18MBU401

IMMUNOLOGY

Semester – IV
(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction

COURSE OUTCOME

- Introducing the **employment** aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
- Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Students can able to perform basic immunological assays.
- It will distinguish fundamental knowledge on immunology and its advancement.

Unit I

Concept of Innate and Adaptive immunity; Contributions of following scientists to the development of field of immunology – Edward Jenner, Karl Landsteiner, Robert Koch, Paul Ehrlich, Elie Metchnikoff, Peter Medawar, MacFarlane Burnet, Neils K Jerne, Rodney Porter and Susumu Tonegawa. Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen, GALT, MALT, CALT.

Unit II

Antigens – Characteristics of an antigen (Foreignness, Molecular size and Heterogeneity); Haptens; Epitopes (T & B cell epitopes); T-dependent and T-independent antigens; Adjuvants. Antibodies – Structure, Types, Functions and Properties of antibodies; Antigenic determinants on antibodies (Isotypic, allotypic, idiotypic); Monoclonal and Chimeric antibodies.

Unit III

MHC – Organization of MHC locus; Structure and Functions of MHC I & II molecules; Antigen processing and presentation (Cytosolic and Endocytic pathways). Complement system – Components of the Complement system; Activation pathways (Classical, Alternative); Biological consequences of complement Activation

Unit IV

Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma and Memory cells); Generation of Cell Mediated Immune Response (Self MHC restriction, T cell activation, Co-stimulatory signals); Killing Mechanisms by CTL and NK cells, Introduction to tolerance. Types of Autoimmunity and Hypersensitivity with examples; Immuno deficiencies – Animal models (Nude and SCID mice), DiGeorge syndrome, Chediak-Higashi syndrome. Transplantation immunology, Graft versus host reaction, Types of tumors, tumor Antigens, causes and therapy for cancers.

Unit V

Principles of precipitation, agglutination, complement fixation, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT, Western blotting, Immunofluorescence, Flow cytometry, Immunoelectron microscopy.

SUGGESTED READINGS

5. Peakman M, and Vergani D. (2009). Basic and Clinical Immunology. 2nd edition Churchill Livingstone Publishers, Edinberg.

18MBU402

MEDICAL MICROBIOLOGY

Semester – IV
(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To introduce the [skill](#) oriented knowledge of the medically important microorganisms, microbial morphology with the main focuses being the characterization, isolation and identification of different microorganism.
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- To develop understanding about microbial infections and manifestations.
- Gain knowledge on microbial infections and its prophylaxis.
- To understand the microbial host interactions in life science.

COURSE OUTCOME

1. It provides the ability to characterize, isolate and identify different microbes.
2. It includes a detailed study of characterization, etiology, pathogenicity, clinical systems, and laboratory diagnosis of disease causing Microorganisms.
3. Upon completion, students gained the knowledge of most common medically important organism and the infections they cause.
4. Different approaches, techniques and tools used to identify pathogens and control them.
5. Diagnostic approaches for microbial pathogens
6. Developing efficient vaccines and new drugs

Unit I

Normal micro flora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract. Host pathogen interaction: Definitions – Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection, Pathophysiologic effects of LPS. Collection, transport and culturing of clinical samples – Sputum, Stool and Urine.

Unit II

List of diseases of various organ systems and their causative agents. The following diseases in detail with symptoms, mode of transmission, prophylaxis and control. Respiratory pathogens: *Streptococcus pyogenes*, *Haemophilus influenzae*, *Mycobacterium tuberculosis*. Gastrointestinal Diseases: *Escherichia coli*, *Salmonella typhi*, *Vibrio cholerae*, *Helicobacter pylori*. Others: *Staphylococcus aureus*, *Bacillus anthracis*, *Clostridium tetani*, *Treponema pallidum*.

Unit III

The detailed study of following diseases – Causative agents, Mode of transmissions, Pathogenicity, Symptoms and prophylaxis of Polio, Herpes, Hepatitis, Rabies, Dengue, AIDS, Influenza with brief description of swine flu, Ebola, Chikungunya, Japanese Encephalitis

Unit IV

Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention. Cutaneous mycoses: Tinea pedis (Athlete's foot). Systemic mycoses: Histoplasmosis. Opportunistic mycoses: Candidiasis. The detailed study of following diseases – Causative agents, Mode of transmissions, Pathogenicity, Symptoms and prophylaxis of Amoebiasis, Giardiasis, Elephantiasis, Taeniasis, Malaria, Kala-azar.

Unit V

Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Antibiotic resistance - MDR, XDR, MRSA, NDM-1 – resistance mechanisms. Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin. Antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine.

SUGGESTED READINGS

1. Brooks G.F., Carroll K.C., Butel J.S., Morse S.A. and Mietzner, T.A. (2013). Jawetz, Melnick and Adelberg's Medical Microbiology. 26th edition. McGraw Hill Publication.

4. Ananthanarayan R. and Paniker C.K.J. (2009) Textbook of Microbiology. 8th edition, University Press Publication.
5. Madigan MT, Martinko JM, Dunlap PV and Clark DP. (2014). Brock Biology of Microorganisms. 14th edition. Pearson International Edition.
6. Goering R., Dockrell H., Zuckerman M. and Wakelin D. (2007). Mims' Medical Microbiology. 4th edition. Elsevier.
7. Willey JM, Sherwood LM, and Woolverton CJ. (2013). Prescott, Harley and Klein's Microbiology. 9th edition. McGraw Hill Higher Education.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To educate students about Environmental monitoring and environmental aspects of microbes.
- To impart a [skill](#) based knowledge on Microbes and environment and ecological importance.
- The students will develop set of skills to recognise the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental and agricultural issues.
- Familiarize students with general principles and subject knowledge in the field of environment and agricultural microbiology.
- To make students aware with current research in environmental and agricultural microbiology.

COURSE OUTCOME

1. It provides a comprehensive overview of biogeochemical processes relevant to environmental scientists and engineers mediated by microorganisms.
2. Students will get the basic knowledge how to prepare and perform sampling and microbial analyses for the environmental studies.
3. Critically discuss the need for environmental microbiology and agricultural microbiology and explain their limitations.
4. Clarify application of microorganisms in varied fields of agricultural and environmental microbiology like bioremediation, biofertilizers and waste water treatment..
5. Analyse various aspects of N₂ fixation, Phosphate solubilization, PGPR, biodegradation and bioremediation mechanisms provided by microbes.
6. Describe role of microorganism in recycling soil nutrients, biodegradation of complex plant polymers, sustaining and improving plant growth through improving nutrient availability.

Unit I

Structure and function of ecosystems (Definition and concept). Types of Environment -Terrestrial, Aquatic and extreme habitats. Environmental factors affecting microbial growth. Microbial succession in decomposition of plant organic matter.

Unit II

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation. Microbe-Plant interaction: Symbiotic and non-symbiotic interactions. Microbe-animal interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria

Unit III

Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin. Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction. Phosphorus cycle: Phosphate immobilization and solubilisation. Sulphur cycle: Microbes involved in sulphur cycle. Other elemental cycles: Iron and manganese

Unit IV

Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill and incineration). Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment.

Unit V

Principles and biodegradation of common pesticides, organic (hydrocarbons, oil spills) and inorganic (heavy metals-chelation) matter, biosurfactants. Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) MPN test (b) Membrane filter technique. GMO and their impact.

18MBU404A

BIOFERTILIZERS AND BIOPESTICIDES

Semester – IV
(3H – 3C)

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To demonstrate the techno-economic viability of the biofertilizers / biopesticides to farmers through field demonstration at farmer's field & by know-how training.
- To study about the biofertilizers in increasing soil fertility and usage of Biopesticides for plant disease.
- To prepare literature and promulgate in local language through booklets / documents etc. about; the benefits of biofertilizers for farming in villages through trained beneficiaries/ cultivators as multiplier impact.
- To demonstrate the effectiveness of biofertilizer cultural practices in the farmers fields for enhanced crop productivity through bioreclamation of waste/ marginal land
- To raise the rural/tribal economy & living standard of the lowly of the lowest backward farming community especially SC & ST and marginal farmers.
- To create self-employment opportunities to weaker underprivileged SC & ST and marginal farmers.

COURSE OUTCOME

1. This course has been designed to provide the student knowledge about eco friendly product which play a crucial role in determining its future use and applications in environmental management.
2. Provides detailed **entrepreneurial** idea about biofertilizer production and plant disease.
3. To produce and impart training of ecofriendly agricultural inputs so as to nullify the ill effects of chemical fertilizers.
4. To demonstrate the know-how technology pertinent to microbiological and physico-chemical analyses of soil samples and their assessment.
5. To demonstrate the low cost media preparation and cultural practices in biofertilizer / biopesticide production.
6. Students can able to develop fundamental aspects of seed/seed material/seedlings/soil/waste matter/crop residues in order to increase the population

Unit I

General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers. Symbiotic N₂ fixers: *Rhizobium* – Isolation, characteristics, types, inoculum production and field application, legume/pulses plants. *Frankia* – Isolation and characteristics, Alnus, Casuarina plants, non-leguminous crop symbiosis. Cyanobacteria, *Azolla* – Isolation, characterization, mass multiplication, their role in rice cultivation, crop response and field application. Soil nutrients and plant growth

Unit II

Free living *Azospirillum*, *Azotobacter* – isolation, characteristics, mass production and field application. Nitrogen cycle. Zinc solubilizer and potash solubilizing microbes

Unit III

Phosphate potash and zinc solubilizing microbes – Isolation, characterization, mass production, field application. Role of phosphate and zinc in plant growth and yield

Unit IV

Introduction of mycorrhizae, Importance of mycorrhizal inoculum, types of mycorrhizae and associated plants, Mass production of VAM, field applications of Ectomycorrhizae and VAM. Entamopathogenic fungi

Unit V

General account of microbes used as bio-insecticides and their advantages over synthetic pesticides, bio nematicide, *Bacillus thuringiensis*, *Pseudomonas*, *Bacillus*, *Streptomyces*- production, Field applications, Viruses – cultivation and field applications.

18MBU404B

RECOMBINANT DNA TECHNOLOGY

Semester – IV
(3H – 3C)

Instruction Hours / week: L:3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To learn the basic tools in recombinant technology
- To understand the various concepts of cloning vectors and cloning strategies
- To emphasize the knowledge in biotechnology and techniques.
- To familiarize the students to versatile tools and techniques employed in genetic engineering and recombinant DNA technology.
- A sound knowledge on procedural repertoire allows students to innovatively apply these in basic and applied fields of biological research.
- This course offers theoretical bases to properties and applications of versatile DNA modifying enzymes, cloning strategies, vector types, host genotype specificities for selection and screening of recombinants and/or recombinant transformants.

COURSE OUTCOME

1. Imparts the **entrepreneurial** concepts of rDNA technology and their applications and Acquire knowledge on the applications of genetic engineering.
2. Understand the difference between old biotechnology and modern biotechnology.
3. Provide examples of current applications of biotechnology and advances in the different areas like medical, microbial, environmental, bioremediation, agricultural, plant, animal, and forensic sciences.
4. Explain the general principles of generating transgenic plants, animals and microbes.
5. Technical know-how on versatile techniques in recombinant DNA technology.
6. An understanding on application of genetic engineering techniques in basic and applied experimental biology.

Unit I

Milestones in genetic engineering and Biotechnology cloning Tools; Restriction modification systems: Types I, II and III. Mode of action, nomenclature, applications of Type II restriction enzymes in genetic engineering. DNA modifying enzymes and their applications: DNA polymerases. Terminal deoxynucleotidyl transferase, kinases and phosphatases, and DNA ligases

Unit II

Cloning Vectors: Definition and Properties Plasmid vectors: pBR and pUC series Bacteriophage lambda and M13 based vectors Cosmids, BACs, YACs. Use of linkers and adaptors. Expression vectors: *E.coli* lac and T7 promoter-based vectors, yeast YIp, YEpl and YCp vectors, Baculovirus based vectors, mammalian SV40-based expression vectors

Unit III

Transformation of DNA: Chemical method, Electroporation. Gene delivery: Microinjection, electroporation, biolistic method (gene gun), liposome and viral- mediated delivery, *Agrobacterium* - mediated delivery DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE and Western blotting.

Unit IV

PCR: Basics of PCR, RT-PCR, Real-Time PCR (Quantitative). Sanger's method of DNA Sequencing: traditional and automated sequencing. Primer walking and shotgun sequencing

Unit V

Construction of Genomic and cDNA libraries, screening of libraries: Colony hybridization and colony PCR, Chromosome walking and chromosome jumping. Products of recombinant DNA technology: Products of human therapeutic interest - insulin, hGH. Bt transgenic - cotton, brinjal, Gene therapy, recombinant vaccines, protein engineering and site directed mutagenesis. CRISPR tool.

18MBU411

IMMUNOLOGY – PRACTICAL

Semester – IV
(4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To strengthen the knowledge of students in immunodiagnostics on skill basis.
- To learn the latest trends in immunology.
- Rapid diagnosis and Immune reaction.
- To provide overview of immune system, antigen antibody structure and interactions.
- To develop understanding of innate and adaptive immunity along with major cells and molecules involved.
- To integrate immunology with health and enrich the knowledge for autoimmune disorders, hypersensitivity reaction.

COURSE OUTCOME

1. Introducing the science of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
2. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
3. Develop understanding about immune system, antigen antibody interactions.
4. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
5. After course completion, students can apply the knowledge in further studies and higher education.
6. Knows the concepts of advanced immunological assays.

EXPERIMENTS

1. Identification of human blood groups.
2. Perform Total Leukocyte Count of the given blood sample.
3. Perform Differential Leukocyte Count of the given blood sample.
4. Separate serum and plasma from the blood sample (demonstration).
5. Perform immunodiffusion by Ouchterlony method.
6. Perform DOT ELISA.
7. Perform immunoelectrophoresis.

SUGGESTED READINGS

1. Goldsby RA, Kindt TJ, Osborne BA. (2007). Kuby's Immunology. 6th edition, W.H. Freeman and Company, New York.
2. Delves P, Martin S, Burton D, Roitt IM. (2006). Roitt's Essential Immunology. 11th edition, Wiley- Blackwell Scientific Publication, Oxford.
3. Murphy K, Travers P, Walport M. (2008). Janeway's Immunobiology. 7th edition, Garland Science Publishers, New York.
4. Abbas AK, Lichtman AH, Pillai S. (2007). Cellular and Molecular Immunology. 6th edition, Saunders Publication, Philadelphia.
5. Peakman M, and Vergani D. (2009). Basic and Clinical Immunology. 2nd edition Churchill Livingstone Publishers, Edinberg.
6. Richard C and Geiffrey S. (2009). Immunology. 6th edition. Wiley Blackwell Publication.

Instruction Hours / week: L: 0 T: 0 P: 4**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- To introduce the knowledge of the medically important microorganisms, microbial morphology with the main focuses being the characterization, isolation and identification of different microorganism.
- The aim of Medical Microbiology course is to introduce basic principles and application relevance of clinical disease for students who are in preparation for physicians.
- The content of rigorous course includes many etiological agents responsible for global infectious diseases.
- It covers all biology of bacteria, viruses and other pathogens related with infectious diseases in humans.
- The course will provide the conceptual basis for understanding pathogenic microorganisms and particularly address the fundamental mechanisms of their pathogenicity.
- It will develop the basic skills on handling clinical pathogens.

COURSE OUTCOME

1. It provides the **entrepreneurial** ability to characterize, isolate and identify different microbes.
2. It includes a detailed study of characterization, etiology, pathogenicity, clinical systems, and laboratory diagnosis of disease causing Microorganisms.
3. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
4. Comprehend the various methods for identification of unknown microorganisms.
5. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
6. Explain the methods of microorganisms control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding. • Demonstrate practical skills in fundamental microbiological techniques.

EXPERIMENTS

1. Identify bacteria (any three of *E. coli*, *Salmonella*, *Pseudomonas*, *Staphylococcus*, *Bacillus*) using laboratory strains on the basis of cultural, morphological and biochemical characteristics: IMViC, TSI, nitrate reduction, urease production and catalase tests.
2. Study of composition and use of important differential media for identification of bacteria: EMB Agar, McConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS, Salmonella Shigella/BSA Agar.
3. Study of bacterial flora of skin by swab method.
4. Antibacterial sensitivity assay by Kirby-Bauer method.
5. Determination of minimal inhibitory concentration (MIC) of an antibiotic.
6. Study symptoms of the diseases with the help of photographs: Polio, anthrax, herpes, chicken pox, HPV warts, AIDS (candidiasis), dermatomycoses (ring worms).
7. Study of various stages of malarial parasite in RBCs using permanent mounts.

SUGGESTED READINGS

18MBU413 ENVIRONMENTAL MICROBIOLOGY – PRACTICAL**Semester – IV
(4H – 2C)****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- To educate students about Environmental monitoring and environmental aspects of microbes.
- To impart a [skill](#) based knowledge on Microbes and environment and ecological importance.
- Appreciate the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved

COURSE OUTCOME

1. Provides a comprehensive overview of biogeochemical processes relevant to environmental scientists and engineers mediated by microorganisms.
2. Understand various plant microbes interactions especially rhizosphere and their applications especially the biofertilizers and their production techniques
3. Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems
4. waste water treatment and bioremediation
5. Know the Microorganisms responsible for water pollution especially Water-borne pathogenic microorganisms and their transmission
6. Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment

EXPERIMENTS

1. Analysis of soil-pH, moisture content, water holding capacity, percolation, capillary action.
2. Isolation of microbes (bacteria & fungi) from soil (28 °C & 45 °C).
3. Isolation of microbes from saline water and soil.
4. Isolation of microbes (bacteria & fungi) from rhizosphere and rhizoplane.
5. Assessment of microbiological quality of water.
6. Determination of BOD of waste water sample.
7. Study the presence of microbial activity by detecting (qualitatively) enzymes (dehydrogenase, amylase and urease) in soil.
8. Isolation of *Rhizobium* from root nodules.

SUGGESTED READINGS

18MBU414A

BIOFERTILIZERS AND BIOPESTICIDES - PRACTICAL

Semester – IV
(3H –1C)

Instruction Hours / week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To study about the biofertilizers in increasing soil fertility and usage of Biopesticides for plant disease on the **entrepreneurial** basis.
- Appreciate the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved
- Understand various plant microbes interactions especially rhizosphere, phyllosphere and mycorrhizae and their applications especially the biofertilizers and their production techniques

COURSE OUTCOME

1. Provide the student knowledge about eco friendly product which play a crucial role in determining its future use and applications in environmental management.
2. Provides detailed idea about biofertilizer production and plant disease.
3. Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems
4. waste water treatment and bioremediation
5. Know the Microorganisms responsible for water pollution especially Water-borne pathogenic microorganisms and their transmission
6. Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment

EXPERIMENTS

1. Mass production and application of *Rhizobium* spp. from root nodules
2. Mass production and application of *Azotobacter* spp.
3. Mass production and application of *Azospirillum* spp.
4. Mass production and application of phosphate solubilizing bacteria- quantification, infectivity and potential of bacteria
5. Mass production and application of mycorrhizae.
6. Mass production and application of *Bacillus thuringiensis*.
7. Mass production and application of *Trichoderma viridae*- Inhibition studies.
8. Mass production and application of *Beauveria bassiana*
9. Isolation and identification of potash solubilizing microbes.
10. Isolation and identification of zinc solubilizing microbes.

RECOMBINANT DNA TECHNOLOGY – PRACTICAL

Semester – IV
(3H – 1C)

Instruction Hours / week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- To learn the **entrepreneurial** basic tools in recombinant technology
- To understand the various concepts of cloning vectors and cloning strategies
- To emphasize the knowledge in biotechnology and techniques.
- Provide idea about DNA, protein purification from samples and quantification.
- To learn the techniques pertaining to amplification of biological molecules.
- To impart knowledge on basic microbial isolation and identification approaches

COURSE OUTCOME

1. Imparts the concepts of rDNA technology and their applications and Acquire knowledge on the applications of genetic engineering.
2. Students will develop understanding about isolation and enumeration of microorganisms from various samples.
3. Microbial identification and characterization using a number of approaches will be well understood.
4. Acquainted with molecular modification approaches that encompass extraction, purification, quantification and augmentation.
5. To give basic understanding of microbial genetic manipulations
6. To understand working of different laboratory equipments used in microbiological laboratories

EXPERIMENTS

1. Preparation of competent cells for transformation.
2. Demonstration of Bacterial Transformation and calculation of transformation efficiency.
3. Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis
4. Ligation of DNA fragments.
5. Cloning of DNA insert and Blue white screening of recombinants.
6. Interpretation of sequencing gel electropherograms.
7. Designing of primers for DNA amplification.
8. Amplification of DNA by PCR.
9. Demonstration of Southern blotting.

Suggested reading

18MBU501A**MANAGEMENT OF HUMAN MICROBIAL DISEASES****Semester – V
(4H – 4C)****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To provide a strong base in the fundamentals of pathogens.
- To learn techniques and methods used in the cultivation and isolation of pathogens.
- To obtain with the knowledge about the habitat and characteristics of pathogens in detail.
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Theoretical knowledge on techniques employed for culturing and detection of plant and animal viruses.

COURSE OUTCOME

1. Develop employability skills for identification, classification, and characterization of various pathogens.
2. To describe and practice the basic principles of chemotherapy and disinfection through laboratory exercises accompanied by case studies.
3. Upon completion, students gained the knowledge of most common medically important organism and the infections they cause. • Different approaches, techniques and tools used to identify pathogens and control them.
4. Diagnostic approaches for microbial pathogens
5. Developing efficient vaccines and new drugs
6. Able to describe characteristics of

Unit I

Infectious and non-infectious diseases, microbial and non-microbial diseases, Deficiency diseases, occupational diseases, Incubation period, mortality rate, nosocomial infections

Unit II

Respiratory microbial diseases, gastrointestinal microbial diseases, Nervous system diseases, skin diseases, eye diseases, urinary tract diseases, Sexually transmitted diseases: Types, route of infection, clinical systems and general prevention methods, study of recent outbreaks of human diseases (SARS/ Swine flu/Ebola) – causes, spread and control, Mosquito borne disease – Types and prevention.

Unit III

Treatment using antibiotics: beta lactam antibiotics (penicillin, cephalosporins), quinolones, polypeptides and aminoglycosides. Anti-fungal and anti-parasitic agents. Judicious use of antibiotics, importance of completing antibiotic regimen, Concept of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR microbial strains. Treatment using antiviral agents: Amantadine, Acyclovir, Azidothymidine. Concept of HAART.

Unit IV

General preventive measures, Transmission and prevention of microbial diseases. Importance of personal hygiene, environmental sanitation and methods to prevent the spread of infectious agents transmitted by direct contact, food, water and insect vectors.

Unit V

Importance, types, Vaccine preparation, synthetic or recombinant vaccines. vaccines available against microbial diseases, vaccination schedule (compulsory and preventive) in the Indian context.

5. Madigan MT, Martinko JM, Dunlap PV and Clark DP. (2014). Brock Biology of Microorganisms. 14th edition. Pearson International Edition.

18MBU501B**MICROBIOLOGICAL ANALYSIS OF AIR AND WATER****Semester – V
(4H – 4C)****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- To impart knowledge microflora of air and water, sample collection, analysis and control of diseases.
- This paper is designed with the objective to impart hand-on experience and laboratory skills to students in area of bioprocess.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental, air and water issues.
- The students will develop set of skills to recognize the ecological problems and critical evaluation of the human impacts on pollution, climate changes and as well as environmental protection.
- To reduce volume of sludge, to stabilize organic solids, and to recover resources. Typical Methods of Treatment: Thickening, chemical addition, centrifugation, filtration, digestion, incineration.
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management

COURSE OUTCOME

1. Provides employability skills involved in the air and water analysis
2. Characterization of microorganisms from water and air samples
3. Students will get the basic knowledge how to prepare and perform sampling and microbial analyses to determine the abundance, growth rate and microbial community composition together with the basic environmental parameters.
4. Validation for equipment, methods, cleaning and process
5. Students can develop their entrepreneurial skills in analysis of air and water sample.
6. Learning the basic principles of microbiological analysis of environmental sector

Unit I

Bioaerosols, Air borne microorganisms (bacteria, viruses, fungi) and their impact on human health and environment, significance in food and pharma industries and operation theatres, allergens

Unit II

Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for bacteria and fungi, Identification characteristics

Unit III

Fate of bioaerosols, inactivation mechanisms – UV light, HEPA filters, desiccation, Incineration. Precipitation, chemical disinfection, filtration, high temperature and UV light.

Unit IV

Water borne pathogens and water borne diseases. Determination of hardness water. Assessment of microbiological quality of water. Determination of BOD and COD of waste water sample.

Unit V

Sample Collection, Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive/MPN tests confirmed and completed tests for faecal coliforms (b) Membrane filter technique and (c) Presence/absence tests

SUGGESTED READINGS

18MBU502A

BIOMATHEMATICS AND BIOSTATISTICS

Semester – V
(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES:**

- This course has been intended to provide the learner insights into helpful areas of Statistics which plays an essential role in present, future use and applications of Biology.
- This course provides an introduction to a variety of statistical methods of use in describing and analyzing biological data.
- It includes a laboratory component in which biological data are analyzed using statistical software. No prior knowledge of the software will be assumed.
- Statisticians help to design data collection plans, analyze data appropriately and interpret and draw conclusions from those analyses.
- To develop students' skills in algebraic manipulation, the calculus of linear and non-linear differential equations, mathematical modelling, matrix algebra and statistical methods.
- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.
- To show how mathematics, statistics and computing can be used in an integrated way to analyse biological systems.
-

COURSE OUTCOME

1. Students get an idea about collection, interpretation and presentation of statistical data.
2. Statistics, a branch of applied Mathematics, is regarded as mathematics applied to observational data.
3. Conceivably everything dealing with the collection, processing, analysis and interpretation of numerical data belongs to the domain of statistics.
4. To introduce students to the use of R for the analysis of biological processes and data, including simple computer programming.
5. Students have an enhanced knowledge and understanding of mathematical modeling and statistical methods in the analysis of biological systems
6. Able to analyse data from experiments and draw sound conclusions about the underlying processes using their understanding of mathematics and statistics be better able to assess biological inferences that rest on mathematical and statistical arguments.

UNIT I

Sets. Functions and their graphs : polynomial, sine, cosine, exponential and logarithmic functions. Motivation and illustration for these functions through projectile motion, simple pendulum, biological rhythms, cell division, muscular fibres etc. Simple observations about these functions like increasing, decreasing and, periodicity. Sequences to be introduced through the examples arising in Science beginning with finite sequences, followed by concepts of recursion and difference equations. For instance, the Fibonacci sequence arising from branching habit of trees and breeding habit of rabbits.

UNIT II

Intuitive idea of algebraic relationships and convergence. Infinite Geometric Series. Series formulas for ex, $\log(1+x)$, $\sin x$, $\cos x$. Step function. Intuitive idea of discontinuity, continuity and limits. Differentiation. Conception to be motivated through simple concrete examples as given above from Biological and Physical Sciences. Use of methods of differentiation like Chain rule, Product rule and Quotient rule. Second order derivatives of above functions. Integration as reverse process of differentiation. Integrals of the functions introduced above. Differential Equations of first order, Linear Differential Equations. Points in plane and space and coordinate form. Examples of matrices arising in

UNIT III

Definitions-Scope of Biostatistics Principles of statistical analysis of biological data - Variables in biology, Data collection, classification and tabulation of data - Graphical and diagrammatic representation.

Measures of Central Tendency – Arithmetic Mean, Median and Mode. Measures of Dispersion- Range, Standard Deviation, Coefficient of variation. Skewness and Kurtosis.

UNIT IV

Elementary Probability and basic laws; Discrete and Continuous Random variable, Mathematical Expectation; Emphasis on examples from Biological Sciences. Mean and Variance of Discrete and Continuous Distributions namely Binomial, Poisson and Normal distribution.

UNIT V

Sampling parameters: Difference between Sample and Population, difference between parametric and non-parametric statistics. Sampling Design: Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements - Types of scale.

18MBU502B

BIOINFORMATICS

Semester – V
(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester exam: 3 hours

COURSE OBJECTIVES

- To detail the importance of computer in field of life sciences.
- To obtain good understanding about the interpretation of biological data base.
- To uptake knowledge in latest tools and technology.
- Aimed to provide an overview of various bioinformatics tools, databases available and sequence analysis
- Provide knowledge on database concept, management, retrieval along with utilization in gene and protein analysis.
- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis

COURSE OUTCOME

1. Provides computational skill on search engines and various software tools involved in bioinformatics
2. It will impart computational based techniques which includes genomics and proteomics in Bioinformatics.
3. Retrieve information from available databases and use them for microbial identifications and drug designing
4. Gain ability to modify gene and protein structures in simulated systems.
5. Introduction to the basics of sequence alignment and analysis.
6. Describe about the different types of Biological databases.

Unit I

RDBMS - Definition of relational database. Mode of data transfer (FTP, SFTP, SCP), advantage of encrypted data transfer.

Unit II

Biological databases – nucleic acid, genome, protein sequence and structure, gene expression databases, Database of metabolic pathways, Mode of data storage - File formats - FASTA, Genbank and Uniprot, Data submission & retrieval from NCBI, EMBL, DDBJ, Uniprot, PDB.

Unit III

Local and Global Sequence alignment, pairwise and multiple sequence alignment. Scoring an alignment, scoring matrices, PAM & BLOSUM series of matrices. Types of phylogenetic trees, Different approaches of phylogenetic tree construction - UPGMA, Neighbour joining, Maximum Parsimony, Maximum likelihood.

Unit IV

Diversity of Genomes: Viral, prokaryotic & eukaryotic genomes Genome, transcriptome, proteome, 2-D gel electrophoresis, Maldi ToF spectroscopy. Major features of completed genomes: *E.coli*, *S.cerevisiae*, *Arabidopsis*, Human.

Unit V

Hierarchy of protein structure - primary, secondary and tertiary structures, modeling. Structural Classes, Motifs, Folds and Domains. Protein structure prediction in presence and absence of structure template Energy minimizations and evaluation by Ramachandran plot Protein structure and rational drug design.

SUGGESTED READINGS

2. Pradeep and Sinha Preeti (2007) Foundations of Computing, 4th ed., BPB Publications.
3. Lesk M.A. (2008) Introduction to Bioinformatics . Oxford Publication, 3rd International Student Edition.
4. Rastogi S.C., Mendiratta N. and Rastogi P. (2007) Bioinformatics: methods and applications, genomics, proteomics and drug discovery, 2nd ed. Prentice Hall India Publication.
5. Primrose and Twyman (2003) Principles of Genome Analysis & Genomics. Blackwell.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

To develop skills related to

- Understand the principles of various instruments used in the life sciences
- Ability to operate the instruments
- Data analysis and interpretations
- Introduce the basic concept of qualitative and quantitative analysis of a given sample
- Study various spectroscopic techniques and its instrumentation
- Study the concept of separation science and its applications.
- To learn the fundamentals of research methodology, working principles and applications of instruments used in biology.

COURSE OUTCOME

1. offers the students with an opportunity to develop skill on the bioinstrumentation and concepts of principles and applications. •
2. Define and explain various fundamentals of spectroscopy, qualitative and quantitative analysis and characterize functionalities of biomolecules by using spectroscopic techniques.
3. Explain the various separation techniques and its instrumentation.
4. Describe the principle and working of various radiation detectors
5. Evaluate the various types & applications of chromatography and electrophoresis.
6. Appreciate the working principles and applications of Microscopy

Unit I

Brightfield and darkfield microscopy, Fluorescence Microscopy, Phase contrast Microscopy, Confocal Microscopy, Electron Microscopy (Scanning and Transmission Electron Microscopy).

Unit II

Principles and applications of paper chromatography (including Descending and 2-D), Thin layer chromatography. Column Chromatography - packing types (IEC, AC, SEC), fraction collection. GLC and HPLC.

Unit III

Principle and applications of native polyacrylamide gel electrophoresis, SDS- polyacrylamide gel electrophoresis, 2D gel electrophoresis, Isoelectric focusing, Zymogram preparation and Agarose gel electrophoresis.

Unit IV

Principle, Instrumentation and application of spectrophotometer, colorimeter and turbidometer. MALDI-TOF, FTIR, MS, NMR.

Unit V

Principles of Filtration (micro and ultra) and centrifugations – RCF and sedimentation coefficient. Types of centrifuges – rotors - fixed angle and swinging bucket rotors. Types of Centrifugation – differential, density gradient and ultracentrifugation. Analytical centrifugation.

6. Cooper G.M. and Hausman R.E. (2009). The Cell: A Molecular Approach. 5th Edition. ASM Press & Sunderland, Washington D.C., Sinauer Associates, MA.
7. Nigam A and Ayyagari A. 2007. Lab Manual in Biochemistry, Immunology and Biotechnology. Tata McGraw Hill.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- This paper aims at introducing students to the basic and applied aspects of plant biotechnology.
- Introduce students to the basic principles and concepts of plant pathology.
- Introduce and illustrate the major groups of organisms that cause plant diseases.
- Enhance student's understanding of scientific research, especially as it applies to the science of plant pathology and the study of microorganisms.
- Provide a framework that students can use in their profession to best approach plant disease management.
- Prepare students for additional classes in Plant Pathology and related disciplines.

COURSE OUTCOME

1. This will enable for learning the techniques to save endangered species which will be useful for mankind
2. Describe the concepts of what constitutes disease in plants.
3. Identify major principles of plant pathology.
4. Recognize the etiological agents of disease.
5. Employ methods to diagnose and manage a wide range of plant diseases.
6. Describe aspects of integrated pest management.

Unit I

Concept of plant disease- definitions of disease, disease cycle and pathogenicity, symptoms associated with microbial plant diseases, types of plant pathogens, economic losses and social impact of plant diseases. Significant landmarks in the field of plant pathology- Contributions of Anton DeBary, Millardet, Burrill, E. Smith, Adolph Mayer, Ivanowski, Diener, Stakman, H.H. Flor, Van Der Plank, molecular Koch's postulates. Contributions of eminent Indian plant pathologists.

Unit II

Infection, invasion, colonization, dissemination of pathogens and perennation. Concepts of monocyclic, polycyclic and polyetic diseases, disease triangle & disease pyramid, forecasting of plant diseases and its relevance in Indian context.

Unit III

Study of some important plant diseases giving emphasis on its etiological agent, symptoms, epidemiology and control.

- a. Important diseases caused by phytopathogenic bacteria: Angular leaf spot of cotton, bacterial leaf blight of rice, crown galls, bacterial cankers of citrus.
- b. Important diseases caused by fungi: White rust of crucifers - *Albugo candida*, Downy mildew of onion - *Peronospora*, Powdery mildew of wheat - *Erysiphe graminis*.
- c. Important diseases caused by viruses: Papaya ring spot, tomato yellow leaf curl, banana bunchy top, rice tungro.

Unit IV**a. Microbial Pathogenicity**

Virulence factors of pathogens: enzymes, toxins (host specific and non specific) growth regulators, virulence factors in viruses (replicase, coat protein, silencing suppressors) in disease development. Effects of pathogens on host physiological processes (photosynthesis, respiration, cell membrane permeability, translocation of water and nutrients, plant growth and reproduction).

b. Genetics of Plant Diseases

Concept of resistance (R) gene and avirulence (avr) gene; gene for gene hypothesis, types of plant resistance: true

resistance– horizontal & vertical, apparent resistance.

c. Defense Mechanisms in Plants

Concepts of constitutive defense mechanisms in plants, inducible structural defenses (histological- cork layer, abscission layer, tyloses, gums), inducible biochemical defenses [hypersensitive response (HR), systemic acquired resistance (SAR), phytoalexins, pathogenesis related (PR) proteins, plantibodies, phenolics, quinones, oxidative bursts].

Unit V

Principles and practices involved in the management of plant diseases by different methods, viz. regulatory - quarantine, crop certification, avoidance of pathogen, use of pathogen free propagative material cultural - host eradication, crop rotation, sanitation, polyethylene traps and mulches chemical - protectants and systemic fungicides, antibiotics, resistance of pathogens to chemicals. biological - suppressive soils, antagonistic microbes-bacteria and fungi, trap plants genetic engineering of disease resistant plants- with plant derived genes and pathogen derived genes.

SUGGESTED READINGS

1. Agrios GN. (2006). Plant Pathology.5th edition.Academic press, San Diego.
2. Lucas JA. (1998). Plant Pathology and Plant Pathogens.3rd edition. Blackwell Science, Oxford.

Instruction Hours / week: L: 3 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- To make students understand the aspects of industrial, soil, environmental, agricultural microbiology.
- Gain knowledge about the Industrially important microorganisms & nutritional requirements.
- Know about the Commercialization methods of Microbial products.
- To understand the industrially important microorganisms' commercial value and importance of patent and IPR.
- Describe about different sewage treatment methods employed in waste water treatment. know the microorganisms responsible for water pollution.

COURSE OUTCOME

1. This paper imparts knowledge on applications of microorganisms in various fields and helps to gain employability in pharmaceutical industries .
2. Describe about different sewage treatment methods employed in waste water treatment.
3. About the global environmental problems.
4. To provide a fundamental knowledge about the various scopes in environmental and industrial studies.
5. Learn about the applications of microbes in biotransformations, therapeutic and industrial biotechnology.
6. Describe aspects of genetically engineered microbes for industrial application.

Unit I

Microbial biotechnology: Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology. Use of prokaryotic and eukaryotic microorganisms in biotechnological applications. Genetically engineered microbes for industrial application: Bacteria and yeast

Unit II

Recombinant microbial production processes in pharmaceutical industries - Streptokinase, recombinant vaccines (Hepatitis B vaccine). Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics, Microbial biosensors. Gene transfer technique.

Unit III

Microbial based transformation of steroids and sterols. Bio-catalytic processes and their industrial applications: Production of high fructose syrup and production of cocoa butter substitute. Phage typing, gene therapy. biotransformation of antibiotics

Unit IV

Microbial product purification: filtration, ion exchange & affinity chromatography techniques Immobilization methods and their application: Whole cell immobilization. RNAi and its applications in silencing genes, drug resistance, therapeutics and host pathogen interactions.

Unit V

Basic cloning steps and product development. Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using

microbial culture. Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents. Patents, patenting fundamental requirements- patent multicellular organisms, IPR, Copyrights, Trademarks

SUGGESTED READINGS

9. Crueger W, Crueger A (1990) Biotechnology: A text Book of Industrial Microbiology 2nd edition. Sinauer associates, Inc.

Instruction Hours / week: L: 3 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- To make students understand the principles of Genetics and inheritance biology.
- Understand that genes are the units of inheritance for individual characteristics and also may contribute to susceptibility to certain diseases
- Understand the number of chromosomes that make up the human genome and where they are located within the cell
- Understand the role of the X and Y chromosomes in determining sex and how they are inherited.
- Understand how gametes are produced by the process of meiosis and how the full complement of 46 chromosomes is restored at fertilisation
- To identify and describe the process and purposes of the cell cycle, meiosis, and mitosis, as well as predict the outcomes of these processes.

COURSE OUTCOME

1. This paper imparts knowledge on the different aspects of genetics and pedigree analysis.
2. Understand the central dogma of molecular biology and the genome of prokaryotic and eukaryotic microorganisms.
3. To gain knowledge about the microbial genetics and central dogma of molecular biology
4. Students will understand the cellular components underlying mitotic cell division.
5. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function. These can include responses to environmental or physiological changes, or alterations of cell function brought about by mutation.
6. To describe applications and techniques of modern genetic technology, as well as select the correct techniques to solve practical genetic problems.

Unit I

Historical developments: Model organisms in genetic analyses and experimentation: *Escherichia coli*, *Saccharomyces cerevisiae*, *Neurospora crassa*, *Caenorhabditis elegans*, *Drosophila melanogaster*, *Arabidopsis thaliana*.

Unit II

Mendel's Laws: Dominance, segregation, independent assortment, deviation from Mendelian inheritance, Rediscovery of Mendel's principles, Chromosome theory of inheritance: Allele, multiple alleles, pseudoallele, complementation tests, Extensions of Mendelian genetics: Allelic interactions, concept of dominance, recessiveness, Incomplete dominance and co-dominance, Multiple alleles, Epistasis, penetrance and expressivity.

Unit III

Linkage and recombination of genes, Cytological basis of crossing over, Crossing over at four-strand stage, Molecular mechanism of crossing over, mapping Homologous and non-homologous recombination, including transposition, site-specific recombination.

Unit IV

Rules of extra nuclear inheritance, Organelle heredity - Chloroplast mutations in *Chlamydomonas*, mitochondrial, mutations in *Saccharomyces*, Maternal effects – Shell coiling in *Limnaea peregra* Infectious heredity - Kappa particles in *Paramecium*. Pedigree analysis, lod score for linkage testing, karyotypes, genetic disorders. Polygenic inheritance, heritability and its measurements, QTL mapping.

Unit V

Structural organization of chromosomes - centromeres, telomeres and repetitive DNA, Packaging DNA molecules into chromosomes, Concept of euchromatin and heterochromatin, Normal and abnormal karyotypes of human chromosomes, Chromosome banding, Giant chromosomes: Polytene and lampbrush chromosomes, Variations in chromosome structure: Deletion, duplication, inversion and translocation, Variation in chromosomal number and structural abnormalities - Klinefelter syndrome, Turner syndrome, Down syndrome

18MBU511A**Semester – V
(4H – 2C)****MANAGEMENT OF HUMAN MICROBIAL DISEASES - PRACTICAL****Instruction Hours / week:L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- To provide a strong base in the fundamentals of pathogens.
- To learn techniques and methods used in the cultivation and isolation of pathogens.
- To obtain with the knowledge about the habitat and characteristics of pathogens.
- Program aims to develop students' understanding of medical microbiology with hand on experience in the isolation of the bacteria from different sources.
- It gives the knowledge about the pathogenicity, understanding the biofilm formation in bacteria, role of biofilm in pathogenicity and their antibiotics resistance pattern of pathogenic bacteria which is useful for public awareness.
- The objective of this course is to instill awareness on basics of immune system where students will learn the components of immunity and various immune responses that work together to protect the host.

COURSE OUTCOME

1. Involves the identification, classification, and characterization of pathogenic species.
2. This paper imparts **employability** in hospital laboratories.
3. Properly use aseptic techniques, including sterilization. Know General bacteriology and microbial techniques for isolation of pure cultures of bacteria.
4. Basics in microbiology course is designed as an interdisciplinary course to acquaint the students of different streams with a very basic knowledge and understanding of
5. microbes, pathogens and their control Learning methods for antimicrobial susceptibility testing
6. In this course the students will observe and perform experiments related to clinical microbiology and virology which will enhance their laboratory skills, and scientific knowledge.

EXPERIMENTS

1. Diagnosis of respiratory tract disease.
2. Diagnosis of urinary tract disease.
3. Diagnosis of gastrointestinal tract disease.
4. Identification of dermatophytes

SUGGESTED READINGS

18MBU511B**Semester – V
(4H – 2C)****MICROBIOLOGICAL ANALYSIS OF AIR AND WATER – PRACTICAL****Instruction Hours / week:L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 9 Hours****COURSE OBJECTIVES**

- Impart knowledge microflora of air and water, sample collection, analysis and control of diseases.
- Explain the significance of air Microflora and airborne diseases
- Gain knowledge about water pollution and waste water treatments.
- Learning the basic principles of environment microbiology and be able to apply these principles to understanding and solving problems in current environmental, air and water issues.
- Validation for equipment, methods, cleaning and process
- Students can develop their entrepreneurial skills in analysis of air and water sample.

COURSE OUTCOME

- This paper teaches different laboratory **skills** of analyzing air and water.
- Hand on training of the general equipment used in microbiology laboratory
- Develop capability to perform different gene transfer methods in microbes
- Characterization of microorganisms from water and air samples
- Enumeration of bacteria and fungi from air by membrane filtration technique
- Gain knowledge about water pollution and waste water treatments.

EXPERIMENTS

1. Enumeration of indoor and outdoor microflora of air (bacteria and fungi) by settle plate method.
2. Enumeration of bacteria and fungi from air by membrane filtration technique.
3. Microbicidal effect of UV light.
4. Evaluation of disinfectants – Phenol coefficient method.
5. MPN test.
6. Enumeration of bacteria and fungi from water by membrane filtration technique.

SUGGESTED READINGS

1. Da Silva N, Taniwaki MH, Junqueira VC, Silveira N, Nascimento MS, Gomes RAR (2012) Microbiological Examination Methods of Food and Water. A Laboratory Manual, CRC Press.
2. Atlas RM and Bartha R. (2000). Microbial Ecology: Fundamentals & Applications. 4th edition. Benjamin/Cummings Science Publishing, USA.
3. Maier RM, Pepper IL and Gerba CP. (2009). Environmental Microbiology. 2nd edition, Academic Press.
4. Hurst CJ, Crawford RL, Garland JL, Lipson DA (2007). Manual of Environmental Microbiology, 3rd edition, ASM press.

18MBU512A**BIOMATHEMATICS AND BIOSTATISTICS - PRACTICAL****Semester – V
(4H – 2C)****Instruction Hours / week:L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- This course has been intended to provide the learner insights into helpful areas of Statistics which plays an essential role in present, future use and applications of Biology.
- Statisticians help to design data collection plans, analyze data appropriately and interpret and draw conclusions from those analyses.
- Statistics helps in the proper and efficient planning of a statistical inquiry in any field of study.
- Statistics helps in providing a better understanding and exact description of a phenomenon of nature.
- To develop students' skills in algebraic manipulation, the calculus of linear and non-linear differential equations, mathematical modelling, matrix algebra and statistical methods.
- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.

COURSE OUTCOME

1. Students get an idea about collection, interpretation and presentation of statistical data.
2. Statistics help in providing data as well as tools to analyze the data.
3. Some powerful techniques are index numbers, time series analysis, and also forecasting.
4. Statistical knowledge helps you use the proper methods to collect the data, employ the correct analyses, and effectively present the results.
5. To show how mathematics, statistics and computing can be used in an integrated way to analyse biological systems.
6. Conceivably everything dealing with the collection, processing, analysis and interpretation of numerical data belongs to the domain of statistics.

List of Experiments (any 10 from the following using any software)

1. Word Problems based on Differential Equations
2. Calculation of Mean
3. Calculation of Median
4. Calculation of Mode
5. Finding Standard Deviation and Coefficient of Variation
6. Calculation of Correlation Coefficient using Karl Pearson Methods
7. Calculation of Correlation Coefficient using Spearman
8. Problems based on Regression Coefficient
9. Finding area under the curve using normal probability
10. Testing of Hypothesis for large sample Z-test
11. Testing of Hypothesis for small sample t-test
12. Testing of Hypothesis using Chi-Square-test

Instruction Hours / week:L: 0 T: 0 P: 4**Marks: Internal: 40 External:60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- Students get an idea about collection, interpretation and presentation of bioinformatics data.
- Develop competence to integrate biological information with computational softwares
- Impart basic understanding of bioinformatics approaches for bacterial/viral/fungal identifications and drug design
- Bioinformatics is the application of computer technology to get the information that's stored in certain types of biological data.
- Bioinformatics provides central, globally accessible databases that enable scientists to submit, search and analyse information.
- A sound knowledge on procedural repertoire allows students to innovatively apply these in basic and applied fields of biological research.

COURSE OUTCOME

1. This course has been intended to provide the learner insights into helpful areas of Bioinformatics which plays an essential role in application-oriented biology.
2. Provides computational [skill](#) on search engines and various software tools involved in bioinformatics
3. Learning methods for designing primers and in-silico PCR
4. Develop competence to retrieve information from biological databases and integrate this biological information with computational softwares.
5. Design an experiment with step-by-step instructions to address a research problem
6. Technical know-how on versatile techniques in bioinformatics techniques

EXPERIMENTS

1. Introduction to different operating systems - UNIX, LINUX and Windows
2. Introduction to bioinformatics databases (any three): NCBI/PDB/DDBJ, Uniprot, PDB
3. Sequence retrieval using BLAST
4. Sequence alignment & phylogenetic analysis using clustalW & phylip
5. Picking out a given gene from genomes using Genscan or other softwares (promoter region identification, repeat in genome, ORF prediction). Gene finding tools (Glimmer, GENSCAN), Primer designing, Genscan/Genetool
6. Protein structure prediction: primary structure analysis, secondary structure prediction using psi- pred, homology modeling using Swissmodel. Molecular visualization using jmol, Protein structure model evaluation (PROCHECK)
7. Prediction of different features of a functional gene

SUGGESTED READINGDS

18MBU513A INSTRUMENTATION AND BIOTECHNIQUES – PRACTICAL**Semester – V
(4H – 2C)****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

To develop skills related to

- Understand the principles of various instruments used in the life sciences.
- Ability to operate the instruments.
- Data analysis and interpretations.
- Appreciate the working principles and applications of Microscopy.
- Understand the mechanics of thesis writing
- To understand working of different laboratory equipment used in microbiological laboratories

COURSE OUTCOME

1. Offers the students with an opportunity to gain practical skills on the bioinstrumentation and concepts of principles and applications.
2. Evaluate the various types & applications of chromatography and electrophoresis.
3. Evaluate the various types & phase contrast microscopy and Electron microscopy
4. Explain the various separation techniques and its instrumentation.
5. Hand on training of the general equipment used in microbiology laboratory
6. Comprehend the major spectrophotometric and titrimetric approaches of quantification in biological and environmental samples.

EXPERIMENTS

1. Study of fluorescent micrographs to visualize bacterial cells – Demonstration
2. Ray diagrams of phase contrast microscopy and Electron microscopy – Demonstration
3. Separation of mixtures by paper / thin layer chromatography.
4. Demonstration of column packing in any form of column chromatography.
5. Separation of protein mixtures by any form of chromatography.
6. Separation of protein mixtures by Polyacrylamide Gel Electrophoresis (PAGE).
7. Determination of λ_{max} for an unknown sample and calculation of extinction coefficient.
8. Separation of components of a given mixture using a laboratory scale centrifuge.
9. Understanding density gradient centrifugation with the help of pictures.

18MBU513B**PLANT PATHOLOGY – PRACTICAL****Semester – V
(4H – 2C)****Instruction Hours / week:L: 0 T: 0 P: 4****Marks: Internal: 40 External:60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- This paper aims at introducing students to the basic and applied aspects of plant biotechnology.
- Introduce students to the basic principles and concepts of plant pathology.
- Introduce and illustrate the major groups of organisms that cause plant diseases
- Provide a framework that students can use in their profession to best approach plant disease management.
- To study the importance of plant diseases and cutting sections of infected plant material
- To acquaint with different strategies for management of plant diseases

COURSE OUTCOME

1. This will enable for learning the techniques to save endangered species which will be useful for mankind.
2. Identify major principles of plant pathology.
3. Demonstration of fungal, bacterial and viral plant pathogens.
4. Recognize the etiological agents of disease.
5. Employ methods to diagnose and manage a wide range of plant diseases.
6. To teach the students about the different groups of insects that vector plant pathogens, vector-plant pathogen interaction, management of vectors for controlling diseases.

SUGGESTED READINGS

18MBU514A	MICROBIAL BIOTECHNOLOGY - PRACTICAL	Semester – V (3H – 1C)
-----------	-------------------------------------	---------------------------

Instruction Hours / week:L: 0 T: 0 P: 3	Marks: Internal: 40 External: 60 Total: 100
	End Semester Exam: 6 Hours

COURSE OBJECTIVE

- To make students understand the aspects of industrial, soil, environmental, agricultural microbiology.
- To understand the methods for Production of industrially important compounds from fungal source.
- This paper is designed to provide an exposure to the students about the potential of fungi as food and in field of biotechnology as source of different enzymes, secondary metabolites, vitamins, polysaccharides, polyhydric alcohols, pigments and lipids.
- Develop an understanding of various aspects of bioprocess technology.
- Evaluate nanotechnology and microbial production of therapeutic compounds
- The laboratory training in addition to theory is included so that the students will acquire the skills to qualify for a broad range of position in research, industry, consultancy, education and publication administration for future education.

COURSE OUTCOME

1. Impart knowledge on applications of microorganisms in various fields
2. Provides skill development on microbial products.
3. To study the immobilization techniques and fungal pigment production.
4. Develop a xylanase and lipase production technology.
5. Demonstration of algal single cell proteins.
6. State of art knowledge about various methodological and analytic approaches that are used within the

EXPERIMENTS

1. Study yeast cell immobilization in calcium alginate gels and storage stability.
2. Study enzyme immobilization by sodium alginate method and storage stability.
3. Study of cell viability and enzyme estimation
4. Pigment production from fungi (*Trichoderma* / *Aspergillus* / *Penicillium*).
5. Isolation of xylanase or lipase producing bacteria.
6. Study of algal Single Cell Proteins.
7. Study the stability of various formulation- powder, liquid, cream (additives, carriers at different pH, moisture, temperature and shelf life)

SUGGESTED READINGS

18MBU514B**INHERITANCE BIOLOGY - PRACTICAL****Semester – V
(3H – 1C)****Instruction Hours / week:L: 0 T: 0 P: 3****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 6 Hours****COURSE OBJECTIVE**

- To make students understand the principles of Genetics and inheritance biology.
- Students will learn the basic principles of inheritance at the molecular, cellular and organismal levels
- Students will test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations.
- Describe the principal cell types comprising each tissue system
- Identify location and function of apical meristems, and describe their general structure
- Explain DNA repair and recombination in terms of mutation and evolution
- The objective of the course is to make student understand about the structure and function of biologically important molecules.

COURSE OUTCOME

1. Imparts knowledge on the different aspects of genetics and pedigree analysis.
2. Students will understand the cellular components underlying mitotic cell division
3. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function.
4. Identify the organs and tissue systems of plants, and explain their respective function
5. Understand how molecular cell biology forms the foundation of biotechnology
6. Students will learn about DNA, RNA and the molecular events that govern cell functions

EXPERIMENTS

1. Mendelian deviations in dihybrid crosses
2. Studying Barr Body with the temporary mount of human cheek cells
3. Studying *Rhoeo* translocation with the help of photographs
4. Karyotyping with the help of photographs
5. Chi-Square Analysis
6. Study of polytene chromosomes using temporary mounts of salivary glands of *Chiromonas / Drosophila* larvae
7. Study of pedigree analysis
8. Analysis of a representative quantitative trait

SUGGESTED READINGS

7. Russell PJ. (2009). *i* Genetics - A Molecular Approach. 3rd Ed, Benjamin Cummings.

Instruction Hours / week: L: 0 T: 0 P: 4**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To teach on cultivation, diseases and health benefits of mushrooms.
- To provide practical knowledge of different sterilization procedures and learn handling of mushrooms.
- To enhance the student's knowledge and impress upon them the important aspects of mushroom.
- To understand to know pure culture techniques and methods of culturing preservation and maintenance of mushrooms.
- To make the students more knowledge on mushroom cultivation.
- To make the students to know the classification.

COURSE OUTCOME

1. To impart knowledge on various mushrooms and its cultivation techniques to become an **entrepreneur**.
2. Able to Know how the architecture of mushrooms
3. To know the methods used to cultivate mushroom.
4. Students are able to predict where the mushroom placed in vegetable kingdom
5. Able to cultivate mushrooms from agricultural waste.
6. Students can able to develop latest technologies in mushroom cultivation.

Unit I

Mushroom morphology: Different parts of a typical mushroom and variations in mushroom morphology. Key to differentiate edible from poisonous mushrooms. Mushroom Classification: Based on occurrence – Epigenous and hypogenous, Natural habitats – Humicolous, Lignicolous & Coprophilous, Color of spores – white, yellow, pink, purple brown and black. Ainsworth et al classification (8th edition) and Bisby's 'Dictionary of Fungi'.

Unit II

Biology of Mushrooms: Vegetative characters, general morphology, spore germination and life cycle of button mushroom (*Agaricus bisporus*), milky mushroom (*Calocybe indica*), oyster mushroom (*Pleurotus sajorcaju*) and paddy straw mushroom (*Volvariella volvcea*).

Unit III

Equipment and sterilization techniques. Isolation and culture of spores, culture media preparation. Production of mother spawn, multiplication of spawn – Inoculation technique – Cultivation technology – Substrates, composting technology, bed, polythene bag preparation, spawning – casing – cropping – Mushroom production – harvest – packing, storage and marketing.

Unit IV

Nutritional profile of Mushrooms: protein, amino acids, calorific values, carbohydrates, fats, vitamins & minerals. Medicinal Properties of Mushrooms: Antibacterial, antifungal, antiviral, anti-tumour effect and hematological value. Cardiovascular and renal effect, in therapeutic diets, adolescence, for aged persons and diabetes mellitus. Mushroom nutraceuticals.

Unit V

Problems in cultivation – diseases, pests and nematodes, weed moulds and their management strategies. Mushroom economics: economics of spawn and mushroom, cultivation, postharvest technologies. Processing and preservation of mushrooms. Mushroom research centres in India.

SUGGESTED READINGS

1. Alice, D., Muthusamy and Yesuraja, M. (1999). Mushroom Culture. Agricultural College, Research Institute Publications, Madurai.
2. Marimuthu, T. et al. (1991). Oyster Mushroom. Department of Plant Pathology. Tamil Nadu Agricultural University, Coimbatore.
3. Nita Bhal. (2000). Handbook on Mushrooms. 2nd ed. Vol. I and II. Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi.
4. Pathak, V. N. and Yadav, N. (1998). Mushroom Production and Processing Technology. Agrobios, Jodhpur.
5. Tewari Pankaj Kapoor, S. C. (1988). Mushroom Cultivation. Mittal Publication, New Delhi.

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To encode the importance of the role of microorganisms in food industries in beneficial ways.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
- To Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
- To Understand the use of standard methods and procedures for the microbiological analysis of food
- Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

COURSE OUTCOME

1. To impart knowledge on various microorganisms involved in food fermentation.
2. To nurture the student to gain **employability** in industrial area.
3. Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
4. Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products – dairy, pickles, Legume and cereal based food products
5. Able to predict spoilage mechanisms in foods
6. Identify methods to control deterioration and spoilage

Unit I

Introduction and scope of Fermentation Technology, Role of microorganism in fermentation process, History and development of fermentation technology, Health benefits of fermented foods.

Unit II

Design of Fermenter, Types of fermentation process - Batch fermentation, Fed-batch fermentation, Continuous fermentation, Solid state fermentation; Types of Fermenters – Tray fermenter, Packed bed column fermenter, Airlift fermenter, Tower fermenter, Stirred tank fermenter, Bubble column fermenter, Cyclone column fermenter.

Unit III

Diary based products – Cheese, Yoghurt, Buttermilk, Kefir; Fruit based products – Cider, Wine, Vinegar; Vegetable based products – Sauerkraut, Kimchi, Pickle; Grain based products – Beer, Idli, Dosa, Sourdough, Bread: Preparation of inoculums, types of microorganisms and production process.

Unit IV

Bean based products – Soy Sauce, Tempeh, Miso, Natto; Meat based products- Salami, Chorizo; Fish based products – Bagoong, Fish sauce: Preparation of inoculums, types of microorganisms and production process.

Unit V

Management of food safety and quality, Control of hazards in food handling and food processing, Food Additives, Food Allergens, Food packaging and Labeling, Food Storage and Transportation, Food safety Programmes (HACCP), Food safety and standard Authority of India (FSSAI), FDA.

SUGGESTED READINGS

1. Hui YH, Meunier-Goddik L, Josephsen J, Nip WK, Stanfield PS (2004) Handbook of food and fermentation technology, CRC Press.
2. Holzapfel W (2014) Advances in Fermented Foods and Beverages, Woodhead Publishing.
3. Yadav JS, Grover, S and Batish VK (1993) A comprehensive dairy microbiology, Metropolitan.
4. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.

18MBU602A**BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS****Semester – VI
(4H – 4C)****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To learn the basic handling of microorganisms.
- To understand the various biological containments.
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.
- To gain knowledge on steps of a patenting process and the role of biosafety committee.
- To emphasize the components and design of laboratory.
- Provide learning opportunities to critically evaluate research methodology and findings

COURSE OUTCOME

1. Able to understand safety aspects in biological laboratory.
2. To create awareness on the Intellectual property rights and patenting of biotechnological processes.
3. To equip students with a basic understanding of the underlying principles of quantitative and qualitative patenting methods.
4. Provide students with in-depth training on the conduct and management of patent filing from inception
5. Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
6. Enable students to be reflexive about their role and others' roles as researchers.

Unit I

Biosafety: Introduction; biosafety issues in biotechnology; Biological Safety Cabinets & their types; Primary Containment for Biohazards; Biosafety Levels of Specific Microorganisms.

Unit II

Biosafety Guidelines: Biosafety guidelines and regulations (National and International); GMOs/LMOs- Concerns and Challenges; Role of Institutional Biosafety Committees (IBSC), RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Overview of International Agreements - Cartagena Protocol.

Unit III

AERB/RSD/RES guidelines for using radioisotopes in laboratories and precautions. Agreements and Treaties: GATT, TRIPS Agreements; Role of Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty on international recognition of the deposit of microorganisms; UPOV & Brene conventions; Patent Co-operation Treaty (PCT); Indian Patent Act 1970 & recent amendments.

Unit IV

Introduction to Intellectual Property: Patents, Types, Trademarks, Copyright & Related Rights, Industrial Design and Rights, Traditional Knowledge, Geographical Indications- importance of IPR – patentable and non patentables – patenting life – legal protection of biotechnological inventions – World Intellectual Property Rights Organization (WIPRO).

Unit V

Grant of Patent and Patenting Authorities: Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; An introduction to Patent Filing Procedures; Patent licensing and agreement; Patent infringement- meaning, COURSE OUTCOME, litigation, case studies, Rights and Duties of patent owner.

SUGGESTED READINGS

4. Singh K K (2015). Biotechnology and Intellectual Property Rights: Legal and Social Implications, Springer India.
5. Goel D & Prashar S (2013). IPR, Biosafety and Bioethics. Pearson.

18MBU602B MICROBES IN SUSTAINABLE AGRICULTURE AND DEVELOPMENT

Semester – VI
(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- The goal of sustainable agriculture is to meet society's food and textile needs in the present without compromising the ability of future generations to meet their own needs.
- Able to evaluate the application of ecological principles and concepts in sustainable agriculture system.
- To know the role of microbes which make crop output more and increase the fertility of crops.
- To know the basics and concepts of various biotechnological related terms
- To know the physiological processes that occur during plant growth and development of methodology involved in plant growth
- To make them to understand issues related to plant nutrition, quality improvement, environmental adaptation, transgenic crops and their use in agriculture.

COURSE OUTCOME

1. Develops the programmatic activities in sustainable agriculture and food systems
2. Able to relate their knowledge about ecology to its relevance in sustainable agriculture
3. Provides detailed idea about bio fertilizer production and develop **entrepreneur** skill related to agriculture field.
4. Understand on soil characteristics and biogeochemical cycling.
5. Students able to use microorganisms as bio control agents.
6. Develops their skills to produce transgenic crops and their use in agriculture.

Unit I

Soil as Microbial Habitat, Soil profile and properties, Soil formation, Diversity and distribution of microorganisms in soil, Mineralization of cellulose, hemicelluloses, lignocelluloses, lignin and humus, phosphate, nitrate, silica, potassium

Unit II

Carbon dioxide, methane, nitrous oxide, nitric oxide – production and control

Unit III

Biocontrol mechanisms and ways, Microorganisms used as biocontrol agents against Microbial plant pathogens, Insects, Weeds.

Unit IV

Plant growth promoting bacteria, biofertilizers – symbiotic (*Bradyrhizobium*, *Rhizobium*, *Frankia*, VAM, potash solubilizer), Non Symbiotic (*Azospirillum*, *Azotobacter*, Mycorrhizae, MHBs, Phosphate solubilizers, algae), Novel combination of microbes as biofertilizers, PGPRs

Unit V

Biotech feed, Silage, Biomanure, biogas, biofuels – advantages and processing parameters, Advantages, social and environmental aspects, Bt crops, golden rice, transgenic animals.

COURSE OBJECTIVES

- To study cell structure and functions of organelle.
- Exposure on transportations through cell membrane.
- To focus on different receptors and model of signaling.
- To introduce the concept of cell signaling.
- To obtain knowledge in cell death and cell renewal.
- To gain knowledge in structural aspects of cells

COURSE OUTCOME

1. Basic concept of cell structure, membrane, cellular functions of different types of cell, modes of cellular signaling and signal amplification.
2. Students able to annotating cell organization of prokaryotic and Eukaryotic.
3. Students able to paraphrase cell death and cell renewal.
4. Able to bullet pointing protein sorting and transport
5. Expertise in interpreting cell internal organelles.
6. Knowledge in induced pluripotent stem cells.

Unit I

Cell Organization – Eukaryotic (Plant and animal cells) and prokaryotic. Plasma membrane: Structure and transport of small molecules. Cell Wall: Eukaryotic cell wall, Extra cellular matrix and cell matrix interactions, Cell-Cell Interactions - adhesion junctions, tight junctions, gap junctions, and plasmodesmata (only structural aspects). Mitochondria, chloroplasts and peroxisomes. Cytoskeleton: Structure and organization of actin filaments, association of actin filaments with plasma membrane, cell surface protrusions, intermediate filaments, microtubules.

Unit II

Nuclear envelope, nuclear pore complex and nuclear lamina. Chromatin – Molecular organization. Nucleolus.

Unit III

Ribosomes, Endoplasmic Reticulum – Structure, targeting and insertion of proteins in the ER, protein folding, processing and quality control in ER, smooth ER and lipid synthesis, export of proteins and lipids. Golgi Apparatus – Organization, protein glycosylation, protein sorting and export from Golgi Apparatus Lysosomes.

Unit IV

Signalling molecules and their receptors. Function of cell surface receptors. Pathways of intra-cellular receptors – Cyclic AMP pathway, cyclic GMP and MAP kinase pathway.

Unit V

Eukaryotic cell cycle and its regulation, Mitosis and Meiosis, Development of cancer, causes and types, Programmed cell death, Stem cells, Embryonic stem cell, induced pluripotent stem cells.

SUGGESTED READING

1. Hardin J, Bertoni G and Kleinsmith LJ. (2010). Becker's World of the Cell. 8th edition. Pearson.
2. Karp G. (2010) Cell and Molecular Biology: Concepts and Experiments. 6th edition. John Wiley & Sons. Inc.
3. De Robertis, EDP and De Robertis EMF. (2006). Cell and Molecular Biology. 8th edition. Lipincott Williams and Wilkins, Philadelphia.
4. Cooper, G.M. and Hausman, R.E. (2009). The Cell: A Molecular Approach. 5th Edition. ASM Press & Sunderland, Washington, D.C.; Sinauer Associates, MA.

COURSE OBJECTIVE

- To provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.
- To impart information on the historical developments in Molecular Biology
- An in-depth study on structure and organization of chromosome and mutagenesis.
- To expose the students on the basic understanding of various techniques used in molecular studies.
- To gather information to know mechanism of DNA replication.
- To gain the knowledge of translational machinery in prokaryotes and eukaryotes.

COURSE OUTCOME

1. Explores technologies using molecular biology, embryo manipulation, cell and tissue culture.
2. Manipulate the genomes of animals for ways to improve the live stock for food production and biomedical purpose.
3. Develop the [skills](#) in molecular biology.
4. Executing concept of RNA splicing and mRNA and its significance.
5. Students able to inferring various model of DNA replication
6. Students able to contrast translational machinery.

Unit I

DNA Structure: Miescher to Watson and Crick- historic perspective, DNA Structure, Salient features of double helix, Types of DNA, Types of genetic material, denaturation and renaturation, cot curves. DNA topology - linking number, topoisomerases; Organization of DNA Prokaryotes, Viruses, Eukaryotes. RNA Structure, Organelle DNA -- mitochondria and chloroplast DNA.

Unit II

Bidirectional and unidirectional replication, semi- conservative, semi- discontinuous replication Mechanism of DNA replication: Enzymes and proteins involved in DNA replication –DNA polymerases, DNA ligase, primase, telomerase – for replication of linear ends. Various models of DNA replication including rolling circle, D- loop (mitochondrial), (theta) mode of replication and other accessory protein, Mismatch and excision repair. CRISPR.

Unit III

Transcription: Definition, difference from replication, promoter - concept and strength of promoter RNA Polymerase and the transcription unit, Transcription in Eukaryotes: RNA polymerases, general Transcription factors. Split genes, concept of introns and exons, RNA splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: si RNA, miRNA and its significance

Unit IV

Translational machinery, Charging of tRNA, aminoacyl tRNA synthetases, Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes, Fidelity of translation, Inhibitors of protein synthesis in prokaryotes and eukaryote

Unit V

Principles of transcriptional regulation, regulation at initiation with examples from *lac* and *trp* operons, Sporulation in *Bacillus*, Yeast mating type switching, Changes in Chromatin Structure - DNA methylation and Histone Acetylation mechanisms.

18MBU611A**MUSHROOM CULTIVATION - PRACTICAL****Semester – VI
(4H – 2C)****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 6 Hours****COURSE OBJECTIVES**

- To teach on cultivation, diseases and health benefits of mushrooms.
- To provide practical knowledge of different sterilization procedures and learn handling of mushrooms.
- To enhance the student's knowledge and impress upon them the important aspects of mushroom.
- To understand to know pure culture techniques and methods of culturing preservation and maintenance of mushrooms.
- To make the students more knowledge on mushroom cultivation.
- To make the students to know the classification.

COURSE OUTCOME

1. To impart knowledge on various mushrooms and its cultivation techniques to become an **entrepreneur**.
2. Students able to predict classification of edible mushroom.
3. Able to cultivate spawn from waste materials.
4. Have a knowledge in sterilization and handling of mushroom.
5. Students understand the application of mushroom biotechnology.
6. Students understand the characteristics and importance of mushrooms.

EXPERIMENTS

1. Oyster cultivation and demonstration of Button mushroom cultivation
2. Tissue isolation and sub culturing
3. Spawn making using sorghum
4. Fruiting bags production – preparing beds (chopping and sterilization of straw)
5. Field trip to commercial mushroom farms and scientific institutions.

SUGGESTED READINGS

18MBU611B

FOOD FERMENTATION TECHNIQUES – PRACTICAL

Semester – VI
(4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 6 Hours**COURSE OBJECTIVES**

- To encode the importance of the role of microorganisms in food industries in beneficial ways.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
- To Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
- To Understand the use of standard methods and procedures for the microbiological analysis of food
- Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

COURSE OUTCOME

1. To impart knowledge on various microorganisms involved in food fermentation.
2. To nurture the student to gain employability in industrial area.
3. Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
4. Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products – dairy, pickles, Legume and cereal based food products
5. Have an idea to isolate beneficial microorganisms from spoiled food.
6. Identify methods to control deterioration and spoilage

EXPERIMENTS

1. Preparation of Yogurt.
2. Preparation of Sauerkraut.
3. Beer production.
4. Wine production.
5. Isolation of Microbes from spoiled Meat and Fish.

SUGGESTED READINGS

1. Hui YH, Meunier-Goddik L, Josephsen J, Nip WK, Stanfield PS (2004) Handbook of food and fermentation technology, CRC Press.
2. Holzapfel W (2014) Advances in Fermented Foods and Beverages, Woodhead Publishing.
3. Yadav JS, Grover, S and Batish VK (1993) A comprehensive dairy microbiology, Metropolitan.
4. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.

18MBU612A**BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS – PRACTICAL****Semester – VI
(4H – 2C)****Instruction Hours / week:L: 0 T: 0 P: 4****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 6 Hours****COURSE OBJECTIVES**

- To learn the basic handling of microorganisms.
- To understand the various biological containments.
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.
- To gain knowledge on steps of a patenting process and the role of biosafety committee.
- To emphasize the components and design of laboratory.
- Provide learning opportunities to critically evaluate research methodology and findings

COURSE OUTCOME

1. Able to understand safety aspects in biological laboratory.
2. To create awareness on the Intellectual property rights and patenting of biotechnological processes.
3. To equip students with a basic understanding of the underlying principles of quantitative and qualitative patenting methods.
4. Provide students with in-depth training on the conduct and management of patent filing from inception
5. Enable students to acquire expertise in the use and application of the methods of data collection and analysis.
6. Enable students to be reflexive about their role and others' roles as researchers

EXPERIMENTS

1. Study of components and design of a BSL-III laboratory
2. Filing applications for approval from biosafety committee
3. Filing primary applications for patents
4. Study on steps of a patenting process

SUGGESTED READINGS

1. Bare Act, 2007. Indian Patent Act 1970 Acts & Rules, Universal Law Publishing Co. Pvt. Ltd., New Delhi.
2. Kankanala C (2007). Genetic Patent Law & Strategy, 1st Edition, Manupatra Information Solution Pvt. Ltd. New Delhi.
3. Mittal, D.P. (1999). Indian Patents Law, Taxmann, Allied Services (p) Ltd.
4. Singh K K (2015). Biotechnology and Intellectual Property Rights: Legal and Social Implications, Springer India.
5. Goel D & Prashar S (2013). IPR, Biosafety and Bioethics. Pearson.

Instruction Hours / week:L: 0 T: 0 P: 4**Marks: Internal: 40 External:60 Total: 100****End Semester Exam: 6 Hours****COURSE OBJECTIVES**

- Able to relate their knowledge about ecology to its relevance in sustainable agriculture
- To evaluate the application of ecological principles and concepts in sustainable agriculture.
- To know the role of microbes which make crop output more and increase the fertility of crops.
- To analyses the degrading microorganisms by various techniques.
- Able to design biogas plant.
- To obtain knowledge in entrepreneur in agricultural area.

COURSE OUTCOME

1. Able to relate their knowledge about ecology to its relevance in sustainable agriculture
2. Provides detailed idea about biofertilizer production and develop entrepreneur skill related to agriculture field.
3. Able to device biogas plant
4. Students will be annotate various zone in soil profile
5. Students will be isolate various degrading microorganisms for agricultural use.
6. Criticize the role of soil microbes in crop production.

EXPERIMENTS

1. Study and enumeration of soil microorganisms: Bacteria, fungi and actinobacteria
2. Study microflora of different types of soils
3. *Rhizobium* as soil inoculants characteristics and field application
4. *Azotobacter* as soil inoculants characteristics and field application
5. Design and functioning of a biogas plant
6. Isolation of cellulose degrading organisms, urea decomposers and nitrate utilizers
7. Screening of bacterial isolates for PHB production by using “Sudan black B” method
8. Estimation of soil microbial activity - CO₂ evolution method

SUGGESTED READINGS

18MBU613A**CELL BIOLOGY - PRACTICAL****Semester – VI
(3H – 1C)****Instruction Hours / week:L: 0 T: 0 P: 3****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 6 Hours****COURSE OBJECTIVES**

- To study cell structure and functions of organelle.
- Exposure on transportations through cell membrane.
- To focus on different receptors and model of signaling.
- To introduce the concept of cell signaling.
- To obtain knowledge in cell death and cell renewal.
- To gain knowledge in structural aspects of cells

COURSE OUTCOME

1. Basic concept of cell structure, membrane, cellular functions of different types of cell, modes of cellular signaling and signal amplification.
2. Students able to annotating cell organization of prokaryotic and Eukaryotic.
3. Students able to paraphrase cell death and cell renewal.
4. Able to bullet pointing protein sorting and transport
5. Expertise in interpreting cell internal organelles.
6. Knowledge in induced pluripotent stem cells.

EXPERIMENTS

1. Study a representative plant and animal cell by microscopy.
2. Study of the structure of cell organelles through electron micrographs.
3. Cytochemical staining of DNA – Feulgen.
4. Demonstration of the presence of mitochondria in striated muscle cells/ cheek epithelial cell using vital stain Janus Green B.
5. Study of polyploidy in Onion root tip by colchicine treatment.
6. Identification and study of cancer cells by photomicrographs.
7. Study of different stages of Mitosis.
8. Study of different stages of Meiosis.

SUGGESTED READINGS

1. Hardin J, Bertoni G and Kleinsmith LJ. (2010). Becker's World of the Cell.8th edition. Pearson.

18MBU613B

MOLECULAR BIOLOGY - PRACTICAL

Semester – VI
(3H – 1C)

Instruction Hours / week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 6 Hours**COURSE OBJECTIVE**

- To provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.
- The course will facilitate in understanding of molecular biology by examining common processes and principles in genes to illustrate complexity.
- To obtain knowledge in resolution and visualization of proteins
- To evaluate genetic material in different samples.
- The student will receive hands-on training in various culturing and molecular techniques for studying microbial diversity and microbial activity.
- To introduce the student to the advanced concepts in molecular biology.

COURSE OUTCOME

1. Explores technologies using molecular biology, cell and tissue culture to manipulate the genomes of animals for ways.
2. Develop the [skills](#) in molecular biology.
3. Student capable of explaining process involved in genetic changes and mutations
4. The identification of genetic regulatory mechanism and distinguishing different mechanism of gene regulation
5. The design of different techniques based on utilizing the genetic mechanism of microbes.
6. Hand on experience of different microbial genetic modification strategies.

EXPERIMENTS

1. Study of different types of DNA and RNA using micrographs and model / schematic representations.
2. Study of semi-conservative replication of DNA through micrographs / schematic representations.
3. Isolation of genomic DNA from *E. coli*.
4. Estimation of salmon sperm / calf thymus DNA using colorimeter (diphenylaminereagent) or UV spectrophotometer (A260 measurement).
5. Estimation of RNA using colorimeter (orcinol reagent) or UV spectrophotometer (A260 measurement).
6. Resolution and visualization of DNA by Agarose Gel Electrophoresis.
7. Estimation of protein
8. Resolution and visualization of proteins by Polyacrylamide Gel Electrophoresis (SDS-PAGE).

SUGGESTED READINGS

1. Watson JD, Baker TA, Bell SP, Gann A, Levine M and Losick R (2008) Molecular Biology of the Gene, 6th edition, Cold Spring Harbour Lab. Press, Pearson Publication

5. Sambrook J and Russell DW. (2001). Molecular Cloning: A Laboratory Manual. 4th Edition, Cold Spring Harbour Laboratory press.
6. Krebs J, Goldstein E, Kilpatrick S (2013). Lewin's Essential Genes, 3rd Ed., Jones and Bartlett Learning

18MBU691**PROJECT****Semester – VI
(8H - 6C)****Instruction Hours / week:L: 8 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**

18MBP101 FUNDAMENTALS OF MICROBIOLOGY AND CLASSIFICATION 4H –4C**Instruction Hours / week: L: 4 T: 0P: 0****Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3 Hours****COURE OBJECTIVES**

- The course is designed to provide a basic understanding on the fundamental aspects of microbiology from historical development.
- To improve the proficiency and knowledge of the candidate on the study of microbial techniques for well exploitation of microorganisms.
- To comprehend the various methods for identification of unknown microorganisms
- This course enables the students to understand various physical and chemical means of sterilization and also learn various techniques for isolation of pure cultures.
- This course figures out them to know about culture collection and maintenance of microbial cultures.
- The beneficial and harmful manifestations of microorganisms especially of bacteria and their role in microbial mineralization and disease processes

COURSE OUTCOME (CO'S)

1. Understand the basic microbial structure and functions of various physiological groups of prokaryotes and eukaryotes.
2. Learn the theory and practical skills in microscopy handling and staining techniques know various culture media and their applications.
3. Study microbial nutritions- Autotrophy and heterotrophy modes of nutrition.
4. Identify the unknown organisms by using microbial tools.
5. Demonstrate electricity generation from the organic matter.
6. Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism – Autotrophy and heterotrophy

UNIT I - Scope of Microbiology and classification system

History and scope of Microbiology. Microbial evolution and Diversity – Taxonomic ranks - Classification system – Phenetic and Phylogenetic Haeckel's three-kingdom concept, Whittaker's Five-kingdom concept, Three-domain concept of Carl Woese.

UNIT II - Microscopy and Staining methods

Microscopy –Simple, Compound, Dark-field, Phase contrast, Fluorescent and Electron microscopes. (SEM and TEM), Confocal microscopy – Principles and their applications. Stains and Staining techniques: Simple and Differential staining methods.

UNIT III - Classification of microorganisms

Systematics of bacteria - Bergey's manual and its importance. Actinobacteria. Classification of algae Clamydomonas, volvox, diatoms, red and brown algae. Classification of virus – DNA, RNA viruses. Classification and taxonomy of fungi – Alexopolous. Economical importance of Fungi. Classification of protozoa – *Entamoebahistolytica*, *Giardia*, *Trichomonas*, *Plasmodium*.

UNIT IV - Growth and Growth factors

Sterilization and disinfection, culture methods: Auxenic and synchronous, aerobic and anaerobic, culture media and nutritional types, growth curve, generation time and growth kinetics. Factors influencing microbial growth. Preservation methods and quality control.

UNIT V - Molecular taxonomy and microbial cell application

Modern Microbiology: Molecular taxonomy, 16S/18S rRNAs and its importance in identification of microorganisms. Phylogenetic tree, Molecular tools in assessing microbial diversity, probiotics and their

applications, microbial fuel cells.

18MBP102

MICROBIAL PHYSIOLOGY AND METABOLISM

Semester – I
4H-4C

Instruction Hours / week :L: 4 T: 0P: 0

Marks: Internal: 40 External: 60 Total:100
End Semester Exam: 3Hours**COURSE OBJECTIVES**

- To gain the knowledge with the various inner and outer structures of prokaryotes and eukaryotes in detail.
- To provide information on sources of energy and its utilization by microorganisms. Microorganisms play important role in environment as producers, consumers and decomposers.
- To impart knowledge on metabolic function and biochemical reaction going on inside the microbial cell.
- To teach metabolic pathways, their regulation and engineering, and methods used in their elucidation.
- To teach students about cell cycle, growth and methods to determine microbial growth.
- Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism – Autotrophy and heterotrophy

COURSE OUTCOME (CO'S)

1. The students will be able to understand and predict the various metabolic reactions in microbial cell.
2. This will make them to predict the intermediate products which can be employed in industrial production processes.
3. The students will be able to know how bacterial and archaeal structure lead to function, how metabolic processes are regulated.
4. The course makes them to understand how microbes respond to environmental stressors, and how microbes can be manipulated to enhance their growth or the production of desired products.
5. Know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement
6. The students will be able to understand how the organisms communicate to the population by using various mechanisms.

UNIT I - Prokaryotic cell structure

Prokaryotic cell structure and organization - cell wall, plasma membrane, cytoplasmic matrix, inclusion bodies, ribosome, nucleoid, capsule, slime layers, S layers, pili, fimbriae, flagella and motility. Eukaryotic cell structure and its organelles. Lichens and microalgae: Structural organization and their properties. Mycoplasma. Basic structure of viruses.

UNIT II – Bacterial spores

Structure of bacterial endospore, endospore formation in *Bacillus* spp. Exospore formation in *Streptomyces*. Sporulation in fungi: *Aspergillus* sp., *Penicillium* sp. Spore cycle, factors affecting spore formation. Growth and nutritional requirements, control of microorganisms. Biofilm and biosurfactant production in bacteria

UNIT III – Metabolic pathway

Glycolysis, EMP, HMP and ED pathway, TCA cycle, Glyoxylate cycle. Aerobic respiration and anaerobic respiration. Electron transport chain in prokaryotes and eukaryotes; Substrate level and oxidative phosphorylation – ATP generation.

UNIT IV - Fatty acids, nucleotides and toxins

Biosynthesis of fatty acids, nucleotides, amino acids, phospholipids. Archaeal lipids. Cell wall biosynthesis of Gram positive and Gram negative bacteria. Cell membrane synthesis and synthesis of secondary metabolites. Toxins – characterization, mechanism of action.

UNIT V - Photosynthetic bacteria & Bioluminescence

Aerobic and anaerobic fermentation and its types. Photosynthetic bacteria – Oxygenic (Cyanobacteria) and anoxygenic (Purple/green sulfur and non-sulfur bacteria). Bacterial photosynthetic pigments. Methanogenesis – assimilation of carbondioxide. Bioluminescence and Quorum sensing – mechanism, importance and applications.

18MBP103

MOLECULAR GENETICS

Semester –I
4H –4C

Instruction Hours / Week: L: 4 T: 0P:0

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- The course presents methods and experimental tools used in modern molecular genetics with emphasis on prokaryotes and eukaryotes.
- The theoretical grounds of methods and their applications in research will be discussed.
- The course also deals with the genome structure, stability, organization, and its expression.
- To provide molecular mechanisms underlying mutations, detection of mutations and DNA damage and repair mechanisms
- The course includes among others model systems, genetics behind complex diseases, identification of disease genes and different types of mutations.

COURSE OUTCOME (CO'S)

1. This course allows the candidate to recollect the basics of molecular genetics and apply a cognitive thinking on the application-oriented sectors of genetics.
2. Students would be able to practically apply this knowledge in different sectors with possibilities ranging from the treatment of human diseases to the development of novel medicines.
3. A thorough understanding of the process of translation and operons along with recombination of DNA.
4. An in-depth study of mutagenesis and genetic analysis with gene mapping.
5. Have a conceptual knowledge about DNA as a genetic material, enzymology, and replication strategies.
6. Full understanding of all aspects of all-important techniques used for the study of biomolecules.

UNIT I – DNA structure and replication

Genetics and its types – History; Mendelian principles – nucleic acid as genetic material Experimental evidence. Structure of DNA – chemical and physical structure of DNA – circular and super helical DNA - different forms of DNA. DNA replication – enzymology of DNA replication – different modes, models and types of DNA replication – Eukaryotic DNA replication.

UNIT II – Gene regulation

Genetic code: DNA transcription in prokaryotes and eukaryotes. Transcriptional control and modification system – RNA translation in prokaryotes and eukaryotes. Polypeptide synthesis (maturation and processing of RNA) – Translational modification. Regulation of gene expression – Operon model (Lac, Trp, Ara) – Regulation of gene expression in eukaryotes.

UNIT – III - Genetic recombination

Genetic recombination in bacteria – conjugation, transformation, transduction. Linkage and genetic mapping. Phage genetics (Replication cycle) – Phage T4 mutants (detection and isolation) — Genetic map of T4 phage.

UNIT – IV – Mutation and repair mechanism

Mutagen, mutagenesis and mutation. Luria Delbruck experiment and its significance. Molecular basis of mutation. Spontaneous and induced mutations. Different types of mutation, mutant detection, mutant selection and carcinogenicity testing. DNA damage – types of damage (deamination, oxidative damage, alkylation, Pyrimidine dimers) – DNA repair mechanism (base excision, nucleotide excision, recombination repair, SOS repair).

UNIT V - Yeast genetics

Life cycle, metabolism, genome and extra chromosomal element. Genetic nomenclature in yeast. Tetrad analysis, Petite mutants (mutant isolation and complementation). Genetic mapping in yeast, *Neurospora* and *Drosophila*

BIOINSTRUMENTATION

Semester -I
4H – 4C

Instruction Hours / week:L: 3 T: 1P: 0

Marks: Internal: 40 External: 60 Total:100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- Introduce the basic concept of qualitative and quantitative analysis of a given sample
- To Study various spectroscopic techniques and its instrumentation.
- To know the concept of separation science and its applications.
- To understand the basic laboratory skills that are essential for beginning-level employment in clinical, pharmaceutical, microbiology, biochemistry and biotechnology laboratories.
- To impart the concept of radiochemical analysis along with industrial analyzers
- To understand working of different laboratory equipment's used in microbiological laboratories

COURSE OUTCOME (CO'S)

1. This enables students to be able to explain bioinstrumentation techniques, design and application.
2. To know the concepts and operation of various lab instruments and related terms.
3. Acquire knowledge and lab skills to perform experiments in laboratory.
4. Connect the concepts of physics, chemistry and engineering principles in the instrumentation.
5. The students will be able to know all the basic principles, technology and applications of various instruments in life science.
6. Comprehend the techniques and the underlying principles in bioinstrumentation.

UNIT I - Spectroscopy

Properties of electromagnetic radiations. Instrumentation and applications of – UV-Visible spectrophotometer, spectrofluorimeter, atomic spectroscopy, FTIR, NMR spectroscopy and flow cytometer.

UNIT II - Centrifugation

Principle and types of centrifuges.Principles and applications of analytical and preparative centrifuges.Relative molecular mass determination and sedimentation coefficient.Sub-cellular Fractionation of cellular components.Density gradient and ultra-centrifugation.

UNIT III - Chromatography

Principle, instrumentation and applications of ion exchange, affinity, gel filtration, Low pressure liquid chromatography (LPLC) and high performance liquid chromatography (HPLC) and fast protein liquid chromatography (FPLC), gas liquid chromatography-mass spectroscopy (GC-MS), LCMS, LCMS/MS, LCMS – QQQ, MALDI – TOF.

UNIT IV - Electrophoresis

Principle, instrumentation and applications of agarose gel electrophoresis, native PAGE, sodium dodecyl sulphate - polyacrylamide gel electrophoresis (SDS-PAGE), isoelectric focusing, immuno electrophoresis, pulse field gel electrophoresis, capillary electrophoresis, gel documentation – applications.

UNIT V - Radioisotopic techniques

introduction, nature of radio activity, types and rate of radioactive decay, units of radio activity, detection and measurement of radio activity. Principle, instrumentation and applications of Geiger-Muller counter, solid and liquid scintillation counter and autoradiography. Biosafety methods in radioactive laboratory.

18MBP105A

MARINE MICROBIOLOGY

Semester -I
4H – 4C

Instruction Hours / week:L: 4 T: 0P: 0

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide students with basic knowledge on the biology and ecology of marine microorganisms, and their ecological role.
- To know the basic biology of marine microorganisms and their activities
- To impart modern techniques for the characterization and study of marine microorganisms and microbial communities.
- To understanding the ecological role of marine microorganisms and marine microbial communities.
- To know the main techniques of modern use necessary for the characterization and study of marine microbes.
- To understand basic biological processes that occur in and between organisms in nature.

COURSE OUTCOME (CO'S)

1. Capable of describing and explaining both biological interaction processes and their importance to ecosystems.
2. To acquire knowledge of the most common research methods used to develop our knowledge of biological processes.
3. learn to work independently in collecting and analysing scientific data, both in the field and in the laboratory.
4. Understand the architecture of marine ecosystem and its essential role
5. Specify the biological significance of biomolecules in metabolism
6. To understand computer applications and Bioinformatics

UNIT I - Marine microorganisms

Collection, preservation, enumeration (total and viable counts), isolation of culture and identification based on morphological, physiological and biochemical characteristics. International and national collection centres.

UNIT II- Extremophiles

Thermophiles, basophiles, halophiles, psychrophiles, acid – alkaliphiles, oligotroph, toxotolerant, xerotolerant, endolith – Extremophiles and their environment, biodiversity. Genomics of extremophiles, phylogeny of extremophiles, 16S RNA classification in mitochondrial DNA genome, RAPD, RFLP studies.

UNIT III – Xenobiotics and Marine Bioproducts

Microbiology of degradation of xenobiotic environment: Ecological considerations, decay behaviour, degradative plasmids, hydrocarbons, oil pollution, surfactants, pesticides, Bioremediation:- Factors affecting bioremediation – role of microbes in the marine nutrient cycles – diseases of marine organisms and its impact on marine biodiversity. Marine Bioproducts.

UNIT IV – Biopigment and Marine micro and macro organisms

Brief account of photosynthetic and accessory pigments. Phytoplanktons and Zooplanktons, Red tides, Zones, Bioluminescence and Biopigment, Marine micro and macro organisms, Coral reefs, Mangroves, Hydrothermal vents and water currents.

UNIT V - Marine exploration

Bar coding of marine organisms: Genome sequencing and physical mapping of genome. Marine exploration, Aquaculture-inland and freshwater, Isolation of marine bioactive compounds-separation, purification and identification techniques, cryopreservation.

SUGGESTED READINGS

8. Presscott, L.N., Harley, J.P. and Klein, D.A., (1999). *Microbiology*. W.C. Brown Publishers.
9. Stanier, R.Y., Ingharam, J.L., Wheelis, M.L., and Painter, P.R., (1986). *General Waste water engineering Treatment, Disposal and Reuse*. Metcaff and Eddy. Inc., Tata Mc Grew Hill, New Delhi.

COURSE OBJECTIVES

- To detail the importance of computer in field of life sciences.
- To obtain good understanding about the interpretation of biological data base. To uptake knowledge in latest tools and technology.
- To describe the history, scope and importance of Bioinformatics and role of internet in Bioinformatics
- Provide an overview of the application areas of bioinformatics, with a focus on the topics that will be taught in the course
- To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis
- Classify different types of Biological Databases.

COURSE OUTCOME (CO'S)

1. The students will have an understanding about the information on the search engines and various software tools involved in bioinformatics.
2. Additional knowledge on different operating systems would enable the candidate to work with versatility.
3. Provides computational skill on search engines and various software tools involved in bioinformatics
4. It will impart computational based techniques which includes genomics and proteomics in Bioinformatics.
5. Retrieve information from available databases and use them for microbial identifications and drug designing
6. Gain ability to modify gene and protein structures in simulated systems.

UNIT – I

Information networks-internet, web browsers, HTTP,HTML and URLs. EMBnet – NCBI, Virtual tourism. Introduction to Operating systems like Windows, UNIX & LINUX - Computer Viruses – Overview and prevention.

UNIT – II

Bioinformatics tools - Global Vs local alignment – Similarity searching –Pair wise alignment and multiple alignments – Biological Databases – Literature, Sequence and Structure – identification and retrieving data from databases.

UNIT – III

Protein information resources –primary sequence database, Composite protein sequence database, secondary database, and Composite protein structure database. Protein structure prediction - Proteomic tools at ExPASy server.

UNIT – IV

Protein structure comparison and classification – RNA structure analysis – Plasmid mapping and Primer designing– Structure visualization softwares – Phylogenetics – Tree types and construction methods.

UNIT – V

DNA sequencing –Specialized genomic resources. DNA microarray – principles and databases – Genomics and Proteomics – genes prediction, splices sites and regulatory regions – Drug designing and Commercial Bioinformatics.

I8MBP105C**BIOCHEMISTRY****Semester - I
4H –4C****Instruction Hours / week: L: 4 T: 0P:0****Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3Hours****COURSE OBJECTIVES**

- To provide the knowledge on basics of biochemistry and its applications and to highlight the technical skill.
- To describe the classification and functions of lipids.
- To summarize the structure and classification of enzymes
- To state the Structure and types of DNA
- To analyse the functions and properties of phosphoglycerides
- To understand about storage and structural polysaccharides.

COURSE OUTCOME**Upon completion of this course students will be able to**

1. Understand the structures of enzymes, proteins, carbohydrates and fats
2. Understand the functions of biomolecules
3. Analyze the process of metabolism
4. Understand of nucleic acids and their importance to combine and analyses information.
5. Explain the structure and mechanism of enzyme action
6. Summarize the DNA & RNA structure and base pairing schemes

UNIT I - Concepts of Biochemistry

Concepts of Biochemistry- Structure and Properties of water, Buffers; Oxidation-Reduction reactions, important functional groups in biochemistry, general types of reactions in biochemistry. Non-covalent interactions.

Cellular basis of life, molecular composition of cells, elements and compounds of life
Biochemical functions of cell organelles.

UNIT II - Carbohydrates

Carbohydrates: Introduction, Sources, Classification. Reactions of carbohydrates, Isomerism of carbohydrates, Fischer projections, Haworth structures. Structure and functions of sugars, homo and heteropolysaccharides, glycoconjugates: Lipids-Introduction, sources, Nomenclature, Classification.

Carbohydrate Metabolism-Introduction, Aerobic and anaerobic pathways: Glycolysis and its regulation, Gluconeogenesis and its regulation. TCA cycle - Regulation, Glyoxylate cycle, amphibolic & anaplerotic reactions. Electron Transport chain, Oxidative phosphorylation, & production of ATP, Inhibitors of ETC and ATP synthesis, balance sheet of glucose oxidation.

UNIT III - Amino Acids and Proteins

Amino Acids and Proteins- Introduction, Classification optical isomerism, chemical properties, Acid-base properties- Levels of protein structure (Ramachandran plot. Denaturation of proteins. Proteins- protein content of various type of cells, biological role of proteins; primary, secondary, tertiary, quaternary structure of proteins. Classification of proteins.

Amino Acid Metabolism- Overview of amino acid metabolism, fate of NH_4^+ and carbon skeleton. Urea cycle and regulation. Biodegradation of amino acids – deamination, transamination, decarboxylation, urea cycle including its regulation.

UNIT IV - Lipids

Lipids-Introduction, sources, Nomenclature, Classification. Properties & Functions. Steroids: Structure of steroid nucleus, biological role of cholesterol, fat soluble vitamins.

Lipid Metabolism- Biodegradation of fatty acids, beta – oxidations of saturated & unsaturated fatty acids. Ketone bodies, production during starving and diabetes Biosynthesis of fatty acids – Acetyl-CoA carboxylase reaction, Fatty acid synthase complex, biosynthesis of palmitate, energetics, Regulation of fatty acid biosynthesis. Biosynthesis of triacylglycerols, Biosynthesis of cholesterol, regulation. Prostaglandins and thromboxanes.

UNIT V- Nucleic Acids

Nucleic Acids-Purines &Pyrimidinesnucleotides, RNA, & DNA base pairing schemes, types of RNA: mRNA, rRNA, tRNA, aminoacyltRNAsynthetase, Secondary structure of DNA, Watson and Crick model. Denaturation of DNA keto-enoltautomerism and consequences.

Nucleic Acid Metabolism- Denovo and salvage pathways for purine synthesis.Recycling of Purine and Pyrimidine nucleotides by salvage pathways.Lesch-Nyhan syndrome & Gout.

18MBP111

BASIC PRACTICAL– I

Semester – I
4H –2C

Instruction Hours / week: L: 0 T:0P:4

Marks: Internal: 40 External: 60 Total:100
End Semester Exam: 9 Hours**COURSE OBJECTIVES**

- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques involved in the isolation, characterization and identification of different types of microorganism.
- Know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- Know General bacteriology and microbial techniques for isolation of pure cultures.
- Master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.
- Comprehend the various methods for identification of unknown microorganisms.
- Understand the microbial transport systems and the modes and mechanisms of energy conservation in microbial metabolism

COURSE OUTCOME

1. A student able to skillfully isolate and identify the microorganisms using different microbiological techniques needed in laboratory.
2. To enhance the ability of the student skills in medical laboratories and research sectors.
3. Demonstrate practical skills in the use of tools, technologies and methods common to microbiology.
4. To apply the scientific method and hypothesis testing in the design and execution of experiments
5. To develop theoretical and practical skills in the design and execution of experiments.
6. Know the various Physical and Chemical growth requirements of bacteria and get equipped with various methods of bacterial growth measurement.

EXPERIMENTS

1. Micrometry
2. Measurement of pH
3. Staining techniques: Simple, Gram, Negative and Endospore
4. Motility determination - Hanging drop and SIM inoculation
5. Cultivation of anaerobic microorganisms – Wright's tube – McIntosh anaerobic jar - roll tube methods.
6. Lactophenol cotton blue mounting of fungi - *Aspergillus* sp, *Mucor* sp, *Rhizopus* sp, *Fusarium* sp, *Penicillium* sp
7. Measurement of microbial growth – Viable count – Direct count – Turbidity methods
8. Biochemical characterization
 - a) Indole Test
 - b) Methyl Red Test
 - c) Voges-Proskauer Test
 - d) Citrate utilization Test
 - e) TSITest
 - f) Catalase Test
 - g) Oxidase Test
 - h) Urease Test
 - i) Nitrate Test
 - j) Carbohydrate fermentation Test
 - k) Amino acid utilization Test
 - l) Hydrolysis of polymers- Starch, Lipid, Casein, Gelatin.

SUGGESTED READINGS

1. Aneja, K.R. (2001). *Experiments in Microbiology, Plant Pathology, Tissue Culture and Mushroom Production Technology*, (3rd ed.), New Age International (P) Limited Publishers, New Delhi.

4. Gunasekaran, P. (1996). *Lab Manual in Microbiology*, (1st ed.). New Age International (P) Ltd, Publishers, New Delhi.

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To acquire skill on the different molecular mechanism of gene transfer, mutations and separation of nucleic acids.
- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques.
- To impart skills of isolation, characterization and identification of different types of microorganism.
- Know various Culture media and their applications and also understand various physical and chemical means of sterilization.
- To make students understand the principles of Genetics
- Students will learn the basic principles of inheritance at the molecular, cellular and organismal levels.

COURSE OUTCOME

1. A student undertaking this course will be learning the principles behind the molecular techniques which would enable him to work in competent molecular biology based laboratories.
2. Imparts knowledge on the different aspects of genetics and pedigree analysis.
3. ➤ Students will apply their knowledge of to selected examples of changes or losses in cell function.
4. ➤ Identify the organs and tissue systems of plants, and explain their respective function.
5. Impart knowledge on applications of microorganisms in various fields
6. Provides skill development on microbial products.

EXPERIMENTS

1. Spontaneous Mutation – gradient plate technique
2. Induced Mutagenesis-chemical and physical -UV
3. Replica plating technique.
4. Transformation in Bacteria
5. Bacterial Conjugation
6. Induction of Lac operon
7. Measurement of growth-one step growth curve using a T even phage
8. Titration of phages (T4)
9. Nuclear staining for nucleic acid identification.
10. Spectrophotometric estimation of protein –BSA
11. Protein Purification using microfiltration.
12. Analysis of amino acid by Paper chromatography
13. Analysis of amino acid by Thin layer chromatography
14. Purification of proteins by column chromatography
15. Analysis of amino acid by HPLC –Demonstration

JOURNAL PAPER ANALYSIS AND PRESENTATION

2H

Instruction Hours / week: L: 2 T: 0 P: 0

COURSE OBJECTIVES

- Virology, often considered a part of microbiology or of pathology, is the study of biological viruses and virus like agents.
- Viral structure, classification and evolution, their ways to infect and exploit cells of virus reproduction, the disease they cause.
- The techniques to isolate and culture them and their potential uses in research and therapy.
- To know how viruses are classified
- To understand the architecture of viruses
- To understand the interactions between viruses and the host immune system

COURSE OUTCOMES

1. Describe the structure and replication strategies of the viruses, the processes of entry into cells, control of gene transcription and where relevant translation and gene product stability, control of and mechanism of genome replication, virion assembly and egress from the cell.
2. Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
3. Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
4. Integrate experimental strategies learned in the context of viral systems into the design of experiments involving other systems.
5. Discern the replication strategies of representative viruses from the seven Baltimore classes
6. To understand the interactions between viruses and the host immune system

UNIT I - Viral classification and properties

Historical perspective of virology - Scope of virology -Viral classification and properties of viruses – Replication of viruses, cultivation of viruses (animal inoculation, Embryonated egg and tissue culture) - properties of viroids and Prions.

UNIT II – Animal DNA viruses

Animal viruses- DNA viruses - morphology, replication, pathogenesis and laboratory diagnosis of Pox virus, Adeno virus, Hepatitis viruses – type A,B and D. Herpes simplex viruses, Oncogenic viruses- Papova virus,- oncogenes and Oncogenesis.

UNIT III - Animal RNA viruses

Animal viruses - RNA viruses - morphology, replication, pathogenesis and laboratory diagnosis of Poliovirus, Rabies virus, Influenza virus, Mumps virus, Measles virus and Rubella virus, Retro virus - HIV virus, Dengue and Japanese Encephalitis, SARS, Swine Flu.

UNIT IV - Plant viruses

Plant viruses – RNA viruses – TMV, Cowpea mosaic virus, Bromomosaic viruses, Satellite viruses – Double stranded DNA viruses - CaMV – Single stranded DNA viruses – Gemini virus. Structure and Replication of Bacteriophage (T4) – Filamentous phage (ΦX174).

UNIT V- Infections and Immunization

Nosocomial infections, Viral vaccines-Interferons - Antiviral drugs - strategies to develop AIDS vaccines - Rabies vaccines preparation (animal and cell culture) and their immunization.

WEBLINK

1. <https://www.medicalnewstoday.com/articles/181418.php>
2. https://www.medicinenet.com/swine_flu/article.htm#swine_flu_h1n1_and_h3n2_influenza_virus_facts

COURSE OBJECTIVES

- Medical Bacteriology introduces basic principles and then applies clinical relevance of many etiological agents responsible for global infectious diseases.
- The infectious disease cycle of the pathogens enables to solve the epidemics.
- The territory covered by infections and the immune response
- We focus on pathogenic mechanisms in order to foster a student's ability to solve problems in their future clinical career and able to establish the medical laboratory.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora

COURSE OUTCOMES

1. Demonstrate an understanding at an advanced level of microbial virulence mechanisms and host response to infection.
2. Application of molecular techniques to medical microbiology; biochemical and genetic mechanisms of antimicrobial agent activity, microbial susceptibility and resistance to antimicrobial agents.
3. Demonstrate an understanding of skin and respiratory tract infections (microbial causes, pathogenesis, transmission of infection, diagnosis, prevention and treatment) by being able to identify a known organisms in clinical samples, and describe the pathogenesis of important pathogens.
4. It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
5. To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue
6. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.

UNIT I- Isolation and identification of pathogens

Laboratory precaution and guidelines – Aseptic collection – transportation – handling and examination of pathological specimens – methods of isolation, identification and interpretation of pathogenic organisms – Antibiotic susceptibility testing.

UNIT II - Infections

Infections – types – methods – infectious disease cycle. Definitions of Epidemics, Endemics Pandemics and investigation of epidemics and control. Definition of pathogens, Saprophytes and Commensals. Quality control in microbiology lab.

UNIT III - Gram positive organisms

Morphology, cultural characteristics, antigenic property, pathogenicity, laboratory diagnosis and treatment. *Staphylococcus* sp., *Streptococcus* sp., *Bacillus* sp., *Corynebacterium* sp., *Clostridium* sp., *Mycobacterium* sp.

UNIT IV - Gram negative organisms

Morphology, cultural characteristics, antigenic property, pathogenicity, laboratory diagnosis and treatment. *E.coli*, *Klebsiella* sp., *Proteus* sp., *Pseudomonas* sp., *Vibrio* sp., *Salmonella* sp., *Shigella* sp., *Treponema* sp., *Leptospira* sp., *Neisseria* sp. and *Haemophilus* sp.

UNIT – V – Infection and Therapy

Nosocomial infection – Urinary tract infection, Respiratory tract infection, Sexually transmitted disease – Immunoprophylaxis – Antimicrobial chemotherapy, Antibiotics, second line drugs. Vaccines.

BIostatistics and Research Methodology

Semester - II
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- About collection, interpretation and presentation of statistical data
- The analytics of data, probability, and hypothesis testing of samples
- The essential role of statistics in present, future use and applications of Biology.
- To equip students with a basic understanding of the underlying principles of quantitative and qualitative research methods.
- Provide students with in-depth training on the conduct and management of research from inception to completion using a wide range of techniques
- The ethical and philosophical issues associated with research in education

COURSE OUTCOMES

1. Apply basic statistical concepts commonly used in health and medical sciences
2. Use basic analytical techniques to generate results
3. Interpret results of commonly used statistical analyses in written summaries.
4. Demonstrate statistical reasoning skills correctly and contextually.
5. Provide learning opportunities to critically evaluate research methodology and findings.
6. Enable students to be reflexive about their role and others' roles as researchers.

UNIT I -Scope of Biostatistics

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion- Range, standard deviation, Coefficient of variation.

UNIT II - Correlation

Correlation – Meaning and definition - Scatter diagram – Karl Pearson's correlation coefficient. Rank correlation. Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT III - Test of significance

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit. Analysis of variance – one way and two way classification. CRD, RBD Designs.

UNIT IV-Research

Research: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs.

UNIT V - Sampling Design

Sampling Design: Meaning – Concepts – Steps in sampling – Criteria for good sample

25

design. Scaling measurements – Techniques – Types of scale.

SUGGESTED READINGS

1. Jerrold H. Zar. (2003). *Biostatistical Analysis*. (4thed.). Pearson Education (P) Ltd, New Delhi.
2. Kothari. C.R. (2004). *Research Methodology – Methods and Techniques*. (2nded.). New Age International Pvt. Ltd, New Delhi.

18MBP204 ENVIRONMENTAL AND AGRICULTURAL MICROBIOLOGY**Semester - II
4H –4C****Instruction Hours / week:L: 4 T:0 P: 0****Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3Hours****COURSE OBJECTIVES**

- To educate the students about concepts of designs of water distribution systems, sewer networks, working principles and design of various physical, chemical and biological treatment systems of water and wastewater.
- To study about the biofertilizers, plant disease and increasing soil fertility.
- Appreciate the diversity of microorganism and microbial communities inhabiting a multitude of habitats and occupying a wide range of ecological habitats
- Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment and also learn different methods for their detection and characterization
- Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved

COURSE OUTCOMES

1. This course will provide the student insights into these invaluable areas of Environmental microbiology, which play a crucial role in determining its future use and applications in environmental management.
2. The Microorganisms responsible for water pollution especially Water-borne pathogenic Students able to know detailed idea about biofertilizer production and plant disease.
3. Understand the basic principles of environment microbiology and be able to apply these principles in solving environmental problems
4. To impart knowledge on waste water treatment and bioremediation
5. Know microorganisms and their transmission
6. Comprehend the various methods to determine the Sanitary quality of water and sewage treatment methods employed in waste water treatment

UNIT I- Aquatic environment

microbiology of water - water pollution and water borne pathogens. Bacteriological examination of water, indicator organism. Microbiology of sewage. Chemical and biochemical characteristic of sewage. methods of sewage treatment - physical screening, chemical, biological (sludge digestion; activated sludge, aerating filters, oxidation pond).

UNIT II - Microbiology of air

Microbial contaminants of air, sources of contamination, microbial indicators of air pollution. Enumeration of bacteria in air. Air samplers and Sampling techniques. Air sanitation.

UNIT III - Bioremediation

Bioremediation – contaminated soil, aquifers, marine pollutants, air pollutants, stimulation of oil spills degradation. Bioremediation of air pollutants. Bioleaching – recovery of metal from ores – oxidation of minerals – testing for biodegradability.

UNIT – IV - Biological nitrogen fixation

Symbiotic and non-symbiotic microorganisms, root nodule formation, nitrogen fixers, hydrogenase, Nitrogenase, *Nif* gene regulation. Biochemistry of nitrogen fixation, Rhizosphere- R: S ratio, Interaction of microbes with plants. Bioconversion of agricultural wastes. Genetically Modified organisms and crops.

UNIT V- Biofertilizer

Application of biofertilizers and biomanures – A combination of biofertilizer and manure applications with reference to soil, seed and leaf sprays. Laboratory and field application: Cost-benefit analysis of

biofertilizer and biomanure production. Biopesticides and its application.

COURSE OBJECTIVES

- To study cell structure, functions of organelle and gain exposure on transportations through cell membrane and to focus on different receptors and model of signaling.
- Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles.
- Students will understand how these cellular components are used to generate and utilize energy in cells.
- To gain the knowledge base in genetics, molecular biology and cell physiology.
- To engage the students in review of scientific literature in the areas of cell mediated biomedical studies.
- Conceptualize and describe protein structure, folding and sorting

COURSE OUTCOME

1. Students upon completion of this paper will have clear knowledge on various cellular functions such as transportation and signaling.
2. It will enable the students to enter into cellular function level research for their future.
3. Students will understand the cellular components underlying mitotic and meiotic cell division.
4. Students will apply their knowledge of cell biology to selected examples of changes or losses in cell function.
5. Conceptual knowledge of properties, structure, function of enzymes, enzyme kinetics and their regulations.
6. Enzyme engineering and their applications in large scale industries.

UNIT I - Cell

Definitions and properties, cell theory.Ultrastructure of eukaryotic cell - plant and animal.Bacterial cell wall structure and composition and their functions.

UNIT II - Plasma membrane

Plasma membrane - structure and functions. Transportation – types and methods. Role of microtubules and microfilaments.

UNIT III - Cell organelles

Endoplasmic reticulum, Golgi complex, Mitochondria, Chloroplast, Ribosomes, Lysosomes, Peroxisomes, Nucleus and Vacuoles.

UNIT IV - Mitosis

Properties and significance, mitotic cell division and five phases of mitosis.

UNIT V - Meiosis

Properties and significance, Phases of meiosis and Cellular aging.

Instruction Hours / week:L: 4 T: 0P: 0**Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To inculcate the quality standards and the quality control practice followed in the industry.
- To bring awareness about biosafety and to enhance the entrepreneurship and employability.
- Knowledge of the principles and documentation of the quality system is a prerequisite for the course.
- Develop goal-oriented standards, policies, and procedures based on user-defined data quality requirements.
- Confirm that draft standards are acceptable to all users.
- Ensure that developed standards conform to the primary goals of the organization.

COURSE OUTCOME

1. Set up and Assess Food Quality Assurance Plans.
2. Create and Critically Evaluate quality specifications for raw materials, and associated final product and appropriate packaging.
3. Design and critically evaluate appropriate testing and recording procedures for raw materials and associated Final product.
4. Design, and evaluate processing documentation including Standard Operating procedures.
5. To realize the importance of significance of quality
6. Identify requirements of quality improvement programs

7.

UNIT – I – Roles and responsibility

An introduction to industrial microbiology. Definition of Quality assurance- roles and responsibilities of Quality assurance in industrial Microbiology. Roles and responsibilities of Quality control in industrial Microbiology.

UNIT – II - Antimicrobial agents

Definitions, properties, mode of action and applications. Antimicrobial agents for external usage - Chemical antimicrobial agents, Sanitizers – QA compounds, Synthetic antimicrobial agents, naturally antimicrobial agents.

UNIT III- Sterilization

Types and Methods of sterilization. Sterility testing and assessment of Microbial Contamination. Quality parameter to assess Natural products, Nutraceutical product, Pharmaceutical products. SOP, SSOP, HACCP, ISO and European Standard.

UNIT IV – Disinfection and antibiotics

Disinfection – types and methods. Disinfection agents- properties and mode of action (Phenol, isopropyl alcohol and ethanol). Antibiotics and antimicrobial drug resistance, search for new antimicrobial agents.

UNIT V - Quality control

Quality assurance and Quality control – pharmacopoeias, quality checking, routine examination and validation of industry. International disinfectant testing protocols, assessment of biocide effectiveness. SOP, SSOP, HACCP, ISO & European Standard.

BIOPROCESS ENGINEERING

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- This course encompasses the use of microorganisms in the manufacture of food or industrial products.
- The use of microorganisms for the production of food, either human or animal, the microorganisms used in bio processes may be natural isolates; laboratory selected mutants or genetically engineered organisms.
- To know the basics and concepts of various biotechnological related terms
- Elucidate the significance of transgenic plants as bioreactors for the production of enzymes.
- Address bioethical and biosafety issues related to plant transgenics
- Elucidate the molecular techniques involved in gene manipulation and rDNA technology

COURSE OUTCOME

1. This course will enable the students to design the various microbial fermentation products and their production, purification for various applications
2. To know the process protocol for the, synthesis and characterization of nanoparticles
3. Explain the gene transfer methods for the production of transgenic animals
4. Gain experimental knowledge to perform animal biotechnology related experiments
5. Explain the application of biotechnology in medical and its allied fields, gene therapy, genetic counseling
6. Address the bioethical issues & concerned linked to medical biotechnology

UNIT I - Fermenter

Design of a basic fermenter, bioreactor configuration, design features, computer control of fermentation process, measurement and control of process. Types of Bioreactors and its functions.

UNIT II - Physical factors and scale-up

Transport phenomena in fermentation: Gas- liquid exchange and mass transfer, oxygen transfer, critical oxygen concentration, heat transfer, aeration/agitation, its importance. Sterilization of Bioreactors, nutrients, air supply, products and effluents, process variables and control, scale-up of bioreactors.

UNIT III - Cultures in the fermenter

Growth of cultures in the fermenter. Importance of media in fermentation, media formulation and modification. Kinetics of growth in batch culture, continuous culture with respect to substrate utilization, specific growth rate, steady state in a chemostat, fed-batch fermentation, yield of biomass, product, calculation for productivity.

UNIT IV - Down streaming process

Down streaming process of microbial products (Peptides, Biopolymers, surfactants, Enzymes) - separation, extraction and purification, drying and crystallization.

UNIT V - Strain improvement & Preservation

Isolation, selection and improvement of microbial cultures. Strain improvement for the selected organism: Use of recombinant DNA technology, protoplast fusion techniques for strain improvement. Improvement of characters other than products and its application in the industry. Preservation of cultures after strain improvement programme.

Instruction Hours / Week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 9 Hours**COURSE OBJECTIVES**

- The course provides the basics of microbiology to build a foundation for more advanced studies in microbiology and biotechnology
- In this course students will learn key methods of microbial production (e.g. fermentation, recombinant protein production and purification).
- Practice in research project planning, in different methods for biotechnology, and for conducting scientific research project.

COURSE OUTCOME (CO'S)

1. This practical course renders a candidate the knowledge of advanced techniques involved in microbial biotechnology.
2. He/she will be able to judge how microbes and enzymes could be applied in industry.
3. Candidates would be skilled enough to perform a molecular technique which forms an integral part of industrial microbiology.
4. Students can develop entrepreneur skills for applications in biotechnology based industries.

EXPERIMENTS

1. Isolation of plasmid DNA from Bacteria
2. Isolation of chromosomal DNA from Bacteria
3. Determination of molecular weight by SDS Polyacrylamide gelelectrophoresis
4. Isolation of microbes from soil
5. Isolation of free-living N₂ fixation from soil -Azotobacter
6. Isolation of symbiotic nitrogen fixers from root nodule -Rhizobium
7. Isolation of phosphate solubilisers, ammonifiers and denitrifiers
8. Study of Mycorrhizae, Cyanobacteria and Azolla
9. Determination of Dissolved oxygen of water
10. Determination of BOD (Biochemical Oxygen Demand) of water
11. Determination of COD (Chemical Oxygen Demand) of water

4. Palanivelu, P. (2004). *Analytical Biochemistry and Separation Techniques*, (3rd ed.). Twenty First Century Publication, Madurai.

COURSE OBJECTIVES

- To acquire practical knowledge in numerous diagnostic tests and procedures used in the microbiology laboratory.
- To understand the importance of diagnostic procedures and gain skills related to the laboratory experiments.
- To learn the techniques pertaining to amplification of biological molecules
- To provide hands-on experience to determine microorganisms in clinical samples
- To acquire knowledge in diagnosing virulence bacteria
- To analyse antimicrobial property of pathogens through various molecular techniques.

COURSE OUTCOME

1. This course provides the current medical aspects on the clinical diagnosis of infection providing the combined treatment of bacteriology and virology.
2. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
3. It will also provide opportunities for a student to develop diagnostic skills in microbiology, including the practical application and interpretation of laboratory tests for the diagnosis of infectious diseases.
4. The significance of bacterial genetic variation (in drug resistance, pathogenesis or virulence and variation, diagnosis, and vaccination), and manipulation of cloned DNA.
5. To know the Virulence of bacteria, bacterial virulence factors and their regulation.
6. To understand drug resistance, drug-bacteria relationship, clinical implications, and prevention

EXPERIMENTS

1. Laboratory diagnosis of pyogenic infections – tuberculosis – enteric fever –diarrhea – UTI – anaerobic infections
2. Isolation and identification of *Candida albicans*
3. Antibiotic sensitivity test discpreparation
4. Antibiotic sensitivity test – Kirby - Bauer, Stroke's method
5. MIC determination by Broth dilution technique, filter paper disc assay
6. Wet mount preparation of parasites- Saline, iodine
7. Identification of parasites-formal ether concentration, floatation methods
8. Morphological examination of fungi in tissues
9. Cultivation of viruses-Egg inoculation
10. Isolation of coli phage from sewage using membrane filter technique.
11. Examination of plant diseases: Wilt of potato, Citrus canker, Rice dwarf virus

JOURNAL PAPER ANALYSIS AND PRESENTATION

**Semester - II
2H**

Instruction Hours / week:L: 2 T: 0 P: 0

Instruction Hours / Week :L: 0 T: 0P: 4
Total:100

Marks: Internal: 40 External: 60
End Semester Exam: 9 Hours

COURSE OBJECTIVES

- Imparting advanced technological knowledge through a detailed study of topics such as immunodiagnosis, assessment of cell mediated immunity and current trends in immunology of diseases.
- The students will be able to identify the cellular and molecular basis of immune responsiveness.
- The students will be able to describe the roles of the immune system in both maintaining health and contributing to disease.
- The students will be able to describe immunological response and how it is triggered and regulated.
- The students will be able to demonstrate a capacity for problem-solving about immune responsiveness.
- Students will be able to transfer knowledge of immunology into clinical decision-making through case studies presented in class.

COURSE OUTCOME (CO'S)

1. To strengthen the technical skill on the immune system, their structure and classification, genetic control of antibody production, Types, structure of antigens and immunodiagnostics.
2. To obtain knowledge of through Molecular immunology, hypersensitive immune reaction and Latest trends in immunology.
3. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity.
4. Develop understanding about immune system, antigen antibody interactions.
5. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
6. Introducing the **employment** aspect of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.

UNIT – I

Immunity – types. Cells of the immune system - lymphoid cells, mononuclear cells, granulocytic cells and mast cells. T & B – cell maturation, activation and differentiation. Organs of the immune system - primary and secondary lymphoid organs – cutaneous / mucosal - associated lymphoid tissues

UNIT – II

Antigens - factor influence immunogenicity - Epitopes - Haptens - study of antigenicity. Immunoglobulins – structure – types and biological activities. Antigenic determinants. Monoclonal antibodies.

UNIT – III

Hypersensitive reactions – Type. Complement system - classical, alternative and lectin pathways, biological consequences. T - cell receptor. Cytokines – Structure, functions and receptors. Major

Histocompatibility complex, classes, structure and its functions.

UNIT – IV

Autoimmune diseases: Antigen processing and presentation - Transplantation immunology - Transplantation antigens, HLA typing. Tumor immunology - treatment of tumors. Immune response to infectious disease.

UNIT – V

Antigen - Antibody reactions: Agglutination and precipitation. Immuno electrophoresis, Complement fixation test, Immunofluorescence, ELISA, RIA, Immuno electron microscopy. Forensic serology, Immunohaematology – ABO, RH incompatibility.

Instruction Hours / Week: L: 4 T: 0 P: 0
100

Marks: Internal: 40 External: 60 Total:
End Semester Exam: 3 Hours

COURSE OBJECTIVES

- This paper adds information about the role of microorganisms in many food, beverage and pharma industries both in production and spoilage processes.
- The objective of the Master's Program in Microbiology is to equip the students to gain bimolecular knowledge and analytical skills at an advanced level.
- The program emphasizes to apply knowledge acquired about prokaryotic and eukaryotic cellular processes, interaction of microorganisms among themselves,
- Physical and chemical agents and higher order organisms in environment and biological systems to various conditions.
- The laboratory training in addition to theory is included so that the students will acquire the skills to qualify for a broad range of positions in research, industry, consultancy, education and public administration, or for further education in a doctoral program.
- Students will be able to address broad range of fields including biopolymer chemistry, marine biochemistry, environmental biotechnology, food science, microbiology, microbial genetics, molecular biology and systems biology

COURSE OUTCOME (CO'S)

1. To encode the importance of the role of microorganisms in food industries both in beneficial and harmful ways.
2. To obtain a good understanding of industrial microbiology and become qualified as microbiologist in food and other industries and candidate able to become entrepreneur after understanding this entire course.
3. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
4. Students can able to understand of the basis of food safety regulations and Discuss the rationale for the use of standard methods and procedures for the microbiological analysis of food.
5. Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.
6. It will help to study the importance in the prevention of contamination that might be caused by the microorganisms.

UNIT – I

Food and microorganisms – Important microorganisms in food – Fungi, Bacteria; Intrinsic and extrinsic parameters of food affecting microbial growth – sources of contamination of food. Food sanitation – indicators of food safety – Coliform bacteria.

UNIT – II

Food preservation – principles – factors affecting preservation – food preservation using temperature – low temperature food preservation – characteristics of psychrotrophs – high temperature food preservation – characteristics of thermophiles – preservation of foods by drying chemicals and radiation – limitations – commercial application.

UNIT – III

Food borne diseases - food poisoning - food borne infection and intoxication- Food control agencies - microbiological criteria for food, microbial quality control and food laws, Hazard Analysis Critical Control Point (HACCP).

UNIT – IV

Microorganisms in Foods and methods for detection: Fresh meat, Processed meat and poultry, Culture, Microscopic, and Sampling Method for detecting microbes, Physical, Chemical methods, Whole animal assays, Immunological methods.

UNIT – V

Applications of Food Microbiology: Beneficial Uses of Microorganisms in Food, Intestinal Beneficial Bacteria-Concept of Prebiotics and Probiotics, Genetically modified foods. Biosensors in food.

Instruction Hours / Week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Should be familiar with current developments and advances in the field of Mycology and Parasitology.
- Develop understanding about immune system, antigen antibody interactions.
- Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
- Diagnostic approaches for microbial pathogens
- Developing efficient vaccines and new drugs
- Different approaches, techniques and tools used to identify pathogens and control them.

COURSE OUTCOME (CO'S)

1. Establish basic theoretical knowledge in the fields of Mycology and Parasitology.
2. To study the properties and various infections caused by the fungal, protozoan and helminthes.
3. Upon completion of the course, students will become an entrepreneur.
4. Upon completion, students gained the knowledge of most common medically important organism and the infections they cause.
5. Different approaches, techniques and tools used to identify pathogens and control them.
6. Diagnostic approaches for microbial pathogens

UNIT – I

General Properties of Fungi - Isolation and identification of medically important fungi – diagnosis of fungal disease - routine mycological techniques - antifungal agents

UNIT – II

Superficial mycosis –Pityriasis versicolor, Tinea nigra, piedra. Cutaneous mycosis – Dermatophytes. Systemic mycosis – Opportunistic mycosis – Candidosis, Cryptococcosis, aspergillosis. Subcutaneous mycosis - Sporotrichosis, Chromoblastomycosis, Mycetoma

UNIT – III

Introduction to Parasitology - protozoa-amoeboeae – flagellates - Laboratory techniques in parasitology - Ova, cyst analysis direct and concentration methods. Blood smear examination - antiprotozoan therapy.

UNIT – IV

Protozoan infections - *Entamoeba histolytica*, *Plasmodium falciparum*, *Leishmania donovani* - *Giardia intestinalis* *Trichomonas vaginalis*, *Toxoplasma gondii*, *Pneumocystis carinii*, *Balantidium coli*.

UNIT – V

Helminthic infections – *Taenia solium*. *Trematodes* - *Schistosoma haematobium*, *Nematodes* - *Trichuris trichiura* - *Ascaris lumbricoides*, *Ancylostoma duodenale*, *Wuchereria bancrofti*.

Instruction Hours / Week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- Microbial technology is concerned with the industrial processing of materials by microorganisms to provide desirable products or serve other useful purposes.
- This paper emphasizes the application of biological systems to the manufacturing and service industries or the use of biological processes within the framework of technical operations and industrial production.
- It creates awareness on the Intellectual property rights and patenting of biotechnological processes.
- This course will provide technical skill majorly deals with DNA.
- To familiarize the students, with the principles of bioethical concepts
- To emphasize on IPR issues and need for knowledge in patents in biotechnology.

COURSE OUTCOME (CO'S)

1. To learn the basic tools in recombinant technology
2. To understand the various concepts of cloning vectors
3. To learn the cloning strategies
4. To familiarize the students, with the principles of bioethical concepts
5. To emphasize on IPR issues and need for knowledge in patents in biotechnology.
6. To aware students with current research.

UNIT – I

Introduction to microbial technology, restriction enzymes – nomenclature – types – and its properties, isolation of DNA, plasmids and RNA. Handling and quantification of nucleic acids, radiolabelling and non-radiolabelling of nucleic acids, gel electrophoresis - Blotting techniques – Southern, Northern and Western blotting techniques.

UNIT – II

Cloning vectors: Plasmid as cloning vectors - pBR322, Bacteriophage - λ , M13; Cosmid, phagemids. Yeast vector. Expression vectors. Prokaryotic hosts: *E.coli*, Eukaryotic hosts: Yeast cell. Gene cloning - basic steps, cloning construction of cDNA, selection and screening method of recombinants. biolabeling of genes and proteins.

UNIT – III

Transgenic plants: Methodology, development of herbicide resistance plants, delayed fruit ripening, Biocontrol agents - Insecticidal toxin of BT, CRY gene and baculovirus. Transgenic animals. Methodology, development of transgenic mice – its application. DNA diagnostic in medical forensics. Biosafety and Bioethics.

UNIT – IV

Discrepancies in biotechnology / chemical patenting. IPR – historical perspective – recent developments in IPR laws in India, IPR and the rights of farmers in developing countries. Types

of IPR- Governing bodies-National and International.

UNIT – V

Patenting – fundamental requirements – patenting multicellular organisms – patenting and fundamental research. Patenting of biological materials, Product patents, conditions for patenting, Patenting of liveforms, regulating recombinant technology, Food and food ingredients. Trade secrets. Writing a patent document.

Instruction Hours / Week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study about the biofertilizers, plant disease and increasing soil fertility.
- To provide the knowledge on biomanure and biofertilizer and to become an entrepreneur in the field.
- To Provides detailed idea about biofertilizer production and plant disease.
- To provide the student knowledge about ecofriendly product which play a crucial role in determining its future use and applications in environmental management.
- The students will be able to make qualitative and quantitative description of the basic enzymatic phenomena and processes.
- To provide the student for entrepreneur.

COURSE OUTCOME (CO'S)

1. This course has been designed to provide the student knowledge about eco friendly product.
2. Product play a crucial role in determining its future use and applications in environmental management.
3. Provides detailed idea about biofertilizer production and plant disease.
4. To produce and impart training of ecofriendly agricultural inputs so as to nullify the ill effects of chemical fertilizers.
5. To demonstrate the know-how technology pertinent to microbiological and physico-chemical analyses of soil samples and their assessment.
6. Provides detailed **entrepreneurial** idea about biofertilizer production and plant disease.

UNIT – I

Fertilizer - importance and present status of types of fertilizers and application. Nitrogen; Carbon, phosphorus and sulphur cycles. Biogeocycles associated with microorganisms.

UNIT – II

Biofertilizers – Nitrogen fixers, Phosphate solubilizers and Potassium mobilizers. Free living forms – Azotobacter, Azospirillum; Symbiotic forms – Rhizobium; Legume Association; *Pseudomonas*; Non-legume association.

UNIT – III

Mycorrhizal association –Ecto and Endo mycorrhizae, Vescicular arbuscular mycorrhizal association (VAM) –Actinomycetes associations in biofertilizer.

UNIT – IV

Biomanures- Properties, production and applications; Composts – production and applications. Agro wastes – Poultry manure and saw-dust.

UNIT – V

Vermi composting– Properties, production and applications Types of compost pits and biodegradation. Application of biofertilizers and biomanures. Quality control parameters, ISI-FCO norms.

Instruction Hours / Week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- Aimed to provide training on various methods of handling.
- Concerning the care and use of laboratory animals.
- Laboratory animal care provides the proper handling and care for various species of animals used in research, testing, and in education.
- It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
- It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
- To study the preclinical studies.

COURSE OUTCOME (CO'S)

1. Laboratory animal care provides the proper handling and care for various species of animals used in research, testing, and in education.
2. It extensively deals with the amended act on the Animal Welfare and the concept, availability, and use of research or testing methods that limit the use of animals or minimize animal distress.
3. This course content will enhance the employment in drug testing field.
4. Validation for equipment, methods, cleaning and process
5. Students can develop their entrepreneurial skills in analysis of pens design and environment.
6. Ethical knowledge for use of animals in research.

UNIT – I

General introduction - responsibilities of institution and chief investigators, Aspects of rabbit behavior relevant to housing, Rabbit Group housing in pens, advantages and disadvantages, Pens, design of pens environment, Rabbit care management – Regrouping, catching and identification in pens and cages, Rabbit care management – food, water, health and breeding in pens and cages, Cage design and environment, Environment enrichment for rabbits in pens and cages, Ethical guidelines for use of animals in research.

UNIT – II

Introduction-behavior, anatomic and physiological features of mice in lab, Husbandry-Housing, nutrition and breeding requirements and management of lab mice, occupational health and zoonotic diseases, treatment of disease in mice, regulatory agencies and complaines associates with management of lab mice, Restraining and sample collection methods from lab mice, Physical, examination of mice for disease conditions, anesthesia and analgesia -mice, Euthanasia in veterinary care.

UNIT – III

Introduction to anatomical and physiological features of laboratory rat, major color groups and

varieties of rats, regulatory management housing of laboratory rats-equipment, feed formulation, ailments & disease management of laboratory rats, disease management and ailments of laboratory rats, restraining and sample collection in lab rats, anesthesia and analgesia of lab rats, breeding of laboratory rats.

UNIT – IV

Introduction – history and classification of guinea pigs, varieties and characteristics of guinea pigs used in labs, characteristics and behaviors of the guinea pig used in labs, housing, nutrition and feeding of guinea pigs, care and handling of guinea pigs in lab, zoonoses of guinea pigs, reproduction and breeding managements in guinea pigs –gnotobiotic animals.

UNIT – V

Various routes of inoculation in mice & rats, various routes of inoculation in mice & rats, handling and routes of inoculation in rabbits, guinea pigs, laboratory use of animals –role in microbiology, antibody production in animals, disposal of animal house wastes, safety measures in animal house.

Instruction Hours / Week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- This course has been intended to provide knowledge about the Bio nanomaterials synthesis and its advancement.
- To foundational knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications
- To help them understand in broad outline of Nanoscience and Nanotechnology.
- Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment
- Apply their learned knowledge to develop Nanomaterial's.

COURSE OUTCOME (CO'S)

1. Students get an idea about application of nanotechnology in biology.
2. It provide analytical knowledge of trends and developments in the field of nanotechnology
3. Acquire knowledge in nanotechnology and how it will support the employment greatly.
4. Students able to construct hierarchy strategy in machine.
5. Able to describe self-application and machine phase biotechnology.
6. Students have an enhanced knowledge and understanding of chemical transformation and biomolecular sensing.

UNIT – I

Biotechnology to Bionanotechnology: Bio nanomachines – Modern bionano materials – protein, nucleic acid, lipids used for carrying information – polysaccharides use in special structural roles – Present status of bionanotechnology.

UNIT – II

Molecular design for nanotechnology: Recombinant DNA technology – X-ray crystallography, NMR spectroscopy and electron microscopy, use in nanotechnology – Computer modeling to bionanomachines and computer assisted molecular design.

UNIT – III

Structural principles of Bionanotechnology: Natural bio nanotechnology design for specific environment – Biomolecular structure as low materials – Hierarchical strategy in construction of nanomachines – protein folding – self organization – molecular recognition – flexibility.

UNIT – IV

Functional principles of Bionanotechnology: Information driven nano assembly – chemical transformation – bio molecular sensing – self application – machine phase bio nanotechnology.

UNIT – V

Future of Bio nanotechnology: Problems in bionanotechnology – Abide finger problem – Sticky finger problem – role of enzyme to solve these problems – Core studies – nomotuble synthesis, nano scale assembler, nanosurveillance – ethical consideration – respect for life, potential

dangers, fuel.

APPLICATION ORIENTED PRACTICAL – V

4H – 2C

Instruction Hours / Week : L: 0 T: 0P: 4
Total:100

Marks: Internal: 40 External: 60

End Semester Exam: 9 Hours
End Semester Exam: 9 Hours**COURSE OBJECTIVES**

- The general objectives of the lab will be to introduce immunology and basic serological techniques.
- To develop the skill in health clinic
- To enhance knowledge in research.
- To give employment opportunities.
- Technical skill of immunology techniques.
- To understand disease mechanisms.

COURSE OUTCOME (CO'S)

1. This practical is to provide the student with a basic knowledge and technical skill of immunology and make them to understand the significance to human disease.
 2. Upon completion students will gain knowledge of immune system, cells involved along with complement system and autoimmunity
 3. Develop understanding about immune system, antigen antibody interactions.
 4. Gain theoretical knowledge of various diseased conditions generated due to interplay of immune system components.
 5. After course completion, students can apply the knowledge in further studies and higher education.
 6. Introducing the science of immunology and to study various types of immune systems their classification structure and mechanism of immune activation.
-
1. Separation of serum / plasma
 2. ABO Blood grouping - Rh typing and cross matching. Estimation of hemoglobin content of human blood.
 3. Agglutination tests.
 - WIDAL - slide and tube test
 - RA test.
 - RPR test.
 - ASO test.
 - CRP test.
 - β -HCG test
 4. ELISA- thyroid hormone analysis
 5. Ouchterlony's Double Immunodiffusion test (ODD)
 6. Counter immunoelectrophoresis (CIE)

End Semester Exam: 9 Hours

COURSE OBJECTIVE

- This provides information on fermented food product production in food industries. To know the possible contamination of food products which may include bacteria and fungi.
- To develop the skill in Isolation of pathogen.
- To enhance knowledge in research.
- To give employment opportunities.
- Technical skill of industries techniques.
- To understand disease mechanisms.

COURSE OUTCOME (CO'S)

1. This practical adds a technical skill and good understanding of industrial microbiology
 2. Students can develop the skills of an efficient microbiologist in food and beverage industries.
 3. Provides necessary entrepreneurial information on the food, dairy Microbiology in safety and quality perspective.
 4. It will help to study the importance in the prevention of contamination that might be caused by the microorganisms.
 5. To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
 6. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
-
1. Production of enzymes – solid state & submerged fermentation – Amylase and protease.
 2. Production of sauerkraut ,yoghurt, wine
 3. Enumeration of Microorganisms from Food samples
 4. Detection and enumeration of Microorganisms present in lab surfaces.
 5. Analysis of Milk quality by MBRT and resazurin
 6. Detection of coliforms from water - MPN test
 7. Isolation of plant pathogens – Bacteria and fungi
 8. Citric Acid production
 9. Mushroom Cultivation
 10. Immobilization technique (Sodium alginate method).

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்:

(8 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(8 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை:

(8மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

18ENU101

ENGLISH

SEMESTER – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV: Drama

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

UNIT - V: Grammar and Composition

GRAMMAR :

1. Tenses
2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

COMPOSITION:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

Prescribed Text:

Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading:

Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press

18PHU101

MECHANICS

SEMESTER – I
5H – 5C

Instruction Hours / week: L: 5 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To know how to use Newton's laws of motion
- To solve advanced problems involving the dynamic motion of mechanical systems and other advanced mathematics in the solution of the problems.
- To find the use of conservation of energy and linear and angular momentum
- To solve dynamics problems.
- To understand the concept of oscillations.
- To gain the knowledge on elasticity.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basic concepts of mechanics
2. Understand the concepts of simple harmonic motion
3. Define the motion of mechanical systems and their degrees of freedom.
4. Study the interaction of forces between solids in mechanical systems.
5. Application of the vector theorems of mechanics and interpretation of their results.
6. Analyse the mechanics as a systematic tool for problem solving.

UNIT I - VECTORS

Vector algebra. Scalar and vector products. Derivatives of a vector with respect to a parameter. Ordinary Differential Equations: 1st order homogeneous differential equations. 2nd order homogeneous differential equations with constant coefficients.

UNIT II - LAWS OF MOTION

Frames of reference. Newton's Laws of motion. Dynamics of a system of particles. Centre of Mass. Momentum and Energy: Conservation of momentum. Work and energy. Conservation of energy. Motion of rockets. Rotational Motion: Angular velocity and angular momentum. Torque. Conservation of angular momentum.

UNIT III - GRAVITATION

Newton's Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant). Kepler's Laws (statement only). Satellite in circular orbit and applications. Special Theory of Relativity: Constancy of speed of light. Postulates of special theory of Relativity. Length contraction. Time dilation. Relativistic addition of velocities.

UNIT IV - OSCILLATIONS

Simple harmonic motion. Differential equation of SHM and its solutions. Kinetic and Potential Energy, Total Energy and their time averages. Damped oscillations.

UNIT V - MOTION OF RIGID BODY

Moment of inertia of a rod, disc, spherical shell, solid and hollow spheres - Theory of compound pendulum and Kater's pendulum - Determination of 'g' - Derivation of expressions for angular momentum and kinetic energy of a system of N particles.

Friction-Static Friction - Laws of Friction-Angle and cone of Friction - Motion up and down on a rough inclined plane.

SUGGESTED READINGS

PROPERTIES OF MATTER AND ACOUSTICS**SEMESTER – I**
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To know how to use Newton's laws of motion
- To solve advanced problems involving the dynamic motion of mechanical systems and other advanced mathematics in the solution of the problems.
- To find the use of conservation of energy and linear and angular momentum
- To solve dynamics problems.
- To understand the concept of oscillations.
- To gain the knowledge on elasticity.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basic concepts of mechanics
2. Understand the concepts of simple harmonic motion
3. Define the motion of mechanical systems and their degrees of freedom.
4. Study the interaction of forces between solids in mechanical systems.
5. Application of the vector theorems of mechanics and interpretation of their results.
6. Analyze the mechanics as a systematic tool for problem solving.

UNIT I - KINETIC THEORY OF GASES

Assumption of Kinetic theory of gases, pressure of an ideal gas (no derivation), Boyle's law, Charles' law, Reganults law, Avagadro law, Kinetic interpretation of Temperature, Ideal Gas equation, Degree of freedom, Law of equipartition of energy and its application for specific heat of gases, Real gases, Vander wall's equation, Brownian motion (Qualitative).

UNIT II - ELASTICITY

Hooke's law- Stress-strain diagram - Elastic moduli-Relation between elastic constants- Poisson's Ratio-Expression for Poisson's ratio in terms of elastic constants- Work done in stretching & work done in twisting a wire- Twisting couple on a cylinder- Determination of Rigidity modulus by static torsion- Torsional pendulum-Determination of Rigidity modulus and moment of inertia - q , η & by Searles method.

UNIT III - SURFACE TENSION

Surface tension and Surface energy- Pressure difference across a spherical surface- Pressure difference across a curved surface - Angle of contact - Angle of contact for water in a glass - Vapour pressure over a flat and curved surface - Variation of Surface tension with temperature - Jaegar's method - Quincke's method.

UNIT IV - VISCOSITY

Streamline flow and Turbulent flow - Stoke's law - Stoke's method for the coefficient of viscosity - Poiseuille's method for the coefficient of viscosity - correction to Poiseuille's equation - Ostwald's viscometer - Variation of viscosity with temperature and pressure - Friction and Lubrication - Searle's viscometer - Viscosity of gases - Modification of Poiseuille's formula for gases - Rankine's method for determining the coefficient of viscosity of a gas.

UNIT V - ULTRASONICS

Intensity and Loudness of sound – decibels – Intensity level – Laws of Transverse Vibrations – Melde's String – Sonometer.

Ultrasonics – Production of ultrasonic wave – Piezoelectric crystal method – Magnetostriction method – Properties – detection – Applications.

18PHU103

MATHEMATICAL PHYSICS - I

SEMESTER – I
5H – 5C

Instruction Hours / week: L: 5 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics
- To communicate mathematical and physical knowledge and ideas to the students.
- To learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
- To contribute innovations and application of basic research.
- To get knowledge to find the relationship between observation and theory and their use in building the basic concepts of computing.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Communicate mathematical and physical knowledge and ideas to the students.
2. Get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations
3. Learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
2. Build connections between mathematical development and conceptual understanding.
3. Understand the relationship between observation and theory and their use in building the basic concepts of computing.
4. Contribute innovations and application of basic research.

UNIT I - BASIC OF C LANGUAGE

Introduction, Data types, Operators and Expressions, Conditional Statements, Input and output Statements (Programs)

UNIT II - COMPLEX ANALYSIS

Brief revision of Complex numbers & their graphical representation. Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles and branch points, order of singularity. Integration of a function of a complex variable. Cauchy's Integral formula.

UNIT III - SPECIAL FUNCTIONS

Definition – The Beta function – Gamma function – Evaluation of Beta function – Other forms of Beta function – Evaluation of Gamma function – Other forms of Gamma function - Relation between Beta and Gamma functions – Problems.

UNIT IV- MATRICES

Introduction – special types of Matrices – Transpose of a Matrix – The Conjugate of a Matrix – Conjugate Transpose of a Matrix – Symmetric and Anti symmetric – Hermitian and skew Hermitian – Orthogonal and Unitary Matrices – Properties – Characteristics equation – Roots and characteristics vector – Diagonalization of matrices – Cayley – Hamilton theorem – Problems

UNIT V - VECTOR CALCULUS

Operator – Divergence – Second derivative of Vector functions or fields – The Laplacian Operator – Curl of a Vector – Line Integral – Line Integral of a Vector field around an infinitesimal rectangle – Curl of Conservative field – Surface Integral – Volume Integral (without problem) – Gauss's Divergence theorem and its proof in the simple problems – Stoke's and its proof with simple problems.

SUGGESTED READINGS

MECHANICS PRACTICAL

SEMESTER – I
2H – 1C

Instruction Hours / week: L: 0 T: 0 P: 2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

1. To impart knowledge on various types of Mechanisms and instruments
2. To impart skills to analyze the position, velocity and acceleration.
3. To understand basic laws governing mechanics of a system.
4. To determine the acceleration due to gravity using various methods.
5. To determine the Moment of Inertia using various methods.
6. To know forces their relationship to engineering applications

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand and analyze basic theory and principles of forces in mechanics
2. Know forces their relationship to engineering applications
3. Analyze motion, forces and motion, work and energy problems and their relationship to engineering applications
4. Understand basic laws governing mechanics of a system.
5. Determine the acceleration due to gravity using various methods.
6. Determine the Moment of Inertia using various methods.

ANY SIX EXPERIMENTS

1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.
2. To determine the Height of a Building using a Sextant.
3. To determine the Moment of Inertia of a Flywheel.
4. To determine g by compound pendulum
5. To determine g by simple pendulum
6. To determine g by Bar Pendulum.
7. To determine g by Kater's Pendulum.
8. To determine g and velocity for a freely falling body using Digital Timing Technique
9. To study the Motion of a Spring and calculate Spring Constant
10. To determine the moment of inertia of a solid sphere

SUGGESTED READINGS

1. Advanced Practical Physics for students, B.L.Flint and H.T.Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practical, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Engineering Practical Physics, S.Panigrahi & B.Mallick, 2015, Cengage Learning India Pvt. Ltd.
4. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

18PHU112

**PROPERTIES OF MATTER AND ACOUSTICS
PRACTICAL****SEMESTER – I
2H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- To be able to identify solids, liquids and gases, and their main properties.
- To be able to identify changes of state.
- To be able to discuss changes of state in terms of the energy of molecules.
- Analyze motion, forces and motion, work and energy problems and their relationship to engineering applications.
- Conduct experiments on wooden bar and to identify its the strength
- Test a wire or cylindrical rod for its strength.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Study the elastic behavior and working of torsional pendulum.
2. Study the bending behavior of beams and analyse the expression for young's modulus.
3. Understand about the surface tension and viscosity of fluid.
4. Use different methods to determine the Young's modulus of different materials.
5. Use different methods to determine the Rigidity modulus of different materials.
6. Experience the practical knowledge on different matters.

ANY SIX EXPERIMENTS

1. To determine the Young's Modulus of the wooden by Optical Lever Method.
2. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
3. To determine the Young's modulus of the bar using pin and microscope – Non-uniform method.
4. To determine the Young's modulus of the bar using cantilever – Non-uniform method.
5. To determine the surface tension of water – capillary rise method
6. To determine the coefficient of viscosity by Stoke's method
7. Verification of laws of transverse vibration and frequency of tuning fork – Sonometer
8. Rigidity modulus – Torsion pendulum
9. To determine the Young's modulus of the bar – Koenig's method
10. To determine the coefficient of viscosity of the liquid – Poiseuille's method

SUGGESTED BOOKS

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practical, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Elements of Properties of Matter by D.S. Mathur, S.Chand & Co.

		SEMESTER – I
18PHU113	MATHEMATICAL PHYSICS PRACTICAL-I	4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics
- To communicate mathematical and physical knowledge and ideas to the students.
- To demonstrate the utility and limitations of a variety of powerful calculational techniques and to provide a deeper understanding of the mathematics underpinning theoretical physics.
- To find the solution through programming languages.
- To write the coding for physical problems

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Communicate mathematical and physical knowledge and ideas to the students.
2. Demonstrate the utility and limitations of a variety of powerful calculational techniques and to provide a deeper understanding of the mathematics underpinning theoretical physics.
3. Evaluate the definite integrals using computer programming techniques
4. Find the solution through programming languages.
5. Write the coding for physical problems
6. Solve complex problems through modeling.

ANY 8 EXPERIMENTS

1. Evaluate the Beta and Gamma function using C program.
2. Write the C Program to Print Square of Each Element of 2D Matrix.
3. Calculate the addition and subtraction of 2 matrices.
4. Write the C Program to Add two Complex Numbers.
5. Write C functions to add and multiply two complex numbers.
6. Program to find Transpose of Given Square Matrix.
7. Evaluate Subtraction of two matrices in C.
8. Write the C Program to perform complex number multiplication.

9. Write the C program to calculate sum of Upper Triangular Elements.
10. Write the C Program to Check whether entered matrix is magic square or not?
11. Find Inverse of a 3 X 3 Matrix using C program.
12. Write C Program to Compute Cross Product of Two Vectors.
13. Write a C Program Friend & Operator: Vector.
14. Write a C Program to Check Prime Number.
15. Check if a Number is Positive or Negative Using if...else.
16. Write a C Program to find the Factorial of a Number.

SUGGESTED BOOKS

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை) மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

18PHU201

ELECTRICITY AND MAGNETISM

SEMESTER – II
5H – 5C

Instruction Hours / week: L: 5 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To establish grounding in electromagnetism in preparation for more advanced courses.
- The major concepts covered are: the abstraction from forces to fields using the examples of the gravitational, electric and magnetic fields, with some applications; the connection between conservative forces and potential energy; how charges move through electric circuits; the close connection between electricity and magnetism, leading to the discovery of electromagnetic waves.
- To use electromagnetic theory and principles in a wide range of applications.
- To understand the calculus along with physical principles
- To effectively solve problems encountered in everyday life, further study in science, and in the professional world.
- To gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply knowledge of electricity and magnetism to explain natural physical processes and related technological advances.
2. Gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.
3. Use an understanding of calculus along with physical principles to effectively solve problems encountered in everyday life, further study in science, and in the professional world.
4. Be able to use electromagnetic theory and principles in a wide range of applications.
5. Design experiments and acquire data in order to explore physical principles, effectively communicate results, and critically evaluate related scientific studies.
6. To develop an understanding of the principles of electricity and magnetism.

UNIT I - ELECTROSTATICS

Electrostatic Field, electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem- Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor.

UNIT II

Electric potential as line integral of electric field, potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel plate, spherical

and cylindrical condenser. Energy per unit volume in electrostatic field. Dielectric medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric.

UNIT III - MAGNETOSTATICS

Biot-Savart's law and its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law.

Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferro-magnetic materials.

UNIT IV - ELECTROMAGNETIC INDUCTION

Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in magnetic field.

UNIT V- MAXWELL'S EQUATIONS AND ELECTROMAGNETIC WAVE PROPAGATION

Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.

18PHU202

ANALOG SYSTEMS AND APPLICATIONS

SEMESTER – II
4H – 5C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To implement mini projects based on concept of electronics circuit concepts.
- To apply concepts for the design of Regulators and Amplifiers.
- To verify the theoretical concepts through laboratory and simulation experiments.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply concepts for the design of Regulators and Amplifiers.
2. Acquire knowledge about how a semiconductor diode rectifies an input ac signal
3. Verify the theoretical concepts through laboratory and simulation experiments.
4. Be able to know about the Field Effect Transistors, their principles and applications
5. Learn how to construct a transistor amplifier and how its gain varies with frequency
6. To implement mini projects based on concept of electronics circuit concepts.

UNIT I - SEMICONDUCTOR DIODES

P and N type semiconductors. Energy Level Diagram. Conductivity and Mobility, Concept of Drift velocity. PN Junction Fabrication (Simple Idea). Barrier Formation in PN Junction Diode. Static and Dynamic Resistance. Current Flow Mechanism in Forward and Reverse Biased Diode. Drift Velocity. Derivation for Barrier Potential, Barrier Width and Current for Step Junction. Current Flow Mechanism in Forward and Reverse Biased Diode.

UNIT II - TWO-TERMINAL DEVICES AND THEIR APPLICATIONS

Rectifier Diode: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, C-filter, Zener Diode and Voltage Regulation. Principle and structure of LEDs, Photodiode and Solar Cell.

Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains α and β Relations between α and β . Load Line analysis of Transistors. DC Load line and Q-point. Physical Mechanism of Current Flow. Active, Cutoff and Saturation Regions. **(6 Lectures)**

UNIT III - AMPLIFIERS

Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of a single-stage CE

amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers. Coupled Amplifier: Two stage RC-coupled amplifier and its frequency response.

Feedback in Amplifiers: Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise.

UNIT IV - SINUSOIDAL OSCILLATORS

Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitt oscillators.

Operational Amplifiers (Black Box approach): Characteristics of an Ideal and practical Op-Amp. (IC 741) Open-loop and Closed-loop Gain. Frequency Response. CMRR. Slew Rate and concept of Virtual ground.

UNIT V - APPLICATIONS OF OP-AMPS

Inverting and non-inverting amplifiers, Adder, Subtractor, Differentiator, Integrator, Log amplifier, Zero crossing detector, Wein bridge oscillator. **Conversion:** Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

MATHEMATICAL PHYSICS – II

SEMESTER – II
5H – 5C

Instruction Hours / week: L: 5 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To provide students with a repertoire of mathematical methods that are essential to the solution of advanced problems encountered in the fields of applied physics and engineering.
- In addition, intended to prepare the student with mathematical tools and techniques that are required in advanced courses offered in the applied physics.
- To contribute innovations and application of basic research.
- To communicate mathematical and physical knowledge and ideas to the students.
- To build connections between mathematical development and conceptual understanding.
- To get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Communicate mathematical and physical knowledge and ideas to the students.
2. Get introduced to Special functions like Gamma function, Beta function, Delta function, Bessel functions and their recurrence relations
3. Learn the fundamentals and applications of Complex Variable, Analyticity, Cauchy-Riemann and Cauchy's Integral.
4. Build connections between mathematical development and conceptual understanding.
5. Understand the relationship between observation and theory and their use in building the basic concepts of computing.
6. Contribute innovations and application of basic research.

UNIT I - FOURIER SERIES

Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions. Application.

UNIT II - NUMERICAL METHOD I

Bisection method - method of successive approximations - RegulaFalsi method - Newton-Raphson method - Horner's method - Euler's method - modified Euler's method - RungeKutta method (II & IV).

UNIT III - NUMERICAL METHOD II

Gauss elimination method - Gauss-Jordan method - Gauss-Seidel method - computation of inverse of a matrix using Gauss elimination method - method of triangularisation.

Trapezoidal rule - Simpson's 1/3 rule and 3/8 rule

UNIT IV - STATISTICS

Arithmetic mean - Median - Quartiles - Deciles - Percentiles - Mode - Empirical relation between mean, median and mode - Geometric mean, harmonic mean - Relation between arithmetic mean, geometric mean and harmonic mean - Range - Range mean or average deviation - Standard deviation - Variance and mean square deviation.

UNIT V - PARTIAL DIFFERENTIAL EQUATIONS

Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a stretched string, rectangular and circular membranes. Diffusion Equation.

SUGGESTED READINGS

SEMESTER – II

18PHU211 ELECTRICITY AND MAGNETISM PRACTICAL 2H – 1C

Instruction Hours / week: L: 0 T: 0 P: 2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To establish grounding in electromagnetism in preparation for more advanced courses.
- Assess the contributions of physics to our evolving understanding of global change and sustainability while placing the development of physics in its historical and cultural context.
- To gain practical knowledge on RC Circuit
- To develop skills in the basic concept of electric forces.
- To understand Gauss law and its applications.
- To gain practical knowledge on magnetic moment.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Gain practical knowledge on RC Circuit
2. Develop skills in the basic concept of electric forces.
3. Understand Gauss law and its applications.
4. Gain practical knowledge on magnetic moment.
5. Determine a Low Resistance by Carey Foster's Bridge
6. Compare capacitances using De'Sauty's bridge

ANY SIX EXPERIMENTS

1. To use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, and (d) checking electrical fuses.
2. To determine Self Inductance of a Coil by Rayleigh's Method.
3. To compare capacitances using De'Sauty's bridge.
4. Measurement of field strength B & its variation in a Solenoid (Determine dB/dx).
5. To study the Characteristics of a Series RC Circuit.
6. To study a series LCR circuit and determine its (a) Resonant Frequency,
7. To determine a Low Resistance by Carey Foster's Bridge.
8. TAN A – Determination of magnetic moment of the bar magnet
9. TAN B – Determination of magnetic moment of the bar magnet
10. Measurement of charge and current sensitivity of Ballistic galvanometer
11. Calibration of low range voltmeter - Potentiometer

SUGGESTED READINGS

1. Advanced Practical Physics for students, B.L.Flint & H.T.Worsnop, 1971, Asia Publishing House.
2. Engineering Practical Physics, S.Panigrahi & B.Mallick, 2015, Cengage Learning India Pvt. Ltd.
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

SEMESTER – II

18PHU212 ANALOG SYSTEMS AND APPLICATIONS PRACTICAL 2H – 1C

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

Course Objectives

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To study the characteristics of a Bipolar Junction Transistor in CE configuration.
- To study the various biasing configurations of BJT for normal class A operation.
- To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
- To design an inverting amplifier using Op-amp for dc voltage circuits

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basics of diode
2. Analyse the characteristics of Bipolar Junction Transistor
3. Perform the procedures for the working of RC-coupled transistor
4. Analyse the relationship between V-I & power curves
5. Understand the applications of Op-amp
6. Develop the ability to analyze and design analog electronic circuits using discrete components.
7. Acquire a basic knowledge in solid state electronics including diodes, MOSFET, BJT, and operational amplifier.

Any 6 experiments

1. To study V-I characteristics of PN junction diode.
2. To study the V-I characteristics of a Zener diode.
3. Study of V-I & power curves of solar cells, and find maximum power point & efficiency.
4. To study the characteristics of a Bipolar Junction Transistor in CE configuration.
5. To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
6. To study the frequency response of voltage gain of a RC-coupled transistor amplifier.

7. To design a phase shift oscillator of given specifications using BJT.
8. To design an inverting amplifier using Op-amp (741,351) for dc voltage of given gain
9. To design inverting amplifier using Op-amp (741,351) and study its frequency response
10. To design non-inverting amplifier using Op-amp (741,351) & study its frequency response

SUGGESTED READINGS

1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
2. OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edition, 2000, Prentice Hall.
3. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.
4. Electronic Devices & circuit Theory, R.L. Boylestad & L.D. Nashelsky, 2009, Pearson.

18PHU213 MATHEMATICAL PHYSICS PRACTICAL – II**SEMESTER – II
4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- To solve simultaneous linear algebraic equations using various methods.
- To evaluate definite integrals using numerical techniques.
- To problem-solving through (computer language) programming.
- To write the coding for physical problems
- To solve complex problems through modeling.
- To find the solution for given problems through computer programming.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment for numerical methods.
2. Develop proficiency in skills to solve the algebraic equations.
3. Evaluate the definite integrals using computer programming techniques
4. Find the solution through programming.
5. Write the coding for physical problems
6. Solve complex problems through modeling.

ANY 8 EXPERIMENTS

1. Write the C⁺⁺ Program Gauss-Jordan method.
2. Write the C⁺⁺ Program Gauss elimination method.
3. Write the C⁺⁺ Program Gauss-Seidel method.
4. Write the C⁺⁺ Program Bisection method.
5. Write the C⁺⁺ Program Runge Kutta method.
6. Write the C⁺⁺ Program Euler's method.
7. Write the C⁺⁺ Program Newton-Raphson method.
8. Write the C⁺⁺ Program Inverse of a matrix.
9. Write the C⁺⁺ Program Regula Falsi method.
10. Write the C⁺⁺ Program Simpson's 1/3 rule.
11. Write the C⁺⁺ Program Trapezoidal rule.
12. Write the C⁺⁺ Program Horner's method.
13. Write the C⁺⁺ Program to Illustrate Trigonometric function.

14. Write the C⁺⁺ Program for heat equation.

15. Write the C⁺⁺ Program to Compute Discrete Fourier Transform Using the Fast Fourier Transform Approach.

SUGGESTED READINGS

6. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications: A.V. Wouwer, P. Saucez, C.V. Fernández. 2014 Springer Scilab by example: M. Affouf 2012, ISBN: 978-1

18AEC201

ENVIRONMENTAL STUDIES

SEMESTER – II
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To gain knowledge on environmental issues.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
7. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.

UNIT I – ENVIRONMENT

Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II - NATURAL RESOURCES

Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Fire accidents and prevention.

UNIT III- BIODIVERSITY AND ITS CONSERVATION

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV- ENVIRONMENTAL POLLUTION

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V - SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

SEMESTER – III

18PHU301 THERMAL PHYSICS AND STATISTICAL MECHANICS 4H-4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- The objective of this course is to give awareness on different laws of thermodynamics and its effect on different aspects in life.
- The aim of statistical mechanics is to give knowledge on the laws of classical thermodynamics for macroscopic systems using the properties of its atomic particles.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
- To apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.
- To give knowledge on the statistical mechanics and explain the applications of thermodynamics.
- To provide the correlation of thermodynamical problems with statistical concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Identify and describe the statistical nature of concepts and laws in thermodynamics, in particular: entropy, temperature, chemical potential, Free energies, partition functions.
2. Realize the importance of thermo dynamical functions and their applications.
3. Statistical physics methods, such as Boltzmann distribution, Gibbs distribution, Fermi-Dirac and Bose-Einstein distributions to solve problems in some physical systems.
4. Become familiar with various thermodynamic process and work done in each of these process.
5. Apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
6. Apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.

UNIT - I

Laws of Thermodynamics: Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law and internal energy, conversion of heat into work, Various Thermodynamical Processes, Applications of First Law: General Relation between C_P and C_V , Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Coefficient, Reversible and irreversible processes, Second law, Entropy, Carnot's cycle, Third law of thermodynamics.

UNIT - II

Thermodynamic Potentials: Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell's relations and applications - Joule-Thompson Effect, Clausius-Clapeyron Equation, Expression for $(C_P - C_V)$, C_P/C_V , TdS equations.

UNIT - III

Kinetic Theory of Gases: Derivation of Maxwell's law of distribution of velocities and its experimental verification, Mean free path (Zeroth Order), Transport Phenomena: Viscosity, Conduction and Diffusion (for vertical case), Law of equipartition of energy (no derivation).

UNIT - IV

Statistical Mechanics: Introduction – Liouville's theorem – Measurement of macro-properties of a thermodynamic system – Ensemble – Microcanonical and Canonical ensembles – Entropy of an ideal gas – microcanonical ensemble – Application of Gibbs canonical ensembles – Fluctuations in thermodynamic variables – Stirling's approximation or Stirling's formula – Relation between entropy and probability – Boltzman theorem.

UNIT – V

Statistical Mechanics: Phase space, Macrostate Thermodynamic probability, Maxwell-Boltzmann Quantum statistics, Fermi-Dirac distribution law, comparison of three statistics. and Microstate, Bose-Einstein distribution law.

SUGGESTED READINGS

SEMESTER – III

18PHU302 PHYSICS OF ELECTRONIC DEVICES AND CIRCUITS 4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- To know about power semiconductor devices frequently used in industries.
- To have an idea about the principle and operation of circuits using semiconductor devices to control various operations.
- To acquaint with industrial and domestic applications of power semiconductor devices.
- To understand the concepts of electronic devices and their communication systems.
- To develop their knowledge on digital communication technology.
- To design the electronic circuits and their block diagrams with number of different electronic components.

Course outcomes

After successful completion of the course, the student is expected to

1. Understand the construction and working of different semiconductor devices.
2. Study about Basics electronics Technology
3. Develop explicit problem-solving strategies that emphasize qualitative analysis steps to describe and clarify the problem.
4. Develop knowledge on design trade-offs in various digital electronic families with a view towards reduced power consumption
5. Realize the importance of different electronic communication systems.
6. Design power electronic circuit for real time application like rectifier and convertor etc.

UNIT-I

Devices: Characteristic and small signal equivalent circuits of UJT and JFET. Metal semiconductor Junction. Metal oxide semiconductor (MOS) device. Ideal MOS and Flat Band voltage. SiO₂-Si based MOS. MOSFET– their frequency limits. Enhancement and Depletion Mode MOSFETS, CMOS. Charge coupled devices. Tunnel diode.

UNIT -II

Power supply and Filters: Block Diagram of a Power Supply, Qualitative idea of C and L Filters. IC Regulators, Line and load regulation, Short circuit protection. Active and Passive Filters, Low Pass, High Pass, Band Pass and band Reject Filters.

UNIT- III

Phase Locked Loop (PLL): Basic Principles, Phase detector(XOR & edge triggered), Voltage Controlled Oscillator (Basics, varactor). Loop Filter– Function, Loop Filter Circuits, transient response, lock and capture. Basic idea of PLL IC (565 or 4046).

UNIT- IV

Processing of Devices: Basic process flow for IC fabrication, Electronic grade silicon. Crystal plane and orientation. Defects in the lattice. Oxide layer. Oxidation Technique for Si. Metallization technique. Positive and Negative Masks. Optical lithography. Electron lithography. Feature size control and wet anisotropic etching. Lift off Technique. Diffusion and implantation.

UNIT-V

Introduction to CRO: Block Diagram of CRO. Applications of Oscilloscope: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency and Phase Difference.

Timer IC: IC 555 Pin diagram and its application as Astable and Monostable Multivibrator using IC 555. Multivibrators: Astable, Bistable and Monostable Multivibrators using transistors.

SUGGESTED READINGS

1. Physics of Semiconductor Devices, S.M. Sze & K.K. Ng, 3rd Ed.2008, John Wiley & Sons
2. Electronic devices and integrated circuits, A.K. Singh, 2011, PHI Learning Pvt. Ltd.
3. Op-Amps & Linear Integrated Circuits, R.A.Gayakwad,4 Ed. 2000,PHI Learning Pvt. Ltd

SEMESTER – III

18PHU303A RENEWABLE ENERGY AND ENERGY HARVESTING 3H - 3C

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- To understand the various forms of conventional energy resources.
- To learn the present energy scenario and the need for energy conservation
- To explain the concept of various forms of renewable energy
- Give outline division aspects and utilization of renewable energy sources for both domestics and industrial application.
- To provide the awareness and need of renewable energy.
- To describe the uses, needs and applications of various renewable energy sources.

Course Outcome

After successful completion of the course, the student is expected to

1. Describe the environmental aspects of non-conventional energy resources. In Comparison with various conventional energy systems, their prospects and limitations.
2. Understand the concept of hydro energy resources and their classification.
3. Describe the use of solar energy and the various components used in the energy production with respect to applications like - heating, cooling, desalination, power generation, drying, cooking etc.
4. Appreciate the need of Wind Energy and the various components used in energy generation and know the classifications.
5. Understand the concept of Biomass energy resources and their classification, types of biogas Plants- applications.
6. Compare Solar, Wind and bio energy systems, their prospects, Advantages and limitations.

UNIT -I

Fossil fuels and Alternate Sources of energy: Fossil fuels and nuclear energy, their limitation, need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, solar energy, biomass, biochemical conversion, biogas generation,

UNIT- II

Solar energy: Solar energy, its importance, storage of solar energy, solar pond, non convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning.

UNIT -III

Wind Energy harvesting: Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies. Ocean Energy: Ocean Energy Potential against Wind and Solar

UNIT - IV

Hydro Energy: Hydropower resources, hydropower technologies, environmental impact of hydro power sources. Piezoelectric Energy harvesting: Introduction.

UNIT - V

Electromagnetic Energy Harvesting: Linear generators, physics mathematical models, recent applications, Geothermal Energy: Geothermal Resources, Geothermal Technologies. Environmental issues and Renewable sources of energy, sustainability.

SUGGESTED READINGS

1. Non-conventional energy sources, B.H. Khan, McGraw Hill
2. Solar energy, Suhas P Sukhative, Tata McGraw - Hill Publishing Company Ltd.
3. Renewable Energy, Power for a sustainable future, Godfrey Boyle, 3rd Edn., 2012, Oxford University Press.
4. Renewable Energy, 3rd Edition,
5. Solar Energy: Resource Assesment Handbook, P Jayakumar, 2009
6. J.Balfour, M.Shaw and S. Jarosek, Photovoltaics, Lawrence J Goodrich (USA).
7. <https://www.edfenergy.com/for-home/energywise/renewable-energy-sources>
8. <https://www.nrdc.org/stories/renewable-energy-clean-facts>
9. <https://www.nationalgeographic.com/environment/energy/reference/renewable-energy/>

18PHU303B

PHYSICS WORKSHOP SKILL

SEMESTER – III
3H - 3C

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

The objective of this course is

- To enable the students to familiar and experience with various mechanical and electrical tools through hands-on mode.
- To extend their skill on workshop tools and their usages.
- To apply their knowledge on making new materials by using various operating machines.
- To develop their knowledge about household electrical appliances, electric shock, etc.
- To use their knowledge towards industries.
- To think and correlate the physics of engineering materials and their applications.

Course outcome

After successful completion of the course, the student is expected to

1. Acquire knowledge about various types of wiring systems, wiring tools, lighting & wiring accessories, wiring estimation & costing, etc.
2. To get familiarized with the welding process.
3. Understand the concept of machining, forming and welding process.
4. Develop knowledge on Operation of oscilloscope.
5. Acquire knowledge about household electrical appliances, electric shock, etc.
6. To get familiarized with the properties of different materials- metals and non metals

UNIT -I

Introduction: Measuring units. conversion to SI and CGS. Familiarization with meter scale, Vernier calliper, Screw gauge and their utility. Measure the dimension of a solid block, volume of cylindrical beaker/glass, diameter of a thin wire, thickness of metal sheet, etc. Use of Sextant to measure height of buildings, mountains, etc.

UNIT -II

Mechanical Skill: Concept of workshop practice. Overview of manufacturing methods: casting, foundry, machining, forming and welding. Types of welding joints and welding defects. Common materials used for manufacturing like steel, copper, iron, metal sheets, composites and alloy, wood.

UNIT- III

Concept of machine processing, introduction to common machine tools like lathe, shaper, drilling, milling and surface machines. Cutting tools, lubricating oils. Cutting of a metal sheet using blade. Smoothing of cutting edge of sheet using file. Drilling of holes of different

diameter in metal sheet and wooden block. Use of bench vice and tools for fitting. Make funnel using metal sheet.

UNIT -IV

Electrical and Electronic Skill: Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

UNIT -V

Introduction to prime movers: Mechanism, gear system, wheel, Fixing of gears with motor axel. Lever mechanism, Lifting of heavy weight using lever. braking systems, pulleys, working principle of power generation systems. Demonstration of pulley experiment.

SUGGESTED READINGS

1. A text book in Electrical Technology - B L Theraja – S. Chand and Company.
2. Performance and design of AC machines – M.G. Say, ELBS Edn.
3. Mechanical workshop practice, K.C. John, 2010, PHI Learning Pvt. Ltd.
4. Workshop Processes, Practices and Materials, Bruce J Black 2005, 3rd Edn., Editor Newnes [ISBN: 0750660732]
5. New Engineering Technology, Lawrence Smyth/Liam Hennessy, The Educational Company of Ireland [ISBN: 0861674480]

18PHU304

MATHEMATICS – I

SEMESTER – III
4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The concepts of Matrices and their properties.
- Techniques of differentiation and integration.
- The transform of a periodic function.
- The applications of the inverse Laplace transform.
- To know the properties of definite integrals.
- To understand the concept of Beta and Gamma integrals.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Solve simultaneous equations with the help of matrices.
2. Mastery in the concepts of vector and scalar fields.
3. Gain the intellectual knowledge of complex functions and their applications.
4. Acquire fundamental knowledge in the techniques of differentiation.
5. Know the properties of definite integrals.
6. Understand the concept of Beta and Gamma integrals.

UNIT I

Curvature in Cartesian coordinates-centre and radius of curvature in Cartesian and polar forms- Total differentiation

UNIT II

Integration of $\frac{f'(x)}{f(x)}$, $f' \sqrt{f(x)}$, $(px+q)/\sqrt{(ax^2+bx+c)}$, $(\sqrt{(x-a)/(b-x)})$, $1/(\sqrt{(x-a)/(b-x)})$, $(1/a \cos x + b \sin x + c)$, $1/(a \cos^2 x + b \sin^2 x + c)$, Integration by parts.

UNIT III

Reduction formulae- problems- evaluation of double and triple integrals- applications to calculations of areas and volumes-areas in polar coordinates.

UNIT IV

Change of order of integration in double integral- change of variables in double and triple integrals.

UNIT V

Beta and Gamma integrals-their properties, relation between them- evaluation of multiple integrals using Beta and Gamma functions.

SUGGESTED READINGS

1. S.Narayanan and T.K.M. Pillai. Calculus Vol 1 and Vol 2, Viswanathan Publishers.
2. P.Kandasamy & K.Thilagarathy, Mathematics for BSc .Vol I and. II(2000), S.Chand and Co.
3. Shanthi Narayanan & J.N.Kapoor, A Text book of calculus, S.Chand & Co

SEMESTER – III

18PHU311 THERMAL PHYSICS AND STATISTICAL MECHANICS 4H - 2C

PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- The objective of this course is to learn how to apply thermodynamic principles in order to interpret thermodynamic systems and predict their behaviors.
- To determine Stefan's Constant.
- To determine the coefficient of thermal conductivity of Cu by Searle's Apparatus.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.
- To experience the practical difficulties to find the physical constant values.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the process of thermal conductivity, viscosity and diffusion in gases
2. Able to correlate theory and practicals.
3. Understand the basic thermal properties via experiments.
4. Verify the Newton's law.
5. Analyse the characteristics of Bipolar Junction Transistor
6. Understand the applications of thermal conductance materials.
7. Apply the laws of thermodynamics to real physical systems and processes.
8. Apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems.

Any 7 Experiments

1. To determine the coefficient of thermal conductivity of a bad conductor by Lee's disc method.
2. Verification of Newton's law of cooling.
3. Determination of thermal conductivity of rubber.
4. To study the variation of thermo emf across two junctions of a thermocouple with temperature.
5. Cooling Curve of a metallic body.
6. To determine the temperature co-efficient of resistance of the given thermistor using post-office box.
7. To record and analyze the cooling temperature of an hot object as a function of time using a thermocouple and suitable data acquisition system

8. To calibrate Resistance Temperature Device (RTD) using Null Method/Off-Balance Bridge
9. Coefficient of thermal conductivity of copper by Searle's method
10. Thermal conductivity of copper by angstrom method.
11. To determine the specific heat capacity of liquid by Joule's Calorimetre.

SUGGESTED READINGS

1. Advanced Practical Physics for students, B.L. Flint & H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, KitabMahal, New Delhi.
4. A Laboratory Manual of Physics for Undergraduate Classes, D.P.Khandelwal, 1985, Vani Publication.

SEMESTER III

18PHU312 PHYSICS OF ELECTRONIC DEVICES AND CIRCUITS 4H - 2C

PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objective

- To know about semiconductor devices frequently used in industries.
- To acquaint industrial and domestic applications of semiconductor devices.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To understand operation of diodes, transistors in order to design basic circuits.
- To design, fabricate and test the different electronic circuit.

Course Outcome

After successful completion of the course, the student is expected to

1. By the end of this subject, students should have acquired reasonable proficiency in the analysis and design of basic electronic circuits.
2. Apply the concepts of basic electronic devices to design various circuits.
3. Understand operation of diodes, transistors in order to design basic circuits.
4. Design small and large signal amplifier circuits for various practical applications.
5. The course as a whole outlines some ways of thinking about analog circuits that hopefully will help to develop intuition.
6. Design, fabricate and test small electronic circuit.

Any 5 Experiments

1. To design a power supply using bridge rectifier and study effect of C-filter.
2. To design the active Low pass and High pass filters of given specification.
3. To design the active filter (wide band pass and band reject) of given specification.
4. To study the output and transfer characteristics of a JFET.
5. To design a common source JFET Amplifier and study its frequency response.
6. To design an Amplitude Modulator using Transistor.
7. To design an Astable multivibrator of given specifications using IC 555.
8. To study the zero-crossing detector and comparator
9. To design a digital to analog converter (DAC) of given specifications.
10. To study the analog to digital convertor (ADC) IC.
11. To investigate the use of an op-amp as a Differentiator and Integrator.

SUGGESTED READINGS

1. Physics of Semiconductor Devices, S.M. Sze & K.K. Ng, 3rd Ed.2008, John Wiley & Sons
2. Electronic devices and integrated circuits, A.K. Singh, 2011, PHI Learning Pvt. Ltd.
3. Op-Amps & Linear Integrated Circuits, R.A.Gayakwad,4 Ed. 2000,PHI Learning Pvt. Ltd
4. Electronic Devices and Circuits, A. Mottershead, 1998, PHI Learning Pvt. Ltd.
5. Electronic Communication systems, G. Kennedy, 1999, Tata McGraw Hill.
6. Introduction to Measurements & Instrumentation, A.K. Ghosh, 3rd Ed., 2009, PHI Learning Pvt. Ltd.
7. Semiconductor Physics and Devices, D.A. Neamen, 2011, 4th Edition, McGraw Hill
8. PC based instrumentation; Concepts & Practice, N.Mathivanan, 2007, Prentice-Hall of India.

10. <https://www.electrical4u.com/>

SEMESTER – III

18PHU313A RENEWABLE ENERGY AND ENERGY HARVESTING 3H - 1C

PRACTICAL

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- To describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the environment.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To obtain knowledge on renewable energy sources.
- To experience the needs of renewable energy sources.
- To develop the new concept of renewable energy sources.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate Training modules on Solar energy, wind energy, etc.
2. Convert units of energy-to quantify energy demands and make comparisons among energy uses, resources, and technologies.
3. Collect and organize information on renewable energy technologies as a basis for further analysis and evaluation.
4. Understand the needs of renewable energy sources.
5. Experience the calculation of wind velocity.
6. Study of box type solar cooker.

Any 5 Experiments

1. Solar cell characteristics
2. Solar Water heater.
3. Solar distillation unit.
4. Analysis of wind velocity
5. Analysis of solar radiation for a day
6. Study of solar distiller.
7. Study of box type solar cooker.
8. Determination of instantaneous thermal efficiency of parabolic collector.
9. Efficiency and fill factor of solar cells.

SUGGESTED READINGS

1. Non conventional Energy sources, G. D. RAI (4th edition), Khanna Publishers, Delhi.
2. Solar Energy, S.P. Sukhatme (second edition), Tata Mc.Graw Hill Ltd, New Delhi.
3. Solar Energy Utilisation, G. D. RAI (5th edition), Khanna Publishers, Delhi.

	SEMESTER – III	
18PHU313B	PHYSICS WORKSHOP SKILL PRACTICAL	3H - 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- To understand concepts of various basic equipments and devices.
- To gain a knowledge and to understand fundamental physical concepts.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To develop the skill on operating the modern machines.
- To enhance their knowledge on foundry tools.

Course Outcomes

After successful completion of the course, the student is expected to

1. Develop skills in assessing the quality of one's own and others' work
2. Develop skills in observation, interpretation, reasoning, synthesis, generalizing, predicting, and questioning as a way to learn new knowledge.
3. Use the multimeters and other electronic kits.
4. Operate the oscilloscope and PCB.
5. Make different shape of materials using foundry tools.
6. Construct the circuit of regulated power supply. Timer circuit, Electronic switch using transistor and relay.

Any 4 Experiments

1. Screw guage, Vernier Calipers, Spherometer, Least count, Zero error, Measurement of thickness of the scale, breadth of scale, radius of curvature of a concave and convex surface.
2. Cutting of a metal sheet using blade. Smoothing of cutting edge of sheet using file. Drilling of holes of different diameter in metal sheet and wooden block.
3. Use of bench vice and tools for fitting. Make funnel using metal sheet.
4. Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB.
5. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

SUGGESTED READINGS

1. A text book in Electrical Technology - B L Theraja – S. Chand and Company.
2. Performance and design of AC machines – M.G. Say, ELBS Edn.

3. Mechanical workshop practice, K.C. John, 2010, PHI Learning Pvt. Ltd.
4. Workshop Processes, Practices and Materials, Bruce J Black 2005, 3rd Edn., Editor Newnes [ISBN: 0750660732]
5. New Engineering Technology, Lawrence Smyth/Liam Hennessy, The Educational Company of Ireland [ISBN: 0861674480]

18PHU314

MATHEMATICS PRACTICAL -I**SEMESTER – III**
4H - 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

This course enables the students

- To develop skills for quantitative estimation using computer language.
- To code various differentiation and integration methods in a modern computer language.
- To plot the graphs of function
- Problem-solving through programming.
- Hands-on training using lab components.
- The usage of program to solve the differential equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Solve complicated matrix related problems like matrix inverse and matrix multiplication.
2. Acquire problem-solving skills through computer programming.
3. Plot various functions and parametric curves.
4. Solve the differential equations for physics problems
5. Gain the intellectual knowledge of complex functions and their applications.
6. Apply the mathematical concepts to physics problems with the aid of computer programming
7. Solve the geometry of the and plot variations of complex functions.

List of Practical

1. Plotting of graphs of function e^{ax+b} , $\log(ax+b)$, $1/(ax+b)$, $\sin(ax+b)$, $\cos(ax+b)$, $|ax+b|$ and to illustrate the effect of a and b on the graph.
2. Plotting the graphs of polynomial of degree 4 and 5, the derivative graph.
3. Sketching parametric curves. (Eg. Circle, Ellipse, Cycloid and Asteroid).
4. Evaluating definite integrals.(Line integral)
5. Evaluating integrals using Reduction formulae.
6. Evaluating integration of an expression by Quadrature.
7. Plotting the double integral of $z = f(x,y) = x + y$ in $0 < x < 2$; $0 < y < 2$.
8. Plotting area under any curve using line integral.

18PHU401

WAVE AND OPTICS

SEMESTER IV
4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- This course builds the ideas of harmonic motion to cover in depth concept of waves in physics with particular emphasis on light waves as an example.
- The foundation of the course is Fourier theory, which will then be used to understand dispersion of waves, image formation in optics and diffraction and other aspects of Fourier optics.
- Understand how the principle of superposition is applied when two pulses meet
- Define three terms to describe periodic waves: speed, wavelength, and frequency
- Explain the characteristics of transverse and longitudinal waves.
- Identify the relationship between the speed, wavelength, and frequency of a wave.

Course Outcome

After successful completion of the course, the student is expected to

1. To develop an understanding of the principles of optics.
2. Understand linear, time-invariant systems.
3. Understand the role of the wave equation and appreciate the universal nature of wave motion in a range of physical systems
4. To build connections between mathematical development and conceptual understanding.
5. Understand dispersion in waves and model dispersion using Fourier theory.
6. Understand optical phenomena such as polarization, birefringence, interference and diffraction in terms of the wave model.

UNIT I

WAVE OPTICS: Huygen's wave theory of light - Huygen's principle - construction Huygen's wave front - Laws of reflection and refraction using spherical wave for at a plane surface (derivation of image distance = object distance using Huygen's construction, derivation of Snells law).

UNIT II

INTERFERENCE: Coherent sources and their production; Conditions for observing interference constructive and destructive interference - Coherent sources by division of wave front Biprism-theory and working, experiment to determine wavelength; Effect of thin film in the path of one of the beams; Calculation of thickness of the Coherent sources by division of amplitude: Interference at thin films - reflected and transmitted light, Colours of thin films; Theory of air wedge; Theory of Newton's rings - Determination of Refractive index of a liquid.

UNIT - III

Diffraction - Fresnel diffraction Concept of Fresnel's half period zones; Theory of rectilinear propagation; Fresnel diffraction, Construction and working of Zone plate; Comparison of Zone plate with lens; Cylindrical Wavefront (Half period strips – qualitative), Theory of diffraction at a straightedge - Fraunhofer diffraction Theory of single slit diffraction; Theory of grating - normal and oblique incidence - Experimental determination of wavelength; Discussion of Dispersive power; Resolving power, Rayleigh's criterion; Expression for resolving power of grating and telescope; Comparison of prism and grating spectra

UNIT IV

Polarization Review of plane polarized light and method of production; Double refraction at crystals; Huygens' explanation of double refraction; Theory of retarding plates - Quarter wave plates and Half wave plates; Theory of superposition of two plane polarized waves with perpendicular vibrations, Production and detection of linearly , elliptically and circularly polarized light; Optical activity - Fresnel's explanation, Laurent's half shade polarimeter.

UNIT-V

Fiber Optics: Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram).

SUGGESTED READINGS

1. Fundamentals of Optics, F.A Jenkins and H.E White, 1976, McGraw-Hill Principles of Optics, B.K. Mathur, 1995, Gopal Printing
2. Fundamentals of Optics, A. Kumar, H.R. Gulati and D.R. Khanna, 2011, R. Chand Publications

18PHU402

NUCLEAR AND PARTICLE PHYSICS

SEMESTER – IV
4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- This is a basic course in Physics which deals with the phenomena taking place in the nuclear domain. Students will be given an insight into the dimensions of a nucleus.
- The aim is to tell them about the stability of nucleus and various other properties.
- The students will learn about various types of radiations and their interaction with matter.
- Students will learn the methods to find the mass and charge of any nucleus by using some instruments.
- To gain knowledge in the content areas of nuclear and particle physics.
- Students will learn the concept of nuclear reactions.

Course Outcomes

After successful completion of the course, the student is expected to

1. Determine the charge, mass of any nucleus by using various spectrographs.
2. They are able to understand the size of nucleus and all its properties.
3. Develop and communicate analytical skills in subatomic physics.
4. This course has led the students to understand interaction of various types of radiation with matter which they observe in their daily life. It's easy for them now to relate the theory to practical.
5. Acquire knowledge in the content areas of nuclear and particle physics, focusing on concepts that are commonly used in this area.
6. Students now know various methods of accelerating various types of particles to perform scattering experiments.

UNIT- I

General Properties of Nuclei: Constituents of nucleus and their Intrinsic properties, quantitative facts about size, mass, charge density (matter energy), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.

UNIT- II

Nuclear Models: Liquid drop model approach, semi empirical mass formula and significance of various terms, condition of nuclear stability. Two nucleon separation energies, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.

UNIT- III

Nuclear Reactions: Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct reaction, resonance reaction, Coulomb scattering (Rutherford scattering).

UNIT -IV

Nuclear Reactors: Nuclear fission - Energy released in fission - Bohr and Wheeler's theory of nuclear fission - Chain reaction - Multiplication factor - Natural uranium and chain reaction - Design of nuclear reactor - Breeder reactor - Nuclear fusion - Source of stellar energy - Thermonuclear reactions - Transuranic elements.

Ionization chamber – Geiger-Muller counter – Proportional counter – Wilson's cloud chamber – Bubble chamber – Their principles and working.

UNIT- V

Particle physics: Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model.

SUGGESTED READINGS

1. Introductory nuclear Physics by Kenneth S.Krane (Wiley India Pvt. Ltd., 2008). Concepts of nuclear physics by Bernard L.Cohen.(Tata Mcgraw Hill, 1998).
2. Introduction to the physics of nuclei & particles, R.A.Dunlap. (Thomson Asia, 2004)
3. Introduction to Elementary Particles, D. Griffith, John Wiley & Sons
4. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000)
5. Nuclear and Particle Physics, Axel Maas, Lecture in SS 2016 at the KFU Graz.
6. Nuclear and Particle Physics, B. R. Martin, Online ISBN:9780470035474, 2006 John Wiley & Sons, Ltd.

		SEMESTER IV
18PHU403A	BASIC INSTRUMENTATION SKILL	3H - 3C
Instruction Hours / week: L: 3 T: 0 P: 0		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

- This course is to get exposure with various aspects of instruments and their usage through hands-on mode.
- To impart physical measurement skills.
- To make the students understand coherence between theoretical and practical measurement.
- Identify the signals and systems.
- To use the techniques, skills and modern technical tools necessary for technical or engineering practice.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis of instruments.

Course Outcome

After successful completion of the course, the student is expected to

1. Develop skills to impart practical knowledge in real time solutions.
2. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.
3. Understand the terminology used in various instruments.
4. Gain knowledge of new concept in the solution of practical oriented problems and to understand more deep knowledge about the solution to theoretical problems.
5. Connect concepts with the instruments to enhance understanding.
6. Understand measurement technology, usage of new instruments and real time applications in engineering studies.

UNIT-I

Basic of Measurement: Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. **Multimeter:** Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.

UNIT- II

Electronic Voltmeter: Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/ Multimeter and their significance. **AC millivoltmeter:** Type of AC millivoltmeters: Amplifier- rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance.

UNIT- III

Cathode Ray Oscilloscope: Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only– no mathematical treatment), brief discussion on screen phosphor, visual persistence & chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance.

UNIT- IV

CRO Measurement: Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working.

Signal Generators and Analysis Instruments: Block diagram, explanation and specifications of low frequency signal generators. pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis.

UNIT- V

Impedance Bridges & Q-Meters: Block diagram of bridge. working principles of basic (balancing type) RLC bridge. Specifications of RLC bridge. Block diagram & working principles of a Q- Meter. Digital LCR bridges.

Digital Instruments: Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter.

Digital Multimeter: Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/ frequency counter, time- base stability, accuracy and resolution.

SUGGESTED READINGS

19PHU403B	RADIATION SAFETY	SEMESTER IV 3H - 3C
Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100		
End Semester Exam: 3 Hours		

Course Objective

- To identify the parts of the x-ray machine and explain their purpose and function.
- Explain how x-rays are produced and how they travel.
- Compare the effects that x-radiation has on a variety of biological and non-biological materials.
- Describe the spectrum of electromagnetic radiation.
- The goal is for the students to develop a basic knowledge of the methods employed in veterinary hospitals and clinics to protect employees and the veterinarians themselves against radiation exposure.
- Discuss the difference between a rotating anode and a fixed anode.
- Discuss which types of machines today have fixed and which have rotating anodes.

Course Outcomes

After successful completion of the course, the student is expected to

1. List and describe the function the parts of the x-ray machine
2. Describe the spectrum of electromagnetic radiation.
3. Understand the terminology used in radiation safety.
4. Gain knowledge of new concept in the field of radiation.
5. They are able to understand the Interaction of Radiation with matter.
6. Discuss the advantages to the utilization of a rotating anode.
7. Impact knowledge on different radiation detector.

UNIT- I

Basics of Atomic and Nuclear Physics: Basic concept of atomic structure; X rays characteristic and production; concept of bremsstrahlung and auger electron, The composition of nucleus and its properties, mass number, isotopes of element, spin, binding energy, stable and unstable isotopes, law of radioactive decay, Mean life and half life, basic concept of alpha, beta and gamma decay, concept of cross section and kinematics of nuclear reactions, types of nuclear reaction, Fusion, fission.

UNIT -II

Interaction of Radiation with matter: Types of Radiation: Alpha, Beta, Gamma and Neutron and their sources, sealed and unsealed sources, **Interaction of Photons** - Photo-electric effect, Compton Scattering, Pair Production, Linear and Mass Attenuation Coefficients, **Interaction of Charged Particles:** Heavy charged particles - Bethe-Bloch Formula, Scaling laws, Mass Stopping Power, Range, Straggling, Channeling and Cherenkov radiation. Beta Particles- Collision and Radiation loss (Bremsstrahlung), **Interaction of Neutrons-** Collision, slowing down and Moderation.

UNIT -III**Radiation detection and monitoring devices: Radiation Quantities and Units:**

Basic idea of different units of activity, KERMA, exposure, absorbed dose, equivalent dose, effective dose, collective equivalent dose, Annual Limit of Intake (ALI) and derived Air Concentration (DAC).

UNIT -IV

Radiation detection: Basic concept and working principle of *gas detectors* (Ionization Chambers, Proportional Counter, Multi-Wire Proportional Counters (MWPC) and Gieger Muller Counter), Scintillation Detectors (Inorganic and Organic Scintillators), Solid States Detectors and Neutron Detectors, Thermoluminescent Dosimetry.

UNIT- V

Radiation safety management: Biological effects of ionizing radiation, Operational limits and basics of radiation hazards evaluation and control: radiation protection standards, International Commission on Radiological Protection (ICRP) principles, justification, optimization, limitation, introduction of safety and risk management of radiation. Nuclear waste and disposal management. Brief idea about Accelerator driven Sub-critical system (ADS) for waste management.

18PHU404

MATHEMATICS – II

SEMESTER IV

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objective

This course enables the students to learn

- The Concept of Fourier analysis and solving boundary value problems.
- Techniques of Fourier and Laplace transform
- To solve differential equations.
- Numerical techniques of differentiation and integration.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The concept of second order linear homogeneous, non-homogeneous differential equations with constant coefficients.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Appreciate the physical significance of Fourier series
2. Understand the mathematical principles on transforms.
3. Apply mathematical foundation to formulate and solve problems arising in physics
4. Synthesize numerical techniques for practical problems.
5. Solve the numerical problem for physics
6. Apply the numerical methods to solve the real life problem

UNIT I

Ordinary Differential Equations: Equations of First Order and of Degree Higher than one – Solvable for p , x , y – Clairaut's Equation – Simultaneous Differential Equations with constant coefficients of the form i) $f_1 D(x) + g_1 D(y) = \phi_1(t)$ ii) $f_2 D(x) + g_2 D(y) = \phi_2(t)$,

where f_1, g_1, f_2 and g_2 are rational functions $D = \frac{d}{dt}$ with constant coefficients ϕ_1 and ϕ_2 explicit functions of t .

UNIT II

Finding the solution of Second and Higher Order with constant coefficients with Right Hand Side is of the form $V e^{ax}$, where V is a function of x – Euler's Homogeneous Linear Differential Equations – System of simultaneous linear differential equations with constant coefficients.

UNIT III

Partial Differential Equations: Formation of Partial Differential Equation by eliminating arbitrary constants and arbitrary functions – Solutions of Partial Differential Equations by direct integration – Solution of standard types of first order partial differential equations.

UNIT IV

Laplace transforms: Definition – Laplace Transforms of standard functions – First Shifting Theorem – Transform of $f(t)$, $\frac{f(t)}{t}$, $f'(t)$, $f''(t)$ - Inverse Laplace Transforms – Applications to solutions of First Order and Second Order Differential Equations with constant coefficients.

UNIT V

Interpolation with unequal intervals – Lagrange's interpolation – Newton's divided difference interpolation – Interpolation with equal intervals – Newton's forward and backward difference formulae.

SUGGESTED READINGS

18PHU411	WAVE AND OPTICS PRACTICAL	SEMESTER – IV
		4H - 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objective

- Understand and working of polarimeter.
- Understand the resolving power of different optical instruments.
- To experience the practical difficulties to find the physical constant values.
- To apply the theoretical knowledge into the experiments and find the solutions.
- Students will be observe the readings practically.
- Students will experience the phenomena of reflection, refraction, etc.,

Course Outcomes

After successful completion of the course, the student is expected to

1. Gain knowledge on various theories of light.
2. Acquire skills to identify and apply formulas of optics and wave physics.
3. Understand the properties of light like reflection, refraction, interference, and diffraction etc.,
4. Understand the applications of diffraction and polarization.
5. Determine the different optical properties by using various apparatus.
6. Know the importance of optical materials in the industrials.

Any 8 Experiments

1. Determine the specific rotation of sugar using polarimeter.
2. Michelson Interferometer – Determination of λ
3. Spectrometer – Determination of refractive index of the prism
4. Spectrometer – Determination of wavelength of spectral lines of mercury
5. Spectrometer – Determine the dispersive power of the material of the given prism
6. Spectrometer – To draw the i-d curve for a given prism and hence to calculate the refractive index of the material.
7. Spectrometer – Determination of wavelength of spectral lines of Na atoms by using grating
8. To determine wavelength of sodium light using Newton's Rings.
9. To determine the wavelength of Laser light using Diffraction grating.
10. Determine the thickness of the given wire using air wedge method
11. Determination of refractive index of water using liquid lens.
12. Determination of the angle of the prism using spectrometer.

SUGGESTED READINGS

1. Advanced practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics practical, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

		SEMESTER IV
18PHU412	NUCLEAR AND PARTICLE PHYSICS PRACTICAL	4H - 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

- To understand the operation of G.M. counter.
- To study the general properties of nucleus
- To study the nuclear forces and nuclear reactions.
- To analyse the B-H curve and their concepts practically.
- To introduce the concept of elementary particles practically.
- To apply the theoretical knowledge into the experiments and find the solutions.

Course Outcomes

After successful completion of the course, the student is expected to

1. Acquire basic knowledge about nuclear and particle physics
2. Develop the nuclear reactions and neutron physics.
3. Know the calculations of e/m and their applications.
4. Understand the operation of G.M. counter
5. Verify the B-H curve of radiative materials.
6. Understand the difference between Magnetron and Thomson methods.

Any 6 Experiments

1. Viscosity of liquid – Mayer's oscillating disc method.
2. ' e/m ' by Magnetron method.
3. ' e/m ' by Thomson method
4. G.M.Counter-Absorption co-efficient and inverse square law.
5. Fabry-perot interferometer - Determination of λ
6. Measurement of counts of radiation by radioactive source using GM counter
7. B – H Curve using Oscilloscope.
8. To calibrate Babinet Compensator.

SUGGESTED READINGS

1. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000)
2. Nuclear and Particle Physics, Axel Maas, Lecture in SS 2016 at the KFU Graz.
3. Nuclear and Particle Physics, B. R. Martin, Online ISBN:9780470035474, 2006 John Wiley & Sons, Ltd.

		SEMESTER IV
18PHU413A	BASIC INSTRUMENTATION SKILL PRACTICAL	3H - 1C
Instruction Hours / week: L: 0 T: 0 P: 3		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives:

- To familiarize the students with working, design and analysis of basic amplifier circuits.
- To design and analyze wave shaping circuits, rectifiers and power supply circuits
- Introduce the basic concept of qualitative and quantitative analysis of an instruments.
- Study the concept of separation science and its applications.
- To demonstrate their knowledge in designing the control loops for these processes.
- To apply the theoretical knowledge into the experiments and find the solutions.

Course Outcomes:

After successful completion of the course, the student is expected to

1. Handle any kind of process by framing it in block diagram, mathematical model and different process variables.
2. Use modern engineering tools and techniques in the practice of electronic devices.
3. Know all the industrial processes and demonstrate their knowledge in designing the control loops for these processes.
4. Understand the working of various types of amplifiers, oscillators, wave shaping and power supply circuits
5. Design and Analyze the various types of amplifiers, oscillators, wave shaping and power supply circuits for any practical situation.
6. Discuss the terms, principle, instrumentation, operation and applications of instruments.

The test of lab skills will be of the following test items:

1. Calibration of a low range voltmeter-potentiometer.
2. Full wave rectifier
3. Calibration of an ammeter-potentiometer
4. Half wave rectifier
5. Measurement of unknown frequency using lissajous figures by CRO.
6. Measurement of risetime and falltime using CRO.
7. Study the layout of receiver circuit.
8. Trouble shooting a circuit
9. Balancing of bridges

Laboratory Exercises:

1. To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.
2. To observe the limitations of a multimeter for measuring high frequency voltage and currents.
3. To measure Q of a coil and its dependence on frequency, using a Q- meter.
4. Measurement of voltage, frequency, time period and phase angle using CRO.
5. Measurement of time period, frequency, average period using universal counter\ frequency counter.
6. Measurement of rise, fall and delay times using a CRO.
7. Measurement of distortion of a RF signal generator using distortion factor meter.
8. Measurement of R, L and C using a LCR bridge/ universal bridge.

Open Ended Experiments:

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter)

SUGGESTED READINGS

1. A text book in Electrical Technology - B L Theraja - S Chand and Co.
2. Performance and design of AC machines - M G Say ELBS Edn.
3. Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.
4. Logic circuit design, Shimon P. Vingron, 2012, Springer.
5. Digital Electronics, Subrata Ghoshal, 2012, Cengage Learning.
6. Electronic Devices and circuits, S. Salivahanan & N. S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
7. Electronic circuits: Handbook of design and applications, U.Tietze, Ch.Schenk, 2008, Springer Electronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India.

		SEMESTER IV
18PHU413B	RADIATION SAFETY PRACTICAL	3H - 1C
Instruction Hours / week: L: 0 T: 0 P: 3		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives:

- Student will get idea about the basic radiation principle.
- To know the nuclear interactions with matter and detection.
- To identify the Biological effects of radiation and measurement.
- To give the demonstration of Gamma spectrum of Gas Light mantle
- To know the Shielding of nuclear radiation.
- To know the importance of background radiation levels using Radiation meter.

Course Outcomes:

After successful completion of the course, the student is expected to

1. Understood the concepts of nuclear radiation.
2. Know the interaction of nuclear radiation with matter.
3. Detect the nuclear radiation.
4. Be familiar with dosimeters and measurements.
5. Know the importance of background radiation levels using Radiation meter.
6. Identify the α particles using reference source & determining its half-life using spark counter.

Any 4 Experiments

1. Study the background radiation levels using Radiation meter
2. Study of characteristics of GM tube and determination of operating voltage and plateau length using background radiation as source (without commercial source).
3. Study of counting statistics using background radiation using GM counter.
4. Study of radiation in various materials (e.g. KSO₄ etc.). Investigation of possible radiation in different routine materials by operating GM at operating voltage.
5. Study of absorption of beta particles in Aluminum using GM counter.
6. Detection of α particles using reference source & determining its half life using spark counter
7. Gamma spectrum of Gas Light mantle (Source of Thorium)

SUGGESTED READINGS

18PHU414

MATHEMATICS PRACTICAL– II**SEMESTER IV****4H - 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- To solve simultaneous linear algebraic equations using various methods.
- To evaluate definite integrals using numerical techniques.
- Problem-solving through (computer language) programming.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The Equations with non-homogeneous boundary conditions.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment for numerical methods.
2. Develop proficiency in skills to solve the algebraic equations.
3. Evaluate the definite integrals using computer programming techniques
4. Find the solution through programming.
5. Write the coding for physical problems
6. Solve complex problems through modeling.

List of Practical

1. Plotting of second order solution family of differential equation.
2. Growth model (exponential case only).
3. Decay model (exponential case only).
4. Solving first order ordinary differential equations.
5. Solution of second order ordinary differential equations with initial conditions.
6. Solving system of linear differential Equations.
7. Computing Lagrange's interpolating polynomial.
8. Computing interpolating polynomial using Newton's formula.

SEMESTER V
4H - 4C**18PHU501****ELECTROMAGNETIC WAVE PROPAGATION****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

The aim and objective of the course

- The aim of this course is to provide the students with the fundamental principles of electrical energy (electro- magnetism).
- It is very important to understand the propagation of waves in different media, its transmission and reception.
- To understand the relation between electric and magnetic fields.
- To gain the knowledge on electromagnetic wave propagations.
- To describe simple models for electromagnetic interaction with media
- To experience the wave propagation in different media.

Course Outcome

After successful completion of the course, the student is expected to

1. calculate electric and magnetic fields from stationary and dynamic charge and current distributions.
2. Be able to use electromagnetic wave theory and principles in a wide range of applications.
3. Gain confidence in their ability to apply mathematical methods to understand electromagnetic problems to real-life situations.
4. Solve simple electrostatic boundary problems.
5. Describe simple models for electromagnetic interaction with media
6. Choose adequate models and solution methods for specific problems.

UNIT- I

Maxwell Equations: Maxwell's equation - Review of Maxwell's equations. Displacement Current. Electromagnetic scalar and vector potential, Gauge Transformation: Lorenz and Coulomb gauge – Poynting theorem and vector.

UNIT -II

EM Wave Propagation in Unbounded Media: Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation through conducting media.

UNIT -III

EM Wave in Bounded Media: Boundary conditions at a plane interface between two media. Reflection & Refraction of plane waves at plane interface between two dielectric

media-Laws of Reflection & Refraction. Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law.

UNIT -IV

Propagation of Electromagnetic Waves: Electromagnetic waves in Free space - Isotropic dielectric - Anisotropic dielectric – Conducting media - Ionized gases. Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law. Reflection & Transmission coefficients. Total internal reflection.

UNIT -V

Wave Guides: Planar optical wave guides. Planar dielectric wave guide. Condition of continuity at interface. Phase shift on total reflection. Eigen value equations. Phase and group velocity of guided waves. Field energy and Power transmission.

SUGGESTED READINGS

1. Electromagnetic Theory, KK Chopra, G Agrawal, K Nath & Co.
2. Electromagnetic fields and waves, Paul Lorrain (Author), Dale Corson, W. H. Freeman Publications
3. Introduction to Electrodynamics by David Jeffery Griffiths, Pearson, 2013 , ISBN – 9780321856562.
4. Electromagnetic Theory, By P.K. Basu, H. Dhasmana, 2010, Ane Books Ltd, ISBN – 978-93-8015-678-1.
5. Elements of Electromagnetics by Matthew N. O. Sadiku, OxfordUniversity Press, 2015, ISBN - 9780199321407.
6. Paul Lorrain and Dale R Corson , Electromagnetic fields and waves , 3rd Edition, W. H. Freeman and Company New York
7. Introduction to Electromagnetic Theory, T.L. Chow, 2006, Jones & Bartlett Learning.
8. Electromagnetic Field Theory: A Collection of Problems, By Gerd Mrozynski, Matthias Stallein, Springer Vieweg, 2013, ISBN -978-3-8348-1711-2.
9. Electromagnetic field Theory, R.S. Kshetrimayun, 2012, Cengage Learning, Engineering Electromagnetic, Willian H. Hayt, 8th Edition, 2012, McGraw Hill.

		SEMESTER V
18PHU502A	ELEMENTS OF MODERN PHYSICS	4H - 4C
Instruction Hours / week: L: 4 T: 0 P: 0		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objective

- To identify the circumstances, in Modern Physics. Enumerate and understand the postulate of relativity.
- To learn about the speed of light as a natural limit to speed.
- To understand the work of Planck, Bohr, Heisenberg, uncertainty principle and the other features of Quantum Mechanics.
- Acquaintance with basic fields of modern physics
- Ability of searching solutions of physical problems in scientific and technical literature.
- Understanding of physical processes and technology

Course Outcome

After successful completion of the course, the student is expected to

1. Recall and apply knowledge in the areas of optics and waves, special relativity and quantum physics (developing the knowledge capability dimension);
2. Conduct relevant experiments, analyse data and report results in written form (developing the technical capability and communication dimensions).
3. Analyse the plank's constant using different experimental technique.
4. Find the wavelength of any laser sources.
5. Differentiate the interference and diffraction properties by the experiments.
6. Understand the theory and practical knowledge of light and other properties.

UNIT-I

Planck's quantum, Planck's constant and light as a collection of photons; Blackbody Radiation: Quantum theory of Light; Photo-electric effect and Compton scattering. DeBroglie wavelength and matter waves; Davisson- Germer experiment. Wave description of particles by wave packets. Group and Phase velocities and relation between them. Two-Slit experiment with electrons. Probability.

UNIT-II

Position measurement- gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle and its applications (Uncertainty relations involving Canonical pair of variables); Derivation from Wave Packets impossibility of a particle.

UNIT- III

Wave amplitude and wave functions. linear superposition principle as a consequence; Schrodinger equation for non-relativistic particles; Momentum and Energy operators;

stationary states; physical interpretation of a wave function, probabilities and normalization; Probability and probability current densities in one dimension.

UNIT-IV

One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunneling in one dimension- across a step potential & rectangular potential barrier.

UNIT- V

Radioactivity: stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.

18PHU502B

MEDICAL PHYSICS

SEMESTER V

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objective

- The objective of the course is to educate and to train students to a competency level sufficient to practice radiation oncology physics independently.
- This prepares the students for clinical practices in radiation therapy (RT) physics through a structured clinical trainings and didactic courses.
- To know the energetic charged particle interactions and transport in matter.
- The program is supervised and mentored by highly qualified clinical practitioners.
- This paper is aimed at giving idea to the students regarding the nature of human body and usage of different radiations for the treatment of body.
- To active participation in clinical research, teaching, and training.

Course Outcomes

After successful completion of the course, the student is expected to

1. Different areas of research in Medical Physics
2. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter
3. Know the energetic charged particle interactions and transport in matter.
4. Understanding the working of a manual optical eye-testing machine
5. Familiarization with the Use of a Vascular Doppler.
6. Realize the real time examples of medical instruments.

UNIT – I**PHYSICS OF THE BODY-I**

Basic Anatomical Terminology: Standard Anatomical Position, Planes. Familiarity with terms like- Superior, Inferior, Anterior, Posterior, Medial, Lateral, Proximal and Distal. **Mechanics of the body:** Skeleton, forces, and body stability. Muscles and dynamics of body movement. Physics of Locomotor Systems: joints and movements, Stability and Equilibrium. **Energy household of the body:** Energy balance in the body, Energy consumption of the body, Heat losses of the body, Thermal Regulation. **Pressure system of body:** Physics of breathing, Physics of cardiovascular system.

UNIT – II**PHYSICS OF THE BODY-II**

Acoustics of the body: Nature and characteristics of sound, Production of speech, Physics of the ear, Diagnostics with sound and ultrasound. **Optical system of the body:** Physics of the eye. **Electrical system of the body:** Physics of the nervous system, Electrical signals and information transfer.

UNIT - III**PHYSICS OF DIAGNOSTIC AND THERAPEUTIC SYSTEMS-I**

X-RAYS: Electromagnetic spectrum, production of x-rays, x-ray spectra, Bremsstrahlung, Characteristic x-ray. **X-ray tubes & types:** Coolidge tube, x-ray tube design, tube cooling stationary mode, Rotating anode x-ray tube, Tube rating, quality and intensity of x-ray. X-ray generator circuits, half wave and full wave rectification, filament circuit, kilo voltage circuit. Single and three phase electric supply. Power ratings. Types of X-Ray Generator, high frequency generator, exposure timers and switches, HT cables.

UNIT - IV

RADIATION PHYSICS: Radiation units exposure, absorbed dose, units: rad, gray, relative biological effectiveness, effective dose- Rem & Sievert, inverse square law. Interaction of radiation with matter Compton & photoelectric effect, linear attenuation coefficient. **Radiation Detectors:** ionization (Thimble chamber, condenser chamber), chamber. Geiger Muller counter, Scintillation counters and Solid State detectors, TFT.

UNIT - V

MEDICAL IMAGING PHYSICS: Evolution of Medical Imaging, X-ray diagnostics and imaging, Physics of nuclear magnetic resonance (NMR), NMR imaging, MRI Radiological imaging, Ultrasound imaging, Physics of Doppler with applications and modes, Vascular Doppler. Radiography: Filters, grids, cassette, X-ray film, film processing, fluoroscopy. **Computed tomography scanner-** principle and function, display, generations, mammography. Thyroid uptake system and Gamma camera (Only Principle, function and display).

SEMESTER-V**18PHU503A DIGITAL ELECTRONICS AND MICROPROCESSOR 4H - 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To acquire knowledge about how a semiconductor diode rectifies an input ac signal.
- To apply concepts for the design of Regulators and Amplifiers.
- To implement mini projects based on concept of electronics circuit concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Apply concepts for the design of Regulators and Amplifiers.
2. Acquire knowledge about how a semiconductor diode rectifies an input ac signal
3. Verify the theoretical concepts through laboratory and simulation experiments.
4. Know about the Field Effect Transistors, their principles and applications
5. Learn how to construct a transistor amplifier and how its gain varies with frequency
6. Implement mini projects based on concept of electronics circuit concepts.

UNIT - I

Decimal, binary, octal, hexadecimal - Conversion of number system - Conversion of decimal to binary, binary to decimal- decimal to octal - Octal to decimal - Octal to binary - Binary to octal - Decimal to hexadecimal - Hexadecimal to decimal, hexadecimal to binary - Binary to hexadecimal.

Binary coded decimal - 8421 code - Alphanumeric codes ASCII code - EBCDIC code - Error detecting code – Parity - Even parity and odd parity method.

UNIT - II

Logic gates - AND, OR, NOT, NAND, NOR gates - Construction of circuit only I/C - Action truth table - Logic symbol.

Boolean operators - Logic expressions – Demorgan's theorems - Laws and rules of Boolean algebra - Truth table - Reducing Boolean expressions, K maps; logic diagrams of Boolean algebra expressions - Converting logic circuits to expressions.

UNIT - III

XOR gates half adder - Full adder - Full subtractor - Parallel binary adder - Parallel binary subtractor - Construction, action and truth table.

Flip-flop definitions; clocked flip-flop; S-R flip-flop: JK flip flop: T-flip flop; D flip flop; master slave J-K flip flop: construction circuits. Ring counter;

UNIT - IV

Brief history, organization and architecture of 8085 - Data and address bus, addressing the I/O devices, registers in the 8085, instruction set - Instruction types, and classification of instruction, simple programs.

UNIT - V

Microprocessor 8085 - Simple Program: 8 bit addition-subtraction-multiplication- finding largest and smallest number, ascending and descending order, 16 bit addition

18PHU503B

**EMBEDDED SYSTEM: INTRODUCTION TO
MICROCONTROLLER****SEMESTER V
4H - 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- This paper gives introduction to microcontroller and embedded systems.
- To learn the architecture of embedded systems, their classification and application.
- To learn about the microprocessors and the organization of microprocessor based systems.
- To acquire knowledge of microcontrollers and their role in I/O port programming and their interface with peripherals.
- To know the Input/output operations and manipulation for arithmetic and logical operations.
- To know the basics of embedded system development and product development with a brief introduction to Arduino.

Course Outcome

After successful completion of the course, the student is expected to

1. Embedded systems including its generic architecture, design and classifications, Embedded processors and microcontrollers.
2. Organization of intel microprocessor 8085, its architecture, pin diagram, timing diagram, instruction set and programming in assembly language.
3. Organization of Intel 8051 microcontroller, its architecture, instruction set, programming and its memory organization, timing diagram.
4. Programming with and without interrupt service request.
5. Interfacing parallel and serial ADC and DAC.
6. Design, fabricate, test and run the programs.

UNIT -I

Embedded system introduction: Introduction to embedded systems and general purpose computer systems, architecture of embedded system, classifications, applications and purpose of embedded systems, challenges & design issues in embedded systems, operational and non-operational quality attributes of embedded systems, elemental description of embedded processors and microcontrollers.

UNIT -II

Review of microprocessors: Organization of Microprocessor based system, 8085 pin diagram and architecture, concept of data bus and address bus, 8085 programming model, instruction classification, subroutines, stacks and its implementation, delay subroutines, hardware and software interrupts.

UNIT -III

8051 microcontroller: Introduction and block diagram of 8051 microcontroller, architecture of 8051, overview of 8051 family, 8051 assembly language programming, Program Counter and ROM memory map, Data types and directives, Flag bits and Program Status Word (PSW) register, Jump, loop and call instructions.

UNIT- IV

8051 I/O port programming: Introduction of I/O port programming, pin out diagram of 8051 microcontroller, I/O port pins description & their functions, I/O port programming in 8051 (using assembly language), I/O programming: Bit manipulation.

Programming: 8051 addressing modes and accessing memory using various addressing modes, assembly language instructions using each addressing mode, arithmetic and logic instructions, 8051 programming in C: for time delay & I/O operations and manipulation, for arithmetic and logic operations, for ASCII and BCD conversions.

UNIT- V

Timer and counter programming: Programming 8051 timers, counter programming.

Serial port programming with and without interrupt: Introduction to 8051 interrupts, programming timer interrupts, programming external hardware interrupts and serial communication interrupt, interrupt priority in the 8051.

Interfacing 8051 microcontroller to peripherals: Parallel and serial ADC, DAC interfacing, LCD interfacing.

Programming Embedded Systems: Structure of embedded program, infinite loop, compiling, linking and locating, downloading and debugging.

SUGGESTED READINGS

1. Embedded Systems: Architecture, Programming & Design, R.Kamal, 2008, Tata McGraw Hill

18PHU504

CHEMISTRY -I

SEMESTER V
4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- Students will learn about the molecular orbital theory, preparation and properties of inorganic compounds.
- To know the theory of covalent bond, polar effects and stereochemistry of organic compounds.
- Gain knowledge on important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
- Acquire concept on the elements of photochemistry, chemical kinetics and chromatography.
- To understand the nature of bonding in simple molecules.
- To understand the basic concepts in chemistry

Course Outcome

The student understand

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About important of industrial chemicals like silicones, fuel gases.
4. About the fertilizers and their impact on environment.
5. Elements of photochemistry, chemical kinetics and chromatography.
6. About the dyes, chemotherapy and vitamins.

UNIT-I

Chemical Bonding: Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H_2 , N_2 and F_2 molecules. Diborane: Preparation, properties and structure. $NaBH_4$: Preparation and uses. Borazole: Preparation and properties. Interhalogen compounds: ICl , BrF_3 , IF_5 - preparation, properties, uses and structure. Basic properties of iodine. Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure. Peroxy acids of sulphur: Preparation, properties, uses and structure.

UNIT- II

Covalent Bond and Stereoisomerism: Covalent Bond: Orbital overlap, hybridization and geometry of CH_4 , C_2H_4 and C_2H_2 . Polar effects: Inductive effect-electromeric effect-mesomeric effect- steric effect- hyperconjugation. **Stereoisomerism:** Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation- resolution-geometrical isomerism of maleic and fumaric acids-keto-enol tautomerism of acetoacetic esters.

UNIT-III

Industrial Chemistry: Silicones: Synthesis, properties and uses. Fuels gases: Natural gas-water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required).Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime-triple superphosphate- potassium nitrate-ammonium nitrate. Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

UNIT-IV

Elements of Photochemistry, Chemical Kinetics and Chromatography: Elements of Photochemistry: Photochemical laws-Beer Lambert's law-Grotthuss-Draper law-Stark-Einstein law (statement only). **Chemical Kinetics:** Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions-effect of temperature on reaction rate-energy of activation. **Chromatography:** Principles and applications of Column, Paper and Thin Layer Chromatography.

UNIT- V

Dyes, Chemotherapy and Vitamins: Dyes: Terms used chromophore, auxochrome, bathochromic shift and hypsochromic shift- classification of dyes– based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes-preparation.

Chemotherapy: Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of pencillins and Chloromycetin. **Vitamins:** Diseases caused by the deficiency of vitamins A, B₁, B₂, C and D-sources of these vitamins.

SUGGESTED READINGS

2. Puri, B.R., Sharma, L. R., & Kalia, K. C. (2017). Principles of Inorganic Chemistry (33rd Edition). Jalandar: Vishal Publishing Company.
3. Bahl, A., & Bahl, B.S. (2015). A Textbook of Organic Chemistry (21st Revised Edition). New Delhi: S.Chand & Company Pvt. Ltd.
4. Puri, B. R., Sharma, L. R. & Pathania, M. S. (2014). Elements of Physical Chemistry (46th Edition). Jalandhar: Vishal Publishing Company.
5. Gopalan, R., & Sundaram, S. (2013). Allied Chemistry (III Edition). New Delhi: Sultan Chand & Sons.

18PHU511

**ELECTROMAGNETIC WAVE PROPAGATION
PRACTICAL****SEMESTER V
4H - 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- The aim of this course is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.
- Both experimental and theoretical physics are incomplete without the option to compute whenever it is necessary.
- The goal of computational physics is not to replace theory or experiment, but to enhance our understanding of physical processes.
- The aim of this course is to lay the grounds for the development of the computational skills.
- To apply the theoretical knowledge into the experiments and find the solutions.
- To understand the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate basic knowledge of numerical methods.
2. Demonstrate basic programming skills.
3. Demonstrate an understanding of the applicability of numerical methods for modeling physical systems and its advantages and disadvantages.
4. Solve the problems by computing.
5. Understand the differences of theory, computing and experiments.
6. Solve the complex equations using different software packages.

Any 8 experiments

1. To determine the specific rotation of sugar solution using Polarimeter.
2. Determination of wavelength of the monochromatic source using Young's double slit method.
3. To study the polarization of light by reflection and determine the polarizing angle for air-glass interface.
4. To verify the Stefan's law of radiation and to determine Stefan's constant.
5. To determine the Boltzmann constant using V-I characteristics of PN junction diode.
6. To verify the law of Malus for plane polarized light.

7. To study the polarization of light by reflection and determine the polarizing angle for air-glass interface.
8. Charging and discharging of a capacitor
9. Verification of Faraday's law of electromagnetism
10. Determination of Planck's constant

SUGGESTED READINGS

1. Advanced practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of practical Physics, I.Prakash & Ramakrishna, 11th Ed., 2011, Kitab Mahal
4. Electromagnetic Field Theory for Engineers & Physicists, G. Lehner, 2010, Springer

SEMESTER V		
18PHU512A	ELEMENTS OF MODERN PHYSICS PRACTICAL	3H - 1C
Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100		
End Semester Exam: 3 Hours		

Course Objective

- To identify the circumstances, in Modern Physics. Enumerate and understand the postulate of relativity.
- To learn about the speed of light as a natural limit to speed.
- To understand the work of Planck, Bohr, Heisenberg, uncertainty principle and the other features of Quantum Mechanics.
- Acquaintance with basic fields of modern physics
- Ability of searching solutions of physical problems in scientific and technical literature.
- Understanding of physical processes and technology

Course Outcome

After successful completion of the course, the student is expected to

1. Recall and apply knowledge in the areas of optics and waves, special relativity and quantum physics (developing the knowledge capability dimension);
2. Conduct relevant experiments, analyse data and report results in written form (developing the technical capability and communication dimensions).
3. Analyse the plank's constant using different experimental technique.
4. Find the wavelength of any laser sources.
5. Differentiate the interference and diffraction properties by the experiments.
6. Understand the theory and practical knowledge of light and other properties.

Any 8 Experiments

1. Measurement of Planck's constant using black body radiation and photo-detector
2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
3. To determine the Planck's constant using LEDs of at least 4 different colours.
4. I-V characteristics of LED
5. I-V characteristics of photocell
6. Plank's constant using color filters.
7. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
8. To setup the Millikan oil drop apparatus and determine the charge of an electron.
9. To show the tunneling effect in tunnel diode using I-V characteristics.
10. To determine the wavelength of laser source using diffraction of single slit.

11. To determine the wavelength of laser source using diffraction of double slits.
12. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating

SUGGESTED READINGS

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I.Prakash & Ramakrishna, 11th Edn, 2011, Kitab Mahal.

18PHU512B

MEDICAL PHYSICS PRACTICAL

SEMESTER V
3H - 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- The objective of the course is to educate and to train students to a competency level sufficient to practice radiation oncology physics independently.
- This prepares the students for clinical practices in radiation therapy (RT) physics through a structured clinical trainings and didactic courses.
- To know the energetic charged particle interactions and transport in matter.
- The program is supervised and mentored by highly qualified clinical practitioners.
- This paper is aimed at giving idea to the students regarding the nature of human body and usage of different radiations for the treatment of body.
- To active participation in clinical research, teaching, and training.

Course Outcomes

After successful completion of the course, the student is expected to

1. Different areas of research in Medical Physics.
2. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter.
3. Know the energetic charged particle interactions and transport in matter.
4. Understanding the working of a manual optical eye-testing machine.
5. Familiarization with the Use of a Vascular Doppler.
6. Realize the real time examples of medical instruments.

Any 6 experiments

1. Understanding the working of a manual Hg Blood Pressure monitor and measure the Blood Pressure.
2. Understanding the working of a manual optical eye-testing machine and to learn eye-testing procedure.
3. Correction of Myopia (short sightedness) using a combination of lenses on an optical bench/breadboard.
4. Correction of Hypermetropia/Hyperopia (long sightedness) using a combination of lenses on an optical bench/breadboard.
5. To learn working of Thermoluminescent dosimeter (TLD) badges and measure the background radiation.
6. Familiarization with Geiger-Muller (GM) Counter and to measure background radiation.

7. Familiarization with Radiation meter and to measure background radiation.
8. Familiarization with the Use of a Vascular Doppler.

SUGGESTED READINGS

1. Basic Radiological Physics, Dr. K. Thayalan - Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)
2. Christensen's Physics of Diagnostic Radiology: Curry, Dowdey and Murry - Lippincot Williams and Wilkins (1990)
3. Physics of Radiation Therapy: F M Khan - Williams and Wilkins, 3rd edition (2003)
4. The essential physics of Medical Imaging: Bushberg, Seibert, Leidholdt and Boone Lippincot Williams and Wilkins, Second Edition (2002)
5. Handbook of Physics in Diagnostic Imaging: Roshan S. Livingstone: B. I. Publications Pvt Ltd.
6. The Physics of Radiology-H E Johns and Cunningham.

SEMESTER V

18PHU513A DIGITAL ELECTRONICS AND MICROPROCESSOR**3H - 1C****PRACTICAL****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- The objective of this paper is to give information about different analog electronic circuits and their applications.
- To understand operation of semiconductor devices.
- To understand DC analysis and AC models of semiconductor devices.
- To acquire knowledge about how a semiconductor diode rectifies an input ac signal.
- To apply concepts for the design of Regulators and Amplifiers.
- To implement mini projects based on concept of electronics circuit concepts.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Understand the basics of diode
2. Analyse the characteristics of Bipolar Junction Transistor
3. Perform the procedures for the working of RC-coupled transistor
4. Analyse the relationship between V-I & power curves
5. Understand the applications of Op-amp
6. Develop the ability to analyze and design analog electronic circuits using discrete components.
7. Acquire a basic knowledge in solid state electronics including diodes, MOSFET, BJT, and operational amplifier.

Any 8 Experiments

1. To verify and design AND, OR, NOT and XOR gates using NAND gates.
2. To verify and design AND, OR, NOT and XOR gates using NOR gates
3. To verify Demorgan's law.
4. Half adder and Full adder.
5. Half and full Subtractor
6. Microprocessor 8085 – 8 bit addition and subtraction
7. Microprocessor 8085 – 8 bit multiplication
8. Microprocessor 8085 – largest and smallest
9. Microprocessor 8085 – Ascending and descending order
10. Microprocessor 8085 – Division
11. Shift register
12. 4-bit binary counter

SUGGESTED READINGS

1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
2. Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.
3. OP-Amps & Linear Integrated Circuit, R.A. Gayakwad, 4th Edn, 2000, Prentice Hall.
4. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.

SEMESTER V
3H - 1C**18PHU513B****EMBEDDED SYSTEM: INTRODUCTION TO
MICROCONTROLLER PRACTICAL****Instruction Hours / week: L: 0 T: 0 P: 3****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- This paper gives introduction to microcontroller and embedded systems.
- To learn the architecture of embedded systems, their classification and application.
- To learn about the microprocessors and the organization of microprocessor based systems.
- To acquire knowledge of microcontrollers and their role in I/O port programming and their interface with peripherals.
- To know the Input/output operations and manipulation for arithmetic and logical operations.
- To know the basics of embedded system development and product development with a brief introduction to Arduino.

Course Outcome

After successful completion of the course, the student is expected to

1. Embedded systems including its generic architecture, design and classifications, Embedded processors and microcontrollers.
2. Organization of intel microprocessor 8085, its architecture, pin diagram, timing diagram, instruction set and programming in assembly language.
3. Organization of Intel 8051 microcontroller, its architecture, instruction set, programming and its memory organization, timing diagram.
4. Programming with and without interrupt service request.
5. Interfacing parallel and serial ADC and DAC.
6. Student shall be able to design, fabricate, test and run the programs.

ANY 8 EXPERIMENTS

1. To find that the given numbers is prime or not.
2. To find the factorial of a number.
3. Write a program to make the two numbers equal by increasing the smallest number and decreasing the largest number.
4. Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's.
5. Program to glow the first four LEDs then next four using TIMER application.

6. Program to rotate the contents of the accumulator first right and then left.
7. Program to run a countdown from 9-0 in the seven segment LED display.
8. To interface seven segment LED display with 8051 microcontroller and display 'HELP' in the seven segment LED display.
9. To toggle '1234' as '1324' in the seven segment LED display.
10. Interface stepper motor with 8051 and write a program to move the motor through a given angle in clock wise or counter clockwise direction.
11. Application of embedded systems: Temperature measurement, some information on LCD display, interfacing a keyboard.

Arduino based programs and experiments:

1. Make a LED flash at different time intervals.
2. To vary the intensity of LED connected to Arduino
3. To control speed of a stepper motor using a potential meter connected to Arduino
4. To display "PHYSICS" on LCD/CRO.

SUGGESTED READINGS

1. Embedded Systems: Architecture, Programming & Design, R.Kamal,]2008,Tata McGraw Hill
2. The 8051 Microcontroller and Embedded Systems Using Assembly and C, M.A. Mazidi, J.G. Mazidi, and R.D. McKinlay, 2nd Ed., 2007, Pearson Education India.
3. Embedded Microcomputer System: Real Time Interfacing, J.W.Valvano, 2000, Brooks/Cole
4. Embedded System, B.K. Rao, 2011, PHI Learning Pvt. Ltd.
5. Embedded Microcomputer systems: Real time interfacing, J.W. Valvano 2011, Cengage Learning

18PHU514**CHEMISTRY PRACTICAL– I****SEMESTER V
4H - 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objective**

- To make the student able to identify the elements and the functional groups present in an organic compound.
- Experimental practice of quantitative and qualitative analysis.
- The objective of the titration is the determination of the concentration or the mass of the minimum formula from the titrated chemical material composing a pure liquid or a solution.
- The main objective of volumetric analysis is to determine the amount of a substance in a given sample.
- When dealing with volumetric analysis the concept of concentration cannot be avoided.
- Molarity i.e. moles per litre or decimeter is widely used unit of concentration.

Course Outcome

On successful completion of the course the students able to

1. Learnt about the qualitative analysis of organic compounds.
2. Learnt the detection of elements and functional groups present in an organic compound by systematic analysis.
3. Gain knowledge on basic test of organic compounds.
4. Differentiate the chemicals and their families.
5. Identify the compound wheather it is aromatic or aliphatic.
6. Confirm different functional group by confirmation studies.

Systematic analysis of an organic compound

1. Preliminary tests
2. Detection of elements present
3. Aromatic or aliphatic
4. Saturated or unsaturated
5. Nature of the functional group,
6. Confirmatory tests– aldehydes, ketones, amines, amides, diamide, carbohydrates, phenols, acids, esters & nitro compounds.

Note: Each student should analyse minimum 6 compounds.

		SEMESTER – VI	
18PHU601	SOLID STATE PHYSICS	4H - 4C	
Instruction Hours / week: L: 4 T: 0 P: 0		Marks: Internal: 40	External: 60 Total: 100
End Semester Exam: 3 Hours			

Course Objective:

- This course integrates theory of Solid State Physics with experimental demonstrations in the Physics Lab.
- The course will provide a valuable theoretical introduction and an overview of the fundamental applications of the physics of solids.
- It includes theoretical description of crystal and electronic structure, lattice dynamics, and optical properties of different materials (metals, semiconductors, dielectrics, magnetic materials and superconductors), based on the classical and quantum physics principles.
- To calculate thermal and electrical properties in the free-electron model.
- To gain a basic knowledge of crystal systems and spatial symmetries.
- To know what phonons are, and be able to perform estimates of their dispersive and thermal properties.

Course Outcomes

After successful completion of the course, the student is expected to

1. Account for interatomic forces and bonds.
2. Have a basic knowledge of crystal systems and spatial symmetries.
3. Account for how crystalline materials are studied using diffraction, including concepts like form factor, structure factor, and scattering amplitude.
4. Know what phonons are, and be able to perform estimates of their dispersive and thermal properties.
5. Calculate thermal and electrical properties in the free-electron model.
6. Explain superconductivity using BCS theory
7. Outline the importance of solid state physics in the modern society.

UNIT - I

Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors- Lattice with a Basis- Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices- Brillouin Zones- Diffraction of X-rays by Crystals. Bragg's Law- Atomic and Geometrical Factor.

UNIT - II

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons- Qualitative Description of the Phonon Spectrum in Solids- Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids (qualitative only). T^3 law

UNIT - III

Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia- and Paramagnetic Domains. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.

UNIT - IV

Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeier relations. Langevin-Debye equation. Complex Dielectric Constant.

UNIT - V

Elementary band theory: Kronig Penny model. Band Gaps. Conductors, Semiconductors and insulators. P and N type Semiconductors. Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient. Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors.

18PHU602A

NANO MATERIALS AND APPLICATIONS

SEMESTER VI
4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective:

- This course covers the different classes of nanomaterials that have been developed in recent years in light of various technological applications.
- In order to understand the behavior of these nanomaterials, quantum phenomena and the limitations of basic physical laws that are important at the nanometer length scale are introduced and developed.
- In particular, properties that exhibit size effects (including electronic, magnetic, photonic, and mechanical) at the nanometer length scale will be presented so that nanomaterials becoming increasingly relevant to modern technologies can be better understood.
- The course will cover recent breakthroughs and assess the impact of this burgeoning field.
- Specific nanofabrication topics include epitaxy, beam lithographies, self-assembly, biocatalytic synthesis, atom optics, and scanning probe lithography.
- The course consists of topics in fundamental nanoscale science, plus an overview of areas in nanotechnology.

Course Outcome

After successful completion of the course, the student is expected to

1. Explain the fundamental principles of nanotechnology and their application to biomedical engineering.
2. Apply engineering and physics concepts to the nano-scale and non-continuum domain.
3. Identify and compare state-of-the-art nanofabrication methods
4. perform a critical analysis of the research literature.
5. Design processing conditions to engineer functional nanomaterials.
6. Evaluate current constraints, such as regulatory, ethical, political, social and economical, encountered when solving problems in living systems.

UNIT - I

NANOSCALE SYSTEMS: Length scales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nanodots, thin films, nanowires, nanorods), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation- Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1D nanostructures and its consequences.

UNIT - II

SYNTHESIS OF NANOSTRUCTURE MATERIALS: Top down and Bottom up approach, Photolithography. Ball milling. Gas phase condensation. Vacuum deposition. Physical vapor deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition. Chemical vapor deposition (CVD). Sol-Gel. Electro deposition. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots.

UNIT - III

CHARACTERIZATION: X-Ray Diffraction. Optical Microscopy. Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy. Scanning Tunneling Microscopy. Fourier Transform Infrared spectroscopy, UV-visible spectroscopy

UNIT – IV

OPTICAL PROPERTIES: Coulomb interaction in nanostructures. Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles and excitons. Excitons in direct and indirect band gap semiconductor nanocrystals. Quantitative treatment of quasi-particles and excitons, charging effects. Radiative processes: General formalization- absorption, emission and luminescence. Optical properties of heterostructures and nanostructures.

UNIT - V

APPLICATIONS: Applications of nanoparticles in quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Types of CNT and CNT based transistors. Nanomaterial Devices: Quantum dots heterostructure lasers, optical switching and optical data storage. Micro Electromechanical Systems (MEMS), Nano Electromechanical Systems (NEMS).

SUGGESTED READINGS

18PHU602B	BIOLOGICAL PHYSICS	SEMESTER VI
		4H - 4C
Instruction Hours / week: L: 4 T: 0 P: 0		Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours		

Course Objectives:

- The course aims to provide students with a foundation in the basic concepts of Biophysics.
- Biophysics is an interdisciplinary science that employs and develops theories and methods of the physical sciences for the investigation of biological systems.
- Topics will include canonical and non-canonical structures of nucleic acids, structure of proteins, enzymes etc.
- Fundamental concepts that underlie biomolecular interactions will be discussed and biophysical methods that are employed for the structural analysis of these systems will be introduced at an elementary level.
- To Understand the concept of life of molecules.
- The physical quantities such as temperature, energy, enthalpy, entropy, and free energy will be employed to understand why a biological system chooses particular state at conditions under study.

Course Outcome

After successful completion of the course, the student is expected to

1. Demonstrate knowledge of the fundamental concepts in physics and chemistry that underlie biological processes.
2. Define the structural characteristics of nucleic acids and proteins
3. Examine parameters that variously determine their stability and function(s).
4. Describe the principles that govern biomolecular interactions
5. Appreciate how established methods of research and enquiry are employed to analyze the different aspects of these interactions.
6. Understand the concept of life of molecules.

UNIT -I

Overview: The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales. Universality of microscopic processes and diversity of macroscopic form. Types of cells. Multicellularity. Allometric scaling laws.

UNIT- II

Molecules of life: Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various types present in cells, their rates of production and turnover. Energy required to make a

bacterial cell. Simplified mathematical models of transcription and translation, small genetic circuits and signaling pathways. Random walks and applications to biology. Mathematical models to be studied analytically and computationally.

UNIT -III

The complexity of life: At the level of a cell: The numbers of distinct metabolites, genes and proteins in a cell. Complex networks of molecular interactions: metabolic, regulatory and signaling networks. Dynamics of metabolic networks; the stoichiometric matrix. Living systems as complex organizations; systems biology. Models of cellular dynamics. The implausibility of life based on a simplified probability estimate, and the origin of life problem.

UNIT -IV

At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cell types as distinct attractors of a dynamical system. Stem cells and cellular differentiation. Pattern formation and development. Brain structure: neurons and neural networks. Brain as an information processing system. Associative memory models. Memories as attractors of the neural network dynamics.

UNIT -V

At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems.

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution. The concept of genotype-phenotype map. Examples.

SUGGESTED READINGS

18PHU603

CHEMISTRY-II

SEMESTER VI

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To make the student to be conversant with the extraction of metals, coordination chemistry, preparation, properties uses and structure of naphthalene and heterocyclic compounds.
- To make the student acquire sound knowledge of electrochemistry, biological functions of amino acids and proteins, thermodynamic laws, entropy, enthalpy change and the principles of electroplating.
- To understand types and structure of different compounds.
- To understand types and structure of inorganic carbon compounds.
- To distinguish between intra and inter molecular hydrogen bonding.
- To understand the electro chemistry of chemicals.

Course Outcome

After successful completion of the course, the student is expected to

1. The student understand the metallurgy of metals and the theories of coordination compounds and the industrial importance of EDTA, haemoglobin and chlorophyll.
2. Understand the concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds.
3. Understand the preparation, classifications and properties of amino acids, proteins and carbohydrates.
4. Understand the concepts of first and second laws of thermodynamics.
5. Understand the fundamentals of electrochemistry.
6. Know the concept and applications of the glucose and fructose.

Unit-I

Metals and Coordination Chemistry: Metals: General methods of extraction of metals-methods of ore dressing-types of furnaces-reduction methods-electrical methods-types of refining-Van Arkel process-Zone refining. **Coordination Chemistry:** Nomenclature-theories of Werner, Sidgewick and Pauling-chelation and its industrial importance-EDTA-haemoglobin-chlorophyll-applications in qualitative and quantitative analysis.

Unit-II

Aromatic Compounds and Heterocyclic Compounds:

Aromatic Compounds: Aromaticity-Huckel's ($4n+2$) rule- aromatic electrophilic substitution in benzene- mechanism of nitration, halogenation, alkylation, acylation and sulphonation. Naphthalene: Isolation, preparation, properties and structure. **Heterocyclic Compounds:** Preparation and properties of pyrrole, furan, thiophene and pyridine.

Unit-III

Amino acids, Proteins and Carbohydrates: Amino acids: Classification, preparation and properties. Peptides-preparation of peptides (Bergmann method only). **Proteins:** Classification, properties, biological functions and structure. **Carbohydrates:** Classification, preparation and properties of glucose and fructose- discussion of open chain and ring structures of glucose and fructose-glucose-fructose interconversion.

Unit-IV

Energetics: Type of systems-processes and their types - isothermal, adiabatic, reversible, irreversible and spontaneous processes-statement of first law of thermodynamics-need for the second law of thermodynamics-heat engine-Carnot cycle-efficiency-Carnot theorem-thermodynamics scale of temperature-Joule-Thomson effect- Enthalpy- Entropy and its significance-Free energy change.

Unit-V

Electrochemistry: Kohlrausch law-conductometric titrations-hydrolysis of salts-galvanic cells-E.M.F.-standard electrode potentials-reference electrodes- electrochemical series and its applications-buffer solution-buffer solution in the biological systems-pH and its determination-principles of electroplating.

SUGGESTED READINGS

		SEMESTER – VI
18PHU611	SOLID STATE PHYSICS PRACTICAL	4H - 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives:

- The course is to understand the basic knowledge on magnetic properties of materials.
- To understand the various parameters of the Hysteresis loop
- Acquire the knowledge of semiconducting and dielectric materials.
- To comprehend the concepts of superconductivity and magnetic properties of solids.
- To verify the dielectric constant of a material by experimentally.
- To understand the importance of new materials in modern technology.

Course Outcome:

After successful completion of the course, the student is expected to

1. Basic practical knowledge on magnetic materials.
2. Understand the basic idea about the dielectric Properties of Solids
3. Experience the behavior of Hysteresis loop of a crystal.
4. Measure the susceptibility of magnetic materials.
5. Verify the dielectric constant of a material by experimentally.
6. Understand the importance of new materials in modern technology.

ANY SIX EXPERIMENTS

1. Measurement of susceptibility - Quinck's Tube Method – Ferromagnetic solution
2. Measurement of susceptibility - Quinck's Tube Method – Paramagnetic solution
3. Measurement of susceptibility – Guoy's tube method – Ferromagnetic solution
4. Measurement of susceptibility – Guoy's tube method – Paramagnetic solution
5. Determination of Dielectric constant – Four probe method
6. Study of Hall effect
7. Study seebeck's effect
8. To determine the refractive index of a dielectric layer using SPR technique.
9. To study the PE Hysteresis loop of a Ferroelectric Crystal.
10. To draw the BH curve of iron using a Solenoid and determine the energy loss from Hysteresis.
11. To measure the resistivity of a semiconductor (Ge) crystal with temperature (up to 150°C) by four-probe method and to determine its band gap.
12. To determine the Hall coefficient of a semiconductor sample.

SUGGESTED READINGS

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. Elements of Solid State Physics, J.P. Srivastava, 2nd Ed., 2006, Prentice-Hall of India

**NANO MATERIALS AND APPLICATIONS
PRACTICAL****SEMESTER VI
4H - 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objective**

- To provide knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications
- To help them understand in broad outline of Nanoscience and Nanotechnology.
- The course will cover recent breakthroughs and assess the impact of this burgeoning field.
- Specific nanofabrication topics include epitaxy, beam lithographies, self- assembly, biocatalytic synthesis, atom optics, and scanning probe lithography.
- The course consists of topics in fundamental nanoscale science, plus an overview of areas in nanotechnology.

Course Outcome

After successful completion of the course, the student is expected to

1. Understand the methods synthesis of nanomaterials
2. Understand their application and the impact of nanomaterials on environment
3. Apply their learned knowledge to develop Nanomaterials.
4. Bring new materials to the society.
5. Gain knowledge on different spectroscopic techniques.
6. Apply their learned knowledge to develop the new devices.

Any 8 experiments

1. Synthesis of metal nanoparticles by chemical route.
2. Analysis of XRD spectra of a sample
3. Synthesis of iron oxide nanoparticles by chemical route.
4. Analysis of FTIR spectra of a sample
5. Analysis of UV- VIS of a sample
6. Synthesis of metal nanoparticles by green synthesis method.
7. Prepare a thin film of semiconductor.
8. Analysis of Photo Luminescence of a sample
9. Analysis of Zeta- potential of a sample
10. Intensity ratio analysis of Raman Spectra

		4H - 2C
Instruction Hours / week: L: 0 T: 0 P:4		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objective

- The student on successful completion of the course should learn the principles of volumetric analysis.
- To estimate the compounds by acidimetry, alkalimetry and permanganometry.
- To acquire practical skills in volumetric analysis.
- To understand the basic principles of volumetric analysis.
- To estimate the Acidimetry & Alkalimetry by volumetric analysis

Course Outcome

After successful completion of the course, the student is expected to

1. Learnt about the qualitative analysis of organic compounds.
2. Learnt the detection of elements and functional groups present in an organic compound by systematic analysis.
3. Gain knowledge on basic test of organic compounds.
4. Differentiate the chemicals and their families.
5. Estimate the Acidimetry & Alkalimetry by volumetric analysis
6. Experience the practical knowledge of Acidimetry & Alkalimetry, Permanganometry

Volumetric analysis

A. Acidimetry & Alkalimetry

1. Estimation of sodium carbonate using standard sodium hydroxide.
2. Estimation of sodium hydroxide using standard sodium carbonate.
3. Estimation of sulphuric acid using standard oxalic acid.
4. Estimation of potassium permanganate using standard sodium hydroxide.

B. Permanganometry

1. Estimation of ferrous sulphate using standard Mohr's salt.
2. Estimation of oxalic acid using standard ferrous sulphate.
3. Estimation of calcium-direct method.

18PHU691

PROJECT

SEMESTER VI
6H - 4C**Course Objectives**

- The aim of the B.Sc. project work is to expose the students to preliminaries and methodology of research in Theoretical Physics and Experimental Physics.
- Students get the opportunity to participate in some ongoing research activity and development of a laboratory experiment.
- To explain the physics problem and its solution in both words and appropriately specific equations to both experts and non-experts.
- To understand the objective of a physics laboratory experiment, properly carry out the experiments, and appropriately record and analyze the results.
- To use computers in data acquisition and processing and how to use available software as a tool in data analysis.
- To think creatively about scientific problems and their solutions.
- To design experiments, and to constructively question results they are presented with, whether these results are in a newspaper, in a classroom, or elsewhere.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Complete an independent research project, resulting in research outputs in terms of publications in journals and conference proceedings.
2. To apply his/her knowledge and skills to carry out advanced tasks and projects.
3. Apply their knowledge to develop the instruments.
4. Verify the basic principles and laws experimentally as a project.
5. Demonstrate knowledge of contemporary issues in their chosen field of research.
6. Demonstrate an ability to present and defend their research work.
7. Successfully pursue career objectives in graduate school or professional schools, in a scientific career in government or industry, in a teaching career, or in a related career.
8. Think creatively about scientific problems and their solutions.
9. Design experiments, and to constructively question results they are presented with, whether these results are in a newspaper, in a classroom, or elsewhere.
10. Explain the physics problem and its solution in both words and appropriately specific equations to both experts and non-experts.
11. Understand the objective of a physics laboratory experiment, properly carry out the experiments, and appropriately record and analyze the results.
12. Use computers in data acquisition and processing and how to use available software as a tool in data analysis.

CONDENSED MATTER PHYSICS**SEMESTER – I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- This course provide the study of properties of materials is very important at all times, to choose the correct material for the correct use.
- With the development of nanotechnology, it is important to give an idea about the preparation methods and characterization of different materials.
- This paper is intended to give the students an idea about importance of crystals and their properties.
- This course will teach you the fundamental physics behind different materials we commonly see in the world around us.
- The course will demonstrate the link between microscopic structure and bulk properties in a variety of systems in hard and soft condensed matter
- To study some of the basic properties of the **condensed** phase of **matter** especially solids.

Course Outcomes (COs)

After completing the course students will/can able to

1. Analyze the electronic, magnetic and thermal properties of materials.
2. classify condensed matter upon its degree of order, with emphasis on scattering experiments.
3. Differentiate materials in a variety of applications.
4. Explain various types of magnetic phenomenon, physics behind them, their properties and applications.
5. Explain superconductivity, its properties, important parameters related to possible applications.
6. Develop the superconducting materials and understand the materials property the basic concept of superconductor

UNIT I- INTER PLANAR SPACING

Inter planar spacing for SC, FCC, BCC lattices - diamond cubic structure - NaCl structure - The reciprocal lattice and their properties - Bragg condition in terms of reciprocal lattice.

Crystal defects: Classification of defects - Points defect - The Schottky defect - The Frenkel defect -colour centers - F center - other colour centers- Dislocations - Slip and plastic

deformation - Shear strength of single crystals - Edge dislocation - Screw dislocation - Stress field around an edge dislocation.

UNIT II - THEORY OF SEMICONDUCTORS

Intrinsic and extrinsic semiconductors - Free carrier concentration in semiconductors – Fermi level and carrier concentration in semiconductors – Mobility of charge carriers – Effect of temperature on mobility – electrical conductivity of semiconductors – Hall Effect in semiconductors – Junction properties.

Ultrasonics: Non destructive testing and applications.

UNIT III - DIELECTRICS, PIEZOELECTRICS AND FERROELECTRICS

Dipole moment – Polarization – the electric field of a dipole – local electric field at an atom – Clausius –Mosotti equation - Dielectric constants and its measurements - Polarizability – The Classical theory of electronic polarizability – dipolar polarizability – Ferro electricity – Dipole theory of ferroelectricity – Piezoelectricity.

UNIT IV - HEAT CAPACITY OF THE ELECTRON GAS

Experimental electrical resistivity of metals – Free electron theory of metals – Debye's equation - superconductivity - Electron phonon interaction - Cooper pairs – BCS theory - Energy gap and its temperature dependence - London equation – Josephson effect and its applications.

Langevin theory of Para magnetism: Quantum theory of Para Magnetism - Curie law- Ferro Magnetism - Weiss molecular field theory - Domain theory - Anti Ferro magnetism -Neel theory - Ferri Magnetism – Ferrites – spin – waves - Experimental techniques to study the magnetic properties.

UNIT V- SUPERCONDUCTIVITY

Sources of superconductivity – The Meissner effect – Thermodynamics of superconducting transitions – Origin of energy gap – London equations –London Penetration depth – Type I and Type II Superconductors - Coherence length – BCS theory – Flux quantization – Theory of DC and AC Josephson effect – Potential applications of superconductivity.

-----------------	--	---------------------------------------

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- This paper contains details of basic electronic components, their characteristics and applications in the construction of different electronic instruments.
- Other than ordinary transistors and diodes special devices are also explained.
- To give an idea about the basics of electronics and electronic devices, which is very important for knowing the basics of any modern instrument.
- To study basic electronic components
- To observe characteristics of electronic devices
- To understand the high frequency application of diodes.

Course Outcomes (Cos)

After completing the course students will/can able to

1. Build, design and analyze analog to digital converter.
2. Design digital and analog systems.
3. Understand the basic operation and working of different diodes like FET, MOSFET, CMOS, etc.
4. Understand the high frequency application of diodes.
5. Analyze PN junctions in semiconductor devices under various conditions.
6. Design and analyze simple rectifiers and voltage regulators using diodes.

UNIT I- ELECTRONIC DEVICES

Transistor Biasing and Stabilization with design problems, h-parameters and their applications in transistor circuit analysis for CE, CB and CC configurations; FET and MOSFETs: Characteristics and Biasing, Design of biasing circuits, Design and analysis of amplifiers, SCR, UJT, DIAC, TRIAC (construction & working).

UNIT II- ANALOG DEVICES

Base-Biased Amplifier, Emitter-Biased Amplifier, Small-Signal operation, AC Beta, AC Resistance of the Emitter Diode, Two Transistor models, Analyzing an Amplifier, AC Quantities on the data sheet, Frequency response of amplifiers General concepts; bode plot; low frequency response: BJT and FET amplifiers; miller effect capacitance; high frequency response of BIT

amplifiers; hybrid pie model: short circuit current gain, cut off frequency, and current gain with resistive load.

UNIT III - ANALOG CIRCUITS

Analysis of compound configurations Cascade connection; Darlington connection; The Depletion Mode MOSFET, D-MOSFET Curves, Depletion Mode MOSFET Amplifier, The Enhancement Mode MOSFET. The Basic concepts of Feedback, Effect Of Negative Feedback, Types of Negative Feedback Connections, Method of Identifying Feedback Topology and Feedback Factor, Stability of Feedback Amplifier.

UNIT IV- POWER AMPLIFIERS

Introduction, Series-fed Class A amplifier, Transformer coupled class A amplifier, Class B amplifier operation, Class B amplifier distortion, Power transistor heat sinking, Class C and Class D amplifiers, Numerical problems.

UNIT V- NETWORK THEORY

mesh and node analysis Kirchhoff's voltage and current law, Network Theorems- Thevenin's theorem, Norton's theorem, Superposition Theorem, Maximum power transfer theorem, Problems based on network theorems

CLASSICAL MECHANICS AND RELATIVITY**SEMESTER – I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course objective**

- Study of Classical Mechanics gives an idea about how classical physics deal with matter and energy.
- It cannot explain many observed phenomena in the case of microparticles and relativistic velocities, it is still valid in the case of macro objects at non-relativistic velocities.
- To give an insight into the classical methods of physics.
- To understand the basic principles of classical mechanics.
- This course will demonstrate the ability to apply basic methods of classical mechanics towards solutions of various problems, including the problems of 1) complicated oscillatory systems, 2) the motion of rigid bodies, 3) mechanics of continuous media.
- Is to demonstrate the equations of motion for complicated many body mechanical systems and their solutions.

Course Outcomes (Cos)

After completing the course the students will/ can able to

1. Understand the classical laws of motion.
2. Compete in using the essential mathematical skills needed for describing mechanics and special relativity
3. Develop problem solving skills.
4. An appreciation of the influence of classical mechanics and relativity on modern scientific development.
5. Use the general theory of relativity to explain the motion of physical system in space co-ordinates
6. Able to solve central potential problems in n-dimensional space.

UNIT I

Conservation laws: Mechanics of a system of particles – Conservation laws: linear momentum, angular momentum, energy – Constraints, Degrees of freedom – Generalised co-ordinates – Generalized notations – Brachistocrone problems – Atwood's machine.

Hamilton's variational principle – Lagrange's equation of motion from Hamilton's principle, D'Alembert's principle – Applications of Lagrange's equation of motion – particle moving under

a central force – particle moving on the surface of earth– Superiority of Lagrange's approach over Newtonian's approach.

UNIT II

Phase space (concepts) - Hamiltonian – Hamilton's canonical equations of motion – Physical significance of H – Advantage of Hamiltonian approach – Hamilton's canonical equation of motion in different coordinate systems – Hamilton-Jacobi method – Kepler's problem solution by Hamilton-Jacobi method – Action and angle variables – Solution of Harmonic oscillator by action angle variable method – canonical or contact transformation – Condition for a transformation to be canonical.

UNIT III

General features of central force motion : General features of orbits – Centre of mass and laboratory coordinates – Virial theorem – Stable and unstable equilibrium – Properties of T, V and ω for small oscillations .

Generalized coordinates for rigid body motion : Euler's angles – Angular velocity, momentum of rigid body – moment and products of inertia – Principal axis transformation – rotational kinetic energy of a rigid body – Moment of inertia of a rigid body – motion of a symmetric top under action of gravity.

UNIT IV

General theory of Relativity: Introduction – Limitation of special theory of relativity and need for a relativity theory in non-inertial frames of reference. Concept of gravitational and inertial mass and the basic postulate of GTR, gravitation & acceleration and their relation to non-inertial frames of reference – principle of equivalence of principle of general co-variance – Minkowski space and Lorentz transformation.

UNIT V

Special Theory of Relativity: Introduction – Galilean transformation and invariance of Newton's laws of motion – Non variance of Maxwell's equations – Michelson Morley experiment and explanation of the null result.

Concept of inertial frame – Postulates of special theory – simultaneity – Lorentz transformation along one of the axes – length contraction – time dilatation and velocity addition theorem – Fizeau's experiment – Four vectors – Relativistic dynamics – Variation of mass with velocity – Energy momentum relationship.

18PHP104**MATHEMATICAL PHYSICS****SEMESTER – I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- It is necessary for a physics student to be familiar with different methods in mathematics.
- Give a basic idea about different methods of mathematics, used in Physics.
- The purpose of the course is to introduce students to methods of mathematical physics
- To develop required mathematical skills to solve problems in quantum mechanics, electrodynamics and other fields of theoretical physics.
- This course provides the basic concepts in higher level mathematics application to physics
- To impart knowledge about various mathematical tools employed to study physics problems

Course Outcomes (COs)

After completing the course the students will / can able to

1. Apply integral transform (Fourier and Laplace) to solve mathematical problems of Fourier transforms as an aid for analyzing experimental data.
2. Students can formulate and express a physical law in terms of tensors, and simplify it by use the coordinate transforms (example: principal axes of inertia).
3. Students will be able to solve some simple classical variation problems.
4. Intuition of the physical meaning of the various vector calculus operators (div, grad, curl)
5. Students can formulate and express a physical law in terms of tensors, and simplify it by use of coordinate transforms (example: principal axes of inertia).
6. Solve some simple classical variation problems.

UNIT I - VECTOR SPACE

Definition of vector space – Linear dependence – Linear independence – Basis – Dimension of a vector space – Representation of Vectors and linear operators with respect to basis – Schmidt orthogonalization process – Inner product.

Tensors : Transformation of coordinates – Summation convention – Contravariant Tensor – Covariant Tensor – Mixed Tensor – Rank of a Tensor – Kronecker delta symbol – symmetric and antisymmetric tensors – Invariant tensors.

UNIT II- COMPLEX VARIABLE

Functions of a complex variable – single and multivalued functions – Cauchy-Riemann differential equation – analytical – line integrals of complex function – Cauchy's integral theorem and integral formula – derivatives of an analytic function – Liouville's theorem - Taylor's series – Laurent's series - Residues and their evaluation - Cauchy's residue theorem – application to the evaluation of definite integrals.

UNIT III- FOURIER TRANSFORM

Properties of Fourier transform – Fourier transform of derivatives – Fourier sine and cosine transforms of derivatives – Fourier transform of functions of two or three variables – Finite Fourier transforms – Simple Applications of FT

Laplace transform – Properties of Laplace transforms – Laplace Transform of derivative of a function – Laplace transform of integral – Laplace transform of periodic functions - Inverse Laplace Transform – Fourier Mellin Theorem - Properties of inverse Laplace Transform – Convolution theorem – Evaluation of Laplace Transform using Convolution theorem.

UNIT IV- FOURIER SERIES

Dirichlet's theorem – change of interval – complex form – Fourier series in the interval $(0, T)$ – Uses of Fourier series - Legendre's polynomials and functions – Differential equations and solutions – Rodrigues formula – Orthogonality – relation between Legendre polynomial and their derivatives – recurrence relations – Laguerre Polynomials – recurrence relations

UNIT V- BESSEL'S FUNCTIONS

differential equation and solution – generating functions – recurrence relations – Bessel function of second order – Spherical Bessel function -

Hermite differential equation and Hermite polynomials: Generating function of Hermite polynomials – Recurrence formulae for Hermite polynomials – Rodrigue's formula for Hermite Polynomials – Orthogonality of Hermite Polynomials – Dirac's Delta Function.

18PHP105A

MATERIAL CHARACTERIZATION**SEMESTER – I**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To Study materials is always important, for any application, including fabrication of satellites.
- To introduce various methods available for characterizing the materials. The characterization of materials specifically addresses that portfolio with which researchers and educators must have working familiarity.
- To provide an introduction to materials characterization and its importance
- To discuss different types of characterization techniques and their uses.
- To introduce the students to the principles of optical and electron microscopy, X-ray diffraction and various spectroscopic techniques Introduction:
- To understand the materials characterization and available techniques

Course Outcomes (COs)

After completing the course the students will / can able to

1. Handle with X-ray, thermal, microscopic, and electrical methods of characterization.
2. Understand and describe the fundamental principles behind the methods of characterization which are included in the curriculum
3. Analyze, interpret and present observations from the different methods.
4. Evaluate the uncertainty of observations and results from the different methods.
5. Understand the history of materials science with basic understanding of metals, binary alloys, magnetic materials, dielectric materials and polymers
6. Understand nucleation, growth and phase transformation kinetics

UNIT I- X-RAY TECHNIQUES

Introduction, X-Ray Powder Diffraction - Rotatory crystal method of X ray diffraction -Neutron diffraction – experiment- Particle size - strain determination, Single Crystal X-Ray Structure Determination, GIXRD and its applications, X-Ray Photoelectron Spectroscopy, Surface X-Ray Diffraction.

Neutron Techniques

Introduction, Neutron Powder Diffraction, Single Crystal Neutron Diffraction.

UNIT II- THERMAL ANALYSIS

Introduction - Definitions, Codes of Practice and Nomenclature - thermogravimetric analysis (TGA) - instrumentation - determination of weight loss and decomposition products - differential thermal analysis (DTA) - cooling curves - differential scanning calorimetry (DSC) - instrumentation - specific heat capacity measurements - determination of thermomechanical parameters .

UNIT III- MAGNETIC ANALYSIS AND OPTICAL MICROSCOPY

Vibrating sample magnetometer - SQUID : Introduction - construction and working principle. Optical microscopy techniques - Bright field - Dark field optical microscopy - phase contrast microscopy -differential interference contrast microscopy - fluorescence microscopy - confocal microscopy - Metallurgical microscope.

UNIT IV - ELECTRON MICROSCOPY AND SCANNING PROBE MICROSCOPY

Electron diffraction technique – High energy electron diffraction – Low energy electron diffraction - Electron microscopy – Scanning electron microscopy (SEM) - FESEM - EDAX - TEM - HRTEM: working principle and Instrumentation - sample preparation - Advantages/disadvantages.

Scanning probe microscopy - STM - AFM - EPMA - working principle and Instrumentation - Advantages/disadvantages.

UNIT V - ELECTRICAL AND OPTICAL METHODS OF CHARACTERIZATION

Two probe and four probe methods - van der Pauw method - Hall probe and measurement - scattering mechanism - C-V, I-V characteristics - Schottky barrier capacitance - impurity concentration - electrochemical C-V profiling - limitations - Introduction to Photoluminescence and Electroluminescence - Applications. Dielectrics - working principle and Instrumentation - Applications.

18PHP105B**ASTRONOMY AND ASTROPHYSICS****SEMESTER – I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- Astronomy and Astrophysics is a very fundamental subject in Physics.
- Includes study of the solar system, evolution of stars, different physical processes going on stellar bodies, life cycle of stars etc.
- Is to apply basic physical principles from a broad range of topics in physics to astronomical situations
- Be able to formulate scientific problems in mathematical terms and apply analytical and numerical methods towards its solution
- Develop skills to design observing projects with research telescopes and projects drawing upon data in the literature and in archives
- Establish competence in focused areas of astrophysical theory and experiment
- Generate fluency in the scientific enterprise and awareness of possible career paths available to the undergraduate astronomy and astrophysics major

Course Outcomes (COs)

After completing the course the students will / can able to

1. Plan and engage in an independent and sustained critical investigation of a chosen research topic to generate new knowledge in an area of astronomy and astrophysics.
2. Systematically evaluate relevant theory and concepts in astronomy and astrophysics,
3. Relate these to appropriate methodologies and evidence and draw appropriate conclusions.
4. Demonstrate capacity for astronomy and astrophysics reasoning through analyzing, proving and explaining concepts from the chosen research area.
5. Identify important constellations – orient in space.
Describe the planets of the solar system and their properties.

UNIT I- ASTROPHYSICS

Introduction - Astrophysics and Astronomy - Celestial coordinate systems (Sun-Earth system, Galactic Coordinate system)

UNIT II- STELLAR STRUCTURE AND EVOLUTION

Star formation - Stellar Magnitudes - Classification of stars - H-D classification - Saha Equation of ionization - Hertzsprung-Russell (H-R) diagram - Gravitational energy - Virial theorem - Equations of stellar structure and evolution - Pre-main sequence evolution - Jeans criteria for star formation - fragmentation and adiabatic contraction - Evolution on the main sequence - Post main sequence evolution

UNIT III - NUCLEAR ASTROPHYSICS

Thermonuclear reactions in stars - pp chains and CNO cycle - Solar Neutrino problem - subsequent thermonuclear reactions - Helium burning and onwards - nucleosynthesis beyond iron - r- and s- processes

Stellar Objects & Stellar Explosions: Qualitative discussions on: Galaxies – Nebulae – Quasars - Brown dwarfs - Red Giant Stars – Nova - Supernova.

UNIT IV- GRAVITATIONAL COLLAPSE AND RELATIVISTIC ASTROPHYSICS

Newtonian theory of stellar equilibrium - White Dwarfs - Electron degeneracy and equation of States - Chandrasekhar Limit - Mass-Radius relation of WD - Neutron Stars - Spherically symmetric distribution of perfect fluid in equilibrium - Tolman-Oppenheimer-Volkoff (TOV) equation – Mass - Radius relations of NS – Pulsars - Magnetars - Gamma ray bursts - Black holes - Collapse to a black hole (Oppenheimer and Snyder) - event horizon - singularity.

UNIT V - ACCRETION DISKS

Formation of Accretion Disks - Differentially rotation systems in Astrophysics - Disk dynamics - Steady Disks - Disk formation in close binary systems through mass transfer - Accretion onto compact objects.

18PHP105C	CRYSTAL GROWTH TECHNIQUES	SEMESTER – I
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- To strengthen the students with crystallographic and **crystal growth techniques**
- To provide the general characteristics of crystals, methods of preparation etc.
- Various thin films deposition techniques and thin film characterization techniques are also covered in the course.
- To give an idea about historical importance of crystals, methods of preparation and characterization of crystals etc.
- To explore the knowledge in fundamentals of materials syntheses, crystal growth techniques, zone refining, properties etc.,
- To provide the basic knowledge on crystal structure.

Course Outcomes (COs)

After completing the course the students will / can able to

1. The student will learn about the crystal growth mechanisms and techniques.
2. Understand different crystals having a lot applications in electronics, energetics etc.
3. Acquire the theoretical concept behind electrical and thermal properties of metals
4. Understand the fundamental theories to describe the energy bands in metals
5. Gain the knowledge about Semiconductor Crystals and their properties
6. Gain the knowledge about phonons and its importance in thermal physics

UNIT I- CRYSTAL GROWTH PHENOMENA

The historical development of crystal growth – significance of single crystals - crystal growth techniques - the chemical physics of crystal growth - Theories of nucleation - Gibb's Thompson equation for vapour, melt and solution- energy of formation of spherical nucleus- heterogeneous nucleation - kinetics of crystal growth, singular and rough faces, KSV theory, BCF theory - periodic bond chain theory- The Muller- Krumbhaar model.

UNIT II- CRYSTAL GROWTH FROM MELT AND SOLUTION GROWTH

Growth from the melt - the Bridgmann technique – crystal pulling - Czochralski method- experimental set up - controlling parameters advantages and disadvantages.- convection in melts – liquid solid interface shape - crystal growth by zone melting - Verneuil flame fusion technique.

UNIT III- LOW TEMPERATURE CRYSTAL GROWTH

Low temperature solution growth - methods of crystallization - slow cooling - solvent evaporation, temperature gradient methods - crystal growth system - growth of KDP, ADP and KTP crystals - high temperature solution growth - gel growth.

UNIT IV- VAPOUR GROWTH AND EPITAXIAL GROWTH

Physical vapour deposition - chemical vapour transport – definition - fundamentals, criteria for transport, Specifications, STP, LTVTP & OTP - advantages and limitations of the technique, hydrothermal growth – design aspect of autoclave – growth of quartz, sapphire and garnet.

Advantages of epitaxial growth - epitaxial techniques - liquid phase epitaxy - vapour phase epitaxy - molecular beam epitaxy - chemical beam epitaxy and atomic layer epitaxy

UNIT V- MATERIALS FOR SEMICONDUCTOR DEVICES

Semiconductor optoelectronic properties - band structure - absorption and recombination, semiconductor alloys - group III-V materials selection - binary compounds, ternary alloys - lattice mismatch - lattice mismatched ternary alloy structures - compositional grading, heteroepitaxial ternary alloy structure - Quaternary alloys - Semiconductor Devices - Laser diodes, light emitting diodes (LED) – photocathodes - microwave Field-Effect Transistors (FET).

18PHP111

GENERAL PHYSICS PRACTICAL - I

SEMESTER – I

4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objective

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To learn the usage of optical systems for various measurements.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- To enable the students to understand the **basic** concepts of mechanics
- To enable the students to get the better understanding of thermodynamical laws using simple experiments
- To develop the practical knowledge of characteristic nature of monochromatic light source

Course Outcomes (COs)

After completing the practical course students will/can able to

1. Apply the analytical techniques and graphical analysis to the experimental data.
2. Verify laws studied in the different theory course.
3. Measure different properties of materials.
4. classify the materials with the properties
5. overcome the fear of experimental skill
6. Capable to built his own equipments for measuring the properties of materials

ANY TEN EXPERIMENTS

1. Young's Modulus – Elliptical Fringes (Cornu's method).
2. Viscosity of liquid – Mayer's oscillating disc method.
3. Michelson Interferometer – Determination of λ and $d\lambda$.
4. 'e/m' by Thomson's method and Magnetron method.
5. Young's Modulus – Hyperbolic Fringes (Cornu's method).
6. Fresnel's biprism - Determination of Wavelength of monochromatic source.

7. Determination of Plank's constant using Photo cell.
8. Forbe's method – Thermal conductivity.
9. 'e' by Millikan's method.
10. Ferguson's method - Specific heat of a liquid.
11. Faraday effect – Determination of Verdet constant using He-Ne laser.
12. Young's Double slit – Determination of Wavelength of monochromatic source.

SUGGESTED READINGS:

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To learn the usage of optical systems for various measurements.
- To apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group. Know and follow the proper procedures and regulations for safely working in a lab.
- To communicate the concepts and results of their laboratory experiments through effective writing and oral communication skills.

Course Outcomes (COs)

After completing the practical course students will/can able to

1. Design and handle various instruments.
2. Verify laws studied in the different theory course.
3. Measure different properties of materials.
4. Gain the knowledge in quantization of electromagnetic fields.
5. Analyze the characteristics of oscillators and wave shaping circuits
6. Understand the basic concepts of amplifiers and operational amplifier

ANY TEN EXPERIMENTS

1. Construct and verify the output of IC regulated power supply.
2. Find the Hysteresis of IC 555 - Schmitt Trigger and plot the response.
3. Construct and verify the output of Instrumentation Amplifier using four IC 741
4. Design and construct high pass and low pass, filter using IC 741 and plot the frequency response curve.
5. Design and construct RC coupled amplifier and plot the frequency response curve.
6. Hartley and Colpitt's oscillators using discrete components.

7. Wave form generators (Square wave and Triangular wave) – Op amp.
8. Phase shift oscillator and Wein's bridge oscillator – Op amp.
9. Design and construct band pass and band rejecter filter using IC 741 and plot the frequency response curve
10. Astable, monostable and bistable multi-vibrators, using discrete components.
11. Analog computer setup – Solving simultaneous equations.
12. Design and construct Differential amplifiers and plot the frequency response curve
13. Construct D to A converter and verify the output- Binary weighted method - R/2R ladder method..
14. FET characteristics and Source follower.

18PHP201

THERMODYNAMICS AND STATISTICAL MECHANICS

SEMESTER – II

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

- Thermodynamics is an important branch of physics, which helps us to understand the different phenomena in the evolution of the universe.
- To introduce the students to the concepts of statistical Thermodynamics. The statistical treatment permits to define the concepts of temperature, heat and entropy strictly from first principles without making use of empirical or axiomatic approach
- This paper gives a basic idea about the laws of thermodynamics and statistical processes.
- To Consolidate the understanding of the laws of thermodynamics and a systematic definition of thermodynamic potentials as the general formalism of thermodynamics.
- To know the foundations of equilibrium statistical physics as the microscopic theory of matter and fields.
- To apply the concepts and principles of black-body radiation to analyze radiation phenomena in thermodynamic systems

Outcomes (Cos)

After completing the course students will/can able to

1. Apply the concepts and laws of thermodynamics to solve problems in thermodynamic systems such as gases, heat engines and refrigerators etc.
2. Describe the laws of thermodynamics from both a macroscopic and microscopic point of view.
3. Use the statistical physics methods, such as Boltzmann distribution, Fermi-Dirac and Bose-Einstein distributions to solve problems in physical systems.
4. Apply the laws of thermodynamics to real physical systems and processes.
5. Describe the properties of ideal gases using Boltzmann statistics.
6. Describe the differences between systems of bosons and fermions and how these arise from microscopic consideration

UNIT-I- LAWS OF THERMODYNAMICS

Some consequences of the laws of thermodynamics – Entropy – Calculation of entropy changes in reversible processes. The principle of increase of entropy – Thermodynamic potentials –

Ehthalpy, Helmholtz and the Gibbs functions – Phase transitions – The Clausius-Clayperon equation – Van der Waals equation of state.

UNIT II- KINETIC THEORY

Distribution function and its evolution – Boltzmann transport equation and its validity – Boltzmann's H-theorem – Maxwell-Boltzmann distribution – Transport phenomena – Mean free path- Conservation laws – Hydrodynamics (No derivation).

UNIT III- CLASSICAL STATISTICAL MECHANICS

Maxwell Boltzmann distribution law: Evaluation of constants - Maxwell's law of distribution of velocities - Most probable speed, Average speed, Root mean square speed - Principle of equipartition of energy - Partition function - Condition for applicability of M.B statistics - Non degenerate and degenerate systems - Maxwell velocity distribution in a given direction - Total internal energy of an ideal gas - Molar heat capacity of a gas at constant volume – Entropy - Helmholtz free energy - Pressure and equation of state of an ideal gas - Limitation of M.B method.

UNIT IV- QUANTUM STATISTICAL MECHANICS

B.E energy distribution for energies in the range E to $E + dE$ – Condition for B.E distribution to approach classical M.B distribution - Bose temperature - Bose Einstein condensation - Planck's law from B.E law - Fermi Dirac distribution law (no derivation) - FD law for the energies in the range E to $E+dE$ – Fermi energy - Effect of temperature - Energy distribution curve - Free electron in a metal - Fermi temperature and Thermionic emission - Richardson Dushman Equation - Comparison of MB, BE and FD statistics.

UNIT V- APPLICATIONS OF QUANTUM STATISTICAL MECHANICS

Ideal Bose gas : Photons – Black body and Planck radiation – Photons – Specific heat of solids – Liquid Helium.

Ideal Fermi gas : Properties – Degeneracy – Electron gas – Pauli paramagnetism

Ferromagnetism : Ising and Heisenberg models.

QUANTUM MECHANICS - I

SEMESTER – II

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- This course is aimed to introduce basic concepts and ideas on **Quantum Mechanics**
- To acquire working knowledge of the Quantum Mechanics postulate on the physical systems.
- To impart knowledge of advanced quantum mechanics for solving relevant physical problems
- It has revolutionized the whole science, important for any physics student to know the
- basics of quantum mechanics.
- This paper gives an idea about the development of quantum mechanics.

Course Outcomes (COs)

After completing the course the students can/will able to

1. Interpret the wave function and apply operators to it, to obtain information about a particle's physical properties such as position, momentum and energy
2. To solve the Schrodinger equation to obtain wave functions for some basic, physically important types of potential in one dimension, and estimate the shape of the wavefunction based on the shape of the potential
3. Understand the role of uncertainty in quantum physics, and use the commutation relations of operators to determine whether or not two physical properties can be simultaneously measured
4. They will be able to apply the technique of separation of variables to solve problems in more than one dimension and to understand the role of degeneracy in the occurrence of electron shell structure in atoms.
5. Apply special functions as the solutions of differential equation as the wave function/state functions and understanding the physical situations where these can be applied.
6. Calculating states of electrons in hydrogen atom and harmonic oscillators and the interpretation of quantum states.

UNIT I - QUANTUM THEORY AND WAVE MECHANICS

Introduction – Limitation of classical physics – Origin of quantum theory – Planck's quantum hypothesis – Einstein's theory of Photoelectric effect – Bohr model of hydrogen atom – Inadequacy of quantum theory.

Matter waves – Uncertainty principle – Wave packet – Group and phase velocity – Time-dependent and Time-independent Schrodinger equations for a free particle and particle in a potential .

UNIT II - ONE DIMENSIONAL POTENTIAL WELL

Square-well potential with rigid walls – Square-well potential with finite walls – Square-well potential barrier – Alpha emission – Bloch waves in a periodic potential – Linear harmonic oscillator (Schrodinger method and operator method) – Free particle.

UNIT III - THREE DIMENSIONAL POTENTIAL WELL AND MATRIX MECHANICS

Particle moving in a spherically symmetric potential – System of two interacting particles – Rigid rotator – Hydrogen atom – Three-dimensional square-well potential - Deuteron Properties of matrix elements – Schroedinger equation in matrix form – Unitary Transformations – Linear harmonic oscillator.

UNIT IV-TIME-INDEPENDENT PERTURBATION THEORY

Basic concepts – Non-degenerate energy levels – First and Second order corrections for energy and wave functions – Ground state of Helium atom – Effect of electric field on the ground state of hydrogen atom (Stark effect) – Degenerate energy levels – Effect of electric field on the $n=2$ state of hydrogen atom

UNIT V- WKB APPROXIMATION AND TIME DEPENDENT PERTURBATION THEORY

Variational method, Variational principle – Variation method for excited states – Application of variation method to ground state of helium – The WKB method
Introduction – First-order perturbation – Harmonic perturbation – Transition to continuum states (Fermi's Golden rule) – Absorption and emission of radiation – Transition probability – Selection rules

18PHP203**NUCLEAR PHYSICS****SEMESTER –II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- Nuclear physics is one of the fundamental subjects of physics. It is important to know about the physics of nuclei and the different energies involved in the nuclear processes.
- Nuclear energy is one of the major sources of energy, which, with proper careful usage, can solve the energy crisis to a large extent.
- To impart knowledge about basic nuclear physics properties and nuclear models for understanding of related reaction dynamics
- to introduce students to the fundamental concepts of nuclear and sub-nuclear physics
- This paper is intended to give an insight into the different nuclear processes and the fundamental particles, which are the real building blocks of the universe.
- To introduce students to the fundamental concepts of nuclear and sub-nuclear physics

Course Outcomes (COs)

After completing the course the students will / can able to

1. Explain central concepts, laws and models in nuclear and particle physics.
2. Interpret basic experiments using basic laws and relations to solve simple problems.
3. Students understand the basic principle, type of accelerators, working and operation of accelerators.
4. Learn the basic of ion sources, beam transport and application of accelerator in different branches of science.
5. Get trained in research institute and academic Universities to handle such complicated machine such as reactors.
6. Explore their knowledge in reactors to the atomic agency

UNIT I - NUCLEAR MASS AND CHARGE

Distribution of nuclear charge - Nuclear mass and binding energy of a nucleus – semi-empirical mass formula – Nature of nuclear force – form of nucleon-nucleon potential – charge independence and charge symmetry of nuclear forces - Bound states of two nucleons-Ground state of Deuterium - Wave mechanics of ground state of Deuterium-Spin states –Pauli's exclusion principle -Tensor force - Exchange force - Low energy Nucleon - Nucleon scattering

UNIT II - NUCLEAR MODELS

Liquid drop model - Bhor Wheeler theory of fission - Condition for spontaneous fission - Activation energy-Seaborg's expression - Shell model: Explanation for magic numbers - Prediction of shell model - Prediction of spin and parity - Nuclear statistics - Magnetic moment of nuclei - Schmidt lines-Nuclear isomerism - Collective model: Explanation of Quadrupole moments - Prediction of sign of electric quadrupole moments. Optical model: Nilsson model - Elementary ideas

UNIT III- RADIOACTIVITY

Alpha decay: Properties of α particles - Velocity and energy of α particles - Gamow's theory of α particles- Geiger - Nuttall law- α ray energies and fine structure of α rays - α disintegration energy-Low range α particles

Beta decay: Properties of β particles - General features of β ray spectrum – Pauli's hypothesis - Fermi's theory of β particles - Forms of interaction and selection rules - Fermi's and Gamow teller transition

Gamma decay: The absorption of γ rays by matter - Interaction of γ rays with matter - Measurement of γ ray energies - Dumont bent crystal spectrometer method-internal conversion – Applications.

UNIT IV - NUCLEAR REACTIONS

Nuclear fission and fusion - Kinds of reaction and conservation laws - energetics of nuclear reaction – Applications of Nuclear Energy – Nuclear Reactors - Isospin - Reaction cross section- Continuum theory of nuclear reaction - Resonance - Briet Wigner Dispersion formula - Stages of nuclear reaction - Statistical theory of nuclear reaction - Evaporation probability and cross section – Kinematics of stopping and pickup reaction - Surface reaction

UNIT V - ELEMENTARY PARTICLES

Introduction to antiparticles, Interactions and Feynman diagrams and particle exchange, Lepton and the weak interaction, Muon Decay, Neutron Decay, Pion and Kaon Decay, Dirac Equation and its Solution, Quarks and Hadrons; Space time symmetries, Quark theory, The Quark Model, QCD, Jets and Gluons.

SUGGESTED READINGS:

18PHP204**SPECTROSCOPY****SEMESTER – II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- This paper gives an insight into the theoretical and practical aspects of spectroscopy. it is used as a tool for non-destructive testing of samples. It is important to know the physical aspects of spectroscopy.
- The major objectives of this course are to integrate theory and practice and to bring together different branches of both Academic studies and Industrial Research through the presentation of critical aspects of modern Spectroscopy.
- The course will provide a valuable theoretical introduction and an overview of modern topics in spectroscopy, which are of current interest and importance in Semiconductor Industry and Biomedicine.
- To give an understanding of wide range of techniques including optical Nearfield spectroscopy, X-ray, Raman, and FTIR spectroscopy.
- To introduce optical **spectroscopy** methods that are widely used in physics, chemistry and biological sciences
- To teach the basic aspects of nuclear magnetic resonance (NMR) **spectroscopy**.

Course Outcomes (COs)

After completing the course the students will / can able to

1. Understand the basic physical chemistry law that govern molecular spectroscopy
2. Student will know basic information on molecular methods (IR, Raman, UV-VIS, NMR, EPR)
3. Select molecular spectroscopy methods suitable for solving given scientific problem
4. Analyze results of measurements using molecular spectroscopy
5. Give a view of the modern experimental tools of Atomic- and Molecular Physics.
6. Gain knowledge of the most common atomic and molecular spectroscopic methods and the atomic and molecular properties derived from those.

UNIT I - IR SPECTROSCOPY AND RAMAN SPECTROSCOPY

Practical aspects – Theory of I.R rotation vibration spectra of gaseous diatomic molecules – applications of I.R spectroscopy – Basic principles of F.T.I.R spectroscopy

Classical and Quantum theory of Raman effect - Rotation vibration Raman spectra of diatomic and polyatomic molecules – Applications - Laser Raman spectroscopy .

UNIT II- ATOMIC SPECTRA AND MICROWAVE SPECTRA

Hydrogen spectra – Angular momentum – Larmor precession – Spin-orbit interactions - Spectra of alkali metals – Energy level and spectral transitions of Helium - Normal Zeeman effect – Anomalous Zeeman effect – Paschen back effect – Inference of nuclear spin - Hyperfine structure of spectral lines – Stark effect – Characteristic X-ray spectra

Classification of molecules – Interaction of radiation with rotating molecule – Rotational spectra of rigid diatomic molecule – Isotopic effect – Non-rigid rotator – Linear, symmetric and asymmetric top molecules – Microwave spectrometer

UNIT III - VIBRATIONAL SPECTROSCOPY

Electronic excitation of diatomic species - Vibrational analysis of diatomic molecules - Deslandre's table - Intensity distribution Frank Condon principle - Rotational structure of electronic bands - Resonance and Normal Fluorescence – Intensities of transitions - Phosphorescence population of triplet state and intensity- Experimental methods - Applications of Fluorescence and phosphorescence.

UNIT IV - NMR SPECTROSCOPY AND NQR SPECTROSCOPY

Quantum mechanical and Classical description - The Bloch equation - Relaxation process - the experimental technique - Principle and working of high resolution NMR Spectrometer - Chemical shift – Applications of NMR

Fundamental requirements - General principle - Experimental detection of NQR frequencies – Interpretation and chemical explanation of NQR spectroscopy – Applications of NQR

UNIT V- ESR SPECTROSCOPY AND MOSSBAUER SPECTROSCOPY

Basic principles of ESR - Experiments – ESR spectrometer reflection cavity and microwave bridge – ESR spectrum hyperfine structure - Study of free radicals – Applications of ESR

The Mossbauer effect- the recoilless emission and absorption of - Mossbauer spectrum – Experimental methods- Hyperfine interaction - Chemical Isomer Shift – Magnetic hyperfine and electric quadrupole interaction.

SUGGESTED READINGS:

18PHP205A**DIGITAL SIGNAL PROCESSING****SEMESTER – II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- Digital processing of signals has an extensive range of applications, from the military to the medical, from entertainment to mass production.
- The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis DSP systems.
- This course provides areas of application the advent of these specially designed DSP devices has started a revolution in engineering which will pervade most areas of modern life.
- To make students familiar with the most important methods in DSP, including digital filter design, transform-domain processing and importance of Signal Processors.
- To make students aware about the meaning and implications of the properties of systems and signals.
- To give idea about different classifications of signals, different methods of recording and processing.

Course Outcomes (COs)

After completing the course the students will/able to

1. Determine the spectral coefficients and the Fourier series components of discrete-time signals.
2. Determine the frequency response and the z-transform of discrete-time systems.
3. Determine the discrete Fourier transform of discrete-time signals.
4. Calculate the outputs of discrete-time systems in response to inputs.
5. Understand the characteristics field effect transistors
6. Analyze the characteristics of oscillators and wave shaping circuits

UNIT I- SIGNALS AND SYSTEMS

Introduction- Classification of signals - Concept of frequency in continuous time and discrete-time signals. Theory of A/D and D/A conversion - Sampling of analog signals -sampling theorem - Quantization of continuous amplitude signals - Quantization of sinusoidal signal - Coding of quantized – samples - Digital to analog conversion

UNIT II- DISCRETE- TIME SIGNALS AND SYSTEMS

Discrete - time linear time-invariant systems-Techniques of analysis of linear systems - Resolution of a discrete time signal into impulses - Response of LTI systems to arbitrary inputs : Convolution sum - Properties of convolution and the interconnection of LTI systems - Casual LTI systems Stability of LTI systems - Systems with finite duration and infinite duration impulse – response

UNIT III- THE Z-TRANSFORM

The Direct Z-Transform - The Inverse Z-Transform - Properties of Z-transform - Rational Z-transforms - Poles and zeros - Inversion of Z-transforms. The inverse Z-Transform by contour integration - Power series expansion - Partial fraction expansion – Decomposition of rational Z-transform – Analysis of linear time invariant systems in the Z-domain – one sided Z-Transform.

UNIT IV-FREQUENCY ANALYSIS OF SIGNALS AND SYSTEMS

Frequency analysis of continuous - time signals. The Fourier Series for continuous Time Periodic Signals - Power Density Spectrum of Periodic Signals - The Fourier Transform of Continuous - Time Aperiodic Signals - Energy Density Spectrum of Aperiodic Signals - Frequency analysis of discrete time signals – The Fourier Series for discrete time Periodic Signals - Power Density Spectrum of Periodic Signals – Fourier transform for discrete time Aperiodic signal - Convergence of the Fourier Transform - Energy Density Spectrum of Aperiodic signals - Relationship of the Fourier Transform to the Z Transform.

UNIT V- DISCRETE FOURIER TRANSFORM

Frequency domain sampling and reconstruction of discrete time signals – The Discrete Fourier transform – DFT as a linear transformation - Relationship of the DFT to the other transforms. Properties of DFT - Multiplication of two DFTs and Circular convolution - Linear filtering methods based on DFT - Frequency analysis of signals using the DFT – Discrete cosine transform - Computation of the Discrete Fourier Transform

18PHP205B**COMPUTATIONAL PHYSICS****SEMESTER – II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- Computational physics may be broadly defined as 'the science of using computers to assist in the solution of physical problems, and to further physics research.
- To equip the students of M.Sc. Physics with knowledge of programming in C, roots of equation, interpolation, curve fitting, numerical differentiation, numerical integration, solution of ordinary differential equations
- To introduce students to computational methods for simulating physical systems and solving problems arising in physics and astronomy, as well as in other related fields
- Computers now play a role in almost every branch of physics like large scale quantum mechanical calculations in nuclear, atomic, molecular and condensed matter physics, large scale calculations in such fields as hydrodynamics, astrophysics, plasma physics, meteorology and geophysics etc.
- The huge increase in the power of computers in recent years has made an impact on the role of computational physics.
- This paper gives idea about different types of computations involved in Physics, like curve fitting, interpolation, extrapolation, numerical calculations etc.

Course Outcomes (COs)

After completing the course the students will/able to

1. Programme numerical methods and their implementation like applying to problem in
2. physics, including modeling of classical physics to quantum system as well as data analysis (Linear and non linear).
3. Analysis techniques for propagating error, representing data graphically. Create, solve and interpret basic mathematical tool.
4. Program independently computers using leading-edge tools,
5. formulate and computationally solve a selection of problems in physics,
6. Use the tools, methodologies, language and conventions of physics to test and Communicate ideas and explanations.
7. Identify and describe the characteristics of various numerical methods

UNIT I - CURVE FITTING

The least squares method for fitting a straight line, parabola, power and exponential curves with the help of principle of least square fit.

UNIT II - INTERPOLATION

Introduction to finite difference operators - Newton's forward and backward difference interpolation formulae - Lagrange's interpolation formula - Newton's divided difference formula with error term - interpolation in two dimensions - Cubic spline interpolation end conditions. Statistical tests - χ^2 - test and T-test.

UNIT III- NUMERICAL DIFFERENTIATION AND INTEGRATION

Numerical differentiation - errors in numerical differentiation - cubic spline method - finding maxima and minima of a tabulated function - Integration of a function with Trapezoidal Rule - Simpson's 1/3 and 3/8 Rule and error associated with each - Romberg's integration - Gaussian integration method - Monte Carlo evaluation of integrals - numerical double integration

UNIT IV- DIFFERENTIAL EQUATIONS

Numerical Solution of Ordinary Differential Equations: Euler method - modified Euler method and Runge - Kutta 4th order methods - adaptive step size R-K method - predictor - corrector methods - Milne's method - Adam-Mouton method.

Numerical Solution of System of Equations: Gauss-Jordan elimination Method - Gauss-Seidel iteration method – Gauss elimination method and Gauss-Jordan method to find inverse of a matrix - Power method and Jacobi's method to solve eigenvalue problems.

UNIT V- NUMERICAL SOLUTIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Elementary ideas and basic concepts in finite difference method – Schmidt Method - Crank - Nicholson method - Weighted average implicit method - Concept of stability.

18PHP205C**THIN FILM PHYSICS****SEMESTER – II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- Introduce physical concepts and mathematical tools used to describe surfaces, interfaces and thin films.
- To develop an intuition for surface and thin film physical principles through plotting of functions using Maple
- To relate the mathematical results to practical applications and experiments in thin film techniques.
- Develop an appreciation of the mathematical basis for experimental techniques for deposition and analysis of thin films
- Understand physical phenomena that can be exploited for the deposition of thin films
- To demonstrate knowledge of different thin film deposition strategies

Course Outcomes (COs)

At the end of the course, the students can/will be able to

1. Discuss the differences and similarities between different vacuum based deposition techniques
2. Evaluate and use models for nucleating and growth of thin films
3. Examine the relation between deposition technique, film structure, and film properties, discuss typical thin film applications,
4. Select proper deposition techniques for various applications.
5. Understand the basic concepts about the thin film technology
6. The importance of use of thin films in application and research.

UNIT I**Growth and structure of films**

General features - Nucleation theories - Post-nucleation growth - Four stages of film growth incorporation of defects during growth - Thin film structures - Structural defects.

Thickness Measurement Methods: Electrical methods Mass methods – Optical interference method – Photometric – Ellipsometry – multiple beam Interferometry – Other methods – Substrate cleaning.

UNIT II**Preparation of Thin Films**

Physical methods: thermal evaporation - vapour sources - Wire, crucible and electron beam gun - sputtering mechanism and methods – Epitaxy methods – Molecular beam epitaxy (MBE). Chemical methods: chemical vapour deposition and chemical solution deposition techniques - spray pyrolysis - laser ablation.

UNIT III**Properties of Thin Films**

Electrical and dielectric behaviour of thin films - components - thin film diode and transistor - strain gauges and gas sensors. Anisotropy in magnetic films - domains in films - computer memories - superconducting thin films - mechanical properties: testing methods - adhesion - surface and tribological coatings. Annealing – Agglomeration and oxidation.

UNIT IV**Transport properties of semiconducting and insulating Films**

Semiconducting films; Theoretical considerations - Experimental results – Photoconduction – Field effect thin films – transistors, Insulation films Dielectric properties – dielectric losses – Ohmic contacts – Metal – Insulator and Metal – metal contacts – DC and AC conduction mechanism .

UNIT V**Applications**

Thin films optics, Optical - reflection and anti-reflection coatings - interference filters - electrophotography, solar cells: current status of bulk silicon solar cells – Fabrication technology – Photo voltaic performance: Emerging solar cells: GaAs and CuInSe₂ -Spintronic - applications.

18PHP211**GENERAL PHYSICS PRACTICAL – II****SEMESTER – I****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To learn the usage of optical systems for various measurements.
- Apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- To emphasize the importance of measurement which is central to physics.
- To empower the student to acquire engineering skills and practical knowledge, which help the student in their everyday life.

Course Outcomes (COs)

After the course the student will/ can able to

1. Handle various difficult instruments.
2. Verify laws studied in the different theory course.
3. Measure different properties of materials.
4. Classify the materials with the properties
5. Overcome the fear of experimental skill
6. Built his own equipments for measuring the properties of materials

ANY TEN EXPERIMENTS

1. Fabry – Perot interferometer – Determination of wavelength.
2. Arc spectra – Copper and Iron
3. Determination of V-I characteristics of a solar cell.
4. Susceptibility – Quinke's method
5. Susceptibility – Gouy method
6. Hall Effect
7. Measurement of resistivity and conductivity of dielectric using Four-probe apparatus.

8. Compressibility of a liquid – Ultrasonic Interferometer, and verify with Ultrasonic Diffractometer
9. Determination of Stefan's constant.
10. Laser Diffraction at sharp edge – Determination of wavelength.
11. Series LCR circuit: (i) Determination of the resonance frequency using variable frequency source, (ii) To study the resonance of LCR using AC mains.
12. Kelvin's double bridge – To measure low resistance.

18PHP212**ELECTRONICS PRACTICAL – II****SEMESTER – II****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- The course is designed to train the students so that they can efficiently handle various Instruments
- To understand the Biasing network for BJT and FET, transient analysis and frequency response of BJT and FET in single stage and multistage amplifier
- To understand the frequency response feedback amplifier using BJT and FET and Tuned amplifier
- To understand the operation of Oscillators and waveform generators
- To learn the usage of digital electronics measurements.
- To develop intellectual communication skills and discuss the basic principles of Scientific concepts in a digital electronics

Course Outcomes (COs)

After completing the practical course the students can / will able to

1. Apply the analytical techniques and graphical analysis to the experimental data.
2. Verify laws studied in the different theory course.
3. Measure different properties of materials.
4. Gain the knowledge in quantization of electromagnetic fields.
5. Analyze the characteristics of oscillators and wave shaping circuits
6. Understand the basic concepts of amplifiers and operational amplifiers

ANY TEN EXPERIMENTS

1. Characteristics and an application of SCR
2. Study of various types of flip-flops (R-S, J-K, Master Slave J-K)
3. Shift register – Digital IC's
4. Schmitt trigger
5. Op-amp – Simultaneous Addition and Subtraction
6. Op-amp – V to I, I to V converter
7. V-I characteristics of a schotkky diode
8. V-I characteristics of photoconductive diode.

9. Op-amp Log and Antilog amplifier.
10. Op-amp –Analog computation second order differential equation
11. Op-amp comparator – Zero crossing detector, Window detector, time marker
12. 555 Timer application – monostable, linear, Astable multivibrators.
13. Virtual Lab (Flip flop, Logic gates)

SUGGESTED BOOK

SEMESTER III

4H- - 4C

18PHP301

QUANTUM MECHANICS – II

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- The aim of this course is to make the students to understand the concepts of quantum physics and their applications in microscopic systems
- This course develops concepts in **quantum mechanics** such that the behaviour of the physical universe can be understood from a fundamental point of view.
- To acquire working knowledge of the Quantum Mechanics postulate on the physical systems
- This is a continuation of Quantum Mechanics – I. More detailed study of problems like scattering problem, relativistic quantum mechanics, quantum electrodynamics etc, are added in this paper to enrich the theoretical knowledge.
- To make the students capable of analyzing theoretical problems like interaction of particles, scattering of particles etc.
- To impart knowledge of advanced quantum mechanics for solving relevant physical problems

Course Outcomes (COs)

After completing the course the student will/can able to

1. Get the knowledge of non-relativistic and relativistic quantum mechanics including time dependent
2. perturbation theory, scattering theory, relativistic wave equations, and second quantization.
3. Understand concepts and to perform calculations of scattering of particles.
4. Understand and evaluate modern research utilizing quantum theory in condensed matter, nuclear and particle physics.
5. Acquire the basic knowledge on Eigen values and Eigen functions
6. Apply the Schrodinger wave equation to get Eigen values of bound systems
7. Understand the matrix formulation in quantum mechanics
8. Acquire the basic knowledge on angular momentum of quantum mechanical systems

UNIT - I

Angular momentum: Angular momentum operators – Angular momentum commutation relations – Eigen values and Eigen functions of L^2 and L_z – General angular momentum – Eigen values of J^2 and J_z – Ladder operators (J_+ and J_-) – Angular momentum matrices – Matrices for J^2 , J_z , J_+ , J_- , J_x and J_y – Spin angular momentum – Spin $\frac{1}{2}$ systems – Spin vectors for spin $\frac{1}{2}$ systems – Addition of angular momentum – Clebsh-Gordan coefficients.

UNIT -II

Scattering: Scattering cross-section – Scattering amplitude – Partial waves – Scattering by a central potential: partial wave analysis – Significant number of partial waves – Scattering by an attractive square-well potential – Briet-Wigner formula – Scattering length – Expression for phase shift – Integral equation – The Born approximation – Scattering by screened coulomb potential – Validity of Born approximation - Laboratory and center of mass co-ordinate systems.

UNIT - III

Many Electron Problem: Indistinguishable particles, Pauli principle – Inclusion of spin – Spin functions for two electrons – Spin functions for three electrons – The Helium atom – Central field approximation – Thomas-Fermi model of the atom – Hartree equation – Hartree-Fock equation – Molecular orbital theory: Hydrogen molecule ion H_2^+ - Valence bond theory – Heitler-London theory of hydrogen molecule.

UNIT - IV

Relativistic quantum mechanics: Klein-Gordan equation – Interpretation of the Klein-Gordan equation – Particle in a coulomb field – Dirac's equation for a free particle – Dirac matrices – Covariant form of Dirac equation – Probability density – Negative energy states – Spin of the Dirac particle – Magnetic moment of the electron – Spin-orbit interaction – Radial equation for an electron in a central potential – Hydrogen atom – Lamb shift.

UNIT - V

Field theory: Introduction – Classical approach to field theory – Relativistic Lagrangian and Hamiltonian of a charged particle in an electromagnetic field – Field: Lagrangian and Hamiltonian formulations – Quantum equation for the field – Second quantisation – Quantisation of non-relativistic Schroedinger equation – Creation, annihilation and number operators.

18PHP302

LASER AND ITS APPLICATIONS

SEMESTER III

4H- - 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- Laser is a versatile tool with applications in almost all fields from medical to astronomy, communications, welding, cutting etc.
- This paper explains the characteristics of lasers, different types of lasers and their construction to apply for industrial use. Applications of lasers in different fields are also explained.
- To give exposure to students about the characteristics of different lasers, their fabrication techniques, applications etc.
- To make the student understand the principles of Lasers
- To enable the student to explore the field of Nonlinear optics
- To be able to apply the fundamental concepts of optics in lasers, optical fiber communications and optoelectronics

Course Outcomes (COs)

After completing the course the students can/will be able to

1. Acquire fundamentals and principles of Laser action and Understand the basic concepts of different types of lasers
2. Understand the absorption and spontaneous and stimulated emission in two level system,
3. The effects of homogeneous and inhomogeneous line broadening, and the conditions for laser amplification.
4. Operate and analyze the properties of the most common laser types, He-Ne, Argon-ion, and carbon-dioxide, ruby, titanium sapphire, neodymium YAG and glass, knowledge of other main laser types.
5. Classify fibers as single-mode, multimode step index and multi-mode graded index.
6. Describe modes in multimode fibers and mode field parameter in single-mode fibers.

UNIT- I

Laser Characteristics: Spontaneous and stimulated emission, Einstein's quantum theory of radiation, theory of some optical processes, coherence and monochromaticity, kinetics of optical absorption, line broadening mechanism, Basic principle of lasers, population inversion, laser pumping, two & three level laser systems, resonator, Q-factor, losses in cavity, threshold condition, quantum yield.

UNIT – II

Laser Systems: Solid state lasers- the ruby laser, Nd:YAG laser, ND: Glass laser, semiconductor lasers – features of semiconductor lasers, intrinsic semiconductor lasers, Gas laser - neutral atom gas laser, He-Ne laser, molecular gas lasers, CO₂ laser, Liquid lasers, dye lasers and chemical laser.

UNIT-III

Advances in laser Physics : Production of giant pulse -Q-switching, giant pulse dynamics, laser amplifiers, mode locking and pulling, Non-linear optics, Harmonic generation, second harmonic generation, Phase matching, third harmonic generation, optical mixing, parametric generation and self-focusing of light.

UNIT – IV

Multi-photon processes: multi-quantum photoelectric effect, Theory of two-photon process, three- photon process, second harmonic generation, parametric generation of light,

Laser spectroscopy : Rayleigh and Raman scattering, Stimulated Raman effect, Hyper-Raman effect, Coherent anti-stokes Raman Scattering, Photo-acoustic Raman spectroscopy.

UNIT – V

Laser Applications : ether drift and absolute rotation of the Earth, isotope separation, Plasma, thermonuclear fusion, laser applications in chemistry, biology, astronomy, engineering and medicine. Communication by lasers: ranging, fiber Optics Communication, Optical fiber, numerical aperture, propagation of light in a medium with variable index, pulse dispersion.

18PHP303**SEMESTER III****ELECTROMAGNETIC THEORY AND ELECTRODYNAMICS 4H- - 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- The aim of this course is to provide the students with the fundamental principles of electrical energy (electro- magnetism).
- To understand the propagation of waves in different media, its transmission and reception.
- To understand, develop, and design various engineering applications involving electromagnetic fields.
- To expose the students to the ideas of electromagnetic waves and structure of transmission line
- To obtain an understanding of Maxwell's equations and be able to apply them to solving practical electromagnetic fields
- To provide the understanding to the propagation of EM wave in free space, conductors & dielectrics.

Course Outcomes (COs)

After completing the course the students will/can able to

1. Formulate potential problems within electrostatics, magnetostatics and stationary current distributions in linear, isotropic media, and also solve such problems in simple geometries using separation of variables and the method of images.
2. Define and derive expressions for the energy both for the electrostatic and magnetostatic fields, and derive Poyntings theorem from Maxwells equations and interpret the terms in the theorem physically.
3. Understand the theories and properties of electrostatics
4. Analyze the interaction of electrostatic properties with matter.
5. Acquire the fundamental knowledge in Magnetostatics
6. Understand the basic concepts of electrodynamics.

UNIT- I

Electrostatics: Electric intensity – Electric potential – Gauss Law - Dielectric and its polarization - Electric displacement D – Dielectric constant ϵ_r – Polarisibility α - Clausius-Mossotti relation (Non-polar molecules) – The Langevin equation (Polar molecules) – Electrostatic energy

Magnetostatics: Current density J – Ampere’s law of force – Biot-Savart law – Ampere’s circuital law – Magnetic scalar potential ϕ_m (no applications) – Magnetic vector potential A – Magnetisation and magnetization current – Magnetic intensity – Magnetic susceptibility and Permeability.

UNIT- II

Field Equations and Conservation Laws: Equation of continuity - Displacement currents - The Maxwell’s equations derivations - physical significance - Poynting vector - Electro magnetic potentials A and ϕ - Maxwell’s equations in terms of Electro magnetic potentials - Concept of gauge - Lorentz gauge - Coulomb gauge

UNIT- III

Propagation of Electromagnetic Waves: Electromagnetic waves in Free space - Isotropic dielectric - Anisotropic dielectric – Conducting media - Ionized gases.

Radiating systems: Oscillating electric dipole – Radiation from an oscillating dipole – Radiation from small current element.

UNIT- IV

Interaction of E.M.Waves with matter (Macroscopic): Boundary conditions at interfaces - Reflection and refraction – Frenel’s laws-Brewster’s law and degree of polarization - Total internal reflection and critical angle.

Interaction of E.M.Waves with matter (Microscopic): Scattering and Scattering parameters - Scattering by a free electron (Thomson Scattering) - Scattering by a Bound electron (Rayleigh scattering) – Dispersion Normal and Anomalous – Dispersion in gases (Lorentz theory) – Dispersion in liquids and solids.

UNIT – V

Relativistic Electrodynamics: Preview of special theory of relativity – 4-vectors and Tensors - Transformation equations for charge and current densities J and ρ – For electromagnetic potentials A and ϕ - Electromagnetic field tensor $F_{\mu\nu}$ - Transformation equations for the field vectors E and B - Covariance of field equations in terms of 4-vectors - Covariance of Maxwell equations in 4-tensor forms – Covariance and transformation law of Lorentz force.

		SEMESTER III	
18PHP304	DIGITAL ELECTRONICS AND MICROPROCESSOR	4H- - 4C	
Instruction Hours / week: L: 4 T: 0 P: 0		Marks: Internal: 40	External: 60 Total: 100
End Semester Exam: 3 Hours			

Course Objectives

- Digital electronics is very important in present day life due to its applications in almost all fields of life. Any signals stored in memory are first digitized. So it is important to have knowledge about digital electronics.
- To acquire the basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
- To prepare students to perform the analysis and design of various digital electronic circuits.
- This paper is intended to give an insight into the theory and applications of digital electronics, design of circuits with digital devices, details of microprocessor and its applications.
- To learn interfacing of real world input and output devices.
- To study various hardware & software tools for developing applications

Course Outcomes (COs)

At the end of the course, Students can

1. Acquire the basic knowledge of digital logic levels and application of digital electronics circuits.
2. Perform the analysis and design of various digital electronic circuits.
3. Acquire knowledge about Microprocessors and its need.
4. Able to identify basic architecture of different Microprocessors.
5. Foster to write the programming using 8085 microprocessor.
Foster to understand the internal architecture and interfacing of different peripheral devices with 8085 Microprocessor.

UNIT -I

Flip Flops: SR, JK, JK Master Slave, T Flip flop & D Flip Flop (Symbol and Truth table) Registers (Types, shift operations) - Counters (Types, Designing of MOD 5 synchronous Counter, Construction and truth table - verification of MOD 16 Asynchronous UP, Down counter) - Multiplexer And demultiplexer (16:1 and 1:16 description and truth table verification) - Decoders and encoders (Definitions, Seven segment decoder, decimal to BCD encoder)

UNIT-II

Special Function ICs: Timer IC 555 (Block diagram, pin description) , Application as Astable, monostable, bistable multivibrator - VCO IC 566 (Block diagram and pin description) - PLL IC 565 (Block diagram and pin description) - Fixed voltage Regulator ICs 7800 and 7900 series - Voltage Regulator IC 723 (description, designing for low and high voltage)

UNIT- III

Microprocessor: Microprocessor Architecture, Pin out configuration of 8085-bus organization and timings –address bus, data bus, multiplexing address/data bus and control and status signal, Interrupts: maskable and non-maskable interrupt (concept), 8085 interrupt.

UNIT -IV

Programming Model of 8085: Instruction set-Data transfer, arithmetic, logical and branch instruction-Addressing modes -16 bit data transfer and memory related instructions-stack and subroutine instructions.

Simple Program: 8 bit addition-subtraction-multiplication- finding largest and smallest number, ascending and descending order, 16 bit addition,

UNIT- V

Interfacing Peripherals and Applications: Interfacing concepts-peripheral I/O instructions-Interfacing programs- Data Converters, LED interfacing, stepper motor interfacing, Hex Keyboard Interfacing.

SUGGESTED READINGS

4H- - 4C

End Semester Exam: 3 Hours

- This course introduces the fundamentals of nano-scale engineering and manufacturing.
- Current and future applications of nanostructured materials will be reviewed with respect to their impact in commercial products and technologies.
- The main physical forces controlling the nucleation and deposition of nanostructures will be presented allowing a better understanding of key design factors at the nano-scale. Well-established and novel synthesis/fabrication methods
- nanostructures will be critically discussed giving a broad overview of the state-of-the-art nanomanufacturing processes.
- To foster the creation of new and relevant technologies and to transfer them to industry for effective utilization of nano materials
- To participate in the planning and solving of engineering and managerial problems of relevance to global industry and to society at large by conducting basic and applied research in the areas of nano technologies

1. Explain the fundamental principles of nanotechnology and their application to biomedical engineering.
2. Apply engineering and physics concepts to the nano-scale and non-continuum domain.
3. Identify and compare state-of-the-art nanofabrication methods and perform a critical analysis of the research literature.
4. Design processing conditions to engineer functional nanomaterials.
5. Evaluate current constraints, such as regulatory, ethical, political, social and economical, encountered when solving problems in living systems.
6. Get motivated to select the deposition techniques for various applications

Low Dimensional Structures :Preparation of quantum nanostructures - size and dimensionality effects - size effects - potential wells - partial confinement - conduction electrons and dimensionality - Fermi gas and density of states - properties dependent on density of states - excitons - single-electron tunneling - Applications - infrared detectors - quantum dot lasers -

superconductivity. Microelectromechanical Systems (MEMS) - Nanoelectromechanical Systems (NEMS) –Fabrication of nanodevices and nanomachines - Molecular and Supramolecular Switches.

UNIT - II

Carbon Nanostructures :Carbon Molecules - Nature of the Carbon Bond - New Carbon Structures - Carbon Clusters -Small Carbon Clusters - Carbon Nano tubes - Fabrication - Structure – Electrical Properties - Vibrational Properties – Mechanical Properties - Applications of Carbon Nano Tubes - Computers - Fuel Cells - Chemical Sensors - Catalysis – Mechanical Reinforcement - Field Emission and Shielding. Solid Disordered Nanostructures - Methods of Synthesis - Failure Mechanisms of Conventional Grain sized Materials – Mechanical Properties – Nano structured Multi layers -Electrical Properties – Porous Silicon - Metal Nano cluster - Composite Glasses.

UNIT - III

Thermal, Microscopic and Infrared Analysis :Thermal analysis – DTA, DSC and TGA – methodology of DTA, DSC and TGA and Instrumentation. Microscopy – Electron microscopy – Principles and instrumentation – resolution limit – scanning tunnelling microscopy – principles – scanning tunnelling microscope - SEM & TEM. Atomic force microscope

UNIT - IV

Instrumentation: IR spectrophotometers – Theory and Instrumentation- Applications. Fourier transform techniques – FTIR principles and instrumentation. Raman spectroscopy – Principles, Instrumentation and Applications. Microwave Spectroscopy -Instrumentation and Applications

UNIT - V

Mass Spectrometry, Resonance Spectroscopy :Mass Spectrometry - Principle – Instrumentation – Types of ions produced in a Mass spectrometer - Interpretation of Mass spectra – Applications. NMR – Principles and Instrumentation – Chemical shift - Spin-spin coupling - Applications of NMR - Electron spin resonance spectrometry – Theory of ESR – Instrumentation - Interpretation of ESR spectra - Applications.

18PHP305B	SOLAR ENERGY AND ITS UTILIZATION	SEMESTER III
		4H- - 4C

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- Solar energy harvesting and utilizing for day to day purposes has become order of the day. The scarcity and increasing need of the fossil fuel has made man to think about alternate sources, the easiest and best being Solar energy. Hence the course introduced to get knowledge of solar energy and its utilization.
- To introduce the students to the world of solar energy, its different uses, the different methods of harvesting solar energy.
- To understand the basic concepts of energies produced from various energy sources, advantages and disadvantages
- To facilitate the students to achieve a clear conceptual understanding of technical and commercial aspects of Solar Power Development and Management.
- To enable the students to develop managerial skills to assess feasibility of alternative approaches and drive strategies regarding Solar Power Development and Management.
- To develop a comprehensive technological understanding in solar PV system components

Course Outcomes (COs)

At the end of the course, Students will / can be able to

1. Impart the knowledge of Storage technologies form the autonomous renewable energy sources.
2. Explain the principles that underlie the ability of various natural phenomena to deliver solar energy.
3. Discuss the positive and negative aspects of solar energy in relation to natural and human aspects of the environment.
4. Understand the basic principles in wind energy conversion and advantage and disadvantage of wind energy conversion systems.
5. Gain the knowledge about the energy produced from biomass and biogas.
6. Understand the concepts of solar cell and solar energy

UNIT -I

Introduction to Energy Sources: World Energy Features, Indian Energy Scene, Conventional and non-conventional energy sources, Prospects of renewable energy sources.

Solar Energy Source: Introduction, Solar constant, radiation on Earth's surface, Radiation geometry, Radiation measurements, Radiation data, Average solar radiation, radiation on tilted surfaces

UNIT – II

Solar Energy collectors : Principle of conversion of energy, Flat plate collector, Transmissivity of cover system, Collector energy balance equation, Thermal Analysis of FPC, Useful heat gain, Focusing collectors, advantages and disadvantages, Factors affecting collector performance.

Application of Solar Energy: Solar Water Heating, Heating and Cooling of Buildings, Thermo electric conversion, Power generation, PV cells, Solar distillation, Pumping, Cooking, Hydrogen production.

UNIT – III

Wind Energy: Principle of energy conversion, Power generation, Forces on blades, energy estimation, Wind data, Components of WECS, Classification of WECS, Advantages and Disadvantages, Types of Wind machines, Performance of Wind machines, Applications of wind energy. Problems

Energy from Biomass: Conversion technology, Factors affecting gas generation, classification of biogas plants, Advantages and disadvantages of different types of plants.

UNIT– IV

Fuel Cells: Design and Principle of operation, Classification, Types, Advantages and disadvantages, Conversion efficiency, Types of electrodes, Work output and EMF of Fuel Cells, Applications of Fuel Cells.

Thermo Nuclear Fusion Energy: Fusion Reactions, Requirements, Plasma, Magnetic and Inertial Confinement fusion, Muon Catalyzed Fusion, Characteristics of D-T Reaction, Advantages of Nuclear Fusion, Fusion Hybrid, Cold Fusion.

UNIT – V

Other Renewables: Geothermal, OTEC, Tidal, Waves, and Hydrogen (Generation and Application)

SUGGESTED READINGS

18PHP305C	OPTOELECTRONICS	SEMESTER – III
		4H- - 4C
Instruction Hours / week: L: 4 T: 0 P: 0	Marks: Internal: 40	External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

- The aim of this course focuses to enable the students to understand optics and nonlinear optics concepts in physics
- Optoelectronics is the science that deals with designing devices that can detect or emit light in any part of the spectrum.
- This paper gives an introduction to semiconductors and light. The application of optics in electronics, usage of optical waves in communications, optical fibers are explained in this paper.
- This course builds on the basic knowledge of both fundamental physics and state-of-the-art technologies for optoelectronic components and fibre optics, in order to understand their important applications in optical communications and energy conversions that influence our society and everyday life
- To focus on the physics of the interaction of photons with semiconductor materials.
- To give adequate knowledge and clear understanding about the fundamentals of optical property.

Course Outcomes (COs)

At the end of the course, Students will / can be able to

1. Conversant with the application of optical properties and processes in semiconductor optical sources.
2. Understand the operation of LEDs and lasers.
3. Be familiar with the structures and performance of LEDs and lasers.
4. Apply the knowledge of laser in holography
5. Gain the knowledge in Fourier optics and Fourier transforming properties of lenses
6. Understand the concepts of nonlinear optics and harmonic generations.

UNIT - I

Semiconductor Science and Light Emitting Diodes :Semiconductor energy bands - semiconductor statistics – extrinsic semiconductors – compensation doping – degenerate and non degenerate semiconductors – energy band diagrams in applied field - direct and indirect bandgap semiconductors, - p-n junction principles - open circuit- forward and reverse bias – depletion layer capacitance – recombination life time – p-n junction band diagram - open circuit - forward and reverse bias – light emitting diodes – principles - device structures - LED materials,

heterojunction high intensity LEDs – double heterostructure – LED characteristics and LEDs for optical fiber communications - surface and edge emitting LEDs.

UNIT - II

Fiber Optics : Symmetric planar dielectric slab waveguide – waveguide condition – single and multimode waveguides – TE and TM modes – modal and waveguide dispersion in the planar waveguide – dispersion diagram – intermodal dispersion – intramodal dispersion – dispersion in single mode fibers – material dispersion – waveguide dispersion – chromatic dispersion – profile and polarization dispersion – dispersion flattened fibers - bit rate and dispersion – optical and electrical bandwidth – graded index optical fiber - light absorption and scattering – attenuation in optical fibers.

UNIT - III

Laser Principles : Laser oscillation conditions - diode laser principles - heterostructure laser diode – double heterostructure – stripe geometry – buried heterostructure – gain and index guiding - laser diode characteristics – laser diode equation - single frequency solid state lasers – distributed feedback – quantum well lasers - vertical cavity surface emitting laser - optical laser amplifiers.

UNIT - IV

Photodetectors and Photovoltaics : Principle of p-n junction photodiode - Ramo's theorem and external photocurrent - absorption coefficient and photodiode materials – quantum efficiency and responsivity - PIN-photodiode – avalanche photodiode – phototransistor - photoconductive detectors and photoconductive gain – noise in photo-detectors – noise in avalanche photodiode - solar energy spectrum - photovoltaic device principles – I-V characteristics - series resistance and equivalent circuit - temperature effects - solar cell materials, device and efficiencies

UNIT - V

Optoelectronic Modulators: Optical polarization, birefringence, retardation plates, electro-optic modulators – Pockels effect - longitudinal and transverse electro-optic modulators, Kerr effect, Magneto-optic effect, acousto-optic effect – Raman Nath and Bragg-types.

Non-linear optics: Wave propagation in an anisotropic crystal - polarization response of materials to light - second order non-linear optical processes – second harmonic generation - sum and frequency generation, optical parametric oscillation - third order non-linear optical processes - third harmonic generation - intensity dependent refractive index - self-focusing - non-linear optical materials, phase matching - angle tuning - saturable absorption - optical bistability - two photon absorption.

18PHP311	ADVANCED PHYSICS PRACTICAL	SEMESTER – III
		4H- - 2C
Instruction Hours / week: L: 0 T: 0 P: 4	Marks: Internal: 40	External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objective

- To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
- The course is designed to train the students so that they can efficiently handle various Instruments
- To learn the usage of optical systems for various measurements.
- Apply the analytical techniques and graphical analysis to the experimental data.
- To develop intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- To understand the programming knowledge in MATLAB for various physics problems and electronic circuits

Course Outcomes (COs)

At the end of the course, Students will / can be able to

1. Design and efficiently handle various instruments.
2. Verify laws studied in the different theory course.
3. Measure different properties of materials.
4. Gain the knowledge in quantization of electromagnetic fields.
5. Analyze the characteristics of oscillators and wave shaping circuits
6. Understand the basic concepts of amplifiers and operational amplifiers

ANY TEN EXPERIMENTS

1. Arc spectra – Aluminium and Brass
2. (i) Determination of wavelength of He-Ne laser – Ruler method.
(ii) Determination of thickness of a wire using He-Ne laser.
3. Determination of e/m using Zeeman effect.
4. Measurement of thickness of a thin film using MBI technique.
5. G.M.Counter – Characteristics.
6. Experiment on rotatory dispersion of quartz.
7. Matlab Programming-Radioactive Decay
8. Matlab Programming-Numerical Integration

9. Matlab Programming-Double Integration
10. Matlab Programming-Solution of Ordinary Differential Equations
11. Matlab Programming-Computer Simulation of Equations of Motion for a System of Particles
12. Matlab Programming-Computer Simulation of 1-D and 2-D Lattice Vibrations
13. Matlab Programming-Computer Simulation of Kronig-Penney Model

SUGGESTED READINGS

		SEMESTER – III
18PHP312	ADVANCED ELECTRONICS PRACTICAL	4H- - 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Internal: 40
		External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

- To introduce different integrated circuit for students to understand the application to electronics circuits
- To understand the Biasing network for BJT and FET, transient analysis and frequency response of BJT and FET in single stage and multistage amplifier
- To understand the frequency response feedback amplifier using BJT and FET and Tuned amplifier.
- This course introduces the assembly language programming of 8085 Microprocessor. It gives a practical training of interfacing the peripheral devices with the 8086 microprocessor.
- To design and construction of circuits using analog component and trouble shooting of the circuits.
- To provide the real time experience on microprocessor in traffic signal and industry

Course Outcomes (COs)

On completion of this lab course the students will be able to:

1. Understand and apply the fundamentals of assembly level programming of microprocessors and microcontroller.
2. Work with standard microprocessor real time interfaces including GPIO, serial ports, digital-to-analog converters and analog-to-digital converters;
3. Troubleshoot interactions between software and hardware;
4. Analyze abstract problems and apply a combination of hardware and software to address the problem
5. Practically study the working of different electronic components circuits.
6. Learn to minimize contributing variables and recognize the limitations of the equipment.

ANY TEN EXPERIMENTS

1. Pulse Width Modulation using IC's to control DC motor speed.
2. 4-bit up/down synchronous or asynchronous counters using IC 7473/7476
3. Frequency modulation/demodulation using IC's
4. Construct the circuit for multiplexer/demultiplexer using IC741
5. Design of active filters

6. Decade counters using IC7490 and 7473
7. Log and antilog circuit using OP-AMP
8. Microprocessor – LED interfacing and Musical tone generator interfacing
9. Microprocessor – interfacing of stepper motor and ADC wave form generation.
10. Microprocessor – Traffic light simulation
11. Microprocessor – interfacing of frequency or temperature measurement sensor
12. Microprocessor – Hexa Key Board interface.

SUGGESTED READINGS

1. Ramesh Gaonkar, 2013, Microprocessor Architecture Programming and Applications with 8085, 6th edition, PENRAM International Pvt Ltd.
2. P. Horowitz and W. Hill, The Art of Electronics, Second edition, Cambridge University Press, 1989.
3. A.S. Sedra and K.C. Smith, Microelectronic Circuits, Fifth edition, Oxford University Press, 2003.
4. <https://nptel.ac.in/courses/108/105/108105102/>
5. <https://nptel.ac.in/courses/115/102/115102014/>

18PHP491**PROJECT****SEMESTER IV****30H- - 15C****Instruction Hours / week: L: 0 T: 0 P: 30****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- The aim of the M.Sc. Research project work is to expose the students to preliminaries and methodology of research in Theoretical Physics and Experimental Physics.
- To provides the students to get opportunity and participate in some ongoing research activity and development of a laboratory experiment.
- To provide the student with a broad spectrum of physics projects courses
- To emphasize the role of physics in life and other discipline (chemistry ,mathematics and biology)
- To develop the ability of the students to conduct, observe, analyzes and report an experiment and deal with physical models and formulas mathematically.
- To provide the student with different practical, intellectual and transferable skills.
- To understand the objective of a physics laboratory experiment, properly carry out the experiments, and appropriately record and analyze the results.
- To think creatively about scientific problems and their solutions.
- To design experiments, and to constructively question results they are presented with, whether these results are in a newspaper, in a classroom, or elsewhere.

Course Outcomes (COs)

After successful completion of the course, the student is expected to

1. Complete an independent research project, resulting in research outputs in terms of publications in journals and conference proceedings.
2. Demonstrate a depth of knowledge of Physics.
3. Complete an independent research project, resulting in research outputs in terms of publications in journals and conference proceedings.

4. Demonstrate knowledge of contemporary issues in their chosen field of research.
5. Demonstrate an ability to present and defend their research work.
6. Demonstrate an ability to succeed in problem solving in electronics
7. Solve physics problems using qualitative and quantitative reasoning including sophisticated mathematical techniques
8. Conduct independent research or work successfully in a technical position.
9. Successfully pursue career objectives in graduate school or professional schools, in a scientific career in government or industry, in a teaching career, or in a related career.
10. Apply their knowledge to develop the instruments.
11. Verify the basic principles and laws experimentally as a project.

FACULTY OF ENGINEERING

B.E. AUTOMOBILE ENGINEERING SYLLABI

2018-2019

(For the regular programme students admitted during 2018-2019 and onwards)

**DEPARTMENT OF AUTOMOBILE ENGINEERING
FACULTY OF ENGINEERING**

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act, 1956)

POLLACHI MAIN ROAD, EACHANARI POST, COIMBATORE – 641 021.

SYLLABI

18BEAE101	MATHEMATICS - I (Calculus and Linear Algebra for Mechanical and Automobile Engineering)	Semester I 4H-4C
Instruction Hours/Week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 hours		

Course Objectives:

- To develop the use of matrix algebra techniques that is needed for practical applications.
- To understand the geometrical aspects of curvature and elegant application of differential calculus.
- To apply differentiation to solve maxima and minima problems.
- To understand the concept of functions of several variables and vector identities.
- To introduce the sequence and series that is essential to many engineering applications.
- Analyse the characteristics of a linear system with Eigenvalues and Eigenvectors.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Analyse the characteristics of a linear system with Eigenvalues and Eigenvectors.
- Evaluate the functions to get the surface area and volume using multiple integral.
- Use the tool of power series for learning advanced engineering mathematics.
- Calculate grad, div and curl in Cartesian and other simple coordinate systems.
- Analyse the differential equations using power series, Taylor's series
- Analyse the differential equations using Fourier series analysis.

Course Contents:**UNIT I MATRICES**

Inverse and rank of a matrix, rank – nullity theorem; system of linear equations; symmetric, skew-symmetric and orthogonal matrices; determinants; Eigenvalues and Eigenvectors; diagonalization of matrices; Cayley-Hamilton theorem, and orthogonal transformation. Simple problems using Scilab.

UNIT II CALCULUS

Evolutes and involutes; evaluation of definite and improper integrals; beta and gamma functions and their properties; applications of definite integrals to evaluate surface areas and volumes of revolutions.

UNIT III CALCULUS

Taylor's and Maclaurin theorems with remainders; indeterminate forms and L'Hospital's rule; Maxima and minima.

UNIT IV MULTIVARIABLE CALCULUS (DIFFERENTIATION)

Limit, continuity and partial derivatives, directional derivatives, total derivative; maxima, minima and saddle points; method of Lagrange multipliers; gradient, curl and divergence.

UNIT V SEQUENCES AND SERIES

Convergence of sequence and series, tests for convergence; power series, Taylor's series, series for exponential, trigonometric and logarithm functions; Fourier series: half range sine and cosine series, Parseval's theorem.

Suggested Readings:

2. G. B. Thomas and R. L. Finney, *Calculus and Analytic Geometry*, Pearson, 2002.
3. Erwin Kreyszig, *Advanced Engineering Mathematics*, John Wiley & Sons, 2006.
4. Veerarajan T., *Engineering Mathematics for First Year*, Tata McGraw-Hill, New Delhi, 2008.
5. Ramana B. V., *Higher Engineering Mathematics*, Tata McGraw-Hill New Delhi, 2010.
6. D. Poole, *Linear Algebra: A Modern Introduction*, Brooks/Cole, 2005.
7. N. P. Bali and Manish Goyal, *A Text Book of Engineering Mathematics*, Laxmi Publications, 2008.
8. B. S. Grewal, *Higher Engineering Mathematics*, Khanna Publishers, 2010.

18BEAE102	ELECTROMAGNETISM (Theory and Laboratory)	Semester I 7H-5C
Instruction Hours/Week: L:3 T:1 P:3		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 hours		

Course Objectives:

- To study the basics of electrostatics in vacuum.
- To study the fundamentals of magnetostatics.
- To inculcate the basics of properties of matter and its applications.
- To introduce the concepts of quantum mechanics.
- To impart the basic knowledge of vacuum science.
- Express the concepts of steady state diffusion and thermal conduction.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Express the concepts of steady state diffusion and thermal conduction.
- Distinguish between diamagnets, paramagnets and ferromagnets.
- Describe the basics of properties of matter and its applications.
- Explain the physical significance of wave function.
- Describe the scanning electron microscope.
- Explain the various types of vacuum pumps.

(i) THEORY

Course Contents:

UNIT I ELECTROSTATIC IN VACUUM

Calculation of electric field and electrostatic potential for a charge distribution; divergence and curl of electrostatic field; Laplace's and Poisson's equations for electrostatic potential and uniqueness of their solution and connection with steady state diffusion and thermal conduction; practical examples like Farady's cage and coffee-ring effect.

Electrostatics in a linear dielectric medium: Polarization – field of a polarized object – bound charges due to electric polarization; electric displacement; boundary conditions on displacement.

UNIT II MAGNETOSTATICS

Bio-Savart law, divergence and curl of static magnetic field; vector potential and calculating it for a given magnetic field using Stokes' theorem.

Magnetostatics in a linear magnetic medium: Magnetization – diamagnets, paramagnets, ferromagnets – field of a magnetized object – bound currents; auxiliary magnetic field \vec{H} ; boundary conditions on \vec{B} and \vec{H} – magnetic susceptibility and permeability – ferromagnetism.

UNIT III PROPERTIES OF MATTER

Elasticity – three types of modulus of elasticity – basic definitions, relation connecting the moduli (derivation) – factors affecting elastic modulus and tensile strength–Poisson’s ratio – torsional pendulum – bending of beams – bending moment – uniform and non-uniform bending - I-shaped girders – stress due to bending in beams.

UNIT IV QUANTUM MECHANICS

Introduction to quantum theory – black body radiation – dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – Schrödinger’s wave equation – time dependent and time independent equations – particle in one dimensional box – physical significance of wave function, scanning electron microscope.

UNIT V VACUUM SCIENCE

Introduction – importance of vacuum in industries – pumping speed and throughput – types of pumps – rotary vane type vacuum pump (oil sealed), diffusion pump and turbo molecular pump – measurement of high vacuum – McLeod gauge – Pirani gauge – Penning gauge.

Suggested Readings:

1. David J. Griffiths, *Introduction to Electrodynamics*, Cambridge University Press, 2017.
2. Ganesan S and Baskar T, *Engineering Physics I*, GEMS Publisher, Coimbatore, 2015.
3. Ganesan S and Iyandurai N, *Applied Physics*, KKS Publishers, 2007.
4. Gaur R.K. and Gupta S.L., *Engineering Physics*, Dhanpat Rai Publications, 2013.
5. Halliday and Resnick, *Physics*, Wiley, 2007.
6. Wayne Saslow, *Electricity, Magnetism, and Light*, Academic Press, 2002.

(ii) LABORATORY

List of Experiments:

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc.
2. Non-uniform bending - Determination of Young’s modulus.
3. Uniform bending - Determination of Young’s modulus.
4. Lee’s disc - Determination of thermal conductivity of a bad conductor.
5. Potentiometer - Determination of thermo emf of a thermocouple.
6. Laser - Determination of the wavelength of the laser using grating.
7. Air wedge - Determination of thickness of a thin sheet/wire.
8. Optical fibre - Determination of Numerical Aperture and acceptance angle.
9. Ultrasonic interferometer - Determination of the velocity of sound and compressibility of liquids.
10. Determination of the band gap of a semiconductor.
11. Spectrometer - Determination of wavelength using grating.
12. Viscosity of liquids - Determination of coefficient of the viscosity of a liquid by Poiseuille’s flow.

18BEAE103	BASIC ELECTRICAL ENGINEERING (Theory and Laboratory)	Semester I 6H-5C
------------------	--	-----------------------------------

Instruction Hours/Week: L:3 T:1 P:2**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart the basic knowledge about the electric circuits.
- To understand the working of electrical machines and transformers.
- To understand the working of power converters and components of low-voltage electrical installations.
- Understand the AC circuits
- Explain the working principle of electrical machines and power converters.
- Describe the single-phase and three-phase voltage source inverters.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Analyse the basic electric and magnetic circuits.
- Understand the DC circuits
- Understand the AC circuits
- Explain the working principle of electrical machines and power converters.
- Describe the single-phase and three-phase voltage source inverters.
- List the components of low-voltage electrical installations.

(i) THEORY**Course Contents:****UNIT I DC CIRCUITS**

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with DC excitation. Superposition, Thevenin and Norton theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT II AC CIRCUITS

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III ELECTRICAL MACHINES

Generation of rotating magnetic fields, construction and working of a three-phase induction motor, significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque-speed characteristic and speed control of separately excited DC motor. Construction and working of synchronous generators.

UNIT IV TRANSFORMERS AND POWER CONVERTERS

Magnetic materials, B-H characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections. Overviews of DC-DC buck and boost converters, duty ratio control. Introduction to single-phase and three-phase voltage source inverters.

UNIT V ELECTRICAL INSTALLATIONS

Components of LT switchgear: Switch Fuse Unit (SFU), MCB, ELCB, RCCB, MCCB, types of wires and cables, earthing. Types of batteries, important characteristics for batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

Suggested Readings:

1. V. D. Toro, *Electrical Engineering Fundamentals*, Prentice Hall India, 1989.
2. D. P. Kothari and I. J. Nagrath, *Basic Electrical Engineering*, Tata McGraw-Hill, 2010.
3. D. C. Kulshreshtha, *Basic Electrical Engineering*, McGraw-Hill, 2009.
4. L. S. Bobrow, *Fundamentals of Electrical Engineering*, Oxford University Press, 2011.
5. E. Hughes, *Electrical and Electronics Technology*, Pearson, 2010.

(ii) LABORATORY**List of Experiments:**

1. Experimental verification of electrical circuit problems using Ohms law and Kirchhoff's law.
2. Measurement of electrical quantities - voltage, current, power and power factor in R load.
3. Speed control of DC shunt motor.
4. Draw the equivalent circuit of single-phase transformer by conducting OC and SC test.
5. Measurement of energy using single-phase energy meter.

18BEAE111**ENGINEERING GRAPHICS AND DESIGN****Semester I**
5H-3C**Instruction Hours/Week: L:1 T:0 P:4****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn conventions and use of drawing tools in making engineering drawings.
- To impart knowledge on orthographic projection.
- To draw orthographic projections of points, line and plane surfaces.
- To draw orthographic projections of solids.
- To impart the basic concepts of isometric projections through simple examples.
- Recognise the conventions and apply dimensioning concepts while drafting simple objects.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Recognise the conventions and apply dimensioning concepts while drafting simple objects.
- Draw freehand sketching of multiple views from pictorial views of objects.
- Draw the orthographic projection of points, line and plane surfaces.
- Draw the orthographic projection of solids.
- Draw the isometric projection of the given objects.
- Demonstrate knowledge of the CAD software

Course Contents:**UNIT I INTRODUCTION**

Principles of Engineering Graphics and their significance – usage of drawing instruments – lettering – layout of drawing sheets – sizes of drawing sheets – different types of lines used in drawing practice – geometric constructions – principles of dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning – location dimension and size dimension – conic sections including the ellipse, parabola and hyperbola (eccentricity method only) – cycloid, epicycloid, hypocycloid and involute – scales – plain, diagonal and vernier scales.

UNIT II ORTHOGRAPHIC PROJECTIONS

Principles of orthographic projections – need for importance of multiple views and their placement – first angle projection – layout views – developing visualization skills through freehand sketching of multiple views from pictorial views of objects.

UNIT III PROJECTION OF POINTS, LINES AND PLANE SURFACES

Projections of points and lines located in the first quadrant inclined to both planes – determination of true lengths and true inclinations – projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT IV PROJECTION OF SOLIDS

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

UNIT V ISOMETRIC PROJECTIONS AND COMPUTER GRAPHICS

Principles of isometric projection – isometric scale, isometric views, conventions – isometric views of lines, planes, simple solids, truncated prisms, pyramids, cylinders and cones – conversion of isometric views to orthographic views and vice-versa.

Overview of computer graphics – listing the computer technologies that impact on graphical communication – demonstrating knowledge of the theory of CAD software – introduction to 3D modelling packages.

Suggested Readings:

1. Venugopal K and Prabhu Raja V, *Engineering Graphics*, New Age International Publishers, 2009.
2. Agrawal C M and Basant Agrawal, *Engineering Graphics*, Tata McGraw-Hill, New Delhi, 2012.
3. James DBethune, *Engineering Graphics with AutoCAD 2015*, Pearson Education, 2016.
4. NarayanaKL and Kannaiah P, *Textbook on Engineering Drawing*, Scitech Publishers, 2008.
5. Bureau of Indian Standards, *Engineering Drawing Practices for Schools and Colleges SP 46-2003*, BIS, New Delhi, 2003.
6. Shah M Band Rana BC, *Engineering Drawing and Computer Graphics*, Pearson Education, 2008.
7. Bhatt N D, Panchal V Mand Ingle P R, *Engineering Drawing*, Charotar Publishing House, 2014.

18BEAE201	MATHEMATICS - II (Calculus, Ordinary Differential Equations and Complex Variable for Mechanical and Automobile Engineering)	Semester II 4H-4C
------------------	--	------------------------------------

Instruction Hours/Week: L:3 T:1 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage.
- To evaluate first order differential equations including separable, homogeneous, exact and linear solvable for p, x and y, Clairaut's form.
- To solve the differential equation of certain type, power series solutions of Legendre polynomials and Bessel functions of the first kind.
- To enable the students to apply the knowledge of mathematics in various engineering fields by making them identify the functions in engineering problems as analytic function and their study as a function of complex variables.
- To develop an understanding of the standard techniques of complex variable theory.
- Apply integration to compute multiple integrals, area, volume, integrals in polar and Cartesian coordinates.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply integration to compute multiple integrals, area, volume, integrals in polar and Cartesian coordinates.
- Analyse first order differential equations utilizing the standard techniques for separable, exact, linear, Bernoulli cases.
- Evaluate analytic functions using the Cauchy-Riemann equations.
- Solve complex integrals using the Cauchy integral formula and the residue theorem.
- Explain the fundamentals and basic concepts of vector calculus
- Explain the fundamentals and basic concepts of ODE and complex functions.

Course Contents:**UNIT I MULTIVARIABLE CALCULUS (INTEGRATION)**

Multiple integration: double and triple integrals (Cartesian and polar), change of order of integration in double integrals, applications: areas and volumes, centre of mass and gravity (constant and variable densities). Theorems of Green, Gauss and Stokes, simple applications involving cubes and rectangular parallelepipeds.

UNIT II FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS

Exact, linear and Bernoulli's equations, Euler's equations, equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type.

UNIT III ORDINARY DIFFERENTIAL EQUATIONS OF HIGHER ORDERS

Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equation; power series solutions; Legendre polynomials, Besselfunctions of the first kind and their properties.

UNIT IV ANALYTIC FUNCTIONS

Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations.

UNIT V COMPLEX INTEGRATION

Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy integral formula (without proof), zeros of analytic functions, singularities, Taylor's series, Laurent's series, Residues, Cauchy residue theorem (without proof), Evaluation of definite integral involving sine and cosine.

Suggested Readings:

1. Hemamalini P.T., *Engineering Mathematics*, McGraw-Hill Education (India) Pvt. Ltd., New Delhi, 2014.
2. G.B. Thomas and R.L. Finney, *Calculus and Analytic Geometry*, Pearson, 2002.
3. Erwin Kreyszig, *Advanced Engineering Mathematics*, John Wiley & Sons, 2006.
4. W.E. Boyce and R.C. DiPrima, *Elementary Differential Equations and Boundary Value Problems*, Wiley India, 2009.
5. S.L. Ross, *Differential Equations*, Wiley India, 1984.
6. E.A. Coddington, *An Introduction to Ordinary Differential Equations*, Prentice Hall, India, 1995.

9. N.P. Bali and Manish Goyal, *A Textbook of Engineering Mathematics*, Laxmi Publications, 2008.
10. B.S. Grewal, *Higher Engineering Mathematics*, Khanna Publishers, 2010.

18BEAE202**CHEMISTRY – I**
(Theory and Laboratory)**Semester II**
7H-6C**Instruction Hours/Week: L:3 T:1 P:3****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the terminologies of atomic and molecular structure.
- To study the basics of periodic properties and intermolecular forces.
- To study about spectroscopic technique.
- To understand the thermodynamic functions.
- To comprehend the basic organic chemistry and to synthesis simple drug.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
- Rationalise periodic properties such as ionization potential, oxidation states and electronegativity.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.
- Rationalise bulk properties and processes using thermodynamic considerations.
- List major chemical reactions that are used in the synthesis of molecules.
- Explain the synthesis of a commonly used drug molecule

(i) THEORY**Course Contents:****UNIT I ATOMIC AND MOLECULAR STRUCTURE**

Schrodinger equation. Particle in a box solutions and their applications. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Pi-molecular orbitals of butadiene and benzene and aromaticity. Introduction to crystal field theory.

UNIT II PERIODIC PROPERTIES, INTERMOLECULAR FORCES AND POTENTIAL ENERGY SURFACES

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers. Ionic, dipolar and van der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H_2F and HCN and trajectories on these surfaces.

UNIT III SPECTROSCOPIC TECHNIQUES AND APPLICATIONS

Spectroscopy (principles and instrumentation only), electronic spectroscopy, vibrational and rotational spectroscopy, applications, surface characterization techniques, diffraction and scattering, fluorescence and its applications in medicine.

UNIT IV USE OF FREE ENERGY IN CHEMICAL EQUILIBRIA

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation, reduction and solubility equilibria. Use of free energy considerations in metallurgy through Ellingham diagrams.

UNIT V ORGANIC REACTIONS AND SYNTHESIS OF A DRUG MOLECULE

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule.

Suggested Readings:

1. B. H. Mahan, *University Chemistry*, Pearson Education, 2010.
2. M. J. Sienko and R. A. Plane, *Chemistry: Principles and Applications*, McGraw-Hill International, 1979.
3. C. N. Banwell, *Fundamentals of Molecular Spectroscopy*, McGraw-Hill, 1994.
4. B. L. Tembe, Kamaluddin and M. S. Krishnan, *Engineering Chemistry* (NPTEL Web-book)
5. P. W. Atkins, *Physical Chemistry*, Oxford University Press, 2009.
6. K. P. C. Volhardt and N. E. Schore, *Organic Chemistry: Structure and Function*, W.H. Freeman, 2014.
7. P C Jain and Monica Jain, *Engineering Chemistry*, DhanpatRai Publishing Company, 2015.

(i) LABORATORY**List of Experiments:**

Choice of 10 experiments from the following:

1. Determination of surface tension and viscosity.
2. Determination of sodium carbonate and sodium hydrogen carbonate in a mixture using volumetric titration.
3. Determination of Ca/Mg using complex metric titration.
4. Thin layer chromatography.
5. Determination of chloride content of water.
6. Determination of the rate constant of a reaction.
7. Conductometry - Determination of cell constant and conductance of solutions.
8. pH metry - Determination of acid/base.
9. Potentiometry - Determination of redox potentials and EMFs.
10. Saponification/acid value of oil.
11. Determination of the partition coefficient of a substance between two immiscible liquids.
12. Adsorption of acetic acid by charcoal.

13. Use of the capillary viscosimeters to demonstrate of isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of an egg.

19BEAE203**ENGLISH****Semester II**
4H-3C**Instruction Hours/Week: L:2 T:0 P:2****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of global communication.
- To help students acquire their ability to speak effectively in real-life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use a dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- Compose business letters and other forms of technical writing.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Use the English language for communication: verbal and non-verbal.
- Express comprehension and acquisition of speaking and writing ability.
- Demonstrate word power: lexical, grammatical and communication competence.
- Compose business letters and other forms of technical writing.
- Demonstrate oral communication in formal contexts.
- Do the writing practice

Course Contents:**UNIT I BASIC WRITING SKILLS**

Sentence structures – use of phrases and clauses in sentences – importance of proper punctuation – creating coherence – organizing principles of paragraphs in documents – techniques for writing precisely.

UNIT II VOCABULARY BUILDING

The concept of word formation – root words from foreign languages and their use in English – acquaintance with prefixes and suffixes from foreign languages in English to form derivatives – synonyms, antonyms, and standard abbreviations.

UNIT III GRAMMAR AND USAGE

Subject-verb agreement – noun-pronoun agreement – misplaced modifiers – articles – prepositions – redundancies – clichés.

UNIT IV LISTENING AND READING SKILLS

Note taking – viewing model interviews – listening to informal conversations – improving listening/reading comprehension – reading model prose/poems – reading exercise.

UNIT V WRITING PRACTICES

Comprehension – précis writing – essay writing listening comprehension – common everyday situations: conversations and dialogues – communication at workplace – interviews – formal presentations.

Note: Students shall have hands-on training in improving listening skill in the language laboratory attwo periods per each unit.

Suggested Readings:

1. Sangeeta Sharma and Meenakshi Raman, *Technical Communication: Principles and Practice*, Oxford University Press, New Delhi, 2015.
2. Sanjay Kumar and PushpLata, *Communication Skills*, Oxford University Press, 2011.
3. Liz Hamp-Lyons and Ben Heasley, *Study Writing*, Cambridge University Press, 2006.
4. F. T. Wood, *Remedial English Grammar*, Macmillan, 2007.
5. Michael Swan, *Practical English Usage*, Oxford University Press, 1995.

19BEAE204	PROGRAMMING FOR PROBLEM SOLVING (Theory and Laboratory)	Semester II 7H-5C
------------------	---	------------------------------------

Instruction Hours/Week: L:3 T:0 P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To identify and understand the working of key components of a computer program.
- To identify and understand the various kinds of keywords and different data types of C programming.
- To understand, analyse and implement software development tools like algorithm, pseudo codes and programming structure.
- To study, analyse and understand the logical structure of a computer program, and different construct to develop a program in C language.
- Test and execute the programs and correct syntax and logical errors.
- Implement conditional branching, iteration and recursion.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Formulate simple algorithms for arithmetic and logical problems.
- Translate the algorithms to programs (in C language).
- Test and execute the programs and correct syntax and logical errors.
- Implement conditional branching, iteration and recursion.
- Apply programming to solve matrix addition and multiplication problems and searching and sorting problems.
- Apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

(i) THEORY**Course Contents:****UNIT I INTRODUCTION TO PROGRAMMING, ARITHMETIC EXPRESSIONS AND PRECEDENCE**

Introduction to programming – flow chart/pseudo code, compilation, variables including data types, arithmetic expressions and precedence.

UNIT II CONDITIONAL BRANCHING AND LOOPS

Conditional branching – loops writing and evaluation of conditionals and consequent branching, iteration and loops.

UNIT III ARRAYS AND BASIC ALGORITHMS

Arrays 1-D, 2-D, character arrays and strings, basic algorithms: searching, basic sorting algorithms, finding roots of equations, idea of time complexity.

UNIT IV FUNCTION AND RECURSION

Functions (including using built-in libraries), recursion with example programs such as quick sort, Ackerman function, etc.

UNIT V STRUCTURE, POINTERS AND FILE HANDLING

Pointers, structures including self referential structures e.g., linked list, notional introduction, file handling in C.

Suggested Readings:

1. E. Balagurusamy, *Computing Fundamentals and C Programming*, Tata McGraw-Hill Education, 2017.
2. E. Balagurusamy, *Programming in ANSI C*, Tata McGraw-Hill, 2017.
3. Byron Gottfried, *Schaum's Outline of Programming with C*, McGraw-Hill, 2017.
4. Brian W. Kernighan and Dennis M. Ritchie, *The C Programming Language*, Prentice Hall of India, 2015.

(ii) LABORATORY**List of Experiments:**

1. Familiarization with the programming environment.
2. Simple computational problems using arithmetic expressions.
3. Problems involving if-then-else structures.
4. Iterative problems e.g., the sum of series.
5. 1D array manipulation.
6. Matrix problems and string operations.
7. Simple functions.
8. Numerical method problems.
9. Recursive functions.
10. Pointers and structures.
11. File operations.

18BEAE205**CONSTITUTION OF INDIA****Semester II**
1H-0C**Instruction Hours/Week: L:1 T:0 P:0****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To know about the Indian constitution.
- To know about the central and state government functionalities in India.
- To know about Indian society.
- Distinguish different culture among the people.
- Describe the structure and function of state government
- Understand the centre-state relations

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the functions of the Indian government.
- State and abide by the rules of the Indian constitution.
- Distinguish different culture among the people.
- Describe the structure and function of state government
- Understand the centre-state relations
- Understand the Indian social structure

Course Contents:**UNIT I INTRODUCTION**

Historical background – constituent assembly of India – philosophical foundations of the Indian constitution – preamble – fundamental rights – directive principles of state policy – fundamental duties – citizenship – constitutional remedies for citizens.

UNIT II STRUCTURE AND FUNCTION OF CENTRAL GOVERNMENT

Union government – structures of the union government and functions – president – vice president – prime Minister – cabinet – parliament – Supreme Court of India – judicial review.

UNIT III STRUCTURE AND FUNCTION OF STATE GOVERNMENT

State government – structure and functions – governor – chief minister – cabinet – state legislature – judicial system in states – high courts and other subordinate courts.

UNIT IV CONSTITUTION FUNCTIONS

Indian federal system – centre-state relations – president's rule – constitutional amendments – constitutional functionaries – assessment of working of the parliamentary system in India.

UNIT V INDIAN SOCIETY

Society: Nature, meaning and definition – Indian social structure – caste, religion, language in India – constitutional remedies for citizens – political parties and pressure groups – rights of women, children, scheduled castes, scheduled tribes and other weaker sections.

Suggested Readings:

1. Durga Das Basu, *Introduction to the Constitution of India*, LexisNexis, 2018.
2. Agarwal R C, *Political Theory (Principles of Political Science)*, S. Chand Publishing, 2018.
3. MacIver R M and Page C H, *Society: An Introductory Analysis*, Macmillan India, 1987
4. Sharma K L, *Social Stratification in India: Issues and Themes*, Sage Publications, New Delhi, 1997.
5. Brij Kishore Sharma, *Introduction to the Constitution of India*, Prentice Hall of India, New Delhi, 2005.
6. Gahai U R, *Indian Political System*, New Academic Publishing House, New Delhi, 1998.
7. Sharma, R N, *Indian Social Problems*, Media Promoters and Publishers Pvt. Ltd., New Delhi, 1987.

19BEAE211	WORKSHOP/MANUFACTURING PRACTICE LABORATORY	Semester II 5H-3C
------------------	---	------------------------------

Instruction Hours/Week: L:1 T:0 P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide hands-on training for the fabrication of components using carpentry and welding equipment/tools.
- To gain the skills for making fitting joints and household pipeline connections using suitable tools.
- To develop the skills for preparing the green sand mould.
- To present the skills for making the simple household electrical connection.
- To develop the skills for making wood/metal models using suitable tools.
- Prepare green sand mould using suitable tools.

Course Outcomes:

- Fabricate simple components using carpentry and welding equipment/tools.
- Make fitting joints and household pipeline connections using suitable tools.
- Prepare green sand mould using suitable tools.
- Make simple household electrical connections using suitable tools.
- Make simple models using wood and metal.
- Make simple plumbing work

(i) Lectures and Videos:

1. Manufacturing methods - casting, forming, machining, joining, advanced manufacturing methods
2. CNC machining and additive manufacturing
3. Fitting operations and power tools
4. Electrical and electronics
5. Carpentry
6. Plastic moulding and glass cutting
7. Metal casting
8. Welding (arc welding and gas welding), brazing

(ii) Workshop Practice:

1. Machine shop
2. Fitting shop
3. Carpentry
4. Electrical and electronics
5. Welding shop
6. Casting
7. Smithy

8. Plastic moulding and glass cutting
9. Plumbing exercises

Suggested Readings:

1. JeyachandranKand Balasubramanian S, *A Premier on Engineering Practices Laboratory*, Anuradha Publications, Kumbakonam, 2007.
2. JeyapoovanT and SaravanapandianM, *Engineering Practices Lab Manual*, Vikas Puplishing House Pvt. Ltd, Chennai,2006.
3. Bawa H S, *Workshop Practice*, Tata McGraw-Hill, New Delhi, 2009.
4. Hajra Choudhury SK, Hajra ChoudhuryAKand Nirjhar Roy SK Choudhry,*Elements of Workshop TechnologyVolume I*, Indian Book Distributing Company, Kolkatta, 2008.
5. Hajra Choudhury SK, Hajra ChoudhuryAKand Nirjhar Roy SK Choudhry,*Elements of Workshop TecnologyVolume II*, Indian Book Distributing Company, Kolkatta, 2010.
6. Gowri S and Jeyapoovan T, *Engineering Practices Lab Manual*, Vikas Publishing House Pvt. Ltd., Chennai, 2017.
7. Kalpakjian S and Steven S Schmid, *Manufacturing Engineering and Technology*, Pearson Education, 2001.
8. Roy A Lindberg, *Processes and Materials of Manufacture*, Prentice Hall of India, 1997.
9. Rao P N, *Manufacturing Technology Volume I and II*, Tata McGraw-Hill, 2018.

18BEAE301	MATHEMATICS - III (PDE, Probability and Statistics)	Semester III 4H-4C
------------------	---	-------------------------------------

Instruction Hours/Week: L:3 T:1 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To acquaint with Fourier series techniques in solving heat flow problems.
- To provide an overview of probability and statistics.
- To introduce the basic concepts of two-dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples.
- Apply the basic concepts of probability and standard distribution.
- Analyze the basic concepts of one and two-dimensional random variables and apply in engineering applications.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the fundamental concepts of partial differential equations and the various solution procedures for solving the first order non-linear partial differential equations.
- Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional wave equations.
- Apply the basic concepts of probability and standard distribution.
- Analyze the basic concepts of one and two-dimensional random variables and apply in engineering applications.
- Formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data.
- Summarize the concept of testing of hypothesis for small and large samples in real-life problems.

Course Contents:**UNIT I PARTIAL DIFFERENTIAL EQUATIONS**

Formation of partial differential equations – singular integrals – solutions of standard types of first-order partial differential equations – Lagrange's linear equation – linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

UNIT II APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Classification of PDE – method of separation of variables – solutions of one-dimensional wave equation – one-dimensional equation of heat conduction – steady state solution of two-dimensional equation of heat conduction.

UNIT III PROBABILITY AND RANDOM VARIABLES

Probability – axioms of probability – conditional probability – Baye's theorem – discrete and continuous random variables– moment generating functions – binomial, Poisson and normal distributions.

UNIT IV TWO-DIMENSIONAL RANDOM VARIABLES

Joint distributions – marginal and conditional distributions – covariance – correlation and linear regression – transformation of random variables – central limit theorem (for independent and identically distributed random variables).

UNIT V TESTING OF HYPOTHESIS

Test of significance – large sample test for single proportion, difference of proportions – tests for single mean, difference of means – test for ratio of variances – chi-square test for goodness of fit and independence of attributes.

Suggested Readings:

1. Erwin Kreyszig, *Advanced Engineering Mathematics*, John Wiley & Sons, 2006.
2. Grewal B S, *Higher Engineering Mathematics*, Khanna Publishers, New Delhi, 2014.
3. Bali N P and Manish Goyal, *A text book of Engineering Mathematics*, Laxmi Publications, 2010.
4. Ramana B V, *Higher Engineering Mathematics*, McGraw-Hill Education, New Delhi, 2016.
5. Hoel P G, Port S C and Stone C J, *Introduction to Probability Theory*, Universal Book Stall, 2003.
6. Ross S, *A First Course in Probability*, Pearson Education, 2002.

18BEAE302**ENGINEERING MECHANICS****Semester III**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To familiarise the basic concepts and force systems in a real-world environment.
- To impart knowledge on the equilibrium of rigid bodies.
- To learn the concept of centroid, centre of gravity and moments of inertia.
- To understand the rectilinear motion and curvilinear motion.
- To enrich the understanding of dynamic forces exerted in rigid body
- To provide knowledge on the friction.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Determine the resultant force and moment for a given system of forces.
- Analyse the plane trusses having different types of supports and determine the forces in each member.
- Identify the location of centroid, centre of gravity and calculate the moment of inertia for different sections.
- Apply the equations of motion of particles to calculate displacement, velocity and acceleration.
- calculate dynamic forces exerted in rigid body
- Determine the friction and its effects by using the laws of friction.

Course Contents:**UNIT I STATICS OF PARTICLES**

Introduction to mechanics – units and dimensions – laws of mechanics – principle of transmissibility – Lami's theorem, parallelogram and triangular law of forces – system of forces – composition of forces – resolution of force – resultant of a force system – free body diagram – equilibrium of a particle.

UNIT II STATICS OF RIGID BODIES IN TWO DIMENSIONS

Moments and couples – Varignon's theorem – resultant of non-concurrent force system – equilibrium of rigid bodies in two dimensions – types of supports – action and reaction forces – frames – types of frames – analysis of perfect frames – method of joints, method of sections and method of tension coefficient.

UNIT III PROPERTIES OF SURFACES AND SOLIDS

Centroid and centre of gravity – determination of centroid of areas, volumes and mass – Pappus and Guldinus theorems – moment of inertia – parallel axis theorem and perpendicular axis theorem –

polar moment of inertia – radius of gyration – product of inertia and principal moment of inertia – mass moment of inertia.

UNIT IV DYNAMICS OF PARTICLES

Linear motion – Relationship between displacement, velocity and acceleration – relative motion – curvilinear motion – Newton's laws of motion – work-energy equation – impulse and momentum – impact of elastic bodies.

UNIT V FRICTION AND RIGID BODY DYNAMICS

Friction force – types of friction – laws of friction – friction on horizontal and inclined planes, ladder, wedge friction and rope friction – velocity and acceleration for combined motion of translation and rotation of rigid bodies – general plane motion.

Suggested Readings:

1. Bansal R K, *Engineering Mechanics*, Laxmi Publications, New Delhi, 2016.
2. Bhavikatti S S, *Engineering Mechanics*, New Age International, New Delhi, 2019.
3. Hibbeler R C and Ashok Gupta, *Engineering Mechanics - Statics and Dynamics*, Pearson Education, New Delhi, 2009.
4. Irving H Shames and Krishna Mohana Rao G, *Engineering Mechanics: Statics and Dynamics*, Pearson Education, 2006.
5. Meriam J L, Kraige L G and Bolton J N, *Engineering Mechanics: Statics*, John Wiley & Sons, 2018.
6. Meriam J L, Kraige L G and Bolton J N, *Engineering Mechanics: Dynamics*, John Wiley & Sons, 2016.
7. Sankarasubramanian G and Rajasekaran S, *Engineering Mechanics Statics and Dynamics*, Vikas Publishing, 2005.
8. Ferdinand P Beer, Russell Johnston Jr., David F Mazurek, Brian S and Sanjeev Sanghi, *Vector Mechanics for Engineers: Statics and Dynamics*, McGraw-Hill Education, 2017.

18BEAE303**APPLIED THERMODYNAMICS****Semester III**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the fundamentals of thermodynamics, zeroth law, first law and second law of thermodynamics.
- To study the thermodynamic properties of pure substances and its phase change processes.
- To learn the gas power cycles and properties of gas mixtures.
- To acquaint the student with the concepts of air standard performance of heat engines.
- To familiarise the concept of psychrometry and its applications.
- To provide knowledge on the working principle and performance of air compressors and refrigeration systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the first law of thermodynamics to closed and open systems.
- Solve the problems related to cycles and cyclic devices using the second law of thermodynamics.
- Determine the thermodynamic properties of pure substances and its phase change processes.
- Evaluate the air standard performance of heat engines.
- Solve the psychrometric problems in various applications.
- Calculate the performance of air compressors and refrigeration systems.

Course Contents:**UNIT I BASIC CONCEPTS AND LAWS OF THERMODYNAMICS**

Basic concepts – concept of continuum – macroscopic approach – thermodynamic systems – closed, open and isolated – zeroth law of thermodynamics – first law of thermodynamics – application to closed and open systems – steady flow process with reference to various thermal equipments – second law of thermodynamics – reversibility and irreversibility – Carnot cycle – reversed Carnot cycle – thermodynamic temperature scale – Clausius inequality – concept of entropy – entropy of ideal gas – principle of increase of entropy – Carnot theorem – absolute entropy – availability.

UNIT II PROPERTIES OF PURE SUBSTANCE AND GASES

Properties of steam – pure substance – phase – phase change process – property diagrams – PVT surface – gas mixtures – properties of ideal and real gases – equation of state – Avagadro's law – Vander Waal's equation of states – compressibility and its chart – Dalton's law of partial pressure – exact differentials – T-D relations – Maxwell relations – Clausius-Clapeyron relation – Joule Thomson coefficient.

UNIT III GAS POWER CYCLES

Air standard cycles – Otto, Diesel, dual cycles – work output, efficiency and mean effective pressure calculations – comparison of the cycles with respect to compression ratio, heat addition, heat rejection, peak pressure, temperature and work output – simple Brayton cycle.

UNIT IV PSYCHROMETRY

Psychrometry and psychrometric charts – property calculations of air vapour mixtures – psychrometric process – sensible and latent heat exchange processes.

UNIT V RECIPROCATING AIR COMPRESSORS AND REFRIGERATION CYCLES

Single acting and double acting air compressors – work required – effect of clearance volume – volumetric efficiency – isothermal efficiency – free air delivery – two-stage compression – condition for minimum work.

Fundamentals of refrigeration – coefficient of performance – reversed Carnot cycle – simple vapour compression refrigeration system – T-S and P-H diagrams – simple vapour absorption refrigeration system – **refrigerant properties**.

Suggested Readings:

1. Nag P K, *Engineering Thermodynamics*, McGraw-Hill Education, 2017.
2. Rathakrishnan E, *Fundamentals of Engineering Thermodynamics*, Prentice-Hall of India, New Delhi, 2006.
3. Rajput R K, *Applied Thermodynamics*, Laxmi Publications, New Delhi, 2016.
4. Arora C P, *Thermodynamics*, Tata McGraw-Hill, New Delhi, 2003.
5. Nag P K, *Basic and Applied Thermodynamics*, Tata McGraw-Hill, New Delhi, 2009.
6. Yunus A Cengel and Michael A Boles, *Thermodynamics*, McGraw-Hill Education, New Delhi, 2015.

18BEAE304**AUTOMOTIVE ENGINES****Semester III**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart basic knowledge on the construction and operation of two-stroke and four-stroke engines.
- To study various components of the fuel feed system.
- To learn the combustion process and types of combustion chambers.
- To provide knowledge on the supercharging, turbocharging and engine testing.
- To familiarise the types of cooling and lubrication systems.
- To provide knowledge on modern engine technologies

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Differentiate the construction and operation of two-stroke and four-stroke engines.
- Name and explain various components of the fuel feed system.
- Discuss the combustion process and combustion chambers.
- List and describe the different methods of supercharging and turbocharging.
- Explain the importance of cooling system.
- Explain the importance of lubrication system.

Course Contents:**UNIT I ENGINE CONSTRUCTION AND OPERATION**

Constructional details and working of four-stroke Spark Ignition (SI) and Compression Ignition (CI) engines – two-stroke engine construction and operation – comparison of four-stroke and two-stroke engines – firing order and its significance – port timing and valve timing diagram of SI and CI engines.

UNIT II FUEL FEED SYSTEM

Carburettor – working principle – requirements – starting, idling, acceleration and normal circuits – compensation – maximum power devices – constant choke and constant vacuum carburettors – fuel feed system – mechanical and electrical fuel feed pumps – jerk pumps – distributor pumps – pintle and multi-hole nozzles – unit injector – injection pump calibration – governor – need and description.

UNIT III COMBUSTION AND COMBUSTION CHAMBERS

Combustion in SI engine – stages of combustion – flame propagation – delay period – uncontrolled combustion – effect of delay period – rate of pressure rise – abnormal combustion – detonation – effect of engine variables on knock – knock rating – combustion chamber and its types – combustion in CI engines – direct and indirect injection combustion chambers for CI engines – importance of swirl, squish and turbulence – factors influencing combustion chamber design.

UNIT IV SUPERCHARGING, TURBOCHARGING AND ENGINE TESTING

Supercharging and turbocharging – different methods of turbocharging – intercooling – turbocharger controls – wastegate, variable geometry, variable nozzle types – dynamometers – indicated thermal, brake thermal and volumetric efficiencies – measurement of friction – cylinder pressure measurement – engine performance maps – engine testing standards – Morse test.

UNIT V COOLING AND LUBRICATION SYSTEMS

Cooling system – need for cooling system – air cooling system, liquid cooling system, thermosyphon cooling system, forced circulation system and pressure cooling system – lubrication system – mist, dry sump and wet sump lubrication systems – properties of lubricants.

Suggested Readings:

1. Ganesan V, *Internal Combustion Engines*, McGraw-Hill Education, New Delhi, 2012.
2. Mathur M L & Sharma R P, *A Course in Internal Combustion Engines*, Dhanpat Rai & Sons, New Delhi, 2001.
3. Heinz Heisler, *Advanced Engine Technology*, Butterworth-Heinemann, 2005.
4. John B Heywood, *Internal Combustion Engine Fundamentals*, McGraw-Hill Education, 2011.
5. Heldt P M, *High-Speed Combustion Engines (Design: Production: Tests)*, Oxford & IBH Publishing Company, 1965.
6. Obert E F, *Internal Combustion Engines: Analysis and Practice*, International Textbook Company, 1988.
7. William H Crouse & Donald L Anglin, *Automotive Mechanics*, McGraw-Hill Education, 2006.
8. Willard W Pulkrabek, *Engineering Fundamentals of the Internal Combustion Engine*, Prentice Hall of India, 2003.

18BEAE305 ENGINEERING METROLOGY AND MEASUREMENTS**Semester III
3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To familiarise the concepts of measurement and characteristics of instruments.
- To learn the procedure for various linear and angular measurements.
- To provide knowledge on the measurement of gear and thread terminologies using suitable instruments.
- To expose the procedure to measure the mechanical parameters using suitable instruments.
- To study the use of laser and advances in metrology for linear geometric dimensions.
- To impart knowledge on digital devices and computer aided inspection devices

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basic concept of measurement and characteristics of measuring instruments.
- Practice the appropriate linear and angular dimensions using precision measuring instruments.
- Examine the major terminologies for the gear and screw thread measurement.
- Explain the suitable type of instrument used to measure the mechanical parameters.
- Apply the advanced techniques in metrology to calculate the geometric dimensions.
- Practice the digital devices and computer aided inspection devices

Course Contents:**UNIT I CONCEPT OF MEASUREMENT**

General concept – generalised measurement system – accuracy and precision – units and standards – measuring instrument sensitivity – readability – range of accuracy – precision – static and dynamic response – repeatability – systematic and random errors – correction – calibration – interchangeability.

UNIT II LINEAR AND ANGULAR MEASUREMENTS

Definition of metrology – linear measurements: vernier, micrometer, interval measurement, slip gauges and its classification – interferometry – optical flats – limit gauges – comparators: mechanical, pneumatic and electrical types and its applications – angular measurements: sine bar, optical bevel protractor, angle decker – taper measurements.

UNIT III FORM MEASUREMENT

Measurement of screw threads – thread gauges – floating carriage micrometer – measurement of gears – tooth thickness – constant chord and base tangent method – Gleason gear testing machine – radius measurements – surface finish, straightness, flatness and roundness measurements.

UNIT IV MEASUREMENT OF MECHANICAL PARAMETERS

Measurement of force, torque and power: mechanical, pneumatic, hydraulic and electrical types – flow measurement: venturimeter, orifice meter, rotameter, pitot tube – temperature: bimetallic strip, pressure thermometers, thermocouples, electrical resistance thermistor.

UNIT V MODERN METROLOGY

Precision instruments based on laser principles – laser interferometer – application in linear, angular measurements and machine tool metrology – coordinate measuring machine – constructional features – types and applications – digital devices – computer aided inspection.

Suggested Readings:

1. Jain R K, *Engineering Metrology*, Khanna Publishers, New Delhi, 2012.
2. Alan S Morris, *The Essence of Measurement*, Prentice Hall of India, 1997.
3. Gupta I C, *Engineering Metrology*, Dhanpat Rai and Sons, New Delhi, 2000.
4. Jayal A K, *Instrumentation and Mechanical Measurements*, Galgotia Publications, 2000.
5. Beckwith T G and Lewis Buck N, *Mechanical Measurements*, Addison-Wesley Publishing Company, 1991.
6. Donald P Eckman, *Industrial Instrumentation*, Wiley Eastern, 1985.

18BEAE306**BIOLOGY FOR ENGINEERS****Semester III**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the basics of biology.
- To gain knowledge about different biomolecules.
- To get familiarise with human diseases.
- To learn about different clinical investigations.
- To know the recent advances in biology.
- Classify the communicable and non-communicable human diseases.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Summarise the cell structures and their functions.
- Explain the biomolecules functions.
- Classify the communicable and non-communicable human diseases.
- Illustrate the different organ function tests.
- Tell the applications of biology in environmental applications.
- Describe the concept of biomechanics.

Course Contents:**UNIT I BASICS OF BIOLOGY**

Cell structure – prokaryotic and eukaryotic cells – animal and plant cell – cell cycle – mitosis – meiosis.

UNIT II BIOMOLECULES

Nucleic acid – DNA: structure, types, RNA: structure, types – proteins: classification, biological functions – carbohydrates: classification, biological functions – lipids: classification, biological functions – hormones: definition, importance – vitamins.

UNIT III HUMAN DISEASES

Communicable diseases: tuberculosis, chikungunya, dengue, influenza, HIV/AIDS – non-communicable diseases: diabetes, cancer, cardiovascular diseases.

UNIT IV ORGAN FUNCTION TESTS

Liver function tests: functions of liver, tests to assess liver function, bilirubin related liver test – renal function tests: tests to assess renal function, clearance test, creatine and urea, urine concentration test – gastric function tests: tests to assess gastric function, fractional test meal, alcohol test meal, insulin test meal – pancreatic function test: secretin test, lundh test.

UNIT V APPLICATIONS OF BIOLOGY

Environmental: waste water treatment, bioremediation – biomaterials and biopolymers for environmental applications – biosensors – biofuel: biogas, biodiesel – biomechanics: biofluid mechanics, biotribology.

Suggested Readings:

1. Dubey R C, *A Textbook of Biotechnology*, S. Chand Publishing, 2014.
2. Arthur T Johnson, *Biology for Engineers*, CRC Press, 2018.
3. Satyanarayana U and Chakrapani U, *Biochemistry*, Books and Allied, 2017.
4. Carol D Tamparo and Marcia A Lewis, *Diseases of the Human Body*, F.A. Davis Company, 2011.
5. Duane Knudson, *Fundamentals of Biomechanics*, Springer, 2007.

18BEAE311	AUTOMOTIVE ENGINE COMPONENTS AND MEASUREMENTS LABORATORY	Semester III 3H-2C
------------------	---	-------------------------------

Instruction Hours/Week: L:0 T:0 P:3**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To give practical knowledge on the dismantling and assembling of an engine.
- To study the various components of an engine.
- To learn the procedure for various linear and angular measurements.
- To provide knowledge on the measurement of gear and thread terminologies.
- To expose the procedure to measure the mechanical parameters using suitable instruments.
- To Study and acquire knowledge on the calibration of Vernier / micrometer / dial gauge

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify and assemble the components of an engine.
- Explain the function of various components of an engine.
- Practice the appropriate linear and angular dimensions using precision measuring instruments.
- Examine the major terminologies for the gear and screw thread.
- Explain the suitable type of instrument used to measure the mechanical parameters.
- Understand the calibration of Vernier / micrometer / dial gauge.

List of Experiments:

1. Dismantling and assembling of the spark ignition engine.
2. Study of the four-cylinder compression ignition engine.
3. Study of oil filter, fuel filter, fuel injection system, carburettor, MPFI and CRDI.
4. Study of ignition system components, coil, magneto and electronic ignition systems.
5. Study of engine cooling system and lubrication system components.
6. Ovality and taper measurement of the cylinder bore, crankshaft and comparison with standard specifications.
7. Calibration of vernier / micrometer / dial gauge.
8. Checking the dimensions of a part using slip gauges.
9. Measurement of gear tooth dimensions.
10. Measurement of straightness, flatness and thread parameters.
11. Measurement of displacement, force and vibration.

18BEAE312**COMPUTER AIDED MACHINE DRAWING
LABORATORY****Semester III
3H-2C****Instruction Hours/Week: L:0 T:0 P:3****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand and interpret drawings of machine components.
- To acquire the ability in designing and making the assembly drawing of various components.
- To expose students to drawing of sleeve and cotter joint.
- To expose students to knuckle joint, gib and cotter joint
- To provide an overview of drawing of universal coupling, screw jack.
- To make the student acquire sound knowledge of piston and connecting rod

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Sketch the detailed drawing of sleeve and cotter joint.
- Sketch the detailed drawing of knuckle joint
- Sketch the detailed drawing of gib and cotter joint.
- Sketch the detailed drawing of universal coupling.
- Sketch the detailed drawing of screw jack.
- Create the assembly drawing of piston and connecting rod

List of Experiments:

1. Modelling and assembly of sleeve and cotter joint.
2. Modelling and assembly of knuckle joint.
3. Modelling and assembly of gib and cotter joint.
4. Modelling and assembly of muff coupling.
5. Modelling and assembly of flange coupling.
6. Modelling and assembly of universal coupling.
7. Modelling and assembly of Oldham's coupling.
8. Modelling and assembly of screw jack.
9. Modelling of the piston.
10. Modelling of the connecting rod.

18BEAE313**THERMAL ENGINEERING LABORATORY****Semester III**
3H-2C**Instruction Hours/Week: L:0 T:0 P:3****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the flash point, fire point and viscosity of the fuel.
- To learn the port timing and valve timing diagram of internal combustion engines.
- To study the performance of the internal combustion engine and refrigeration system.
- To understand the thermal conductivity, heat transfer and emissivity.
- To know the effectiveness of heat exchangers.
- To study the coefficient of performance of a refrigeration system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Measure the flash point, fire point and viscosity of given sample.
- Draw the port timing diagram of two-stroke and valve timing diagram of four-stroke internal combustion engines.
- Evaluate the performance of internal combustion engine and reciprocating air compressor.
- Calculate the coefficient of performance of a refrigeration system.
- Estimate the thermal conductivity of material, heat transfer from surface and emissivity of a grey surface.
- Calculate the effectiveness of a heat exchanger.

List of Experiments:

1. Determination of viscosity of oils.
2. Determination of flash point and fire point of fuels.
3. Valve and port timing diagrams.
4. Performance test on in-line multi-cylinder compression ignition engine.
5. Morse test on spark ignition engine.
6. Performance test on single/two stage reciprocating air compressor.
7. Determination of coefficient of performance of a refrigeration system.
8. Thermal conductivity measurement by guarded plate method.
9. Natural convection heat transfer from a vertical cylinder.
10. Heat transfer from pin fin (natural and forced convection modes).
11. Determination of emissivity of a grey surface.
12. Effectiveness of parallel/counter flow heat exchanger.

18BEAE351	SOFT SKILLS	Semester III
		3H-0C

Instruction Hours/Week: L:1 T:0 P:2 **Marks: Internal:100 External:0 Total:100**

Course Objectives:

- To enhance the employability and career skills of students.
- To orient the students towards grooming as a professional.
- To develop an understanding of interview dynamics and techniques.
- To train the students to face interviews.
- Express the presentation skills
- Express the views in group discussions with confidence.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the adequate soft skills required for the workplace.
- Express the presentation skills
- Express the views in group discussions with confidence.
- Demonstrate the appropriate interview skills.
- Manage time effectively.
- Explain the stress management

Course Contents:**UNIT I INTRODUCTION**

Introduction to soft skills – hard skills and soft skills – employability and career skills – grooming as a professional with values – general awareness of current affairs.

UNIT II PRESENTATION

Self-introduction – organizing the material – introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice – presenting the visuals effectively – 5 minute presentations.

UNIT III GROUP DISCUSSION

Introduction to Group Discussion (GD) – participating in group discussions – understanding group dynamics – brainstorming the topic – questioning and clarifying – GD strategies – activities to improve GD skills – mock GD.

UNIT IV INTERVIEW

Interview etiquette – resume – dress code – body language – attending job interviews – telephone interview – one to one interview and panel interview – frequently asked questions related to job interviews.

UNIT V INTERPERSONAL SKILLS

Interpersonal skills – timemanagement– stress management–professional networking – respecting social protocols.

Suggested Readings:

1. Jeff Butterfield,*Soft Skills for Everyone*,Cengage Learning, New Delhi,2011.
2. Barun K Mitra,*Personality Development and Soft Skills*,Oxford University Press,2011.
3. Rajiv K Mishra,*Personality Development*,Rupa & Company,2012.

18BEAE401**FLUID MECHANICS AND HEAT TRANSFER****Semester IV**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To study the fluid laws
- To make the students conversant on properties and measurements.
- To expose the various fluid flow measuring devices and calculate the flow losses in pipes.
- To impart knowledge on various types of pumps and hydraulic turbines.
- To impart knowledge of the conduction heat transfer mechanisms.
- To learn the principles of convection and radiation.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Estimate the flow properties and pressure head using fundamental laws of fluid mechanics.
- Evaluate the discharge and loss of energy in flow through pipes.
- Analyse the performance of hydraulic pumps and turbines for a given application.
- Apply the heat conduction equation to compute the rate of heat transfer in simple and composite systems.
- Determine the rate of heat transfer in convection mode.
- Determine the rate of heat transfer in radiation mode.

Course Contents:**UNIT I BASIC CONCEPTS AND PROPERTIES OF FLUIDS**

Definition of fluid– distinction between solid and fluid –units and dimensions – properties of fluids: density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension –fluid statics – concept of fluid static pressure, absolute and gauge pressures – pressure measurements by U-tube manometer.

UNIT II FLUID KINEMATICS AND DYNAMICS

Fluid kinematics –flow visualization – lines of flow – types of flow – velocity field and acceleration – continuity equation (one and three dimensional differential forms) –equation of streamline – stream function – velocity potential function – circulation – flow net – Bernoulli's equation – applications –venturimeter, orifice meter, pitot tube.

Incompressible fluid flow – viscous flow – Navier-Stokes equations– flow through pipes – Darcy-Weisbach equation – pipe roughness – friction factor – flow through pipes in series and in parallel – power transmission – introduction to the concept of boundary layer flows – boundary layer thickness – boundary layer separation – drag and lift coefficients.

UNIT III PUMPS AND TURBINES

Impact of jets – Euler's equation – theory of roto-dynamic machines – velocity component – centrifugal, reciprocating and rotary pumps.

Pelton wheel, Francis turbine and Kaplan turbine – performance curves – governing of turbines.

UNIT IV HEAT CONDUCTION

Basic concepts – mechanism of heat transfer – conduction, convection and radiation – general differential equation of heat conduction – Fourier's law of conduction – Cartesian and cylindrical coordinates – one dimensional steady state heat conduction – conduction through plane wall, cylinders, spheres and composite systems – conduction with internal heat generation – extended surfaces – unsteady heat conduction – lumped analysis – use of Heisler chart.

UNIT V CONVECTION AND RADIATION

Convective heat transfer coefficients – boundary layer concept – types of convection – dimensional analysis – external flow – flow over plates, cylinders and spheres – internal flow – laminar and turbulent flow – combined laminar and turbulent – flow over bank of tubes.

Laws of radiation – Stefan-Boltzmann law and Kirchhoff law – black body radiation – grey body radiation – shape factor algebra – radiation shields.

Note: Usage of approved data book is permitted in the examination.

Suggested Readings:

1. Bansal R K, *Fluid Mechanics and Hydraulic Machines*, Laxmi Publications, New Delhi, 2018.
2. Shiv Kumar, *Fluid Mechanics: Basic Concepts & Principles*, Ane Books Pvt. Ltd., New Delhi, 2015.
3. Yunus A Cengel and John M Cimbala, *Fluid Mechanics: Fundamentals and Applications*, McGraw-Hill Education, 2014.
4. Victor Lyle Streeter, Benjamin Wylie E, Keith W Bedford, *Fluid Mechanics*, McGraw-Hill Education, 2010.
5. Frank M White, *Fluid Mechanics*, McGraw-Hill Education, 2016.
6. Nag P K, *Heat and Mass Transfer*, McGraw-Hill Education, 2011.
7. Rajput R K, *Heat and Mass Transfer*, S. Chand & Company Pvt. Ltd., New Delhi, 2012.
8. Jack P Holman, *Heat Transfer*, McGraw-Hill Education, 2011.

18BEAE402**STRENGTH OF MATERIALS****Semester IV**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To study and estimate the mechanical properties of materials and their deformations under different loading conditions.
- To gain knowledge on the shear force and bending stress distribution in different beams under various loads.
- To impart knowledge on finding slope and deflection of beams and buckling of columns for various boundary conditions.
- To learn deformation of the shaft under torsion and deflection of closed helical springs.
- To acquire knowledge on the two-dimensional stress systems and stresses in thin cylinders and spherical shells.
- To introduce the concepts of Mohr's circle

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Evaluate the stresses and strains in simple and composite structures subjected to axial loads.
- Examine the shear force, bending moment and shear stress of various beams under different loading conditions.
- Examine the stresses induced in the shaft and closed coil helical springs subjected to torsion.
- Evaluate the slope and deflection of beams and buckling loads of columns with different boundary conditions.
- Examine the stresses in two-dimensional systems and thin cylinders.
- Familiar with construction of Mohr's circle

Course Contents:**UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS**

Stress – strain – types of stresses – stress and strain diagram – Hooke's law – Young's modulus – deformation of simple and compound bars subjected to axial loading – thermal stresses – elastic constants – Poisson's ratio – volumetric strain – bulk modulus – strain energy and impact loading.

UNIT II BEAMS - LOADS AND STRESSES

Types of beams, supports and loads – shear force and bending moment in beams – cantilever, simply supported and overhanging beams – stresses in beams – theory of simple bending – stress variation along the length and in the beam section – effect of shape of beam section on stress induced – composite beams – shear stresses in beams.

UNIT III TORSION

Analysis of torsion of circular shaft – shear stress distribution – power transmitted by solid and hollow circular shafts – strength of a shaft and torsional rigidity – stepped shaft – compound shafts – stress in helical springs – analysis of close-coiled helical springs.

UNIT IV DEFLECTION OF BEAMS AND COLUMNS

Relationship between deflection, slope and moment – evaluation of beam deflection and slope using double integration method, Macaulay's method and moment-area method – columns – end conditions for long columns – equivalent length of a column – Euler's formula – slenderness ratio – Rankine's formula for columns.

UNIT V ANALYSIS OF STRESSES IN TWO DIMENSIONS

Biaxial state of stresses – thin cylindrical and spherical shells – deformation and stresses in thin cylindrical and spherical shells subjected to internal pressure – biaxial stresses at a point – stresses on an inclined plane – principal planes and principal stresses – Mohr's circle.

Suggested Readings:

1. Bansal R K, *Strength of Materials*, Laxmi Publications, New Delhi, 2018.
2. Punmia B C, Ashok Kumar Jain and Arun Kumar Jain, *Strength of Materials*, Laxmi Publications, New Delhi, 2019.
3. Rattan S S, *Strength of Materials*, McGraw-Hill Education, New Delhi, 2016.
4. Popov E P, *Engineering Mechanics of Solids*, Prentice-Hall of India, New Delhi, 2002.
5. Kazimi S M A, *Solid Mechanics*, Tata McGraw-Hill, New Delhi, 2001.
6. Ryder G H, *Strength of Materials*, Macmillan India, New Delhi, 2002.
7. Ferdinand P Beer, E Russell Johnston Jr. E, John T DeWolf, David F Mazurek and Sanjeev Sanghi, *Mechanics of Materials*, McGraw-Hill Education, New Delhi, 2016.

18BEAE403**THEORY OF MACHINES****Semester IV**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the concept and kinematic analysis of simple mechanisms.
- To introduce the concept of friction drives in kinematic of machines.
- To calculate the speed ratio of various types of the gear train and construct the cam profile for the various types of follower motion.
- To provide knowledge on balancing of rotating and reciprocating masses.
- To learn the concept of free, forced and damped vibrations.
- To provide knowledge on torsional vibration of shaft

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify the simple mechanisms based on a given application, and find velocity and acceleration of simple mechanisms.
- Estimate the amount of power transmitted by drive.
- Calculate the speed ratio of various types of the gear train and construct the cam profile for the various types of follower motion.
- Estimate the balancing mass for rotating and reciprocating masses by using the force and couple polygon.
- Evaluate the natural frequency of a single degrees of freedom system subjected to free and forced vibrations.
- Compute the torsional vibration of shaft

Course Contents:**UNIT I MECHANISMS**

Machine structure – kinematic link, pair and chain – Gruebler's criteria – constrained motion – degrees of freedom – slider crank and crank rocker mechanisms – inversions – applications – kinematic analysis of simple mechanisms – determination of velocity and acceleration.

UNIT II FRICTION

Types of friction – friction in screw and nut – screw jack – pivot and collar – thrust bearing – plate and disc clutches – belt and rope drives – ratio of tensions – effect of centrifugal and initial tension – condition for maximum power transmission – open and crossed belt drive.

UNIT III GEARS AND CAMS

Gear profile and geometry – nomenclature of spur and helical gears – gear trains – simple, compound and epicyclic gear trains – determination of speed and torque – cams – types of cams – design of profiles for knife edged, flat faced and roller ended followers with and without offsets for various types of follower motions.

UNIT IV BALANCING

Static and dynamic balancing – single and several masses in different planes – balancing of reciprocating masses – primary balancing and concepts of secondary balancing – swaying couple – tractive force – hammer blow – balancing of coupled locomotives – governors and gyroscopic effects.

UNIT V VIBRATION

Free, forced and damped vibrations of single degree of freedom systems – force transmitted to supports – vibration isolation – vibration absorption – torsional vibration of shaft – single and multi rotor systems – geared shafts – critical speed of shaft.

Suggested Readings:

1. Rattan S S, *Theory of Machines*, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2014.
2. Ballaney P L, *Theory of Machines and Mechanisms*, Khanna Publishers, New Delhi, 2002.
3. Bansal R K, *Theory of Machines*, Laxmi Publications, New Delhi, 2012.
4. Rao J S and Duggipati R V, *Mechanism and Machine Theory*, New Age International Publishers, New Delhi, 2006.
5. Malhotra D R and Gupta H C, *The Theory of Machines*, Satya Prakasam Tech. India Publications, 1989.
6. Amitabha Ghosh and Asok Kumar Mallik, *Theory of Mechanisms and Machines*, Affiliated East-West Press, New Delhi, 1988.
7. Shigley J E and Uicker J J, *Theory of Machines and Mechanisms*, McGraw-Hill Education, 1986.

18BEAE404**ENGINEERING MATERIALS AND METALLURGY****Semester IV**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide knowledge on physical metallurgy of metals through the study of phase diagrams.
- To study the properties and applications of various metals and alloys used in engineering industries.
- To expose the various heat treatment processes of steels.
- To impart knowledge of the mechanical properties evaluation and testing methods of engineering materials.
- To introduce fundamentals of composites
- To provide fundamental knowledge of composites and their applications.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the phase diagrams of different engineering materials.
- Recognise the properties and applications of various metals and alloys.
- Identify the appropriate heat treatment processes for the given applications.
- Test the mechanical properties of the given materials for real-time applications.
- Understand the fundamentals of composites
- Identify the appropriate composites for applications in the automotive industry.

Course Contents:**UNIT I CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS**

Constitution of alloys – solid solutions – substitutional and interstitial – phase diagrams – isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions – iron-carbon equilibrium diagram– classification of steel and cast iron – microstructure, properties and application.

UNIT II FERROUS AND NON-FERROUS METALS

Effect of alloying additions on steel (Mn, Si, Cr, Mo, V, Ti and W) – stainless and tool steels – High-strength low-alloy steel – maraging steels – gray, white malleable, spheroidal – graphite – alloy cast irons – copper and copper alloys – brass, bronze and cupronickel – aluminium and Al-Cu – precipitation strengthening treatment – bearing alloys.

UNIT III HEAT TREATMENT

Purpose of heat treatment –annealing – types of annealing processes – normalising – hardening and tempering – isothermal transformation diagrams – cooling curves superimposed on isothermal transformation diagrams– critical cooling rate–hardenability – Jominy end quench test – austempering – martempering – case hardening – types of case hardening processes.

UNIT IV MECHANICAL PROPERTIES AND TESTING

Mechanism of plastic deformation, slip and twinning – types of fracture – testing of materials under tension, compression and shear loads – hardness and testing methods– impact test – fatigue test – creep test.

UNIT V INTRODUCTION TO COMPOSITES

Fundamentals of composites – need for composites – enhancement of properties – classification of composites – matrix – polymer matrix composites, metal matrix composites, ceramic matrix composites – reinforcement – particle reinforced composites, fibre reinforced composites – applications of various types of composites in automobiles.

Suggested Readings:

1. Kenneth G Budinski and Michael K Budinski, *Engineering Materials*, Prentice Hall of India, 2010.
2. Raghavan V, *Materials Science and Engineering*, Prentice Hall of India, 1999.
3. Bhagwan D Agarwal, Lawrence J Broutman and Chandrashekhara K, *Analysis and Performance of Fiber Composites*, John Wiley & Sons, 2017.
4. William D Callister Jr., *Materials Science and Engineering: An Introduction*, John Wiley & Sons, 2004.
5. Sidney H Avner, *Introduction to Physical Metallurgy*, Tata McGraw- Hill, 1997.
6. Ronald F Gibson, *Principles of Composite Material Mechanics*, CRC Press, 2016.

18BEAE441**AUTOMOTIVE CHASSIS AND TRANSMISSION****Semester IV
6H-5C****Instruction Hours/Week: L:3 T:0 P:3****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide knowledge on the frame, front axle and steering system.
- To expose the different types of clutches and gearboxes.
- To study the various components in driveline, final drive and rear axle.
- To learn the types of suspension systems and wheels.
- To provide an overview of tyres – tyre construction – tyre designation
- To impart knowledge on construction and working principle of different types of brakes.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss the types of frame, front axle and steering system.
- Sketch and explain the different types of clutches and gearboxes.
- Describe the components in driveline, final drive and rear axle.
- Describe the suspension systems and wheels.
- Familiar with tyres – tyre construction – tyre designation
- Explain the construction and working principle of different types of brakes.

Course Contents:**UNIT I FRAME, FRONT AXLE AND STEERING SYSTEM**

Chassis and its classification – types, materials and load acting on frame – types of front and stub axles – steering geometry – conditions for true rolling motion of wheels during steering – Ackermann and Davis steering mechanisms – steering linkages – types of steering gearboxes – understeer and oversteer – steering ratio – reversible and irreversible steering – power steering.

UNIT II CLUTCH AND TRANSMISSION GEARBOX

Requirements of clutch – construction and working of different types of clutches – necessity of transmission – types of transmission – construction and operation of sliding mesh, constant mesh, synchromesh and epicyclic gearboxes – torque converter – overdrive – continuously variable transmissions.

UNIT III DRIVELINE, FINAL DRIVE AND REAR AXLE

Driveline – propeller shaft – universal joints – slip joint – final drive – Hotchkiss drive – torque tube drive – differential principle – construction and operation of differential unit – non-slip differential – differential locks – loads on a rear axle – types of rear axles – rear axle casing – multi-drive axle.

UNIT IV SUSPENSION, WHEELS AND TYRES

Requirements of a suspension system – types of suspension springs – constructional details and characteristics of leaf spring, coil spring, torsion bar and rubber spring – air and hydrostatic suspension systems – independent suspension – shock absorbers – types of wheels – types of tyres – tyre construction – tyre designation – tyre pressure and wear – factors affecting tyre life.

UNIT V BRAKES

Need for brake systems – stopping distance, time and braking efficiency – effect of weight transfer during braking – classification of brakes – drum and disc brakes – construction and working of mechanical, hydraulic and pneumatic brake systems – servo brake systems – power brakes – engine exhaust brakes – hand brake – retarders – Anti-lock Braking Systems (ABS).

Suggested Readings:

1. Kirpal Singh, *Automobile Engineering Volume. 1*, Standard Publishers, New Delhi, 2018.
2. Gupta R B, *Automobile Technology*, Satya Prakashan, New Delhi, 2016.
3. Giri N K, *Automobile Mechanics*, Khanna Publishers, New Delhi, 2008.
4. Peter Martin Heldt, *The Automotive Chassis*, Chilton Book Co., 1992.
5. Tim Gilles, *Automotive Chassis: Brakes, Suspension, and Steering*, Cengage Learning, 2005.

List of Experiments:

1. Servicing of the clutch assembly with play adjustment.
2. Servicing of the transmission gearbox assembly.
3. Servicing of the propeller shaft and universal joint assembly.
4. Servicing of the drive shaft assembly.
5. Servicing of the differential assembly.
6. Servicing of different types of rear axle assembly.
7. Servicing of the steering gearbox assembly.
8. Servicing of the suspension system.
9. Servicing of the brake system.
10. Study of two-wheeler, light motor vehicle and heavy motor vehicle chassis.

18BEAE442	AUTOMOTIVE ELECTRICAL AND ELECTRONICS SYSTEMS	Semester IV 6H-5C
------------------	--	------------------------------------

Instruction Hours/Week: L:3 T:0 P:3**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To expose the different types of batteries and ignition systems.
- To provide knowledge on the working of starting system and charging system.
- To provide knowledge on automobile wiring system.
- To learn the automobile lighting system.
- To study the various sensors and actuators used in the automobile.
- To impart knowledge on the electronic engine management system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Sketch and explain the working principle of battery and ignition system.
- Discuss working of the starting system and charging system.
- Illustrate the automobile wiring system.
- Illustrate the automobile lighting system.
- Identify the sensors and actuators used in the automobile.
- Explain the electronic engine management system.

Course Contents:**UNIT I BATTERY AND IGNITION SYSTEM**

Different types of batteries – principle and construction of lead acid battery – battery rating, testing, maintenance and charging – spark plugs – advance mechanisms – different types of ignition systems.

UNIT II STARTING SYSTEM AND CHARGING SYSTEM

Principle, construction and working of starter motor – starter motors characteristics, capacity requirements – drive mechanisms – starter switches – principle, construction and working of DC generators and alternators – characteristics of DC generators and alternators – control unit – cut out, electronic regulators.

UNIT III LIGHTING SYSTEM, WIRING SYSTEM AND ACCESSORIES

Vehicle interior lighting system – vehicle exterior lighting system – wiring requirements – lighting design – dashboard instruments – horn, wiper, trafficator.

UNIT IV SENSORS AND ACTUATORS

Classification of sensors – sensor for speed, throttle position, exhaust oxygen level, manifold pressure, crankshaft position, coolant temperature, intake air temperature, exhaust temperature, air mass flow for engine application – solenoids, stepper motors and relay.

UNIT V ELECTRONIC ENGINE MANAGEMENT SYSTEM

Electronic engine control – input, output and control strategies – electronic fuel control system – fuel control modes – open loop and closed loop control at various modes – exhaust gas recirculation (EGR) control – electronic ignition systems – spark advance correction schemes – fuel injection timing control.

Suggested Readings:

1. Young A P and Griffiths L, *Automobile Electrical Equipments*, ELBS & New Press, 1990.
2. William B Ribbens, *Understanding Automotive Electronics*, Butterworth-Heinemann, 2012.
3. Robert Bosch, *Bosch Automotive Electrics and Automotive Electronics*, Springer, 2014.
4. James D Halderman, *Automotive Electricity and Electronics*, Pearson Education, 2016.
5. Barry Hollembeak, *Automotive Electricity & Electronics*, Delmar Cengage Learning, 2011.
6. Arthur W Judge, *Modern Electrical Equipment for Automobiles*, Chapman & Hall, 1992.

List of Experiments:**A. Electrical Laboratory**

1. Testing of batteries and battery maintenance.
2. Testing of starter motors.
3. Testing of alternators.
4. Fault diagnosis of the ignition system.
5. Study of automobile electrical wiring circuits.

B. Electronics Laboratory

1. Study of rectifiers and filters.
2. Study of logic gates.
3. Study of SCR and IC timer.
4. Interfacing A/D converter and simple data acquisition.
5. Display and keyboard interfacing with microcontroller.
6. Interfacing sensors using a microcontroller.

18BEAE411	FLUID MECHANICS AND STRENGTH OF MATERIALS LABORATORY	SemesterIV 3H-2C
------------------	---	-----------------------------

Instruction Hours/Week: L:0 T:0 P:3**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To demonstrate the principles of fluid mechanics.
- To measure the energy losses in a pipe flow.
- To perform a characteristic study on non-positive and positive displacement pumps.
- To know the tensile and shear strength of materials.
- To study the hardness and impact strength of materials.
- To give exposure to compression strength of helical springs

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Calculate the rate of fluid flow and coefficient of discharge in fluid flow devices.
- Measure the losses associated in a pipe flow.
- Evaluate the performance of non-positive and positive displacement pumps.
- Measure the tensile and shear strength of materials.
- Evaluate the hardness and impact strength of materials.
- Evaluate the compression strength of helical springs

List of Experiments:

1. Determination of the coefficient of discharge of venturimeter and orifice meter.
2. Calculation of the rate of flow using rotameter.
3. Determination of the friction factor for a set of pipes.
4. Performance test on the centrifugal pump/submersible pump.
5. Performance test on the reciprocating pump.
6. Performance test on the gear pump.
7. Tension test on a mild steel rod.
8. Torsion test on a mild steel rod
9. Single shear and double shear test on metals.
10. Hardness test on metals.
11. Impact test on metals.
12. Compression test on helical springs.

18BEAE451**COURSE ORIENTED PROJECT - I****Semester IV**
1H-0C

Instruction Hours/Week: L:0 T:0 P:1**Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To develop the skills to formulate a technical project.
- To give guidance on the various tasks of the project and standard procedures.
- To provide the guidelines to prepare a technical report of the project.
- Apply technical ideas, strategies and methodologies.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify a problem and develop the solutions.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Apply technical ideas, strategies and methodologies.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.
- Prepare technical report and oral presentations.

Guidelines:

- A maximum of three students per team should do the project work.
- At the end of the semester, a report and a technical presentation should be made by the students.

18BEAE452**FUELS AND LUBRICANTS****Semester IV**
1H-0C**Instruction Hours/Week: L:1 T:0 P:0****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To provide knowledge on the theory of lubrication.
- To familiarise the manufacturing process of fuels and lubricants.
- To study the properties of lubricants and fuel.
- Define the various terminologies associated with fuel.
- Explain the manufacture of automotive lubricants
- Explain the Thermo-chemistry of fuels

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the manufacturing process of fuels and lubricants.
- Describe the refining process
- Define the various terminologies associated with fuel.
- Explain the manufacture of automotive lubricants
- Explain the Thermo-chemistry of fuels
- Select the suitable lubrication type for a particular application.

Course Contents:**PART I MANUFACTURE OF FUELS AND LUBRICANTS**

Engine friction – effect of engine variables on friction – hydrodynamic lubrication – elasto hydrodynamic lubrication – boundary lubrication – bearing lubrication – functions of the lubrication system.

Structure of petroleum – refining process – fuels – thermal cracking, catalytic cracking, polymerization, alkylation, isomerisation, blending – products of refining process – manufacture of automotive lubricants.

PART II LUBRICANTS, PROPERTIES AND TESTING OF FUELS

Specific requirements for automotive lubricants – oxidation, deterioration and degradation of lubricants – additives and additive mechanism – synthetic lubricants – classification of lubricating oils – properties of lubricating oils – tests on lubricants – grease classification and properties – test used in grease.

Thermo-chemistry of fuels – properties and testing of fuels: relative density, calorific value, flash point, fire point, distillation, vapour pressure, spontaneous ignition temperature, viscosity, pour point, flammability, ignitability, diesel index, American Petroleum Institute (API) gravity, aniline point, carbon residue, copper strip corrosion.

Suggested Readings:

1. George E Totten, Steven R Westbrook, Rajesh J Shah, *Fuels and Lubricants Handbook: Technology, Properties, Performance, and Testing*, ASTM International, 2003.
2. Lansdown A R, *Lubrication: A Practical Guide to Lubricant Selection*, Pergamon Press, 1982.

18BEAE501**DESIGN OF MACHINE ELEMENTS****Semester V**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn the design procedure of machine elements subjected to simple loads.
- To understand the various types of stresses induced in different machine members.
- To study the design procedure of shafts and couplings.
- To provide knowledge on the design of bolted and welded joints.
- To impart knowledge on the design of helical spring and flywheel.
- To study the selection procedure of sliding and rolling contact bearings.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Design machine elements subjected to simple loads.
- Design shaft for various engineering applications.
- Design couplings for various engineering applications.
- Design bolted and welded joints subjected to static and eccentric loading conditions.
- Design helical spring and flywheel for various engineering applications.
- Design and select journal bearings and rolling contact bearings for various machines.

Course Contents:**UNIT I STEADY STRESSES IN MACHINE MEMBERS**

Introduction to the design process – factors influencing in machine design – selection of materials based on mechanical properties – direct, bending and torsional stress equations – impact and shock loading – calculation of principle stresses for various load combinations – eccentric loading – curved beams – factor of safety – theories of failure – stress concentration.

UNIT II SHAFTS AND COUPLINGS

Shafts – types of shafts – standard sizes of shafts – design of shafts based on strength and torsional rigidity – keys, keyways and splines – couplings – types of couplings – design of rigid and flexible couplings.

UNIT III TEMPORARY AND PERMANENT JOINTS

Threaded fasteners – types of threaded fasteners – terminology, classification and designation of screw threads – design of bolts – welded joints – types of welded joints – design of welded joints.

UNIT IV ENERGY STORING ELEMENTS

Springs – classification – applications – design of helical spring – flywheel – fluctuation of speed – turning moment diagram – fluctuation of energy – workdone per cycle – energy storing capacity of flywheel – design of flywheel.

UNIT V BEARINGS

Classification – rolling contact bearings – designation – design of rolling contact bearing – sliding contact bearings – terminology and design of hydrodynamic journal bearing – lubrication.

Note: Usage of approved data book is permitted in the examination.

Suggested Readings:

1. Bhandari V B, *Design of Machine Elements*, McGraw-Hill Education, 2016.
2. Robert C Juvinall and Kurt M Marshek, *Fundamentals of Machine Component Design*, John Wiley & Sons, 2011.
3. Robert L Mott, Edward M Vavrek and Jyhwen Wang, *Machine Elements in Mechanical Design*, Pearson, 2017.
4. Robert L Norton, *Design of Machinery*, McGraw-Hill, 2003.
5. William Orthwein, *Machine Component Design*, Jaico Publishing House, 2013.
6. Ansel C Ugural, *Mechanical Design: An Integrated Approach*, McGraw-Hill, 2004.
7. Spotts M F, Shoup T E and Hornberger L E, *Design of Machine Elements*, Pearson, 2003.

18BEAE502**IC ENGINE DESIGN****Semester V**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn the design procedure of cylinder and piston.
- To study the design procedure of connecting rod.
- To provide knowledge on the design of crankshaft.
- To impart knowledge on the design of valves and valve actuating components.
- To study the design procedure of timing belt and pulley
- To acquaint the student with the concepts of sprocket and chain.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Design cylinder and piston for the specified power and torque.
- Design connecting rod of an engine.
- Design crankshaft of an engine.
- Design valves and valve actuating components.
- Select suitable timing belt and pulley.
- Select suitable transmission chains and sprockets

Course Contents:**UNIT I DESIGN OF CYLINDER AND PISTON**

Material selection for cylinder and piston – piston friction, piston slap, piston failure – lubrication of piston assembly – design of cylinder, piston, piston pin and piston rings.

UNIT II DESIGN OF CONNECTING ROD

Material selection for connecting rod – design of connecting rod small end, big end and shank – design of connecting rod cap and bolt.

UNIT III DESIGN OF CRANKSHAFT

Materials selection for crankshaft – balancing of IC engines – significance of firing order – design of crankshaft under bending and twisting – balancing weight calculations.

UNIT IV DESIGN OF VALVES AND VALVE ACTUATING COMPONENTS

Materials selection for valves and valve actuating component – design of camshaft, push rod, rocker arm, rocker shaft, valves and valve spring.

UNIT V DESIGN OF TIMING BELT, PULLEY, SPROCKET AND CHAIN

Selection of V-belts and pulleys – selection of flat belts and pulleys – selection of transmission chains and sprockets – design of pulleys and sprockets.

Note: Usage of approved data book is permitted in the examination.

Suggested Readings:

1. Kulkarni S G, *Machine Design*, Tata McGraw-Hill, 2008.
2. Jain R K, *Machine Design*, Khanna Publishers, New Delhi, 1988.
3. Charles Fayette Taylor, *The Internal Combustion Engine in Theory and Practice*, The MIT Press, 1968.
4. Kolchin A and Demidov V, *Design of Automotive Engines*, Mir Publishers, Moscow, 1984.
5. John Fenton, *Engine Design*, Cambridge University Press, 1986.
6. Joseph E Shigley, Charles R Mischke, Richard G Budynas and Keith J Nisbett, *Mechanical Engineering Design*, McGraw-Hill Education, 2015.

18BEAE503**VEHICLE DYNAMICS****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To study the fundamental concept of vibration of a single degree of freedom system.
- To acquire knowledge on the road vehicle dynamics, stability and handling.
- To develop an understanding of the relationships between vehicle design variables and vehicle dynamic behaviour.
- To apply modelling techniques to predict the dynamic behaviour of road vehicles.
- To introduce the concepts of gradeability, tractive force, braking force and stopping distance
- To provide knowledge on steady state cornering model to design the steering system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basic elements of vibration of single degree of freedom system.
- Analyse the cornering and tractive property of a tyre.
- Understand the sources of vibration
- Design and analyse the suspension system of a vehicle.
- Analyse the gradeability, tractive force, braking force and stopping distance of a vehicle.
- Apply steady state cornering model to design the steering system of a vehicle.

Course Contents:**UNIT I BASICS OF VIBRATION**

Mechanical vibrating systems – mechanical vibration and human comfort – single degree of freedom free vibration – forced and damped vibrations – magnification factor and transmissibility – modelling and simulation studies – vibration absorber – vibration measuring instruments.

UNIT II TYRES

Tyre forces and moments – tyre structure – longitudinal and lateral force at various slip angles – rolling resistance – tractive and cornering property of tyre – performance of tyre on wet surface – ride property of tyres – magic formula tyre model – estimation of tyre road friction – test on various road surfaces – tyre vibration.

UNIT III VERTICAL DYNAMICS

Two degree of freedom system – sources of vibration – modelling of passive, semi-active and active suspension using quarter car model, half car model and full car model – influence of suspension stiffness, suspension damping, and tyre stiffness – air suspension system and their properties.

UNIT IV LONGITUDINAL DYNAMICS

Aerodynamic forces and moments– tyre forces – rolling resistance – load distribution for three wheeler and four wheeler – calculation of maximum acceleration – reaction forces for different drives – braking and driving torque – prediction of vehicle performance – anti-lock braking system – stability control – traction control.

UNIT V LATERAL DYNAMICS

Steady-state handling characteristics – steady-state response to steering input – transient response characteristics – direction control of vehicle – roll centre, roll axis – vehicle underside forces – stability of vehicle on banked road, during turn – effect of suspension on cornering.

Suggested Readings:

1. Thomas D Gillespie, *Fundamentals of Vehicle Dynamics*, SAE, 1992.
2. Rajesh Rajamani, *Vehicle Dynamics and Control*, Springer, 2005.
3. Singiresu S Rao, *Mechanical Vibrations*, Pearson, 2016.
4. Hans B Pacejka, *Tyre and Vehicle Dynamics*, Butterworth-Heinemann, 2006.
5. Reza N Jazar, *Vehicle Dynamics: Theory and Application*, Springer, 2008.
6. Jan Zuijdijk, *Vehicle Dynamics and Damping*, AuthorHouse, 2013.

18BEAE504**ENVIRONMENTAL SCIENCES****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To give a comprehensive insight into natural resources, ecosystem and biodiversity.
- To educate the ways and means of the environment.
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge of human welfare measures.
- Express the importance of conservation of biodiversity.
- Explain the different types of pollution.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Name the renewable and non-renewable energy sources.
- Explain the concept of an ecosystem.
- Express the importance of conservation of biodiversity.
- Explain the different types of pollution.
- Describe the disaster management
- List the various social issues and possible solutions.

Course Contents:**UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES**

Definition – scope and importance – need for public awareness – forest resources – use and overexploitation – deforestation – water resources – use and overutilization of surface and groundwater – floods – drought – conflicts over water – land resources – land as a resource – land degradation – man induced landslides – soil erosion and desertification – mineral resources – use and exploitation – environmental effects of extracting and using mineral resources – food resources – world food problems – changes caused by agriculture and overgrazing – effects of modern agriculture – energy resources – growing energy needs – renewable and non-renewable energy sources – use of alternate energy sources – role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM

Chemistry and environment – environmental segments – composition and structure of atmosphere – concept of an ecosystem – structure, components and function of an ecosystem – energy flow in the ecosystem – food chain, food web and ecological pyramids – structure and function of terrestrial ecosystem (forest, desert and grassland ecosystem) and aquatic ecosystem (freshwater and marine ecosystem).

UNIT III BIODIVERSITY

Definition – genetic diversity, species diversity and ecosystem diversity – biogeographical classification of India – importance of biodiversity – value of biodiversity – hotspots of biodiversity – threats to biodiversity – endangered and endemic species of India – conservation of biodiversity – in-situ and ex-situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION

Definition – causes, effects and control measures of air pollution, water pollution, soil pollution, marine pollution, noise pollution and thermal pollution – solid waste management – causes, effects and control measures of urban and industrial wastes – role of an individual in prevention of pollution – disaster management – earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT

From unsustainable to sustainable development – urban problems related to energy sources – water conservation, rainwater harvesting and watershed management – resettlement and rehabilitation of people, its problems and concerns – environmental ethics – issues and possible solutions – climate change – greenhouse effect and global warming – acid rain – ozone layer depletion – wasteland reclamation – environment protection act – human rights – value education – role of information technology in environment and human health – human safety – population growth – variation of population among nations – population explosion.

Suggested Readings:

1. Ravikrishnan A, *Environmental Science*, Sri Krishna Hitech Publishing Company Pvt. Ltd., Chennai, 2012.
2. Anubha Kaushik and Kaushik C P, *Environmental Science and Engineering*, New Age International (P) Ltd., New Delhi, 2010.
3. William P Cunningham, *Principles of Environmental Science*, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2008.
4. Linda D Williams, *Environmental Science Demystified*, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2005.
5. Erach Bharucha, *The Biodiversity of India*, Mapin Publishing (P) Ltd., Ahmedabad, 2005.
6. Tyler Miller G Jr., *Environmental Science*, Thomson & Thomson Publishers, New Delhi, 2004.
7. Trivedi R K and Goel P K, *Introduction to Air Pollution*, Techno-Science Publications, Jaipur, 2003.

Instruction Hours/Week: L:0 T:0 P:3**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To study the working principle of governor and gyroscope.
- To familiarize the students to understand gyroscopic law and gyroscopic couple
- To provide knowledge on the balancing of rotating and reciprocating masses.
- To learn the concept of transverse and torsional vibration.
- To introduce the concept and working of sensors used in the mechatronic systems.
- To impart knowledge on working of microcontroller in the mechatronic systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Select the suitable governor for various engineering applications.
- Familiar with gyroscopic law and determine the gyroscopic couple
- Estimate the balancing mass for rotating and reciprocating masses.
- Calculate the natural frequency of transverse and torsional vibration.
- Select the different types of sensor for various mechatronics applications.
- Develop a controller using the microcontroller for mechatronic system.

List of Experiments:

1. Determination of range, sensitivity and effort of Watt, Porter and Proell governors.
2. Verification of gyroscopic law and determination of gyroscopic couple.
3. Determination of jump speed and profile of a cam.
4. Balancing of rotating and reciprocating masses.
5. Determination of moment of inertia of connecting rod and flywheel by oscillation method.
6. Determination of critical speed of a shaft with concentrated loads.
7. Determination of torsional frequency of compound pendulum and flywheel.
8. Determination of natural frequency and deflection of the beam.
9. Design and testing of fluid power circuits to control velocity, direction and force of single and double acting actuators.
10. Design of circuits with logic sequence using electro-pneumatic trainer kits.
11. Simulation of basic hydraulic, pneumatic and electric circuits using the software.
12. Study of circuits with multiple cylinder sequences in electro-pneumatic using PLC.

18BEAE551**COURSE ORIENTED PROJECT - II****Semester V**
1H-0C**Instruction Hours/Week: L:0 T:0 P:1****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To develop the skills to formulate a technical project.
- To give guidance on the various tasks of the project and standard procedures.
- To provide the guidelines to prepare a technical report of the project.
- Analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify a problem and develop the solutions.
- Apply technical ideas, strategies and methodologies.
- Analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.
- Prepare technical report and oral presentations.

Guidelines:

- A maximum of three students per team should do the project work.
- At the end of the semester, a report and a technical presentation should be made by the students.

18BEAE552**TECHNICAL PRESENTATION****Semester V**
1H-0C**Instruction Hours/Week: L:0 T:0 P:1****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To develop self-learning skills of utilizing various technical resources to make a technical presentation.
- To promote technical presentation and communication skills.
- To understand the guidelines to prepare the slides and effectively use it for presentation.
- To promote the ability for interacting and sharing attitude.
- Learn, practice and acquire the skills necessary
- Use a structured presentation methodology to prepare presentation material and effective visual aids

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Refer and utilise various technical resources available from multiple fields.
- Demonstrate sound technical knowledge on a given topic.
- Learn, practice and acquire the skills necessary
- Use a structured presentation methodology to prepare presentation material and effective visual aids
- Determine and develop personal presentation style
- To deliver effective presentation with clarity

18BEAE553**IN-PLANT TRAINING****Semester V**
0H-0C

Instruction Hours/Week: L:0 T:0 P:0**Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To expose the students to the realworking environment.
- To develop skills in the application of theory to practical work situations.
- To build the strength, teamwork spirit and self-confidence in students life.
- To enhance the ability to improve students creativity skills and sharing ideas.
- Learn, practice and acquire the skills necessary
- Acquire knowledge through interaction with professionals

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply theoretical knowledge to practical work situations.
- Become updated with all the modern changes in technological world.
- Learn, practice and acquire the skills necessary
- Acquire knowledge through interaction with professionals
- Prepare report and presentation with effective visual aids
- To deliver effective presentation with clarity

Guidelines:

- Students should undergo in-plant training for a minimum duration ofthree weeks duration during winter/summer vacation between III and V semesters.
- A report with an in-plant training completion certificate from the industry should be subsequently submitted to the department within a week after completion of in-plant training.
- The viva-voce examination will be conducted at the end of V semester.

18BEAE601**AUTOMOTIVE CHASSIS COMPONENTS DESIGN****Semester VI**
4H-4C**Instruction Hours/Week: L:3 T:1 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn the design procedure of frame and springs.
- To study the design procedure of front axle and steering linkages.
- To provide knowledge on the design of clutches.
- To impart knowledge on the design of three speed and four speed gearboxes.
- To study the design of driveline components.
- To facilitate the understanding of shafts

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Design the frame and springs for automotive.
- Analyse the loads, moments and stresses at different sections of front axle.
- Design a suitable clutch for various engineering applications.
- Design the gearbox for various engineering applications.
- Design the propeller shaft to transmit required torque.
- Design the rear axle shafts

Course Contents:**UNIT I VEHICLE FRAME AND SUSPENSION**

Study of loads – moments and stresses on frame members – design of frame for passenger and commercial vehicle – design of leaf springs, coil springs and torsion bar springs.

UNIT II FRONT AXLE AND STEERING SYSTEMS

Analysis of loads, moments and stresses at different sections of front axle – determination of bearing loads at kingpin bearings, wheel spindle bearings – choice of bearings – determination of optimum dimensions and proportions for steering linkages, ensuring minimum error in steering – design of front axle beam.

UNIT III CLUTCH

Design of single plate clutch, multi-plate clutch and cone clutch – torque capacity of clutch – design of clutch components – design details of roller and sprag clutches.

UNIT IV GEARBOX

Gear train calculations – layout of gearboxes – calculation of bearing loads and selection of bearings – design of three speed and four speed gearboxes.

UNIT V DRIVELINE AND REAR AXLE

Design of propeller shaft – design details of final drive gearing – design details of full floating, semi-floating and three-quarter floating rear shafts – design aspects of final drive.

Suggested Readings:

1. Giri N K, *Automobile Mechanics*, Khanna Publishers, New Delhi, 2008.
2. Giancarlo Genta and Lorenzo Morello, *The Automotive Chassis: Volume 1: Components Design*, Springer Netherlands, 2014.
3. Dean Avern, *Automobile Chassis Design*, Iliffe Books Ltd., 2001.

18BEAE602**ENGINEERING ECONOMICS AND FINANCIAL
MANAGEMENT****Semester VI
3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the basics of economics and cost analysis related to engineering so as to take economically sound decisions.
- To acquire knowledge on laws of demand and supply.
- To emphasise the systematic evaluation of the costs, break-even point for return on economics and diseconomies.
- To acquaint in pricing methods, payback and competition in the modern market structure.
- To impart knowledge on economic liberalization, privatization and globalization
- To enrich the understanding of engineering economics analysis

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the major concepts and techniques of engineering economic analysis in real-time applications.
- Analyse the demand and supply and sketch a demand and supply curve.
- Determine the break-even point and find out the strength and weakness of the market structure.
- Compare the cost of multiple projects by using the methods learned, and make a quantitative decision between alternate facilities and/or systems.
- Understand economic liberalization, privatization and globalization
- Apply the appropriate engineering economics analysis methods for problem solving.

Course Contents:**UNIT I FUNDAMENTALS OF ENGINEERING ECONOMICS**

Introduction to engineering economics – definition and scope – significance of engineering economics – demand and supply analysis – law of demand – elasticity of demand – demand forecasting – supply – law of supply – elasticity of supply – market mechanism.

UNIT II FINANCIAL MANAGEMENT

Objectives and functions of financial management – financial statements, working capital management – factors influencing working capital requirements – estimation of working capital – cost analysis – basic cost concepts – total cost, variable cost, total cost, marginal cost – cost output in the short and long run.

UNIT III CAPITAL MARKET

Stock exchanges – functions – listing of companies – role of Securities and Exchange Board of India – index numbers – capital market reforms – money and banking – money – functions – value

of money – inflation and deflation – commercial bank and its functions – central bank and its functions.

UNIT IV NEW ECONOMIC ENVIRONMENT

Economic systems, economic liberalization –privatization – globalization – overview of international trade – World Trade Organization – intellectual property rights – capital budgeting – need for capital budgeting – project appraisal methods – payback period – average rate of return – time value of money – discounted cash flow techniques – feasibility report.

UNIT V DEPRECIATION AND BREAK-EVEN ANALYSIS

Depreciation – causes for depreciation – methods of computing depreciation – break-even analysis and its objectives – break-even chart – simple problems – managerial uses of break-even analysis.

Suggested Readings:

1. Ramachandra Aryasri A and Ramana Murthy V V, *Engineering Economics and Financial Accounting*, Tata McGraw-Hill, New Delhi, 2003.
2. Varshney R L and Maheshwari K L, *Managerial Economics*, Sultan Chand & Sons, New Delhi, 2014.
3. Paul A Samuelson and William D Nordhaus, *Economics*, Tata McGraw-Hill, New Delhi, 2010.

18BEAE641**MANUFACTURING TECHNOLOGY****Semester VI**
6H-5C**Instruction Hours/Week: L:3 T:0 P:3****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the basic principle and manufacturing methods of components.
- To study the steps involved in the casting process.
- To learn the theory of metal cutting and calculate the forces involved in it.
- To introduce the basic concepts of integrated manufacturing.
- To introduce the basic concepts of grinding process
- To provide an exhaustive knowledge on various generic process and benefits of rapid prototyping techniques.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- List and explain the steps involved in the casting process.
- Understand the theory of metal cutting
- Select the suitable type of machine for machining operations.
- Describe the types of grinding process.
- Select the suitable material handling and storage system for flexible manufacturing systems.
- Select appropriate rapid prototyping process for engineering applications.

Course Contents:**UNIT I METAL CASTING**

Casting process: introduction, steps involved, types, advantages, limitations and applications – pattern: design, types, materials and allowances– moulding sand:constituents, types and properties – core making – melting practice and furnace – casting defects: types, causes and remedies.

UNIT II THEORY OF METAL CUTTING AND MACHINE TOOLS

Mechanics of chip formation – single point cutting tool – forces in machining – types of chip – cutting tool nomenclature – orthogonal and oblique metal cutting – cutting tool materials – tool wear, tool life, surface finish – cutting fluids.

Classification, construction and specifications of lathe, shaper, planer, milling and drilling machines – machining time and cost estimation.

UNIT III MANUFACTURE OF COMPONENTS AND ABRASIVE PROCESSES

Production of axisymmetric components – production of prismatic components – hole-making processes – gear manufacturing processes.

Abrasive processes: grinding wheel – specifications and selection – cylindrical grinding, surface grinding, centreless grinding and internal grinding – typical applications – concepts of surface integrity.

UNIT IV INTEGRATED MANUFACTURING SYSTEM

Definition – application – features – types of manufacturing systems – computer numerical control systems – direct numerical control systems – manufacturing cells – Flexible Manufacturing Systems (FMS) – transfer systems – head changing FMS – group technology.

UNIT V RAPID PROTOTYPING

Introduction – principle, process and applications of stereo-lithography, selective laser sintering, fused deposition modelling, laminated object manufacturing and three-dimensional printing – rapid tooling – indirect rapid tooling – direct rapid tooling.

Suggested Readings:

1. Rao P N, *Manufacturing Technology Volume-I and Volume-II*, McGraw-Hill Education, 2018.
2. Amitabha Ghosh and Asok Kumar Mallik, *Manufacturing Science*, Affiliated East-West Press, 2010.
3. Pham D T and Dimov S S, *Rapid Manufacturing*, Springer, 2001.
4. HMT, *Production Technology*, Tata McGraw-Hill, New Delhi, 2001.
5. Serope Kalpakjian and Steven R Schmid, *Manufacturing Engineering and Technology*, Pearson, 2014.
6. Chua C K, Leong K F and Lim C S, *Rapid Prototyping: Principles and Applications*, World Scientific Publishing, 2010.

List of Experiments:

1. Study of machine shop layout and machine tools.
2. Facing, plain and step turning.
3. Grooving and taper turning.
4. Knurling and thread cutting.
5. Drilling, reaming and counterboring.
6. Tapping.
7. Keyway cutting.
8. V-block shaping.
9. Polygon milling.
10. Study of forging processes.

18BEAE611**VEHICLE MAINTENANCE LABORATORY****Semester VI**
3H-2C**Instruction Hours/Week: L:0 T:0 P:3****Marks: Internal:40 External:60 Total:100****End Semester Exam: 3 hours****Course Objectives:**

- To study the garage layout and general procedure for servicing.
- To learn the tuning of gasoline engine.
- To expose students to tuning of diesel engines
- To impart knowledge on fault diagnosis in electrical and electronic ignition systems.
- To provide knowledge on troubleshooting of fuel feed system, charging system, starting system and lighting system.
- To familiarise with adjustment of the headlight beam.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- List the procedure for servicing of an automobile.
- Demonstrate the tuning of gasoline engines.
- Demonstrate the tuning of diesel engines.
- Identify the fault in electrical and electronic ignition systems.
- Analyse and troubleshoot the faults of fuel feed system, charging system, starting system and lighting system.
- Demonstrate the adjustment of the headlight beam.

List of Experiments:

1. Study of an automobile garage.
2. Study of general procedures for servicing and maintenance schedule.
3. Tuning of gasoline and diesel engines.
4. Fault diagnosis in electrical and electronic ignition systems.
5. Troubleshooting of gasoline and diesel fuel feed systems.
6. Troubleshooting of charging system and starting system.
7. Troubleshooting of lighting system and accessories.
8. Simple tinkering and soldering work of body panels.
9. Adjustment of the headlight beam.
10. Study of door lock and window glass rising mechanisms.

18BEAE651**MINI PROJECT****Semester VI**
2H-1C**Instruction Hours/Week: L:0 T:0 P:2****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To develop knowledge to identify a real-world problem.
- To identify various tasks of the project to determine standard procedures.
- To identify and learn new tools, algorithms and techniques.
- To understand the various procedures for validation of the product and cost-effectiveness analysis.
- Design and conduct experiments
- Analyse and interpret data.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate sound technical knowledge of a selected project topic.
- Apply the knowledge of mathematics, science and engineering to solve complex engineering problems.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments
- Analyse and interpret data.
- Prepare technical report and oral presentations.

Guidelines:

- A maximum of four students per group should do the mini project.
- At the end of the semester, a report and a technical presentation along with a demonstration should be made by the students.

18BEAE652**ENGINE AND VEHICLE MANAGEMENT SYSTEM****Semester VI****1H-0C****Instruction Hours/Week: L:1 T:0 P:0****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To learn the fundamentals of automotive electronics and the principle of engine management.
- To impart knowledge of vehicle management systems.
- Explain the Microprocessor architecture
- Describe the working of the fuel system components
- Discuss the working of various vehicle management systems.
- Explain the vehicle security systems

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Sketch the layout and explain the working of engine management systems.
- Explain the Microprocessor architecture
- Describe the working of the fuel system components
- Discuss the working of various vehicle management systems.
- Explain the vehicle security systems
- To learn the fundamentals of automotive electronics and the principle of engine management.

Course Contents:**PART I FUNDAMENTALS OF AUTOMOTIVE ELECTRONICS AND SI ENGINE MANAGEMENT**

Microprocessor architecture – open and closed loop control strategies – PID control – lookup tables – introduction to modern control strategies like fuzzy logic and adaptive control – parameters to be controlled in SI and CI engines and in the other parts of the automobile.

Layout and working of SI engine management systems like Bosch L-Jetronic and LH-Jetronic – group and sequential injection techniques – working of the fuel system components – cold start and warm up phases, idle speed control, acceleration and full load enrichment, deceleration fuel cut-off – fuel control maps – open loop control of fuel injection and closed loop lambda control.

PART II VEHICLE MANAGEMENT SYSTEMS

ABS system, its need, layout and working – electronic control of suspension – damping control – electric power steering – supplementary restraint system of airbag system – crash sensor – seat belt tightening – cruise control – vehicle security systems – alarms – vehicle tracking system – onboard diagnostics – collision avoidance – radar warning system.

Suggested Readings:

1. William B Ribbens, *Understanding Automotive Electronics*, Butterworth-Heinemann, 2017.
2. Robert Bosch GmbH, *Gasoline-Engine Management*, John Wiley & Sons, 2006.

18BEAE653**ESSENCE OF INDIAN TRADITIONAL KNOWLEDGE****Semester VI
1H-0C****Instruction Hours/Week: L:1 T:0 P:0****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To facilitate the students with the concepts of Indian traditional knowledge and to make them understand the importance of roots of knowledge system.
- Know the need and importance of protecting traditional knowledge.
- Know the various government acts and rules for the protection of traditional knowledge.
- Understand the concepts of intellectual property to protect traditional knowledge.
- Know the traditional knowledge in different sectors like engineering, medicine, etc.
- Understand the importance of conservation and sustainable development of environment

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Understand the concept of traditional knowledge and its importance.
- Know the need and importance of protecting traditional knowledge.
- Know the various government acts and rules for the protection of traditional knowledge.
- Understand the concepts of intellectual property to protect traditional knowledge.
- Know the traditional knowledge in different sectors like engineering, medicine, etc.
- Understand the importance of conservation and sustainable development of environment

Course Contents:**UNIT I INTRODUCTION TO TRADITIONAL KNOWLEDGE**

Define traditional knowledge – nature and characteristics – scope and importance – kinds of traditional knowledge – physical and social contexts in which traditional knowledge develop – historical impact of social change on traditional knowledge systems – indigenous knowledge – characteristics – traditional knowledge vis-à-vis indigenous knowledge – traditional knowledge vs. western knowledge – traditional knowledge vis-à-vis formal knowledge.

UNIT II PROTECTION OF TRADITIONAL KNOWLEDGE

Protection of traditional knowledge – need for protecting traditional knowledge – significance of traditional knowledge protection – value of traditional knowledge in global economy – role of government to harness traditional knowledge.

UNIT III GOVERNMENT ACTS

The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 – Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act)

The Biological Diversity Act, 2002 and Rules, 2004 – The Protection of Traditional Knowledge Bill, 2016 – Geographical Indicators Act, 2003.

UNIT IV INTELLECTUAL PROPERTY RIGHTS

Traditional knowledge and intellectual property – systems of traditional knowledge protection – legal concepts for the protection of traditional knowledge – certain non-IPR mechanisms of traditional knowledge protection – patents and traditional knowledge – strategies to increase protection of traditional knowledge – global legal forum for increasing protection of Indian traditional knowledge.

UNIT V TRADITIONAL KNOWLEDGE IN DIFFERENT SECTORS

Traditional knowledge and engineering – traditional medicine system – traditional knowledge and biotechnology – traditional knowledge in agriculture – traditional societies depend on it for their food and healthcare needs – importance of conservation and sustainable development of environment – management of biodiversity – food security of the country – protection of traditional knowledge.

Suggested Readings:

1. Amit Jha, *Traditional Knowledge System in India*, Atlantic Publishers & Distributors, 2009.
2. Basanta Kumar Mohanta, Vipin Kumar Singh, *Traditional Knowledge System & Technology in India*, Pratibha Prakashan, 2012.
3. Kapil Kapoor and Michel Danino, *Knowledge Traditions and Practices of India*, CBSE, 2012.

18BEAE701**TOTAL QUALITY MANAGEMENT****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn concepts, dimension quality and philosophies of TQM.
- To study the TQM principles and its strategies.
- To expose the seven statistical quality and management tools.
- To impart knowledge on TQM tools for continuous improvement.
- To introduce the quality systems and procedures adopted.
- To acquaint the student with the concepts of quality management system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Use the concepts, dimension of quality and philosophies of TQM.
- Apply the principles of TQM and its strategies in industries.
- Apply the statistical quality tools and seven management tools.
- Choose suitable TQM tools for continuous improvement.
- Understand the Failure Modes and Effects Analysis
- Use the concepts of quality management system in industries.

Course Contents:**UNIT I INTRODUCTION**

Definition and dimensions of quality – quality costs – basic concepts of Total Quality Management (TQM)– principles of TQM – leadership concepts – role of senior management – quality council – quality statement – strategic planning –Deming philosophy – TQM implementation barriers.

UNIT II TQM PRINCIPLES

Customer satisfaction – customer perception of quality – customer complaints – customer retention – employee involvement – motivation, empowerment, teams, recognition and reward, performance appraisal – continuous process improvement – Juran trilogy, Plan-Do-Study-Act (PDSA) cycle, 5S, Kaizen – supplier partnership – partnering, supplier selection, supplier rating – performance measures.

UNIT III STATISTICAL PROCESS CONTROL

The seven tools of quality – statistical fundamentals – measures of central tendency and dispersion – population and sample – normal curve – control charts for variables and attributes – process capability – concept of six sigma – new seven management tools.

UNIT IV TQM TOOLS

Benchmarking –quality function deployment –Taguchi quality loss function – total productive maintenance – Failure Modes and Effects Analysis (FMEA).

UNIT V QUALITY SYSTEM

Need – ISO 9000 quality system – quality system elements – implementation of quality system – documentation – QS 9000 –ISO/TS 16949 – ISO14000.

Suggested Readings:

1. Dale H Besterfield, Carol Besterfield-Michna, Glen Besterfield and Mary Besterfield-Sacre, *Total Quality Management*, Pearson Education, 2013.
2. James R Evans and William M Lindsay Evans, *The Management and Control of Quality*, Cengage Learning, 2012.
3. Janakiraman B and Gopal R K, *Total Quality Management: Text and Cases*, Prentice-Hall of India, 2006.
4. Suganthi L and Anand A Samuel, *Total Quality Management*, Prentice-Hall of India, 2011.

18BEAE711	COMPUTER AIDED DESIGN ANALYSIS LABORATORY	Semester VII 3H-2C
------------------	--	-------------------------------

Instruction Hours/Week: L:0 T:0 P:3**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce knowledge of the FEA software as a tool for analysis.
- To provide knowledge on contact stress analysis using FEA software.
- To impart knowledge on transient analysis using FEA software.
- To learn about temperature distribution for heat conduction using FEA software.
- To impart knowledge on coupled field analysis using FEA software.
- To expose students to analysis of the simple structure using FEA software

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Analysis of piston and connecting rod using FEA software.
- Analysis of bumper using FEA software.
- Analysis of leaf spring using FEA software.
- Analysis of composite structure using FEA software
- Find the temperature distribution for heat conduction using FEA software.
- Dynamic analysis of the simple structure using FEA software.

List of Experiments:

1. Thermal analysis of piston.
2. Transient analysis of connecting rod.
3. Crash analysis of bumper.
4. Coupled field analysis of brake shoe.
5. Contact stress analysis of leaf spring.
6. Contact stress analysis of gear pair.
7. Stress analysis of the composite structure.
8. Study of combustion analysis.
9. Study of aerodynamic analysis.

18BEAE751**INDUSTRIAL ROBOTICS****Semester VII**
1H-0C**Instruction Hours/Week: L:1 T:0 P:0****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To learn the construction and fundamentals of robots.
- To provide knowledge on types of drives and end effectors in robots.
- To impart knowledge on sensors and machine vision system.
- To provide knowledge on the applications of robots in industries.
- Select a suitable drive and an end effectfor industrial robots.
- Choose sensors and machine vision system for industrial robots.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify the components and construction of robot manipulator.
- Understand the sensors
- Select a suitable drive and an end effectfor industrial robots.
- Choose sensors and machine vision system for industrial robots.
- Discuss the usage and applications of robots in industries.
- Understand the economic analysis of robots

Course Contents:**PART I FUNDAMENTALS OF ROBOT**

Robot – definition – robot anatomy – co-ordinate systems – work envelopetypes and classification – specifications – pitch, yaw, roll, joint notations, speed of motion, payload – robot parts and their functions – need for robots – different applications – pneumatic drives – hydraulic drives – mechanical drives – electrical drives – DC servo motors, stepper motor, AC servo motors –end effectors – grippers – requirements of a sensor– position sensors, proximity sensors, touch sensors – camera, frame grabber, sensing and digitizing image.

PART II ROBOT CELL DESIGN AND APPLICATIONS

Robot work cell design and control – sequence control, operator interface – mobile robot working principle – robot applications – material handling, machine loading and unloading, assembly, inspection,welding, spray painting and undersea robot – safety considerations forrobot operations – economic analysis of robots.

Suggested Readings:

1. Mikell P Groover, Mitchell Weiss, Roger N Nagel, Nicholas G Odrey, and Ashish Dutta, *Industrial Robotics: Technology, Programming and Applications*, McGraw-Hill Education, 2012.
2. John J Craig, *Introduction to Robotics: Mechanics and Control*, Pearson, 2018.
3. Deb S R and Deb S, *Robotics Technology and Flexible Automation*, McGraw-Hill Education, 2009.

18BEAE791**PROJECT PHASE - I****Semester VII**
4H-2C**Instruction Hours/Week: L:0 T:0 P:4****Marks: Internal:100 External:0 Total:100****Course Objectives:**

- To develop knowledge to identify a real-world problem.
- To identify the various tasks of the project to determine standard procedures.
- To identify and learn new tools, algorithms and techniques.
- To understand the various procedures for validation of the product and cost-effectiveness analysis.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments, as well as analyse and interpret data.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate a sound technical knowledge of their selected project topic.
- Apply the knowledge of mathematics, science and engineering to solve complex engineering problems.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments, as well as analyse and interpret data.
- Familiar with cost-effectiveness analysis.
- Prepare technical report and oral presentations.

Guidelines:

- A maximum of four students per team should do the project work.
- At the end of the semester, a report and a technical presentation should be made by the students.

18BEAE801	PROFESSIONAL ETHICS AND ENTREPRENEURSHIP DEVELOPMENT	Semester VIII 3H-3C
------------------	---	--------------------------------

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam: 3 hours****Course Objectives:**

- To create an awareness of human values and engineering ethics to instil moral and social values.
- To understand fundamental concepts and principles of management, including the basic roles, skills, and functions of management.
- To develop and strengthen entrepreneurial quality and motivation in students and to impart basic entrepreneurial skills to run a business efficiently and effectively.
- Implement the importance of ethics and professionalism.
- Practice the process of management's four functions.
- Understand the stress management

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the human values.
- Implement the importance of ethics and professionalism.
- Practice the process of management's four functions.
- Understand the stress management
- Understand the budgetary and non-budgetary control technique
- Understand the entrepreneurial characteristics.

Course Contents:**UNIT I HUMAN VALUES**

Morals, values and ethics – integrity – work ethic – service learning – civic virtue – respect for others – living peacefully – caring – sharing – honesty – courage – valuing time – cooperation – commitment – empathy – self-confidence – character – spirituality – introduction to yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS

Senses of engineering ethics – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – models of professional roles – theories about right action – self-interest – customs and religion – uses of ethical theories.

UNIT III INTRODUCTION TO MANAGEMENT, PLANNING AND ORGANISING

Definition of management – management and administration – development of management thought – contribution of Taylor and Fayol – functions of management – nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies –

planning premises – planning tools and techniques – decision making steps and process – nature and purpose of organising – formal and informal organization – organization chart – types.

UNIT IV DIRECTING AND CONTROLLING

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – system and process of controlling – budgetary and non-budgetary control techniques – control and performance – direct and preventive control – reporting.

UNIT V ENTREPRENEURSHIP AND MOTIVATION

Entrepreneur – types of entrepreneurs – difference between entrepreneur and intrapreneur – entrepreneurship in economic growth – factors affecting entrepreneurial growth – major motives influencing an entrepreneur – achievement motivation training – self rating – business games – thematic apperception test – stress management – entrepreneurship development programs – need, objectives.

Suggested Readings:

1. Govindarajan M, Natarajan S and Senthil Kumar V S, *Professional Ethics and Human Values*, PHI Learning, New Delhi, 2013.
2. Tripathi P C and Reddy P N, *Principles of Management*, McGraw-Hill Education, 2012.
3. Khanka S S, *Entrepreneurial Development*, S. Chand Publishing, New Delhi, 2006.
4. Charles E Harris, Michael S Pritchard, Michael J Rabins, Ray James and Elaine Englehardt, *Engineering Ethics: Concepts and Cases*, Cengage Learning, 2013.
5. Stephen P Robbins, Mary A Coulter and David A De Cenzo, *Fundamentals of Management*, Pearson Education, 2017.
6. Sangeeta Sharma, *Entrepreneurship Development*, PHI Learning, New Delhi, 2016.

18BEAE891**PROJECT PHASE - II****Semester VIII**
12H-6C**Instruction Hours/Week: L:0 T:0 P:12****Marks: Internal:120 External:180 Total:300****Course Objectives:**

- To identify the various tasks of the project to determine standard procedures.
- To identify and learn new tools, algorithms and techniques.
- To understand the various procedures for validation of the product and cost-effectiveness analysis.
- Apply the knowledge of mathematics, science and engineering to solve complex engineering problems.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments, as well as analyse and interpret data.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate sound technical knowledge of the project topic.
- Apply the knowledge of mathematics, science and engineering to solve complex engineering problems.
- Identify, formulate and analyse problems and justify solutions using scientific knowledge.
- Design and conduct experiments, as well as analyse and interpret data.
- Execute the project based on the design developed during phase - I.
- Prepare technical report and oral presentations.

Guidelines:

- A maximum of four students per team should do the project work.
- At the end of the semester, a report and a technical presentation should be made by the students.

18BEAE5E01**AUTOMOTIVE EMISSIONS AND NVH CONTROL****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the mechanism of pollutant formation in engines.
- To understand the importance of post-combustion treatments to control pollution.
- To study the pollution treatment and control techniques.
- To provide knowledge on the laws and regulations related to automotive emission levels.
- To introduce properties of tyres affecting vibration and noise
- To learn the noise and vibration control techniques.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the mechanism of pollutant formation in engines.
- Apply the knowledge of post-combustion treatments to control pollution.
- Discuss the control techniques and instrumentation for pollution measurements.
- State the laws and regulations related to automotive emission levels.
- Discuss the properties of tyres affecting vibration and noise
- Design the systems to reduce noise and vibration.

Course Contents:**UNIT I MECHANISM OF POLLUTANT FORMATION AND POST-COMBUSTION TREATMENTS**

Introduction – pollutants – sources – formation of hydrocarbon(HC) and carbon monoxide (CO) in SI engines – nitrogen oxides (NO_x) formation in SI and CI engines – particulate emission from SI and CI engines – smoke emission in CI engines – effect of operating variables on emission formation.

Post-combustion treatments: physical conditions and exhaust gas compositions before treatment – catalytic mechanism – thermal reactions – installation of catalyst in exhaust lines – NO_x treatment in diesel engines – diesel trap oxidizers.

UNIT II CONTROL TECHNIQUES AND INSTRUMENTATION FOR POLLUTION MEASUREMENTS

Crankcase emission control – fuel evaporation and control – exhaust gas recirculation – intake temperature control – air injected exhaust – thermal reactors – selective catalytic reduction – catalytic converters – types – catalytic mechanism – tuning of mechanical systems – air-fuel ratio control – non-dispersive infrared analyser – flame ionization detectors – chemiluminescent analyser – smoke meters – gas chromatograph – onboard diagnostic system.

UNIT III LAWS AND REGULATIONS

Historical background – regulatory test procedures (European cycles) – exhaust gas pollutants – particulate pollutants – European statutory values – inspection of vehicles in circulation – influence of actual traffic conditions and influence of vehicle maintenance – Indian emission standards.

UNIT IV NOISE CONTROL

Identification of noise sources – quantification – control of airborne noise – use of noise absorber, barrier, different materials – criteria for the selection of materials – control of structure-borne noise – treatments for vibration damping materials for hood liner and headliner – resonance and ill effects of resonance – characteristics of vehicle noise – sources of vehicle noise – engine noise, techniques for locating and measuring engine noise – engine noise control techniques – inlet and exhaust noise mechanism and control – noise from cooling system – transmission noise and tyre noise – anechoic chamber.

UNIT V VIBRATION CONTROL

Introduction – vibration analysis – sources of vibration – damping of vibration – rubber mountings – vibration isolation and absorption – constrained and extensive layer damping – engine and drivetrain vibration – vehicle and chassis vibration – application of plastics and composites in automobiles – properties of tyres affecting vibration and noise.

Suggested Readings:

1. George S Springer and Donald J Patterson, *Engine Emissions*, Plenum Press, 1990.
2. Crouse W M and Anglin A L, *Automotive Emission Control*, McGraw-Hill, 1995.
3. John B Heywood, *Internal Combustion Engine Fundamentals*, McGraw-Hill, 2011.
4. Matthew Harrison, *Vehicle Refinement: Controlling Noise and Vibration in Road Vehicles*, Elsevier, 2004.
5. Ganesan V, *Internal Combustion Engines*, Tata McGraw-Hill, New Delhi, 2012.
6. Patterson D J and Henin N A, *Emission from Combustion Engine and their Control*, Anna Arbor Science Publication, 1985.
7. Heinz Heisler, *Advanced Engine Technology*, Butterworth-Heinemann, 2005.
8. Robert Hickling and Mounir M Kamal, *Engine Noise: Excitation, Vibration and Radiation*, Plenum Press, New York, 1982.
9. White R G and Walker J G, *Noise and Vibration*, Ellis Horwood Ltd., 1982.

18BEAE5E02**VEHICLE BODY ENGINEERING****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam: 3 hours****Course Objectives:**

- To understand the vehicle aerodynamics.
- To impart knowledge on body construction of the car, bus and commercial vehicles.
- To study the body materials, mechanisms and repair.
- To impart knowledge on the safety aspect of bus body
- To introduce the concepts of regulations
- To expose students to material used in bodybuilding, tools used and body repairs

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish the various aerodynamic forces and moments.
- Explain different aspects of the car body, bus body and commercial vehicle.
- Describe the safety aspect of bus body
- Describe the commercial vehicle bodies
- Explain the regulations.
- Describe the material used in bodybuilding, tools used and body repairs.

Course Contents:**UNIT I VEHICLE AERODYNAMICS**

Objectives – vehicle drag and types – various types of forces and moments – effects of forces and moments – side wind effects on forces and moments – various body optimization techniques for minimum drag – wind tunnels – principle of operation – types – wind tunnel testing such as flow visualization techniques, airflow management test – measurement of various forces and moments by using wind tunnel.

UNIT II CAR BODY

Types of car body – saloon, convertibles, limousine, estate van, racing and sports car – visibility regulations – driver's visibility, improvement in visibility and tests for visibility – driver seat design – car body construction – various panels in car bodies – safety aspect of car body.

UNIT III BUS BODY

Types of bus body based on capacity, distance travelled and construction – bus body layout for various types – types of metal sections used – regulations – constructional details of conventional and integral – driver seat design – safety aspect of bus body.

UNIT IV COMMERCIAL VEHICLE BODY

Types of commercial vehicle bodies – light commercial vehicle body – construction details of commercial vehicle body – flat platform body, trailer, tipper body and tanker body – dimensions of driver's seat in relation to controls – drivers cab design – regulations.

UNIT V BODY MATERIALS, TRIM, MECHANISMS AND BODY REPAIR

Types of materials used in body construction – steel sheet, timber, plastics, Glass Reinforced Plastic (GRP) – properties of materials – body trim items – body mechanisms – hand tools – power tools – panel repair – repairing sheet metal – repairing plastics – body fillers – passenger compartment service – anticorrosion methods – modern painting process procedure – paint problems.

Suggested Readings:

1. James E Duffy, *Body Repair Technology for 4-Wheelers*, Cengage Learning, 2009.
2. Powloski J, *Vehicle Body Engineering*, Business Books Ltd., 1998.
3. BraithwaiteJB, *Vehicle Body Building and Drawing*, Heinemann Educational Books Ltd., London, 1997.
4. Dieler Anselm, *The Passenger Car Body*, SAE International, 2000.
5. GilesGJ, *Body Construction and Design*, Illiffe Books Butterworth & Co., 1991.
6. John Fenton, *Vehicle Body Layout and Analysis*, Mechanical Engineering Publication Ltd., London, 1992.

18BEAE5E03
18BEAEOE02

TWO AND THREE WHEELER TECHNOLOGY

Semester V
3H-3C

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- To impart technical knowledge on construction and working of the power train and drive train of two and three wheeler vehicles.
- To familiarise with maintenance procedures of the engine and subsystems of two and three wheelers.
- To impart knowledge on types of transmission systems
- To impart knowledge on types of steering and suspension systems
- To impart knowledge on types of wheels, tyres and brakes for two and three wheelers
- To make the students conversant on servicing of two and three wheelers.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

Course Contents:

UNIT I INTRODUCTION

History of two and three wheelers – classification and layouts of two wheelers – classification and layouts of three wheelers – main frame for two wheelers and types – main frame for three wheelers and types.

UNIT II INTERNAL COMBUSTION ENGINES

Classification of engines – selection criteria of engine for two and three wheelers – design considerations for two and three wheeler engines – construction and working of two-stroke and four-stroke engines – fuel feed system – lubricating system – cooling system – scavenging system – cranking system – kick start and auto-start mechanisms.

UNIT III TRANSMISSION, STEERING AND SUSPENSION SYSTEMS

Clutch – single plate, multiple plate and centrifugal clutches – primary reduction – transmission gearbox – gear shifting mechanisms – automatic transmission – final drive and differential for three wheelers – steering geometry – steering column construction – steering system for three wheelers – front and rear suspension systems – spring and shock absorber assembly.

UNIT IV WHEELS, TYRES AND BRAKES

Spoked wheels, pressed steel wheels and alloy wheel – tyre construction – tyre with tube and tubeless tyre – theory of brake action – drum and disc brakes – brake links layout for front and rear wheels – mechanical and hydraulic brake control systems – anti-lock braking system.

UNIT V TWO AND THREE WHEELERS CASE STUDY

Case study of mopeds, scooters, motor cycles, sports bikes, auto rickshaws, pickup vans, delivery vans and trailers – servicing – factors affecting fuel economy and emission.

Suggested Readings:

1. Dhruv U Panchal, *Two and Three Wheeler Technology*, PHI Learning, New Delhi, 2015.
2. Ramalingam K K, *Two Wheelers and Three Wheelers: Theory, Operation and Maintenance*, Scitech Publications, Chennai, 2017.
3. Irving P E, *Motorcycle Engineering*, Veloce Enterprises, USA, 2017.
4. Dennis Bailey and Keith Gates, *Bike Repair and Maintenance for Dummies*, John Wiley & Sons, USA, 2009.
5. Chris Grissom, Matt Spitzer, Bruce A Johns and David D Edmundson, *Motorcycles: Fundamentals, Service, Repair*, Goodheart-Willcox, 2019.

18BEAE5E04**TRACTOR AND FARM EQUIPMENTS****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To familiarise the components of a tractor and its controls.
- To impart knowledge on the various farm equipment.
- To expose students to the types of tractors.
- To familiarize the students to understand the performance characteristics of a tractor engine.
- To facilitate the understanding of cooling and lubrication system for troubleshooting.
- To impart knowledge on tractor attachments

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Classify the types of tractors.
- Explain the performance characteristics of a tractor engine.
- Discuss the construction and operation of the valve mechanism.
- Analyse the cooling and lubrication system for troubleshooting.
- Discuss the tractor attachments
- List and explain the various farm equipment.

Course Contents:**UNIT I GENERAL DESIGN OF TRACTORS**

Classification of tractors –main components of tractor –safety rules.

UNIT II CONTROL OF THE TRACTOR AND FUNDAMENTALS OF ENGINE OPERATION

Tractor controls and the starting of the tractor engines –basic notions and definition –engine cycles – operation of multi-cylinder engines –general engine design –basic engine performance characteristics.

UNIT III ENGINE FRAMEWORK AND VALVE MECHANISM OF TRACTOR

Cylinder and pistons –connecting rods and crankshafts – engine balancing –construction and operation of the valve mechanism –valve mechanism components –valve mechanism troubles.

UNIT IV COOLING, LUBRICATION AND FUEL SYSTEM

Cooling system –classification –liquid cooling system –components – lubrication system –servicing and troubles – fuel tanks and filters –fuel pumps –air cleaner and turbocharger.

UNIT V FARM EQUIPMENT

Tractor attachments –farm equipment –classification –auxiliary equipment –trailers and body tipping mechanism.

Suggested Readings:

1. Rodichev V and Rodicheva G, *Tractors and Automobiles*, Mir Publishers, Moscow, 1984.
2. Kolchin A and Demidov V, *Design of Automotive Engines*, Mir Publishers, Moscow, 1984.
3. John B Liljedahl, Walter M Carleton, Paul K Turnquist and David W Smith, *Tractors and their Power Units*, Avi Publishing, 1985.

18BEAE5E05**VIBRATION AND NOISE CONTROL****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the basics of vibration and noise.
- To understand the importance of single degree and two degrees of freedom vibration systems.
- To equip them with skills to Calculate the total sound pressure level
- To enrich the understanding of frequency analysis
- To understand the sources of vibration and noise.
- To learn the vibration and noise control techniques.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- List and explain the types of vibrations.
- Analyse a single degree and two degrees of freedom vibration systems.
- Calculate the total sound pressure level produced by two sounds of different levels.
- Apply frequency analysis
- Identify the sources of vibration in automobiles.
- Design the systems to reduce vibration and noise.

Course Contents:**UNIT I BASICS OF VIBRATION**

Introduction – classification of vibration – free and forced vibration – undamped and damped vibration – linear and non-linear vibration – response of damped and undamped systems under harmonic force – analysis of single degree and two degree of freedom systems – torsional vibration – determination of natural frequencies.

UNIT II BASICS OF NOISE

Introduction – amplitude, frequency, wavelength and sound pressure level – addition, subtraction and averaging decibel levels – noise dose level – legislation – measurement and analysis of noise – measurement environment – equipment – frequency analysis – tracking analysis – sound quality analysis.

UNIT III AUTOMOTIVE NOISE SOURCES

Noise characteristics of engines – engine overall noise levels – assessment of combustion noise – assessment of mechanical noise – engine radiated noise – intake and exhaust noise – engine necessary contributed noise – transmission noise – aerodynamic noise – tyre noise – brake noise.

UNIT IV VIBRATION CONTROL TECHNIQUES

Vibration isolation – tuned absorbers – untuned viscous dampers – damping treatments – application – dynamic forces generated by IC engines – engine isolation – crankshaft damping – modal analysis of the mass elastic model – shock absorbers.

UNIT V NOISE CONTROL

Methods for control of engine noise, combustion noise, mechanical noise – predictive analysis – palliative treatments and enclosures – automotive noise control principles – sound in enclosures – sound energy absorption – sound transmission through barriers.

Suggested Readings:

1. Singiresu S Rao, *Mechanical Vibrations*, Pearson Education, 2017.
2. Kewal Pujara, *Vibrations and Noise for Engineers*, Dhanpat Rai Publishing, 2013.
3. Ramamurti V, *Mechanical Vibration Practice and Noise Control*, Narosa Publishing House, 2017.
4. Shabana A A, *Theory of Vibration*, Springer-Verlag New York, 1996.
5. William T Thomson, Marie Dillon Dahleh and Chandramouli Padmanabhan, *Theory of Vibrations with Applications*, Pearson Education, 2008.
6. Rao J S and Gupta K, *Introductory Course on Theory and Practice of Mechanical Vibrations*, New Age International, 1999.
7. David A Bies and Colin H Hansen, *Engineering Noise Control: Theory and Practice*, CRC Press, 2017.

18BEAE5E06**COMPOSITE MATERIALS****Semester V**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide fundamental knowledge on the reinforcement and matrix materials.
- To expose the characteristics and different fabrication techniques of polymer matrix composites.
- To impart knowledge on the metal matrix composites.
- To provide knowledge on the ceramic matrix composites.
- To impart knowledge on the advanced composites.
- To provide knowledge on applications of composite in various industries.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify suitable reinforcement and matrix materials for different applications.
- Select appropriate fabrication technique for the specific application of polymer matrix composite.
- Select suitable processing method for the fabrication of metal matrix composites.
- Select suitable fabrication method for the specific application of ceramic matrix composite.
- Describes the sol-gel technique
- Identify the advanced composites for appropriate applications.

Course Contents:**UNIT I INTRODUCTION TO COMPOSITES**

Fundamentals of composites – need for composites– enhancement of properties – classification of composites – matrix – Polymer Matrix Composites (PMC), Metal Matrix Composites (MMC), Ceramic Matrix Composites (CMC) – reinforcement – particle reinforced composites, fibre reinforced composites – applications of various types of composites.

UNIT II POLYMER MATRIX COMPOSITES

Polymer matrix resins – thermosetting resins, thermoplastic resins – reinforcement fibres – rovings – woven fabrics – non-woven random mats – various types of fibres – PMC processes –hand layup processes – spray-up processes – compression moulding – reinforced reaction injection moulding – resin transfer moulding – pultrusion – filament winding – injection moulding – Fibre Reinforced Plastics (FRP), Glass Fibre Reinforced Plastics (GRP).

UNIT III METAL MATRIX COMPOSITES

Characteristics of MMC – various types of MMC – alloy vs. MMC – advantages and limitations of MMC – metal matrix reinforcements – particles – fibres – effect of reinforcement –volume fraction – rule of mixtures – processing of MMC – powder metallurgy process – diffusion bonding – stir casting – squeeze casting.

UNIT IV CERAMIC MATRIX COMPOSITES

Engineering ceramic materials– properties – advantages – limitations – monolithic ceramics –need for CMC – ceramic matrix –various types of CMC – oxide ceramics – non-oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles – fibres – whiskers – sintering – hot pressing – cold isostatic pressing – hot isostatic pressing.

UNIT V ADVANCES IN COMPOSITES

Carbon/carbon composites – advantages and limitations of carbon matrix – carbon fibre – chemical vapour deposition of carbon on carbon fibre perform – sol-gel technique – composites for aerospace applications.

Suggested Readings:

1. Bhagwan D Agarwal, Lawrence J Broutman and Chandrashekhara K, *Analysis and Performance of Fiber Composites*, John Wiley & Sons, 2017.
2. Krishan K Chawla, *Composite Materials: Science and Engineering*, Springer-Verlag New York, 2012.
3. Sharma S C, *Composite Materials*, Narosa Publishing House, 2000.
4. Clyne T W and Withers P J, *An Introduction to Metal Matrix Composites*, Cambridge University Press, 1993.
5. Brent Strong A, *Fundamentals of Composites Manufacturing*, SME, 2007.
6. Matthews F L and Rawlings R D, *Composite Materials: Engineering and Science*, Woodhead Publishing, 1999.
7. Ronald F Gibson, *Principles of Composite Material Mechanics*, CRC Press, 2016.

18BEAE6E01	ADVANCED THEORY OF IC ENGINES	Semester VI 3H-3C
-------------------	--------------------------------------	------------------------------------

Instruction Hours/Week: L:3 T:0 P:0	Marks: Internal:40 External:60 Total:100
End Semester Exam:3 hours	

Course Objectives:

- To impart knowledge on advancement in IC engine construction and combustion process.
- To familiarise the combustion modelling.
- To enrich the understanding of advances in IC Engines
- To expose students to performance of the IC engines
- To facilitate the understanding of computer control of engine parameters
- To impart knowledge on performance maps

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the operating cycles of SI engines, CI engines and gas turbines.
- Understand the IC engine combustion processes.
- Analyse the causes of knocking in combustion.
- Apply new techniques to improve the performance of the IC engines.
- Explain the computer control of engine parameters for pollution control
- Explain the performance maps.

Course Contents:**UNIT I CYCLE ANALYSIS**

Operating cycles of SI engines, CI engines and gas turbines – comparison of air standard cycle – fuel-air cycle and actual cycle.

UNIT II COMBUSTION OF FUELS

Combustion stoichiometry of petrol, diesel, alcohol and hydrogen fuels – chemical energy and heating values – chemical equilibrium and maximum temperature – SI engine combustion – flame velocity and area of flame front – CI engine combustion – fuel spray characteristics – droplet size, penetration and atomization.

UNIT III COMBUSTION MODELLING

Basic concepts of engine simulation – governing equation – flow models – thermodynamic models – SI engine and CI engine models.

UNIT IV ADVANCES IN IC ENGINES

Adiabatic and Low Heat Rejection (LHR) engines – MAN combustion chamber and multi-fuel engines – stratified charged and lean burn engines – locomotive and marine engines.

UNIT V OPERATION AND PERFORMANCE OF ENGINES

Computer control of engine parameters for pollution control and better efficiency –closed-loop control of engine parameters –hybrid operation – performance maps.

Suggested Readings:

1. Ganesan V, *Internal Combustion Engines*, McGraw-Hill Education, New Delhi, 2012.
2. Ganesan V, *Computer Simulation of Spark-Ignition Engine Processes*, Universities Press, Hyderabad, 1996.
3. John B Heywood, *Internal Combustion Engine Fundamentals*, McGraw-Hill Education, 2011.

18BEAE6E02**AUTOMOTIVE AIRCONDITIONING****Semester VI**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To gain knowledge offundamentals of the automotive air conditioning.
- To study the working ofautomotive cooling and heating systems.
- To provide knowledge on air conditioning controls, delivery system and refrigerants.
- To impart knowledge on working of automatic temperature control.
- To learn the system servicing and testing.
- To impart knowledge on special tools for servicing

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the psychrometry principles.
- Explain the components of vehicle air conditioning systems.
- Describe the air conditioning controls.
- Select the suitable sensors and actuators for automatic temperature control.
- Discover and troubleshoot the fault in vehicle air conditioning systems.
- Describe the special tools for servicing vehicle air conditioning

Course Contents:**UNIT I AUTOMOTIVE AIRCONDITIONING FUNDAMENTALS**

Purposes of heating, ventilation and air conditioning – environmental concerns – ozone layer depletion – location of air conditioning components in a car – schematic layout of a vehicle refrigeration system – psychrometry – basic terminology and psychrometric mixtures – psychrometric chart.

UNIT II AUTOMOTIVE COOLING AND HEATING SYSTEM

Vehicle refrigeration system and related problems – fixed thermostatic and orifice tube system – variable displacement thermostatic and orifice tube system – vehicle air conditioning operation – types of compressor – compressor clutches – compressor clutch electrical circuit – compressor lubrication – condensers – evaporators – expansion devices – evaporator temperature and pressure controls – receiver – drier – accumulators – refrigerant hoses, connections and other assemblies – heating system.

UNIT III AIR CONDITIONING CONTROLS, DELIVERY SYSTEM AND REFRIGERANTS

Types of control devices – preventing compressor damage – preventing damage to other systems – maintaining driveability – preventing overheating – ram air ventilation – air delivery components – control devices – vacuum controls containers – handling refrigerants – discharging, charging and leak detection – refrigeration system diagnosis – diagnostic procedure – ambient conditions affecting system pressures.

UNIT IV AUTOMATIC TEMPERATURE CONTROL

Different types of sensors and actuators used in automatic temperature control – fixed and variable displacement temperature control – semi-automatic – controller design for fixed and variable displacement type air conditioning system.

UNIT V SYSTEM SERVICING AND TESTING

Special tools for servicing vehicle air conditioning – diagnosing components and air conditioning systems – diagnosing cooling system – air delivery system – automatic temperature control system diagnosis and service.

Suggested Readings:

1. James D Halderman, *Automotive Heating and Air Conditioning*, Pearson, 2018.
2. Warren M Farnell, *Automotive Heating, Ventilation and Air Conditioning Systems: Classroom Manual*, Pearson, 2004.
3. Warren M Farnell, *Automotive Heating, Ventilation and Air Conditioning Systems: Shop Manual*, Pearson, 2004.
4. William H Crouse and Donald L Anglin, *Automotive Air Conditioning*, McGraw-Hill Inc., 1990.
5. Mitchell Information Services, Inc., *Mitchell Automatic Heating and Air Conditioning Systems*, Prentice Hall Inc., 1989.
6. Paul Weisler, *Automotive Air Conditioning*, Reston Publishing Co. Inc., 1990.

18BEAE6E03**AUTOMOTIVE SAFETY****Semester VI**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam: 3 hours****Course Objectives:**

- To understand automotive safety in the broader context of transportation safety.
- To evaluate effects of the collision of vehicles on the human body.
- To acquire knowledge on the importance and use of safety systems in road vehicles.
- To provide knowledge on crash injuries and human safety using crash test
- To expose students to various comfort and convenience systems
- To introduce the concepts of environment information system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Analyse the different types of active and passive safety system used in automobiles.
- Examine the crash testing and evaluation of vehicle safety using crash test.
- Analyse the different types of vehicle safety systems used in automobiles.
- Examine the crash injuries and human safety using crash test.
- Explain the various comfort and convenience systems.
- Explain the environment information system

Course Contents:**UNIT I INTRODUCTION**

Design of the body for safety – energy equation – engine location – deceleration of vehicle inside passenger compartment – deceleration on impact with stationary and movable obstacle – concept of crumple zone – safety sandwich construction.

UNIT II SAFETY CONCEPTS

Active safety – driving safety – conditional safety – perceptibility safety – operating safety – passive safety – exterior safety – interior safety – deformation behaviour of vehicle body – speed and acceleration characteristics of passenger compartment on impact.

UNIT III SAFETY EQUIPMENT

Seat belt – regulations – automatic seat belt tightener system – collapsible steering column – tiltable steering wheel – airbags – electronic system for activating airbags – bumper design for safety.

UNIT IV COLLISION WARNING AND AVOIDANCE

Collision warning system – causes of rear-end collision – frontal object detection – rear vehicle object detection system – object detection system with braking system interactions.

UNIT V COMFORT AND CONVENIENCE SYSTEM

Steering and mirror adjustment – central locking system – garage door opening system – tyre pressure control system – rain sensor system – environment information system.

Suggested Readings:

1. Ljubo Vlacic, Michael Parent and Fumio Harashima, *Intelligent Vehicle Technologies*, Butterworth-Heinemann, UK, 2001.
2. Heinz Heisler, *Advanced Vehicle Technology*, Butterworth-Heinemann, UK, 2002.
3. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, USA, 2017.
4. Bosch, *Automotive Handbook*, SAE Publication, 2011.
5. Powloski J, *Vehicle Body Engineering*, Business Books Ltd., London, 1969.
6. Ronald K Jurgen, *Automotive Electronics Handbook*, McGraw-Hill Inc., 1999.

18BEAE6E04**OFF-ROAD VEHICLES****Semester VI**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge of the construction layout and applications of the off-road vehicles.
- To learn the various earth moving constructional machines.
- To study the construction and working details of industrial vehicles.
- To acquire knowledge on the working of tractor attachments and military vehicles.
- To provide knowledge on the mechanism of brake, suspension and steering in off-road vehicles.
- To impart knowledge on earth moving machines

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the construction layout and features of off-road vehicles.
- Select earth moving constructional machine for a particular application.
- Describe the construction details and working of industrial vehicles.
- State the special features of tractor attachments and military vehicles.
- Illustrate the mechanism of brake
- Illustrate the mechanism of suspension and steering

Course Contents:**UNIT I CLASSIFICATION AND REQUIREMENTS OF OFF-ROAD VEHICLES**

Construction layout, capacity and applications of off-road vehicle – prime mover, chassis and transmission – multi-axle vehicles.

UNIT II EARTH MOVING CONSTRUCTIONAL MACHINES

Dumpers – safety features, safety warning system for dumper – design aspects of dumper body, articulated dumpers, loaders – single bucket, multi-bucket and rotary types – bulldozers, kinematics for loader and bulldozers with operational linkages – excavators, backhoe loaders, scrapers, motor graders, power shawl, bush cutters, stumpers, rippers.

UNIT III INDUSTRIAL APPLICATIONS

Constructional and working details of jib crane, concrete ready mixers, compactors, forklift, utility vehicles, man-lift, scissors, lift trucks, material handlers and power generators.

UNIT IV FARM EQUIPMENT, MILITARY AND COMBAT VEHICLES

Tractors – classification – working attachments: power take off, special implements, paddy harvester, sugarcane harvester, feller bunchers – special features and constructional details of military tankers, Armoured Vehicle Launched Bridge (AVLB), gun carriers and transport vehicles.

UNIT V VEHICLE SYSTEMS

Brake system and actuation – oil cooled disc brakes and dry disc caliper brakes – body hoist and bucket operational hydraulics – hydro-pneumatic suspension cylinders – power steering system – articulated steering assembly – power and capacity of earth moving machines.

Suggested Readings:

1. Nakra C P, *Farm Machines and Equipments*, Dhanpat Rai Publishing, 2006.
2. Robert L Peurifoy, Clifford J Schexnayder and Aviad Shapira, *Construction Planning, Equipment, and Methods*, McGraw-Hill Education, 2010.
3. Abrosimov K, Bromberg A and Katayev F, *Road-Making Machinery*, Mir Publishers, Moscow, 1971.
4. Wong J Y, *Theory of Ground Vehicles*, John Wiley & Sons, 2008.
5. Bart H Vanderveen, *Tanks & Transport Vehicles: World War 2*, F. Warne, 1974.
6. Ageikin S, *Off the Road Wheeled and Combined Traction Devices: Theory and Calculation*, Ashgate Publishing Company, 1988.
7. Erich J Schulz, *Diesel Equipment I & II*, McGraw-Hill, 1981.

18BEAE6E05	DESIGN FOR MANUFACTURE AND ASSEMBLY	Semester VI 3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To introduce the way of specifying dimension and tolerance in engineering drawing by using geometric dimensioning and tolerancing.
- To indicate the design considerations while casting, welding and forming of components.
- To familiarise with the concept and design guidelines for manufacturing parts by different machining processes.
- To study the factors affecting the easy assembly of parts into a final product.
- To impart knowledge on the environmental impact of products manufactured and engineering ways to minimise it.
- To Study and acquire knowledge on disassembly, recyclability, remanufacture

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply geometric dimensioning and tolerancing techniques in engineering drawing.
- Apply design considerations to minimise the difficulty in fabrication of components by casting, welding and forming processes.
- Apply design for manufacturing concept to reduce the machining time and manufacturing cost.
- Perform the parts assembly of the given component using design for assembly guidelines.
- Design components taking into consideration the environmental impact.
- Describe disassembly, recyclability, remanufacture,

Course Contents:**UNIT I GEOMETRIC DIMENSIONING AND TOLERANCING**

Tolerance chains and identification of functionally important dimensions – international tolerance grades – surface finish – attainable tolerance grades and different machining processes – geometric dimensioning and tolerancing – location, form and feature tolerance – tolerance limits for assembly – cumulative effect of tolerances – sure fit law, normal law and truncated normal law – tolerance zone conversions.

UNIT II DESIGN CONSIDERATIONS FOR CASTINGS, WELDING AND FORMING

Casting – pattern, mould, parting line – cast, cored and machined holes – redesign of castings based on parting line considerations – minimizing core requirements – welding – stresses in welding – measures to combat contraction stresses – welding sequence – joints in welding – weldability of steel – design of welded structures – form design aspects for forging and sheet metal components.

UNIT III DESIGN FOR MANUFACTURE - MACHINING CONSIDERATIONS

Design for manufacture guidelines – design features to facilitate machining – drills – milling cutters – keyways – doweling procedures – counter sunk screws – reduction of machined area – simplification by separation – simplification by amalgamation – design for manufacture: machinability, economy, clampability, accessibility, assembly – redesign for manufacture.

UNIT IV DESIGN FOR ASSEMBLY

Design for Assembly (DFA) guidelines – minimizing number of parts – insertion and fastening – design guidelines for part handling – effect of part symmetry, part thickness, part size, weight on handling time – types of manual assembly methods – effect of assembly layout on part acquisition time – assembly efficiency – DFA index.

UNIT V DESIGN FOR ENVIRONMENT

Environmental objectives – global issues, regional and local issues – basic design for environment methods – design guidelines – lifecycle assessment – weighted sum assessment method – lifecycle assessment method – techniques to reduce environmental impact – design to minimise material usage – design for disassembly, recyclability, remanufacture, energy efficiency – design to regulations and standards.

Suggested Readings:

1. Gene RCogorno, *Geometric Dimensioning and Tolerancing for Mechanical Design*, McGraw-Hill Professional, New Delhi, 2011.
2. Harry Peck, *Designing for Manufacture*, Pitman Publishing, London, 1973.
3. Robert Matousek, *Engineering Design - A Systematic Approach*, Blackie and Son Ltd., London, 1974.
4. Spotts M F, *Dimensioning and Tolerance for Quantity Production*, Prentice Hall, New Jersey, 2007.
5. Bralla J G, *Hand Book of Product Design for Manufacturing*, McGraw-Hill Publications, New Delhi, 2000.
6. Kevin Otto and Kristin Wood, *Product Design: Techniques in Reverse Engineering and New Product Development*, Pearson Education, 2001.

18BEAE6E06**INDUSTRIAL ENGINEERING AND OPERATIONS
RESEARCH****Semester VI
3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To familiarise the production planning methodologies and layout design.
- To learn the concept of work study.
- To impart knowledge on the basics of linear programming techniques.
- To understand the transportation and assignment models.
- To provide knowledge on the importance of inventory control.
- To provide knowledge on economic order quantity

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Select suitable production planning methodologies, production system and plant layout for the industry.
- Execute an effective work study and ergonomics for better productivity.
- Formulate and select a suitable method to solve the linear programming problem.
- Solve different transportation and assignment based models.
- Solve the inventory decision-making problem using mathematical modelling.
- Describe the economic order quantity

Course Contents:**UNIT I PRODUCTION SYSTEM AND WORK STUDY**

Industrial engineering – concept, history and development – applications – productivity – factors influencing productivity – plant layout – criteria for good layout – types of layout – work study – method study – work measurement – ergonomics.

UNIT II PRODUCTION MANAGEMENT

Objectives of production management – types of production – classification of production system – new product design – demand forecasting – production planning and control – capacity planning – material requirement planning – process planning – project scheduling – production control – make or buy decisions.

UNIT III LINEAR PROGRAMMING

Operations Research: introduction, scope, objectives, phases and its limitations – Linear Programming Problem (LPP) – formulation – graphical method – Simplex method – artificial variable techniques – Big-M method.

UNIT IV DISTRIBUTION AND ASSIGNMENT MODEL

Transportation problem – Vogel's approximation method – optimality test using MODI method – Assignment problem – Hungarian method – travelling salesman problem – sequencing problem –

processing 'n' jobs through two machines and three machines – processing two jobs through 'm' machines.

UNIT V INVENTORY CONTROL

Types of inventory – inventory costs – variables in the inventory problem – other factors involved in inventory analysis – deterministic inventory model – inventory models with probabilistic demand – re-order level and optimum buffer stock – economic order quantity with price breaks.

Suggested Readings:

1. Frederick S Hillier and Gerald J Lieberman, *Introduction to Operations Research*, Tata McGraw-Hill, New Delhi, 2006.
2. Elwood S Buffa, *Modern Production/Operations Management*, Wiley Eastern, New Delhi, 2007.
3. Kanti Swarup, Gupta P K and Man Mohan, *Operations Research*, Sultan Chand & Sons, New Delhi, 1995.
4. Dharani Venkatakrishnan S, *Operations Research*, Keerthi Publication House, Coimbatore, 1991.
5. Gupta P K and Hira D S, *Operations Research*, S. Chand and Company, New Delhi, 2012.
6. Panneerselvam R, *Production and Operations Management*, Prentice-Hall of India, New Delhi, 2007.

18BEAE7E01**AUTOMOTIVE AERODYNAMICS****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide knowledge on the fundamentals of aerodynamics and vehicle body optimisation.
- To introduce the use of wind tunnels in testing the vehicles.
- various aerodynamic shapes of car
- To introduce aerodynamics for design of the vehicle body
- To study the features of characteristics of forces and moments
- To understand the importance computational fluid dynamics analysis

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the importance of aerodynamics for automobiles.
- Apply principles of aerodynamics for design of the vehicle body.
- Analyse the various aerodynamic shapes of car.
- Discuss the characteristics of forces and moments.
- Apply the concept of wind tunnel for the aerodynamic design of automobiles.
- Apply the computational fluid dynamics analysis.

Course Contents:**UNIT I INTRODUCTION**

Scope – historical developments – fundamental of fluid mechanics – flow phenomenon related to vehicles – external and internal flow problem – resistance to vehicle motion – performance – fuel consumption – performance potential of vehicle aerodynamics.

UNIT II AERODYNAMIC DRAG OF CARS

Cars as a bluff body – flow field around car – drag force – types of drag force – analysis of aerodynamic drag – drag coefficient of cars – strategies for aerodynamic development – low drag profiles.

UNIT III SHAPE OPTIMIZATION OF CARS

Front end modification – front and rear windshield angle – boat tailing, hatchback, fastback, square back, dust flow patterns at the rear – effects of gap configuration – effect of fasteners – case studies on modern vehicles.

UNIT IV VEHICLE HANDLING

The origin of forces and moments on a vehicle – lateral stability problems – methods to calculate forces and moments – vehicle dynamics under side winds – the effects of forces and moments – characteristics of forces and moments – dirt accumulation on the vehicle – wind noise – drag reduction in commercial vehicles and racing cars.

UNIT V WIND TUNNELS FOR AUTOMOTIVE AERODYNAMICS

Introduction – principle of wind tunnel technology – limitation of simulation – stress with scale models – full-scale wind tunnels – measurement techniques – equipment and transducers – road testing methods – numerical methods – computational fluid dynamics analysis.

Suggested Readings:

1. Fred Browand, Rose McCallen and James Ross, *The Aerodynamics of Heavy Vehicles: Trucks, Buses, and Trains*, Springer, 2004.
2. Wolf-Heinrich Hucho, *Aerodynamic of Road Vehicles*, Butterworth-Heinemann, 1997.
3. Jewel B Barlow, William H Rae and Alan Pope, *Low-Speed Wind Tunnel Testing*, John Wiley & Sons, 1999.
4. *Automotive Aerodynamic: Update SP-706*, Society of Automotive Engineers, 1987.
5. *Vehicle Aerodynamics: SP-1145*, Society of Automotive Engineers, 1996.

18BEAE7E02**AUTOMOTIVE TESTING****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide knowledge on the automotive testing methods and their importance.
- To study the various testing standards and guidelines.
- To provide knowledge on all the automotive testing regulations while testing a vehicle.
- To understand the importance of the effectiveness and efficiency of all components.
- To provide an overview of energy testing
- To expose students to analyse the vehicle and report the results

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Prepare the vehicle for testing according to standards.
- Test the vehicle in static and dynamic conditions.
- Incorporate all the automotive testing regulations while testing a vehicle.
- Test the effectiveness and efficiency of all components.
- Describe the energy testing
- Analyse the vehicle and report the results.

Course Contents:**UNIT I VEHICLE WIND TUNNEL TESTING AND BODY TESTING**

Wind tunnel test requirements – ground boundary simulation – wind tunnel selection and Reynolds number capability – model details – mounting of model – test procedure – body test – dynamics simulation sled testing – dolly rollover test – dolly rollover fixture – vehicle roof strength test – door system crash test.

UNIT II COLLISION AND CRASH TESTING

Crash testing – human testing – dummies – crash worthiness – pole crash testing – near crash testing – vehicle to vehicle impact – side impact testing – crash test sensor – sensor mounting positions – crash test data acquisition – braking distance test.

UNIT III TESTING OF WHEELS AND BRAKES

Wheelsdynamic cornering fatigue, dynamic radial fatigue tests – procedures – bending moment and radial load calculations – impact test – road hazard impact test for wheel and tyre assemblies test procedures – failure criteria and performance criteria.

UNIT IV ENERGY TESTING

Engine cooling fan, air conditioning and brake compressors, hydraulic pumps power consumptions – ABS energy consumption.

UNIT V FUEL CONSUMPTION TESTING

Test route selection – vehicle test speeds – cargo, weights, driver selection, tested data, finding and calculations – test on rough terrain, pothole with laden and unladen conditions.

Suggested Readings:

1. Thomas G Beckwith, Roy D Marangoni and John H Lienhard V, *Mechanical Measurements*, Pearson Education, 2013.
2. *SAE Handbook - Vol 3*, SAE Publications, 2000.
3. Tim Grilles, *Automotive Service*, Delmar Publishers, 1998.
4. William HCrouse and Donald LAnglin, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2006.

18BEAE7E03	ALTERNATE FUELS AND ENERGY SYSTEMS	Semester VII 3H-3C
-------------------	---	-------------------------------------

Instruction Hours/Week: L:3 T:0 P:0	Marks: Internal:40 External:60 Total:100
End Semester Exam:3 hours	

Course Objectives:

- To acquire knowledge of alternative fuels and changes in the engine design for handling them.
- To learn the various energy systems for use in the automobiles.
- To equip them with skills to modify the engines
- To make the students conversant of biofuels
- To make the students conversant of synthetic fuels
- To give exposure to combustion, performance and emission characteristics of engines

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Analyse the thermodynamics of combustion characteristics of alternative fuels.
- Distinguish the various types of alternative fuels based on need and scope.
- Modify the engines according to the type of alternative fuel.
- Explain the biofuels
- Explain the synthetic fuels
- Analyse the combustion, performance and emission characteristics of engines

Course Contents:**UNIT I GASEOUS FUELS**

Properties – composition – production – storage – engine modifications – combustion – performance and emission characteristics in SI and CI engines – advantages and disadvantages of Compressed Natural Gas (CNG), Liquefied Petroleum Gas (LPG), hydrogen and ammonia.

UNIT II ALCOHOL FUELS

Properties – composition – production – storage – engine modifications – blends – combustion – performance and emission characteristics in SI and CI engines – advantages and disadvantages of methanol, ethanol and butanol.

UNIT III BIO-FUELS

Properties – composition – production – engine modifications – treatment – blends – performance and emission characteristics – advantages and disadvantages of straight vegetable oils, bio-diesel and biogas.

UNIT IV SYNTHETIC FUELS

Properties – composition – material compatibility – engine modifications – performance and emission characteristics – advantages and disadvantages of hydrogen with CNG, dimethyl ether, diethyl ether, syngas, producer gas and plastic fuel.

UNIT V DUAL-FUEL AND MULTI-FUEL ENGINES

Technology – working principle – conversion of engine – operation – combustion, performance and emission characteristics – advantages and disadvantages.

Suggested Readings:

1. Thipse SS, *Alternate Fuels: Concepts, Technologies and Developments*, Jaico Publishing House, Delhi, 2010.
2. Richard LBechfold, *Alternative Fuels Guidebook*, SAE International, Warrendale, 1997.
3. Ganesan V, *Internal Combustion Engines*, McGraw-Hill Education, New Delhi, 2012.
4. Mathur L and Sharma RP, *Internal Combustion Engines*, Dhanpat Rai Publications, New Delhi, 2002.
5. *Alcohols as Motor Fuels: Progress in Technology Series No. 19*, SAE Publication, USA, 1980.

18BEAE7E04**APPLIED HYDRAULICS AND PNEUMATICS****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the various types of hydraulic pumps and actuators.
- To learn the various hydraulic components and their functions.
- To provide knowledge on the selection of hydraulic components.
- To study the various types of pneumatic components and servo systems.
- To learn the fluid power circuit design methods and its applications.
- To provide knowledge on the application of accumulator and intensifier circuit.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify suitable hydraulic pumps and actuators for different applications.
- Choose suitable hydraulic components for several applications.
- Select suitable fluid power components for various uses.
- Choose suitable pneumatic components for different applications.
- Design the fluid power circuit for given applications.
- Explain the application of accumulator and intensifier circuit.

Course Contents:**UNIT I HYDRAULIC PUMPS AND ACTUATORS**

Introduction to fluid power system – applications of Pascal's law – hydraulic pumps – pumping theory – classification – construction and working principles of gear pump, vane pump, piston pump, lobe pump – fluid power actuators – construction and working principles of single acting, double acting, cushioning and telescopic cylinder – gear motors – vane motors.

UNIT II HYDRAULIC COMPONENTS

Direction control valve – check valve – shuttle valve – 3/2, 4/2 and 4/3 way valve and solenoid valve – actuation methods – pressure control valves – pressure relief valve – compound pressure relief valve – pressure reducing valve – unloading valve – sequence valve – counterbalance valve – flow control valves and its types – accumulators and intensifier – types.

UNIT III SELECTION OF HYDRAULIC COMPONENTS

Selection factors – selection of pumps – actuators – cylinders – motors versus load – piston rod buckling – selection of hydraulic pipe and hoses, valves, reservoir, filters, accumulators and intensifiers.

UNIT IV PNEUMATIC COMPONENTS

Compressors – Filter, Regulator, Lubricator (FRL) unit – mufflers – valves – direction control valves – shuttle valve – two-way air piloted valve – push button valve – quick exhaust valve – lever control valve and solenoid valve – pneumatic actuators – servo system – hydro-mechanical, electro-hydraulic and proportional valve.

UNIT V DESIGN OF FLUID POWER CIRCUIT

Fluid power circuits – speed control circuits – synchronizing circuit – sequential circuit – design for simple application using cascade and stepper sequencer method – application of accumulator and intensifier circuit.

Suggested Readings:

1. Anthony Esposito, *Fluid Power with Applications*, Pearson Education, New Delhi, 2011.
2. Majumdar S R, *Oil Hydraulics*, Tata McGraw-Hill Publishing Company, New Delhi, 2004.
3. Majumdar S R, *Pneumatic Systems: Principles and Maintenance*, Tata McGraw-Hill Publishing Company, New Delhi, 2008.
4. Ilango S, *Introduction to Hydraulics and Pneumatics*, Prentice Hall of India, New Delhi, 2007.
5. Andrew Parr, *Hydraulics and Pneumatics*, Jaico Publishing House, 2006.

18BEAE7E05**OPTIMIZATION FOR ENGINEERING DESIGN****Semester VII
3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To formulate design optimization problems for engineering applications.
- To provide knowledge on single variable unconstrained problems.
- To learn multi-objective unconstrained optimization problems.
- To introduce concepts of constrained non-linear optimization problems.
- To interpret non-traditional optimization techniques for engineering problems.
- To study the features of neural network-based optimization

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Formulate design optimization problem from real-world applications.
- Compute the solution for single variable unconstrained optimization problems.
- Determine the solution for multivariable unconstrained optimization problems.
- Find the solution for the constrained non-linear optimization problems.
- Apply non-traditional optimization techniques to solve engineering problems.
- Apply the neural network based optimization

Course Contents:**UNIT I INTRODUCTION**

Introduction to design optimization – historical development – design process – conventional vs. optimum design process – statement of an optimization problem – optimum design problem formulation – process steps – problem formulation for engineering applications – classifications of optimization problems.

UNIT II SINGLE VARIABLE NONLINEAR UNCONSTRAINED OPTIMIZATION ALGORITHMS

Optimality criteria – unimodal function – eliminating methods – exhaustive search, dichotomous search, interval halving method, Fibonacci search method, golden section search method – point estimation method (Powell's algorithm) – gradient-based methods – Newton-Raphson method (Taylor's series expansion), bisection method, secant method, cubic search method.

UNIT III MULTIVARIABLE NONLINEAR UNCONSTRAINED OPTIMIZATION ALGORITHMS

Optimality criteria – unidirectional search – direct search methods – evolutionary optimization method, random search methods, Simplex search method, Hooke-Jeeves pattern search method – indirect search (gradient) methods – Cauchy's (steepest descent) method, Newton's method, conjugate gradient method.

**UNIT IV CONSTRAINED NONLINEAR OPTIMIZATION ALGORITHMS AND
SPECIALISED PROGRAMMING**

Introduction, characteristics – indirect search methods – transformation methods, penalty function method, method of multipliers – sensitivity analysis – Kuhn-Tucker conditions, theorems – direct search minimization methods – variable elimination method, complex search method and random search methods – feasible direction method – integer programming – penalty function method, branch and bound method.

UNIT V NON-TRADITIONAL OPTIMIZATION TECHNIQUES

Genetic Algorithms (GA) – principle, difference and similarities between GA and traditional methods – constrained optimization – GA operators – real-coded and advanced GAs – simulated annealing – neural network based optimization.

Suggested Readings:

1. Singiresu S Rao, *Engineering Optimization: Theory and Practice*, Wiley India, Delhi, 2009.
2. Kalyanmoy Deb, *Optimization for Engineering Design: Algorithms and Examples*, PHI Learning, New Delhi, 2012.
3. Jasbir Singh Arora, *Introduction to Optimum Design*, Elsevier India, New Delhi, 2011.
4. Saravanan R, *Manufacturing Optimization through Intelligent Techniques*, Taylor & Francis Publications, CRC Press, New Delhi, 2006.

18BEAE7E06**MECHATRONICS****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the concept and working of sensors used in the mechatronic system.
- To study different types of actuators used in the mechatronic system.
- To provide knowledge on feedback mechanism for improving the reliability of the mechatronic system.
- To impart knowledge on working of microcontroller in the mechatronic system.
- To learn the Programmable Logic Controller (PLC) used in the mechatronic system.
- To expose students to program for PLC

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Select the different types of sensor for various mechatronics applications.
- Identify suitable actuator used in a mechatronic system.
- Design a feedback controller for mechatronic systems.
- Develop a controller using microcontroller for the mechatronic system.
- Describe the PLC
- Write a program for PLC used in the mechatronic systems.

Course Contents:**UNIT I SENSORS**

Components of mechatronics system – sensor – terminology and mathematical equation – potentiometer – linear variable differential transformer – strain gauge – piezoelectric sensor – optical encoder – hall effect sensor – thermistor – thermocouple – light sensor.

UNIT II ACTUATORS

Terminology – mathematical equation of mechanical actuation system – cam, gear, belt and chain, ball screw – mechanical aspects of motor selection – pneumatic and hydraulic actuation system – electrical actuation system – relay and solenoid – working and control of brush and brushless DC motor – working and control of stepper and servo motor.

UNIT III FEEDBACK CONTROL

Transfer function – mathematical modelling of mechanical and electrical system – electrical analogy – electro-mechanical system – first order system – second order system – proportional control – derivative control – integral control – PID control – controller tuning – concept of stability.

UNIT IV MICROCONTROLLER

Architecture of 8051 – I/O pins, ports and circuits – memory, counter, timer – interrupt – instruction set – moving data – logical, arithmetic operation – jump and call instruction – LCD and keyboard interfacing – examples – windscreen wiper motion – car engine management.

UNIT V PROGRAMMABLE LOGIC CONTROLLER

Basic structure – input/output processing – programming – mnemonics – timers, internal relays and counters – shift registers – master and jump controls – data handling – analogue input/output – selection of PLC – examples – pick and place robot – car park barrier system.

Suggested Readings:

1. W. Bolton, *Mechatronics*, Pearson Education, New Delhi, 2012.
2. Godfrey Onwubolu, *Mechatronics: Principles and Applications*, Butterworth-Heinemann, 2005.
3. Nitaigour Premchand Mahalik, *Mechatronics: Principles, Concepts and Applications*, Tata McGraw-Hill Publishing Company, New Delhi, 2008.
4. Krishna Kant, *Microprocessors and Microcontrollers*, Prentice Hall of India, 2007.
5. Ramachandran K P, Vijayaraghavan G K and Balasundaram M S, *Mechatronics: Integrated Mechanical Electronic Systems*, Wiley India, New Delhi 2008.

18BEAE7E07
18BEAEOE04**MODERN VEHICLE TECHNOLOGY****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

Course Contents:**UNIT I TRENDS IN POWER PLANTS**

Hybrid vehicles – stratified charged/lean burn engines – hydrogen engines – battery vehicles – electric propulsion with cables – magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Adaptive cruise control – intelligent speed adaptation – lane departure warning systems – traction control systems – driver drowsiness detection system – collision avoidance systems – hill descent control – anti-spin regulation – parking assistance systems – night-vision systems – pedestrian detection.

UNIT III SUSPENSION, BRAKES AND SAFETY

Interconnected air and liquid suspensions – hydroelastic suspension system – hydragas suspension – closed loop suspension – indirect floating caliper disc brake – self energising disc brake – anti-skid braking system – retarders – regenerative braking – auto emergency braking – crumple zone – safety cage – airbags – seat belts – headrests.

UNIT IV EMISSION AND NOISE POLLUTION CONTROL

Engine emissions – types of catalytic converters – open loop and closed loop operation to the oxidizing catalytic converter – evaporative emission – internal and external noise – identification of noise sources – noise control techniques – adaptive noise control.

UNIT V VEHICLE TELEMATICS

Building blocks of vehicle telematics system – Global Positioning System (GPS) and Geographic Information System (GIS) for vehicle tracking – automotive navigation system – road recognition system – wireless vehicle safety communications – UsageBased Insurance (UBI).

Suggested Readings:

1. Ljubo Vlacic, Michael Parent and Fumio Harashima, *Intelligent Vehicle Technologies*, Butterworth-Heinemann, UK, 2001.
2. Ronald K Jurgen, *Navigation and Intelligent Transportation Systems*, SAE International, USA, 1998.
3. Heinz Heisler, *Advanced Vehicle Technology*, Butterworth-Heinemann, UK, 2002.
4. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, USA, 2017.
5. William B Ribbens, *Understanding Automotive Electronics*, Butterworth-Heinemann, UK, 2017.
6. *Bosch Automotive Handbook*, Robert Bosch, Germany, 2018.

18BEAE7E08**INTELLIGENT VEHICLE TECHNOLOGY****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn the various advanced driver assistance systems.
- To provide knowledge of the vehicle telematics.
- To impart knowledge on safety and security systems.
- To study the various comfort systems.
- To introduce the adaptive control systems.
- To introduce the concepts of the global positioning systems

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- List and explain the various driver assistant systems.
- Discuss the global positioning systems
- Describe the vehicle telematics and its applications.
- Explain the safety and security systems for automotive.
- Discuss the various comfort systems.
- Explain the adaptive control systems.

Course Contents:**UNIT I DRIVER ASSISTANCE SYSTEMS**

Introduction – driver support systems – driver information – driver perception – driver convenience – driver monitoring – vehicle support systems – general vehicle control – collision avoidance – vehicle status monitoring.

UNIT II TELEMATICS

Global positioning systems – geographical information systems – navigation systems – automotive vision system – road recognition – driver assistance systems.

UNIT III SAFETY AND SECURITY SYSTEMS

Airbags – seat belt tightening system – collision warning systems – child lock – anti-lock braking system – anti-theft technologies – smart card system – number plate coding.

UNIT IV COMFORT SYSTEMS

Active suspension systems – requirement and characteristics – different types – power steering – collapsible and tiltable steering column – power windows.

UNIT V ADAPTIVE CONTROL SYSTEMS

Adaptive cruise control – adaptive noise control – anti-spin regulation – traction control systems – cylinder cut-off technology.

Suggested Readings:

1. Ljubo Vlacic, Michael Parent and Fumio Harashima, *Intelligent Vehicle Technologies*, Butterworth-Heinemann, 2001.
2. Ronald K Jurgen, *Navigation and Intelligent Transportation Systems*, SAE International, 1998.
3. Heinz Heisler, *Advanced Vehicle Technology*, Butterworth-Heinemann, 2002.
4. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, 2017.

18BEAE7E09 MANUFACTURING OF AUTOMOTIVE COMPONENTS

Semester VII
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on basic principle and production methods of automotive components.
- To learn the surface coating technologies used in the automotive industry.
- To understand the importance of suitable process for the manufacturing automotive components.
- To enrich the understanding of casted and forged engine components
- To know the application of the emission control system
- To expose students to the stretch forming of auto body panels

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Select the materials for the components based on its functionality.
- Analyse suitable process for the manufacturing automotive components.
- List the casted and forged engine components.
- Select suitable surface coating technologies for the components.
- Describe the emission control system
- Explain the stretch forming of auto body panels.

Course Contents:**UNIT I CASTED ENGINE COMPONENTS**

Material selection and manufacturing methods for piston, piston rings, cylinder block, wet and dry liners, engine head, oil pan, carburetors– thermal barrier coating of engine head and valves.

UNIT II FORGED ENGINE COMPONENTS

Material selection and manufacturing methods for crankshaft, connecting rod, camshaft, valve, piston pin, push rod, rocker arm, tappets, spark plug.

UNIT III TRANSMISSION SYSTEM

Material selection and manufacturing methods for clutch, clutch lining, gearbox, gear, propeller shaft, differential, axle shaft, bearing, fasteners, wheel drum.

UNIT IV VEHICLE CHASSIS

Material selection and manufacturing methods for chassis, dead axle, leaf spring, coil spring, shock absorbers, wheel housing, steering system, brake shoes, wheel rim, tyres – heat treatment procedures.

UNIT V RECENT DEVELOPMENTS

Surface treatment – plastics – plastics in automobile vehicles – processing of plastics – emission control system – catalytic converter – hydroforming of exhaust manifold and lamp housing – stretch forming of auto body panels – metal matrix composite liners – selection of materials for auto components – use of robots in body weldment.

Suggested Readings:

1. Heldt P M, *High Speed Combustion Engines*, Oxford Publishing Co., New York, 1990.
2. Gupta K M, *Automobile Engineering Volume I & II*, Umesh Publishers, 2000.
3. Kirpal Singh, *Automobile Engineering Volume I & II*, Standard Publishers, New Delhi, 2018.
4. Serope Kalpakjian and Steven R Schmid, *Manufacturing Processes for Engineering Materials*, Pearson Education, 2008.
5. Mohammed A Omar, *The Automotive Body Manufacturing Systems and Processes*, John Wiley & Sons, 2011.

18BEAE7E10**COMPUTATIONAL FLUID DYNAMICS****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce governing equations of viscous fluid flows.
- To introduce numerical modelling and its role in the field of fluid flow and heat transfer.
- To provide knowledge on the various discretization methods, solution procedures and turbulence modelling.
- Analyse finite difference and finite volume methods for diffusion.
- Analyse finite volume method for convective diffusion.
- Analyse the flow field problems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Derive the governing equations and boundary conditions for fluid dynamics.
- Analyse finite difference and finite volume methods for diffusion.
- Analyse finite volume method for convective diffusion.
- Analyse the flow field problems.
- Explain and solve the turbulence models and mesh generation techniques.
- Use software tools.

Course Contents:**UNIT I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS**

Basics of computational fluid dynamics – governing equations of fluid dynamics – continuity, momentum and energy equations – chemical species transport – physical boundary conditions – time-averaged equations for turbulent flow – turbulent-kinetic energy equations – mathematical behaviour of PDEs on CFD – elliptic, parabolic and hyperbolic equations.

UNIT II FINITE DIFFERENCE AND FINITE VOLUME METHODS FOR DIFFUSION

Derivation of finite difference equations – simple methods – general methods for first and second order accuracy – finite volume formulation for steady-state – one, two and three -dimensional diffusion problems – parabolic equations – explicit and implicit schemes – example problems on elliptic and parabolic equations – use of finite difference and finite volume methods.

UNIT III FINITE VOLUME METHOD FOR CONVECTION DIFFUSION

Steady one-dimensional convection and diffusion – central, upwind differencing schemes – properties of discretization schemes – conservativeness, boundedness, transportiveness, hybrid, power-law, QUICK schemes.

UNIT IV FLOW FIELD ANALYSIS

Finite volume methods – representation of the pressure gradient term and continuity equation – staggered grid – momentum equations – pressure and velocity corrections – pressure correction equation – SIMPLE algorithm and its variants – PISO algorithms.

UNIT V TURBULENCE MODELS AND MESH GENERATION

Turbulence models – mixing length model – two-equation models – high and low Reynolds number models – structured grid generation – unstructured grid generation – mesh refinement – adaptive mesh – software tools.

Suggested Readings:

1. Ghoshdastidar P S, *Computer Simulation of Flow and Heat Transfer*, Tata McGraw-Hill Publishing Company Ltd., 2017.
2. Versteeg H K and Malalasekera W, *An Introduction to Computational Fluid Dynamics: The Finite Volume Method*, Pearson Education Ltd., 2007.
3. Anil W Date, *Introduction to Computational Fluid Dynamics*, Cambridge University Press, 2005.
4. Chung T J, *Computational Fluid Dynamics*, Cambridge University Press, 2002.
5. Ghoshdastidar P S, *Heat Transfer*, Oxford University Press, 2005.
6. Muralidhar K and Sundararajan T, *Computational Fluid Flow and Heat Transfer*, Narosa Publishing House, New Delhi, 2014.
7. Patankar S V, *Numerical Heat Transfer and Fluid Flow*, Hemisphere Publishing Corporation, 2004.

18BEAE7E11**NEW PRODUCT DEVELOPMENT****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the importance of new product development to firm performance.
- To understand the needs of the customer.
- To provide knowledge on creative thinking methods.
- To impart knowledge on decision-making.
- To learn the methods of developing cost estimates.
- To introduce the concepts of decision making and product architecture

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate an understanding of the overview of all the product development processes.
- Demonstrate the knowledge of concept generation and selection tools.
- List the systematic methods for designing.
- Explain the decision-making process.
- Discuss the methods of developing cost estimates.
- Explain the decision making and product architecture

Course Contents:**UNIT I INTRODUCTION**

Need for developing products – the importance of engineering design – types of design – design process – relevance of product lifecycle issues in design – designing to codes and standards – societal considerations in engineering design – generic product development process – various phases of product development – planning for products – establishing markets – market segments – relevance of market research.

UNIT II CUSTOMER NEEDS

Identifying customer needs – voice of customer – customer populations – hierarchy of human needs – need gathering methods – affinity diagrams – needs importance – establishing engineering characteristics – competitive benchmarking – quality function deployment – house of quality – product design specification – case studies.

UNIT III CREATIVE THINKING

Creative thinking – creativity and problem solving – creative thinking methods – generating design concepts – systematic methods for designing – functional decomposition – physical decomposition – functional representation – morphological methods – Theory of Inventive Problem Solving (TRIZ) – axiomatic design

UNIT IV DECISION MAKING AND PRODUCT ARCHITECTURE

Decision making –decision theory –utility theory –decision trees –concept evaluation methods – Pughconcept selection method – weighted decision matrix –analytic hierarchy process – introduction toembodiment design –product architecture – types of modular architecture –steps in developingproduct architecture.

UNIT V DESIGN AND COST ANALYSIS

Industrial design – human factors design –user-friendly design – design for serviceability – design for environment – prototyping and testing – cost evaluation –categories of cost – overhead costs – activity based costing –methods of developing cost estimates – manufacturing cost –value analysis in costing.

Suggested Readings:

1. Anita Goyal, Karl T Ulrich and Steven D Eppinger, *Product Design and Development*, Tata McGraw-Hill Education, 2009.
2. Kevin Otto and Kristin Wood, *Product Design*, Pearson Education, 2015.
3. Clive L Dym and Patrick Little, *Engineering Design: A Project-based Introduction*, John Wiley & Sons, 2009.
4. George E Dieter and Linda C Schmidt, *Engineering Design*, McGraw-Hill International, 2009.
5. Yousef Haik and Shahin T M M, *Engineering Design Process*, Cengage Learning, 2010.

18BEAE7E12**LEAN MANUFACTURING****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To acquire the general knowledge to deliver consistently high quality and value added products and services to the customer in a lean environment.
- To understand the terminology relating to lean operations in both service and manufacturing organizations.
- To impart knowledge on principles of lean manufacturing on the shop floor
- To enrich the understanding of just in time concept
- To expose students to concepts of visual management, 5S and total productive maintenance
- To expose students to Jidoka principle

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Summarise the quality requirements to provide products and services in a lean environment.
- Apply the principles of lean manufacturing on the shop floor.
- Explain the just in time
- Explain the concepts of visual management, 5S and total productive maintenance.
- Examine the Jidoka principle.
- Illustrate the culture of lean management.

Course Contents:**UNIT I INTRODUCTION**

The mass production system – origin of lean production system – necessity – lean revolution in Toyota – systems and systems thinking – basic image of lean production – customer focus – muda(waste).

UNIT II STABILITY OF LEAN SYSTEM

Standards in the lean system – 5S system – total productive maintenance – standardized work – elements of standardized work – charts to define standardized work – manpower reduction – overall efficiency – standardized work and Kaizen – common layouts.

UNIT III JUST IN TIME (JIT)

Principles of JIT – JIT system – Kanban – Kanban rules – expanded role of conveyance – production leveling – pull systems – value stream mapping.

UNIT IV JIDOKA (AUTOMATION WITH A HUMAN TOUCH)

Jidoka concept – Poka-Yoke (mistake proofing) systems – inspection systems and zone control – types and use of Poka-Yoke systems – implementation of Jidoka.

UNIT V WORKER INVOLVEMENT AND SYSTEMATIC PLANNING METHODOLOGY

Involvement – activities to support involvement – quality circle activity – Kaizen training – suggestion programs – Hoshin planning system (systematic planning methodology) – phases of Hoshin planning – lean culture.

Suggested Readings:

1. Dennis P, *Lean Production Simplified: A Plain-Language Guide to the World's Most Powerful Production System*, Productivity Press, 2015.
2. Liker J, *The Toyota Way: 14 Management Principles from the World's Greatest Manufacturer*, McGraw-Hill, 2004.
3. Michael L G, *Lean Six Sigma: Combining Six Sigma Quality with Lean Production Speed*, McGraw-Hill, 2002.
4. Taiichi Ohno, *Toyota Production System: Beyond Large-Scale Production*, Taylor & Francis, 1988.
5. Mike Rother and John Shook, *Learning to See: Value-Stream Mapping to Add Value and Eliminate Muda*, The Lean Enterprise Institute, 2003.

18BEAE7E13**FINITE ELEMENT ANALYSIS****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart basic knowledge on the finite element method.
- To provide knowledge on one- and two-dimensional elements.
- To study heat conduction problems using finite element method.
- To present knowledge on the higher order and isoparametric elements.
- To Study and acquire knowledge on numerical methods
- To provide knowledge on Gaussian quadrature method

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the numerical methods to formulate the simple finite element problems.
- Apply the one-dimensional finite element method to solve bar, beam and truss type problems.
- Apply the finite element method for plane stress, plane strain and axisymmetric conditions.
- Determine the temperature distribution of one and two dimensional heat transfer problems using one and two dimensional finite elements.
- Apply the numerical methods to formulate the higher order and isoperimetric problems.
- Apply Gaussian quadrature method.

Course Contents:**UNIT I INTRODUCTION**

Relevance and scope of finite element methods – strain vs displacement relations – stresses and equilibrium – natural and essential boundary conditions – Rayleigh-Ritz method – Galerkin method – FEM procedure – discretization of domain – element shapes, types, size, location and numbers.

UNIT II ONE-DIMENSIONAL (1D) ELEMENTS

Coordinate system types: global, local and natural – shape function of 1D bar element – finite element formulation – stiffness matrix, load vector, boundary condition and assembly of global equation – 1D bar element and two node truss element – problems in 2D truss – introduction to beam element.

UNIT III TWO-DIMENSIONAL (2D) ELEMENTS

Shape function for linear triangular element – finite element formulation – Constant Strain Triangular (CST) element – plane stress, plane strain – axisymmetric elements.

UNIT IV HEAT TRANSFER APPLICATIONS

Shape function for 1D and 2D triangular element heat conduction – stiffness matrix, load vector and assembly of global equation for 1D and 2D triangular element heat conduction – heat generation with convective boundary conditions for linear element.

UNIT V HIGHER ORDER AND ISOPARAMETRIC ELEMENT

Selection of order of polynomial – linear, simplex, complex and multiplex elements – mesh refinement methods and convergence requirements – iso, sub and super parametric element – shape functions for a 2D four noded and eight noded isoparametric rectangular element using natural coordinate system – Gaussian quadrature method.

Suggested Readings:

1. Rao S S, *Finite Element Method in Engineering*, Elsevier India, 2005.
2. David V Hutton, *Fundamentals of Finite Element Analysis*, Tata McGraw-Hill Publishing Company, New Delhi, 2005.
3. Robert D Cook, David S, Malkucs Michael E Plesha, *Concepts and Applications of Finite Element Analysis*, John Wiley, New Delhi, 2007.
4. Chandrupatla T R and Belegundu A D, *Introduction to Finite Elements Engineering*, Pearson Education, New Delhi, 2002.
5. Bhavikati S S, *Finite Element Analysis*, New Age International Publishers, 2015.

18BEAE7E14**HYBRID VEHICLE TECHNOLOGY****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the working of different configurations of electric vehicles and their components.
- To impart knowledge on modelling of battery.
- To introduce the basic principle and operation of the fuel cell.
- To provide knowledge on the design of electric and hybrid electric vehicles.
- To learn the power electronic converter for battery charging.
- To impart knowledge on energy storage design

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the working of different configurations of electric vehicles.
- Analyse the performance characteristics of the battery.
- State the basic principle of operation of the fuel cell.
- Design series and parallel hybrid electric drive trains.
- Discuss the various charging methods for the battery.
- Discuss the energy storage design.

Course Contents:**UNIT I ELECTRIC AND HYBRID ELECTRIC VEHICLES**

Configuration of electric vehicles – performance of electric vehicles – traction motor characteristics – tractive effort and transmission requirement – vehicle performance – tractive effort in normal driving – energy consumption – concept of hybrid electric drive trains – architecture of hybrid electric drive trains – series hybrid electric drive trains – parallel hybrid electric drive trains.

UNIT II ENERGY STORAGE

Energy storage requirements – battery parameters – types of batteries – modelling of battery – fuel cell basic principle and operation – types of fuel cells – Polymer Exchange Membrane Fuel Cell (PEMFC) and its operation – modelling of PEMFC, supercapacitors.

UNIT III ELECTRIC PROPULSION

EV consideration – DC motor drives and speed control – induction motor drives – permanent magnet motor drives – switch reluctance motor drive for electric vehicles – configuration and control of drives.

UNIT IV DESIGN OF ELECTRIC AND HYBRID ELECTRIC VEHICLES

Series hybrid electric drive train design: operating patterns – control strategies – sizing of major components – power rating of traction motor – power rating of engine/generator – design of photonic power system.

Parallel hybrid electric drive train design: control strategies of parallel hybrid drive train – design of engine power capacity – design of electric motor drive capacity – transmission design – energy storage design.

UNIT V POWER ELECTRONIC CONVERTER FOR BATTERY CHARGING

Charging methods for battery – termination methods – charging from grid – Z-converter, isolated bidirectional DC-DC converter – design of Z-converter for battery charging – high-frequency transformer based isolated charger topology – transformerless topology.

Suggested Readings:

1. Iqbal Husain, *Electric and Hybrid Vehicles: Design Fundamentals*, CRC Press, 2010.
2. Mehrdad Ehsani, Yimin Gao, Stefano Longo and Kambiz Ebrahimi, *Modern Electric, Hybrid Electric, and Fuel Cell Vehicles*, CRC Press, 2018.
3. Tom Denton, *Electric and Hybrid Vehicles*, CRC Press, 2016.
4. Sheldon S Williamson, *Energy Management Strategies for Electric and Plug-in Hybrid Electric Vehicles*, Springer, 2013.
5. John Fenton and Ron Hodgkinson, *Lightweight Electric/Hybrid Vehicle Design*, Butterworth-Heinemann, 2001.
6. Chan C C and Chau K T, *Modern Electric Vehicle Technology*, Oxford University Press, 2001.
7. Chris Mi, Abul Masrur M and David Wenzhong Gao, *Hybrid Electric Vehicles: Principles and Applications with Practical Perspectives*, John Wiley & Sons, 2011.

18BEAE7E15**FUEL CELL TECHNOLOGY****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To address the need and promise of alternative clean energy.
- To introduce the concept of fuel cells for use in automobiles.
- To learn the fuel cell components and their impact on performance.
- To impart knowledge on the fuel cycle analysis.
- To provide knowledge on performance characteristics of the fuel cell.
- To expose students to the impact of the fuel cell system in automobiles

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- List the types of fuel cells.
- Explain the thermodynamics and electrochemical kinetics of fuel cells.
- Describe the fuel cell performance characteristics
- Explain the various components of the fuel cell.
- Analyse the performance characteristics of the fuel cell.
- Analyse the impact of the fuel cell system in automobiles.

Course Contents:**UNIT I INTRODUCTION TO FUEL CELLS**

Introduction – working and types of fuel cell – low, medium and high temperature fuel cell – liquid and methanol types – proton exchange membrane fuel cell – solid oxide, hydrogen fuel cells – thermodynamics and electrochemical kinetics of fuel cells.

UNIT II FUEL CELLS FOR AUTOMOTIVE APPLICATIONS

Fuel cells for automotive applications – technology advances in fuel cell vehicle systems – onboard hydrogen storage – liquid hydrogen and compressed hydrogen – metal hydrides – fuel cell control system – alkaline fuel cell – road map to market.

UNIT III PERFORMANCE OF FUEL CELL COMPONENTS

Fuel cell performance characteristics – current/voltage, voltage efficiency and power density, ohmic resistance, kinetic performance, mass transfer effects – membrane electrode assembly components, fuel cell stack, bi-polar plate, humidifiers and cooling plates.

UNIT IV FUELLING

Hydrogen storage technology – pressure cylinders, liquid hydrogen, metal hydrides, carbon fibres – reformer technology – steam reforming, partial oxidation, auto-thermal reforming – CO removal, fuel cell technology based on removal like biomass.

UNIT V FUEL CYCLE ANALYSIS

Introduction to fuel cycle analysis – application to fuel cell and other competing technologies like battery powered vehicles, SI engine fuelled by natural gas and hydrogen and hybrid electric vehicle.

Suggested Readings:

1. Viswanathan B and Aulice Scibioh M, *Fuel Cells: Principles and Applications*, CRC Press, 2008.
2. Shripad T Revankar and Pradip Majumdar, *Fuel Cells: Principles, Design, and Analysis*, CRC Press, 2014.
3. James Larminie and Andrew L Dicks, *Fuel Cell Systems Explained*, John Wiley & Sons, 2003.
4. Gregor Hoogers, *Fuel Cell Technology Handbook*, CRC Press, 2002.

18BEAE7E16**PROCESS PLANNING AND COST ESTIMATION****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the process planning concepts.
- To impart importance of the cost estimation process and procedures.
- To study the procedure to calculate direct, indirect and overhead expenses.
- To facilitate the understanding of the production cost of forging, welding, and foundry.
- To learn the procedure to estimate the various machining costs.
- To acquire the procedure to estimate the machining time for lathe, drilling, boring, shaping, milling and grinding operations.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the concepts of process planning and cost estimation.
- Assess the importance of cost estimation process and its procedures.
- Compute direct, indirect and overhead expenses.
- Determine the production cost of forging, welding, and foundry.
- Calculate the machining time for lathe, drilling, boring and shaping operations.
- Calculate the machining time for milling and grinding operations.

Course Contents:**UNIT I PROCESS PLANNING**

Definition – objective – scope – process planning activities – approaches – manual, computer aided process planning – retrieval, generative and semi-generative – selection processes – machine selection – material selection parameters – set of documents for process planning – production time calculation – selection of cost optimal processes.

UNIT II INTRODUCTION TO COST ESTIMATION

Objectives and functions of estimating – costing – importance and aims of costing – difference between costing and estimation – methods of costing – types of estimates – methods of estimates – importance of realistic estimates – estimating procedure.

UNIT III ELEMENTS OF COST

Introduction – material cost – direct and indirect – labour cost – direct, indirect and determination of direct labour cost – expenses – direct and indirect – analysis of overhead expenses – administrative expenses – selling and distributing expenses – allocation of overhead expenses – depreciation – causes and methods of depreciation.

UNIT IV PRODUCTION COST ESTIMATION

Estimation in forging shop – losses in forging and forging cost –estimation in gas cutting and welding shop – material cost, labour cost and finish on cost –estimation in foundry shop – pattern cost, foundry cost and casting cost.

UNIT V ESTIMATION OF MACHINING TIME

Importance of machine time calculations – estimation of machining time for lathe, drilling, boring, shaping, milling and grinding operations.

Suggested Readings:

1. Kesavan R, Elanchezhian E and Vijaya Ramnath B, *Process Planning and Cost Estimation*, New Age International Publications, 2008.
2. Adithan M, *Process Planning and Cost Estimation*, New Age International Publications, 2007.
3. Peter Scallan, *Process Planning: The Design/Manufacture Interface*, Elsevier, 2003.
4. Sinha B P, *Mechanical Estimating and Costing*, Tata McGraw-Hill, 2001.
5. Mukhopadhyay S K, *Production Planning and Control: Text and Cases*, Prentice Hall of India, 2007.
6. Chitale A V and Gupta R C, *Product Design and Manufacturing*, Prentice Hall of India, 2000.

18BEAE7E17**PRODUCT LIFECYCLE MANAGEMENT****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the concepts of Product Lifecycle Management (PLM).
- To impart knowledge on the product development process and methodologies.
- To study the product modelling and analysis tools.
- To provide knowledge of the product data management technology.
- To expose the recent trends in PLM.
- To give exposure to Intelligent information systems

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the concepts of PLM.
- List and explain phases of the product development process.
- Demonstrate how the new product development process works.
- Explain the functions of product data management.
- Describe the recent trends in PLM.
- Explain the Intelligent information systems

Course Contents:**UNIT I INTRODUCTION TO PRODUCT LIFECYCLE MANAGEMENT (PLM)**

Background, overview, need, benefits, concept of PLM – components / elements of PLM, – emergence of PLM – significance of PLM – customer involvement – product data and product workflow – company's PLM vision – PLM strategy – principles for PLM strategy – preparing for the PLM strategy – developing a PLM strategy – strategy identification and selection – change management for PLM.

UNIT II PRODUCT DEVELOPMENT PROCESS AND METHODOLOGIES

Integrated product development process –conceive phase – design phase – realize phase – service phase– bottom-up design, top-down design, front-loading design workflow, design in context, modular design – concurrent engineering – work structuring and team deployment – product and process systemization – problem identification and solving methodologies – product reliability – mortality curve.

UNIT III PRODUCT MODELLING AND ANALYSIS TOOLS

Product modelling– definition of concepts – fundamental issues – role of process chains and product models – types of product models – model standardization efforts – types of process chains – industrial demands – design for manufacturing – machining – casting and metal forming – optimum design – design for assembly and disassembly – probabilistic design concepts –Failure Mode Effects Analysis(FMEA) –Quality Function Deployment (QFD)– Taguchi Method for design

of experiments – design for product life cycle – estimation of manufacturing costs – reducing the component costs and assembly costs – minimise system complexity.

UNIT IV PRODUCT DATA MANAGEMENT (PDM) TECHNOLOGY

Introduction to concepts, benefits and terminology of PDM – CIM data – PDM functions – definition and architectures of PDM systems – product data interchange – portal integration – PDM acquisition and implementation.

UNIT V RECENT ADVANCES

Intelligent information systems – knowledge based product and process models – applications of soft computing in product development process – advanced database design for integrated manufacturing.

Suggested Readings:

1. Michael Grieves, *Product Lifecycle Management*, Tata McGraw-Hill Education, 2006
2. Antti Saaksvuori and Anselmi Immonen, *Product Life Cycle Management*, Springer, 2005.
3. John Stark, *Product Lifecycle Management: 21st Century Paradigm for Product Realisation*, Springer London, 2011.
4. Karl T Ulrich and Steven D Eppinger, *Product Design and Development*, McGraw-Hill, New York, 2016.

18BEAE7E18**COMPUTER INTEGRATED MANUFACTURING****Semester VII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce basic concepts of the Computer Integrated Manufacturing (CIM).
- To provide knowledge on the group technology and computer aided process planning.
- To impart knowledge on the shop floor control and Flexible Manufacturing Systems (FMS).
- To learn the various CIM implementation and data communication techniques.
- To provide knowledge on the concept of manufacturing automation protocol, technical office protocol and database terminology.
- To familiarize the students to understand the advantages of database and relational database

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Assess CAD/CAM integration for changing manufacturing and management scene.
- Construct a machine cell using the concepts of group technology and computer aided process planning.
- Select suitable material handling and storage system for FMS.
- Choose suitable CIM implementation and data communication techniques.
- Explain various protocols and database terminology in CIM.
- Explain advantages of database and relational database

Course Contents:**UNIT I INTRODUCTION**

The changing manufacturing and management scene – external communication – islands of automation and software – dedicated and open systems – manufacturing automation protocol – introduction to CAD/CAM integration.

UNIT II GROUP TECHNOLOGY AND COMPUTER AIDED PROCESS PLANNING

Classification and coding – DCLASS, MICLASS and OPITZ coding systems – facility design using GT – Benefits of GT – cellular manufacturing – process planning – role of process planning in CAD/CAM integration – approaches to computer aided process planning – variant approach and generative approaches.

UNIT III SHOP FLOOR CONTROL AND FMS

Shop floor control phases – factory data collection system – automatic identification methods – bar code technology – automated data collection system – FMS – components of FMS – types – FMS workstation – material handling and storage systems – FMS layout – computer control systems – application and benefits.

UNIT IV CIM IMPLEMENTATION AND DATA COMMUNICATION

System modelling tools – ICAM definition (IDEF) models – activity cycle diagram – CIM Open System Architecture (CIMOSA) – manufacturing enterprise wheel – CIM architecture – product data management implementation – software – communication fundamentals – Local Area Networks (LAN) – topology – LAN implementations – network management and installations.

UNIT V OPEN SYSTEM AND DATABASE FOR CIM

Open systems – open system inter-connection – manufacturing automation protocol and technical office protocol (MAP/TOP) – development of databases – database terminology – architecture of database systems – data modelling and data associations – relational databases – database operators – advantages of database and relational database.

Suggested Readings:

1. Mikell P Groover, *Automation of Production Systems and Computer Integrated Manufacturing*, Pearson Education, 2008.
2. Lee Kunwoo, *CAD/CAM/CAE Systems*, Addison Wesley, 1999.
3. Kant Vajpayee S, *Principles of Computer Integrated Manufacturing*, Prentice Hall, New Delhi, 2003.
4. Radhakrishnan P, Subramanyan S and Raju V, *CAD/CAM/CIM*, New Age International Pvt. Ltd., New Delhi, 2000.

VEHICLE MAINTENANCE

Semester VIII
3H-3C

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- To understand the need for vehicle maintenance and its importance.
- To familiarise the maintenance procedure for various components of an automobile.
- To familiarize the students to understand servicing of transmission and driveline components.
- To make the students conversant on the procedure for steering and suspension
- To make the students conversant on the procedure for wheel and brake maintenance.
- To Study and acquire knowledge on the fault diagnosis in the electrical and air conditioner systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

Course Contents:

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Need for maintenance – preventive and breakdown maintenance – requirements of maintenance – preparation of checklists – inspection schedule – maintenance of records, log sheets and other forms – safety precautions in maintenance – workshop layout, tools and equipment.

UNIT II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE

General engine service – dismantling of engine components – engine repair – service of basic engine parts, cooling and lubricating system, fuel system, intake and exhaust system – engine tune-up.

UNIT III TRANSMISSION AND DRIVELINE MAINTENANCE

General checks, adjustment and service of clutch – dismantling, identifying, checking and reassembling transmission, transaxle – road testing – removing and replacing propeller shaft – servicing of cross and yoke joint, and constant velocity joint – rear axle service points – removing axle shaft and bearings – servicing differential assemblies – fault diagnosis.

UNIT IV STEERING, SUSPENSION, WHEEL AND BRAKE MAINTENANCE

Inspection, maintenance and service of steering linkage, steering column, rack and pinion steering, recirculating ball steering, worm type steering, power steering system – inspection, maintenance and service of MacPherson strut, coil spring, leaf spring, shock absorbers – wheel alignment and balance – removing and fitting of tyres – tyre wear and tyre rotation – inspection, maintenance and service of hydraulic brake, drum brake, disc brake, parking brake – bleeding of brakes.

UNIT V ELECTRICAL AND AIR CONDITIONER MAINTENANCE

Maintenance of batteries, starting system, charging system and body electrical – fault diagnosis using scan tools – maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator – replacement of hoses – leak detection – air conditioner charging – fault diagnosis – vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

Suggested Readings:

1. Tim Gilles, *Automotive Service: Inspection, Maintenance, Repair*, Cengage Learning, USA, 2015.
2. Philip Knott and Adam Roylance, *An Introductory Guide to Motor Vehicle Maintenance: Light Vehicles*, EMS Publishing, UK, 2010.
3. James D Halderman and Curt Ward, *Advanced Engine Performance Diagnosis*, Pearson, USA, 2016.
4. Ed May and Les Simpson, *Automotive Mechanics Volume 1*, McGraw-Hill Australia, 2006.
5. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, USA, 2017.
6. Service manuals of various OEMs.

18BEAEOE05

FLEET MANAGEMENT

Semester VIII
3H-3C

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- To impart knowledge on the personnel management, selection process, training methods and motor vehicle act.
- To plan the vehicle routes, scheduling of vehicles and fare structure.
- To design the vehicle maintenance systems.
- To Study and acquire knowledge on fare structure and analyse the methods of fare collection
- To introduce the concepts of vehicle parts, supply management and data processing
- To Study and acquire knowledge on electronically controlled vehicle maintenance system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the knowledge of personnel management and analyse the selection process and training methods.
- Apply the motor vehicle act in terms of registration and describe the various vehicles and conduct the test of competence to drive.
- Construct a fare structure and analyse the methods of fare collection.
- Analyse the vehicle parts, supply management and data processing.
- Describe the scheduled and unscheduled maintenance
- Demonstrate an electronically controlled vehicle maintenance system and analyse the work schedule.

Course Contents:

UNIT I INTRODUCTION

Personnel management – objectives and functions of personnel management – psychology, sociology and their relevance to an organization – selection process: job description, employment tests, interviewing, introduction to training objectives, methods of training, training procedure and psychological tests.

UNIT II MOTOR VEHICLE ACT

Schedules and sections of the motor vehicle act – traffic signs, fitness certificate, registration requirements, permit, insurance and constructional regulations – description of vehicle: goods carrier, tankers, tippers, delivery vans, recovery vans, power wagons and fire fighting vehicles – spread over, running time, test of competence to drive.

UNIT III SCHEDULING AND FARE STRUCTURE

Route planning – scheduling of transport vehicles – preparation of timetable – preparation of vehicle and crew scheduling – principal features of operating costs for transport vehicles – fare structure and method of drawing up of a fare table – methods of fare collection.

UNIT IV VEHICLE PARTS, SUPPLY MANAGEMENT AND BUDGET

Cost of inventory – balancing inventory cost against downtime – parts control – bin tag systems – time management – time record keeping – budget activity and capital expenditures – classification of vehicle expenses – fleet management and data processing – data processing systems – computer controlling of fleet activity.

UNIT V MAINTENANCE

Scheduled and unscheduled maintenance – preventive maintenance – evaluation of Preventive Maintenance Inspection (PMI) programme – work scheduling – overtime – breakdown analysis – control of repair backlogs – cost of options – electronically controlled vehicle maintenance system.

Suggested Readings:

1. Robert P Currie, Michelle BCurrie and George M Keen, *Fleet Management*, Wandering Brothers Publishing, USA, 2006.
2. John Dolce, *Fleet Management*, McGraw-Hill, 1984.
3. SCC Editorial, *Motor Vehicles Act, 1988*, Eastern Book Company, New Delhi, 2019.
4. Rex W Faulks, *Bus and Coach Operation*, Butterworth-Heinemann, UK, 1987.
5. John E Dolce, *Analytical Fleet Maintenance Management*, SAE International, USA, 2009.

18BEAE8E03**NON-DESTRUCTIVE TESTING****Semester VIII**
3H-3C**Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn the different surface inspection techniques.
- To provide knowledge of the magnetic particle testing.
- To impart knowledge of the ultrasonic testing method.
- To present knowledge of the radiography testing method.
- To impart knowledge of acoustic emission testing principle
- To study the various special non-destructive testing methods.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Select appropriate surface inspection techniques for the components to be inspected.
- Explain the magnetic particle testing method for ferrous materials.
- Select and explain the suitable testing method for testing internal defects.
- Apply radiography testing methods for different suitable applications.
- Understand the acoustic emission testing principle
- Choose a suitable special non-destructive technique for various applications.

Course Contents:**UNIT I SURFACE TECHNIQUES**

Concepts of Non-Destructive Testing (NDT) – discontinuities and defects in various manufacturing component – types of NDT techniques – introduction to standards and specifications (ASME, ASTM, AWS) – visual or optical testing – direct and remote visual inspection and aides – liquid penetrant testing principles – types and properties of liquid penetrants and developers – preparation of test materials – advantages and limitations – application of penetrants to parts – fluorescent penetrant test.

UNIT II MAGNETIC PARTICLE TESTING

Magnetic particle testing principles – applications – magnetization methods – magnetic particles – dry particle technique and wet fluorescent particle technique – demagnetization, advantages and limitations – magnetic flux leakage testing principle – instrumentation and applications – electromagnetic induction techniques principle – instrumentation and applications of eddy current testing.

UNIT III ULTRASONIC TESTING

Ultrasonic testing principle – types and characteristics of ultrasonic waves – attenuation, couplants, probes – inspection methods: pulse echo, transmission and phased array techniques – types of scanning and displays – angle beam inspection of welds – calibration of ASTM test blocks – International Institute of Welding (IIW) reference blocks – applications.

UNIT IV RADIOGRAPHY TESTING

Radiographic testing principle – sources of X-rays and gamma rays and their characteristics – absorption, scattering – filters and screens, imaging modalities – film radiography and digital radiography – problems in shadow formation, exposure factors, film handling and storage – inverse square law – exposure charts and radiographic equivalence – penetrometers – safety in radiography – applications.

UNIT V SPECIAL TECHNIQUES

Acoustic emission testing principle – advantages and limitations – instrumentation and applications – infrared thermography – contact and non-contact inspection methods – pressure and leak testing – testing procedure and applications – laser shearography – typical applications – requirements – advantages and disadvantages.

Suggested Readings:

1. Baldev Raj, Jayakumar T and Thavasimuthu M, *Practical Non-Destructive Testing*, Narosa Publishing, 1997.
2. Mc Gonnagle, *Non-Destructive Testing*, McGraw-Hill Book Co., 1988.
3. Barry Hull and Vernon John, *Non Destructive Testing*, Macmillan, 1989.
4. Ravi Prakash, *Non-Destructive Testing Techniques*, New Age International Publishers, 2010.

18BEAE8E04	NON-TRADITIONAL MACHINING PROCESSES	Semester VIII 3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To introduce the basics of non-traditional machining processes.
- To study the mechanical energy based non-traditional machining processes.
- To provide knowledge on electrical energy based non-traditional machining process.
- To impart knowledge on chemical and electrochemical energy based processes.
- To present knowledge on thermal energy based machining processes.
- To introduce the basics of laser beam machining and plasma arc machining

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basics of non-traditional machining processes.
- Select suitable mechanical energy based non-traditional machining processes for the given industrial applications.
- Find suitable machining processes for machining electrically conductive materials.
- Choose an appropriate chemical and electrochemical energy based processes for precision machining.
- Select suitable thermal energy based process for cutting and machining of the hard materials.
- Explain the laser beam machining and plasma arc machining

Course Contents:**UNIT I UNCONVENTIONAL MACHINING PROCESSES**

Introduction – need – classification – energies employed in the processes – brief overview of abrasive jet machining, water jet machining, ultrasonic machining, electric discharge machining, electrochemical machining, electron beam machining, laser beam machining and plasma arc machining.

UNIT II MECHANICAL ENERGY BASED PROCESSES

Working principle, equipment, process parameters, material removal rate, applications of abrasive jet machining, water jet machining and ultrasonic machining.

UNIT III ELECTRICAL ENERGY BASED PROCESSES

Electric Discharge Machining (EDM) working principle, equipment, process parameters, material removal rate, electrode/tool, power circuits, tool wear, dielectric, flushing – wire cut EDM – applications.

UNIT IV CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES

Chemical machining: etchants, maskants, techniques – working principle, equipment, process parameters, material removal rate, electrical circuit of electrochemical machining – electrochemical grinding – electrochemical honing – applications.

UNIT V THERMAL ENERGY BASED PROCESSES

Principle, equipment, material removal rate of laser beam machining and plasma arc machining – principle, equipment, types, beam control techniques, material removal rate of electron beam machining – applications.

Suggested Readings:

1. Mishra P K, *Non Conventional Machining*, Narosa Publishing House, New Delhi, 2007.
2. Pandey P C and Shan H S, *Modern Machining Processes*, Tata McGraw-Hill Publishing Company, New Delhi, 2008.
3. Joao Paulo Davim, *Nontraditional Machining Processes: Research Advances*, Springer, New York, 2013.
4. Paul De Garmo, Black J T and Ronald A Kohser, *Material and Processes in Manufacturing*, Prentice Hall of India, New Delhi, 2011.
5. Vijaya Kumar Jain, *Advanced Machining Processes*, Allied Publishers, New Delhi, 2005.
6. Hassan El-Hofy, *Advanced Machining Processes: Nontraditional and Hybrid Machining Processes*, McGraw-Hill Professional, New Delhi, 2005.

18BEAE8E05**QUALITY CONTROL AND RELIABILITY
ENGINEERING****Semester VIII
3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the concept of Statistical Quality Control (SQC).
- To familiarise with various statistical process control methods.
- To study the methods and characteristics of sampling.
- To describe the concept of reliability and its models.
- To impart knowledge on the design of reliability process.
- To describe the concept of product life cycles

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Summarise the concept of quality and process control for variables.
- Apply the process control for attributes.
- Explain the importance of sampling methods and their characteristics.
- Explain the concept of life testing.
- Evaluate the reliability concept with their models.
- Explain the product life cycles

Course Contents:**UNIT I INTRODUCTION AND PROCESS CONTROL FOR VARIABLES**

Introduction – definition of quality – basic concept of quality – definition of SQC – benefits and limitation of SQC – quality assurance – quality control – quality cost – variation in process – causes of variation – theory of control chart – uses of control chart – X chart, R chart and U chart – process capability – process capability studies – six sigma concepts.

UNIT II PROCESS CONTROL FOR ATTRIBUTES

Control chart for attributes – control chart for nonconformities – p chart and np chart – C and U charts – state of control and process out of control identification in charts – pattern study.

UNIT III ACCEPTANCE SAMPLING

Lot by lot sampling – types – probability of acceptance in single, double, multiple sampling techniques – Operating Characteristic (OC) curves – producer's risk and consumer's risk – Acceptable Quality Level (AQL), Lot Tolerance Percent Defective (LTPD), Average Outgoing Quality Limit (AOQL) concepts – standard sampling plans for AQL and LTPD – uses of standard sampling plans.

UNIT IV LIFE TESTING - RELIABILITY

Life testing – Objective – failure data analysis – mean failure rate, mean time to failure, mean time between failure, hazard rate – Weibull model – system reliability, series, parallel and mixed configuration – maintainability and availability – acceptance sampling based on reliability test.

UNIT V QUALITY AND RELIABILITY

Reliability improvements – techniques – use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – optimization in reliability – product design – product analysis – product development – product life cycles.

Note: Usage of approved statistical table is permitted in the examination.

Suggested Readings:

1. Besterfield D H, *Quality Control*, Prentice Hall, 2013.
2. Patrick O'Connor and Andre Kleyner, *Practical Reliability Engineering*, John Wiley, 2012.
3. Danny Samson, *Manufacturing and Operations Strategy*, Prentice Hall, 1991.
4. Eugene L Grant, *Statistical Quality Control*, McGraw-Hill, 2017.
5. Gupta R C, *Statistical Quality Control*, Khanna Publishers, 2001.

18BEAE8E06	INTELLECTUAL PROPERTY RIGHTS	Semester VIII 3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To introduce the basic concepts of Intellectual Property Rights (IPR).
- To compare and contrast the different forms of intellectual property protection in terms of their key differences and similarities.
- To study the various agreements and legislation related to IPR.
- To learn digital products and law.
- To provide knowledge on enforcement of IPRs.
- To provide knowledge on the Infringement of IPRs

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Outline the basic concepts of intellectual property rights.
- Explain the registration of copyrights, trademarks, patents, geographical indications, trade secrets and industrial design registration.
- State the various agreements and legislation related to IPR.
- Describe digital products and law.
- Explain the enforcement measures of IPRs.
- Explain the Infringement of IPRs

Course Contents:

UNIT I INTRODUCTION

Introduction to IPRs – basic concepts and need for intellectual property, patents, copyrights, geographical indications – IPR in India and abroad – genesis and development – the way from WTO to WIPO –TRIPS – nature of intellectual property, industrial property, technological research, inventions and innovations – important examples of IPR.

UNIT II REGISTRATION OF IPRs

Meaning and practical aspects of registration of copyrights, trademarks, patents, geographical indications, trade secrets and industrial design registration in India and abroad.

UNIT III AGREEMENTS AND LEGISLATIONS

International treaties and conventions on IPRs – TRIPS agreement – PCT agreement – Patent Act of India – Patent Amendment Act – Design Act – Trademark Act – Geographical Indication Act.

UNIT IV DIGITAL PRODUCTS AND LAW

Digital innovations and developments as knowledge assets – IP laws, cyber law and digital content protection – unfair competition – meaning and relationship between unfair competition and IP laws – case studies.

UNIT V ENFORCEMENT OF IPRs

Infringement of IPRs – enforcement measures – emerging issues – case studies.

Suggested Readings:

1. Satarkar S V, *Intellectual Property Rights and Copyrights*, Ess Ess Publications, New Delhi, 2002.
2. Scople Vinod V, *Managing Intellectual Property*, Prentice Hall of India, 2012.
3. Deborah E Bouchoux, *Intellectual Property: The Law of Trademarks, Copyrights, Patents and Trade Secrets*, Cengage Learning, 2012.
4. Prabuddha Ganguli, *Intellectual Property Rights: Unleashing the Knowledge Economy*, McGraw-Hill Education, 2011.
5. Derek Bosworth and Elizabeth Webster, *The Management of Intellectual Property*, Edward Elgar Publishing Ltd., 2013.

18BEBMEOE01**ROBOTICS IN MEDICINE****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the basics of robotics and kinematics.
- To understand the basics of inverse kinematics.
- To explore various kinematic motion planning solutions for various robotic configurations.
- To explore various applications of robots in medicine.
- Express the various kinematic motion planning solutions for various robotic configurations.
- Describe the task planning, task level programming

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basics of robotics and kinematics.
- Describe the basics of inverse kinematics.
- Express the various kinematic motion planning solutions for various robotic configurations.
- Describe the task planning, task level programming
- Explain thebiologically inspired robots
- State the various applications of robots in medicine.

Course Contents:**UNIT I INTRODUCTION**

Automation and robots, classification, application, specification, notations, direct kinematics, dot and cross products, coordinate frames, rotations, homogeneous coordinates, link coordinates, arm equation, five-axis robot, four-axis robot, six-axis robot.

UNIT II KINEMATICS

Inverse kinematics – general properties of solutions, tool configuration, fiveaxis robots, three-four axis, six axis robot, workspace analysis and trajectory planning, work envelope and examples, workspace fixtures, pick and place operations, continuous path motion, interpolated motion, straight-line motion.

UNIT III ROBOT VISION

Robot vision, image representation, template matching, polyhedral objects, shape analysis, segmentation – thresholding, region labelling, shrink operators, swell operators, Euler numbers, perspective transformation, structured illumination, camera calibration.

UNIT IV PLANNING

Task planning, task level programming, uncertainty, configurationspace, gross motionplanning, grasp planning, fine-motion planning, simulation of planar motion, source and goal scenes, task planner simulation.

UNIT V APPLICATIONS

Applications in biomedical engineering – bio engineering, biologically inspired robots, neural engineering, application in rehabilitation – interactive therapy, bionic arm, clinical and surgical–gynaecology, orthopaedics, neurosurgery.

Suggested Readings:

1. Robert J. Schilling, *Fundamentals of Robotics: Analysis and Control*, Prentice Hall, 1990.
2. John J. Craig, *Introduction to Robotics: Mechanics and Control*, Pearson Education, 2005.
3. Andrew C. Staugaard, *Robotics and AI: An Introduction to Applied Machine Intelligence*, Prentice Hall, 1987.
4. Mikell P Groover, Mitchell Weiss, Roger N Nagel, Nicholas G Odrey and Ashish Dutta, *Industrial Robotics: Technology, Programming and Applications*, McGraw-Hill Education, 2012.
5. Wolfram Stadler, *Analytical Robotics and Mechatronics*, McGraw-Hill, 1995.
6. Saeed B. Niku, *Introduction to Robotics: Analysis, Control, Applications*, John Wiley & Sons, 2010.
7. K. S. Fu, Ralph C. Gonzalez and C. S. G. Lee, *Robotics*, McGraw-Hill, 2008.

18BEBMEOE02 VIRTUAL REALITY AND AUGMENTED REALITY 3H-3C

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the relevance of this course to the existing technology through demonstrations, case studies and applications with a futuristic vision along with socio-economic impact and issues.
- To understand virtual reality, augmented reality and using them to build biomedical engineering applications.
- To know the intricacies of these platform to develop PDA applications with better optimality.
- State the side effects of exposures to virtual reality environment.
- List the applications of virtual reality and augmented reality.
- Discuss the virtual reality on the web

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the concept of virtual reality.
- Discuss the various virtual reality development processes.
- State the side effects of exposures to virtual reality environment.
- List the applications of virtual reality and augmented reality.
- Discuss the virtual reality on the web
- Discuss the virtual reality on the mobile

Course Contents:**UNIT I INTRODUCTION**

The three I's of Virtual Reality (VR) – commercial VR technology and the five classic components of a VR system – input devices (trackers, navigation, and gesture interfaces): three-dimensional position trackers, navigation and manipulation, interfaces and gesture interfaces – output devices: graphics displays, sound displays and haptic feedback.

UNIT II VR DEVELOPMENT PROCESS

Geometric modelling – kinematics modelling – physical modelling – behaviour modelling – model management.

UNIT III CONTENT CREATION CONSIDERATIONS FOR VR

Methodology and terminology – user performance studies – VR health and safety issues – usability of virtual reality system – cyber sickness – side effects of exposures to virtual reality environment.

UNIT IV VR ON THE WEB AND VR ON THE MOBILE

JS – pros and cons – building blocks (WebVR, WebGL, three.js, device orientation events) – frameworks (A-frame, React VR) – Google VR for Android – scripts, mobile device configuration, building to android – cameras and interaction – teleporting – spatial audio – assessing human parameters – device development and drivers – design haptics.

UNIT V APPLICATIONS

Medical applications – military applications – robotics applications – advanced real time tracking – other applications: games, movies, simulations, therapy.

Suggested Readings:

1. Grigore C. Burdea and Philippe Coiffet, *Virtual Reality Technology*, John Wiley & Sons, 2003.
2. Jason Jerald, *The VR Book: Human-Centered Design for Virtual Reality*, Morgan & Claypool, 2015.
3. Dieter Schmalstieg and Tobias Höllerer, *Augmented Reality: Principles and Practice*, Addison-Wesley Professional, 2016.
4. Steve Aukstakalnis, *Practical Augmented Reality: A Guide to the Technologies, Applications, and Human Factors for AR and VR*, Addison-Wesley Professional, 2016.
5. Robert Scoble and Shel Israel, *The Fourth Transformation: How Augmented Reality and Artificial Intelligence Change Everything*, Patrick Brewster Press, 2016.
6. Tony Parisi, *Learning Virtual Reality: Developing Immersive Experiences and Applications for Desktop, Web, and Mobile*, O'Reilly Media Inc., 2015.
7. Tony Parisi, *Programming 3D Applications with HTML5 and WebGL: 3D Animation and Visualization for Web Pages*, O'Reilly Media Inc., 2014.
8. Jos Dirksen, *Learning Three.js – the JavaScript 3D Library for WebGL*, Packt Publishing Ltd., 2015.

18BEBMEOE03**ARTIFICIAL ORGANS AND IMPLANTS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To have an overview of artificial organs and transplants.
- To impart knowledge on the principles of implant design with a case study.
- To understand the implant design parameters and solutions in use.
- To study about various blood interfacing implants.
- Explain the implant design parameters and solutions in use.
- Discuss the various blood interfacing implants.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss about the artificial organs and transplants.
- Describe the principles of implant design with a case study.
- Explain the implant design parameters and solutions in use.
- Discuss the various blood interfacing implants.
- Explain implantable medical devices and organs
- Explain the gastrointestinal system

Course Contents:**UNIT I ARTIFICIAL ORGANS AND TRANSPLANTS**

Artificial organs:Introduction, outlook for organ replacements, design consideration,evaluation process.

Transplants:Overview, immunological considerations, blood transfusions, individual organs – kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN

Principles of implant design, clinical problems requiring implants for solution, permanent versus absorbable devices, the missing organ and its replacement, tissue engineering, scaffolds, cells and regulators criteria for materials selection, case study of organ regeneration.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION

Biocompatibility, local and systemic effects of implants, design specifications for tissue bonding and modulus matching, degradation of devices, natural and synthetic polymers, corrosion, wear and tear, implants for bone, devices for nerve regeneration.

UNIT IV BLOOD INTERFACING IMPLANTS

Neural and neuromuscular implants, heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, artificial kidney - dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

Gastrointestinal system, dentistry, maxillofacial and craniofacial replacement, soft tissue repair, replacement and augmentation, recent advancement and future directions.

Suggested Readings:

1. Kolff W. J., *Artificial Organs*, John Wiley & Sons, 1976.
2. Joon Park, *Biomaterials Science and Engineering*, Springer US, 1984.
3. Joseph D. Bronzino, *Biomedical Engineering Handbook - Volume II*, CRC Press / IEEE Press, 2000.
4. Khandpur R. S., *Handbook of Biomedical Instrumentation*, McGraw-Hill Education, 2014.
5. Joon Park and Roderic S. Lakes, *Biomaterials: An Introduction*, Springer US, 1992.
6. Ioannis V. Yannas, *Tissue and Organ Regeneration in Adults: Extension of the Paradigm to Several Organs*, Springer, 2014.
7. Yadin David, Wolf W. von Maltzahn, Michael R. Neuman and Joseph D. Bronzino, *Clinical Engineering*, CRC Press, 2003.
8. Myer Kutz, *Standard Handbook of Biomedical Engineering & Design*, McGraw-Hill, 2003.

18BTBTOE01	BIOREACTOR DESIGN	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To impart basic knowledge in bioprocess engineering.
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor.
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in the separation process.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Summarise the basic concepts in biotechnology
- Summarise the basic concepts in bioprocess engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for bioprocess engineering.
- Construct the equipments used in mass transfer operations.
- Categorise the equipments used in separation process.

Course Contents:**UNIT I INTRODUCTION TO BIOPROCESS ENGINEERING**

Introduction – biotechnology and bioprocess engineering – biologists and engineers differ in their approach to research – how biologists and engineers work together – bioprocesses: regulatory constraints.

UNIT II REACTOR DESIGN

Design of airlift fermentor, bubble column reactor and continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS

Design of shell and tube heat exchanger, double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber.

UNIT V SEPARATION EQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotary drum drier and Swenson Walker crystallizer.

Suggested Readings:

1. James Edwin Bailey and David F. Ollis, *Biochemical Engineering Fundamentals*, McGraw-Hill Education (India), 2015.
2. Don W. Green and Robert H. Perry, *Perry's Chemical Engineers' Handbook*, McGraw-Hill, 2008.
3. Pauline. M. Doran, *Bioprocess Engineering Principles*, Academic Press, 2015.

18BTBTOE02**FOOD PROCESSING AND PRESERVATION****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarise the students on the concepts of preservation methods for fruits.
- To create a deeper understanding of preservation methods for vegetables.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarise the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

Course Contents:**UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING**

Properties of food – physical, thermal, mechanical, sensory. Raw material preparation – cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS

Heating – blanching and pasteurization. Freezing – dehydration – canning – additives – fermentation – extrusion cooking – hydrostatic pressure cooking – dielectric heating – microwave processing and aseptic processing – infrared radiation processing – concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS

Size reduction – fibrous foods, dry foods and liquid theory and foods – equipments – membrane separation – filtration – equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING

Refrigeration, freezing – theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES

Pre-processing operations – preservation by reduction of water content: drying/dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar –heat preservation– food irradiation – combined preservation techniques.

Suggested Readings:

1. R. Paul Singh and Dennis R. Heldman, *Introduction to Food Engineering*, Academic Press, 2014.
2. P.Fellows, *Food Processing Technology Principles and Practice*, Woodhead Publishing Ltd., 2017.
3. Mircea Enachescu Dauthy, *Food and Vegetable Processing*, FAO Agricultural Services Bulletin, 1995.
4. M.A.Rao, Syed S.H. Rizvi and Ashim K. Datta, *Engineering Properties of Foods*, CRC Press, 2014.
5. B. Sivasankar, *Food Processing and Preservation*, PHI Learning Pvt. Ltd., 2002.

18BTBTOE03	BASIC BIOINFORMATICS	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in microarray data analysis.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Summarise the basic concepts and importance of bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyse the three-dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modelling.
- Extend the knowledge in microarray technology and applications of bioinformatics in various sectors.

Course Contents:

UNIT I OVERVIEW OF BIOINFORMATICS

The scope of bioinformatics; bioinformatics and the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA and proteins; determination of protein structure; gene and protein expression data; protein interaction data. Databases – contents, structure and annotation; file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA

Data retrieval with Entrez and DBGET/LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA and BLAST; sequence filters; iterative database searches and PSI-BLAST. Multiple-sequence alignment, gene and protein families: multiple-sequence alignment and family relationships; protein families and pattern databases; protein domain families.

UNIT III PHYLOGENETICS

Phylogenetics, cladistics and ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools and resources.

UNIT IV STRUCTURAL BIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure and function; obtaining, viewing and analysing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH and SCOP; introduction to protein structure prediction; structure prediction by comparative modelling; secondary structure prediction; advanced protein structure prediction and prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS

Microarray data, analysis methods; microarray data, tools and resources; sequence sampling and SAGE. Bioinformatics in pharmaceutical industry: informatics and drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading and installation; database management.

Suggested Readings:

1. Dan E Krane and Michael L Raymer, *Fundamental Concepts of Bioinformatics*, Pearson Education, 2004.
2. Andreas D Baxevanis and B.F. Franchis Ouellette, *Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins*, Wiley-Interscience, 2004.
3. David W. Mount, *Bioinformatics: Sequence and Genome Analysis*, Cold Spring Harbor Laboratory Press, 2004.
4. Jonathan Pevsner, *Bioinformatics and Functional Genomics*, Wiley-Blackwell, 2015.
5. Michael J Koernberg, *Microarray Data Analysis: Methods and Applications*, Humana Press, 2016.

18BTBTOE04**FUNDAMENTALS OF NANOBIO TECHNOLOGY****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart the skills in the field of nanobiotechnology and its applications.
- To acquire knowledge in the nanoparticles and its significance in various fields.
- To extend the knowledge in types and application of nanoparticles in sensors.
- To define the concepts of biomaterials through the molecular self assembly.
- To equip students with clinical applications of nanodevices.
- To describe a deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Develop skills in the field of nanobiotechnology and its applications.
- Summarise the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nanoparticles in sensors.
- Define the concepts of biomaterials through the molecular self assembly.
- Outline the clinical applications of nanodevices.
- Describe the socio-economic issues in nanobiotechnology.

Course Contents:**UNIT I INTRODUCTION**

Introduction, scope and overview, length scales, importance of nanoscale and technology, history of nanotechnology, future of nanotechnology: nanotechnology revolution, silicon based technology, benefits and challenges in molecular manufacturing: the molecular assembler concept, controversies and confusions, understanding advanced capabilities, nanotechnology in different fields: nanobiotechnology, materials, medicine, dental care.

UNIT II NANOPARTICLES

Introduction, types of nanoparticles, techniques to synthesise nanoparticles, characterization of nanoparticles, applications, toxic effects of nanomaterials, significance of nanoparticles nanofabrications– MEMS/NEMS, atomic force microscopy, self assembled monolayers/dip-pen nanolithography, soft lithography, PDMS molding, nanoparticles, nanowires and nanotubes.

UNIT III MEDICAL NANOTECHNOLOGY

Nanomedicine, nanobiosensor and nanofluidics. nanocrystals in biological detection, electrochemical DNA sensors and integrated nanoliter systems. Nano-biodevices and systems. Fabrication of novel biomaterials through molecular self assembly – small scale systems for in vivo drug delivery – future nanomachine.

UNIT IV NANOBIO TECHNOLOGY

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors –applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nano carbontubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY

Introduction, socioeconomic challenges, ethical issues in nanotechnology: with especial reference to nanomedicine, nanomedicine applied in nonmedical contexts, social issues relating to nanomedicine. Social and ethical issues, economic impacts, other issues, nanotechnology and future socio-economic challenges.

Suggested Readings:

1. Niemeyer, C.M. and Mirkin, C.A., *Nanobiotechnology: Concepts, Applications and Perspectives*, Wiley-VCH, 2005.
2. Goodsell, D.S., *Bionanotechnology*, John Wiley and Sons, Inc., 2004.
3. Shoseyov, O. and Levy, I., *Nanobiotechnology: Bioinspired Devices and Materials of the Future*, Humana Press, 2008.
4. Bhushan, B., *Springer Handbook of Nanotechnology*, Springer-Verlag Berlin Heidelberg, 2017.
5. Robert A. Freitas Jr., *Nanomedicine*, Landes Biosciences, 2006.
6. Kohler, M. and Fritzsche, W., *Nanotechnology: An Introduction to Nanostructuring Techniques*, Wiley-VCH, 2008.

18BTCEO01 ENERGY MANAGEMENT IN CHEMICAL INDUSTRIES**3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To teach the basic concepts and fundamental aspects of industrial and domestic thermal systems' design.
- To prepare the students for the positions of energy management in energy intensive industries.
- Examine the relationship between energy systems and society.
- Use optimization techniques for conservation of energy in chemical industries.
- Understand economic balance in energy
- Evaluate the production rate and analyze the cost from economic balance for energy consumption.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Plan to optimize energy using systems and procedures to meet energy demand.
- Describe the movement of substances in the entire globe.
- Examine the relationship between energy systems and society.
- Use optimization techniques for conservation of energy in chemical industries.
- Understand economic balance in energy
- Evaluate the production rate and analyze the cost from economic balance for energy consumption.

Course Contents:**UNIT I PLANNING FOR ENERGY NEEDS**

Forecasting techniques; energy demand; magnitude and pattern; input and output analysis; energy modelling and optimal mix of energy sources.

UNIT II ENERGY AND ENVIRONMENT

Energy; various forms; energy storage; structural properties of environment; bio-geo-chemical cycles; society, environment population and technology.

UNIT III ENERGY AND SOCIETY

Energy and evolution; growth and change; patterns of consumption in developing and advanced countries; commercial generation of power requirements and benefit.

UNIT IV MANAGEMENT OF ENERGY CONSERVATION IN CHEMICAL INDUSTRIES

Chemical industries; classification; conservation in unit operations such as separation; cooling tower; drying; conservation applied to refineries, petrochemical, fertilisers, cement, pulp and paper, food and chlor-alkali industries; conservation using optimization techniques.

UNIT V ECONOMIC BALANCE IN ENERGY CONSUMPTION

Cost analysis; capacity; production rate; system rate; system cost analysis; corporate models; production analysis and production using fuel inventories; input-output analysis; economics; tariffs.

Suggested Readings:

1. Jerrold H Kertz, *Energy Conservation and Utilization*, Allyn and Bacur Inc., 1976.
2. Gemand M Gramlay, *Energy*, Macmillan Publishing Co., New York, 1975.
3. Krentz J. H., *Energy Conservation and Utilization*, Allyn and Bacur Inc., 1976.
4. Gramlay G. M., *Energy*, Macmillan Publishing Co., New York, 1975.
5. Rused C. K., *Elements of Energy Conservation*, McGraw-Hill Book Co., 1985.

18BTCEO02	FERTILIZER TECHNOLOGY	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To enable the students to learn the fertilizer manufacturing including new or modified fertilizer products and new techniques.
- Develop the flow chart for manufacture of nitrogenous fertilizers.
- Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
- Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
- Understand the fertilizers impacts and standards
- Illustrate the quality and pollution standards permissible in fertilizer industry.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Illustrate chemical, organic fertilizers and nutrients.
- Develop the flow chart for manufacture of nitrogenous fertilizers.
- Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
- Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
- Understand the fertilizers impacts and standards
- Illustrate the quality and pollution standards permissible in fertilizer industry.

Course Contents:

UNIT I INTRODUCTION

Chemical fertilizers and organic manures – types of chemical fertilizers. Secondary nutrients, micro nutrients.

UNIT II NITROGEN FERTILIZERS

Nitrogenous fertilizers – methods of production of ammonia and urea. Nitric acid, ammonium sulphate, ammonium nitrate, calcium ammonium nitrate, ammonium chloride – their methods of production, characteristics, storage and handling specifications.

UNIT III PHOSPHATIC FERTILIZERS

Raw materials, phosphate rock, sulphur pyrites – process for the production of sulphuric and phosphoric acids. Ground phosphaterock, bone meal. Single super phosphate, triple super phosphate – methods of production, characteristics and specifications.

UNIT IV POTASSIC FERTILIZERS

Potassium chloride, potassium sulphate, potassium schoenite – methods of production, specification, characteristics. Complex fertilizers, NPK fertilizers, mono ammonium phosphate, diammonium phosphate, nitro phosphate methods of production.

UNIT V FERTILIZERS IMPACTS AND STANDARDS

Fluid fertilizers. Controlled release of fertilizers. solid, liquid and gaseous pollution from ammonia urea and NPK fertilizer industries and standards laid down for them. Fertilizer production in India.

Suggested Readings:

1. Gopala Rao M. and Marshall Sittig, *Dryden's Outlines of Chemical Technology*, WEP East-West Press, New Delhi, 2010.
2. George T. Austin, *Shreve's Chemical Process Industries*, McGraw Hill Professional, 2012.
3. Vincent Sauchelli, *The Chemistry and Technology of Fertilizers*, Reinhold Pub. Corp., 1960.
4. Editorial Committee, *FAI Seminar on Fertilizer in India in the Seventies (Proceedings)*, The Fertilizer Association of India, New Delhi, 1973.
5. Editorial Committee, *Seminar on Recent Advances in Fertilizer Technology*, The Fertilizer Association of India, New Delhi, 1972.
6. Sauchelli V., *Manual on Fertilizer Manufacture*, Industry Publication Inc., New Jersey, 1963.
7. Chari, K.S., *CHEMTECH - II - Chapter on Fertilizers*, Chemical Engineering Education Development Centre, IIT Madras, 1977.
8. Menon M.G., *Fertilizer Industry - Introductory Survey*, Higginbothams, Madras, 1973.

18BTCEO03**INDUSTRIAL WASTEWATER TREATMENT****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce students to the principles of wastewater and solid waste treatment and management.
- To impart knowledge on fundamental concepts in water and wastewater treatment technologies, hazardous solid waste disposal and management issues related to sludge treatment and disposal.
- Separate the contaminants from the effluent for treatability.
- Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
- Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
- Apply wastewater reclamation technologies

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Examine the constituents of waste water and its effects.
- Separate the contaminants from the effluent for treatability.
- Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
- Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
- Apply wastewater reclamation technologies
- Develop process flow diagram for water reuse and sludge disposal.

Course Contents:**UNIT I INTRODUCTION TO WASTE WATER ENGINEERING**

Waste water engineering –overview, inorganic non-metallic constituents and metallic constituents, physical and biological characteristics.

UNIT II UNIT OPERATIONS AND UNIT PROCESS

Screening, flow equalization, mixing, flocculation, grit removal, sedimentation, coagulation, precipitation, oxidation and neutralization.

UNIT III FUNDAMENTALS OF BIOLOGICAL TREATMENT

Introduction, microbial growth kinetics, types of biological process for wastewater treatment – aerobic and anaerobic oxidation, biological nitrification and de-nitrification, biological phosphorous removal, activated sludge process (with design considerations), trickling filters and lagoons.

UNIT IV WASTE WATER TREATMENT IN SPECIFIC INDUSTRIES

Dairy, sugar, pulp and paper, textile and pharmaceutical industries.

UNIT V WATER REUSE

Wastewater reclamation technologies and reuse, solid processing flow diagrams, sludge and scum pumping, grinding, screening, degritting, blending, anaerobic digestion, composting, conditioning, dewatering and incineration.

Suggested Readings:

1. Metcalf Eddy, *Wastewater Engineering - Treatment and Reuse*, Tata McGraw Hill, New Delhi, 2002.
2. Mark J. Hammer, *Water and Wastewater Technology*, Prentice Hall of India Pvt. Ltd., New Delhi, 2012.
3. James M. Montgomery, *Water Treatment Principles and Design*, A Wiley Interscience Publication, New York, 1985.

18BTCEO04 SOLID AND HAZARDOUS WASTE MANAGEMENT**3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide an understanding of solid and hazardous waste engineering principles and management issues.
- To provide students with the necessary background and knowledge pertaining to the engineering design of solid and hazardous waste facilities.
- Deduce the source reduction, recycling and reuse techniques of solid waste.
- Analyze the collection systems and method of transfer of solid waste.
- Describe the processing techniques for solid and hazardous waste.
- Select the suitable methods for disposal of solid and hazardous waste.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Outline the salient features of solid waste management and handling.
- Deduce the source reduction, recycling and reuse techniques of solid waste.
- Analyze the collection systems and method of transfer of solid waste.
- Describe the processing techniques for solid and hazardous waste.
- Select the suitable methods for disposal of solid and hazardous waste.
- Interpret the legislation for management, handling and disposal of solid and hazardous waste.

Course Contents:**UNIT I CHARACTERISTICS AND SOURCE REDUCTION OF SOLID WASTE**

Definition, sources, and types of solid waste –composition, physical, chemical and biological properties of solid wastes –percapita generation rates –sampling and characterization of solid waste –source reduction of wastes – waste exchange –recyclingand reuses –salient features of Indian legislations on management and handling of municipal solid wastes.

UNIT II COLLECTION AND TRANSPORT OF SOLID WASTE

Estimation of solid waste and factors affecting generation rates – on-site handling, storage, and processing – collection services:municipal and commercial – industrial services –collection systems: Hauled-Container System (HCS) and Stationary ContainerSystem (SCS) –vehicle and labour assessment –assessment of collection route – transfer and transport –transfer stationlocation – means and methods of transfer.

UNIT III PROCESSING AND DISPOSAL OF SOLID WASTE

Objective of processing – material separation and processing technologies – biological, chemical and thermal conversiontechnologies – disposal in landfills: site selection methods and operations, leachate and gas generations and movement andcontrol of gas and leachate techniques – composting: aerobic and anaerobic – resource and energy recovery schemes.

UNIT IV HAZARDOUS WASTE CHARACTERIZATION AND MANAGEMENT

Definitions and identifications of hazardous waste – origin and characterization of hazardous solid waste – typical hazardous wastes in MSW – hazardous waste management: minimization, collection, storage, handling, transport, and disposal – design of hazardous waste landfills – TCLP tests – national and international legislation for hazardous waste management – Atomic Energy Regulatory Board – International Atomic Energy Agency – Department of Atomic Energy – Nuclear Power Corporation – nuclear power plants in India.

UNIT V NUCLEAR WASTE AND e-WASTE

Sources – classification – effects of nuclear waste – initial treatment of nuclear waste – vitrification, ion exchange, synroc – longterm management – above ground disposal, geological disposal, ocean dumping, transmutation, space disposal – reuse of waste – nuclear safety and waste regulation – case study on nuclear disaster – source of e-waste – material composition of e-waste – recycling and recovery – integrated approaches to e-waste recycling – socio economic factors – treatment option – disposal option – e-waste legislation.

Suggested Readings:

1. Tchobanoglous, G., *Integrated Solid Waste Management*, McGraw-Hill Publication, New York, 1993.
2. Ronald E. Hester and Roy M. Harrison, *Electronic Waste Management*, Royal Society of Chemistry, 2009.
3. Peavy, S.H., Rowe, R.D. and Tchobanoglous, G., *Environmental Engineering*, McGraw-Hill Inter Edition, 1985.
4. 2. Charles, A.W., *Hazardous Waste Management*, McGraw-Hill Publication, 2002.

18BECEO01**HOUSING, PLAN AND MANAGEMENT****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To examine the role and tasks of basic housing policies and building bye-laws.
- To understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors.
- To analyse the innovative construction methods and materials.
- To analyse city management strategies and strengthen the urban governance through a problem solving approach.
- Use housing programmes and schemes.
- Plan and design housing projects.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the importance of basic housing policies and building bye-laws.
- Use housing programmes and schemes.
- Plan and design housing projects.
- Examine innovative construction methods
- Examine innovative construction materials.
- Describe housing finance and loan approval procedures.

Course Contents:**UNIT I INTRODUCTION TO HOUSING**

Definition of basic terms – house, home, household, apartments, multi-storeyed buildings, special buildings, objectives and strategies of national housing policies, principle of sustainable housing, housing laws at state level, bye-laws at urban and rural local bodies – levels – development control regulations, institutions for housing at national, state and local levels.

UNIT II HOUSING PROGRAMMES

Basic concepts, contents and standards for housing programmes – sites and services, neighbourhoods, open development plots, apartments, rental housing, co-operative housing, slum housing programmes, role of public, private and non-government organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS

Formulation of housing projects – site analysis, layout design, design of housing units (design problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

New constructions techniques – cost effective modern construction materials, building centers – concept, functions and performance evaluation.

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

Appraisal of housing projects – housing finance, cost recovery – cash flow analysis, subsidy and cross subsidy, pricing of housing units, rents, recovery pattern (problems).

Suggested Readings:

1. Meera Mehta and Dinesh Mehta, *Metropolitan Housing Markets*, Sage Publications Pvt. Ltd., New Delhi, 2002.
2. Francis Cherunilam and Odeyar D Heggade, *Housing in India*, Himalaya Publishing House, Bombay, 2001.
3. *Development Control Rules for Chennai Metropolitan Area*, CMA, Chennai, 2002.
4. *National Experiences with Shelter Delivery for the Poorest Groups*, UNCHS (Habitat), Nairobi, 2000.

18BECEO02**BUILDING SERVICES****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide knowledge on machineries involved in building construction.
- To impart knowledge on electrical systems in buildings.
- To understand the principles of illumination and design.
- To learn the refrigeration principles and its applications.
- To study the importance of fire safety and its installation techniques.
- Use the principles of illumination and design.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the machineries involved in building construction.
- Discuss the electrical system and its selection criteria.
- Use the principles of illumination and design.
- Illustrate the principle of refrigeration.
- Explain the importance of fire safety and its installation techniques.
- Apply fire safety installation techniques.

Course Contents:**UNIT I MACHINERIES**

Hot water boilers – lifts and escalators – special features required for physically handicapped and elderly – conveyors – vibrators – concrete mixers – DC/AC motors – generators – laboratory services – gas, water, air and electricity.

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS

Basics of electricity – single/three phase supply – protective devices in electrical installations – earthing for safety – types of earthing – ISI specifications – types of wires, wiring systems and their choice – planning electrical wiring for building – main and distribution boards – transformers and switch gears – layout of substations.

UNIT III PRINCIPLES OF ILLUMINATION AND DESIGN

Visual tasks – factors affecting visual tasks – modern theory of light and colour – synthesis of light – additive and subtractive synthesis of colour – luminous flux – candela – solid angle illumination – utilization factor – depreciation factor – MSCP – MHCP – classification of lighting – artificial light sources – spectral energy distribution – luminous efficiency – colour temperature – colour rendering. Design of modern lighting – lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES AND APPLICATIONS

Thermodynamics – heat – temperature, measurement transfer – change of state – sensible heat – latent heat of fusion, evaporation, sublimation – saturation temperature – superheated vapour – subcooled liquid – pressure temperature relationship for liquids – refrigerants – vapour compression cycle – compressors – evaporators – refrigerant control devices – electric motors – starters – air handling units – cooling towers – window type and packaged air-conditioners – chilled water plant – fan coil systems – water piping – cooling load – air conditioning systems for different types of buildings – protection against fire to be caused by AC systems.

UNIT V FIRE SAFETY INSTALLATION

Causes of fire in buildings – safety regulations – NBC – planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and AC systems. Special features required for physically handicapped and elderly in building types – heat and smoke detectors – fire alarm system, snorkel ladder – fire lighting pump and water storage – dry and wet risers – automatic sprinklers.

Suggested Readings:

1. E.R.Ambrose, *Heat Pumps and Electric Heating*, John and Wiley and Sons Inc., New York, 2002.
2. *Handbook for Building Engineers in Metric Systems*, NBC, New Delhi, 2005.
3. Derek Phillips, *Lighting in Architectural Design*, McGraw-Hill, New York, 2000.
4. A.F.C. Sherratt, *Air-Conditioning and Energy Conservation*, The Architectural Press, London, 2005.
5. National Building Code.

18BECEO03 REPAIR AND REHABILITATION OF STRUCTURES 3H-3C

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To learn various distress and damages to concrete and masonry structures.
- To know the influence of corrosion in durability of structures.
- To understand the importance of maintenance of structures.
- To study the various types and properties of repair materials.
- To learn various techniques involved in demolition of structures.
- Describe the importance of maintenance of structures, types and properties of repair materials.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the various distress and damages to concrete and masonry structures.
- Discuss the durability of structures and corrosion mechanism.
- Describe the importance of maintenance of structures, types and properties of repair materials.
- Assess the damage of structures.
- Apply various repair techniques
- Explain the modern techniques and equipment adopted for the demolition of structures.

Course Contents:**UNIT I INTRODUCTION**

Quality assurance for concrete construction as-built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, design and construction errors.

UNIT II DURABILITY OF STRUCTURES

Corrosion mechanism – diagnosis – causes and effects – cover thickness and cracking, measurements for corrosion – methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT III MAINTENANCE AND REPAIR STRATEGIES

Definitions: maintenance, repair and rehabilitation, facets of maintenance, importance of maintenance, preventive measures on various aspects, inspection, assessment procedure for evaluating a damaged structure, causes of deterioration, testing techniques.

UNIT IV MATERIALS FOR REPAIR

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, fibre reinforced

concrete, eliminators and polymers coating for rebars during repair, foamed concrete, mortar and dry pack, vacuum concrete.

UNIT V TECHNIQUES FOR REPAIR AND REPAIR OF STRUCTURES

Non-destructive testing techniques, corrosion protection techniques, gunite and shotcrete epoxy injection, mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, deflection, cracking, chemical disruption, weathering wear, fire, leakage, marine exposure. Engineered demolition techniques for dilapidated structures – case studies.

Suggested Readings:

1. R.T.Allen and S.C.Edwards, *Repair of Concrete Structures*, Blakie and Sons, UK, 2011.
2. Dr. B.Vidivelli, *Rehabilitation of Concrete Structures*, Standard Publishers, Chennai, 2011.

18BECEO04 COMPUTER-AIDED CIVIL ENGINEERING DRAWING**3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on parametric design and the conventions of formal engineering drawing.
- To produce and interpret 2D and 3D drawings.
- To communicate a design idea/concept graphically/visually.
- To provide knowledge on masonry bonds.
- To understand perspective view of buildings.
- Illustrate a design idea/concept graphically/visually.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the parametric design and the conventions of formal engineering drawing.
- Create and interpret 2D drawings.
- Create and interpret 3D drawings.
- Illustrate a design idea/concept graphically/visually.
- Discuss the various types of masonry bonds.
- Create perspective view of a building.

Course Contents:**UNIT I INTRODUCTION**

Introduction to concept of drawings, interpretation of typical drawings, planning drawings to show information concisely and comprehensively; optimal layout of drawings and scales; introduction to computer aided drawing, co-ordinate systems, reference planes. Commands: initial settings, drawing aids, drawing basic entities, modify commands, layers, text and dimensioning, blocks. Drawing presentation norms and standards.

UNIT II SYMBOLS AND SIGN CONVENTIONS

Materials, architectural, structural, electrical and plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards.

UNIT III MASONRY BONDS

English bond and Flemish bond – corner wall and cross walls – one brick wall and one and half brick wall.

UNIT IV BUILDING DRAWING

Terms, elements of planning building drawing, methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings and fixtures, finishes. Use of notes to improve clarity.

UNIT V PICTORIAL VIEW

Principles of isometrics and perspective drawing. Perspective view of building.

List of Drawing Experiments:

1. Buildings with load bearing walls including details of doors and windows.
2. Single storey RCC building.
3. Multi-storey RCC building.

Suggested Readings:

1. Subhash C Sharma and Gurucharan Singh, *Civil Engineering Drawing*, Standard Publishers, 2005.
2. Ajeet Singh, *Working with AutoCAD 2000 with Updates on AutoCAD 2000i*, Tata McGraw-Hill Company Ltd., New Delhi, 2002.
3. Sham Tickoo, *AutoCAD 2009 for Engineers and Designers*, Pearson Education, 2009.
4. Venugopal K, *Engineering Drawing and Graphics + AutoCAD*, New Age International Pvt. Ltd., 2007.
5. Balagopal T.S. Prabhu, *Building Drawing and Detailing*, Spades Publishing, Calicut, 1987.

18BECOE01**INTERNET PROGRAMMING****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the Java programming language and explore its current strengths and weaknesses.
- To study the way that object-oriented concepts are implemented in the Java programming language.
- To write working Java code to demonstrate the use of applets for client side programming.
- Discuss the way that exceptions are detected and handled in the Java programming language.
- Create Java code that demonstrates multiple threads of execution.
- Describe internet telephony

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basic and advanced concepts and techniques of Java.
- Design an application based upon the concepts of Java and advance Java.
- Discuss the way that exceptions are detected and handled in the Java programming language.
- Create Java code that demonstrates multiple threads of execution.
- Describe internet telephony
- Explain multimedia applications

Course Contents:**UNIT I INTRODUCTION**

Introduction –network of networks, intranet, extranet and internet. World wide web – domain and subdomain, address resolution, DNS, telnet, FTP, HTTP. TCP/IP –features, segment, three-way handshaking, flow control, error control, congestion control, IP datagram, IPv4 and IPv6. IP subnetting and addressing – classful and classless addressing, subnetting.

UNIT II HTML

Introduction, editors, elements, attributes, heading, paragraph. Formatting, link, head, table, list, block, layout, CSS. Form, iframe, colors, colorname, colorvalue. Image maps– map, area, attributes of image area– Extensible Markup Language (XML)–introduction, tree, syntax, elements, attributes, validation, viewing. XHTML in brief. CGI scripts – introduction – environment variable, GET and POST methods.

UNIT III PERL

Introduction, variable, condition, loop, array, implementing data structure, hash, string, regular expression, file handling, I/O handling –JavaScript – basics, statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, boolean, regex. Function, errors,

validation. Cookies–definition of cookies, create and store a cookie with example. Java applets – container class, components, applet life cycle, update method, applications.

UNIT IV CLIENT-SERVER PROGRAMMING

Client-server programming in Java – Java socket, Java RMI. Threats –malicious code – viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks–network security techniques – password and authentication– VPN, IP security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall–introduction, packet filtering, stateful, application layer, proxy.

UNIT V INTERNET TELEPHONY

Introduction, VoIP–multimedia applications – multimedia over IP: RSVP, RTP, RTCP and RTSP–streaming media, codec and plugins, IPTV–search engine and web crawler – definition, metadata, web crawler, indexing, page rank, overview of SEO.

Suggested Readings:

1. Paul Deitel, Harvey Deitel and Abby Deitel, *Internet and World Wide Web: How to Program*, Pearson, 2011.
2. N.P. Gopalan and J. Akilandeswari, *Web Technology: A Developer's Perspective*, PHI Learning, Delhi, 2013.
3. Rahul Banerjee, *Internetworking Technologies: An Engineering Perspective*, PHI Learning, Delhi, 2011.
4. Robert W. Sebesta, *Programming the World Wide Web*, Pearson Education, 2016.

18BECOE02**MULTIMEDIA AND ANIMATION****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To study the graphics techniques and algorithms.
- To study the multimedia concepts and various I/O technologies.
- Explain the various latest interactive multimedia devices, the basic concepts about images and image formats.
- Explain the data compression techniques, image compression techniques like JPEG
- Explain the video compression techniques like MPEG, and the basic concepts about animation
- Create an interactive multimedia presentation by using multimedia devices

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss the fundamental concepts of computer animation and multimedia.
- Explain the various latest interactive multimedia devices, the basic concepts about images and image formats.
- Explain the data compression techniques, image compression techniques like JPEG
- Explain the video compression techniques like MPEG, and the basic concepts about animation
- Create an interactive multimedia presentation by using multimedia devices
- Identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

Course Contents:**UNIT I INTRODUCTION**

What is mean by animation – why we need animation – history of animation– uses of animation – types of animation – principles of animation – some techniques of animation – animation on the web – 3D animation – special effects – creating animation.

UNIT II CREATING ANIMATION IN FLASH

Introduction to flash animation – introduction to flash – working with the timeline and frame-based animation – working with the timeline and tween-based animation – understanding layers – action script.

UNIT III 3D ANIMATION AND ITS CONCEPTS

Types of 3D animation– skeleton and kinetic 3D animation– texturing and lighting of 3Danimation – 3D camera tracking – applications and software of 3D animation.

UNIT IV MOTION CAPTION

Formats – methods – usages – expression – motion capture softwares – script animation usage– different language of script animation among the software.

UNIT V CONCEPT DEVELOPMENT

Story developing – audio and video – colour model – device independent colour model – gamma and gamma correction – production budgets – 3D animated movies.

Suggested Readings:

1. Malay K. Pakhira, *Computer Graphics, Multimedia and Animation*, PHI Learning Pvt. Ltd., 2010.
2. Ranjan Parekh, *Principles of Multimedia*, Tata McGraw-Hill, 2007.
3. Ashok Banerji and Ananda Mohan Ghosh, *Multimedia Technologies*, McGraw-Hill Publication, 2009.
4. Pankaj Dhaka, *Encyclopedia of Multimedia and Animations*, Anmol Publications, 2011.

18BECOE03**PC HARDWARE AND TROUBLE SHOOTING****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To assemble/setup and upgrade personal computer systems.
- To perform installation, configuration, and upgrading of microcomputer hardware and software.
- To install/connect associated peripherals.
- Define the terms that are directly related to processors such as caching, multi-threading, dual-core technology, multi-processing, and pipelining.
- Explain the PC memories such as RAM and ROM devices.
- Discuss about motherboards and the various technologies connected to mainboards such as chipsets, buses, and various BIOS types.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify the main components of the PC.
- Use the skills to troubleshoot various power-related problems.
- Define the terms that are directly related to processors such as caching, multi-threading, dual-core technology, multi-processing, and pipelining.
- Explain the PC memories such as RAM and ROM devices.
- Discuss about motherboards and the various technologies connected to mainboards such as chipsets, buses, and various BIOS types.
- Prepare a HDD for storing data; install Windows OS and various programs.

Course Contents:**UNIT I INTRODUCTION**

Introduction – computer organization – number systems and codes – memory – ALU – CU – instruction prefetch – interrupts – I/O techniques – device controllers – error detection techniques – microprocessor – personal computer concepts – advanced system concepts – microcomputer concepts – OS – multitasking and multiprogramming – virtual memory – cache memory – modern PC and user.

UNIT II PERIPHERAL DEVICES

Introduction – keyboard – CRT display monitor – printer – magnetic storage devices – FDD – HDD – special types of disk drives – mouse and trackball – modem – faxmodem – CD ROM drive – scanner – digital camera – DVD – special peripherals.

UNIT III PC HARDWARE OVERVIEW

Introduction – hardware BIOS DOS interaction – the pc family – pc hardware – inside the system box – motherboard logic – memory space – peripheral interfaces and controllers – keyboard interface – CRT display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE

Introduction – system configuration – pre-installation planning – installation practice – routine checks – PC assembling and integration – BIOS setup – engineering versions and compatibility – preventive maintenance – DOS – virus – data recovery.

UNIT V TROUBLESHOOTING

Introduction – computer faults – nature of faults – types of faults – diagnostic programs and tools – microprocessor and firmware – programmable LSI's – bus faults – faults elimination process – systematic troubleshooting – symptoms observation and analysis – fault diagnosis – fault rectification – troubleshooting levels – FDD, HDD, CD-ROM problems.

Suggested Readings:

1. B. Govindarajalu, *IBM PC Clones Hardware, Troubleshooting and Maintenance*, Tata McGraw-Hill, 2002.
2. Peter Abel and Niyaz Nizamuddin, *IBM PC Assembly Language and Programming*, Pearson Education, 2007.
3. Scott Mueller, *Upgrading and Repairing PCs*, Pearson Education, 2016.

18BECOE04**JAVA PROGRAMMING****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand the fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Demonstrate the concepts of polymorphism and inheritance.
- List the important topics and explain the principles of software development.
- Create a computer program to solve specified problems.
- Use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Identify classes, objects, members of a class and relationships among them needed for a specific problem.
- Demonstrate the concepts of polymorphism and inheritance.
- List the important topics and explain the principles of software development.
- Create a computer program to solve specified problems.
- Use the Java SDK environment to create, debug and run simple Java programs.
- Describe the basics of event handling

Course Contents:**UNIT I INTRODUCTION TO JAVA**

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism –objects and classes in Java – defining classes – methods – access specifiers – static members –constructors – finalise method.

UNIT II PACKAGES

Arrays – strings – packages – Javadoc comments – inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes.

UNIT III I/O STREAMS

The object class – reflection – interfaces – object cloning – inner classes – proxies – I/O streams – graphics programming – frame – components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to swing – model-view-controller design pattern –buttons – layout management – swing components – exception handling – exception hierarchy – throwing and catching exceptions.

UNIT V MOTIVATION FOR GENERIC PROGRAMMING

Motivation for generic programming – generic classes – generic methods – generic code and virtual machine – inheritance and generics – reflection and generics – multi-threaded programming – interrupting threads – thread states – thread properties – thread synchronization – executors – synchronizers.

Suggested Readings:

1. Cay S. Horstmann and Gary Cornell, *Core Java: Volume I - Fundamentals*, Sun Microsystems Press, 2008.
2. K. Arnold and J. Gosling, *The Java Programming Language*, Pearson Education, 2009.
3. Timothy Budd, *Understanding Object-Oriented Programming with Java*, Pearson Education 2002.
4. C. Thomas Wu, *An introduction to Object-Oriented Programming with Java*, Tata McGraw-Hill Publishing Company Ltd., 2008.

18BECOE05**MACHINE LEARNING****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the basic concepts and techniques of machine learning.
- To have a complete understanding of the supervised and unsupervised learning techniques.
- To study the various probability based learning techniques.
- To learn dimensionality reduction techniques.
- To understand evolutionary models and graphical models of machine learning algorithms.
- Employ supervised, unsupervised or semi-supervised learning algorithms for any given problem.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish between supervised, unsupervised and semi-supervised learning.
- Apply the appropriate machine learning strategy for any given problem.
- Employ supervised, unsupervised or semi-supervised learning algorithms for any given problem.
- Design systems that use the appropriate graph models of machine learning.
- Propose new machine learning algorithms to improve classification accuracy/efficiency.
- Apply Markov models and Bayesian networks

Course Contents:**UNIT I INTRODUCTION**

Foundations: linear algebra – probability – vectorization learning – types of machine learning – supervised learning – preliminaries – testing machine learning algorithms – data into probabilities – basic statistics – the brain and the neuron – design a learning system – perspectives and issues in machine learning – concept learning task – concept learning as search – finding a maximally specific hypothesis – version spaces and the candidate elimination algorithm – linear discriminants – perceptron – linear separability – linear regression – logistic regression.

UNIT II LINEAR MODELS AND TREE

Multi-layer perceptron – going forwards – going backwards: back propagation error – multi-layer perceptron in practice – examples of using the MLP – overview – deriving back-propagation – radial basis functions and splines – concepts – RBF networks – curse of dimensionality – interpolations and basis functions – support vector machines – introduction to deep learning.

UNIT III PROBABILISTIC MODELS

Decision trees – constructing decision trees – classification and regression trees – feature selection – ensemble learning – boosting – bagging – different ways to combine classifiers – probability and learning – Gaussian mixture models – nearest neighbor methods – unsupervised learning – K-means and K-medoids algorithms – vector quantization – self organizing feature map.

Case study 1: Analysis of feature selection algorithms for real-world problems.

Case study 2: Evaluation of neural network model, decision trees and support vector machines for real-world problems.

Case study 3: Evaluation of clustering algorithms such as K-means and K-medoids for real-world problems.

Case study 4: Modify supervised and unsupervised learning algorithms to improve the learning performance.

UNIT IV DIMENSIONALITY REDUCTION, EVOLUTIONARY MODELS

Dimensionality reduction – linear discriminant analysis – principal component analysis – factor analysis – independent component analysis – locally linear embedding – isomap – least squares optimization – evolutionary learning – genetic algorithms – genetic offspring – genetic operators – using genetic algorithms – reinforcement learning – overview – getting lost example – Markov decision process.

UNIT V GRAPHICAL MODELS

Markov Chain Monte Carlo methods – sampling – proposal distribution – Markov Chain Monte Carlo – graphical models – Bayesian networks – Markov random fields – hidden Markov models – tracking methods.

Case study 5: Working with dimensionality reduction algorithms for real-world problems.

Case study 6: Demonstrating the use of evolutionary algorithms to improve the efficiency of the algorithm / to optimization problem for real-world scenarios.

Case study 7: Working with Markov models and Bayesian networks to forecast future for real-world scenarios.

Suggested Readings:

1. Stephen Marsland, *Machine Learning: An Algorithmic Perspective*, Chapman and Hall/CRC, 2014.
2. Jason Bell, *Machine Learning: Hands-On for Developers and Technical Professionals*, John Wiley & Sons, 2014.
3. Michael Bowles, *Machine Learning in Python: Essential Techniques for Predictive Analysis*, John Wiley & Sons, 2015.
4. Ethem Alpaydin, *Introduction to Machine Learning*, The MIT Press, 2014.
5. Peter Flach, *Machine Learning: The Art and Science of Algorithms that Make Sense of Data*, Cambridge University Press, 2012.
6. Thomas Mitchell, *Machine Learning*, McGraw-Hill Education, 2013.

18BEEEOE01**ELECTRIC HYBRID VEHICLE****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the basic concepts of an electric hybrid vehicle.
- To gain knowledge about the electric propulsion unit.
- To understand and gain knowledge about various energy storage devices.
- Evaluate the different energy management strategies.
- Describe the concept of different energy storage devices.
- Analyse the different motor drives used in hybrid electric vehicles.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the concept of hybrid electric vehicles.
- Discuss the concept of hybrid electric drive-trains.
- Evaluate the different energy management strategies.
- Describe the concept of different energy storage devices.
- Analyse the different motor drives used in hybrid electric vehicles.
- Discuss the fuel cell based energy storage and its analysis

Course Contents:**UNIT I INTRODUCTION**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, configuration and control of DC motor drives, configuration and control of induction motor drives, configuration and control of permanent magnet motor drives, configuration and control of switch reluctance motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

Introduction to energy storage requirements in hybrid and electric vehicles, battery based energy storage and its analysis, fuel cell based energy storage and its analysis, super capacitor based energy storage and its analysis, flywheel based energy storage and its analysis, hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Suggested Readings:

1. Iqbal Hussein, *Electric and Hybrid Vehicles: Design Fundamentals*, CRC Press, 2010.
2. Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay and Ali Emadi, *Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design*, Standardsmedia, 2009.
3. James Larminie and John Lowry, *Electric Vehicle Technology Explained*, Wiley, 2012.

18BEEEOE02**ENERGY MANAGEMENT AND ENERGY AUDITING****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To gain knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of an energy audit.
- Discuss the basic concept of energy audit and types.
- Analyse the different energy efficient motors.
- Describe the concept of energy conservation.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the concept of energy management.
- Analyse the different methods for economic analysis.
- Discuss the basic concept of energy audit and types.
- Analyse the different energy efficient motors.
- Describe the concept of energy conservation.
- Analyse the different methods to improve power factor.

Course Contents:**UNIT I ENERGY MANAGEMENT**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –energy auditor and energy manager – eligibility, qualification and functions – questionnaire and checklist for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

Economics analysis – depreciation methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis – calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, energy conservation schemes – energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

Electric motors: factors affecting efficiency – energy efficient motors – constructional details, characteristics – voltage variation –over motoring – motor energy audit.

Energy conservation: importance – energy saving measures in DG set – fans and blowers pumps – air conditioning system – energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

Power factor – methods of improvement, location of capacitors, p.f. with nonlinear loads, effect of harmonics on p.f. – p.f. motor controllers – energy efficient lighting system design and practice – lighting control – measuring instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

Suggested Readings:

1. Murphy W.R. and G. McKay, *Energy Management*, Butterworth-Heinemann, 2007.
2. John C. Andreas, *Energy Efficient Electric Motors*, Marcel Dekker Inc. Ltd., 2005.
3. Wayne C. Turner and Steve Doty, *Energy Management Handbook Volume II*, Lulu Enterprises Inc., 2013.

18BEEEOE03**PROGRAMMABLE LOGIC CONTROLLER****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand the basic principles of PLC systems.
- To gain knowledge about data handling functions.
- To understand the principles of PID.
- Interpret relay ladder diagrams.
- Examine the issues related to using PLCs for batch processes and sequential control.
- Describe programmable controller networking and supervisory control.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Examine the typical PLC hardware structure.
- Interpret relay ladder diagrams.
- Examine the issues related to using PLCs for batch processes and sequential control.
- Describe programmable controller networking and supervisory control.
- Design logic circuits to perform industrial control functions of medium complexity.
- Demonstrate the correct operation of logic circuits by programming them into the programmable logic controller.

Course Contents:**UNIT I INTRODUCTION**

PLC Basics: PLC system, I/O modules and interfacing, CPU processor, programming equipment, programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING

PLC Programming: Input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples. Ladder diagrams for process control: Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS

PLC Registers: Characteristics of registers, module addressing, holding registers, input registers, output registers. PLC Functions: Timer functions and industrial applications, counters, counter function, industrial applications, architecture functions, number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

Data Handling Functions: SKIP, master control, relay, jump, move, FIFO, FAL, ONS, CLR and sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of twoaxes and threeaxis robots with PLC, matrix functions.

UNIT V PID PRINCIPLES

Analog PLC Operation: Analog modules and systems, analog signal processing, multi-bit data processing, analog output application examples, PID principles, position indicator with PID control, PID modules, PID tuning, PID functions.

Suggested Readings:

1. John R. Hackworth and Frederick D. Hackworth, Jr., *Programmable Logic Controllers: Programming Method and Applications*, Pearson, 2006.
2. John W. Webb and Ronald A. Reis, *Programmable Logic Controllers: Principle and Applications*, Pearson, 2003.
3. W. Bolton, *Programmable Logic Controller*, Elsevier Newnes Publications, 2009.

18BEEEOE04**RENEWABLE ENERGY RESOURCES****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To gain knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To understand the basic principles of the fuel cell and geothermal power plants.
- To gain knowledge about the hydro energy.
- Explain the need of wind energy and the various components used in energy generation.
- Discuss the need of hydro energy and the various types of hydro energy.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the need of renewable energy resources, historical and latest developments.
- Describe the use of solar energy and the various components used in the energy production with respect to applications.
- Explain the need of wind energy and the various components used in energy generation.
- Discuss the need of hydro energy and the various types of hydro energy.
- Analyse the different energy sources for energy production.
- Explain the need of ocean thermal power plants

Course Contents:**UNIT I INTRODUCTION**

Energy scenario –different types of renewable energy sources – environmental aspects of energy utilization – energy conservation and energy efficiency – needs and advantages, Energy Conservation Act, 2003.

UNIT II SOLAR ENERGY

Introduction to solar energy: Solar radiation, availability, measurement and estimation– solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

Introduction – basic principles of wind energy conversion – components of wind energy conversion system – site selection consideration – basictypes of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – interconnected systems.

UNIT IV HYDRO ENERGY

Hydropower, classification of hydropower, turbine selection, ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

Bioenergy and types – fuel cell, geothermal power plants; Magneto-Hydro-Dynamic (MHD) energy conversion.

Suggested Readings:

1. G.D. Rai, *Non-conventional Energy Sources*, Khanna Publishers, 2011.
2. B H Khan, *Non-Conventional Energy Resources*, Tata McGraw-Hill Education, 2009.
3. S. Rao and B.B. Parulekar, *Energy Technology: Non Conventional, Renewable and Conventional*, Khanna Publishers, 2013.
4. Godfrey Boyl, *Renewable Energy: Power for a Sustainable Future*, Oxford University Press, 2012.
5. John W. Twidell and Anthony D. Weir, *Renewable Energy Resources*, Taylor and Francis, 2015.

18BEECOE01**REAL TIME EMBEDDED SYSTEMS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management.
- To learn about semaphore management and message passing.
- To study about memory management.
- Discuss about task management.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss about embedded systems architecture.
- Explain embedded system, its hardware and software.
- Discuss about task management.
- Express semaphore management and message passing.
- Describe about memory management.
- Implement the multitasking

Course Contents:**UNIT I INTRODUCTION TO EMBEDDED SYSTEM**

Introduction –embedded systems description, definition, design considerations and requirements – overview of embedded system architecture (CISC and RISC) – categories of embedded systems – embedded processor selection and tradeoffs – embedded design life cycle – product specifications – hardware/software partitioning – iterations and implementation – hardware software integration – product testing techniques–ARM7.

UNIT II OPERATING SYSTEM OVERVIEW

Introduction–advantageanddisadvantageofusingRTOS–multitasking–tasks – realtimekernels – scheduler – non-preemptive kernels – preemptive kernels – reentrancy – reentrantfunctions– round robin scheduling – task priorities – static priorities– mutual exclusion–deadlock – intertask communication–message mailboxes–message queues – interrupts – taskmanagement–memory management – time management–clock ticks.

UNIT III TASK MANAGEMENT

Introduction – μ C/OS-II features – goals of μ C/OS-II – hardware and software architecture– Kernelstructures: Tasks–task states–task scheduling–idle task–statistics task–interrupts under μ C/OS-II–clock tick – μ C/OS-II initialization. Task management: Creating tasks–task stacks–stackchecking–task’spriority–suspendingtask–resumingtask. Timemanagement: Delaying atask–resuming a delayed task–system time. Event control blocks – placing a task in the ECB wait list–removing a task from an ECB wait list.

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore management: Semaphore management overview– signalling a semaphore. Message mailbox management: Creating a mailbox –deleting mailbox–waiting for a message box–sending message to a mailbox – status of mailbox. Message queue management: Creating message queue– deleting a message queue–waiting for a message queue–sending message to a queue– flushing a queue.

UNIT V MEMORY MANAGEMENT

Memory management: Memory control blocks–creating partition – obtaining a memory block–returning a memory block. Getting started with μ C/OS-II–installing μ C/OS-II–Porting μ C/OS-II:Development tools–directories and files– testing a port – IAR workbench with μ C/OS-II – μ C/OS-II porting on a 8051CPU– implementation of multitasking – implementation of scheduling and rescheduling –analyse the multichannel ADC with help of μ C/OS-II.

Suggested Readings:

1. JeanJ. Labrosse, *Micro C/OS-II The Real Time Kernel*, CMPBooks, 2009.
2. David Seal, *ARM Architecture Reference Manual*, Addison-Wesley, 2008.
3. Steve Furbe, *ARM System-on-Chip Architecture*, Addison-Wesley Professional, California, 2000.
4. K. V. K. K. Prasad, *Embedded / Real-Time Systems: Concepts, Design & Programming Black Book*, Dreamtech Press, 2005.
5. Sriram V Iyer and Pankaj Gupta, *Embedded Realtime Systems Programming*, Tata McGraw-Hill, 2004.

18BEECOE02**CONSUMER ELECTRONICS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To study about various speakers and microphone.
- To learn the fundamental of television systems and standards.
- To learn the process of audio recording and reproduction.
- To study the various telephone networks.
- To discuss about the working of home appliances.
- Demonstrate the working of various optical recording systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the working of various types of loud speakers.
- Describe various types of picture tubes.
- Demonstrate the working of various optical recording systems.
- Distinguish various standards for colour TV system.
- Discuss various telecommunication networks.
- Demonstrate the working of various home appliances.

Course Contents:**UNIT I LOUDSPEAKERS AND MICROPHONES**

Dynamic loudspeaker, electrostatic loudspeaker, permanent magnet loudspeaker, woofers and tweeters – microphone characteristics, carbon microphones, dynamic microphones and wireless microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV – luminance and chrominance signal; monochrome and colour picture tubes –colourTV systems–NTSC, PAL, SECAM– components of a remote control.

UNIT III OPTICAL RECORDING AND REPRODUCTION

Audio disc– processing of the audio signal–readout from the disc –reconstruction of the audio signal–video disc–video disc formats – recording systems–playback systems.

UNIT IV TELECOMMUNICATION SYSTEMS

Telephone services – telephone networks–switching system principles–PAPX switching–circuit, packet and message switching, LAN, MAN and WAN, integrated services digital network. Wireless local loop. VHF/UHF radio systems, limited range cordless phones; cellular modems.

UNIT V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

Suggested Readings:

1. S.P. Bali, *Consumer Electronics*, Pearson Education, 2005.
2. J. S. Chitode, *Consumer Electronics*, Technical Publications, 2007.
3. Philip Hoff, *Consumer Electronics for Engineers*, Cambridge University Press, 1998.

18BEECOE03**NEURAL NETWORKS AND ITS APPLICATIONS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the basic concepts of neural networks and their applications in various domain.
- To educate how to use soft computing to solve real-world problems.
- To have a solid understanding of the basic neural network.
- Apply perception concept in design.
- Design using ART phenomena.
- Describe SOM concepts.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basic concepts of neural networks and its applications in various domains.
- Discuss about learning process in neural networks.
- Apply perception concept in design.
- Design using ART phenomena.
- Describe SOM concepts.
- Use soft computing to solve real-world problems.

Course Contents:**UNIT I INTRODUCTION TO NEURAL NETWORKS**

Introduction – biological neurons and their artificial models – learning, adaptation and neural network's learning rules – types of neural networks – single layer, multiple layer – feed forward, feedback networks.

UNIT II LEARNING PROCESS

Error– correction learning– memory based learning –Hebbian learning – competitive learning – Boltzmann learning – supervised and unsupervised learning – adaptation – statistical learning theory.

UNIT III PERCEPTION

Single layer perception – adaptive filtering – unconstrained optimization – least-mean square algorithm – learning curve – annealing technique – perception convergence theorem – relationship between perception and Baye's classifier – back propagation algorithm.

UNIT IV ATTRACT OR NEURAL NETWORK AND ART

Hopfield model – BAM model– BAM stability – adaptive BAM – Lyapunov function – effect of gain – Hopfield design – application to TSP problem – ART – layer 1 – layer 2 – orienting subsystem – ART algorithm – ARTMAP.

UNIT V SELF ORGANIZATION

Self-organizing map – SOM algorithm – properties of the feature map – LVQ – hierarchical vector quantization. Applications of self-organizing maps: The neural phonetic type writer learning ballistic arm movements.

Suggested Readings:

1. Simon Haykin and Simon S. Haykin, *Neural Networks and Learning Machines*, Prentice Hall, 2009.
2. Satish Kumar, *Neural Networks: A Classroom Approach*, McGraw-Hill Education, 2012.
3. Rajasekaran S. and Vijayalakshmi Pai G. A., *Neural Networks, Fuzzy Logic and Genetic Algorithm: Synthesis and Applications*, PHI Learning Pvt. Ltd. 2003.
4. Laurene V. Fausett, *Fundamentals of Neural Networks: Architectures, Algorithms and Applications*, Pearson, 1994.
5. Philip D. Wasserman, *Neural Computing: Theory and Practice*, Van Nostrand Reinhold, 1989.
6. James A. Freeman and David M. Skapura, *Neural Networks: Algorithms, Applications, and Programming Techniques*, Addison-Wesley, 2005.

18BEECOE04**FUZZY LOGIC AND ITS APPLICATIONS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the basic concepts of fuzzy logic and their applications in various domain.
- To educate how to use fuzzy computation to solve real-world problems.
- To have a solid understanding of basic fuzzy models.
- Describe the theory of reasoning.
- Develop fuzzy controllers.
- Discuss the concepts of adaptive fuzzy control.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the basic concepts of fuzzy logic and its applications in various domains.
- Describe the theory of reasoning.
- Develop fuzzy controllers.
- Discuss the concepts of adaptive fuzzy control.
- Use fuzzy computation to solve real-world problems.
- Design fuzzy based model for any application.

Course Contents:**UNIT I BASICS OF FUZZY LOGIC**

Fuzzy sets, properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle.

UNIT II THEORY OF APPROXIMATE REASONING

Linguistic variables, fuzzy proportions, fuzzy if-then statements, inference rules, compositional rule of inference – fuzzy models.

UNIT III FUZZY KNOWLEDGE BASED CONTROLLERS

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and de fuzzyfication procedures–design of fuzzy logic controller.

UNIT IV ADAPTIVE FUZZY CONTROL

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS

Simple applications of FKBC – washing machines – traffic regulations – lift control – fuzzy in medical applications – introduction to ANFIS.

Suggested Readings:

1. Dimiter Driankov, Hans Hellendoorn and Michael Reinfrank, *An Introduction to Fuzzy Control*, Springer-Verlag Berlin Heidelberg, 1996.
2. George J. Klir and Tina A. Folger, *Fuzzy Sets, Uncertainty and Information*, Prentice Hall, 1988.
3. Timothy J. Ross, *Fuzzy Logic with Engineering Applications*, John Wiley & Sons, 2010.
4. George J. Klir and Bo Yuan, *Fuzzy Sets and Fuzzy Logic: Theory and Applications*, Prentice Hall, 1995.

18BEECOE05**PRINCIPLES OF MODERN COMMUNICATION
SYSTEM****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide students with an overview of communication systems.
- To provide an overview on mobile communication.
- To make students to have a better understanding on satellite and radar communication.
- Explain the working of mobile cellular communication.
- Describe various standards in use for wireless communication and its application.
- Demonstrate some basic application of GPS.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss the past, present and future trends in mobile communication.
- Explain the working of mobile cellular communication.
- Describe various standards in use for wireless communication and its application.
- Demonstrate some basic application of GPS.
- Explain the working of radar and its applications.
- Describe the modern navigation systems

Course Contents:**UNIT I THE EVOLUTION OF ELECTRONIC COMMUNICATION**

From smoke signals to smart phones – history of communications: theoretical foundations, development and applications – frequencies for communication – frequency regulations – overview of communication transmitter and receiver.

UNIT II MOBILE CELLULAR COMMUNICATIONS

Evolution to cellular networks – cellular systems generations and standards: 1G, 2G, 3G, 4G – cellular network components – components of a mobile phone – setting up a call process – making a call process – receiving a call process – spectrum allocation: policies and strategies, role of TRAI.

UNIT III WIRELESS COMMUNICATION

Introduction –Bluetooth– infrared communication – IEEE wireless LANs (Wi-Fi) – IEEE 802.16 (WiMaX) –future mobile and wireless networks: introduction to 5G – device to device communication – IoT.

UNIT IV SATELLITE COMMUNICATION

History of satellite communication, basics of satellites, types of satellites, capacity allocation – launch vehicles and orbits: introduction to launching vehicles, important orbits, working of rocket, three pioneers of rocketry – basics of Global Positioning System (GPS) –applications of GPS.

UNIT V RADAR AND NAVIGATION

Introduction, radar block diagram and operation, radar frequencies, applications of radar. Navigation systems: introduction and methods of navigation, instrument landing system, microwave landing system – modern navigation systems.

Suggested Readings:

1. Simon Haykin and Michael Moher, *Communication Systems*, John Wiley & Sons, 2009.
2. B.P. Lathi, Zhi Ding and Hari Mohan Gupta, *Modern Digital and Analog Communication Systems*, Oxford University Press, 2017.
3. Theodore S. Rappaport, *Wireless Communications: Principles and Practice*, Prentice Hall, 2002.
4. Vijay K. Garg, *Wireless Communications and Networking*, Morgan Kaufmann, 2007.
5. Timothy Pratt, Charles W. Bostian and Jeremy E. Allnutt, *Satellite Communications*, John Wiley & Sons, 2002.
6. Merrill I Skolnik, *Introduction to Radar Systems*, Tata McGraw-Hill, 2001.
7. Myron Kayton and Walter R. Fried, *Avionics Navigation Systems*, John Wiley & Sons, 1997.

18BTFTOE01	PROCESSING OF FOOD MATERIALS	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To explain the milling, extraction and manufacture of tremendous products from cereals, pulses and oil seeds.
- To summarise the production and processing methods of fruits and vegetables.
- To discuss the chemical composition, processing, production, spoilage and quality of milk and milk products.
- To outline the overall processes involved in the production of meat, poultry and fish products.
- To review the production and processing methods of plantation and spice products.
- Illustrate the techniques involved in the processing of dairy products.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss the various processing technologies involved in cereal, pulses and oilseed technology.
- Demonstrate the major operations applied in fruits and vegetable processing.
- Illustrate the techniques involved in the processing of dairy products.
- Infer the production of different types of milk.
- List the overall processing of meat, poultry and fish processing.
- Outline the processing of spices and plantation products.

Course Contents:

UNIT I CEREAL, PULSES AND OIL SEEDS TECHNOLOGY

Rice milling, pulse milling, wheat milling – oil extraction – methods of manufacture of bread – different processes of manufacture – types of breads – buns, biscuits, cakes and cookies – pasta products – tortilla – method of manufacture.

UNIT II FRUITS AND VEGETABLE PROCESSING

Production of fruits and vegetables in India, cause for heavy losses, preservation treatments – basics of canning, minimal processing and hurdle technology as applied to vegetable and fruit processing, processing of fruit juices, dehydration, aseptic processing.

UNIT III DAIRY PROCESSING

Basic dairy terminology, composition, general tests at reception, dairy processing – method of manufacture of standardized, toned and double toned milk, milk powder – equipments – pasteurizers, homogenizers and pumps – method of manufacture of dairy products – ice-cream, cheese, paneer, yoghurt – pasteurization and microorganisms involved in spoilage of milk.

UNIT IV MEAT, POULTRY AND FISH PROCESSING

Meat composition from different sources, definitions and measurements, carcass processing, meat products, processing of poultry products, fish and other marine products processing.

UNIT V PLANTATION PRODUCT TECHNOLOGY

Processing of tea, coffee and cocoa – outline of the methods of manufacture of green tea, black tea, instant tea, instant coffee, cocoa and chocolate. Outline of the methods of processing of pepper, cardamom, ginger, vanilla and turmeric.

Suggested Readings:

1. Srivastava R.P. and Kumar S., *Fruit and Vegetable Preservation: Principles and Practices*, International Book Distributing Co., Lucknow, 2010.
2. Chakraverty A., Mujumdar A.S., Raghavan G.S.V. and Ramaswamy H.S., *Postharvest Technology: Cereals, Fruits, Vegetables, Tea, and Spices*, Marcel Dekker Press, USA, 2003.
3. Sukumar De, *Outlines of Dairy Technology*, Oxford University Press, New Delhi, 2016.

18BTFTOE02**NUTRITION AND DIETETICS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To explain the basic concepts of food and nutrition.
- To define the overall classification, function, and source of carbohydrates, lipids and proteins.
- To discuss the overall aspects of vitamins.
- To outline the role of health and nutritional importance of micro and macro minerals.
- To summarise the recent trends in nutrition.
- List the various attributes of fat and water soluble vitamins.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Discuss the basics in the area of nutritional assessment in health and disease.
- Categorise the recommended dietary allowances for different age groups.
- Express the classifications, functions and sources of carbohydrates, lipids and proteins.
- List the various attributes of fat and water soluble vitamins.
- Report the role, bioavailability, sources and deficiency diseases of macro and micro minerals.
- Recognise the diets and concepts of foods suggested for nutritional, chronic and acute disorders.

Course Contents:**UNIT I HUMAN NUTRITION**

Historical perspective of nutrient requirements – assessment of nutritional status – recommended dietary allowances of macronutrients for all age groups – assessment of protein quality – malnutrition and related disorders– balanced diet. Factors influencing dietary intake: Food habits, food fads and fallacies, their influence on health and wellbeing.

UNIT II BIOMOLECULES

Carbohydrates –definition, classification, functions, sources of carbohydrates, deficiency. Lipids – definition, classification, function, sources, refined and hydrogenated fats process. Proteins – definitions, classification, function, amino acids, sources of proteins.

UNIT III VITAMINS

Physiological role, bio-availability, requirements, sources and deficiency of fat soluble vitamins: Vitamin A, D, E and K. Water soluble vitamins: Vitamin C, thiamine, riboflavin, niacin, pantothenic acid, biotin, folic acid, vitamin B12, vitamin B6.

UNIT IV MINERALS

Physiological role, bio-availability, requirements, sources and deficiency of macro minerals: Calcium, phosphorus magnesium, sodium, potassium chloride. Micro minerals: Iron, zinc, copper, selenium, chromium, iodine, manganese, molybdenum and fluoride.

UNIT V RECENT TRENDS IN NUTRITION

Principles of dietary management in gout, rheumatism, AIDS/HIV –cancer – risk factors, symptoms, dietary management, role of food in prevention of cancer. Role of functional foods, health foods and novel foods, organically grown foods, recent concepts in human nutrition like nutrigenomics, nutraceuticals, etc.

Suggested Readings:

1. Gordon M. Wardlaw, *Perspectives in Nutrition*, WCB McGraw-Hill Publishers, Boston, 2013.
2. Shubhangini A. Joshi, *Nutrition and Dietetics*, Tata McGraw- Hill Publishing Company Ltd., New Delhi, 2016.
3. Srilakshmi. B., *Nutrition Science*, New Age International Pvt. Ltd., Publishers, 2017.
4. Ronald Ross Watson, *Functional Foods and Nutraceuticals in Cancer Prevention*, Wiley-Blackwell, 2003.
5. Sunetra Roday, *Food Science and Nutrition*, Oxford Higher Education/Oxford University Press, 2018.

18BTFTOE03	READY TO EAT FOODS	3H-3C
Instruction Hours/Week: L:3 T:0 P:0	Marks: Internal:40 External:60 Total:100	
		End Semester Exam:3 hours

Course Objectives:

- To outline the current status of snack food industry.
- To describe the production, processing and marketing trends of potato and tortilla chips.
- To outline the overall processing of popcorn.
- To explain the production and processing of fruits involved in snack food preparation.
- To summarise the sensory analysis methods and packaging techniques of snack foods.
- Demonstrate the various unit operations involved in the production of potato and tortilla chips.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Review the overall aspects of snack food industry.
- Develop ready to eat foods from potato and maize flour.
- Demonstrate the various unit operations involved in the production of potato and tortilla chips.
- Illustrate the overall aspects of popcorn production.
- List the production, processing and manufacturing of fruit based snacks.
- Recognise the sensory analysis and packaging methods of snack foods.

Course Contents:

UNIT I SNACK FOOD INDUSTRY

Introduction – history – past innovations – outline of snack food industry – nutrition – total quality management of technology – domestic snack food market – global market – snack food association future considerations.

UNIT II POTATO AND TORTILLA CHIPS PROCESSING

Potato production – potato snack ingredients – potato analysis and composition – potato chip manufacturing process – unit operations – other value added products from potato.

Tortilla chips –raw materials – processing steps – equipment involved – reconstitution of dry maize flour – unit operations.

UNIT III POPCORN PROCESSING

Introduction –raw popcorn selection and preparation – popping methods – home preparation of popcorn – equipments – industrial manufacturing process – flavourings and applicators – popcorn packaging – relative nutrition – marketing.

UNIT IV FRUIT BASED SNACKS

Introduction – production and processing of fruit crops – fruit purees – fruit powders – canned fruit snacks – alcoholic preservation of fruit snacks – fruit candies – fruit bars – exotic fruits.

UNIT V SENSORY EVALUATION AND PACKAGING

Introduction – analytical methods – sensory methods – sensory aspect of processing – quality properties of snack foods and packaging materials – automated bag – pouch packaging – cartoning case packing – current issues in snack foods packaging.

Suggested Readings:

1. Lusas, E. W. and Rooney, L. W., *Snack Foods Processing*, CRC Press, 2001.
2. Panda, H., *The Complete Technology Book on Snack Foods*, National Institute of Industrial Research, Delhi, 2013.
3. Sergio O. Serna-Saldivar, *Industrial Manufacture of Snack Foods*, Kennedys Books Ltd., 2008.

18BTFTOE04	AGRICULTURAL WASTE AND BYPRODUCTS UTILIZATION	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To categorise the types of agricultural wastes.
- To outline the production and utilization of biomass.
- To explain the various parameters considered to be important in the designing of biogas units.
- To review the various methods employed in the production of alcohol from the by-products of agricultural wastes.
- To summarise the overall aspects involved in the production of paperboards and particleboards from agricultural wastes.
- Assess the various parameters considered to be important in the designing of biogas units.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- List and group the types of agricultural wastes.
- Develop a number of value added products from agriculture wastes.
- Discuss the techniques and production involved in the utilization of biomass.
- Assess the various parameters considered to be important in the designing of biogas units.
- Illustrate the various methods employed in the production of alcohol from the by-products of agricultural wastes.
- Choose the appropriate materials to produce paperboards and particle boards from agricultural wastes.

Course Contents:

UNIT I TYPES OF AGRICULTURAL WASTES

Introduction and background, agricultural waste, crop waste, agricultural residues (annual crops), technical terms, rice by-products utilization-rice bran and germ, rice bran oil, economic products from agriculture waste/by-products.

UNIT II BIOMASS PRODUCTION AND UTILIZATION

Biomass gasifier, technology used for the utilization of agricultural wastes: biomass gasifier, Nimbkar Agricultural Research Institute (NARI) gasifier, rice-husk based gasifier, heat and steam from sugarcane leaf and bagasse.

UNIT III BIOGAS DESIGN AND PRODUCTION

Biogas: Definition, composition, history of biogas, production of biogas, types of biogas plant (floating drum type and fixed dome type) and their components (inlet, outlet, stirrer, slanting pipe, digester, gas holder and gas outlet pipe), selection and design of biogas plant.

UNIT IV PRODUCTION OF ALCOHOL FROM WASTE MATERIALS

Production of alcohol from waste materials: Introduction, production methods, cellulolysis (biological approach): Pretreatment, cellulolytic processes (chemical and enzymatic hydrolysis), microbial fermentation, gasification process (thermochemical approach).

UNIT V PRODUCTION OF PAPERBOARDS AND PARTICLEBOARDS FROM AGRICULTURAL WASTE

Production and testing of paperboards and particleboards from agricultural waste: Introduction, history, terminology and classification, raw materials, production steps- pulping, classifications of pulp, bleaching, plies, coating, grades.

Suggested Readings:

1. K M Sahay and K K Singh, *Unit Operations of Agricultural Processing*, Vikas Publishing House Pvt. Ltd., Noida, 2013.
2. Beggs C., *Energy Management and Conservation*, Butterworth-Heinemann, 2009.
3. Chaturvedi P., *Energy Management: Challenges for the Next Millennium*, Concept Publishing Co., 2001.
4. Fardo S W, Patrick D R, Richardson R E and Fardo B W, *Energy Conservation Guidebook*, The Fairmont Press, 2014.
5. Wulfinghoff D R, *Energy Efficiency Manual*, Energy Institute Press, 2000.

18BEMEOE01**COMPUTER AIDED DESIGN****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide an overview of how computers are being used in mechanical component design.
- To study the various computer graphics concepts.
- To get basic knowledge of geometric modelling.
- To study the basics of parametric design and object representation.
- To get basic knowledge in product design and development.
- Explain the process involved in graphic transformations.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Give an overview of the CAD systems and its importance.
- Explain the ideas and principles behind the computer graphics.
- Explain the process involved in graphic transformations.
- Understand the operations involved in geometric modelling.
- Describe the concepts of parametric design.
- Understand the basics of product design and development.

Course Contents:**UNIT I OVERVIEW OF CAD SYSTEMS**

Conventional and computer aided design processes–advantages and disadvantages. Subsystems of CAD – CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives – display transformation in Two- and Three-dimensional graphics concepts, graphical input technique, geometric transformations, visual realism, computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELLING

Wireframe, surface, NURBS and solid modelling –applications and advantages. Creating primitive solids, sweeping solids, Boolean operations. Extracting entities from a solid. Filletting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modelling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION

Types of coordinate systems. Parametric design – definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids – manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT

Automated 2D drafting – basics, mechanical assembly – bill of materials generation. Mass property calculations.

Suggested Readings:

1. Vera B Anand, *Computer Graphics and Geometric Modeling for Engineers*, John Wiley & Sons, New York, 2000.
2. Radhakrishnan P and Subramanyan S, *CAD/CAM/CIM*, New Age International Pvt. Ltd., 2008.
3. Ibrahim Zeid, *CAD/CAM Theory and Practice*, McGraw-Hill Inc., New York, 2009.
4. Barry Hawhes, *The CAD/CAM Process*, Pitman Publishing, London, 2007.
5. William M Newman and Robert Sproul, *Principles of Interactive Computer Graphics*, McGraw-Hill Inc., New York, 2001.
6. Sadhu Singh, *Computer-Aided Design and Manufacturing*, Khanna Publishers, New Delhi, 1998.

18BEMEOE02**INDUSTRIAL SAFETY AND ENVIRONMENT****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide in-depth knowledge on industrial safety.
- Understand the various safety techniques involved in the industrial sector.
- Record and investigate the accident zone and prepare reports related to it.
- Conduct basic safety inspections using strategies that they have developed.
- Identify and demonstrate the working of safety monitoring.
- Train about education and training based on safety.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Understand the need and awareness of safety concepts.
- Understand the various safety techniques involved in the industrial sector.
- Record and investigate the accident zone and prepare reports related to it.
- Conduct basic safety inspections using strategies that they have developed.
- Identify and demonstrate the working of safety monitoring.
- Train about education and training based on safety.

Course Contents:**UNIT I CONCEPTS**

Evolution of modern safety concept –safety policy – safety organization – line and staff functions for safety – safety committee – budgeting for safety.

UNIT II TECHNIQUES

Incident Recall Technique (IRT), disaster control, Job Safety Analysis (JSA), safety survey, safety inspection, safety sampling, safety audit.

UNIT III ACCIDENT INVESTIGATION AND REPORTING

Concept of an accident, reportable and non-reportable accidents, unsafe act and condition – principles of accident prevention, supervisory role – role of safety committee – accident causation models – cost of accident. Overall accident investigation process –response to accidents, India reporting requirement, planning document, planning matrix, investigators kit, functions of investigator, four types of evidence, records of accidents, accident reports.

UNIT IV SAFETY PERFORMANCE MONITORING

Reactive and proactive monitoring techniques –permanent total disabilities, permanent partial disabilities, temporary total disabilities – calculation of accident indices, frequency rate, severity rate, frequency severity incidence, incident rate, accident rate, safety “t” score, safety activity rate – problems.

UNIT V SAFETY EDUCATION AND TRAINING

Importance of training – identification of training needs – training methods – programme, seminars, conferences, competitions – method of promoting safe practice – motivation – communication – role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – domestic safety and training.

Suggested Readings:

1. *Accident Prevention Manual for Industrial Operations*, N.S.C. Chicago, 2010.
2. Heinrich H.W., *Industrial Accident Prevention*, Tata McGraw-Hill Company, New York, 1941.
3. Krishnan N.V, *Safety Management in Industry*, Jaico Publishing House, Bombay, 1997.
4. John R Ridley, *Safety at Work*, Elsevier, 2014.
5. Roland P. Blake, *Industrial Safety*, Prentice Hall, New Jersey, 1973.
6. L M Deshmukh, *Industrial Safety Management*, Tata McGraw-Hill, 2005.

18BEMEOE03**TRANSPORT PHENOMENA****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To provide the basics of transport phenomena and its applications.
- To provide the knowledge over the properties of the systems and unit systems used.
- To understand the basics and mathematics involved in momentum transport.
- To provide the basics and applications of energy transport.
- To give basics and principles involved in the mass transport phenomena.
- Understand the basic concepts involved in momentum transport.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Understand the basic concepts of transport phenomena.
- Understand the essentiality of properties of a system and unit systems used.
- Understand the basic concepts involved in momentum transport.
- Apply the mathematics involved in fluid flow problems.
- Explain the various energy transport phenomena.
- Understand the basics of mass transport phenomena.

Course Contents:**UNIT I INTRODUCTION AND BASIC CONCEPTS**

General overview of transport phenomena including various applications, transport of momentum, heat and mass, transport mechanism, level of transport, driving forces, molecular transport (diffusion), convective transport (microscopic).

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, gas laws, laws of conservation, energy and heat units.

UNIT III MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, force, unit and dimensions, pressure in fluid, head of fluid, molecular transport for momentum, heat and mass transfer, viscosity of fluids, Newton's law, momentum transfer, Newtonian and non-Newtonian fluids, fluid flow and Reynolds number, overall mass balance, control volume and continuity equation, overall energy balance, Bernoulli's equation, overall momentum balance, drag coefficient, Stokes law, flow in packed beds, flow in fluidized bed.

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, conduction heat transfer through flat slab/wall and through hollow cylinder, conduction through solids in series, forced convection heat transfer

inside pipes, heat transfer outside various geometrics in forced convection, general discussion on natural convection heat transfer, heat exchangers, general discussion on radiation heat transfer.

UNIT V MASS TRANSPORT

Basic concepts in mass transport, some application examples, modes of mass transfer, molecular diffusion– Fick's law, analogy between mass, heat and momentum transfer, dispersion, hydraulic or Darcy's flow in porous media, chemical kinetics and activation energy, film theory, convective mass transfer, liquid-solid mass transfer, liquid-liquid mass transport, gas-liquid mass transfer, aeration and oxygen transport, air stripping.

Suggested Readings:

1. Geankoplis, C. J., *Transport Processes and Separation Processes Principles*, Prentice Hall, 2013.
2. R. Byron Bird, Warren E. Stewart and Edwin N. Lightfoot, *Transport Phenomena*, John Wiley & Sons, 2007.
3. Edwin N. Lightfoot, *Transport Phenomena and Living Systems: Biomedical Aspects of Momentum and Mass Transport*, Wiley, 2007.

18BEMEOE04**INTRODUCTION TO BIOMECHANICS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- Biomechanics provides key information on the most effective and safest movement patterns, equipment, and relevant exercises to improve human movement.
- Present the nine fundamentals of biomechanics and its need.
- Explain the nine principles used for the application of biomechanics.
- Describe the human anatomy.
- Explain the need for biomechanics in muscle actions.
- Understand the basics of the mechanics involved in the musculoskeletal system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Understand the basics and importance of biomechanics.
- Present the nine fundamentals of biomechanics and its need.
- Explain the nine principles used for the application of biomechanics.
- Describe the human anatomy.
- Explain the need for biomechanics in muscle actions.
- Understand the basics of the mechanics involved in the musculoskeletal system.

Course Contents:**UNIT I INTRODUCTION**

Biomechanics –improving performance – applications – preventing and treating injury – qualitative and quantitative analysis – scholarly societies – computer searches – biomechanical knowledge versus information – kinds of sources – evaluating sources.

UNIT II KEY MECHANICAL CONCEPTS

Mechanics –basic units – nine fundamentals of biomechanics – principles and laws – nine principles for application of biomechanics.

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (whole-body) modelling – position and direction terminology – terminology for common movements – skeletal anatomy – major joints – major muscle groups – anthropometric data.

UNIT IV ANATOMICAL DESCRIPTION

Key anatomical concepts – directional terms – joint motions – muscle actions – active and passive tension of muscle – limitations of functional anatomical analysis – mechanical method of muscle action analysis – the need for biomechanics to understand muscle actions – sports medicine and rehabilitation applications.

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

Tissue loads – response of tissues to forces – biomechanics of the passive muscle-tendon unit – biomechanics of bone – biomechanics of ligaments – three mechanical characteristics of muscle– Stretch-Shortening Cycle (SSC) –force-time principle – neuromuscular control.

Suggested Readings:

1. Duane Knudson, *Fundamentals of Biomechanics*, Springer US, 2013.
2. C. Ross Ethier and Craig A. Simmons, *Introductory Biomechanics: From Cells to Organisms*, Cambridge University Press, 2008.

18BESH0E01**SOLID WASTE MANAGEMENT****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To make the students conversant with the basics of solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of hazardous waste management.
- To acquaint the students with the basics of energy generation from waste materials.
- Identify the methods of wastes disposals.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Outline the basic principles of solid waste and separation of wastes.
- Identify the concepts of treatment of solid wastes.
- Identify the methods of wastes disposals.
- Examine the level of hazardousness and its management.
- Examine the possible of energy production using waste materials.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I SOLID WASTE**

Definitions – sources, types, compositions, properties of solid waste – municipal solid waste – physical, chemical and biological property – collection – transfer stations – waste minimization and recycling of municipal waste.

UNIT II WASTE TREATMENT

Size reduction – aerobic composting – incineration – batch type and continuous flow type, medical/pharmaceutical waste incineration – environmental impacts – measures of mitigate environmental effects due to Incineration.

UNIT III WASTE DISPOSAL

Sanitary landfill method of solid waste disposal – landfill classification, types, methods and siting consideration – layout and preliminary design of landfills – composition, characteristics generation, movement and control of landfill leachate and gases – environmental monitoring system for landfill gases, waste landfill remediation.

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition and identification of hazardous waste – sources and nature of hazardous waste – impact on environment – hazardous waste control – minimization and recycling – assessment of hazardous

waste sites – disposal of hazardous waste, underground storage tanks construction, installation and closure, remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion technologies – pyrolysis systems, combustion systems, gasification systems, environment control systems, energy recovery systems. Biological and chemical conversion technologies – aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

Suggested Readings:

1. Dara S.S. and Mishra D.D., *A Textbook of Environmental Chemistry and Pollution Control*, S.Chand and Company Ltd., New Delhi, 2011.
2. Naomi B. Klinghoffer and Marco J. Castaldi, *Waste to Energy Conversion Technology*, Woodhead Publishing Ltd., Cambridge, UK, 2013.
3. Frank Kreith and George Tchobanoglous, *Handbook of Solid Waste Management*, McGraw-Hill Publishing Ltd., New York, 2002.
4. Kanti L. Shah, *Basics of Solid and Hazardous Waste Management Technology*, Prentice Hall (P) Ltd., New Delhi, 1999.

18BESH0E02**GREEN CHEMISTRY****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To make the students conversant about green chemistry.
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basics information on catalysis.
- Apply the concepts combustion of green technology.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Outline the basic principles of green chemistry.
- Examine the different atom efficient process and synthesis elaborately.
- Apply the concepts combustion of green technology.
- Identify and apply the concepts of renewable energy.
- Apply the concepts of green catalysts in the synthesis.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY

Biotechnology and its applications in environmental protection – bio informatics – bio remediation, biological purification of contaminated air. Green chemistry for clean technology –significance of green chemistry – basic components of green chemistry, industrial applications of green chemistry, green fuels–e-green propellants and biocatalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

Suggested Readings:

1. Sanjay K. Sharma and Ackmez Mudhoo, *Green Chemistry for Environmental Sustainability*, CRC Press, London, 2010.
2. Ahluwalia V. K. and M.Kidwai, *New Trends in Green Chemistry*, Anamaya Publishers, New Delhi, 2007.
3. Sunita Rattan, *A Textbook of Engineering Chemistry*, S.K. Kataria and Sons, New Delhi, 2012.
4. Mukesh Doble, Ken Rollins and Anil Kumar, *Green Chemistry and Engineering*, Academic Press, Elsevier, New Delhi, 2007.

18BESH0E03**APPLIED ELECTROCHEMISTRY****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To make the students conversant with the information on electrochemical material.
- To make the student acquire sound knowledge of conducting polymers.
- To acquaint the student with concepts of energy storage devices.
- To develop energy storage devices.
- Apply the concepts of electrochemistry in storage devices.
- Identify the concepts of storage devices and their applications.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Outline the basic principles of chemistry in electrochemical material.
- Examine the properties of conducting polymers.
- Apply the concepts of electrochemistry in storage devices.
- Identify the concepts of storage devices and their applications.
- Apply suitable materials for the manufacturing of storage devices.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I METAL FINISHING**

Fundamental principles, surface preparation – electroplating of copper, nickel, chromium, zinc and precious metals (gold and silver) – electroplating for electronic industry – alloy plating, brass plating – electroless plating of nickel – anodizing – electroforming – electrowinning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS

Electropolymerisation – anodic and cathodic polymerization – effect of reaction parameters on the course of the reaction – electrochemical preparation of conducting polymers – poly acetylene – electrolytic production of perchlorates and manganese dioxide – electro organic chemicals – constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES - I

Principles of energy conservation – electrochemical energy conservation – thermodynamic reversibility, Gibbs equation. EMF – battery terminology, energy and power density – properties of anodes, cathodes, electrolytes and separators – types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES - II

Primary batteries – dry Leclanche cells, alkaline primary batteries, lithium batteries – construction, characteristics, problems associated with system – secondary batteries – lead acid, nickel cadmium – fuel cells – introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells – preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics – amorphous silicon solar cells –PhotoElectrochemicalCells(PEC) for conversion of light energy to electrical energy – PEC cells based on Cd/Se and Ga/As characteristics.

Suggested Readings:

1. Cynthia G. Zoski, *Handbook of Electrochemistry*, Academic Press, Elsevier, UK, 2007.
2. D.Pletcher and F.C.Walsh, *Industrial Electrochemistry*, Chapman and Hall, London, 1990.
3. M. Barak, *Electrochemical Power Sources*, Peter Peregrinius Ltd., Steverage, UK, 1997.
4. Bruno Scrosati, *Applications of Electroactive Polymers*, Chapman & Hall, London, 1993.
5. K.L. Chopra and I. Kaur, *Thin Film Devices and their Application*, Plenum Press, New York, 1983.
6. M.M.Baizer, *Organic Electrochemistry*, Dekker Inc., New York, 1983.

18BESH0E04**INDUSTRIAL CHEMISTRY****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To make the students conversant with cement and lime and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts of explosives.
- To acquaint the students with the basics of agriculture chemicals.
- Identify the usage of inorganic chemicals.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Outline the basic chemistry of cement and lime.
- Examine the uses of abrasives and refractories.
- Identify the usage of inorganic chemicals.
- Identify the concepts of explosives and smoke screens.
- Identify the usage of agriculture chemicals.
- Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I CEMENT AND LIME**

Manufacture of Portland cement – setting and hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials – manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives– artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and TNT. – industrial explosives – nitro-glycerine and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

Suggested Readings:

1. Harikrishan, *Industrial Chemistry*, Goel Publishing House, Meerut, 2014.
2. B.K. Sharma, *Industrial Chemistry*, Goel Publishing House, Meerut, 2000.
3. B.N.Chakrabarty, *Industrial Chemistry*, Oxford and IBH Publishing Co., New Delhi, 1998.
4. James A. Kent, *Handbook of Industrial Chemistry*, Van Nostrand Reinhold, New York, 1992.
5. R.N. Sherve, *Chemical Process Industries*, McGraw-Hill, Kugakuisha Ltd., Tokyo, 1984.
6. S.D. Shukla and G.N. Pandey, *A Textbook of Chemical Technology*, Vikas Publishing House (P) Ltd., New Delhi, 1979.

18BESH0E05	TECHNICAL WRITING	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To develop abilities to write technically and expressively.
- To recognise writing as a constructive and meaningful process.
- To practice using reading strategies for effective writing.
- To design effective technical documents for both print and digital media.
- To identify the qualities of good technical writing.
- Identify the usage of inorganic chemicals.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Create simple sentences and correct common grammatical errors in written English.
- Use their reading ability for effective writing.
- Restate to minimize word, sentence and paragraph length without sacrificing clarity or substance.
- Discuss the basic technical writing concepts and terms such as audience analysis, jargon, format, visuals, and presentation.
- Demonstrate the basic components of definitions, descriptions, process explanations and other common forms of technical writing.
- Organize the structure of thesis and articles

Course Contents:**UNIT I BASICS OF WRITING**

Introduction to technical writing – importance of writing – characteristics of writing – audience recognition/analysis – appropriateness of language – conciseness and flow – bias-free and plain writing – impersonal and formal language – techniques of technical writing – overcoming writer's block – prioritizing for effective writing – avoiding plagiarism.

UNIT II PARAGRAPHS AND ESSAYS

Expressing ideas – paragraph construction – cohesion and coherence – adequate development – kinds of paragraphs – writing drafts – paragraph length and pattern – types of essays – characteristics of essays – salient point of sentence constructions.

UNIT III LETTERS, MEMOS AND EMAIL

Formal written correspondence – types of messages – business letters – structure of letters – language in letters – tense in letters – cover letters – resumes – curriculum vitae – memos – emails – email etiquette – effectiveness and purpose.

UNIT IV THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to effective précis writing – guidelines – technical proposals – types of proposals – characteristics – body of the proposals – style and appearance – evaluation of proposals – proof reading – book/film review – travelogue – dialogue writing.

UNIT V REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles – objectives of reports – characteristics of reports – structure of reports – types of reports – writing an article – writing research articles – essential features of dissertation – organizing the structure of thesis and articles – writing technical description.

Suggested Readings:

1. V.N. Arora and Lakshmi Chandra, *Improve Your Writing*, Oxford University Press, New Delhi, 2014.
2. David Morley, *The Cambridge Introduction to Creative Writing*, Cambridge University Press, New Delhi, 2010.
3. Graham King, *Collins Improve Your Writing Skills*, HarperCollins Publishers, UK, 2009.
4. Phyllis Creme and Mary R. Lea, *Writing at University: A Guide for Students*, Oxford University Press, New Delhi, 2003.

18BESH0E06	GEOPHYSICS	3H-3C
Instruction Hours/Week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 hours

Course Objectives:

- To inculcate the basics of the brief history of earth sciences.
- To divulge knowledge on the basics of the structure of earth and earth's gravitational field.
- To disseminate the fundamentals of the magnetic field and thermal distribution of earth.
- To introduce the concepts of seismology and seismic waves.
- To impart the basic knowledge of oceans.
- Discuss the concepts of the structure of earth and earth's gravitational field.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain basics of the history of earth sciences.
- Discuss the concepts of the structure of earth and earth's gravitational field.
- Describe the concepts of the magnetic field and thermal distribution of earth.
- Explain the basics of seismic waves.
- Discuss the basics of oceans and the properties of seawater.
- Apply the knowledge gained from this course to solve the relevant problems in the engineering stream.

Course Contents:

UNIT I ORIGIN OF EARTH

A brief history of the development of earth sciences. An overview of geophysical methods and their essential features, problems of inversion and non-uniqueness in geophysics, origin and evolution of solar system, earth and moon structure, Kepler's law of planetary motion, a review of the earth's structure and composition.

UNIT II STRUCTURE OF EARTH

Chemical composition of earth, rheological behaviour of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, major features of the earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy.

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sunspot, solar flares, geomagnetic storms, sea-floor spreading, paleomagnetism and its uses, thermal history of the earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle.

UNIT IV SEISMOLOGY

Earthquake seismology, earthquakes and its classifications, global seismicity and tectonics, earth's internal structure derived from seismology, earthquake mechanism and Anderson's theory of faulting, continental drift and plate tectonics: Its essential features, present day plate motions, triple junctions, oceanic ridges, Benioff zones, arcs, hot spots, mantle plume, mountain building, origin of Himalaya, geodynamics of Indian subcontinent.

UNIT V OCEANS

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, laws of seas, coastal zone management.

Suggested Readings:

1. B.F. Howell, *Introduction to Geophysics*, McGraw-Hill, 2007.
2. W. Lowrie, *Fundamentals of Geophysics*, Cambridge University Press, 2007.
3. J.A. Jacobs and R.D. Russel, *Physics and Geology*, McGraw-Hill, 2002.

18BESH0E07**ENGINEERING ACOUSTICS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To disseminate the fundamentals of acoustic waves.
- To inculcate the characteristics of radiation and reception of acoustic waves.
- To divulge knowledge on the basics of pipe resonators and filters.
- To introduce the features of architectural acoustics.
- To impart the basic knowledge of transducers and receivers.
- Explain the basic ideas of pipe resonators and filters.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics.
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

Course Contents:**UNIT I INTRODUCTION**

Acoustics waves – linear wave equation – sound in fluids – harmonic plane waves – acoustics intensity – specific acoustic impedance – spherical waves – decibel scales. Reflection and transmission: Transmission from one fluid to another normal and oblique incidence – method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – acoustic reciprocity – continuous line source radiation impedance – fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient.

UNIT III PIPES RESONATORS AND FILTERS

Resonance in pipes – standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator – acoustic impedance – reflection and transmission of waves in pipe – acoustic filters – low pass, high pass and band pass. Noise, signal detection, hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS

Sound in enclosure – a simple model for the growth of sound in a room – reverberation time – Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.

Environmental acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loudspeaker– horn loudspeaker, receivers – condenser – microphone – moving coil electrodynamic microphone piezoelectric microphone – calibration of receivers.

Suggested Readings:

1. Lawrence E. Kinsler, Austin R. Frey, Alan B. Coppens and James V. Sanders, *Fundamentals of Acoustics*, John Wiley & Sons, 1999.
2. F. Alton Everest and Ken C. Pohlmann, *Master Handbook of Acoustics*, McGraw-Hill Professional, 2014.

18BESH0E08**INDUSTRIAL MATHEMATICS - I****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To develop analytical skills for solving engineering problems.
- To teach the students the basic concepts of LPP.
- To learn the techniques to solve transportation and assignment problems.
- To make the students study the integer programming and network analysis.
- To analyse the results and propose recommendations to the decision-making processes in management engineering.
- Formulate and solve transportation models and assignment models.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Define and formulate linear programming problems and appreciate their limitations.
- Solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
- Formulate and solve transportation models and assignment models.
- Construct linear integer programming models and discuss the solution techniques.
- Formulate and solve problems as networks and graphs.
- Apply PERT and CPM

Course Contents:**UNIT I LINEAR PROGRAMMING PROBLEM**

Formulation of LPP –graphical method –simplex method – artificial variable technique and two-phase simplex method. Duality –dual and simplex method – dual simplex method.

UNIT II TRANSPORTATION PROBLEM

Transportation model, finding initial basic feasible solutions, moving towards optimality, degeneracy.

UNIT III ASSIGNMENT PROBLEM

Solution of an assignment problem, multiple solution, Hungarian algorithm, maximization in assignment model, impossible assignment.

UNIT IV INTEGER PROGRAMMING

Integer programming problem – Gomory's fractional cut method – branch bound method.

UNIT V NETWORK ANALYSIS

PERT and CPM – network diagram – probability of achieving completion date – crash time – cost analysis.

Suggested Readings:

1. Hamdy Taha. A., *Operations Research*, Prentice-Hall of India Pvt. Ltd., New Delhi, 2013.
2. Kanti Swarup, P. K. Gupta and Man Mohan, *Operations Research*, Sultan Chand & Sons, New Delhi, 2010.
3. Natarajan A.M., Balasubramani P. and Thamilarasi A, *Operations Research*, Pearson Education, New Delhi, 2005.
4. Srinivasan G, *Operations Research: Principles and Applications*, PHI Pvt. Ltd., New Delhi, 2007.
5. Wayne L. Winston, *Operations Research: Applications and Algorithms*, Cengage Learning India Pvt. Ltd., New Delhi, 2004.

18BESH0E09**INDUSTRIAL MATHEMATICS - II****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To kindle analytical skills for solving engineering problems.
- To impart the knowledge about inventory models.
- To learn replacement models and simulation models.
- To provide techniques for effective methods to solve nonlinear programming and decision making.
- To analyse the results and propose recommendations to the decision-making processes in management engineering.
- Discuss the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Solve simple models in inventory problems and replacement problems.
- Explain different queuing situations and find optimal solutions using models for different situations.
- Simulate different real-life probabilistic situations using Monte Carlo simulation technique.
- Discuss the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
- Convert and solve practical situations into replacement models.
- Model and solve problems using non-integer programming.

Course Contents:**UNIT I INVENTORY MODELS**

Economic order quantity models – techniques in inventory management – ABC analysis.

UNIT II NON-LINEAR PROGRAMMING

Khun-Tucker conditions with non-negative constraints –quadratic programming – Wolf's modified simplex method.

UNIT III SIMULATION MODELS

Elements of simulation model – Monte Carlo technique – applications. Queuing model: Problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ models.

UNIT IV DECISION MODELS

Decision analysis – decision making environment – decisions under uncertainty – decision under risk – decision – tree analysis.

UNIT V REPLACEMENT MODELS

Models based on models that gradually deteriorate with time – whose maintenance cost increase with time – replacement of items that fail suddenly and completely.

Suggested Readings:

1. Hamdy Taha. A., *Operations Research*, Prentice-Hall of India Pvt. Ltd., New Delhi, 2013.
2. Kanti Swarup, P. K. Gupta and Man Mohan, *Operations Research*, Sultan Chand & Sons, New Delhi, 2010.
3. Natarajan A.M., Balasubramani P. and Thamilarasi A, *Operations Research*, Pearson Education, New Delhi, 2005.
4. Srinivasan G, *Operations Research: Principles and Applications*, PHI Pvt. Ltd., New Delhi, 2007.
5. Wayne L. Winston, *Operations Research: Applications and Algorithms*, Cengage Learning India Pvt. Ltd., New Delhi, 2004.

18BESH0E10**FUZZY MATHEMATICS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To understand basic knowledge of fuzzy sets and fuzzy logic.
- To apply the basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations.
- To apply basic fuzzy inference and approximate reasoning.
- To know the applications of fuzzy technology.
- Describe the methods of fuzzy logic.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the main subject of fuzzy sets.
- Discuss the concept of fuzziness involved in various systems and fuzzy set theory.
- Describe the methods of fuzzy logic.
- Comprehend the concepts of fuzzy relations.
- Analyse the application of fuzzy logic control to real-time systems.
- Understand the fuzzy relational inference

Course Contents:**UNIT I FUZZY SETS**

Basics – classical sets vs. fuzzy sets – need for fuzzy sets – definition and mathematical representations – level sets – fuzzy functions – Zadeh's extension principle.

UNIT II OPERATIONS ON FUZZY SETS

Operations on $[0,1]$ – Fuzzy negation, triangular norms, t-conorms, fuzzy implications, aggregation operations, fuzzy functional equations.

UNIT III FUZZY RELATIONS

Fuzzy binary and n-ary relations – composition of fuzzy relations – fuzzy equivalence relations – fuzzy compatibility relations – fuzzy relational equations.

UNIT IV FUZZY MEASURES

Possibility theory – fuzzy measures – evidence theory – necessity and belief measures – probability measures vs. possibility measures.

UNIT V FUZZY INFERENCE

Approximate reasoning fuzzy decision making – fuzzy relational inference – compositional rule of inference – efficiency of inference – hierarchical.

Suggested Readings:

1. George J Klir and Bo Yuan, *Fuzzy Sets and Fuzzy Logic: Theory and Applications*, Prentice Hall of India, New Delhi, 2003.
2. Zimmermann H.J., *Fuzzy Set Theory and its Applications*, Kluwer Academic Publishers, USA, 2001.
3. Michał Baczyński and Balasubramaniam Jayaram, *Fuzzy Implications*, Springer-Verlag Publishers, Heidelberg, 2008.
4. Kevin M Passino and Stephen Yurkovich, *Fuzzy Control*, Addison Wesley Longman Publishers, USA, 1998.

18BESH0E11**MATHEMATICAL PHYSICS****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To know the fundamentals of tensors.
- To know the series solutions to differential equations.
- To introduce the concepts of special functions.
- To study about calculus of variations and integral equations.
- To familiar with the main mathematical methods used in physics.
- Discuss the special type of matrices that are relevant in physics and tensors.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
- Discuss the special type of matrices that are relevant in physics and tensors.
- Explain special functions like Bessel, Legendre, Hermite and Laguerre functions and their recurrence relations.
- Compare different ways of solving second order differential equations.
- Use calculus of variations and linear integral equations.
- Solution of Fredholm equations with separable kernels.

Course Contents:**UNIT I TENSORS**

Definition of tensor –rank, symmetric tensors, contraction, quotient rule –tensors with zero components, tensor equations, metric tensors and their determinants –pseudo tensors.

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series solution: Classification of singularities of an ordinary differential equation –series solution – method of Frobenius – indicial equation – examples.

UNIT III SPECIAL FUNCTIONS

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre, Hermite and Laguerre functions – Generating Function.

UNIT IV CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green's function – solution of integral equation – integral equations of the convolution type – Abel's integral equations – integro-differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

Suggested Readings:

1. Grewal B.S., *Higher Engineering Mathematics*, Khanna Publishers, New Delhi, 2013.
2. Murray R Spiegel, Seymour Lipschutz and Dennis Spellman, *Vector Analysis*, Tata McGraw-Hill Education Pvt. Ltd., New Delhi, 2010
3. Stephenson, G. and Radmore, P.M., *Advanced Mathematical Methods for Engineering and Science Students*, Cambridge University Press India Pvt. Ltd., New Delhi, 1990.
4. Larry C. Andrews, *Special Functions of Mathematics for Engineers*, Oxford Science Publishers, New Delhi, 1997.

18BESH0E12**LINEAR ALGEBRA****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To introduce the basic concepts of vector space.
- To know the fundamentals of linear algebra.
- To solve the system of linear equations.
- To study the linear transformations.
- To introduce the concepts of inner product spaces.
- Express linear transformations as a matrix form.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- Apply the fundamental concepts in their respective engineering fields.
- Express linear transformations as a matrix form.
- Explain the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers.
- Discuss the importance of linear algebra
- Discuss the applications of linear algebra in branches of mathematics.

Course Contents:**UNIT I VECTOR SPACES**

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space.

UNIT II EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors –diagonalization – power method – QR decomposition.

UNIT III SYSTEM OF LINEAR EQUATIONS

Direct methods, Gauss elimination method, Gauss-Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear transformations – the null space and range – isomorphisms – matrix representation of linear transformations – similarity–Eigen values and Eigenvectors–diagonalization.

UNIT V INNER PRODUCT SPACES

The dot product on \mathbb{R}^n and inner product spaces – orthonormal bases – orthogonal complements – Application: Least squares approximation – diagonalization of symmetric M – Application: Quadratic forms.

Suggested Readings:

1. Kreyszig E, *Advanced Engineering Mathematics*, John Wiley & Sons, New Delhi, 2014.
2. Shahnaz Bathul, *Special Functions and Complex Variables*, PHI Publications, New Delhi, 2009.
3. Anton and Rorres, *Elementary Linear Algebra: Applications*, Wiley India, New Delhi. 2012.
4. Jim Defranza, Daniel Gagliardi, *Introduction to Linear Algebra with Application*, Tata McGraw-Hill, New Delhi, 2008.

18BEAE0E01**AUTOMOBILE ENGINEERING****3H-3C****Instruction Hours/Week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Explain the function and working of components in transmission and drive lines.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

Course Contents:**UNIT I ENGINE AND AUXILIARY SYSTEMS**

Classification of engines – construction and working of four-stroke Spark Ignition (SI) engine and Compression Ignition (CI) engine – construction and working of two-stroke SI and CI engine – firing order – carburettor – fuel injection systems – battery – dynamo – alternator – starting motor – lighting system – ignition system.

UNIT II TRANSMISSION SYSTEMS

Requirements of transmission system – flywheel – clutch – types of clutch – construction of single and multi-plate clutches – need, types and construction of transmission gearbox – universal joint – propeller shaft – need, types and construction of differential – four wheel drive.

UNIT III STEERING AND SUSPENSION SYSTEMS

Principle of steering – steering linkages – types of steering gearbox – power steering – suspension systems – need and types – independent suspension – coil spring, leaf spring, torsion bar and air suspension – shock absorbers.

UNIT IV WHEELS AND BRAKES

Wheels and tyres –construction –types and specifications –tyre wear and causes – brakes – need – braking distance – types – mechanical,hydraulic and pneumatic brakes – power brake – parking brake – redundant braking system.

UNIT V CURRENT AND FUTURE TRENDS

Anti-lock Braking System (ABS) – brake assist – Electronic Brakeforce Distribution (EBD)– airbags – automatic high-beam control – backup cameras – defogger– electric vehicles – hybrid vehicles– autonomous vehicles – vehicle-to-vehicle communication –vehicle tracking – alternative fuels.

Suggested Readings:

1. Kirpal Singh, *Automobile Engineering Volume I*, Standard Publishers, New Delhi, 2018.
2. Sethi H M, *Automobile Technology*, Tata McGraw-Hill, New Delhi, 2003.
3. William HCrouse and Donald LAnglin, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2006.
4. Srinivasan S, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2003.
5. Ganesan V, *Internal Combustion Engines*, McGraw-Hill Education, New Delhi, 2012.

INDEX OF COURSES

A

ADVANCED THEORY OF IC ENGINES	120
AGRICULTURAL WASTE AND BYPRODUCTS UTILIZATION	244
ALTERNATE FUELS AND ENERGY SYSTEMS	136
APPLIED ELECTROCHEMISTRY	258
APPLIED HYDRAULICS AND PNEUMATICS	138
APPLIED THERMODYNAMICS	50
ARTIFICIAL ORGANS AND IMPLANTS	184
AUTOMOBILE ENGINEERING	278
AUTOMOTIVE AERODYNAMICS	132
AUTOMOTIVE AIR CONDITIONING	122
AUTOMOTIVE CHASSIS AND TRANSMISSION	71
AUTOMOTIVE CHASSIS COMPONENTS DESIGN	90
AUTOMOTIVE ELECTRICAL AND ELECTRONICS SYSTEMS	73
AUTOMOTIVE EMISSIONS AND NVH CONTROL	109
AUTOMOTIVE ENGINE COMPONENTS AND MEASUREMENTS LABORATORY	58
AUTOMOTIVE ENGINES	52
AUTOMOTIVE SAFETY	124
AUTOMOTIVE TESTING	134

B

BASIC BIOINFORMATICS	190
BASIC ELECTRICAL ENGINEERING	30
BIOLOGY FOR ENGINEERS	56
BIOREACTOR DESIGN	186
BUILDING SERVICES	204

C

CHEMISTRY – I	36
COMPOSITE MATERIALS	118
COMPUTATIONAL FLUID DYNAMICS	150
COMPUTER AIDED DESIGN	246
COMPUTER AIDED DESIGN ANALYSIS LABORATORY	103
COMPUTER AIDED MACHINE DRAWING LABORATORY	59
COMPUTER INTEGRATED MANUFACTURING	166
COMPUTER-AIDED CIVIL ENGINEERING DRAWING	208
CONSTITUTION OF INDIA	42
CONSUMER ELECTRONICS	230
COURSE ORIENTED PROJECT - I	76
COURSE ORIENTED PROJECT - II	87

D

DESIGN FOR MANUFACTURE AND ASSEMBLY	128
DESIGN OF MACHINE ELEMENTS	78
DYNAMICS AND MECHATRONICS LABORATORY	86

E

ELECTRIC HYBRID VEHICLE	220
ELECTROMAGNETISM	28
ENERGY MANAGEMENT AND ENERGY AUDITING	222
ENERGY MANAGEMENT IN CHEMICAL INDUSTRIES	194
ENGINE AND VEHICLE MANAGEMENT SYSTEM	98
ENGINEERING ACOUSTICS	266

ENGINEERING ECONOMICS AND FINANCIAL MANAGEMENT	92
ENGINEERING GRAPHICS AND DESIGN	32
ENGINEERING MATERIALS AND METALLURGY	69
ENGINEERING MECHANICS	48
ENGINEERING METROLOGY AND MEASUREMENTS	54
ENGLISH	38
ENVIRONMENTAL SCIENCES	84
ESSENCE OF INDIAN TRADITIONAL KNOWLEDGE	99

**FACULTY OF ENGINEERING
DEGREE OF BACHELOR OF ENGINEERING IN
BIOMEDICAL ENGINEERING**

**DEPARTMENT OF BIOMEDICAL
ENGINEERING**

**(REGULAR PROGRAMME)
CURRICULUM & SYLLABI
(2018-2019)**

**KARPAGAM ACADEMY OF HIGHER EDUCATION
(Established Under Section 3 of UGC Act 1956)
COIMBATORE 641 021
INDIA.**

COURSE OBJECTIVES:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To improve the students communication skill at interview level

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- write business letters and other forms of technical writing.
- prepare for oral communication in formal contexts

Unit- I LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)**

Listening –Types of listening- Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Formal and Informal letters- Letters to the Editor.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Tenses -Articles. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit – II LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (8)**

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing**– Coherence and cohesion in writing – Short paragraph writing – Writing short messages.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

Unit – III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (8)

Listening – Listening for specific task – fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** –comprehension passages based on general topics or matters of current affairs. **Writing** - Autobiographical writing & Biographical writing.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Preposition – Infinitive & Gerund. **Vocabulary** – Foreign words used in English – British and American usage.

Unit- IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10)

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) & Instruction writing.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Parts of Speech , Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit-V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (10)

Listening –Distinction between native and Indian English (Speeches by TED and Kalam). **Speaking**- Extempore talk –Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

Total-45

COURSE OBJECTIVES:

The goal of this course is for the students

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To understand geometrical aspects of curvature and elegant application of differential calculus which are needed in Engineering applications.
- To make the student acquire sound knowledge of techniques in solving ordinary differential equations that model Engineering problems.
- To familiarize the student with functions of several variables which is the foundation for many branches of Engineering.
- To introduce sequence and series which is central to many applications in Engineering.
- To make the student to solve various engineering problems

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- To solve the rank, Eigen values and eigenvectors, diagonalization of a matrix, Symmetric matrices and the students will be able to use matrix algebra techniques for practical applications.
- To equip the students to have basic knowledge and understanding in one field of materials, differential calculus
- To solve simple standard examples using the ideas of differential equations.
- To apply various techniques to solve Partial Differential Equations
- To develop the tool of power series for learning advanced Engineering Mathematics.
- To apply the knowledge acquired to solve various Engineering problems.

UNIT I MATRICES**(12)**

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS**(12)**

Limits, Continuity (Concepts only)- Differentiation- Differentiation Techniques: standard formulae, product rule, quotient rule, chain rule, method of substitution, implicit functions and successive differentiation.

UNIT III GEOMETRICAL APPLICATIONS OF DIFFERENTIAL CALCULUS**(12)**

Curvature – centre, radius and circle of curvature in Cartesian co- ordinates – Evolutes – Envelope – Evolute as envelope of normals.

UNIT**IV****DIFFERENTIAL****EQUATIONS****(12)**

Introduction to Ordinary differential equations: Linear ordinary differential equations of second and higher order with constant coefficients.

Introduction to Partial differential equations: Linear Partial differential equations of second and higher order with constant coefficients.

UNIT V VECTOR DIFFERENTIATION

(12)

Vectors-Differentiation of vectors – scalar and vector point functions –vector operator – vector operator applied to scalar point functions: Gradient; vector operator applied to vector point functions: Divergence and curl; Physical interpretation of divergence and curl, Directional derivative, solenoidal and irrotational vectors.

3. www.intmath.com/matrices-determinants
4. [www. Intmath.com/calculus/calculus-intro.php](http://www.Intmath.com/calculus/calculus-intro.php)

OBJECTIVES:

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure
- Study, analyze and understand logical structure of a computer program, and
- Different construct to develop a program in “C” language
- To decompose a problem into functions and synthesize a complete program using divide and conquer approach.

INTENDED OUTCOME

The student will learn

- To formulate simple algorithms for arithmetic and logical problems.
- To translate the algorithms to programs (in C language).
- To test and execute the programs and correct syntax and logical errors.
- To implement conditional branching, iteration and recursion.
- To use arrays, pointers and structures to formulate algorithms and programs.
- To apply programming to solve matrix addition and multiplication problems and searching and sorting problems.
- To apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration

UNIT I INTRODUCTION TO PROGRAMMING

Introduction to components of a computer system disks, memory, processor, where a program is stored and executed, operating system, compilers- Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples. From algorithms to programs; source code, variables with data types variables and memory locations, Syntax and Logical Errors in compilation, object and executable code.

UNIT II ARITHMETIC EXPRESSIONS, PRECEDENCE, CONDITIONAL BRANCHING AND LOOPS

Arithmetic expressions and precedence-Conditional Branching - Loops-Writing and evaluation of conditionals and consequent branching-Iteration and loops.

UNIT III ARRAY AND BASIC ALGORITHMS

Arrays-Arrays 1-D, 2-D, Character arrays and Strings, Searching, Basic Sorting Algorithms- Bubble, Insertion and Selection sorting, Finding roots of equations, notion of order of complexity through example programs (no formal definition required).

UNIT IV FUNCTION AND RECURSION

Functions including using built in libraries-Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference, **Recursion:** Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function. Quick sort or Merge sort.

UNIT V STRUCTURE, POINTERS AND FILE HANDLING

Structures, Defining structures and Array of Structures, **Pointers:** Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling.

COURSE OBJECTIVES:

The Goal of this course is for students to

- To understand the properties of matter and its applications.
- To study the basics of sound and ultrasonics with appropriate applications.
- To study the fundamentals of thermal and quantum physics and their applications.
- To introduce the concepts of light, laser and fiber optics for diverse applications.
- To comprehend the properties of crystal and its various crystal structures.
- To analyse the relevant problems in engineering stream.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

- Develop knowledge on the basics of properties of matter and its applications.
- Make use of the concepts of sound, ultrasonic and their applications.
- Illustrate the thermal properties of materials and advanced physics concepts of quantum theory
- Identify the basics of light, laser, fiber optics and their applications.
- Develop the basics of crystals and their structures.
- Make use of the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), Poisson's ratio- Torsional pendulum- bending of beams - bending moment – uniform and non uniform bending

Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNIT III QUANTUM PHYSICS (9)

Introduction to quantum theory – Black body radiation - dual nature of matter and radiation – de Broglie wavelength, uncertainty principle –Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electron microscope

UNIT IV CRYSTAL PHYSICS**(9)**

Lattice – unit cell – Bravais lattice – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures, crystal defects – point, line and surface defects

UNIT V ULTRASONICS AND NUCLEAR PHYSICS**(9)**

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A, B and C – scan displays, Medical applications – Sonogram. Introduction – basics about nuclear fission and fusion, Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

3. www.oyc.yale.edu
4. www.physics.org

COURSE OBJECTIVES:

The goal of this course is for students :

- To understand the terminologies of atomic and molecular structure
- To study the basics of Periodic properties, Intermolecular forces
- To study about spectroscopic technique
- To understand the thermodynamic functions
- To understand the concept of chemical reactions
- To comprehend the basic organic chemistry and to synthesis simple drug

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
- Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
- Rationalise bulk properties and processes using thermodynamic considerations.
- List major chemical reactions that are used in the synthesis of molecules.
- Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I WATER TECHNOLOGY

(9)

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination (No problems) – Hardness – Types and estimation by EDTA method (No problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation, UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES

(9)

Electrolytic conductance-application (conductometric titration)- Electrochemical cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes – Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) —Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery. An introduction to Fuel Cell- $\text{H}_2\text{-O}_2$ Fuel Cell.

UNIT III FUELS AND COMBUSTION

(9)

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV- Problems on Calculation of GCV & NCV - Flue gas analysis.

UNIT IV CORROSION SCIENCE**(9)**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions – Inorganic coatings- Metallic coatings - Electroplating of Cu over Fe and Electro less plating (Ni) - Surface conversion coating - Hot dipping.- Anodizing of Al

UNIT V SURFACE CHEMISTRY AND PHASE RULE**(9)**

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm-Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams – one component water system, two component Ag-Pb system.

COURSE OBJECTIVES:

- To give exposure on the basics of Biomedical engineering to the students.
- To have a basic knowledge on medical devices and equipment
- To understand the evolution of modern health care system
- To induce medical Morality and Ethics in the students
- To understand the various diagnostic methods and therapeutic systems available
- To get to know the various biomedical signals and other parameters associated with the Human body

COURSE OUTCOMES:

At the end of the course he student will be able to:

- Understand the basics of Bioinstrumentation
- Exposed to the ethics for Biomedical engineers
- Analyze models of physiological system.
- Handle biomedical equipments
- Know the various physiological systems of human body and the associated biopotentials
- Understand the codes of ethics for engineers

UNIT-I INTRODUCTION (9)

Historical Perspective-Evolution of modern health care system, Roles played by Biomedical engineers, Professional status of biomedical engineering, Electrical Signals – Conductivity & temperature.

UNIT-II DIAGNOSTIC DEVICES (9)

Sources of biomedical signals, Basic medical instrumentation system-General block diagram of a medical instrumentation system, Diagnostic devices-ECG, EEG, blood pressure measurement, Temperature and Respiration rate measurement, Blood cell counters, General constraints in design of medical instrumentation systems.

UNIT-III DIAGNOSTIC IMAGING (9)

X-rays, Nuclear Medical Imaging-Positron Emission Tomography, Magnetic Resonance Imaging Scanners, Diagnostic Ultrasound, Thermal imaging systems.

UNIT-IV THERAPEUTIC EQUIPMENT (9)

Cardiac Pacemakers, Cardiac Defibrillators, Artificial heart, Instruments for Surgery, Haemodialysis Machines-Artificial Kidney, Dialyzers, Ventilators-Humidifiers, Nebulizers and Aspirators, Anaesthesia Machine.

UNIT-V ETHICS FOR BIOMEDICAL ENGINEERS (9)

Morality and Ethics-A Definition of terms, Human Experimentation, Ethical issues in feasibility studies, Ethical issues in emergency use, Ethical issues in treatment use, Codes of ethics for bio engineers.

Total: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Enderle, John D., Bronzino, Joseph D., Blanchard, Susan M	Introduction to Biomedical Engineering	Elsevier Inc	2 nd edition, 2005
2.	R. S. Khandpur	Handbook of Biomedical Instrumentation	McGraw-Hill Publishing Company Limited	2 nd edition, 2003
3.	Daniel A Vallero	Biomedical ethics for Engineers	Elsevier publication	1 st edition, 2007

REFERENCE BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Leslie Cromwell, Fred J. Weibell, Erich A. Pfeiffer	Biomedical Instrumentation and Measurement	Prentice Hall of India, New Delhi	2 nd edition 2002
2.	John G Webster	Medical Instrumentation: Application and Design	John Wiley and sons, New York	4 th edition, 2010
3.	Joseph J Carr, John M Brown	Introduction to Biomedical Equipment Technology	John Wiley & Sons, New York	4 th edition, 2008

COURSE OBJECTIVES

- To impart the basic knowledge about the Electric circuits.
- To understand the working of various Electrical Machines.
- To know about various measuring instruments.
- To understand the basic concepts in semiconductor devices and digital electronics.
- To explain the working principle, construction, applications of DC machines, AC machines & measuring instruments.
- Highlight the importance of transformers in transmission and distribution of electric power

COURSE OUTCOMES

At the end of the course the student will be able to

- The students shall develop an intuitive understanding of the circuit analysis, basic concepts of electrical machines, basics of electronics and be able to apply them in practical situation
- Predict the behavior of any electrical and magnetic circuits.
- Formulate and solve complex AC, Dc circuits.
- Identify the type of electrical machine used for that particular application
- Understand the role of electronic components in biomedical field
- Know the various electric and electronic components

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS**9**

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES**9**

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS**9**

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS**9**

Characteristics of PN Junction Diode – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V- DIGITAL ELECTRONICS**9**

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems- simplification of Boolean expression - implementation of Boolean expressions using logic gates

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mittle, V.M	Basic Electrical Engineering	Tata McGraw Hill Edition, New Delhi	2004
2	Sedha R.S	Applied Electronics	S. Chand & Co	2006

REFERENCES

S. No	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Muthusubramanian R, and Muraleedharan K A	Basic Electrical, Electronics and Computer Engineering	Tata McGraw Hill, Second Edition	2006
2	Nagsarkar T K and Subbiah M S	Basics of Electrical Engineering	Oxford press	2005
3	Mahmood Nahvi and Joseph A	Electric Circuits	Schaum' Outline Series, McGraw Hill	2002
4	Premkumar N	Basic Electrical Engineering	Anuradha Publishers	2003

Course Objective:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To analyse the relevant problems in engineering stream.

Course Outcomes:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending (or) Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Wheatstone Bridge

COURSE OBJECTIVES

The goal of this course is for students :

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of sodium carbonate and sodium hydrogen carbonate, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To understand the use of Spectrophotometry.
- To acquaint the students with the determination of rate constant of a reaction
- To carried out different types of titrations for estimation of concerned in materials

COURSE OUTCOMES

Upon completion of the course the students will be able to

- The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering. The students will learn to:
- Estimate rate constants of reactions from concentration of reactants/products as a function of time
- Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc
- Determine the partition coefficient of a substance between two immiscible liquids.
- Acquaint the students with the determination of acid value of an oil
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results

LIST OF EXPERIMENTS – CHEMISTRY

1. Estimation of alkalinity of Water sample.
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using BaCl_2 vs Na_2SO_4 .
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
10. Estimation of Ferric ion by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

COURSE OBJECTIVES

- To familiarize with open source office packages
- To write programs for Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings and Functions.
- To discuss the fundamental principles of C Programming, as well as in-depth data and information processing techniques
- To solve problems, explore real-world software development challenges, and create practical and contemporary applications
- To learn about data structures
- To apply the string handling functions to solve the given problem

COURSE OUTCOMES

- Study logical structure of a computer program
- analyze logical structure of a computer program
- understand computer program, and different constructor to develop a program in 'C' language
- Utilize the basic data structures.
- Distinguish and use the fundamental data types.
- Utilize a simple programming environment, compile programs and interpret compiler errors.

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings- Pointers.

PRACTICALS:

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:

Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. C Programming:

Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

1	E. Balagurusamy	Computing Fundamentals and C	TMH Education, 5th Edition	2014
2	Yashavant Kanetkar	Let us “C”	BPB Publications, 13 th Edition	2013

COURSE OBJECTIVES

The Goal of this course is for students to

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.
- Apply auxiliary or sectional views to most practically represent engineered parts
- To understand Dimension and annotate two-dimensional engineering drawings
- Understand the application of industry standards and techniques applied in Engineering graphics
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice

COURSE OUTCOMES:

On Completion of the course the student will be able to

- perform free hand sketching of basic geometrical constructions and multiple views of objects.
- do orthographic projection of lines and plane surfaces.
- draw projections and solids and development of surfaces.
- prepare isometric and perspective sections of simple solids.
- demonstrate computer aided drafting.
- Use various graphic tools

UNIT I INTRODUCTION**9**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES**8**

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING**9**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES**8**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS**8**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam)**3**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

OBJECTIVE:

- To enable the **student** to have good health.
- To practice mental hygiene.
- To possess emotional stability.
- To integrate moral values.
- To attain higher level of consciousness.
- To Develop The Self Discipline, and Self Control

OUTCOME:

- Gain the knowledge about the theory and practice of Yoga and its nature
- Gain knowledge about Definition of psychology, Methods of psychological sciences
- Demonstrate Kriyas, Asanas, Mudras, Pranayama and meditative postures.
- To aware of Yoga Psychology and Definition & characteristics of Personality
- understand the knowledge of Advance Asanas
- To aware of Scope and substance of Indian Psychology, Cognitive process like Sensation, Perception, Attention, Memory and Thinking

UNIT- I

Introduction To Yoga- Meaning Of Yoga – Concept Of Yoga- Aim And Objectives Of Yoga –History Of Yoga - Systems Of Yoga.- Stages (Or) Limbs Of Yoga

UNIT- II

Asanas-Surya Namashkar- Thadasana- Veerabadhra Asana- Trikonasana- Utkatasana- ArdhaChakrasana- Ardha Kati Chakrasana- Thandasana- Gomugasana- Padmasana- Vajrasana- Paschimottasana- Matsyendrasana-BavanaMukthasana- SuptaPadhangusthasana-Sethubhandhasana- Navasana- ArdhaBavanamukthasana- Mathasyasana- Naukasana- Bujangasana- Salabasana- Makkarasana- Dhanurasana.

UNIT- III

Advance Asanas- Sirasasana- Garudasana- Natrajasana- Rajakoptasana- Chakrasana- Kukutasana- Virikshasana- Sarvagasana- Halasana-. Mayurasana .

UNIT- IV

Pranayama- Meaning- Types Of Pranayama- Bhastrika- Bhramari- Udgeeth- Kabalbhati- Bahya- AnulomVilom- Pranay Pranayama- Benefits Of Pranayama. Neti - JalaNeti , Sutra Neti, Nouli-Three Types, Douthy-Three Types

UNIT- V

Mudras- Uses Of Mudras- Gyan- Shoonya- Apaana- Prana- Vayu- Prithvi- Linga- Apana- Adi Mudra- - Agni Mudra- Surya Mudra- Varuna- Hakini Mudra.

REFERENCES:

S.No	Author Name	Title Of Book	Publisher	Yearof Publication
1.	Dr.K.Chandrasekaran	Sound Health Through Yoga	PremKalyan	2009
2.	B.K.S.Iyengar	Light On Pranayama	Crossroad Centuary	2013
3.	Thirumular	Thirumandhiram	Sriramakrishna Math	2016

OBJECTIVES:

- To help students comprehend the role of listening skills in effective communication.
- To familiarize students with verbal and non-verbal communication.
- To expose students to neutral accent.
- To develop emotional intelligence skills in them for enhancing their self-esteem.
- To assist them in setting goals and developing positive attitude.
- To enable students to acquire decision making skills, problem solving skills and assertive skills.

INTENDED OUTCOMES:

Students undergoing this course will be able to

- Design and deliver a persuasive presentation that convinces the audience of the topic's relevance and overcomes resistance, using appropriate visual support and adhering to a specified time limit.
- Use a strategic communication model and critical thinking to identify objectives, analyze audiences, and choose the most effective structure and style for delivering strategically sound written and spoken messages.
- Practice principles of effective business writing and document design in all written documents.
- Build an understanding of different organizational cultures, business practices, and social norms to communicate more effectively in domestic and cross-cultural business contexts.
- Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
- Make decisions and solve problems by their own

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone

Etiquette- Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body language – Etiquette- Organization of presentation – brain storming- Negotiations.

UNIT - IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNIT - V

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

COURSE OBJECTIVES:

- To motivate learners to acquire listening & speaking skills in both formal and informal context.
- To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading.
- To equip them to write for academic as well as work place context.
- To enable students to face interviews.
- Understand the English grammar and develop communication skills

COURSE OUTCOMES:

Students undergoing this course will be able to

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance their reading texts critically and analytically.
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.
- Speak English confidently and write technical papers
- Read technical papers and review them

UNIT-1 LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)**

Listening - Difference between Hearing & Listening –Listening to informal conversation. Speaking - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., Reading – Extensive and Intensive reading. Writing – Report writing - Writing a covering letter.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Regular & Irregular verbs - Kinds of sentences - Question tags. Homonyms and Homophones.

UNIT-II LSRW SKILLS & GRAMMAR**Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)**

Listening – Note Taking- Improving grasping ability. Speaking – Welcome address - Vote of thanks - Master of ceremony. Reading – Active and Passive reading - Reading for vocabulary- Reading for a purpose. Writing - Writing a review (Film review) - Summary of a story. Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Modal verbs – Conjunction - Expression of cause and effect. Phrasal verbs - Idioms.

UNIT – III LSRW SKILLS & GRAMMAR

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R) **Writing** - Essay writing - Minutes of meeting - Agenda

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Active and Passive voice - Purpose expression. Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV LSRW SKILLS & GRAMMAR, CAREER ORIENTED

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Checklist preparation.

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Grammar - Numerical expressions – Collocations. Singular and Plural (Nouns)

UNIT- V LSRW SKILLS & GRAMMAR, FIELD WORK

Receptive Skills (Listening, Reading and Scanning) & Productive Skills (Writing, Speaking and Representing) (9)

Listening – Types of listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing-

Grammar & Vocabulary (Function Grammar & Technical Vocabulary)

Transformation of sentences (Simple, Compound & Complex). Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

COURSE OBJECTIVES:**The goal of this course is for students :**

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To acquaint the student with the concepts of vector calculus needed for problems in all engineering disciplines.
- To enable the students to apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their study as a functions of a complex variables.
- Develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence.
- To specify some difficult integration that appear in applications can be solved by complex integration in application areas such as fluid dynamics and flow of the electric current.
- To make the student understand the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.

COURSE OUTCOMES:**The student will be able to**

- To apply the Eigen values and eigenvectors, diagonalization of a matrix, nature and they will also be able to use matrix algebra techniques for practical applications.
- To find grad, div and curl in Cartesian and other simple coordinate systems, and establish identities connecting these quantities, to evaluate line, surface and volume integrals in simple coordinate systems and to use Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
- To find the Analytic functions using the Cauchy Riemann equations and they will learn mapping properties of elementary functions and mapping properties of some special transcendental functions. They will understand relations between conformal mappings and quadratic differentials and how geometric structures are changing under conformal mappings.
- To evaluate complex integrals using the Cauchy's integral formula and the Residue theorem and to appreciate how complex methods can be used to prove some important theoretical results.
- To apply Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.
- In applying the concept of Matrices , Vector calculus, Analytic functions, Complex integration and Laplace transforms in their respective fields.

UNIT I INTEGRAL CALCULUS**(12)**

Definite and indefinite integrals – Techniques of integration – Substitution rule, Trigonometric integrals, Integration by parts , Integration of rational functions by partial fraction, Integration of irrational functions – Improper Integrals.

UNIT II MULTIPLE INTEGRALS**(12)**

Double integral – Cartesian coordinates – Polar coordinates – Area as double integrals- Change the order of integration – Triple integration in Cartesian co-ordinates.

UNIT III VECTOR INTEGRATION (12)

Integration of vectors – line integral- surface integral- volume integral- Green's theorem - Gauss divergence theorem and Stoke's theorems (Statement Only), hemisphere and rectangular parallelopipeds problems.

UNIT IV ANALYTIC FUNCTIONS (12)

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: $w = z+a$, az , $1/z$ and bilinear transformation.

UNIT V COMPLEX INTEGRATION (12)

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi-circle (excluding poles on the real axis).

COURSE OBJECTIVES:

The goal of this course is for students :

- To give a comprehensive insight into natural resources.
- To impart knowledge on ecosystem and biodiversity.
- To educate the ways and means of the environment.
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
- Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
- Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES**(9)**

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM**(9)**

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY

(9)

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION

(9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT

(9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change-Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

COURSE OBJECTIVE:

The goal of this course is for students

- To enrich the understanding of various types of materials and their applications in engineering and technology
- To review physics and chemistry in the context of materials science & engineering.
- To describe the different types of bonding in solids, and the physical ramifications of these differences.
- Give an introduction to metals, ceramics, polymers, and electronic materials in the context of a molecular level understanding of bonding.
- Give an introduction to the relation between processing, structure, and physical properties.
- Give the beginning student an appreciation of recent developments in materials science & engineering within the framework of this class.

COURSE OUTCOME:

Upon completion of this course, students will be able to:

- The students will have the knowledge on different types of materials and that knowledge will be used by them in different engineering and technology applications
- Given a type of material, be able to qualitatively describe the bonding scheme and its general physical properties, as well as possible applications.
- Given a type of bond, be able to describe its physical origin, as well as strength.
- Be able to qualitatively derive a material's Young's modulus from a potential energy curve.
- Given the structure of a metal, be able to describe resultant elastic properties in terms of its 1D and 2D defects.
- Given a simple set of diffraction data, be able to index the peaks and infer the structure. Be able to describe a polymer's elastic behavior above and below the glass transition.

UNIT I CONDUCTING MATERIALS**(9)**

Conductors – classical free electron theory of metals – Electrical and thermal conductivity – Wiedemann – Franz law – Lorentz number – Draw backs of classical theory – Quantum theory – Fermi distribution function – Effect of temperature on Fermi Function – Density of energy states – carrier concentration in metals.

UNIT II SEMICONDUCTING MATERIALS**(9)**

Intrinsic semiconductor – carrier concentration derivation – Fermi level – Variation of Fermi level with temperature – electrical conductivity – band gap determination – extrinsic semiconductors – carrier concentration derivation in n-type semiconductor – variation of Fermi level with temperature and impurity concentration – compound semiconductors – Hall effect – Determination of Hall coefficient – Applications.

UNIT III MAGNETIC AND SUPERCONDUCTING MATERIALS**(9)**

Origin of magnetic moment – Dia and para magnetism – Ferro magnetism – Domain theory – Hysteresis – soft and hard magnetic materials – anti – ferromagnetic materials – Ferrites – applications.

Superconductivity: properties - Types of super conductors – BCS theory of superconductivity(Qualitative) - High Temperature superconductors – Applications of superconductors – Magnetic levitation.

UNIT IV DIELECTRIC MATERIALS

(9)

Electrical susceptibility – dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – internal field – Clausius – Mosotti relation (derivation) – dielectric loss – dielectric breakdown – Applications of dielectric materials – ferroelectricity and applications.

UNIT V ADVANCED MATERIALS AND CHARACTERIZATION TECHNIQUES

(9)

Nano materials: synthesis – Physical and chemical vapour deposition – ball milling - properties of nanoparticles and applications. Carbon nanotubes: structure – properties and applications.

Spectroscopy: Basic concepts, Theory and Experimental techniques – Raman Spectroscopy, Nuclear Magnetic Resonance Spectroscopy (NMR).

COURSE OBJECTIVES:

The goal of this course is for students

- To provide exposure to the students with hands on experience on various basic engineering practices in civil, mechanical, electrical and electronics engineering.
- To understand carpentry works
- To understand Plumbing works
- To understand smithy and foundry works
- To classify various tools used in carpentry ,plumbing and foundry works
- To understand basic concept of machining

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Ability to fabricate carpentry components and pipe connections including plumbing works.
- Ability to use welding equipments to join the structures.
- Demonstrate carpentry works
- Demonstrate Plumbing works
- Demonstrate smithy and foundry works
- Ability to fabricate electrical and electronics circuits

PART – A (MECHANICAL)**1. WELDING**

- i. Preparation of arc welding of butt joints, lap joints and tee joints.

2. BASIC MACHINING

- i. Simple Turning and Taper turning
- ii. Drilling and Tapping
- iii. Sheet Metal Work
- iv. Model making – Trays, funnels, etc.

3. DEMONSTRATION ON

- i. Smithy operations
- ii. Foundry operations
- iii. Plumbing Works
- iv. Carpentry Works

PART –B (ELECTRICAL & ELECTRONICS)**4. ELECTRICAL ENGINEERING**

- i. Study of electrical symbols and electrical equipments.
- ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring.
- iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
- iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
- v. Measurement of energy using single phase energy meter.

5. ELECTRONICS ENGINEERING

- i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
- ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
- iii. Study of logic gates AND, OR, NOT, NOR and NAND.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Jeyachandran, K. and Balasubramanian, S	A Premier on Engineering Practices Laboratory	Anuradha Publications, Kumbakonam	2007
2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices Lab Manual	Vikas Pupliching House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

COURSE OBJECTIVES:

- To provide an awareness to Computing and C Programming
- To know the correct and efficient ways of solving problems
- To learn to develop algorithm for simple problem solving
- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure

LEARNING OUTCOMES:

- Able to understand the basic terminology used in computer programming
- Able to write, compile and debug programs in C language.
- Able to use different data types in a computer program.
- Able to design programs involving decision structures, loops and functions.
- Able to understand the dynamics of memory by the use of pointers
- Understand the concept of function and operator
- Develop programming skill and to solve engineering related problems.

List of Experiments

1. Write a C program to find Factorial of a given number using do while loop.
2. Write a C Program to print Fibonacci series using while loop.
3. Write a C Program to check a given number is Prime or Not.
4. Write a C Program to compute the sum of even numbers for a given n value.
5. Write a C Program to check the given string is Palindrome or Not.
6. Write a C Program to check the given number is Armstrong or Not using functions.
7. Write a C Program to count the number of vowels from the given string using switch case.
8. Write a C Program to read a line of text from keyboard and print the number of characters, words and spaces.
9. Write a C Program to print the student's record using structure.
10. Write a C Program to find factorial of a number using recursion function.

BUSINESS PLAN

COURSE OBJECTIVE:

The goal of this course is for students

- To describe the content and delivery of a business planning course.
- To examine the perceived effectiveness of the business planning course relating to entrepreneurial skills gained by students
- To examine the usefulness of business plans as a pedagogical tool in imparting knowledge and skills to identify and integrate key business functional areas.
- To explain relevance of Ethics while taking business decisions.
- To understand the risk assessments and business plan process
- To learn about the various market research

SOURCE OUTCOMES:

After this course the student will be able to:

- Think about self business
- Know the various risk factors in business
- Read various business articles and know the market research
- Get familiar with various Government policies
- Various factors of successful business
- Have a good knowledge about various markets

UNIT I

Entrepreneurship – Types- Entrepreneurial Competencies -Business Plan – Meaning - Basic parameters - Project parameters - Factors of successful business - Term Loans and Working Capital Management.

UNIT II

Business Plan Process - Sources of Information – Online Resources - Offline Resources - Sources of Market Research - Benefits of market study - Coverage of market study.

UNIT III

Business Plan components - Company description - Industry Analysis - Target Market - Competition - Strategic position - Risk assessment - Technology plan - Management and Organization – Government policy

COURSE OBJECTIVES:

The goal of this course is for students :

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP, Transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis
- To teach the students the basic concepts PERT & CPM
- To teach the students the basic concepts of Hungarian Algorithm
- To make students understand the concept of Branch Bound Method

COURSE OUTCOMES:

Upon completion of this course, the student will be able to

- Be able to solve problems in different environments and develop critical thinking
- Be able to build and solve Transportation Models
- Be able to analyse Assignment Models,
- Be able to solve integer programming and Nonlinear programming
- Be able to understand Hungarian Algorithm
- Analyse and apply branch bound method in engineering problems

UNIT I LINEAR PROGRAMMING PROBLEM (12)

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method.

UNIT II TRANSPORTATION AND ASSIGNMENT PROBLEM (12)

Transportation Model- finding initial basic feasible solutions- moving towards optimality- Degeneracy. Solution of an Assignment problem - Hungarian Algorithm.

UNIT III INTEGER PROGRAMMING (11)

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT IV NETWORK ANALYSIS (11)

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

UNIT V CALCULUS OF VARIATIONS (14)

Calculus of Variations - Basic definition, Simplest problem, Isoperimetric problem, Problems with Higher order derivatives, Euler Lagrange Equation, Weierstrass - Erdmann conditions; Pontryagin Maximum Principle; Transversality condition; Applications

18BEBME301B LINEAR ALGEBRA AND PARTIAL DIFFERENTIAL EQUATIONS 3 1 0 4 100

OBJECTIVES:

- To introduce the basic notions of groups, rings, fields which will then be used to solve related problems.
- To understand the concepts of vector space, linear transformations and diagonalization.
- To apply the concept of inner product spaces in orthogonalization.
- To understand the procedure to solve partial differential equations.
- To give an integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject.

INTENDED OUTCOMES:

- Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- Demonstrate accurate and efficient use of advanced algebraic techniques.
- Demonstrate their mastery by solving non - trivial problems related to the concepts and by proving simple theorems about the statements proven by the text.
- Able to solve various types of partial differential equations.
- Able to solve engineering problems using Fourier series.
- Able to apply the fundamental concepts in their respective engineering fields

UNIT I VECTOR SPACES

Vector spaces – Subspaces – Linear combinations and linear system of equations – Linear independence and linear dependence – Bases and dimensions.

UNIT II LINEAR TRANSFORMATION AND DIAGONALIZATION

Linear transformation - Null spaces and ranges - Dimension theorem - Matrix representation of linear transformations - Eigen values and eigenvectors - Diagonalizability.

UNIT III INNER PRODUCT SPACES

Inner product, norms - Gram Schmidt orthogonalization process - Adjoint of linear operations - Least square approximation.

UNIT IV PARTIAL DIFFERENTIAL EQUATIONS

Formation – Solutions of first order equations – Standard types and equations reducible to standard types – Singular solutions – Lagrange's linear equation – Integral surface passing through a given curve – Classification of partial differential equations - Solution of linear equations of higher order with constant coefficients – Linear non-homogeneous partial differential equations.

UNIT V FOURIER SERIES SOLUTIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Dirichlet's conditions – General Fourier series – Half range sine and cosine series - Method of separation of variables – Solutions of one dimensional wave equation and one-dimensional heat equation – Steady state solution of two-dimensional heat equation – Fourier series solutions in Cartesian coordinates.

COURSE OBJECTIVES

The goal of this course is for students

- To introduce basic postulates of Boolean algebra and shows the correlation between Boolean expressions
- To introduce the methods for simplifying Boolean expressions
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits
- To introduce the concept of memories and programmable logic devices.
- To illustrate the concept of synchronous and asynchronous sequential circuits
- To summarize the concept of memories and programmable logic devices.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Understand number systems and codes
- Understand basic postulates of Boolean algebra and shows the correlation between Boolean expressions
- Understand the methods for simplifying Boolean expressions
- Understand the formal procedures for the analysis and design of combinational circuits and sequential circuits
- Understand the concept of memories and programmable logic devices.
- Interpret the concept of synchronous and asynchronous sequential circuits

UNIT-I NUMBER SYSTEMS AND BOOLEAN ALGEBRA (12)

Binary, Octal, Decimal, Hexadecimal-Number base conversions – complements – signed Binary numbers. Binary Arithmetic- Binary codes: Weighted –BCD-Gray code-Excess 3 code-ASCII – Error detecting code – conversion from one code to another-Boolean postulates and laws –De-Morgan's Theorem- Principle of Duality- Boolean expression – Boolean function- Minimization of Boolean expressions – Sum of Products (SOP) –Product of Sums (POS)-Minterm- Maxterm- Canonical forms – Conversion between canonical forms –Karnaugh map Minimization – Don't care conditions.

UNIT-II LOGIC GATES AND COMBINATIONAL CIRCUITS (12)

LOGIC GATES: AND, OR, NOT, NAND, NOR, Exclusive – OR and Exclusive – NOR- Implementations of Logic Functions using gates, NAND –NOR implementations –Multi level gate implementations.

COMBINATIONAL CIRCUITS: Design procedure – Adders-Subtractors – Serial adder/Subtractor - Parallel adder/ Subtractor- Carry look ahead adder- BCD adder- Magnitude Comparator- Multiplexer/ Demultiplexer- encoder / decoder – parity checker. Implementation of combinational logic using MUX.

UNIT-III SEQUENTIAL CIRCUIT (12)

Flip flops SR, JK, T, D and Master slave – Characteristic table and equation– Edge triggering – Level Triggering –Realization of one flip flop using other flip flops –Asynchronous– Synchronous counters –Classification of sequential circuits – Moore and Mealy –Design of Synchronous counters: state diagram- State table –State minimization –State assignment- Register – shift registers- Universal shift register

UNIT-IV ASYNCHRONOUS SEQUENTIAL CIRCUITS (12)

Design of fundamental mode and pulse mode circuits – primitive state / flow table – Minimization of primitive state table –state assignment – Excitation table – Excitation map- cycles – Races –Hazards: Static –Dynamic –Essential –Hazards elimination.

UNIT-V MEMORY DEVICES (12)

Classification of memories –RAM organization– Static RAM Cell-Bipolar RAM cell – MOSFET RAM cell –Dynamic RAM cell –ROM organization - PROM –EPROM –EEPROM –Programmable Logic Devices – Programmable Logic Array (PLA)- Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA).

COURSE OBJECTIVE

The goal of this course is for students

- To develop programming skill and to solve engineering related problems using C++, Object Oriented Programming (OOP) and Data Structure Concepts.
- Describe the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects.
- Demonstrate the use of various OOPs concepts with the help of programs
- Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming.
- Describe the concept of function overloading, operator overloading, virtual functions and polymorphism.
- Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming.

COURSE OUTCOME

After the successful completion of the course the student will be able to :

- Design correct programs to solve problems.
- Choose efficient data structures and apply them to solve problems.
- Analyze the efficiency of programs based on time complexity.
- Prove the correctness of a program using loop invariants, pre-conditions and post-conditions in programs.
- Understand the concept of function overloading, operator overloading, virtual functions and polymorphism
- Develop programming skill and to solve engineering related problems using C++, Object Oriented Programming (OOP) and Data Structure Concepts

UNIT – I INTRODUCTION TO DATA STRUCTURES

Abstract data types – Arrays – Static, Dynamic and Generic arrays. Strings – Fixed and variable size – static and dynamic strings.

UNIT – II LINKED LISTS

Dynamic storage management – singly and doubly linked list – Stack – Application of stack – Fixed, variable and Generic stack – queues – queue based on Dynamic linked list – Trees – Binary Trees – Graphs – Warshall's Algorithms – Shortest paths.

UNIT – III OBJECTS ORIENTED PROGRAMMING

Objects and classes – methods, messages, encapsulation, abstraction, inheritance, polymorphism, dynamic building. Traditional approach Versus object orientation; benefits of object orientation – flexibility in software development – reusability – extensibility – maintainability.

UNIT – IV OBJECTS AND CLASSES

Specifying classes – using – C++ objects and data types – constructors and destructors – object as function arguments – structures and classes. Array fundamentals – array as class member data – array of objects. Structures – simple structure – accessing structure member – structure within structure – structure and classes – Function overloading – Inline function – Virtual function and polymorphism.

UNIT – V OPERATOR OVERLOADING

Overloading unary operator – overloading binary operator – data conversion. Inheritance – derived class and base class – derived class constructors – public and private inheritance – level of inheritance. C++ graphics – text – mode graphics functions – graphics – mode graphics functions – colors – rectangles and lines – polygons and inheritance – text in graphics mode – Addresses and pointers, Simple file operations: streams – string I/O – character I/O.

The goal of this course is for students :

- To understand the operational characteristics of a Semiconductor in Equilibrium and Non-Equilibrium conditions.
- To understand the working of PN junction diodes and special purpose diodes.
- To understand the basic working physics of BJT and FET both in ideal and non-ideal conditions.
- To understand the working of Rectifiers and Voltage regulators.
- To understand the fabrication process of Monolithic ICs
- To improve knowledge about the working of Rectifiers and Voltage regulators.

Upon completion of this course, the student will be able to:

- Understand the fundamental concepts
- Logically analyze any electronic circuit
- Apply the logic in any application
- Understand the specifications of regulators and power supply circuits.
- Apply positive feedback principle and design oscillators.
- Design multivibrator circuits.

Semiconductors: Intrinsic semiconductor – extrinsic semiconductor – Fermi level in an intrinsic semiconductor – intrinsic semiconductor and extrinsic semiconductor. Semiconductor diodes : Formation of PN junction – working principle – VI characteristics – PN diode currents – diode current equation – diode resistance – transition and diffusion capacitance. Special purpose diodes : Zener diode, schottky diode

Bipolar Transistors: Construction – working – transistor currents –transistor configurations and input-output characteristics – Early effect (base width modulation) – transistor as an amplifier Transistor as a switch.

Field-Effect Transistors: construction, working and VI characteristics of JFET – comparison of BJT and JFET – MOSFET – enhancement MOSFET, depletion MOSFET - working principle and VI characteristics, comparison of MOSFET with JFET.

UNIT IV DC POWER SUPPLIES**(9)**

Rectifiers and Filters: Block schematic of a typical DC power supply, single phase HWR, FWR, full-wave bridge rectifier, power supply filters (ripple factor and efficiency analysis), Voltage regulators: voltage regulation, Zener diode shunt regulator, transistor series regulator, transistor shunt regulator, switching regulators.

UNIT V OSCILLATORS AND MULTIVIBRATORS**(9)**

RC phase shift oscillator, Wein-bridge oscillator, Hartley oscillator, Colpitts oscillator, types of multivibrators, Astable, monostable and bistable multivibrators.

COURSE OBJECTIVES

The goal of this course is for students

- To study about the biochemistry of living cells, metabolism of biomolecules and the methods of investigation and diagnostic tools.
- To summarize the role of these biomolecules by providing basic information on specific metabolic diseases and disorders of these biomolecules.
- To analyse the structural and functional properties of carbohydrates, proteins and lipids
- To discuss about functions of each organelles and Transport of substances across biological membranes
- To infer about the biochemistry of living cells
- Demonstrate the concepts of biochemistry of living cells

COURSE OUTCOMES

Upon completion of this course, students will be able to:

- Demonstrate the concepts of biochemistry of living cells
- Understand the concepts of protein biochemistry
- Explain about functions of each organelles and Transport of substances across biological membranes
- Illustrate the structural and functional properties of carbohydrates, proteins and lipids
- Perceive the concepts of investigation of metabolism.
- Understand the structural and functional properties of various organelles and biomolecules

UNIT I BIOCHEMISTRY OF LIVING CELLS (9)

Biochemistry of living cells, sub cellular fractionation using the differential centrifugation method. Functions of each organelles, redox potential, oxidative phosphorylation, Transport of substances across biological membranes.

UNIT II CARBOHYDRATES (9)

Carbohydrates: Definition, classification, biological functions; glycolysis, TCA cycle, glycogenesis, glycogenolysis, Diabetes Mellitus – Blood Sugar analysis and glucose tolerance test.

UNIT III PROTEINS (9)

Proteins: Definition, classification, architecture, biological functions; Classification of amino acids, Oxidative and non oxidative deamination, transamination, decarboxylation, urea cycle, Purification of proteins.

UNIT IV LIPIDS (9)

Lipids: Definition, classification, biological functions; biosynthesis of long chain fatty acids, degradation of fatty acids - oxidation of fatty acids.

UNIT V METHODS OF INVESTIGATION OF METABOLISM (9)

Liver function tests, Real function tests, Gastric function tests. Diagnostic tools: Principles and applications of photometry, spectrophotometry, flurometry, flame photometry, automation in clinical laboratory. Uses of isotopes in biochemistry.

TEXT BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication

REFERENCE BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Lehninger.A .L., Nelson D.L., Cox .M.M.,	Principles of Biochemistry	CBS Publications	1993
2	Varley	Clinical Biochemistry	CBS Publications	1988

COURSE OBJECTIVE

The goal of this course is for students

- To provide the students a basic understanding of the structure and function of the human body.
- To perceive structure and functions of the various types of systems of human body.
- To outline about eye, ear and Endocrine glands of human
- To learn organs and structures involving in system formation and functions.
- To understand all systems in the human body.
- To infer basic understanding of the interconnection of various organ systems in human body

COURSE OUTCOMES

Upon completion of this course, students will be able to:

- Explain basic structure and functions of cells and its organelles
- Demonstrate about anatomy and physiology of various organ systems
- Illustrate eye, ear and Endocrine glands of human
- Explain the interconnect of various organ systems in human body
- Enlighten organs and structures involving in system formation and functions.
- Elucidate special senses in the human body.

UNIT I**CELL****(9)**

Structure of Cell – Organelles and description – Function of each component of the cell – Membrane potential – Action Potential – Generation and Conduction – Electrical Stimulation. Blood Cell – Composition – Origin of RBC – Blood Groups – Estimation of RBC, WBC and Platelet.

UNIT II**CARDIAC AND NERVOUS SYSTEM****(9)**

Heart, Major blood vessels – Cardiac Cycle – ECG – Blood Pressure – Feedback Control for Blood Pressure – Nervous Control of Heart - Cardiac output – Coronary and Peripheral Circulation – Structure and function of Nervous tissue – Neuron - Synapse - Reflexes -Receptors -Brain - Brainstem -Spinal cord – Reflex action – Velocity of Conduction of Nerve Impulses - Electro Encephalograph – Autonomic Nervous System.

UNIT III RESPIRATORY SYSTEM AND MUSCULO SKELETAL SYSTEM**(9)**

Physiological aspects of respiration – Trachea and lungs - Exchange of gases – Regulation of Respiration - Disturbance of respiration function - Pulmonary function test - Muscles - tissue - types - structure of skeletal muscle - types of muscle and joints.

UNIT IV**DIGESTIVE AND EXCRETORY SYSTEM****(9)**

Organisation of GI System, Digestion and absorption – Movements of GI tract – Intestine - Liver - Pancreas - Structure of Nephron – Mechanism of Urine formation – Urine Reflex – Skin and Sweat Gland – Temperature regulation.

UNIT V**EYE, EAR, ENDOCRINE GLANDS****(9)**

Optics of Eye – Retina – Photochemistry of Vision – Accommodation - Neurophysiology of vision – EOG. Physiology of internal ear – Mechanism of Hearing – Auditory Pathway, Hearing Tests - Endocrine glands.

Total : 45**TEXT BOOKS**

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Sarada Subramanyam, K.Madhavan Kutty and H.D.Singh	Text Book of 'Human Physiology	S.Chand & Company	1996
2	Ranganathan, T.S	Text Book of Human Anatomy	S.Chand &Co. Ltd., Delhi	1996

REFERENCE BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Tobin, C.E.,	Basic Human Anatomy	McGraw-Hill Publishing Co. Ltd.,	1997
2	J.Gibson	Modern Physiology and Anatomy for Nurses	Blackwell SC Publishing	1981
3	Arthur.C.Guyton	John E Hall – ,Textbook of Medical Physiology	W.B. Saunders Company	2000

OBJECTIVE:

The goal of this course is for students

- To estimate and quantify biomolecules.
- To divide amino acid molecules
- To evaluate and interpret of biochemical parameter
- To understand differential count of WBCs
- To understand the Ishihara chart
- To understand the auditory conduction

INTENDED OUTCOMES:

- Upon completion of this course, students will be able to:
- Solve the quantitative test of different biomolecules
- Label the separation technology of proteins and amino acids.
- Blood group identification
- Estimate of blood glucose
- Estimate of Hemoglobin
- Perceive the Biochemistry laboratory functional parameters

LIST OF EXPERIMENTS:

1. General tests for carbohydrates, proteins and lipids.
2. Preparation of serum and plasma from blood.
3. Estimation of blood glucose.
4. Estimation of serum cholesterol.
5. Estimation of creatinine in urine.
6. Separation of amino acids using thin layer chromatography.
7. Estimation of Hemoglobin
8. Differential count of different WBCs and Blood group identification
9. Ishihara chart for color blindness and Snellen's chart for myopia and hyperopia – by letters reading and ophthalmoscope to view retina.
10. Weber's and Rinnee's test for auditory conduction.

OBJECTIVE:

The goal of this course is for students

- To introduce basic postulates of Boolean algebra and shows the correlation between Boolean expressions
- To introduce the methods for simplifying Boolean expressions
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits
- To Learn about counters
- To Learn about Shift registers
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits

INTENDED OUTCOMES:

Upon completion of this course, students will be able to:

- Analyse different methods used for simplification of Boolean expressions.
- Design and implement Combinational circuits.
- Design and implement synchronous and asynchronous sequential circuits.
- Interpret the concept of synchronous and asynchronous sequential circuits
- Implement shift registers using Flip-flops.
- Apply the knowledge on digital circuits design

LIST OF EXPERIMENTS:

1. Study of logic gates.
2. Design and implementation of adders and Subtractors using logic gates.
3. Design and implementation of code converters using logic gates BCD to excess-3 code
4. Design and implementation of 4 bit binary Adder/Subtractor and BCD adder using IC 7483.
5. Design and implementation of 2 bit Magnitude Comparator using logic gate 8 bit Magnitude Comparator using IC 7485.
6. Design and implementation of 16 bit odd/even parity checker generator using IC74180.
7. Design and implementation of Multiplexer and Demultiplexer using logic gates and study of IC74150 and IC74154.
8. Design and implementation of encoder and Decoder using logic gates and study of IC 7445 and IC 74147.
9. Construction and verification of 4 bit ripple counter and Mod-10/ Mod- 13 Ripple counters.
10. Design and implementation of 3 bit Synchronous up/down counter.

11. Implementation of SISO, SIPO,PISO and PIPO shift registers
using Flip-flops.

18BEBME313

Course Oriented project-I

0 0 2 1

100

18BEBME351

SOFT SKILLS FOR BIOMEDICAL ENTREPRENEURS

1 0 0 - 100

Course Objectives :

- To encourage the all round development of students by focusing on soft skills.
- To make the engineering students aware of the importance, the role and the content of soft skills
- To give instruction, knowledge acquisition, demonstration and practice on soft skills
- To develop and nurture the soft skills of the students through individual and group activities.
- To expose students to right attitudinal and behavioural aspects
- To build the right attitudinal through activities

Course Outcomes:

On completion of the course, student will be able to

- Effectively communicate through verbal/oral communication and improve the listening skills
- Write precise briefs or reports and technical documents .
- Actively participate in group discussion / meetings / interviews and prepare & deliver presentations .
- Become more effective individual through goal/target setting, self motivation and practicing creative thinking.
- Function effectively in multi-disciplinary and heterogeneous teams
- Handle team work, Inter-personal relationships, conflict management and leadership quality.

People skills – social skills – communication skills – character traits – attitudes – career attributes – emotional intelligence coefficient – common sense – cognitive or emotional empathy– interpersonal skills – courtesy – flexibility – integrity – interpersonal skills – positive attitude – professionalism – responsibility – team work – work ethics.

TOTAL: 15

COURSE OBJECTIVES:

The goal of this course is for students

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

COURSE OUTCOMES:

Upon successful completion of the course, students will be able to:

- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- To apply the concept of testing of hypothesis for small and large samples in real life problems.
- To apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
- To have the notion of sampling distributions and statistical techniques used in engineering and management problems.
- To make the student acquire sound knowledge of techniques in quality control that model engineering problems.

UNIT- I PROBABILITY**(11)**

Probability – Definition – Law - conditional probability-Bayes theorem- Probability mass function - Probability density functions.

UNIT- II RANDOM VARIABLES**(13)**

Introduction to one dimensional random variables – Discrete – Continuous - Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression.

UNIT- III TESTING OF HYPOTHESIS**(12)**

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions – Tests for independence of attributes and Goodness of fit.

UNIT – IV DESIGN OF EXPERIMENTS**(12)**

Analysis of variance – one way classification – CRD – Two-way classification – RBD – Latin square.

UNIT – V RELIABILITY AND QUALITY CONTROL**(12)**

Concepts of reliability – hazard functions – Reliability of series and parallel systems – control charts for measurement (*\bar{X} and R charts*) - Control charts for attributes (p, c and np charts).

COURSE OBJECTIVES

The goal of this course is for students :

- To discuss the basic concepts of linear integrated circuits
- To study the circuit configuration and introduce practical applications of linear integrated circuits.
- To introduce the concept of Passive and Active filters
- To infer the theory and applications of PLL
- To make use of the theory of ADC and DAC using OP – AMPS
- To demonstrate the concepts of waveform generation and introduce some special function ICs

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Define linear and non linear applications of OP – AMPS
- Create waveforms using OP – AMP Circuits
- Ability to design new analog linear circuits and develop linear IC based Systems.
- Understand the concept of application of waveform generators
- Design ADC and DAC using OP – AMPS
- Analyze special function ICs

UNIT I OPERATIONAL AMPLIFIER CHARACTERISTICS (9)

Op-amp - Block diagram Representation of op-amp- Open loop & closed loop configurations – DC & AC performance characteristics of op-amp – Frequency compensation - Noise – Differential amplifiers -Electrical Characteristics and internal schematic of 741 op - amps.

UNIT II OPAMP APPLICATIONS (9)

Inverting & Non-inverting voltage amplifiers -Voltage follower –Summing & averaging amplifiers - AC amplifiers, Instrumentation Amplifiers-V-to-I and I-to-V converters-Differentiators and Integrators. Wave Shaping Circuits - Clipper and Clampers–Comparators and its applications.

UNIT III WAVEFORM GENERATORS AND PLL (9)

Waveform Generators: Sine-wave Generators – Square / Triangle / Sawtooth Wave generators. IC 555 Timer: Monostable operation and its applications, Astable operation and its applications PLL: Operation of the Basic PLL-Closed loop analysis of PLL-Voltage Controlled Oscillator-PLL Applications

UNIT IV ACTIVE FILTERS & VOLTAGE REGULATOR (9)

Filters: Passive and Active Networks – Filter Approximations-Design of LPF, HPF, BPF and Band Reject Filters , Voltage Regulators: Basics of Voltage Regulator – Linear Voltage Regulators using Op-amp – IC Regulators (78xx, 79xx, LM 317, 723)-Switching Regulators.

UNIT V**DATA CONVERSION DEVICES****(9)**

DAC circuits: Weighted Resistor DAC, R-2R Ladder DAC- Inverted R-2R Ladder DAC Monolithic DAC; Analog to Digital conversion: Ramp Type ADC-Successive Approximation ADC-Dual Slope ADC-Flash Type ADC.

COURSE OBJECTIVES:

The goal of this course is for students

- To define the basic concepts such as generalized instrumentation system, general properties of input transducers, static and dynamic characteristics of transducers and sensors
- To perceive a thorough understanding of principle of sensors
- To know the principle of transduction, classifications and the characteristics of different transducers
- To create the biomedical applications of the transducers and sensors.
- To discuss working of some of the above transducers and sensors.
- To know the different display and recording devices.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Have a clear understanding of generalized medical instrumentation system, general properties of input transducers, static and dynamic characteristics of transducers and sensors.
- Demonstrate various transducers and sensors in the course.
- Describe the purpose and methods of measurements.
- Explain the principle of different sensors and its applications
- Apply the transducers and sensors learnt in the course in suitable medical contexts.
- Implement working knowledge of some of the transducers and sensors

UNIT I INTRODUCTION TO TRANSDUCERS AND ITS CHARACTERISTICS (10)

Introduction: Generalized Instrumentation System, General Properties of Input Transducer Static Characteristics: Accuracy, Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics: First Order and Second Order Characteristics, Time Delay, Error Free Instrument, Transfer Functions. Design Criteria, Generalized Instrument Specifications.

UNIT II MEASUREMENTS (8)

Displacement, motion and Pressure Measurement: (with applications) Resistive: Potentiometers, Strain Gauges and Bridge Circuits. Inductive: Variable Inductance and LVDT Capacitive type, Piezoelectric Transducers. Types of Diaphragms, Bellows, Bourdon Tubes.

UNIT III THERMAL MEASUREMENTS (6)

Temperature Measurement: Thermistor, Thermocouple, Resistive Temperature Detector, IC based Temperature Measurement, Radiation Sensors and Applications .

UNIT IV ELECTRODES (10)

Biopotential Electrodes: Electrodes Electrolyte Interface, Half-Cell Potential, Polarization, Polarizable and Non Polarizable, Electrodes, Calomel Electrode, Electrode Circuit Model, Electrode Skin-Interface and Motion Artifact. Body Surface Electrodes. Internal Electrodes: Needle and Wire Electrodes (Different Types). Microelectrodes: Metal, Supported Metal Micropipette (Metal Filled Glass And Glass Micropipette Electrodes)

UNIT V**BIOSENSORS****(11)**

Chemical Sensors: Blood gas and Acid- Base Physiology Potentiometric Sensors, Ion Selective Electrodes, ISFETS. Amperometric Sensors, Clark Electrode with examples - pH, pO₂, pCO₂ Electrodes, Transcutaneous Arterial Oxygen Tension, Carbon Dioxide measurements: capnostat. Fiber Optic Sensors: Design Principles in Fabrication of Fiber Optic Sensors - Temperature, Chemical, Pressure. Biosensor: Classifications: Biological phenomenon, Transduction Phenomenon i.e. Enzyme Sensor and Electrode based: Affinity Sensors (Catalytic Biosensors), Two examples of each Biosensors and Immunosensors.

COURSE OBJECTIVES:

The goal of this course is for students :

- To infer processor architecture and its programming
- To discuss interfacing concepts
- To appraise advanced processor architecture
- To utilize the concepts of Interfacing with Peripherals for building applications
- To demonstrate the concepts Reduced Instruction Set Computer (RISC) architecture and Advanced RISC Machine (ARM) architecture
- To develop skill to explore system design technique .

COURSE OUTCOMES:

At the end of this course students will demonstrate the ability to

- Design assembly language programming (ALP) for different applications for 8085
- Compile assembly language programming (ALP) for different applications for 8086
- Perceive knowledge on advanced processors and controllers
- Create application by Interfacing memory and I/O device with controllers
- Demonstrate the architectures of Reduced Instruction Set Computer (RISC) and Advanced RISC Machine (ARM) processors
- Design and deploy the Interfacing peripherals in real time scenario.

UNIT -I THE 8085 MICROPROCESSOR**9**

Introduction to 8085 – Microprocessor architecture – Instruction set – Programming the 8085 – Code conversion.

UNIT II THE 8086 MICROPROCESSOR**9**

Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction set and assembler directives – Assembly language programming – Modular Programming – Interrupts and interrupt service routines – Byte and String Manipulation.

UNIT III I/O INTERFACING**9**

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display , LCD display, Keyboard display interface and Alarm Controller.

UNIT IV MICROCONTROLLER**9**

Architecture of 8051 – Special Function Registers(SFRs) - I/O Pins Ports and Circuits – Instruction set - Addressing modes - Assembly language programming.

UNIT V INTERFACING MICROCONTROLLER**9**

Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing - ADC, DAC & Sensor Interfacing - External Memory Interface- Stepper Motor and Waveform generation.

COURSE OBJECTIVES:

The goal of this course is for students:

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value
- To understand the various ecosystems and biodiversity
- To study the tole of engineers in the ecosystem

COURSE OUTCOMES

After this course the student will be able to:

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value
- To understand the various ecosystems and biodiversity
- To study the tole of engineers in the ecosystem

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India

UNIT II ENVIRONMENTAL POLLUTION

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT III NATURAL RESOURCES

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy, sources, use of alternate energy sources.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TEXT BOOK

Benny Joseph, ‘Environmental Science and Engineering’, Tata McGraw-Hill, New Delhi, 2006.

2. Gilbert M.Masters, ‘Introduction to Environmental Engineering and Science’, 2nd edition, Pearson Education, 2004.

COURSE OBJECTIVES

The goal of this course is for students:

- To familiarize students with the fundamentals of analog and digital communication systems
- to provide students with tools for communication signal analysis
- to familiarize students with various techniques for amplitude modulation and demodulation of analog signals
- to develop the students' ability to determine the effects of receiver frequency and phase errors in synchronous modulation systems
- to familiarize students with techniques for generating and demodulating narrow-band and wide-band frequency and phase modulated signals
- to familiarize students with basic techniques for generating and demodulating pulse code modulated signals
- to familiarize students with issues pertaining to the transmission of digital signals over bandwidth

COURSE OUTCOMES

Upon completion of this course, students should be able to do the following:

- apply Fourier analysis to communication signals
- explain how channel imperfections distort signals
- derive the energy or power spectral density of signals
- determine the number of levels in a quantizer given signal-to-noise ratio and maximum input voltage
- describe the different types of line codes
- describe the use of controlled intersymbol interference to achieve maximum data rates

UNIT I ANALOG COMMUNICATION

Introduction to Communication Systems - Modulation – Types - Need for Modulation. Theory of Amplitude Modulation - Evolution and Description of SSB Techniques - Theory of Frequency and Phase Modulation – Comparison of Analog Communication Systems (AM – FM – PM).

UNIT II PULSE AND DATA COMMUNICATION

Pulse Communication: Pulse Amplitude Modulation (PAM) – Pulse Time Modulation (PTM) – Pulse code Modulation (PCM) - Comparison of various Pulse Communication System (PAM – PTM – PCM). Data Communication: History of Data Communication - Standards Organizations for Data Communication- Data Communication Circuits - Data Communication Codes - Data communication Hardware - serial and parallel interfaces.

UNIT III DIGITAL COMMUNICATION

Amplitude Shift Keying (ASK) – Frequency Shift Keying (FSK)–Phase Shift Keying (PSK) – BPSK – QPSK – Quadrature Amplitude Modulation (QAM) – 8 QAM – 16 QAM – Bandwidth Efficiency– Comparison of various Digital Communication System (ASK – FSK – PSK – QAM).

UNIT IV SOURCE AND ERROR CONTROL CODING

Entropy, Source encoding theorem, Shannon fano coding, Huffman coding, mutual information, channel capacity, Error Control Coding, linear block codes, cyclic codes - ARQ Techniques.

UNIT V MULTI-USER RADIO COMMUNICATION

Global System for Mobile Communications (GSM) - Code division multiple access (CDMA) – Cellular Concept and Frequency Reuse - Channel Assignment and Handover Techniques - Overview of Multiple Access Schemes - Satellite Communication - Bluetooth.

18BEBME411 MICROPROCESSOR & MICROCONTROLLER LABORATORY 0032 100

COURSE OBJECTIVES:

The goal of this course is for students :

- Introduce ALP concepts and features
- Write ALP for arithmetic and logical operations in 8086 and 8051
- Differentiate Serial and Parallel Interface
- Be familiar with MASM
- To design and implement programs on 8085 microprocessor
- To interface different I/Os with Microprocessors

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Write ALP Programmes for fixed and Floating Point and Arithmetic operations
- Interface different I/Os with processor
- Generate waveforms using Microprocessors
- Execute Programs in 8051
- Use Serial and Parallel Interface
- Perform A/D and D/A conversion

LIST OF EXPERIMENTS:

8085 Programs using kits

1. Basic arithmetic and Logical operations
2. Sorting and searching

8086 Programs using kits

3. Basic arithmetic and Logical operations
4. Code conversion, decimal arithmetic and Matrix operations.
5. Floating point operations, string manipulations, sorting and searching

Peripherals and Interfacing Experiments

6. Traffic light control
7. Stepper motor control
8. Key board and Display
9. Serial interface and Parallel interface
10. A/D and D/A interface and Waveform Generations

8051 Experiments using kits and MASM

11. Basic arithmetic and Logical operations
12. Code conversion

TOTAL: 45

OBJECTIVES:

The goal of this course is for students,

- To discuss working principle of Transducers and various Biomedical sensors.
- To experiment with basic functions of Biosensors.
- To make use of different physiological signals.
- To learn about various biosensors
- To distinguish contact and non-contact method of skin temperature measurement
- To learn about data acquisition of physiological signal

INTENDED OUTCOMES:

Upon completion of this course, students will be able to:

- Interpret the characteristics of various biosensors
- Illustrate the importance of the sensors and transducers for medical applications.
- Analyse the characteristics of physiological signals
- Measure skin temperature
- Perform data acquisition of physiological signals
- Choose the biosensors for relevant application

LIST OF EXPERIMENTS

1. Study of Biological Sensors
2. Displacement measurement using LVDT
3. Characteristics of temperature sensors – thermistor and RTD.
4. Characteristics of thermocouple
5. Characteristics of Flow Transducer
6. Characteristics of photo diodes, phototransistor
7. Characteristics of Piezoelectric Transducer.
8. Data acquisition of physiological signals
9. Measurement of skin temperature by both contact and non-contact method.
10. Study of the characteristics of capacitor level sensor for saline level measurement in a I-V set.

OBJECTIVE:

- To gain the knowledge on various electronic equipments
- To learn the working principle of voltmeter
- To learn the working principle of digital voltmeter
- To discuss the working principle of Ammeter
- To distinguish analog multimeter digital multimeter
- To understand the operation of function generator

OUTCOME:

- Understand the working of various electronic equipments
- Analyse the operations of voltmeter and Ammeter
- Use RLC meter and LCR meter
- Understand the applications of EMF meter
- handle analog multimeter digital multimeter
- Demonstrate the operation of function generator

Study of Voltmeter – Ammeter – ohmmeter – capacitance meter – regulated power supply – oscilloscope – function generator – time-domain reflectometer – digital voltmeter – digital counter – Analog multimeter & Digital multimeter – Signal injector – RLC meter – LCR meter – EMF meter – Electrometer -

COURSE OBJECTIVES:

The goal of this course is for students :

- To analyse the systems in time and frequency domain
- To understand the concept of stability
- To acquire knowledge about the Bio Control system, Process regulation.
- To understand the concept behind feedback and continuum in various systems and subsystems.
- To apply mathematical modelling principles in understanding the various fundamental biological systems
- To study system concept of biological control

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Understand the need for mathematical modelling of various systems,
- Understand the representation of systems in block diagrams and signal flow graphs
- Analyze the process regulation
- Understand the concept of modelling basic physiological systems
- Understand the concept of oxygen and carbon dioxide transport in blood
- Explain the concept of Endocrine control system

UNIT I INTRODUCTION TO BIO CONTROL SYSTEM (9)

Introduction: Technological control system, transfer function, mathematical approaches, system stability, introduction to biological control system, Modeling and block diagram, closed loop dynamics of first order and second order control system, similarities between biological and engineering control system, biological receptors and receptor characteristics.

UNIT II PROCESS REGULATION (9)

Acid-base balance, extra-cellular water and electrolyte, interstitial fluid volume, blood pressure, blood glucose, CO₂.

UNIT III MODELING OF HUMAN THERMAL REGULATORY SYSTEM (9)

Parameters involved, control system model etc. Biochemistry of digestion, types of heat loss from body, models of heat transfer between subsystems of human body like skin - core etc. and systems like within body, body environment.

UNIT IV BIOLOGICAL CONTROL I (9)

Cardiac rate, blood pressure, respiratory rate, mass balancing of lungs, oxygen uptake by RBC and pulmonary capillaries, oxygen and carbon dioxide transport in blood and tissues.

UNIT V BIOLOGICAL CONTROL II (9)

Urine formation and control, Pupil control systems, skeletal muscle servomechanism and semicircular canal. Free swinging limbs, Endocrine control system.

2	E. Carson, E. Salzsieder	Modelling and Control in Biomedical Systems 2000 (including Biological Systems)	Pergamon Publishing	January 2001

COURSE OBJECTIVES:

The goal of this course is for students:

- To illustrate origin of bio potentials and its propagations
- To understand the basic theory of Bio potential Electrodes and Bio potential measurement.
- To appraise the different types of electrodes and its placement for various recordings
- To design bio amplifier for various physiological recordings
- To study the various bio chemical measurements.
- To perceive the different measurement techniques for non-physiological parameters.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Differentiate different bio potentials and its propagations.
- Describe the electrode behavior and circuit models
- Illustrate different electrode placement for various physiological recordings
- Design bio amplifier for various physiological recordings
- Explain various technique for non-electrical physiological measurements
- Measure various biochemical parameters.

UNIT I BIO POTENTIAL ELECTRODES (9)

Origin of bio potential and its propagation. Electrode-electrolyte interface, electrode-skin interface, half-cell potential, impedance, polarization effects of electrode – nonpolarizable electrodes. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits.

UNIT II ELECTRODE CONFIGURATIONS (9)

Biosignals characteristics – frequency and amplitude ranges. ECG – Einthoven's triangle, standard 12 lead system. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG, ERG and EOG – unipolar and bipolar mode.

UNIT III BIO AMPLIFIER (8)

Need for bio-amplifier - single ended bio-amplifier, differential bio-amplifier – right leg driven ECG amplifier. Transformer and optical isolation - isolated DC amplifier and AC carrier amplifier. Chopper amplifier.

UNIT IV MEASUREMENT OF NON-ELECTRICAL PARAMETER (10)

Temperature, respiration rate and pulse rate measurements. Blood Pressure: indirect methods - auscultatory method, oscillometric method, direct methods: electronic manometer, Pressure amplifiers - systolic, diastolic, mean detector circuit. Blood flow and cardiac output measurement: Indicator dilution, thermal dilution and dye dilution method, Electromagnetic and ultrasound blood flow measurement.

UNIT V **BIO-CHEMICAL MEASUREMENT** **(9)**

Biochemical sensors - pH, pO₂ and pCO₂, Ion selective Field effect Transistor (ISFET), Immunologically sensitive FET (IMFET), Blood glucose sensors - Blood gas analyzers, colorimeter, flame photometer, spectrophotometer, blood cell counter, auto analyzer

TEXT BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Joseph J. Carr and John M. Brown	Introduction to Biomedical Equipment Technology	Pearson Education	2004
2	John G. Webster	Medical Instrumentation Application and Design	John Wiley and sons	2004

2	Khandpur R.S	Handbook of Biomedical Instrumentation	Tata McGraw-Hill, New Delhi	2003
3	Myer Kutz	Standard Handbook of Biomedical Engineering & Design	McGraw-Hill	2003

COURSE OBJECTIVES

The goal of this course is for students:

- To study the characteristics of different biosignals
- To learn linear and non-linear filtering techniques to extract desired information
- To analyse the characteristics of some of the most commonly used biomedical signals, including ECG, EEG, EOG, and EMG.
- To perceive choice of filters to remove noise and artifacts from biomedical signals.
- To apply established engineering methods to analyse ECG signal problems.
- To discuss established engineering methods to analyse neurological signals.

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Design different types of biomedical signals and identify their spectral components.
- Utilize different filters on biomedical signals and judge filter performance.
- Identify physiological interferences and artifacts affecting ECG signal.
- Assess power and correlation spectra of EEG signal.
- Analyze biosignals in time and frequency domains.
- perform classification and recognition Biosignals

UNIT I DISCRETE – TIME SIGNALS AND SYSTEMS (9)

Sampling of Analogue signals – aliasing – standard discrete time signals – classification – discrete time systems – Linear time invariant stable casual discrete time systems – classification methods – linear and circular convolution – difference equation representation – DFS, DTFT, DFT – FFT computations using DIT and DIF algorithms.

UNIT II INFINITE IMPULSE RESPONSE DIGITAL FILTERS (9)

Review of design of analogue Butterworth and Chebyshev Filters, Frequency transformation in analogue domain – Design of IIR digital filters using impulse invariance technique – Design of digital filters using bilinear transform – Realization using direct, cascade and parallel forms.

UNIT III FINITE IMPULSE RESPONSE DIGITAL FILTERS (9)

Symmetric and Asymmetric FIR filters – Linear phase FIR filters – Design using Frequency sampling technique – Window design using Hamming, Hanning and Blackmann Windows – Realisation of FIR filters

UNIT IV ANALYSIS OF BIO –SIGNALS (9)

Removal of artifacts-ECG, Event detection –ECG,P wave, QRS Complex, T wave, correlation analysis of ECG signals, Averaging of signals-PCG, ECG and EMG.

UNIT V PROCESSING OF BIO SIGNALS (9)

Heart rate variability Analysis, Analysis of PCG signals, Analysis of Time variant systems, Fixed segmentation –STFT, ACF, SEM and GLR.

PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT**COURSE OBJECTIVES**

The goal of this course is for students:

- To develop managerial and entrepreneurial skills our culture and ethics
- To Distinguish Direct and Preventive Control
- To perceive Knowledge on the principles of management is essential for all kinds of people in all kinds of organisations
- To have a clear understanding of the managerial functions like planning, organizing, staffing, leading and controlling
- To create an awareness and practice through engineering ethics and human values
- To outline how business ethics works

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Advanced philosophical knowledge of the profession of recreation and leisure
- Synthesis of trends and issues as related to current professional practice
- Evaluate organizational theories and human resource management principles
- Analyse the information competency
- Follow Ethical practice and ethical management
- Understand Models of Professional Roles

UNIT I**ENGINEERING ETHICS****9**

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT II**FACTORS OF CHANGES****9**

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws.Social changes – Meaning and nature – Theories.

UNIT III**HISTORICAL DEVELOPMENT, PLANNING, ORGANISING****9**

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision-making – Formal and informal organization – Organization Chart –.

UNIT IV**DIRECTING AND CONTROLLING****9**

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION**9**

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

18BEBME5E--**Professional Elective I****3 0 0 3 100****18BEBME5E--****Professional Elective II****3 0 0 3 100**

18BEBME512 BIOMEDICAL INSTRUMENTATION & SIGNAL PROCESSING 0 0 3 2 100
LAB

COURSE OBJECTIVES:

The goal of this course is for students:

- To discuss the working principle of Biomedical Instrumentation systems.
- To infer the basic acquisition techniques of bioelectric signals.
- To learn about Audiometer
- To understand the concept of Signal Averaging
- To analyse ECG signal
- To experiment with basic signal processing operations such as Linear Convolution, Circular Convolution, Auto Correlation, Cross Correlation and Frequency analysis in MATLAB

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Create coding for different convolution and correlation techniques.
- Develop preamplifiers and amplifiers for various bio signal recordings.
- Measure various non-electrical parameters using suitable sensors/transducers
- Perform biosignal Acquisition
- Analyse ECG signal
- Understand about SNR improvement

Laboratory Experiments:

1. Acquisition and recording of Electrocardiogram.
2. Acquisition of Electromyogram and determining conduction velocity.
3. Study of Audiometer and Air conduction thresholds testing; Plotting of Audiogram.
4. Study of Blood Pressure meter and Phonocardiograph.
5. Design and implementation of circuits with biomedical applications (like QRS detector, ECG Amplifier, EMGetc)
6. Study and acquisition of PPG signals.
7. Spectral Modeling and Analysis of ECG Signals
8. Detection of QRS complex and heart rate measurement.
9. Auto-correlation and cross correlation of ECG signals.
10. Signal Averaging to improve the SNR.
11. Design of 50 Hz notch filter for ECG signal and display PSD.

OBJECTIVE

- To equip the students with requisite knowledge and skills
- To equip the students with right attitude necessary to provide effective leadership in a global environment.
- To develop competent management professionals with strong ethical values,
- To develop the students with capable of assuming a pivotal role in various sectors of the Indian Economy & Society, aligned with the national priorities.
- To develop proactive thinking so as to perform effectively in the dynamic socio-economic and business ecosystem.
- To harness entrepreneurial approach and skillsets.

OUT COME

- Competent managers with requisite knowledge, skills and right attitude
- Sustenance in globally competitive environment.
- Management professionals with pro-active thinking and Innovative approach
- Sensitive professionals with ethical values.
- Leaders with concern towards Nation and society at large
- Entrepreneurial approach and skillsets to contribute for socio-economic development

Basic table mannerism – common sense – public behaviour – attitude – genuinity & Uniqueness – roles and functions of marketing executives - Voice modulation - tone and phonetics – Market Analysis – telemarketing – E & Online Marketing – customer support and handling

COURSE OBJECTIVES:

The goal of this course is for students:

- To study the formation of an image and its acquisition
- To introduce the use and application of transforms in image processing
- To explain the fundamentals of medical image acquisition, processing and storage.
- To discuss simple image enhancement techniques in Spatial and Frequency domain.
- To appraise the concepts of degradation function and restoration techniques.
- To apply image compression and recognition methods.

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the image fundamentals and mathematical transforms necessary for image processing.
- Illustrate the image enhancement techniques.
- Preprocess the image using filtering techniques
- Utilize image restoration procedures.
- Segment the region of interest in images.
- Apply the image compression procedures.

UNIT I DIGITAL IMAGE FUNDAMENTAL**(9)**

Elements of digital image processing systems, Elements of Visual perception, Image sampling and quantization, – Some Basic relationships between pixels, Matrix and Singular Value representation of discrete images.

UNIT II IMAGE TRANSFORMS**(9)**

2D DFT, Cosine, Sine Hadamard, Haar, Slant, KL transform and their properties.

UNIT III IMAGE ENHANCEMENT**(9)**

Histogram – Modification and specification techniques, Enhancement by point processing Image smoothening, Image sharpening, generation of spatial masks from frequency domain specification, Homomorphic filtering, and color image processing.

UNIT IV IMAGE RESTORATION AND RECONSTRUCTION OF MEDICAL IMAGES**(9)**

Image degradation models, Unconstrained and Constrained restoration, inverse filtering, Least mean square filter, Image reconstruction from projections – Radon transforms, Filter back projection algorithm, Fourier reconstruction of MRI Images.

UNIT V MEDICAL IMAGE COMPRESSION TECHNIQUES**(9)**

Run length, Huffman coding, arithmetic coding, Pixel coding, transform coding, JPEG Standard, predictive techniques, Application of image processing techniques in thermography, SPECT, PET images.

Total : 45

TEXT BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Rafael C., Gonzalez and Richard E. Woods	Digital Image Processing	Pearson Education Asia	2001
2	Anil K. Jain	Fundamentals of Digital Image Processing	Prentice Hall of India	1997

REFERENCE BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	William K. Pratt	Digital Image Processing	John Wiley	1987

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive about the principles of biomechanics.
- To study about the mechanics involved with various physiological systems.
- To gain knowledge about musculoskeletal mechanics
- To infer the mechanics of physiological systems.
- To discuss the mechanics of joints.
- To create mathematical models used in the analysis of biomechanical systems

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain the principles of biomechanics.
- Discuss the mechanics of physiological systems.
- Demonstrate the mechanics of joints.
- Analyze the biomechanical systems using mathematical models.
- Design and develop the models specific to orthopedic applications
- Illustrate the mathematical models used in the analysis of biomechanical systems.

UNIT I INTRODUCTION TO MECHANICS

Introduction – Scalars and vectors, Statics – Force types, Resolution and composition of forces, Moments of force and couple, Resultant force determination, parallel forces in space, equilibrium coplanar forces, Dynamics, Basic principles – Linear motion, Newton's laws of motion, Impulse and Momentum, Work and Energy Kinetics – Velocity and acceleration, Kinematics – Link segment models, Force transducers, Force plates, Introduction to Constitutive equations – Constitutive equations of Nonviscous fluid, Newtonian Viscous fluid and Hookean Elastic solid

UNIT II BIOFLUID MECHANICS

Intrinsic fluid properties – Density, Viscosity, Compressibility and Surface Tension, Viscometers – Capillary, Coaxial cylinder and cone and plate, Rheological properties of blood, Pressure-flow relationship for Non-Newtonian Fluids, Fluid mechanics in straight tube – Steady Laminar flow, Turbulent flow, Flow development, Viscous and Turbulent Shear Stress, Effect of pulsatility, Boundary Layer Separation, Structure of blood vessels, Material properties and modeling of Blood vessels, Heart –Cardiac muscle characterisation, Native heart valves – Mechanical properties and valve dynamics, Prosthetic heart valve fluid dynamics.

UNIT III BIOSOLID MECHANICS

Constitutive equation of viscoelasticity – Maxwell & Voight models, anisotropy, Hard Tissues – Structure, blood circulation, elasticity and strength, viscoelastic properties, functional adaptation, Soft Tissues – Structure, functions, material properties and modeling of Soft Tissues – Cartilage, Tendons and Ligaments Skeletal Muscle – Muscle action, Hill's models, mathematical modeling, Bone fracture mechanics, Implants for bone fractures.

UNIT IV BIOMECHANICS OF JOINTS

Skeletal joints, forces and stresses in human joints, Analysis of rigid bodies in equilibrium, Free body diagrams, Structure of joints, Types of joints, Biomechanical analysis of elbow, shoulder,

spinal column, hip, knee and ankle, Lubrication of synovial joints, Gait analysis, Motion analysis using video.

UNIT V MODELING AND ERGONOMICS

Introduction to Finite Element Analysis, finite element analysis of lumbar spine; Ergonomics – Musculoskeletal disorders, Ergonomic principles contributing to good workplace design, Design of a Computer work station, Whole body vibrations, Hand transmitted vibrations.

TEXT BOOKS:

1. Y.C. Fung, —Bio-Mechanics- Mechanical Properties of Tissuesl, Springer-Verlag, 1998.
2. Subrata Pal, —Textbook of Biomechanicsl, Viva Books Private Limited, 2009.

REFERENCES:

2. Sheraz S. Malik and Shahbaz S. Malik, —Orthopaedic Biomechanics Made Easyl, Cambridge University Press, 2015.
3. Jay D. Humphrey, Sherry De Lange, —An Introduction to Biomechanics: Solids and Fluids, Analysis and Designl, Springer Science Business Media, 2004.

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive the medical devices applied in measurement of parameters related to cardiology, neurology and the methods of continuous monitoring and transmitting them.
- To analyze some of the cardiac assist devices.
- To understand the principle of diathermy
- To discuss about the measurement of the signals generated by muscles.
- To summarize the need and use of some of the extracorporeal devices.
- To learn the patient safety measures

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Utilize different medical devices applied in measurement of parameters related to cardiology, neurology
- Explain about cardiac assist devices, its continuous monitoring and transmission
- Measure signals generated by muscles
- Analyze different types of diathermy units.
- Identify the electrical hazards and Implement methods of patient safety
- Interpret the need and use of the extracorporeal devices.

UNIT I**CARDIAC EQUIPMENT****9**

Electrocardiograph, Normal and Abnormal Waves, Heart rate monitor, Holter Monitor, Phonocardiography, Plethysmography. Cardiac Pacemaker- Internal and External Pacemaker– Batteries, AC and DC Defibrillator- Internal and External

UNIT II**NEUROLOGICAL EQUIPMENT****9**

Clinical significance of EEG, Multi channel EEG recording system, Epilepsy, Evoked Potential– Visual, Auditory and Somatosensory, MEG (Magneto Encephalo Graph). EEG Bio Feedback Instrumentation.

UNIT III**SKELETAL MUSCULAR EQUIPMENT****9**

Generation of EMG, recording and analysis of EMG waveforms, fatigue characteristics, Muscle stimulators, nerve stimulators, Nerve conduction velocity measurement, EMG Bio Feedback Instrumentation.

UNIT IV**PATIENT MONITORING AND BIOTELEMETRY****9**

Patient monitoring systems, ICU/CCU Equipments, Infusion pumps, bed side monitors, Central consoling controls. Radio Telemetry (single, multi), Portable and Landline Telemetry unit, Applications in ECG and EEG Transmission.

UNIT V SPECIAL DIAGNOSTIC TECHNIQUES**9**

Lithotripsy, Principles of Cryogenic technique and application, Endoscopy, Laparoscopy. Thermography – Recording and clinical application, ophthalmic instruments.

COURSE OBJECTIVES:

The goal of this course is for students:

- To discuss the fundamentals of hospital administration.
- To analyze the market related research process.
- To summarize the quality and safety aspects in hospital.
- To perceive knowledge about human resource management in hospital
- To explain about hospital information systems

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Explain various information management systems and relative supportive services.
- Interpret market related research processes in healthcare and hospital sectors.
- Illustrate the quality and safety aspects in hospital.
- Demonstrate about human resource management in hospital
- Understand about NABH and NABL
- Explain the importance of supportive services

UNIT II HUMAN RESOURCE MANAGEMENT IN HOSPITAL

Principles of HRM – Functions of HRM – Profile of HRD Manager – Tools of HRD –Human Resource Inventory – Manpower Planning. Different Departments of Hospital, Recruitment, Selection, Training Guidelines –Methods of Training – Evaluation of Training – Leadership grooming and Training, Promotion – Transfer, Communication – nature, scope, barriers, styles and modes of communication.

UNIT III MARKETING RESEARCH PROCESS

Marketing information systems - assessing information needs, developing & disseminating information - Market Research process - Other market research considerations – Consumer Markets & Consumer Buyer Behaviour - Model of consumer behaviour - The buyer decision process - Model of business buyer behavior – Major types of buying situations - WTO and its implications.

UNIT IV HOSPITAL INFORMATION SYSTEMS & SUPPORTIVE SERVICES

Management Decisions and Related Information Requirement - Clinical Information Systems - Administrative Information Systems - Support Service Technical Information Systems – Medical Transcription, Medical Records Department – Central Sterilization and Supply Department – Pharmacy– Food Services - Laundry Services.

UNIT V QUALITY AND SAFETY ASPECTS IN HOSPITAL

Quality system – Elements, implementation of quality system, Documentation, Quality auditing, International Standards ISO 9000 – 9004 – Features of ISO 9001 – ISO 14000 – Environment Management Systems. NABA, JCI, NABL. Security – Loss Prevention – Fire Safety – Alarm System – Safety Rules. Health Insurance & Managing Health Care – Medical Audit – Hazard and Safety in a hospital Setup.

18BEBME6E--	Professional Elective III	3 0 0 3	100
18BEBME6E--	Professional Elective IV	3 0 0 3	100

COURSE OBJECTIVES:

The goal of this course is for students to:

- To implement fundamental image processing techniques in Biomedical Images.
- To infer enhancement and Transformation of Medical Images.
- To perceive knowledge about reconstruction of images.
- To learn about pre processing of image
- To understand the CT images
- To study the MATLAB implementation

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Apply various pre-processing techniques in Medical Images.
- Outline enhancement and transformation of Medical Images.
- Simplify and reconstruct medical images.
- Use MATLAB tool for image processing application
- Perform Image analysis
- Perform image compression

LIST OF EXPERIMENTS:

1. Digital image Fundamentals.
2. Image Enhancement and Transformation.
3. Edge detection and boundary tracing techniques.
4. Removal of noise in medical images.
5. Image compressions.
6. Restoration of CT images.
7. Reconstruction of images.
8. Image Analysis.
9. Matlab implementation.

COURSE OBJECTIVES:

The goal of this course is for students:

- To provide practice on recording and analysis of different Bio potentials
- To learn different non-electrical parameters using various methods
- To learn about Electrical safety measurements
- To study the function of different Therapeutic equipment.
- To understand the concept the ultrasonic diathermy
- To understand the concept of biotelemetry

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Measure different bioelectrical signals using various methods
- Assess different non-electrical parameters using various methodologies
- Illustrate various diagnostic and therapeutic techniques.
- Handle therapeutic equipment
- Design ECG amplifier
- Design and simulate by using Lab View

LIST OF EXPERIMENTS:

1. Simulation of ECG – detection of QRS complex and heart rate
2. Study of shortwave and ultrasonic diathermy
3. Study of biotelemetry
4. Electrical safety measurements.
5. Measurement of Respiratory parameters using spirometry.
6. Study of medical stimulator.
7. Study of ESU – cutting and coagulation modes
8. Recording of Audiogram
9. Design of ECG amplifier, recording and analysis using Lab View

Total: 45

COURSE OBJECTIVES:

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To understand Data, expressions and statements
- To learn about Python functions
- To know about files and dictionaries

COURSE OUTCOMES:

- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python
- To write python programmes in biomedical applications
- To work with files and dictionaries
- To get familiar with conditionals and loops

UNIT I ALGORITHMIC PROBLEM SOLVING

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV LISTS, TUPLES, DICTIONARIES

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

UNIT V FILES, MODULES, PACKAGES

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

6	Paul Gries, Jennifer Campbell and Jason	Practical Programming: An Introduction to Computer	Pragmatic Programmers, LLC	2013

COURSE OBJECTIVES:

The goal of this course is for students:

- To introduce virtual instrumentation concepts and applications.
- To discuss about programming structure in LabVIEW.
- To analyze data acquisition hardware.
- To infer knowledge on VI programs for specific applications.
- To perceive the basics of virtual instrumentation.
- To program virtual instrumentation software for biomedical applications

**COURSE OUTCOMES:**

Upon completion of this course, students will be able to:

- Illustrate programming concepts of virtual instruments.
- Compile programming structure in LabVIEW.
- Understand the use of VI for data acquisition.
- analyze different types of interfaces.
- Choose data from hardware systems.
- Develop VI programs for specific applications.

UNIT I REVIEW OF VIRTUAL INSTRUMENTATION (9)

Historical perspectives, Need of VI, advantages, Define VI, block diagram and architecture of a virtual instrument, data -flow techniques, graphical programming in data flow, comparison with conventional programming.

UNIT II VI PROGRAMMING TECHNIQUES (9)

VIS and sub-VIS loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, string and file I/O, Graphical programming in data flow, comparison with conventional programming.

UNIT III DATA ACQUISITION BASICS (9)

ADC, DAC, DIO, Counters & timers, PC Hardware structure, timing, interrupts, DMA, Software and Hardware Installation. GPIB/IEEE 488 concepts, and embedded system buses - PCI, EISA, CPCI, and USB & VXI. A

UNIT IV COMMON INSTRUMENT INTERFACES (9)

Current loop, RS.232C/RS.485, GPIB, System buses, interface buses: USB, PCMCIA, VXI, SCXI, PXI, etc., networking basics for office & Industrial applications, Visa and IVI, image acquisition and processing. Motion control. ADC, DAC, DIO, DMM, waveform generator.

UNIT V USE OF ANALYSIS TOOLS (9)

Fourier transforms, power spectrum correlation methods, windowing & filtering, Major equipments- Oscilloscope, Digital Multimeter, Pentium Computers, Application in Biomedical field

Total : 45

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive the rehabilitation concepts and Rehabilitation team for future development and applications.
- To understand the Primary & secondary Disabilities
- To discuss various Principles of Rehabilitation Engineering.
- To infer the various orthotic devices and prosthetic devices to overcome orthopedic problems.
- To explain the need for medical aids.
- .To explain about different types of models of Hand and arm replacement

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Elaborate about the needs of rehabilitations and its future development.
- Understand the terminologies used by the rehabilitation team
- Demonstrate Engineering Concepts in Sensory & Motor rehabilitation.
Apply the different types of Therapeutic Exercise Technique to benefit the society.
- and their application in biomedical field and hence the benefit of the society.
- Understand the need of virtual reality based rehabilitation
- Simplify about different types of models of Hand and arm replacement.

UNIT I INTRODUCTION TO REHABILITATION

What is Rehabilitation, Epidemiology of Rehabilitation, Health, Levels of Prevention, Preventive Rehabilitation, Diagnosis of Disability, Functional Diagnosis, Importance of Psychiatry in Functional diagnosis, Impairment disability handicap, Primary & secondary Disabilities, Rehabilitation team Classification of members, The Role of Psychiatrist, Occupational therapist, Physical therapist, Recreation therapist, Prosthetist - Orthotist, Speech pathologist, Rehabilitation nurse, Social worker, Corrective therapist, Psychologist, Music therapist, Dance therapist & Biomedical engineer.

UNIT II PRINCIPLES OF REHABILITATION

Introduction, The Human Component, Principles of Assistive Technology Assessment, Principles of Rehabilitation Engineering- Key Engineering Principles, Key Ergonomic Principles - Practice of Rehabilitation and Assistive Technology.

UNIT III THERAPEUTIC EXERCISE TECHNIQUE

Co-ordination exercises, Frenkels exercises, Gait analyses-Pathological Gaits, Gait Training, Relaxation exercises-Methods for training Relaxation, Strengthening exercises-Strength training, Types of Contraction, Mobilisation exercises, Endurance exercises.

UNIT IV MANAGEMENT OF COMMUNICATION & VIRTUAL REALITY

Impairment-introduction to communication, Aphasia, Types of aphasia, Treatment of aphasic patient, Augmentative communication-general form of communication, types of visual aids, Hearing aids, Types of conventional hearing aid, Writing aids. Introduction to virtual reality, Virtual reality based rehabilitation, Hand motor recovery systems with Phantom haptics, Robotics and Virtual Reality Applications in Mobility Rehabilitation.

UNIT V ORTHOTIC, PROSTHETIC DEVICES & RESTORATION TECHNIQUES

General orthotics, Classification of orthotics-functional & regional, General principles of Orthosis, Calipers- FO, AFO, KAFO, HKAFO. Prosthetic devices: Hand and arm replacement, Body powered prosthetics, Myoelectric controlled prosthetics and Externally powered limb prosthetics. Functional Electrical Stimulation systems-Restoration of hand function, restoration of standing and walking, Hybrid Assistive Systems (HAS).

COURSE OBJECTIVE:

The goal of this course is for students:

- To familiarizethestudentswithVirtualInstrumentationandtodoprogrammingforapplications
- To perceive the basics of virtual instrumentation.
- To program virtual instrumentation software for biomedical applications
- To analyse timing issues
- To learn about GPIB
- To do program with Lab view software for biomedical applications

COURSE OUTCOME

Upon completion of this course, the student will be able to:

- study about Programming Techniques
- study about Data Acquisition and inter facing techniques
- do programming for process control and other applications
- use D/A acquisition interface
- use serial communication interface
- use Lab view software for biomedical signal analysis

LIST OF EXPERIMENTS

1. Getting Started with Lab VIEW – Basic operations, controls and indicators.
2. Simple programming structures and Timing Issues
3. Lab VIEW – Debugging a VI, Sub-VI's
4. Lab VIEW – Traffic Light - Programming Structure, Sub-Vis, Clusters
5. GPIB-Serial poll Byte
6. Communication via RS232/ Serial Port.
7. Oscilloscope - Attribute Nodes, Menus
8. RC Circuit measurement - Timing issues
9. Lab VIEW – Incorporating user written C subroutines
10. Digital-to-Analog acquisition interfacing - Analog I/O
11. The RS232 Interface – Function Generator
12. Importing pictures, Global/ local variables. Arrays, Clusters

18BEBME712	Hospital Training	0 0 3 2	100
18BEBME791	Project Work Phase I	0 0 8 4	100

COURSE OBJECTIVES

The aim of the course is to:

- To have an overview of artificial organs & transplants
- To describe the principles of implant design with a case study
- To explain the implant design parameters and solution in use
- To study about various blood interfacing implants
- To study about soft tissue replacement and hard tissue replacement
- TO learn about various implants

COURSE OUTCOMES

After the course the student will be able to:

- Understand of artificial organs & transplants
- Know the principles of implant design with a case study
- Explain the implant design parameters and solution in use
- Know about various blood interfacing implants
- Understand about soft tissue replacement and hard tissue replacement
- Know about various implants

UNIT I ARTIFICIAL ORGANS & TRANSPLANTS

ARTIFICIAL ORGANS:-Introduction, outlook for organ replacements, design consideration, evaluation process.

TRANSPLANTS:-Overview, Immunological considerations, Blood transfusions, individual organs – kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN

Principles of implant design, Clinical problems requiring implants for solution, Permanent versus absorbable devices, the missing organ and its replacement, Tissue engineering, scaffolds, cells and regulators criteria for materials selection, Case study of organ regeneration.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION

Biocompatibility, local and systemic effects of implants, Design specifications for tissue bonding and modulus matching, Degradation of devices, natural and synthetic polymers, corrosion, wear and tear, Implants for Bone, Devices for nerve regeneration.

UNIT IV BLOOD INTERFACING IMPLANTS

Neural and neuromuscular implants, heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, artificial kidney- dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

Gastrointestinal system, Dentistry, Maxillofacial and craniofacial replacement, Soft tissue repair, replacement and augmentation, recent advancement and future directions.

MEDICAL PHYSICS

3 0 0 3 100

COURSE OBJECTIVES

The Goal of this course is for students:

- To study the complete non-ionizing radiations including light and its effect in human body.
- To demonstrate the principles of ultrasound radiation and its applications in medicine.
- To appraise about radioactive nuclides and also the interactions of radiation with matters and how isotopes are produced.
- To perceive the role of Physics in cardiopulmonary system.
- To analyse the harmful effects of radiation and radiation protection regulations.
- To study the effects of sound and light in human body

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Analyze the low and high frequency effects of non-ionizing radiation and physics of light.
- Define various clinical applications based on ultrasound wave.
- Explain the process of radioactive nuclide production using different techniques.
- Analyze radiation mechanics involved with various physiological systems.
- Apply the concept of physics in the function of cardiopulmonary system.
- Outline the detrimental effects of radiation and regulations for radiation safety.

UNIT I NON IONIZING RADIATION AND ITS MEDICAL APPLICATION 9

Non-ionizing Electromagnetic Radiation: Overview of non-ionizing radiation effects-Low Frequency Effects- Higher frequency effects. Physics of light, Measurement of light and its unit- limits of vision and color vision an overview, Thermography– Application

UNIT II SOUND IN MEDICINE 9

Physics of sound, Normal sound levels –ultrasound fundamentals – Generation of ultrasound (Ultrasound Transducer) - Interaction of Ultrasound with matter; Cavitations, Reflection, Transmission- Scanning systems – Artifacts- Ultrasound- Doppler-Double Doppler shift-Clinical Applications

UNIT III PRINCIPLES OF RADIOACTIVE NUCLIDES 9

Radioactive Decay – Spontaneous Emission – Isometric Transition – Gamma ray emission, alpha, beta, Positron decay, electron capture, Sources of Radioisotopes Natural and Artificial radioactivity, Radionuclide used in Medicine and Technology ,Decay series, Production of radionuclides – Cyclotron produced Radionuclide- Reactor produced Radio- nuclide-fission and electron Capture reaction, radionuclide Generator-Techetium generator.

UNIT IV INTERACTION OF RADIATION WITH MATTER 9

Interaction of charged particles with matter –Specific ionization, Linear energy transfer range, Bremsstrahlung, Annihilation, Interaction of X and Gamma radiation with matter- Photoelectric effect, Compton Scattering , Pair production, Attenuation of Gamma Radiation ,Interaction of neutron with matter and their clinical significance.

UNIT V BASIC RADIATION QUANTITIES 9

Introduction -exposure- Inverse square law-KERMA-Kerma and absorbed dose –stopping power -

relationship between the dosimetric quantities - Bremsstrahlung radiation, Bragg's curve- concept of LD 50- Stochastic and Non-stochastic effects, Different radiation Unit, Roentgen, gray, Sievert.

COURSE OBJECTIVES:

The aim of the course is to:

- To understand the technologies of fingerprint, iris, face and speech recognition
- To understand the general principles of design of biometric systems and the underlying trade-offs.
- To recognize personal privacy and security implications of biometrics based identification technology.
- To identify issues in the realistic evaluation of biometrics based systems.
- Identify the correct advantages and disadvantages of each biometric method
- Demonstrate knowledge engineering principles underlying biometric systems.

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Demonstrate knowledge engineering principles underlying biometric systems.
- Analyze design basic biometric system applications.
- To understand the general principles of design of biometric systems and the underlying trade-offs.
- To recognize personal privacy and security implications of biometrics based identification technology.
- identify issues in the realistic evaluation of biometrics based systems.
- Identify the correct advantages and disadvantages of each biometric method

UNIT I INTRODUCTION TO BIOMETRICS 9

Introduction and back ground – biometric technologies – passive biometrics – active biometrics – Biometric systems – Enrollment – templates – algorithm – verification – Biometric applications – biometric characteristics- Authentication technologies –Need for strong authentication – Protecting privacy and biometrics and policy – Biometric applications – biometric characteristics

UNIT II FINGERPRINT TECHNOLOGY 9

History of fingerprint pattern recognition - General description of fingerprints - Finger print feature processing techniques - fingerprint sensors using RF imaging techniques – fingerprint quality assessment – computer enhancement and modeling of fingerprint images – fingerprint enhancement – Feature extraction – fingerprint classification – fingerprint matching

UNIT III FACE RECOGNITION AND HAND GEOMETRY 9

Introduction to face recognition, Neural networks for face recognition – face recognition from correspondence maps – Hand geometry – scanning – Feature Extraction - Adaptive Classifiers - Visual-Based Feature Extraction and Pattern Classification - feature extraction – types of algorithm – Biometric fusion.

UNIT IV MULTIMODAL BIOMETRICS AND PERFORMANCE EVALUATION 9

Voice Scan – physiological biometrics –Behavioral Biometrics - Introduction to multimodal biometric system – Integration strategies – Architecture – level of fusion – combination strategy – training and adaptability – examples of multimodal biometric systems – Performance evaluation- Statistical Measures of Biometrics – FAR – FRR – FTE – EER – Memory requirement and allocation.

UNIT V BIOMETRIC AUTHENTICATION**9**

Introduction - Biometric Authentication Methods - Biometric Authentication Systems – Biometric authentication by fingerprint -Biometric Authentication by Face Recognition. -. Expectation-Maximization theory - Support Vector Machines. Biometric authentication by fingerprint –biometric authentication by hand geometry- Securing and trusting a biometric transaction – matching location – local host - authentication server – match on card (MOC) – Multibiometrics and Two-Factor Authentication

COURSE OBJECTIVES

To Study about:

- The optical properties of the tissues and the interactions of light with tissues.
- The instrumentation and components in Medical Optics.
- The Medical Lasers and their applications
- The optical diagnostic applications
- The emerging optical diagnostic and therapeutic techniques
- To understand photodynamic therapy.

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Understand optical properties of the tissues and the interactions of light with tissues.
- Know the instrumentation and components in Medical Optics.
- Design therapeutic equipments
- Work with optical diagnostic applications
- Work with optical therapeutic components
- Know the laser safety measures

UNIT I OPTICAL PROPERTIES OF THE TISSUES

Fundamental Properties of light - Refraction, Reflection, Laws (Snell's law and Fresnel law) Scattering, Absorption, Light transport inside the tissue, Tissue properties, Laser Characteristics as applied to medicine and biology, Laser tissue Interactions – Photo chemical, Photo thermal and Photo mechanical interactions, Fluorescence, Speckles, Photo ablative processes.

UNIT II INSTRUMENTATION IN PHOTONICS

Instrumentation for absorption, Scattering and emission measurements, Excitation light sources – high pressure arc lamps, LEDs, Lasers, Optical filters – Prism and Monochromators, Polarizers, Optical detectors – Single Channel and Multichannel detectors, Time resolved and phase resolved detection methods, Optical fibers – Total Internal Reflection.

UNIT III SURGICAL THERAPEUTIC APPLICATIONS OF LASERS

Lasers in ophthalmology, Dermatology, Dentistry, Urology, Otolaryngology, Tissue welding and Soldering.

UNIT IV NON THERMAL DIAGNOSTIC APPLICATIONS

Optical coherence tomography, Elastography, Laser Induced Fluorescence (LIF)-Imaging, FLIM Raman Spectroscopy and Imaging, FLIM – Holographic and Speckle applications of lasers in biology and medicine.

UNIT V DIAGNOSTIC AND THERAPEUTIC TECHNIQUES

Near field imaging of biological structures, In vitro clinical diagnostics, Phototherapy, Photodynamic therapy (PDT) - Principles and mechanisms - Oncological and non-oncological applications of PDT - Biostimulation effect – applications - Laser Safety Procedures.

TEXT BOOKS:

1. Tuan Vo Dirh, —Biomedical Photonics – Handbook, CRC Press, Boca Raton, 2014.
2. Paras N. Prasad, —Introduction to Biophotonics, A. John Wiley and Sons, Inc. Publications, 2003

REFERENCES:

1. Markolf H.Niemz, —Laser-Tissue Interaction Fundamentals and Applications, Springer, 2007
2. G.David Baxter —Therapeutic Lasers – Theory and practice, Churchill Livingstone publications Edition- 2001.
3. Leon Goldman, M.D., & R.James Rockwell, Jr., —Lasers in Medicine, Gordon and Breach, Science Publishers Inc., 1975.

COURSE OBJECTIVES:

The objective of this course is for:

- the student to gain a solid appreciation for the special significance of the word biomaterial
- Rapid and exciting evolution and expansion of biomaterials science and its applications in medicine.
- Learn the functional performance of biomaterials.
- Ceramic, polymeric, composite and “smart” biomaterials will be covered in detail.
- Understand the structure and properties of these types of biomaterials.
- Know the important biomaterials and their processing, properties and applications

COURSE OUTCOMES

The student should be made to:

- Learn characteristics and classification of Biomaterials
- Understand different metals, ceramics and its nanomaterial's characteristics as biomaterials
- Learn polymeric materials and its combinations that could be used as a tissue replacement implants
- Get familiarized with the concepts of Nano Science and Technology
- Identify and understand the main terms largely used in biomaterials literature, basic properties of various biomaterials
- correctly associate terms with processes/phenomena, and be able to correlate related events

UNIT I INTRODUCTION TO BIO-MATERIALS

Definition and classification of bio-materials, mechanical properties, visco elasticity, biomaterial performance, body response to implants, wound healing, blood compatibility, Nano scale phenomena.

UNIT II METALLIC AND CERAMIC MATERIALS

Metallic implants - Stainless steels, co-based alloys, Ti-based alloys, shape memory alloy, nanostructured metallic implants, degradation and corrosion, ceramic implant – bio inert, biodegradable or bioresorbable, bioactive ceramics, nanostructured bio ceramics.

UNIT III POLYMERIC IMPLANT MATERIALS

Polymerization, factors influencing the properties of polymers, polymers as biomaterials, biodegradable polymers, Bio polymers: Collagen, Elastin and chitin. Medical Textiles, Materials for ophthalmology: contact lens, intraocular lens. Membranes for plasma separation and Blood oxygenation, electro spinning: a new approach.

UNIT IV TISSUE REPLACEMENT IMPLANTS

Small intestinal sub mucosa and other decellularized matrix biomaterials for tissue repair: Extra cellular Matrix. Soft tissue replacements, sutures, surgical tapes, adhesive, Percutaneous and skin implants, maxillofacial augmentation, Vascular grafts, hard tissue replacement Implants, joint replacements, tissue scaffolding and engineering using Nano biomaterials.

UNIT V TESTING OF BIOMATERIALS:

Biocompatibility, blood compatibility and tissue compatibility tests, Toxicity tests, sensitization, carcinogenicity, mutagenicity and special tests, In vitro and In vivo testing; Sterilisation of implants and devices: ETO, gamma radiation, autoclaving. Effects of sterilization.

COURSE OBJECTIVES:

- Introduction and description of core concepts of IoT, role and scope of smart sensors for insuring convergence of Technologies and multidisciplinary engineering practices, Machine Intelligence Quotient.
- Understanding the need for migrating towards software defined networks and integrating time series data from wireless sensor networks.
- Hardware platforms and operating systems commonly used in IoT systems.
- Big data predictive analytics and transformation from IT to IOT.
- Awareness of IoT related cyber legislation.
- To understand Smart Objects and IoT Architectures

Course objectives**After the course the student should be able to:**

- Introduction and description of core concepts of IoT, role and scope of smart sensors for insuring convergence of Technologies and multidisciplinary engineering practices, Machine Intelligence Quotient.
- Understand Smart Objects and IoT Architectures
- learn about various IOT-related protocols
- Build simple IoT Systems using Arduino and Raspberry Pi.
- Understand data analytics and cloud in the context of IoT
- Know Hardware platforms and operating systems commonly used in IoT systems.

UNIT I FUNDAMENTALS OF IoT

Evolution of Internet of Things - Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT models – Simplified IoT Architecture and Core IoT Functional Stack -- Fog, Edge and Cloud in IoT – Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II IoT PROTOCOLS

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks – Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks – Application Transport Methods: Supervisory Control and Data Acquisition – Application Layer Protocols: CoAP and MQTT

UNIT III DESIGN AND DEVELOPMENT

Design Methodology - Embedded computing logic - Microcontroller, System on Chips - IoT system building blocks - Arduino - Board details, IDE programming - Raspberry Pi - Interfaces and Raspberry Pi with Python Programming.

UNIT IV DATA ANALYTICS AND SUPPORTING SERVICES

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest – Role of Machine Learning – No SQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics – Xively Cloud for IoT, Python Web Application Framework –

Django – AWS for IoT – System Management with NETCONF-YANG

UNIT V CASE STUDIES/INDUSTRIAL APPLICATIONS

Cisco IoT system - IBM Watson IoT platform – Manufacturing - Converged Plantwide Ethernet Model (CPwE) – Power Utility Industry – GridBlocks Reference Model - Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control

COURSE OBJECTIVES:**The student should be made to:**

- Learn the key principles for telemedicine and health.
- Understand telemedical technology.
- Know telemedical standards, mobile telemedicine and its applications.
- Understand various applications of Body Area Network
- Know the different network protocols
- Familiarise various Communication technology

COURSE OUTCOMES:**At the end of the course, the student should be able to:**

- Apply multimedia technologies in telemedicine.
- Explain Protocols behind encryption techniques for secure transmission of data.
- Apply telehealth in healthcare.
- Know various safety and regulatory issues
- Understand Data Security and Standards
- Get familiar with Real-time Telemedicine

UNIT I**TELEMEDICINE AND HEALTH****9**

History and Evolution of telemedicine, Functional diagram of telemedicine system, Telemedicine, Telehealth, Tele care, Organs of telemedicine, Global and Indian scenario, Ethical and legal aspects of Telemedicine - Confidentiality, Social and legal issues, Safety and regulatory issues, Advances in Telemedicine.

UNIT II**TELEMEDICAL TECHNOLOGY****9**

Principles of Multimedia - Text, Audio, Video, data, Data communications and networks, PSTN, POTS, ANT, ISDN, Internet, Air/ wireless communications: GSM satellite, and Micro wave, Modulation techniques, Types of Antenna, Integration and operational issues, Communication infrastructure for telemedicine – LAN and WAN technology. Satellite communication. Mobile hand held devices and mobile communication. Internet technology and telemedicine using world wide web (www). Video and audio conferencing. Clinical data – local and centralized.

UNIT III**TELEMEDICAL STANDARDS****9**

Data Security and Standards: Encryption, Cryptography, Mechanisms of encryption, phases of Encryption. Protocols: TCP/IP, ISO-OSI, Standards followed DICOM, HL7, H. 320 series (Video phone based ISDN) T. 120, H.324 (Video phone based PSTN), Video Conferencing, Real-time Telemedicine integrating doctors / Hospitals, Clinical laboratory data, Radiological data, and other clinically significant biomedical data, Administration of centralized medical data, security and confidentiality of medical records and access control, Cyber laws related to telemedicine.

UNIT IV**MOBILE TELEMEDICINE****9**

Tele radiology: Definition, Basic parts of teleradiology system: Image Acquisition system Display system, Tele pathology, multimedia databases, color images of sufficient resolution, Dynamic range, spatial resolution, compression methods, Interactive control of color, Medical information storage and management for telemedicine- patient information medical history, test reports, medical images diagnosis and treatment. Hospital information system - Doctors, paramedics, facilities available. Pharmaceutical information system.

UNIT V**TELEMEDICAL APPLICATIONS****9**

Telemedicine access to health care services – health education and self care. · Introduction to robotics surgery, Telesurgery, Telecardiology, Teleoncology, Telemedicine in neurosciences, Electronic Documentation, e-health services security and interoperability., Telemedicine access to health care services – health education and self care, Business aspects - Project planning and costing, Usage of telemedicine.

CANCER BIOLOGY

3 0 0 3

100

COURSE

OBJECTIVES

- To develop skills of the students in the area of Cancer Biology.
- Growth factors related to transformation, Telomerases.
- . Cancer screening and early detection,
- Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer
- Know Different forms of therapy, chemotherapy, radiation therapy,
- Understand about detection of cancers, prediction of aggressiveness of cancer

COURSE

OBJECTIVES

At the end of the course, the student would have learnt about

- pathogenesis of cancer,
- identifications of cancer through tools developed by biotechnology research
- molecules synthesized for cancer therapy.
- This will be very beneficial for the student to take up projects in Cancer Biology.
- x-ray radiation-mechanisms of radiation carcinogenesis.
- Detection using biochemical assays

UNIT I FUNDAMENTALS OF CANCER BIOLOGY

9

Regulation of cell cycle, mutations that cause changes in signal molecules, effects on receptor, signal switches, tumour suppressor genes, modulation of cell cycle in cancer, different forms of cancers, diet and cancer. Cancer screening and early detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer.

UNIT II PRINCIPLES OF CARCINOGENESIS

12

Theory of carcinogenesis, Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x-ray radiation-mechanisms of radiation carcinogenesis.

UNIT III PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER

9

Signal targets and cancer, activation of kinases; Oncogenes, identification of oncogenes, retroviruses and oncogenes, detection of oncogenes. Oncogenes/proto oncogene activity, Growth factors related to transformation, Telomerases.

UNIT IV PRINCIPLES OF CANCER METASTASIS

9

Clinical significances of invasion, heterogeneity of metastatic phenotype, metastatic cascade, basement membrane disruption, three step theory of invasion, proteinases and tumour cell invasion.

UNIT V NEW MOLECULES FOR CANCER THERAPY

6

Different forms of therapy, chemotherapy, radiation therapy, detection of cancers, prediction of aggressiveness of cancer, advances in cancer detection. Use of signal targets towards therapy of cancer; Gene therapy.

TEXT BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Maly B.W.J	Virology A Practical Approach	“”, IRLI Press, Oxford	1987
2	Dunmock N.J And Primrose S.B	Introduction to Modern Virology	Blackwell Scientific Publications,	1988

REFERENCE

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Maly B.W.J	An Introduction Top Cellular And Molecular Biology of Cancer	Oxford Medical Publications	1991

COURSE OBJECTIVE

- To Design biomedical signal conditioning circuits
- To Work in various health related companies
- To Become familiar with various clinical devices
- To Promote research in the field of biomedical engineering
- To Work with and service various clinical devices
- To Excel in hardware and software applications in medical field

COURSE OUTCOME:

- gain in depth knowledge of fundamentals of operational amplifier circuits
- learn the various applications using operational amplifiers.
- understand various Filters
- Familiarise A/D and D/A convertors
- Apply op-amp in various conditioning circuits
- Need for digital circuits in biomedical field

UNIT 1**INTRODUCTION TO OPAMP****9**

Introduction, Signal conditioning, 741 General purpose OPAMP: ideal characteristics, offset voltages and currents. Open & Closed Loop Configuration. Inverting, Non-Inverting, Summing, Voltage Follower, Integrator, differentiators, Log & Anti-Log Amplifiers, Differential Amplifiers, CMRR.

UNIT 2**APPLICATION OF OPAMPS****9**

Comparator- Zero crossing detector, Inverting and non inverting comparator, Schmitt Trigger, Precision rectifiers- Half wave and Full wave rectifiers, Peak detectors, Monostable, Astable multivibrators, Sawtooth generator, Triangular waveform generator, Sine Wave Generators-RC Phase Shift Oscillator, Wein Bridge oscillator.

UNIT 3**FILTERS****9**

Introduction- Analog Filters, Active Filters and Passive Filters, First order and Second order Low Pass Filters, High Pass Filters, Band Pass Filters- Narrow Band Pass, Wide band Pass Filters,, Band Reject Filters- Notch Filter, All Pass filters and higher Order filters- Design and applications.

UNIT 4**A/D AND D/A CONVERTERS****9**

Sample and Hold circuit - D/A converters: Resistive divider and R-2R ladder networks, A/D converters: Counting type, Successive approximation, parallel comparator, Voltage to Current Converter, 555 Timer and its applications- Astable multivibrators and Monostable Multivibrator.

UNIT 5**AMPLIFIERS**

Instrumentation amplifiers, Bridge Amplifiers, Bioelectric Amplifiers: - Properties desired, Isolation Amplifiers:- Battery Powered, Carrier, Optically Coupled, Current Loading, Chopper Stabilized amplifier, Input Guarding.

5	Jacob Mill man	Micro Electronics	McGraw-Hill	1987
6	Robert Coughlin and Fredrer	Operational Amplifiers & Linear Integrated Circuits	Prentice Hall	2001

COURSE OBJECTIVES:

The goal of this course is for students:

- To introduce the relevance of this course to the existing technology
- The student should be made to understand the principles, practices and areas of application in Hospital management
- To know the hazardous materials used in hospital and its impact on health.
- To get knowledge on biomedical waste management.
- To infer the hazards in biomedical waste management.
- To develop knowledge on facility safety and infection control.

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Distinguish various waste disposal procedures and management.
- Understand the biomedical waste disposal concept.
- Explain the importance of supportive services.
- Demonstrate Biomedical Waste Management techniques.
- Elaborate the hazards in biomedical waste management.
- Apply knowledge on facility safety and infection control.

UNIT I HEALTHCARE HAZARD CONTROL AND UNDERSTANDING ACCIDENTS

Healthcare Hazard Control : Introduction, Hazard Control, Hazard Control Management, Hazard Control Responsibilities, Addressing Behaviors, Hazard Control Practice, Understanding Hazards, Hazard Analysis, Hazard Control and Correction, Personal Protective Equipment, Hazard Control Committees, Hazard Control Evaluation, Hazards, System Safety, Ergonomics. Understanding Accidents: Accident Causation Theories, Human Factors, Accident Deviation Models, Accident Reporting, Accident Investigations, Accident Analysis, Organizational Functions That Support Accident Prevention, Workers' Compensation, Orientation, Education, and Training.

UNIT II BIOMEDICAL WASTE MANAGEMENT

Biomedical Waste Management : Types of wastes, major and minor sources of biomedical waste, Categories and classification of biomedical waste, hazard of biomedical waste, need for disposal of biomedical waste, waste minimization, waste segregation and labeling, waste handling, collection, storage and transportation, treatment and disposal.

UNIT III HAZARDOUS MATERIALS

Hazardous Materials : Hazardous Substance Safety, OSHA Hazard Communication Standard, DOT Hazardous Material Regulations, Healthcare Hazardous Materials, Medical Gas Systems, Hazardous Waste Operations and Emergency Response Standard, Respiratory Protection.

UNIT IV FACILITY SAFETY

Facility Safety : Introduction, Facility Guidelines Institute, Administrative Area Safety, Slip, Trip, and Fall Prevention, Safety Signs, Colors, and Marking Requirements, Scaffolding, Fall Protection, Tool Safety, Machine Guarding, Compressed Air Safety, Electrical Safety, Control of Hazardous Energy, Permit Confined Spaces, OSHA Hearing Conservation Standard, Heating, Ventilating, and

Air-Conditioning Systems, Assessing IAQ, Landscape and Grounds Maintenance, Fleet and Vehicle Safety.

UNIT V INFECTION CONTROL, PREVENTION AND PATIENT SAFETY

Healthcare Immunizations, Centers for Disease Control and Prevention, Disinfectants, Sterilants, and Antiseptics, OSHA Bloodborne Pathogens Standard, Tuberculosis, Healthcare Opportunistic Infections, Medical Waste. Patient Safety: An Organizational Function, Errors and Adverse Events, Safety Cultures, Patient-Centered Healthcare, Quality Improvement Tools and Strategies, Healthcare-Associated Infections, Medication Safety.

TEXT BOOKS:

1. Tweedy, James T., Healthcare hazard control and safety management-CRC Press_Taylor and Francis (2014).
2. Anantpreet Singh, Sukhjot Kaur, Biomedical Waste Disposal, Jaypee Brothers Medical Publishers (P) Ltd (2012).

FOR SEMESTER VII (ELECTIVE-V)

18BEBME7E01

REHABILITATION ENGINEERING

3 0 0 3

100

COURSE OBJECTIVES:

The goal of this course is for students:

- To perceive the rehabilitation concepts and Rehabilitation team for future development and applications.
- To understand the Primary & secondary Disabilities
- To discuss various Principles of Rehabilitation Engineering.
- To infer the various orthotic devices and prosthetic devices to overcome orthopedic problems.
- To explain the need for medical aids.
- .To explain about different types of models of Hand and arm replacement

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Elaborate about the needs of rehabilitations and its future development.
- Understand the terminologies used by the rehabilitation team
- Demonstrate Engineering Concepts in Sensory & Motor rehabilitation.
Apply the different types of Therapeutic Exercise Technique to benefit the society.
- Design and apply different types Hearing aids, visual aids and their application in biomedical field and hence the benefit of the society.
- Understand the need of virtual reality based rehabilitation Simplify about different types of models of Hand and arm replacement

UNIT I

MEDICAL X-RAY EQUIPMENT

9

Nature of X-rays- X-Ray absorption – Tissue contrast. X- Ray Equipment (Block Diagram) – X-Ray Tube, the collimator, Bucky Grid, power supply, Digital Radiography- discrete digital detectors, storage phosphor and film scanning, X-ray Image Intensifier tubes – Fluoroscopy – Digital Fluoroscopy. Angiography, cine Angiography. Digital subtraction Angiography. Mammography.

UNIT II

COMPUTED TOMOGRAPHY

9

Principles of tomography, CT Generations, X- Ray sources- collimation- X- Ray detectors-Viewing systems- spiral CT scanning – Ultra fast CT scanners. Image reconstruction techniques- back projection and iterative method.

UNIT III

MAGNETIC RESONANCE IMAGING

9

Fundamentals of magnetic resonance- Interaction of Nuclei with static magnetic field and Radio frequency wave- rotation and precession – Induction of magnetic resonance signals – bulk magnetization – Relaxation processes T1 and T2. Block Diagram approach of MRI system- system magnet (Permanent, Electromagnet and Super conductors), generations of gradient magnetic fields, Radio Frequency coils (sending and receiving), shim coils, Electronic components, fMRI.

Course Objectives

The goal of this course is for students

- To Understand Biomedical Laser principles and applications.
- To be familiar with optical properties of tissues
- To infer the knowledge of photonics
- To be exposed to Optical Holography
- To explain the various applications of Laser
- To understand photodynamic therapy.

Course Outcomes

Upon completion of this course, students will be able to:

- Analyse the optical properties of tissues
- Use the Photonics instrumentation
- Apply lasers in different areas of medicine.
- Perceive the lasers in ophthalmology
- Discuss about optical hologram
- Explain the special techniques of Lasers.

UNIT I OPTICAL PROPERTIES OF THE TISSUES**9**

Refraction, scattering, absorption, light transport inside the tissue, tissue properties, Light interaction with tissues, photothermal interaction, fluorescence, speckles.

UNIT II INSTRUMENTATION IN PHOTONICS**9**

Instrumentation for absorption, scattering and emission measurements, excitation light sources –high pressure arc lamp, solid state LEDs, optical filters, polarisers, time resolved and phase resolved detectors.

UNIT III APPLICATIONS OF LASERS**9**

Laser in tissue welding, lasers in dermatology, lasers in ophthalmology, otolaryngology, urology.

UNIT IV OPTICAL HOLOGRAPHY**9**

Wave fronts, interference patterns, principle of hologram, optical hologram, applications.

UNIT V SPECIAL TECHNIQUES**9**

Near field imaging of biological structures, in-vitro clinical diagnostic, fluorescent spectroscopy, photodynamic therapy.

PATIENT AND DEVICES SAFETY

3 0 0 3

100

The goal of this course is for students

- To provide basic knowledge on the concept of Healthcare Quality management towards continuous improvement of patient care
- To Understand hospital safety.
- To be familiar with electrical & fire safety.
- To infer the knowledge of regulatory requirement for health care.
- To be exposed to standardization of quality medical care in hospitals
- To explain the assessing quality health care

Upon completion of this course, students will be able to:

- Create coding for different convolution and correlation techniques.
- Develop preamplifiers and amplifiers for various bio signal recordings.
- Measure various non-electrical parameters using suitable sensors/transducers
- Perform biosignal Acquisition
- Analyse ECG signal
- Understand about SNR improvement

UNIT I STANDARDIZATION OF QUALITY MEDICAL CARE IN HOSPITALS 9

Define Quality- Need for Standardization & Quality Management, TQM in Health care organization- Quality assurance methods, QA in (Medical Imaging & Nuclear medicine) Diagnostic services – Classification of equipments

UNIT II REGULATORY REQUIREMENT FOR HEALTH CARE 9

FDA regulations, Accreditation for hospitals - JCI, NABH and NABL, Other regulatory Codes.

UNIT III HOSPITAL SAFETY 9

Security & Safety of Hospital -Property, Staff & Patients, Radiation safety, Safety precautions, hazardous effects of radiation, allowed levels of radiation, ICRP regulations for radiation safety, Disposal of Biological waste.

UNIT IV ELECTRICAL & FIRE SAFETY 9

Sources of shocks, macro & micro shocks -Hazards, monitoring and interrupting the Operation from leakage current- Elements of fire, causes of fire , Action to be taken in case of fire in a Hospital.

UNIT V ASSESSING QUALITY HEALTH CARE 9

Patient Safety Organization- Governmental & Independent, Measuring Quality care – Evaluation of hospital services – six sigma way, Quality Assurance in Hospitals Sop's – Patient Orientation for Total Patient Satisfaction. 5S techniques.

Total : 45

OBJECTIVES:

- To understand generation of x-rays and its uses in imaging.
- To learn different types of radio diagnostic techniques.
- To know techniques used for visualizing different sections of the body.
- To infer radiation therapy methodologies and the radiation safety.
- To be familiar with electrical & fire safety.
- Know different diagnostic and therapeutic equipments

INTENDED OUTCOMES:

Upon completion of this course, students will be able to:

- Make the students aware of the role of medical x-ray equipment.
- Explain the different radio diagnostic and therapeutic techniques.
- Analyse the computed tomography Principles and applications.
- Use the MRI methods in appropriate situations.
- Apply nuclear medicine system in different areas of medicine.
- Perceive the standardization of quality radiation therapy and radiation safety in hospitals.

UNIT I MEDICAL X-RAY EQUIPMENT**9**

Nature of X-rays- X-Ray absorption – Tissue contrast, X- Ray Equipment (Block Diagram) – X-Ray Tube, the collimator, Bucky Grid, power supply, Digital Radiography- discrete digital detectors, storage phosphor and film scanning, X-ray Image Intensifier tubes – Fluoroscopy – Digital Fluoroscopy. Angiography, cine Angiography, Digital subtraction Angiography, Mammography.

UNIT II COMPUTED TOMOGRAPHY**9**

Principles of tomography, CT Generations, X- Ray sources- collimation- X- Ray detectors-Viewing systems- spiral CT scanning – Ultra fast CT scanners. Image reconstruction techniques- back projection and iterative method.

UNIT III MAGNETIC RESONANCE IMAGING**9**

Fundamentals of magnetic resonance- Interaction of Nuclei with static magnetic field and Radio frequency wave- rotation and precession – Induction of magnetic resonance signals – bulk magnetization – Relaxation processes T1 and T2. Block Diagram approach of MRI system- system magnet (Permanent, Electromagnet and Super conductors), generations of gradient magnetic fields, Radio Frequency coils (sending and receiving), shim coils, Electronic components, fMRI.

UNIT IV NUCLEAR MEDICINE SYSTEM**9**

Radio Isotopes- alpha, beta, and gamma radiations. Radio Pharmaceuticals. Radiation detectors – gas filled, ionization chambers, proportional counter, GM counter and scintillation Detectors, Gamma camera- Principle of operation, collimator, photo multiplier tube, X-Y positioning circuit, pulse height analyzer. Principles of SPECT and PET.

UNIT V RADIATION THERAPY AND RADIATION SAFETY**9**

Radiation therapy – linear accelerator, Telegamma Machine. SRS –SRT,-Recent Techniques in radiation therapy - 3DCRT – IMRT – IGRT and Cyber knife- radiation measuring instruments- Dosimeter, film badges, Thermo Luminescent dosimeters- electronic dosimeter- Radiation protection in medicine- radiation protection principles.

FOR SEMESTER VIII (ELECTIVE-VI & VII)

18BEBME8E01

BIOLOGICAL SPECTROSCOPY

3 0 0 3

100

COURSE OBJECTIVE

- To develop the skills of students in the area of Biological spectroscopy.
- To learn various aspects of mass spectroscopy
- To Understand NMR Spectroscopy
- To Know various diffraction methods
- To Learn about Polarized light
- To understand optical rotation

COURSE OUTCOMES:

At the end of the course, the student would have learnt about

- various aspects of mass spectroscopy
- Understand about magnetic resonance imaging.
- Application of mass spectrometry
- X-ray diffraction.
- Familiarise optical rotation
- various kinds spectroscopic techniques to study biological system.

UNIT I OPTICAL ROTATORY DISPERSION

5

Polarized light – optical rotation – circular dichroism – circular dichroism of nucleic acids and proteins.

UNIT II NUCLEAR MAGNETIC RESONANCE

10

Chemical shifts – spin – spin coupling – relaxation mechanisms – nuclear overhauser effect – multidimensional NMR spectroscopy – determination of macromolecular structure by NMR – magnetic resonance imaging.

UNIT III MASS SPECTROMETRY

10

Ion sources sample introduction – mass analyzers and ion detectors – biomolecule mass spectrometry – peptide and protein analysis – carbohydrates and small molecules – specific applications.

UNIT IV X-RAY DIFFRACTION

10

Scattering by x- rays – diffraction by a crystal – measuring diffraction pattern – bragg reflection – unit cell – phase problem – anomalous diffraction – determination of crystal structure – electron and neutron diffraction.

UNIT V SPECIAL TOPICS AND APPLICATIONS

10

Electron microscopy – transmission and scanning electron microscopy – scanning tunneling and atomic force microscopy – combinatorial chemistry and high throughput screening methods.

TEXT BOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Campbell I.D and Dwek R.A	Biological Spectroscopy	Benjamin Cummins and	1986
2	Atkins P.W	Physical Chemistry	Oxford IV Edition	1990

COURSE OBJECTIVES:

- To study the various parts of robots and fields of robotics.
- To study the various kinematics and inverse kinematics of robots.
- To study the Euler, Lagrangian formulation of Robot dynamics.
- To study the trajectory planning for robot.
- To study the control of robots for some specific applications.
- Use Robots in different applications

COURSE OUTCOMES:

Upon completion of this course, students will be able to:

- Explain various kinds robotics techniques, vision, planning and applications.
- Outline the basic concept of robotics
- Identify and discuss the Robot Vision
- Describe about manipulators and kinematics.
- Demonstrate Task level programming
- Discuss the applications of robotic systems in medical field.

UNIT I BASIC CONCEPTS**(9)**

Definition and origin of robotics–different types of robotics–various generations of robots– degrees of freedom–Asimov’s laws of robotics–dynamic stabilization of robots.

UNIT II POWER SOURCES AND SENSORS**(9)**

Hydraulic, pneumatic and electric drives–determination of HP of motor and gear ratio–variable speed arrangements–path determination – micro machines in robotics– machine vision – ranging– laser–acoustic –magnetic, fiber optic and tactile sensors.

UNIT III MANIPULATORS, ACTUATORS AND GRIPPERS**(9)**

Construction of manipulators– manipulator dynamics and force control –electronic and pneumatic manipulator control circuits–end effectors–U various types of grippers –design considerations.

UNIT IV KINEMATICS AND PATH PLANNING**(9)**

Solution of inverse kinematics problem–multiple solution jacobian work envelop–hill Climbing Techniques– robot programming languages

UNIT V CASE STUDIES**(9)**

Multiple robots–machine interface–robots in manufacturing and non-manufacturing applications– robot cell design–selection of robot.

COURSE OBJECTIVE:

- To study and gain the knowledge of Nanotechnology in the field of medicine.
- To study and gain the knowledge of Cellular Nano machines and the Building Blocks of Life
- Know the Importance of various nano materials in health and medicine.
- To gain the knowledge of Molecular therapy
- To study Stem cell therapy,
- .Application of nanotechnology in health monitoring systems

COURSE OUTCOMES:

After learning the course the students should be able to understand:

1. Applications of nanotechnology health care and medicine.
2. Cellular Nano machines and the Building Blocks of Life
3. Importance of nanomaterials in drug delivery.
4. Application of nanomaterials and nanosystems in Medical Diagnostics and Therapeutics.
5. Know Application of nanotechnology in health monitoring systems.
6. Familiarise Cellular Nano machines

UNIT I INTRODUCTION (9)

Cellular Nano machines and the Building Blocks of Life, A New Generation of Nano tools, Importance of various nano materials in health and medicine.

UNIT II NANOPARTICLES FOR DIAGNOSTICS (9)

Nanoparticles in Medical Diagnostics and Therapeutics, Targeted drug delivery, Magnetic Nanoparticles as Contrast Agents for Medical Diagnosis, Liposome based delivery, Bio Inspired Nanomaterials for a New Generation of Medicine.

UNIT III THERAPEUTIC NANO DEVICES (9)

Definition and scope, Synthetic Approaches: top-down versus bottom-up Approaches for Nanotherapeutic Device Components, Applications for Nano therapeutic Devices.

UNIT IV NANOSYSTEMS FOR HEALTHCARE MONITORING – I (9)

Single-Molecule Detection Techniques for Monitoring Cellular Activity at the Nano scale Level, Nano probes, Integrated Cantilever-Based Biosensors for the Detection of Chemical and Biological Entities.

UNIT V NANOSYSTEMS FOR HEALTHCARE MONITORING – II (9)

Nano pore Methods for DNA Detection and Sequencing, Nano tube Based Membrane Systems, micro/nano fluidic systems for bio-object sorting, single chip electrophoresis system.

TEXT BOOK:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Tuan Vo-Dinh	Nanotechnology in Biology and Medicine: Methods, Devices and Applications	CRC press	2006

REFERENCE BOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Chala Kumar	Bio functionalization of nanomaterials	Wiley	2005
2	Charles Pooles, Frank J. Ownes	Introduction to Nanotechnology	Wiley	2003
3	Bharat Bhushan	Handbook of Nanotechnology	Springer	2003

COURSE OBJECTIVES:**To enable the students**

- To learn the fundamentals of tissue engineering and tissue repairing
- To acquire knowledge on clinical applications of tissue engineering
- To understand the basic concept behind tissue engineering focusing on the stem cells, biomaterials and its applications
- Overall exposure to the role of tissue engineering and stem cell therapy in organogenesis
- Ability to understand the components of the tissue architecture
- To learn the fundamentals of tissue engineering and tissue repairing

COURSE OUTCOMES:**Upon completion of this course, the students would get**

- Ability to understand the components of the tissue architecture
- Opportunity to get familiarized with the stem cell characteristics and their relevance in medicine
- Awareness about the properties and broad applications of biomaterials
- Overall exposure to the role of tissue engineering and stem cell therapy in organogenesis
- To learn the fundamentals of tissue engineering and tissue repairing
- To acquire knowledge on clinical applications of tissue engineering

UNIT I INTRODUCTION (9)

Introduction to tissue engineering: Basic definition; current scope of development; use in therapeutics, cells as therapeutic agents, cell numbers and growth rates, measurement of cell characteristics morphology, number viability, motility and functions. Measurement of tissue characteristics, appearance, cellular component, ECM component, mechanical measurements and physical properties.

UNIT II TISSUE ARCHITECTURE (9)

Tissue types and Tissue components, Tissue repair, Engineering wound healing and sequence of events. Basic wound healing Applications of growth factors: VEGF/angiogenesis, Basic properties, Cell-Matrix & Cell-Cell Interactions, telomeres and Selfrenewal, Control of cell migration in tissue engineering.

UNIT III BIOMATERIALS (9)

Biomaterials: Properties of biomaterials, Surface, bulk, mechanical and biological properties. Scaffolds & tissue engineering, Types of biomaterials, biological and synthetic materials, Biopolymers, Applications of biomaterials, Modifications of Biomaterials, Role of Nanotechnology.

UNIT IV BASIC BIOLOGY OF STEM CELLS (9)

Stem Cells: Introduction, hematopoietic differentiation pathway Potency and plasticity of stem cells, sources, embryonic stem cells, hematopoietic and mesenchymal stem cells, Stem Cell markers, FACS

analysis, Differentiation, Stem cell systems- Liver, neuronal stem cells, Types & sources of stem cell with characteristics: embryonic, adult, haematopoietic, fetal, cord blood, placenta, bone marrow, primordial germ cells, cancer stem cells induced pluripotent stem cells.

UNIT V (9) **CLINICAL APPLICATIONS**

Stem cell therapy, Molecular therapy, In vitro organogenesis, Neurodegenerative diseases, spinal cord injury, heart disease, diabetes, burns and skin ulcers, muscular dystrophy, orthopedic applications, Stem cells and Gene therapy Physiological models, tissue engineered therapies, product characterization, components, safety, efficacy. Preservation –freezing and drying. Patent protection and regulation of tissue engineered products, sethical issues.

COURSE OBJECTIVES:

- To introduce speech production and related parameters of speech.
- To show the computation and use of techniques such as short time Fourier transform, linear predictive coefficients and other coefficients in the analysis of speech.
- To understand different speech modeling procedures such as Markov and their implementation issues.
- To introduce the models of speech production and acoustic phonetics
- . To teach time and frequency domain techniques for estimating speech parameters
- To teach predictive techniques for speech coding

COURSE OUTCOMES:

Upon completion of the course, students will be able to

- Model speech production system and describe the fundamentals of speech.
- Extract and compare different speech parameters.
- Choose an appropriate statistical speech model for a given application.
- Design a speech recognition system.
- Use different speech synthesis techniques.
- .Analyze application of speech processing in speech compression, speech recognition, and speech synthesis

UNIT I BASIC CONCEPTS**9**

Speech Fundamentals: Articulatory Phonetics – Production and Classification of Speech Sounds; Acoustic Phonetics – Acoustics of speech production; Review of Digital Signal Processing concepts; Short-Time Fourier Transform, Filter-Bank and LPC Methods.

UNIT II SPEECH ANALYSIS**9**

Features, Feature Extraction and Pattern Comparison Techniques: Speech distortion measures– mathematical and perceptual – Log–Spectral Distance, Cepstral Distances, Weighted Cepstral Distances and Filtering, Likelihood Distortions, Spectral Distortion using a Warped Frequency Scale, LPC, PLP and MFCC Coefficients, Time Alignment and Normalization – Dynamic Time Warping, Multiple Time – Alignment Paths.

UNIT III SPEECH MODELING**9**

Hidden Markov Models: Markov Processes, HMMs – Evaluation, Optimal State Sequence – Viterbi Search, Baum-Welch Parameter Re-estimation, Implementation issues.

UNIT IV SPEECH RECOGNITION**9**

Large Vocabulary Continuous Speech Recognition: Architecture of a large vocabulary continuous speech recognition system – acoustics and language models – n-grams, context dependent sub-word units; Applications and present status.

UNIT V SPEECH SYNTHESIS**9**

Text-to-Speech Synthesis: Concatenative and waveform synthesis methods, sub-word units for TTS, intelligibility and naturalness – role of prosody, Applications and present status.

OBJECTIVE:

- Generating a good understanding of RP history, its development and applications.
- To expose the students to different types of Rapid prototyping processes,
- Materials used in RP systems and reverse engineering.
- To provide knowledge on different types of Rapid Prototyping systems and its applications in various fields
- Understand Selective Laser Sintering
- Know Direct shell production casting

OUTCOME:

- To provide knowledge on different types of Rapid Prototyping systems and its applications in various fields
- Generating a good understanding of RP history, its development and applications.
- To expose the students to different types of Rapid prototyping processes,
- Materials used in RP systems and reverse engineering.
- Familiarise Laser Engineered Net Shaping (LENS).
- Know medical data processing

UNIT I INTRODUCTION**9**

History – Development of RP systems – Applications in Product Development, Reverse Engineering, Rapid Tooling, Rapid Manufacturing- Principle – Fundamental – File format – Other translators – medical applications of RP - On demand manufacturing – Direct material deposition - Shape Deposition Manufacturing.

UNIT II LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEMS**9**

Classification – Liquid based system - Stereolithography Apparatus (SLA), details of SL process, products, Advantages, Limitations, Applications and Uses. Solid based system - Fused Deposition Modeling, principle, process, products, advantages, applications and uses - Laminated Object Manufacturing

UNIT III POWDER BASED RAPID PROTOTYPING SYSTEMS**9**

Selective Laser Sintering – principles of SLS process, principle of sinter bonding process, Laser sintering materials, products, advantages, limitations, applications and uses. Three Dimensional Printing – process, major applications, research and development. Direct shell production casting – key strengths, process, applications and uses, case studies, research and development. Laser Sintering System, e-manufacturing using Laser sintering, customized plastic parts, customized metal parts, e-manufacturing - Laser Engineered Net Shaping (LENS).

UNIT IV MATERIALS FOR RAPID PROTOTYPING SYSTEMS**9**

Nature of material – type of material – polymers, metals, ceramics and composites- liquid based materials, photo polymer development – solid based materials, powder based materials - case study.

UNIT V REVERSE ENGINEERING and NEW TECHNOLOGIES**9**

Introduction, measuring device- contact type and non-contact type, CAD model creation from point clouds-preprocessing, point clouds to surface model creation, medical data processing - types of medical imaging, software for making medical models, medical materials, other applications – Case study.

COURSE OBJECTIVES:**The student should be made to:**

- Learn various MEMS fabrication techniques.
- Understand different types of sensors and actuators and their principles of operation at the micro scale level.
- Know the application of MEMS in different field of medicine.
- Discuss various MEMS fabrication techniques.
- Explain different types of sensors and actuators and their principles of operation at the micro Scale level.
- Apply MEMS in different field of medicine.

COURSE OUTCOMES:**At the end of the course, the student should be able to:**

- Discuss various MEMS fabrication techniques.
- Explain different types of sensors and actuators and their principles of operation at the micro Scale level.
- Apply MEMS in different field of medicine.
- Learn various MEMS fabrication techniques.
- Understand different types of sensors and actuators and their principles of operation at the micro scale level.
- Know the application of MEMS in different field of medicine.

UNIT I MEMS MATERIALS AND FABRICATION**9**

Typical MEMs and Microsystems, materials for MEMS - active substrate materials-Silicon and its compounds, Silicon piezoresistors, Gallium Arsenide, quartz, polymers. Micromachining photolithography, thin film deposition, doping, etching, bulk machining, wafer bonding, LIGA

UNIT II MECHANICAL AND THERMAL SENSORS AND ACTUATORS**9**

Mechanics for MEMs design- static bending of thin plates, mechanical vibration, thermomechanics, fracture and thin film mechanics. Mechanical sensors and actuators – beam and cantilever – microplates, strain, pressure and flow measurements, Thermal sensors and actuators- actuator based on thermal expansion, thermal couples, thermal resistor, Shape memory alloys- Inertia sensor, flow sensor

UNIT III ELECTROSTATIC AND PIEZOELECTRIC SENSORS AND ACTUATORS**9**

Parallel plate capacitor, pull in effect, Electrostatic sensors and actuators- Inertia sensor, Pressure sensor, flow sensor, tactile sensor, comb drive. Properties of piezoelectric materials, Piezoelectric sensor and actuator – inchworm motor, inertia sensor, flow sensor.

UNIT IV MICROFLUIDIC SYSTEMS**9**

Fluid dynamics, continuity equation, momentum equation, equation of motion, laminar flow in circular conduits, fluid flow in microconduits, in submicrometer and nanoscale. Microscale

fluid, expression for liquid flow in a channel, fluid actuation methods, dielectrophoresis, microfluid dispenser, microneedle, micropumps-continuous flow system, micromixers

UNIT V APPLICATIONS OF BIOMEMS

9

CAD for MEMs, Drug delivery, micro total analysis systems (MicroTAS) detection and measurement methods, microsystem approaches to polymerase chain reaction (PCR), DNA sensor, MEMS based drug delivery

Total : 45

OBJECTIVES:**The student should be made to:**

- Learn how to value intangible assets, taking into account their commercial potential and legal status.
- Explore the legal & business issues surrounding marketing of new products related to technology.
- Review an intellectual property portfolio and comprehend the extent of their protection.
- Develop a business plan that advances the value of their intellectual property portfolio
- Develop a strategy of marketing their intellectual property and understand some negotiation basics.
- Explain some of the limits of their intellectual property rights and comprehend some basic legal pitfalls.

OUTCOMES:**Upon completion of the course, students will be able to:**

- Review an intellectual property portfolio and comprehend the extent of their protection.
- Develop a business plan that advances the value of their intellectual property portfolio
- Learn how to value intangible assets, taking into account their commercial potential and legal status.
- Explore the legal & business issues surrounding marketing of new products related to technology.
- Develop a strategy of marketing their intellectual property and understand some negotiation basics.
- Explain some of the limits of their intellectual property rights and comprehend some basic legal pitfalls.

UNIT I INTRODUCTION**9**

Introduction – Invention and Creativity – Intellectual Property (IP) – Importance – Protection of IPR – Basic types of property (i) Movable Property (ii) Immovable Property and (iii) Intellectual Property.

UNIT II PATENTS, COPYRIGHTS AND TRADEMARKS**9**

IP – Patents – Copyrights and related rights – Trade Marks and rights arising from Trademark registration – Definitions – Industrial Designs and Integrated circuits – Protection of Geographical Indications at national and International levels – Application Procedures.

UNIT III INTERNATIONAL STANDARDISATION**9**

International convention relating to Intellectual Property – Establishment of WIPO – Mission and Activities – History – General Agreement on Trade and Tariff (GATT).

UNIT IV INDIAN STRATEGIES**9**

Indian Position Vs WTO and Strategies – Indian IPR legislations – commitments to WTO-Patent Ordinance and the Bill – Draft of a national Intellectual Property Policy – Present against unfair

competition.

UNIT V CASE STUDIES

9

Case Studies on – Patents (Basmati rice, turmeric, Neem, etc.) – Copyright and related rights – Trade Marks – Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition.

Total : 45

TEXT BOOK:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Subbaram N.R	Handbook of Indian Patent Law and Practice	S. Viswanathan, Printers and Publishers Pvt. Ltd	1998

REFERENCES:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Eli Whitney	United States Patent Number: 72X	Cotton Gin	March 14, 1794
2	Derwent IP Matters	Using the Internet for non-patent prior art searches	-	July 2000.

COURSE OBJECTIVE

- To impart Adequate knowledge on there presentation and structures of artificial intelligence and to study in depth about the expert systems and its tools.
- To present an overview of artificial intelligence (AI) principles and approaches.
- Develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents: Search, Knowledge representation, inference, logic, and learning.
- Students will implement a small AI system in a team environment. The knowledge of artificial intelligence plays a considerable role in some applications students develop for courses in the program.
- To impart Knowledge Representation: Predicate Logic: Unification, modus ponens, resolution, and dependency directed backtracking.
- To develop understanding of Rule based Systems: Forward reasoning: Conflict resolution, backward reasoning: use of no backtrack.

LEARNING OUTCOMES:

Upon successful completion of this course student will:

- be able to design a knowledge based system, be familiar with terminology used in this topical area
- have read and analyzed important historical and current trends addressing artificial intelligence.
- To Handling uncertainty: Non-Monotonic Reasoning, Probabilistic reasoning, and use of certainty factors.
- Learning Concept automation, genetic algorithm,
- Know Knowledge discovery in database.
- Familiarise learning by inductions, neural nets.

UNIT I AI & INTERNAL REPRESENTATION

9

The AI problem– What is AI technology– Level of the Model–Criteria for Success problems, Problem Spaces & Searches & Heuristic Search Technology Problem as a State Space Search–Production Systems– Production System Characteristics– Generate & Test– Hill Climbing –Best First Search–Constraint Satisfaction– Means End Analysis.

UNIT2 KNOWLEDGE REPRESENTATION

9

Issues in Knowledge Representation – Using Predicate Logic– Representing Simple Facts in Logic, Representing Instance & Isa Relationship–Computable Functions & I Predicates–Representing Knowledge Using Rules: Procedural Vs. Declarative Knowledge– Forward Vs. Backward Reasoning.

UNIT3 SLOT & FILLER STRUCTURES

9

Weak Slot & Filler– Semantic Nets– Frames Strong & filler Structures– Scripts– CYC–CYCL

UNIT4 EXPERT SYSTEMS

9

What are Expert Systems– Knowledge Representation in Expert Systems– Symbolic Computation–Rule based Systems

UNIT5 TOOLS FOR BUILDING EXPERT SYSTEMS

9

Using Domain Knowledge– Knowledge Acquisition– Design for Explanation–Black Board Architecture– Truth Maintenance Systems–Machine Learning– Case based Reasoning

Total : 45

TEXT/REFERENCEBOOKS

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Elaine Rich, Kevin Knight	Artificial Intelligence	2 nd Edition, Tata McGraw Hill	1992
2	Peter Jackson,	Introduction to Expert Systems	3 rd Edition, Addison Wesley, 1 st Indian Reprint	2000

COURSE OBJECTIVES:

The student should be made to:

- Understand biological and statistical foundations of neural networks,
- Learn Perceptron, MLPs, SVMs, RBFN and competitive learning
- Introduce major deep learning algorithms, the problem settings,
- Neural networks applications to solve real world problems.
- Design ANN for some basic logical operations.
- Understand the concept of learning in AI and ANN based systems.

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Explain the mathematical foundations of neural network models.
- Design and implement neural network systems to solve real-world problems.
- Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.
- Implement deep learning algorithms and solve real-world problems.
- Get the idea about how ANN can be applied in various fields of technology including bioinformatics, communication etc.
- Understand how artificial neural network arise from biological neuron.

UNIT I NEURON MODEL NETWORK ARCHITECTURE**9**

Neuron model – single input neuron –activation function – multiple input neuron neural networks viewed as directed graphs -feedback - network architectures – knowledge representation – linear and non- linear separable problem(XOR)

UNIT II LEARNING PROCESS**9**

Error – correction learning – memory based learning - Hebbian learning-competitive learning- Boltzmann learning-credit assignment problem-supervised and unsupervised learning-adaptation statistical learning theory.

UNIT III PERCEPTRONS**9**

Single layer perceptron-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Learning curve-Annealing Technique-perception convergence theorem- Relationship between perceptron and Baye's classifier-Back propagation algorithm- Network pruning techniques-supervised learning viewed as an optimization problem convolutional network. Application to Adaptive Prediction and character recognition.

UNIT IV ATTRACTOR NEURAL NETWORK AND ART**9**

Hopfield model-BAM model-BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem-Leaning law L1-L2- Leaning law L2-L1-ART algorithm-ARTMAP

UNIT V PRINCIPAL COMPONENT ANALYSIS AND SELF ORGANIZATION 9

Principle of self organization-Principle Component analysis-Adaptive PCA using Lateral inhibition-
Two classes of PCA algorithm-Two basic feature- mapping model-self organizing map-SOM
Algorithm properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-
organizing maps: The Neural Phonetic Typewriter- Learning Ballistic Arm Movements

LIST OF OPEN ELECTIVES OFFERED BY
SCIENCE AND HUMANITIES DEPARTMENT

18BESH0E01

PROBABILITY AND RANDOM PROCESS

3 0 0 3

100

COURSE OBJECTIVES:

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes.
- To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in IT fields.
- To understand the concept of correlation and spectral densities.

COURSE OUTCOMES:

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.
- To understand the significance of linear systems with random inputs.
- Apply the concept random processes in engineering disciplines.
- Understand and apply the concept of correlation and spectral densities.
- The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable.

UNIT I MEASURES OF CENTRAL TENDENCY AND PROBABILITY (9)

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability – Random variable - Axioms of probability - Conditional probability – Total probability – Baye's theorem.

UNIT II STANDARD DISTRIBUTIONS (9)

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – *Chebyshev's inequality*.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES (9)

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT IV CLASSIFICATION OF RANDOM PROCESS**(9)**

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT V CORRELATION AND SPECTRAL DENSITIES**(9)**

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

2. www.mathcentre.ac.uk
3. www.mathworld.Wolfram.com

COURSE OBJECTIVES:

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To understand the concepts of Probability Measures vs Possibility Measures

COURSE OUTCOME:

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyze the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS**(9)**

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS**(9)**

Operations on Fuzzy Sets Operations on $[0, 1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS**(9)**

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES**(9)**

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE**(9)**

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

COURSE OBJECTIVES:

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To understand the importance of Linear Algebra and its applications in branches of Mathematics

COURSE OUTCOMES:

The student will be able to

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES (9)

General vector spaces, real vector spaces, Euclidean n -space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS (9)

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS (9)

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS (9)

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations - Similarity - Eigenvalues and Eigenvectors
Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES (9)

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

COURSE OBJECTIVES:

- To disseminate the fundamentals of acoustic waves. (K)
- To inculcate the characteristics of radiation and reception of acoustic waves. (K)
- To divulge knowledge on the basics of pipe resonators and filters.(S)
- To introduce the features of architectural acoustics.(S)
- To impart the basic knowledge of transducers and receivers.(K)
- To introduce the applications of Engineering acoustics

COURSE OUTCOME:

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics..
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION**9**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales.Reflection and Transmission:Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**9**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers.Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS**9**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**9**

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

Transducer as an electives network – canonical equation for the two simple transducers
transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser –
microphone – moving coil electrodynamics microphone piezoelectric microphone –
calibration of receivers

2. www.acoustics-engineering.com
3. www.nptel.ac.in
4. www.ocw.mit.edu

Course Objectives:

- To make the students conversant with basics of Solid waste and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand the chemical principles in field of engineering and technology

Course Outcome:

- Outline the basic principles of Solid waste and separation of wastes (K)
- Identify the concepts of treatment of solid wastes(S)
- Identify the methods of wastes disposals.(S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE**9**

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT**9**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL**9**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT**9**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE**9**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

COURSE OBJECTIVES:

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basics information on catalysis.
- To understand the chemical principles in in field of engineering and technology

COURSE OUTCOMES:

- Outline the basic principles of green chemistry (K)
- Examine the different atom efficient process and synthesis elaborately (S)
- Apply the concepts combustion of green technology (S)
- Identify and apply the concepts of renewable energy(S)
- Apply the concepts of green catalysts in the synthesis (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**9**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluoruous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES**9**

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY**9**

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air.Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES**9**

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY**9**

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

COURSE OBJECTIVES:

- To make the students conversant with the information on electrochemical material.
- To make the student acquire sound knowledge of conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principles of solar cells and its applications
- To understand about electrochemical material science

COURSE INTENDED OUTCOME:

- Outline the basic principles of chemistry in electrochemical material (K)
- Examine the properties of conducting polymers(S)
- Apply the concepts of electrochemistry in storage devices.(S)
- Identify the concepts of storage devices and its applications. (S)
- Apply the suitable materials for the manufacturing of storage devices. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING**9**

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS**9**

Electropolymerization- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I**9**

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II**9**

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries, Lithium ion batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE**9**

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

Course Objectives:

- To make the students conversant with cement and lime and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts explosives.
- To acquaint the students with the basics of agriculture chemicals.
- To understand the chemical principles in in field of engineering and technology

Course Outcomes:

- Outline the basic chemistry of cement and lime (K)
- Examine the uses of abrasives and refractories (S)
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens(S)
- Identify the usage of the agriculture chemicals(S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME**9**

Manufacture of Portland cement – setting of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES**9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**9**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS**9**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

PURPOSE:

It provides techniques of writing and also trains the students to write without their influence of mother tongue. In addition to honing their skills as professional writers, students will develop technical vocabularies that will aid writing research articles and discussing articles produces by their peers.

COURSE OBJECTIVE:

- Develop abilities to write technically and expressively.
- Recognize writing as a constructive, meaningful process.
- Practise using reading strategies for effective writing.
- To develop communication skills
- Understand grammar and usage of various phrases and idioms
- Construct simple sentences, correct common grammatical errors in written English

COURSE OUTCOMES:

Students undergoing this course are able to

- Construct simple sentences, correct common grammatical errors in written English.
- Build confidence in English language by imbibing lexical and syntax rules.
- Enrich their reading ability for effective writing.
- Read and review technical papers
- Write technical papers by their own
- face technical interviews with confidence

UNIT I BASICS OF WRITING**9**

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer's block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT II PARAGRAPHS AND ESSAYS**9**

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT III LETTERS, MEMOS AND EMAIL**9**

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT IV THE ART OF CONDENSATION AND TECHNICAL PROPOSALS**9**

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT V REPORTS AND RESEARCH ARTICLES**9**

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

LIST OF OPEN ELECTIVES OFFERED BY
COMPUTER SCIENCE ENGINEERING DEPARTMENT

	L	T	P	C
18BEC SOE01				
INTERNET PROGRAMMING				
	3	0	0	3

COURSE OBJECTIVE:

- To introduce the Java programming language and explore its current strengths and Weaknesses
- To study the way that object-oriented concepts are implemented in the Java programming language
- To write working Java code to demonstrate the use of applets for client side programming
- To study the way that exceptions are detected and handled in the Java programming language
- To write working Java code that demonstrates multiple threads of execution
- To understand about various Internet applications

COURSE OUTCOME

- Know Java programming language and explore its current strengths and Weaknesses
- Learn about object-oriented concepts
- Learn Java code to demonstrate the use of applets for client side programming
- To study the way that exceptions are detected and handled in the Java programming language
- know Java code that demonstrates multiple threads of execution
- To understand about various Internet applications

UNIT I INTRODUCTION

9

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Sub netting and addressing- Classful and Classless Addressing, Sub netting

UNIT II HTML

9

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Color name, Color value. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction-

UNIT III PERL

9

Introduction, Variable, Condition, Loop, Array, implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING

9

Client-Server programming in Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY

9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TEXTBOOKS:

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Paul Deitel, Harvey Deitel and Abby Deitel	Internet and World Wide Web-How to Program 5 th Edition	Dorling Kindersley pvt Ltd	2011
2.	N.P. Gopalan and J. Akilandeswari	Web Technology: A Developer's Perspective	PHI Learning	2013

REFERENCES:

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Rahul Banerjee	Internetworking Technologies, An Engineering Perspective	PHI Learning, Delhi	2011
2.	Robert W. Sebesta	Programming the World Wide Web	Pearson Education	2016

COURSE OBJECTIVE:

- To study the graphics techniques and algorithms
- To study the multimedia concepts and various I/O technologies.
- To enable the students to develop their creativity
- To impart the fundamental concepts of Computer Animation and Multimedia.
- To understand Techniques of Animation
- Learn about different 3D Animation

COURSE OUTCOMES:

After the course the student will be able to:

- Get Familiarised With Animation
- Types Of 3D Animation
- Know about motion caption
- Work With The Timeline And Tween-Based Animation
- Learn about 3D Animation
- Master the techniques of computer animation and multimedia

UNIT I INTRODUCTION**9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH**9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS**9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage
– Different Language of Script Animation Among the Software.

UNIT V CONCEPT DEVELOPMENT**9**

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total: 45**TEXTBOOK:**

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Malay K. Pakhira	Computer Graphics, Multimedia and Animation	PHI Learning PVT Ltd	2010

REFERENCES:

S.NO	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Ranjan Parekh	Principles of Multimedia	TMH	2007
2.	Ashok Banerji, Ananda Mohan Ghosh	Multimedia Technologies	McGraw Hill Publication	2010
3.	Pankaj Dhaka	Encyclopedia of Multimedia and Animations	Anmol Publications	2011

COURSE OBJECTIVES:

- Assemble/setup and upgrade personal computer systems
- Perform installation, configuration, and upgrading of microcomputer hardware and software.
- Install/connect associated peripherals.
- Diagnose and troubleshoot microcomputer systems hardware and software, peripheral equipment.
- Know Multitasking and Multiprogramming
- Familiarise Various Types of faults

COURSE OUTCOMES**After the course student will be able to:**

- Familiarise Special Peripherals.
- Know Computer Organization
- Know about Memory Space
- Familiarise Motherboard Logic
- Know Programmable LSI's
- Know about Data Recovery.

UNIT I INTRODUCTION**9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES**9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW**9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE**9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V TROUBLESHOOTING**9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

S.NO.	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	B. Govindarajalu	IBM PC Clones Hardware, Troubleshooting and Maintenance	TMH	2002

REFERENCES:

S.NO.	Author(s) Name	Title of The Book	Publisher	Year of Publication
1.	Peter Abel, NiyazNizamuddin	IMB PC Assembly Language and Programming	Pearson Education	2007
2.	Scott Mueller	Repairing PC's	PHI	1992

COURSE OBJECTIVES:

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development.
- Have the ability to write a computer program to solve specified problems.
- Be able to use the Java SDK environment to create, debug and run simple Java programs
- To understand Object oriented programming concepts

COURSE OUTCOMES:**After the course student will be able to:**

- Familiar with programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java and work with 2D shapes
- Be familiar with Arrays – Strings - Packages
- Have the ability to write a computer program to solve specified problems.
- Work on Java SDK environment to create, debug and run simple Java programs
- To understand abstract classes

UNIT I INTRODUCTION TO JAVA**9**

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members –constructors – finalize method

UNIT II PACKAGES**9**

Arrays – Strings - Packages – Java-Doc comments – Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS**9**

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING**9**

Exceptions – Syntax of exception handling code – Multiple catch statements – Using finally statements – Throwing our own exceptions – Using exceptions for debugging

UNIT V THREADS**9**

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

LIST OF OPEN ELECTIVES OFFERED BY
ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT

18BEEEOE01 ELECTRIC HYBRID VEHICLES L T P C 3 0 0 3

COURSE OBJECTIVES:

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To understand and gain the knowledge about various energy storage devices.
- To know the concept of electric hybrid vehicle
- Understand the various energy storage schemes
- Know about the various fuel efficiency schemes

COURSE OUTCOMES:

- At the end of the course the student will be understand the concept of electric hybrid vehicle and its energy storage schemes.
- Battery based energy storage and its analysis,
- Familiarise Fuel Cell based energy storage and its analysis
- Super Capacitor based energy storage and its analysis,
- Understand Flywheel based energy storage and its analysis,
- Know Hybridization of different energy storage devices.

UNIT I INTRODUCTION

9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motr drives, drive system efficiency.

UNIT IV ENERGY STORAGE

9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES**9**

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Total: 45**TEXTBOOK:**

S. NO.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Iqbal Hussein	Electric and Hybrid Vehicles: Design Fundamentals	CRC Press – 2 nd edition	2010

REFERENCES:

1	MehrdadEhsani, YimiGao, Sebastian E. Gay, Ali Emadi	Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design	Standardsmedia – 2 nd edition	2009
2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley – 2 nd edition	2012

COURSE OBJECTIVES:

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To understand and gain the knowledge about various energy storage devices.
- To know the concept of electric hybrid vehicle
- Understand the various energy storage schemes
- Know about the various fuel efficiency schemes

COURSE OUTCOMES:

At the end of the course the student will be

- understand the concept of electric hybrid vehicle and its energy storage schemes.
- Battery based energy storage and its analysis,
- Familiarise Fuel Cell based energy storage and its analysis
- Super Capacitor based energy storage and its analysis,
- Understand Flywheel based energy storage and its analysis,
- Know Hybridization of different energy storage devices.

UNIT I ENERGY MANAGEMENT**9**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS**9**

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT**9**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS**9**

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY

INSTRUMENTS

9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice-lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

S. NO.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	Energy Management	Heinemann Publications	2007

REFERENCES:

S. NO.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	Lulu Enterprises, Inc. - 8th Edition Volume II	2013

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment
Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Digital logic gates programming holding registers input registers, output registers.
PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

|---|

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes.Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

LIST OF OPEN ELECTIVES OFFERED BY
ELECTRONICS AND COMMUNICATION ENGINEERING

18BEECOE01

REAL TIME EMBEDDED SYSTEMS

L T P C 100

3 0 0 3

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To impart knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

9

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems- embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW

9

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks-Real Time Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion–Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management– Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

9

Introduction–µ C/OS-II Features-Goals of µ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under µ C/OS-II –Clock Tick–µ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks– Stack Checking–Task’s Priority–Suspending Task–Resuming Task. Time Management: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING**9**

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. MessageMailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT**9**

Memory Management: Memory Control Blocks–Creating Partition–Obtaining a Memory Block–Returning a Memory Block. Getting Started withµ C/OS-II–Installingµ C/OS-II–Portingµ C/OS-II:Development Tools–Directories and Files– Testing a Port -IAR Workbench withµ C/OS-II-µ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling andRescheduling –Analyze the Multichannel ADC with help ofµ C/OS-II.

2	Sriram V Iyer, Pankaj Gupta	Embedded Real Time Systems Programming	Tata McGraw Hill	2004

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNITII TELEVISION STANDARDS AND SYSTEMS 9

Components of a TV system–interlacing–composite video signal.Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNITIII OPTICAL RECORDING AND REPRODUCTION 9

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNITIV TELECOMMUNICATION SYSTEMS 9

Telephone services-telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network.Wireless Local Loop.VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNITV HOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software; Components of air conditioning and refrigeration systems.

REFERENCE:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Philip Hoff, Philip Herbert Hoff.	Consumer Electronics for Engineers.	Cambridge University Press	1998

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve

UNIT I INTRODUCTION TO NEURAL NETWORKS**9**

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT II LEARNING PROCESS**9**

Error– correction learning– memory based learning- hebbian learning-competitive learning-Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION**9**

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm- Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART**9**

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT V SELF ORGANIZATION**9**

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

3	Wasserman P.D	Neural Computing Theory & Practice	Van Nortrand Reinhold	1989
4	Freeman J.A., S kapura D.M	Neuralnetworks, algorithms, applications, and programming techniques.	AdditionWesley	2005

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy inference and defuzzy inference procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT I**9**

Basics of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II**9**

Theory of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III**9**

Fuzzy Knowledge Based Controllers (FKBC): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy inference and defuzzy inference procedures– Design of Fuzzy Logic Controller

UNIT IV**9**

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Self organizing controller model based controller.

UNIT V**9**

Fuzzy based systems: Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

UNIT V SEPARATIONEQUIPMENTS

TEXTBOOKS:

S.NO.	Author(s)Name	Titleofthebook	Publisher	YearofPublicatio
1	James Edwin Bailey, DavidF.Ollis	Biochemical Engineering Fundamentals	McGraw- Hill	2007
2	DonW.Green,RobertH.Perry	Chemical Engineer Handbook	The McGraw- HillCompanies, Inc.	2008

REFERENCE:

S.NO	Author(s)Name	Titleofthebook	Publisher	Year of Publications
1	Pauline.M.Doran	BioprocessEngineering Principles	Academic Press	2013

OBJECTIVES:

- To understand the importance of food processing
- To make the students learn the various processing and preservation techniques.
- Understand various Pasteurization and Freezing techniques
- Learn about Infrared radiation processing-
- Concepts and equipment used. In various food processing methods
- Learn about preservation of fruits and vegetables

INTENDED OUTCOMES:

The students are exposed to

- Properties of Food material.
- Various methods used for preserving Fruits and vegetables
- Learn about chemical preservation
- Know food preservation by cooling methods
- Learn about Food irradiation
- Understand fermentation techniques

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING 9

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS 9

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- microwave processing and aseptic processing- Infrared radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS 9

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING 9

Refrigeration, Freezing- Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES 9

Preprocessing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

2	B. Sivasankar	Food processing and preservation	PHI Learning Pvt. Ltd	2002

COURSE OBJECTIVES:

- To enable the students to get aware of available tools and data bases for performing research in bioinformatics.
- To provide the thorough understanding of protein structure in detail.
- bioinformatics at a level appropriate for biology majors having completed the lower-division core, and for chemistry, computer science, and math majors with an interest in biology.
- the chemical principles that underlie biochemistry, molecular biology and genomics,
- the design and implementation of relational databases
- the construction of predictive mathematical models of biological systems.

COURSE OUTCOMES:

At the end of the course,

- The students will understand the importance of Bioinformatics in various sectors.
- The students will be exposed to biological database management and microarray technology.
- Understand advanced methods in computational biology
- Be capable of using critical thinking and research methods in Bioinformatics to understand computational and experimental data
- Demonstrate the ability to produce and present original research in Bioinformatics.
- preparation for and presentations at scientific meetings, and graduate seminars, student seminars, and qualifying examinations.

UNIT I OVERVIEW OF BIOINFORMATICS**9**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases—contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**9**

Data retrieval with Entrez & DBGET/LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS**9**

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS**9**

Conceptual model of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS**9**

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharmainformatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

1	Michael J. Korenberg	Microarray Data Analysis: Methods and Applications	Springer Science & Business Media	2007

COURSE OBJECTIVES:

- To develop skills of the students in the field of nano biotechnology and its applications in various fields.
- The course will serve as an effective course to understand Socio-economic issues of Nanobiotechnology.
- Scope of nanoparticles in biomedical field
- Ethical issues working with nanoparticles
- Learn about nanosurgical devices
- Benefits and challenges in Molecular manufacturing:

COURSE OUTCOMES:

At the end of the course,

- The students will be able to identify the potential areas where nanoparticles can be utilized.
- The students will be exposed to the ethical issues regarding the use of nanoparticles.
- Learn Techniques to Synthesize Nanoparticles
- Learn about nanosurgical devices
- Familiarise MEMS/NEMS
- Know about various lithographic techniques

UNIT I INTRODUCTION**(9)**

Introduction, Scope and Overview, Length scales, Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANOPARTICLES**(9)**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self-assembled monolayers/Dip-pen Nanolithography, Soft Lithography, PDMS Molding, Nanoparticles, Nanowires and Nanotubes.

UNIT III APPLICATIONS**(9)**

Nanomedicine, Nanobiocensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNITIV NANOBIO TECHNOLOGY**(9)**

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors-Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubes. Nanosurgical devices.

UNITV ETHICAL ISSUES IN NANOTECHNOLOGY**(9)**

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

COMPUTER AIDED DESIGN

L T P C
3 0 0 3

Course Objective

- To apply basic concepts to develop construction (drawing) techniques.
- To ability to manipulate drawings through editing and plotting techniques.
- To understand geometric construction and Produce template drawings.
- To understand and demonstrate dimensioning concepts and techniques.
- To understand Section and Auxiliary Views.
- To become familiar with Solid Modelling concepts and techniques.

Course Outcome

- Apply basic concepts to develop construction (drawing) techniques.
- Ability to manipulate drawings through editing and plotting techniques.
- Understand geometric construction and Produce template drawings.
- Understand and demonstrate dimensioning concepts and techniques
- Understand Section and Auxiliary Views
- Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS

9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS

9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING

9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of

solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION 9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V **PRODUCT DESIGN AND DEVELOPMENT** **9**

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

6	Rao S S	Optimisation Techniques	Wiley Eastern, New Delhi	2003

Course Objective

- To recognize and evaluate occupational safety and health hazards in the workplace.
- To determine appropriate hazard controls following the hierarchy of controls.
- To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

- Recognize and evaluate occupational safety and health hazards in the workplace.
- Determine appropriate hazard controls following the hierarchy of controls.
- Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- Prevent or mitigate harm or damage to people, property, or the environment

UNIT I INTRODUCTION TO LOGISTICS**9**

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN**9**

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS**9**

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES**9**

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM**9**

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP, - Case study, ERP Software's

2	Steudel.H.J and Desruelle.P	Manufacturing in the nineteen - How to become a mean, lean and world class competitor	Van No strand Reinhold, New York	1992

Course Objective

- To generalized equations for mass, momentum and heat.
- To understand the concepts of Reynolds and Gauss theorems.
- To learn combined diffusive and convective transport.
- To apply Film- and penetration models for mass and heat transfer.
- To apply Stefan-Maxwells equations for multi-component diffusion.
- To Solve the given set of equations either analytically or numerically.

Course Outcome

- Generalized equations for mass, momentum and heat.
- Understand the concepts of Reynolds and Gauss theorems.
- Learn combined diffusive and convective transport.
- Apply Film- and penetration models for mass and heat transfer.
- Apply Stefan-Maxwells equations for multi-component diffusion.
- Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT**9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

Course Objective

- To describe the principles of the study of human movement.
- To describe the range of factors that influence the initiation, production and control of human movement.
- To identify the body's lever systems and their relationship to basic joint movement and classification.
- To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- To relate the different body systems necessary for human movement to occur.

Course Outcome

- Describe the principles of the study of human movement.
- Describe the range of factors that influence the initiation, production and control of human movement.
- Identify the body's lever systems and their relationship to basic joint movement and classification.
- Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM**9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

NON-DESTRUCTIVE TESTING

L T P C
3 0 0 3

Course Objectives:

- To provide knowledge on the basic principles of NDT.
- To develop a basic knowledge about various NDT techniques.
- To learn the different NDT process parameters.
- To familiarise with internal flaws.
- To provide knowledge on common defects in manufacturing process
- To provide knowledge on standards and specifications

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Understand the basic principles of various NDT methods, fundamentals, importance of NDT
- Explain the appropriate NDT technique as per requirement.
- Knowledge to set various process parameters and control the NDT process for the desired output parameters.
- The student shall be able to find the internal flaws in the material by NDT and take measures to eliminate them.
- Ability to solve various problems encountered like leakage, cracks, blowholes etc with the manufacturing process by analyzing the data.
- Describe the standards and specifications related to non-destructive testing technology.

UNIT I INTRODUCTION

9

Properties of Materials – Characteristics of Ferrous, Non-ferrous and Alloys. Destructive testing and Non-destructive testing – Classification – Uses and applications. Codes, Standards and Specifications (ASME, ASTM, AWS etc.).

UNIT II PENETRANT TESTING AND MAGNETIC PARTICLE INSPECTION

9

Introduction to Penetrant Testing – Liquid Penetrants and Dye Penetrants - An Illustration of Penetrant Testing, Advantages of Penetrant Testing, Disadvantages of Penetrant Testing. Introduction to Magnetic Particle Inspection - An Illustration of Magnetic Particle Inspection, Advantages of Magnetic Particle Crack Detection, Disadvantages of Magnetic Particle Crack Detection

UNIT III ULTRASONIC FLAW DETECTION AND RADIOGRAPHY INSPECTION

9

Introduction to Ultrasonic Flaw Detection, An Illustration of Ultrasonic Flaw Detection, Advantages of Ultrasonic Flaw Detection, Disadvantages of Ultrasonic Flaw Detection, Principle of Radiography Inspection, Radiation sources, Attenuation in the specimen, Radiographic imaging, Inspection Techniques, Application and limitations, Safety.

UNIT IV EDDY CURRENT AND ELECTRO-MAGNETIC METHODS**9**

Introduction to Eddy Current Testing. An Illustration of Eddy Current Testing Equipment , Advantages of Eddy Current Testing, Disadvantages of Eddy Current Testing

UNIT V NON-DESTRUCTIVE INSPECTION(NDI) AND ITS APPLICATIONS**9**

Inspection of Raw Products, Inspection For In-Service Damage, Power Plant Inspection, Storage Tank Inspection, Aircraft Inspection, Jet Engine Inspection, Pressure Vessel Inspection, Bridge Inspection, Pipeline Inspection.

Course Objectives:

- To understand the UAV system design development and integration.
- To know about avionics subsystem and analyse the performance of the sub-system
- To learn the different avionics hardware used in UAV.
- To familiarise with communication and payloads.
- To provide knowledge on UAV controls.
- To impart knowledge on development of UAV systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate ability to identify and explain the complete system for UAV requirement and performance and their functions.
- Understand the UAV sub-system and input/output device & power requirement system and ability to analyze the performance of the sub-system.
- Explain the different avionics hardware used in UAV.
- Describe the communication and payloads
- Understand the concept of UAV controls
- Demonstrate the design process of UAV

UNIT I INTRODUCTION TO UAV**9**

History of UAV –classification – Introduction to Unmanned Aircraft Systems--models and prototypes – System Composition-applications

UNIT II THE DESIGN OF UAV SYSTEMS**9**

Introduction to Design and Selection of the System- Aerodynamics and Airframe Configurations- Characteristics of Aircraft Types-Design Standards and Regulatory Aspects-UK,USA and Europe- Design for Stealth--control surfaces-specifications.

UNIT III AVIONICS HARDWARE**9**

Autopilot – AGL-pressure sensors-servos-accelerometer –gyros-actuators- power supply-processor, integration, installation, configuration, and testing

UNIT IV COMMUNICATION PAYLOADS AND CONTROLS**9**

Payloads-Telemetry-tracking-Aerial photography-controls-PID feedback-radio control frequency range –modems-memory system-simulation-ground test-analysis-trouble shooting

UNIT V THE DEVELOPMENT OF UAV SYSTEMS**9**

Waypoints navigation-ground control software- System Ground Testing- System In-flight Testing- Future Prospects and Challenges-Case Studies – Mini and Micro UAVs.

3.	www.theuav.com/

Course Objectives:

- Apply knowledge and skills in the aviation industry and make more effective decisions for organization.
- Provide insight into current trends and issues in civil aviation, such as aviation safety and security, law and new technology.
- Understand complexity of air transport operation and to find best solution for the issues.
- Understand Various Air transport issues
- Detail the services needed to operate the aerodrome
- Identify solutions to challenges presented regarding aerodrome design and operations

Course Outcomes:**Upon successful completion of the course, the students should be able to:**

- Explain the roles of the International Civil Aviation Organization and the International Air Transport Association in fostering safe and efficient air transport
- Describes national and international rules and regulations for air transportation
- Identify organizations controlling the regulatory processes in international aviation
- Describe the Various transport issues involved in handling passengers, freight of aircraft
- Demonstrate the services needed to operate the aerodrome
- Critically analyse and discuss challenges in aerodrome design and operations

UNIT I INTRODUCTION**9**

Development of air transportation, comparison with other modes of transport – Role of IATA, ICAO – The general aviation industry airline – Factors affecting general aviation, use of aircraft, airport: airline management and organization – levels of management, functions of management, Principles of organization planning the organization – chart, staff departments & line departments.

UNIT II AIRLINE ECONOMICS**9**

Forecasting – Fleet size, Fleet planning, the aircraft selection process, operating cost, passenger capacity, load factor etc. – Passenger fare and tariffs – Influence of geographical, economic & political factors on routes and route selection.

FLEET PLANNING: The aircraft selection process – Fleet commonality, factors affecting choice of fleet, route selection and Capital acquisition – Valuation & Depreciation – Budgeting, Cost planning – Aircrew evaluation – Route analysis – Aircraft evaluation.

UNIT III PRINCIPLES OF AIRLINES SCHEDULING**9**

Equipment maintenance, Flight operations and crew scheduling, Ground operations and facility limitations, equipments and types of schedule – hub & spoke scheduling, advantages / disadvantages & preparing flight plans – Aircraft scheduling in line with aircraft maintenance practices.

UNIT IV AERODROME DATA, PHYSICAL CHARACTERISTICS AND OBSTACLE RESTRICTION

9

Aerodrome data - Basic terminology – Aerodrome reference code – Aerodrome reference point – Aerodrome elevation – Aerodrome reference temperature – Instrument runway, physical Characteristics; length of primary / secondary runway – Width of runways – Minimum distance between parallel runways etc. – obstacles restriction.

UNIT V VISUAL AIDS FOR NAVIGATION, VISUAL AIDS FOR DENOTING OBSTACLES EMERGENCY AND OTHER SERVICES

9

Visual aids for navigation Wind direction indicator – Landing direction indicator – Location and characteristics of signal area – Markings, general requirements – Various markings – Lights, general requirements – Aerodrome beacon, identification beacon – Simple approach lighting system and various lighting systems – VASI & PAPI - Visual aids for denoting obstacles; object to be marked and lighter – Emergency and other services.

5. www.brown.edu/Departments/EEB/EML/.../principles_flight.html

Course Objectives:

- To impart knowledge on Avionic subsystems and its design
- To familiarize the students to understand Avionics Architecture
- To study the features of various display systems
- To give exposure to navigation and flight control systems.
- To provide an overview of air data systems.
- To acquaint the student with the concepts of auto pilot system

Course Outcomes:**Upon successful completion of the course, the students should be able to:**

- Enumerate the various Avionic subsystems and its design.
- Design the System architecture for various databases and explain its application in aviation.
- Identify the components and illustrate the working principles of various display systems in flight deck .
- Describe the navigation and flight control systems.
- Describe the air data systems
- Understand the concepts of auto pilot system.

UNIT I INTRODUCTION TO AVIONICS

Need for avionics in civil and military aircraft and space systems – integrated avionics and weapon systems – typical avionics subsystems, design, technologies – Introduction to digital computer and memories.

UNIT II DIGITAL AVIONICS ARCHITECTURE

Avionics system architecture–8085 Architecture and 8086 Architecture -Bus Structure of 8085 Architecture and 8086 Architecture– data buses – MIL-STD-1553B – ARINC – 420 – ARINC – 629.

UNIT III FLIGHT DECKS AND COCKPITS

Control and display technologies: CRT, LED, LCD, EL and plasma panel – Touch screen – Direct voice input (DVI) – Civil and Military Cockpits: MFDS, HUD, MFK, HOTAS.

UNIT IV INTRODUCTION TO NAVIGATION SYSTEMS

Radio navigation – ADF, DME, VOR, LORAN, DECCA, OMEGA, ILS, MLS – Inertial Navigation Systems (INS) – Inertial sensors, INS block diagram – Satellite navigation systems – GPS.

UNIT V AIR DATA SYSTEMS AND AUTO PILOT

Air data quantities – Altitude, Air speed, Vertical speed, Mach Number, Total air temperature, Mach warning, Altitude warning – Auto pilot – Basic principles, Longitudinal and lateral auto pilot.

AUTOMOBILE ENGINEERING L T P C 3 0 0 3

COURSE OBJECTIVES

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system..

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles

UNIT I ENGINE AND FUEL FEED SYSTEMS

9

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburetor working principle, requirements of an automotive carburetor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNITII TRANSMISSION SYSTEMS

9

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNITIII SUSPENSION SYSTEM

9

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNITIV BRAKES**9**

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNITV ELECTRICAL SYSTEM**9**

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

COURSE OBJECTIVES

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

COURSE OUTCOMES

- Upon successful completion of the course, the students should be able to:
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION**9**

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS**9**

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburetor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION**9**

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES**9**

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS**9**

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

COURSE OBJECTIVE

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES**9**

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE**9**

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE**9**

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE**9**

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY**9**

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts,

Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

18BEAE0E04 INTRODUCTION TO MODERN VEHICLE TECHNOLOGY L T P C
3 0 0 3

COURSE OBJECTIVES

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications

UNIT I TRENDS IN POWER PLANTS 9

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS 9

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti-spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY 9

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION 9

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS 9

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

LIST OF OPEN ELECTIVES OFFERED BY
CIVIL ENGINEERING DEPARTMENT

18BECEO01	HOUSING, PLAN AND MANAGEMENT	L T P C 3 0 0 3
------------------	-------------------------------------	----------------------------------

COURSE OBJECTIVE:

- Teach them introduction to housing
- Make them aware of Formulation of Housing Projects
- Impart knowledge about construction techniques and cost-effective materials
- Learn about Formulation of Housing Projects
- Understand Site analysis
- Learn about Layout design

COURSE OUTCOME

At the end of the this course the students should have learnt

- the basic terms of housing programmes,
- planning and designing of housing projects,
- Know construction techniques and
- Understand cost effective materials and
- familiarise housing finance
- Know Project appraisal techniques.

UNIT I INTRODUCTION TO HOUSING	9
--	----------

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES	9
--	----------

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS	9
--	----------

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS	9
---	----------

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

COURSE OBJECTIVES

- Defining and identifying of eng. services systems in buildings.
- The role of eng. services systems in providing comfort and facilitating life of users of the building.
- The basic principles of asset management in a building & facilities maintenance environment
- Importance of Fire safety and its installation techniques
- To Know the principle of Refrigeration and application
- To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

- Machineries involved in building construction
- Understand Electrical system and its selection criteria
- Use the Principles of illumination & design
- Know the principle of Refrigeration and application
- Importance of Fire safety and its installation techniques
- Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lams of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

18BECEO03 MANAGEMENT OF IRRIGATION SYSTEMS L T P C
3 0 0 3

OBJECTIVES

- To enable the students for a successful career as water management professionals.
- To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
- To expose the students the need for an interdisciplinary approach in irrigation water management
- To providing a platform to work in an interdisciplinary team.
- To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
- To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

- Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
- Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
- Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
- Gain insight on local and global perceptions and approaches to participatory water resource management
- Learn from successes and failures in the context of both rural and urban communities of water management.
- Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.
- Familiarise Irrigation scheduling

UNIT I IRRIGATION SYSTEM REQUIREMENTS 9

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING 9

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation.

UNIT III MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION**9**

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study.

UNIT V INVOLVEMENT OF STAKE HOLDERS**9**

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

OBJECTIVE:

- To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
- To study different methods of construction to successfully achieve the structural design with recommended specifications.
- To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
- To study of construction equipment's, and temporary works required to facilitate the construction process
- To provide a coherent development to the students for the courses in sector of Advanced construction technology.
- To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

- Implementation of new technology concepts which are applied in field of Advanced construction.
- Different methods of construction to successfully achieve the structural design with recommended specifications.
- Application of scientific and technological principles of planning, analysis, design and management to construction technology.
- Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
- Development to the students for the courses in sector of Advanced construction technology.
- The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT - I MODERN CONSTRUCTION METHODS

9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES

9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines. Construction Methods for River Works Pipelines.

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I

9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting.

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II

9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant.

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES

9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

****-- Skill Development**

****-- Employability**

****--Entrepreneurship**

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

PO-1 Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO-2 Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO-3 Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO-4 Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO-5 Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO-6 The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO-7 Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO-8 Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO-9 Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO-10 Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO-11 Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO-12 Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSO)

The B.E. Degree Programme in Civil Engineering is offered in the department with the following programme specific outcomes:

PSO-13 The Graduates of this Programme with proficiency in mathematics and physical sciences will excel in the core areas of civil engineering such as structural, environmental and water resources engineering.

PSO-14 Utilize principles, methods, software's and codes of practices to excel in the areas of planning, analysis and designs related to Civil Engineering systems.

PSO-15 Prepare detailed drawings, cost estimates, reports, walk through views, interact with clients, manage workers, work in a team and executes construction works.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

The Civil Engineering education at KAHE, Coimbatore, mainly based on practical oriented learning. The courses offered are focused on training the students to make them adaptable to any type of role in different fields of Civil Engineering.

The B.E. Degree Programme in Civil Engineering is offered in the department with the following educational objectives:

PEO-1 To equip the graduates with sufficient knowledge and experience to become leaders in industry and academia

PEO-2 To offer platform for research and development

PEO-3 To impart professional ethics with a commitment to the society and environment

SEMESTER I

Course Objectives:

1. To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
2. To understand geometrical aspects of curvature and elegant application of differential calculus. To introduce the concepts of improper integrals, Gamma, Beta and Error functions which are needed in engineering applications.
3. To introduce sequence and series and Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
4. To understand the concept of functions of several variables and vector identities.
5. To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage
6. To know essential tools of matrices and linear algebra including linear transformations, Eigen values, diagonalization and orthogonalization

Course Outcomes:

After successfully completing the course, the student will have a good understanding of the following topics and their applications:

1. In rank and Eigen values and eigenvectors, diagonalization of a matrix, Symmetric matrices and the students will be able to use matrix algebra techniques for practical applications.
2. To apply differential and integral calculus to notions of evolute and introduce the concepts of improper integrals, Gamma, Beta and Error functions which are needed in engineering application
3. To solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
4. To understand the ideas of limits and continuity and an ability to calculate with them and apply them and also to calculate grad, div and curl in Cartesian and other simple coordinate systems.
5. To apply integration to compute multiple integrals, area, volume, integrals in polar and Cartesian coordinates, in addition to change of order and vector integration.
6. This course equips students to have basic knowledge and understanding in one field of materials, integral and differential calculus

UNIT I - Matrices

Inverse and rank of a matrix, rank-nullity theorem; System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigen values and eigenvectors;

Diagonalization of matrices; Cayley-Hamilton Theorem, Orthogonal transformation. Simple Problems using Scilab.

UNIT II - Calculus:

Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

UNIT III - Sequences and series:

Convergence of sequence and series, tests for convergence, power series, Taylor's series. Series for exponential, trigonometric and logarithmic functions; Fourier series: Half range sine and cosine series, Parseval's theorem.

UNIT IV - Multivariable Calculus (Differentiation)

Limit continuity and partial derivatives, directional derivatives, total derivative, Maxima, minima and saddle points; Method of Lagrange multipliers; Gradient, curl and divergence.

UNIT V - Multivariable Calculus (Integration)

Multiple Integration: double and triple integrals (Cartesian and polar), change of order of integration in double integrals, Applications: areas and volumes, Center of mass and Gravity (constant and variable densities). Theorems of Green, Gauss and Stokes, Simple applications involving cubes and rectangular parallelepipeds.

SUGGESTED READINGS

1. Hemamalini. P.T,(2014),Engineering Mathematics, McGraw Hill Education (India) Private Limited, New Delhi.
2. G.B. Thomas and R.L. Finney, (2002),Calculus and Analytic geometry, 9th Edition,Pearson,.
3. Erwin kreyszig, (2006),Advanced Engineering Mathematics, 9th Edition,John Wiley & Sons.
4. Veerarajan T, (2008),Engineering Mathematics for first year,Tata McGraw-Hill, New Delhi.
5. Ramana B.V, (2010),Higher Engineering Mathematics, 11th Reprint, Tata McGraw Hill New Delhi.
6. D. Poole, (2005),Linear Algebra: A Modern Introduction, 2nd Edition,Brooks/Cole.
7. N.P. Bali and Manish Goyal, (2010), A text book of Engineering Mathematics, Laxmi Publications.
8. B.S. Grewal, (2010), Higher Engineering Mathematics, 36th Edition, Khanna Publishers.
9. V. Krishnamurthy, (2005),V.P. Mainra and J.L. Arora, An introduction to Linear Algebra, Affiliated East–West press.

Course Objective

1. To understand the terminologies of atomic and molecular structure
2. To study the basics of Periodic properties, Intermolecular forces
3. To study about spectroscopic technique
4. To understand the thermodynamic functions
5. To comprehend the basic organic chemistry and to synthesis simple drug.
6. To understand the chemical principles in the projects undertaken in field of engineering and technology

Course Outcomes

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
3. Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
4. Rationalise bulk properties and processes using thermodynamic considerations.
5. List major chemical reactions that are used in the synthesis of molecules.
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I - Atomic and molecular structure

Schrodinger equation. Particle in a box solutions and their applications. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Pi-molecular orbitals of butadiene and benzene and aromaticity. Introduction to Crystal field theory.

UNIT II - Periodic properties, Intermolecular forces and potential energy surfaces

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers. Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H_2F and HCN and trajectories on these surfaces.

UNIT III - Spectroscopic techniques and applications

Spectroscopy (Principles and Instrumentation only). Electronic spectroscopy. Vibrational and rotational spectroscopy. Applications. Surface characterization techniques. Diffraction and scattering. Fluorescence and its applications in medicine.

UNIT IV - Use of free energy in chemical equilibria

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria. Use of free energy considerations in metallurgy through Ellingham diagrams.

UNIT V - Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule.

SUGGESTED READINGS

1. B. H. Mahan, (2010), University chemistry, Pearson Education.
2. M. J. Sienko and R. A. Plane, Chemistry: Principles and Applications.
3. C. N. Banwell, (1994), Fundamentals of Molecular Spectroscopy, McGraw-Hill.
4. B. L. Tembe, Kamaluddin and M. S. Krishnan, Engineering Chemistry (NPTEL Web-book)
5. P. W. Atkins, (2009), Physical Chemistry, Oxford University Press.
6. K. P. C. Volhardt and N. E. Schore, (2014), 5th Edition, Organic Chemistry: Structure and Function, W.H. Freeman.
7. P C Jain & Monica Jain, (2015), Engineering Chemistry, Dhanpat Rai Publishing Company.

Chemistry Laboratory

Course Objectives

1. To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
2. To estimate the amount of sodium carbonate and sodium hydrogen carbonate, hardness, chloride in water sample
3. To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
4. To acquaint the students with the determination of rate constant of a reaction
5. To carried out different types of titrations for estimation of concerned in materials
6. To determine the partition coefficient of a substance between two immiscible liquids.

Course Outcomes

1. The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering. The students will learn to:
2. Estimate rate constants of reactions from concentration of reactants/products as a function of time
3. Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc
4. Determine the partition coefficient of a substance between two immiscible liquids.
5. Acquaint the students with the determination of acid value of an oil
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results

Choice of 10 experiments from the following:

1. Determination of surface tension and viscosity
2. Determination of Sodium Carbonate and Sodium Hydrogen Carbonate in a mixture using volumetric titration
3. Determination of Ca / Mg using complexometric titration
4. Thin layer chromatography
5. Determination of chloride content of water
6. Determination of the rate constant of a reaction
7. Conductometry - Determination of cell constant and conductance of solutions
8. pH Metry – Determination of Acid / Base
9. Potentiometry - determination of redox potentials and emfs
10. Saponification/acid value of an oil
11. Determination of the partition coefficient of a substance between two immiscible liquids
12. Adsorption of acetic acid by charcoal
13. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

(i) Theory

Course Objectives

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of Electrical Machines and Transformers.
3. To understand the working of Power Converters and components of low-voltage electrical installations.
4. To understand and analyze basic electric and magnetic circuits.
5. To gain the basic knowledge about the Electric circuits.
6. To study the working principles of electrical machines and power converters.

Course Outcomes

1. To understand and analyze basic electric and magnetic circuits.
2. Students will gain the basic knowledge about the Electric circuits.
3. To study the working principles of electrical machines and power converters.
4. To introduce the components of low-voltage electrical installations.
5. Gained the knowledge in working of Electrical Machines and Transformers.
6. Students will gain the applications of transformers.

UNIT I - DC Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT II - AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III - Electrical Machines

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque-speed characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

UNIT IV - Transformers And Power Converters

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections. Overviews of DC-DC buck and boost converters, duty ratio control. Introduction to Single-phase and three-phase voltage source inverters.

UNIT V - Electrical Installations

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, RCCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

SUGGESTED READINGS

1. V. D. Toro, (1989), Electrical Engineering Fundamentals, Prentice Hall India.
2. D. P. Kothari and I. J. Nagrath, (2010), Basic Electrical Engineering, Tata McGraw Hill.
3. D. C. Kulshreshtha, (2009), Basic Electrical Engineering, McGraw Hill.
4. L. S. Bobrow, (2011), Fundamentals of Electrical Engineering, Oxford University Press.
5. E. Hughes, (2010), Electrical and Electronics Technology, Pearson.

ii) Laboratory

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.

Course Outcomes

At the end of this course, students will demonstrate the ability

1. To understand and analyze basic electric and magnetic circuits.
2. To study the working principles of electrical machines and power converters.

List of Experiments

1. Experimental verification of electrical circuit problems using Ohms law and Kirchoff's law.
2. Measurement of electrical quantities – voltage, current, power & power factor in R load.
3. Speed control of DC shunt motor
4. Draw the equivalent circuit of single phase Transformer by conducting OC & SC Test.
5. Measurement of energy using single phase energy meter.

SUGGESTED READING

1. D. P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 2010.
2. D. C. Kulshreshtha, "Basic Electrical Engineering", McGraw Hill, 2009.
3. L. S. Bobrow, "Fundamentals of Electrical Engineering", Oxford University Press, 2011.
4. E. Hughes, "Electrical and Electronics Technology", Pearson, 2010.
5. V. D. Toro, "Electrical Engineering Fundamentals", Prentice Hall India, 1989

Course Objectives

1. to prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
2. to prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
3. To give exposure to solid modeling, computer-aided geometric design, creating working drawings and engineering communication.
4. To develop graphic skill for communication of concepts, ideas and design of engineering products
5. To give exposure to existing national standards related to technical drawings
6. To gather skills in technical drawing.

Course Outcomes

1. Introduction to engineering design and its place in society
2. Exposure to the visual aspects of engineering design and engineering graphics standards
3. Exposure to solid modeling, computer-aided geometric design, creating working drawings and engineering communication.
4. To develop graphic skill for communication of concepts, ideas and design of engineering products
5. To give exposure to existing national standards related to technical drawings
6. To gather skills in technical drawing.

UNIT I - INTRODUCTION

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Conic sections including the Ellipse, Parabola and Hyperbola (eccentricity method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales

UNIT II - ORTHOGRAPHIC PROJECTIONS

Principles of Orthographic Projections- Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT III PROJECTION OF POINTS, LINES AND PLANE SURFACES

Projections of Points and lines located in the first quadrant inclined to both planes - Determination of true lengths and true inclinations; Projection of polygonal surface and circular lamina inclined to both reference planes

UNIT IV PROJECTION OF SOLIDS

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

UNIT V ISOMETRIC PROJECTIONS & COMPUTER GRAPHICS

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple solids, truncated prisms, pyramids, cylinders and cones; Conversion of Isometric Views to Orthographic Views and Vice-versa

Overview of Computer Graphics, listing the computer technologies that impact on graphical communication, demonstrating knowledge of the theory of CAD software, Introduction to 3D modeling packages

SEMESTER II

Course Objectives:

1. Evaluate first order differential equations including separable, homogeneous, exact and linear
 - a. Solvable for p, x and y, Clairaut's form.
2. Solving differential equation of certain type and Power series solutions of Legendre polynomials, Bessel functions of the first kind and their properties.
3. To introduce the basic concepts of PDE for solving standard partial differential equations
4. To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations
5. To develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, to specify some difficult integration that appear in applications can be solved by complex integration in application areas such as fluid dynamics and flow of the electric current.
6. To make the student to solve various Engineering problems.

Course Outcomes:

The students will learn:

1. Solve first order differential equations utilizing the standard techniques for separable, exact, linear, Bernoulli cases.
2. Apply various techniques in solving differential equations and to understand the method of finding the series solution of Bessel's and Legendre's differential equations.
3. Understand how to solve the given standard partial differential equations.
4. Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
5. To Evaluate complex integrals using the Cauchy integral formula and the residue Theorem and to appreciate how complex methods can be used to prove some important theoretical results.
6. To understand the fundamentals and basic concepts in vector calculus, ODE, complex functions and problems related to engineering applications by using these techniques.

UNIT I - First order ordinary differential equations

Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p , equations solvable for y , equations solvable for x and Clairaut's type.

UNIT II - Ordinary differential equations of higher orders

Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equation; Power series solutions; Legendre polynomials, Bessel functions of the first kind and their properties.

UNIT III - Partial Differential Equations

First order partial differential equations, solutions of first order linear and non-linear PDEs- Solution to homogenous and non-homogenous linear partial differential equations second and higher order by complementary function and particular integral method.

UNIT IV - Partial Differential Equations

Flows, vibrations and diffusions, second-order linear equations and their classification, Initial and boundary conditions (with an informal description of well posed problems), D'Alembert's solution of wave equation. Boundary-value problems: Solution of boundary-value problems for various linear PDEs in various geometries.

UNIT V - Complex Integration

Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof), zeros of analytic functions, singularities, Taylor's series, Laurent's series, Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine.

(i) Theory**Course Objective:**

1. To develop capacity to predict the effect of force and motion.
2. To understand the theory of rigid body mechanics and newton laws.
3. To obtain knowledge on friction in limiting and nonlimiting cases.
4. To analyse various systems in terms of free body diagrams.
5. To remember stresses and deflections of beams on elastic foundations.
6. To solve the relevant problems in engineering stream.

Course Outcome:

1. Illustrate the vectorial and scalar representation of forces and moments.
2. Analyse the rigid body in equilibrium.
3. Evaluate the static forces exerted in rigid body.
4. Infer the concept of free body diagram.
5. Summarize the various properties of stress and strain.
6. Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

Theory**Unit 1- Vector mechanics of a particle**

Transformation of scalars and vectors under Rotation transformation; Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates. Potential energy function; $F = - \text{Grad } V$, equipotential surfaces and meaning of gradient.

Unit 2- Planar rigid body mechanics

Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Euler's laws of motion, their independence from Newton's laws, and their necessity in describing rigid body motion. Introduction to three-dimensional rigid body motion.

Unit 3 - Statics

Free body diagrams with examples on modelling of typical supports and joints; Condition for equilibrium in three- and two- dimensions; Friction: limiting and non-limiting cases; Force displacement relationship; Geometric compatibility for small deformations.

Unit 4 - Mechanics of solids

Concept of stress at a point; Planet stress: transformation of stresses at a point, principal stresses and Mohr's circle; Displacement field; Concept of strain at a point; Plane strain: transformation of

strain at a point, principal strains and Mohr's circle; Concepts of elasticity, plasticity, strain hardening, failure (fracture / yielding); Idealization of one dimensional stress-strain curve.

Unit 5 - Stress and strain

Bending stress; Shear stress; Cases of combined stresses; Concept of strain energy; Yield criteria; Deflection due to bending; Integration of the moment-curvature relationship for simple boundary conditions; Method of superposition (without using singularity functions); Strain energy and complementary strain energy for simple structural elements.

(ii) Laboratory

Course Objective:

1. To develop basic laboratory skills and demonstrating the application of physical principles.
2. To prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. To present experimental data in various appropriate forms like tabulation, and plots.
4. To analyze, Interpret and Summarize experimental results.
5. To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. To develop the skills for understanding basic electric circuits.

Course Outcomes:

1. The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
2. Prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. Present experimental data in various appropriate forms like tabulation, and plots.
4. Analyze, Interpret and Summarize experimental results.
5. Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending - Determination of young's modulus
3. Uniform bending – Determination of young's modulus

4. Lee's disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermo e.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge - Determination of thickness of a thin sheet/wire
8. Optical fibre -Determination of Numerical Aperture and acceptance angle
9. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10. Determination of Band gap of a semiconductor.
11. Spectrometer- Determination of wavelength using grating.
12. Viscosity of liquids-Determination of co-efficient of viscosity of a liquid by Poiseuille's flow

Course Objectives

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
2. To help students acquire their ability to speak effectively in real life situations.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To ensure that students use dictionary to improve their active and passive vocabulary.
5. To enable students to improve their lexical, grammatical and communicative competence.
6. To improve the student's communication skill at interview level.

Course Outcomes

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Gain confidence in using English language in real life situations.
4. Improve word power: lexical, grammatical and communication competence.
5. To guide the students to write business letters and other forms of technical writing.
6. To enable students to prepare for oral communication in formal contexts.

Unit I - Basic Writing Skills

Sentence Structures - Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents - Techniques for writing precisely

Unit II - Vocabulary Building

The concept of Word Formation - Root words from foreign languages and their use in English - Acquaintance, with prefixes and suffixes from foreign languages in English to form derivatives. - Synonyms, antonyms, and standard abbreviations.

Unit III - Grammar and Usage

Subject-verb agreement - Noun-pronoun agreement - Misplaced modifiers – Articles – Prepositions – Redundancies - Clichés

Unit IV - Listening and Reading Skills

Note taking- viewing model interviews – listening to informal conversations – improving listening / reading comprehension – reading model prose / poems – reading exercise

Unit V - Writing Practices Comprehension - Précis Writing - Essay Writing Listening Comprehension - Common Everyday Situations: Conversations and Dialogues - Communication at Workplace – Interviews - Formal Presentations

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

SUGGESTED READINGS

2. Sanjay Kumar and PushpLata, (2011),Communication Skills ,Oxford University Press.
3. Liz Hamp - Lyons and Ben Heasley, (2006),Study Writing, Cambridge University Press.
4. F.T. Wood., (2007), Remedial English Grammar, Macmillan.
5. Michael Swan, (1995),Practical English Usage, OUP.

(i) Theory**Course Objectives**

1. Identify and understand the working of key components of a computer program.
2. Identify and understand the various kinds of keywords and different data types of C programming
3. Understand, analyze and implement software development tools like algorithm,
4. pseudo codes and programming structure
5. Study, analyze and understand logical structure of a computer program, and different construct to develop a program in “C” language
6. To use algorithms and programs in practical applications.

Course Outcomes

The course will enable the students

1. To formulate simple algorithms for arithmetic and logical problems
2. To translate the algorithms to programs (in C language)
3. To test and execute the programs and correct syntax and logical errors
4. To implement conditional branching, iteration and recursion
5. To decompose a problem into functions and synthesize a complete program using divide and conquer approach
6. To use arrays, pointers and structures to formulate algorithms and programs

Unit I – Introduction to Programming, Arithmetic expressions and precedence

Introduction to Programming-Flowchart / pseudocode, compilation, Variables including data types, Arithmetic expressions and precedence.

Unit II – Conditional Branching and Loops

Conditional Branching – Loops Writing and evaluation of conditionals and consequent branching, Iteration and loops.

Unit III – Arrays and Basic Algorithms

Arrays 1-D, 2-D, Character arrays and Strings **Basic Algorithms:** Searching, Basic Sorting Algorithms, Finding roots of equations, idea of time complexity.

Unit IV – Function and Recursion

Functions (including using built in libraries), Recursion with example programs such as Quick sort, Ackerman function etc.

Unit V - Structure, Pointers and File Handling

Pointers, Structures including self-referential structures e.g., linked list, notional introduction, File handling in C.

SUGGESTED READINGS

1. E. Balagurusamy,(2017) Computing Fundamentals and C Programming, 5th Edition, TMH Education
2. E. Balaguruswamy (2017), Programming in ANSI C, 7th Edition, Tata McGraw-Hill,
3. Byron Gottfried (2017), Schaum's Outline of Programming with C, 3rd Edition, McGraw-Hill
4. Brian W. Kernighan and Dennis M. Ritchie,(2015) The C Programming Language, 2nd Edition, Prentice Hall of India

(ii) Laboratory

Course Objectives

1. To provide an awareness to Computing and C Programming
2. To know the correct and efficient ways of solving problems
3. To learn to develop algorithm for simple problem solving

Course outcomes

1. To formulate the algorithms for simple problems
2. To translate given algorithms to a working and correct program
3. To be able to correct syntax errors as reported by the compilers
4. To be able to identify and correct logical errors encountered at run time
5. To be able to write iterative as well as recursive programs
6. To be able to represent data in arrays, strings and structures and manipulate them through a program
7. To be able to declare pointers of different types and use the mind defining self- referential structures.
8. To be able to create, read and write to and from simple text files.

List of Experiments

Tutorial 1: Problem solving using computers:

Lab 1: Familiarization with programming environment

Tutorial 2: Variable types and type conversions:

Lab 2: Simple computational problems using arithmetic expressions

Tutorial 3: Branching and logical expressions:

Lab 3: Problems involving if-then-else structures

Tutorial 4: Loops, while and for loops:

Lab 4: Iterative problems e.g., sum of series

Tutorial 5: 1D Arrays: searching, sorting:

Lab 5: 1D Array manipulation

Tutorial 6: 2D arrays and Strings, memory structure:

Lab 6: Matrix problems, String operations

Tutorial 7: Functions, call by value:

Lab 7: Simple functions

Tutorial 8 & 9: Numerical methods (Root finding, numerical differentiation, numerical integration):

Lab 8 and 9: Numerical methods problems

Tutorial 10: Recursion, structure of recursive calls:

Lab 10: Recursive functions

Tutorial 11: Pointers, structures and dynamic memory allocation

Lab 11: Pointers and structures

Tutorial 12: File handling:

Lab 12: File operations

Course Objectives

1. To prepare the students to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
2. To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice.
3. To gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
4. To fabricate components with their own hands.
5. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
6. By assembling different components, they will be able to produce small devices of their interest.

Course Outcomes

1. Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
2. Students will be able to fabricate components with their own hands.
3. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
4. By assembling different components, they will be able to produce small devices of their interest.
5. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
6. Communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice.

i) Lectures & videos: (10 PERIODS)**Detailed contents**

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lectures)**
2. CNC machining, Additive manufacturing **(1 lecture)**
3. Fitting operations & power tools **(1 lecture)**
4. Electrical & Electronics **(1 lecture)**

5. Carpentry (**1 lecture**)
6. Plastic moulding, glass cutting (**1 lecture**)
7. Metal casting (**1 lecture**)
8. Welding (arc welding & gas welding), brazing (**1 lecture**)

ii) Workshop Practice: (60 PERIODS)

- 9 Machine shop (**10 Periods**)
- 10 Fitting shop (**8 Periods**)
- 11 Carpentry (**6 Periods**)
- 12 Electrical & Electronics (**8 Periods**)
- 13 Welding shop (**8 hours (Arc welding 4 Periods + gas welding 4 Periods)**)
- 14 Casting (**8 Periods**)
- 15 Smithy (**6 Periods**)
- 16 Plastic moulding & Glass Cutting (**3 Periods**)
- 17 Plumbing Exercises (**3 Periods**)

SEMESTER III

18BECE301

Mathematics –III
(Transform & Discrete Mathematics)

4H-4C

Instruction Hours/week: L:3 T:1 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. The objective of this course is to familiarize the students with statistical techniques.
2. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline.
3. To understand the basic concepts of Set Theory.
4. To understand the basic concepts of graph theory.
5. To extend student's logical and mathematical maturity and ability to deal with abstraction.
6. To make the student to solve their core Engineering problems.

Course Outcomes

The students will learn:

1. To have a lucid idea about Laplace Transforms.
2. To equip themselves in the different Transform techniques like Z transforms.
3. To aware of a class of functions which transform a finite set into another finite set which relates to input and output functions in computer science.
4. To apply agivenlogic sentence express it in terms of predicates, quantifiers, and logical connectives.
5. To develop the given problem as graph networks and solve with techniques of graph theory.
6. To develop the fundamentals and basic concepts in Laplace transform ,Set Theory and to solve problems related to engineering applications by using these techniques.

UNIT I - Transform Calculus -1

Laplace Transform, Properties of Laplace Transform, Laplace transform of periodic functions. Finding inverse Laplace transform by different methods, convolution theorem. Evaluation of integrals by Laplace transform, solving ODEs by Laplace Transform method.

UNIT II -Transform Calculus-2

Z-transform and properties, methods, inverses and their applications.

UNIT III – Sets, Relation and Function

Basic operations on sets, Cartesian products, disjoint union (sum), and power sets. Different types of relations, their compositions and inverses. Different types of functions, their compositions and inverses.

UNIT IV–Logic and Proofs

Propositional logic – Propositional equivalences – Predicates and quantifiers – Nested quantifiers – Rules of inference – Introduction to proofs – Proof methods and strategy.

UNIT V –Graphs

Graphs and graph models – Graph terminology and special types of graphs–Matrix representation of graphs and graph isomorphism– Connectivity – Euler and Hamilton paths.

SUGGESTED READINGS

9. N. Deo, Graph Theory, Prentice Hall of India,1974.

(i) Theory**Course Objectives**

1. To provide an overview of various Diodes and other electronics components
2. To provide an overview of various transistors and their configurations
3. To provide an overview of application of various electronic devices
4. To gain confidence in handling and usage of electronic devices, tools and instruments in engineering applications
5. To obtain knowledge on the principles and procedure for the analysis of Circuit theory.
6. To understand the basic concepts in DC (circuit) and AC (circuit) Fundamentals.

COURSE OUTCOMES

At the end of the course the students will

1. Know broadly the concepts and functionalities of the electronic devices, tools and instruments
2. Understand use, general specifications and deploy abilities of the electronic devices, and assemblies.
3. Gain confidence in handling and usage of electronic devices, tools and instruments in engineering applications
4. Gain knowledge on the principles and procedure for the analysis of Circuit theory.
5. Understand the basic concepts in DC (circuit) and AC (circuit) Fundamentals.
6. Understand the basic principles of electromagnetic fields.

UNIT I DIODES AND APPLICATIONS

Semiconductor Diode - Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Diode as a Switch, Diode as a Rectifier, Half Wave and Full Wave Rectifiers with and without Filters; Breakdown Mechanisms, Zener Diode – Operation and Applications; Opto-Electronic Devices – LEDs, Photo Diode and Applications; Silicon Controlled Rectifier (SCR) – Operation, Construction, Characteristics, Ratings, Applications;

UNIT II TRANSISTOR CHARACTERISTICS

Bipolar Junction Transistor (BJT) – Construction, Operation, Amplifying Action, Common Base, Common Emitter and Common Collector Configurations, Operating Point, Voltage Divider Bias Configuration; Field Effect Transistor (FET) – Construction, Characteristics of Junction FET, Depletion and Enhancement type Metal Oxide Semiconductor (MOS) FETs, Introduction to CMOS circuits

UNIT III TRANSISTOR AMPLIFIERS AND OSCILLATORS

Classification, Small Signal Amplifiers –Basic Features, Common Emitter Amplifier, Coupling and Bypass Capacitors, Distortion, AC Equivalent Circuit; Feedback Amplifiers – Principle, Advantages

of Negative Feedback, Topologies, Current Series and Voltage Series Feedback Amplifiers; Oscillators – Classification, RC Phase Shift, Wien Bridge, High Frequency LC and Non-Sinusoidal type Oscillators;

UNIT IV OPERATIONAL AMPLIFIERS AND APPLICATIONS

Introduction to Op-Amp, Differential Amplifier Configurations, CMRR, PSRR, Slew Rate; Block Diagram, Pin Configuration of 741 Op-Amp, Characteristics of Ideal Op-Amp, Concept of Virtual Ground

SUGGESTED READINGS

5. R.T. Paynter (2009), Introductory Electronic Devices & Circuits, Conventional Flow Version, Pearson

(ii) Laboratory

Course Objective

- To learn the characteristics of basic electronic devices
- To understand the basic operation of electronic equipments
- To learn the working of rectifiers and power supply
- To understand the basics of logic gates and other digital circuits

COURSE OUTCOME

On completion of this laboratory course, the student should be able to:

- Design amplifiers for any given frequency
- Design oscillators for any frequency
- Construct simple digital design using logic gates.
- Construct any bit counter using Flip-flop

List of Experiments

1. Characteristics of PN diode and Zener Diode
2. Common Emitter input-output Characteristics
3. Frequency Response of CE and CS amplifier
4. JFET in Common Source (CS) Configuration
5. Integrator and Differentiator using Op-amp.
6. Phase shift and Wien bridge oscillators using Op-amp.
7. Functional verification of logic Gates
8. Realization of Flipflop using Logic gates
9. Design of Up/Down counter

18BECE303**Biology for Engineers****Semester-III
3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. To understand the basics of biology
2. To gain knowledge about different biomolecules
3. To get familiarize with human diseases
4. To learn about different clinical investigations
5. To know the recent advances in biology
6. To gain recent advancements in the field of biology.

Course Outcomes

At the end of the course

1. Summarize the cell structures and its functions
2. Explain the Biomolecules functions
3. Classify the communicable and non communicable human diseases
4. Illustrate the different organ function tests
5. Tell the applications of biology in environmental applications
6. Describe the applications of biology in concrete technology

UNIT I - BASICS OF BIOLOGY

Cell structure: Prokaryotic and eukaryotic cells, Animal and Plant Cell, Cell cycle – Mitosis - Meiosis,

UNIT II - BIOMOLECULES

Nucleic acid – DNA – Structure - types, RNA – Structure – types, Proteins – classification, biological functions, carbohydrates - classification, biological functions, lipids – classification, biological functions, Hormones-definition, importance; Vitamins.

UNIT III – HUMAN DISEASES

Communicable diseases –Tuberculosis, Chikungunya, Dengue, Influenza, HIV/AIDS; Non Communicable diseases – Diabetes, Cancer, Cardiovascular diseases.

UNIT IV – ORGAN FUNCTION TESTS

Liver function tests – Functions of liver- Tests to assess liver function- Bilirubin related liver test; Renal function tests – Tests to assess renal function - Clearance test – Creatine and urea- Urine concentration test; Gastric function tests – Tests to assess gastric function - Fractional test meal, Alcohol test meal, Insulin test meal; Pancreatic Function Test –Secretin test, Lundh test.

UNIT V – APPLICATIONS OF BIOLOGY IN CIVIL ENGINEERING

Microorganisms – Types of microorganisms, Application of microorganisms in civil engineering; Environmental engineering - Waste water management - Phytoremediation technique; solid waste management - Composting method; Biological oxygen demand (BOD), chemical oxygen demand (COD); Concrete technology- Self healing bacterial concrete.

SUGGESTED READINGS:

1. R.C.Dubey, S. Chand. (2013). A Text book of Biotechnology, Higher Academic Publications.
2. Arthur T. Johnson. (2016). Biology for Engineers, CRC Press, Taylor and Francis.
3. Satyanaraynaa. (2017). Biochemistry, 5th edition. Books and allied PVT ltd.

5. Satyanaraynaa. (2016). Biotechnology, Books and allied PVT Ltd.
6. Shetty M.S. (2018). Concrete Technology Theory and Practice, S. Chand & Company Ltd.

Course Objectives

1. The objective of this Course is to provide an introduction to energy systems and renewable energy resources, with a scientific examination of the energy field
2. To emphasis on alternative energy sources and their technology and application.
3. The class will explore society's present needs and future energy demands, examine conventional energy sources and systems, including fossil fuels and nuclear energy,
4. To focus on alternatives, renewable energy sources such as solar, biomass (conversions), wind power, waves and tidal, geothermal, ocean thermal, hydro and nuclear.
5. To know the energy conservation methods will be emphasized from Civil Engineering perspective.
6. The knowledge acquired lays a good foundation for design of various civil engineering systems/ projects dealing with these energy generation paradigms in an efficient manner.

Course Outcomes

1. List and generally explain the main sources of energy and their primary applications nationally and internationally
2. Have basic understanding of the energy sources and scientific concepts/principles behind them
3. Understand effect of using these sources on the environment and climate
4. Describe the challenges and problems associated with the use of various energy sources, including fossil fuels, with regard to future supply and the impact on the environment.
5. List and describe the primary renewable energy resources and technologies.
6. To quantify energy demands and make comparisons among energy uses, resources, and technologies.

Proposed Syllabus

UNIT-I: Introduction to Energy Science: Introduction to Energy, sustainability and the environment. Primary energy sources – world energy resources–Indian energy scenario–energy cycle of the earth – environmental aspects of energy utilization, CO₂ emissions and Global warming–renewable energy resources and their importance.

UNIT-II: Energy Sources: Overview of energy systems, sources, transformations, efficiency, and storage. Fossil fuels (coal, oil, oil-bearing shale and sands, coal gasification) - past, present & future, Remedies & alternatives for fossil fuels - biomass, wind, solar, nuclear, wave, tidal and hydrogen; Sustainability and environmental trade-offs of different energy systems; energy storage or regeneration.

UNIT-III: *Energy & Effect on Environment:* Energy efficiency and conservation; introduction to clean energy technologies and its importance in sustainable development; Carbon footprint, energy consumption and sustainability, energy economics; Climate change, acid rain, ozone layer depletion, Case Studies. Wasteland reclamation, Consumerism and waste products, Environment Protection Act, Air (Prevention and Control of Pollution) Act.

UNIT-IV: *Civil Engineering Projects connected with the Energy Sources:* Coal mining technologies, Oil exploration off shore platforms, Underground and under-sea oil pipelines, solar chimney project, wave energy caissons, coastal installations for tidal power, wind mill towers; hydro power stations above-ground and underground along with associated dams, tunnels, penstocks, etc.; Nuclear fuel storage and disposal systems.

UNIT-V: *Engineering for Energy conservation: Energy Auditing:* Need, Types, Methodology and Barriers. Role of energy Managers. Instruments for energy auditing. Concept of Green Building and Green Architecture; Green building concepts; Energy conservation opportunities Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems.

9. Related papers published in international journals

Course Objectives

1. To give an understanding to the students of the vast breadth and numerous areas of engagement available in the overall field of Civil Engineering
2. To motivate the student to pursue a career in one of the many areas of Civil Engineering with deep interest and keenness.
3. To expose the students to the various avenues available for doing creative and innovative work in this field by showcasing the many monuments and inspiring projects of public utility.
4. To Exploration of the various possibilities of a career in this field
5. To Providing a foundation for the student to launch off upon an inspired academic pursuit into this branch of engineering
6. To Understanding the vast interfaces this field has with the society at large

Course Outcomes

1. Introduction to what constitutes Civil Engineering
2. Identifying the various areas available to pursue and specialize within the overall field of Civil Engineering
3. Highlighting the depth of engagement possible within each of these areas
4. Exploration of the various possibilities of a career in this field
5. Understanding the vast interfaces this field has with the society at large
6. Providing inspiration for doing creative and innovative work

Proposed Syllabus

What is Civil Engineering/ Infrastructure, History of Civil Engineering, Overview of ancient & modern civil engineering marvels, current national planning for civil engineering/ infrastructure projects, scope of work involved in various branches of Civil Engineering – Architecture & Town planning, Surveying & Geomatics, Structural Engineering, Construction Management, Construction materials, Hydrology and Water Resources Engineering, Hydraulic Engineering, Environmental Engineering & Sustainability, Pavement Engineering and construction, Traffic & Transportation Engineering and Management, Geotechnical Engineering, Ocean Engineering, Building Energy Efficiency, Basics of Contract Management, Professional Ethics, Avenues for entrepreneurial working, Creativity & Innovativeness in Civil Engineering.

UNIT I Basic Understanding: What is Civil Engineering/ Infrastructure? Basics of Engineering and Civil Engineering; Broad disciplines of Civil Engineering; Importance of Civil Engineering, Possible scopes for a career.

Overview of National Planning for Construction and Infrastructure Development: Position of construction industry vis-à-vis other industries, five year plan outlays for construction; current budgets for infrastructure works;

Fundamentals of Architecture & Town Planning: Aesthetics in Civil Engineering, Examples of great architecture, fundamentals of architectural design & town planning; Building Systems (HVAC, Acoustics, Lighting, etc.); LEED ratings; Development of Smart cities

Fundamentals of Building Materials: Stones, bricks, mortars, Plain, Reinforced & Prestressed Concrete, Construction Chemicals; Structural Steel, High Tensile Steel, Carbon Composites; Plastics in Construction; 3D printing; Recycling of Construction & Demolition wastes

UNIT II Basics of Construction Management & Contracts Management: Temporary Structures in Construction; Construction Methods for various types of Structures; Major Construction equipment; Automation & Robotics in Construction; Modern Project management Systems; Advent of Lean Construction; Importance of Contracts Management
Environmental Engineering & Sustainability: Water treatment systems; Effluent treatment systems; Solid waste management; Sustainability in Construction;
Geotechnical Engineering: Basics of soil mechanics, rock mechanics and geology; various types of foundations; basics of rock mechanics & tunneling

UNIT III Hydraulics, Hydrology & Water Resources Engineering: Fundamentals of fluid flow, basics of water supply systems; Underground Structures; Underground Structures Multi- purpose reservoir projects

Structural Engineering: Types of buildings; tall structures; various types of bridges; Water retaining structures; Other structural systems; Experimental Stress Analysis; Wind tunnel studies;

Surveying & Geomatics: Traditional surveying techniques, Total Stations, Development of Digital Terrain Models; GPS, LIDAR;

UNIT IV Traffic & Transportation Engineering: Investments in transport infrastructure development in India for different modes of transport; Developments and challenges in integrated transport development in India: road, rail, port and harbor and airport sector; PPP in transport sector; Intelligent Transport Systems; Urban Public and Freight Transportation; Road Safety under heterogeneous traffic; Sustainable and resilient pavement materials, design, construction and management; Case studies and examples.

Repairs & Rehabilitation of Structures: Basics of corrosion phenomena and other structural distress mechanisms; some simple systems of rehabilitation of structures; Non- Destructive testing systems; Use of carbon fiber wrapping and carbon composites in repair.

UNIT Computational Methods, IT, IoT in Civil Engineering: Typical software used in Civil Engineering- Finite Element Method, Computational Fluid Dynamics; Computational Geotechnical Methods; highway design (MX), Building Information Modelling; Highlighting typical available software systems (SAP,STAAD, MATLAB, ETAB,MIKE

21,MODFLOW,REVIT,TEKLA, AUTOCAD, GEOSTUDIO, EDUSHAKE, MSP, PRIMAVERA, ArcGIS)

Course Objectives

1. To provide an introductory treatment of *Engineering Mechanics* to all the students of engineering, with a view to prepare a good foundation for taking up advanced courses in the area in the subsequent semesters.
2. A working knowledge of statics with emphasis on force equilibrium and free body diagrams.
3. Provides an understanding of the kinds of stress and deformation and how to determine them in a wide range of simple, practical structural problems.
4. To understanding of the mechanical behavior of materials under various load conditions.
5. To apply Newton's laws of motion in practical experiences.
6. To apply basic knowledge of maths and physics to solve real-world problems

Course Outcomes

1. Use scalar and vector analytical techniques for analyzing forces in statically determinate structures
2. Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems
3. Apply basic knowledge of maths and physics to solve real-world problems
4. Understand measurement error, and propagation of error in processed data
5. Understand basic kinematics concepts – displacement, velocity and acceleration (and their angular counterparts);
6. Understand basic dynamics concepts – force, momentum, work and energy;

Proposed Syllabus**UNIT-I**

Introduction to Engineering Mechanics: Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant- Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy

UNIT-II

Friction: Introduction to friction- Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, wedge friction, screw jack & differential screw jack;
Basic Structural Analysis: Equilibrium in three dimensions; Method of Joints; How to determine if a member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames.

UNIT-III

Centroid and Centre of Gravity: Centroid of simple figures from first principle, Centroid of

composite sections; Centre of Gravity and its implications; Area moment of inertia- Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.

UNIT-IV

Virtual Work and Energy Method- Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium- Stability of equilibrium.

UNIT-V

Review of particle dynamics and Introduction to Kinetics of Rigid Bodies- Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton's 2nd law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse-momentum (linear, angular); Impact (Direct and oblique). Introduction to Kinetics of Rigid Bodies-Basic terms, general principles in dynamics; Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid body rotation;

8. Reddy Vijaykumar K. and K. Suresh Kumar (2010), Singer's Engineering Mechanics
9. Bansal R.K. (2010), A Text Book of Engineering Mechanics, Laxmi Publications
10. Khurmi R.S. (2010), Engineering Mechanics, S. Chand & Co.
11. Tayal A.K. (2010), Engineering Mechanics, Umesh Publications

OBJECTIVE:

1. Will understand the role of thinking in all forms of communication.
2. Students will gain the neutral accent.
3. To guide students to read and comprehend articles from newspapers and magazines.
4. To equip students with oral and appropriate written communication skills.
5. To assist students with employability and job search skills.
6. Self-development of the students will be increase.

OUTCOMES:

1. Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
2. Enhance them reading texts critically and analytically.
3. Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument.
4. Improve their lexical, grammatical and communicative competence.
5. Will gain knowledge in creative, critical, analytical and evaluative writing.
6. Enrich the ability to face interviews with confidence.

UNIT-I: Information Design and Development- Different kinds of technical documents, Information development life cycle, Organization structures, factors affecting information and document design, Strategies for organization, Information design and writing for print and for online media.

UNIT-II : Technical Writing, Grammar and Editing- Technical writing process, forms of discourse, Writing drafts and revising, Collaborative writing, creating indexes, technical writing style and language. Basics of grammar, study of advanced grammar, editing strategies to achieve appropriate technical style. Introduction to advanced technical communication, Usability, Human factors, Managing technical communication projects, time estimation, Single sourcing, Localization.

UNIT-III: Self Development and Assessment- Self assessment, Awareness, Perception and Attitudes, Values and belief, Personal goal setting, career planning, Self-esteem. Managing Time; Personal memory, Rapid reading, taking notes; Complex problem solving; Creativity

UNIT-IV: Communication and Technical Writing- Public speaking, Group discussion, Oral; presentation, Interviews, Graphic presentation, Presentation aids, Personality Development. Writing reports, project proposals, brochures, newsletters, technical articles, manuals, official notes, business letters, memos, progress reports, minutes of meetings, event report.

UNIT-V: Ethics- Business ethics, Etiquettes in social and office settings, Email etiquettes, Telephone Etiquettes, engineering ethics, managing time, Role and responsibility of engineer, Work culture in jobs, Personal memory, Rapid reading, taking notes, Complex problem solving, Creativity.

7. Xebec, Presentation Book, TMH New Delhi, 2000. (ISBN 0402213)

Course Objectives

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/ visually
4. Examine a design critically and with understanding of CAD .
5. To interpret drawings, and to produce designs using a combination of 2D and 3D software.
6. To understand another person's designs, and to get exposure to national standards relating to technical drawings using Computer Aided Design and Drafting practice

Course Outcomes

1. Develop graphical skills for communicating concepts, ideas and designs of engineering products graphically/ visually as well as understand another person's designs, and to get exposure to national standards relating to technical drawings using Computer Aided Design and Drafting practice
2. Develop parametric design and the conventions of formal engineering drawing
3. Produce and interpret 2D & 3D drawings
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Do a detailed study of an engineering artifact
6. Develop drawings for conventional structures using practical norms.

UNIT-I:INTRODUCTION; Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co- ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.

UNIT-II: SYMBOLS AND SIGN CONVENTIONS: Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards

UNIT-III: BUILDING DRAWING: Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity

UNIT-IV: PICTORIAL VIEW: Principles of isometrics and perspective drawing. Perspective view of

building.

List of Drawing Experiments:

1. Buildings with load bearing walls including details of doors and windows. Taking standard drawings of a typical two storeyed building including all MEP, joinery, rebars, finishing and other details and writing out a description of the Facility in about 500 -700 words.
2. RCC framed structures
3. Reinforcement drawings for typical slabs, beams, columns and spread footings.
4. Industrial buildings - North light roof structures - Trusses
5. Perspective view of one and two storey buildings

SEMESTER IV

Course Objectives

1. To explain the basic theorems used in mechanical engineering.
2. To explain the fundamentals of manufacturing process and machine tools.
3. To explain the principles of refrigeration and air- conditioning
4. To Study about the operations of power plants.
5. To know about the automobile engineering
6. To Gain the basic manufacturing and machining processes.

Course Outcomes

1. To impart the basic knowledge of various basic fields of mechanical engineering.
2. Gain the basic manufacturing and machining processes.
3. Able to know about basic machining process.
4. Study about the operations of power plants.
5. Know about the automobile engineering
6. The principles of refrigeration and air- conditioning

INTRODUCTION (Not included for examination)

Engineering and Technology - History of Mechanical Engineering- Mechanics - Statics and dynamics - Broad areas in Mechanical Engineering.

UNIT I MANUFACTURING PROCESSES FOUNDRY - Principles - Patterns - Types, Molding Processes, Cupola and Induction Furnaces. **METAL FORMING** - Principles - Hot and cold working of metals - Forging, rolling, extrusion and wire drawing, sheet metal operations. **WELDING** - Principles - Oxy-Acetylene Welding and Manual Metal Arc Welding, Brazing and Soldering.

UNIT II MACHINE TOOLS

Machining principles - Construction and working principles of basic machine tools - Lathe, Drilling, Shaper, Planer and Milling machine. Introduction to CNC machines.

UNIT III AUTOMOBILE ENGINEERING

Working principle of petrol and diesel engines - Four stroke and two stroke cycles - Comparison between four stroke and two stroke engines - Working principle of simple carburetor - Lubrication system and cooling system.

UNIT IV ENERGY ENGINEERING & HYDRAULIC MACHINES

Introduction to Boilers - Working principle of Thermal, Hydro - Electric and Nuclear Power Plants - Merits and demerits. Solar – Wind power plants.

Turbines - Impulse turbine - Pelton wheel, Reaction turbines - Kaplan and Francis turbines - Pumps - Working principle of Reciprocating pumps and Centrifugal pumps.

UNIT V REFRIGERATION AND AIR- CONDITIONING

Terminology of Refrigeration and Air Conditioning - Basic principles of Vapour Compression and Absorption Refrigeration System – Window and Split Room Air Conditioners.

TEXT BOOKS

S.No	Title of the book	Author(s) Name	Publisher	Year of Publication
1	Basic Mechanical Engineering	Shanmugam,	Tata McGraw Hill Publishing company Limited, New Delhi	2010
2	Basic Mechanical Engineering	Rajput, R.K	Laxmi Publications (P) Ltd, New Delhi	2008

Course Objectives

1. Identify the main and most common igneous, sedimentary and metamorphic rocks encountered by foundations and construction.
2. To identify and define the main morphological and geological characteristics as shown on maps
3. Analyze geological parameters important in geotechnical studies.
4. To establish and describe topographical and geological sections,
5. Identify potential geological hazards and various structures and ways of preventing and dealing with them
6. To collect, analyze, and report geologic data using standards in engineering practice

Course Outcomes:

1. Site characterization and how to collect, analyze, and report geologic data using standards in engineering practice
2. The fundamentals of the engineering properties of Earth materials and fluids.
3. Rock mass characterization and the mechanics of planar rock slides and topples.
4. Soil characterization and the Unified Soil Classification System.
5. The mechanics of soils and fluids and their influence on settlement, liquefaction, and soil slope stability.
6. Students are able to identify the different types of formation of earth.

UNIT I General Geology: Geology in Civil Engineering – Branches of geology – Earth Structures and composition –Earth processes – Weathering – Work of rivers, wind and sea and their engineering importance – Seismic activity-Seismo-tectonics of Indian plates, seismic zones of India-Ground water.

UNIT II Mineralogy: Elementary knowledge on symmetry elements of important crystallographic systems – physical properties of minerals – study of the following rock forming minerals – Quartz family. Feldspar family, Augite, Hornblende, Biotite, Muscovite, Calcite, Garnet – properties, behaviour and engineering significance of clay minerals – Fundamentals of process of formation of ore minerals – Coal and petroleum – Their origin and occurrence in India.

UNIT III Petrology: Classification of rocks – distinction between igneous, sedimentary and metamorphic rocks. Description, occurrence, engineering properties and distribution of following rocks. Igneous rocks – Granite, Syenite, Diorite, Gabbro, Pegmatite, Dolerite and Basalt Sedimentary rocks sandstone, Limestone, shale conglo, Metamorphic rocks. Quartzite, Marble, Slate, Phyllite, Gniess and Schist.

UNIT IV Structural Geology And Geophysical Method: Attitude of beds – Outcrops – Introduction to Geological maps – study of structures – Folds, faults and joints – Seismic and Electrical methods for Civil Engineering investigations- Geophysical investigation

UNIT V Investigations In Civil Engineering : Remote sensing techniques – Study of air photos and satellite images – Interpretation for Civil Engineering projects – Geological conditions necessary for construction of Dams, Tunnels, Buildings, Road cuttings, Landslides – Causes and preventions. Sea erosion and coastal protection.

Text/Reference Books:

1. Engineering and General Geology, Parbin Singh, 8th Edition (2010), S K Kataria & Sons.
2. Text Book of Engineering Geology, N. Chenna Kesavulu, 2nd Edition (2009), Macmillan Publishers India.
3. Geology for Geotechnical Engineers, J.C.Harvey, Cambridge University Press (1982).

Course Objective

1. To understand basic concepts in Disaster Management
2. To understand Definitions and Terminologies used in Disaster Management
3. To understand Types and Categories of Disasters
4. To understand the Challenges posed by Disasters
5. To understand Impacts of Disasters Key Skills
6. To understand Categories of Disasters

Course Outcome

The student will develop competencies in

1. The application of Disaster Concepts to Management
2. Analyzing Relationship between Development and Disasters.
3. Ability to understand Categories of Disasters
4. Realization of the responsibilities to society
5. The Challenges posed by Disasters
6. Understand the impacts of Disasters Key Skills

UNIT-I: Introduction - Concepts and definitions: disaster, hazard, vulnerability, risks- severity, frequency and details, capacity, impact, prevention, mitigation).

UNIT-II: Disasters - Disasters classification; natural disasters (floods, draught, cyclones, volcanoes, earthquakes, tsunami, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

UNIT-III: Disaster Impacts - Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

UNIT-IV: Disaster Risk Reduction (DRR) - Disaster management cycle – its phases; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post- disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications); Alternate Communication systems-Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.

UNIT-V: Disasters, Environment and Development - Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, land- use changes, urbanization etc.), sustainable and environmental friendly recovery; reconstruction and development methods.

8. Inter Agency Standing Committee (IASC) (Feb. 2007). IASC Guidelines on Mental Health and Psychosocial Support in Emergency Settings. Geneva: IASC

Course Objective

1. To introduce to continuum mechanics and material modeling of engineering materials based on first energy principles: deformation and strain.
2. To know about momentum balance, stress and stress states; elasticity and elasticity bounds; plasticity and yield design.
3. The overarching theme is a unified mechanistic language using thermodynamics
4. To understanding, modelling and design of a large range of engineering materials.
5. The subject of mechanics of materials involves analytical methods for determining the strength, stiffness (deformation characteristics)
6. To know stability of the various members in a structural system.

Course Outcome

1. Describe the concepts and principles, understand the theory of elasticity including strain/displacement and Hooke's law relationships; and perform calculations, relative to the strength and stability of structures and mechanical components.
2. Define the characteristics and calculate the magnitude of combined stresses in individual members and complete structures; analyze solid mechanics problems using classical methods and energy methods.
3. Analyse various situations involving structural members subjected to combined stresses by application of Mohr's circle of stress; locate the shear center of thin wall beams.
4. Calculate the deflection at any point on a beam subjected to a combination of loads.
5. Solve for stresses and deflections of beams under unsymmetrical loading; apply various failure criteria for general stress states at points.
6. Solve torsion problems in bars and thin walled members

UNIT-I: *Simple Stresses and Strains*- Concept of stress and strain, St. Venant's principle, stress and strain diagram, Elasticity and plasticity – Types of stresses and strains, Hooke's law. stress – strain diagram for mild steel – Working stress – Factor of safety – Lateral strain, Poisson's ratio and volumetric strain – Elastic moduli and the relationship between them – Bars of varying section – composite bars – Temperature stresses. Strain Energy – Resilience Gradual, sudden, impact and shock loadings – simple applications.

UNIT-II: *Compound Stresses and Strains*- Two dimensional system, stress at a point on a plane, principal stresses and principal planes, Mohr circle of stress, ellipse of stress and their applications. Two dimensional stress-strain system, principal strains and principal axis of strain, circle of strain and ellipse of strain. Relationship between elastic constants.

UNIT-III: *Bending moment and Shear Force Diagrams*- Bending moment (BM) and shear force (SF) diagrams. BM and SF diagrams for cantilevers simply supported and fixed beams with or without overhangs. Calculation of maximum BM and SF and the point of contra flexure under concentrated loads, uniformly distributed loads over the whole span or part of span, combination of concentrated loads (two or three) and uniformly distributed loads, uniformly varying loads,

application of moments.

UNIT-IV: *Flexural Stresses-Theory of simple bending* – Assumptions – Derivation of bending equation: $M/I = f/y = E/R$ - Neutral axis – Determination of bending stresses – Section modulus of rectangular and circular sections (Solid and Hollow), I, T, Angle and Channel sections – Design of simple beam sections.

Shear Stresses- Derivation of formula – Shear stress distribution across various beam sections like rectangular, circular, triangular, I, T angle sections.

Slope and deflection- Relationship between moment, slope and deflection, Moment area method, Macaulay's method. Use of these methods to calculate slope and deflection for determinant beams.

UNIT-V: Torsion- Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts, torsional rigidity, Combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion. Analysis of close-coiled-helical springs.

Thin Cylinders and Spheres- Derivation of formulae and calculations of hoop stress, longitudinal stress in a cylinder, and sphere subjected to internal pressures.

List of Experiments:

1. Tension test
2. Bending tests on simply supported beam and Cantilever beam.
3. Compression test on concrete
4. Impact test
5. Shear test
6. Investigation of Hook's law that is the proportional relation between force and stretching in elastic deformation
7. Determination of torsion and deflection,
8. Measurement of forces on supports in statically determinate beam,
9. Determination of shear forces in beams,
10. Determination of bending moments in beams,
11. Measurement of deflections in statically determinate beam,
12. Measurement of strain in a bar
13. Bend test steel bar;
14. Yield/tensile strength of steel bar;

**18BECE441 Instrumentation & Sensor Technologies for Civil Engineering
Applications 4H-3C**

Instruction Hours/week: L: 1 T: 1 P: 2**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. To understand instrumentation, sensor theory and technology, data acquisition, digital signal processing, damage detection algorithm, life time analysis and decision making.
2. To understand theoretical and practical principles of design of sensor systems
3. To allow students to prepare, deploy and analyze observations from standard instruments.
4. Laboratory experiments shall be used on application of concepts introduced in the lectures.
5. To describe the requirements during the transmission of measured signals
6. To construct Instrumentation/Computer Networks
7. To suggest proper sensor technologies for specific applications

Course Outcomes:

1. To analyze the errors during measurements
2. To specify the requirements in the calibration of sensors and instruments
3. To describe the noise added during measurements and transmission
4. To describe the measurement of electrical variables
5. To describe the requirements during the transmission of measured signals
6. To construct Instrumentation/Computer Networks

UNIT-I: *Fundamentals of Measurement, Sensing and Instrumentation* covering definition of measurement and instrumentation, physical variables, common types of sensors; Describe the function of these sensors; Use appropriate terminology to discuss sensor applications; and qualitatively interpret signals from a known sensor type, types of instrumentation, Sensor Specifics, Permanent installations, Temporary installations;

UNIT-II: *Sensor Installation and Operation* covering to: i) Predict the response of sensors to various inputs; ii) Construct a conceptual instrumentation and monitoring program; iii) Describe the order and methodology for sensor installation; and iv) Differentiate between types of sensors and their modes of operation and measurement and v) Approach to Planning Monitoring Programs, Define target, Sensor selection, Sensor siting, Sensor Installation & Configuration, Advanced topic, Sensor design, Measurement uncertainty

UNIT-III: *Data Analysis and Interpretation* covering a) Fundamental statistical concepts, b) Data reduction and interpretation, c) Piezometer, Inclinator, Strain gauge, etc. d) Time domain signal processing, e) Discrete signals, Signals and noise and f) a few examples of statistical information to calculate are: Average value (mean), On average, how much each measurement deviates from the mean (standard deviation), Midpoint between the lowest and highest value of the set (median), Most frequently occurring value (mode), Span of values over which your data set occurs (range)

UNIT-IV: *Frequency Domain Signal Processing and Analysis* covering Explain the need for frequency domain analysis and its principles; Draw conclusions about physical processes based

on analysis of sensor data; Combine signals in a meaningful way to gain deeper insight into physical phenomena, Basic concepts in frequency domain signal processing and analysis, Fourier Transform, FFT (Fast Fourier Transform), Example problems: Noise reduction with filters, Leakage, Frequency resolution

Tutorials *from the above modules* demonstrating clearly the understanding and use for the sensors and instruments used for the problems posed and inferences drawn from the measurement and observations made along with evaluation report

Practical's:

Instrumentation of typical civil engineering members/structures/structural elements Use of different sensors, strain gauges, inclinometers, Performance characteristics Errors during the measurement process Calibration of measuring sensors and instruments Measurement, noise and signal processing Analog Signal processing Digital Signal Processing Demonstration & use of sensor technologies

Text/Reference Books:

1. Alan S Morris (2001), Measurement and Instrumentation Principles, 3rd/e, Butterworth Heinemann
2. David A. Bell (2007), Electronic Instrumentation and Measurements 2nd/e, Oxford Press
3. S. Tumanski (2006), Principle of Electrical Measurement, Taylor & Francis
4. Ilya Gertsbakh (2010), Measurement Theory for Engineers, Springer

Course Objective

1. The course provides a first level exposure to the students to fluid statics, kinematics and dynamics.
2. Measurement of pressure, computations of hydrostatic forces on structural components and the concepts of Buoyancy all find useful applications in many engineering problems.
3. A training to analyze engineering problems involving fluids – such as those dealing with pipe flow, open channel flow, jets, turbines and pumps, dams and spillways, culverts, river
4. To know the groundwater flow - with a mechanistic perspective is essential for the civil engineering students.
5. To apply the continuity, momentum and energy principles
6. To apply dimensional analysis

Course Outcome

1. Understand the broad principles of fluid statics, kinematics and dynamics
2. Understand definitions of the basic terms used in fluid mechanics
3. Understand classifications of fluid flow
4. Be able to apply the continuity, momentum and energy principles
5. Be able to apply dimensional analysis
6. Understand the open channel flow, jets, turbines and pumps, dams and spillways, culverts, river.

UNIT-I: Basic Concepts and Definitions – Distinction between a fluid and a solid; Density, Specific weight, Specific gravity, Kinematic and dynamic viscosity; variation of viscosity with temperature, Newton law of viscosity; vapour pressure, boiling point, cavitation; surface tension, capillarity, Bulk modulus of elasticity, compressibility.

UNIT-II: Fluid Statics - Fluid Pressure: Pressure at a point, Pascals law, pressure variation with temperature, density and altitude. Piezometer, U-Tube Manometer, Single Column Manometer, U-Tube Differential Manometer, Micromanometers. pressure gauges, Hydrostatic pressure and force: horizontal, vertical and inclined surfaces. Buoyancy and stability of floating bodies.

UNIT-III: Fluid Kinematics- Classification of fluid flow : steady and unsteady flow; uniform and non-uniform flow; laminar and turbulent flow; rotational and irrotational flow; compressible and incompressible flow; ideal and real fluid flow; one, two and three dimensional flows; Stream line, path line, streak line and stream tube; stream function, velocity potential function. One-, two- and three -dimensional continuity equations in Cartesian coordinates

UNIT-IV: Fluid Dynamics- Surface and body forces; Equations of motion - Euler's equation; Bernoulli's equation – derivation; Energy Principle; Practical applications of Bernoulli's equation : venturimeter, orifice meter and pitot tube; Momentum principle; Forces exerted by fluid flow on pipe bend; Vortex Flow – Free and Forced; Dimensional Analysis and Dynamic Similitude - Definitions of Reynolds Number, Froude Number, Mach Number, Weber Number and Euler Number;

Buckingham's π -Theorem.

Lab Experiments

1. Calculation of viscosity
2. Study of Pressure Measuring Devices
3. Verification of Bernoulli's Theorem
4. Venturimeter
5. Orifice meter
6. Impacts of jets
7. Velocity distribution in pipes
8. Laminar Flow

Text/Reference Books:

4. Theory and Applications of Fluid Mechanics, K. Subramanya, Tata McGraw Hill
5. Fluid Mechanics with Engineering Applications, R.L. Daugherty, J.B. Franzini and E.J. Finnemore, International Student Edition, Mc Graw Hill.

Course Objectives

With the successful completion of the course, the student should have the capability to:

1. describe the function of surveying in civil engineering construction,
2. Work with survey observations, and perform calculations,
3. Customary units of measure. Identify the sources of measurement errors and mistakes; understand the difference between accuracy and precision as it relates to distance, differential leveling, and angular measurements,
4. Identify and calculate the errors in measurements and to develop corrected values for differential level circuits, horizontal distances and angles for open or closed-loop traverses,
5. Operate an automatic level to perform differential and profile leveling; properly record notes; mathematically reduce and check leveling measurements,
6. Measure horizontal, vertical, and zenith angles with a transit, theodolite, total station or survey grade GNSS instruments,

Course Outcomes

1. Students will gain basic knowledge of surveying and unit conversions and its principle.
2. Apply the knowledge, techniques, skills, and applicable tools of the discipline to engineering and surveying activities
3. Translate the knowledge gained for the implementation of Civil infrastructure facilities
4. Relate the knowledge on Surveying to the new frontiers of science like Hydrographic surveying, Electronic Distance Measurement, Global Positioning System, Photogrammetric and Remote Sensing.
5. Able to measure horizontal, vertical, and zenith angles with a transit, theodolite, total station or survey grade GNSS instruments,
6. Able to identify and calculate the errors in measurements

UNIT-I: *Introduction to Surveying (8 hours):* Principles, Linear, angular and graphical methods, Survey stations, Survey lines- ranging, Bearing of survey lines, Levelling: Plane table surveying, Principles of levelling- booking and reducing levels; differential, reciprocal leveling, profile levelling and cross sectioning. Digital and Auto Level, Errors in levelling; contouring: Characteristics, methods, uses; areas and volumes.

Triangulation and Trilateration: Theodolite survey: Instruments, Measurement of horizontal and vertical angle; Horizontal and vertical control - methods -triangulation - network- Signals. Baseline - choices - instruments and accessories - extension of base lines - corrections - Satellite station - reduction to centre - Intervisibility of height and distances - Trigonometric leveling - Axis single corrections.

UNIT-II: Curves-Elements of simple and compound curves – Method of setting out– Elements of Reverse curve - Transition curve – length of curve – Elements of transition curve - Vertical curves

UNIT-III: *Modern Field Survey Systems* : Principle of Electronic Distance Measurement,

Modulation, Types of EDM instruments, Distomat, Total Station – Parts of a Total Station – Accessories –Advantages and Applications,Field Procedure for total station survey, Errors in Total Station Survey; Global Positioning Systems- Segments, GPS measurements, errors and biases, Surveying with GPS, Co-ordinate transformation, accuracy considerations.

UNIT-IV: *Photogrammetry Surveying*: Introduction, Basic concepts, perspective geometry of aerial photograph, relief and tilt displacements, terrestrial photogrammetry, flight planning; Stereoscopy, ground control extension for photographic mapping- aerial triangulation, radial triangulation, methods; photographic mapping- mapping using paper prints, mapping using stereoplotting instruments, mosaics, map substitutes.

UNIT-V: *Remote Sensing*: Introduction –Electromagnetic Spectrum, interaction of electromagnetic radiation with the atmosphere and earth surface, remote sensing data acquisition: platforms and sensors; visual image interpretation; digital image processing.

Course objectives

1. Make measurements of behavior of various materials used in Civil Engineering.
2. Provide physical observations to complement concepts learnt
3. Introduce experimental procedures and common measurement instruments, equipment, devices.
4. Exposure to a variety of established material testing procedures and techniques
5. Different methods of evaluation and inferences drawn from observations
6. To compute engineering values (e.g. stress or strain) from laboratory measures

Course outcomes

1. Calibrate electronic sensors
2. Operate a data acquisition system
3. Operate various types of testing machines
4. Configure a testing machine to measure tension or compression behavior
5. Compute engineering values (e.g. stress or strain) from laboratory measures
6. Analyze a stress versus strain curve for modulus, yield strength and other related attributes

UNIT-I : *Introduction to Engineering Materials covering*, Cements, M-Sand, Concrete (plain, reinforced and steel fibre/ glass fibre-reinforced, light-weight concrete, High Performance Concrete, Polymer Concrete) Ceramics, and Refractories, Bitumen and asphaltic materials, Timbers, Glass and Plastics, Structural Steel and other Metals, Paints and Varnishes, Acoustical material and geo-textiles, rubber and asbestos, laminates and adhesives, Graphene, Carbon composites and other engineering materials including properties and uses of these

UNIT-II : *Introduction to Material Testing covering*, What is the “ Material Engineering” ?; Mechanical behavior and mechanical characteristics; Elasticity – principle and characteristics; Plastic deformation of metals; Tensile test – standards for different material (brittle, quasi-brittle, elastic and so on) True stress – strain interpretation of tensile test; hardness tests; Bending and torsion test; strength of ceramic; Internal friction, creep – fundamentals and characteristics; Brittle fracture of steel – temperature transition approach; Background of fracture mechanics; Discussion of fracture toughness testing – different materials; concept of fatigue of materials; Structural integrity assessment procedure and fracture mechanics

UNIT-III: *Standard Testing & Evaluation Procedures covering*, Laboratory for mechanical testing; Discussion about mechanical testing; Naming systems for various irons, steels and nonferrous metals; Discussion about elastic deformation; Plastic deformation; Impact test and transition temperatures; Fracture mechanics – background; Fracture toughness – different materials; Fatigue of material; Creep.

Practical's:

- Gradation of coarse and fine aggregates
- Different corresponding tests and need/application of these tests in design and quality control
- Tensile Strength of materials & concrete composites
- Compressive strength test on aggregates
- Tension I - Elastic Behaviour of metals & materials
- Tension II - Failure of Common Materials
- Direct Shear - Frictional Behaviour
- Concrete I - Early Age Properties
- Concrete II - Compression and Indirect Tension
- Compression – Directionality
- Soil Classification
- Consolidation and Strength Tests
- Tension III - Heat Treatment
- Torsion test
- Hardness tests (Brinell's and Rockwell)
- Tests on closely coiled and open coiled springs
- Theories of Failure and Corroboration with Experiments
- Tests on unmodified bitumen and modified binders with polymers
- Bituminous Mix Design and Tests on bituminous mixes - Marshall method
- Concrete Mix Design as per BIS

Text/Reference Books:

1. Chudley, R., Greeno (2006), 'Building Construction Handbook' (6th ed.), R. Butterworth-Heinemann
2. Khanna, S.K., Justo, C.E.G and Veeraragavan, A, ' Highway Materials and Pavement Testing', Nem Chand & Bros, Fifth Edition
3. Various related updated & recent standards of BIS, IRC, ASTM, RILEM, AASHTO, etc. corresponding to materials used for Civil Engineering applications
4. Kyriakos Komvopoulos (2011), Mechanical Testing of Engineering Materials, Cognella
5. E.N. Dowling (1993), Mechanical Behaviour of Materials, Prentice Hall International Edition
6. American Society for Testing and Materials (ASTM), *Annual Book of ASTM Standards* (post 2000)
7. Related papers published in international journals

Course objectives

1. Awareness of the importance of Civil Engineering and the impact it has on the Society and at global levels
2. Awareness of the impact of Civil Engineering for the various specific fields of human Endeavour
3. Need to think innovatively to ensure Sustainability.
4. To know the requirements for energy and how they are met: past, present and future
5. To know the impact which Civil Engineering projects have on the Society at large and on the global arena and using resources efficiently and effectively.
6. To applying professional and responsible judgement and take a leadership role.

Course objectives

1. The impact which Civil Engineering projects have on the Society at large and on the global arena and using resources efficiently and effectively.
2. The extent of Infrastructure, its requirements for energy and how they are met: past, present and future
3. The Sustainability of the Environment, including its Aesthetics,
4. The potentials of Civil Engineering for Employment creation and its Contribution to the GDP
5. The Built Environment and factors impacting the Quality of Life
6. The precautions to be taken to ensure that the above-mentioned impacts are not adverse but beneficial.

UNIT-I: Introduction to Course and Overview; Understanding the past to look into the future: Pre-industrial revolution days, Agricultural revolution, first and second industrial revolutions, IT revolution; Recent major Civil Engineering breakthroughs and innovations; Present day world and future projections, Ecosystems in Society and in Nature; the steady erosion in Sustainability; Global warming, its impact and possible causes; Evaluating future requirements for various resources; GIS and applications for monitoring systems; Human Development Index and Ecological Footprint of India Vs other countries and analysis;

UNIT-II: Understanding the importance of Civil Engineering in shaping and impacting the world; The ancient and modern Marvels and Wonders in the field of Civil Engineering; Future Vision for Civil Engineering

UNIT-III: Infrastructure - Habitats, Megacities, Smart Cities, futuristic visions; Transportation (Roads, Railways & Metros, Airports, Seaports, River ways, Sea canals, Tunnels (below ground, under water); Futuristic systems (ex, Hyper Loop)); Energy generation (Hydro, Solar (Photovoltaic, Solar Chimney), Wind, Wave, Tidal, Geothermal, Thermal energy); Water provisioning; Telecommunication needs (towers, above-ground and underground cabling); Awareness of various Codes & Standards governing Infrastructure development; Innovations and methodologies for ensuring Sustainability;

UNIT-IV: Environment- Traditional & futuristic methods; Solid waste management, Water purification, Wastewater treatment & Recycling, Hazardous waste treatment; Flood control (Dams, Canals, River interlinking), Multi-purpose water projects, Atmospheric pollution; Global warming phenomena and Pollution Mitigation measures, Stationary and non- stationary; Environmental Metrics & Monitoring; Other Sustainability measures; Innovations and methodologies for ensuring Sustainability.

UNIT-V: Built environment – Facilities management, Climate control; Energy efficient built environments and LEED ratings, Recycling, Temperature/ Sound control in built environment, Security systems; Intelligent/ Smart Buildings; Aesthetics of built environment, Role of Urban Arts Commissions; Conservation, Repairs & Rehabilitation of Structures & Heritage structures; Innovations and methodologies for ensuring Sustainability

UNIT-VI: Civil Engineering Projects – Environmental Impact Analysis procedures; Waste (materials, manpower, equipment) avoidance/ Efficiency increase; Advanced construction techniques for better sustainability; Techniques for reduction of Green House Gas emissions in various aspects of Civil Engineering Projects; New Project Management paradigms & Systems (Ex. Lean Construction), contribution of Civil Engineering to GDP, Contribution to employment (projects, facilities management), Quality of products, Health & Safety aspects for stakeholders; Innovations and methodologies for ensuring Sustainability during Project development;

SEMESTER V

Course Objectives

1. Understand the deformation and strains under different load action and response in terms of forces and moments
2. Understand the behavior under different loading actions
3. Application of engineering principles to calculate the reactions, forces and moments
4. Understand the energy methods used to derive the equations to solve engineering problems
5. Make use of the capabilities to determine the forces and moments for design.
6. To understand the impact of engineering solutions in a global and societal context

Course Outcomes:

At the end of the course, the student will have

1. an ability to apply knowledge of mathematics, science, and engineering
2. an ability to design a system, component, or process to meet desired needs
3. an ability to identify, formulate, and solve engineering problems
4. the broad education necessary to understand the impact of engineering solutions in a global and societal context
5. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
6. an ability to apply principles of engineering, basic science, and math to model, analyze, design and realize physical systems, components or processes

Proposed Syllabus

UNIT-I: *Deformation and Strain* covering description of finite deformation, Infinitesimal deformation; Stability of dams, retaining walls and chimneys;
Generalized state of stress and strain: Stress and strain tensor, Yield criteria and theories of failure; Tresca, Von-Mises, Hill criteria, Heigh-Westerguard's stress space.

UNIT-II: *Momentum Balance and Stresses* covering Forces and Moments Transmitted by Slender Members, Shear Force and Bending Moment Diagrams, Momentum Balance, Stress States / Failure Criterion. *Mechanics of Deformable Bodies* covering Force-deformation Relationships and Static Indeterminacy, Uniaxial Loading and Material Properties, Trusses and Their Deformations, Statically Determinate and Indeterminate Trusses,

UNIT-III: *Force-Stress-Equilibrium* covering Multiaxial Stress and Strain----- *Displacement – Strain* covering Multiaxial Strain and Multiaxial Stress-strain Relationships

UNIT-IV: *Elasticity and Elasticity Bounds* covering Stress-strain-temperature Relationships and Thin-walled Pressure Vessels, Stress and strain Transformations and Principal Stress, Failure of Materials,

UNIT-V: *Bending: Stress and Strains; Deflections and Torsion* covering Pure Bending, Moment-

curvature Relationship, Beam Deflection, Symmetry, Superposition, and Statically Indeterminate Beams, Shear and Torsion, Torsion and Twisting, Thermoelasticity, Energy methods, Variational Methods; Strain energy, elastic, complementary and total strain energy, Strain energy of axially loaded bar, Beam in bending, shear and torsion; General energy theorems, Castigliano's theorem, Maxwell-Betti's reciprocal theorem; Virtual work and unit load method for deflection, Application to problems of beams and frames.

UNIT-VI: *Structural stability*; Stability of columns, Euler's formula, end conditions and effective length factor, Columns with eccentric and lateral load; Plasticity and Yield Design covering 1D-Plasticity – An Energy Approach, Plasticity Models, Limit Analysis and Yield Design

Course Objectives:

1. This course aims at providing students with a solid background on principles of structural engineering design.
2. Students will be exposed to the theories and concepts of both concrete and steel design and analysis both at the element and system levels.
3. Hands-on design experience and skills will be gained and learned through problem sets and a comprehensive design project.
4. An understanding of real-world open-ended design issues will be developed. Weekly recitations and project discussions will be held besides lectures.
5. To gain the knowledge of different analysis involved in structures.
6. To identify the failures involved in buildings

Course Outcomes:

1. The students will be able to apply their knowledge of structural mechanics in addressing design problems of structural engineering
2. They will possess the skills to solve problems dealing with different loads and concrete and steel
3. They will have knowledge in structural engineering
4. Students will gain the knowledge of different analysis involved in structures.
5. Students will be able to know about the different structural elements and their designing.
6. They are able to identify the failures involved in buildings.

UNIT-I: Introduction- concepts of energy principles, safety, sustainable development in performance; what makes a structure; principles of stability, equilibrium; what is a structural engineer, role of engineer, architect, user, builder; what are the functions' what do the engineers design, first principles of process of design

UNIT-II: Planning and Design Process; Materials, Loads, and Design Safety; Behaviour and Properties of Concrete and Steel; Wind and Earthquake Loads

UNIT-III: *Materials and Structural Design Criteria:* Introduction to the analysis and design of structural systems. Analyses of determinate and indeterminate trusses, beams, and frames, and design philosophies for structural engineering. Laboratory experiments dealing with the analysis of determinate and indeterminate structures;

UNIT-IV: *Design of Structural Elements;* Concrete Elements, Steel Elements, Structural Joints; Theories and concepts of both concrete and steel design and analysis both at the element and system levels. Approximate Analysis Methods as a Basis for Design; Design of

Reinforced Concrete Beams for Flexure; Design of Reinforced Concrete Beams for Shear; Bond,

Anchorage, and Serviceability; Reinforced Concrete Columns; Reinforced Concrete Slabs; Introduction to Steel Design; Tension Members and Connections; Bending Members; Structural Systems

UNIT-V: *System Design Concepts*; Special Topics that may be Covered as Part of the Design Project Discussions; Flat slabs; Prestressed Concrete Elements; Constructability and Structural Control; Fire Protection

Course Objectives

1. Understand the interaction among various processes in the hydrologic cycle
2. Apply the application of fluid mechanics and use of computers in solving a host of problems in hydraulic engineering
3. Study types and classes of hydrologic simulation models and design procedures for safe and effective passage of flood flows for design of hydraulic structures
4. To cover the socio-technical aspects in the field of water resources
5. To calculate the hydrological extreme flood and drought events in water resources engineering
6. To understand the concept of precipitation and measurement of precipitation.

Course Outcomes

1. Understand the basic aquifer parameters and estimate groundwater resources for different hydro-geological boundary conditions.
2. Able to understand the concept of precipitation and measurement of precipitation.
3. Will gain a brief knowledge of the distribution systems.
4. Understand application of systems concept, advanced optimization techniques to cover the socio-technical aspects in the field of water resources
5. Apply the principles and applications of remote sensing,
6. Applying the knowledge of GPS and GIS in the context to hydrological extreme flood and drought events in water resources engineering

UNIT-I: *Introduction* - hydrologic cycle, water-budget equation, history of hydrology, world water balance, applications in engineering, sources of data.

Precipitation - forms of precipitation, characteristics of precipitation in India, measurement of precipitation, rain gauge network, mean precipitation over an area, depth- area-duration relationships, maximum intensity/depth-duration-frequency relationship, Probable Maximum Precipitation (PMP), rainfall data in India.

UNIT-II: *Abstractions from precipitation* - evaporation process, evaporimeters, analytical methods of evaporation estimation, reservoir evaporation and methods for its reduction, evapotranspiration, measurement of evapotranspiration, evapotranspiration equations, potential evapotranspiration over India, actual evapotranspiration, interception, depression storage, infiltration, infiltration capacity, measurement of infiltration, modelling infiltration capacity, classification of infiltration capacities, infiltration indices.

UNIT-III: *Runoff* - runoff volume, SCS-CN method of estimating runoff volume, flow- duration curve, flow-mass curve, hydrograph, factors affecting runoff hydrograph, components of hydrograph, base flow separation, effective rainfall, unit hydrograph surface water resources of India, environmental flows.

Ground water and well hydrology - forms of subsurface water, saturated formation, aquifer

properties, geologic formations of aquifers, well hydraulics: steady state flow in wells, equilibrium equations for confined and unconfined aquifers, aquifer tests.

UNIT-IV: *Water withdrawals and uses* – water for energy production, water for agriculture, water for hydroelectric generation; flood control. Analysis of surface water supply, Water requirement of crops-Crops and crop seasons in India, cropping pattern, duty and delta; Quality of irrigation water; Soil-water relationships, root zone soil water, infiltration, consumptive use, irrigation requirement, frequency of irrigation; Methods of applying water to the fields: surface, sub-surface, sprinkler and trickle / drip irrigation.

UNIT-V: *Distribution systems* - canal systems, alignment of canals, canal losses, estimation of design discharge. Design of channels- rigid boundary channels, alluvial channels, Kennedy's and Lacey's theory of regime channels. Canal outlets: non-modular, semi-modular and modular outlets. Water logging: causes, effects and remedial measures. Lining of canals, types of lining. Drainage of irrigated lands: necessity, methods.

Dams and spillways - embankment dams: Classification, design considerations, estimation and control of seepage, slope protection. Gravity dams: forces on gravity dams, causes of failure, stress analysis, elementary and practical profile. Arch and buttress dams. Spillways: components of spillways, types of gates for spillway crests; Reservoirs- Types, capacity of reservoirs, yield of reservoir, reservoir regulation, sedimentation, economic height of dam, selection of suitable site.

5. L W Mays, Water Resources Engineering, Wiley.
6. J D Zimmerman, Irrigation, John Wiley & Sons
7. C S P Ojha, R Berndtsson and P Bhunya, Engineering Hydrology, Oxford.

Course Objectives

1. Recognize the function and scope of Transportation Engineering
2. Identify Driver, User, vehicle and Roadway characteristics and Analyze the interaction among the parameters.
3. Analyze Speed-Volume-Density, Perform Highway
4. Capacity Analysis and Describe Traffic Control System Components and Devices
5. Recognize problems and issues of Parking, Accident, Public Transport and ITS
6. Describe Transportation Planning Process and apply Traffic Forecasting Methods.

Course Outcomes

On completion of the course, the students will be able to:

1. carry out surveys involved in planning and highway alignment
2. design the geometric elements of highways and expressways
3. carry out traffic studies and implement traffic regulation
4. Gained the knowledge in the control measures and intersection design of highway alignment.
5. characterize pavement materials and
6. design flexible and rigid pavements as per IRC

UNIT-I: Highway development and planning-Classification of roads, road development in India, Current road projects in India; highway alignment and project preparation.

UNIT-II : Geometric design of highways:- Introduction; highway cross section elements; sight distance, design of horizontal alignment; design of vertical alignment; design of intersections, problems

UNIT-III: Traffic engineering & control- Traffic Characteristics, traffic engineering studies, traffic flow and capacity, traffic regulation and control; design of road intersections; design of parking facilities; highway lighting; problems

UNIT-IV: Pavement materials- Materials used in Highway Construction- Soils, Stone aggregates, bituminous binders, bituminous paving mixes; Portland cement and cement concrete: desirable properties, tests, requirements for different types of pavements. Problems

UNIT-V: Design of pavements- Introduction; flexible pavements, factors affecting design and performance; stresses in flexible pavements; design of flexible pavements as per IRC; rigid pavements- components and functions; factors affecting design and performance of CC pavements; stresses in rigid pavements; design of concrete pavements as per IRC; problems

2. Kadiyalai, L.R., ' Traffic Engineering and Transport Planning', Khanna Publishers.
3. Partha Chakraborty, ' Principles Of Transportation Engineering, PHI Learning,
4. Fred L. Mannering, Scott S. Washburn, Walter P. Kilareski, 'Principles of Highway Engineering and Traffic Analysis', 4th Edition, John Wiley
5. Srinivasa Kumar, R, Textbook of Highway Engineering, Universities Press, 2011.
6. Paul H. Wright and Karen K. Dixon, Highway Engineering, 7th Edition, Wiley Student Edition, 2009.

Course Objectives:

1. To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines.
2. At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering
3. To solve problems in uniform, gradually and rapidly varied flows in steady state conditions.
4. To gain a complete knowledge of open channel flow.
5. To familiar with the dimensional analysis and hydraulic similitude.
6. To gain knowledge of pump and turbines

Course Outcomes

1. The students will be able to apply their knowledge of fluid mechanics in addressing problems in open channels.
2. They will possess the skills to solve problems in uniform, gradually and rapidly varied flows in steady state conditions.
3. They will have knowledge in hydraulic machineries (pumps and turbines).
4. Able to relate the theory and practice of problems in hydraulic engineering
5. Will gain a complete knowledge of open channel flow.
6. Will be familiar with the dimensional analysis and hydraulic similitude.

UNIT-I: Introduction to Open Channel Flow-Comparison between open channel flow and pipe flow, geometrical parameters of a channel, classification of open channels, classification of open channel flow, Velocity Distribution of channel section.

Laminar Flow- Laminar flow through: circular pipes, annulus and parallel plates. Stoke's law, Measurement of viscosity.

Turbulent Flow- Reynolds experiment, Transition from laminar to turbulent flow. Definition of turbulence, scale and intensity, Causes of turbulence, instability, mechanism of turbulence and effect of turbulent flow in pipes. Reynolds stresses, semi-empirical theories of turbulence, Prandtl's mixing length theory, universal velocity distribution equation. Resistance to flow of fluid in smooth and rough pipes, Moody's diagram.

UNIT-II: Boundary Layer Analysis-Assumption and concept of boundary layer theory. Boundary-layer thickness, displacement, momentum & energy thickness, laminar and Turbulent boundary layers on a flat plate; Laminar sub-layer, smooth and rough boundaries. Local and average friction coefficients. Separation and Control.

UNIT-III: Dimensional Analysis and Hydraulic Similitude: Dimensional homogeneity, Rayleigh method, Buckingham's Pi method and other methods. Dimensionless groups. Similitude, Model studies, Types of models. Application of dimensional analysis and model studies to fluid flow problem.

UNIT-IV: Uniform Flow-Continuity Equation, Energy Equation and Momentum Equation, Characteristics of uniform flow, Chezy's formula, Manning's formula. Factors affecting Manning's

Roughness Coefficient “ n . *Most economical section of channel*. Computation of Uniform flow, Normal depth.

Non-Uniform Flow- Specific energy, Specific energy curve, critical flow, discharge curve Specific force Specific depth, and Critical depth. Channel Transitions. Measurement of Discharge and Velocity – Venturi Flume, Standing Wave Flume, Parshall Flume, Broad Crested Weir. Measurement of Velocity- Current meter, Floats, Hot-wire anemometer. Gradually Varied Flow-Dynamic Equation of Gradually Varied Flow, Classification of channel bottom slopes, Classification of surface profile, Characteristics of surface profile. Computation of water surface profile by graphical, numerical and analytical approaches. Direct Step method, Graphical Integration method and Direct integration method.

Computational Fluid Dynamics: Basic equations of fluid dynamics, Grid generation, Introduction to in viscid incompressible flow, Boundary layer flow as applicable to C.F.D. Hydro informatics: Concept of hydro informatics –scope of internet and web based modeling in water resources engineering

UNIT-V: Hydraulic Jump- Theory of hydraulic jump, Elements and characteristics of hydraulic jump in a rectangular Channel, length and height of jump, location of jump, Types, applications and location of hydraulic jump. Energy dissipation and other uses, surge as a moving hydraulic jump. Positive and negative surges. Dynamics of Fluid Flow- Momentum principle, applications: Force on plates, pipe bends, moments of momentum equation,

UNIT-VI: Flow through Pipes: Loss of head through pipes, Darcy-Wiesbatch equation, minor losses, total energy equation, hydraulic gradient line, Pipes in series, equivalent pipes, pipes in parallel, flow through laterals, flows in dead end pipes, siphon, power transmission through pipes, nozzles. Analysis of pipe networks: Hardy Cross method, water hammer in pipes and control measures, branching of pipes, three reservoir problem.

Practical Work:

1. Uniform Flow
2. Venturi Flume
3. Standing Wave Flume
4. Gradually Varied Flow
5. Hydraulic Jump
6. Flow under Sluice Gate
7. Flow through pipes
8. Turbulent flow through pipes
9. Laminar flow through pipes
10. Major losses / Minor losses in pipe

Text/Reference Books:

1. Hydraulics and Fluid Mechanics, P.M. Modi and S.M. Seth, Standard Book House
2. Theory and Applications of Fluid Mechanics, K. Subramanya, Tata McGraw Hill.
3. Open channel Flow, K. Subramanya, Tata McGraw Hill.
4. Open Channel Hydraulics, Ven Te Chow, Tata McGraw Hill.
5. Burnside, C.D., “*Electromagnetic Distance Measurement*,” Beekman Publishers, 1971.

Course Objectives

1. Understand the different types of soil based on their formation mechanism;
2. Understand the various phase diagrams and derive various phase relationships of the soil;
3. Understand the behaviour of soils based on their moisture contents;
4. Perform laboratory experiments to estimate various Atterberg limits and evaluate index properties of soils
5. Determine the permeability of soils through various laboratory and field tests;
6. Perform laboratory test to determine the maximum dry density and optimum moisture content of the soil

Course Outcomes

On completion of this module, the student must be able to:

1. Specify a strategy for site investigation to identify the soil deposits and determine the depth and spatial extent within the ground;
2. Understand various site investigation techniques and their in-situ applications;
3. Prepare a soil investigation report based on borehole log data and various in-situ tests like SPT, CPT, etc.
4. To estimate various Atterberg limits and evaluate index properties of soils
5. Will get familiar with the various test available for determining the permeability of soil.
6. Will get a good exposure to the bearing capacity of soil.

UNIT-I: *Introduction*—Types of soils, their formation and deposition, Definitions: soil mechanics, soil engineering, rock mechanics, geotechnical engineering. Scope of soil engineering. Comparison and difference between soil and rock. Basic Definitions and Relationships-Soil as three-phase system in terms of weight, volume, voids ratio, and porosity. Definitions: moisture content, unit weights, degree of saturation, voids ratio, porosity, specific gravity, mass specific gravity, etc. Relationship between volume weight, voids ratio- moisture content, unit weight- percent air voids, saturation-moisture content, moisture content- specific gravity etc. Determination of various parameters such as: Moisture content by oven dry method, pycnometer, sand bath method, torsional balance method, nuclear method, alcohol method and sensors. Specific gravity by density bottle method, pycnometer method, measuring flask method. Unit weight by water displacement method, submerged weight method, core-cutter method, sand-replacement method.

UNIT-II: *Plasticity Characteristics of Soil* - Introduction to definitions of: plasticity of soil, consistency limits-liquid limit, plastic limit, shrinkage limit, plasticity, liquidity and consistency indices, flow & toughness indices, definitions of activity and sensitivity. Determination of: liquid limit, plastic limit and shrinkage limit. Use of consistency limits. Classification of Soils-Introduction of soil classification: particle size classification, textural classification, unified soil classification system, Indian standard soil classification system. Identification: field identification of soils, general characteristics of soil in different groups.

UNIT-III: *Permeability of Soil* - Darcy's law, validity of Darcy's law. Determination of coefficient

of permeability: Laboratory method: constant-head method, falling-head method. Field method: pumping- in test, pumping- out test. Permeability aspects: permeability of stratified soils, factors affecting permeability of soil. Seepage Analysis- Introduction, stream and potential functions, characteristics of flow nets, graphical method to plot flow nets.

UNIT-IV: *Effective Stress Principle - Stresses in soils* – Introduction, stresses due to point load, line load, strip load, uniformly loaded circular area, rectangular loaded area. Influence factors, Isobars, Boussinesq's equation, Newmark's Influence Chart. Contact pressure under rigid and flexible area, computation of displacements from elastic theory.

Introduction, effective stress principle, nature of effective stress, effect of water table. Fluctuations of effective stress, effective stress in soils saturated by capillary action, seepage pressure, quick sand condition.

UNIT-V: *Compaction of Soil*-Introduction, theory of compaction, laboratory determination of optimum moisture content and maximum dry density. Compaction in field, compaction specifications and field control.

Consolidation of Soil - Introduction, comparison between compaction and consolidation, initial, primary & secondary consolidation, spring analogy for primary consolidation, interpretation of consolidation test results, Terzaghi's theory of consolidation, final settlement of soil deposits, computation of consolidation settlement and secondary consolidation.

UNIT-VI: *Shear Strength* - Mohr circle and its characteristics, principal planes, relation between major and minor principal stresses, Mohr-Coulomb theory, types of shear tests: direct shear test, merits of direct shear test, triaxial compression tests, test behaviour of UU, CU and CD tests, pore-pressure measurement, computation of effective shear strength parameters. Unconfined compression test, vane shear test

UNIT-VII: *Stability of Slopes* - Introduction, types of slopes and their failure mechanisms, factor of safety, analysis of finite and infinite slopes, wedge failure Swedish circle method, friction circle method, stability numbers and charts.

UNIT-VIII: *Soil Exploration*- Introduction, methods of site exploration and soil investigation, methods of boring, soil samplers, sampling procedures, trial pits, borings, penetrometer tests, analysis of borehole logs, geophysical and advance soil exploration methods.

Practical Work: List of tests on-

1. Field Density using Core Cutter method.
2. Field Density using Sand replacement method.
3. Natural moisture content using Oven Drying method.
4. Field identification of Fine Grained soils.
5. Specific gravity of Soils.
6. Grain size distribution by Sieve Analysis.
7. Grain size distribution by Hydrometer Analysis.
8. Consistency limits by Liquid limit
9. Consistency limits by Plastic limit
10. Consistency limits by Shrinkage limit.
11. Permeability test using Constant-head test method.
12. Permeability test using Falling-head method.
13. Compaction test: Standard Proctor test.

14. Compaction test: Modified Proctor test.
15. Relative density.
16. Consolidation Test.
17. Triaxial Test (UU)
18. Vane shear test
19. Direct Shear Test
20. Unconfined Compression Strength Test.

2. Fundamentals of Soil Engineering by Taylor, John Wiley & Sons
3. An Introduction to Geotechnical Engineering, by Holtz R.D. and Kovacs, W.D., Prentice Hall, NJ
4. Principles of Geotechnical Engineering, by Braja M. Das, Cengage Learning
5. Principles of Foundation Engineering, by Braja M. Das, Cengage Learning
6. Essentials of Soil Mechanics and Foundations: Basic Geotechnics by David F. McCarthy
7. Soil Mechanics in Engineering Practice by Karl Terzaghi, Ralph B. Peck, and Gholamreza Mesri.
8. Geotechnical Engineering: Principles and Practices of Soil Mechanics and Foundation Engineering (Civil and Environmental Engineering) by V.N.S. Murthy

Course Objectives

1. Understand the impact of humans on environment and environment on humans
2. Be able to identify and value the effect of the pollutants on the environment: atmosphere, water and soil.
3. To select the most appropriate technique for the treatment of water, wastewater solid waste and contaminated air.
4. To plan strategies to control, reduce and monitor pollution.
5. To analyze the impact of humans on environment and environment on humans
6. To know the different designing elements in sewer systems.

Course Outcomes

1. Analyze the impact of humans on environment and environment on humans
2. Be able to examine the effect of the pollutants on the environment: atmosphere, water and soil.
3. Be able to plan strategies to control, reduce and monitor pollution.
4. Be able to select the most appropriate technique for the treatment of water, wastewater solid waste and contaminated air.
5. Be conversant with basic environmental legislation.
6. Able now the different designing elements in sewer systems.

UNIT-I: Water: -Sources of Water and quality issues, water quality requirement for different beneficial uses, Water quality standards, water quality indices, water safety plans, Water Supply systems, Need for planned water supply schemes, Water demand industrial and agricultural water requirements, Components of water supply system; Transmission of water, Distribution system, Various valves used in W/S systems, service reservoirs and design.

Water Treatment: aeration, sedimentation, coagulation flocculation, filtration, disinfection, advanced treatments like adsorption, ion exchange, membrane processes

UNIT-II: Sewage- Domestic and Storm water, Quantity of Sewage, Sewage flow variations. Conveyance of sewage- Sewers, shapes design parameters, operation and maintenance of sewers, Sewage pumping; Sewerage, Sewer appurtenances, Design of sewerage systems. Small bore systems, Storm Water- Quantification and design of Storm water; Sewage and Sullage, Pollution due to improper disposal of sewage, National River cleaning plans,

Wastewater treatment, aerobic and anaerobic treatment systems, suspended and attached growth systems, recycling of sewage – quality requirements for various purposes.

UNIT-III: Air - Composition and properties of air, Quantification of air pollutants, Monitoring of air pollutants, Air pollution- Occupational hazards, Urban air pollution automobile pollution, Chemistry of combustion, Automobile engines, quality of fuel, operating conditions and interrelationship. Air quality standards, Control measures for Air pollution, construction and limitations

Noise- Basic concept, measurement and various control methods.

UNIT-IV: *Solid waste management*-Municipal solid waste, Composition and various chemical and physical parameters of MSW, MSW management: Collection, transport, treatment and disposal of MSW. Special MSW: waste from commercial establishments and other urban areas, solid waste from construction activities, biomedical wastes, Effects of solid waste on environment: effects on air, soil, water surface and ground health hazards. Disposal of solid waste-segregation, reduction at source, recovery and recycle. Disposal methods- Integrated solid waste management. Hazardous waste: Types and nature of hazardous waste as per the HW Schedules of regulating authorities.

UNIT-V: *Building Plumbing*-Introduction to various types of home plumbing systems for water supply and waste water disposal, high rise building plumbing, Pressure reducing valves, Break pressure tanks, Storage tanks, Building drainage for high rise buildings, various kinds of fixtures and fittings used.

Government authorities and their roles in water supply, sewerage disposal. Solid waste management and monitoring/control of environmental pollution.

Practical Work: List of Experiments

1. Physical Characterization of water: Turbidity, Electrical Conductivity, pH
2. Analysis of solids content of water: Dissolved, Settleable, suspended, total, volatile, inorganic etc.
3. Alkalinity and acidity, Hardness: total hardness, calcium and magnesium hardness
4. Analysis of ions: copper, chloride and sulfate
5. Optimum coagulant dose
6. Chemical Oxygen Demand (COD)
7. Dissolved Oxygen (D.O) and Biochemical Oxygen Demand (BOD)
8. Break point Chlorination
9. Bacteriological quality measurement: MPN,
10. Ambient Air quality monitoring (TSP, RSPM, SO_x, NO_x)
11. Ambient noise measurement

8. Manual on Sewerage and Sewage Treatment Systems, Part A, B and C. Central Public Health and Environmental Engineering Organization, Ministry of Urban Development.

Course Objectives

The course is designed to address the following:

1. To make the students understand the types of roles they are expected to play in the society as practitioners of the civil engineering profession
2. To develop some ideas of the legal and practical aspects of their profession
3. To give an understanding of Intellectual Property Rights, Patents.
4. To give a good insight into contracts and contracts management
5. To know about Intellectual Property Rights, Patents.
6. To Gathered ideas of the legal and practical aspects of their profession

Course Outcomes

1. Familiarize the students to what constitutes professional practice, introduction of various stakeholders and their respective roles; understanding the fundamental ethics governing the profession
2. Gained a good insight into contracts and contracts management in civil engineering, dispute resolution mechanisms; laws governing engagement of labour.
3. Good understanding of Intellectual Property Rights, Patents.
4. To make the students understand the types of roles they are expected to play in the society as practitioners of the civil engineering profession
5. To develop good ideas of the legal and practical aspects of their profession
6. Gathered ideas of the legal and practical aspects of their profession

Proposed Syllabus

Professional practice covering the respective roles of the various stakeholders in the profession of civil engineering and the factors governing the same; Professional ethics relating to civil engineering; Various aspects of contracts relating to construction and management of contracts; types of contractual and other disputes in the profession and methods of dispute resolution; legal aspects relating to employment and service conditions of labour; intellectual property rights and their legal framework

UNIT-I A- Professional Practice – Respective roles of various stakeholders: Government (constituting regulatory bodies and standardization organizations, prescribing norms to ensure safety of the citizens); Standardization Bodies (ex. BIS, IRC)(formulating standards of practice); professional bodies (ex. Institution of Engineers(India), Indian Roads Congress, IIA/ COA, ECI, Local Bodies/ Planning Authorities) (certifying professionals and offering platforms for interaction); Clients/ owners (role governed by contracts); Developers (role governed by regulations such as RERA); Consultants (role governed by bodies such as CEAI); Contractors (role governed by contracts and regulatory Acts and Standards); Manufacturers/ Vendors/ Service agencies (role governed by contracts and regulatory Acts and Standards)

UNIT-I B- Professional Ethics – Definition of Ethics, Professional Ethics, Business Ethics, Corporate Ethics, Engineering Ethics, Personal Ethics; Code of Ethics as defined in the website of Institution of Engineers (India); Profession, Professionalism, Professional Responsibility, Professional Ethics; Conflict of Interest, Gift Vs Bribery, Environmental breaches, Negligence, Deficiencies in state-of-the-art; Vigil Mechanism, Whistle blowing, protected disclosures.

UNIT-II: *General Principles of Contracts Management: Indian Contract Act, 1872 and amendments* covering General principles of contracting; Contract Formation & Law; Privacy of contract; Various types of contract and their features; Valid & Voidable Contracts; Prime and sub-contracts; Joint Ventures & Consortium; Complex contract terminology; Tenders, Request For Proposals, Bids & Proposals; Bid Evaluation; Contract Conditions & Specifications; Critical /“ Red Flag” conditions; Contract award & Notice To Proceed; Variations & Changes in Contracts; Differing site conditions; Cost escalation; Delays, Suspensions & Terminations; Time extensions & Force Majeure; Delay Analysis; Liquidated damages & Penalties; Insurance & Taxation; Performance and Excusable Non-performance; Contract documentation; Contract Notices; Wrong practices in contracting (Bid shopping, Bid fixing, Cartels); Reverse auction; Case Studies; Build-Own-Operate & variations; Public- Private Partnerships; International Commercial Terms;

UNIT-III : *Arbitration, Conciliation and ADR (Alternative Dispute Resolution) system:* Arbitration – meaning, scope and types – distinction between laws of 1940 and 1996; UNCITRAL model law – Arbitration and expert determination; Extent of judicial intervention; International commercial arbitration; Arbitration agreements – essential and kinds, validity, reference and interim measures by court; Arbitration tribunal – appointment, challenge, jurisdiction of arbitral tribunal, powers, grounds of challenge, procedure and court assistance; Award including Form and content, Grounds for setting aside an award, Enforcement, Appeal and Revision; Enforcement of foreign awards – New York and Geneva Convention Awards; Distinction between conciliation, negotiation, mediation and arbitration, confidentiality, resort to judicial proceedings, costs; Dispute Resolution Boards; Lok Adalats

UNIT-IV : *Engagement of Labour and Labour & other construction-related Laws:* Role of Labour in Civil Engineering; Methods of engaging labour- on rolls, labour sub-contract, piece rate work; Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Workmen’s Compensation Act, 1923; Building & Other Construction Workers (regulation of employment and conditions of service) Act (1996) and Rules (1998); RERA Act 2017, NBC 2017

UNIT-V : *Law relating to Intellectual property:* Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright – computer programs, Ownership of copyrights and assignment, Criteria of infringement, Piracy in Internet – Remedies and procedures in India; Law relating to Patents under Patents Act, 1970 including Concept and historical perspective of patents law in India, Patentable inventions with special reference to biotechnology products, Patent protection for computer programs, Process of obtaining patent – application, examination, opposition and sealing of patents, Patent cooperation treaty and grounds for opposition,

SEMESTER VI

Course Objectives

1. To understand modern construction practices
2. To understand how the construction projects are administered with respect to contract structures and issues.
3. To control and monitor construction projects with respect to time and cost
4. To optimize the construction projects based on costs.
5. To gain knowledge of different network analysis in construction management.
6. To get an idea of basic construction dynamics- various stakeholders, project objectives, processes, resources required and project economics

Course Outcomes

1. An idea of how structures are built and projects are developed on the field
2. A good idea of basic construction dynamics- various stakeholders, project objectives, processes, resources required and project economics
3. A basic ability to plan, control and monitor construction projects with respect to time and cost
4. An idea of how to optimize construction projects based on costs
5. An ability to put forward ideas and understandings to others with effective communication processes
6. Will gain the knowledge of the different network analysis in construction management.

UNIT-I: *Basics of Construction-* Unique features of construction, construction projects- types and features, phases of a project, agencies involved and their methods of execution;

Construction project planning- Stages of project planning: pre-tender planning, pre-construction planning, detailed construction planning, role of client and contractor, level of detail. Process of development of plans and schedules, work break-down structure, activity lists, assessment of work content, concept of productivities, estimating durations, sequence of activities, activity utility data; Techniques of planning- Bar charts, Gantt Charts. Networks: basic terminology, types of precedence relationships, preparation of CPM networks: activity on link and activity on node representation, computation of float values, critical and semi critical paths, calendaring networks.PERT- Assumptions underlying PERT analysis, determining three time estimates, analysis, slack computations, calculation of probability of completion.

UNIT-II: Construction Methods basics: Types of foundations and construction methods; Basics of Formwork and Staging; Common building construction methods (conventional walls and slabs; conventional framed structure with block work walls; Modular construction methods for repetitive works; Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges.

UNIT-III: Construction Equipment basics: Conventional construction methods Vs Mechanized methods and advantages of latter; Equipment for Earthmoving, Dewatering; Concrete mixing, transporting & placing; Cranes, Hoists and other equipment for lifting; Equipment for transportation

of materials. Equipment Productivities

UNIT-IV: Planning and organizing construction site and resources- Site: site layout including enabling structures, developing site organization, Documentation at site; Manpower: planning, organizing, staffing, motivation; Materials: concepts of planning, procurement and inventory control; Equipment: basic concepts of planning and organizing; Funds: cash flow, sources of funds; Histograms and S-Curves. Earned Value; Resource Scheduling- Bar chart, line of balance technique, resource constraints and conflicts; resource aggregation, allocation, smoothening and leveling. Common Good Practices in Construction

UNIT-V: *Project Monitoring & Control*- Supervision, record keeping, periodic progress reports, periodical progress meetings. Updating of plans: purpose, frequency and methods of updating. Common causes of time and cost overruns and corrective measures. Basics of Modern Project management systems such as Lean Construction; Use of Building Information Modelling (BIM) in project management; Quality control: concept of quality, quality of constructed structure, use of manuals and checklists for quality control, role of inspection, basics of statistical quality control. Safety, Health and Environment on project sites: accidents; their causes, effects and preventive measures, costs of accidents, occupational health problems in construction, organizing for safety and health.

UNIT-VI: *Contracts Management basics*: Importance of contracts; Types of Contracts, parties to a contract; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price. Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Dispute Resolution methods-Contract Recovery

Construction Costs: Make-up of construction costs; Classification of costs, time- cost trade-off in construction projects, compression and decompression.

		Semester-VI
18BECE641	Engineering Economics, Estimation & Costing	7H-5C
Instruction Hours/week: L: 2 T: 1 P: 4		Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To understand how competitive bidding works and how to submit a competitive bid proposal.
2. To understand the technical specifications for various works to be performed for a project and how they impact the cost of a structure.
3. to quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates and build up the overall cost of the structure.
4. to perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives.
5. to carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives.
6. To know the technical specifications for various works can be done easily

Course Outcomes

On completion of the course, the students will:

1. Have an idea of Economics in general, Economics of India particularly for public sector agencies and private sector businesses
2. Be able to perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives.
3. Be able to carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives.
4. Be able to quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates and build up the overall cost of the structure.
5. The technical specifications for various works can be done easily.
6. Gained the knowledge in successful participation of a bid.

UNIT-I: Basic Principles and Methodology of Economics. Demand/Supply – elasticity – Government Policies and Application. Theory of the Firm and Market Structure. Basic Macroeconomic Concepts (including GDP/GNP/NI/Disposable Income) and Identities for both closed and open economies. Aggregate demand and Supply (IS/LM). Price Indices (WPI/CPI), Interest rates, Direct and Indirect Taxes (3 lectures)

UNIT-II: Public Sector Economics –Welfare, Externalities, Labour Market. Components of Monetary and Financial System, Central Bank –Monetary Aggregates; Commercial Banks & their functions; Capital and Debt Markets. Monetary and Fiscal Policy Tools & their impact on the economy – Inflation and Phillips Curve. (2 lectures)

UNIT-III: Elements of Business/Managerial Economics and forms of organizations. Cost & Cost Control –Techniques, Types of Costs, Lifecycle costs, Budgets, Break even Analysis, Capital Budgeting, Application of Linear Programming. Investment Analysis – NPV, ROI, IRR, Payback Period, Depreciation, Time value of money (present and future worth of cash flows). Business Forecasting – Elementary techniques. Statements – Cash flow, Financial. Case Study Method. (3

lectures)

UNIT-IV: *Estimation* / Measurements for various items- Introduction to the process of Estimation; Use of relevant Indian Standard Specifications for the same, taking out quantities from the given requirements of the work, comparison of different alternatives, Bar bending schedules, Mass haul Diagrams, Estimating Earthwork and Foundations, Estimating Concrete and Masonry, Finishes, Interiors, MEP works; BIM and quantity take-offs; adding equipment costs; labour costs; rate analysis; Material survey-Thumb rules for computation of materials requirement for different materials for buildings, percentage breakup of the cost, cost sensitive index, market survey of basic materials. Use of Computers in quantity surveying (7 lectures)

UNIT-V: Specifications-Types, requirements and importance, detailed specifications for buildings, roads, minor bridges and industrial structures. (3 lectures)

Rate analysis-Purpose, importance and necessity of the same, factors affecting, task work, daily output from different equipment/ productivity. (3 lectures)

UNIT-VI: Tender- Preparation of tender documents, importance of inviting tenders, contract types, relative merits, prequalification. general and special conditions, termination of contracts, extra work and Changes, penalty and liquidated charges, Settlement of disputes, R.A. Bill & Final Bill, Payment of advance, insurance, claims, price variation, etc. Preparing Bids-Bid Price buildup: Material, Labour, Equipment costs, Risks, Direct & Indirect Overheads, Profits; Bid conditions, alternative specifications; Alternative Bids. Bid process management (6 lectures)

Term Work Assignments may include:

1. s

Project Work -I

12H-6C

Instruction Hours/week: L: 0 T: 0 P: 12

Marks: Internal:120 External:180

Total:300

End Semester Exam:3 Hours

OBJECTIVE

At the end of this, the students shall be able

1. To work in convenient groups of not more than four members in a group on a project involving theoretical and experimental studies related to Civil Engineering.
2. Each student shall finally produce a comprehensive report covering background information, literature Survey, problem statement, Project work details and conclusions.
3. This experience of project work shall help the student in expanding his / her knowledge base
4. Will provide opportunity to utilise the creative ability and inference capability.
5. Students will gain the presentation skills.
6. To explain his/her project to the external examiner and can publish the projects in a reputed journal.

18BECCE01

Structural Analysis-I

3H-3C

(Truss Analysis, Principle of virtual work – Unit load method, Strain Energy methods,
Moving loads and influence lines, Cables)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To equip the students with the comprehensive methods of structural analysis with Emphasis on analysis of elementary structures.
2. To analyze trusses and study displacement response of statically determinate structural systems using energy methods:
3. To analyze statically indeterminate structures using strain energy method and method of consistent deformation
4. To know about moving loads and influence lines
5. To know about Statically determinate and indeterminate suspension bridges and arches.
6. To analyze the forces in cables under concentrated and uniformly distributed loads

Course Outcomes

The students will be able to

1. Analyze trusses and study displacement response of statically determinate structural systems using energy methods:
2. Apply unit load method and strain energy method for determination of deflection of statically determinate beams, frames & pin jointed trusses
3. Analyze statically indeterminate structures using strain energy method and method of consistent deformation
4. know about moving loads and influence lines
5. Know about Statically determinate and indeterminate suspension bridges and arches.
6. Analyze the forces in cables under concentrated and uniformly distributed loads

UNIT I –Truss Analysis: Analysis of determinate truss-Methods of 8 15% joints and sections (Numerical problems) Elastic theorems and energy principles - strain energy due to axial load, bending moment, shear and torsion - strain energy method, Castigliano's method for deflection (Derivations only)

UNIT II -Principle of virtual work – Unit load method-Betti's theorem – Maxwell's law of reciprocal deflections - principle of least work - application of unit load method and strain energy method for determination of deflection of statically determinate beams, frames - pin jointed trusses (simple numerical problems) Concepts of temperature effects and lack of fit.(No numerical problems) Statically indeterminate structures: Degree of static and kinematic indeterminacies – Introduction to force and displacement method(step by step procedure).

UNIT III –Strain Energy methods: Analysis of beams, frames and trusses with internal and external redundancy – (Simple problems with maximum two redundants) Concepts of effect of prestrain, lack of fit, temperature changes and support settlement.(No numerical problems) Method of Consistent deformations: Analysis of beams frames and trusses with internal and external redundancy(Simple problems with maximum two redundants) Concepts of effect of prestrain, lack of fit, temp

UNIT IV - Moving loads and influence lines. Introduction to moving loads - concept of influence lines - influence lines for reaction, shear force and bending moment in simply supported beams and over hanging beams - analysis for different types of moving loads - single concentrated load - several concentrated loads, uniformly distributed load on shorter and longer than the span.

UNIT V Cables: Analysis of forces in cables under concentrated and uniformly distributed loads - Anchor Cables Suspension Bridges: Un-stiffened suspension bridges, maximum tension in the suspension cable and backstays, pressure on towers.

18BECCE02**Structural Analysis-II****3H-3C****(Flexibility Method, Stiffness Matrix Method, Finite Element Method, Plastic Analysis Of Structures, Space And Cable Structures)****Instruction Hours/week: L: 3 T: 0 P: 0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. To introduce the students to advanced methods of analysis like matrix methods, Plastic analysis and FE method and also analysis of space structures.
2. Understand indeterminate structure and methods of analysis by flexible method.
3. Analysis of element by global stiffness matrix method
4. To analysis of plane stress and plane strain and displacement function by finite element method.
5. To calculation the deflection of trusses, beams and frames by using unit load method.
6. To analyze the space truss using method of tension coefficients.

Course Outcomes

The student will have the knowledge on advanced methods of analysis of structures including space and cable structures.

1. Understand indeterminate structure and methods of analysis by flexible method.
2. Analysis of element by global stiffness matrix method
3. Analysis of plane stress and plane strain and displacement function by finite element method.
4. Analyze the space truss using method of tension coefficients.
5. Apply influence line for indeterminate beams.
6. Understand matrix method and its application for computer-based analysis of structure.

UNIT I : Flexibility Method Equilibrium and compatibility – Determinate vs Indeterminate structures – Indeterminacy – Primary structure – Compatibility conditions – Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames (with redundancy restricted to two).

UNIT II : Stiffness Matrix Method Element and global stiffness matrices – Analysis of continuous beams – Co-ordinate transformations – Rotation matrix – Transformations of stiffness matrices, load vectors and displacements vectors – Analysis of pin-jointed plane frames and rigid frames (with redundancy limited to two)

UNIT III Finite Element Method Introduction – Discretisation of a structure – Displacement functions – Truss element – Beam element – Plane stress and plane strain – Triangular elements

UNIT IV : Plastic Analysis Of Structures Statically indeterminate axial problems – Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic

hinge and mechanism – Plastic analysis of indeterminate beams and frames – Upper and lower bound theorems

UNIT V: Space And Cable Structures Analysis of Space trusses using method of tension coefficients – Beams curved in plan Suspension cables – suspension bridges with two and three hinged stiffening girders

Semester-		
18BECCE03	Advanced Structural Analysis	3H-3C
(Review of basic concepts in structural analysis, Review of analysis of indeterminate structures, Matrix concepts and Matrix analysis of structures, Matrix analysis of structures with axial elements, Analysis of elastic instability and second-order effects)		
<hr/>		
Instruction Hours/week: L: 3 T: 0 P: 0		Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. The main objective is to enable the student to have a good grasp of all the fundamental issues in these advanced topics in structural analysis, besides enjoying the learning process, and developing analytical and intuitive skills.
2. The basic concepts of structural analysis and matrix algebra
3. To demonstrations through many examples of how matrix methods can be applied to linear static analysis of skeletal structures.
4. To analyses of Plane and space trusses; beams and grids; plane and space frames by the stiffness method
5. To analysis of trusses by flexibility method.
6. Simple structures can be conveniently solved using a reduced stiffness formulation, involving far less computational effort.

Course Outcomes

The student will have the knowledge on

1. The basic concepts of structural analysis and matrix algebra
2. Descriptions and demonstrations through many examples of how matrix methods can be applied to linear static analysis of skeletal structures.
3. Analyses of Plane and space trusses; beams and grids; plane and space frames by the stiffness method
4. Analysis of trusses by flexibility method.
5. Simple structures can be conveniently solved using a reduced stiffness formulation, involving far less computational effort.
6. Analysis of elastic instability and second-order response.

UNIT I Review of basic concepts in structural analysis: Review topics on Structural Analysis and Linear Algebra. structure (structural elements, joints and supports, stability, rigidity and static indeterminacy, kinematic indeterminacy); loads (direct actions, indirect loading); (equilibrium, compatibility, force-displacement relations); levels of analysis; analysis of statically determinate structures (trusses, beams, frames); applications of principle of virtual work and displacement-based and force-based energy principles; deriving stiffness and flexibility coefficients.

UNIT II Review of analysis of indeterminate structures: Force methods: Statically indeterminate structures (method of consistent deformations; theorem of least work). Displacement Methods: Kinetically indeterminate structures (slope-deflection method; moment distribution method).

UNIT III Matrix concepts and Matrix analysis of structures: Matrix; vector; basic matrix operations; rank; solution of linear simultaneous equations; Eigen values and eigenvectors. Introduction; coordinate systems; displacement and force transformation matrices; Contra-gradient principle; element and structure stiffness matrices; Element and structure flexibility matrices; equivalent joint loads; stiffness and flexibility approaches.

UNIT IV Matrix analysis of structures with axial elements: Introduction: Axial stiffness and flexibility; stiffness matrices for an axial element (two dof), plane truss element (four dof) and space truss element (six dof); One-dimensional axial structures: Analysis by conventional stiffness method (two dof per element) and reduced element stiffness method (single dof); Analysis by flexibility method; Plane trusses: Analysis by conventional stiffness method (four dof per element) and reduced element stiffness method (single dof); Analysis by flexibility method; Space trusses: Analysis by conventional stiffness method (six dof per element) and reduced element stiffness method (single dof).

UNIT V Analysis of elastic instability and second-order effects: Effects of axial force on flexural stiffness: Review of buckling of ideal columns; flexural behaviour and stiffness measures for beam-columns - braced and unbraced, under axial compression; Solution by slope deflection method: Slope deflection equations for prismatic beam columns using stability functions; modifications for pinned and guided-fixed-end conditions; fixed end moments in beam-columns; Solution by matrix method: Stiffness matrix for prismatic beam column element; estimation of critical elastic buckling loads; second-order analysis;

18BECCE04**Structural Mechanics****3H-3C**

**(Direct Stress & Strain, Moment Of Inertia, S.F & B.M IN BEAM, Bending & Shear
Stresses in Beam, Analysis Of Truss)**

Instruction Hours/week: L: 3 T: 0 P: 0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. The main objective is to enable the student to have a good grasp of Calculating various structural material properties under direct loading condition, Analyze Statically Determinate structures like Beam, Column & Truss.
2. To study the external effects on the body due to action of force system.
3. To understand so that design can done by the engineer.
4. To analysis determinate structures under action of transverse loading, along with, analysis of members under direct loading is to be studied.
5. To analysis the industrial Trusses is also incorporated to give an idea of typical structure to the students.
6. To enables the student to analyse Steel & Concrete Structures used in Civil Engineering construction.

Course Outcomes

The student will have the knowledge on

1. The Applied Mechanics in Second Semester was taught to study the external effects on the body due to action of force system.
2. The behaviour of structure under different loading conditions is needed to understand so that design can do by the engineer.
3. Analysis of determinate structures under action of transverse loading, along with, analysis of members under direct loading is to be studied.
4. Analysis of Industrial Trusses is also incorporated to give an idea of typical structure to the students.
5. The Structural Mechanics-I which enables the student to analyse Steel & Concrete Structures used in Civil Engineering construction.
6. Analyze Statically Determinate structures like Beam, Column & Truss.

UNIT I Direct Stress & Strain- Different types of Structures and Loads - Direct Stress , linear Strain , Hook's Law Numerical Problems on Direct Stress & Linear Strain . Stress Strain curve of Mild Steel. Modulus of Elasticity. Yield , Breaking & Ultimate Stress and factor of Safety along with numerical problems - Lateral Strain and Poission's ratio with numerical problems - Basics Concepts

of Shear Stress , Shear Strain & Shear Modulus - Bulk Modulus , volumetric Strain along with numerical Problems - Differentiate between Sudden , Gradual & Impact Loads Define Strain Energy , Proof Resilience for Sudden , Gradual & Impact Load along with numerical problems

UNIT II Moment Of Inertia Moment of Inertia & its Importance - Parallel & Perpendicular Axis Theorem - Formula of Moment of Inertia of solid & Hollow sections like Rectangle , Triangle , Circle - Moment of Inertia about C.G for I section , H section , Channel Section , Angle Section , T Section and Built up Section having flange plates to I & H Section and of Double Channels back to back & toe to toe

UNIT III S.F & B.M in Beam Statically Determinate Beam Like Cantilever , Simply Supported & Over Hang Beam - Shear Force and Bending Moment and its relationship - Sagging & Hogging Bending Moment and its importance - Point of Contra-flexure & its importance - S.F & B.M Diagram for Cantilever , Simply Supported & Over Hang Beam subjected to Point Load and/ or U.D.L

UNIT IV Bending & Shear Stresses in Beam- Bending Theory Equation Bending stress, Sectional Modulus, Neutral Axis Apply Bending theory to statically determinate beams having rectangular or circular section - Shear Stress equation Shear Stress Distribution Diagram for Solid & Hollow Rectangular and Circular Section Apply shear Stress Equation & Draw Shear Stress Distribution Diagram for I, H, T, Channel & Angle Section.

UNIT V Analysis Of Truss- Perfect & Imperfect Truss various trusses for different spans and application - Analysis of Triangle, Howe, North Light & Fan trusses under Panel Point Loads using Graphical & Method of Joint.

Reinforced Concrete

3H-3C

(Methods Of Design Of Concrete Structures, Limit State Design For Flexure , Limit State Design for Bond, Anchorage Shear & Torsion , Limit State Design of Columns , Limit State Design of Footing)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. The main objective is to introduce the different types of philosophies related to design of basic structural elements such as slab, beam, column and footing which form part of any structural system with reference to Indian standard code of practice.
2. To understand the general mechanical behavior of reinforced concrete.
3. To analyze and design reinforced concrete flexural members.
4. To analyze and design reinforced concrete compression members.
5. To analyze and design for vertical and horizontal shear in reinforced concrete.
6. To analyze transfer and development length of concrete reinforcement.

Course Outcomes

The student will have the knowledge on

1. Understand the general mechanical behavior of reinforced concrete.
2. Analyze and design reinforced concrete flexural members.
3. Analyze and design reinforced concrete compression members.
4. Analyze and design for vertical and horizontal shear in reinforced concrete.
5. Analyze transfer and development length of concrete reinforcement.
6. Analyze and design for deflection and crack control of reinforced concrete members.

UNIT I : Methods Of Design Of Concrete Structures Concept of Elastic method, ultimate load method and limit state method – Advantages of Limit State Method over other methods – Design codes and specification – Limit State philosophy as detailed in IS code – Design of beams and slabs by working stress method.

UNIT II: Limit State Design For Flexure Analysis and design of singly and doubly reinforced rectangular and flanged beams – Analysis and design of one way, two way and continuous slabs subjected to uniformly distributed load for various boundary conditions.

UNIT III: Limit State Design for Bond, Anchorage Shear & Torsion Behaviour of RC members in bond and Anchorage – Design requirements as per current code – Behaviour of RC beams in shear and torsion – Design of RC members for combined bending shear and torsion.

UNIT IV: Limit State Design of Columns Types of columns – Braced and unbraced columns – Design of short Rectangular and circular columns for axial, uniaxial and biaxial bending.

UNIT V: Limit State Design of Footing Design of wall footing – Design of axially and eccentrically loaded rectangular pad and sloped footings – Design of combined rectangular footing for two columns only.

18BECEE06**Concrete Technology****3H-3C****(Constituent Materials , Chemical and Mineral Admixtures, Proportioning Of Concrete Mix , Fresh And Hardened Properties of Concrete, Special Concretes)****Instruction Hours/week: L: 3 T: 0 P: 0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. To impart knowledge to the students on the properties of materials for concrete by suitable tests, mix design for concrete and special concretes.
2. To properties of materials required for concrete tests on those materials and design procedures for making conventional and special concretes.
3. To identifying the functional role of ingredients of concrete and apply this knowledge to mix design philosophy
4. To acquiring and applying fundamental knowledge in the fresh and hardened properties of concrete
5. To evaluating the effect of the environment on service life performance, properties and failure modes of structural concrete and demonstrate techniques of measuring the Non Destructive Testing of concrete structure
6. To developing an awareness of the utilization of waste materials as novel innovative materials for use in concrete

Course Outcomes

The student will possess the knowledge on

1. Properties of materials required for concrete tests on those materials and design procedures for making conventional and special concretes.
2. Identifying the functional role of ingredients of concrete and apply this knowledge to mix design philosophy
3. Acquiring and applying fundamental knowledge in the fresh and hardened properties of concrete
4. Evaluating the effect of the environment on service life performance, properties and failure modes of structural concrete and demonstrate techniques of measuring the Non Destructive Testing of concrete structure
5. Developing an awareness of the utilization of waste materials as novel innovative materials for use in concrete
6. Designing a concrete mix which fulfills the required properties for fresh and hardened concrete

UNIT I : Constituent Materials-Cement-Different types-Chemical composition and Properties - Tests on cement-IS Specifications- Aggregates-Classification-Mechanical properties and tests as per BIS Grading requirements- Water- Quality of water for use in concrete.

UNIT II:Chemical and Mineral Admixtures- Accelerators-Retarders- Plasticizers- Super plasticizers- Water proofers – Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline -Their effects on concrete properties

UNIT III:Proportioning Of Concrete Mix- Principles of Mix Proportioning-Properties of Concrete Related to Mix Design Physical Properties of materials required for Mix Design – Design Mix and Nominal Mix-BIS Method of Mix Design – Mix Design Examples

UNIT IV:Fresh And Hardened Properties of Concrete- Workability-Tests for workability of concrete-Slump Test and Compacting factor Test-Segregation and Bleeding-Determination of Compressive and Flexural strength as per BIS – Properties of Hardened concrete-Determination of Compressive and Flexural strength-Stress-strain curve for concrete Determination of Young's Modulus.

UNIT V : Special Concretes Light weight concretes – High strength concrete – Fibre reinforced concrete – Ferro cement – Ready mix concrete – SIFCON-Shotcrete – Polymer concrete – High performance concrete- Geopolymer Concrete

Design of Concrete Structures-I

3H-3C

(Introduction- Plain and Reinforced concrete, Limit state of collapse in shear and bond,
Design of Singly Reinforced Beams, Design of slabs, Two- way slabs)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To provide the students with the knowledge of the behavior of reinforced concrete structural elements in flexure, shear, compression and torsion
2. To enable them to design essential elements such as beams, columns, slabs staircases and footings under various loads
3. Apply the fundamental concepts of limit state method
4. Use IS code of practice for the design of concrete elements
5. Understand the structural behavior of reinforced concrete elements in bending, shear, compression and torsion.
6. Design beams, slab, stairs, and columns and draw the reinforcement details.

Course Outcomes

The students will be able to

1. Apply the fundamental concepts of limit state method
2. Use IS code of practice for the design of concrete elements
3. Understand the structural behavior of reinforced concrete elements in bending, shear, compression and torsion.
4. Design beams, slab, stairs, and columns and draw the reinforcement details.
5. Analyze and design for deflection and crack control of reinforced concrete members.
6. Know the short term and long term deflections.

UNIT I : Introduction- Plain and Reinforced concrete- Properties of concrete and reinforcing steel-Objectives of design-Different design philosophies- Working Stress and Limit State method of design-Introduction to BIS code- Types of limit states characteristic and design values-partial safety factors-types of loads and their factors. Limit State of Collapse in Bending-assumptions-stress-strain relationship of steel and concrete- analysis of singly reinforced rectangular beams-balanced-under reinforced-over reinforced sections-moment of resistance codal provisions

UNIT II: Limit state of collapse in shear and bond- shear stresses in beams types of reinforcement-shear strength of RC beam-IS code recommendations for shear design-design of shear reinforcement examples Bond and development length - anchorage for reinforcement bars - code recommendations regarding curtailment of reinforcement

UNIT III: Design of Singly Reinforced Beams- basic rules for design- design example of simply supported beam- design of cantilever beam detailing Analysis and design of doubly reinforced beams

– detailing, T-beams- terminology- analysis of T beams- examples - Design for torsion-IS code approach- examples.

UNIT IV: Design of slabs- introduction- one-way and two-way action of slabs - load distribution in a slab- IS recommendations for design of slabs- design of one-way slab- cantilever slab- numerical problems – concepts of detailing of continuous slab –code coefficients.

UNIT V : Two- way slabs- simply supported and restrained slabs – design using IS Code coefficients Reinforcement detailing Limit State of Serviceability- limit state of deflection- short term and long term deflection-IS code recommendations- limit state of cracking- estimation of crack width- simple numerical examples

3. Varghese P.C, Limit State Design of Reinforced Concrete, Prentice Hall of India Pvt Ltd,,2008
4. Relevant IS codes (I.S 456, I.S 875, SP 34)

18BECCE08

Design of Concrete Structures-II

3H-3C

(Analysis and design of short columns , Foundations, Retaining walls

Introduction to design of water tanks, Circular slabs)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To provide knowledge in the structural design of selected advanced structures of concrete and enable them to design reinforced concrete structures for real-world applications.
2. To design eccentrically loaded and slender columns using SP 16 design charts and different types of foundations
3. To design and detail cantilever retaining wall and understand the design principles of Counterfort retaining wall
4. To design and detail circular slabs and domes
5. To design rectangular and circular water tanks using IS code coefficients (IS 3370).
6. To gain knowledge of design of rectangular footing and combined footing.

Course Outcomes

The students will be able to

1. Design eccentrically loaded and slender columns using SP 16 design charts and different types of foundations
2. Design and detail cantilever retaining wall and understand the design principles of Counterfort retaining wall
3. Design and detail circular slabs and domes
4. Design rectangular and circular water tanks using IS code coefficients (IS 3370).
5. Gain knowledge of design of rectangular footing and combined footing.
6. Analyze combined footing with rectangular and trapezoidal sections.

UNIT I: Analysis and design of short columns under eccentric loading Columns subjected to compression and uniaxial bending- design using SP16 charts for limit state Columns subjected to combined axial load and biaxial bending moments-code procedure for design- design using SP16 charts for limit state Slender columns- behavior of slender columns-braced and un-braced columns-design procedure- design using SP16 charts for limit state

UNIT II: Foundations- classification-IS code provisions for design of isolated footings- design principles of rectangular footings- Design of rectangular footings-uniform thickness and sloped-eccentrically loaded rectangular footing of uniform thickness-detailing. Combined footings (design principles only)- analysis of combined footings-rectangular and trapezoidal.

UNIT III: Retaining walls-Types- Cantilever retaining wall- earth pressure and forces acting-stability-proportioning-structural behavior of components -design example of cantilever retaining

wall without surcharge-detailing Counterfort retaining wall- design principles of components and detailing (design not required)

UNIT IV: Introduction to design of water tanks-design philosophy and requirements-joints- IS code recommendations Design of rectangular water tanks using IS code coefficients (IS 3370). Design of circular water tanks using- IS code coefficients (IS 3370)

UNIT V: Circular slabs- stresses- reinforcements- simply supported, fixed and partially fixed subjected to uniformly distributed loads Design and detailing of spherical and conical domes

Prestressed Concrete

3H-3C

(Introduction to Prestressed concrete, Limit state design criteria, Shear and torsional resistance, Anchorage Zone stresses in post tensioned members, Composite beams)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To make students familiar with the concepts and design of typical pre-stressed concrete structural elements and to have a knowledge of the codal provisions.
2. To design prestressed concrete members using codal provisions
3. To design for shear and torsion of prestressed concrete members
4. To design end blocks and provide detailing of reinforcements
5. To design composite members and other applications
6. To design continuous members.

Course Outcomes

The students will be able to

1. Analyze prestressed concrete members
2. Design prestressed concrete members using codal provisions
3. Design for shear and torsion of prestressed concrete members
4. Design end blocks and provide detailing of reinforcements
5. Design composite members and other applications
6. Design continuous members.

UNIT I: Introduction: Basic concept and principles of pre-stressed concrete, materials, prestressing systems – Analysis of prestress and bending stresses loss of pre-stress Stresses at transfer and service loads.

UNIT II: Limit state design criteria: Inadequacy of elastic and ultimate load method, criteria for limit states, strength and serviceability. Design of sections for flexure codal provisions- ultimate strength in flexure

UNIT III: Shear and torsional resistance: design of shear reinforcement, design of reinforcement for torsion, shear and bending. Deflections of prestressed concrete members: Importance, factors, short term and long term deflection. Codal provisions

UNIT IV: Anchorage Zone stresses in post tensioned members: Stress distribution in end block, anchorage zone reinforcement. Prestressed concrete poles and sleepers: Design of sections for compression and bending Partial pre-stressing- Definitions, principles and design approaches and applications

UNIT V: Composite beams –Analysis and design – Ultimate strength – applications, Elementary idea of composite construction for tee beams in bridges. Statically Indeterminate structures: advantages of continuous member (Concepts and steps for analysis).

18BECEE10

Design of Steel Structures

3H-3C

(Introduction to steel and steel structures, Tension members, Compression members,
Design of roof trusses, Design of timber structures)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To introduce the limit state design of steel structural components subjected to bending, compression and tensile loads including the connections.
2. To enable design of structural components using timber.
3. To design tension members and beams using the is specifications
4. To design columns under axial loads using is specifications
5. To design beams and plate girders
6. To assess loads on truss and design purlins

Course Outcomes

The students will be able to

1. Design bolted and welded connections
2. Design tension members and beams using the is specifications
3. Design columns under axial loads using is specifications
4. Design beams and plate girders
5. Assess loads on truss and design purlins
6. Design structural components using timber

UNIT I: Introduction to steel and steel structures- properties of steel, structural steel sections. Introduction to design: Design loads and load combinations, limit state design concepts. Connections bolted and welded (direct loads)

UNIT II: Tension members-Types of sections – net area- design of tension members- concept of shear lag-use of lug angle-connections in tension members

UNIT III: Compression members- design of struts- solid and built up columns for axial loads-- design of lacings and battens-column bases- slab base – gusseted base

UNIT IV: Design of roof trusses- types-design loads and load combinations assessment of wind loads- design of purlins. Moment resistant/Eccentric connections (in plane and out of plane)

UNIT V: Design of timber structures: types of timber - classification - allowable stresses-design of beams-flexure, shear, bearing and deflection considerations-Design of columns. Design of composite beam sections with timber and steel.

18BECCE11**Concrete Materials****3H-3C**

(Stones – Bricks – Concrete Blocks , Lime – Cement – Aggregates – Mortar , Concrete, Timber And Other Materials ,Modern Materials)

Instruction Hours/week: L: 3 T: 0 P: 0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

At the end of this course the students should have learnt about

1. The various materials, both conventional and modern, that are commonly used in civil engineering construction.
2. Further he should be able to appreciate the criteria for choice of the appropriate materials and the various tests for quality control in the use of these materials.
3. To know the properties of different ingredients of concrete.
4. To know the properties and characteristics of different admixtures.
5. To know about the testing methods of fresh and harden concrete.
6. To know about the modern materials which are used in concrete.

Course Outcomes

The students will be able to

1. Know about the tests involved in the concrete, bricks and stones.
2. Acquire the knowledge about the properties of different ingredients of concrete.
3. Know about the testing methods of fresh and harden concrete.
4. Gain the knowledge of properties and characteristics of different admixtures.
5. Know about the modern materials which are used in concrete.
6. Know the Applications of laminar composites, Fibre textiles and Geosynthetics.

UNIT I. Stones – Bricks – Concrete Blocks Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacture of clay bricks – Tests on bricks – Compressive Strength - Water Absorption – Efflorescence –Bricks for special use – Refractory bricks – Cement and Concrete hollow blocks – Lightweight concrete blocks – Code Practices

UNIT II. Lime – Cement – Aggregates – Mortar Lime – Preparation of lime mortar – Cement. Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration - Compressive strength – Tensile strength – Soundness and consistency – Setting time – Aggregates – Natural stone aggregates – Industrial byproducts – Crushing strength – Impact strength – Flakiness – Abrasion Resistance – Grading – Sand – Bulking – Code Practices

UNIT III. Concrete- Concrete Ingredients – Manufacture – Batching plants – RMC – Properties of fresh concrete – Slump – Flow and compaction – Principles of hardened concrete – Compressive, Tensile and shear strength – Modulus of rupture – Tests – Mix specification – Mix proportioning – IS method – High Strength Concrete and HPC – Other types of Concrete – Code Practices

UNIT IV. Timber And Other Materials Timber – Market forms – Industrial timber- Plywood - Veneer – Thermocole – Panels of laminates – Steel – Aluminum and Other Metallic Materials - Composition – uses – Market forms – Mechanical treatment – Paints – Varnishes – Distempers – Code Practices

UNIT V. Modern Materials Glass – Ceramics – Sealants for joints – Fibre glass reinforced plastic – Clay products – Refractories – Composite materials – Types – Applications of laminar composites – Fibre textiles – Geosynthetics for Civil Engineering applications.

SUGGESTED READINGS

18BECCE12

Soil Mechanics-I

4H-3C

(Soil Classification And Compaction, Soil Water And Water Flow, Stress Distribution And Settlement, Shear Strength and Slope stability)

Instruction Hours/week: L: 3 T: 0 P: 0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. Should be able to assess soil behavior with the mineralogy present and advanced soil testing of soils such as in thermal, chemical, magnetic fields.
2. Should be able to do seepage analysis for finding discharge calculation and stability of structure.
3. To perceive The Compaction And The Settlements Of Cohesive and cohesionless Soils.
4. To make Use of the Condition of Soil Hydraulic.
5. To calculate The Total Normal Stress, Pore Water Pressure, and Effective Normal Stress.
6. To determine The Distribution Of Stresses In Subsoil Under The Energy Of External Loads (Method Boussinesq).

Course Outcomes

Upon Completion Of Lecture, Students Will Be Able To:

1. Perceive The Compaction And The Settlements Of Cohesive and cohesionless Soils.
2. Comfortly Make Use of the Condition of Soil Hydraulic.
3. Calculate The Total Normal Stress, Pore Water Pressure, and Effective Normal Stress.
4. Determine The Distribution Of Stresses In Subsoil Under The Energy Of External Loads (Method Boussinesq).
5. Describe The Mechanical Behavior And The Mohr –Coulomb Failure Criterion.
6. Identify Lateral Earth Pressure By Rankine And Coulomb And The Bearing Capacity Of Shallow Foundations By Terzaghi and Slope Stability Measures.

UNIT I Soil Classification And Compaction: Nature of soil – phase relationships – Soil description and classification for engineering purposes, their significance – Index properties of soils - BIS Classification system – Soil compaction – Theory, comparison of laboratory and field compaction methods – Factors influencing compaction behaviour of soils.

UNIT II Soil Water And Water Flow: Soil water – static pressure in water - Effective stress concepts in soils – capillary stress – Permeability measurement in the laboratory and field pumping in pumping out tests – factors influencing permeability of soils – Seepage – introduction to flow nets – Simple problems. (Sheet pile and weir).

UNIT III Stress Distribution And Settlement: Stress distribution - soil media – Boussinesq theory - Use of Newmarks influence chart – Components of settlement — immediate and consolidation settlement – Terzaghi's one-dimensional consolidation theory – computation of rate of settlement. - \sqrt{t} and log t methods– e-log p relationship - Factors influencing compression behaviour of soils.

UNIT IV Shear Strength: Shear strength of cohesive and cohesionless soils – Mohr – Coulomb failure theory – Measurement of shear strength, direct shear – Triaxial compression, UCC and Vane shear tests – Pore pressure parameters – cyclic mobility – Liquefaction.

UNIT V Slope Stability: Slope failure mechanisms – Types - infinite slopes – finite slopes – Total stress analysis for saturated clay – Fellenius method - Friction circle method – Use of stability number - slope protection measures.

Semester-		
18BEECE13	Soil Mechanics-II	4H-3C
(Earth Pressure theories, Sheet pile, Excavation Methods, Analyses of Slope Stability and measures)		

Instruction Hours/week: L: 3 T: 0 P: 0	Marks: Internal:40 External:60 Total:100
--	--

End Semester Exam:3 Hours

Course Objectives

1. Should be able to assess soil behavior with the mineralogy present and advanced soil testing of soils such as in thermal, chemical, magnetic fields.
2. Should be able to do seepage analysis for finding discharge calculation and stability of structure.
3. To design sheet pile wall with different methods.
4. To familiarized with different construction practices for excavation with advantages and disadvantages of each method.
5. To determine the safety analysis for slopes with different methods proposed in the syllabus.
6. To introduce with the commercial software's for analyzing the stability of slopes and retaining walls.

Course Outcomes

Upon Completion Of Lecture, Students Will Be Able To:

1. Should be able design retaining wall subjected to various loads with the knowledge of earth pressure theories.
2. Should be able to design sheet pile wall with different methods.
3. Should get familiarized with different construction practices for excavation with advantages and disadvantages of each method.
4. Should be able to determine the safety analysis for slopes with different methods proposed in the syllabus.
5. Should get introduced with the commercial software's for analyzing the stability of slopes and retaining walls.
6. Should be able to design slope ratios by using software's (Computer-Aided Stability Analyses).

UNIT I Earth Pressure theories: Introduction Lateral Earth Pressure At Rest - Active Pressure Rankine - Active Earth Pressure For Inclined Backfill Coulomb's -Active Earth Pressure For Earthquake conditions- Lateral Earth Pressure Due To Surcharge Active Pressure For Wall Rotation About Top-Braced Cut Active Earth Pressure For Translation Of Retaining Wall-Granular Backfill Passive Pressure - Rankine Passive Earth Pressure inclined Backfill.

UNIT II Sheet pile: Design of Retaining Structures Lecture: Anchored sheet pile walls- Objectives- Different types of anchored sheet pile walls-Free earth support piles -Fixed earth support piles- Comparison between fixed earth method and free earth method- Design of sheet pile wall by free earth support. Conditions for free earth support of an anchored sheet pile wall- Forces acting on sheet

pile in free earth support case (cohesionless soil)- Forces acting on sheet pile in free earth support case (cohesive soil). Moment reduction factor for cohesive foundation soils.

UNIT III Excavation Methods: The nature of the excavation work- Trenching-Preparation and excavation. Tunneling- The nature of tunneling work - the planning, investigation, design and construction stages- Tunneling hazards and risks- Common hazards and risks involved in shaft construction- Control measures. Preventing Ground Collapse- Ground conditions. Benching and battering. Shoring- Hydraulic systems- Steel sheet piling- Steel trench sheeting- Timber soldier sets- Other ground support methods- Regular inspection.

UNIT IV Slope Stability measures: Slope failure mechanisms – Types - infinite slopes – finite slopes – Total stress analysis for saturated clay – Fellenius method - Friction circle method – Use of stability number - slope protection measures.

UNIT V Analyzing The Stability Of Slopes: Stability Of Slopes and Retaining Structures-Stability of Slopes and Retaining Structures- Reclamation And Ground Improvement-Stability of Natural Slopes, Rock Bund and Rip-Rap Stability of Retaining Structure- Flexible Retaining Structure - Computer-Aided Stability Analyses

18BECEE14

Foundation Engineering

4H-3C

(Selection of foundation and Sub-soil exploration/investigation, Shallow Foundation, Pile Foundation, Retaining walls)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. Able to Analyze and design the foundations, types of foundations, bearing capacity and settlement of foundations; ground movements due to construction
2. To analysis and design of excavations, retaining walls, cuts & excavations and sheet piles, slopes and underground structures.
3. To select and design appropriate/suitable foundation system (shallow/Deep) for different structures, that
4. To satisfy the allowable bearing capacity and settlement requirements based on soil properties,
5. To design deep foundation satisfying bearing capacity and settlement requirements,
6. To understand the engineering behaviour of expansive soils and selection of suitable foundation type for such soils.

Course Outcomes

After learning the course the students should be able to:

1. Select appropriate soil investigation/testing technique/method and get true sub soil parameters used for
2. Select and design appropriate/suitable foundation system (shallow/Deep) for different structures, that
3. satisfy the allowable bearing capacity and settlement requirements based on soil properties,
4. Design deep foundation satisfying bearing capacity and settlement requirements,
5. Understand the engineering behaviour of expansive soils and selection of suitable foundation type for such soils.
6. Selection of alternate materials like geosynthetics and its application in foundation problems.

UNIT I: Selection of foundation and Sub-soil exploration/investigation: Types of foundation, Factors affecting the selection of type of foundations, steps in choosing types of foundation based on soil condition, Objectives and planning of exploration program, methods of exploration-wash boring and rotary drilling-depth of boring, soil samples and soil samplers-representative and undisturbed sampling, field penetration tests: SPT, SCPT, DCPT. Introduction to geophysical methods, Bore log and report writing, data interpretation.

UNIT II Shallow Foundation: Introduction, significant depth, design criteria, modes of shear failures. Detail study of bearing capacity theories (Prandtl, Rankine, Terzaghi, Skempton), bearing capacity determination using IS Code, Presumptive bearing capacity. Settlement, components of settlement & its estimation, permissible settlement, Proportioning of footing for equal settlement, allowable bearing pressure. Bearing capacity from in-situ tests(SPT, SCPT, PLATE LOAD), Factors affecting bearing capacity including Water Table., Bearing capacity of raft/mat foundation as per code provisions, Contact pressure under rigid and flexible footings. Floating foundation. Types of pavements & its design.

UNIT III Pile foundations :Introduction, load transfer mechanism, types of piles and their function, factors influencing selection of pile, their method of installation and their load carrying characteristics for cohesive and granular soils, piles subjected to vertical loads- pile load carrying capacity from static formula, dynamic formulae (ENR and Hiley), penetration test data & Pile load test (IS 2911). Pile group: carrying capacity, efficiency and settlement. Negative skin friction.

UNIT IV Foundations on problematic soil &Introduction to Geosynthetics :Significant characteristics of expansive soil, footing on such soils, Problems and preventive measures. Under-reamed pile foundation-its concept, design& field installation. Significant characteristics of silt and loess, problems & remedial measures footing on such soils, introduction to geosynthetics-types and uses.

UNIT V Retaining walls: Types (types of flexible and rigid earth retention systems: counterfort, gravity, diaphragm walls, sheet pile walls, soldier piles and lagging).

18BECCE15**Environmental Geo-technology****4H-3C****(Fundamentals of Geo environmental Engineering, Soil-Water-Contaminant Interaction, Waste Containment System, Contaminant Site Remediation)****Instruction Hours/week: L: 3 T: 0 P: 0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. Have an exposure to interdisciplinary issues pertaining to environment and geotechnical engineering
2. Be trained to develop sustainable and environmentally sound solutions for geotechnical problems
3. To understand the relevance of various legal aspects involved in addressing environmental consequences associated with geotechnical issues.
4. To understand the Fundamentals of geo environmental engineering and multiphase behavior of soil.
5. To understand the Soil-water contaminant interaction studies and concepts of unsaturated soil in geo environmental engineering.
6. To understand the Waste containment system and also the property evaluation of soil, design practices, Vertical barriers

Course Outcomes

After learning the course the students should be able to:

1. Understand the Fundamentals of geo environmental engineering and multiphase behavior of soil.
2. Understand the Soil-water contaminant interaction studies and concepts of unsaturated soil in geo environmental engineering.
3. Understand the Waste containment system and also the property evaluation of soil, design practices, Vertical barriers,
4. Understand the Contaminant site remediation, some examples of in-situ remediation
5. Understand the Advanced soil characterization for geo environmental applications
6. Develop sustainable and environmentally sound solutions for geotechnical problems

UNIT I: Fundamentals of Geo environmental Engineering: Scope of geo environmental engineering - multiphase behavior of soil – role of soil in geo environmental applications – importance of soil physics, soil chemistry, hydrogeology, biological process – sources and type of ground contamination– impact of ground contamination on geo environment - case histories on geo environmental problems.

UNIT II Soil-Water-Contaminant Interaction: Soil mineralogy characterization and its significance in determining soil behavior – soil-water interaction and concepts of double layer – forces of interaction between soil particles. Concepts of unsaturated soil – importance of unsaturated soil in geo environmental problems - measurement of soil suction - water retention curves - water flow in saturated and unsaturated zone. Soil-water-contaminant interactions and its implications – Factors effecting retention and transport of contaminants.

UNIT III Waste Containment System: Evolution of waste containment facilities and disposal practices – Site selection based on environmental impact assessment –different role of soil in waste containment – different components of waste containment system and its stability issues – property evaluation for checking soil suitability for waste containment – design of waste containment facilities

UNIT IV Contaminant Site Remediation: Site characterization – risk assessment of contaminated site - remediation methods for soil and groundwater – selection and planning of remediation methods – some examples of in-situ remediation.

UNIT V Advanced Soil Characterization: Contaminant analysis - water content and permeability measurements – electrical and thermal property evaluation – use of GPR for site evaluation - introduction to geotechnical centrifuge modeling.

Ecological Engineering

3H-3C

(Ecosystems & Eco technology, Systems Approach In Ecological Engineering, Ecological Engineering Processes Self-organizing design and processes, Waste Treatment Ecological engineers and ecotechnology)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To impart knowledge on the principles of ecological engineering that strengthen the functions of ecosystems, restore devastated ecosystems
2. To utilize the functions of ecosystems to develop ecological engineering designs for environmental management.
3. To gain the knowledge of system approach in ecological engineering
4. To estimate the sources separation systems, aqua cultural system and agro systems
5. To analyze the ecological processes self-organizing the design process..
6. To realize Eco technology for Waste Treatment Ecological engineers and ecotechnology

Course Outcomes

1. Identify the application, development and evolution of ecology
2. knowledge of system approach in ecological engineering
3. Estimate the sources separation systems, aqua cultural system and agro systems
4. Analyze the ecological processes self-organizing the design process..
5. Realize Eco technology for Waste Treatment Ecological engineers and ecotechnology
6. Balance the Case studies of Integrated Ecological Engineering

UNIT I Ecosystems & Ecotechnology Aim, scope and applications of ecology – Development and evolution of ecosystems – Principles and concepts pertaining to communities in ecosystem – Energy flow and material cycling in ecosystems – productivity in ecosystems.

UNIT II Systems Approach In Ecological Engineering Principles, components and characteristics of systems – Classification of systems – Structural and functional interactions of environmental systems – Environmental systems as energy systems – Mechanisms of steady-state maintenance in open and closed systems – Modeling and Eco technology – Elements modeling – Modelling procedure – Classification of ecological model s- Applications of models in Eco technology – Ecological economics.

UNIT III Ecological Engineering Processes Self-organizing design and processes – Multi seeded microcosms – Interface coupling in ecological systems – Concept of energy – Determination of sustainable loading of ecosystems.

UNIT IV Ecotechnology for Waste Treatment Ecological engineers and ecotechnology – Classification of ecotechnology – Principles of ecological engineering. Ecosanitation-Principles and operation of soil infiltration systems – Wetlands and ponds – source separation systems – Aquacultural systems – Agro ecosystems – Detritus based treatment for solid wastes – Applications of ecological engineering for marine systems.

UNIT V Case Studies: Case studies of Integrated Ecological Engineering Systems and their commercial prospects.

Transport of Water and Wastewater
(General Hydraulics And Flow Measurement, Water Transmission And
Distribution, Wastewater Collection And Conveyance, Storm Water
Drainage)

3H-3C

Instruction Hours/week: L: 3 T: 0 P: 0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. To educate the students in detailed design concepts related to water transmission mains, water distribution system, sewer networks and storm water drain and computer application on design.
2. To understand and apply the principle of hydraulics in water transportation and distribution and wastewater collection and conveyance.
3. To design water supply mains taking into account all the design parameters.
4. To analyze a water supply distribution network.
5. To select an appropriate pipe material, necessary pipe appurtenances and able to locate the leaking mains for the water distribution system. Analyze
6. To estimate the quantity of storm drainage and design a proper storm drainage for speedy draining of storm water from the city area.

Course Outcomes

1. Understand and apply the principle of hydraulics in water transportation and distribution and wastewater collection and conveyance.
2. Design water supply mains taking into account all the design parameters.
3. Analyze a water supply distribution network.
4. Select an appropriate pipe material, necessary pipe appurtenances and able to locate the leaking mains for the water distribution system. Analyze
5. Estimate the quantity of storm drainage and design a proper storm drainage for speedy draining of storm water from the city area.
6. Design a sewer network for the proper disposal of the sewage generated from the city limits to treatment plant.

UNIT I General Hydraulics And Flow Measurement Fluid properties; fluid flow – continuity principle, energy principle and momentum principle; frictional head loss in free and pressure flow, minor heads losses, Carrying Capacity–Flow measurement.

UNIT II Water Transmission And Distribution Need for Transport of water and wastewater- Planning of Water System –Selection of pipe materials, Water transmission main design- gravity and pumping main; Selection of Pumps- characteristics- economics; Specials, Jointing, laying and maintenance, water hammer analysis; water distribution pipe networks Design, analysis and optimization – appurtenances – corrosion prevention – minimization of water losses – leak detection Storage reservoirs.

UNIT III Wastewater Collection And Conveyance Planning factors – Design of sanitary sewer; partial flow in sewers, economics of sewer design; Wastewater pumps and pumping stations- sewer appurtenances; material, construction, inspection and maintenance of sewers; Design of sewer outfalls-mixing conditions; conveyance of corrosive wastewaters.

UNIT IV Storm Water Drainage Necessity- - combined and separate system; Estimation of storm water run-off Formulation of rainfall intensity duration and frequency relationships- Rational methods

UNIT V Case Studies And Software Applications Use of computer software in water transmission, water distribution and sewer design – EPANET 2.0, LOOP version 4.0, SEWER, BRANCH, Canal ++ and GIS based software's.

SUGGESTED READINGS

1. "Manual on water supply and Treatment", CPHEEO, Ministry of Urban Development, Government of India, New Delhi, 1999.
2. Bajwa, G.S. "Practical Handbook on Public Health Engineering", Deep Publishers, Shimla, 2003
3. CPHEEO Manual on Sewerage and Sewage Treatment Systems Part A, B & C, Ministry of Urban Development,

18BECEE18 Physico-Chemical Processes for Water and Wastewater Treatment**3H-3C****(Quality , Quantity of Water and Waste Water ,Screening and Skimming,
Sedimentation, Softening Desalination &Disinfection)****Instruction Hours/week: L: 3 T: 0 P: 0****Marks: Internal:40External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. The course content should be taught and with the aim to develop required skills in students so that they are able to acquire following competencies.
2. Estimate the quantity of water required for domestic and industrial uses and waste water generated by domestic and industrial use.
3. Supervise operation and maintenance of the fresh water and waste water Treatment plants.
4. To estimate water for domestic and industrial requirement
5. To explain the characteristics of water and waste water.
6. To determine the quality of generated sludge by treatment of water and waste water and various methods for disposal of sludge

Course Outcomes

1. The theory should be taught and practical should be carried out in such a manner that students are able to acquire required learning outcomes in cognitive, psychomotor and affective domain to demonstrate following course outcomes.
2. Estimate water for domestic and industrial requirement
3. Explain the characteristics of water and waste water.
4. Determine the quality of generated sludge by treatment of water and waste water and various methods for disposal of sludge
5. Explain methods of disinfection, chlorination – chlorine dose, chlorine demand,
6. Describe process for removal of oil, grease etc & disposal of skimming

UNIT –I Quality , Quantity of Water and Waste Water Quality of water and wastewater
Wholesome water -Impurity of water- Characteristics of water- Examination of water - Standards of potable water quality - Characteristics of sewage - Examination of sewage - Standards of quality of treated water and wastewater - Quantity of water and waste water - Waste water and gas flow - Water requirement for domestic and industrial purposes - Waste water formation and estimation - Spectrum of particulate size distribution - Variation of flows.

UNIT II Screening and Skimming Purpose of screenings and terms : blinding, stratification , contamination (oversize , fines, foreign body), gradation, grading, Flow equalization -Types of bar racks and screens -Disposal of screenings - Removal of oil, grease etc. - Flootation - Skimming tank - Disposal of skimming.

UNIT III Sedimentation Introduction - Principles of Sedimentation and Stokes' law applied to fluids - Characteristics of the settleable solids - Classification of sedimentation tanks for water and waste water - Factors influencing sedimentation -Deciding size of sedimentation tank for water and wastewater -Standard design loading - Detention period -Coagulation – purpose, principle - Types of coagulants and its suitability -Determination of optimum coagulation dose. - Feeding of coagulant and feeding devices = Flocculation and flocculation tanks and design criteria of flocculator - Clarifiers, its types and design criteria. - Settling efficiency of particles - Grit removal

UNIT IV Filtration -Theory of filtration- Mechanism for particle size -Hydraulics of filters -Types of filters and their flow direction -Filter clogging -Filter washing -Break through -Deciding size of filter unit - Advances in filtration

UNIT V Softening Desalination &Disinfection Chemical precipitation - Water and wastewater softening -Estimation of dose of chemical - Methods of softening - ammonia, borax, lye, lime-soda, chelating, Ion exchange method etc. - osmosis, electrolysis -. Methods of disinfection -chlorination – chlorine dose, chlorine demand, application of chlorine - Use of various forms of chlorine, break through chlorination - Removal of colour

Biological Processes for Contaminant Removal

3H-3C

(Introduction: microbiology fundamentals, Aerobic biological treatment, Anaerobic biological treatment, Energetic and stoichiometric)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

Have knowledge of the main contaminant removal procedures and associated problems.

1. The biological treatment of effluents consists in the use of bacterial cultures to degrade household and industrial effluents.
2. This requires the knowledge of some microbiology fundamentals and of the meaning and determination of the kinetic and stoichiometric coefficients that govern the process.
3. To serve as the basis for studying the aerobic and anaerobic biological processes and for developing the construction details of the reactors where these take place.
4. To analyse the different options applicable to different substrates.
5. To examine the different equipment options required for each treatment.
6. To study different work scenarios to determine the most effective options.

Course Outcomes

1. Have a sound knowledge of microbiology fundamentals applied to biological treatments.
2. Correctly implement the procedures for determining kinetic and stoichiometric parameters.
3. Apply knowledge of enzyme reaction kinetics to reactor design.
4. Analyse the different options applicable to different substrates.
5. Examine the different equipment options required for each treatment.
6. Study different work scenarios to determine the most effective options.

UNIT –I Introduction: microbiology fundamentals and kinetic and stoichiometric coefficients: a. Bacterial growth and biological oxidation b. Kinetics and stoichiometric of biological growth

UNIT II Aerobic biological treatment: fixed and suspension cultures a. Suspension cultures b. Characteristics of the activated sludge process. c. Control parameters d. Overproduction of sludge and oxygen consumption: Scums h. Fixed cultures: percolators and biodiscs. i. Nutrient (N and P) removal.

UNIT III Anaerobic biological treatment: biogas production, collection and use a. Mechanism and phases of the anaerobic process. b. Gas production, collection and use. c. Energetics and stoichiometric of the process d. Anaerobic contact process and slurry filter e. anaerobic digestion of slurry.

UNIT IV Energetics and stoichiometric- activated sludge process. f. Balanced diet: C:N:P ratio. Presence of toxic substances g. Operational difficulties: swelling, rising sludge.

UNIT V Control parameters: load, pH, VFAs, acidity-alkalinity, gas quantity and quality.

SUGGESTED READINGS

18BECCE20 Rural Water Supply and Onsite Sanitation Systems 3H-3C
(Rural Water Supply, Low Cost Water Treatment, Rural Sanitation, Solid Waste Management)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

Have knowledge of the main contaminant removal procedures and associated problems.

1. Issues of rural water supply, low cost water treatment , sanitation and solid waste management.
2. To design water supply and sanitation system for rural community.
3. To design low cost waste management systems for rural areas.
4. To plan and design an effluent disposal mechanism
5. To identify the occupational hazards.
6. To plan and identify the removal of hazards by composting

Course Outcomes

At the end of the course the student will be able to

1. Identify the problems pertaining to rural water supply and sanitation.
2. Design water supply and sanitation system for rural community.
3. Design low cost waste management systems for rural areas.
4. Plan and design an effluent disposal mechanism
5. Identify the occupational hazards.
6. Plan and identify the removal of hazards by composting

UNIT –I Rural Water Supply: Issues of rural water supply –Various techniques for rural water supply- merits- National rural drinking water program- rural water quality monitoring and surveillance- operation and maintenance of rural water supplies

UNIT II Low Cost Water Treatment: Introduction – Epidemiological aspects of water quality methods for low cost water treatment - Specific contaminant removal systems.

UNIT III Rural Sanitation: Introduction to rural sanitation- Community and sanitary latrines - Planning of wastewater collection system in rural areas- Treatment and Disposal of wastewater - Compact and simple wastewater treatment units and systems in rural areas- stabilization ponds - septic tanks - Imhoff tank- soak pits- low cost excreta disposal systems- Effluent disposal.

UNIT IV Industrial Hygiene And Sanitation: Occupational Hazards- Schools- Public Buildings Hospitals- Eating establishments- Swimming pools – Cleanliness and maintenance and comfort- Industrial plant sanitation.

UNIT V Solid Waste Management: Disposal of Solid Wastes- Composting- land filling incineration- Biogas plants - Rural health - Other specific issues and problems encountered in rural sanitation.

18BECCE21 Solid and Hazardous Waste Management 3H-3C
(Sources, Classification And Regulatory Framework, Waste Characterization And Source Reduction Storage, Collection And Transport Of Wastes, Waste Processing Technologies Waste Disposal)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To impart knowledge and skills in the collection, storage, transport, treatment, disposal and recycling options for solid wastes including the related engineering principles, design criteria, methods and equipment's.
2. To define and explain important concepts in the field of solid waste management and suggest suitable technical solutions for treatment of municipal and industrial waste
3. To understand the role legislation and policy drivers play in stakeholders' response to the waste
4. To apply the basic scientific principles for solving practical waste management challenges
5. To design the different elements of waste management systems.
6. To understand the techniques involves in the waste disposal, landfill etc.,

Course Outcomes

On completion of the course, the student is expected to be able to

1. Understand the characteristics of different types of solid and hazardous wastes and the factors affecting variation
2. Define and explain important concepts in the field of solid waste management and suggest suitable technical solutions for treatment of municipal and industrial waste
3. Understand the role legislation and policy drivers play in stakeholders' response to the waste
4. Apply the basic scientific principles for solving practical waste management challenges
5. Design the different elements of waste management systems.
6. Understand the techniques involves in the waste disposal, landfill etc.,

UNIT I Sources, Classification And Regulatory Framework

Types and Sources of solid and hazardous wastes - Need for solid and hazardous waste management – Salient features of Indian legislations on management and handling of municipal solid wastes, hazardous wastes, biomedical wastes, nuclear wastes - lead acid batteries, electronic wastes, plastics and fly ash – Elements of integrated waste management and roles of stakeholders - Financing and Public Private Participation for waste management- Integrated solid waste management.

UNIT II Waste Characterization And Source Reduction Waste generation rates and variation - Composition, physical, chemical and biological properties of solid wastes – Hazardous Characteristics – TCLP tests – waste sampling and characterization plan - Source reduction of wastes –Waste exchange - Extended producer responsibility - Recycling and reuse

UNIT III Storage, Collection And Transport Of Wastes Handling and segregation of wastes at source – storage and collection of municipal solid wastes – Analysis of Collection systems - Need for transfer and transport – Transfer stations Optimizing waste allocation– compatibility, storage, labeling and handling of hazardous wastes – hazardous waste manifests and transport

UNIT IV Waste Processing Technologies Objectives of waste processing – material separation and processing technologies – biological and chemical conversion technologies – methods and controls of Composting - thermal conversion technologies and energy recovery – incineration – solidification and stabilization of hazardous wastes- treatment of biomedical wastes - Health considerations in the context of operation of facilities.

UNIT V Waste Disposal Waste disposal options – Disposal in landfills - Landfill Classification, types and methods – site selection - design and operation of sanitary landfills, secure landfills and landfill bioreactors – leachate and landfill gas management – landfill closure and environmental monitoring – Rehabilitation of open dumps-remediation of contaminated sites.

18BECEE22

Air and Noise Pollution and Control

3H-3C

(Introduction Air Pollution Monitoring And Modelling, Control Of Particulate

Contaminants ,Control Of Gaseous Contaminants, Automobile And Noise Pollution)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To impart knowledge on the principles and design of control of indoor/ particulate / gaseous air pollutant and its emerging trends.
2. To apply sampling techniques and Suggest suitable air pollution prevention equipment's and techniques for various gaseous and particulate pollutants.
3. To apply air pollution monitoring and modeling
4. To induce operational considerations under the processing and control monitoring.
5. To apply sampling techniques of gaseous contaminants.
6. To control noise pollution by specific measurements, standard and preventive measures.

Course Outcomes

After completion of this course, the student is expected to be able to:

1. Apply sampling techniques and Suggest suitable air pollution prevention equipment's and techniques for various gaseous and particulate pollutants.
2. Apply air pollution monitoring and modeling
3. Induce operational considerations under the processing and control monitoring.
4. Apply sampling techniques of gaseous contaminants.
5. Control noise pollution by specific measurements, standard and preventive measures.
6. Gain the knowledge on the principles and design of control of indoor/ particulate / gaseous air pollutant and its emerging trends.

UNIT I Introduction Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories.

UNIT II Air Pollution Monitoring And Modelling Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Transport & Dispersion of Air Pollutants – Modeling Techniques – Air Pollution Climatology. 19

UNIT III Control Of Particulate Contaminants Factors affecting Selection of Control Equipment – Gas Particle Interaction, – Working principle, Design and performance equations of Gravity Separators, cyclones, Fabric filters, Particulate Scrubbers, Electrostatic Precipitators – Operational Considerations - Process Control and Monitoring – Costing of APC equipment – Case studies for stationary and mobile sources.

UNIT IV Control Of Gaseous Contaminants Factors affecting Selection of Control Equipment – Working principle, Design and performance equations of absorption, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters – Process control and Monitoring - Operational Considerations - Costing of APC Equipment – Case studies for stationary and mobile sources.

UNIT V Automobile And Noise Pollution Vehicular Pollution: Automobile emission- Types of emissions- Exhaust emissions, evaporative emissions, crank-case emissions- Prevention and control of vehicular pollution. Noise Pollution: Sources and Effects of Noise Pollution – Measurement – Standards –Control and Preventive measures. Sources types and control of indoor air pollutants, sick building syndrome types – Radon Pollution and its control.

18BECCE23 Environmental Impact Assessment and Life Cycle Analyses 3H-3C
(Environmental impact assessment (EIA) Methodologies, Environmental management
EMS and Standardization, LCA)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To impart Knowledge on the growing need of civil engineering professionals to be acquainted with the potential environmental risks of infrastructure projects.
2. To give an appropriate knowledge the complementary role of ecological engineering through application of different environmental technologies.
3. To know the emerging aspects of environmental management including techniques of ecological foot printing and carbon trading will be illustrated.
4. To know the examples and case studies of some mega-projects will be included.
5. To assess the techniques of corporate environmental management to regional environmental management.
6. To know the remediation techniques and development of predictive models.

Course Outcomes

After completion of this course, the student is expected to be able to:

1. Approach the Environmental Management including methods of standardization and certification will be discussed.
2. Give an appropriate knowledge the complementary role of ecological engineering through application of different environmental technologies.
3. Know the emerging aspects of environmental management including techniques of ecological foot printing and carbon trading will be illustrated.
4. Know the examples and case studies of some mega-projects will be included.
5. Assess the techniques of corporate environmental management to regional environmental management.
6. Know the remediation techniques and development of predictive models.

UNIT I Environmental impact assessment (EIA): Introduction, definitions and concepts, rationale and historical development of EIA, EIA for civil engineers. **road components of EIA:** Initial environmental examination, environmental impact statement, environmental appraisal, environmental impact factors and areas of consideration. Pertinent institutional information, unique pollution problems, existing visual quality, public participation techniques. Composite consideration, potential cultural resources, potential visual impacts, geographical study area.

UNIT II Methodologies: Measurement of environmental impact, organization, scope and methodologies of EIA pertinent environmental factors. Six generic steps, descriptive checklists, simple interaction matrix, stepped matrix, uniqueness ratio, habitat evaluation system. Public involvement techniques, comprehensive environmental impact study, various project types,

archaeological properties, leachate testing, evaluation species, proposing agency, EIA Models. **Status of EIA in India:** EIA Regulations in India, TOR for Hydropower Projects and other projects. Case studies from hydropower projects, hazardous industries and mining.

UNIT III Environmental management: Principles, problems and strategies; Review of political, ecological and remedial actions. Future strategies; multidisciplinary environmental strategies, the human, planning, decision-making and management dimensions. Environmental audit: Definitions and concepts, partial audit, compliance audit, methodologies and regulations.

UNIT IV EMS and Standardization: Introduction to ISO and ISO 14000. EMAS regulations, wider application of system based approach. Local infrastructure development and environmental management: A system approach, Regional environmental management system, Conversion plan development and implementation strategies, Environmental management systems in local government.

UNIT V LCA: Life cycle assessment; Triple bottom line approach; Industrial Ecology. Ecological foot printing, Design for Environment, Future role of LCA, Product stewardship, design, durability and justifiability, measurement techniques and reporting. **Carbon trading** Energy foot printing, Food foot printing and Carbon foot printing. GHG emissions, global warming, climate change and Carbon credits, CDM, Initiatives in India; Sustainable development; Future scenarios.

18BECCE24**Building Construction Practice****3H-3C****(Building Materials, Foundation and Masonry, Construction Practices and Sub –Super structure construction)****Instruction Hours/week: L: 3 T: 0 P: 0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

After successful completion of the course, the student will be able to

1. To select suitable materials for buildings and adopt suitable construction techniques.
2. To select suitable techniques used in super and sub structure construction.
3. To recognizing the good materials to be used for the construction work
4. To investigation of soil condition, Deciding and design of suitable foundation for different structures
5. To supervise of different types of masonry
6. To apply grouting techniques.

Course Outcomes

This course will develop a student;

1. In recognizing the good materials to be used for the construction work
2. In investigation of soil condition, Deciding and design of suitable foundation for different structures
3. In supervision of different types of masonry
4. In applying grouting techniques.
5. In applying different construction techniques in underwater construction
6. In explaining erection techniques for high rise structures.

UNIT I- Building Materials: Stone as building material; Requirement of good building stones, dressing of stones, Deterioration and Preservation of stone work. Bricks; Classification, Manufacturing of clay bricks, Requirement of good bricks. Field and laboratory tests on bricks; compressive strength, water absorption, efflorescence, dimension and war page. Cement Concrete blocks, Stabilized Mud Blocks, Sizes, requirement of good blocks. Mortar: types and requirements. Timber as construction material Fine aggregate: Natural and manufactured: Sieve analysis, zoning, specific gravity, bulking, moisture content, deleterious materials. Coarse aggregate: Natural and manufactured: Importance of size, shape and texture. Grading of aggregates, Sieve analysis, specific gravity, Flakiness and elongation index, crushing, impact and abrasion tests.

UNIT II –Foundation and Masonry: Preliminary investigation of soil, safe bearing capacity of soil, Function and requirements of good foundation, types of foundation, introduction to spread, combined, strap, mat and pile foundation Masonry: Definition and terms used in masonry. Brick masonry, characteristics and requirements of good brick masonry, Bonds in brick work, Header, Stretcher, English, Flemish bond, Stone masonry, Requirements of good stone masonry, Classification, characteristics of different stone masonry, Joints in stone masonry. Types of walls; load bearing, partition walls, cavity walls.

UNIT III- Construction Practices : Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork – masonry – stone masonry

– Bond in masonry – concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements – Building foundations – basements – temporary shed – centering and shuttering – slip forms – scaffoldings – de-shuttering forms – Fabrication and erection of steel trusses – frames – braced domes – laying brick — weather and water proof – roof finishes – acoustic and fire protection..

UNIT IV- Sub Structure Construction: Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques - well and caisson - sinking cofferdam - cable anchoring and grouting-driving diaphragm walls, sheet piles - shoring for deep cutting - well points -Dewatering and stand by Plant equipment for underground open excavation;

UNIT V- Super Structure Construction-: Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – in-situ pre-stressing in high rise structures, Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks;

18BECCE25**Construction Project Planning & Systems
(Project Planning systems, Planning Techniques, Contracts Management,
Project Monitoring, Quality control)****3H-3C****Instruction Hours/week: L: 3 T: 0 P: 0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

After successful completion of the course, the student will be able to

1. To analyze and apply the project planning systems and techniques
2. To plan, organize and manage the production and business processes of lesser or medium complexity within the business systems (civil engineering and public utility companies, local government offices)
3. To develop detailed appreciation for construction planning and scheduling
4. To apply their learned knowledge as it pertains to upper level construction management skills and procedures.
5. To update their knowledge on time and cost overruns and their corrective measures.
6. To apply their learned knowledge as it pertains to Project monitoring skills.

Course Outcomes

At the end of this course the student is expected to have learnt how to

1. Plan construction projects, schedule the activities using network diagrams,
2. develop detailed appreciation for construction planning and scheduling
3. Apply their learned knowledge as it pertains to upper level construction management skills and procedures.
4. Update their knowledge on time and cost overruns and their corrective measures.
5. Apply their learned knowledge as it pertains to Project monitoring skills.
6. Identify and understand the safety concepts of quality control.

UNIT I –Project Planning systems: Definition of Projects; Stages of project planning: pre-tender planning, pre-construction planning, detailed construction planning, role of client and contractor, level of detail. Process of development of plans and schedules, work break-down structure, activity lists, assessment of work content, concept of productivities, estimating durations, sequence of activities, activity utility data.

UNIT II –Planning Techniques:- Bar charts, Gantt Charts. Networks: basic terminology, types of precedence relationships, preparation of CPM networks: activity on link and activity on node representation, computation of float values, critical and semi critical paths, calendaring networks. PERT- Assumptions underlying PERT analysis, determining three time estimates, analysis, slack computations, calculation of probability of completion. Allocation of Resources- materials,

equipment, staff, labour and finance; resource levelling and optimal schedules; Project organisation, documentation and reporting systems

UNIT III:- Contracts Management: Importance of Contracts Management; Planning and organizing construction site and resources- Site: site layout including enabling structures, developing site organization, Documentation at site; Manpower: planning, organizing, staffing, motivation; Materials: concepts of planning, procurement and inventory control; Equipment: basic concepts of planning and organizing; Funds: cash flow, sources of funds; Histograms and S-Curves. Earned Value; Resource Scheduling- Bar chart, line of balance technique, resource constraints and conflicts; resource aggregation, allocation, smoothening and levelling. Common Good Practices in Construction;

UNIT IV- Project Monitoring: Supervision, record keeping, periodic progress reports, periodical progress meetings. Updating of plans: purpose, frequency and methods of updating. Common causes of time and cost overruns and corrective measures. Basics of Modern Project management systems such as Lean Construction; Use of Building Information Modelling (BIM) in project management;

UNIT V- Quality control: concept of quality, quality of constructed structure, use of manuals and checklists for quality control, role of inspection, basics of statistical quality control. Safety, Health and Environment on project sites: accidents; their causes, effects and preventive measures, costs of accidents, occupational health problems in construction, organizing for safety and health.

Sustainable Construction Methods

3H-3C

(Types of foundations and construction methods, Modular construction methods, Cutting Edge of Sustainable Construction, Sustainability in Built environment and LEED Construction Management)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

This class is an introduction to sustainable construction.

1. Demonstrate an ability to evaluate and/or design whole or parts of projects, taking into account not only the financial and economic issues but also the social and environmental impacts affecting the sustainability of infrastructure.
2. Promote an approach to project evaluation that is based on an appreciation of the needs of society, the potential for sustainable development
3. To recognition the problems that may result from poorly conceived or poorly implemented projects and programs.
4. To know the construction method which is used in the sustainable environment.
5. To know the cutting edge rating systems in detail, including its evolution, objectives, criteria, levels of certification benefits, and shortcomings
6. To know a series of case studies representing diverse project types, sizes, certification levels, and climate regions

Course Outcomes

After taking this class students should be able to:

1. Understand rating systems and compares key features such as cost, ease of use, and building performance
2. Know the construction method which is used in the sustainable environment.
3. Know the cutting edge rating systems in detail, including its evolution, objectives, criteria, levels of certification benefits, and shortcomings
4. Know a series of case studies representing diverse project types, sizes, certification levels, and climate regions
5. Know what are “lessons learned” of sustainable construction through LEED case studies
6. Understand the concept of sustainable development or sustainability in the built environment

UNIT I –Types of foundations and construction methods: Basics of Formwork and Staging; Common building construction methods (conventional walls and slabs; conventional framed structure with block work walls).

UNIT II –Modular construction methods: Modular construction methods for repetitive works; Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges.

UNIT III:-Cutting Edge of Sustainable Construction: Identification of cutting edge sustainable construction materials, technologies, and project management strategies for use in the construction industry and evaluation of their potential to reduce the negative environmental impacts of construction activity.

UNIT IV- Sustainability in Built environment: The fundamental concepts of sustainable development in the built environment; the environmental - resources issues and industrial - construction metabolism with examples. Environmental ethics and environmental justice; ecological - environmental economics including Life Cycle Costing; building assessment (frameworks) and ecolabels. Energy systems, energy, entropy, energy conservation and renewable energy; Life Cycle Assessment, embodied energy, energy, and materials. Concepts such as New Urbanism, bioclimatic design principles, ecological concepts, passive design strategies will be discussed.

UNIT V- LEED Construction Management: Examination of the current LEED for New Construction rating system, and case study analysis of highly successful recent "green construction projects" through student team assignments and presentations. Preparation for the LEED Green Associate professional licensing exam.

Semester-		
18BECCE27	Construction Engineering Materials	3H-3C
(Stones – Bricks – Concrete Blocks, Lime – Cement – Aggregates – Mortar, Concrete, Timber And Other Modern Materials)		
<hr/>		
Instruction Hours/week: L: 3 T: 0 P: 0	Marks: Internal:40	External:60 Total:100
<hr/>		
End Semester Exam:3 Hours		

Course Objectives

At the end of this course the students should have learnt about the

1. Various materials, both conventional and modern, that are commonly used in civil engineering construction.
2. Further he should be able to appreciate the criteria for choice of the appropriate materials and the various tests for quality control in the use of these materials.
3. To expose students to the various building and general construction products and their associated quality, durability, warranties, and availability.
4. To impart knowledge of various types of properties, uses, and variety of materials important in construction.
5. To expose students to various quality control aspects of the civil engineering materials by performing different lab test on materials.
6. To provide hands-on, research, and collaborative activities to vary and deepen the study of construction materials.

Course Outcomes

After taking this class students should be able to:

1. Expose students to the various building and general construction products and their associated quality, durability, warranties, and availability.
2. Impart knowledge of various types of properties, uses, and variety of materials important in construction.
3. Expose students to various quality control aspects of the civil engineering materials by performing different lab test on materials.
4. Provide hands-on, research, and collaborative activities to vary and deepen the study of construction materials.
5. Know what are market forms of Timbers, Plywood's, Steels etc..
6. Understand the concept of Modern materials used in the construction.

Unit I Stones – Bricks – Concrete Blocks: Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacture of clay bricks – Tests on bricks – Compressive Strength - Water Absorption – Efflorescence –Bricks for special use – Refractory bricks – Cement and Concrete hollow blocks – Lightweight concrete blocks – Code Practices

Unit II-Lime – Cement – Aggregates – Mortar: Lime – Preparation of lime mortar – Cement. Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar

– Hydration - Compressive strength – Tensile strength – Soundness and consistency – Setting time – Aggregates – Natural stone aggregates – Industrial byproducts – Crushing strength – Impact strength – Flakiness – Abrasion Resistance – Grading – Sand – Bulking – Code Practices

Unit III - Concrete: Concrete – Ingredients – Manufacture – Batching plants – RMC – Properties of fresh concrete – Slump – Flow and compaction – Principles of hardened concrete – Compressive, Tensile and shear strength – Modulus of rupture – Tests – Mix specification – Mix proportioning – IS method – High Strength Concrete and HPC – Other types of Concrete – Code Practices

Unit IV - Timber And Other Materials: Timber – Market forms – Industrial timber- Plywood - Veneer – Thermocole – Panels of laminates – Steel – Aluminum and Other Metallic Materials - Composition – uses – Market forms – Mechanical treatment – Paints – Varnishes – Distempers – Code Practices

Unit V. Modern Materials: Glass – Ceramics – Sealants for joints – Fibre glass reinforced plastic – Clay products – Refractories – Composite materials – Types – Applications of laminar composites – Fiber textiles – Geosynthetics for Civil Engineering applications.

18BECCE28

Contracts Management

3H-3C

(Contract Management, Contract Parameters, Various Acts governing
Contracts Bid Process and Bid Evaluation)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

Upon completion of this course, the student should:

1. To have developed a more detailed appreciation for construction planning and scheduling
2. To apply their learned knowledge as it pertains to upper level construction management skills and procedures.
3. To evaluate the best practices associated with the development of contract parameters.
4. To understand the legal aspects of acts governing the contracts
5. To discuss techniques for appropriate risks and changes, monitoring and measuring the contract closure
6. To understand the basics of the bid process, important points in a tender document, and unbalanced contracts.

Course Outcomes

After taking this class students should be able to:

1. Apply project Procurement management concepts in a project environment.
2. Describe techniques used to procure resources within a project's scope and techniques to reduce procurement risks.
3. Evaluate the best practices associated with the development of contract parameters.
4. Understand the legal aspects of acts governing the contracts
5. Discuss techniques for appropriate risks and changes, monitoring and measuring the contract closure
6. Understand the basics of the bid process, important points in a tender document, and unbalanced contracts.

Unit I Contract Management: Introduction, Importance of Contracts, Overview of Contract Management, Overview of Activities in Contract Management; Planning and People- Resource Management; Types of Contracts, Parties to a Contract; Contract Formation, Formulation of Contract, Contract Start-Up, Managing Relationships; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price.

Unit II-Contract Parameters: Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Notices under contracts; Conventional and Alternative Dispute Resolution methods.

Unit III - Various Acts governing Contracts; Contract Administration and Payments- Contract Administration, Payments; Contract Management in Various Situations- Contract Management in NCB Works, Contract Management in ICB Works Contracts, Contract of Supply of Goods- Design, Supply and Installation Contracts, Contract Management in Consultancy,;

Unit IV - Bid Process and Bid Evaluation: bid process, important points in a tender document, and unbalanced contracts. Material covered includes: Request For Proposal and problems Different types of proposals Design Conditions and Standard Component List-Tender document - Unbalanced proposals. Exercises: Evaluating Unit Prices Premium Portion Of The Overtime Rate Handling Bid Questions.

Unit V. Managing Risks and Change- Managing Risks, Managing Change; Contract Closure and Review- Ending a Contract, Post-Implementation Review; Legal Aspects in Contract Management- Contract Management Legal View, Dispute Resolution, Integrity in Contract Management; Managing Performance- Introduction, Monitoring and Measurement.

SUGGESTED READINGS

18BECCE29

Construction Equipment& Automation

3H-3C

(Construction Equipment's And Management, Equipment For Earthwork,
Other Construction Equipment, Asphalt And Concrete Plants and Material
handling Equipment)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To study and understand the various types of equipment's used for earthwork, tunneling, drilling, blasting, dewatering, material handling conveyors and its applications in construction projects.
2. To know various types of equipment have to be used in the constructions projects.
3. To know the equipment's used for earthwork.
4. To know the equipment's used for lifting, demolishing, grouting and dewatering purposes.
5. To know the equipment's used in batching asphalt and concrete plants.
6. To know the material handling conveyors, use of drones and use of robots for repetitive activities.

Course Outcomes

At the end of this course students will be able to

1. Know various types of equipment have to be used in the constructions projects.
2. Know the equipment's used for earthwork.
3. Know the equipment's used for lifting, demolishing, grouting and dewatering purposes.
4. Know the equipment's used in batching asphalt and concrete plants.
5. Know the material handling conveyors, use of drones and use of robots for repetitive activities.
6. Understand the various types of equipment's used for earthwork, tunneling, drilling, blasting, dewatering, material handling conveyors and its applications in construction projects.

Unit I Construction Equipment's And Management: Identification – Planning of equipment – Selection of Equipment - Equipment Management in Projects - Maintenance Management – Equipment cost – Operating cost – Cost Control of Equipment - Depreciation Analysis – Replacement of Equipment- Replacement Analysis - Safety Management

UNIT II Equipment For Earthwork: Fundamentals of Earth Work Operations - Earth Moving Operations - Types of Earth Work Equipment - Tractors, Motor Graders, Scrapers, Front end Waders – Dozer, Excavators, Rippers, Loaders, trucks and hauling equipment, Compacting Equipment, Finishing equipment.

UNIT III Other Construction Equipment: Equipment for Dredging, Trenching, Drag line and clamshells, Tunneling – Equipment for Drilling and Blasting - Pile driving Equipment - Erection Equipment - Crane, Mobile crane - Types of pumps used in Construction - Equipment for Dewatering and Grouting – Equipment for Demolition. Under water concreting equipment's

UNIT IV Asphalt And Concrete Plants: Aggregate production- Different Crushers – Feeders - Screening Equipment - Handling Equipment - Batching and Mixing Equipment - Pumping Equipment – Ready mix concrete equipment, Concrete pouring equipment. Asphalt Plant, Asphalt Pavers, Asphalt compacting Equipment

UNIT V Materials Handling Equipment: Forklifts and related equipment - Portable Material Bins – Material Handling Conveyors – Material Handling Cranes- Industrial Trucks. Equipment for transportation of materials. Equipment Productivities; Use of Drones for spread out sites; Use of robots for repetitive activities.

SUGGESTED READINGS

18BECCE30

Repairs & Rehabilitation of Structures

3H-3C

(Maintenance And Repair Strategies, Strength And Durability of Concrete,
Special Concretes, Repair, Rehabilitation and Retrofitting of Structures)

Instruction Hours/week: L: 3 T: 0 P: 0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. Students must gained knowledge on quality of concrete, durability aspects, causes of deterioration, assessment of distressed structures, repairing of structures and demolition procedures.
2. To assessing damage to structures and various repair techniques
3. To know various types and properties of repair materials
4. To Analyse the damage to structures using various tests
5. To gain the importance and methods of substrate preparation
6. To know about various repair techniques of damaged structures, corroded structures

Course Outcomes

By the end of this course students will have the capability/knowledge of

1. various distress and damages to concrete and masonry structures
2. the importance of maintenance of structures, types and properties of repair materials etc
3. assessing damage to structures and various repair techniques
4. various types and properties of repair materials
5. damage to structures using various tests
6. the importance and methods of substrate preparation

UNIT I : Maintenance And Repair Strategies: Maintenance, Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance, Various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration.

UNIT II: Strength And Durability of Concrete: Quality assurance for concrete – Strength, Durability and Thermal properties, of concrete – Cracks, different types, causes – Effects due to climate, temperature, Sustained elevated temperature, Corrosion – Effects of cover thickness.

UNIT III : Special Concretes: Polymer concrete, Sulphur infiltrated concrete, Fibre reinforced concrete, High strength concrete, High performance concrete, Vacuum concrete, Self-compacting concrete, Geopolymer concrete, Reactive powder concrete, Concrete made with industrial wastes.

UNIT IV: Techniques For Repair and Protection Methods: Non-destructive Testing Techniques, Epoxy injection, Shoring, Underpinning, Corrosion protection techniques – Corrosion inhibitors, Corrosion resistant steels, Coatings to reinforcement, cathodic protection.

UNIT V: Repair, Rehabilitation and Retrofitting of Structures: Strengthening of Structural elements, Repair of structures distressed due to corrosion, fire, Leakage, earthquake – Demolition Techniques – Engineered demolition methods – Case studies.

SOLID WASTE MANAGEMENT**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

1. To make the students conversant with basics of Solid wastes and its classification.
2. To make the student acquire sound knowledge of different treatments of solid wastes.
3. To acquaint the student with concepts of waste disposals.
4. To develop an understanding of the basic concepts of Hazardous waste management's.
5. To acquaint the students with the basics of energy generation from waste materials.
6. To understand the chemical principles in the projects undertaken in field of engineering and technology

Course Outcome:

1. Outline the basic principles of Solid waste and separation of wastes (K)
2. Identify the concepts of treatment of solid wastes(S)
3. Identify the methods of wastes disposals.(S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste

Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

GREEN CHEMISTRY**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
3. To acquaint the student with concepts of green technology.
4. To develop an understanding of the basic concepts of renewable energy resources.
5. To acquaint the students with the basics information on catalysis.
6. To apply the concepts of green catalysts in the synthesis

COURSE OUTCOMES:

1. Outline the basic principles of green chemistry (K)
2. Examine the different atom efficient process and synthesis elaborately (S)
3. Apply the concepts combustion of green technology (S)
4. Identify and apply the concepts of renewable energy(S)
5. Apply the concepts of green catalysts in the synthesis (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorosolvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air.Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

APPLIED ELECTROCHEMISTRY**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Objectives:**

1. To make the students conversant with the information on electrochemical material.
2. To make the student acquire sound knowledge of conducting polymers.
3. To acquaint the student with concepts of Energy storage devices.
4. To develop energy storage devices.
5. To impart knowledge on basic principles of solar cells and its applications
6. To understand the chemical principles in the projects undertaken in field of engineering.

Course Outcomes:

1. Outline the basic principles of chemistry in electrochemical material (K)
2. Examine the properties of conducting polymers(S)
3. Apply the concepts of electrochemistry in storage devices.(S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS

lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics **TOTAL :45**

Suggested Readings:

INDUSTRIAL CHEMISTRY**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

1. To make the students conversant with cement and lime and its uses.
2. To make the student acquire sound knowledge of abrasives and refractories.
3. To acquaint the student with concepts of inorganic chemicals.
4. To develop an understanding of the basic concepts explosives.
5. To acquaint the students with the basics of agriculture chemicals.
6. To understand the chemical principles in the projects undertaken in field of engineering.

Course Outcomes:

1. Outline the basic chemistry of cement and lime (K)
2. Examine the uses of abrasives and refractories (S)
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens(S)
5. Identify the usage of the agriculture chemicals(S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME

Manufacture of Portland cement – setting of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid –

manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

Suggested Readings:

3H-3C

TECHNICAL WRITING

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

1. Develop abilities to write technically and expressively,
2. Recognize writing as a constructive, meaningful process,
3. Practice using reading strategies for effective writing.
4. Design effective technical documents for both print and digital media
5. Identify the qualities of good technical writing
6. To improve the ability of writing.

COURSE OUTCOMES:

Students undergoing this course are able to

1. Construct simple sentences, correct common grammatical errors in written English.
2. Build confidence in English language by imbibing lexical and syntax rules.
3. Enrich their reading ability for effective writing.
4. Minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Understand the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT – I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing –

Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer’s block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT – 2 PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT – 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT – 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT – 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

18BESHOE06

3H-3C

GEOPHYSICS

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objective:

1. To inculcate the basics of brief history of Earth sciences .
2. To divulge knowledge on the basics of structure of earth and earth's gravitational field.
3. To disseminate the fundamentals of magnetic field and thermal distribution of earth.
4. To introduce the concepts of seismology and seismic waves. .
5. To impart the basic knowledge of oceans.
6. To understand the basics and properties of sea water.

Course Outcome:

1. gain knowledge on the basics of history of Earth sciences.
2. acquire knowledge on concepts of structure of earth and earth's gravitational field.
3. have adequate knowledge on the concepts of magnetic field and thermal distribution of earth
4. obtain knowledge on the basics of seismic waves.
5. understand the basics of oceans and properties of sea water.
6. apply the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I ORIGIN OF EARTH

A brief history of the development of Earth Sciences . An overview of Geophysical methods and their essential features, Problems of inversion and non-uniqueness in Geophysics, Origin & evolution of Solar system, Earth and Moon structure,.Kepler's law of planetary motion, A review of the Earth's structure and composition

UNIT II STRUCTURE OF EARTH

Chemical composition of Earth, Rheological behavior of crust and upper mantle, visco-elasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, Major features of the Earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sun spot, solar flares, geomagnetic storms, sea-floor spreading, Paleomagnetism and its uses, Thermal history of the Earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle

UNIT IV SEISMOLOGY

Earthquake seismology, Earthquakes and its classifications, Global seismicity and tectonics, Earth's internal structure derived from seismology, Earthquake mechanism and Anderson's theory of faulting, Continental drift and plate tectonics: its essential features, present day plate motions, Triple junctions, oceanic ridges, Benioff zones, arcs, hot spots, Mantle Plume, Mountain building, origin of Himalaya, Geodynamics of Indian subcontinent.

UNIT V OCEANS

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, Circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, Laws of seas, Coastal zone management

3H-3C

ENGINEERING ACOUSTICS

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

1. To disseminate the fundamentals of acoustic waves.
2. To inculcate the characteristics of radiation and reception of acoustic waves.
3. To divulge knowledge on the basics of pipe resonators and filters.
4. To introduce the features of architectural acoustics.
5. To impart the basic knowledge of transducers and receivers.
6. To apply the knowledge inputs of the course for engineering applications.

COURSE OUTCOME:

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics..
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS

Sound in enclosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

Transducer as an electrical network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamic microphone piezoelectric microphone – calibration of receivers

Suggested Readings:

1. Lawrence E. Kinsler, Austin R. Frey, Fundamentals of Acoustics, John Wiley & Sons, 4th edition 2000.
2. F. Alton Everest & Ken Pohlmann, Master Handbook of Acoustics, McGraw Hill Professional, 6th edition 2014.

18BESHOE08

3H-3C

INDUSTRIAL MATHEMATICS – I

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

OBJECTIVES:

1. To develop analytical skills for solving engineering problems
2. To teach the students the basic concepts of LPP,
3. To learn the techniques to solve transportation and Assignment problems
4. To make the students to study about the Integer Programming and Network Analysis
5. Analyse the results and propose recommendations to the decision-making processes in Management Engineering.
6. To formulate and solve problems as networks.

INTENDED OUTCOMES:

1. To define and formulate linear programming problems and appreciate their limitations.
2. To solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
3. To be able to build and solve Transportation Models, Assignment Models,
4. To construct linear integer programming models and discuss the solution techniques.
5. To formulate and solve problems as networks and graphs.
6. To be able to solve problems in different environments and develop critical thinking

UNIT I LINEAR PROGRAMMING PROBLEM

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method .

UNIT II TRANSPORTATION PROBLEM

Transportation Model, finding initial basic feasible solutions, moving towards optimality, Degeneracy.

UNIT III ASSIGNMENT PROBLEM

Solution of an Assignment problem, Multiple Solution, Hungarian Algorithm, Maximization in Assignment Model, Impossible Assignment.

UNIT IV INTEGER PROGRAMMING

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT V NETWORK ANALYSIS

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

Suggested Readings:

1. HamdyTaha. A., Operations Research, Prentice – Hall of India Private Limited, New Delhi.2013.

18BESHOE09

3H-3C

INDUSTRIAL MATHEMATICS – II

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

OBJECTIVES:

1. To kindle analytical skills for solving engineering problems
2. To impart the knowledge about inventory models
3. To learn replacement models and simulation models
4. To provide techniques for effective methods to solve nonlinear programming and decision making.
5. To analyse the results and propose recommendations to the decision-making processes in Management Engineering
6. To solve problems using non integer programming.

INTENDED OUTCOMES:

The students will

1. To be able to solve simple models in Inventory problems and Replacement problems.
2. To understand different queuing situations and find the optimal solutions using models for different situations.
3. Simulate different real life probabilistic situations using Monte Carlo simulation technique.
4. To be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be

used in each type.

5. Convert and solve the practical situations into replacement models.
6. To understand how to model and solve problems using non integer programming.

UNIT – I INVENTORY MODELS

Economic order quantity models-techniques in inventory management-ABC analysis.

UNIT – II NON LINEAR PROGRAMMING

Khun-tucker conditions with non-negative constraints- Quadratic programming- Wolf's modified simplex method.

UNIT – III SIMULATION MODELS

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT -IV DECISION MODELS

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

UNIT -V REPLACEMENT MODELS

Models based on models that gradually deteriorate with time-whose maintenance cost increase with time- Replacement of items that fail suddenly and completely.

Suggested Readings:

1. HamdyTaha. A., Operations Research, Prentice – Hall of India Private Limited, New Delhi.2013.

3H-3C

FUZZY MATHEMATICS

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

1. Be able to understand basic knowledge of fuzzy sets and fuzzy logic
2. Be able to apply basic knowledge of fuzzy operations.
3. To know the basic definitions of fuzzy relations
4. Be able to apply basic fuzzy inference and approximate reasoning
5. To know the applications of fuzzy Technology.
6. To understand the concept of fuzziness involved in various systems.

COURSE OUTCOME:

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

Suggested Readings:

1. George J Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic : Theory and Applications, Prentice Hall of India, New Delhi,2003.
2. Zimmermann H.J. Fuzzy Set Theory and its Applications, Kluwer Academic publishers, USA.2001.
3. Michal Baczynski and BalasubramaniamJayaram, Fuzzy Implications, Springer-Verlag publishers, Heidelberg,2008
4. Kevin M Passino and Stephen Yurkovich, Fuzzy Control, Addison Wesley Longman publishers, USA,1998.

18BESHOE11

3H-3C

MATHEMATICAL PHYSICS

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

1. To know the fundamentals of Tensors.
2. To know the series solutions to differential equations.
3. To introduce the concepts of special functions.
4. To study about Calculus of variations and integral equations
5. Be familiar with the main mathematical methods used in physics.
6. To learn different ways of solving second order differential equations

COURSE OUTCOME:

1. Students will demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
2. Learn about special type of matrices that are relevant in physics and then learn about tensors.
3. Get introduced to Special functions like Bessel, Legendre , Hermite and Laguerre functions and their recurrence relations
4. Learn different ways of solving second order differential equations and familiarized with singular points and Frobenius method.
5. Students will master in calculus of variations and linear integral equations.
6. The students will have the knowledge on Mathematical Physics and that knowledge will be used by them in different engineering and technology applications.

UNIT I TENSORS

Definition of tensor - rank, symmetric tensors, contraction, quotient rule - tensors with zero components, tensor equations, metric tensors and their determinants - pseudo tensors

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series Solution : Classification of

singularities of an ordinary differential equation - Series solution-Method of Frobenius - indicial equation - examples

UNIT III SPECIAL FUNCTIONS

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre, Hermite and Laguerre functions – Generating Function

UNIT IV CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler's equation – Functional dependant on first and higher order derivatives – Functional dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric Problems – Direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green's function – solution of a integral equation – integral equations of the convolution type – Abel's integral equations – integro-differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

Suggested Readings:

3H-3C

LINEAR ALGEBRA

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

1. To introduce the basic concepts of vector space
2. To know the fundamentals of linear Algebra
3. To solve system of linear equations
4. To study about the linear transformations
5. To introduce the concepts of inner product spaces
6. To apply the basic concepts in their respective fields

COURSE OUTCOMES:

The student will be able to

1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
2. To apply the fundamental concepts in their respective engineering fields
3. To visualize linear transformations as matrix form
4. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
5. To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations - Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

Suggested Readings:

18BEC SOE01

INTERNET PROGRAMMING

L	T	P	C
3	0	0	3

Course Objectives

1. To introduce the basic concepts of Fuzzy logic and its applications in various domain
2. To educate how to use Fuzzy computation to solve real-world problems
3. To have a solid understanding of Basic fuzzy models.
4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
5. To learn about applications on Fuzzy based systems
6. To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

1. Understand the basic concepts of Fuzzy logic and its applications in various domain
2. Gain knowledge on theory of Reasoning
3. Develop fuzzy controllers
4. Understand concepts of adaptive fuzzy control
5. Ability to develop how to use Fuzzy computation to solve real- world problems
6. Design fuzzy based model for any application

UNIT I Introduction

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V Internet Telephony

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

MULTIMEDIA AND ANIMATION

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

1. To impart the fundamental concepts of Computer Animation and Multimedia
2. To study the graphic techniques and algorithms using flash
3. Explain various concepts available in 3D animation
4. Explain various devices available for animation
5. To study the multimedia concepts and various I/O technologies for concept development
6. To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Develop their creativity using animation and multimedia
2. Understand the concepts of Flash and able to develop animation using it
3. Understand about various latest interactive 3D animation concepts
4. Know the various devices and software available in motion capture
5. Understand the concept development process
6. Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I Introduction

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V Concept Development

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

TEXT BOOK:

1. Computer Graphics, Multimedia and Animation-Malay K. Pakhira, PHI Learning PVT Ltd, 2010

REFERENCES:

1. Principles of Multimedia – Ranjan Parekh, 2007, TMH. (Unit I, Unit V)
2. Multimedia Technologies – Ashok Banerji, Ananda Mohan Ghosh – McGraw Hill Publication.
3. Encyclopedia of Multimedia and Animations-Pankaj Dhaka, Anmol Publications-2011

COURSE OBJECTIVES:

1. To study the basic parts of computer in detail
2. Introduce various peripheral devices available for computer and its detailed working concepts
3. Overview of various interfaces and other hardware overview
4. Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
5. To study basic concepts and methods in troubleshooting
6. To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

1. Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
2. Identify various peripheral devices available and its working
3. Understand various concepts of hardware and its interface and control
4. Perform basic installation of PC. Importance of maintenance is understood
5. Understand Various faults and failures are identified and troubleshooting in detail
6. Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

TEXT BOOK:

1. B. Govindarajalu, "IBM PC Clones Hardware, Troubleshooting and Maintenance", 2/E, TMH, 2002.

REFERENCES:

1. Peter Abel, Niyaz Nizamuddin, "IMB PC Assembly Language and Programming", Pearson Education, 2007
2. Scott Mueller, "Repairing PC's", PHI, 1992

COURSE OBJECTIVES:**3 0 0 3**

1. To understand Object Oriented Programming concepts and basic characteristics of Java
2. To know the principles of packages, inheritance and interfaces
3. To define exceptions and use I/O streams
4. To develop a java application with threads, generics classes and swings
5. To explain the need for generic programming
6. To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

1. Develop Java programs using OOP principles
2. Develop Java programs with the concepts of inheritance and interfaces
3. Build Java applications using exceptions and I/O streams
4. Develop Java applications with threads and generics classes and swings
5. Understand various aspects for motivation of generic programming
6. Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA

Object oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members – constructors – finalize method

UNIT II PACKAGES

Arrays – Strings - Packages – Java-Doc comments -- Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to Swing – Model-View-Controller design pattern –buttons – layout management – Swing Components – exception handling – exception hierarchy – throwing and catching exceptions.

UNIT V MOTIVATION FOR GENERIC PROGRAMMING

Motivation for generic programming – generic classes – generic methods – generic code and virtual machine – inheritance and generics – reflection and generics - Multi-threaded programming – interrupting threads – thread states – thread properties – thread synchronization – Executors – synchronizers.

2. <http://www.winprog.org/tutorial/msvc.html>
3. <http://www.tutorialized.com/tutorials/Visual-C/1>
4. <http://www.freeprogrammingresources.com/visualcpp.html>

Course Objectives

1. To understand the basic concepts of electric hybrid vehicle.
2. To gain the knowledge about electric propulsion unit.
3. To gain the concept of Hybrid Electric Drive-Trains.
4. To gain the different Energy Management Strategies.
5. To study about the efficiency manipulation in drives
6. To understand and gain the knowledge about various energy storage devices

Course Outcomes:

1. Summarize the basic concepts in bioprocess Engineering.
2. Explain the concept of Hybrid Electric Vehicles.
3. Understand the concept of Hybrid Electric Drive-Trains.
4. Identify the different Energy Management Strategies.
5. Understand the concept of different Energy Storage devices.
6. Analyze the different motor drives used in Hybrid Electric Vehicles

UNIT I INTRODUCTION

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its

analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TEXT BOOK

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Iqbal Hussein	Electric and Hybrid Vehicles: Design	CRC Press – 2 nd edition	2010

REFERENCE BOOK

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay, Ali Emadi	Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design	Standards media – 2 nd edition	2009
2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley – 2 nd edition	2012

Course Objectives:

1. To gain the knowledge about energy management.
2. To understand the basic concepts in economic analysis in energy management.
3. To understand the basic principles of energy audit.
4. To gain the knowledge about the basic concept of types of Energy Audit
5. To gain and Evaluate the different energy efficient motors
6. Understand the concept of Energy conservation.
7. To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the concept of Energy Management.
2. Analyze the different methods for economic analysis
3. Knowledge about the basic concept of Energy Audit and types.
4. Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air-conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

TEXT BOOK

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	Energy Management	Heinemann Publications	2007

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	Lulu Enterprises, Inc. - 8th Edition Volume II	2013

Course Objectives

1. To understand the basic principles of PLC systems.
2. To gain the knowledge about data handling functions.
3. To gain the knowledge of storage techniques in PLC
4. To acquire the knowledge about how to handle the data and functions
5. To study about flow charts of ladder and spray process system
6. To understand the principles of PID.

Course Outcome

1. At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
2. To acquire the knowledge of storage techniques in PLC
3. Students know how to handle the data and functions
4. Students known about advanced controller in PLC applications
5. Students gather real time industrial application of PLC
6. Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment
Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and

Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEBSITE

<http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>,-Introduction to programmable Logic controller

Course Objectives

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Analyze the Energy Scenario in india
2. Understand the concept of Solar Energy
3. Understand the concept of Wind Energy
4. Understand the concept of Hydro Energy
5. Analyze the different energy sources
6. Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEBSITES

1. www.energycentral.com
2. www.catelectricpowerinfo.com

Course Objectives

1. To introduce students to the embedded systems, its hardware and software.
2. To introduce devices and buses used for embedded networking.
3. To study about task management
4. To learn about semaphore management and message passing
5. To study about memory management
6. To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems-embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks-Real Time Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion– Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management– Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

Introduction-µ C/OS-II Features-Goals ofµ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under µC/OS-II –Clock Tick-µ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks– StackChecking–Task’sPriority–SuspendingTask– esumingTask.TimeManagement: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box– Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks–Creating Partition–Obtaining a Memory Block– Returning a Memory Block. Getting Started with μ C/OS-II–Installing μ C/OS-II–Porting μ C/OS-II: Development Tools–Directories and Files– Testing a Port -IAR Workbench with μ C/OS-II– μ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help of μ C/OS-II.

SUGGESTED READINGS

1. Floyd JeanJ. Labrosse Micro C/OS–II The Real Time Kernel CMPBOOKS 2009
2. David Seal ARM Architecture Reference Manual.Addison-Wesley 2008
3. Steve Furbe, ARM System-on-Chip Architecture, Addison-Wesley Professional, California 2000.
4. K.V.K.K.Prasad Embedded Real-Time Systems: Concepts, Design & Programming Dream Tech Press 2005.
5. Sriram V Iyer, Pankaj Gupta Embedded Real Time Systems Programming Tata Mc Graw Hill 2004

Course Objectives

1. To study about various speakers and microphone
2. To learn the fundamental of television systems and standards
3. To learn the process of audio recording and reproduction
4. To study various telephone networks
5. To discuss about the working of home appliances
6. To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

1. Understand working of various type of loud speakers
2. Acquire knowledge on various types of picture tubes
3. Demonstrate the working of various optical recording systems
4. Distinguish various standards for color TV system
5. Acquire knowledge on various telecommunication networks
6. Demonstrate the working of various home appliances

UNIT-I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT-II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNIT-III OPTICAL RECORDING AND REPRODUCTION

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNIT-IV TELECOMMUNICATION SYSTEMS

Telephone services–telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNITV HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; Components of air conditioning and refrigeration systems.

SUGGESTED READINGS

1. S.P. Bali Consumer Electronics Pearson Education 2007
2. J.S.Chitode Consumer Electronics Technical Publications 2007
3. Philip Hoff, Philip Herbert Hoff Consumer Electronics for Engineers Cambridge University Press 1998

Course Objectives

1. To introduce the basic concepts of neural networks and its applications in various domain
2. To educate how to use Soft Computing to solve real-world problems
3. To have a solid understanding of Basic Neural Network.
4. To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
5. To gain exposure in the field of neural networks and relate the human neural system into the digital world
6. To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

1. Understand the basic concepts of neural networks and its applications in various domains
2. Gain knowledge about learning process in Neural Networks
3. Apply perception concept in design
4. Design using ART phenomena
5. Gain knowledge on SOM concepts
6. Ability to develop the use of Soft Computing to solve real-world problems

UNIT-I INTRODUCTION TO NEURAL NETWORKS

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT-II LEARNING PROCESS

Error- correction learning- memory based learning- hebbian learning-competitive learning-Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT-III PERCEPTION

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm- Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT-IV ATTRACT OR NEURAL NETWORK AND ART

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain- Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem-

ART algorithm-ARTMAP.

UNIT-V SELF ORGANIZATION

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

SUGGESTED READINGS

1. Simon Haykin Neural Networks and Learning Machines 3rd Edition Pearson/Prentice Hall 2009
2. Satish Kumar Neural Networks: A Classroom Approach TMH 2008
3. Rajasekaran.S, Vijayalakshmi Pai.G.A Neural Networks, Fuzzy Logic and Genetic Algorithms, Synthesis and Applications PHI, New Delhi 2003.

5. Wasserman P.D Neural Computing Theory & Practice Van Nostrand Reinhold 1989.
6. Freeman J.A, S. K. D.M Neural networks, algorithms, applications, and programming techniques Addison Wesley 2005.

Course Objectives

1. To introduce the basic concepts of Fuzzy logic and its applications in various domain
2. To educate how to use Fuzzy computation to solve real-world problems
3. To have a solid understanding of Basic fuzzy models.
4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
5. To learn about applications on Fuzzy based systems
6. To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

1. Understand the basic concepts of Fuzzy logic and its applications in various domain
2. Gain knowledge on theory of Reasoning
3. Develop fuzzy controllers
4. Understand concepts of adaptive fuzzy control
5. Ability to develop how to use Fuzzy computation to solve real- world problems
6. Design fuzzy based model for any application

UNIT-I BASICS OF FUZZY LOGIC

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT-II THEORY OF APPROXIMATE REASONING

Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT-III FUZZY KNOWLEDGE BASED CONTROLLERS

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy fiction and de fuzzy fiction procedures–Design of Fuzzy Logic Controller

UNIT-IV ADAPTIVE FUZZY CONTROL

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT-V FUZZY BASED SYSTEMS

Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

18BEECOE05**Principles of Modern Communication System****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****Course Objectives**

1. To provide students with an overview of communication systems
2. To provide an overview on mobile communication
3. To make students to have a better understanding on satellite and radar communication
4. To understand the basic communication techniques which in turn are used as the building blocks of the larger and more complex communication systems.
5. To acquire the basic engineering understanding to the modern communication systems and; the relevant theory and technique.
6. Design simple systems for landing and navigation.

Course Outcomes

At the end of the course the students will be able to

1. Understand past, present and future trends in mobile communication.
2. Gain knowledge about mobile cellular communication
3. Understand various standards in use for wireless communication and its application.
4. Demonstrate some basic application of GPS.
5. Gain knowledge about RADAR working and its applications
6. Demonstrate how a simple radar system works and its applications.

UNIT I THE EVOLUTION OF ELECTRONIC COMMUNICATION

From smoke signals to smart phones - History of communications: Theoretical Foundations, Development & Applications - Frequencies for communication - Frequency regulations - Overview of communication transmitter and receiver.

UNIT II MOBILE CELLULAR COMMUNICATIONS

Evolution to cellular networks – Cellular systems generations and standards: 1G, 2G, 3G, 4G - Cellular network components - Components of a mobile phone - setting up a call process - Making a call process - Receiving a call process - Spectrum allocation: Policies and strategies, Role of TRAI.

UNIT III WIRELESS COMMUNICATION

Introduction - Bluetooth - Infrared communication - IEEE Wireless LANs (Wi-Fi) - IEEE 802.16 (WiMaX) - Future mobile and wireless networks: Introduction to 5G- device to device communication- IoT.

UNIT IV SATELLITE COMMUNICATION

History of Satellite communication, Basics of Satellites, Types of Satellites, Capacity Allocation - Launch Vehicles and Orbits: Introduction to launching vehicles, Important Orbits, working of rocket, Three Pioneers of Rocketry - Basics of Global Positioning System (GPS) - Applications of GPS.

UNIT V RADAR & NAVIGATION

Introduction, Radar Block diagram and Operation, Radar Frequencies, Applications of Radar. Navigation Systems: Introduction & methods of navigation, Instrument Landing System, Microwave landing system- Modern Navigation systems.

18BTBTOE01**BIOREACTOR DESIGN****3H-3C****Instruction Hours/week: L:3 T:0 P:0**
Total:100**Marks: Internal:40 External:60****End Semester Exam:3 Hours**

Course Objectives:

1. To impart basic knowledge in bioprocess Engineering
2. To design the bioreactors for various operations.
3. To understand the principle and working of heat transfer equipments.
4. To extend the knowledge in principle of heat transfer inside a bioreactor
5. To construct the equipments used in mass transfer operations.
6. To learn the equipments used in separation process.

Course Outcomes:

1. Summarize the basic concepts in bioprocess Engineering.
2. Design the bioreactors for various operations.
3. Develop the heat transfer equipments for Bioprocess Engineering.
4. Elaborate the principle of heat transfer in bioreactor.
5. Construct the equipments used in mass transfer operations.
6. Categorize the equipments used in separation process.

UNIT I –INTRODUCTION TO BIOPROCESS ENGINEERING

Introduction – Biotechnology and Bioprocess Engineering- Biologists and Engineers Differ in their approach to research-How Biologists and Engineers work Together- Bioprocesses: Regulatory constraints.

UNIT II - REACTOR DESIGN

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III - HEAT TRANSFER EQUIPMENTS

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV - MASS TRANSFER EQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V - SEPARATION EQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotary drum drier and Swenson –walker crystallizer.

18BTBTOE02

FOOD PROCESSING AND PRESERVATION

3H-3C

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60

Total:100

End Semester Exam:3 Hours

Course Objectives

1. To learn the scope and importance of food processing.
2. To impart basic knowledge in different food processing methods carried out in the food tech companies.
3. To extend the brief knowledge in food conservation operations.
4. To study the methods of food preservation by cooling.
5. To familiarize the students on the concepts of preservation methods for fruits.
6. To create deeper understanding on preservation methods for vegetables.

Course Outcomes

1. Describe the scope and importance of food processing.
2. Outline the various processing methods for foods.
3. Extend the knowledge in food conservation operations.
4. Describe the methods of food preservation by cooling.
5. Summarize the preservation methods for fruits.
6. Demonstrate the preservation methods for vegetables.

UNIT I - SCOPE AND IMPORTANCE OF FOOD PROCESSING

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II - PROCESSING METHODS

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning-additives- fermentation-extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing-Concepts and equipment used.

UNIT III - FOOD CONVERSION OPERATIONS

Size reduction – Fibrous foods, dry foods and liquid theory and foods – equipments - membrane separation- filtration- equipment and application.

UNIT IV - FOOD PRESERVATION BY COOLING

Refrigeration, Freezing-Theory, freezing time calculation, methods freezing of freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V - PRESERVATION METHODS FOR FRUITS AND VEGETABLES

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

SUGGESTED READINGS:

2. P.Fellows.(2017). Food processing technology principles and practice, Fourth Edition. Wood head publishing Ltd.
3. Mircea Enachescu Dauthy. (1995). Food and vegetable processing.FAO agricultural services bulletin.
4. M.A. Rao, Syed S.H.Rizvi, Ashim K. Datta. (2014). Engineering properties of foods. CRC press.
5. B. Sivasankar. (2002). Food processing and preservation.PHI learning Pvt.Ltd.

Instruction Hours/week: L:3 T:0 P:0
Total:100**Marks: Internal:40 External:60****End Semester Exam:3 Hours****Course Objectives**

1. To understand the available tools and databases for performing research in bioinformatics.
2. To expose students to sequence alignment tool in bioinformatics.
3. To construct the phylogenetic trees for evolution.
4. To get familiar with the 3D structure of protein and classification.
5. To acquire basic knowledge in protein secondary structure prediction.
6. To extend the brief knowledge in Micro array data analysis.

Course Outcomes

1. Summarize the basic concepts and importance of Bioinformatics in various sectors.
2. Demonstrate the sequence alignment tool in bioinformatics.
3. Construct the phylogenetic trees for evolution.
4. Analyze the three dimensional protein structure and classification using various tools.
5. Illustrate the protein secondary structure prediction by comparative modeling.
6. Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I - OVERVIEW OF BIOINFORMATICS

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II - RETRIEVAL OF BIOLOGICAL DATA

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III - PHYLOGENETICS

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV - STRUCTURAL BIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V - MICROARRAY DATA ANALYSIS

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

SUGGESTED READINGS:

4. Jonathan Pevsner.(2015). Bioinformatics and functional genomics. wiley-Liss.
5. Michael J Koernberg. (2016).Microarray Data Analysis: Methods and applications. Humana Press

Course Objectives

1. To impart the skills in the field of nano biotechnology and its applications.
2. To acquire knowledge in the nano particles and its significance in various fields.
3. To extend the knowledge in types and application of nano particles in sensors.
4. To define the concepts of biomaterials through molecular self assembly.
5. To equip students with clinical applications of nano devices.
6. To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

1. Develop skills in the field of nano biotechnology and its applications.
2. Summarize the nanoparticles and its significance in various fields.
3. Extend the knowledge in types and application of nano particles in sensors.
4. Define the concepts of biomaterials through molecular self assembly.
5. Outline the clinical applications of nano devices.
6. Describe the socio-economic issues in nanobiotechnology.

UNIT I - INTRODUCTION

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II - NANO PARTICLES

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III – MEDICAL NANOTECHNOLOGY

Nanomedicine, Nanobiosensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV - NANOBIO TECHNOLOGY

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine.Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nano carbontubules.Nanosurgical devices.

UNIT V - ETHICAL ISSUES IN NANOTECHNOLOGY

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

SUGGESTED READINGS:

2. Goodsell, D.S. (2004). Bionanotechnology. John Wiley and Sons, Inc.
3. Shoseyov, O.and Levy, I (2008).Nanobiotechnology: Bioinspired Devices and Materials of the Future. Humana Press.
4. Bhushan, B.(2017). Springer Handbook of Nanotechnology. Springer-Verlag Berlin Heidelberg.
5. FreitasJr R.A (2006) Nanomedicine. Landes Biosciences.
6. Kohler, M. and Fritzsche, W. (2008). Nanotechnology – An Introduction to Nanostructuring Techniques. Wiley-VCH.

COURSE OBJECTIVE

1. To provide an overview of how computers are being used in mechanical component design
2. To study about the various computer graphics concepts
3. To get basic knowledge on geometric modeling
4. to study about the basics of parametric design and object representation
5. To get basic knowledge in product design and development.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

1. Give the overview of the cad systems and its importance
2. Explain the ideas and principles behind the computer graphics
3. Explain the process involved in graphic transformations
4. Understand the operations involved in the geometric modeling.
5. Describe the concepts of parametric design
6. Understand the basics of the product design and development.

UNIT I OVERVIEW OF CAD SYSTEMS

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, Boolean operations. Extracting entities from a solid. Filletting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

SUGGESTED READINGS

INDUSTRIAL SAFETY AND ENVIRONMENT

3 H – 3 C

Instruction hours / week L : 3 T : 0 P : 0

Marks: Internal : 40 External : 60 Total: 100

End Semester Exam : 3 Hours

COURSE OBJECTIVE

1. To get the basic introduction on logistics
2. To study the basics of supply chain and its concepts.
3. to know the various phases involved in supply chain
4. to study about different supply chain models
5. to know the various activities involved in supply chain management.

COURSE OUTCOMES

Upon completion of this course, the students can be able to

1. Understand the role of logistics
2. Understand the phases of supply chain
3. Get the knowledge on various supply chain models
4. Link the supply chain concepts with customer
5. Perform various activities involved in supply chain
6. Understand the management system of supply chain and the information system followed for managing the same.

UNIT I INTRODUCTION TO LOGISTICS

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP, - Case study, ERP Software's

SUGGESTED READINGS

1. Shari.P.B and Lassen.T.S, Managing the global supply chain, 1st edition, Viva books, New Delhi, 2000
2. Ayers.J.B, Hand book of supply chain management, 1st edition, The St. Lencie press, 2001
3. Nicolas.J.N, Competitive manufacturing management - continuous improvement, Lean production, customer focused quality, 1st edition, McGrawHill, New York, 2008

4. Steudel.H.J and Desruelle.P, Manufacturing in the nineties - How to become a mean, lean and world class competitor,1st edition, Van No strand Reinhold, New York, 2007(digital)

COURSE OBJECTIVE

1. To provide the basics of transport phenomena and its applications.
2. To provide the knowledge over the properties of the systems and unit systems used.
3. To understand the basics and mathematics involved in momentum transport.
4. To provide the basics and applications of energy transport.
5. To give basics and principles involved in the mass transport phenomena.

COURSE OUTCOMES

Upon completion of this course, the students can be able to

1. Understand the basic concepts of transport phenomena
2. Understand the essentiality of properties of a system and unit systems used.
3. Understand the basic concepts involved in momentum transport.
4. Apply the mathematics involved in fluid flow problems.
5. Explain the various energy transport phenomena.
6. Understand the basics of mass transport phenomena.

UNIT I INTRODUCTION AND BASIC CONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non-Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

SUGGESTED READINGS

1. Geankoplis, C. J, Transport Processes and Separation Processes Principles, 4th edition, Prentice Hall, 2013
2. R. Byron Bird, Warren E. Stewart, Edwin N. Lightfoot, Transport Phenomena, 1st edition, John Wiley & Sons, 2007.
3. Edwin N. Lightfoot, Transport phenomena and living systems: biomedical aspects of momentum and mass transport, 1st edition, Wiley, 1973, 2007 (digital)

COURSE OBJECTIVE

1. Biomechanics provides key information on the most effective and safest movement patterns, equipment, and relevant exercises to improve human movement.

COURSE OUTCOMES

Upon completion of this course, the students will be able to,

1. Understand the basics and importance of biomechanics.
2. Present the nine fundamentals of biomechanics and its need.
3. Explain the nine principles used for application of biomechanics.
4. Describe the human anatomy
5. Explain the need for biomechanics in muscle actions
6. Understand the basics of the mechanics involved in musculoskeletal system.

UNIT I INTRODUCTION

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

SUGGESTED READINGS

1. Duane Knudson, Fundamentals of Biomechanics, 1st edition, Springer Science+ Business Media, LLC, 2013
2. C. Ross Ethier Craig A. Simmons, Introductory Biomechanics, 1st edition, Cambridge University Press, 2008

Course Objectives:

1. To impart knowledge on the constructional details and principle of operation of various automobile components.
2. To learn the function and working of various components in transmission and drive lines.
3. To study the concept and working of steering and suspension systems in an automobile.
4. To give knowledge on the wheels, tyres and brakes of automobiles.
5. To provide information on the current and future trends in automobiles.
6. Explain the function and working of components in transmission and drive lines.

Course Outcomes:**Upon successful completion of the course, the students should be able to:**

1. Demonstrate the operating principles and constructional details of various automobile components.
2. Explain the function and working of components in transmission and drive lines.
3. Identify and explain the types of steering system.
4. Identify and explain the types of suspension system.
5. Classify and describe the types of wheels, tyres and brakes of automobiles.
6. Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension - Pneumatic suspension - Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory, Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT V ELECTRICAL SYSTEM

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

3.	N.Newton, W. Steeds and T.K.Garrett	The Motor vehicle, 13th edition	SAEInc	2001

Course Objectives:

1. To impart technical knowledge on construction and working of the power train and drive train of two and three wheeler vehicles.
2. To familiarise with maintenance procedures of the engine and subsystems of two and three wheelers.
3. To impart knowledge on types of transmission systems
4. To impart knowledge on types of steering and suspension systems
5. To impart knowledge on types of wheels, tyres and brakes for two and three wheelers
6. To make the students conversant on servicing of two and three wheelers.

Course Outcomes:**Upon successful completion of the course, the students should be able to:**

1. Construct the frames of two and three wheelers of different layouts.
2. Demonstrate the constructional details and principle of operation of various engine components.
3. Identify and explain the types of transmission systems.
4. Identify and explain the types of steering and suspension systems.
5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
6. Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength Torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

AUTOMOBILE MAINTENANCE

3 0 0 3 100

Course Objectives:

1. To understand the need for vehicle maintenance and its importance.
2. To familiarise the maintenance procedure for various components of an automobile.
3. To familiarize the students to understand servicing of transmission and driveline components.
4. To make the students conversant on the procedure for steering and suspension
5. To make the students conversant on the procedure for wheel and brake maintenance.
6. To Study and acquire knowledge on the fault diagnosis in the electrical and air conditioner systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

1. Describe and differentiate the types of maintenance.
2. List the procedure for dismantling, servicing and assembling of engine components.
3. Demonstrate the servicing of transmission and driveline components.
4. Discuss the procedure for steering and suspension
5. Discuss the procedure for wheel and brake maintenance.
6. Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TEXT BOOKS

SL.NO.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	John Doe	Fleet Management	McGraw Hill Co	1984
2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

Course Objectives:

1. To impart knowledge on trends in the vehicle power plants.
2. To learn the various advanced driver assistance systems.
3. To study the working of advanced suspension and braking systems in an automobile.
4. To give information about motor vehicle emission and noise pollution control.
5. To provide knowledge of the vehicle telematics.
6. To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

1. Distinguish and describe the various modern vehicle power plant systems.
2. List and explain the various driver assistant mechanisms.
3. Identify and describe the working of advanced suspension and braking systems.
4. Apply the knowledge of motor vehicle emission and noise pollution control.
5. Describe the noise control techniques
6. Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

COMMERICAL FLEET OPEARTION

3 0 0 3 100

Course Objectives:

1. To impart knowledge on the personnel management, selection process, training methods and motor vehicle act.
2. To plan the vehicle routes, scheduling of vehicles and fare structure.
3. To design the vehicle maintenance systems.
4. To Study and acquire knowledge on fare structure and analyse the methods of fare collection
5. To introduce the concepts of vehicle parts, supply management and data processing
6. To Study and acquire knowledge on electronically controlled vehicle maintenance system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

1. Apply the knowledge of personnel management and analyse the selection process and training methods.
2. Apply the motor vehicle act in terms of registration and describe the various vehicles and conduct the test of competence to drive.
3. Construct a fare structure and analyse the methods of fare collection.
4. Analyse the vehicle parts, supply management and data processing.
5. Describe the scheduled and unscheduled maintenance
6. Demonstrate an electronically controlled vehicle maintenance system and analyse the work schedule.

UNIT I ORGANISATION AND MANAGEMENT

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

UNIT II VEHICLE MAINTENANCE

Scheduled and unscheduled maintenance - Planning and scope - Evaluation of PMI programme – Work scheduling - Overtime - Breakdown analysis - Control of repair backlogs - Cost of options.

UNIT III VEHICLE PARTS, SUPPLY MANAGEMENT AND BUDGET

Cost of inventory - Balancing inventory cost against downtime - Parts control - Bin tag systems – Time management - Time record keeping - Budget activity - Capital expenditures - Classification of vehicle expenses - Fleet management and data processing - Data processing systems - Software. Model - Computer controlling of fleet activity - Energy management.

UNIT IV SCHEDULING AND FARE STRUCTURE

Route planning - Scheduling of transport vehicles - Preparation of timetable – preparation of vehicle and crew schedule - Costs, fare structure – Fare concessions - Methods of fare collection - Preparation of fare table.

UNIT V MOTOR VEHICLE ACT

Schedules and sections - Registration of motor vehicles - Licensing of drivers and conductors - Control of permits - Limits of speed - traffic signs - Constructional regulations - Description of goods carrier, delivery van, tanker, tipper, municipal, fire fighting and break down service vehicle.

REFERENCE BOOKS

SL. NO	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	John Dolu	Fleet Management	McGraw-Hill Co.	1984
2.	Rex W. Faulks	Bus and Coach Operation	Butterworth.	1987
3.	Kitchin L.T.D	Bus operation, 3 rd Edition	iliffe and Sons Ltd., London.	1992

COURSE OBJECTIVE

1. Teaching the basic concepts and fundamental aspects of industrial and domestic thermal systems' design.
2. Prepare the students for the positions of energy management in energy intensive industries

COURSE OUTCOME

After completion of the course, students are able to

1. Plan to optimize energy using systems and procedures to meet energy demand
2. Describe the movement of substances in the entire globe
3. Examine the relationship between energy systems and society
4. Use optimization techniques for conservation of energy in chemical industries
5. Evaluate the production rate and analyze the cost from economic balance for energy consumption.

Unit-I PLANNING FOR ENERGY NEEDS

Forecasting techniques; energy demand; magnitude and pattern; input and output analysis; energy modelling and optimal mix of energy sources.

Unit-II ENERGY AND ENVIRONMENT

Energy; various forms; energy storage; structural properties of environment; bio-geo-chemical cycles; society, environment population and technology.

Unit-III ENERGY AND SOCIETY

Energy and evolution; growth and change; patterns of consumption in developing and advanced countries; commercial generation of power requirements and benefit.

Unit-IV MANAGEMENT OF ENERGY CONSERVATION IN CHEMICAL INDUSTRIES

Chemical industries; classification; conservation in unit operations such as separation; cooling tower; drying; conservation applied to refineries, petrochemical, fertilizers, cement, pulp and paper, food and chlor-alkali industries; conservation using optimization techniques.

Unit-V ECONOMIC BALANCE IN ENERGY CONSUMPTION

Cost analysis; capacity; production rate; system rate; system cost analysis; corporate models; production analysis and production using fuel inventories; input-output analysis; economics; tariffs

TOTAL: 45 Hrs

FERTILIZER TECHNOLOGY

3 0 0 3 100

COURSE OBJECTIVE

1. 1.To enable the students to learn the fertilizer manufacturing including new or modified fertilizer products and new techniques.
2. Understand, interpret and prepare project reports.
3. Understand safety goals, waste control and waste treatment (effluent control)
4. Understand the energy conservation and balance.
5. Develop attitude for safety consciousness
6. State the importance of fertilizers in agriculture

COURSE OUTCOME

1. After completion of the course, students are able to
2. Illustrate chemical, organic fertilizers and nutrients
3. Develop the flow chart for manufacture of nitrogenous fertilizers
4. Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
5. Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
6. Illustrate the quality and pollution standards permissible in fertilizer industry.

Unit-I INTRODUCTION

Chemical Fertilizers and Organic Manures - Types of chemical Fertilizers. Secondary nutrients, micro nutrients.

Unit-II NITROGEN FERTILIZERS

Nitrogenous Fertilizers - Methods of production of Ammonia and Urea. Nitric acid, Ammonium sulphate, Ammonium Nitrate, Calcium Ammonium Nitrate, Ammonium Chloride - Their methods of production, characteristics, storage and handling specifications.

Unit-III PHOSPHATIC FERTILIZERS

Raw materials, phosphate rock, Sulphur pyrites -Process for the production of Sulphuric and Phosphoric acids. Ground phosphate rock, bone meal. Single Super Phosphate, Triple Super phosphate -Methods of production, characteristics and specifications.

Unit-IV POTASSIC FERTILIZERS

Potassium chloride, Potassium sulphate, Potassium schoenite - Methods of production, specification, characteristics. Complex Fertilizers, NPK Fertilizers, Mono ammonium phosphate, Diammonium phosphate, Nitro phosphate Methods of production.

Unit-V FERTILIZERS IMPACTS AND STANDARDS

Fluid fertilizers. Controlled Release of fertilizers. Solid, Liquid and Gaseous pollution from ammonia urea and NPK fertilizer industries and standards laid down for them. Fertilizer production in India.

- Menon M.G., Fertilizer Industry - Introductory Survey, Higginbothams, Madras, 1973

COURSE OBJECTIVE

1. To introduce students to the principles of wastewater and solid waste treatment and management.
2. The students will learn the fundamental concepts in water and wastewater treatment technologies, hazardous solid waste disposal and management issues related to sludge treatment and disposal.

COURSE OUTCOME

After completion of the course, students are able to

1. Examine the constituents of waste water and its effects.
2. Separate the contaminants from the effluent for treatability.
3. Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
4. Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
5. Develop process flow diagram for water reuse and sludge disposal

UNIT I INTRODUCTION TO WASTE WATER ENGINEERING

Waste Water Engineering - Overview, inorganic non-metallic constituents and metallic constituents, physical and biological Characteristics.

UNIT II UNIT OPERATIONS AND UNIT PROCESS

Screening, Flow Equalization, Mixing, Flocculation, Grit removal, Sedimentation, Coagulation, Precipitation, Oxidation and Neutralization

UNIT III FUNDAMENTALS OF BIOLOGICAL TREATMENT

Introduction, Microbial growth kinetics, types of biological process for wastewater treatment - aerobic and anaerobic oxidation, Biological Nitrification and De-nitrification, biological phosphorous removal, activated sludge process (with design Considerations), trickling filters and lagoons.

UNIT IV WASTE WATER TREATMENT IN SPECIFIC INDUSTRIES

Dairy, Sugar, Pulp and Paper, Textile and Pharmaceutical Industries.

UNIT V WATER REUSE

Wastewater reclamation technologies and reuse, Solid processing flow diagrams, sludge and scum pumping, grinding, screening, degritting, blending, anaerobic digestion, composting, conditioning, dewatering and incineration.

TOTAL : 45 Hrs

SOLID AND HAZARDOUS WASTE MANAGEMENT

3 0 0 3 100

COURSE OBJECTIVE

1. To provide an understanding of solid and hazardous waste engineering principles and management issues
2. This course is designed to provide students with the necessary background and knowledge pertaining to the engineering design of solid and hazardous waste facilities

COURSE OUTCOME

1. After successful completion of the course, student will be able to
2. Outline the salient features of solid waste management and handling.
3. Deduce the source reduction, recycling and reuse techniques of solid waste.
4. Analyze the collection systems and method of transfer of solid waste.
5. Describe the processing techniques for solid and hazardous waste.
6. Select the suitable methods for disposal of solid and hazardous waste.
7. Interpret the legislation for management, handling and disposal of solid and hazardous waste.

UNIT I CHARACTERISTICS AND SOURCE REDUCTION OF SOLID WASTE

Definition, sources, and types of solid waste - Composition, physical, chemical and biological properties of solid wastes - Per capita generation rates - Sampling and characterization of solid waste - Source reduction of wastes - Waste exchange - Recycling and reuses - Salient features of Indian legislations on management and handling of municipal solid wastes.

UNIT II COLLECTION AND TRANSPORT OF SOLID WASTE

Estimation of solid waste and factors affecting generation rates - On-site handling, storage, and processing- Collection services: municipal and commercial - Industrial services - Collection

systems: Hauled-container system (HCS) and stationary containersystem (SCS) - Vehicle and labour assessment - Assessment of collection route - Transfer and transport - Transfer stationlocation- Means and methods of transfer.

UNIT III PROCESSING AND DISPOSAL OF SOLID WASTE

Objective of processing - material separation and processing technologies- biological, chemical and thermal conversion technologies- disposal in Landfills: site selection methods and operations, leachate and gas generations and movement and control of gas and leachate techniques - Composting: aerobic and anaerobic - Resource and energy recovery schemes.

UNIT IV HAZARDOUS WASTE CHARACTERIZATION AND MANAGEMENT

Definitions and Identifications of hazardous waste - Origin and characterization of hazardous solid waste- Typical hazardous wastes in MSW - Hazardous waste management: minimization, collection, storage, handling, transport, and disposal - design ofhazardous waste landfills - TCLP tests - National and International legislation for hazardous waste management – AtomicEnergy Regulatory Board -International Atomic Energy Agency - Department of Atomic Energy - Nuclear Power Corporation -Nuclear power plants in India.

UNIT V NUCLEAR WASTE AND e-WASTE

Sources - classification - effects of nuclear waste- initial treatment of nuclear wastevitrification, ion exchange, synroc – long term management - above ground disposal, geological disposal, ocean dumping, transmutation, space disposal - reuse ofwaste - nuclear safety and waste regulation - case study on nuclear disaster - source of e-waste - material composition ofe-waste - recycling and recovery - integrated approaches to e-waste recycling - socio economic factors - treatment option -disposal option - e-waste legislation.

TEXT BOOKS

- Tchobanoglous, G. et al., "Integrated Solid Waste Management", McGraw-Hill Publication., New York, 1993.
- Ronald E. Hester, Roy M. Harrison "Electronic Waste Management", Royal Society of Chemistry, 2009.
- Peavy, SH, Rowe, RD and Tchobanoglous, G, "Environmental Engineering", McGraw-Hill Inter Edition, 1985.
- Charles, A.W., "Hazardous Waste Management", McGraw-Hill Publication, 2002

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

1. Explain the milling, extraction and manufacture of tremendous products from cereals, pulses and oil seeds
2. Summarize the production and processing methods of fruits and vegetables
3. Discuss the chemical composition, processing, production, spoilage and quality of milk and milk products
4. Outline the overall processes involved in the production of meat, poultry and fish products
5. Review the production and processing methods of plantation and spice products

Course Outcomes:

1. Discuss the various processing technologies involved in cereal, pulses and oilseed technology
2. Demonstrate the major operations applied in fruits and vegetable processing
3. Illustrate the techniques involved in the processing of dairy products
4. Infer the production of different types of milk
5. List the overall processing of meat, poultry and fish processing
6. Outline the processing of spices and plantation products

Unit I - CEREAL, PULSES AND OIL SEEDS TECHNOLOGY

Rice milling, Pulse milling, Wheat milling - Oil extraction - Methods of manufacture of Bread - different processes of manufacture - types of breads - buns, biscuits, cakes and cookies - Pasta products - Tortilla - Method of manufacture.

Unit II - FRUITS AND VEGETABLE PROCESSING

Production of Fruits and vegetables in India, Cause for heavy losses, preservation treatments - Basics of Canning, Minimal processing and Hurdle technology as applied to Vegetable and Fruit processing, Processing of fruit juices, Dehydration, Aseptic processing.

Unit III - DAIRY PROCESSING

Basic dairy terminology, composition, General tests at reception, Dairy Processing - Method of manufacture of Standardized, toned and double toned milk, milk powder - Equipments - Pasteurizers, homogenizers and pumps - Method of manufacture of dairy products - Icecream, Cheese, Paneer, Yoghurt - Pasteurization and microorganisms involved in spoilage of milk.

Unit IV - MEAT, POULTRY AND FISH PROCESSING

Meat composition from different sources, Definitions and measurements, Carcass Processing, Meat Products, Processing of Poultry Products, Fish and other Marine Products Processing .

Unit V - PLANTATION PRODUCT TECHNOLOGY

Processing of Tea, Coffee and Cocoa - Outline of the methods of manufacture of - green tea, black tea, instant tea, Instant coffee, Cocoa and Chocolate. Outline of the methods of processing of Pepper, cardamom, ginger, vanilla and turmeric

SUGGESTED READINGS

1. Srivastava R.P. and Kumar S. Fruit and Vegetable Preservation: Principles and Practices. International Book Distributing Co. Lucknow. 3rd Edition. 2010.
2. Chakraverty A., Mujumdar A.S., Raghavan G.S.V and Ramaswamy H.S. Handbook of Post-harvest Technology: Marcel Dekker Press. USA. 1st Edition. 2003.
3. Sukumar De. Outlines of Dairy Technology. Oxford University Press. New Delhi. 23rd impression. 2016.

Course objectives

1. Explain the basic concepts of food and nutrition
2. Define the overall classification, function, and source of carbohydrates, lipids and proteins
3. Discuss the overall aspects of vitamins
4. Outline the role of health and nutritional importance of micro and macro minerals
5. Summarize the recent trends in nutrition

Course outcomes

1. Discuss the basics in the area of nutritional assessment in health and disease
2. Categorize the recommended dietary allowances for different age groups
3. Express the classifications, functions and sources of carbohydrates, lipids and proteins
4. List the various attributes of fat and water soluble vitamins
5. Report the role, bioavailability, sources and deficiency diseases of macro and micro minerals
6. Recognize the diets and concepts of foods suggested for nutritional, chronic and acute disorders

UNIT I - HUMAN NUTRITION

Historical perspective of nutrient requirements – Assessment of nutritional status - recommended dietary allowances of macronutrients for all age groups - Assessment of protein quality – Malnutrition and related disorders – Balanced Diet. Factors influencing dietary intake: Food habits, food fads and fallacies, their influence on health and wellbeing.

UNIT II - BIOMOLECULES

Carbohydrates- Definition, classification, Functions, Sources of Carbohydrates, Deficiency. Lipids – Definition, classification, function, sources, Refined & Hydrogenated fats process. Proteins – Definitions, Classification, Function, Amino Acids, Sources of Proteins.

UNIT III - VITAMINS

Physiological role, bio-availability, requirements, sources and deficiency of Fat Soluble Vitamins: Vitamin A, Vitamin D, E & K. Water soluble vitamins: Vitamin C, Thiamine, Riboflavin, Niacin, Pantothenic acid, Biotin, Folic acid, Vitamin B12, Vitamin B6.

UNIT IV - MINERALS

Physiological role, bio-availability, requirements, sources and deficiency of Macro minerals: Calcium, Phosphorus Magnesium, Sodium, Potassium chloride. Micro minerals: Iron, Zinc, copper, selenium, chromium, iodine, manganese, Molybdenum and fluoride.

UNIT V - RECENT TRENDS IN NUTRITION

Principles of dietary management in gout, rheumatism, AIDS/HIV - Cancer-risk factors, symptoms, dietary management, role of food in prevention of Cancer. Role of functional foods, health foods and novel foods, organically grown foods, recent concepts in human nutrition like nutrigenomics, nutraceuticals etc.

SUGGESTED READINGS

1. Gordon M. Wardlaw. Perspectives in Nutrition. WCB McGraw-Hill Publishers, Boston, 9th Edition. 2013.
2. Shubhangini A. Joshi. Nutrition and Dietetics. Tata Mc Grow- Hill publishing Company Ltd, New Delhi. 4th Edition. 2016.
3. Srilakshmi. B. Nutrition Science. New Age International Pvt. Ltd, Publishers. 6th Edition. 2017.
4. Ronald Ross Watson. Functional foods and Nutraceuticals in Cancer Prevention. Ed. Wiley – Blackwell. 2003.
5. Sunetra Roday. Food Science and Nutrition. Oxford Higher Education/Oxford University Press. 3rd edition 2019.

Course Objectives

1. Outline the current status of snack food Industry
2. Describe the production, processing and marketing trends of potato and tortilla chips
3. Outline the overall processing of popcorn
4. Explain the production and processing of fruits involved in snack food preparation
5. Summarize the sensory analysis methods and packaging techniques of snack foods

Course Outcomes (COs)

1. Review the overall aspects of snack food industry
2. Develop ready to eat foods from potato and maize flour
3. Demonstrate the various unit operations involved in the production of potato and tortilla chips
4. Illustrate the overall aspects of popcorn production
5. List the production, processing and manufacturing of fruit based snacks
6. Recognize the sensory analysis and packaging methods of snack foods

UNIT I SNACK FOOD INDUSTRY

Introduction-History-Past innovations- Outline of snack food industry- Nutrition-Total Quality Management of Technology-Domestic Snack Food Market-Global Market-Snack Food Association Future Considerations

UNIT II POTATO AND TORTILLA CHIPS PROCESSING

Potato Production- Potato snack Ingredients- Potato Analysis and Composition-Potato chip manufacturing process-Unit Operations-Other value added products from Potato.

Tortilla chips - Raw Materials- Processing steps-Equipment involved-Reconstitution of Dry Maize Flour-Unit operations.

UNIT III POPCORN PROCESSING

Introduction- Raw popcorn selection and preparation-Popping Methods-Home preparation of Popcorn-Equipments-Industrial manufacturing process- Flavorings and Applicators-Popcorn Packaging- Relative Nutrition- Marketing.

UNIT IV FRUIT BASED SNACKS

Introduction-production and processing of fruit crops – fruit purees – fruit powders – canned fruit snacks – alcoholic preservation of fruit snacks – fruit candies – fruit bars – exotic fruits.

UNIT V SENSORY EVALUATION AND PACKAGING

Introduction- Analytical methods-Sensory methods- Sensory Aspect of Processing- Quality properties of Snack Foods and Packaging Materials-Automated Bag- Pouch Packaging- Cartoning Case Packing-Current Issues in Snack Foods Packaging

SUGGESTED READING

1. Lusas, E. W and Rooney, L. W. Snack Foods Processing. CRC Press, 1st Edition 2001.
2. Panda, H. The Complete Technology Book on Snack Foods, National Institute of Industrial Research, Delhi. 2nd Edition 2013.
3. Sergio O Serna-Saldivar, Industrial Manufacture of Snack Foods, Kennedys Books Ltd. 2008.

Course Objectives

1. Categorize the types of agricultural wastes
2. Outline the production and utilization of biomass
3. Explain the various parameters considered to be important in the designing of biogas units
4. Review the various methods employed in the production of alcohol from the byproducts of agricultural wastes
5. Summarize the overall aspects involved in the production of paperboards and particleboards from agricultural wastes

Course Outcomes

1. List and group the types of agricultural wastes
2. Develop a number of value added products from agriculture wastes
3. Discuss the techniques and production involved in the utilization of biomass
4. Assess the various parameters considered to be important in the designing of biogas units
5. Illustrate the various methods employed in the production of alcohol from the byproducts of agricultural wastes
6. Choose the appropriate materials to produce paperboards and particle boards from agricultural wastes

UNIT 1-TYPES OF AGRICULTURAL WASTES

Introduction and Background Agricultural Waste, Crop Waste, Agricultural Residues (annual crops), Technical terms, rice by-products utilization-rice bran and germ, rice bran oil, economic products from agriculture waste/by-products.

UNIT 2-BIOMASS PRODUCTION AND UTILIZATION

Biomass Gasifier, Technology used for the utilization of agricultural wastes: Biomass Gasifier, Nimbkar Agricultural Research Institute (NARI) Gasifier, Rice-Husk Based Gasifier, Heat and Steam from Sugarcane Leaf and Bagasse.

UNIT 3-BIOGAS DESIGN AND PRODUCTION

Biogas: Definition, composition, history of biogas, Production of biogas; types of biogas plant (floating drum type and fixed dome type) and their components (inlet, outlet, stirrer, slanting pipe, digester, gas holder and gas outer pipe), Selection and Design of biogas plant.

UNIT 4-PRODUCTION OF ALCOHOL FROM WASTE MATERIALS

Production of Alcohol from waste materials: Introduction, Production methods, Cellulolysis (biological approach): Pretreatment, Cellulolytic processes (Chemical and Enzymatic hydrolysis), Microbial fermentation, Gasification process (thermochemical approach).

UNIT 5-PRODUCTION OF PAPERBOARDS AND PARTICLEBOARDS FROM AGRICULTURAL WASTE

Production and testing of Paperboards and Particleboards from Agricultural Waste: Introduction, History, Terminology and classification, Raw materials, Production steps- Pulping, Classifications of pulp, Bleaching, Plies, Coating, Grades.

SUGGESTED READINGS

1. K M Sahay and K K Singh. Unit Operations of Agricultural Processing. Vikas Publishing House Pvt Ltd, Noida, Uttar Pradesh. 2nd Edition 2013.
2. Beggs C. Energy Management and Conservation. Elsevier Publication. 2nd Edition 2009.
3. Chaturvedi P. 2009. Energy Management: Challenges for the Next Millennium. Concept Publishing Co. 1st Edition 2000.
4. Fardo SW, Patrick DR, Richardson RE and Fardo BW. Energy Conservation Guidebook. The Fairmont Press. 3rd Edition 2014.
5. Wulfinghoff DR. Energy Efficiency Manual. Energy Institute Press. 2000.

OBJECTIVES

The goal of this course is for students

1. To understand the basics of Robotics, Kinematics.
2. To understand the basics of Inverse Kinematics.
3. To explore various kinematic motion planning solutions for various Robotic configurations.
4. To study the trajectory planning for robot.
5. To understand the task level programming
6. To explore various applications of Robots in Medicine

OUTCOMES

Upon completion of this course, students will be able to:

1. Explain various kinds robotics techniques, vision, planning and applications.
2. Outline the basic concept of robotics
3. Identify and discuss the Robot Vision
4. Describe about manipulators and kinematics.
5. Demonstrate Task level programming
6. Discuss the applications of robotic systems in medical field.

UNIT I INTRODUCTION

Introduction Automation and Robots, Classification, Application, Specification, Notations, Direct Kinematics Dot and cross products, Coordinate frames, Rotations, Homogeneous coordinates Link coordination arm equation – Five-axis robot, Four-axis robot, Six-axis robot

UNIT II KINEMATICS

Inverse Kinematics – General properties of solutions tool configuration, Five axis robots, Three-Four axis, Six axis Robot, Workspace analysis and trajectory planning work envelope and examples, workspace fixtures, Pick and place operations, Continuous path motion, Interpolated motion, Straight-line motion.

UNIT III ROBOT VISION

Robot Vision Image representation, Template matching, Polyhedral objects, Shape analysis, Segmentation – Thresholding, region labeling, Shrink operators, Swell operators, Euler numbers, Perspective transformation, Structured illumination, Camera calibration.

UNIT IV PLANNING

Task Planning Task level programming, Uncertainty, Configuration, Space, Gross motion, Planning, Grasp Planning, Fine-motion planning, Simulation of planar motion, Source and Goal scenes, Task Planner simulation.

UNIT V APPLICATIONS

Applications in Biomedical Engineering – Bio Engineering Biologically Inspired Robots, Neural Engineering, Application in Rehabilitation – Interactive Therapy, Bionic Arm, Clinical and Surgical – Gynecology, Orthopaedics, Neurosurgery

TEXT BOOKS:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Robert Schilling	Fundamentals of Robotics- Analysis and control	Prentice Hall	2003
2	J.J.Craig	Introduction to Robotics ,	Pearson Education	2005

5	K. S. Fu, R. C. Gonzales and C. S. G. Lee	Robotics	McGraw Hill	2008

OBJECTIVES:

1. To introduce the relevance of this course to the existing technology through demonstrations, case studies and applications with a futuristic vision along with socio-economic impact and issues
2. To understand virtual reality, augmented reality and using them to build Biomedical engineering applications
3. To know the intricacies of these platform to develop PDA applications with better optimality

UNIT I INTRODUCTION

The three I's of virtual reality-commercial VR technology and the five classic components of a VR system - Input Devices: (Trackers, Navigation, and Gesture Interfaces): Three-dimensional position trackers, navigation and manipulation-interfaces and gesture interfaces-Output Devices: Graphics displays-sound displays & haptic feedback..

UNIT II VR DEVELOPMENT PROCESS

Geometric modeling - kinematics modeling- physical modeling - behaviour modeling - model Management.

UNIT III CONTENT CREATION CONSIDERATIONS FOR VR

Methodology and terminology-user performance studies-VR health and safety issues-Usability of virtual reality system- cyber sickness -side effects of exposures to virtual reality environment

UNIT IV VR ON THE WEB & VR ON THE MOBILE

JS-pros and cons-building blocks (WebVR, WebGL, Three.js, device orientation events)- frameworks (A-frame, React VR)-Google VR for Android-Scripts, mobile device configuration, building to android-cameras and interaction-teleporting-spatial audio-Assessing human parameters-device development and drivers-Design Haptics

UNIT V APPLICATIONS

Medical applications-military applications-robotics applications- Advanced Real time Tracking other applications- games, movies, simulations, therapy.

OBJECTIVES

The goal of this course is for students:

1. To discuss the overview of artificial organs & transplants
2. To extend the principles of implant design with a case study
3. To explain the implant design parameters and solution in use
4. To simplify about various blood interfacing implants
5. To know the biocompatibility of artificial organs
6. To learn about the implantable medical devices

OUTCOMES

Upon completion of this course, students will be able to:

1. Explain the implant design parameters and solution in use
2. Analyze about various blood interfacing implants
3. Evaluate response of biomaterials in living system
4. Perceive knowledge about artificial organs & transplants
5. Demonstrate different types of soft tissue replacement and hard tissue replacement
6. Assess biocompatibility of artificial organs

UNIT I ARTIFICIAL ORGANS & TRANSPLANTS

ARTIFICIAL ORGANS:-Introduction, outlook for organ replacements, design consideration, evaluation process.

TRANSPLANTS:-Overview, Immunological considerations, Blood transfusions, individual organs – kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN

Principles of implant design, Clinical problems requiring implants for solution, Permanent versus absorbable devices, the missing organ and its replacement, Tissue engineering, scaffolds, cells and regulators criteria for materials selection, Case study of organ regeneration.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION

Biocompatibility, local and systemic effects of implants, Design specifications for tissue bonding and modulus matching, Degradation of devices, natural and synthetic polymers, corrosion, wear and tear, Implants for Bone, Devices for nerve regeneration.

UNIT IV BLOOD INTERFACING IMPLANTS

Neural and neuromuscular implants, heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, artificial kidney- dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

Gastrointestinal system, Dentistry, Maxillofacial and craniofacial replacement, Soft tissue repair, replacement and augmentation, recent advancement and future directions.

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TEXT BOOKS

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 2002.
2. Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 2001.

REFERENCES

1. Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.
2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 2000.

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Sub cooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TEXT BOOKS

1. E.R.Ambrose, "Heat Pumps and Electric Heating", John and Wiley and Sons, Inc., New York, 2002.
2. Handbook for Building Engineers in Metric systems, NBC, New Delhi, 2005.

REFERENCES

1. Philips Lighting in Architectural Design, McGraw-Hill, New York, 2000.
2. A.F.C. Sherratt, "Air-conditioning and Energy Conservation", The Architectural Press, London, 2005.
3. National Building Code.

COURSE OBJECTIVES

1. To learn various distress and damages to concrete and masonry structures
2. To know the influence of corrosion in durability of structures
3. To understand the importance of maintenance of structures
4. To study the various types and properties of repair materials
5. To learn various techniques involved in demolition of structures

COURSE OUTCOME

By the end of this course students will have the capability/knowledge of

1. Various distress and damages to concrete and masonry structures
2. Durability of structures and corrosion mechanism
3. The importance of maintenance of structures, types and properties of repair materials etc
4. Assessing damage of structures and various repair techniques
5. Modern technique and equipment being adopted for the demolition of structures

UNIT – I INTRODUCTION

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors.

UNIT – II DURABILITY OF STRUCTURES

Corrosion mechanism – diagnosis- causes and effects - cover thickness and cracking, measurements for corrosion - methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT - III MAINTENANCE AND REPAIR STRATEGIES

Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration - testing techniques.

UNIT - IV MATERIALS FOR REPAIR

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fibre reinforced concrete. eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete.

UNIT - V TECHNIQUES FOR REPAIR AND REPAIR OF STRUCTURES

Non-destructive Testing Techniques, Corrosion protection techniques , Guniting and Shotcrete Epoxy injection, Mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure Engineered demolition techniques for dilapidated structures - case studies

COURSE OBJECTIVES

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/ visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Get a Detailed study of an engineering artifact

COURSE OUTCOME

The students will be able to

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/ visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Get a Detailed study of an engineering artifact
6. Planning and designing of structures

UNIT 1: *INTRODUCTION*; Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co- ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.

9

UNIT 2: *SYMBOLS AND SIGN CONVENTIONS*: Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards

9

UNIT 3: *MASONRY BONDS*: English Bond and Flemish Bond – Corner wall and Cross walls - One brick wall and one and half brick wall

9

UNIT 4: *BUILDING DRAWING*: Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity

9

UNIT 5: *PICTORIAL VIEW*: Principles of isometrics and perspective drawing. Perspective view of building.

9

List of Drawing Experiments:

1. Buildings with load bearing walls including details of doors and windows.
2. Single storey RCC building
3. Multistorey RCC building

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act 1956)

Coimbatore – 641 021. INDIA

FACULTY OF ENGINEERING

POST-GRADUATE PROGRAMME PART TIME PROGRAMME REGULATIONS 2018 CHOICE BASED CREDIT SYSTEM

These Regulations are effective from the academic year 2018 – 19 and applicable to the students admitted to M. E. / M. Tech. programmes during the academic year 2018 – 19 and onwards.

1 PROGRAMMES OFFERED, MODES OF STUDY AND ADMISSION REQUIREMENTS

1.1 P.G. PROGRAMMES OFFERED:

M. E. and M. Tech.

The various P.G. Programmes offered by the Karpagam Academy of Higher Education are listed in **Table 1.**

1.2 MODE OF STUDY:

1.2.1 Part-Time:

In this mode of study, the candidates are required to attend classes only on the specified contact hours.

1.2.2 Conversion from part time mode of study to full time is not permitted.

1.2.3 Conversion from one programme to another is not permitted.

1.3 ADMISSION REQUIREMENTS:

Candidates for admission to the first semester of the Master's Degree Programme shall be required to have passed an appropriate Degree Examination of any University accepted by the Board of Management of the Karpagam Academy of Higher Education as equivalent thereto. Admission shall be offered only to the candidates who possess the qualification prescribed against each course, given in **Table-2.**

2. DURATION OF THE PROGRAMMES:

2.1 The minimum and maximum period for completion of the P.G. Programmes are given below:

Programme	Min. No. of Semesters	Max. No. of Semesters
M. E. / M. Tech. (Part Time)	6	12 (Male) 14 (Female)

2.2 Each semester shall normally consist of 90 working days or 270 hours for part-time mode of study.

2.3 The prescribed credits required for the award of the degree shall be within the limits specified below.

PROGRAMME	PRESCRIBED CREDIT RANGE
M. E. / M. Tech.	65 to 75

2.4 Credits will be assigned to the courses for different modes of study as given below:

No. of credit per lecture period per week	: 1
No. of credit per tutorial period per week	: 1
No. of credit for 3 periods of laboratory course per week	: 2
No. of credit for 3 periods of project work per week	: 2

3. STRUCTURE OF THE PROGRAMME

3.1 Every Programme will have a curriculum and syllabi consisting of core courses, elective courses and project work.

The Programme may also include seminar / practicals, if they are specified in the curriculum.

3.1.1 The electives from the curriculum are to be chosen with the approval of the Head of the Department. A candidate may be permitted by the Head of the Departments to choose a maximum of 2 electives from among elective subjects listed under various PG programmes offered by other departments of the same Faculty of Engineering, provided the HOD offering those courses approves such request subject to 'no' clash to theory classes of both the department in the Time Table.

3.1.2 The medium of instruction for all courses, examinations, seminar presentations and project thesis shall be in English.

3.2 MAXIMUM MARKS

The maximum marks assigned to different courses shall be as given below:

Each of the theory and practical courses (excluding project work) shall carry maximum of 100 marks of which 40 marks will be through Continuous Internal Assessment.

3.3 PROJECT WORK

The project work for M. E. / M. Tech. consists of Phase – I and Phase – II. Phase-I is to be undertaken during V semester and Phase-II, is to be undertaken during VI semester. The project work will be always in-house. All the students are advised to do their project work within the campus. However, as a special case, if a student is able to get a project from a government organization or private or public sector company with a turn over about Rs. 50 crore, the student may be permitted to do his/her project work in institution/research organization/industry.

4. EVALUATION OF PROJECT WORK

The evaluation of Project Work for Phase I & Phase II shall be done independently in the respective semesters. The total marks for project work including Phase I & Phase II is 400. The project work pertained to Phase I is evaluated through Continuous Internal Assessment only. No End Semester Examination will be conducted for the Phase I. The maximum internal marks for Phase I is 100. For Phase – II, the maximum internal mark is 120 and the maximum End Semester Examination mark is 180. The total marks for Phase – II is 300. The overall passing minimum is 50 %.

There shall be two assessments, by a review committee, during each of the project semesters. The Head of the Department shall constitute the review committee for each branch of study.

4.1 The Project Report prepared according to approved guidelines and duly signed by the supervisor(s) and the Head of the Department shall be submitted to the COE through the HOD and the Dean.

4.2 The evaluation of the Project work Phase – I will be purely internal. During CIA of Phase – I, there will be a Viva-Voce Examination by a team consisting of the Supervisor, an Internal Examiner (other than the Supervisor) and an External Examiner. The evaluation of the Project work Phase – II will be based on the project report submitted in Phase – II semester and a Viva-Voce Examination by a team consisting of the Supervisor, an Internal Examiner, and an External Examiner for each programme. The External Examiner shall be appointed by the Karpagam Academy of Higher Education for Phase – II evaluation.

4.3.1 If a candidate fails to submit the project report on or before the specified deadline, he / she is deemed to have failed in the project work and shall re-enroll for the same in a subsequent semester.

4.3.2 If a candidate fails in the viva-voce examinations of Phase-I he / she has to resubmit the project report within 30 days from the date of declaration of the results. If he / she fails in the viva-voce examination of Phase-II of project work, he / she shall resubmit the project report within 60 days from the date of declaration of the results. For this purpose the same Internal and External Examiner shall evaluate the resubmitted report.

4.3.3 Every candidate shall send a paper for publication in a journal or a conference or apply for a patent. An acknowledgement from the Supervisor for having communicated to the journal or conference or application of patent shall be attached to the report of the project work. Such acknowledgements shall be sent to the Controller of Examinations along with the evaluation marks by the team of examiners without which the thesis shall not be accepted.

4.3.4 A copy of the approved project report after the successful completion of viva-voce examination shall be kept in the library of the institution.

5. REQUIREMENTS FOR COMPLETION OF THE SEMESTER

A candidate who has fulfilled the following conditions shall be deemed to have satisfied the requirements for completion of a semester.

5.1 Ideally every student is expected to attend all classes and secure 100% attendance. However, in order to allow for certain unavoidable reasons, the student is expected to attend at least 75% of the classes.

5.2 However, a candidate who has secured attendance between 65% and 74 % (both included) in the current semester due to medical reasons (Hospitalization / Accident / Specific illness) **or due to participation in College/ University / State/National / International level sports events or due to participation in Seminar/ Conference/ Workshop/ Training programme / Voluntary Service/Extension activities or similar programmes** with a prior permission from the Registrar shall be given exemption from the prescribed attendance requirements and he / she shall be permitted to appear for the current semester examinations on payment of prescribed condonation fees.

5.3 However, a candidate who has secured attendance less than 64 % in the current semester due to any reason shall not be permitted to appear for the current semester examinations. But he / she will be permitted to appear for his/her arrear examinations, if any and redo the programme.

6. PROCEDURE FOR AWARDING MARKS FOR INTERNAL ASSESSMENT

6.1 Every teacher is required to maintain an 'ATTENDANCE AND ASSESSMENT RECORD' which consists of attendance marked in each theory or practical or project work class, the test marks and the record of class work (topic covered), separately for each course. This should be submitted to the Head of the Department periodically (at least three times in a semester) for checking the syllabus coverage and the record of test marks and attendance. The Head of the Department shall sign with

date after due verification. At the end of the semester, the record should be verified by the Dean who will keep this document in safe custody (for five years). Records of attendance and assessment of both current and previous semesters shall be submitted for inspection to the team appointed by the Karpagam Academy of Higher Education/any other approved body.

6.2 Continuous Internal Assessment (CIA):

The performance of students in each subject will be continuously assessed by the respective teachers as per the guidelines given below:

THEORY COURSES:

S. No.	CATEGORY	MAXIMUM MARKS
1.	Paper Presentation *	15
2.	Attendance	5
3.	Test – I #	10
4.	Test – II #	10
TOTAL		40

* One refereed journal paper related to the subject and approved by the teacher should be critically presented. The Paper Presentation should be evaluated by a committee and marks should be entered in Automation software on or before 60th working day of the semester.

The test scripts should be evaluated and marks should be entered in Automation software on or before 4th working day after the last test.

PATTERN OF TEST QUESTION PAPER:

INSTRUCTION	REMARKS
Maximum Marks	60 marks
Duration	2 Hours
Part – A	9 Two mark Questions. Out of 12 any 9 Questions are to be answered. Question No. 1 to 12, uniformly covering the two and half units of the syllabus. (9 x 2 = 18 Marks)
Part– B	3 Fourteen mark Questions. Question No. 13 will be a compulsory question (Design/Analysis/Case study type) from any of the three units. Question 14 and 15 will be of either or choice from the remaining two units of the syllabus. (3 x 14 = 42 Marks)

PRACTICAL COURSES:

S. No	CATEGORY	MAXIMUM MARKS
1.	Attendance	5
2.	Observation work	5
3.	Record work	5
4.	Model examination	15
5.	Viva – voce [Comprehensive]	10
TOTAL		40

Every practical Exercise / Experiment shall be evaluated based on the conduct of Exercise / Experiment and records maintained.

6.3 ATTENDANCE

Marks Distribution for Attendance

S. No.	Attendance %	Marks
1	75 and above	5
2	Less than 75	0

7. REQUIREMENTS FOR APPEARING FOR END SEMESTER EXAMINATION (ESE)

A candidate shall normally be permitted to appear for the ESE of any semester commencing from I semester if he / she has satisfied the semester completion requirements (Subject to Clause 5) and has registered for examination in all courses of the semester. Registration is mandatory for Semester Examinations as well as supplementary examinations failing which the candidate will not be permitted to move to the higher semester. A candidate already appeared for a subject in a semester and passed the examination is not entitled to reappear in the same subject for improvement of grade.

8. END SEMESTER EXAMINATION

ESE will be held at the end of each semester for each subject, which consists of 100 marks, later scaled down to 60 marks.

PATTERN OF ESE QUESTION PAPER:

INSTRUCTION	REMARKS
Maximum Marks	100 marks for all Semester Examinations.
Duration	3 Hours
Part – A	15 Two mark Questions. Out of 20, any 15 Questions are to be answered. Question No. 1 to 20, 4 questions from each unit. (15 x 2 = 30 Marks)
Part– B	5 Fourteen mark Questions. Question No. 21 will be a compulsory question (Design/Analysis/Case study type) from any of the five units. Question 22 to 25, will be of either or choice from the remaining four units of the syllabus. (5 x 14 = 70 Marks)

9. PASSING REQUIREMENTS

9.1 Passing minimum: The passing minimum for CIA is 20 (i.e. out of 40 marks). The passing minimum for End Semester Examination is 30 (i.e. out of 60 marks). The overall passing minimum for theory/laboratory course is 50 (Sum of his/her score in internal and external examination) out of 100 marks.

9.2 If the candidate fails to secure a pass in a particular course ESE, it is mandatory that candidate shall register and reappear for the examination in that course during the subsequent semester when examination is conducted in that course. Further the candidate should continue to register and

reappear for the examination till a pass is secured in such supplementary exam within the stipulated maximum duration of the programme (Clause 2.1).

The CIA marks obtained by the candidate in his / her first or subsequent appearance where he / she secures a pass shall be retained by the office of the Controller of Examinations and considered valid for all remaining attempts till the candidate secures a pass in his/her ESE.

9.3 If the candidate fails to secure a pass in a particular course CIA, it is mandatory that candidate shall register and reappear for the CIA in that course during the subsequent semester when CIA is conducted in that course by the faculty member assigned for that particular course during that semester by the concerned HOD. Further the candidate should continue to register and reappear for the CIA till a pass is secured in such supplementary exam within the stipulated maximum duration of the programme (Clause 2.1).

10. AWARD OF LETTER GRADES

10.1 All assessments of a course will be done on absolute mark basis. However, for the purpose of reporting the performance of a candidate, letter grades, each carrying certain number of points, will be awarded as per the range of total marks (out of 100) obtained by the candidate in each subject as detailed below:

Letter grade	Marks Range	Grade Point	Description
O	91 - 100	10	OUTSTANDING
A+	81- 90	9	EXCELLENT
A	71-80	8	VERY GOOD
B+	66- 70	7	GOOD
B	61 – 65	6	ABOVE AVERAGE
C	55 - 60	5	AVERAGE
D	50 - 54	4	PASS
RA	<50	-	REAPPEARANCE
AB		0	ABSENT

10.2 GRADE SHEET

After results are declared, Grade sheets will be issued to each student which will contain the following details:

- i The list of courses enrolled during the semester and the grade scored.
- ii The Grade Point Average (**GPA**) for the semester and

- iii The Cumulative Grade Point Average (**CGPA**) of all courses enrolled from first semester onwards.

GPA is the ratio of the sum of the products of the number of Credits (**C**) of courses enrolled and the Grade Points (**GP**) corresponding to the grades scored in those courses, taken for all the courses to the sum of the number of credits of all the courses in the semester.

$$\text{GPA} = \frac{\text{Sum of [C*GP]}}{\text{Sum of C}}$$

CGPA will be calculated in a similar manner, considering all the courses enrolled from first semester. **RA** grade will be excluded for calculating **GPA** and **CGPA**.

10.3 REVALUATION

A candidate can apply for revaluation of his/her semester examination answer paper in a theory course, within 2 weeks from the declaration of results, on payment of a prescribed fee through proper application to the Controller of Examinations through the Head of the Department and Dean. **A candidate can apply for revaluation of answer scripts for not exceeding 5 subjects at a time.** The Controller of Examinations will arrange for the revaluation and the results will be intimated to the candidate concerned through the Head of the Department and Dean. Revaluation is not permitted for Supplementary theory courses, Practical courses, and Project Work.

11. ELIGIBILITY FOR THE AWARD OF THE DEGREE

A student shall be declared to be eligible for the award of the Degree if he/she has

- Successfully gained the required number of total credits as specified in the curriculum corresponding to his/her programme within the stipulated time.
- No disciplinary action is pending against him/her.

The award of the degree must be approved by the Board of Management of Karpagam Academy of Higher Education.

12. CLASSIFICATION OF THE DEGREE AWARDED

12.1 A candidate who qualifies for the award of the Degree (vide Clause 11) having passed the examination in all the courses in his/her first appearance within the specified minimum number of semesters (vide Clause 2.1) securing a **CGPA of not less than 8.0** shall be declared to have passed the examination in **First Class with Distinction**.

12.2 A candidate who qualifies for the award of the Degree (vide Clause 11) having passed the examination in all the courses within the specified minimum number of semesters (vide

Clause 2.1) plus one year (two semesters), securing **CGPA of not less than 6.5** shall be declared to have passed the examination in **First Class**. For this purpose the withdrawal from examination (vide Clause 13) will not be construed as an appearance. Further, the authorized break of study (vide Clause 14) will not be counted for the purpose of classification.

12.3 All other candidates (not covered in Clauses 12.1 and 12.2) who qualify for the award of the degree (vide Clause 11) shall be declared to have passed the examination in **Second Class**.

13. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

13.1 A candidate may for valid reasons and on prior application, be granted permission to withdraw from appearing for the examination of any one course or consecutive examinations of more than one course in a semester examination. Withdrawal application is valid, only if the candidate is otherwise eligible to write the examination.

13.2 Such withdrawal shall be permitted only once during the entire period of study of the degree programme.

13.3 Withdrawal application is valid only if it is made within 10 days prior to the commencement of the examination in that course or courses and recommended by the Head of the Department and Dean and approved by the Registrar.

13.3.1 Notwithstanding the requirement of mandatory TEN days notice, applications for withdrawal for special cases under extraordinary conditions will be considered on the merit of the case.

13.4 Withdrawal shall not be construed as an appearance for the eligibility of a candidate for First Class with Distinction. This provision is not applicable to those who seek withdrawal during VI semester.

13.5 Withdrawal from the ESE is **NOT** applicable to arrear courses.

13.6 The candidate shall reappear for the withdrawn courses during the examination conducted in the subsequent semester.

14. PROVISION FOR AUTHORISED BREAK OF STUDY

14.1 Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree programme. However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for break of study. If a candidate intends to temporarily discontinue the programme in the middle of the semester for valid reasons and to rejoin the programme in a subsequent year, permission may be granted based on the merits of the case

provided he/she applies to the Registrar, but not later than the last date for registering for the ESE of the semester in question, through the Head of the Department and Dean stating the reasons thereof and the probable date of rejoining the programme.

- 14.2** The candidate thus permitted to rejoin the programme after the break shall be governed by the curriculum and regulations in force at the time of rejoining. Such candidates may have to do additional courses, if any as per the curriculum and regulations in force at that period of time.
- 14.3** The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification (vide Clause 12). However, additional break of study granted will be counted for the purpose of classification.
- 14.4** The total period for completion of the programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in Clause 2.1 irrespective of the period of break of study (vide Clause 14.1) in order that he/she may be eligible for the award of the degree.
- 14.5** If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted 'Withdrawal' or 'Break of Study' (Clause 13 and 14 respectively) is not applicable for this case.

15. SPECIAL SUPPLEMENTARY ESE:

After the publication of VI semester results, if a student has an arrear in any theory course of the entire programme, he/she will be permitted to apply within 15 days of the publication of results, and appear for a special supplementary examination.

16. DISCIPLINE

Every student is required to observe disciplined and decorous behavior both inside and outside the Karpagam Academy of Higher Education and not to indulge in any activity which will tend to bring down the prestige of the Karpagam Academy of Higher Education. The erring student will be referred to the Disciplinary Committee constituted by the Karpagam Academy of Higher Education, to enquire into acts of indiscipline and recommend the Karpagam Academy of Higher Education about the disciplinary action to be taken. If a student indulges in malpractice in any of the CIA/ESE he/she shall be liable for punitive action as prescribed by the Karpagam Academy of Higher Education from time to time.

17. REVISION OF REGULATION AND CURRICULUM

The Karpagam Academy of Higher Education may from time to time revise, amend or change the Regulations, Scheme of Examinations and syllabi if found necessary on the recommendations of

Board of Studies, Academic Council and Board of Management of Karpagam Academy of Higher Education.

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act 1956)

Coimbatore – 641 021. INDIA

FACULTY OF ENGINEERING

DEPARTMENT OF CIVIL ENGINEERING

M.E. WATER RESOURCES AND ENVIRONMENTAL ENGINEERING (PART TIME)

Curriculum Structure
(2018 BATCH ONWARDS)

PROGRAMME EDUCATIONAL COURSE OBJECTIVES (PEOs) :

- I. To prepare students to excel in research and to succeed in Water resources and Environmental engineering profession through global, rigorous post graduate education
- II. To provide students with a solid foundation in mathematical, scientific and engineering fundamentals required to solve in Water resources and Environmental engineering problems
- III. To train students with good scientific and engineering knowledge so as to comprehend, analyze, design, and create novel products and solutions for the real life problems
- IV. To inculcate students in professional and ethical attitude, effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate in Water resources and Environmental engineering issues to broader social context.
- V. To provide student with an academic environment aware of excellence, leadership, written ethical codes and guidelines, and the life-long learning needed for a successful professional career

PROGRAMME OUTCOMES (POs):

On successful completion of the programme,

- a. Graduates will demonstrate knowledge of mathematics, science and engineering.
- b. Graduates will demonstrate an ability to design a system, component or process as per needs and specifications.
- c. Graduates will demonstrate an ability to visualize and work on laboratory and multidisciplinary tasks.
- d. Graduate will demonstrate skills to use modern engineering tools, software and equipment to analyze problems.
- e. Graduates will demonstrate knowledge of professional and ethical responsibilities.

- f. Graduate will be able to communicate effectively in both verbal and written form.
- g. Graduate will develop confidence for self education and ability for life-long learning.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

- h. Graduates will demonstrate an ability to identify, formulate and solve engineering problems.
- i. Graduate will demonstrate an ability to design and conduct experiments, analyze and interpret data.
- j. Graduate will show the understanding of impact of engineering solutions on the society and also will be aware of contemporary issues.

L-Lecture T-Tutorial P-Practical C-Credit

CIA – Continuous Internal Assessment

ESE – End semester Examination

Total credits = 71

Total Marks = 2100

*** To be evaluated internally by a committee of members**

Review 1& 2

– 60 marks

Final presentation and viva voce

– 40 marks

****-- Skill Development**

****-- Employability**

****--Entrepreneurship**

Course Objectives:

1. This subject aims at making the students to understand the relevance of various components of hydrologic cycle, which are responsible for spatial and temporal distribution of water availability in any region.
2. To Understand different rain gauges and Perform various kind of Rainfall Analysis
3. To estimate various losses such as evaporation, Evapotranspiration and Infiltration.
4. It has evolved as a science in response to the need to understand the complex water system of the earth and help solve water problems.
5. To impart the knowledge on Precipitation, Abstraction and Runoff processes of hydrologic cycle, their estimation and field measurements and Water harvesting methods.
6. To impart knowledge in soil erosion and sedimentation to estimate the life of the reservoir.

Course Outcomes:

At the end of the course, students will be able to

1. Describe the hydrologic cycle and devices for hydro meteorological Measurements
2. Explain different rain gauges and Perform various kind of Rainfall Analysis
3. Estimate various losses such as evaporation, Evapotranspiration and Infiltration.
4. Discuss the various methods of runoff estimation and derive hydrographs
5. Demonstrate the various methods of Stream flow measurement and water harvesting Techniques.
6. Apply the knowledge of soil erosion and sedimentation to estimate the life of the reservoir.

UNIT I ATMOSPHERIC WATER SYSTEM 9

Hydrologic cycle – Climate – Weather – Layers in atmosphere – Types and forms of precipitation – Hydro-metrologic measurements – Cyclones – Fronts – Winds – monsoons – Clouds – Requirements for precipitations.

UNIT II HYDROLOGIC PROCESSES 9

Rainfall – Rain gauges – Adequacy of network – Spatial and temporal distribution – frequency and intensity / duration analysis – Consistency – missing data – Abstractions – Infiltration – Evaporation – Interception – Process, estimation and measurement – Depression and detention storages.

UNIT III RUNOFF ESTIMATION 9

Components – Factors affecting runoff – Catchment characteristics – Flow measurements – Stream gauging – Floats, current meters – Venturi, Cut-throat and Parshall flumes – Rating curves – Aquatic Doppler velocity meter – Estimation – SCS and storage table methods – Empirical equations – Rainfall – Runoff models – TANK model – Tank clustered catchments.

UNIT IV HYDROGRAPHS 9

Hydrographs – Base flow – Unit hydrographs with single and multi peaks – S curve hydrograph – Dimensionless unit hydrograph – Synthetic unit hydrograph – Applications.

UNIT V RAINWATER HARVESTING

9

Importance – RWH in rural and urban areas – RWH from building roof and open areas – Direct storage in sumps – Design of RWH structures – Public participations – Case studies

Total Hours 45

SUGGESTED READINGS:

1. Chow V.T., Maidment D.R., Mays L.W , (2010) Applied hydrology, McGraw Hill publications, New York.
2. Ragunath H.M, (2006), Hydrology, Wiley Eastern Ltd., New Delhi.
3. Ven Te Chow, (2013), Hand book of hydrology, McGrawHill publications, New York.
4. Subramanya.K (2000), Hydrology, Tata McGraw Hill Co., New Delhi.

Web Sites:

1. www.springer.com
2. www.nptel.com
3. www.civil.ubc.ca

OBJECTIVES:

1. To provide an overview of probability and statistics and the basic concepts of two-dimensional random variables
2. Be introduced to the notion of sampling distributions which is useful in making rational decision in management problems.
3. To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
4. To introduce the basic concepts of classifications of design of experiments.
5. To gain knowledge in Quality Control.
6. To understand the concept of testing of hypothesis for small and large samples in real life.

OUTCOMES:

1. Understand the basic concepts of probability and one- and two-dimensional random variables have knowledge of standard distribution which can describe real life phenomenon.
2. The students know how to use the Sampling Theory in real life situations.
3. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
4. Apply the concept of testing of hypothesis for small and large samples in real life problems.
5. To apply the basic concepts of classifications of design of experiments in the field of statistical methods.
6. Summarize the concept of testing of hypothesis for small and large samples in real life.

UNIT-I PROBABILITY AND DISTRIBUTION

Axioms of probability – Conditional probability – Total probability– Random variables – Binomial, Poisson and Normal distributions with Moment generating functions – Correlation – Regression.

UNIT-II SAMPLING DISTRIBUTION AND ESTIMATION

Sampling distributions – Estimation of parameters – Method of Moments – Principle of Least squares – Method of Maximum Likelihood.

UNIT -III TESTING OF HYPOTHESIS

Basic definitions of Statistical Hypothesis – Tests based on Normal, t, Chi-square and F distributions for mean, variance and proportion.

UNIT -IV DESIGN OF EXPERIMENTS

Analysis of variance – One way and Two way classifications – Completely randomized design – Randomized block design – Latin square design – 2 factorial design.

UNIT -V STATISTICAL QUALITY CONTROL

Statistical quality control – Statistical process control – X and R or S control chart- Attribute control charts – P chart and U chart – Control chart performance.

18PMEWE1E01

**INDUSTRIAL WASTEWATER POLLUTION
PREVENTION AND CONTROL**

3H:3C

Instruction Hours/ Week : L:3 T: 0 P: 0

Marks: Internal–40 , External–60; Total-100

End Sem. Exam–3 Hrs

Course Objectives:

1. To understand the principle of various processes applicable to industrial wastewater treatment
2. To impart knowledge on the concept and application of Industrial pollution prevention, cleaner technologies, industrial wastewater treatment and residue management.
3. To identify the best applicable technologies for wastewater treatment from the perspective of yield production.
4. To audit and analyze environmental performance of industries to internal, external client, regulatory bodies and design water reuse management techniques
5. To conduct research to develop effective management systems for industrial wastewater that are technically sound, economically feasible and socially acceptable
6. To know about various pollutants which are from various processes in industries and its effects in our environment.

Course Outcomes:

1. Explain the source and types of industrial wastewater and their environmental impacts and choose the regulatory laws pertaining to environmental protection
2. Identify industrial wastewater pollution and implement pollution prevention, waste minimization in industries
3. Apply knowledge and skills to design industrial wastewater treatment schemes
4. Audit and analyze environmental performance of industries to internal, external client, regulatory bodies and design water reuse management techniques
5. Conduct research to develop effective management systems for industrial wastewater that are technically sound, economically feasible and socially acceptable
6. Know about various pollutants which are from various processes in industries and its effects in our environment.

UNIT I INTRODUCTION

9

Industrial scenario in India– Industrial activity and Environment - Uses of Water by industry – Sources and types of industrial wastewater – Nature and Origin of Pollutants - Industrial wastewater and environmental impacts – Regulatory requirements for treatment of industrial wastewater – Industrial waste survey – Industrial wastewater monitoring and sampling -generation rates, characterization and variables –Toxicity of industrial effluents and Bioassay tests – Major issues on water quality management.

UNIT II INDUSTRIAL POLLUTION PREVENTION

9

Prevention and Control of Industrial Pollution – Benefits and Barriers – Waste management Hierarchy - Source reduction techniques – Pollution Prevention of Assessment - Material balance - Evaluation of Pollution prevention options –Cost benefit analysis – pay back period - Waste minimization Circles.

UNIT III INDUSTRIAL WASTEWATER TREATMENT

9

Equalization - Neutralization – Oil separation – Flotation – Precipitation – Heavy metal Removal– Aerobic and anaerobic biological treatment – Sequencing batch reactors – High Rate reactors - Chemical oxidation – Ozonation – carbon adsorption – Photo-catalysis – Wet Air Oxidation – Evaporation – Ion Exchange – Membrane Technologies – Nutrient removal.- Treatability studies.

UNIT IV WASTEWATER REUSE AND RESIDUAL MANAGEMENT

9

Individual and Common Effluent Treatment Plants – Joint treatment of industrial and domestic wastewater - Zero effluent discharge systems - Quality requirements for Wastewater reuse – Industrial reuse, Present status and issues - Disposal on water and land – Residuals of industrial wastewater treatment – Quantification and characteristics of Sludge – Thickening, digestion, conditioning, dewatering and disposal of sludge – Management of RO rejects.

UNIT V CASE STUDIES

9

Industrial manufacturing process description, wastewater characteristics, source reduction options and waste treatment flow sheet for Textiles – Tanneries – Pulp and paper – metal finishing – Oil Refining – Pharmaceuticals – Sugar and Distiller

Total Hours : 45

SUGGESTED READINGS:

1. Eckenfelder, W.W, (2000), Industrial Water Pollution Control, Mc-Graw Hill.

5. Pollution Prevention: - Fundamentals and Practice (2000), Mc-Graw Hill International, Boston

Web sites.

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca
5. www.aboutcivil.com

Course Objectives:

1. To acquire the knowledge on problem associated with soil contamination
2. To know about safety disposal of waste and remediates the contaminated soils by different techniques to protect the environment.
3. To know about composition and properties of various types of soil.
4. To know about various ground improvement techniques.
5. To understand contaminant transport in soil and various remedial techniques.
6. To impart knowledge in soil pollution and its remedial measures.

Course Outcomes:

1. The student acquires the knowledge on problem associated with soil contamination
2. Know about composition and properties of various types of soil.
3. Know about safety disposal of waste and remediates the contaminated soils by different techniques to protect the environment.
4. Know about various ground improvement techniques.
5. Understand contaminant transport in soil and various remedial techniques.
6. Apply knowledge in soil pollution and its remedial measures.

UNIT I PHYSICS AND CHEMISTRY OF SOIL**9**

Soil formation – composition – soil fabric – mass-volume relationship – Index properties and soil classification – hydraulic and consolidation characteristics – Chemical properties – soil pH – Surface charge and point of zero charge – Anion and Cation exchange capacity of clays– Specific surface area- bonding in clays-soil pollution-factors governing soil-pollutant interaction.

UNIT II INORGANIC AND ORGANIC GEOCHEMISTRY**9**

Inorganic geochemistry – Metal contamination – Distribution of metals in soils – Geochemical processes controlling the distribution of metals in soils – Chemical analysis of metal in soil – Organic geochemistry – Organic contamination – Distribution of NAPLs in soils – Process controlling the distribution of NAPLs in soil – Chemical analysis of NAPLs in soils.

UNIT III CONTAMINANT FATE AND TRANSPORT IN SOIL**9**

Transport processes – advection – diffusion – dispersion – chemical mass transfer processes – sorption and desorption – precipitation and dissolution – oxidation and reduction – acid base reaction – complexation – ion exchange – volatilization – hydrolysis – biological process-microbial transformation of heavy metals.

UNIT IV GROUND IMPROVEMENT TECHNIQUES IN WASTE MANAGEMENT**9**

Role of Ground Improvement-Drainage and Ground Water Lowering-Electro osmotic Methods-Diaphragm walls-Thermal and Freezing methods - Insitu Densification - Deep Compaction - Dynamic Compaction -Blasting Sand piles pre-loading with sand drains-Stone Columns Lime piles-

Earth reinforcement -rock bolts Cables and guniting Geotextiles as reinforcement Filtration. Drainage and Erosion control.

UNIT V SOIL REMEDIATION TECHNOLOGIES

9

Contaminated site characterization – Containment – Soil vapour extraction - Soil washing – Solidification and Stabilization – Electro-kinetic remediation – Thermal desorption – Vitrification – In-situ and Ex-situ Bioremediation – Phytoremediation – Soil fracturing – Biostimulation – Bioaugmentation –Chemical oxidation and reduction.

Total Hours:45

2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca
5. www.aboutcivil.com

Course Objectives:

1. To understand the microbial process and its kinetics
2. To design and size the different components of conventional aerobic treatment systems.
3. To design and size the different components of advanced aerobic treatment systems.
4. To understand in detail about the anaerobic treatment of wastewater which includes the design of attached and suspended growth processes.
5. To design the different elements of sludge treatment systems and understand the importance O&M issues pertaining to biological treatment systems
6. To understand Principles of Aerobic and Anaerobic Treatment

Course Outcomes:

1. Understand the microbial process and its kinetics
2. Design and size the different components of conventional aerobic treatment systems.
3. Design and size the different components of advanced aerobic treatment systems.
4. Understand in detail about the anaerobic treatment of wastewater which includes the design of attached and suspended growth processes.
5. Design the different elements of sludge treatment systems and understand the importance O&M issues pertaining to biological treatment systems
6. Principles of Aerobic and Anaerobic Treatment

UNIT I INTRODUCTION**9**

Objectives of biological treatment – significance – Principles of aerobic and anaerobic treatment – kinetics of biological growth – Factors affecting growth – attached and suspended growth – Determination of Kinetic coefficients for organics removal – Biodegradability assessment –selection of process- reactors-batch-continuous type.

UNIT II AEROBIC TREATMENT OF WASTEWATER**9**

Design of sewage treatment plant units –Activated Sludge process and variations, Sequencing Batch reactors, Membrane Biological Reactors-Trickling Filters-Bio Tower-RBC-Moving Bed Reactors-fluidized bed reactors, aerated lagoons, waste stabilization ponds – nutrient removal systems – natural treatment systems, constructed wet land – Disinfection – disposal options – reclamation and reuse – Flow charts, layout, PID, hydraulic profile, recent trends.

UNIT III ANAEROBIC TREATMENT OF WASTEWATER :**9**

Attached and suspended growth, Design of units – UASB, up flow filters, Fluidized beds MBR, septic tank and disposal – Nutrient removal systems – Flow chart, Layout and Hydraulic profile – Recent trends.

UNIT IV SLUDGE TREATMENT AND DISPOSAL**9**

Design of sludge management facilities, sludge thickening, sludge digestion, biogas generation, sludge dewatering (mechanical and gravity) Layout, PID, hydraulics profile – upgrading existing plants – ultimate residue disposal – recent advances.

UNIT V

9

Construction and Operational Maintenance problems – Trouble shooting – Planning, Organizing and Controlling of plant operations – capacity building - Retrofitting Case studies – sewage treatment plants – sludge management facilities.

Total Hours:45

SUGGESTED READINGS:

websites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca

Course Objectives:

1. To understand the Earth's Climate System
2. To know the concept of Global Warming, the impact of climate change on environment, adaptation and its mitigation measures.
3. To orient towards the global climate change and its impact on water resources.
4. To understand the climate change phenomenon
5. To analyze related issues on water, irrigation and its social implications.
6. To implement clean technology and energy

Course Outcomes:

1. Understand the Earth's Climate System
2. Know the concept of Global Warming, the impact of climate change on environment, adaptation and its mitigation measures.
3. Orient towards the global climate change and its impact on water resources.
4. Understand the climate change phenomenon
5. Analyze related issues on water, irrigation and its social implications.
6. Develop clean technology and energy

UNIT I EARTH'S CLIMATE SYSTEM

9

Introduction-Climate in the spotlight - The Earth's Climate Machine – Climate Classification - Global Wind Systems – Trade Winds and the Hadley Cell – The Westerlies - Cloud Formation and Monsoon Rains – Storms and Hurricanes - The Hydrological Cycle – Global Ocean Circulation – El Nino and its Effect - Solar Radiation –The Earth's Natural Green House Effect – Green House Gases and Global Warming – Carbon Cycle.

UNIT II OBSERVED CHANGES AND ITS CAUSES

9

Observation of Climate Change – Changes in patterns of temperature, precipitation and sea level rise – Observed effects of Climate Changes – Patterns of Large Scale Variability – Drivers of Climate Change – Climate Sensitivity and Feedbacks – The Montreal Protocol – UNFCCC – IPCC – Evidences of Changes in Climate and Environment – on a Global Scale and in India – climate change modeling.

UNIT III IMPACTS OF CLIMATE CHANGE

9

Impacts of Climate Change on various sectors – Agriculture, Forestry and Ecosystem – Water Resources – Human Health – Industry, Settlement and Society – Methods and Scenarios – Projected Impacts for Different Regions– Uncertainties in the Projected Impacts of Climate Change – Risk of Irreversible Changes.

UNIT IV CLIMATE CHANGE ADAPTATION AND MITIGATION MEASURES

9

Adaptation Strategy/Options in various sectors – Water – Agriculture – Infrastructure and Settlement including coastal zones – Human Health – Tourism – Transport – Energy – Key Mitigation Technologies and Practices – Energy Supply – Transport – Buildings – Industry –

Agriculture – Forestry - Carbon sequestration – Carbon capture and storage (CCS)- Waste (MSW & Bio waste, Biomedical, Industrial waste – International and Regional cooperation.

UNIT V CLEAN TECHNOLOGY AND ENERGY

9

Clean Development Mechanism –Carbon Trading- examples of future Clean Technology – Bio-diesel – Natural Compost – Eco- Friendly Plastic – Alternate Energy – Hydrogen – Bio-fuels – Solar Energy – Wind – Hydroelectric Power – Mitigation Efforts in India and Adaptation funding.

SUGGESTED READINGS:

1. Jan C. van Dam(2003). Impacts of Climate Change and Climate Variability on Hydrological Regimes, Cambridge Karpagam academy of Higher Education Press.
2. Dash Sushil Kumar(2007). Climate Change – An Indian Perspective, Cambridge Karpagam academy of Higher Education Press India Pvt. Ltd.

Course Objectives

1. Understand the impact of humans on environment and environment on humans
2. Be able to identify and value the effect of the pollutants on the environment: atmosphere, water and soil.
3. To select the most appropriate technique for the treatment of water, wastewater solid waste and contaminated air.
4. To plan strategies to control, reduce and monitor pollution.
5. To analyze the impact of humans on environment and environment on humans
6. To know the different designing elements in sewer systems.

Course Outcomes

1. Analyze the impact of humans on environment and environment on humans
2. Be able to examine the effect of the pollutants on the environment: atmosphere, water and soil.
3. Be able to plan strategies to control, reduce and monitor pollution.
4. Be able to select the most appropriate technique for the treatment of water, wastewater solid waste and contaminated air.
5. Be conversant with basic environmental legislation.
6. Able now the different designing elements in sewer systems.

Experiments

1. Hydrochemistry - Physical and chemical properties of water
2. On site estimations and laboratory analysis of water
3. Collection of water samples
4. Major ions analysis of collected water samples
5. Suspended and dissolved solids - EC and pH

Total Hours : 30

18PMEWE201 DESIGN OF HYDRAULIC AND ENVIRONMENTAL ENGINEERING STRUCTURES 3H:3C

Instruction Hours/ Week : L:3 T: 0 P: 0

Marks: Internal–40 , External–60; Total-100

End Sem. Exam–3 Hrs

Course Objectives:

1. To provide sufficient mathematical and physical background to formulate real life problems in hydraulic and environmental engineering structures
2. To design RCC and pre stressed pipes
3. To design all types of water tanks
4. To design special purpose structures
5. To repair and rehabilitate hydraulic structures using various repair methods
6. To design structures used in water and sewerage works

Course Outcomes:

1. Understand sufficient mathematical and physical background to formulate real life problems in hydraulic and environmental engineering structures
2. Design RCC and pre stressed pipes
3. Design all types of water tanks
4. Design special purpose structures
5. Repair and rehabilitate hydraulic structures using various repair methods
6. Design structures used in water and sewerage works

UNIT I DESIGN OF PIPES 9

Design of Concrete, Pre-stressed Concrete, Steel and Cast iron piping mains, sewerage tanks design - anchorage for pipes - massive outfalls - structural design and laying - hydrodynamic considerations. Advances in the manufacturing of pipes.

UNIT II ANALYSIS AND DESIGN OF WATER TANKS 9

Design of circular, rectangular, spherical and Intze type of tanks using concrete. Design of pre-stressed concrete cylindrical tanks - Economic analysis - introduction to computer aided design and packages.

UNIT III DESIGN OF SPECIAL PURPOSE STRUCTURES 9

Underground reservoirs and swimming pools, Intake towers, Structural design including foundation of water retaining structures such as settling tanks, clarifloculators, aeration tanks etc. - effect of earth pressure and uplift considerations - selection of materials of construction.

UNIT IV REPAIR AND REHABILITATION OF STRUCTURES 9

Diagnosing the cause and damage, identification of different types of structural and non-structural cracks – repair and rehabilitation methods for Masonry, Concrete and Steel Structures.

UNIT V STRUCTURES USED IN WATER AND SEWERAGE WORKS 9

Exposure on steel, lattice structures used in water and sewerage works. Design of hydraulic structures-Selection of types of dams- Development of storage dams in India-Design of hydropower installation- Intake structures- Water conductor structures- tunnels – surge tanks- Penstocks- Values – anchor blocks- type of power house- Turbines and their foundations.

Total Hours:45

SUGGESTED READINGS:

web sites:

1. www.springer.com
2. www.nptel.com

Course Objectives:

1. To study various types and sources of air pollution and its effects
2. To understand methods of source and ambient monitoring and dispersion of pollutants and their modeling
3. To understand the principles and design of control of particulate pollutants
4. To understand the principles and design of control of gaseous pollutant
5. To analyze the sources, effects and control of vehicular, indoor air and noise pollution
6. To impart knowledge on types and sources of air pollution, its effects and design of control methods

Course outcomes:

1. Understand various types and sources of air pollution and its effects
2. Know source and ambient monitoring and dispersion of pollutants and their modeling
3. Determine the principles and design of control of particulate pollutants
4. Determine the principles and design of control of gaseous pollutant
5. Analyze the sources, effects and control of vehicular, indoor air and noise pollution
6. Understand the types and sources of air pollution, its effects and design of control methods

UNIT I INTRODUCTION**9**

Air resource management system - Air quality management - Scales of air pollution problem - Sources and classification of pollutants and their effect on human health vegetation and property - Global implications of air pollution - Meteorology Fundamentals - Atmospheric stability - Micrometeorology - Atmospheric turbulence - mechanical and thermal turbulence - Wind profiles - Atmospheric Diffusion - Atmospheric diffusion theories - Steady-state atmospheric diffusion equation – Plume rise - Diffusion models – Software applications - Ambient air quality and emission standards – Air pollution indices – Indoor Air Pollutants – Models – Air Quality Sampling and Monitoring.

UNIT II CONTROL OF PARTICULATE CONTAMINANTS:**9**

Settling chambers - Filters, gravitational, Centrifugal – multiple type cyclones, prediction of collection efficiency, pressure drop, wet collectors, Electrostatic Precipitation theory – ESP design – Operational Considerations – Process Control and Monitoring – Case Studies.

UNIT III CONTROL OF GASEOUS CONTAMINANTS:**9**

Absorption – principles - description of equipment-packed and plate columns - design and performance equations – Adsorption - principal adsorbents - Equipment descriptions – Design and performance equations – Condensation - design and performance equation – Incineration - Equipment description - design and performance equations - Biological Air Pollution Control Technologies – Bio-Scrubbers, Biofilters – Operational Considerations – Process Control and Monitoring – Case Studies.

UNIT IV EMERGING TRENDS:**9**

Process Modification – Automobile Air Pollution and its control – Fuel Modification - Mechanical Particulate Collectors – Entrainment Separation – Internal Combustion Engines – Membrane Process – Ultraviolet Photolysis – High Efficiency Particulate Air Filters – Technical & Economic Feasibility of selected emerging technologies for Air pollution control – Control of Indoor Air Quality – Radio active pollution and its control.

UNIT V AIR POLLUTION SURVEY**9**

Air pollution survey – Air pollution legislation and regulations – Industrial plant location and city planning – Air pollution in Indian cities. Case Studies – cement industry, refineries, fertilizers, paper – sources of pollutants and its controls, cost benefit analysis.

Total Hours: 45**SUGGESTED READINGS:**

1. Lawrence K.Wang, Norman C Perelra, Yung-Tse Hung (2004), Air Pollution Control Engineering, Tokyo
2. Noel de Nevers, (2016), Air Pollution Control Engg. McGraw-Hill, New York.
3. Anjaneyulu.Y, (2002), Air Pollution & Control Technologies, Allied Publishers (P) Ltd, India.
4. David H.F Liu, Bela G.Liptak, (2000), Air Pollution, Lewis Publishers.

Web Sites:

1. www.springer.com
2. www.nptel.com

Course Objectives:

1. To educate the students in detailed design concepts related to water transmission mains, water distribution system and buried pipes with emphasis on computer application
2. To analyze the design of water distribution system and various nodes.
3. To Perform the network design of the pipes & flow analysis.
4. To assess the reliability and uncertainty of the design.
5. To study the pipe distribution software's and sewer design.
6. To get knowledge about the importance of storm water distribution.

Course Outcomes:

At the time of completion of this course, students will know about

1. The students will be able to get a basic knowledge of the design of pipe networks.
2. They will be able to analyze pipe network problems using computer software like EPANET2.0
3. The student can able to perform the network design of the pipes & flow analysis.
4. Educate the students in detailed design concepts related to water transmission mains, water distribution system and buried pipes with emphasis on computer application.
5. The student can assess the reliability and uncertainty of the design.
6. They can able to know the importance of storm water distribution.

UNIT I WATER SUPPLY SYSTEMS 9

Water requirement – sources of water – water demand – reservoir storage – nodal hydraulic gradient level values - water supply consideration, Types of water supply systems- piping system- distribution network- labeling- network components – Network models – design – optimization in practice

UNIT II HYDRAULIC PRINCIPLES AND NETWORK PARAMETERS 9

Energy and hydraulic gradient lines – head loss in links – equivalent pipes – series – parallel pipes – path head loss and loop head loss – analysis of water distribution network- static node, dynamic node – network performance – flow analysis - Layout – in situ lining - pipes material – appurtenances – minimization of water losses – leak detection.

UNIT III STORM WATER DISTRIBUTION AND BURIED PIPES 9

Planning – runoff estimation – rainfall data analysis – storm water drain design Introduction to Buried pipes – external loads – gravity flow design, pressurized flow- rigid and flexible pipes – installation – trenchless technology

UNIT IV RELIABILITY ASSESSMENT AND DESIGN 9

Uncertainty and reliability – affecting events- assessment – reliability parameters- configurations. Design methodology - strengthening and expansion

UNIT V SOFTWARE APPLICATIONS 9

Use of software in water transmission, water distribution and sewer design – LOOP 4.0, SEWER, EPANET, BRANCH, SEWERCAD, WATERCAD, STORMNET

Total Hours:45

2. Bajwa. G. S(2003). Practical handbook on Public Health Engineering, Deep publishers, Shimla.
3. CPHEEO(2016). Ministry of Urban Development, GOI, New Delhi
4. B.A. Hauser(2011). Practical hydraulics Hand Book, Lewis Publishers, New York.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

1. Students will be exposed to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related work.
2. They will learn about the latest developments in ground water applications to drainage on the basis of a clear understanding of the principles of drainage engineering.
3. To Understand the interaction among various processes in the Combined irrigation and drainage systems.
4. To Apply the application of drainage system and its design.
5. To study the design procedures for drainage system and its management.
6. To get knowledge about the salt balance of the root zone.

Course Outcomes:

At the time of completion of this course, students well know about

1. This course impacts knowledge about the need for irrigation drainage system and its design.
2. In addition, it enabled to manage the salinity problems and leaching process.
3. The students can able to apply the usage of drainage system and its design.
4. They can have more knowledge about the irrigation practice.
5. They can design the drainage system without others help.
6. They can get information about the irrigation and drainage system.

UNIT I BASICS OF GROUND WATER 9

Occurrence of Ground water – Utilization – Ground water component in hydrologic cycle – Geological formations – Types of aquifers and their characteristics – Ground water movement – Darcy's Law.

UNIT II GROUND WATER HYDRAULICS RELATED TO DRAINAGE 9

Steady and unsteady flow of ground water– Ground water recharge – Dupuit-Forchheimer assumptions - Subsurface flow into drains – Steady and unsteady state drainage equations – Seepage from river into aquifers – Seepage from open channels.

UNIT III DRAINAGE PRINCIPLES AND CRITERIA 9

Factors to be considered in land drainage – Combined irrigation and drainage systems - Water balance – Equations for water balance – Drainage surveys – Agricultural drainage criteria – Effect of field drainage systems on agriculture.

UNIT IV DESIGN AND MANAGEMENT OF DRAINAGE SYSTEMS 9

Drainage materials – Surface drainage systems, their components and applications in sloping areas – Subsurface drainage systems – Mole drainage - Tube well irrigation - Drainage application and design – Management and maintenance of drainage systems.

UNIT V SALINITY CONTROL 9

Salinity in relation to irrigation and drainage – Salt balance of the root zone – Leaching process – Bio drainage – Environmental aspects of drainage.

Total Hours:45

SUGGESTED READINGS:

1. Todd D.K(2011). Ground Water Hydrology, Ground Water Hydrology.
2. Ground Water Hydrology(2007). Ground Water, Wiley Eastern Ltd., New Delhi.
3. Kessler J(2003). Drainage Principles and Applications Vol. II and IV, International Institute of Land Reclamation and Improvement.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca

Course Objectives:

1. To educate the students on the principles of rural water supply and sanitation and to develop understanding of factors governing the aspects in rural water supply and sanitation.
2. To Understand the impact of humans on environment and environment on humans.
3. To be able to identify and value the effect of the sanitation on the environment.
4. To select the most appropriate technique for the treatment of water, wastewater solid waste and contaminated air.
5. To plan strategies to control, reduce the effect and monitor ponds.
6. To know the different designing elements in sewer systems

Course Outcomes:

1. Analyze the impact of humans on environment and treating by disinfection method.
2. Be able to plan strategies to control, reduce and monitor filters.
3. Be able to select the most appropriate technique for the treatment of water, wastewater solid waste and contaminated air.
4. Be conversant with basic environmental legislation.
5. Able now the different designing elements in sewer systems.
6. Have knowledge about the pollution and its control.

UNIT I DEVELOPMENT OF WATER SOURCES 9

Sources of water – Surface and ground water sources – Development of deep bore wells; Estimation of yield – Alternate sources of water supply – Rain water harvesting - pumps – Types and selection of pumps for deep bore wells – Construction, operation and maintenance.

UNIT II WATER TREATMENT 9

Quality of water – Standards - conventional water treatment – Technologies for removal of specific contaminants; Iron, Arsenic, Fluoride, T.D.S; Disinfection – Alternate disinfection methods – solar disinfection.

UNIT III SANITATION 9

Basic requirement of sanitation; Decentralized / onsite wastewater management; small bore / settled effluent sewer system – Design and operation.

UNIT IV SEWAGE TREATMENT 9

Fundamentals of sewage treatment; Decentralized sewage treatment; Septic tank with depression pit – DEWATS, Intermittent sand filters – Anaerobic filters – Waste stabilization ponds – Design and operation.

UNIT V SEWAGE DISPOSAL AND REUSE 9

Methods of disposal, Land disposal, sewage farms – Artificial recharge of ground water; Recycle and Reuse of sewage – Grey water Harvesting – Salt water intrusion and remediation – Ground water pollution and remediation.

4. Todd, D.K(2006). Ground Water Hydrology, John Wiley & Sons, New York.

5. F.R. Spellman(2013). Hand Book of Water and Wastewater Treatment Plant operations, CRC Press, New York

.websites:

1. www.nptel.com
2. www.civil.ubc.ca
3. www.aboutcivil.com

Course Objectives:

- The objective of this course is enabling the student to understand the basic empirical works.
- To gain the knowledge of the residence and movement of groundwater, as well as a number of quantitative aspects.
- To understand the hydrological parameters.
- To study about the ground water hydraulics.
- To gain the methods of analysis for unconfined aquifer
- To design the construction of wells

Course Outcomes:

1. At the end of the course, the student should be able to evaluate the aquifer parameters and groundwater resources for different hydro-geological boundary conditions.
2. Students are able to understand aquifer properties and its dynamics after the completion of the course.
3. It imparts exposure towards well design and practical problems of ground water aquifers.
4. They can able to design the construction of wells.
5. To study about the ground water hydraulics.
6. To gain the methods of analysis for unconfined aquifer

UNIT I GENERAL 9

Historical background – Characterization of groundwater – Utilization of groundwater – Groundwater in hydrological cycle – Origin of groundwater – Aquifer – Types of aquifer – other geological formations.

UNIT II HYDRO GEOLOGICAL PARAMETERS 9

Interstices – Porosity – Specific yield – Specific retention – Specific storage and storage coefficient – Intrinsic permeability – Hydraulic conductivity – Transmissivity, safe yield – factors controlling safe yield – Darcy's Law and limitations.

UNIT III GROUND WATER HYDRAULICS 9

Ground water potentials – Classic properties of aquifer skeleton and water, basic principles – ground water flow equations – Flow nets – Dupuit-Forchheimer assumptions – Seepage from and to streams – Well hydraulics – Well losses – Image well theory – Partial penetrations of wells – Interference of wells – Collector wells and infiltration galleries.

UNIT IV PUMPING TEST ANALYSIS 9

Methods of analysis for unconfined and non-leaky and leaky confined aquifer and water table aquifer – locating hydro-geological boundaries – determination of well characteristics and specific capacity of wells – well characteristics for large diameter wells.

UNIT V DESIGN AND CONSTRUCTION 9

Well design criteria – Construction of wells – Well drilling methods – filter design – artificial and natural packing – well casing and screens – production test – maintenance of production wells.

Total Hours:45**SUGGESTED READINGS:**

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

1. To teach the students about rivers, its classification and river hydraulics.
2. To analyses the River mechanics, surveys, models and river maintenance.
3. To design about the river hydraulics, Boundary conditions and back waters.
4. To do mapping and measurement of discharge surveys and models.
5. To manage the river training and regulation works.
6. To study the Rivers of India, Himalaya and Peninsular regions.

Course Outcomes:

At the end of this course the students

1. The student will understand theoretical concepts of water and sediment movements in rivers
2. They will inculcate the benefits of fluvial system to the society.
3. Design about the river hydraulics, Boundary conditions and back waters.
4. They can able to do mapping and measurement of discharge surveys and models.
5. Manage the river training and regulation works, Flood plain management.
6. Analyses the River mechanics, surveys, models and river maintenance.

UNIT I RIVER FUNCTIONS 9

Primary function of a river – River uses and measures – Water and Sediment loads of river – Rivers in India, Himalaya and Peninsular.

UNIT II RIVER HYDRAULICS 9

Physical Properties and Equations – Steady flow in rivers – uniform and non uniform – Turbulence and velocity profiles – resistance co efficient – Boundary conditions and back waters – Transitions – Rating Curve – Unsteady flow in rivers : Propagative of surface waves – Characteristics, flood waves – knematic and diffusion analogy – velocity of propagation of flood waves – Flood wave –Maximum

UNIT III RIVER MECHANICS 9

River Equilibrium : Stability of Channel – regime relations – river bend equilibrium – hydraulic geometry of downstream - Bars and meandering - River dynamics – degradation and aggradation of river bed – Confluences and branches – River Data base.

UNIT IV RIVER SURVEYS AND MODEL 9

Mapping – Stage and Discharge Measurements – Sediments – Bed and suspended load – Physical hydraulic Similitude – Rigid and mobile bed – Mathematical – Finite one dimensional – multi – dimensional – Water Quality and ecological model

UNIT V RIVER MANAGEMENT 9

River training works and river regulation works – Flood plain management – waves and tides in Estuaries - Interlinking of rivers – River Stabilization

Total Hours:45**SUGGESTED READINGS:**

2. Pierre Y. Julien(2018). River Mechanics, Cambridge Karpagam academy of Higher Education Press.

3. K.L Rao(2011). INDIA's WATER WEALTH, Orient Longman Ltd.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca
5. www.aboutcivil.com

Course Objectives:

1. To estimate index properties of soils (coarse and fine).
2. To estimate shear strength of soils by direct shear test, triaxial shear test, vane shear test & unconfined compressive test.
3. To estimate the engineering properties of the soils by density test, CBR test permeability test and consolidation test.
4. To Perform laboratory experiments to estimate various Atterberg limits and evaluate index properties of soils
5. To determine the permeability of soils through various laboratory and field tests;
6. To perform laboratory test to determine the maximum dry density and optimum moisture content of the soil

Course Outcomes:

On completion of the course, the students will be able to:

1. Classify soil by physical observation of the soils.
2. Classify soil based on estimated index and engineering characteristics of soils.
3. Carry out interpolation among the estimated soil design parameters.
4. Prepare a soil investigation report based on borehole log data and various in-situ tests like SPT, CPT, etc.
5. Estimate various Atterberg limits and evaluate index properties of soils
6. Get familiar with the various test available for determining the permeability of soil.

LIST OF EXPERIMENTS

1. Specific gravity of soil grains(Specific gravity bottle &Pycnometer)
2. Grain size distribution - Sieve analysis
3. Relative density of sands
4. Atterberg limits test
 - a) Liquid Limit
 - b) Plastic Limit
 - c) Shrinkage Limit
5. Determination of moisture - Density relationship using standard Proctor test.
6. Permeability determination (constant head and falling head methods)
7. Determination of shear strength parameters.
 - a) Direct shear test on cohesion less soil
 - b) Unconfined compression test on cohesive soil
 - c) Triaxial compression test (Study Experiment)
8. One dimensional consolidation test (Determination of co-efficient of consolidation only, Study Experiment)
9. Field density test
 - a) Core cutter and
 - b) Sand replacement methods

SUGGESTED READINGS:

1. Head, K.H(2009). Manual of Soil Laboratory Testing (Vol-1 to 3), John Wiley & Sons, Chichester.
2. Lambe T.W(2009). Soil Testing for Engineers, John Wiley and Sons, New York.
3. Saibaba Reddy, E. and Rama Sastri, K(2002). Measurement of Engineering Properties of Soils, New Age International Publishers, New Delhi.
4. I.S.Code of Practice (2720) Relevant Parts, as amended from time to time

Course Objectives:

1. This subject is enabling the student to develop environmentally sound solutions to geotechnical problems
2. To solve environmental engineering problems unique to several soil and subsurface conditions.
3. To understand soil water environment interaction relating to geotechnical problems.
4. To study the effect of pollution on soil water behavior- Sources, production and classification of wastes.
5. To implement Ground modification techniques and remediation technology
6. To give solution for environmental related problems

Course Outcomes:

At the end of course students able to know about

1. Environmentally sound solutions to geotechnical problems
2. Environmental engineering problems unique to several soil and subsurface conditions.
3. Soil water environment interaction relating to geotechnical problems.
4. Effect of pollution on soil water behavior- Sources, production and classification of wastes.
5. Ground modification techniques and Remediation technology

Solution for environmental related problems

UNIT I INTRODUCTION**9**

Introduction to Environmental Geotechniques-Environmental cycles and their interaction-Soil water environment interaction relating to geotechnical problems-Effect of pollution on soil water behaviour-Sources,production and classification of wastes-Environmental regulations in India-Case studies of foundation failures by ground contamination.

UNIT II SITE SELECTION AND METHOD OF DISPOSALS**9**

Criteria for selection of sites for waste disposal facilities-parameters controlling the selection of wastes disposal sites-current practices for waste disposal, subsurface disposal techniques-Passive contaminant systems-Leachate contamination-applications of geomembrane and other techniques in solid and liquid waste disposal-rigid or flexible membrane liners.

UNIT III HYDROLOGY OF CONTAMINANTS**9**

Transport phenomena in saturated and partially saturated porous media-contaminant migration and contaminant hydrology-Hydrological design for ground water pollution control-Ground water pollution downstream for landfills Bearing capacity of compacted fills-foundation for waste fill ground-pollution of aquifers by mining and liquid wastes-protection of aquifers

UNIT IV HAZARDOUS WASTE DISPOSAL**9**

Hazardous waste control and storage system-Stabilisation/Solidification of wastes-Processes and Functions- Monitoring and performance of contaminant facilities-Environmentally safe disposal of solid and liquid waste

UNIT V REMEDIAL MEASURES: Ground modification techniques in waste fill, Remedial measures for contaminated grounds-Remediation technology-Bio-remediation

9**Total Hours:45**

SUGGESTED READINGS:

Course Objectives:

1. To formulate research problem
2. To carry out research analysis
3. To follow research ethics
4. To understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity
5. To understand about IPR and filing patents in R & D.
6. To analyze research related information

Course Outcomes:

1. Ability to formulate research problem
2. Ability to carry out research analysis
3. Ability to follow research ethics
4. Ability to understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity
5. Ability to understand about IPR and filing patents in R & D.
6. Analyze research related information

UNIT 1: RESEARCH PROBLEM

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

UNIT 2: LITERATURE STUDIES

Effective literature studies approaches, analysis Plagiarism, Research ethics,

UNIT 3: TECHNICAL WRITING

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.

UNIT 4: NATURE OF INTELLECTUAL PROPERTY:

Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

UNIT 5: PATENT RIGHTS:

Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications, New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

18PMEWE3E01**ENVIRONMENTAL IMPACT ASSESSMENT OF WATER****RESOURCES DEVELOPMENT****3H:3C**

Instruction Hours/ Week : L:3 T: 0 P: 0

Marks: Internal-40 , External-60; Total-100

End Sem. Exam-3 Hrs

Course Objectives:

1. To understand need for environmental clearance, its legal procedure, need of EIA, its types, stakeholders and their roles
2. To understand various impact identification methodologies, prediction techniques and model of impacts on various environments
3. To understand relationship between social impacts and change in community due to development activities and rehabilitation methods
4. To document the EIA findings and prepare environmental management and monitoring plan
5. To identify, predict and assess impacts of similar projects based on case studies
6. To understand the need and methodology adopted for environmental impact assessment

Course Outcomes:

1. Understand need for environmental clearance, its legal procedure, need of EIA, its types, stakeholders and their roles
2. Understand various impact identification methodologies, prediction techniques and model of impacts on various environments
3. Understand relationship between social impacts and change in community due to development activities and rehabilitation methods
4. Document the EIA findings and prepare environmental management and monitoring plan
5. Identify, predict and assess impacts of similar projects based on case studies
6. Understand the need and methodology adopted for environmental impact assessment

UNIT I ENVIRONMENTAL ISSUES**9**

Water resources development and environmental issues – Environment in water resources project planning – Environmental regulations and requirements – The EIA (Environmental Impact Assessment) notification

UNIT II EIA FUNDAMENTALS**9**

Environmental Impact Assessment (EIA) – Environmental Impact Statement – EIA in Project Cycle – Legal and Regulatory aspects in India according to Ministry of Environment and Forests – Types and limitations of EIA – Cross sectoral issues and terms of reference in EIA – Participation of Public and Non-Governmental Organizations in environmental decision making

UNIT III ENVIRONMENTAL IMPACTS**9**

Hydrological and water quality impacts – Ecological and biological impacts – Social and cultural impacts – Soil and landscape changes – Agro economic issues – Human health impacts – Ecosystem changes.

UNIT IV METHODS OF EIA**9**

EIA team formation – Development of scope, mandate and study design – Base line survey – Check lists – Ad hoc procedures – Network and matrix methods – Semi-quantitative methods – ICID checklist – Economic approaches – Environmental Impact Statement (EIS) preparation.

UNIT V ENVIRONMENTAL MANAGEMENT

9

In-stream ecological water requirements - Public participation in environmental decision making – Sustainable water resources development – Eco restoration – Hydrology and global climate change – Human ecology – Ecosystem services – Environmental monitoring programs.

Total Hours:45

SUGGESTED READINGS:

5. Arnel, N(2014). Hydrology and global environmental change, Prentice Hall, Harlow.

web sites:

1. www.springer.com
2. www.nptel.com

Course Objectives:

1. This subject is enabling the student to educate the various instrumental methods of monitoring the quality of air, water, soil and its parameters.
2. To analyze the quality and control and its assurance.
3. To study about the various spectroscopic methods such as fluorimetry, nephelometry and turbidimetry.
4. To get knowledge about the electro and radio analytical methods.
5. To assess the Principles, techniques and applications of NDIR analyzer for Continuous monitoring systems.
6. To study about the various Chromatographic methods such as Column, Paper and thin layer chromatography

Course Outcomes:

At the end of this course the students will understand

1. Use Spectroscopic Method, Chromatographic Method, Electro and Radio Analytical Methods in environmental quality monitoring.
2. Analyze the quality and control and its assurance.
3. The students can able to study about the various spectroscopic methods such as fluorimetry, nephelometry and turbidimetry.
4. They can assess the Principles, techniques and applications of NDIR analyzer for Continuous monitoring systems.
5. Study about the various Chromatographic methods such as Column, Paper and thin layer chromatography
6. They can get knowledge about the electro and radio analytical methods.

UNIT I INTRODUCTION**9**

Wet Chemistry methods and their limitations-Instrumental Methods, Selection of method- Precision and Accuracy, Error in measuring signals- Quality control & assurance- Sample preservation, Sample preparation and analyte isolation.

UNIT II SPECTROSCOPIC METHODS**9**

Principles, techniques and applications of spectrophotometry, fluorimetry, nephelometry and turbidimetry, Atomic Absorption Spectrometry (Flame, graphite furnace and hydride generation), Atomic Emission Spectrometry (AES) , flame and Inducted Coupled Plasma (ICP) – TOC Analyzer

UNIT III CHROMATOGRAPHIC METHODS**9**

Column, Paper and thin layer chromatography (TLC)- Principles, techniques and applications of GC, GC-MS, High performance liquid chromatography (HPLC) and Ion chromatograph (IC)- Hyphenated techniques for Environmental contaminant(trace organics) analysis.

UNIT IV ELECTRO AND RADIO ANALYTICAL METHODS**9**

Principles, techniques and applications of Conductometry, potentiometry, coulometry, AOX analyzer Amperometry, polarography, New Activation Analysis (NAA), X-ray Fluorescence (XRF) and X-ray Diffraction (XRD) methods.

UNIT V CONTINUOUS MONITORING INSTRUMENTS

9

Principles, techniques and applications of NDIR analyzer for CO, chemiluminescent analyzer for NO_x Fluorescent analyzer for SO₂- Particulates analysis- Auto analyzer for water quality using flow injection analysis.

Total Hours:45

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca

Course Objectives:

1. This subject is enabling the student to educate the various environmental health hazards and safety methods in industries.
2. This subject serves as a synopsis of the three majors environmental, health, and safety (EHS) disciplines.
3. They can able to fit and work together within the organizational structure of a facility.
4. Provide a safe place of employment. provide a safe working environment.
5. Provide a written safety policy/risk assessment. look after the health and safety of others.
6. Will assist you in identifying safety and occupational health issues, and any environmental aspects.

Course Outcomes:

At the end of this course

1. The student acquires the knowledge about the health hazards and the safety measures to be followed in the industrial environment.
2. Also, the different techniques and training followed in the industrial environment.
3. Providing a safe place of employment and safe working environment.
4. Assist students in identifying safety and occupational health issues, and any environmental aspects.
5. Able to know the procedures and precautionary measures necessary when handling hazardous substances.
6. To know about the factors to be considered in the development of effective training programmes.

UNIT I INTRODUCTION**9**

Need for developing Environment, Health and Safety systems in work places. Status and relationship of Acts, Regulations and Codes of Practice. Role of trade union safety representatives. International initiatives. Ergonomics and work place.

UNIT II OCCUPATIONAL HEALTH AND HYGIENE**9**

Definition of the term occupational health and hygiene. Categories of health hazards. Exposure pathways and human responses to hazardous and toxic substances. Advantages and limitations of environmental monitoring and occupational exposure limits. Hierarchy of control measures for occupational health risks. Role of personal protective equipment and the selection criteria. Effects on humans, control methods and reduction strategies for noise, radiation and excessive stress.

UNIT III WORKPLACE SAFETY AND SAFETY SYSTEMS**9**

Features of the satisfactory design of work premises HVAC, ventilation. Safe installation and use of electrical supplies. Fire safety and first aid provision. Significance of human factors in the establishment and effectiveness of safe systems. Safe systems of work for manual handling operations. Control methods to eliminate or reduce the risks arising from the use of work equipment. Requirements for the safe use of display screen equipment. Procedures and precautionary measures

necessary when handling hazardous substances. Contingency arrangements for events of serious and imminent danger.

UNIT IV TECHNIQUES OF ENVIRONMENTAL SAFETY

9

Elements of a health and safety policy and methods of its effective implementation and review. Functions and techniques of risk assessment, inspections and audits. Investigation of accidents- Principles of quality management systems in health and safety management. Relationship between quality manuals, safety policies and written risk assessments. Records and other documentation required by an organisation for health and safety. Industry specific EHS issues.

UNIT V EDUCATION AND TRAINING

9

Requirements for and benefits of the provision of information, instruction, training and supervision. Factors to be considered in the development of effective training programmes. Principles and methods of effective training. Feedback and evaluation mechanism.

Total Hours:45

SUGGESTED READINGS:

1. Nicholas P. Cheremisinoff and Madelyn L. Graffia(2007). Environmental and Health and Safety Management, William Andrew Inc. NY.
2. Brian Gallant(2007). The Facility Manager's Guide to Environmental Health and Safety, Government Inst Publ.
3. Bill Taylor(2005). Effective Environmental, Health, and Safety Management Using the Team Approach, Culinary and Hospitality Industry Publications Services.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca
5. www.aboutcivil.com

Course Objectives:

1. To apply the knowledge of fluid mechanics to analyze and predict mixing in natural bodies of water.
2. To study the hydrodynamic aspects of water quality management in natural bodies of water.
3. Apply the application of fluid mechanics and use of computers in solving a host of problems in environment hydraulic engineering.
4. Study types and classes of hydraulic simulation models and design procedures for safe and effective passage of flood flows for design of hydraulic structures
5. To cover the fundamental relationship for flow and transport.
6. To study about the reservoir classification and external energy sources.

Course Outcomes:

1. The students will be able to gain a basic knowledge advection-dispersion processes in the environment.
2. They will gain the skills to take up research activities solving environmental problems involving fluid motions.
3. Solve the Derivation of different types of diffusion equations.
4. Study the transport processes in lakes and reservoirs.
5. To get more knowledge about the transport processes in the estuaries.
6. Calculate the Systems and Control Volume approach

UNIT I FUNDAMENTAL RELATIONSHIPS FOR FLOW AND TRANSPORT 9

Concentration and units of measure – Conservation laws – Systems and Control Volume approach – Differential element approach – Sources, Sinks and box-models – Mixing.

UNIT II DIFFUSION AND DISPERSION 9

Derivation of diffusion equation – Solution of diffusion equation – Advective diffusion – Turbulent diffusion – Shear flow diffusion.

UNIT III TRANSPORT PROCESSES IN RIVERS 9

Mixing in Rivers – Continuous point discharges – Two rivers mixing – Dispersion in rivers.

UNIT IV TRANSPORT PROCESSES IN LAKES AND RESERVOIRS 9

Reservoir classification – External energy sources – Surface layer – mixing in the hypolimnion – inflows and outflows.

UNIT V TRANSPORT PROCESSES IN THE ESTUARIES 9

Classification – Forces – wind, tides, rivers – Trapping and pumping – Estuarine Circulation.

Total Hours:45**SUGGESTED READINGS:**

1. Fischer, H.B., List, E.G., Koh, R.C.Y., Imberger(2010). Mixing in Inland and Coastal Waters, Academic Press, New York.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

1. This subject includes the list of experiments to be conducted to teach the principles and applications of remote sensing, GPS and GIS in the context of water resources.
2. To know the importance of remote sensing and GIS in solving the spatial problems in water resources.
3. To expertise in digital image processing
4. To gain good exposure to the Global positioning system in real time data processing
5. To know the potential of Geographical Information System
6. To use Data integration between Satellite data, GPS and GIS in Decision Making

Course Outcomes

1. The principles and applications of remote sensing, GPS and GIS in the context of water resources.
2. The importance of remote sensing and GIS in solving the spatial problems in water resources.
3. Expertise in digital image processing
4. Good exposure to the Global positioning system in real time data processing
5. Potential of Geographical Information System
6. Data integration between Satellite data, GPS and GIS in Decision Making

List of Experiment

1. Registration of spatial data
2. GPS- Mapping-Transformation
3. Different data format
4. Creating spatial data- Attribute entry- spatial analysis
5. Reclassification
6. Over lay analysis
7. Interpolation
8. Digital Elevation Model.

Total Hours : 30

Course Objectives:

1. To gain a brief knowledge on different hazardous waste and its disposal methods.
2. To provide students with the necessary background and knowledge about the various sources.
3. To know the on-site/off-site processing of the Solid waste management and the disposal methods.
4. To characterize the waste and its sources with various test available for checking the quality.
5. To know the different methods available for storage and collection of municipal solid wastes.
6. To gain the knowledge of processing and conversion technologies.

Course Outcomes:

1. Brief knowledge on different hazardous waste and its disposal methods.
2. The necessary background and knowledge about the various sources.
3. The on-site/off-site processing of the Solid waste management and the disposal methods.
4. Characterize the waste and its sources with various test available for checking the quality.
5. Different methods available for storage and collection of municipal solid wastes.
6. Processing and conversion technologies used in solid and hazardous waste technologies.

UNIT I INTRODUCTION**9**

Types and Sources of solid and hazardous wastes - Need for solid and hazardous waste management – Elements of integrated waste management and roles of stakeholders - Salient features of Indian legislations on management and handling of municipal solid wastes, hazardous wastes, biomedical wastes, lead acid batteries, plastics and fly ash.

UNIT II WASTE CHARACTERISATION AND SOURCE REDUCTION**9**

Waste generation rates and variation - Composition, physical, chemical and biological properties of solid wastes – Hazardous Characteristics – TCLP tests – waste sampling and characterization plan - Source reduction of wastes – Recycling and reuse – Waste exchange.

UNIT III STORAGE, COLLECTION AND TRANSPORT OF WASTES**9**

Handling and segregation of wastes at source – storage and collection of municipal solid wastes – Analysis of Collection systems - Need for transfer and transport – Transfer stations Optimizing waste allocation– compatibility, storage, labeling and handling of hazardous wastes – hazardous waste manifests and transport.

UNIT IV WASTE PROCESSING TECHNOLOGIES**9**

Objectives of waste processing – material separation and processing technologies – biological and chemical conversion technologies – methods and controls of Composting - thermal conversion technologies and energy recovery – incineration – solidification and stabilization of hazardous wastes - treatment of biomedical wastes.

UNIT V WASTE DISPOSAL

9

Waste disposal options – Disposal in landfills - Landfill Classification, types and methods – site selection - design and operation of sanitary landfills, secure landfills and landfill bioreactors – leachate and landfill gas management – landfill closure and environmental monitoring – closure of landfills – landfill remediation.

Total Hours:45

SUGGESTED READINGS:

1. George Tchobanoglous, Hilary Theisen and Samuel A. Vigil(2007). Integrated Solid Waste Management, McGraw-Hill International edition, New York.
2. CPHEEO(2018). Manual on Municipal Solid waste management, Government of India, New Delhi.
3. Micheael D. LaGrega, Philip L Buckingham, Jeffrey C. E vans(2010). Environmental Resources Management, Hazardous waste Management, McGraw-Hill International edition, New York.
4. Vesilind P.A., Worrell W and Reinhart(2011). Solid waste Engineering, Thomson Learning Inc., Singapore.

web sites:

1. www.springer.com
2. www.nptel.com

Course Objectives:

1. To gain the knowledge of management models to estimate the groundwater quantity and qualities.
2. To understand the inputs, system parameters, policy, variables and outputs of a groundwater management models.
3. To know the different methods available for investigation of groundwater.
4. To gain the knowledge of groundwater flow model.
5. To gain the conceptual model design.
6. To analyses the Groundwater contamination, restoration and management methods.

Course Outcomes:

1. Students are able to develop and apply numerical model for various application along with better understanding aquifer characteristics
2. The knowledge of management models to estimate the groundwater quantity and qualities.
3. Understand the inputs, system parameters, policy, variables and outputs of a groundwater management models.
4. The different methods available for investigation of groundwater.
5. The knowledge of groundwater flow model.
6. Analyses the Groundwater contamination, restoration and management methods.

UNIT I GROUNDWATER PROSPECTING**9**

Investigation and evaluation – Geophysical methods- Electrical Resistivity methods – Interpretation of data – Seismic method – Subsurface investigation – Test drilling – Resistivity logging – Application of remote sensing techniques.

UNIT II GROUNDWATER FLOW MODEL**9**

Physical models – Analog models – Mathematical modeling – Unsaturated flow models Numerical modeling of groundwater flow – Finite Differential equations - Finite difference solution – Successive over Relaxation, Alternating direction implicit procedure – Crank Nicolson equation – Iterative methods -Direct methods - Inverse problem – Finite element method

UNIT III CONTAMINANT TRANSPORT MODEL**9**

Contaminant transport theory – Advection, dispersion equation – Longitudinal and transverse dispersivity – Hydrodynamic dispersion – Analytical models – Numerical simulation of solute transport – Solution methods - Sorption model – Subsurface mass transport through the vadose zone - Density driven flow - Heat transport.

UNIT IV MODEL DEVELOPMENT**9**

Data requirements – Conceptual model design : Conceptualization of aquifer system – Parameters, Input-output stresses, Initial and Boundary conditions - Model design and execution : Grid design, Setting boundaries, Time discretization and Transient simulation – Model calibration : steady state

and unsteady state – sensitivity analysis – Model validation and prediction – Uncertainty in the model prediction

UNIT V GROUNDWATER MANAGEMENT MODEL

9

Optimal groundwater development – Indian GEC norms – Conjunctive use models Modeling multilayer groundwater flow system -Modeling contaminant migration – Modeling fracture flow system – Artificial recharge feasibility through modeling – Simulation of movements of solutes in unsaturated zone – Stochastic modeling of groundwater flow - Groundwater contamination, restoration and management

Total Hours:45

SUGGESTED READINGS:

5. www.aboutcivil.com

Instruction Hours/ Week : L:3 T: 0 P: 0

Marks: Internal–40 , External–60; Total-100

End Sem. Exam–3 Hrs

Course Objectives:

1. This course enables the students to know about landfill and remediation technologies in detail.
2. To know the different Waste management Hierarchy.
3. To study about the different landfill liners and cover systems.
4. To know in detail about the hydrologic Evaluation of Landfill Performance (HELP) model.
5. To understand about the landfill management.
6. To know the relevant regulations and engineering design requirements of landfills and contaminated site remediation

Course Outcomes:

1. To understand the important characteristics and design principles of the waste containment and remediation industry as well as know the relevant regulations and engineering design requirements of landfills and contaminated site remediation
2. Enables the students to know about landfill and remediation technologies in detail.
3. Know The different Waste management Hierarchy.
4. Study about the different landfill liners and cover systems.
5. The knowledge of hydrologic Evaluation of Landfill Performance (HELP) model.
6. Understand about the landfill management.

UNIT I LANDFILL BASICS**9**

Waste management Hierarchy- Need for landfills –Environmental Protection by Landfills- Landfill Classification – Sanitary and Secure Landfills - Components and Configuration – Legal framework for landfilling – Landfill Site investigation- Regional Landfills- Environmental control using site design — Landfill Design Tasks

UNIT II LANDFILL LINERS AND COVER SYSTEMS**9**

Landfill barrier system components – Design of Compacted clay liners: Factors affecting hydraulic conductivity , Water content-density criteria, Thickness, Desiccation - Geosynthetic Clay Liners and Geomembranes; types, manufacturing, handling, seaming and testing - Asphalt Barriers and Capillary barrier - Composite Liner system design- liner construction and quality control- Leakage through Liners- vapor transmission and chemical compatibility - Installation of Geomembranes - Liner Leakage Mechanism – Diffusion - Controls on advection through liners - Single phase flowadvection-diffusion- Landfill cover systems- Design of Cover Systems – Daily Cover – Intermediate Cover – Final Cover - Flow through Landfill Covers- Design and Analysis of Slope Stability- Anchor Trenches- Access ramps - Erosion control

UNIT III LEACHATE AND LANDFILL GAS MANAGEMENT**9**

Waste decomposition in landfills - Factors affecting leachate and landfill gas generation – Factors affecting Leachate Quantity in active and post closure conditions- Hydrologic Evaluation of Landfill Performance (HELP) model – Leachate Drainage Layer – Geotextile and Geonet design – Leachate Collection and Removal systems-Temporal trends in leachate composition – Design of Landfill gas

collection and removal systems- Gas condensate issues & knockouts – Leachate treatment methods (biological and physico-chemical)- Leachate re-circulation & bioreactor landfills- monitoring and control of leachate and Landfill gas- Landfill Settlement

UNIT IV LANDFILL OPERATION AND CLOSURE

9

Landfill Construction and Operational Controls – Fill Sequencing Plans – Cell Construction- Dozer and Compactor operations-Selection of Landfill Equipment- Landfill Administration-Record Keeping -Topographic mapping-Environmental Controls – Odour, Vector and Litter Control – Landfill Safety -Fire Control – Ground and Surface water Monitoring – Methane Gas monitoring - Audits of landfill environmental performance and management – Post Closure care and use of landfills – Landfill Economics- landfill construction and operational cost estimation – establishing tipping fees

UNIT V CONTAMINATED SITE REMEDIATION

9

Contaminated sites - Fate and behaviour of toxics and persistent substances in the environment – Engineering Issues in Site Remediation - Site Characterization - Framework for risk assessment at landfill sites - Remediation Principles: Source Control and Management of Migration Covers, Cutoff Walls, Solidification / Stabilization - Pump-and-Treat Systems - Solvent Vapor Extraction, Air Sparging, Soil Flushing – Bioremediation - Natural Attenuation - Remedy Selection and Risk Assessment – Geotechnical Aspects of In Situ Remediation Technology - Specific case studies in contaminated site remediation – Rehabilitation of Open dumps- Landfill Mining

Total Hours:45

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca
5. www.aboutcivil.com

Course Objectives:

1. These courses are introduced to the students to understand the basic concept of mathematical modelling
2. To know about the process simulation techniques of environmental disturbances with reference to air, water and groundwater domains.
3. To know about modeling concept and transport phenomena.
4. To understand water quality and air pollution modeling
5. To understand the transport of air Pollutants in environment.
6. To gain the knowledge of software in air quality measurement.

Course Outcomes:

At the end of this course students

1. Understand the basic concept of mathematical modelling
2. Know about the process simulation techniques of environmental disturbances with reference to air, water and groundwater domains.
3. Concept of modeling concept and transport phenomena.
4. Understand water quality and air pollution modeling
5. Understand the transport of air Pollutants in environment.
6. Knowledge of software in air quality measurement.

UNIT I MODELING CONCEPTS**9**

Casual and statistical models-Characteristics- Steps in model development - Importance of model building.- conservation of mass and mass balance –calibration and verification of models; Transport phenomena – Advection, diffusion, dispersion, simple transport models; chemical reaction kinetics – Law of mass action, Rate constants, reaction order, types of reactions, equilibrium principles.

UNIT II WATER QUALITY MODELING**9**

Water quality models – Historical development – Mass balance equation – Streeter - Phelps Equation – Modification to Streeter – Phelps Equation – Waste load allocations – Dissolved oxygen in Rivers and estuaries; Lake Water Quality Models; Models for Nitrogen, Bacteria, Phosphate and toxicants - Ground Water Quality Modeling - Contaminant solute transport equation, Numerical methods.

UNIT III AIR POLLUTION MODELING**9**

Chemistry of air Pollutants - Atmospheric reactions, sinks for air pollution –Transport of air Pollutants - Meteorological settling for dispersal of air pollutants – Vertical structure of temperature and stability, atmospheric motions, Wind and shear, self cleaning of atmosphere; transport and diffusion of stack emissions – atmospheric characteristics significant to transport and diffusion of stack emission – stack plume characteristics.

UNIT IV AIR QUALITY MODELS**9**

Types modeling technique, modeling for nonreactive pollutants, single source, short term impact, multiple sources and area sources, Fixed box models- diffusion models – Gaussian plume derivation-modifications of Gaussian plume equation- long term average-multiple cell model- receptor oriented and source oriented air pollution models- model performance, accuracy and utilization.

Software package applications: Air quality modeling and water quality modeling.

Total Hours: 45

SUGGESTED READINGS:

1. Steven C.Chapra(2008). Surface Water Quality Modeling ,The McGraw-Hill Companies, Inc., New Delhi.
2. J.L.Schnoor(2002). Environmental Modeling Fate and Transport of Pollutants in Water, Air and Soil, John Wiley & Sons Inc., New York.
3. Arthur C.Stern(2006). Air Pollutants, their transformation and Transport, Academic Press.
4. Deaton and Wine Brake(2012). Dynamic Modeling of Environmental Systems, Wiley & Sons.

Course Objectives:

1. This subject aims at making the students to understand the hydrologic extremes of floods and droughts, estimation of severity and extent of damages and the mitigation measures to combat them.
2. To know the different methods of design flood estimation and perform channel reservoir routing.
3. To carryout flood inundation modeling and suggest suitable flood control measures.
4. To acquire the knowledge about different types of drought and their impacts.
5. To assess the severity, duration and frequency of drought using drought indices.
6. To exposed to various approaches, measures and case studies of drought indices.

Course Outcomes

1. Students know the different methods of design flood estimation and perform channel reservoir routing.
2. Carryout flood inundation modeling and suggest suitable flood control measures.
3. Student acquires the knowledge about different types of drought and their impacts.
4. Asses the severity, duration and frequency of drought using drought indices.
5. Students exposed to various approaches, measures and case studies of drought indices.
6. Know the Drought severity assessment

UNIT I FLOOD ESTIMATION AND ROUTING**9**

Estimation of design flood – SPF/MPF empirical methods – Statistical methods – Frequency analysis – Unit hydrograph method – Flood estimation in small watersheds and mountainous region – Estimation by lumped, distributed model – Routing – Lumped – Distributed – Hydraulic and hydrological routing.

UNIT II FLOOD CONTROL AND MANAGEMENT**9**

Flood control methods – Structural and non structural measures - Flood plain Zoning – Flood disaster monitoring and mitigation procedure – Methods of forecasting – Data analysis and warning – Flood fighting -Remote Sensing for flood management.

UNIT III DROUGHTS**9**

Definitions based on rainfall, stream flow, vegetation and comprehensive aspects - Characterization of Drought/water shortage/aridity/desertification - NCA classification – Direct and indirect losses.

UNIT IV DROUGHT ASSESSMENT**9**

Drought indices - Drought severity assessment – meteorological, hydrological and agricultural aspects - IMD, Palmer, Herbst, Aridity Indices and Ramaprasad methods.

UNIT V DROUGHT MONITORING AND MANAGEMENT**9**

Drought monitoring - Supply and demand oriented measures – Traditional water conservation - Drought Prone Areas Programme (DPAP) – Integrated drought management – Remote Sensing Applications for drought mitigation - NDVI concepts.

Total Hours:45

18PMEWE4E06 REHABILITATION AND MODERNISATION OF IRRIGATION**SYSTEMS****3H:3C**

Instruction Hours/ Week : L:3 T: 0 P: 0

Marks: Internal–40 , External–60; Total-100

End Sem. Exam–3 Hrs

Course Objectives:

1. To expose the students to the need and importance of the rehabilitation
2. To learn modernization of irrigation systems
3. To train them in the related concepts and methods.
4. To Diagnostic analysis of flow, seepage and other parameters
5. To study about various projects and implementation
6. To analyze Distinction between rehabilitation and modernization

Course Outcomes

1. The students will be familiar in understanding the different types of maintenance problems with respect to technical and social aspects,
2. Students can overcome these problems by rehabilitation and modernization methods.
3. The students will get an overall exposure to different types of irrigation system
4. Know the maintenance issues
5. Solve issues for improving their performance based on service-oriented approach.
6. Plan Distinction between rehabilitation and modernization

UNIT I Irrigation Systems**9**

Historical evolution of irrigation systems in India; its importance to agricultural production. Irrigation system classification – Nature of system modernization and rehabilitation. Distinction between rehabilitation and modernization; Rehabilitation and modernization objectives – Theory and Practice.

UNIT II System Maintenance**9**

Maintenance: essential, catch up, preventive and normal – Diagnostic analysis of flow, seepage and other parameters through Participatory Rural Appraisal, Rapid Rural Appraisal and Walk-through Survey – Development and maintenance programme – Kudimaramath – Turnover – WUA.

UNIT III Problem Identification**9**

System performance: history of inflow, cropping pattern, system alterations, distribution performance – Operational constraints – Management constraints – Resources constraints

UNIT IV Rehabilitation**9**

Baseline survey – Deferred maintenance – Causes – Criteria used for taking rehabilitation programmes – Software and hardware improvements – Prioritization – Role of water users' association – Monitoring and evaluation.

UNIT V Implementation**9**

Rehabilitation and modernization programmes – Periyar Vaigai Project – Walawe Project – Tank Modernization Project – Water Resources Consolidation Project. IAM WARM Project.

Total Hours:45**SUGGESTED READINGS:**

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

1. To provide the technical, economical and sociological understanding of a watershed.
2. To provide a comprehensive discourse on the engineering practices of watershed management for realizing the higher benefits of watershed management.
3. To solve erosion, water and wind erosion problems
4. To examine Soil Conservation Measures: Agronomical and Mechanical
5. To Design of Small Water Harvesting Structures
6. To Evaluate of Watershed Management

Course Outcomes

1. The students will be able to apply the knowledge of overall concepts of watershed
2. Students can analyze for better management.
3. Deduct comprehensive discourse on the engineering practices
4. Assess watershed management for realizing the higher benefits of watershed management.
5. Evaluate the Design of Small Water Harvesting Structures.
6. Importance of Soil Conservation Measures: Agronomical and Mechanical

UNIT I WATERSHED CONCEPTS 9

Watershed - Need for an Integrated Approach - Influencing Factors: Geology – Soil – Morphological Characteristics - Toposheet - Delineation – Codification – Prioritization of Watershed – Indian Scenario

UNIT II SOIL CONSERVATION MEASURES 9

Types of Erosion – Water and Wind Erosion: Causes, Factors, Effects and Control – Soil Conservation Measures: Agronomical and Mechanical - Estimation of Soil Loss – Sedimentation

UNIT III WATER HARVESTING AND CONSERVATION 9

Water Harvesting Techniques – Micro-Catchments - Design of Small Water Harvesting Structures – Farm Ponds – Percolation Tanks – Yield from a Catchment

UNIT IV WATERSHED MANAGEMENT 9

Project Proposal Formulation - Watershed Development Plan – Entry Point Activities – Estimation – Watershed Economics - Agroforestry – Grassland Management – Wasteland Management – Watershed Approach in Government Programmes –Developing Collaborative know how – People's Participation – Evaluation of Watershed Management

UNIT V GIS FOR WATERSHED MANAGEMENT 9

Applications of Remote Sensing and Geographical Information System - Role of Decision Support System – Conceptual Models and Case Studies

Total Hours:45**SUGGESTED READINGS:**

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

- Students will be introduced to the role of disciplines of ecology
- To study socio-economics play in management of urban water resources management.
- They will be exposed to global food security and public-private participation issues
- To impact Legal and regulatory settings, in the context of UWRM
- To compare Management models for flow rate and volume control rate
- To take part in approaches to operations and maintenance

Course Outcomes

1. They will gain a broad understanding of the complexities of dealing with water resources problems.
2. At the end of this course the students are introduced with the concepts of urbanization
3. The student is exposed to use the urban storm water models for better storm water management.
4. Judge different types of operation and maintenance.
5. Discover global food security and public-private participation issues.
6. Construct in approaches to operations and maintenance

UNIT I URBAN HYDROLOGIC CYCLE**9**

Water in the urban eco-system – Urban Water Resources – Major problems – Urban hydrological cycle – Storm water management objectives and limitations – Storm water policies – Feasibility consideration.

UNIT II URBAN WATER RESOURCES MANAGEMENT MODELS**9**

Types of models – Physically based – conceptual or unit hydrograph based – Urban surface runoff models – Management models for flow rate and volume control rate – Quality models.

UNIT III URBAN STORM WATER MANAGEMENT**9**

Storm water management practices (Structural and Non-structural Management measures) – Detention and retention concepts – Modelling concept – Types of storage – Magnitude of storage – Hydraulic analysis and design guidelines – Flow and storage capacity of urban components – Temple tanks.

UNIT IV MASTER PLANS**9**

Planning and organizational aspects – Inter dependency of planning and implementation of goals and measures – Socio – economics financial aspects – Potential costs and benefit measures – Measures of urban drainage and flood control benefits – Effective urban water user organizations.

UNIT V OPERATION AND MAINTENANCE**9**

General approaches to operations and maintenance – Complexity of operations and need for diagnostic analysis – Operation and maintenance in urban water system – Maintenance Management System – Inventories and conditions assessment – Social awareness and involvement.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

1. The student is exposed to the design aspects of hydro-power plants,
2. To inference various components of hydropower plants and their layout.
3. To develop Different types of dam design taking into account the suitability of the site
4. To recall different type loads that are likely to be encountered.
5. To study Dam safety and instrumentation.
6. To discuss Settlement and deformation

Course Outcomes

1. The students will be able to get a basic knowledge of planning and designing hydropower plants.
2. The student is exposed to the design aspects of hydro-power plants, various components of hydropower plants and their layout,
3. Take part in Different types of dam design and the different type loads that are likely to be encountered
4. They can predict different type loads that are likely to be encountered.
5. Rule on Dam safety and instrumentation.
6. Modify different Settlement and deformation

UNIT I HYDROELECTRIC POWER DEVELOPMENT**9**

Introduction – Types of power development – Classification. Planning – Environmental Considerations - Data requirement for assessment of hydropower. Components of hydropower.

UNIT II DESIGN OF HYDROPOWER INSTALLATION**9**

Components – Intake structure – water conductor systems – tunnels – surge tanks – penstocks – valves – anchor blocks.

UNIT III TYPES OF POWER HOUSE**9**

Underground – emi-underground. Turbines and their foundations – structural and geotechnical aspects of power-house design.

UNIT IV EMBANKMENT DAM ENGINEERING**9**

Introduction. Nature and classification of engineering soils. Principles of design. Materials and construction. Internal seepage. Stability and stress. Settlement and deformation. Rockfill and rockfill embankments.

UNIT V CONCRETE DAM ENGINEERING**9**

Loading: Concepts and criteria. Gravity dam analysis. Buttress dam analysis. Arch dam analysis. Design features and construction. Concrete for dams. Dam safety and instrumentation. Foundation measurements. Analysis of strain data.

Total Hours:45

SUGGESTED READINGS:

1. Novak, P., Moffat, A.I.B., Nalluri, C. and Narayanan, R(2017). Hydraulic Structures, Unwin Hyman Ltd., London.
2. Dandekar, M.M. and Sharma, K.N(2014). Water Power Engineering, Vikas Publishing House, New Delhi.
3. USBR.(2012). Design of Small Dams, Oxford and IBH Publishing Co. Pvt. Ltd.
4. Sharma, H.D(2009). Concrete Dams, Metropolitan New Delhi.
5. Varshney, R.S.(2014). Concrete Dams, Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi.
6. Varshney, R.S(2009). Hydro Power Structures, Nem Chand Bros. Roorkee.
7. Guthrie, Brown J.(2014) Hydro Electric Engineering Practice, Blackie and Son, Glasgow.

web sites:

1. www.springer.com
2. www.civil.ubc.ca

Course Objectives:

- The main purpose of coastal engineering is to protect harbors and improve navigation.
- The students to the diverse topics as wave mechanics, wave climate, shoreline protection methods
- To study laboratory investigations using model studies.
- To relate Statistics analysis of grouped wave data
- To show Field measurement; models, groins, sea walls, offshore breakwaters, artificial nourishment
- To prove Physical modeling in Coastal Engineering

Course Outcomes

1. Students will understand coastal engineering aspects of harbors methods
2. Analyze navigation, shoreline protection
3. Students can adapt laboratory investigations using model studies and to use the skills and techniques in ICM.
4. Decide students to understand the fundamental ocean wave theories
5. The students can formulate protect harbors and improve navigation with the techniques required to analysis the wave
6. To test laboratory investigations of coastal modelling using model studies

UNIT I INTRODUCTION TO COASTAL ENGINEERING 9

Introduction - wind and waves – Sea and Swell - Introduction to small amplitude wave theory – use of wave tables- Mechanics of water waves – Linear (Airy) wave theory.

UNIT II WAVE PROPERTIES AND ANALYSIS 9

Introduction to non-linear waves and their properties – Waves in shallow waters – Wave Refraction, Diffraction and Shoaling –Hind seast wave generation models, wave shoaling; wave refraction; wave breaking; wave diffraction random and 3D waves- Short term wave analysis – wave spectra and its utilities - Long term wave analysis- Statistics analysis of grouped wave data.

UNIT III COASTAL SEDIMENT TRANSPORT 9

Dynamic beach profile; cross-shore transport; along shore transport (Littoral transport), sediment movement

UNIT IV COASTAL DEFENSE 9

Field measurement; models, groins, sea walls, offshore breakwaters, artificial nourishment - planning of coast protection works - Design of shore defense structures –Case studies.

UNIT V MODELING IN COASTAL ENGINEERING 9

Physical modeling in Coastal Engineering – Limitations and advantages – Role of physical modeling in coastal engineering – Numerical modeling – Modeling aspects – limitations – Case studies using public domain models.

Total Hours:45**SUGGESTED READINGS:**

1. Dean, R.G. and Dalrymple, R.A.(2013). Water wave mechanics for Engineers and Scientists, Prentice-Hall, Inc.
2. Ippen, A.T(2009). Estuary and Coastline Hydrodynamics, McGraw-Hill Book Company, Inc.
3. Sorenson, R.M(2013). Basic Coastal Engineering, A Wiley-Interscience Publication.

4. Coastal Engineering Research Center(2010). Coastal Engineering Manual, Vol. I-VI, US Army Corps of Engineers.
5. Kamphuis, J.W, Introduction to coastal engineering and management.

web sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com

Course Objectives:

- To implement the methods using the spread sheet in Excel
- To find Roots of non-linear equations by Bisection method and Newton's method.
- To do curve fitting by least square approximations
- To Solve the system of Linear Equations using Gauss - Elimination/ Gauss - Seidal Iteration/ Gauss - Jorden Method.
- To integrate Numerically Using Trapezoidal and Simpson's Rules.
- To find Numerical Solution of Ordinary Differential Equations by Euler's Method, Runge- Kutta Method.

Course Outcomes

At the end of the course, students will be able to

- Implement the methods using the spread sheet in Excel
- Find Roots of non-linear equations by Bisection method and Newton's method.
- Do curve fitting by least square approximations
- Solve the system of Linear Equations using Gauss - Elimination/ Gauss - Seidal Iteration/ Gauss - Jorden Method.
- To Integrate Numerically Using Trapezoidal and Simpson's Rules.
- To Find Numerical Solution of Ordinary Differential Equations by Euler's Method, Runge- Kutta Method.

SYLLABUS CONTENTS:

1. Find the Roots of Non-Linear Equation Using Bisection Method.
2. Find the Roots of Non-Linear Equation Using Newton's Method.
3. Curve Fitting by Least Square Approximations.
4. Solve the System of Linear Equations Using Gauss - Elimination Method.
5. Solve the System of Linear Equations Using Gauss - Seidal Iteration Method.
6. Solve the System of Linear Equations Using Gauss - Jorden Method.
7. Integrate numerically using Trapezoidal Rule.
8. Integrate numerically using Simpson's Rules.
9. Numerical Solution of Ordinary Differential Equations By Euler's Method.
10. Numerical Solution of Ordinary Differential Equations By Runge- Kutta Method.

SUGGESTED READINGS:

1. Steven C. Chapra, Raymond P. Canale(2014). Numerical Methods for Engineers, McGraw - Hill Pub. Co. Ltd.
2. Curtis F. Gerald and Patrick O. Wheatley(2009). Applied Numerical Analysis, Pearson Education, South Asia.

Course Objectives:

1. To Identify structural engineering problems reviewing available literature.
2. To study different techniques used to analyze complex structural systems.
3. To work on the solutions given and present solution by using his/her technique applying engineering principles.
4. To work individually on a project involving theoretical and experimental studies related to Civil Engineering.
5. To produce a comprehensive report covering background information, literature Survey, problem statement, Project work details and conclusions.
6. To utilize the creative ability and inference capability.

Course Outcomes

At the end of the course, the student will be able to:

1. Identify structural engineering problems reviewing available literature.
2. Study different techniques used to analyze complex structural systems.
3. work on the solutions given and present solution by using his/her technique applying engineering principles.
4. Work individually on a project involving theoretical and experimental studies related to Civil Engineering.
5. Produce a comprehensive report covering background information, literature Survey, problem statement, Project work details and conclusions.
6. Utilize the creative ability and inference capability.

SYLLABUS CONTENTS:

Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available.

End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution.

Continuous assessment of Mini Project at Mid Sem and End Sem will be monitored by the departmental committee.

Course Objectives:

1. To understand the basics of business analytics and its life cycle.
2. To gain knowledge about fundamental business analytics.
3. To learn modeling for uncertainty and statistical inference.
4. To understand analytics using Hadoop and Map Reduce frameworks.
5. To acquire insight on other analytical frameworks.
6. To Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.

Course Outcomes

On completion of the course, the student will be able to

1. Identify the real-world business problems and model with analytical solutions.
2. Solve analytical problem with relevant mathematics background knowledge.
3. Convert any real-world decision-making problem to hypothesis and apply suitable statistical testing.
4. Write and Demonstrate simple applications involving analytics using Hadoop and MapReduce
5. Use open-source frameworks for modeling and storing data.
6. Apply suitable visualization technique using R for visualizing voluminous data.

UNIT I: BUSINESS ANALYTICS:**9**

Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of ⁹ probability distribution and data modelling, sampling and estimation methods overview.

UNIT II: TRENDINESS AND REGRESSION ANALYSIS:**9**

Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics ⁸ Technology.

UNIT III: ORGANIZATION STRUCTURES OF BUSINESS ANALYTICS:**9**

Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics ⁹ analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization.

UNIT-IV: FORECASTING TECHNIQUES:**9**

Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate

Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carlo Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

UNIT V: DECISION ANALYSIS:

9

Formulating Decision Problems, Decision Strategies with the without 8 Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.

Recent Trends in : Embedded and collaborative business intelligence, Visual data 4 recovery, Data Storytelling and Data journalism.

Total Hours:45

SUGGESTED READINGS:

1. Business analytics Principles, Concepts, and Applications by Marc J. Schniederjans, Dara G. Schniederjans, Christopher M. Starkey, Pearson FT Press.
2. Business Analytics by James Evans, persons Education.

Course Objectives:

1. Summarize basics of industrial safety
2. Describe fundamentals of maintenance engineering
3. Explain wear and corrosion
4. Illustrate fault tracing
5. Identify preventive and periodic maintenance
6. To get fundamental knowledge on safe storage of chemicals.

Course Outcomes

1. Ability to summarize basics of industrial safety
2. Ability to describe fundamentals of maintenance engineering
3. Ability to explain wear and corrosion
4. Ability to illustrate fault tracing
5. Ability to identify preventive and periodic maintenance
6. Students would be able to create safe storage systems

UNIT-I: INDUSTRIAL SAFETY:

9

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT-II:FUNDAMENTALS OF MAINTENANCE ENGINEERING:

9

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

UNIT-III:WEAR AND CORROSION AND THEIR PREVENTION:

9

Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT-IV FAULT TRACING:

9

Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT-V PERIODIC AND PREVENTIVE MAINTENANCE:

9

Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

Total Hours:45

SUGGESTED READINGS:

1. Maintenance Engineering Handbook, Higgins & Morrow, Da Information Services.
2. Maintenance Engineering, H. P. Garg, S. Chand and Company.
3. Pump-hydraulic Compressors, Audels, Mcgrew Hill Publication.
4. Foundation Engineering Handbook, Winterkorn, Hans, Chapman & Hall London.

Instruction Hours/ Week : L:3 T: 0 P: 0

Marks: Internal–40 , External–60; Total-100

End Sem. Exam–3 Hrs

Course Objectives:

1. Solve linear programming problem and solve using graphical method.
2. Solve LPP using simplex method
3. Solve transportation, assignment problems
4. Solve project management problems
5. Solve scheduling problems
6. Model formulation and applications that are used in solving business decision problems.

Course Outcomes

At the end of the course, the students will be able to

1. Formulate linear programming problem and solve using graphical method.
2. Solve LPP using simplex method
3. Formulate and solve transportation, assignment problems
4. Solve project management problems
5. Solve scheduling problems
6. Model the real-world problem and simulate it.

UNIT I OPTIMIZATION TECHNIQUES	9
--	----------

Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models

UNIT II FORMULATION OF A LPP	9
--	----------

Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming

UNIT III NONLINEAR PROGRAMMING PROBLEM	9
--	----------

Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT

UNIT IV SCHEDULING AND SEQUENCING	9
---	----------

single server and multiple server models - deterministic inventory models - Probabilistic inventory control models - Geometric Programming.

UNIT V COMPETITIVE MODELS	9
---------------------------------------	----------

Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

Total Hours:45

SUGGESTED READINGS:

- H.A. Taha, Operations Research, An Introduction, PHI, 2008
- H.M. Wagner, Principles of Operations Research, PHI, Delhi, 1982.
- J.C. Pant, Introduction to Optimisation: Operations Research, Jain Brothers, Delhi, 2008
- Hitler Libermann Operations Research: McGraw Hill Pub. 2009
- Pannerselvam, Operations Research: Prentice Hall of India 2010
- Harvey M Wagner, Principles of Operations Research: Prentice Hall of India 2010

Course Objectives:

1. Summarize the costing concepts and their role in decision making
2. Infer the project management concepts and their various aspects in selection
3. Interpret costing concepts with project execution
4. Develop knowledge of costing techniques in service sector and various budgetary control techniques
5. Illustrate with quantitative techniques in cost management
6. The course focuses on the early project phases, including examples from technical projects

Course Outcomes

1. Understand the costing concepts and their role in decision making
2. Understand the project management concepts and their various aspects in selection 57
3. Interpret costing concepts with project execution
4. Gain knowledge of costing techniques in service sector and various budgetary control techniques
5. Become familiar with quantitative techniques in cost management
6. Create project execution plan, either in a team effort or on individual basis.

UNIT-I INTRODUCTION**9**

Overview of the Strategic Cost Management Process, Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.

UNIT-II PROJECT**9**

meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and non-technical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process

UNIT-III COST BEHAVIOR AND PROFIT PLANNING MARGINAL COSTING**9**

Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis.

UNIT-IV PRICING STRATEGIES**9**

Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

UNIT-V QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT**9**

Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

Total Hours:45

SUGGESTED READINGS:

1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
4. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher
5. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

Course Objectives:

1. Summarize the characteristics of composite materials and effect of reinforcement in composite materials.
2. Identify the various reinforcements used in composite materials.
3. Compare the manufacturing process of metal matrix composites.
4. Understand the manufacturing processes of polymer matrix composites.
5. Analyze the strength of composite materials.
6. To understand the basic theory and applications of modern composite materials.

Course Outcomes

1. Know the characteristics of composite materials and effect of reinforcement in composite materials.
2. Know the various reinforcements used in composite materials.
3. Understand the manufacturing processes of metal matrix composites.
4. Understand the manufacturing processes of polymer matrix composites.
5. Analyze the strength of composite materials.
6. Understand the basic theory and applications of modern composite materials.

UNIT-I: INTRODUCTION: Definition – Classification and characteristics of Composite materials Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT – II: REINFORCEMENTS: Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

UNIT – III: Manufacturing of Metal Matrix Composites: Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving. Properties and applications.

UNIT-IV: Manufacturing of Polymer Matrix Composites: Preparation of Moulding compounds and preregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

UNIT – V: Strength: Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

SUGGESTED READINGS:

1. Material Science and Technology – Vol 13 – Composites by R.W.Cahn – VCH, West Germany.
2. Materials Science and Engineering, An introduction. WD Callister, Jr., Adapted by R. Balasubramaniam, John Wiley & Sons, NY, Indian edition, 2007.
3. Hand Book of Composite Materials-ed-Lubin.
4. Composite Materials – K.K.Chawla.
5. Composite Materials Science and Applications – Deborah D.L. Chung.
6. Composite Materials Design and Applications – Danial Gay, Suong V. Hoa, and Stephen W. Tasi.

Course Objectives:

1. Interpret the various types of wastes from which energy can be generated
2. Develop knowledge on biomass pyrolysis process and its applications
3. Develop knowledge on various types of biomass gasifiers and their operations
4. Invent knowledge on biomass combustors and its applications on generating energy
5. Summarize the principles of bio-energy systems and their features
6. Provide information on various methods of waste management.

Course Outcomes

1. Understand the various types of wastes from which energy can be generated
2. Gain knowledge on biomass pyrolysis process and its applications
3. Develop knowledge on various types of biomass gasifiers and their operations
4. Gain knowledge on biomass combustors and its applications on generating energy
5. Understand the principles of bio-energy systems and their features
6. Understand waste characterization, Segregation, Disposal etc will be made known

UNIT-I: INTRODUCTION to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

UNIT-II: BIOMASS PYROLYSIS: Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

UNIT-III: BIOMASS GASIFICATION: Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

UNIT-IV: BIOMASS COMBUSTION: Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

UNIT-V: BIOGAS: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

SUGGESTED READINGS:

1. Non Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.
2. Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, Tata McGraw Hill Publishing Co. Ltd., 1983.

3. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.
4. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley & Sons, 1996.

Course Objectives:

1. To define the groundwater system, types of aquifers and aquifer parameters
2. To apply the knowledge of groundwater basics to study the groundwater movement and its potential for confined and unconfined aquifers.
3. To explain the details of steady and unsteady flow characteristics in well hydraulics
4. To adopt design concept for various wells in different hydrogeological formations and to construct the wells for different purposes
5. To apply the creative and advance techniques in groundwater model development for management of groundwater resources.
6. To evaluate the aquifer parameters and groundwater resources for different hydro-geological boundary conditions.

Course Outcomes:

1. Define the groundwater system, types of aquifers and aquifer parameters
2. Apply the knowledge of groundwater basics to study the groundwater movement and its potential for confined and unconfined aquifers.
3. Explain the details of steady and unsteady flow characteristics in well hydraulics
4. Adopt design concept for various wells in different hydrogeological formations and to construct the wells for different purposes
5. Apply the creative and advance techniques in groundwater model development for management of groundwater resources.
6. Evaluate the aquifer parameters and groundwater resources for different hydro-geological boundary conditions.

UNIT I OVERVIEW OF REMOTE SENSING**9**

Historical Perspective, Principles of remote sensing, components of Remote Sensing, Energy source and electromagnetic radiation, Energy interaction, Spectral response pattern of earth surface features

UNIT II REMOTE SENSING TECHNOLOGY**9**

Classification of Remote Sensing Systems, Energy recording technology, Aerial photographs, Photographic systems – Across track and along track scanning, Multispectral remote sensing, Thermal remote sensing, Microwave remote sensing – Active and passive sensors, RADAR, LIDAR, Satellites and their sensors, Indian space programme - Research and development

UNIT III DATA PROCESSING**9**

Characteristics of Remote Sensing data, Photo grammetry – Satellite data analysis – Visual image interpretation, Digital image processing – Image rectification, enhancement, transformation, Classification, Data merging, RS – GIS Integration, Image processing software.

UNIT IV GEOGRAPHICAL INFORMATION SYSTEM**9**

GIS Concepts – Spatial and non - spatial data, Vector and raster data structures, Data analysis, Database management – GIS software

UNIT V REMOTE SENSING AND GIS APPLICATIONS

9

Monitoring and management of environment, Conservation of resources, Sustainable land use, Coastal zone management – Limitations

Total Hours:45

SUGGESTED READINGS:

1. Willard H. Merritt, L. Dean, D.A. and Settle, F.A(2004). **Instrumental methods of analysis Edn**, Words Worth, New York.
2. Lillesand, T.M. and Kiefer, R.W(2015). **Remote sensing and image interpretation**, John Wiley and sons, New York.
3. Golfried Konechy(2014). **Geoinformation: Remote sensing, Photogrammetry and Geographical Information Systems**, CRC press.
4. Burrough, P.A. and McDonnell, R.A(2015). **Principles of Geographic Information systems** , Oxford Karpagam academy of Higher Education Press, New York.
5. Lintz, J. and Simonet(2012). **Remote sensing of Environment**, Addison Wesley Publishing Company, New Jersey.
6. **Manual of Remote Sensing(2001). Pmapler and Applications of Imaging RADAR, Vol.2, ASPR.**

Web Sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca

Course Objectives

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Analyze the Energy Scenario in India
2. Understand the concept of Solar Energy
3. Understand the concept of Wind Energy
4. Understand the concept of Hydro Energy
5. Analyze the different energy sources
6. Students gathered the real time inter connected system modelling in wind power

UNIT I MECHANICAL PROCESSING FOR MATERIAL RECYCLING 9

Resource recovery for a sustainable development- Material and energy flow management and analysis - Systems and processes for reduction, reuse and recycling -Objectives of Waste Processing-Source Segregation and Hand Sorting-Waste Storage and Conveyance – Shredding – Pulping - Size Separation by Screens- Density Separation by Air Classification –magnetic and electromechanical separation processes- Design Criteria and Equipment selection

UNIT II BIOLOGICAL PROCESSING FOR RESOURCE RECOVERY 9

Mechanisms of Biological Processing – Aerobic Processing of Organic fraction - Composting methods and processes- factors affecting- Design of Windrow Composting Systems- In Vessel Composting- Compost Quality Control- Vermiculture: definition, scope and importance – common species for culture - Environmental requirements - culture methods- Applications of vermiculturePotentials and constraints for composting in India-Largescale and decentralized plants.

UNIT III BIO-CHEMICAL CONVERSION OF WASTE TO ENERGY 9

Principles and Design of Anaerobic Digesters – Process characterization and control- The biochemistry and microbiology of anaerobic treatment - Toxic substances in anaerobic treatment - Methane generation by Anaerobic Digestion- Anaerobic reactor technologies – Commercial anaerobic Technologies- Single stage and multistage digesters- Digester design and performance Gas collection systems-Methane Generation and Recovery in Landfills – Biofuels from Biomass

UNIT IV THERMO-CHEMICAL CONVERSION OF WASTE TO ENERGY 9

Principles and Design of Energy Recovery Facilities -Types and principles of energy conversion processes - Incinerator design - Mass Burn and RDF Systems- Composition and calorific value of fuels and waste, Determination of the stoichiometric air consumption, Calculation of the flue gas composition - grate firing designs, boiler design, removal of bottom ash, heat recovery- Emission

Controls – flue gas cleaning, de-dusting, flue gas scrubbers, DeNOx processes, dioxins and furans - Alternative thermal processes: co-incineration, pyrolysis, gasification, plasma arc – Process characterization and control- waste heat recovery- Bottom ash: Quantity, quality, treatment, utilization, disposal- Facility design- decentralized mobile plants- Planning and construction of incineration plants

UNIT V CASE STUDIES ON WASTE RECYCLING

9

Recycling technologies for paper, glass, metal, plastic – Used Lead Acid Battery Recycling –End of Life Vehicle Recycling – Electronic Waste Recycling – Waste Oil Recycling – Solvent Recovery- Drivers and barriers for material recycling: social, legal and economic factors - Environmental impacts of waste recycling - Design for the environment: the life cycle approach

Total Hours:45

SUGGESTED READINGS:

2. Chimenti, Chiumenti, Diaz, Savage, Eggerth, and Goldstein ,(2011). Modern Composting Technologies, JG Press.
3. Aarne Vesilind and Alan E Rimer(2012) .Unit operations in Resource Recovery Engineering,. Prentice Hall Inc., London.
4. Manser A G R, Keeling A A(2013). Practical handbook of processing and recycling on municipal waste, Pub CRC Lewis London, ISBN 1-56670-164.
5. Charles R Rhyner(2017). Waste Management and Resource Recovery, Lewis Publishers.

Web Sites:

1. www.springer.com
2. www.nptel.com
3. www.wikipedia.com
4. www.civil.ubc.ca

COURSE OBJECTIVES:

To impart knowledge on

1. Developing analytical skills of the students to address any specific structural related problems.
2. Select suitable experimental method to solve the structural engineering problems.
3. Execution of the project using suitable techniques
4. On completion of the project work students will be in a position to take up any research and challenging practical problem for finding better solutions.
5. To take up any research and challenging practical problem for finding better solutions.
6. To provide a clear idea of his/her area of work and they are in a position to carry out the work in a systematic way.

COURSE OUTCOMES:

At the end of the course, the students will be able to

1. Identify the problem by analyzing the gap through literature survey
2. Conduct the experimental work to solve structural engineering problems
3. Validate the experimental results using simulation models
4. Write a technical report related to selected topic
5. Present outcome of the study with the help of ppt.
6. Manage any type of design and construction projects.

SYLLABUS:

The student individually works on a specific topic approved by faculty member who is familiar in this area of interest. The student can select any topic which is relevant to his/her specialization of the programme. The topic may be experimental or analytical or case studies. At the end of the semester, a detailed report on the work done should be submitted which contains clear definition of the identified problem, detailed literature review related to the area of work and methodology for carrying out the work. The students will be evaluated through a viva-voce examination by a panel of examiners including one external examiner.

COURSE OBJECTIVES:

To impart knowledge on

1. Developing analytical skills of the students to address any specific structural related problems.
2. Select suitable experimental method to solve the structural engineering problems.
3. Execution of the project using suitable techniques
4. On completion of the project work students will be in a position to take up any research and challenging practical problem for finding better solutions.
5. To take up any research and challenging practical problem for finding better solutions.
6. To provide a clear idea of his/her area of work and they are in a position to carry out the work in a systematic way.

COURSE OUTCOMES:

At the end of the course, the students will be able to

1. Identify the problem by analyzing the gap through literature survey
2. Conduct the experimental work to solve structural engineering problems
3. Validate the experimental results using simulation models
4. Write a technical report related to selected topic
5. Present outcome of the study with the help of ppt.
6. Manage any type of design and construction projects.

SYLLABUS:

The student should continue the phase I work on the selected topic as per the formulated methodology. At the end of the semester, after completing the work to the satisfaction of the supervisor and review committee, a detailed report should be prepared and submitted to the head of the department. The students will be evaluated through based on the report and the viva-voce examination by a panel of examiners including one external examiner.

COURSE OBJECTIVES:

- The objective of this course is to familiarize the prospective engineers with techniques in basic calculus and linear algebra.
- It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.
- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To acquaint the student with mathematical tools needed in evaluating integrals and their usage.
- To make the student acquire sound knowledge of techniques in solving ordinary differential equations that model engineering problems.
- To make the student to solve various Engineering problems.

COURSE OUTCOMES:

The students will learn:

- To apply differential and integral calculus to notions of curvature and to improper integrals. Apart from various applications, they will have a basic understanding of Beta and Gamma functions.
- Fluency in integration using standard methods, including the ability to find an appropriate Method for a given integral.
- The essential tools of matrices and linear algebra including linear transformations, Eigenvalues and diagonalization.
- To apply differential and integral calculus to notions of curvature and to improper integral and proper integrals.
- To solve the system of linear algebraic equations.
- To analyze and evaluate the basic concepts of mathematics like matrix operation, vector spaces and calculus.

UNIT I - Matrices**(9)**

Matrices, vectors: addition and scalar multiplication, matrix multiplication; Linear systems of equations, linear Independence, rank of a matrix, determinants, Cramer's Rule, inverse of a matrix, Gauss elimination and Gauss-Jordan elimination. Simple problems using Scilab.

UNIT II - Vector spaces**(9)**

Vector Space, linear dependence of vectors, basis, dimension; Linear transformations (maps), range and kernel of a linear map, rank and nullity, Inverse of a linear transformation, rank nullity theorem, composition of linear maps, Matrix associated with a linear map.

UNIT III - Vector spaces

(9)

Eigen values, eigenvectors, symmetric, skew-symmetric, and orthogonal Matrices, Eigen bases. Diagonalization; Inner product spaces.

UNIT IV - Calculus

(9)

Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

UNIT V - Calculus

(9)

Taylor's and Maclaurin theorems with remainders; indeterminate forms and L'Hospital's rule; Maxima and minima.

Total Hours: 60

COURSE OBJECTIVES

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To improve the student's communication skill at interview level.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- Effectively use English language for communication: verbal & non –verbal.
- Express comprehension and acquisition of speaking & writing ability.
- Improve the student confidence in using English language in real life situations.
- Develop word power: lexical, grammatical and communication competence.
- Prepare the students to write business letters and other forms of technical writing.
- Demonstrate the students to prepare for oral communication in formal contexts.

Unit I -Basic Writing Skills**(9)**

Sentence Structures - Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents - Techniques for writing precisely

Unit II - Vocabulary Building**(9)**

The concept of Word Formation - Root words from foreign languages and their use in English - Acquaintance, with prefixes and suffixes from foreign languages in English to form derivatives. - Synonyms, antonyms, and standard abbreviations.

Unit III - Grammar and Usage**(9)**

Subject-verb agreement - Noun-pronoun agreement - Misplaced modifiers – Articles – Prepositions – Redundancies – Clichés

Unit IV - Listening and Reading Skills**(9)**

Note taking- viewing model interviews – listening to informal conversations – improving listening / reading comprehension – reading model prose / poems – reading exercise.

UnitV.-Writing Practices**(9)**

Comprehension - Précis Writing - Essay Writing Listening Comprehension - Common Everyday Situations: Conversations and Dialogues - Communication at Workplace – Interviews - Formal Presentations.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

Total Hours: 45

18BECS141

Semi- Conductor Physics

7H-5C

(Theory & Lab.)

Instruction Hours/week: L:3 T:1 P:3

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

(i) Theory**COURSE OBJECTIVES:**

- To understand the fundamentals of quantum physics and their applications.
- To inculcate the characteristics of electronic materials through basics.
- To divulge knowledge on the basics of semiconducting materials for diode applications.
- To introduce the features of light interaction with semiconductor for optoelectronic applications.
- To impart the basic knowledge of new semiconducting materials for engineering applications.
- To understand the features of low dimensional materials for engineering field.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

- Develop the idea of quantum mechanics through applications.
- Apply the concepts of quantum theory for various methodologies.
- Explain the basic ideas of classical electron theory and energy band structures.
- Illustrate the basics of semiconductor physics and its applications in various electronic devices.
- Identify the basic properties and functioning of optical materials for optoelectronics.
- Summarize the features of low dimensional materials for engineering applications.

Unit 1 - Quantum Mechanics**(9)**

Introduction to quantum theory, merits of quantum theory, black body radiation, laws of blackbody radiation, dual nature of matter and radiation, de Broglie wavelength, uncertainty principle, Schrodinger's wave equation, time dependent and time independent equations, physical significance of wave function, particle in one dimensional box, degenerate and non-degenerate states, scanning electron microscope.

Unit 2 - Electronic materials**(9)**

Free electron theory, energy band diagrams, Bloch theorem -Kronig-Penny model (to introduce origin of band gap), Energy bands in solids, Direct and indirect bandgaps, Types of electronic materials: metals, semiconductors and insulators, density of states, occupation probability, Fermi level, effective mass, phonons.

Unit 3 - Semiconductors**(9)**

Intrinsic and extrinsic semiconductors, Dependence of Fermi level on carrier-concentration and temperature (equilibrium carrier statistics), carrier generation and recombination, Carrier transport: diffusion and drift, p-n junction, metal-semiconductor junction (Ohmic and Schottky).

Unit 4 - Light-semiconductor interaction

(9)

Optical transitions in bulk semiconductors: absorption, emission and scattering -Transition rates (Fermi's golden rule), optical loss and gain; photovoltaic effect, exciton, Drude model, LED, solar cell, photo diode.

Unit 5 - Engineered semiconductor materials

(9)

Density of states in 2D, 1D and 0D (qualitatively), practical examples of low-dimensional systems such as quantum wells, wires, and dots: design, fabrication, methods of fabrication (CVD, PVD), Coulomb blockade, single electron transistor, Giant Magneto Resistance, Spintronics.

Total Hours: 45

TEXT BOOKS:

- 2) <https://www.edx.org/course/semiconductor-fundamentals>
- 3) <https://nptel.ac.in/courses/108108122/>

(ii) Laboratory

COURSE OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To develop the skills for understanding basic electric circuits.

COURSE OUTCOME:

Upon completion of this course the students will be able to:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending - Determination of young's modulus
3. Uniform bending – Determination of young's modulus
4. Lee's disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermo e.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge - Determination of thickness of a thin sheet/wire
8. Optical fibre -Determination of Numerical Aperture and acceptance angle
9. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10. Determination of Band gap of a semiconductor.
11. Spectrometer- Determination of wavelength using grating.
12. Viscosity of liquids-Determination of co-efficient of viscosity of a liquid by Poiseuille's flow

Total Hours: 45

Programming For Problem Solving

7H-5C

(Theory & Lab.)

Instruction Hours/week: L:3 T:0 P:4

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

(i) Theory**COURSE OBJECTIVES:**

- To Identify and understand the working of key components of a computer program.
- To Identify and understand the various kinds of keywords and different data types of C programming
- To Understand, analyze and implement software development tools like algorithm,
- To develop pseudo codes and programming structures.
- To Study, analyze and understand logical structure of a computer program, and different constructs to develop a program in “C” language.
- To discuss programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Formulate simple algorithms for arithmetic and logical problems, Translate the algorithms to programs (in C language) and Test and execute the programs and correct syntax and logical errors
- Implement conditional branching, iteration and recursion
- Decompose a problem into functions and synthesize a complete program using divide and conquer approach
- Use arrays, pointers and structures to formulate algorithms and programs
- Apply programming to solve matrix addition and multiplication problems and searching and sorting problems
- Apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

Unit I – Introduction to Programming (9)

Introduction to components of a computer system disks, memory, processor, where a program is stored and executed, operating system, compilers - Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart / Pseudocode with examples. From algorithms to programs; source code, variables with data types variables and memory locations, Syntax and Logical Errors in compilation, object and executable code.

Unit II – Arithmetic expressions, precedence, Conditional Branching and Loops (9)

Arithmetic expressions and precedence – Conditional Branching- Loops-Writing and evaluation of conditionals and consequent branching-Iteration and loops.

Unit III - Array and Basic Algorithms (9)

Arrays-Arrays1-D, 2-D,Character arrays and Strings, Searching, Basic Sorting Algorithms-Bubble

Insertion and Selection sorting, Finding roots of equations, notion of order of complexity through example programs (no formal definition required).

Unit IV - Function and Recursion

(9)

Functions including using built in libraries Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference, **Recursion:** Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function. Quick sort or Merge sort.

Unit V - Structure, Pointers and File Handling

(9)

Structures, Defining structures and Array of Structures, **Pointers:** Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling.

Total Hours: 45

(ii) Laboratory

COURSE OBJECTIVES:

- To provide an awareness to Computing and C Programming
- To know the correct and efficient ways of solving problems
- To learn to develop algorithm for simple problem solving
- To write programs to solve mathematical problems.
- To develop pseudo codes and programming structures.
- To discuss programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Formulate the algorithms for simple problems
- Translate given algorithms to a working and correct program
- Correct syntax errors as reported by the compilers
- Identify and correct logical errors encountered at run time
- Write iterative as well as recursive programs
- Represent data in arrays, strings and structures and manipulate them through a program

List of Experiments

Lab 1: Familiarization with programming environment

Lab 2: Simple computational problems using arithmetic expressions-Circumstances and Area of Circle

Lab 3: Problems involving if-then-else structures-Amstrong Number and Find the Largest of Three number, Even/Odd, Prime numbers.

Lab 4: Loops, while and for loops- sum of series, Factorial, Fibonacci

Lab 5: 1DArray manipulation-Searching and Sorting

Lab 6: Matrix problems-Matrix Addition and multiplications,String operations

Lab 7: Simple functions-Sqrt,Math, Pow,

Lab 8and 9:Numerical methods problems- Root finding, numerical differentiation, numerical integration

Lab 10: Recursive functions- Factorial, Fibonacci

Lab 11: Pointers-Call by Value and Call by reference, structures- Display student records

Lab 12: File operations-open,read,write,close

Probability And Statistics

4H-4C

Instruction Hours/week: L:3 T:1 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

- To familiarize the students with statistical techniques.
- To equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline.
- To gain knowledge in measures of central tendency.
- Acquire skills in handling situations involving more than one random variable and functions of random variables.
- Be introduced to the notion of sampling distributions and have acquired knowledge of statistical techniques useful in making rational decision in management problems.
- Be exposed to statistical methods designed to contribute to the process of making scientific judgments in the face of uncertainty and variation.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Formulate the ideas of probability, random variables and various discrete and continuous probability distributions and their properties.
- Apply the basic ideas of statistics including measures of central tendency, correlation and regression.
- Apply the statistical methods of studying data samples.
- Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases.
- Understand the concept of the sampling distribution of a statistic, and in particular describe the behavior of the sample mean and hypothesis testing.
- Apply problem solving techniques to solve real world events.

UNIT I - Basic Probability

(9)

Probability spaces, conditional probability, Bayes' rule, independence; Discrete random variables, Independent random variables, the multinomial distribution, sums of independent random variables; Expectation of Discrete Random Variables, Moments, Variance of a sum, Correlation coefficient, Chebyshev's Inequality.

UNIT II - Random Variables

(9)

Continuous random variables and their properties, distribution functions and densities, normal, exponential and gamma densities. Bivariate distributions and their properties, conditional densities.

UNIT III - Basic Statistics

(9)

Measures of Central tendency: Moments, skewness and Kurtosis - Probability distributions: Binomial, Poisson and Normal - evaluation of statistical parameters for these three distributions, Correlation and regression – Rank correlation.

UNIT IV - Applied Statistics

(9)

Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves. Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations.

UNIT V - Small samples

(9)

Test for single mean, difference of means and correlation coefficients, test for ratio of variances - Chi-square test for goodness of fit and independence of attributes.

Chemistry – I
(Theory & Lab.)

7H-6C

Instruction Hours/week: L:3 T:1 P:3

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

(i) Theory**COURSE OBJECTIVES:**

- To understand the terminologies of atomic and molecular structure
- To study the basics of Periodic properties, Intermolecular forces
- To study about spectroscopic technique
- To understand the thermodynamic functions
- To comprehend the basic organic chemistry and to synthesis simple drug.
- To understand the chemical principles in the projects undertaken in field of engineering and technology

COURSE OUTCOMES:

Upon completion of this course, the students will be able to:

- Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
- Rationalise periodic properties such as ionization potential, electro negativity, oxidation states and electro negativity.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
- Rationalise bulk properties and processes using thermodynamic considerations.
- List major chemical reactions that are used in the synthesis of molecules.
- Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I - Atomic and molecular structure**(9)**

Schrodinger equation. Particle in a box solutions and their applications. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Pi-molecular orbitals of butadiene and benzene and aromaticity. Introduction to Crystal field theory.

UNIT II - Periodic properties, Intermolecular forces and potential energy surfaces**(9)**

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electro negativity, polarizability, oxidation states, coordination numbers. Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena.

UNIT III - Spectroscopic techniques and applications**(9)**

Spectroscopy (Principles and Instrumentation only).Electronic spectroscopy. Vibrational and rotational spectroscopy. Applications. Surface characterization techniques SEM and TEM. Fluorescence and its applications in medicine.

UNIT IV - Use of free energy in chemical equilibria**(9)**

Thermodynamic functions: energy, entropy and free energy. Significance of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation, reduction and solubility equilibria. Use of free energy considerations in metallurgy through Ellingham diagrams.

UNIT V - Organic reactions and synthesis of a drug molecule

(9)

Introduction to organic reactions and its mechanism involving substitution, addition, elimination, oxidation, reduction, cyclization and ring opening. Synthesis of a commonly used drug molecule.

Total Hours: 60

TEXT BOOKS:

1. B. H. Mahan, University chemistry, Pearson Education, (2010).

- 3) <https://www.coursera.org/learn/chemistry-1>
- 4) <https://www.edx.org/learn/chemistry>

(ii) Laboratory

COURSE OBJECTIVE

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To study about spectroscopic technique
- To understand the thermodynamic functions
- To comprehend the basic organic chemistry and to synthesis simple drug.
- To study the basics of Periodic properties, Intermolecular forces
- To determine the partition coefficient of a substance between two immiscible liquids.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

- Estimate rate constants of reactions from concentration of reactants/products as a function of time
- Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc
- Synthesize a small drug molecule and analyse a salt.
- Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases.
- Understand the concept of the sampling distribution of a statistic, and in particular describe the behavior of the sample mean and hypothesis testing.
- To apply problem solving techniques to solve real world events.

Choice of 10 experiments from the following:

1. Determination of surface tension and viscosity
2. Determination of Sodium Carbonate and Sodium Hydrogen Carbonate in a mixture using volumetric titration
3. Determination of Ca / Mg using complexometric titration
4. Thin layer chromatography
5. Determination of chloride content of water
6. Determination of the rate constant of a reaction
7. Conductometry - Determination of cell constant and conductance of solutions
8. pH Metry – Determination of Acid / Base
9. Potentiometry - determination of redox potentials and emfs
10. Saponification/acid value of an oil
11. Determination of the partition coefficient of a substance between two immiscible liquids
12. Adsorption of acetic acid by charcoal
13. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

Total Hours: 45

18BECS242**Basic Electrical Engineering****6H-5C****(Theory & Lab.)****Instruction Hours/week: L:3 T:1 P:2****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****i) Theory****COURSE OBJECTIVES:**

- To impart basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
- To impart the basic knowledge about the AC and DC Electric circuits.
- To introduce fundamental concepts and analysis techniques in electrical engineering to students across all disciplines.
- To understand the working of Electrical Machines and Transformers.
- To understand the working of Power Converters and components of low-voltage electrical installations.
- To discuss the applications of the basic concepts in Electrical engineering for multi-disciplinary tasks.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- Demonstrate an understanding of the basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
- Demonstrate an understanding of basic concepts of analysis of simple DC and AC circuits used in electrical and electronic devices
- Demonstrate an understanding of selection skill to identify the type of generators or motors required for particular application.
- Demonstrate an understanding of basic concepts of transformers their application in transmission and distribution of electric power.
- Demonstrate an understanding of the effects of electric shock and precautionary measures.
- Apply the basic concepts in Electrical engineering for multi-disciplinary tasks.

UNIT I - DC Circuits**(9)**

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT II - AC Circuits**(9)**

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III - Electrical Machines**(9)**

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque-speed characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

UNIT IV - Transformers And Power Converters (9)

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections. Overviews of DC-DC buck and boost converters, duty ratio control. Introduction to Single-phase and three-phase voltage source inverters.

UNIT V - Electrical Installations (9)

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, RCCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

Total Hours: 60

(ii) Laboratory

COURSE OBJECTIVES:

- To impart basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
- To impart the basic knowledge about the AC and DC Electric circuits.
- To introduce fundamental concepts and analysis techniques in electrical engineering to students across all disciplines.
- To understand the working of Electrical Machines and Transformers.
- To understand the working of Power Converters and components of low-voltage electrical installations.
- To discuss the applications of the basic concepts in Electrical engineering for multi-disciplinary tasks.

COURSE OUTCOMES :

At the end of this course, students will demonstrate the ability

- Demonstrate an understanding of the basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
- Demonstrate an understanding of basic concepts of analysis of simple DC and AC circuits used in electrical and electronic devices

- Demonstrate an understanding of selection skill to identify the type of generators or motors required for particular application.
- Demonstrate an understanding of basic concepts of transformers their application in transmission and distribution of electric power.
- Demonstrate an understanding of the effects of electric shock and precautionary measures.
- Apply the basic concepts in Electrical engineering for multi-disciplinary tasks.

List of Experiments

1. Experimental verification of electrical circuit problems using Ohms law and Kirchoff's law.
2. Measurement of electrical quantities – voltage, current, power & power factor in R load.
3. Speed control of DC shunt motor
4. Draw the equivalent circuit of single phase Transformer by conducting OC & SC Test.
5. Measurement of energy using single phase energy meter.

Total Hours: 30

TEXT BOOKS:

1. D. P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 2010.
2. D. C. Kulshreshtha, "Basic Electrical Engineering", McGraw Hill, 2009.

Workshop / Manufacturing practices Laboratory

5H-3C

Instruction Hours/week: L:1 T:0 P:4

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

COURSE OBJECTIVES:

- To identify and use of tools, types of joints in carpentry, fitting, tin smithy and plumbing operations.
- To understand of electrical wiring and components.
- To Observe the function of lathe, shaper, drilling, boring, milling, grinding machines.
- To identify the need for heating of the Mild Steel and to understand the Hot Working of the metals in Black Smithy
- To demonstrate Manufacturing practices on CNC Machine tools.
- To discuss different types of solid state welding and other welding practices viz Arc welding, Gas welding, Brazing, Soldering etc.

COURSE OUTCOMES:

Upon completion of this course the students will be able to:

- To identify different Tools required for Wood working.
- Familiarize the students to different cutting fluids.
- Use the Cutting tools required for Metal working in the Fitting work.
- Identify the need for heating of the Mild Steel and to understand the Hot Working of the metals in Black Smithy
- Demonstrate Manufacturing practices on CNC Machine tools.
- Expose different types of solid state welding and other welding practices viz Arc welding, Gas welding, Brazing, Soldering etc.

i) Lectures & videos: (10)**Detailed contents**

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods (3)
2. CNC machining, Additive manufacturing (1)
3. Fitting operations & power tools (1)
4. Electrical & Electronics (1)
5. Carpentry (1)
6. Plastic moulding, glass cutting (1)
7. Metal casting (1)
8. Welding (arc welding & gas welding), brazing (1)

ii) Workshop Practice: (60)

9. Machine shop (10)
10. Fitting shop (8)
11. Carpentry (6)
12. Electrical & Electronics (8)
13. Welding shop (8)

(8 hours (Arc welding 4 Periods + gas welding 4 Periods)

14. Casting	(8)
15. Smithy	(6)
16. Plastic moulding & Glass Cutting	(3)
17. Plumbing Exercises	(3)

COURSE OBJECTIVES

- To understand the importance graphics in engineering
- To learn basic engineering drawing formats
- To develop the graphical skills for communication of concepts, ideas and design of engineering products through technical drawings.
- To learn to take data and transform it into graphic drawings.
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- To discuss the theory of projection.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Know and understand the conventions and the method of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skills in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.

UNIT I -INTRODUCTION**(9)**

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Conic sections including the Ellipse, Parabola and Hyperbola (eccentricity method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales

UNIT II -ORTHOGRAPHIC PROJECTIONS**(9)**

Principles of Orthographic Projections- Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT III - PROJECTION OF POINTS, LINES AND PLANE SURFACES**(9)**

Projections of Points and lines located in the first quadrant inclined to both planes - Determination of true lengths and true inclinations; Projection of polygonal surface and circular lamina inclined to both reference planes

UNIT IV -PROJECTION OF SOLIDS**(9)**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

UNIT V -ISOMETRIC PROJECTIONS & COMPUTER GRAPHICS

(9)

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple solids, truncated prisms, pyramids, cylinders and cones; Conversion of Isometric Views to Orthographic Views and Vice-versa

Overview of Computer Graphics, listing the computer technologies that impact on graphical communication, demonstrating knowledge of the theory of CAD software, Introduction to 3D modeling packages

TOTAL HOURS: 60

End Semester Exam:3 Hours

COURSE OBJECTIVES

- To introduce sequence and series and Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To understand the concept of functions of several variables and vector identities.
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage
- Evaluate first order differential equations including separable, homogeneous, exact and linear Solvable for p, x and y, Clairaut's form.
- Solving differential equation of certain type and Power series solutions of Legendre polynomials, Bessel functions of the first kind and their properties.
- To explain basic knowledge and understanding in one field of materials, differential calculus

COURSE OUTCOMES

The students will learn:

- To solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- To understand the ideas of limits and continuity and an ability to calculate with them and apply them and also to calculate grad, div and curl in Cartesian and other simple coordinate systems.
- To apply integration to compute multiple integrals, area, volume, integrals in polar and Cartesian coordinates, in addition to change of order and vector integration.
- To solve first order differential equations utilizing the standard techniques for separable, exact, linear, Bernoulli cases.
- To solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- This course equips students to have basic knowledge and understanding in one field of materials, differential calculus

UNIT I - Sequences and series:

Convergence of sequence and series, tests for convergence, power series, Taylor's series. Series for exponential, trigonometric and logarithmic functions

UNIT II - Multivariable Calculus (Differentiation)

Limit, continuity and partial derivatives, directional derivatives, total derivative, Maxima, minima and saddle points; Method of Lagrange multipliers; Gradient, curl and divergence.

UNIT III - Multivariable Calculus (Integration)

Multiple Integration: double and triple integrals (Cartesian and polar), change of order of integration in double integrals, Applications: areas and volumes, Center of mass and Gravity (constant and variable densities). Theorems of Green, Gauss and Stokes, Simple applications involving cubes and rectangular parallelepipeds.

UNIT IV - First order ordinary differential equations

Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type.

UNIT V- Ordinary differential equations of higher orders

Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equation; Power series solutions; Legendre polynomials, Bessel functions of the first kind and their properties.

COURSE OBJECTIVES

- To give a comprehensive insight into natural resources
- Understand ecosystem and biodiversity.
- To educate the ways and means of the environment
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- Understand various Social issues and its effect on environment

COURSE OUTCOMES

Upon completion of this course the student will be able to:

- Prepare them to go eco-friendly and help preserving the nature and environment.
- Educate the means in preserving the environment.
- Understand the various types of pollution and environmental status.
- Enhance the fundamental knowledge on human welfare measures and sustainable and unsustainable development.
- Get an insight on various Social issues and how it effects the environment
- Demonstrate a general understanding of the breadth and interdisciplinary nature of environmental issues.

UNIT I - Introduction To Environmental Studies And Natural Resources

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II - Ecosystem

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem).

UNIT III - Biodiversity

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity. Biogeographical classification of India, Importance of biodiversity- Value of biodiversity - Hot Spots of biodiversity- Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV - Environmental Pollution

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management- causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution– Disaster management- earthquake, tsunami, cyclone and landslides.

UNIT V - Social Issues And Environment

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health- Human Safety- Population growth, Variation of population among nations- Population explosion.

2. Bharucha Erach, (2005), Environmental Science Demystified Mapin Publishing (P) Ltd., Ahmedabad.
3. Tyler Miller G. Jr, (2004) Environmental Science, Thomson & Thomson Publishers, New Delhi
4. Trivedi, R.K. and Goel, P.K, (2003), Introduction to Air Pollution, Techno-Science Publications, Jaipur.

COURSE OBJECTIVES:

- To familiarization of the syntax, semantics, data-types
- To use the library functions of numerical computing languages SCILAB
- To create application of such languages for implementation/simulation and visualization of basic mathematical functions relevant to electronics applications.
- To understand the algebra concepts.
- To analyze the program and the correctness.
- To understand Linear algebra and Signal processing concepts

COURSE OUTCOMES:

- Understand the main features of the SCILAB program development environment to enable their usage in the higher learning.
- Implement simple mathematical functions/equations in numerical computing environment such as SCILAB.
- Interpret and visualize simple mathematical functions and operations thereon using plots/display.
- Analyze the program for correctness and determine/estimate/predict the output and verify it under simulation environment using SCILAB tools
- Perform simulation/implementation of various applications
- Good understanding of Linear algebra and Signal processing concepts

LIST OF EXPIREMENTS:

1. Study of basic SCILAB commands
2. Matrix constructors and operations
3. Matrix bitwise, relational & logical operations
4. Control structures (if-else, if-elseif –else, select)
5. Control structures (for, while, break and continue)
6. Graphics - 2d plots

COURSE OBJECTIVES:

- To impart knowledge in electronic semiconductor devices & circuits
- Give importance to the various aspects of design & analysis.
- To provide knowledge about different types of amplifier & oscillator circuits and their design.
- To provide a thorough understanding of the operational amplifier circuits and their functions
- To design and analysis the applications in op-amp.
- To discuss linear and non-linear applications of op-amp

COURSE OUTCOMES:

Upon completion of this course the student will be able to:

- Understand the characteristics of electronic devices including diodes, BJT and MOSFET.
- Design and analyze various rectifier and amplifier circuits.
- Design sinusoidal and non-sinusoidal oscillators.
- Understand the functioning of OP-AMP and design OP-AMP based circuits.
- Understand Differential, multi-stage and operational amplifiers
- Design and analyse Linear and Nonlinear applications of op-amp

UNIT 1: Diode circuits (4 Hours)

P-N junction diode, I-V characteristics of a diode; review of half-wave and full-wave rectifiers, Zener diodes, clamping and clipping circuits.

UNIT 2: BJT circuits (8 Hours)

Structure and I-V characteristics of a BJT; BJT as a switch. BJT as an amplifier: small-signal model, biasing circuits, current mirror; common-emitter, common-base and common-collector amplifiers; Small signal equivalent circuits, high-frequency equivalent circuits

UNIT 3: MOSFET circuits (8 Hours)

MOSFET structure and I-V characteristics. MOSFET as a switch. MOSFET as an amplifier: small-signal model and biasing circuits, common-source, common-gate and common-drain amplifiers; small signal equivalent circuits - gain, input and output impedances, transconductance, high frequency equivalent circuit.

UNIT 4: Differential, multi-stage and operational amplifiers (8 Hours)

Differential amplifier; power amplifier; direct coupled multi-stage amplifier; internal structure of an operational amplifier, ideal op-amp, non-idealities in an op-amp (Output offset voltage, input bias current, input offset current, slew rate, gain bandwidth product)

UNIT 5: Linear and Nonlinear applications of op-amp (14 Hours)

Idealized analysis of op-amp circuits. Inverting and non-inverting amplifier, differential amplifier, instrumentation amplifier, integrator, active filter, P, PI and PID controllers and lead/lag compensator using an op-amp, voltage regulator, oscillators (Wein bridge and phase shift). Analog to Digital Conversion. Hysteretic Comparator, Zero Crossing Detector, Square-wave and triangular-wave generators. Precision rectifier, peak

detector. Monoshot.
