

- 1 Isonicotinic acid hydrazide
- 2 Chloroquine
- 3 Metronidazole
- 4 Dapsone
- 5 Chlorpheniramine maleate
- 6 Benzyl penicillin

III. Preparation of medicinally important compounds or intermediates by Microwave irradiation technique.

IV. Drawing structures and reactions using chem draw®

V. Determination of physicochemical properties such as logP, clogP, MR, Molecular weight, Hydrogen bond donors and acceptors for class of drugs course content using drug design software Drug like lieness screening (Lipinskies RO5)

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug S ynthesis by Lednicer, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

17BP602T

SEMESTER-VI

PHARMACOLOGY-III (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on respiratory and gastrointestinal system, infectious diseases, immuno-pharmacology and in addition, emphasis on the principles of toxicology and chronopharmacology.
- Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
- Comprehend the principles of toxicology and treatment of various poisonings.
- Appreciate correlation of pharmacology with related medical sciences.
- Enlight the chemotherapy of drugs on various Urinary tract infections and sexually transmitted diseases and Chemotherapy of malignancy.
- Explain about Immunopharmacology, Protein drugs, monoclonal antibodies, target drugs to antigen and biosimilars.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
2. Comprehend the principles of toxicology and treatment of various poisonings.
3. Appreciate correlation of pharmacology with related medical sciences.
4. Enlight the chemotherapy of drugs on various Urinary tract infections and sexually transmitted diseases and Chemotherapy of malignancy.
5. Explain about Immunopharmacology, Protein drugs, monoclonal antibodies, target drugs to antigen and biosimilars.
6. Describe Chronopharmacology, Biological clock and its significance.

Course Content:**UNIT-I****1. Pharmacology of drugs acting on Respiratory system:**

- a. Anti -asthmatic drugs
- b. Drugs used in the management of COPD
- c. Expectorants and antitussives
- d. Nasal decongestants
- e. Respiratory stimulants

2. Pharmacology of drugs acting on the Gastrointestinal Tract:

- a. Antiulcer agents.
- b. Drugs for constipation and diarrhoea.
- c. Appetite stimulants and suppressants.
- d. Digestants and carminatives.
- e. Emetics and anti-emetics.

UNIT-II

3. Chemotherapy:

- a. General principles of chemotherapy.
- b. Sulfonamides and cotrimoxazole.
- c. Antibiotics- Penicillins, cephalosporins, chloramphenicol, macrolides, quinolones and fluoroquinolones, tetracycline and aminoglycosides

UNIT-III

3. Chemotherapy:

- a. Antitubercular agents
- b. Antileprotic agents
- c. Antifungal agents
- d. Antiviral drugs
- e. Anthelmintics
- f. Antimalarial drugs
- g. Antiamoebic agents

UNIT-IV

3. Chemotherapy:

- l. Urinary tract infections and sexually transmitted diseases.
- m. Chemotherapy of malignancy.

4. Immunopharmacology:

- a. Immunostimulants
- b. Immunosuppressant Protein drugs, monoclonal antibodies, target drugs to antigen, biosimilars

UNIT-V

5. Principles of toxicology:

- a. Definition and basic knowledge of acute, subacute and chronic toxicity.
- b. Definition and basic knowledge of genotoxicity, carcinogenicity, teratogenicity and mutagenicity

- c. General principles of treatment of poisoning
- d. Clinical symptoms and management of barbiturates, morphine, organophosphorus compound and lead, mercury and arsenic poisoning.

6. Chronopharmacology:

- a. Definition of rhythm and cycles.
- b. Biological clock and their significance leading to chronotherapy.

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradle y R.W., Applied Therapeutics, The Clinical use of Drugs. The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher
Modern Pharmacology with clinical Applications, by Charles R.Craig& Robert.
8. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
9. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan,
- 10.N.Udupa and P.D. Gupta, Concepts in Chronopharmacology.

17BP608P

SEMESTER-VI

PHARMACOLOGY-III (Practical)**4H****4C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Calculate the dose in pharmacological experiments.
- To Perform various pharmacological screening studies.
- To Demonstrate the toxicity studies in animal models.
- To know the student's t test, ANOVA, Chi square test, Wilcoxon Signed Rank test.
- To determine the pharmacokinetic parameters by using the data.
- To evaluate the acute skin irritation, acute eye irritation and corrosion of a test substance.

Course Outcomes (CO's): On successful completion of the course the student will

1. Calculate the dose in pharmacological experiments.
2. Perform various pharmacological screening studies.
3. Demonstrate the toxicity studies in animal models.
4. Describe the student's t test, ANOVA, Chi square test, Wilcoxon Signed Rank test.
5. Determine the pharmacokinetic parameters by using the data.
6. Evaluate the acute skin irritation, acute eye irritation and corrosion of a test substance.

1. Dose calculation in pharmacological experiments.
2. Antiallergic activity by mast cell stabilization assay.
3. Study of anti-ulcer activity of a drug using pyloruslig and (SHAY) rat model and NSAIDS induced ulcer model.
4. Study of effect of drugs on gastrointestinal motility.
5. Effect of agonist and antagonists on guinea pig ileum.
6. Estimation of serum biochemical parameters by using semi- auto analyser.
7. Effect of saline purgative on frog intestine.
8. Insulin hypoglycemic effect in rabbit.
9. Test for pyrogens (rabbit method).
10. Determination of acute oral toxicity (LD50) of a drug from a given data.
11. Determination of acute skin irritation / corrosion of a test substance.
12. Determination of acute eye irritation / corrosion of a test substance.
13. Calculation of pharmacokinetic parameters from a given data.
14. Biostatistics methods in experimental pharmacology(student's t test, ANOVA).
15. Biostatistics methods in experimental pharmacology (Chi square test, Wilcoxon Signed Rank test).

***Experiments are demonstrated by simulated experiments/videos**

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradle y R.W., Applied Therapeutics, The Clinical use of Drugs. The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher
Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert.
8. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
9. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan,
- 10.N.Udupa and P.D. Gupta, Concepts in Chronopharmacology.

17BP603T

SEMESTER-VI

HERBAL DRUG TECHNOLOGY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject gives the student the knowledge of basic understanding of herbal drug industry, the quality of raw material, guidelines for quality of herbal drugs, herbal cosmetics, natural sweeteners, nutraceutical etc.
- The subject also emphasizes on Good Manufacturing Practices (GMP), patenting and regulatory issues of herbal drugs
- To elaborate the herbal cosmetics, natural sweeteners, Nutraceuticals
- To explain the patenting of herbal drugs, Herbal drugs industry.
- To demonstrate the GMP.
- To understand the study of Herbal cosmetics, excipients and formulations.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand raw material as source of herbal drugs from cultivation to herbal drug product.
2. Explain the WHO and ICH guidelines for evaluation of herbal drugs.
3. Elaborate the herbal cosmetics, natural sweeteners, Nutraceuticals
4. Explain the patenting of herbal drugs, Herbal drugs industry.
5. Demonstrate the GMP.
6. Understand the study of Herbal cosmetics, excipients and formulations.

Course content:**UNIT-I**

Herbs as raw materials: Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation Source of Herbs Selection, identification and authentication of herbal materials Processing of herbal raw material.

Biodynamic Agriculture: Good agricultural practices in cultivation of medicinal plants including Organic farming. Pest and Pest management in medicinal plants: Biopesticides / Bioinsecticides.

Indian Systems of Medicine:

- a) Basic principles involved in Ayurveda, Siddha, Unani and Homeopathy
- b) Preparation and standardization of Ayurvedic formulations viz Aristas and Asawas, Ghutika, Churna, Lehya and Bhasma.

UNIT-II

Nutraceuticals: General aspects, Market, growth, scope and types of products available in the market. Health benefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritable bowel syndrome and various Gastro intestinal diseases. Study of following herbs as health food: Alfaalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, Spirulina.

Herbal-Drug and Herb-Food Interactions: General introduction to interaction and classification. Study of following drugs and their possible side effects and interactions: Hypercium, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper & Ephedra.

UNIT-III

Herbal Cosmetics: Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gums colours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin care, hair care and oral hygiene products.

Herbal excipients: Herbal Excipients – Significance of substances of natural origin as excipients – colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavors & perfumes.

Herbal formulations : Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage forms like phytosomes.

UNIT- IV

Evaluation of Drugs WHO & ICH guidelines for the assessment of herbal drugs
Stability testing of herbal drugs.

Patenting and Regulatory requirements of natural products:

- a) Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting and Biopiracy
- b) Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma & Neem.

Regulatory Issues - Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs & Cosmetics Act for ASU drugs.

UNIT-V

General Introduction to Herbal Industry: Herbal drugs industry: Present scope and future prospects. A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants in India.

Schedule T – Good Manufacturing Practice of Indian systems of medicine Components of GMP (Schedule – T) and its objectives Infrastructural requirements, working space, storage area, machinery and equipments, standard operating procedures, health and hygiene, documentation and records.

Suggested Readings:

1. Text book of Pharmacognosy by Trease & Evans.
2. Text book of Pharmacognosy by Tyler, Brady & Robber.
3. Pharmacognosy by Kokate, Purohit and Gokhale.
4. Essential of Pharmacognosy by Dr.S.H.Ansari.
5. Pharmacognosy & Phytochemistry by V.D.Rangari.
6. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in Indian Medicine & Homeopathy)
7. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

17BP609P

SEMESTER-VI

HERBAL DRUG TECHNOLOGY (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To perform the preliminary phytochemical screening of crude drugs.
- To determine the alcohol content of Asava and Arista.
- To evaluate the excipients of natural origin.
- To prepare and standardize the creams, lotions and shampoos and syrup.
- To explain the Monograph analysis of herbal drugs.
- To determine the aldehyde content, Phenol content and total alkaloids.

Course Outcomes(CO's): On successful completion of the course the student will

1. Perform the preliminary phytochemical screening of crude drugs.
2. Determine the alcohol content of Asava and Arista.
3. Evaluate the excipients of natural origin.
4. Prepare and standardize the creams, lotions and shampoos and syrup.
5. Explain the Monograph analysis of herbal drugs.
6. Determine the aldehyde content, Phenol content and total alkaloids.

1. To perform preliminary phytochemical screening of crude drugs.
2. Determination of the alcohol content of Asava and Arista.
3. Evaluation of excipients of natural origin.
4. Incorporation of prepared and standardized extract in cosmetic formulations like creams, lotions and shampoos and their evaluation.
5. Incorporation of prepared and standardized extract in formulations like syrups, mixtures and tablets and their evaluation as per Pharmacopoeial requirements.
6. Monograph analysis of herbal drugs from recent Pharmacopoeias.
7. Determination of Aldehyde content.
8. Determination of Phenol content.
9. Determination of total alkaloids.

Suggested Readings:

1. Text book of Pharmacognosy by Trease & Evans.
2. Text book of Pharmacognosy by Tyler, Brady & Robber.
3. Pharmacognosy by Kokate, Purohit and Gokhale.
4. Essential of Pharmacognosy by Dr.S.H.Ansari.
5. Pharmacognosy & Phytochemistry by V.D.Rangari.

6. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in Indian Medicine & Homeopathy)
7. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

BIOPHARMACEUTICS AND PHARMACOKINETICS (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen and in solving the problems arising therein.
- To explain the use of plasma drug concentration-time data to calculate the pharmacokinetic parameters.
- To understand the concepts of bioavailability and bioequivalence of drug products and their significance.
- To understand various pharmacokinetic parameters, their significance & applications.
- To demonstrate a clear information on compartmental models and methods to assess the models.
- To describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the basic concepts in biopharmaceutics and pharmacokinetics and their significance.
2. Explain the use of plasma drug concentration-time data to calculate the pharmacokinetic parameters.
3. Understand the concepts of bioavailability and bioequivalence of drug products and their significance.
4. Understand various pharmacokinetic parameters, their significance & applications.
5. Demonstrate a clear information on compartmental models and methods to assess the models.
6. Describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.

Course Content:**UNIT-I**

Introduction to Biopharmaceutics Absorption; Mechanisms of drug absorption through GIT, factors influencing drug absorption through GIT, absorption of drug from Non per oral extra-vascular routes, Distribution Tissue permeability of drugs, binding of drugs, apparent, volume of drug distribution, plasma and tissue protein binding of drugs, factors affecting protein-drug binding. Kinetics of protein binding, Clinical significance of protein binding of drugs.

UNIT- II

Elimination: Drug metabolism and basic understanding metabolic pathways renal excretion of drugs, factors affecting renal excretion of drugs, renal clearance, Non renal routes of drug excretion of drugs

Bioavailability and Bioequivalence: Definition and Objectives of bioavailability, absolute and relative bioavailability, measurement of bioavailability, in-vitro drug dissolution models, in-vitro-in-vivo correlations, bioequivalence studies, methods to enhance the dissolution rates and bioavailability of poorly soluble drugs.

UNIT- III

Pharmacokinetics: Definition and introduction to Pharmacokinetics, Compartment models, Non compartment models, physiological models, One compartment open model. (a). Intravenous Injection (Bolus) (b). Intravenous infusion and (c) Extra.

UNIT- IV

Multi compartment models: Two compartment open model. IV bolus Kinetics of multiple dosing, steady state drug levels, calculation of loading and maintenance doses and their significance in clinical settings.

UNIT- V

Nonlinear Pharmacokinetics:

- a. Introduction,
- b. Factors causing Non-linearity.
- c. Michaelis-menton method of estimating parameters, Explanation with example of drugs.

Suggseted Readings:

1. Biopharmaceutics and Clinical Pharmacokinetics by, Milo Gibaldi.
2. Biopharmaceutics and Pharmacokinetics; By Robert F Notari.
3. Applied biopharmaceutics and pharmacokinetics, Leon Shargel and Andrew B.C.YU 4th edition, Prentice-Hall International edition. USA.
4. Bio pharmaceutics and Pharmacokinetics-A Treatise, By D. M. Brahmkar and Sunil B. Jaiswal, Vallabh Prakashan Pitampura, Delhi.
5. Pharmacokinetics: By Milo Gibaldi Donald, R. Mercel Dekker Inc.
6. Hand Book of Clinical Pharmacokinetics, By Milo Gibaldi and Laurie Prescott by ADIS Health Science Press.
7. Biopharmaceutics; By Swarbrick.
8. Clinical Pharmacokinetics, Concepts and Applications: By Malcolm Rowland and Thomas, N. Tozen, Lea and Febiger, Philadelphia, 1995.
10. Dissolution, Bioavailability and Bioequivalence, By Abdou H.M, Mack, Publishing

Company, Pennsylvania 1989.

11. Biopharmaceutics and Clinical Pharmacokinetics-An introduction 4th edition Revised and expanded by Rebert F Notari Marcel Dekker Inn, New York and Basel, 1987.
12. Remington's Pharmaceutical Sciences, By Mack Publishing Company, Pennsylvania

17BP605T

SEMESTER-VI

PHARMACEUTICAL BIOTECHNOLOGY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- ☐ Biotechnology has a long promise to revolutionize the biological sciences and technology.
- ☐ Scientific application of biotechnology in the field of genetic engineering, medicine and fermentation technology makes the subject interesting.
- ☐ Biotechnology is leading to new biological revolutions in diagnosis, prevention and cure of diseases, new and cheaper pharmaceutical drugs.
- ☐ Biotechnology has already produced transgenic crops and animals and the future promises lot more.
- ☐ It is basically a research-based subject.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understanding the importance of Immobilized enzymes in Pharmaceutical Industries.
2. Explain Genetic engineering applications in relation to production of pharmaceuticals.
3. Understand the Importance of Monoclonal antibodies in Industries.
4. Appreciate the use of microorganisms in fermentation technology.
5. Discover different blotting techniques in pharmaceutical biotechnology.
6. Acquire scientific application in the field of genetic engineering, medicine and fermentation technology.

UNIT -I

- a) Brief introduction to Biotechnology with reference to Pharmaceutical Sciences.
- b) Enzyme Biotechnology- Methods of enzyme immobilization and applications.
- c) Biosensors- Working and applications of biosensors in Pharmaceutical Industries.
- d) Brief introduction to Protein Engineering.
- e) Use of microbes in industry. Production of Enzymes- General consideration - Amylase, Catalase, Peroxidase, Lipase, Protease, Penicillinase.
- f) Basic principles of genetic engineering.

UNIT- II

- a) Study of cloning vectors, restriction endonucleases and DNA ligase.
- b) Recombinant DNA technology. Application of genetic engineering in medicine.
- c) Application of r DNA technology and genetic engineering in the production of: i) Interferon ii) Vaccines- hepatitis- B iii) Hormones-Insulin.

d) Brief introduction to PCR.

UNIT- III

Types of immunity- humoral immunity, cellular immunity

- a) Structure of Immunoglobulins.
- b) Structure and Function of MHC.
- c) Hypersensitivity reactions, Immune stimulation and Immune suppressions.
- d) General method of the preparation of bacterial vaccines, toxoids, viral vaccine, antitoxins, serum-immune blood derivatives and other products relative to immunity.
- e) Storage conditions and stability of official vaccines.
- f) Hybridoma technology- Production, Purification and Applications.
- g) Blood products and Plasma Substitutes.

UNIT -IV

- a) Immuno blotting techniques- ELISA, Western blotting, Southern blotting.
- b) Genetic organization of Eukaryotes and Prokaryotes.
- c) Microbial genetics including transformation, transduction, conjugation, plasmids and transposons.
- d) Introduction to Microbial biotransformation and applications.
- e) Mutation: Types of mutation/mutants.

UNIT -V

- a) Fermentation methods and general requirements, study of media, equipments, sterilization methods, aeration process, stirring.
- b) Large scale production fermenter design and its various controls.
- c) Study of the production of - penicillins, citric acid, Vitamin B12, Glutamic acid, Griseofulvin.
- d) Blood Products: Collection, Processing and Storage of whole human blood, dried human plasma, plasma Substitutes.

Suggested Readings:

1. B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of Recombinant DNA: ASM Press Washington D.C.Society of Chemistry.
2. Zaborsky: Immobilized Enzymes, CRC Press, Degrand, Ohio.
3. S.B. Primrose: Molecular Biotechnology (Second Edition) Blackwell Scientific Publication.
4. Stanbury F., P., Whitaker A., and Hall J., S., Principles of fermentation technology, 2nd edition, Aditya books Ltd., New Delhi.

17BP606T

SEMESTER –VI

PHARMACEUTICAL QUALITY ASSURANCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course deals with the various aspects of quality control and quality assurance aspects of pharmaceutical industries.
- It deals with the important aspects like cGMP, QC tests, documentation, quality certifications and regulatory affairs.
- To discuss the scope of quality certifications applicable to pharmaceutical industries.
- To elaborate the responsibilities of QA and QC departments.
- To understand the GLP and its importance
- To describe the warehouse and good warehouse practice.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understanding the cGMP aspects in a pharmaceutical industry.
2. Explain the importance of documentation.
3. Discuss the scope of quality certifications applicable to pharmaceutical industries.
4. Elaborate the responsibilities of QA and QC departments.
5. Understand the GLP and its importance
6. Describe the warehouse and good warehouse practice.

Course content:**UNIT – I**

Quality Assurance and Quality Management concepts: Definition and concept of Quality control, Quality assurance and GMP. Total Quality Management (TQM): Definition, elements, philosophies

ICH Guidelines: purpose, participants, process of harmonization, Brief overview of QSEM, with special emphasis on Q-series guidelines, ICH stability testing guidelines. Quality by design (QbD): Definition, overview, elements of QbD program, tools ISO 9000 & ISO14000: Overview, Benefits, Elements, steps for registration NABL accreditation : Principles and procedures

UNIT - II

Organization and personnel: Personnel responsibilities, training, hygiene and personal records. Premises: Design, construction and plant layout, maintenance, sanitation, environmental control, utilities and maintenance of sterile areas, control of contamination.

Equipments and raw materials: Equipment selection, purchase specifications, maintenance, purchase specifications and maintenance of stores for raw materials.

UNIT – III

Quality Control: Quality control test for containers, rubber closures and secondary packing materials.

Good Laboratory Practices: General Provisions, Organization and Personnel, Facilities, Equipment, Testing Facilities Operation, Test and Control Articles, Protocol for Conduct of a Nonclinical Laboratory Study, Records and Reports, Disqualification of Testing Facilities.

UNIT – IV

Complaints: Complaints and evaluation of complaints, Handling of return good, recalling and waste disposal.

Document maintenance in pharmaceutical industry: Batch Formula Record, Master Formula Record, SOP, Quality audit, Quality Review and Quality documentation, Reports and documents, distribution records.

UNIT – V

Calibration and Validation: Introduction, definition and general principles of calibration, qualification and validation, importance and scope of validation, types of validation, validation master plan. Calibration of pH meter, Qualification of UV-Visible spectrophotometer, General principles of Analytical method Validation.

Warehousing: Good warehousing practice, materials management

Suggested Readings:

1. Quality Assurance Guide by organization of Pharmaceutical Products of India.
2. Good Laboratory Practice Regulations, 2nd Edition, Sandy Weinberg Vol. 69.
3. Quality Assurance of Pharmaceuticals- A compendium of Guide lines and Related materials Vol I WHO Publications.
4. A guide to Total Quality Management- Kushik Maitra and Sedhan K Ghosh.
5. How to Practice GMP's – P P Sharma.
6. ISO 9000 and Total Quality Management – Sadhank G Ghosh.
7. The International Pharmacopoeia – Vol I, II, III, IV- General Methods of Analysis and Quality specification for Pharmaceutical Substances, Excipients and Dosage forms.
8. Good laboratory Practices – Marcel Deckker Series.
9. ICH guidelines, ISO 9000 and 14000 guidelines.

SEMESTER VII

17BP701T

SEMESTER – VII

INSTRUMENTAL METHODS OF ANALYSIS (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs.
- This subject is designed to impart a fundamental knowledge on the principles and instrumentation of spectroscopic and chromatographic technique.
- This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.
- To discuss the applications of analytical techniques.
- To perform quantitative analysis of drugs using various analytical instruments.
- To perform qualitative analysis of drugs using various analytical instruments

Course Outcomes: On successful completion of the course the student will

1. Understand the interaction of matter with electromagnetic radiations and its applications in drug analysis.
2. Describe the instrumentation of spectroscopy techniques.
3. Understand the chromatographic separation and analysis of drugs.
4. Discuss the applications of analytical techniques.
5. Perform quantitative analysis of drugs using various analytical instruments.
6. Perform qualitative analysis of drugs using various analytical instruments.

Course Content:**UNIT –I**

UV Visible spectroscopy: Electronic transitions, chromophores, auxochromes, spectral shifts, solvent effect on absorption spectra, Beer and Lambert's law, Derivation and deviations. Instrumentation - Sources of radiation, wavelength selectors, sample cells, detectors- Photo tube, Photomultiplier tube, Photo voltaic cell, Silicon Photodiode. Applications - Spectrophotometric titrations, Single component and multi component analysis.

Fluorimetry: Theory, Concepts of singlet, doublet and triplet electronic states, internal and external conversions, factors affecting fluorescence, quenching, instrumentation and applications.

UNIT –II

IR spectroscopy: Introduction, fundamental modes of vibrations in poly atomic molecules, sample handling, factors affecting vibrations Instrumentation - Sources of radiation, wavelength selectors, detectors - Golay cell, Bolometer, Thermocouple, Thermister, Pyroelectric detector and applications.

Flame Photometry-Principle, interferences, instrumentation and applications

Atomic absorption spectroscopy- Principle, interferences, instrumentation and applications.

Nepheloturbidometry- Principle, instrumentation and applications.

UNIT –III

Introduction to chromatography:

Adsorption and partition column chromatography-Methodology, advantages, disadvantages and applications.

Thin layer chromatography- Introduction, Principle, Methodology, R_f values, advantages, disadvantages and applications.

Paper chromatography-Introduction, methodology, development techniques, advantages, disadvantages and applications.

Electrophoresis– Introduction, factors affecting electrophoretic mobility, Techniques of paper, gel, capillary electrophoresis, applications.

UNIT –IV

Gas chromatography - Introduction, theory, instrumentation, derivatization, temperature programming, advantages, disadvantages and applications.

High performance liquid chromatography (HPLC)-Introduction, theory, Instrumentation, advantages and applications.

UNIT –V

Ion exchange chromatography-Introduction, classification, ion exchange resins, properties, mechanism of ion exchange process, factors affecting ion exchange, methodology and applications.

Gel chromatography- Introduction, theory, instrumentation and applications.

Affinity chromatography- Introduction, theory, instrumentation and applications.

Suggested Readings:

1. Instrumental Methods of Chemical Analysis by B.K Sharma.
2. Organic spectroscopy by Y.R Sharma.
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors.
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel.
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake.
6. Organic Chemistry by I. L. Finar.
7. Organic spectroscopy by William Kemp.
8. Quantitative Analysis of Drugs by D. C. Garrett.
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi.
10. Spectrophotometric identification of Organic Compounds by Silverstein.

17BP705P

SEMESTER – VII

INSTRUMENTAL METHODS OF ANALYSIS (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To estimate the samples using analytical instruments.
- To perform assay of drug samples using analytical instruments
- To determine the effect of solvents on absorption maxima.
- To separate the mixtures of sample using chromatographic techniques.
- To demonstrate HPLC.
- To demonstrate gas chromatography.

Course Outcomes (CO's): On successful completion of the course the student will

1. Estimate the samples using analytical instruments.
 2. Perform assay of drug samples using analytical instruments
 3. Determine the effect of solvents on absorption maxima.
 4. Separate the mixtures of sample using chromatographic techniques.
 5. Demonstrate HPLC.
 6. Demonstrate gas chromatography.
-
- 1 Determination of absorption maxima and effect of solvents on absorption maxima of organic compounds.
 - 2 Estimation of dextrose by colorimetry.
 - 3 Estimation of sulfanilamide by colorimetry.
 - 4 Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy.
 - 5 Assay of paracetamol by UV- Spectrophotometry.
 - 6 Estimation of quinine sulfate by fluorimetry.
 - 7 Study of quenching of fluorescence.
 - 8 Determination of sodium by flame photometry.
 - 9 Determination of potassium by flame photometry.
 - 10 Determination of chlorides and sulphates by nephelo turbidometry.
 - 11 Separation of amino acids by paper chromatography.
 - 12 Separation of sugars by thin layer chromatography.
 - 13 Separation of plant pigments by column chromatography.
 - 14 Demonstration experiment on HPLC.
 - 15 Demonstration experiment on Gas Chromatography.

Suggested Readings:

1. Instrumental Methods of Chemical Analysis by B.K Sharma.
2. Organic spectroscopy by Y.R Sharma.
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors.
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel.
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake.
6. Organic Chemistry by I. L. Finar.
7. Organic spectroscopy by William Kemp.
8. Quantitative Analysis of Drugs by D. C. Garrett.
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi.
10. Spectrophotometric identification of Organic Compounds by Silverstein.

17BP702T

SEMESTER –VII

INDUSTRIAL PHARMACY - II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market
- To understand the process of technology transfer from lab scale to commercial batch.
- To elicit different Laws and Acts that regulate pharmaceutical industry.
- To understand the approval process and regulatory requirements for drug products.
- To detailed description on regulatory requirements followed in India.
- To exploit knowledge on pharmaceutical product development and translation from laboratory to market.

Course Outcomes (CO's): On successful completion of the course the student will

1. Identify the process of pilot plant and scale up of pharmaceutical dosage forms.
2. Understand the process of technology transfer from lab scale to commercial batch.
3. Elicit different Laws and Acts that regulate pharmaceutical industry.
4. Understand the approval process and regulatory requirements for drug products.
5. Detailed description on regulatory requirements followed in India.
6. Exploit knowledge on pharmaceutical product development and translation from laboratory to market.

Course Content:**UNIT-I**

Pilot plant scale up techniques: General considerations - including significance of personnel requirements, space requirements, raw materials, Pilot plant scale up considerations for solids, liquid orals, semi solids and relevant documentation, SUPAC guidelines, Introduction to platform technology.

UNIT-II

Technology development and transfer: WHO guidelines for Technology Transfer (TT): Terminology, Technology transfer protocol, Quality risk management, Transfer from R& D to production (Process, packaging and cleaning), Granularity of TT Process (API, excipients, finished products, packaging materials) Documentation, Premises and equipments, qualification and validation, quality control, analytical method transfer, Approved regulatory bodies and agencies, Commercialization - practical aspects and problems (case studies), TT agencies in India - APCTD, NRDC, TIFAC, BC IL, TBSE / SIDBI; TT related documentation - confidentiality agreement, licensing, MoUs, legal issues.

UNIT-III

Regulatory affairs: Introduction, Historical overview of Regulatory Affairs, Regulatory authorities, Role of Regulatory affairs department, Responsibility of Regulatory Affairs Professionals.

Regulatory requirements for drug approval: Drug Development Teams, Non-Clinical Drug Development, Pharmacology, Drug Metabolism and Toxicology, General considerations of Investigational New Drug (IND) Application, Investigator's Brochure (IB) and New Drug Application (NDA), Clinical research / BE studies, Clinical Research Protocols, Biostatistics in Pharmaceutical Product Development, Data Presentation for FDA Submissions, Management of Clinical Studies.

UNIT-IV

Quality management systems: Quality management & Certifications: Concept of Quality, Total Quality Management, Quality by Design (QbD), Six Sigma concept, Out of Specifications (OOS), Change control, Introduction to ISO 9000 series of quality systems standards, ISO 14000, NABL, GLP

UNIT-V

Indian Regulatory Requirements: Central Drug Standard Control Organization (CDSCO) and State Licensing Authority: Organization, Responsibilities, Certificate of Pharmaceutical Product (COPP), Regulatory requirements and approval procedures for New Drugs.

Suggested Readings:

1. Regulatory Affairs from Wikipedia, the free encyclopedia modified on 7th April available at http://en.wikipedia.org/wiki/Regulatory_Affairs.
2. International Regulatory Affairs Updates, 2005. available at <http://www.iraup.com/about.php>
3. Douglas J Pisano and David S. Mantus. Text book of FDA Regulatory Affairs A Guide for Prescription Drugs, Medical Devices, and Biologics' Second Edition.
4. Regulatory Affairs brought by learning plus, inc. available at <http://www.cgmp.com/ra.htm>.

17BP703T

SEMESTER -VII

PHARMACY PRACTICE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- In the changing scenario of pharmacy practice in India, for successful practice of Hospital Pharmacy, the students are required to learn various skills like drug distribution, drug information, and therapeutic drug monitoring for improved patient care.
- In community pharmacy, students will be learning various skills such as dispensing of drugs, responding to minor ailments by providing suitable safe medication, patient counselling for improved patient care in the community set up.
- Students will effectively apply principles of drug store management and inventory control to medication use.
- Students will provide patient-centered care to diverse patients using the best available evidence and monitor drug therapy of patient through medication chart review, obtain medication history interview and counsel the patients, identify drug related problems.
- Students will engage in innovative activities by making use of the knowledge of clinical trials
- Students will exhibit professional ethics by producing safe and appropriate medication use throughout society

Course Outcomes: On successful completion of the course the student will

1. Students will demonstrate knowledge and ability to use principles of therapeutics, health behavior, social and administrative aspects in the practice of pharmacy.
2. Students will use knowledge of drug distribution methods in hospital and apply it in the practice of pharmacy.
3. Students will effectively apply principles of drug store management and inventory control to medication use.
4. Students will provide patient-centered care to diverse patients using the best available evidence and monitor drug therapy of patient through medication chart review, obtain medication history interview and counsel the patients, identify drug related problems.
5. Students will engage in innovative activities by making use of the knowledge of clinical trials
6. Students will exhibit professional ethics by producing safe and appropriate medication use throughout society

UNIT- I

a) Hospital and its organization: Definition, Classification of hospital- Primary, Secondary and Tertiary hospitals, Classification based on clinical and non- clinical basis, Organization Structure of a Hospital, and Medical staffs involved in the hospital and their functions.

b) Hospital pharmacy and its organization: Definition, functions of hospital pharmacy, Organization structure, Location, Layout and staff requirements, and Responsibilities and functions of hospital pharmacists.

c) Adverse drug reaction: Classifications - Excessive pharmacological effects, secondary pharmacological effects, idiosyncrasy, allergic drug reactions, genetically determined toxicity, toxicity following sudden withdrawal of drugs, Drug interaction- beneficial interactions, adverse interactions, and pharmacokinetic drug interactions, Methods for detecting drug interactions, spontaneous case reports and record linkage studies, and Adverse drug reaction reporting and management.

d) Community Pharmacy: Organization and structure of retail and wholesale drug store, types and design, Legal requirements for establishment and maintenance of a drug store, Dispensing of proprietary products, maintenance of records of retail and wholesale drug store.

UNIT- II

a) Drug distribution system in a hospital: Dispensing of drugs to inpatients, types of drug distribution systems, charging policy and labelling, Dispensing of drugs to ambulatory patients, and Dispensing of controlled drugs.

b) Hospital formulary: Definition, contents of hospital formulary, Differentiation of hospital formulary and Drug list, preparation and revision, and addition and deletion of drug from hospital formulary.

c) Therapeutic drug monitoring: Need for Therapeutic Drug Monitoring, Factors to be considered during the Therapeutic Drug Monitoring, and Indian scenario for Therapeutic Drug Monitoring.

d) Medication adherence: Causes of medication non-adherence, pharmacist role in the medication adherence, and monitoring of patient medication adherence.

e) Patient medication history interview: Need for the patient medication history interview, medication interview forms.

f) Community pharmacy management: Financial, materials, staff, and infrastructure requirements.

UNIT III

a) Pharmacy and therapeutic committee: Organization, functions, Policies of the pharmacy and therapeutic committee in including drugs into formulary, inpatient and outpatient prescription, automatic stop order, and emergency drug list preparation.

b) Drug information services: Drug and Poison information centre, Sources of drug information, Computerised services, and storage and retrieval of information.

c) Patient counseling: Definition of patient counseling; steps involved in patient counseling, and Special cases that require the pharmacist.

d) Education and training program in the hospital: Role of pharmacist in the education and training program, Internal and external training program, Services to the nursing homes/clinics, Code of ethics for community pharmacy, and Role of pharmacist in the interdepartmental communication and community health education.

e) Prescribed medication order and communication skills: Prescribed medication order-interpretation and legal requirements, and Communication skills- communication with prescribers and patients.

UNIT- IV

- a) Budget preparation and implementation:** Budget preparation and implementation
- b) Clinical Pharmacy:** Introduction to Clinical Pharmacy, Concept of clinical pharmacy, functions and responsibilities of clinical pharmacist, Drug therapy monitoring - medication chart review, clinical review, pharmacist intervention, Ward round participation, Medication history and Pharmaceutical care. Dosing pattern and drug therapy based on Pharmacokinetic & disease pattern.
- c) Over the counter (OTC) sales:** Introduction and sale of over the counter, and Rational use of common over the counter medications.

UNIT- V

- a) Drug store management and inventory control:** Organisation of drug store, types of materials stocked and storage conditions, Purchase and inventory control: principles, purchase procedure, purchase order, procurement and stocking, Economic order quantity, Reorder quantity level, and Methods used for the analysis of the drug expenditure.
- b) Investigational use of drugs:** Description, principles involved, classification, control, identification, role of hospital pharmacist, advisory committee.
- c) Interpretation of Clinical Laboratory Tests:** Blood chemistry, hematology, and urinalysis

Suggested Readings:

1. Merchant S.H. and Dr. J.S.Quadry. *A textbook of hospital pharmacy*, 4th ed. Ahmadabad: B.S. Shah Prakakshan; 2001.
2. Parthasarathi G, Karin Nyfort-Hansen, Milap C Nahata. *A textbook of Clinical Pharmacy Practice- essential concepts and skills*, 1st ed. Chennai: Orient Longman Private Limited; 2004.
3. William E. Hassan. *Hospital pharmacy*, 5th ed. Philadelphia: Lea & Febiger;1986.
4. Tipnis Bajaj. *Hospital Pharmacy*, 1st ed. Maharashtra: Career Publications; 2008.
5. Scott LT. *Basic skills in interpreting laboratory data*, 4thed. American Society of Health System Pharmacists Inc; 2009.
6. Parmar N.S. *Health Education and Community Pharmacy*, 18th ed. India: CBS Publishers & Distributers; 2008.

Suggesting Journals:

1. Therapeutic drug monitoring. ISSN: 0163-4356.
2. Journal of pharmacy practice. ISSN : 0974-8326.
3. American journal of health system pharmacy. ISSN: 1535-2900 (online).
4. Pharmacytimes(Monthly magazine).

SEMESTER – VII

NOVEL DRUG DELIVERY SYSTEMS (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart basic knowledge on the area of novel drug delivery systems.
- To demonstrate the criteria for selection of drugs for the development of Novel drug delivery systems.
- To understand the criteria for selection of polymers for the development of Novel drug delivery systems.
- To express the Formulation characteristics of a new drug delivery systems.
- To explain the evaluation techniques followed in each drug delivery systems.
- To exploit new technologies to already existing drugs for enhancing the therapeutic effect.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand various approaches for development of novel drug delivery systems.
2. Demonstrate the criteria for selection of drugs for the development of Novel drug delivery systems.
3. Understand the criteria for selection of polymers for the development of Novel drug delivery systems.
4. Express the Formulation characteristics of a new drug delivery systems.
5. Explain the evaluation techniques followed in each drug delivery systems.
6. Exploit new technologies to already existing drugs for enhancing the therapeutic effect.

Course content:**UNIT-I**

Controlled drug delivery systems: Introduction, terminology/definitions and rationale, advantages, disadvantages, selection of drug candidates. Approaches to design controlled release formulations based on diffusion, dissolution and ion exchange principles. Physicochemical and biological properties of drugs relevant to controlled release formulations.

Polymers: Introduction, classification, properties, advantages and application of polymers in formulation of controlled release drug delivery systems.

UNIT-II

Microencapsulation: Definition, advantages and disadvantages, microspheres /microcapsules, microparticles, methods of microencapsulation, applications.

Mucosal Drug Delivery system: Introduction, Principles of bioadhesion / mucoadhesion, concepts, advantages and disadvantages, transmucosal permeability and formulation considerations of buccal delivery systems.

Implantable Drug Delivery Systems: Introduction, advantages and disadvantages, concept of implants and osmotic pump.

UNIT-III

Transdermal Drug Delivery Systems: Introduction, Permeation through skin, factors affecting permeation, permeation enhancers, basic components of TDDS, formulation approaches.

Gastroretentive drug delivery systems: Introduction, advantages, disadvantages, approaches for GRDDS – Floating, high density systems, inflatable and gastroadhesive systems and their applications.

Nasopulmonary drug delivery systems: Introduction to Nasal and Pulmonary routes of drug delivery, Formulation of Inhalers (dry powder and metered dose), nasal sprays, nebulizers

UNIT-IV

Targeted drug Delivery: Concepts and approaches advantages and disadvantages, introduction to liposomes, niosomes, nanoparticles, monoclonal antibodies and their applications.

UNIT-V

Ocular Drug Delivery Systems: Introduction, intra ocular barriers and methods to overcome – Preliminary study, ocular formulations and ocuserts.

Intrauterine Drug Delivery Systems: Introduction, advantages and disadvantages, development of intra uterine devices (IUDs) and applications.

Suggested Readings:

1. Y W. Chien, Novel Drug Delivery Systems, 2nd edition, revised and expanded, Marcel Dekker, Inc., New York, 1992.
2. Robinson, J. R., Lee V. H. L, Controlled Drug Delivery Systems, Marcel Dekker, Inc., New York, 1992.
3. Encyclopedia of Controlled Delivery. Edith Mathiowitz, Published by Wiley Interscience Publication, John Wiley and Sons, Inc, New York. Chichester/Weinheim
4. N.K. Jain, Controlled and Novel Drug Delivery, CBS Publishers & Distributors, New Delhi, First edition 1997 (reprint in 2001).
5. S.P. Vyas and R.K. Khar, Controlled Drug Delivery -concepts and advances, Vallabhrakashan, New Delhi, First edition 2002.

Suggested Journals:

1. Indian Journal of Pharmaceutical Sciences (IPA).
2. Indian Drugs (IDMA).
3. Journal of Controlled Release (Elsevier Sciences).
4. Drug Development and Industrial Pharmacy (Marcel & Decker).
5. International Journal of Pharmaceutics (Elsevier Sciences).

SEMESTER VIII

17BP801T

SEMESTER-VIII

BIOSTATISTICS AND RESEARCH METHODOLOGY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To understand the applications of Biostatistics in Pharmacy.
- This subject deals with descriptive statistics, Graphics, Correlation, Regression and logistic regression Probability theory
- To know sampling technique, Parametric tests, Non Parametric tests and ANOVA
- To know Introduction to Design of Experiments, Phases of Clinical trials
- To understand observational and experimental studies, SPSS, R and MINITAB statistical software's,
- To analyse the statistical data using Excel.

Course Outcomes (CO's): On successful completion of the course the student will

1. Measure the central tendency, dispersion and correlation.
2. Calculate regression analyse and probability.
3. Perform parametric and non-parametric tests.
4. Design methodology for research and draw graphs.
5. Design and analyse experiments.
6. Know the operation of M.S. Excel, SPSS, R and MINITAB[®], DoE (Design of Experiment)

Course content:**UNIT-I****Introduction:** Statistics, Biostatistics, Frequency distribution.**Measures of central tendency:** Mean, Median, Mode- Pharmaceutical examples.**Measures of dispersion:** Dispersion, Range, standard deviation, Pharmaceutical problems.**Correlation:** Definition, Karl Pearson's coefficient of correlation, Multiple correlation - Pharmaceutical examples.**UNIT-II**

Regression: Curve fitting by the method of least squares, fitting the lines $y = a + bx$ and $x = a + by$, Multiple regression, standard error of regression- Pharmaceutical Examples

Probability: Definition of probability, Binomial distribution, Normal distribution, Poisson's distribution, properties - problems

Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM) - Pharmaceutical examples.

Parametric test: t-test(Sample, Pooled or Unpaired and Paired) , ANOVA, (One way and Two way), Least Significance difference.

UNIT-III

Non Parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, Kruskal-Wallis test, Friedman Test.

Introduction to Research: Need for research, Need for design of Experiments, Experimental Design Technique, plagiarism.

Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plot graph.

Designing the methodology: Sample size determination and Power of a study, Report writing and presentation of data, Protocol, Cohort studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

UNIT-IV

Blocking and confounding system for Two-level factorials

Regression modeling: Hypothesis testing in Simple and Multiple regression models **Introduction to Practical components of Industrial and Clinical Trials Problems:** Statistical Analysis Using Excel, SPSS, MINITAB[®], DESIGN OF EXPERIMENTS, R - Online Statistical Software's to Industrial and Clinical trial approach.

UNIT-V

Design and Analysis of experiments:

Factorial Design: Definition, 2^2 , 2^3 design. Advantage of factorial design

Response Surface methodology: Central composite design, Historical design, Optimization Techniques.

Suggested Readings:

1. Pharmaceutical statistics- Practical and clinical applications, Sanford Bolton, publisher Marcel Dekker Inc. New York.
2. Fundamental of Statistics – Himalaya Publishing House- S.C.Guptha.
3. Design and Analysis of Experiments –PHI Learning Private Limited, R. Pannarselvam.
4. Design and Analysis of Experiments – Wiley Students Edition, Douglas and C. Montgomery.

17BP 802T

SEMESTER-VIII

SOCIAL AND PREVENTIVE PHARMACY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The purpose of this course is to introduce to students a number of health issues and their challenges.
- This course also introduced a number of national health programmes.
- The roles of the pharmacist in these contexts are also discussed.
- To evaluate alternative ways of solving problems related to health and pharmaceutical issues
- To understand general principles of prevention and control of diseases
- To Know the functions of Primary Health Centres.

Course Outcomes (CO's): On successful completion of the course the student will

1. Measure the central tendency, dispersion and correlation.
2. Acquire high consciousness/realization of current issues related to health and pharmaceutical problems within the country and worldwide.
3. Have a critical way of thinking based on current healthcare development.
4. Evaluate alternative ways of solving problems related to health and pharmaceutical issues
5. General principles of prevention and control of diseases
6. Know the functions of Primary Health Centres.

Course content:**UNIT I:**

Concept of health and disease: Definition, concepts and evaluation of public health. Understanding the concept of prevention and control of disease, social causes of diseases and social problems of the sick.

Social and health education: Food in relation to nutrition and health, Balanced diet, Nutritional deficiencies, Vitamin deficiencies, Malnutrition and its prevention.

Sociology and health: Socio cultural factors related to health and disease, Impact of urbanization on health and disease, Poverty and health.

Hygiene and health: personal hygiene and health care; avoidable habits.

UNIT II:

Preventive medicine: General principles of prevention and control of diseases such as cholera, SARS, Ebola virus, influenza, acute respiratory infections, malaria, chicken guinea, dengue, lymphatic filariasis, pneumonia, hypertension, diabetes mellitus, cancer, drug addiction-drug substance abuse.

UNIT III:

National health programs, its objectives, functioning and outcome of the following: HIV AND AIDS control programme, TB, Integrated disease surveillance program (IDSP), National

leprosy control programme, National mental health program, National programme for prevention and control of deafness, Universal immunization programme, National programme for control of blindness, Pulse polio programme.

UNIT IV:

National health intervention programme for mother and child, National family welfare programme, National tobacco control programme, National Malaria Prevention Program, National programme for the health care for the elderly, Social health programme; role of WHO in Indian national program

UNIT V:

Community services in rural, urban and school health: Functions of PHC, Improvement in rural sanitation, national urban health mission, Health promotion and education in school.

Suggested Readings:

1. Short Textbook of Preventive and Social Medicine, Prabhakara GN, 2nd Edition, 2010, ISBN: 9789380704104, JAYPEE Publications
2. Textbook of Preventive and Social Medicine (Mahajan and Gupta), Edited by Ro y Rabindra Nath, Saha Indranil, 4th Edition, 2013, ISBN: 9789350901878, JAYPEE Publications
3. Review of Preventive and Social Medicine (Including Biostatistics), Jain Vivek, 6th Edition, 2014, ISBN: 9789351522331, JAYPEE Publications
4. Essentials of Community Medicine—A Practical Approach, Hiremath Lalita D, Hiremath Dhananjaya A, 2nd Edition, 2012, ISBN: 9789350250440, JAYPEE Publications
5. Park Textbook of Preventive and Social Medicine, K Park, 21st Edition, 2011, IS BN-14: 9788190128285, BANARSIDAS BHANOT PUBLISHERS.
6. Community Pharmacy Practice, Ramesh Adepu, BSP publishers, Hyderabad

Suggested Journals:

1. Research in Social and Administrative Pharmacy, Elsevier, Ireland

17BP803ET

SEMESTER-VIII

PHARMA MARKETING MANAGEMENT (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The pharmaceutical industry not only needs highly qualified researchers, chemists and, technical people
- It also requires skilled managers who can take the industry forward by managing and taking the complex decisions which are imperative for the growth of the industry.
- The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.
- To demonstrate the new products decision like labeling, packaging etc.
- To discover promotion criteria's to be followed in Indian market.
- To exploit new technologies to already existing drugs for enhancing the therapeutic effect

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the market concepts.
2. Demonstrate the new products decision like labeling, packaging etc.
3. Discover promotion criteria's to be followed in Indian market.
4. Explain the role of professional sales representative.
5. Interpret the merging concepts in the ever-developing market.
6. Exploit new technologies to already existing drugs for enhancing the therapeutic effect

UNIT -I

Marketing: Definition, general concepts and scope of marketing; Distinction between marketing & selling; Marketing environment; Industry and competitive analysis; Analyzing consumer buying behavior; industrial buying behavior.

Pharmaceutical market: Quantitative and qualitative aspects; size and composition of the market; demographic descriptions and socio-psychological characteristics of the consumer; market segmentation & targeting. Consumer profile; Motivation and prescribing habits of the physician; patients' choice of physician and retail pharmacist. Analyzing the Market; Role of market research.

UNIT -II

Product decision: Classification, product line and product mix decisions, product life cycle, product portfolio analysis; product positioning; New product decisions; Product branding, packaging and labeling decisions, Product management in pharmaceutical industry.

UNIT- III

Promotion: Methods, determinants of promotional mix, promotional budget; An overview of personal selling, advertising, direct mail, journals, sampling, retailing, medical exhibition, public relations, online promotional techniques for OTC Products.

UNIT- IV

Pharmaceutical marketing channels: Designing channel, channel members, selecting the appropriate channel, conflict in channels, physical distribution management: Strategic importance, tasks in physical distribution management.

Professional sales representative (PSR): Duties of PSR, purpose of detailing, selection and training, supervising, norms for customer calls, motivating, evaluating, compensation and future prospects of the PSR.

UNIT- V

Pricing: Meaning, importance, objectives, determinants of price; pricing methods and strategies, issues in price management in pharmaceutical industry. An overview of DPCO (Drug Price Control Order) and NPPA (National Pharmaceutical Pricing Authority).

Emerging concepts in marketing: Vertical & Horizontal Marketing; Rural Marketing; Consumerism; Industrial Marketing; Global Marketing.

Suggested Readings:

1. Philip Kotler and Kevin Lane Keller: Marketing Management, Prentice Hall of India, New Delhi.
2. Walker, Boyd and Larreche : Marketing Strategy- Planning and Implementation, Tata MC GrawHill, New Delhi.
3. Dhruv Grewal and Michael Levy: Marketing, Tata MC Graw Hill.
4. Arun Kumar and N Menakshi: Marketing Management, Vikas Publishing, India.
5. Rajan Saxena: Marketing Management; Tata MC Graw-Hill (India Edition).
6. Ramaswamy, U.S & Nanakamari, S: Marketing Management: Global Perspective, Indian Context, Macmillan India, New Delhi.
7. Shanker, Ravi: Service Marketing, Excell Books, New Delhi
8. Subba Rao Changanti, Pharmaceutical Marketing in India (GIFT – Excel series) Excel Publications.

17BP804ET

SEMESTER-VIII

PHARMACEUTICAL REGULATORY SCIENCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart the fundamental knowledge on the regulatory requirements for approval of new drugs, and drug products in regulated markets of India & other countries like US, EU, Japan, Australia, UK etc.
- It prepares the students to learn in detail on the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products.
- To know the process of drug discovery, development and generic product development
- To understand the regulatory approval process and registration procedures for API and drug products in various countries
- To learn the basic understanding of regulations of India with other global regulated markets
- It gives basic understanding of developing clinical trial protocols

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the process of drug discovery, development and generic product development
2. Describe the regulatory approval process and registration procedures for API and drug products in various countries
3. Learn the basic understanding of regulations of India with other global regulated markets
4. Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
5. Explain basic understanding of developing clinical trial protocols
6. Understand the concept of pharmacovigilance and its significance

Course content:**UNIT I**

New Drug Discovery and development: Stages of drug discovery, Drug development process, pre-clinical studies, non-clinical activities, clinical studies, Innovator and generics, Concept of generics, Generic drug product development.

UNIT II

Regulatory Approval Process: Approval processes and timelines involved in Investigational New Drug (IND), New Drug Application (NDA), Abbreviated New Drug Application (ANDA). Changes to an approved NDA / ANDA.

Regulatory authorities and agencies: Overview of regulatory authorities of India, United States, European Union, Australia, Japan, Canada (Organization structure and types of applications)

UNIT III

Registration of Indian drug product in overseas market: Procedure for export of pharmaceutical products, Technical documentation, Drug Master Files (DMF), Common Technical Document (CTD), electronic Common Technical Document (eCTD), ASEAN Common Technical Document (ACTD) research.

UNIT IV

Clinical trials: Developing clinical trial protocols, Institutional Review Board / Independent Ethics committee - formation and working procedures, Informed consent process and procedures, GCP obligations of Investigators, sponsors & Monitors, Managing and Monitoring clinical trials, Pharmacovigilance - safety monitoring in clinical trials.

UNIT V

Regulatory Concepts: Basic terminology, guidance, guidelines, regulations, Laws and Acts, Orange book, Federal Register, Code of Federal Regulatory, Purple book.

Suggested Readings:

1. Drug Regulatory Affairs by Sachin Itkar, Dr. N.S. Vyawahare, Nirali Prakashan.
2. The Pharmaceutical Regulatory Process, Second Edition Edited by Ira R. Berry and Robert P. Martin, Drugs and the Pharmaceutical Sciences, Vol.185. Informa Health care Publishers.
3. New Drug Approval Process: Accelerating Global Registrations By Richard A Guarino, MD, 5th edition, Drugs and the Pharmaceutical Sciences, Vol.190.
4. Guidebook for drug regulatory submissions / Sandy Weinberg. By John Wiley & Sons. Inc.
5. FDA Regulatory Affairs: a guide for prescription drugs, medical devices, and biologics /edited by Douglas J. Pisano, David Mantus.
6. Generic Drug Product Development, Solid Oral Dosage forms, Leon Shargel and Isader Kaufer, Marcel Dekker series, Vol.143.
7. Clinical Trials and Human Research: A Practical Guide to Regulatory Compliance By Fay A. Rozovsky and Rodney K. Adams.
8. Principles and Practices of Clinical Research, Second Edition Edited by John I. Gallin and Frederick P. Ognibene.
9. Drugs: From Discovery to Approval, Second Edition By Rick Ng.

17BP 805ET

SEMESTER-VIII

PHARMACOVIGILANCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This paper will provide an opportunity for the student to learn about development of pharmacovigilance as a science
- To know basic terminologies used in pharmacovigilance,
- To understand global scenario of Pharmacovigilance, train students on establishing pharmacovigilance programme in an organization
- To learn various methods that can be used to generate safety data and signal detection.
- This paper also develops the skills of classifying drugs, diseases.
- Learn to write effectively case narratives of adverse events and their quality.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the importance of safety monitoring.
2. Discuss the History and development of pharmacovigilance, National and international scenario of pharmacovigilance, Dictionaries, coding and terminologies used in pharmacovigilance, Detection of new adverse drug reactions and their assessment, Adverse drug reaction reporting systems and communication in pharmacovigilance, Pharmacovigilance Program of India (PvPI) requirement for ADR reporting in India.
3. Understand the International standards for classification of diseases and drugs
4. Generate and describe the safety data during pre clinical, clinical and post approval phases of drugs' life cycle, Drug safety evaluation in paediatrics, geriatrics, pregnancy and lactation
5. Elaborate the ICH guidelines for ICSR, PSUR, expedited reporting, pharmacovigilance planning, CIOMS requirements for ADR reporting
6. Write effectively case narratives of adverse events and their quality.

Course Content**UNIT I****Introduction to Pharmacovigilance:**

- History and development of Pharmacovigilance.
- Importance of safety monitoring of Medicine.
- WHO international drug monitoring programme.
- Pharmacovigilance Program of India(PvPI).

Introduction to adverse drug reactions:

- Definitions and classification of ADRs.
- Detection and reporting.
- Methods in Causality assessment.
- Severity and seriousness assessment.
- Predictability and preventability assessment.
- Management of adverse drug reactions.

Basic terminologies used in pharmacovigilance:

- Terminologies of adverse medication related events.
- Regulatory terminologies.

UNIT II**Drug and disease classification:**

- Anatomical, therapeutic and chemical classification of drugs
- International classification of diseases
- Daily defined doses
- International Non proprietary Names for drugs

Drug dictionaries and coding in pharmacovigilance:

- WHO adverse reaction terminologies.
- MedDRA and Standardised MedDRA queries.
- WHO drug dictionary.
- Eudravigilance medicinal product dictionary.

Information resources in pharmacovigilance:

- Basic drug information resources.
- Specialised resources for ADRs.

Establishing pharmacovigilance programme:

- Establishing in a hospital.
- Establishment & operation of drug safety department in industry.
- Contract Research Organisations (CROs).
- Establishing a national programme.

UNIT III**Vaccine safety surveillance:**

- Vaccine Pharmacovigilance.
- Vaccination failure.
- Adverse events following immunization

Pharmacovigilance methods:

- Passive surveillance – Spontaneous reports and case series.
- Stimulated reporting.
- Active surveillance – Sentinel sites, drug event monitoring and registries.

- Comparative observational studies – Cross sectional study, case control study and cohort study.
- Targeted clinical investigations.

Communication in pharmacovigilance:

- Effective communication in Pharmacovigilance.
- Communication in Drug Safety Crisis management.
- Communicating with Regulatory Agencies, Business Partners, Healthcare facilities & Media.

UNIT IV**Safety data generation:**

- Pre clinical phase.
- Clinical phase.
- Post approval phase (PMS).

ICH Guidelines for Pharmacovigilance:

- Organization and objectives of ICH.
- Expedited reporting.
- Individual case safety reports.
- Periodic safety update reports.
- Post approval expedited reporting.
- Pharmacovigilance planning.
- Good clinical practice in pharmacovigilance studies.

UNIT V**Pharmacogenomics of adverse drug reactions:**

- Genetics related ADR with example focusing PK parameters.

Drug safety evaluation in special population:

- Paediatrics
- Pregnancy and lactation
- Geriatrics

CIOMS:

- CIOMS Working Groups
- CIOMS Form

CDSCO (India) and Pharmacovigilance:

- D&C Act and Schedule Y
- Differences in Indian and global pharmacovigilance requirements

Suggested Readings:

1. Textbook of Pharmacovigilance: S K Gupta, Jaypee Brothers, Medical Publishers.
2. Practical Drug Safety from A to Z By Barton Cobert, Pierre Biron, Jones and Bartlett Publishers.
3. Mann's Pharmacovigilance: Elizabeth B. Andrews, Nicholas, Wiley Publishers.
4. Stephens' Detection of New Adverse Drug Reactions: John Talbot, Patrick Walle, Wiley Publishers.
5. An Introduction to Pharmacovigilance: Patrick Waller, Wiley Publishers.
6. Cobert's Manual of Drug Safety and Pharmacovigilance: Barton Cobert, Jones & Bartlett Publishers.
7. Textbook of Pharmacoepidemiology edited by Brian L. Strom, Stephen E Kimmel, Sean Hennessy, Wiley Publishers.
8. A Textbook of Clinical Pharmacy Practice -Essential Concepts and Skills: G. Parthasarathi, Karin Nyfort Hansen, Milap C. Nahata
9. National Formulary of India
10. Text Book of Medicine by Yashpal Munjal
11. Text book of Pharmacovigilance: concept and practice by GP Mohanta and PK Mann
12. <http://www.whoumc.org/DynPage.aspx?id=105825&mn1=7347&mn2=7259&mn3=7297>
13. <http://www.ich.org/>
14. <http://www.cioms.ch/>

17BP806ET

SEMESTER-VIII

QUALITY CONTROL AND STANDARDIZATION OF HERBALS (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- In this subject the student learns about the various methods
- To understand guidelines for evaluation and standardization of herbs and herbal drugs.
- The subject also provides an opportunity for the student to learn cGMP, GAP and GLP in traditional system of medicines.
- To know regulatory approval process and their registration in Indian and international markets.
- To understand Drugs and Cosmetic Act Provision for herbal drug preparation and marketing
- To learn basic tests for drugs to obtain dosage form for pharmaceutical substances and medicinal plants

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain basic tests for drugs to obtain dosage form for pharmaceutical substances and medicinal plants
2. Explain methods for evaluation of pharmaceutical substances, medicinal plants and commercial crude drugs along with WHO guidelines for quality control for herbal drugs
3. Describe guidelines for cGMP, GAP, GMP and GLP for quality assurance of herbal drugs in industry
4. Describe guidelines for quality control of herbal drugs and evaluation of safety and efficacy of herbal medicines.
5. Explain regulatory approval process and their registration in Indian and international markets.
6. Explain Drugs and Cosmetic Act Provision for herbal drug preparation and marketing

UNIT- I

Basic tests for drugs – Pharmaceutical substances, Medicinal plants materials and dosage forms WHO guidelines for quality control of herbal drugs. Evaluation of commercial crude drugs intended for use

UNIT- II

Quality assurance in herbal drug : industry of cGMP, GAP, GMP and GLP in traditional system of medicine. WHO Guidelines on current good manufacturing Practices (cGMP) for Herbal Medicines. WHO Guidelines on GACP for Medicinal Plants.

UNIT -III

EU and ICH guidelines for quality control of herbal drugs.

Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

UNIT- IV

Stability testing of herbal medicines. Application of various chromatographic techniques in standardization of herbal products.

Preparation of documents for new drug application and export registration

GMP requirements and Drugs & Cosmetics Act provisions.

UNIT-V

Regulatory requirements for herbal medicines. WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems Comparison of various Herbal Pharmacopoeias.

Role of chemical and biological markers in standardization of herbal products.

Suggested Readings:

1. Pharmacognosy by Trease and Evans
2. Pharmacognosy by Kokate, Purohit and Gokhale
3. Rangari, V.D., Text book of Pharmacognosy and Phytochemistry Vol. I, Carrier Pub., 2006.
4. Aggrawal, S.S., Herbal Drug Technology. Universities Press, 2002.
5. EMEA. Guidelines on Quality of Herbal Medicinal Products/Traditional Medicinal Products,
6. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.
7. Shinde M.V., Dhalwal K., Potdar K., Mahadik K. Application of quality control principles to herbal drugs. International Journal of Phytomedicine 1(2009); p. 4-8.
8. WHO. Quality Control Methods for Medicinal Plant Materials, World Health Organization, Geneva, 1998. WHO. Guidelines for the Appropriate Use of Herbal Medicines. WHO Regional Publications, Western Pacific Series No 3, WHO Regional office for the Western Pacific, Manila, 1998.
9. WHO. The International Pharmacopeia, Vol. 2: Quality Specifications, 3rd edn. World Health Organization, Geneva, 1981.
10. WHO. Quality Control Methods for Medicinal Plant Materials. World Health Organization, Geneva, 1999.
11. WHO. WHO Global Atlas of Traditional, Complementary and Alternative Medicine. 2 vol. set. Vol. 1 contains text and Vol. 2, maps. World Health Organization, Geneva, 2005.
12. WHO. Guidelines on Good Agricultural and Collection Practices (GACP) for Medicinal Plants. World Health Organization, Geneva, 2004.

17BP807ET

SEMESTER-VIII

COMPUTER AIDED DRUG DESIGN (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detailed knowledge of rational drug design process and various techniques used in rational drug design process.
- To know the various stages of drug discover
- To Learn the concept of bioisosterism and drug resistance
- To understand physicochemical Properties and the techniques involved in QSAR
- To Learn Bioinformatics and Cheminformatics
- To know methods in molecular and quantum mechanics

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the various stages of drug discover
2. Learn the concept of bioisosterism and drug resistance
3. Describe physicochemical Properties and the techniques involved in QSAR
4. Learn introduction to Bioinformatics and Cheminformatics
5. Learn methods in molecular and quantum mechanics
6. Explain various structure based drug design methods (Molecular docking, Denovo drug design)

Course Content:**UNIT-I****Introduction to Drug Discovery and Development:** Stages of drug discovery and development**Lead discovery and Analog Based Drug Design:** Rational approaches to lead discovery based on traditional medicine, Random screening, Non-random screening, serendipitous drug discovery, lead discovery based on drug metabolism, lead discovery based on clinical observation.**Analog Based Drug Design:** Bioisosterism, Classification, Bioisosteric replacement. Any three case studies.**UNIT-II****Quantitative Structure Activity Relationship (QSAR):** SAR versus QSAR, History and development of QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammett's substituent constant and Taft's steric constant. Hansch analysis, Free Wilson analysis, 3D-QSAR approaches like COMFA and COMSIA.**UNIT-III**

Molecular Modeling and virtual screening techniques

Virtual Screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore based Screening.

Molecular docking: Rigid docking, flexible docking, manual docking, Docking based screening. De novo drug design.

UNIT-IV

Informatics & Methods in drug design: Introduction to Bioinformatics, chemoinformatics. ADME databases, chemical, biochemical and pharmaceutical databases.

UNIT-V

Molecular Modeling: Introduction to molecular mechanics and quantum mechanics. Energy Minimization methods and Conformational Analysis, global conformational minima determination.

Suggested Readings:

1. Robert GCK, ed., "Drug Action at the Molecular Level" University Park Press Baltimore.
2. Martin YC. "Quantitative Drug Design" Dekker, New York.
3. Delgado JN, Remers WA eds "Wilson & Gisvolds's Text Book of Organic Medicinal & Pharmaceutical Chemistry" Lippincott, New York.

SEMESTER-VIII

CELL AND MOLECULAR BIOLOGY (Elective subject)

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To understand cell and molecular biology history environment, their life cycle, division, death and cell function.
- This is done both on a microscopic and molecular level.
- Cell biology research encompasses both the great diversity of single-celled organisms like bacteria and protozoa,
- To learn specialized cells in multi-cellular organisms such as humans, plants, and sponges.
- To know basic molecular genetic mechanisms
- To understand protein structure and functions

Course Outcomes(CO's): On successful completion of the course the student will

- Summarize cell and molecular biology history. Cellular functioning and composition, DNA properties of cell biology.
- Describe the chemical foundations of cell biology.
- Discuss protein structure and function.
- Explain cellular membrane structure and function.
- Describe basic molecular genetic mechanisms.
- Summarize the Cell Cycles.

Course content:**UNIT I**

- a) Cell and Molecular Biology: Definitions theory and basics and Applications.
- b) Cell and Molecular Biology: History and Summation.
- c) Properties of cells and cell membrane.
- d) Prokaryotic versus Eukaryotic.
- e) Cellular Reproduction.
- f) Chemical Foundations – an Introduction and Reactions (Types).

UNIT II

- a) DNA and the Flow of Molecular Information.
- b) DNA Functioning.
- c) DNA and RNA.
- d) Types of RNA.
- e) Transcription and Translation.

UNIT III

- a) Proteins: Defined and Amino Acids.
- b) Protein Structure.
- c) Regularities in Protein Pathways.
- d) Cellular Processes.
- e) Positive Control and significance of Protein Synthesis.

UNIT IV

- a) Science of Genetics.
- b) Transgenics and Genomic Analysis.
- c) Cell Cycle analysis.
- d) Mitosis and Meiosis.
- e) Cellular Activities and Checkpoints.

UNIT V

- a) Cell Signals: Introduction.
- b) Receptors for Cell Signals.
- c) Signaling Pathways: Overview.
- d) Misregulation of Signaling Pathways.
- e) Protein-Kinases: Functioning.

Suggested Readings:

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hill edn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. Edward: Fundamentals of Microbiology.
10. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi
11. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company
12. B.R.Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of RecombinantDNA: ASM Press Washington D.C.
13. RA Goldshy et. al., : Kuby Immunology.

17BP809ET

SEMESTER-VIII

COSMETIC SCIENCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To know the cosmetics in day to day life.
- To understand the formulation characteristics of cosmetic preparations
- To understand the role of herbs in cosmetic science
- To Demonstrate the evaluation procedures in the formulation of cosmetics
- To Identify the problems encountered during the usage of cosmetics
- To illustrate the role of nutraceuticals in day to day life

Course Outcomes(CO's): On successful completion of the course the student will

1. Discover the cosmetics in day to day life.
2. Formulation characteristics of cosmetic preparations
3. Understand the role of herbs in cosmetic science
4. Demonstrate the evaluation procedures in the formulation of cosmetics
5. Identify the problems encountered during the usage of cosmetics
6. Illustrate the role of nutraceuticals in day to day life

UNIT I

Classification of cosmetic and cosmeceutical products definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs

Cosmetic excipients: Surfactants, rheology modifiers, humectants, emollients, preservatives. Classification and application.

Skin: Basic structure and function of skin.

Hair: Basic structure of hair. Hair growth cycle.

Oral Cavity: Common problem associated with teeth and gums.

UNIT II

Principles of formulation and building blocks of skin care products: Face wash, Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages. Application of these products in formulation of cosmeceuticals. **Antiperspirants & deodorants-** Actives & mechanism of action.

Principles of formulation and building blocks of Hair care products: Conditioning shampoo, Hair conditioner, anti-dandruff shampoo. Hair oils. Chemistry and formulation of Para-phenylene diamine based hair dye. Principles of formulation and building blocks of oral care products: Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

UNIT III

Sun protection, Classification of Sunscreens and SPF.

Role of herbs in cosmetics: Skin Care: Aloe and turmeric Hair care: Henna and amla. Oral care: Neem and clove

Analytical cosmetics: BIS specification and analytical methods for shampoo, skin- cream and toothpaste.

UNIT IV

Principles of Cosmetic Evaluation: Principles of sebumeter, corneometer. Measurement of TEWL, Skin Color, Hair tensile strength, Hair combing properties Soaps, and syndet bars. Evolution and skin benefits.

UNIT V

Oily and dry skin, causes leading to dry skin, skin moisturisation. Basic understanding of the terms Comedogenic, dermatitis. Cosmetic problems associated with Hair and scalp: Dandruff, Hair fall causes Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odor. Antiperspirants and Deodorants- Actives and mechanism of action

References:

- 1) Harry's Cosmeticology, Wilkinson, Moore, Seventh Edition, George Godwin.
- 2) Cosmetics – Formulations, Manufacturing and Quality Control, P.P. Sharma, 4th Edition, Vandana Publications Pvt. Ltd., Delhi.
- 3) Text book of cosmeticology by Sanju Nanda & Roop K. Khar, Tata Publishers.

17BP810ET

SEMESTER-VIII

PHARMACOLOGICAL SCREENING METHODS**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To study blood withdrawal techniques and drug administration in animals.
- To know dose, dose calculations grouping of animals, species selection, sex in conducting the animal experimentation.
- To understand the research Study of screening animal models for Diuretics, no-tropics, anti-Parkinson's, anti asthmatics.
- To learn screening methods of CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, anti parkinsonism, alzheimer's disease Explain screening methods of for CVS activity- anti hypertensives, diuretics, anti arrhythmic, anti dyslipidemic
- To know screening methods of Research methodology and Bio-statistics

Course Outcomes(CO's): On successful completion of the course the student will

1. Describe the applications of common laboratory animals, explain CPCSEA and OECD guidelines governing the for maintenance, breeding and conduct of experiments on laboratory animals.
2. Explain blood withdrawal techniques and drug administration in animals.
3. Explain dose, dose calculations grouping of animals, species selection, sex in conducting the animal experimentation.
4. Describe the research Study of screening animal models for Diuretics, no-tropics, anti-Parkinson's, anti asthmatics.
5. Explain screening methods of CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, anti parkinsonism, alzheimer's disease Explain screening methods of for CVS activity- anti hypertensives, diuretics, anti arrhythmic, anti dyslipidemic
6. Explain screening methods of Research methodology and Bio-statistics

UNIT –I

Laboratory Animals: Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals, Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. Techniques for collection of blood and common routes of drug administration in laboratory animals, Techniques of blood collection and euthanasia.

UNIT –II**Preclinical screening models:**

a. Introduction: Dose selection, calculation and conversions, preparation of drug solution/suspensions, grouping of animals and importance of sham negative and positive control groups. Rationale for selection of animal species and sex for the study.

b. Study of screening animal models: Diuretics, nootropics, anti-Parkinson's, antiasthmatics. **Preclinical screening models:** for CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, antiparkinsonism, Alzheimer's disease.

UNIT –III

Preclinical screening models: for ANS activity, sympathomimetics, sympatholytics, parasympathomimetics, parasympatholytics, skeletal muscle relaxants, drugs acting on the eye, local anaesthetics.

UNIT –IV

Preclinical screening models: for CVS activity- antihypertensives, diuretics, antiarrhythmic, antidyslipidemic, antiaggregatory, coagulants, and anticoagulants. Preclinical screening models for other important drugs like antiulcer, antidiabetic, anticancer and antiasthmatics.

Research methodology and Bio-statistics: Selection of research topic, review of literature, research hypothesis and study design. Pre-clinical data analysis and interpretation using Student's 't' test and One-way ANOVA. Graphical representation of data.

Suggested Readings:

1. Fundamentals of experimental Pharmacology-by M.N.Ghosh
2. Hand book of Experimental Pharmacology-S.K.Kulakarni
3. CPCSEA guidelines for laboratory animal facility.
4. Drug discovery and Evaluation by Vogel H.G.
5. Drug Screening Methods by Suresh Kumar Gupta and S. K. Gupta
6. Introduction to biostatistics and research methods by PSS Sundar Rao and J Richard

17BP 811ET

SEMESTER-VIII

ADVANCED INSTRUMENTATION TECHNIQUES**4H****4C**

Instruction hours/ wee : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs.
- This subject is designed to impart advanced knowledge on the principles and instrumentation of spectroscopic and chromatographic hyphenated techniques.
- This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.
- To Learn basic principles and instrumentation of thermal analysis
- To know general principles and procedures involved in extraction techniques.
- To Learn basic instrumentation and applications of hyphenated techniques.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain theoretical principles of, MASS and NMR spectroscopy.
2. Learn basic instrumentation of NMR and mass spectrometer.
3. Explain theoretical principles of x-rays, instrumentation and identification of organic compounds.
4. Learn basic principles and instrumentation of thermal analysis
5. Describe general principles and procedures involved in extraction techniques.
6. Learn basic instrumentation and applications of hyphenated techniques.

Course Content:**UNIT-I**

Nuclear Magnetic Resonance spectroscopy: Principles of H-NMR and C-NMR, chemical shift, factors affecting chemical shift, coupling constant, Spin - spin coupling, relaxation, instrumentation and applications.

Mass Spectrometry- Principles, Fragmentation, Ionization techniques – Electron impact, chemical ionization, MALDI, FAB, Analyzers-Time of flight and Quadrupole, instrumentation, applications

UNIT-II

Thermal Methods of Analysis: Principles, instrumentation and applications of Thermogravimetric Analysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC).

X-Ray Diffraction Methods: Origin of X-rays, basic aspects of crystals, X-ray Crystallography rotating crystal technique, single crystal diffraction, powder diffraction, structural elucidation and applications.

UNIT-III

Calibration and validation-as per ICH and USFDA guidelines

Calibration of following Instruments: Electronic balance, UV-Visible spectrophotometer, IR spectrophotometer, Fluorimeter, Flame Photometer, HPLC and GC.

UNIT-IV

Radio immune assay: Importance, various components, Principle, different methods, Limitation and Applications of Radio immuno assay.

Extraction techniques: General principle and procedure involved in the solid phase extraction and liquid-liquid extraction.

UNIT-V

Hyphenated techniques-LC-MS/MS, GC-MS/MS, HPTLC-MS.

Suggested Readings:

1. Instrumental Methods of Chemical Analysis by B.K Sharma.
2. Organic spectroscopy by Y.R Sharma.
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors.
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel.
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake.
6. Organic Chemistry by I. L. Finar.
7. Organic spectroscopy by William Kemp.
8. Quantitative Analysis of Drugs by D. C. Garrett.
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi.
10. Spectrophotometric identification of Organic Compounds by Silverstein.

17BP 812 ET

SEMESTER-VIII

DIETARY SUPPLEMENTS AND NUTRACEUTICALS**4H****4C**

Instruction hours/ wee : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject covers foundational topic that are important for understanding the need and requirements of dietary supplements among different groups in the population.
- To know about effect of nutrition to maintain healthy life of public included maternal and child health and effects of education about nutrition in community.
- To understand source, chemistry and uses of several natural nutraceuticals.
- To know occurrence, chemical nature and medicinal benefits of natural nutraceuticals belong to different phytochemical categories.
- To learn about different free radical which generate in body and their effects and different dietary fibres and complex carbohydrate as functional food ingredients.
- To understand the role of free radicals in development of different diseases and aging

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the definition, classification of nutraceuticals, functional foods and dietary supplements and role of nutraceuticals in prevention or cure various diseases.
2. Explain about effect of nutrition to maintain healthy life of public included maternal and child health and effects of education about nutrition in community.
3. Describe about source, chemistry and uses of several natural nutraceuticals.
4. Describe occurrence, chemical nature and medicinal benefits of natural nutraceuticals belong to different phytochemical categories.
5. Explain about different free radical which generate in body and their effects and different dietary fibres and complex carbohydrate as functional food ingredients.
6. Explain the role of free radicals in development of different diseases and aging

UNIT I**07 hours**

- a. Definitions of Functional foods, Nutraceuticals and Dietary supplements. Classification of Nutraceuticals, Health problems and diseases that can be prevented or cured by Nutraceuticals i.e. weight control, diabetes, cancer, heart disease, stress, osteoarthritis, hypertension etc.
- b. Public health nutrition, maternal and child nutrition, nutrition and ageing, nutrition education in community.
- c. Source, Name of marker compounds and their chemical nature, Medicinal uses and health benefits of following used as nutraceuticals/functional foods: Spirulina, Soyabean, Ginseng, Garlic, Broccoli, Gingko, Flaxseeds

UNIT II**15 hours**

Phytochemicals as nutraceuticals: Occurrence and characteristic features(chemical nature medicinal benefits) of following

- a) Carotenoids- α and β -Carotene, Lycopene, Xanthophylls, leutin
- b) Sulfides: Diallyl sulfides, Allyl trisulfide.
- c) Polyphenolics: Resveratrol
- d) Flavonoids- Rutin, Naringin, Quercetin, Anthocyanidins, catechins, Flavones
- e) Prebiotics / Probiotics.: Fructo oligosaccharides, Lacto bacillum
- f) Phyto estrogens : Isoflavones, daidzein, Genistein, lignans
- g) Tocopherols
- h) Proteins, vitamins, minerals, cereal, vegetables and beverages as functional foods: oats, wheat bran, rice bran, sea foods, coffee, tea and the like.

UNIT III**07 hours**

- a) Introduction to free radicals: Free radicals, reactive oxygen species, production of free radicals in cells, damaging reactions of free radicals on lipids, proteins, Carbohydrates, nucleic acid
- b) Dietary fibres and complex carbohydrates as functional food ingredients..

UNIT IV**10 hours**

- a) Free radicals in Diabetes mellitus, Inflammation, Ischemic reperfusion injury, Cancer, Atherosclerosis, Free radicals in brain metabolism and pathology, kidney damage, muscle damage. Free radicals involvement in other disorders. Free radicals theory of ageing.
- b) Antioxidants: Endogenous antioxidants – enzymatic and nonenzymatic antioxidant defence, Superoxide dismutase, catalase, Glutathione peroxidase, Glutathione Vitamin C, Vitamin E, α - Lipoic acid, melatonin

Synthetic antioxidants: Butylated hydroxy Toluene, Butylated hydroxy Anisole.

- c) Functional foods for chronic disease prevention

UNIT V**06 hours**

- a) Effect of processing, storage and interactions of various environmental factors on the potential of nutraceuticals.
- b) Regulatory Aspects; FSSAI, FDA, FPO, MPO, AGMARK. HACCP and GMPs on Food Safety. Adulteration of foods.
- c) Pharmacopoeial Specifications for dietary supplements and nutraceuticals.

17BP 813ET

Elective course on Pharmaceutical Product Development (Theory)

SEMESTER-VIII

4H

4C

No of Hours: 3**Tutorial: 1****Credit points:4****Course Objectives:**

- To Learn the regulatory principles and requirements of drug discovery and developments
- To Understand the concept of preformulation studies for various formulations
- To understand concept and designing of pilot plants and product scale up
- To Learn various pharmaceutical packaging systems and their quality testing
- To Learn the concept of technology transfer from R&D to production plant
- To Discuss on the new era opportunities and challenges in the pharmaceutical market

Course Outcomes (CO's): On successful completion of the course the student will

1. Learn the regulatory principles and requirements of drug discovery and developments
2. Understand the concept of preformulation studies for various formulations
3. Concept and designing of pilot plants and product scale up
4. Learn various pharmaceutical packaging systems and their quality testing
5. Learn the concept of technology transfer from R&D to production plant
6. Discuss on the new era opportunities and challenges in the pharmaceutical market

Course content**Unit I**

Introduction to pharmaceutical product development, objectives, regulations related to preformulation, formulation development, stability assessment, manufacturing and quality control testing of different types of dosage forms

Unit II

An advanced study of Pharmaceutical Excipients in pharmaceutical product development with a special reference to the following categories

- i. Solvents and solubilizers
- ii. Cyclodextrins and their applications
- iii. Non - ionic surfactants and their applications
- iv. Polyethylene glycols and sorbitols
- v. Suspending and emulsifying agents
- vi. Semi solid excipients

Unit-III

An advanced study of Pharmaceutical Excipients in pharmaceutical product development with a special reference to the following categories

- i. Tablet and capsule excipients
- ii. Directly compressible vehicles

- iii. Coat materials
- iv. Excipients in parenteral and aerosols products
- v. Excipients for formulation of NDDS

Selection and application of excipients in pharmaceutical formulations with specific industrial applications

Unit-IV

Optimization techniques in pharmaceutical product development. A study of various optimization techniques for pharmaceutical product development with specific examples. Optimization by factorial designs and their applications. A study of QbD and its application in pharmaceutical product development.

Unit-V

Selection and quality control testing of packaging materials for pharmaceutical product development- regulatory considerations.

Recommended Books (Latest editions)

SEMESTER-VIII

PROJECT WORK**12H 6C**

Instruction hours/ week : L: 0 T:0 P:12

Marks: Internal: 0 External: 150 Total:150

External Semester Exam: 4 Hours

No. of hours: 12**Tutorial:0****Credit point: 6**

All the students shall undertake a project under the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subject opted by the student in semesterVIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages). The internal and external examiner appointed by the University shall evaluate the project at the time of the Practical examinations of other semester(s). Students shall beevaluated in groups for four hours (i.e., about half an hour for a group of five students).
