Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators).

Inheritance, Polymorphism and Exception Handling:

Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

18CAU102**COMPUTER SYSTEM ARCHITECTURE****Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

Enable the student

- To discuss the basic concepts of Logic gates, multiplexers and de multiplexers.
- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- Explain different types of addressing modes.
- To learn CISC and RISC architecture.
- To summarize the types of memory and I/O channels.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Students will acquire a basic knowledge about computer system architecture, arithmetic, digital circuits and the low - level programming skills.
2. Define different number systems, binary addition and subtraction, 2's complement representation and operations with this representation.
3. Understand the inner workings and performance capabilities of microprocessors.
4. Understand the concept of registers and Instruction set.
5. Know the addressing modes and instruction format of various microprocessors.
6. Understand memory and I/O channels.

Unit-I - INTRODUCTION

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors – Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

Unit-II - DATA REPRESENTATION AND BASIC COMPUTER ARITHMETIC

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

Unit-III - BASIC COMPUTER ORGANIZATION AND DESIGN

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

Unit-IV - CENTRAL PROCESSING UNIT

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

Unit-V - MEMORY AND INPUT-OUTPUT ORGANIZATION

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

18CAU103	COMPUTER FUNDAMENTALS	Semester – I 4H – 4C
-----------------	------------------------------	---------------------------------------

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External : 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify the factors that goes into an individual or organizational decision on how to purchase computer equipment.
- To identify how to maintain computer equipment and solve common problems relating to computer hardware.
- To identify how software and hardware work together to perform computing tasks and how software is developed and upgraded.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Understand the meaning and basic components of a computer system,
2. Define and distinguish Hardware and Software components of computer system,
3. Explain and identify different computing machines during the evolution of computer system,
4. Explain the functions of a computer,
5. Identify the various input and output units and explain their purposes
6. Understand the role of CPU and its components

Unit-I – INTRODUCTION

Introduction to computer system, uses, types. **Data Representation:** Number systems and character representation, binary arithmetic. **Human Computer Interface:** Types of software, Operating system as user interface, utility programs.

Unit-II – DEVICES

Input and output devices (with connections and practical demo), keyboard, mouse, joystick, scanner, OCR, OMR, bar code reader, web camera, monitor, printer, plotter.

Unit-III – MEMORY

Primary, secondary, auxiliary memory, RAM, ROM, cache memory, hard disks, optical disks.

Unit-IV - COMPUTER ORGANISATION AND ARCHITECTURE

C.P.U., registers, system bus, main memory unit, cache memory, Inside a computer, SMPS, Motherboard, Ports and Interfaces, expansion cards, ribbon cables, memory chips, processors.

Unit-V - OVERVIEW OF EMERGING TECHNOLOGIES

Bluetooth, cloud computing, big data, data mining, mobile computing and embedded systems.

18CAU111	PROGRAMMING FUNDAMENTALS USING C / C++ - PRACTICAL	Semester – I 4H – 2C
-----------------	---	---------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

Enable the student

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To study the concepts of Call by value and call by reference.
- To learn file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Develop programs using the basic elements like control statements, Arrays and Strings .
2. Solve the memory access problems by using pointers
3. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
4. Understand the uses of preprocessors and various header file directives.
5. Use the characteristics of an object-oriented programming language in a program.
6. Implement File handling mechanisms.

List of Programs

1. WAP to print the sum and product of digits of an integer.
2. WAP to reverse a number.
3. WAP to compute the sum of the first n terms of the following series $S = 1 + 1/2 + 1/3 + 1/4 + \dots$
4. WAP to compute the sum of the first n terms of the following series $S = 1 - 2 + 3 - 4 + 5 - \dots$
5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.

6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

7. WAP to compute the factors of a given number.

8. Write a macro that swaps two numbers. WAP to use it.

9. WAP to print a triangle of stars as follows (take number of lines from user):

```
*  
***  
*****  
*****  
*****
```

10. WAP to perform following actions on an array entered by the user:

i) Print the even-valued elements

ii) Print the odd-valued elements

iii) Calculate and print the sum and average of the elements of array

iv) Print the maximum and minimum element of array

v) Remove the duplicates from the array

vi) Print the array in reverse order

The program should present a menu to the user and ask for one of the options. The menu should also include options to re-enter array and to quit the program.

11. WAP that prints a table indicating the number of occurrences of each alphabet in the text entered as command line arguments.

12. Write a program that swaps two numbers using pointers.

13. Write a program in which a function is passed address of two variables and then alter its contents.

14. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

15. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.

16. Write a menu driven program to perform following operations on strings:

a) Show address of each character in string

- b) Concatenate two strings without using strcat function.
 - c) Concatenate two strings using strcat function.
 - d) Compare two strings
 - e) Calculate length of the string (use pointers)
 - f) Convert all lowercase characters to uppercase
 - g) Convert all uppercase characters to lowercase
 - h) Calculate number of vowels
 - i) Reverse the string
17. Given two ordered arrays of integers, write a program to merge the two-arrays to get an ordered array.
18. WAP to display Fibonacci series (i)using recursion, (ii) using iteration
19. WAP to calculate Factorial of a number (i)using recursion, (ii) using iteration
20. WAP to calculate GCD of two numbers (i) with recursion (ii) without recursion.
21. Create Matrix class using templates. Write a menu-driven program to perform following Matrix operations (2-D array implementation):
a) Sum b) Difference c) Product d) Transpose
22. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).
23. Create a class Triangle. Include overloaded functions for calculating area. Overload assignment operator and equality operator.
24. Create a class Box containing length, breath and height. Include following methods in it:
a) Calculate surface Area
b) Calculate Volume
c) Increment, Overload ++ operator (both prefix & postfix)
d) Decrement, Overload -- operator (both prefix & postfix)
e) Overload operator == (to check equality of two boxes), as a friend function
f) Overload Assignment operator
g) Check if it is a Cube or cuboid

Write a program which takes input from the user for length, breath and height to test the above class.

25. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

26. Write a program to retrieve the student information from file created in previous question and print it in following format:

Roll No. Name Marks

27. Copy the contents of one text file to another file, after removing all whitespaces.

28. Write a function that reverses the elements of an array in place. The function must accept only one pointer value and return void.

29. Write a program that will read 10 integers from user and store them in an array. Implement array using pointers. The program will print the array elements in ascending and descending order.

**18CAU112 COMPUTER SYSTEM ARCHITECTURE
- PRACTICAL**

Semester – I
3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

Enable the student

- To discuss the basic concepts of Logic gates, multiplexers and de multiplexers.
- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- Explain different types of addressing modes.
- To learn CISC and RISC architecture.
- To summarize the types of memory and I/O channels.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Students will acquire a basic knowledge about computer system architecture, arithmetic, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. analyze the use of encoder and decoder.
4. Understand the working of half adder and full adder.
5. Design and analyze memory, I/O devices and cache structures for processor.
6. Evaluate the performance of computer systems

List of Experiments (Any 8 Experiments)

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

SUGGESTED READINGS

18CAU113	COMPUTER FUNDAMENTALS - PRACTICAL	Semester – I 3H – 2C
-----------------	--	---------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

Enable the student

- Create a document in Microsoft Word with formatting options.
- Add a graphic to a document.
- Write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- Indicate the names and functions of the Excel interface components.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Modify text using various formatting options from the editing tools under the Home tab
2. Demonstrate the mechanics and uses of Word tables to organize and present data.
3. Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
4. Create and design a spreadsheet for general office use.
5. Demonstrate the basic mechanics and navigation of an Excel spreadsheet.
6. Demonstrate formatting techniques and presentation styles.

Demonstrate the use of basic functions and formulas

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare a **grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold

- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher's name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.

- a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
- b. Design a certificate in landscape orientation with a border around the document.
- c. Design a Garage Sale sign.
- d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:

- (a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
- (b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).

Color, Style, Item

Blue, A980, Van

Red, X023, Car

Green, YL724, Truck

Name, Age, Sex

Bob, 23, M

Linda, 46, F

Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	Dolls	Trucks	Puzzles
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order: In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu
 EDIT Complete menu
 VIEW Complete menu
 INSERT Complete menu
 FORMAT Complete menu
 TABLE Complete menu
 WINDOW Complete menu
 HELP Complete menu
 TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

**TOTAL
AVERAGE**

(a) Apply Formatting as follow:

- i. Title in TIMES NEW ROMAN
- ii. Font Size - 14
- iii. Remaining text - ARIAL, Font Size -10
- iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.
- v. Numbers in two decimal places.
- vi. Qtr. Heading in center Alignment.
- vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
≥ 80	A+
$\geq 60 < 80$	A
$\geq 50 < 60$	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F	
1	Salesman			Sales in (Rs.)			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	Commission
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
 - 30% of Basic if Basic ≤ 1000
 - 25% of Basic if Basic > 1000 & Basic ≤ 3000
 - 20% of Basic if Basic > 3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is ≤ 1000
Rs. 75/- if Basic > 1000 & Basic ≤ 2000
Rs. 100 if Basic > 2000
- Entertainment Allowance NIL if Basic is ≤ 1000
Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is ≤ 1500
Rs. 60/- if Basic > 1500 & Basic ≤ 3000
Rs. 80/- if Basic > 3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment

Total deduction = Provident Fund + Group Insurance Premium

Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	5%	6%	7%	8%	9%
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amounts given the rate of Interest and time

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

- Calculate total sale year wise.
- Calculate the net sale made by each salesman
- Calculate the maximum sale made by the salesman
- Calculate the commission for each salesman under the condition.
 - If total sales >4,00,000 give 5% commission on total sale made by the salesman.
 - Otherwise give 2% commission.
- Draw a bar graph representing the sale made by each salesman.
- Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to					
Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

(a) Calculate Monthly total.

(b) Surplus = Monthly income - Monthly total.

(c) What would be total surplus if monthly income is 1500.

(d) How much does telephone expense for March differ from quarter average.

(e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

(a) Compute the total revenue earned.

(b) Plot the line chart to compare the revenue of all publisher for 4 years.

(c) Chart Title should be _Total Revenue of sam's Bookstall (1997-2000)'

(d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

SUGGESTED READINGS

1. Bittu Kumar (2015). Microsoft Office 2010. VS Publishers, New Delhi

2. Ramesh Bangia (2015). Learning Microsoft Office 2010, UBS Publishers.

18AEC101	ENVIRONMENTAL STUDIES	Semester – I
		3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To encourage to learn ecosystems and biodiversity.
- To learn environment pollution and control measures of pollution.
- To create system concepts and methodologies and analyze interactions.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Unit I – INTRODUCTION - ENVIRONMENTAL STUDIES & ECOSYSTEMS

Environment Definition, Scope and importance; Ecosystem, Structure and functions of ecosystem. Energy flow, Food chains and food webs, Ecological succession. Classification of ecosystem. Forest ecosystem, Grassland Ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

Unit II - NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources - Renewable and Non – Renewable resources. Land resources and land use change, Land degradation, soil erosion and desertification. Forest resources - Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations. Water resources - Use and over-exploitation of surface and ground water, floods,

droughts, conflicts over water. Use of alternate energy sources, growing energy needs, case studies. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

Unit III - BIODIVERSITY AND ITS CONSERVATION

Levels of biological diversity - genetic, species and ecosystem diversity. Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value. Bio-geographical classification of India. Biodiversity patterns (global, National and local levels). Hot-spots of biodiversity. India as a mega-diversity nation. Endangered and endemic species of India. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV - ENVIRONMENTAL POLLUTION

Definition, causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Noise pollution. Nuclear hazards and human health risks. Solid waste management and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Case studies.

Unit V - SOCIAL ISSUES AND THE ENVIRONMENT

Concept of sustainability and sustainable development. Water conservation - Rain water harvesting, watershed management. Climate change, global warming, ozone layer depletion, acid rain and its impacts on human communities and agriculture. Environment Laws (Environment Protection Act, Air Act, Water Act, Wildlife Protection Act, Forest Conservation Act). International agreements (Montreal and Kyoto protocols). Resettlement and rehabilitation of project affected persons. Disaster management (floods, earthquake, cyclones and landslides). Environmental Movements (Chipko, Silent valley, Bishnois of Rajasthan). Environmental ethics: Role of Indian and other religions and cultures in environmental conservation. Environmental communication and public awareness, case studies (e.g., CNG vehicles in Delhi). Human population growth: Impacts on environment, human health and welfare.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி - I, தமிழ்

பருவம் II

18LSU201 :

தமிழ் இரண்டாம் தாள்

4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு - I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.

2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு - II : சங்க இலக்கியம்

:

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த - பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை - குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு -

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்டு

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொடிகேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் -பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் - 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி,

'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் - 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி'

என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) - கண்ணகியின் சிறப்பு:

நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

'கண்ணகி என்பாண் மன்னோ' என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்:

'அருந்திறலரசர்' என்பதிலிருந்து தொடங்கி, 'மன்னவரேறென்' என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்:

'என்னே' என்பதிலிருந்து தொடங்கி, 'விசும்பில் தோன்றுமால்' என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: 'நீர்வார் கண்ணை' என்பதிலிருந்து தொடங்கி, 'புகாரென் பதியே' என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: 'வன்னி மரமும்' என்பதிலிருந்து தொடங்கி, 'பதிப்பிறந்தேன்' என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு []

18ENU201**ENGLISH****Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives:**

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcome:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

Unit - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

Unit - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

Unit - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

Unit – IV : Drama

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

Unit – V : Grammar and Composition

GRAMMAR:

1. Tenses
2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

Composition:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

Prescribed Text:

Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading:

18CAU201**PROGRAMMING IN JAVA****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives**

Enable the Student

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. Use looping and decision constructs to solve problems.
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

Unit I - INTRODUCTION TO JAVA

Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods)

Unit II - ARRAYS, STRINGS AND I/O

Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

Unit III - INHERITANCE

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

Unit IV - EXCEPTION HANDLING

Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads.

Unit V - DATABASE CONNECTIVITY AND JAVA APPLETS

Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC. Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes.

18CAU202**DISCRETE STRUCTURES****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

Enable the student

- To develop logical thinking and its application to computer science
- To write and evaluate a proof or outline the basic structure of and give examples of each proof technique described
- To know the concepts of sets and functions.
- to transform a given problem into a combination of several simpler statements and arrive at a solution to the problem and be able to prove it logically
- To solve problems with the help of tools of mathematical analysis.
- To reason and ability to present a coherent and mathematically accurate argument.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Familiar with elementary algebraic set theory.
2. Demonstrate the ability to write and evaluate a proof or outline the basic structure of and give examples of each proof technique described.
3. Understand the basic principles of sets and operations in sets.
4. Demonstrate an understanding of relations and functions and be able to determine their properties.
5. Demonstrate different traversal methods for trees and graphs.
6. Initiate to knowledge from inference theory.

Unit I

Sets: Introduction, Sets , finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations.

Unit II

Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

Unit III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution.

Unit IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

Unit V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

18CAU203**COMPUTER NETWORKS AND INTERNET
TECHNOLOGIES****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

Enable the student

- To study the basics of Computer Networks.
- To study and compare various Network architectures and fundamental protocols.
- To learn about networking protocol and OSI model.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites.
- To understand the principles of creating an effective web page.
- To develop skills in analyzing the usability of a website.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Enumerate the layers of the OSI model and TCP/IP.
4. Gain the skills and project-based experience needed for entry into web design and development careers.
5. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
6. Select and apply markup languages for processing, identifying, and presenting of information in web

Unit I - COMPUTER NETWORKS

Introduction to computer network, data communication, components of data communication, data transmission mode, data communication measurement, LAN, MAN, WAN, wireless LAN, internet, intranet, extranet. **Network Models:** Client/ server network and Peer-to-peer network, OSI, TCP/IP, 8L layers and functionalities.

Unit II - TRANSMISSION MEDIA AND LAN TOPOLOGIES

Introduction, Guided Media: Twisted pair, Coaxial cable, 4L Optical fiber. Unguided media: Microwave, Radio frequency propagation, Satellite. **LAN Topologies:** Ring, bus, star, mesh and tree topologies. Network Devices: NIC, repeaters, hub, bridge, switch, gateway and router.

Unit III- INTERNET TERMS AND APPLICATIONS

Internet Terms: Web page, Home page, website, internet browsers, URL, Hypertext, 2L ISP, Web server, download and upload, online and offline. **Internet Applications:** www, telnet, ftp, e-mail, social networks, search engines, 6L Video Conferencing, e-Commerce, m-Commerce, VOIP, blogs.

Unit IV - INTRODUCTION TO WEB DESIGN

Introduction to hypertext markup language (html) 16L Document type definition, creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames, hosting options and domain name registration. **Customized Features:** Cascading style sheet (css) for text formatting and other manipulations.

Unit V - JAVASCRIPT FUNDAMENTALS

Data types and variables, functions, methods and events, 14L controlling program flow, JavaScript object model, built-in objects and operators.

SUGGESTED READINGS

18CAU211	PROGRAMMING IN JAVA - PRACTICAL	Semester – II 4H – 2C
-----------------	--	--

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

Enable the student

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To implement the Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer class like setCharAt(), setLength(), append(), insert(), concat() and equals().
9. Write a program to create a —distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer

10. Modify the —distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.
11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program —DivideByZero that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

18CAU212**DISCRETE STRUCTURES - PRACTICAL****Semester – II
3H – 2C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

Enable the student

- To develop logical thinking and its application to computer science
- To write and evaluate a proof or outline the basic structure of and give examples of each proof technique described
- To know the concepts of sets and functions.
- to transform a given problem into a combination of several simpler statements and arrive at a solution to the problem and be able to prove it logically
- To solve problems with the help of tools of mathematical analysis.
- To reason and ability to present a coherent and mathematically accurate argument.

Course Outcomes(COs)

Upon successful completion of the course, the student will be able to:

1. Familiar with elementary algebraic set theory.
2. Demonstrate the ability to write and evaluate a proof or outline the basic structure of and give examples of each proof technique described.
3. Understand the basic principles of sets and operations in sets.
4. Demonstrate an understanding of relations and functions and be able to determine their properties.
5. Demonstrate different traversal methods for trees and graphs.
6. Initiate to knowledge from inference theory.

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
 $1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$

4. Write a C Program to perform the sum $= 1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a C program in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
(i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$
10. Write a C Program to prove De – Morgan's law.

18CAU213**COMPUTER NETWORKS AND INTERNET
TECHNOLOGIES - PRACTICAL****Semester – II
3H – 2C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

Enable the student

- To understand the principles of creating an effective web page.
- To develop skills in analyzing the usability of a website.
- To learn the language of HTML and JavaScript.
- To learn to design web pages using Forms, Tables, Frames, TextBox
- To study the basics of JavaScript
- To learn to validate input in web pages using JavaScript

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Gain the skills and project-based experience needed for entry into web design and development careers.
2. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
3. Select and apply markup languages for processing, identifying, and presenting of information in web pages.
4. Create and manipulate web media objects using editing software.
5. Create web pages and validate input using JavaScript.
6. Develop web pages and perform computation using JavaScript.

List of Programs

1. Create HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
2. Create HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
3. Create HTML document with Table

4. Create Form with Input Type, Select and Text Area in HTML.
5. Create an HTML containing Roll No., student's name and Grades in a tabular form.

6. Create an HTML document (having two frames) which will appear as follows

About	This frame would show the contents according to the link clicked by the user on the left frame.
Department 1	
Department 2	
Department 3	

7. Create an HTML document containing horizontal frames as follows

Department Names (could be along with Logos)
Contents according to the Link clicked

8. Create a website of 6 – 7 pages with different effects as mentioned in above problems.

9. Create HTML documents (having multiple frames) in the following three formats

Frame1
Frame2

Frame1	
Frame2	Frame3

10. Create a form using HTML which has the following types of controls:

V. Text Box

VI. Option/radio buttons

VII. Check boxes

VIII. Reset and Submit buttons

List of Practicals using Javascript : Create event driven program for following:

11. Print a table of numbers from 5 to 15 and their squares and cubes using alert.

12. Print the largest of three numbers.

13. Find the factorial of a number n.

14. Enter a list of positive numbers terminated by Zero. Find the sum and average of these numbers.

15. A person deposits Rs 1000 in a fixed account yielding 5% interest. Compute the amount in the account at the end of each year for n years.

16. Read n numbers. Count the number of negative numbers, positive numbers and zeros in the list.

18CAU301**DATA STRUCTURES****Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives:**

Enable the student

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand sorting, searching and hashing algorithms
- To develop application using data structures
- Choose appropriate data structures and algorithms for problem solving.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Able to use linear and non-linear data structures like stacks, queues , linked list etc.

Unit-I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

Unit –II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

Unit –III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

Unit -IV

Searching and Sorting, Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

Unit –V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

		Semester – III
18CAU302	OPERATING SYSTEMS	4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

Enable the student

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- Understand basic resource management techniques.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Appreciate the role of operating system as System software.

Unit –I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

Unit –II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources- Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication- Deadlocks.

Unit –III

Memory Management: Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

Unit –IV

File and I/O Management: Directory structure-File operations-File Allocation methods-Device management.

Unit -V

Protection and Security: Policy mechanism-Authentication-Internal aCSUess Authorization.

Semester – III**18CAU303****ADVANCED NETWORKING****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives:**

Enable the student

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.
- Channel error detection and correction, MAC protocols, Ethernet and WLAN.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

Unit – I

Introduction to Computer Networks : Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

Unit –II

Digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media. **Networks Switching Techniques and Access mechanisms:** Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

UNIT –III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit –IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways;

Networks Layer Functions and Protocols: Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit –V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake;

Overview of Application layer protocol: Overview of DNS protocol; overview of WWW & HTTP protocol.

18CAU304A**ANDROID PROGRAMMING****Semester – III
3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Internal: **40** External: **60** Total: **100****End Semester Exam: 3 Hours****Course Objectives:**

Enable the student

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design and develop useful Android applications with compelling user. interfaces .by using, extending, and creating your own layouts and Views and using Menus.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Analyze the Architecture and features of Android with another Mobile Operating System.
2. Evaluate the standard of Kotlin language for developing Android Applications
3. Apply knowledge for creating user Interface and develop activity for Android App.
4. Evaluate the user interface architecture of Android for developing Android Apps
5. Understand the implementation of SQLite database operations with Android.
6. Design and implement Database Application and Content providers.

Unit -I**Introduction:** History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.**Unit –II****Overview of object oriented programming using Java:** OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.**Unit –III****Development Tools:** Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.**Unit –IV**

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size **User Interface Design:** Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes), Images, Menu, Dialog

Unit –V

Database: Understanding of SQL database, connecting with the database.

18CAU304B**STRUTS FRAMEWORK****Semester – III
3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Internal: **40** External: **60**Total: **100****End Semester Exam: 3 Hours****Course Objectives:**

Enable the students to

- Understand the Model, View, Controller (MVC) design pattern and how it is applied by Struts Framework
- Know the components of Struts Application and database connectivity
- Implement JSP functions using Struts
- Perform client and server side validation using Struts Validator Framework
- Develop web applications using Struts
- Develop EJB programs and get familiar with Struts framework

Course Outcome (COs):

Upon completion of the course, the students will be able to:

1. Know about MVC and overview of JSP
2. Identify the components of a Struts Application and how to connect database in web based applications
3. Know about the struts Sub elements and Control Tags
4. Develop programs with Data Tags and Bean Tags
5. Develop programs with HTML Tags and Logic Tags and able to construct enterprise-level web based applications
6. Construct web based applications and Identify where data structures are appearing in them.

Unit –I

Introduction, Understanding the MVC Design Pattern, The Struts Implementation of the MVC, Directory Structure, Web Application Deployment Descriptor, The Tomcat JSP/Servlet Container, Installing and Configuring Tomcat, Testing Your Tomcat Installation, An Overview of the Java Servlet and JavaServer Pages, The GenericServlet and HttpServlet Classes, Life Cycle of a Servlet. Struts OverView, Life Cycle of Struts.

Unit -II

Components of a Struts Application, The Controller, The View, DynaActionForm & LazyDynaBean, ActionServlet, RequestProcessor, ActionForm, IncludeAction, Forward Action, LocaleAction, DispatchAction, LookupDispatchAction, MappingDispatchAction, EventDispatchAction, SwitchAction, Interceptors, Implementing Custom interceptors, Struts Validation, Exception Handling, Managing Errors, Struts Error Management - ActionError,

ActionErrors, Creating Custom ActionMappings, Struts JDBC Connection, Using a DataSource in Struts Application, Debugging Struts Applications.

Unit -III

The struts-config.xml, The Struts Subelements, The icon Tag Subelement, display-name Tag Subelement, description Tag Subelement, set-property Tag Subelement, Adding a Struts DataSource, Adding FormBean Definitions, Adding Global Forwards, Adding Actions, Adding a RequestProcessor, Adding Message Resources, Adding a Plug-in. The Bean Tag Library, Installing the Bean Tags, bean:cookie Tag, bean:define Tag, bean:header Tag, bean:include Tag, bean:message Tag, bean:page Tag, bean:parameter Tag, bean:resource Tag, bean:size Tag, bean:struts Tag, bean:write Tag

Unit -IV

HTML Tag Library, Base Tag, Button Tag, Cancel Tag, Checkbox Tag, Errors Tag, Form Tag, Hidden Tag, Html Tag, Image Tag, Img Tag, Link Tag, Multibox Tag, Select Tag, Option Tag, Options Tag, Password Tag, Radio Tag, Reset Tag, Rewrite Tag, Submit Tag, Text Tag, Textarea Tag

Unit -V

The Logic Tag Library, Empty Tag, notEmpty Tag, equal Tag, notEqual Tag, forward Tag, redirect Tag, greaterEqual Tag, greaterThan Tag, iterate Tag, lessEqual Tag, lessThan Tag, match Tag, notMatch Tag, present Tag, notPresent Tag

Suggested readings

18CAU311**DATA STRUCTURES - PRACTICAL****Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objective**

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand sorting, searching and hashing algorithms
- To develop application using data structures
- Choose appropriate data structures and algorithms for problem solving.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Able to use linear and non-linear data structures like stacks, queues , linked list etc.

LIST OF PROGRAMS:

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.
8. Perform Queues operations using Circular Array implementation. Use Templates.

9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. Write a program to scan a polynomial using linked list and add two polynomial.
11. Write a program to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. Write a program to display Fibonacci series (i)using recursion, (ii) using iteration
13. Write a program to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. Write a program to create a Binary Search Tree and include following operations in tree:
 - (a) Insertion (Recursive and Iterative Implementation)
 - (b) Deletion by copying
 - (c) Deletion by Merging
 - (d) Search a no. in BST
 - (e) Display its preorder, postorder and inorder traversals Recursively
 - (f) Display its preorder, postorder and inorder traversals Iteratively
 - (g) Display its level-by-level traversals
 - (h) Count the non-leaf nodes and leaf nodes
 - (i) Display height of tree
 - (j) Create a mirror image of tree
 - (k) Check whether two BSTs are equal or not
15. Write a program to convert the Sparse Matrix into non-zero form and vice-versa.
16. Write a program to reverse the order of the elements in the stack using additional stack.
17. Write a program to reverse the order of the elements in the stack using additional Queue.
18. Write a program to implement Diagonal Matrix using one-dimensional array.
19. Write a program to implement Lower Triangular Matrix using one-dimensional array.
20. Write a program to implement Upper Triangular Matrix using one-dimensional array.
21. Write a program to implement Symmetric Matrix using one-dimensional array.
22. Write a program to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. Write a program to implement various operations on AVL Tree.

18CAU312**OPERATING SYSTEMS - PRACTICAL****Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- Understand basic resource management techniques.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Appreciate the role of operating system as System software.

LIST OF PROGRAMS:

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behavior of Linux kernel including CPU information and. memory information
3. Write a program to print file details including owner a access permissions, file access time, where file name is given as argument.
4. Write a program to copy files using system calls.
5. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.

8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.

18CAU313	ADVANCED NETWORKING - PRACTICAL	Semester – III
		4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objective

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.
- Channel error detection and correction, MAC protocols, Ethernet and WLAN.

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

LIST OF PROGRAMS:

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Suggested readings

18CAU314A**ANDROID PROGRAMMING PRACTICAL****Semester – III
3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

Enable the student

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design and develop useful Android applications with compelling user. interfaces .by using, extending, and creating your own layouts and Views and using Menus.

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Analyze the Architecture and features of Android with another Mobile Operating System.
2. Evaluate the standard of Kotlin language for developing Android Applications
3. Apply knowledge for creating user Interface and develop activity for Android App.
4. Evaluate the user interface architecture of Android for developing Android Apps
5. Understand the implementation of SQLite database operations with Android.
6. Design and implement Database Application and Content providers.

LIST OF PROGRAMS:

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.

7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Suggested readings

1. James C. Sheusi, (2013). *Android application development for Java for Java programmers*, Cengage Learning.

Semester – III**18CAU314B****STRUTS FRAMEWORK - PRACTICAL****3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3****Marks: Internal: 40 External: 60****Total: 100****End Semester Exam: 3 Hours****Course Objectives:**

Enable the students to

- Understand the Model, View, Controller (MVC) design pattern and how it is applied by Struts Framework
- Know the components of Struts Application and database connectivity
- Implement JSP functions using Struts
- Perform client and server side validation using Struts Validator Framework
- Develop web applications using Struts
- Develop EJB programs and get familiar with Struts framework

Course Outcome (COs):

Upon completion of the course, the students will be able to:

1. Know about MVC and overview of JSP
2. Identify the components of a Struts Application and how to connect database in web based applications
3. Know about the struts Sub elements and Control Tags
4. Develop programs with Data Tags and Bean Tags
5. Develop programs with HTML Tags and Logic Tags and able to construct enterprise-level web based applications
6. Construct web based applications and Identify where data structures are appearing in them.

LIST OF PROGRAMS:

1. Create a Simple Struts Human Resource (HR) Application
2. Create Struts Login Application Using Action form
3. Create a Struts Global Action Forwards and Action Mappings
4. Create and implement Multiple Struts Configuration File
5. Create Struts Application to implement struts Lookup Dispatch Action
6. Create Struts Application to mapping the struts Action Servlet
7. Create a Feedback form to implement struts HTML Tag
8. Create Struts Application to use of action forms for validating user input.
9. Create Struts Applications to implement Struts Logic Tag

10. Create a Struts LOGIC tag library provides tags that are useful in managing conditional generation of output text

Suggested readings

1. James Goodwill,(2002). *Mastering Jakarta Struts*, Wiley Publishing, Inc.

Semester – IV**18CAU401 RELATIONAL DATABASE MANAGEMENT SYSTEMS 4H-4C****Instruction Hours / week: L:4 T:0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept
- To train the student to translate business requirements into relational database schemas and manipulate databases using the SQL Data Manipulation Language.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

Unit I

Databases and Database Users --Characteristics of the Database Approach - Actors on the Scene- Workers behind the Scene- Advantages of Using the DBMS Approach- A Brief History of Database Applications- Database System Concepts and Architecture : Data Models, Schemas, and Instances - Three-Schema Architecture and Data Independence- Database Languages and Interfaces- The Database System Environment- Centralized and Client/Server Architectures for DBMSs- Classification of Database Management Systems.

Unit II

Data Modeling Using the Entity-Relationship (ER) :Conceptual Data Models for Database Design -A Sample Database Application -Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles,and Structural Constraints -Weak Entity Types -ER Diagrams, Naming Conventions, and Design Issues. The Enhanced Entity-Relationship: Subclasses, Superclasses, and Inheritance - Specialization and Generalization - Constraints and

Characteristics of Specialization and Generalization Hierarchies -Modeling of UNION Types Using Categories- Data Abstraction, Knowledge Representation.

Unit III

Relational Algebra: Relational Algebraic Operations-Aggregate Function-Update Operations.SQL: Characteristics-Advantages& Action-Data types and Literals-Types of SQL Commands:DDL,DML,DQL,DCL,DAS,TCS-SQL Operators-Arithmetic, Comparison, Logical& Set Operator-Operator Precedence. Tables, view and Indexes: Introduction-View-Indexes. Queries and subqueries: Introduction-Subqueries-Aggregate Function-Insert, update and Delete Operations.

Unit IV

Overview – declaration section – executable command section: conditional logic, loops, CASE statements – exception handling section. Triggers: definition – types: row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions, and Packages: Local and global – procedures vs. functions – stored procedures, functions – create procedure syntax - create function syntax – package header – package body – calling procedures, functions, package members. Replacing and dropping procedures, functions, packages.

Unit V

Database Design Theory and Normalization: Basics of Functional Dependencies and Normalization for Relational Databases-Informal Design Guidelines for Relation Schemas-Functional Dependencies-Normal Forms Based on Primary Keys-General Definitions of Second and Third Normal Forms-Boyce-Codd Normal Form-Multivalued Dependency and Fourth Normal Form-Join Dependencies and Fifth Normal Form.

18CAU402**SOFTWARE ENGINEERING****4. Semester – IV
4H –4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques
- Implement a given software design using sound development practices.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

Unit -I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

Unit-II

Requirement Analysis; Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

Unit-III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

Unit-IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

Unit-V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

18CAU403**WEB PROGRAMMING****Semester – IV
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To understand the concepts and architecture of the World Wide Web.
- To understand and practice markup languages
- Understand the technologies used in Web Programming.
- Know the importance of object-oriented aspects of Scripting.
- To understand and practice embedded dynamic scripting on client-side Internet Programming
- To develop dynamic web applications, create and consume web services

Course Outcomes (COs)

Upon Completion of the course, the students will be able to

1. Design web pages.
2. Use technologies of Web Programming.
3. Apply object-oriented aspects to Scripting.
4. Create a basic website using HTML and Cascading Style Sheets.
5. Design and implement dynamic web page with validation using JavaScript objects and by applying different event handling mechanisms.
6. Use scripting languages and web services to transfer data and add interactive components to web pages.

Unit-I

Creating an HTML Document – creating list – creating links between document – linking to resources on the internet – working with hypertext attributes – working with fonts and text styles – tables – creating frameset – working with forms – working with cascading style sheets.

Unit-II

JavaScript: Introduction to javascript – Programming fundamentals – Functions and objects – Navigator object model

Unit-III

JavaScript: Form and form elements – Scripting frames and multiple windows – Event object – Functions and custom objects.

Unit-IV

ASP: Client side scripting vs. Server side scripting- Variables & Constants- Procedures – Forms – Cookies – Application - #include – Global.asa - Functions-ASP object model: Response- Request- Application- Session – Server – Error – Array

Unit-V

ASP: Collections & Control Structure-File system object: File System – Text Stream- Drive – File – Folder – Directory – ADO - sql & Databases for data driven applications-ASP Components: Ad Rotator – Browser Cap. – Content Linking – Content Rotator .

Semester – IV**18CAU404A****R PROGRAMMING****3H – 3C****Instruction Hours / week: L:3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives :**

Enable the student

- To acquire the computing tasks such as using conditional processing statements, loops, and writing one's own functions.
- Performing advanced graphing of data and statistical modeling of data.
- Use statistical distribution functions in R
- Read Structured Data into R from various sources
- Understand split-apply-combine (group-wise operations) in R
- Perform basic statistical modeling of data

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Learn how to install and configure software necessary for a statistical programming environment.
2. Discuss generic programming language concepts as they are implemented in a high-level statistical language.
3. The course covers practical issues in statistical computing which includes programming in R, reading data into R, accessing R packages, writing R functions, debugging, and organizing and commenting R code.
4. Import external data into R for data processing and statistical analysis
5. Learn the main R data structures – vector and data frame
6. Learn the file processing in R.

Unit-I

History and Overview of R : The S Philosophy - Back to R -Basic Features of R - Free Software -Design of the R System - Limitations of R- R Resources .Getting Started with R :Installation - Getting started with the R interface -.R Nuts and Bolts :Entering Input - Evaluation -R Objects - Numbers - Attributes - Creating Vectors - Mixing Objects - Explicit Coercion - Matrices -Lists -Factors - Missing Values - Data Frames - Names .

Unit-II

Getting Data In and Out of R :Reading and Writing Data - Reading Data Files with read.table() - Reading in Larger Datasets with read.table - Calculating Memory Requirements for R Objects . Using the readr Package .Using Textual and Binary Formats for Storing Data :Using

dput() and dump() – Binary Formats - Interfaces to the Outside World : File Connections - Reading Lines of a Text File - Reading From a URL Connection - Subsetting R Objects :Subsetting a Vector - Subsetting a Matrix - Subsetting Lists - Subsetting Nested Elements of a List - Extracting Multiple Elements of a List - Partial Matching -Removing NA Values .

Unit-III

Vectorized Operations :Vectorized Matrix Operations .Dates and Times :Dates in R - Times in R - Operations on Dates and Times .Managing Data Frames with the dplyr package :Data Frames -The dplyr Package - dplyr Grammar - Installing the dplyr package - select() - filter() -arrange() - rename() - mutate() - group_by()-%>%.Control Structures :if-else - for Loops - Nested for loops - while Loops - repeat Loops - next, break .

Unit-IV

Functions: Functions in R - Your First Function - Argument Matching - Lazy Evaluation – The Argument - Arguments Coming After the Argument .Scoping Rules of R : A Diversion on Binding Values to Symbol - Scoping Rules - Lexical Scoping: Why Does It Matter? -Lexical vs. Dynamic Scoping -- Application: Optimization - Plotting the Likelihood. Coding Standards for R .Loop Functions : Looping on the Command Line - lapply() - sapply() - split() - Splitting a Data Frame - tapply - apply() - Col/Row Sums and Means -Other Ways to Apply - mapply()- Vectorizing a Function .

Unit-V

Debugging -:Something's Wrong! - Figuring Out What's Wrong - Debugging Tools in R . Using traceback() - Using debug() - Using recover().Profiling R Code: Using system.time() . Timing Longer Expressions - The R Profiler - Using summaryRprof().Simulation :Generating Random Numbers - Setting the random number seed -Simulating a Linear Model - Random Sampling .

18CAU404B**OPEN SOURCE TECHNOLOGIES****Semester – IV
3H-3C****Instruction Hours / week: L: 3 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives :**

Enable the student

- To introduce open source technology for development of web applications.
- For Study the problems with traditional commercial software.
- To understand open source scripting language for programming in web environment i.e. PHP.
- To study the open source management system and connection with database.
- To learn open source web server, software tools.
- To learn the open source ideals in order to apply those principles

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Leaned the need of open source technology, open source development model, application of open sources, aspects of open source movement
2. The students will be aware about the problems with traditional commercial software.
3. The student will be familiar with basis syntax of PHP, common PHP scripts elements.
4. The student will be familiar with creating of the server side scripting using PHP, implement PHP database connectivity, perform operation on database and open source database management system.
5. The students will be familiar with Working of different web Servers.
6. The students will be aware about the software tool and process like Eclipse IDE, Selenium ID

Unit-I

Why open source, what is Open source, open source principles, open standards requirements for software, open source successes, free software, some example of free software, free software license provider, free software Vs Open source software, Public Domain , FOSS DOES not Mean any cost, proprietary Vs Open Source Licensing Model.

Principles and Open Source Methodology: History, open source initiatives, open standards principles-methodologies, philosophy, software freedom, open source software, development, Licenses, copyright.

Unit-II

Open source projects: Starting and maintaining an open source project, open source hardware- open source design-open source teaching (OST).Open Source Ethics: Open Source Vs Closed Source-Open source Government-The ethics of open source-social and financial impacts of open source technology-shared software, shared source.

Unit-III

Apache Web Server: Introduction-Starting, Stopping, and Restarting Apache-Configuration-Securing Apache Create the Web Site-Apache Log Files

Unit-IV

MySQL: Introduction-Tutorial-Database Independent Interface-Table Joins-Loading and Dumping a Database

Unit-V

Perl: Introduction-Perl Documentation-Perl Syntax Rules-A Quick Introduction To Object-Oriented Programming-What We Didn't Talk About

Suggested Readings

5. Kailashvadera, Vhavyesh Gandhi, (2009). *Open source Technologies*, Lakshmi Publications,(1st ed.). [UNIT I – III]
6. Nick Wells,(2012). *The Complete Guide to Linux System Administration*, Delmar Cengage Learning.

Semester – IV**18CAU411 RELATIONAL DATABASE MANAGEMENT SYSTEMS - PRACTICAL****4H– 2C****Instruction Hours / week: L: 0 T: 0 P:4 C:2****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objective**

Enable the student

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept
- To train the student to translate business requirements into relational database schemas and manipulate databases using the SQL Data Manipulation Language.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

List Of Programs:

1. Create a table with following fields:

Staff table:

Field name	Constraint	Type	Size
Staff_no	Primary key	Character	6
Staff_name	Not Null	Character	30
Gender	Check	Character	1
Dob		Date	
Dept_code	Foreign key	Character	4
Designation		Character	15
Basic		Number	7,2

Department table:

Field name	Constraint	Type	Size
Dept_code	Primary key	Character	4
Dept_name		Character	30

Execute the following queries:

- Insert records for all the staff.
 - Select the records for male staff.
 - Select the staff whose name start with S.
 - Update the records.
 - To list the staff who joined 2 years back.
 - To list the staff in computer science dept.
 - To list the staff_name and the dept_name in which he/she works.
 - To list the maximum and minimum salary in each dept.
 - To list the dept along with the total amount spent on salary
 - To list the name of the staff who draw the salary more than the average salary.
2. Perform queries using string functions.
 3. Perform queries using mathematical functions.
 4. Perform queries using date functions.
 5. Perform queries using aggregate and set functions.
 6. Creation the following
 - Views
 - Objects
 - Sequence
 - Synonyms.
 7. Create a table with the following fields:

Book table:

Field name	Constraint	Type	Size
Access_no	Primary key	Character	6
Title		Character	30
Author		Character	30
Publisher		Character	30
Subject		Character	10
Price		Number	6,2

Execute the following queries:

- List the C and C++ books.
- List the books written by a particular author.
- List the books which costs between Rs.300/- and Rs.500/-
- List the no of books available in each subject.

- List the books in the decreasing order of the cost.
 - Calculate the total cost and average cost of the available books
 - List the books of minimum cost and maximum cost.
8. Perform different types of join operations between the two tables.
 9. Create a table to store the salary details of the employees in a company. Use Cursor to update the employee salary.
 10. Write a PL/SQL program to calculate the Fibonacci series, factorial, Palindrome string on user choice.
 11. Create a table master book to contain the information of magazine_code, magazine_name, and publisher, Weekly/biweekly/monthly, price. Write PL/SQL block to perform insert, update and delete operations on the above table.
 12. Create a table to contain phone number, user name, address of the phone user. Write a function to search for a address using phone numbers.
 13. Create a table with the following fields:

Account table:

Field name	Constraint	Type	Size
Acc_no	Primary key	Character	4
Cust_name		Character	30
Branch_name		Character	30
Cust_city		Character	30

Borrower table:

Field name	Constraint	Type	Size
Acc_no	Foreign key	Character	30
Branch_name		Character	30
Amount		Number	8,2

Write the procedure to update the records of the tables.

14. Write a package to perform arithmetic operations.
15. Creating triggers.

Semester – IV**18CAU412****SOFTWARE ENGINEERING - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques
- Implement a given software design using sound development practices.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

Sample Projects:

1. **Criminal Record Management:** Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information:** Online information about the bus routes and their frequency and fares
3. **Car Pooling:** To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System

- 9. Parking Allocation System
- 10. Wholesale Management System

Suggested Readings

Semester – IV**18CAU413****WEB PROGRAMMING - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

Enable the student

- To understand the concepts and architecture of the World Wide Web.
- To understand and practice markup languages
- Understand the technologies used in Web Programming.
- Know the importance of object-oriented aspects of Scripting.
- To understand and practice embedded dynamic scripting on client-side Internet Programming
- To develop dynamic web applications, create and consume web services

Course Outcomes (COs)

Upon Completion of the course, the students will be able to

1. Design web pages.
2. Use technologies of Web Programming.
3. Apply object-oriented aspects to Scripting.
4. Create a basic website using HTML and Cascading Style Sheets.
5. Design and implement dynamic web page with validation using JavaScript objects and by applying different event handling mechanisms.
6. Use scripting languages and web services to transfer data and add interactive components to web pages.

List of Programs:

1. Develop a website for Karpagam University using HTML.
2. Write Online Quiz program (Include Style Sheets)
3. Create a simple animation using DHTML.
4. Write a program to apply Mask into an Image Using Filters in DHTML.
5. Generate web page that represents clock-every 60 see the page updated with server current time Using JavaScript.
6. Design a form and validate it using JavaScript.
7. Show the demo of AD Rotator Component
8. Write Database Access program using ASP.
9. Program to retrieve Cookies information using ASP
10. Program to count web page hits using ASP

11. Program to create Date & Time, String Manipulation using ASP
12. Write a program to find the visitor's Browser Type, IP Address and More Information

Suggested Readings

1. Danny Goodman, (2000). *Javascript Bible*, (3rd ed.), IDG Books India Pvt Ltd. (**Unit- III**).
2. David Flanagan, (2006). *JavaScript: The Definitive Guide*, O'Reilly,
3. Nicholas C. Zakas, Inc Ebrary and Ebrary,(2005). *Professional JavaScript for Web Developers*, New Delhi , John Wiley & Sons Inc.
4. Patrick Carey, (2005). *New Perspectives on HTML and XHTML*, (1st ed.), Thomson Course Technology Publishing. (**Unit- I**).
5. Rohit Khurana's, (2002). *Javascript Professional edition*, (2nd ed.), A.P.H. Publishing company, NewDelhi.(**Unit -II**)
6. Russell Jones, A. (2000). *Mastering ActiveServerPages 3*, (1st ed.), BPB Publishing, New Delhi.(**Unit- IV & Unit -V**).

		Semester – IV
18CAU414A	R PROGRAMMING - PRACTICAL	3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

Enable the student

- To acquire the computing tasks such as using conditional processing statements, loops, and writing one's own functions.
- Performing advanced graphing of data and statistical modeling of data.
- Use statistical distribution functions in R
- Read Structured Data into R from various sources
- Understand split-apply-combine (group-wise operations) in R
- Perform basic statistical modeling of data

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Learn how to install and configure software necessary for a statistical programming environment.
2. Discuss generic programming language concepts as they are implemented in a high-level statistical language.
3. The course covers practical issues in statistical computing which includes programming in R, reading data into R, accessing R packages, writing R functions, debugging, and organizing and commenting R code.
4. Import external data into R for data processing and statistical analysis
5. Learn the main R data structures – vector and data frame
6. Learn the file processing in R

List of Programs:

1. Write a program to demonstrate functions and operators
2. **Vectors:** Grouping values into vectors, then doing arithmetic and graphs with them
3. **Matrices:** Creating and graphing two-dimensional data sets
4. **Summary Statistics:** Calculating and plotting some basic statistics: mean, median, and standard deviation
5. **Factors:** Creating and plotting categorized data
6. **Data Frames:** Organizing values into data frames, loading frames from files and merging them
7. Write a program to design R as a calculator

7. Write a program to demonstrate Probability distributions
8. Write a program to demonstrate Importing and exporting data
9. Write a program to Establish a Regression

Suggested Readings

1. Daniel Navarro, (2013). *Learning Statistics with R*. University of Adelaide Publications.
2. Hadley Wickham, (2014). *Advanced R Programming*, (1st ed.)
3. Jeffrey Stanton, (2013). *Introduction to Data Science, with Introduction to R*, Version 3 ,
4. Roger.D.Peng, (2015). *R Programming for Data Science*

18CAU414B OPEN SOURCE TECHNOLOGIES - PRACTICAL**Semester –IV
3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3
100****Marks: Internal: 40 External: 60****Total:****End Semester Exam: 3 Hours****Course Objectives:**

Enable the student

- To introduce open source technology for development of web applications.
- For Study the problems with traditional commercial software.
- To understand open source scripting language for programming in web environment i.e. PHP.
- To study the open source management system and connection with database.
- To learn open source web server, software tools.
- To learn the open source ideals in order to apply those principles

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Leaned the need of open source technology, open source development model, application of open sources, aspects of open source movement
2. The students will be aware about the problems with traditional commercial software.
3. The student will be familiar with basis syntax of PHP, common PHP scripts elements.
4. The student will be familiar with creating of the server side scripting using PHP, implement PHP database connectivity, perform operation on database and open source database management system.
5. The students will be familiar with Working of different web Servers.
6. The students will be aware about the software tool and process like Eclipse IDE, Selenium ID.

List of Programs:

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.

6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Suggested Readings

1. Andrew M. St. Laurent, (2004). *Understanding Open Source and Free Software Licensing*, O'Reilly Media.
2. Dan Woods, Gautam Guliani, (2005). *Open Source for the Enterprise*, O'Reilly Media.
3. Fadi P. Deek and James A. M. McHugh, (2007). *Open Source Technology and Policy*, Cambridge University Press.
4. James Lee, Brent Ware, 2002. *Open Source Web Development with LAMP: Using Linux, Apache, MySQL, Perl, and PHP*, , Publisher: Addison Wesley Date [UNIT IV – V]
5. Kailashvadera, Vhavyesh Gandhi, (2009). *Open source Technologies*, Lakshmi Publications, (1st ed.). [UNIT I – III]
6. Nick Wells, (2012). *The Complete Guide to Linux System Administration*, Delmar Cengage Learning.

18CAU501A**ARTIFICIAL INTELLIGENCE****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To understand the various characteristics of Intelligent agents and different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To learn about knowledge inference and planning strategies of AI.
- To know about various Expert System tools and applications
- To learn programming in logic language to implement various AI algorithms
- To read and analyzed important historical and current trends addressing artificial intelligence.

Course Outcomes (Cos)

Upon completion of this course the students will be able to:

1. Compare AI with human intelligence and traditional information processing, discuss its strengths, limitations and its application to complex and human centered problems.
2. Formalize a given problem in the language/framework of AI knowledge representation.
3. Analyze and formalize the problem through knowledge inference and planning strategies.
4. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in machine learning and expert systems,
5. Apply the concept of AI using programming language PROLOG
6. Develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents: Search, Knowledge representation, inference, logic, and learning.

Unit I – INTRODUCTION

Introduction to Artificial Intelligence, Background and Applications, Turing Test and Rational Agent approaches to AI, Introduction to Intelligent Agents, their structure, behavior and environment.

Unit II - PROBLEM SOLVING AND SEARCHING TECHNIQUES

Problem Characteristics, Production Systems, Control Strategies, Breadth First Search, Depth First Search, Hill climbing and its Variations, Heuristics Search Techniques: Best First Search, A* algorithm, Constraint Satisfaction Problem, Means-End Analysis, Introduction to Game Playing, Min-Max and Alpha-Beta pruning algorithms.

Unit III - KNOWLEDGE REPRESENTATION

Introduction to First Order Predicate Logic, Resolution Principle, Unification, Semantic Nets, Conceptual Dependencies, Frames, and Scripts, Production Rules, Conceptual Graphs. Programming in Logic (PROLOG)

Unit IV- DEALING WITH UNCERTAINTY AND INCONSISTENCIES

Truth Maintenance System, Default Reasoning, Probabilistic Reasoning, Bayesian Probabilistic Inference, Possible World Representations.

Unit V- UNDERSTANDING NATURAL LANGUAGES

Parsing Techniques, Context-Free and Transformational Grammars, Recursive and Augmented Transition Nets.

SUGGESTED READINGS

1. DAN.W. Patterson. Introduction to A.I and Expert Systems. PHI.2007.
2. Russell & Norvig. Artificial Intelligence-A Modern Approach. LPE. Pearson Prentice Hall.2nd edition. 2005.

18CAU501B**SOFTWARE TESTING****Semester – V
4H – 4C****Instruction Hours / week: L:3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques
- To gain confidence in and providing information about the level of quality of the software

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Apply the software testing techniques in commercial environment

Unit- I**Assessing Testing Capabilities and Competencies**

Who is associated with testing? – The multiple Roles of Testing – Defect – The business perspective for testing – test process and testers ; Building a software testing strategy: Computer System Strategic risks – Economics of Testing – Common Computer Problems – Economics of System Development Life Cycle (SDLC) Testing – Testing-an Organizational Issue – Establishing a testing policy – Structured approach to testing – Test Strategy; Software Testing Methodology: Reduce the cost of testing – Functional and Structural testing – Workbench concept – Eight considerations in developing testing methodologies

Unit -II**Software Testing Fundamentals**

Examining the specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques; Testing the software with blinders on:

Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques; Examining the code: Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist; Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging- Testing the Pieces- Data Coverage- Code Coverage.

Unit- III

Software Testing Techniques

Determining your software testing techniques: Testing Techniques/Tools selection process – Selecting Techniques/tools – Structural system testing techniques- Functional

system testing techniques – UNIT testing technique – Functional testing and analysis – Functional testing – Test factor/Test technique matrix

Testing process

The Cost of Computer Testing – Life Cycle Testing concept – Verification and validation in the software. Assess Project Management Development Estimate and Status - Develop Test Plan - Requirements Phase Testing -Design Phase Testing -Program Phase Testing

Unit -IV

Testing process

Execute Test and Record results- Acceptance Test- Report Test Results- Testing Software Installation- Test Software Changes - Evaluate Test Effectiveness.

Unit- V

Testing Specialized Systems and Applications

Testing client/server systems - Testing web-based systems - Testing security - Building tests documentation.

Suggested Readings

2. William E.Perry, (2001). *Effective methods for Software Testing*, (2nd ed.), New Delhi: John Wiley & Sons, Inc., (1, 3, 4 & 5 units)

18CAU502A**COMPUTER GRAPHICS****Semester – V**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives**

Enable the student

- This course presents an introduction to computer graphics designed to give the student an overview of fundamental principles.
- The course makes the student to understand about the video and raster scan displays and their storage
- Methods for modeling objects as polygonal meshes or smooth surfaces, and as rendering such as hidden-surface removal, shading, illumination, and shadows will be investigated.
- To make the student to understand the usage of input devices and its working
- The course objective relies on the student to understand the line algorithm and 2D,3D Geometrical transformation.
- To Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Have a knowledge and understanding of the structure of an interactive computer graphics system, and the separation of system components.
2. Have a knowledge and understanding of geometrical transformations and 2D viewing.
3. Be able to create interactive graphics applications.
4. Have a knowledge and understanding of techniques for representing 3D geometrical objects.
5. Have a knowledge and understanding of the various clipping algorithms and visible surface detection algorithm.
6. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.

Unit I - INTRODUCTION

Basic elements of Computer graphics, Applications of Computer Graphics.

Unit II - GRAPHICS HARDWARE

Architecture of Raster and Random scan display devices, input/output devices.

Unit III - FUNDAMENTAL TECHNIQUES IN GRAPHICS

Raster scan line, circle and ellipse drawing, thick primitives, Polygon filling, line and polygon clipping algorithms, 2D and 3D Geometric Transformations, 2D and 3D Viewing Transformations (Projections- Parallel and Perspective), Vanishing points.

Unit IV - GEOMETRIC MODELING

Representing curves & Surfaces.

Unit V - Visible Surface determination

Hidden surface elimination. **Surface rendering-** Illumination and shading models. Basic color models and Computer Animation.

18CAU502B**INFORMATION SECURITY AND CYBER LAWS****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- Gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- Understand key terms and concepts in cyber law, intellectual property and cyber crimes, trademarks and domain theft.
- To examine secure software development practices.
- To incorporate approaches for incident analysis and response.
- To incorporate approaches for risk management and best practices.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain an understanding of cryptography, how it has evolved, and some key encryption techniques used today.
5. The learner will develop an understanding of security policies (such as confidentiality, integrity, and availability), as well as protocols to implement such policies.
6. The learner will gain familiarity with prevalent network and distributed system attacks, defenses against them, and forensics to investigate the aftermath.

Unit I - COURSE INTRODUCTION

Computer network as a threat, hardware vulnerability, software vulnerability, importance of data security.

Digital Crime: Overview of digital crime, criminology of computer crime.

Unit II - INFORMATION GATHERING TECHNIQUES

Tools of the attacker, information and cyber warfare, scanning and spoofing, password cracking, malicious software, session hijacking

Unit III - RISK ANALYSIS AND THREAT

Risk analysis, process, key principles of conventional computer security, security policies, authentication, data protection, access control, internal vs external threat, security assurance, passwords, authentication, and access control, computer forensics and incident response

Unit IV- INTRODUCTION TO CRYPTOGRAPHY AND APPLICATIONS

Important terms, Threat, Flaw, Vulnerability, Exploit, Attack, Ciphers, Codes, Caesar Cipher, Rail-Fence Cipher, Public key cryptography (Definitions only), Private key cryptography (Definition and Example)

Safety Tools and Issues : Firewalls, logging and intrusion detection systems, Windows and windows XP / NT security, Unix/Linux security, ethics of hacking and cracking

Unit V- CYBER LAWS

CYBER LAWS to be covered as per IT 2008:

- Chapter 1: Definitions 88
- Chapter 2: Digital Signature And Electronic Signature
- [Section 43] Penalty and Compensation for damage to computer, computer system, etc.
- [Section 65] Tampering with Computer Source Documents
- [Section 66 A] Punishment for sending offensive messages through communication service, etc.
- [Section 66 B] Punishments for dishonestly receiving stolen computer resource or communication device
- [Section 66C] Punishment for identity theft
- [Section 66D] Punishment for cheating by personation by using computer resource
- [Section 66E] Punishment for violation of privacy
- [Section 66F] Punishment for cyber terrorism
- [Section 67] Punishment for publishing or transmitting obscene material in electronic form
- [Section 67A] Punishment for publishing or transmitting of material containing sexually explicit act, etc. in electronic form
- [Section 67B] Punishment for publishing or transmitting of material depicting children in sexually explicit act, etc. in electronic form
- [Section 72] Breach of confidentiality and privacy

18CAU503A**DATA MINING****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To Understand Data Mining fundamentals and Characterize the kinds of patterns that can be discovered by association rule mining
- To Compare and evaluate different data mining techniques like classification, prediction.
- To Cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To Design data warehouse with dimensional modelling and apply OLAP operations.
- To program using available data mining tools and general-purpose languages.

Course Outcomes(COs)

Upon completion of this course the students will be able to:

1. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
2. Design and deploy appropriate classification techniques and decision trees.
3. Understand the concept of clustering and its real time applications
4. Explore recent trends in data mining such as web mining, spatial-temporal mining
5. Able to know the basic concepts of data warehouse and OLAP operations
6. Organize and Prepare the data needed for data mining using pre preprocessing techniques

Unit- I**Introduction :** Fundamentals of data mining – Data Mining Functionalities – Classification of Data Mining systems – Major issues in Data Mining.

Data Warehouse and OLAP Technology: An Overview – Data Warehouse – Multidimensional Data Model – Data Warehouse Architecture

Unit-II**Data Preprocessing:** Needs Preprocessing the Data – Data Cleaning – Data Integration and Transformation – Data Reduction – Discretization and Concept Hierarchy Generation – Online Data Storage.**Preparing Data for Mining:** Variable Measures.**Unit-III**

Mining Frequent Patterns, Associations and Correlations: Basic Concepts – Efficient and Scalable Frequent item set Mining Methods – From Association Mining to Correlation Analysis.

Unit-IV

Predictive and descriptive data mining techniques, supervised and unsupervised learning techniques, process of knowledge discovery in databases, pre-processing methods

Unit-V

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering, Scalability and data management issues in data mining algorithms, measures of interestingness

Suggested Readings

18CAU503B**PROGRAMMING IN PYTHON****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 Ext : 60****Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To Learn Syntax and Semantics and create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications
- To Use Python interactively

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Decompose a Python program into functions.
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python Programs.
6. Implement database and GUI applications

Unit-I

Planning the Computer Program: Concept of problem solving-Problem definition- Program design-Debugging-Types of errors in programming-Documentation.

Unit-II

Techniques of Problem Solving: Flowcharting-decision table-algorithms-Structured programming concepts-Programming methodologies: top-down and bottom-up Programming.

Unit-III

Overview of Programming: Structure of a Python Program-Elements of Python.

Unit-IV

Introduction to Python: Python Interpreter-Using Python as calculator-Python shell- Indentation. Atoms-Identifiers and keywords-Literals-Strings-Operators(Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator).

Unit-V

Creating Python Programs: Input and Output Statements-Control statements(Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.).
Defining Functions-Default arguments.

18CAU504A**DIGITAL IMAGE PROCESSING****Semester – V
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To apply knowledge of mathematics, science, and engineering
- To design and conduct experiments, as well as to analyze and interpret data

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

Unit-I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

Unit-II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

Unit-III

Image Restoration, Basic Framework, Interactive Restoration, Image deformation and geometric transformations, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Estimation of Degradation functions, Restoration from projections, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW

coding, Transform Coding, Sub-image size selection, blocking artifacts, DCT implementation using FFT, Run length coding.

Unit – IV

FAX compression (CSUITT Group-3 and Group-4), Symbol-based coding, JBIG-2, Bit-plane encoding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Expansion of functions, Multi-resolution analysis, Scaling functions, MRA refinement equation, Wavelet series expansion, Discrete Wavelet Transform (DWT), Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

Unit-V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Hit-or-Miss Transform, Boundary Detection, Hole filling, Connected components, convex hull, thinning, thickening, skeletons, pruning, Geodesic Dilation, Erosion, Reconstruction by dilation and erosion. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding, Otsu's method, Moving averages, Multivariable thresholding, Region-based segmentation, Watershed algorithm, Use of motion in segmentation

Suggested Readings

18CAU504B**MONGO DB****Semester – V**
3H – 3C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives**

Enable the student

- To get knowledge and skills to master the NoSQL database mongoDB.
- To write programs using MongoDB
- To design an e-commerce data model
- To gain the knowledge on replication
- To know about Query language
- To know about query optimization

Course Outcomes(COs)

Upon completion of this course, the students will be able to:

1. Gain the right skills and knowledge needed to develop Applications on mongoDB
2. Run Applications on MongoDB
3. Do the query operation in MongoDB
4. Manipulate aggregate function
5. Design an e-commerce data model
6. Gain the knowledge on replication

Unit I - GETTING STARTED

A database for the modern web – MongoDB through the JavaScript shell – Writing programs using MongoDB.

Unit II - APPLICATION DEVELOPMENT

Document-oriented data – Principles of schema design – Designing an e-commerce data model – Nuts and bolts on databases, collections, and documents. Queries and aggregation – E-commerce queries – MongoDB's query language – Aggregating orders – Aggregation in detail.

Unit III - UPDATES, ATOMIC OPERATIONS, AND DELETES

A brief tour of document updates – E-commerce updates – Atomic document processing – MongoDB updates and deletes. Indexing and query optimization: Indexing theory – Indexing in practice – Query optimization.

Unit IV – REPLICATION

Overview – Replica sets – Master-slave replication – Drivers and replication. Sharding: Overview – A sample shard cluster – Querying and indexing a shard cluster – Choosing a shard key – sharding in production.

Unit V - DEPLOYMENT AND ADMINISTRATION

Deployment – Monitoring and diagnostics – Maintenance – Performance troubleshooting

18CAU511A	ARTIFICIAL INTELLIGENCE – PRACTICAL	Semester – V 4H – 2C
------------------	--	---------------------------------------

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To understand the various characteristics of Intelligent agents and different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To learn about knowledge inference and planning strategies of AI.
- To know about various Expert System tools and applications
- To learn programming in logic language to implement various AI algorithms
- To read and analyzed important historical and current trends addressing artificial intelligence.

Course Outcomes (Cos)

Upon completion of this course the students will be able to:

1. Compare AI with human intelligence and traditional information processing, discuss its strengths, limitations and its application to complex and human centered problems.
2. Formalize a given problem in the language/framework of AI knowledge representation.
3. Analyze and formalize the problem through knowledge inference and planning strategies.
4. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in machine learning and expert systems,
5. Apply the concept of AI using programming language PROLOG
6. Develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents: Search, Knowledge representation, inference, logic, and learning.

List of Programs:

1. Write a prolog program to calculate the sum of two numbers.
2. Write a prolog program to find the maximum of two numbers.
3. Write a prolog program to calculate the factorial of a given number.
4. Write a prolog program to calculate the nth Fibonacci number.
5. Write a prolog program, insert_nth(item, n, into_list, result) that asserts that result is the list into_list with item inserted as the n'th element into every list at all levels.
6. Write a Prolog program to remove the Nth item from a list.
7. Write a Prolog program, remove-nth(Before, After) that asserts the After list is the Before list with the removal of every n'th item from every list at all levels.
8. Write a Prolog program to implement append for two lists.
9. Write a Prolog program to implement palindrome(List)
10. Write a Prolog program to implement max(X,Y,Max) so that Max is the greater of two numbers X and Y.
11. Write a Prolog program to implement maxlist(List,Max) so that Max is the greatest number in the list of numbers List.

12. Write a Prolog program to implement `sumlist(List,Sum)` so that `Sum` is the sum of a given list of numbers `List`.
13. Write a Prolog program to implement two predicates `evenlength(List)` and `oddlength(List)` so that they are true if their argument is a list of even or odd length respectively.
14. Write a Prolog program to implement `reverse(List,ReversedList)` that reverses lists.
15. Write a Prolog program to implement `maxlist(List,Max)` so that `Max` is the greatest number in the list of numbers `List` using cut predicate.
16. Write a Prolog program to implement GCD of two numbers.
17. Write a prolog program that implements Semantic Networks/Frame Structures.

18CAU511B**SOFTWARE TESTING - PRACTICAL****Semester –V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques
- To gain confidence in and providing information about the level of quality of the software

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Apply the software testing techniques in commercial environment

List of Programs:

1. Create a VB form with the following fields and create the database also for them. Insert 3 records. Using Win Runner tool record the above 3 transaction and test them and produce the Report. (Blackbox Testing).
2. Create a VB form and then add login dialog form. Using Win Runner tool check the Username and Password and produce the Report. (Security testing).
3. Create a VB form with the following fields and check the calculation is correct or not by using the test toll Win Runner. (Functional Testing) Fields – Name, Designation, Department, Basic, HRA, DA, PF and netsal.
- 4.using Win Runner test tool check the database values after changing. Using Flight database. (Regression testing).
5. Write a C program for Boundary Testing.
6. Write a C program for Loop Testing.
7. Write a C program for Integration Testing.
8. Write a C program for Interface Testing.
9. Write a C program for Unit testing.

Suggested Readings

2. William E.Perry, (2001). *Effective methods for Software Testing*, (2nd ed.), New Delhi: John Wiley & Sons, Inc., (1, 3, 4 & 5 units)

18CAU512A**COMPUTER GRAPHICS – PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- This course presents an introduction to computer graphics designed to give the student an overview of fundamental principles.
- The course makes the student to understand about the video and raster scan displays and their storage
- Methods for modeling objects as polygonal meshes or smooth surfaces, and as rendering such as hidden-surface removal, shading, illumination, and shadows will be investigated.
- To make the student to understand the usage of input devices and its working
- The course objective relies on the student to understand the line algorithm and 2D,3D Geometrical transformation.
- To Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Have a knowledge and understanding of the structure of an interactive computer graphics system, and the separation of system components.
2. Have a knowledge and understanding of geometrical transformations and 2D viewing.
3. Be able to create interactive graphics applications.
4. Have a knowledge and understanding of techniques for representing 3D geometrical objects.
5. Have a knowledge and understanding of the various clipping algorithms and visible surface detection algorithm.
6. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.

List of programs:

1. Write a program to implement Bresenham's line drawing algorithm.
2. Write a program to implement mid-point circle drawing algorithm.
3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.
4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.
5. Write a program to apply various 2D transformations on a 2D object (use homogenous coordinates).
6. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.
7. Write a program to draw Hermite/Bezier curve.

18CAU512B **INFORMATION SECURITY AND CYBER LAWS** **Semester – V**
- PRACTICAL **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 **Marks: Internal: 40** **External: 60** **Total: 100**
End Semester Exam: 3 Hours

Course Objectives

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- Gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- Understand key terms and concepts in cyber law, intellectual property and cyber crimes, trademarks and domain theft.
- To examine secure software development practices.
- To incorporate approaches for incident analysis and response.
- To incorporate approaches for risk management and best practices.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain an understanding of cryptography, how it has evolved, and some key encryption techniques used today.
5. The learner will develop an understanding of security policies (such as confidentiality, integrity, and availability), as well as protocols to implement such policies.
6. The learner will gain familiarity with prevalent network and distributed system attacks, defenses against them, and forensics to investigate the aftermath.

List of Programs:

1. Demonstrate the use of Network tools: ping, ipconfig, ifconfig, tracert, arp, netstat, whois
2. Use of Password cracking tools : John the Ripper, Ophcrack. Verify the strength of passwords using these tools.
3. Perform encryption and decryption of Caesar cipher. Write a script for performing these operations.
4. Perform encryption and decryption of a Rail fence cipher. Write a script for performing these operations.
5. Use nmap/zenmap to analyse a remote machine.
6. Use Burp proxy to capture and modify the message.

7. Demonstrate sending of a protected word document.
8. Demonstrate sending of a digitally signed document.
9. Demonstrate sending of a protected worksheet.
10. Demonstrate use of steganography tools.
11. Demonstrate use of gpg utility for signing and encrypting purposes.

18CAU513A	DATA MINING - PRACTICAL	Semester – V 4H – 2C
------------------	--------------------------------	---------------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To Understand Data Mining fundamentals and Characterize the kinds of patterns that can be discovered by association rule mining
- To Compare and evaluate different data mining techniques like classification, prediction.
- To Cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To Design data warehouse with dimensional modelling and apply OLAP operations.
- To program using available data mining tools and general-purpose languages.

Course Outcomes(COs)

Upon completion of this course the students will be able to:

1. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
2. Design and deploy appropriate classification techniques and decision trees.
3. Understand the concept of clustering and its real time applications
4. Explore recent trends in data mining such as web mining, spatial-temporal mining
5. Able to know the basic concepts of data warehouse and OLAP operations
6. Organize and Prepare the data needed for data mining using pre preprocessing techniques

List of Programs:

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). For test options, first choose "Use training set", then choose "Percentage Split" using default 66% percentage split. Report model percent error rate
2. Using iris dataset preprocess and classify it with J4.8 and Naïve Bayes Classifier. examine the tree in the Classifier output panel
3. Using the datasets *ReutersCorn-Train* and *ReutersGrain-Train*. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis
5. Using weka Experimenter perform comparison analysis of J48, oneR and ID3 for vote dataset
6. Using Weka Experimenter perform comparison analysis of Naïve Bayes with different datasets
7. Apply ZeroR, OneR, and J48, to classify the Iris data in an experiment using 10 train and test runs, with 66% of the data used for training and 34% used for testing.
8. Using Weka Knowledge flow Set up a flow to load an ARFF file (batch mode) and perform a cross-validation using J48 (WEKA's C4.5 implementation).

18CAU513B**PROGRAMMING IN PYTHON - PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4
100****Marks: Internal: 40 External: 60 Total:****End Semester Exam: 3 Hours****Course Objectives**

- To Learn Syntax and Semantics and create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications
- To Use Python interactively

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Decompose a Python program into functions.
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python Programs.
6. Implement database and GUI applications

List of Programs:

1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria :
Grade A: Percentage ≥ 80
Grade B: Percentage ≥ 70 and < 80
Grade C: Percentage ≥ 60 and < 70
Grade D: Percentage ≥ 40 and < 60
Grade E: Percentage < 40
3. Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from user.
4. Write a program in python to display the first n terms of Fibonacci series.
5. Write a program in python to find factorial of the given number.
6. Write a program in python to find sum of the following series for n terms: $1 - 2/2! + 3/3! - - - n/n!$
7. Write a program in python to calculate the sum and product of two compatible matrices.

Suggested Readings

18CAU514A DIGITAL IMAGE PROCESSING - PRACTICAL**Semester – V
3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3
Total: 100****Marks: Internal: 40 External: 60****End Semester Exam: 3 Hours****Course Objectives**

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To apply knowledge of mathematics, science, and engineering
- To design and conduct experiments, as well as to analyze and interpret data

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques

List of Programs:

1. Write program to read and display digital image using MATLAB or SCILAB
 - a. Become familiar with SCILAB/MATLAB Basic commands
 - b. Read and display image in SCILAB/MATLAB
 - c. Resize given image
 - d. Convert given color image into gray-scale image
 - e. Convert given color/gray-scale image into black & white image
 - f. Draw image profile
 - g. Separate color image in three R G & B planes
 - h. Create color image using R, G and B three separate planes
 - i. Flow control and LOOP in SCILAB
 - j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
 - a. Obtain Negative image
 - b. Obtain Flip image
 - b. Thresholding
 - d. Contrast stretching
3. To write and execute programs for image arithmetic operations
 - a. Addition of two images
 - b. Subtract one image from other image
 - c. Calculate mean value of image
 - d. Different Brightness by changing mean value
4. To write and execute programs for image logical operations

- a. AND operation between two images
 - b. OR operation between two images
 - c. Calculate intersection of two images
 - d. Water Marking using EX-OR operation
 - e. NOT operation (Negative image)
5. To write a program for histogram calculation and equalization using
 - a. Standard MATLAB function
 - b. Program without using standard MATLAB functions
 - c. C Program
6. To write and execute program for geometric transformation of image
 - a. Translation
 - b. Scaling
 - c. Rotation
 - d. Shrinking
 - e. Zooming
7. To understand various image noise models and to write programs for
 - a. image restoration
 - b. Remove Salt and Pepper Noise
 - c. Minimize Gaussian noise
 - d. Median filter and Weiner filter
8. Write and execute programs to remove noise using spatial filters
 - a. Understand 1-D and 2-D convolution process
 - b. Use 3x3 Mask for low pass filter and high pass filter
 - c. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.
9. Write and execute programs for image frequency domain filtering
 - a. Apply FFT on given image
 - b. Perform low pass and high pass filtering in frequency domain
 - c. Apply IFFT to reconstruct image
10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
11. Write and execute program for image morphological operations erosion and dilation.

Suggested Readings

Semester – V**18CAU514B****MONGO DB - PRACTICAL****3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal:40 External:60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives**

Enable the student

- To get knowledge and skills to master the NoSQL database mongoDB.
- To write programs using MongoDB
- To design an e-commerce data model
- To gain the knowledge on replication
- To know about Query language
- To know about query optimization

Course Outcomes(COs)

Upon completion of this course, the students will be able to:

1. Gain the right skills and knowledge needed to develop Applications on mongoDB
2. Run Applications on MongoDB
3. Do the query operation in MongoDB
4. Manipulate aggregate function
5. Design an e-commerce data model
6. Gain the knowledge on replication

List of Experiments:

Structure of 'restaurants' collection :

```
{ "address": { "building": "1007", "coord": [ -73.856077, 40.848447 ], "street": "Morris Park Ave", "zipcode": "10462" }, "borough": "Bronx", "cuisine": "Bakery", "grades": [ { "date": { "$date": 1393804800000 }, "grade": "A", "score": 2 }, { "date": { "$date": 1378857600000 }, "grade": "A", "score": 6 }, { "date": { "$date": 1358985600000 }, "grade": "A", "score": 10 }, { "date": { "$date": 1322006400000 }, "grade": "A", "score": 9 }, { "date": { "$date": 1299715200000 }, "grade": "B", "score": 14 }, "name": "Morris Park Bake Shop", "restaurant_id": "30075445" }
```

1. Write a MongoDB query
 - a. To display all the documents in the collection restaurants.
 - b. To display the fields restaurant_id, name, borough and cuisine for all the documents in the collection restaurant.
 - c. To display the fields restaurant_id, name, borough and cuisine, but exclude the field _id for all the documents in the collection restaurant
 - d. To display the fields restaurant_id, name, borough and zip code, but exclude the field _id for all the documents in the collection restaurant.
 - e. To display all the restaurant which is in the borough bronx
 - f. To display the first 5 restaurant which is in the borough bronx.

- g. To display the next 5 restaurants after skipping first 5 which are in the borough bronx.
 - h. To find the restaurants who achieved a score more than 90.
 - i. To Find The Restaurants That Achieved A Score, More Than 80 But Less Than 100.
- 2. Write a MongoDB query
 - a. To find the restaurants which locate in latitude value less than -95.754168.
 - b. To Find the restaurants that do not prepare any cuisine of 'american' and their grade score more than 70 and latitude less than -65.754168.
 - c. To Find the restaurants which do not prepare any cuisine of 'american' and achieved a score more than 70 and not located in the longitude less than - 65.754168. Note : do this query without using \$and operator. Go to the editor
 - d. To find the restaurants which do not prepare any cuisine of 'American ' and achieved a grade point 'A' not belongs to the borough Brooklyn. The document must be displayed according to the cuisine in descending order.
- 3. Write a MongoDB query
 - a. To find the restaurant Id, name, borough and cuisine for those restaurants which contain 'Wil' as first three letters for its name. Go to the editor
 - b. To find the restaurant Id, name, borough and cuisine for those restaurants which contain 'ces' as last three letters for its name.
 - c. To find the restaurant Id, name, borough and cuisine for those restaurants which contain 'Reg' as three letters somewhere in its name.
- 4. Write a mongodb query
 - a. To find the restaurants which belong to the borough Bronx and prepared either American or Chinese dish.
 - b. To find the restaurant Id, name, borough and cuisine for those restaurants which belong to the borough Staten Island or Queens or Bronx or Brooklyn.
 - c. To find the restaurant Id, name, borough and cuisine for those restaurants which are not belonging to the borough Staten Island or Queens or Bronx or Brooklyn.
 - d. To find the restaurant Id, name, borough and cuisine for those restaurants which achieved a score which is not more than 10.
 - e. To find the restaurant Id, name, borough and cuisine for those restaurants which prepared dish except 'American' and 'Chinees' or restaurant's name begins with letter 'Wil'.
 - f. To find the restaurant Id, name, and grades for those restaurants which achieved a grade of "A" and scored 11 on an isodate "2014-08- 11T00:00:00Z" among many of survey dates
 - g. To find the restaurant Id, name and grades for those restaurants where the 2nd element of grades array contains a grade of "A" and score 9 on an isodate "2014-08- 11T00:00:00Z".
- 5. Write a MongoDB query to find the restaurant Id, name, address and geographical location for those restaurants where 2nd element of coord array contains a value which is more than 42 and upto 52
- 6. Write a MongoDB query
 - a. To arrange the name of the restaurants in descending along with all the columns.
 - b. To arranged the name of the cuisine in ascending order and for that same cuisine borough should be in descending order.
- 7. Write a MongoDB query to know whether all the addresses contains the street or not.

8. Write a MongoDB query which will select all documents in the restaurants collection where the coord field value is Double.
9. Write a MongoDB query which will select the restaurant Id, name and grades for those restaurants which returns 0 as a remainder after dividing the score by 7.
10. Write a MongoDB query to find the restaurant name, borough, longitude and attitude and cuisine for those restaurants which contains 'mon' as three letters somewhere in its name.

SUGGESTED READINGS

18CAU601A**PHP PROGRAMMING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives****Enable the student**

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To Create conditional structures

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Analyze and solve various database tasks using the PHP language.

Unit-I

Introduction to PHP: PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP -Basic Syntax, PHP variables and constants -Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator-PHP operator Precedence and associativity

Unit-II

Handling HTML form with PHP: Capturing Form Data-GET and POST form methods- Dealing with multi value fields Redirecting a form after submission -**PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

Unit-III

PHP Functions: Function, Need of Function , declaration and calling of a function -PHP Function with arguments, Default Arguments in Function -Function argument with call by value, call by reference -Scope of Function Global and Local

Unit-IV

String Manipulation and Regular Expression: Creating and accessing String, Searching & Replacing String -Formatting, joining and splitting String , String Related Library functions-Use and advantage of regular expression over inbuilt function -Use of preg_match(), preg_replace(), preg_split()-functions in regular expression

Unit-V

Array: Anatomy of an Array ,Creating index based and Associative array ,Accessing array- Looping with Index based array, with associative array using each() and foreach()-Some useful Library function

4. Steven Holzner, (2007). *PHP: The Complete Reference Paperback*, McGraw Hill Education (India), 2007.
5. Timothy Boronczyk, Martin E. Psinas, (2008). *PHP and MYSQL (Create-Modify-Reuse)*, Wiley India Private Limited.

18CAU601B**UNIX / LINUX PROGRAMMING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives****Enable the student to**

- Understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- Understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- Understand how the operating system abstractions can be implemented
- Understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- Understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented. These also include issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.
- provide introduction to UNIX Operating System and its File System
- gain an understanding of important aspects related to the SHELL and the process
- develop the ability to formulate regular expressions and use them for pattern matching.

Course Outcome

Upon completion of this course, students will be able to:

1. Describe the architecture and features of UNIX Operating System and distinguish it from other Operating System
2. Demonstrate UNIX commands for file handling and process control
3. Write Regular expressions for pattern matching and apply them to various filters for a specific task
4. Analyze a given problem and apply requisite facets of SHELL programming in order to devise a SHELL script to solve the problem
5. Implement various file processing commands used in UNIX.
6. Construct various shell scripts for simple applications.

Unit-I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process

Unit-II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

Unit-III

User Management and the File System Types of Users, Creating users, Granting rights

User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

Unit-IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script, Shell variable (user defined and system variables)

Unit-V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell, Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

4. Sumitabha, Das, (2006). *Unix Concepts And Applications*, Tata McGraw-Hill Education.

SEMESTER-VI**18CAU602A****DATABASE ADMINISTRATION****4H - 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student to

- Installing Oracle Software
- Creating an Oracle Database Using DBCA
- Managing Database instances and ASM instances
- Managing and controlling database network environment
- Define and devise transaction management, concurrency control, crash recovery components
- Managing storage structures
- Controlling user security
- Designing Database backup and recovery procedures
- Take Decisions related with Database Maintenance

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Design, model and install any database management systems by using Oracle database as sample.
2. Plan, design, construct, control and manage database instances, database network environment, storage structures, user security, database backup and recovery, database maintenance
3. Define and devise transaction management, concurrency control, crash recovery components
4. Examine and perform data base administration roles and operations by using Oracle database system as a sample
5. Compare and contrast by examining the database systems and new trends in data storage, data retrieval and maintenance techniques.
6. Configure, manage and maintain database, to audit and improve database performances and to use tools for database administration.

Unit I

Oracle DBA's: The Oracle DBA's Role- Oracle Database 11g Architecture: Oracle Databases and instances- Oracle Logical Storage structures – Oracle Logical Database structures – Oracle Physical Storage structures- Multiplexing Database Files - Oracle Memory Structures-Oracle Backup and Recovery – Security Capabilities – Tablespace Architecture – Oracle Tablespace installation – Traditional Disk Space Storage – Automatic Storage Management

Unit II

Common Space Management Problems – Oracle Segments, Extents and Blocks – Space Management Methodologies – SYSAUX monitoring and usage – Archived Redo Log File Management – Built in Space Management Tools: Segment Advisor – Undo Advisor and the Automatic Workload Repository – Index usage – Space Usage Warning Levels – Reusable space allocation – Managing alert and Trace Files with ADR – Transaction Basics – Undo Basics – Managing Undo Tablespaces – Flashback features

Unit III

Tuning Application Design – Tuning SQL – Tuning Memory Usage – Tuning Data Access – Tuning Data Manipulation – Tuning Physical Storage – Reducing Network Security – Database Authentication Methods

Unit IV

Database Authorization Methods – Auditing: Auditing Locations – Statement Auditing – Privilege Auditing Schema Object Auditing – Auditing Related Data Dictionary Views – Logical Backups – Physical Backups – Using Data Pump Export and Import – Data Pump Import Options – Integration of Backup Procedures
Overview of Oracle Net – Using the Oracle Net Configuration Assistant – Using the Oracle Net Manager – Starting the Listener Server Process – Controlling the Listener Server Process Using Data links

Unit-V

Creating Tablespaces in a VLDB Environment: Bigfile Tablespace Basics – Creating and Modifying Bigfile Tablespace – Bigfile Tablespace ROWID format – DBMS_ROWID and Bigfile Tablespaces.- Advanced Oracle Table Types – Using Bitmap Indexes – Oracle Data Pump
Remote queries – Remote Data Manipulation: Two Phase Commit – Managing Distributed Data – Managing Distributed Transactions – Monitoring and Tuning Distributed Database

18CAU602B**CLOUD COMPUTING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Int: 40 Ext: 60****Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student to

- Basics of cloud computing.
- Key concepts of virtualization.
- Different Cloud Computing services
- Cloud Implementation, Programming and Mobile cloud computing
- Key components of Amazon Web Services
- Cloud Backup and solution

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Define Cloud Computing and memorize the different Cloud service and deployment models
2. Describe importance of virtualization along with their technologies.
3. Use and Examine different cloud computing services
4. Analyze the components of open stack & Google Cloud platform and understand Mobile Cloud Computing
5. Describe the key components of Amazon web Service
6. Design & develop backup strategies for cloud data based on features

Unit-I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. **Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

Unit-II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

Unit-III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

Unit-IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

Unit-V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

SEMESTER-VI**18CAU603A****BIG DATA ANALYTICS****3H- 3C****Instruction Hours / week: L: 3 T: 0 P: 0
100****Marks: Internal: 40 External: 60 Total:****End Semester Exam: 3Hours****Course Objectives****Enable the student**

- To know the fundamental concepts of big data and analytics.
- To explore tools and practices for working with big data
- To learn about stream computing.
- To know about the research that requires the integration of large amounts of data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Work with big data tools and its analysis techniques
2. Analyze data by utilizing clustering and classification algorithms
3. Learn and apply different mining algorithms and recommendation systems for large volumes of data
4. Perform analytics on data streams
5. Learn NoSQL databases and management.
6. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing

Unit-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

Unit-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data -Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

Unit-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

Unit-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

Unit-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

18CAU603B**SYSTEM PROGRAMMING****Semester – VI
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- Describe the utility of different system programs & system tools.
- Familiarize with the tradeoffs between run-time and compile-time processing (Linking & Loading techniques).
- Explore the use of compiler with its phases.
- Use of Syntax directed scheme for intermediate code generation.
- Construct & use of different compiler tools as Lex, Yacc for code generation & optimization.

Course Outcome

Upon completion of this course, students will be able to:

- Organize the functionalities & components of system software & tools into different layers for efficient code generation.
- Apply the knowledge & technique to develop solutions to real world problems by compiling application programs.
- ability to identify, formulate, and solve computer engineering problems with proper systematic & semantic approach.
- Develop possible program constructs for further code generation with Type checking & memory management strategy
- Design a simple compiler with tools & different with optimized techniques
- Design and implement system utility programs.

Unit I - ASSEMBLERS & LOADERS, LINKERS

One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

Unit II - LEXICAL ANALYSIS

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

Unit III – PARSING

Bottom up parsing- LR parser, **Intermediate representations:** Three address code generation, syntax directed translation, translation of types, control Statements.

Unit IV- STORAGE ORGANIZATION

Activation records stack allocation.

Unit V- CODE GENERATION

Object code generation

18CAU611A**PHP PROGRAMMING - PRACTICAL****Semester – VI
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives****Enable the student**

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To Create conditional structures

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Analyze and solve various database tasks using the PHP language.

List of Programs:

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. Write a simple PHP program to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick " " brown fox' Expected Output : Thequick""brownfox
9. Write a PHP script that finds out the sum of first n odd numbers.

10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
11. Write a PHP script that checks if a string contains another string.
12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

4. Analyze a given problem and apply requisite facets of SHELL programming in order to devise a SHELL script to solve the problem
5. Implement various file processing commands used in UNIX.
6. Construct various shell scripts for simple applications.

List of Programs:

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to accept a login name. If not a valid login name display message —Entered login name is invalid.

5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of `—who` command along with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.
11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Work with big data tools and its analysis techniques
2. Analyze data by utilizing clustering and classification algorithms
3. Learn and apply different mining algorithms and recommendation systems for large volumes of data
4. Perform analytics on data streams
5. Learn NoSQL databases and management.
6. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing

List of Programs:

1. Implement a quicksort using scala.
2. Implement a auction service using scala.
3. Write a scala function to perform any 10 arithmetic operations.
4. Write a program to find the factorial of a given number using recursion.
5. Write a program for string manipulations.
6. Write a program for alphabetic order arrangement of a set of names.
7. Write a program for student records using scala list.
8. Implement any 5 map methods for maintaining customer details.
9. Implement employee records using Files
10. Write a program to copy the files using command line arguments.

Suggested readings

18CAU613B	SYSTEM PROGRAMMING - PRACTICAL	Semester – VI
		3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- Describe the utility of different system programs & system tools.
- Familiarize with the tradeoffs between run-time and compile-time processing (Linking & Loading techniques).
- Explore the use of compiler with its phases.
- Use of Syntax directed scheme for intermediate code generation.
- Construct & use of different compiler tools as Lex, Yacc for code generation & optimization.

Course Outcome

Upon completion of this course, students will be able to:

1. Organize the functionalities & components of system software & tools into different layers for efficient code generation.
2. Apply the knowledge & technique to develop solutions to real world problems by compiling application programs.
3. ability to identify, formulate, and solve computer engineering problems with proper systematic & semantic approach.
4. Develop possible program constructs for further code generation with Type checking & memory management strategy
5. Design a simple compiler with tools & different with optimized techniques
6. Design and implement system utility programs.

List of Programs:

1. To implement an assembler for a hypothetical language.
2. Write a program to recognize numbers, identifiers.
3. Write a program to develop desk calculator.

Semester IV										
18CMP401	Corporate Administration and Secretarial Practice	IV	b,g,h,i	4	0	0	4	40	60	100
18CMP402	Entrepreneurship and Small Business Management	IV	b,g,h,i	3	0	0	3	40	60	100
18CMP491	Project and Viva Voce	III	c,d,f	0	0	23	8	80	120	200
				7	0	23	15	160	240	400
							87	1000	1500	2500

PROGRAMME OUTCOMES (PO)

- a) Postgraduates will develop an understanding of various commerce functions such as finance, accounting, financial analysis, project evaluation, cost accounting.
- b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning.
- c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.
- d) Postgraduates will develop an ability to effectively communicate both orally and in written forms.
- e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.
- f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.
- g) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- h) Postgraduates will apply the lifelong learning and exhibit high level of commitment to identify a timely opportunity and use business innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.
- i) Postgraduates will acquire managerial positions or take up entrepreneurial ventures by applying the skills and knowledge gained.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance
- II. Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.
- III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.
- IV. Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

Program Educational Objectives	Program Outcomes								
	a	b	c	d	e	f	g	h	i
Postgraduates will gain advanced knowledge in the domain of commerce, management and finance	✓				✓				
Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.	✓				✓				
Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.			✓	✓		✓			
Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.		✓					✓	✓	✓

18CMP101	CORPORATE FINANCE	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of corporate finance and its importance in managing a business
2. To understand the nature, importance, structure of corporate finance related areas.
3. To impart knowledge regarding source of finance for a business.
4. To develop a conceptual framework of finance function
5. To acquaint the participants with the tools, techniques
6. To know the process of financial management in the realm of financial decision making.

COURSE OUTCOMES:

Learners should be able to

1. Understand the role of a financial manager and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time
3. Apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Compute the cost of capital and financial leverage to estimate the optimal capital structure
5. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions.

Unit – I

Scope and Functions of Finance – Role of Financial Manager – Goals of Financial Management – Functions of Controller and Treasurers in India

Unit – II

Cost of Capital – Significance – Concepts of Cost of Capital – Cost of Debt Capital, Preference Capital, Equity Capital and Retained Earnings – Weighted Average Cost of Capital

Unit – III

Capital Structure – Concept – Capital Structure Theories – Net Income Theory, Net Operating Income Theory – MM's Proportion on Capital Structure – Determinants of Optimal Capital Structure – Financial and Operating Leverage

Unit – IV

Capital Budgeting Decisions – Investment Evaluation Criteria – Payback Method – ARR – NPV Method – IRR – Profitability Index – Risk Analysis in Capital Budgeting – Nature of Risk – Conventional and Statistical Technique to handle risk

Unit –V

Management of Working Capital – Determinants of Working Capital – Management of Accounts Receivable, Inventory and Cash – Financing of Working Capital – Dividend Theories – Walter’s Model – Gordon’s Model – MM’s Hypothesis – Dividend Policy – Determinants of Dividend Policy.

Note: Theory :80 Marks and Problems : 20 Marks

SUGGESTED READINGS

Text Book

1. **Pandey, I.M. (2014).** *Financial Management*. New Delhi, Vikas Publishing House Private Limited.

References

1. **Prasana Chandra (2012).** *Financial Management – Theory and Practice*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.
2. **Khan, M.Y., and Jain, P.K. (2014).** *Financial Management*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.

COURSE OBJECTIVES:**To make the students**

1. To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem solving skills.

COURSE OUTCOMES:**Learners should be able to**

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run
5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit - I

Nature, Objectives and Scope of Managerial Economics – Role and Responsibilities of Managerial Economist – Circular Flow of Economic Activity – Nature of the Firm – Economic Profit – Profits in the Market System

Unit – II

Demand Theory and Analysis – Supply Theory and Analysis

Unit – III

Production Theory – Cost Theory – Cost Concept – Cost Output Relationship – Break Even Analysis

Unit – IV

Perfect Competition, Monopoly, Monopolistic Competition, Oligopoly, Duopoly, Bilateral Monopoly – Monopsony.

Unit – V

Pricing Decision – Pricing of Goods and Services – Pricing and Employment of Inputs – Pricing in Public Sector – Risk and Decision Making – Input – Output Analysis

SUGGESTED READINGS

Text Book

1. **Varshney and Maheswari (2014).** *Managerial Economics*. New Delhi, Sultan Chand and Sons.

References

1. **Heynes, Mole and Paul (2007).** *Managerial Economics*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.
2. **Joel Dean (2011).** *Managerial Economics*. Jaipur, Mangal Deep Publications.
3. **Sumitra Pal (2011).** *Managerial Economics*. New Delhi, Macmillan
4. India Limited.

COURSE OBJECTIVES:

Course Objectives

This course enables the students

1. To provide essential knowledge on Linear programming
2. To offer practical exposure to transportation and assignment problems
3. To gain the knowledge on Assignment and Queuing Theory Problems
4. To train students on Inventory Control
5. To help to facilitate the learning of network analysis
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

Course Outcomes

On successful completion of this course, the students will be able to

1. Students may gather relevant knowledge for minimizing Operation Cost
2. Students are equipped to cut total cost and able to minimize time required for completing assigned task
3. Students could learn to maintain optimal level of inventory
4. Understand various mathematical applications in industries.
5. Decision making for real time environment.
6. course concentrates on Linear programming, transportation model, Queuing theory and Inventory

Unit – I

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

Unit - II

Transportation Model: Introduction – Mathematical Formulation – Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model - Unbalanced Transportation Problems and Maximization case in Transportation Problem- Traveling Sales Man Problem.

Unit- III

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method – Unbalanced Assignment Problem- Maximization Case in

Assignment Problem - Travelling Salesman Problem. Queuing Theory : Introduction – Characteristics of Queuing System. Problems in $(M/M/1):(\infty/\text{FIFO})$ and $(M/M/1):(N/\text{FIFO})$ models

Unit - IV

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models – Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage -Price Break

Unit - V

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path- PERT –Time Estimates in PERT- Probability of Meeting scheduled date of Completion of Projects

18CMP104	ADVANCED CORPORATE ACCOUNTING	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the Redemption of Preference shares, Mergers& Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. To Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. To comprehend on recent developments and accounting standards
4. To enable the students to have working knowledge in corporate and special accounts.
5. To enable the students to have working knowledge in corporate and special accounts.
6. To provide knowledge on the importance of Human Resources Accounting

COURSE OUTCOMES :

Learners should be able to

1. Understand the Redemption of Preference shares, Mergers & Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. Comprehend on recent developments and accounting standards
4. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the discipline of accounting.
5. course includes preparation of final accounts, Amalgamation, Absorption and Reconstruction, Holding Company, Insurance and Banking Company Accounts, Inflation and Human Resource Accounting

Unit – I

Preparation of Company Final Accounts – Treatment and Provisions for Income Tax – Divisible Profit – Bonus Shares – Calculation of Managerial Remuneration

Unit –II

Amalgamation, Absorption and Reconstruction of Companies (Advanced Problems in Amalgamation, Absorption and Reconstruction of Companies including adjustment regarding elimination of Unrealized Profit, Inter Company Owings and Inter-Company Holdings)

Unit – III

Holding Company Accounts – Capital Profit – Revenue Profit – Minority Interest
– Cost of Control – Preparation of Consolidated Balance Sheet

Unit – IV

Insurance Company Accounts – Life and General Insurance Accounts – Preparation of Revenue Accounts and Balance Sheet (Under the New Format) - Banking Company Accounts – Rebate on Bills Discounted – Classification of Advances and Investments – Preparation of Profit and Loss Account and Balance Sheet (Under the New Format)

Unit – V

Inflation Accounting – Human Resource Accounting –International Accounting Standards (Theory Only) – International Financial Reporting Standards.

Note: Theory 20%; Problems 80%

18CMP105A	FINANCIAL MARKETS AND INSTITUTIONS	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. To understand the regulatory bodies governing the functioning of financial markets and financial institution
3. To analyze the structure of financial markets and its functions
4. To provide knowledge on Financial System of India and
5. To provide knowledge on Financial System of India and to familiarize the structure of financial markets
6. To familiarize the structure of financial markets

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. Understand the regulatory bodies governing the functioning of financial markets and financial institution
3. Obtain the capacity to do lifelong learning on financial markets, instruments, financial institution and its applications.
4. To communicate orally and in written format about the financial markets and institutions
5. The course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions
6. Course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions

Unit – I

Financial Concept: Financial Assets, Intermediaries, Financial Markets, Financial Rate of Return, Financial Instruments. Financial Markets Classification – Development of Financial System in India, Legislative Support – Weakness of Indian Financial System

Unit - II

Money Market – Definition – Money Market Vs Capital Market- Objectives – Importance of Money Market – Composition of Money Market – Participants – Commercial Bill Market – Types of Bills – Importance of Bill Market –Discount Market – Acceptance Market – Bill Market Scheme – Treasury Bill Market – Types of Treasury

Bills –Importance – Commercial Paper – Certificate of Deposit – REPO – Structure of Indian Money Market –Recent Developments in Money Markets.

Unit – III

Capital Market – Meaning – Stock Exchange – Distinction between New Issue Market and Stock Exchange – Relationship between New Issues Market and Stock Exchange – Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

Unit - IV

Depository System : Definition and Meaning – Objectives – Interacting Institutions – Depository Process – Trading in a Depository System – Depository System in India – Depository Participants – Benefits – NSDL – Central Depository Services (India) Ltd. – Drawbacks – Remedial Measures - Derivatives

Unit - V

RBI – Commercial Banks – Public and Private – Co-operative Banks - LIC – IDBI – IFCI – ICICI – NHB – SFCs – DIC – TIIC. SEBI – Objectives – Functions of SEBI - Guidelines for Investor Protection

SUGGESTED READINGS

Text Book

References

1. **Gupta, N.K., and Monika Chopra (2011).** *Financial Markets and Institutions*. New Delhi, ANE Books Limited
2. **Gurussamy, S. (2009).** *Financial Markets and Institutions*. New Delhi, Tata Mc Graw Hill Publishing.

18CMP105B	Semester – I			
	L	T	P	C
	4	-	-	4

MARKETING MANAGEMENT

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

Unit-I

Definition of Marketing and Marketing Management – Object and Importance of Marketing – Evolution of Concept of Marketing – Recent Development in Marketing Concept – Marketing Functions – Approaches to the Study of Marketing – Market Segmentation – Basis – Criteria – Benefits.

Unit-II

Product Policy: Product Planning and Development – Product Life Cycle – Product Line and Product Mix Strategies. Branding: Features – Types – Functions. Packaging: Features – Types – Advantages – Brand Name and Trademark.

Unit-III

Pricing: Definition - Objectives of Pricing Decisions - Factors influencing Pricing Decisions – Methods of Setting Prices – Cost – Demand and Competition – Pricing Policies and Strategies.

Unit-IV

Sales Promotion: Meaning and Definition – Objectives and Importance of Sales Promotion – Personal Selling – Steps in Personal Selling - Advertising – Meaning – Objectives – Functions and Importance – Kinds of Media – Direct Marketing – Multi-level Marketing. Distribution Channels: Types of Channels – Factors affecting Choice of Distribution.

Unit-V

Marketing of Services – E-Marketing – Marketing Ethics – Consumerism – Meaning – Evolution – Types of Exploitation – Consumer Rights – Laws Protecting the Consumer Interest – Consumer Protection Acts – Consumer Courts - Retail Marketing – Methods – Problems – Retail Marketing in India – Customer Relationship Management

SUGGESTED READINGS

Text Book

18CMP105C	HUMAN RESOURCE DEVELOPMENT	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSE OUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit – I

Introduction to Human Resource Development: Concept and evolution; Relationship between human resource management and human resource development; HRD mechanisms, processes and outcomes; HRD matrix; HRD interventions; Roles and competencies of HRD professionals

Unit –II

HRD Process: Assessing HRD needs; Designing and developing effective HRD programs; Implementing HRD programs; Evaluating HRD programs.

Unit – III

Learning and HRD: Maximizing learning; Individual differences in learning process; Learning strategies and styles; Principles of learning; Learning and motivation; HRD culture and climate.

Unit – IV

HRD Activities and Applications: HRD for Workers; HRD mechanisms for workers; Role of trade unions; Employee training and development- Process, methods, and types; Coaching, counselling and performance management; Career management and development; Organization development.

Unit – V

HRD in Organisations, Trends and Practices: Select cases for HRD Practices in Government organisations, defence, police, private sectors and public sectors units; HRD audit; Balanced scorecard; People capability maturity model; Integrating HRD with technology; Employer branding and other recent trends; Future of HRD.

7. **Rao, T.V.** *HRD Score Card 2500: Based on HRD audit*. Sage Publications.

COURSE OBJECTIVES:**To make the students**

1. To understand the basic concepts of organizational behavior.
2. To analyze the individual behavior traits required for performing as individual or group.
3. To obtain the knowledge and skills of perceiving, motivating using different learning styles.
4. To understand how to perform in group and team and how to manage the power, politics and conflict.
5. To recognize the importance of organizational culture and organizational change.
6. The course comprise of Organizational behavior, Personality, Attitude, Stress and Organizational Conflict

COURSE OUTCOMES:**Learners should be able to:**

1. Analyze behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization by applying personality, motivation and learning theories.
3. Manage team and resolve conflict arising between the members.
4. Explain how organizational changes held in the company
5. and culture affect working relationships within organizations.
6. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit – I

Organizational Behaviour – Nature – Disciplines contributing to Organizational Behavior – Role of Organizational Behavior – Foundations of Organizational Behavior – Implications of Hawthorne Experiments

Unit – II

Individual Difference – Nature – Causes – Models of Man – Perception – Perceptual Process – Perceptual Selectivity – Distortion in Perception – Personality – Determinants of Personality

Unit – III

Attitude – Concepts – Theories of Attitude Formation – Factors in Attitude Formations – Attitude Change. Stress – Causes of Stress – Effects of Stress – Stress Coping Strategies – Individual and Organizational

Unit – IV

Group Dynamics – Concepts and Features of Group – Types of Groups – Formal and Informal Groups – Causes of Informal Organizations – Types of Industrial Organization – Effects of Informal Organization – Group Cohesiveness

Unit – V

Organizational Conflicts – Functional and Dysfunctional Aspects of Conflicts – Role Conflicts – Interpersonal Conflict – Conflict Management

18CMP111	PRACTICAL 1 - COMPUTER APPLICATION IN BUSINESS	Semester – I			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES:

To make the students

1. To prepare template to present the financial data for supporting analysis.
2. To use advanced formula in financial calculations
3. To use visualization tools to represent the financial data graphically
4. To forecast the financial data using the in build tools
5. To Understand and apply Sensitivity analysis on models like Goal Seek , Scenarios; for financial decision-making
6. To insert the slides with animation effects.

COURSE OUTCOMES:

Learners should be able to

1. Apply advanced formulas to lay data in readiness for financial analysis
2. Use advanced techniques for financial report visualizations
3. Leverage on various methodologies of summarizing financial data
4. Understand and apply Sensitivity (“What-if”) analysis models like Goal Seek , Scenarios; Excel models for financial decision-making
5. Exhibit communication skills to communicate the output derived from the program.
6. Course includes practical on paragraph formatting, usage of Excel functions, Automation of Presentation, creation of database and report generation.

I - MS WORD

1. Prepare an research article related to the specialization using Bold, Underline, Font Size, style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an inter collegiate invitation for the college function using Text boxes and clip parts, Word Art, Symbols, Borders and Shading.
3. Prepare an end semester mark statement through template and perform the following operations: Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of table Format.
4. Prepare a Convocation letter for the passed out students for 10 members using mail merge operation.
5. Prepare a resume for attending interview using alignment and formatting.

II - MS EXCEL

1. Prepare a cost sheet and perform the following operations: Data Entry, Total, by using arithmetic function.
2. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a steel manufacturing company by using chart wizard.
3. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
4. Prepare a Product Life Cycle which should contain the following stages: Introduction, Growth, Maturity, Saturation, decline of a product.
5. Prepare an income tax filling return as per the income tax department format.
6. Carry out result analysis of your department by employing statistical and mathematical functions.
7. Calculate Electricity statement by making use IF statement.

III - MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design Presentation slides for Organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design presentation slides about an illustrate story and perform frame movement by interesting clip arts to illustrate running of an image automatically.
4. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

IV - MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details: Employee id, Employee name, Date of Birth, Department and Designation,

Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.

2. Create mailing labels for student database which should include at least three table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table. Perform query for calculation total and create an invoice in form design view.
4. Create report for the Product database.

COURSE OBJECTIVES:**To make the students**

1. To Explain the core concepts of costing, costing types and its importance in managing a business
2. To develop a conceptual framework of costing and to acquaint the participants with the tools, techniques
3. To know the process of cost reduction and control in the realm of decision making.
4. To familiarizes students with the various concepts and elements of cost
5. To Create cost consciousness among the students
6. To provide the students knowledge about use of costing data for Planning, Control and decision making

COURSEOUTCOMES:**Learners should be able to**

1. Explain the core concepts of costing, costing types and its importance in managing a business
2. Develop a conceptual framework of costing and to acquaint the participants with the tools, techniques and process cost reduction and control in the realm of decision making
3. Compute using different costing methods.
4. Demonstrate capabilities of teamwork, problem-solving and critical thinking
5. Communication skills related to finance decisions.
6. course include Material Cost, Labour Cost, Overheads, Process Costing, Activity Based Costing and Target Costing

Unit – I

Cost Accounting – Meaning and Objectives – Importance – Limitations – Limitations of Financial Accounting – Differences between Cost Accounting and Financial Accounting, Cost Accounting and Management Accounting – Methods of Costing – Elements of Cost – Preparation of Cost Sheet – Tender – Quotations – Reconciliation of Cost and Financial Accounting

Unit – II

Material Control – Objectives – Levels of Inventory – EOQ – Methods of Inventory Control – Methods of Valuing Material Issues – Control over Wages – Scrap and Spoilage - Labour - Labour Cost Control – Importance – Systems of Wage Payment – Incentives – Idle Time – Control Over Idle Time – Labour Turnover

Unit – III

Overheads – Classification of Overheads – Allocation, Apportionment and Absorption of Overheads – Methods of Absorption of Overheads

Unit – IV

Process Costing – Features – General Principles – Comparison between Job Costing and Process Costing – Process Losses – Normal Loss – Abnormal Loss – Abnormal Gains – Inter Process Profit – Equivalent Production – Procedure for Evaluation – Joint Product and by Product

Unit-V

Activity Based Costing: Meaning and Methodology of Activity Based Costing (ABC Analysis)-Merits, Demerits and Suitability of Activity Based Costing- Implementation of Activity Based Costing- Draw Back of Conventional Costing - Target costing: Meaning-Characteristics-Principles-Implementation of Target Costing- Installation of Target Costing-Target Costing Vs. Traditional Costing- Life Cycle Costing-Meaning-Definition-Applications of LCC -Importance-Process of LCC

COURSE OBJECTIVES :

To make the students

1. To understand the concept of retailing, retailing strategy and the trends of retailing in India
2. To obtain the knowledge on the retail location and importance of choosing the retail location.
3. To gain knowledge on the retail formats and importance of choosing the retail formats.
4. To know the process of retail pricing and merchandising.
5. To recognize the importance of advertising and technology usage in retailing.
6. To develop an understanding of the retail strategy and planning process

LEARNING OUTCOMES :

Learners should be able to

1. Comprehend on the retailing concept, retailing strategy and the trends of retailing in India.
2. Select the appropriate location for the setting up of retail store.
3. Evaluate the importance of the various retail formats
4. Formulate pricing strategies, apply the concept of merchandising and assess the different advertising and technology options suitable for the success of the retail operations.
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Course includes Overview of Retailing, Retail location and layout, Merchandizing, Communication, Advertisement and Sales Promotion.

Unit – I

An overview of Retailing - Types of stores - Product Retailing vs. Service Retailing - Non store Retailing - Retail strategy - Achieving competitive advantage and positioning Retailing environment - Legal, Social, Economic, Technological, issues - Trends in the Indian Retailing Industry

Unit – II

Retail store location and layout - Country/Region analysis - Trade area analysis - Site evaluation and selection - Store design and layout - Comprehensive store planning - Exterior design and layout - Interior store design and layout - Interior design elements

Unit – III

Planning merchandise needs and merchandise budgets - Methods for determining inventory evaluation - Assortment planning, buying and vendor relations - Merchandise pricing - Price strategies - Psychological pricing - Mark-up and markdown strategies.

Unit – IV

Communicating with the retail customer - Retail promotion mix-Advertising - Sales promotion - Publicity - Retail selling process - Retail database- In-store customer service.

Unit – V

Globalization and changing retail formats – Online retailing - International Retailing – Opportunities and Challenges - Market entry formulas - New customized formats (customized stores, portable stores, merchandise depots, retail theater, service malls, customer-made stores, interactive kiosk 'shopping arcades')

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To help students to understand different heads of income
3. To learn the tools and techniques to compute the tax for the various income heads.
4. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
5. To communicate orally and in written form the income tax concepts and computations.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Provide the students knowledge about Tax planning
4. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
5. Communicate orally and in written the Income tax computation under various income heads and deductions.
6. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.

Unit- I

Income Tax Act 1961- Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

Unit - II

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

Unit - III

Capital Gains – Capital Gain –Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

Unit - IV

Deduction out of Gross Total Income - Computation of Total Income-
Assessment of Individual.

Unit - V

Tax Planning – Advance payment of tax –Tax Deducted at Source - ETDS
Software - Returns to be submitted by various assesses-Different Types of Tax Planning
– Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

18CMP204	INSURANCE AND RISK MANAGEMENT	Semester – II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To create awareness among students on various insurance policies and the procedures followed on availing policies
5. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
6. To create awareness among students on various insurance policies and the procedures followed on availing policies

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. course consists of types of risks, risk management, Life and General Insurance
6. Create awareness among students on various insurance policies and the procedures followed on availing policies

Unit – I

Introduction to Risk Management : The Concept of Risk – Risk Vs Uncertainty – Types of Risks: Market Risk, Credit Risk, Operational Risk, Interest Risk, Business Risk, Systematic Risk – Classifying Pure Risks – Methods of Handling Pure Risks – Risk Management Process – Risk Financing Techniques – Risk Management Objectives – Risk Management Information System (RMIS) – Risk Control

Unit - II

Risk Management by Individuals: Factors affecting individual demands for insurance – Risk Management by Corporations – Corporate Risk Management Process – Types of Risk Managing Firms

Unit – III

Growth and Development of Indian Insurance Industry – Regulations of Insurance Business and the Emerging Scenario – Introduction to Life and General Insurance – Life Insurance: Features of Life Insurance – Essentials of Life Insurance Contract – Kinds of Insurance Policies – Premium Determination – Life Policy Conditions

Unit –IV

Fire Insurance – Fire Insurance Contracts – Fire Insurance Coverage – Policies for Stocks – Rate Fixation in Fire Insurance – Settlement of Claims – Marine Insurance: Marine Insurance Contract – Types of Marine Insurance – Marine Cargo Losses and Frauds – Settlement of Claims

Unit – V

Miscellaneous Insurance: Motor Insurance – Employer's Liability Insurance – Personal Accident and Sickness Insurance – Aviation Insurance – Burglary Insurance – Fidelity Guarantee Insurance – Engineering Insurance – Cattle Insurance – Crop Insurance

18CMP205C STRATEGIC HUMAN RESOURCE MANAGEMENT	Semester – II			
	L	T	P	C
	4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSEOUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit –I

Introduction: Concept and context of strategic human resource management (SHRM); Corporate strategy and SHRM; Evolution of SHRM; SHRM & HR; Challenges in SHRM; Resource based view of a firm; Competencies of HR professionals.

Unit – II

HR Strategies: Strategic HR planning and acquisition: Recruitment and selection; Strategic training and development; Reward and compensation strategy; Corporate strategy and career systems; Employee separation and retention management, retrenchment; Strategic approach to industrial relations; Managing workforce diversity.

Unit – III

Implementing Strategic Human Resource Management: Identifying strategic positions; Human resource analytics; Employee engagement; Matching culture with strategy; Behavioural issues in strategy implementation.

Unit – IV

Linking SHRM to Competitive Success and Corporate Strategy: SHRM for competitive advantage; HC Bridge Model and Decision science model; Tools for work analysis and talent strategies; HR implications of mergers and acquisitions; Outsourcing and its HR implications.

Unit – V

Trends and Issues in SHRM: Alignment of HR strategies and the impact on business performance; HR metrics; Human resource strategy in international context; Future of SHRM.

 07-04 credit purchases from LG Limited invoice no 123
 Oven 100nos at Rs 800,Mixes 100nos at Rs 1000,DVD player 100nos at Rs 1500,
 Fridge 100nos at Rs 2000
 10-04 Credit Sales to AMN invoice no 1:
 Oven 70nos at Rs 1000,Mixes 70nos at Rs 1500,DVD player 70nos at Rs 2000
 Fridge 70nos at Rs 2500+TNGST 4% ON TOTAL SALES
 10-04 Cash Sales invoice no 2:
 Oven 10nos at Rs 1000,Mixes 10nos at Rs 1500,DVD player 10nos at Rs 2000,
 Fridge 10nos at Rs 2500+TNGST 4% ON TOTAL SALES CASH discount 5%

15-4 Paid cheque to LG limited Rs 2,00,000
 15-4 Received cheque from AMN&co Rs 3,00,000

5. Payment made by cash

Paid to petty cash Rs 2000, Furniture Rs 15000, Salaries Rs 10000
 Wages Rs 7000, Carriage inward Rs 1500.

25-04 Payment made by petty cash

Conveyance Rs 200, Postage Rs 150, Stationeries Rs 150, Staff Welfare Rs 200

30-04 Journal depreciate 10% on furniture:

Prepare Trading Profit and Loss Account and Balance sheet.

6. From the Balances of Ms. Kavitha, Prepare Trading A/C, Profit And Loss A/C and Balance Sheet for The Year Ending

Stock - 9,300	Misc. income - 200
Repairs - 310	Purchases - 15,450
Machinery - 12,670	Purchase return - 440
Furniture - 1430	Sales return - 120
Office expenses - 750	Sundry creditors - 12,370
Trading expenses - 310	Advertisement - 500
Land & Building - 15,400	Cash in hand - 160
Bank charges - 50	Cash at bank - 5,870
Capital - 24,500	Sales - 20,560
Loan - 5,000	Sundry expenses - 150
Closing stock - 7,580	Insurance - 500
	Traveling expenses - 200

INVENTORY VALUATION

7. From the Information given below create unit of measurement, stock groups and stock items

Find the stock summary:

Stock groups: 1. Magazine 2. Baby drinks 3. Cool drinks 4. daily news paper 5. Hot drinks
 6. Stationeries 7. Vegetables

Stock items:

Item	Qty	Rate	Units
Boost	25	80	nos
Sports star	20	15	nos
Potato	260	30	kgs
Star dust	20	25	nos
The Hindu	50	3.25	nos
Tomato	150	15	kgs
Fanta	10	25	lit
Dinamalar	40	2.50	nos

Coco	55	120	nos
Horlicks	60	70	nos
India today	10	10	nos
Lactogin	10	100	nos

MAINTAIN BILLWISE DETAILS

8. Create bill wise details from the following

1. Ravi commenced business with a capital of Rs 2,00,000
2. Purchased goods from Kumar & Co Rs.15, 000 Paid in three installments within 5 days gap
3. Purchased goods for cash Rs.8000
4. Sold goods to Ratna & co Rs. 20,000 amount to be paid in two installment
5. Sold goods for cash for Rs .5000
6. Received cash from Ratna & co Rs. 75000
7. Paid to Kumar & co Rs. 7500
8. Sold goods for cash Rs.5000

CONSOLIDATION OF ACCOUNTS

9. Bharath Agencies, A Wholesaler Gives The Following Information:

Opening balances:

Capital: 20, 00,000 cash at bank: 10, 00,000

Cash in hand: 5, 00,000 furniture: 5, 00,000

Bharath agencies are dealing in stationeries. The selling prices are as follows;

Pen Rs 35 per dozen, pencil Rs. 30 per dozen, Ink pens Rs 140 per dozen

The following transactions take on a particular date:

- 1.purchased 100 dozens of pens from Ravana bros. @ Rs.25 per dozen for cash
- 2.purchased 200 dozens of pencils from Gughan bros.@ Rs.21.50 per dozen for credit less discount of Rs 100
- 3.sold 10 dozens of pens to Dharma bros. For cash
- 4.sold 10 dozens of pens to Bema bros for credit
- 5.sold 50 dozens of pencils to Arjuna bros.
- 6.purchased from Ravana bros 50 dozens of ink pens @ Rs.120 and by cheque.

Prepare following statements using Ex-accounting packages:

Stores ledger, Trading account, Income statement, Balance sheet, Account summary

Ignore dates

FOREIGN GAINS/LOSS

10. Calculate

01.01.2005 Purchased goods from U.K supplier 1000 £

02.01.2005 Sold goods to U.S buyer 1500

03.01.2005 Cash received from U.S buyer 1500

(Selling rate rs.46/\$)

04.02.2005 Paid cash to U.K supplier 1000

(Selling rate Rs 53/ £)

Dollar \$:

Std rate - 1\$ - 43 Rs

Sales rate - 1\$ - 44 Rs

Buying rate - 1\$ - 42 Rs

Pound £:

Std rate - 1 £ - 51 Rs

Sales rate - 1 £ - 50 Rs

Buying rate - 1 £ - 52 Rs

11. MEMO VOUCHER

An advance amount paid Rs 1500 given to sales executive for traveling. The actual expenses for traveling expenses for the sales is Rs 500

12. CHEQUE PRINTING

Print a cheque:

Company name on cheque: Wipro India Ltd.: name of the bank Indusind bank.

Width 168, height 76, starting location 116, distance from top 23.

13. RATIO ANALYSIS

Enter the following details comment upon the short-term solvency position of the company:

Working capital Rs 20560492

Cash 14500

Bank 18500

Debtors 518260

Creditors 429337

Sales 515252

Purchases 433310

Stock 125982

Net profit ...?

14. INTEREST CALCULATIONS

Cash deposited in Scotia bank Rs 1,00,000

Sold goods to Ganesh Rs 25,000

31-12- cash deposited at Scotia bank Rs 50,000

Sold goods to Ganesh 50,000

Interest parameters rate 14% per 365 days year

15. Calculate Interest

Cash deposited in SBI 1, 00,000 Rs

1-12 purchased goods from suppliers Rs 20,000

Deposited in SBI Rs.50, 000

Purchased goods from suppliers Rs 40,000

Interest parameters rate 16% per 365 days year

16. Display the interest calculations for the period 1-4-2011 to 31-12-2011

Opening balance

Ram & Co Rs 25,000

Krishna traders Rs 20,000

Interest parameters rate 12% per 365 days year

Interest parameters rate 12% and 16% for sundry creditors per 365 days year

Purchased goods from Krishna for 25,000(credit period 45 days)

Sold goods to Ram for Rs. 50,000(credit period 30 days)

Paid to Krishna the amount plus interest

Received from Ram plus interest

17. Create stock items, stock groups, sales categories, godowns, units of measure.

Stock	Category	Group	Godown	Unit of measure	Std cost	Sell Price	Op. Qty	Total Value
Inter Celeron	Processor	Celeron	Mumbai	Nos.	15000	20000	2	30000
Intel Premium III	Processor		Chennai	Nos	20000	25000	3	60000
Tally Silver	Accounting	Tally	Chennai	Nos	20000	22500	5	100000
Tally gold	Accounting	Tally	Chennai	Nos	42000	45000	5	210000
								400000

18. Using the above exercise create various vouchers including VAT calculation for the following

Date Transactions	Transcation
09/4/2006	Intel Pentium III (3 Nos) @ 25,000 delivered to Vijay & CO, from Madras Go down.
10/4/2006	10 Nos of Intel Celeron @ 15000 per unit received from Jayaram and Co, and sent to Madras Go down.
12/4/2006	2Nos of Intel Premium III received from Vijay & CO, as it was not in a working position.
14/4/2006	2Nos of Intel Celeron returned to Jayaram & Co from Madras Go down.
14/4/2006	Physical Stock verification shows Shortage of 1 No Intel Pentium III.

19. Create the following Inventory vouchers with data from any cost accounting book.

- a. Purchase order
- b. sales order
- c. Rejection out
- d. Rejection in
- e. Stock journal
- f. Delivery note
- g. Receipt note
- h. Physical stock

20. In addition to the above mentioned lab exercises work out a problem from any advanced accountancy book with a minimum of 20 transactions and generate the tally reports in full.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To provide the students knowledge about budgetary control.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. course incorporates Financial Statement Analysis, Ratio Analysis, Fund Flow and Cash Flow Analysis, Budgeting and Marginal Costing

Unit – I

Management Accounting – Meaning – Definition – Objectives and Scope – Relationship between Management Accounting and Financial Accounting – Management Accounting and Cost Accounting

Unit – II

Financial Statement Analysis – Types of Financial Statement Analysis - Ratio Analysis – Meaning – Uses – Limitations – Classification of Ratios – Computation of Ratios from Financial Statements

Unit – III

Fund Flow Analysis – Cash Flow Analysis – Working Capital Statements – Funds from Operations

Unit – IV

Budgetary Control – Flexible Budget – Sales Budget – Cash Budget – Production Budget – Purchase Budget

Unit – V

Marginal Costing – Break Even Analysis – Applications of Marginal Costing Techniques – Determination of Sales Mix – Key factor – Make or Buy Decision (Simple Problems Only)

Note: Theory -20% Problems - 80%

References

1. **Sharma Shashi K. Gupta (2003).** *Management Accounting*. New Delhi, Kalyani Publishers.
2. **Khan, P.K. and Jain (2009).** *Management Accounting*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.

COURSE OBJECTIVES:

To make the students

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. To identify appropriate sources of information and methods of data collection for solving a business issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :

Learners should be able to

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit-I

Introduction to Research: Meaning – Purpose – Types of Research – Significance – Qualities of a good research – Steps in Research - Identification, Selection and Formulation of Research Problem. Research Design: Components of Research Design – Methods of Research Design.

Unit-II

Sampling Design: Census and Sample Survey – Characteristics of a Good Sample Plan – Steps in Sampling – Types of Sampling – Advantages and Limitations of Sampling. Data Collection: Primary Data - Meaning – Significance – Methods of Collecting Data: Observation – Interview Schedule – Questionnaire. Secondary Data – Meaning - Sources of Secondary Data – Precautions while using Secondary Data.

Unit-III

Scaling Techniques: Meaning of Scale–Measurement of Scale – Important Scaling Techniques - Processing of Data - Editing – Purpose – Analysis and Interpretation of Data: Meaning – Need for Interpretation – Techniques of Interpretation.- Report Writing: Types of Research Reports – Layout of the Report – Steps in Writing the Report – Contents of Research Reports

Unit-IV

Hypothesis: Characteristics of a good Hypothesis – Formulation of Hypothesis – Procedure for Testing of Hypothesis – T test, F test and Chi Square Test, Analysis of Variance - Business Forecasting – Exponential Smoothing

Unit-V

Descriptive Statistics - Measures of Central Tendency: - Mean, Median and Mode - Standard deviation – Karl Pearson Correlation – Spearman Rank Correlation - Regression Models – Inferential Statistics – Multivariate Analysis - Factor Analysis – Kruskal Wallis Test

Note:

The question paper shall cover 80% theory and 20% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST/CGST/IGST/SGST/UTGST and customs law.
2. To learn and compute the GST liabilities.
3. To know how to register GST and apply the GST provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the GST and customs and utilize for lifelong practical application.
6. To demonstrate custom duties in India

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. Comprehend and compute GST liabilities.
3. Know the procedure to register GST and apply GST provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining GST and customs and utilize for lifelong practical application.
6. Know the concept of input tax credit mechanism

Unit-I

Introduction to Indirect Tax: Meaning – Features-Types- Objectives – Principles- Cannon of Taxation – Tax system in India- Pros and Cons of Indirect tax- Contribution to government Revenues- Development of Indirect Taxation.

Unit-II

Customs Law: Basic Concepts of Customs Law- Different types of Customs Duty- Abatement of duty in damaged or deteriorated goods- Valuation –Customs procedure- Exemptions- Customs Duty drawback- Duty Free Zones- Offense and Penalties.

Unit-III

Introduction to Goods and Services Tax (GST): Meaning of GST – Basic Concepts – Features of GST- Benefits of GST- GST working Mechanism – GST rate and taxes on GST – Goods and Service Tax Network (GSTN) – Constitutional Framework of GST – Model GST Law – Chargeability for GST – Composition Scheme.

Unit-IV

Supply: Meaning and Scope- Types of Supply – Time of Supply – Provision relating to time of Supply – Place of supply – Provision relating to place of supply – Valuation mechanism – Input tax credit mechanism – Payment mechanism – Registration under GST-Rules

Unit-V

Registration under GST: Return Filing- Rules- Refund Provision in GST – E – commerce- operators- TDS/TCS- Small scale exemption.

COURSE OBJECTIVES:

To make the students

1. To understand the basic concepts of environmental forces for business decisions
2. To learn the political and government influence on business activities
3. To analyses the social factors affecting the business structure
4. To critically evaluate the economic and global factors influencing the business environment.
5. To expose the students to the environmental aspects of business
6. To expose the students to the Social Environment: Social Responsibilities of Business

COURSEOUTCOMES:

Learners should be able to

1. Understand the basic concepts of environmental forces for business decisions
2. Learn the political and government influence on business activities
3. Analyze the social factors affecting the business structure
4. Critically evaluate the economic and global factors influencing the business
5. The course incorporates Economic, Political, Technological and Social Environments
6. Know the concept of Social Responsibilities of Business

Unit-I

Introduction to Business Environment – Objectives – Types of Environment – Nature and Scope – Relationship between Economic and Non-Economic Environment – Elements of Business Environment

Unit-II

Economic Environment: Industrial Policy 1991 – Liberalization – Privatization and Globalization – Pros and Cons of Globalization – Forms of Privatization

Unit-III

Political Environment: Government and Business Relationship – Different Roles of Government in Indian Economy – Objectives of State Intervention – Indian Constitution – The Preamble Fundamental Rights.

Unit-IV

Technological Environment: Features – Impact of Technology on Society and Economy – Restraints on Technological Growth – Technology Policy.

Unit-V

Social Environment: Social Responsibilities of Business – Business and Society -
Women and Business Opportunities – Child Labour – Corporate Governance. – Green
Marketing – Global Warming

	Semester – III			
	L	T	P	C
18CMP305A INTERNATIONAL FINANCIAL MANAGEMENT	4	-	-	4

Course Objectives

To make the students

1. To make the students understand principles of financial management
2. To enable the students to take investment decisions.
3. To help the students to make financial decisions.
4. To provide the students with the basic knowledge of Dividend decisions.
5. To impart knowledge of working capital and cash management.
6. To provide knowledge on Foreign exchange and its significance in a developing economy

Course Outcomes

Learners should be able to

1. Students will be familiarized with basic concepts of financial management.
2. Students will know the technicalities of making investment decisions.
3. Students will be capable of making financing decisions.
4. Students will be familiarized with concepts of dividend decisions.
5. Students will be capable of making working capitalization and cash management.
6. course includes Balance of Payment, International Monetary System, Foreign Exchange Market, Foreign Exchange Risk and International Financial Market Instruments

Unit - I

IFM- Nature and Scope, IFM and Domestic Financial Management- Balance of payments - Significance- Preparation of BOP Statement - Link between BOP and the Economy.

Unit - II

International Monetary System - Gold Standard - IMF and World Bank Exchange Rate Mechanism - Factors influencing Exchange Rate - Purchasing Power Parity and Interest Rate Parity Theorems.

Unit - III

Foreign Exchange Market Transactions Spot, Forward, Futures, Options and Swaps - Arbitrage and Speculation in Foreign Exchange Market.- Exchange Arithmetic, Spread, Premium and Discount. – Currency Derivatives and Swaps

Unit - IV

Foreign Exchange Exposure - Managing Transaction, Translation and Operating Exposure - Techniques for covering the Foreign Exchange Risk - Internal and External Techniques of Risk.

Unit -V

International Financial Market Instruments - International Equities - ADR and GDR - Foreign Bond and Euro-bond - Short-term and Medium-term instruments.

COURSEOUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

Workout the following statistics:

1. Descriptive Statistics
2. Chi-square
3. Independent Sample 't' Test
4. Paired 't' Test
5. Analysis of Variance (ANOVA)
6. Karl Pearson Correlation
7. Spearman Rank Correlation
8. Regression
9. Factor Analysis
10. Kolmogorov and Smirnov test
11. Mann Whitney U Test
12. Wilcoxon Test

- 13. Friedman Rank Test
- 14. Kruskal Wallis H-Test
- 15. Garrett Ranking

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of auditing, corporate governance
2. To learn the audit techniques, corporate governance
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of auditing, corporate governance
2. Recall audit techniques, corporate governance practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance.
6. Reminiscence with statistics on global reporting.

Unit – I

Company Administration – Hierarchy – Share Holders – Membership – Termination – Rights and Duties – Board of Directors – Qualification – Appointment – Powers – Duties – Other Managerial Personnel

Unit – II

Company Secretary – Meaning – Types – Qualities – Appointment – Dismissal – Power – Rights – Duties and Liabilities – Role of a Secretary in the Administration of a Company

Unit – III

Meeting – Law Governing Meetings – Requisites of a Valid Meeting – Chairman of a Meeting – Appointment – Duties – Powers – Notice – Agenda – Minutes – Quorum – Motion – Resolution – Methods of Voting

Unit – IV

Kinds of Company Meetings – Board of Directors Meeting – Share holder Meeting – Statutory Meeting – Annual General Meeting – Extraordinary General Meeting – Duties of a Company Secretary relating to the Meetings

Unit – V

Drafting of Correspondence relating to the Meetings – Drafting of Notices – Agenda and Minutes of the Meetings of Shareholders and Directors – Drafting of Chairman's Speech – Annual Report and Auditors Report

SUGGESTED READINGS

Text Book

1. **Kuchhal, M.C. (2008).** *Secretarial Practice*. New Delhi, Vikas Publishing House Private Limited.

References

1. **Kapoor, N.D. (2015).** *Elements of Company Law*. New Delhi, Sultan Chand and Sons.
2. **Ashok K. Bagrial (2007).** *Company Law*. New Delhi, Vikas Publishing House Private Limited.

18CMP402	ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT	Semester – IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES:

1. To make the students
2. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
4. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
5. To initiate the required skills for entrepreneurial development.
6. To help students understand the process of establishing and developing an enterprise

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of entrepreneurship, entities of business, creating ideas, mobilizing funds and support from government.
2. Communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. Apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. course include Entrepreneur and Entrepreneurship, Market and Technical Analysis, Diversification, Sub-contracting, Incentives and Subsidies
5. Initiate the required skills for entrepreneurial development.
6. Understand the process of establishing and developing an enterprise

Unit – I

Small Business Enterprise - Small Business framework - Concept and Definition- Nature and Characteristics - Relationship between Small and Large Business - Scope and Types of Small Business - Rationale and Objectives - Small Business as seed bed of Entrepreneurship

Unit –II

Entrepreneurship - Entrepreneur and Entrepreneurship Concept - Distinction between Entrepreneur and Manager - Entrepreneurial Competency - Functions - Types (including women and rural).

Unit – III

Establishing a Small Enterprise - Learning the important steps for starting a Business - Project Identification and Selecting the Product - Generation and Screening the Project Ideas - Market Analysis - Technical Analysis, Financial Analysis (up to cost of production) Project Formulation - Assessment of Project Feasibility - Preparation of Project Report - Dealing with basic startup problems.

Unit –IV

Growth Strategy - Growth strategy for Small Business - Need for Growth - Types of Growth Strategy - Expansion - Diversification-Sub contracting.

Unit-V

Institutional Support - Sources of Finance - Financial Support to Small Business- Various Incentives and Subsidies - Central and State Government Schemes

SUGGESTED READINGS

Text Books

1. **Khanka, S. S, (2012).** *Entrepreneurial Development*. New Delhi, Sultan Chand and Publications.
2. **Shaprio Alan, C. (2009).** *Multinational Financial Management*. New Delhi, Prentice Hall of India.

References

1. **Gupta, C.B., and Srinivasan, N.P. (2014).** *Entrepreneurial Development*. New Delhi, Sultan Chand and Sons.
2. **Suresh Jayasree (2010).** *Entrepreneurial Development*. Chennai, Margham Publications.

COURSE OBJECTIVES:**To make the students**

1. To identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills

The students should select a problem in Accounting, Finance, Marketing or any other areas related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives
- Research Methodology

- Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

B.Sc. COMPUTER SCIENCE

CHOICE BASED CREDIT SYSTEM (CBCS)

**Curriculum and Syllabus
Regular (2018 – 2019)**

DEPARTMENT OF COMPUTER SCIENCE

FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Deemed to be University)
(Established Under Section 3 of UGC Act, 1956)
Eachanari (Post), Coimbatore – 641 021.
Tamilnadu, India

Phone No. 0422-2980011 - 15 Fax No: 0422-2980022-23
E mail ID: info@karpagam.com
Web: www.kahedu.edu.in

PROGRAM OUTCOMES: The program must enable students to attain by the time of graduation

- a) An ability to apply knowledge of computing and mathematics appropriate to the program's student outcomes and to the discipline
- b) An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution
- c) An ability to design, implement and evaluate a computer-based system, process, component or program to meet desired needs.
- d) An ability to function effectively on teams to accomplish a common goal
- e) An understanding of professional, ethical, legal, security and social issues and responsibilities
- f) An ability to communicate effectively with a range of audiences
- g) An ability to use current techniques, skills and tools necessary for computing practice
- h) An ability to use and apply current technical concepts and practices in the core information technologies of human computer interaction, information management, programming, networking and web systems and technologies
- i) An ability to effectively integrate IT-based solutions into the user environment
- j) An understanding of best practices and standards and their application

PROGRAM SPECIFIC OUTCOME (PSOs)

- k) Understand analyze and develop computer programs in the areas related to Database systems and Big data Analytics, cloud computing, soft computing, IoT, Image processing, Green computing, web designing, mobile computing and networking for efficient design of computer based system of varying complexity.
- l) Apply standard software Engineering practices and strategies in software project development using open-source programming environment to deliver a quality for business success.
- m) Be acquainted with the contemporary issues, latest trends in technological development and thereby innovate new ideas and solutions to existing problems.
- n) An ability to produce cost effective, quality and maintainable software products and solutions (services) meeting the global standards and requirements with the knowledge acquired and using the emerging techniques, tools and software engineering

methodologies and principles and able to comprehend and write effective project reports in multidisciplinary environment in the context of changing technologies.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- PEO I : To be a working Information Technology (IT) professional with core competencies that can be used on multi-disciplinary projects
- PEO II : To understand the importance of relationship building within the IT industry
- PEO III : To understand the need for lifelong learning in the exploration and journey in IT
- PEO IV : To understand, evaluate and practice ethical behavior within the IT industry
- PEO V : To be cognizant of security issues and their impacts on industry

MAPPING of PEOs and POs

POs	a	b	c	d	e	f	f	h	i	j	k	l	m	n

கற்பகம் உயர்கல்விகலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப்பாடத்திட்டம் (2018 - 2019)
முதல்பருவம்
(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU101

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

- இந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇடம்பெறுகின்ற, ‘தமிழ்இலக்கியவரலாறு’ குறித்தமுழுமையானஅறிமுகம்பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல்மற்றும்தொல்லியல்சார்ந்தஆவணத்தேடலுக்குரியஆய்வுமனப்பான்மையுடன், இலக்கியங்களைஅணுகுதல்.
- தமிழின்வளர்ச்சித்துறையாகிய, ‘அறிவியல்தமிழ்’ ; ‘இணையதமிழ்’ குறித்தபன்னோக்குஅணுகுமுறையிலானஆய்வுச்சிந்தனைமேம்பாடு.
- வேலைவாய்ப்புக்குரியசுயதிறன்மேம்பாட்டுடன், படைப்பாக்கத்திறன்மேம்பாடும்பெற்றிருத்தல் .
- சமுதாயமற்றும்வாழ்வியல்மதிப்புகளைப்பேணுவதற்குக்கருவியாகஇலக்கியங்களைநாடுகின்றமனப்பான்மைவளர்ச்சி.
- மொழிபெயப்புத்துறைசார்ந்தவேலைவாய்புத்திறன்பெற்றிருத்தல்

பகுதி- I, தமிழ் முதல் பருவம் 18LSU101 :
 தமிழ் முதல் தாள் 4-H,4-C
 (இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
 (For I-UG Science Degree Classes)

அலகு - I : இக்கால இலக்கியம்: (10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம்பிள்ளை-ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் -மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை.

அலகு - II : அற இலக்கியம்:

(8 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் - 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (8 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV : கட்டுரை: (8 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்

2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்

3. வாழ்க்கை - இளவழகனார்

4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்

5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(6 மணிநேரம்)

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு.

கற்பகம் உயர்கல்வி கலைக்கழகத் தமிழ்த்துறை வெளியீடு.

18CSU101	PROGRAMMING FUNDAMENTALS USING C / C++	Semester – I
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C and C++ Languages
- To enable effective usage of arrays, structures, functions
- To learn effective usage of pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to do the following:

1. Develop programs using the basic elements like control statements, Arrays and Strings .
2. understand about the dynamic memory allocation using pointers which is essential for utilizing memory
3. Understand about the code reusability with the help of user defined functions.
4. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
5. Use the characteristics of an object-oriented programming language in a program.
6. Use the basic object-oriented design principles in computer problem solving.

UNIT I - INTRODUCTION TO C AND C++

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O:

Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar etc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h etc).

Expressions, Conditional Statements and Iterative Statements:

Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

UNIT II - FUNCTIONS AND ARRAYS

Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

UNIT III - DERIVED DATA TYPES (STRUCTURES AND UNIONS)

Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++:

Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

UNIT IV - MEMORY ALLOCATION IN C++

Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.

File I/O, Preprocessor Directives:

Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

UNIT V - USING CLASSES IN C++

Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables & Functions, Objects as parameters, Specifying the Protected and Private Access, Copy Constructors, Overview of Template classes and their use.

Overview of Function Overloading and Operator Overloading:

Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators).

Inheritance, Polymorphism and Exception Handling:

Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

18CSU102**COMPUTER SYSTEM ARCHITECTURE****Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

1. Students will acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT I - INTRODUCTION

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors – Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory units.

UNIT II - DATA REPRESENTATION AND BASIC COMPUTER ARITHMETIC

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

UNIT III - BASIC COMPUTER ORGANIZATION AND DESIGN

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

UNIT IV - CENTRAL PROCESSING UNIT

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining

and parallel architecture.

UNIT V - MEMORY AND INPUT-OUTPUT ORGANIZATION

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

18CSU103**COMPUTER FUNDAMENTALS****Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.
- To identify fundamental concepts relating to database applications.
- To manipulate and control the Windows desktop, files and disks.
- To understand the emerging technologies and their uses.

Course Outcomes (COs)

1. Understand the meaning and basic components of a computer system,
2. Gain knowledge about five generations and classification of computer system,
3. Explain the functions of a computer,
4. Identify and discuss the functional units of a computer system,
5. Identify the various input and output units and explain their purposes
6. Understand the emerging technologies and their uses.

UNIT I – INTRODUCTION

Introduction to computer system, uses, types. **Data Representation:** Number systems and character representation, binary arithmetic. **Human Computer Interface:** Types of software, Operating system as user interface, utility programs.

UNIT II – DEVICES

Input and output devices (with connections and practical demo), keyboard, mouse, joystick, scanner, OCR, OMR, bar code reader, web camera, monitor, printer, plotter.

UNIT III – MEMORY

Primary, secondary, auxiliary memory, RAM, ROM, cache memory, hard disks, optical disks.

UNIT IV - COMPUTER ORGANISATION AND ARCHITECTURE

C.P.U., registers, system bus, main memory unit, cache memory, Inside a computer, SMPS, Motherboard, Ports and Interfaces, expansion cards, ribbon cables, memory chips, processors.

UNIT V - OVERVIEW OF EMERGING TECHNOLOGIES

Bluetooth, cloud computing, big data, data mining, mobile computing and embedded systems.

**18CSU111 PROGRAMMING FUNDAMENTALS USING
C / C++ - PRACTICAL**

**Semester – I
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to do the following:

1. Develop programs using the basic elements like control statements, Arrays and Strings .
2. Solve the memory access problems by using pointers
3. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
4. Understand the uses of preprocessors and various header file directives.
5. Use the characteristics of an object-oriented programming language in a program.

List of Programs

1. WAP to print the sum and product of digits of an integer.
2. WAP to reverse a number.
3. WAP to compute the sum of the first n terms of the following series $S = 1 + 1/2 + 1/3 + 1/4 + \dots$
4. WAP to compute the sum of the first n terms of the following series $S = 1 - 2 + 3 - 4 + 5 - \dots$
5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.
6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.
7. WAP to compute the factors of a given number.
8. Write a macro that swaps two numbers. WAP to use it.
9. WAP to print a triangle of stars as follows (take number of lines from user):

```
*  
***  
*****  
*****  
*****
```

10. WAP to perform following actions on an array entered by the user:

- i) Print the even-valued elements
- ii) Print the odd-valued elements
- iii) Calculate and print the sum and average of the elements of array
- iv) Print the maximum and minimum element of array
- v) Remove the duplicates from the array
- vi) Print the array in reverse order

The program should present a menu to the user and ask for one of the options. The menu should also include options to re-enter array and to quit the program.

11. WAP that prints a table indicating the number of occurrences of each alphabet in the text entered as command line arguments.

12. Write a program that swaps two numbers using pointers.

13. Write a program in which a function is passed address of two variables and then alter its contents.

14. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

15. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.

16. Write a menu driven program to perform following operations on strings:

- a) Show address of each character in string
- b) Concatenate two strings without using strcat function.
- c) Concatenate two strings using strcat function.
- d) Compare two strings
- e) Calculate length of the string (use pointers)

- f) Convert all lowercase characters to uppercase
 - g) Convert all uppercase characters to lowercase
 - h) Calculate number of vowels
 - i) Reverse the string
17. Given two ordered arrays of integers, write a program to merge the two-arrays to get an ordered array.
18. WAP to display Fibonacci series (i)using recursion, (ii) using iteration
19. WAP to calculate Factorial of a number (i)using recursion, (ii) using iteration
20. WAP to calculate GCD of two numbers (i) with recursion (ii) without recursion.
21. Create Matrix class using templates. Write a menu-driven program to perform following Matrix operations (2-D array implementation):
a) Sum b) Difference c) Product d) Transpose
22. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).
23. Create a class Triangle. Include overloaded functions for calculating area. Overload assignment operator and equality operator.
24. Create a class Box containing length, breath and height. Include following methods in it:
a) Calculate surface Area
b) Calculate Volume
c) Increment, Overload ++ operator (both prefix & postfix)
d) Decrement, Overload -- operator (both prefix & postfix)
e) Overload operator == (to check equality of two boxes), as a friend function
f) Overload Assignment operator
g) Check if it is a Cube or cuboid
- Write a program which takes input from the user for length, breath and height to test the above class.
25. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.
26. Write a program to retrieve the student information from file created in previous question and print it in following format:

Roll No. Name Marks

27. Copy the contents of one text file to another file, after removing all whitespaces.
28. Write a function that reverses the elements of an array in place. The function must accept only one pointer value and return void.
29. Write a program that will read 10 integers from user and store them in an array. Implement array using pointers. The program will print the array elements in ascending and descending order.

18CSU113	COMPUTER FUNDAMENTALS - PRACTICAL	Semester – I 3H – 2C
-----------------	--	---------------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

- Create a document in Microsoft Word with formatting options.
- Create, edit, save, and print documents to include documents with lists and tables.
- Add a header and footer to a document and add a graphic to a document.
- Write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

1. Modify text using various formatting options from the editing tools under the Home tab
2. Set up section breaks to create different headers and footers for the odd and even pages within the document sections.
3. Demonstrate the mechanics and uses of Word tables to organize and present data.
4. Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
5. Create and design a spreadsheet for general office use.
6. Demonstrate the use of basic functions and formulas in Excel

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare a **grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold

- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher's name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.

- a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
- b. Design a certificate in landscape orientation with a border around the document.
- c. Design a Garage Sale sign.
- d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:

- (a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.
- (b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).

Color, Style, Item

Blue, A980, Van

Red, X023, Car

Green, YL724, Truck

Name, Age, Sex

Bob, 23, M

Linda, 46, F

Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	Dolls	Trucks	Puzzles
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order: In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu
 EDIT Complete menu
 VIEW Complete menu
 INSERT Complete menu
 FORMAT Complete menu
 TABLE Complete menu
 WINDOW Complete menu
 HELP Complete menu
 TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL

AVERAGE

(a) Apply Formatting as follow:

- i. Title in TIMES NEW ROMAN
- ii. Font Size - 14
- iii. Remaining text - ARIAL, Font Size -10
- iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.
- v. Numbers in two decimal places.
- vi. Qtr. Heading in center Alignment.
- vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
≥ 80	A+
$\geq 60 < 80$	A
$\geq 50 < 60$	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F	
1	Salesman			Sales in (Rs.)			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	Commission
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
 - 30% of Basic if Basic <=1000
 - 25% of Basic if Basic >1000 & Basic <=3000
 - 20% of Basic if Basic >3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is <=1000
Rs. 75/- if Basic >1000 & Basic <=2000
Rs. 100 if Basic >2000
- Entertainment Allowance NIL if Basic is <=1000
Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is <=1500
Rs. 60/- if Basic > 1500 & Basic <=3000
Rs. 80/- if Basic >3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment

Total deduction = Provident Fund + Group Insurance Premium

Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	5%	6%	7%	8%	9%
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amounts given the rate of Interest and time

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

- Calculate total sale year wise.
- Calculate the net sale made by each salesman
- Calculate the maximum sale made by the salesman
- Calculate the commission for each salesman under the condition.
 - If total sales >4,00,000 give 5% commission on total sale made by the salesman.
 - Otherwise give 2% commission.
- Draw a bar graph representing the sale made by each salesman.
- Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER
Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to					
Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

(a) Calculate Monthly total.

(b) Surplus = Monthly income - Monthly total.

(c) What would be total surplus if monthly income is 1500.

(d) How much does telephone expense for March differ from quarter average.

(e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

(a) Compute the total revenue earned.

(b) Plot the line chart to compare the revenue of all publisher for 4 years.

(c) Chart Title should be Total Revenue of sam's Bookstall (1997-2000)

(d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

18AEC101**ENVIRONMENTAL STUDIES****Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT I - INTRODUCTION

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II - NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

UNIT III - BIODIVERSITY AND ITS CONSERVATION

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical,

aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV - ENVIRONMENTAL POLLUTION

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V - SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

18ENU201**ENGLISH****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives:**

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV: Drama

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

UNIT - V: Grammar and Composition**GRAMMAR :**

1. Tenses

2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

COMPOSITION:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

18CSU201**PROGRAMMING IN JAVA****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT I - INTRODUCTION TO JAVA

Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods)

UNIT II - ARRAYS, STRINGS AND I/O

Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview**

Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

UNIT III - INHERITANCE

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

UNIT IV - EXCEPTION HANDLING AND DATABASE CONNECTIVITY

Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

UNIT V - JAVA APPLETS

Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

18CSU202**DISCRETE STRUCTURES****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

This course enables the students to

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis.

UNIT I

Sets: Introduction, Sets, finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

UNIT II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

UNIT III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

UNIT IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

UNIT V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

18CSU203**COMPUTER NETWORKS AND INTERNET
TECHNOLOGIES****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To study the basics of Computer Networks.
- To learn various transmission media.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites.
- To understand the principles of creating an effective web page.
- To develop skills in analyzing the usability of a website.
- To learn the language of HTML and JavaScript.

Course Outcomes (COs)

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Identify the different types of network topologies and protocols.
4. Enumerate the layers of the OSI model and TCP/IP.
5. Gain the skills and project-based experience needed for entry into web design and development careers.
6. Select and apply markup languages for processing, identifying, and presenting of information in web pages.

UNIT I - COMPUTER NETWORKS

Introduction to computer network, data communication, components of data communication, data transmission mode, data communication measurement, LAN, MAN, WAN, wireless LAN, internet, intranet, extranet. **Network Models:** Client/ server network and Peer-to-peer network, OSI, TCP/IP, 8L layers and functionalities.

UNIT II - TRANSMISSION MEDIA AND LAN TOPOLOGIES

Introduction, Guided Media: Twisted pair, Coaxial cable, Optical fiber. Unguided media: Microwave, Radio frequency propagation, Satellite. **LAN Topologies:** Ring, bus, star, mesh and tree topologies. Network Devices: NIC, repeaters, hub, bridge, switch, gateway and router.

UNIT III - INTERNET TERMS AND APPLICATIONS

Internet Terms: Web page, Home page, website, internet browsers, URL, Hypertext, ISP, Web server, download and upload, online and offline. **Internet Applications:** www, telnet, ftp, e-mail, social networks, search engines, 6L Video Conferencing, e-Commerce, m-Commerce, VOIP, blogs.

UNIT IV - INTRODUCTION TO WEB DESIGN

Introduction to hypertext markup language (html) Document type definition, creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames, hosting options and domain name registration. **Customized Features:** Cascading style sheet (css) for text formatting and other manipulations.

UNIT V - JAVASCRIPT FUNDAMENTALS

Data types and variables, functions, methods and events, controlling program flow, JavaScript object model, built-in objects and operators.

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer classes like setCharAt(), setLength(), append(), insert(), concat() and equals().
9. Write a program to create a —distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the —distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference

variable to another object reference variable. Further create a third object which is a clone of the first object.

11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program —DivideByZero that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it to examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scroll the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

18CSU212**DISCRETE STRUCTURES - PRACTICAL****Semester – II
3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

COURSE OBJECTIVES

- To provides a deep knowledge to the learners to develop and analyze algorithms as well as enable them to think about and solve problems in new ways.
- To express ideas using mathematical notation and solve problems using the tools of mathematical analysis.

COURSE OUTCOMES(COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
 $1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$
4. Write a C Program to to perform the sum = $1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a C program in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
 (i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$
10. Write a C Program to prove De – Morgan's law.

18CSU213**COMPUTER NETWORKS AND INTERNET
TECHNOLOGIES - PRACTICAL****Semester – II
3H – 2C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To study the basics of Computer Networks.
- To learn various transmission media.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites.
- To understand the principles of creating an effective web page.
- To develop skills in analyzing the usability of a website.
- To learn the language of HTML and JavaScript.

Course Outcomes (COs)

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Identify the different types of network topologies and protocols.
4. Enumerate the layers of the OSI model and TCP/IP.
5. Gain the skills and project-based experience needed for entry into web design and development careers.
6. Select and apply markup languages for processing, identifying, and presenting of information in web pages.

List of Programs

1. Create HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
2. Create HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
3. Create HTML document with Table

4. Create Form with Input Type, Select and Text Area in HTML.
5. Create an HTML containing Roll No., student's name and Grades in a tabular form.
6. Create an HTML document (having two frames) which will appear as follows

About	This frame would show the contents according to the link clicked by the user on the left frame.
Department 1	
Department 2	
Department 3	

7. Create an HTML document containing horizontal frames as follows

Department Names (could be along with Logos)
Contents according to the Link clicked

8. Create a website of 6 – 7 pages with different effects as mentioned in above problems.

9. Create HTML documents (having multiple frames) in the following three formats

Frame1
Frame2

Frame1	
Frame2	Frame3

10. Create a form using HTML which has the following types of controls:

V. Text Box

VI. Option/radio buttons

VII. Check boxes

VIII. Reset and Submit buttons

List of Practicals using Javascript : Create event driven program for following:

11. Print a table of numbers from 5 to 15 and their squares and cubes using alert.

12. Print the largest of three numbers. 81

13. Find the factorial of a number n.

14. Enter a list of positive numbers terminated by Zero. Find the sum and average of these numbers.

15. A person deposits Rs 1000 in a fixed account yielding 5% interest. Compute the amount in the account at the end of each year for n years.

16. Read n numbers. Count the number of negative numbers, positive numbers and zeros in the list.

18CSU301**DATA STRUCTURES****Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To know about hashing algorithms
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

Unit I - ARRAYS

Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation). Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

Unit II - LINKED LISTS

Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

Unit III - TREES

Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion, Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

Unit IV - SEARCHING AND SORTING

Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

Unit V - HASHING

Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function

18CSU302**OPERATING SYSTEMS****Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

Unit I - INTRODUCTION TO OPERATING SYSTEM

Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems- Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

Unit II - OPERATING SYSTEM ORGANIZATION

Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources- Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication- Deadlocks.

Unit III - MEMORY MANAGEMENT

Physical and Virtual address space-Memory Allocation strategies –Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

Unit IV - FILE AND I/O MANAGEMENT

Directory structure-File operations-File Allocation methods- Device management.

Unit V- PROTECTION AND SECURITY

Policy mechanism-Authentication-Internal access Authorization.

18CSU303**COMPUTER NETWORKS****Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

Unit I - INTRODUCTION TO COMPUTER NETWORKS

Network definition; network topologies; network classifications; network protocol; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission; digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media.

Unit II - NETWORKS SWITCHING TECHNIQUES AND ACCESS MECHANISMS

Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

Unit III - DATA LINK LAYER FUNCTIONS AND PROTOCOL

Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit IV - MULTIPLE ACCESS PROTOCOL AND NETWORKS

CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; Networks Layer Functions and Protocols: Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V - TRANSPORT LAYER FUNCTIONS AND PROTOCOLS

Transport services- error and flow control, Connection establishment and release- three way handshake; Overview of Application layer protocol: Overview of DNS protocol; overview of WWW &HTTP protocol.

18CSU304A**ANDROID PROGRAMMING****Semester – III
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design, create, deploy, and test applications for the Android mobile phone platform.

Course Outcomes (Cos)

Upon completion of this course the students will be able to:

1. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.
2. Analyze the Architecture and features of Android with another Mobile Operating System.
3. Evaluate the standard of Kotlin language for developing Android Applications
4. Apply knowledge for creating user Interface and develop activity for Android App.
5. Evaluate the user interface architecture of Android for developing Android Apps
6. Understand the implementation of SQLite database operations with Android.

Unit I - INTRODUCTION

History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

Unit II - OVERVIEW OF OBJECT ORIENTED PROGRAMMING USING JAVA

OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

Unit III - DEVELOPMENT TOOLS

Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

Unit IV- USER INTERFACE ARCHITECTURE

Application context, intents, Activity life cycle, multiple screen sizes. **User Interface Design:** Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes), Images, Menu, Dialog.

Unit V- DATABASE

Understanding of SQLite database, connecting with the database.

18CSU304B	PROGRAMMING IN VISUAL BASIC /GAMBAS	Semester – III 3H – 3C
------------------	--	-----------------------------------

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- To identify the differences between the procedural languages and event driven languages.
- To introduce computer programming using the VISUAL BASIC programming language.
- To demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
- To develop a Graphical User Interface (GUI) based on problem description
- To develop and debug applications using Visual Basic
- To Emphasis on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger.

Course Outcomes(COs)

1. Construct appropriate user interfaces for simple programs, and design systems with minimal complexity and maximal functionality.
2. Understand computer programming using the VISUAL BASIC programming language.
3. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
4. Develop a Graphical User Interface (GUI) based on problem description
5. Develop and debug applications using Visual Basic
6. Emphasize on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger.

Unit I - GUI ENVIRONMENT

Introduction to graphical user interface (GUI), programming language (procedural, object oriented, event driven), the GUI environment, compiling, debugging, and running the programs.

Controls : Introduction to controls textboxes, frames, check boxes, option buttons, images, setting borders and styles, the shape control, the line control, working with multiple controls and their properties, designing the user interface, keyboard access, tab controls, default & cancel property, coding for controls.

Unit II – OPERATIONS

Data types, constants, named & intrinsic, declaring variables, scope of variables, val function, arithmetic operations, formatting data.

Decision Making : If statement, comparing strings, compound conditions (and, or, not), nested if statements, case structure, using if statements with option buttons & check boxes, displaying message in message box, testing whether input is valid or not.

Unit III -MODULAR PROGRAMMING

Menus, sub-procedures and sub-functions defining/creating and modifying a menu, using common dialog box, creating a new subprocedure, passing variables to procedures, passing argument by value or by reference, writing a function/ procedure.

Unit IV- FORMS HANDLING

Multiple forms creating, adding, removing forms in project, hide, show method, load, unload statement, me keyword, referring to objects on a different forms

Iteration Handling: Do/loops, for/next loops, using msgbox function, using string Function

Unit V- ARRAYS AND GROUPED DATA CONTROL

Arrays - 1-dimension arrays, initializing and array using for each, user-defined data types, accessing information with user-defined data types, using list boxes with array, two dimensional arrays. lists, loops and printing list boxes & combo boxes, filling the list using property window / add item method, clear method, list box properties, removing an item from a list, list box/ combo box operations.

Database Connectivity: Database connectivity of forms with back end tool like mysql populating the data in text boxes, list boxes etc. searching of data in database using forms. Updating/ editing of data based on a criterion.

Semester – III**18CSU311****DATA STRUCTURES - PRACTICAL****4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To know about hashing algorithms
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

List of programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.
8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display Fibonacci series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion

14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
 - (b) Deletion by copying
 - (c) Deletion by Merging
 - (d) Search a no. in BST
 - (e) Display its preorder, postorder and inorder traversals Recursively
 - (f) Display its preorder, postorder and inorder traversals Iteratively
 - (g) Display its level-by-level traversals
 - (h) Count the non-leaf nodes and leaf nodes
 - (i) Display height of tree
 - (j) Create a mirror image of tree
 - (k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

List of programs

1. Write a program (using *fork()* and/or *exec()* commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)
4. Write a program to print file details including owner aCSUess permissions, file aCSUess time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using *thread* library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

18CSU313**COMPUTER NETWORKS - PRACTICAL****Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

18CSU314A	ANDROID PROGRAMMING - PRACTICAL	Semester – III 3H – 1C
------------------	--	-----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To compare the differences between Android and other mobile development environments.
- To learn the Object-oriented features of Kotlin and APIs for Android Development.
- To describe the working of Android applications, life cycle, manifest, and Intents
- To demonstrate the implementation of Form widgets for Android App development.
- To learn the SQLite database connectivity and database operations with android
- To design, create, deploy, and test applications for the Android mobile phone platform.

Course Outcomes (Cos)

Upon completion of this course the students will be able to:

1. Design and develop useful Android applications with compelling user interfaces by using, extending, and creating your own layouts and Views and using Menus.
2. Analyze the Architecture and features of Android with another Mobile Operating System.
3. Evaluate the standard of Kotlin language for developing Android Applications
4. Apply knowledge for creating user Interface and develop activity for Android App.
5. Evaluate the user interface architecture of Android for developing Android Apps
6. Understand the implementation of SQLite database operations with Android.

List of Programs

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Semester – III

18CSU314B PROGRAMMING IN VISUAL BASIC/GAMBAS – PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To identify the differences between the procedural languages and event driven languages.
- To introduce computer programming using the VISUAL BASIC programming language.
- To demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
- To develop a Graphical User Interface (GUI) based on problem description
- To develop and debug applications using Visual Basic
- To Emphasis on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger.

Course Outcomes(COs)

1. Construct appropriate user interfaces for simple programs, and design systems with minimal complexity and maximal functionality.
2. Understand computer programming using the VISUAL BASIC programming language.
3. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc.)
4. Develop a Graphical User Interface (GUI) based on problem description
5. Develop and debug applications using Visual Basic
6. Emphasize on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger.

List of Programs

1. Print a table of numbers from 5 to 15 and their squares and Cubes.
2. Print the largest of three numbers.
3. Find the factorial of a number n.
4. Enter a list of positive numbers terminated by zero. Find the sum & average of these numbers.
5. A person deposits Rs. 1000 in a fixed account yielding 5% interest. Complete the amount in the account at the end of each year for n years.
6. Read n numbers. Count the number of negative numbers, positive numbers & zeros in the list.
7. Read n numbers. Count the number of negative numbers, positive numbers and zeroes in the list. use arrays.
8. Read a single dimension array. Find the sum and average of these numbers.
9. Read a two dimension array. Find the sum of two 2D Array.
10. Create a database Employee and Make a form in VB 6.0 to allow data entry to Employee Form with the following command buttons:
Employee Form
Employee Name: NEXT
Employee Id:
Date of Joining:
Designation:
Department:
Address:

18CSU401**DESIGN AND ANALYSIS OF ALGORITHMS****Semester – IV
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To learn mathematical background for analysis of algorithm
- To learn various advanced data structures.
- To understand the concept of designing an algorithm.
- To learn dynamic programming and greedy method.
- To understand the concept of pattern matching
- To learn advanced tree and graph applications

Course Outcomes(COs)

1. Learn to choose appropriate advanced data structure for given problem
2. Knowledge to calculate complexity.
3. Select appropriate design techniques to solve real world problems.
4. Apply the dynamic programming technique to solve the problems.
5. Apply the greedy programming technique to solve the problems.
6. Select a proper pattern matching algorithm for given problem

Unit I - INTRODUCTION

Basic Design and Analysis techniques of Algorithms, Correctness of Algorithm.

Algorithm Design Techniques: Iterative techniques, Divide and Conquer, Dynamic Programming, Greedy Algorithms.

Unit II - SORTING AND SEARCHING TECHNIQUES

Elementary sorting techniques–Bubble Sort, Insertion Sort, Merge Sort, Advanced Sorting techniques - Heap Sort, Quick Sort, Sorting in Linear Time - Bucket Sort, Radix Sort and Count Sort, Searching Techniques, Medians & Order Statistics, complexity analysis;

Unit III - LOWER BOUNDING TECHNIQUES

Decision Trees Balanced Trees: Red-Black Trees

Unit IV- ADVANCED ANALYSIS TECHNIQUE

Amortized analysis **Graphs:** Graph Algorithms–Breadth First Search, Depth First Search and its Applications, Minimum Spanning Trees.

Unit V- STRING PROCESSING

String Matching, KMP Technique.

18CSU402**SOFTWARE ENGINEERING****Semester – IV
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

Course Outcomes(COs)

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

Unit I – INTRODUCTION

The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

Unit II - REQUIREMENT ANALYSIS

Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

Unit III - RISK MANAGEMENT

Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, Quality Management- Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

Unit IV- DESIGN ENGINEERING

Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

Unit V - TESTING STRATEGIES & TACTICS

Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

18CSU403	DATA BASE MANAGEMENT SYSTEMS	Semester – IV 4H – 4C
-----------------	-------------------------------------	--

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To retrieve any type of information from a data base by formulating complex queries in SQL.
- To analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Retrieve any type of information from a data base by formulating complex queries in SQL.
6. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Unit I - INTRODUCTION

Characteristics of database approach, data models, database system architecture and data independence. **Entity Relationship(ER) Modeling:** Entity types, relationships, constraints.

Unit II - RELATION DATA MODEL

Relational model concepts, relational constraints, relational algebra.

Unit III - SQL QUERIES

Database design: Mapping ER/EER model to relational database, functional dependencies, Lossless decomposition.

Unit IV- DATABASE DESIGN

Normal forms (upto BCNF). Transaction Processing : ACID properties, concurrency control

Unit V- FILE STRUCTURE AND INDEXING

Operations on files, File of Unordered and ordered records, overview of File organizations, Indexing structures for files(Primary index, secondary index, clustering index), Multilevel indexing using B and B+ trees.

SUGGESTED READINGS

18CSU404A**HTML PROGRAMMING****Semester – IV
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To Understand the fundamentals of HTML and use different formatting options
- To Create tables and frames
- To insert a graphic and links within a web page.
- To insert ordered and unordered lists within a web page.
- To use cascading style sheets.
- To validate and publish a web page.

Course Outcomes (COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Create tables and frames
3. Insert a graphic and links within a web page.
4. Insert ordered and unordered lists within a web page.
5. Use cascading style sheets.
6. Validate and publish a web page.

Unit I - INTRODUCTION TO THE BASICS

The Head, the Body, Colors, Attributes, Lists, ordered and unordered

Unit II - LINKS INTRODUCTION

Relative Links, Absolute Links, Link Attributes, Using the ID Attribute to Link within a Document

Unit III - IMAGES

Putting an Image on a Page, Using Images as Links, Putting an Image in the Background

Unit IV- TABLES

Creating a Table, Table Headers, Captions, Spanning Multiple Columns, Styling Table

Unit V- FORMS

Basic Input and Attributes, Other Kinds of Inputs, Styling forms with CSS ,Where To Go From Here

18CSU404B**XML PROGRAMMING****Semester – IV
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- To learn rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
- To Construct Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
- To develop dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
- To create valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
- To learn to display XML documents using CSS.
- To construct of complex queries over XML documents using XPath and XQuery.

Course Outcomes(COs)

1. Learning rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
2. Constructing Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
3. Developing dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
4. Creating valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
5. Learning to display XML documents using CSS.
6. Construction of complex queries over XML documents using XPath and XQuery.

Unit I – INTRODUCTION

Understanding Mark-up Languages, Introduction to XML and its Goals.

Unit II - XML BASICS

XML Structure and Syntax, Document classes and Rules.

Unit III - OTHER XML CONCEPTS

Scripting XML

Unit IV - Other XML Concepts

XML as Data, Linking with XML

Unit V -XML WITH STYLE

XSL –Style Sheet Basics, XSL basics, XSL style sheets.

18CSU411	DESIGN AND ANALYSIS OF ALGORITHMS - PRACTICAL	Semester – IV 4H – 2C
-----------------	--	----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To learn mathematical background for analysis of algorithm
- To learn various advanced data structures.
- To understand the concept of designing an algorithm.
- To learn dynamic programming and greedy method.
- To understand the concept of pattern matching
- To learn advanced tree and graph applications

Course Outcomes(COs)

1. Learn to choose appropriate advanced data structure for given problem
2. Knowledge to calculate complexity.
3. Select appropriate design techniques to solve real world problems.
4. Apply the dynamic programming technique to solve the problems.
5. Apply the greedy programming technique to solve the problems.
6. Select a proper pattern matching algorithm for given problem

List of Programs

1. Implement Insertion Sort (The program should report the number of comparisons) ii. Implement Merge Sort (The program should report the number of comparisons)
2. Implement Heap Sort (The program should report the number of comparisons)
3. Implement Randomized Quick sort (The program should report the number of comparisons)
4. Implement Radix Sort
5. Create a Red-Black Tree and perform following operations on it: i. Insert a node ii. Delete a node iii. Search for a number & also report the color of the node containing this number.
6. Write a program to determine the LCS of two given sequences
7. Implement Breadth-First Search in a graph
8. Implement Depth-First Search in a graph
9. Write a program to determine the minimum spanning tree of a graph

For the algorithms at S.No 1 to 3 test run the algorithm on 100 different inputs of sizes varying from 30 to 1000. Count the number of comparisons and draw the graph. Compare it with a graph of $n \log n$.

18CSU412**SOFTWARE ENGINEERING - PRACTICAL****Semester – IV
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

Course Outcomes(COs)

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology, and test the software using testing tools.
6. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

S. No	Practical Title
1.	<ul style="list-style-type: none"> • Problem Statement • Process Model
2.	Requirement Analysis: <ul style="list-style-type: none"> • Creating a Data Flow • Data Dictionary, Use Cases
3.	Project Management: <ul style="list-style-type: none"> • Computing FP • Effort • Schedule, Risk Table, Timeline chart
4.	Design Engineering: <ul style="list-style-type: none"> • Architectural Design • Data Design, Component Level Design
5.	Testing: <ul style="list-style-type: none"> • Basis Path Testing

Sample Projects:

1. **Criminal Record Management:** Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information:** Online information about the bus routes and their frequency and fares
3. **Car Pooling:** To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system

9. Parking Allocation System
10. Wholesale Management System

18CSU413 DATA BASE MANAGEMENT SYSTEMS - PRACTICAL**Semester – IV
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60****Total: 100****Course Objectives**

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To retrieve any type of information from a data base by formulating complex queries in SQL.
- To analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Retrieve any type of information from a data base by formulating complex queries in SQL.
6. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.

1. Create and use the following database schema to answer the given queries.

Field	Type	NULL	KEY	DEFAULT
Eno	Char(3)	NO	PRI	NIL
Ename	Varchar(50)	NO		NIL
Job_type	Varchar(50)	NO		NIL
Manager	Char(3)	Yes	FK	NIL
Hire_date	Date	NO		NIL
Dno	Integer	YES	FK	NIL
Commission	Decimal(10,2)	YES		NIL
Salary	Decimal(7,2)	NO		NIL

DEPARTMENT Schema

Field	Type	NULL	KEY	DEFAULT
Dno	Integer	No	PRI	NULL
Dname	Varchar(50)	Yes		NULL
Location	Varchar(50)	Yes		New Delhi

Query List

1. Query to display Employee Name, Job, Hire Date, Employee Number; for each employee with the Employee Number appearing first.
2. Query to display unique Jobs from the Employee Table.
3. Query to display the Employee Name concatenated by a Job separated by a comma.
4. Query to display all the data from the Employee Table. Separate each Column by a comma and name the said column as THE OUTPUT.
5. Query to display the Employee Name and Salary of all the employees earning more than \$2850.
6. Query to display Employee Name and Department Number for the Employee No= 7900.
7. Query to display Employee Name and Salary for all employees whose salary is not in the range of \$1500 and \$2850.
8. Query to display Employee Name and Department No. of all the employees in Dept 10 and Dept 30 in the alphabetical order by name.
9. Query to display Name and Hire Date of every Employee who was hired in 1981.
10. Query to display Name and Job of all employees who don't have a current Manager.
11. Query to display the Name, Salary and Commission for all the employees who earn commission.
12. Sort the data in descending order of Salary and Commission.
13. Query to display Name of all the employees where the third letter of their name is _A'.
14. Query to display Name of all employees either have two _R's or have two _A's in their name and are either in Dept No = 30 or their Manger's Employee No = 7788.
15. Query to display Name, Salary and Commission for all employees whose Commission Amount is 14 greater than their Salary increased by 5%.
16. Query to display the Current Date.
17. Query to display Name, Hire Date and Salary Review Date which is the 1st Monday after six months of employment.
18. Query to display Name and calculate the number of months between today and the date each employee was hired.
19. Query to display the following for each employee <E-Name> earns < Salary> monthly but wants < 3 * Current Salary >. Label the Column as Dream Salary.
20. Query to display Name with the 1st letter capitalized and all other letter lower case and length of their name of all the employees whose name starts with _J', 'A' and _M'.
21. Query to display Name, Hire Date and Day of the week on which the employee started.
22. Query to display Name, Department Name and Department No for all the employees.
23. Query to display Unique Listing of all Jobs that are in Department # 30.
24. Query to display Name, Dept Name of all employees who have an _A' in their name.
25. Query to display Name, Job, Department No. And Department Name for all the employees working at the Dallas location.
26. Query to display Name and Employee no. Along with their Manger's Name and the Manager's employee no; along with the Employees' Name who do not have a Manager.
27. Query to display Name, Dept No. And Salary of any employee whose department No. and salary matches both the department no. And the salary of any employee who earns a commission.

28. Query to display Name and Salaries represented by asterisks, where each asterisk (*) signifies \$100.
29. Query to display the Highest, Lowest, Sum and Average Salaries of all the employees
30. Query to display the number of employees performing the same Job type functions.
31. Query to display the no. of managers without listing their names.
32. Query to display the Department Name, Location Name, No. of Employees and the average salary for all employees in that department.
33. Query to display Name and Hire Date for all employees in the same dept. as Blake.
34. Query to display the Employee No. And Name for all employees who earn more than the average salary.
35. Query to display Employee Number and Name for all employees who work in a department with any employee whose name contains a _T'.
36. Query to display the names and salaries of all employees who report to King.
37. Query to display the department no, name and job for all employees in the Sales department.

18CSU414A	HTML PROGRAMMING - PRACTICAL	Semester – IV 3H – 1C
------------------	-------------------------------------	----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To Understand the fundamentals of HTML and use different formatting options
- To Create tables and frames
- To insert a graphic and links within a web page.
- To insert ordered and unordered lists within a web page.
- To use cascading style sheets.
- To validate and publish a web page.

Course Outcomes (COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Create tables and frames
3. Insert a graphic and links within a web page.
4. Insert ordered and unordered lists within a web page.
5. Use cascading style sheets.
6. Validate and publish a web page.

List of Programs

1. Create an HTML document with the following formatting options:
 - I. Bold
 - II. Italics
 - III. Underline
 - IV. Headings (Using H1 to H6 heading styles)
 - V. Font (Type, Size and Color)
 - VI. Background (Colored background/Image in background)
 - VII. Paragraph
 - VIII. Line Break
 - IX. Horizontal Rule
 - X. Pre tag
2. Create an HTML document which consists of:
 - I. Ordered List
 - II. Unordered List
 - III. Nested List
 - IV. Image
- 3 Create an HTML document which implements Internal linking as well as External linking.
- 4 Create a table using HTML which consists of columns for Roll No., Student's name and grade.

18CSU414B	XML PROGRAMMING - PRACTICAL	Semester – IV 3H – 1C
------------------	------------------------------------	--

Instruction Hours / week: L: 0 T: 0 P: 3 **Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours

Course Objective

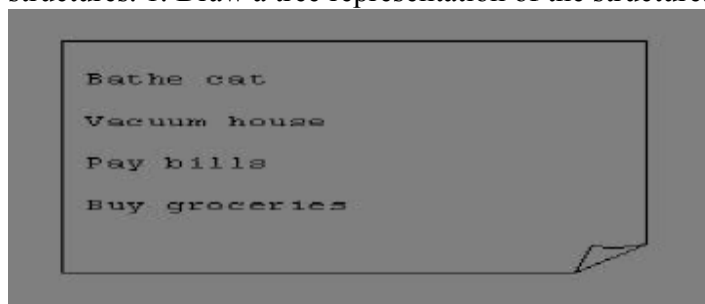

- To learn rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
- To Construct Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
- To develop dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
- To create valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
- To learn to display XML documents using CSS.
- To construct of complex queries over XML documents using XPath and XQuery.

Course Outcomes(COs)

1. Learning rules and techniques to create well-formed XML documents, learning to use XML namespaces correctly.
2. Constructing Document Type Definitions and XML Schema documents that can be used to validate XML documents (structure, content).
3. Developing dynamic web pages using XSL, applying XSLT transformations and formatting to XML documents (XSL, XPath).
4. Creating valid HTML webpages and Cascading Style Sheets, based on the specifications of W3C.
5. Learning to display XML documents using CSS.
6. Construction of complex queries over XML documents using XPath and XQuery.

List of Programs**Exercise #1 – Information Structure**

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.

**Exercise 2# Deconstructing an XML Document**

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

```
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies. Revised
and expanded—over 600 new pages. </description>
</coverInfo> </book>
```

Exercise #3 – Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

Exercise #4 – Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

```
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is
willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>
```

Exercise #5-Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

```
<PROCEDURE><TITLE>How to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat. <WARNING></OVERVIEW>Cats
don't like to take baths. You could get hurt doing this. Be sure to obtain all the required
protective gear before you start. </WARNING><EQUIPEMENT><ITEM>Hockey Mask
<ITEM>Padded Full-body Kevlar Armor</ITEM><ITEM>Tub full of warm
water</ITEM><ITEM>Towels </ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat
Shampoo</ITEM> <EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now
is hiding under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP>
<ITEM>Using the First Aid kit, repair the damage to your head and arms.</STEP>
<STEP>Place the cat back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then
make an effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>
```

18CSU501A**CLOUD COMPUTING****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

Unit I - OVERVIEW OF COMPUTING PARADIGM

Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. **Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

Unit II - CLOUD COMPUTING ARCHITECTURE

Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

Unit III - CASE STUDIES

Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

Unit IV - SERVICE MANAGEMENT IN CLOUD COMPUTING

Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

Unit V - CLOUD SECURITY

Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

18CSU501B**SOFTWARE TESTING****Semester – V**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective:**

- To study fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods.
- To discuss various software testing issues and solutions in software unit test; integration, regression, and system testing.
- To learn how to planning a test project, design test cases and data, conduct testing operations, manage software problems and defects, generate a testing report.
- To expose the advanced software testing topics, such as object-oriented software testing methods, and component-based software testing issues, challenges, and solutions.
- To gain software testing experience by applying software testing knowledge and methods to practice-oriented software testing projects.
- To gain the techniques and skills on how to use modern software testing tools to support software testing projects

Course Outcomes(COs)

1. Have the ability to understand the fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods
2. Have an ability to design and conduct a software test process for a software testing project.
3. Have an ability to identify the needs of software test automation, and define and develop a test tool to support test automation.
4. Have an ability understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods.
5. Have an ability to use various communication methods and skills to communicate with their teammates to conduct their practice-oriented software testing projects.
6. Have an ability to use software testing methods and modern software testing tools for their testing projects.

Unit I – INTRODUCTION

Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System Testing.

Unit II - TESTING

Basic Terminologies, V Shaped Software Lifecycle Model, Functional Testing- Black-box Testing.

Unit III - TESTING

Boundary Value Analysis, Equivalence Class Testing, Decision Table Based Testing
Structural Testing\ White-box Testing.

Unit IV - BASIS PATH TESTING

Program Graph, DD Path graph, Cyclomatic Complexity, Graph Matrices, Control Flow Testing:
Statement Coverage, Branch Coverage, Condition Coverage, Path Coverage

Unit V - OBJECT ORIENTED TESTING

Object Orientation , Path Testing, State Based Testing, Class Testing. Metrics and Models in
Software Testing: Software Metrics , Categories of Metrics, Object Oriented Metrics used in
Testing.

18CSU502A**INTERNET TECHNOLOGIES****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To get familiar with basics of the Internet Programming.
- To acquire knowledge and skills for creation of web site considering both client and server side programming
- To gain ability to develop responsive web applications using JavaScript
- To develop advanced Java applications using JDBC
- To learn and create JSP applications
- To develop the component based applications using Java Beans

Course Outcomes(COs)

1. Familiarize with the basics of the Internet Programming.
2. Acquires knowledge and skills for creation of web site considering both client and server side programming
3. Ability to develop responsive web applications using JavaScript
4. Develop advanced Java applications using JDBC
5. Understand and create JSP applications
6. Develop the component based applications using Java Beans

Unit I - JAVA

Use of Objects, Array and ArrayList class

Unit II - JAVASCRIPT

Data types, operators, functions, control structures, events and event handling.

Unit III - JDBC

JDBC Fundamentals, Establishing Connectivity and working with connection interface, Working with statements, Creating and Executing SQL Statements, Working with Result Set Objects.

Unit IV - JSP

Introduction to JavaServer Pages, HTTP and Servlet Basics, The Problem with Servlets, The Anatomy of a JSP Page, JSP Processing, JSP Application Design with MVC, Setting Up the JSP Environment, Implicit JSP Objects, Conditional Processing, Displaying Values, Using an expression to Set an Attribute, Declaring Variables and Methods, Error Handling and Debugging, Sharing Data Between JSP Pages, Requests, and Users, Database Access.

Unit V: Java Beans

Java Beans Fundamentals, JAR files, Introspection, Developing a simple Bean, Connecting to DB

18CSU502B**INFORMATION SECURITY AND CYBER LAWS****Semester – V**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives**

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
- To explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
- To understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications
- To understand the various Cyber laws and its sections with case studies.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
2. State the basic concepts in information security
3. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
4. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
5. Understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications
6. Understand the various Cyber laws and its sections with case studies.

Unit I - COURSE INTRODUCTION

Computer network as a threat, hardware vulnerability, software vulnerability, importance of data security.

Digital Crime: Overview of digital crime, criminology of computer crime.

Unit II - INFORMATION GATHERING TECHNIQUES

Tools of the attacker, information and cyber warfare, scanning and spoofing, password cracking, malicious software, session hijacking

Unit III - RISK ANALYSIS AND THREAT

Risk analysis, process, key principles of conventional computer security, security policies, authentication, data protection, access control, internal vs external threat, security assurance, passwords, authentication, and access control, computer forensics and incident response

Unit IV- INTRODUCTION TO CRYPTOGRAPHY AND APPLICATIONS

Important terms, Threat, Flaw, Vulnerability, Exploit, Attack, Ciphers, Codes, Caesar Cipher, Rail-Fence Cipher, Public key cryptography (Definitions only), Private key cryptography (Definition and Example)

Safety Tools and Issues : Firewalls, logging and intrusion detection systems, Windows and windows XP / NT security, Unix/Linux security, ethics of hacking and cracking

Unit V- CYBER LAWS

CYBER LAWS to be covered as per IT 2008:

- Chapter 1: Definitions 88
- Chapter 2: Digital Signature And Electronic Signature
- [Section 43] Penalty and Compensation for damage to computer, computer system, etc.
- [Section 65] Tampering with Computer Source Documents
- [Section 66 A] Punishment for sending offensive messages through communication service, etc.
- [Section 66 B] Punishments for dishonestly receiving stolen computer resource or communication device
- [Section 66C] Punishment for identity theft
- [Section 66D] Punishment for cheating by personation by using computer resource
- [Section 66E] Punishment for violation of privacy
- [Section 66F] Punishment for cyber terrorism
- [Section 67] Punishment for publishing or transmitting obscene material in electronic form
- [Section 67A] Punishment for publishing or transmitting of material containing sexually explicit act, etc. in electronic form
- [Section 67B] Punishment for publishing or transmitting of material depicting children in sexually explicit act, etc. in electronic form
- [Section 72] Breach of confidentiality and privacy

18CSU503A**DATA MINING****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

1. Understand the basic concepts and techniques of Data Mining
2. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
3. Design and deploy appropriate classification techniques
4. Understand the concept of clustering and its real time applications
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Analyze the basic concepts of data warehouse and OLAP operations

Unit I – OVERVIEW

Predictive and descriptive data mining techniques

Unit II - LEARNING TECHNIQUES

Supervised and unsupervised learning techniques

Unit III - KNOWLEDGE DISCOVERY

Process of knowledge discovery in databases, pre-processing methods

Unit IV - DATA MINING TECHNIQUES

Association Rule Mining, classification and regression techniques, clustering

Unit V - ISSUES

Scalability and data management issues in data mining algorithms, measures of interestingness.

18CSU503B**R-PROGRAMMING****Semester – V**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objective**

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R ecosystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

Unit I: INTRODUCTION

History and Overview of R, Getting Started with R, Getting Help, Data Types, R Nuts and Bolts, **Getting Data In and out of R: Reading and Writing Data, Subsetting R objects: Vector, Matrix, List and Data frames.**

Unit II: R FUNCTIONALITIES

Operators in R, Vectorized Operations, **Date and Times in R: Operations on date and times, Managing Data frames with the dplyr package: Data Frames, The dplyr package, dplyr Grammar, select(), arrange(), filter(), rename(), mutate(), group_by(), %>%.**

Unit III: CONTROL STRUCTURES:

if_else, else_if, for loops, Nested for loop, while, repeat, next, break-Scoping Rules-**Functions in R: lapply, tapply, split, mapply, apply-Combining Variables with the c, cbind, rbind Functions-Coding Standards in R-String Operations.**

Unit IV: STATISTICAL ANALYSIS IN R

Statistical Analysis in R: Data types – Categorical – Binary – ordinal – Nominal – Continuous – Discrete – Data Dimensions – Univariate – bivariate – multivariate – Numerical Measures – Central Tendency – Mean – Median – Mode. R Packages-Debugging Tools-Simulation-R Profiler-Statistical Functions – Comparison of Samples – same groups – different groups – Independent groups - Student T Test – Dependent Test – Independent Test.

Unit V: IMPORT AND EXPORT DATA INTO R

Read CSV, Excel, SPSS, Stata, SAS Files. **Data visualization:** Base graphics system in R, Advanced R graphics: ggplot - **Reporting** – Data Preparation – Embedding R chunks – Labelling and reusing code chunks – Report Compiling – Configuring – R Packages – shiny - ggvis

18CSU504A	ORACLE (SQL/PL-SQL)	Semester – V 3H – 3C
------------------	----------------------------	---------------------------------

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To gain knowledge about using ORACLE software for developing databases and using them.
- To know the SQL *plus interface and its commands.
- To create, alter tables, views, indexes ,synonyms and constraints using DDL statements.
- To Query the database using DML statements and write complex queries for information retrieval.
- To gain knowledge about transaction control in Oracle
- To write procedures and functions using PL/SQL.

Course Outcomes(COs)

1. Understand the ORACLE software for developing databases and using them.
2. Using the SQL *plus interface and its commands.
3. creating, altering tables, views, indexes ,synonyms and constraints using DDL statements.
4. Querying the database using DML statements and write complex queries for information retrieval.
5. Apply transaction controls statements in Oracle
6. Write procedures and functions using PL/SQL.

Unit I - INTRODUCTION TO ORACLE AS RDBMS

SQL Vs. SQL * Plus: SQL Commands and Data types, Operators and Expressions, Introduction to SQL * Plus.

Unit II - MANAGING TABLES AND DATA

Creating and Altering Tables (Including constraints) ,Data Manipulation Command like Insert, update, delete, SELECT statement with WHERE, GROUP BY and HAVING, ORDER BY, DISTINCT, Special operator like IN, ANY, ALL BETWEEN, EXISTS, LIKE, Join, Built in functions

Unit III - OTHER DATABASE OBJECTS

View, Synonyms, Index

Unit IV - TRANSACTION CONTROL STATEMENTS

Commit, Rollback, Savepoint

Unit V - INTRODUCTION TO PL/SQL

SQL v/s PL/SQL, PL/SQL Block Structure, Language construct of PL/SQL (Variables, Basic and Composite Data type, Conditions looping etc.) TYPE and % ROWTYPE , Using Cursor (Implicit, Explicit)

SUGGESTED READINGS

18CSU504B**PROGRAMMING IN PYTHON****Semester – V
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To Learn Syntax and Semantics of Python
- To create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Learn to use logical constructs in Python
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

Unit I - PLANNING THE COMPUTER PROGRAM

Concept of problem solving-Problem definition- Program design-Debugging-Types of errors in programming-Documentation.

Unit II - TECHNIQUES OF PROBLEM SOLVING

Flowcharting-decision table-algorithms-Structured programming concepts-Programming methodologies: top-down and bottom-up Programming.

Unit III - OVERVIEW OF PROGRAMMING

Structure of a Python Program-Elements of Python.

Unit IV - INTRODUCTION TO PYTHON

Python Interpreter-Using Python as calculator-Python shell- Indentation. Atoms-Identifiers and keywords-Literals-Strings-Operators(Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator).

Unit V - CREATING PYTHON PROGRAMS

Input and Output Statements-Control statements(Branching, Looping, Conditional Statement, Exit function, Difference between break, continue and pass.). Defining Functions-Default arguments.

18CSU511A**CLOUD COMPUTING -PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

List of Programs

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that access different programs on different platforms.
3. Working on tools used in cloud computing online-
 - a) Storage
 - b) Sharing of data
 - c) Manage your calendar, to-do lists,
 - d) A document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

18CSU511B**SOFTWARE TESTING –PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objective:**

- To study fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods.
- To discuss various software testing issues and solutions in software unit test; integration, regression, and system testing.
- To learn how to planning a test project, design test cases and data, conduct testing operations, manage software problems and defects, generate a testing report.
- To expose the advanced software testing topics, such as object-oriented software testing methods, and component-based software testing issues, challenges, and solutions.
- To gain software testing experience by applying software testing knowledge and methods to practice-oriented software testing projects.
- To gain the techniques and skills on how to use modern software testing tools to support software testing projects

Course Outcomes(COs)

1. Have the ability to understand the fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods
2. Have an ability to design and conduct a software test process for a software testing project.
3. Have an ability to identify the needs of software test automation, and define and develop a test tool to support test automation.
4. Have an ability understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods.
5. Have an ability to use various communication methods and skills to communicate with their teammates to conduct their practice-oriented software testing projects.
6. Have an ability to use software testing methods and modern software testing tools for their testing projects.

Computer Lab Based on Software Testing

1. Write a program that take three inputs (a,b &c) that represent the sides of a triangle, and the output is one of the below four:

- a. Not a triangle
- b. Scalene triangle
- c. Isosceles triangle
- d. Equilateral triangle

1.1 Generate test cases using Boundary Value Analysis, Equivalence Class Partitioning and Decision Table Testing.

1.2 Generate test cases using Basis path testing.

1.3 Run code coverage tool.

2. Write a program that determines the nature of roots of a quadratic equation. Output should be one of the following:-

- Not a quadratic equation.
- Complex roots
- Real roots
- Single roots

I. Generate test cases using Boundary Value Analysis, Equivalence Class Partitioning and Decision Table Testing.

II. Generate test cases using Basis path testing.

III. Run code coverage tool

3. Write a program that checks whether the number is even or odd. Run code coverage tool and find the amount of code being covered.

4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() And

- donot free memory leading to memory leaks. Verify the same using Valgrind.
- Now, free memory using free() at the end of the program to avoid memory leaks. Verify the same using Valgrind.

5. Use Load UI load testing tool to test the web application performance

18CSU512A**INTERNET TECHNOLOGIES – PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To get familiar with basics of the Internet Programming.
- To acquire knowledge and skills for creation of web site considering both client and server side programming
- To gain ability to develop responsive web applications using JavaScript
- To develop advanced Java applications using JDBC
- To learn and create JSP applications
- To develop the component based applications using Java Beans

Course Outcomes(COs)

1. Familiarize with the basics of the Internet Programming.
2. Acquires knowledge and skills for creation of web site considering both client and server side programming
3. Ability to develop responsive web applications using JavaScript
4. Develop advanced Java applications using JDBC
5. Understand and create JSP applications
6. Develop the component based applications using Java Beans

Create event driven program for following:

1. Print a table of numbers from 5 to 15 and their squares and cubes using alert.
2. Print the largest of three numbers.
3. Find the factorial of a number n.
4. Enter a list of positive numbers terminated by Zero. Find the sum and average of these numbers.
5. A person deposits Rs 1000 in a fixed account yielding 5% interest. Compute the amount in the account at the end of each year for n years.
6. Read n numbers. Count the number of negative numbers, positive numbers and zeros in the list.

18CSU512B**INFORMATION SECURITY AND CYBER LAWS
- PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To provides an overview of Information Security and Assurance.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
- To explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
- To understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications
- To understand the various Cyber laws and its sections with case studies.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
2. State the basic concepts in information security
3. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
4. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
5. Understand the concepts of cryptographic utilities and authentication mechanisms to design secure applications
6. Understand the various Cyber laws and its sections with case studies.

List of Programs

1. Demonstrate the use of Network tools: ping, ipconfig, ifconfig, tracert, arp, netstat, whois
2. Use of Password cracking tools : John the Ripper, Ophcrack. Verify the strength of passwords using these tools.
3. Perform encryption and decryption of Caesar cipher. Write a script for performing these operations.
4. Perform encryption and decryption of a Rail fence cipher. Write a script for performing these operations.
5. Use nmap/zenmap to analyse a remote machine.
6. Use Burp proxy to capture and modify the message.
7. Demonstrate sending of a protected word document.
8. Demonstrate sending of a digitally signed document.
9. Demonstrate sending of a protected worksheet.
10. Demonstrate use of steganography tools.
11. Demonstrate use of gpg utility for signing and encrypting purposes.

18CSU513A**DATA MINING - PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

1. Understand the basic concepts and techniques of Data Mining
2. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
3. Design and deploy appropriate classification techniques
4. Understand the concept of clustering and its real time applications
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Analyze the basic concepts of data warehouse and OLAP operations

LIST OF PRACTICALS

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose “Use training set”, then choose “Percentage split” using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classify it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perform comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perform comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS’s C4.5 implementation).
9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

18CSU513B**R PROGRAMMING – PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R ecosystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes(COs)

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

Software Lab Based on R Programming

1. Write a program that prints 'Hello World' to the screen.
2. Write a program that asks the user for a number n and prints the sum of the numbers 1 to n
3. Write a program that prints a multiplication table for numbers up to 12.
4. Write a function that returns the largest element in a list.
5. Write a function that computes the running total of a list.
6. Write a function that tests whether a string is a palindrome.
7. Implement the following sorting algorithms: Selection sort, Insertion sort, Bubble Sort
8. Implement linear search.
9. Implement binary search.
10. Implement matrices addition, subtraction and Multiplication

18CSU514A	Oracle (SQL/PL-SQL) LAB - PRACTICAL	Semester – V 3H – 1C
------------------	--	---------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To gain knowledge about using ORACLE software for developing databases and using them.
- To know the SQL *plus interface and its commands.
- To create, alter tables, views, indexes ,synonyms and constraints using DDL statements.
- To Query the database using DML statements and write complex queries for information retrieval.
- To gain knowledge about transaction control in Oracle
- To write procedures and functions using PL/SQL.

Course Outcomes(COs)

1. Understand the ORACLE software for developing databases and using them.
2. Using the SQL *plus interface and its commands.
3. creating, altering tables, views, indexes ,synonyms and constraints using DDL statements.
4. Querying the database using DML statements and write complex queries for information retrieval.
5. Apply transaction controls statements in Oracle
6. Write procedures and functions using PL/SQL.

[SQL COMMANDS]

- 1) SQL* formatting commands
- 2) To create a table, alter and drop table.
- 3) To perform select, update, insert and delete operation in a table.
- 4) To make use of different clauses viz where, group by, having, order by, union and intersection,
- 5) To study different constraints.

[SQL FUNCTION]

- 6) To use oracle function viz aggregate, numeric, conversion, string function.
- 7) To understand use and working with joins.
- 8) To make use of transaction control statement viz rollback, commit and save point.
- 9) To make views of a table.
- 10) To make indexes of a table.

[PL/SQL]

- 11) To understand working with PL/SQL
- 12) To implement Cursor on a table.
- 13) To implement trigger on a table

18CSU514B PROGRAMMING IN PYTHON - PRACTICAL**Semester – V
3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To Learn Syntax and Semantics of Python
- To create Functions in Python.
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes (COs)

Upon completion of this the course students will be able to:

1. Develop algorithmic solutions to simple computational problems
2. Structure simple Python programs for solving problems.
3. Learn to use logical constructs in Python
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

List of Programs

1. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria :
Grade A: Percentage ≥ 80
Grade B: Percentage ≥ 70 and < 80
Grade C: Percentage ≥ 60 and < 70
Grade D: Percentage ≥ 40 and < 60
Grade E: Percentage < 40
3. Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from user.
4. WAP to display the first n terms of Fibonacci series.
5. WAP to find factorial of the given number.
6. WAP to find sum of the following series for n terms: $1 - 2/2! + 3/3! - \dots - n/n!$
7. WAP to calculate the sum and product of two compatible matrices.

18CSU601A**PHP PROGRAMMING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To work with open source applications that deal with database and website development.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Develop dynamic web pages.

Unit I - INTRODUCTION TO PHP

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) - PHP with other technologies, scope of PHP Basic Syntax, PHP variables and constants - Types of data in PHP , Expressions, scopes of a variable (local, global) - PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator -PHP operator Precedence and associativity

Unit II - HANDLING HTML FORM WITH PHP

Capturing Form Data -GET and POST form methods -Dealing with multi value fields - Redirecting a form after submission. **PHP conditional events and Loops** - PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop – Goto , Break ,Continue and exit

Unit III - PHP FUNCTIONS

Function, Need of Function , declaration and calling of a function - PHP Function with arguments, Default Arguments in Function- Function argument with call by value, call by reference -Scope of Function Global and Local

Unit IV- STRING MANIPULATION AND REGULAR EXPRESSION

Creating and accessing String , Searching & Replacing String -Formatting, joining and splitting String , String Related Library functions -Use and advantage of regular expression over inbuilt function -Use of preg_match(), preg_replace(), preg_split() functions in regular expression

Unit V- ARRAY

Anatomy of an Array ,Creating index based and Associative array ,Accessing array - Looping with Index based array, with associative array using each() and foreach() -Some useful Library function

18CSU601B**UNIX / LINUX PROGRAMMING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques like scheduling or time management, space management and principles and how they can be implemented.
- To know about the issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Course Outcomes(COs)

1. This course teaches the student the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation.
2. Implement operating system abstractions in the development of application programs
3. Apply the principles of concurrency and synchronization to write correct concurrent programs/software
4. Implement basic resource management techniques like scheduling or time management, space management
5. Learn about processes and processor management, memory management schemes, file system and secondary storage management.
6. Learn about issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Unit I - INTRODUCTION

What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems, Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process

Unit II - SYSTEM PROCESSES (AN OVERVIEW)

External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

Unit III- USER MANAGEMENT AND THE FILE SYSTEM

Types of Users, creating users, granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

Unit IV - SHELL INTRODUCTION AND SHELL SCRIPTING

What is shell and various type of shell, various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script, Shell variable (user defined and system variables)

Unit V- SYSTEM CALLS, USING SYSTEM CALLS

Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

18CSU602A**WEB AND E-COMMERCE TECHNOLOGIES****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- to describe Internet trading relationships including Business to Consumer, Business-to-Business, Intra-organizational.
- To analyse the impact of E-commerce on business models and strategy
- To describe the key features of Internet, Intranets and Extranets and explain how they relate to each other.
- To understand applied cryptographic technology and Web security protocols;
- To understand the necessary infrastructure and functional components to develop Ecommerce systems;
- To understand the digital payment systems

Course Outcomes (COs)

Upon successful completion of the course students will be able to:

1. Recognize the impact of Information and Communication technologies, especially of the Internet in business operations
2. Recognize the fundamental principles e-Commerce
3. Understand the necessary infrastructure and functional components to develop Ecommerce systems
4. describe the key features of Internet, Intranets and Extranets and explain how they relate to each other.
5. Apply cryptographic technology and Web security protocols
6. Explain the added value, risks and barriers in the adoption of electronic fund transfer

Unit I- INTRODUCTION TO ELECTRONIC COMMERCE

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of ECommerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce, Electronic Commerce Applications, 9 Electronic Commerce and Electronic Business(C2C)(C2G,G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

Unit II- THE INTERNET AND WWW

Evolution of Internet, Domain Names and Internet Organization (.edu, .com, .mil, .gov, .net etc.) , Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, Cost, Time, Reach, Registering a Domain Name, Web promotion, Target email, Banner, Exchange, Shopping Bots

Unit III - INTERNET SECURITY

Secure Transaction, Computer Monitoring, Privacy on Internet, Corporate Email privacy, Computer Crime(Laws , Types of Crimes), Threats, Attack on Computer System, Software Packages for privacy, Hacking, Computer Virus(How it spreads, Virus problem, virus protection,

Encryption and Decryption, Secret key Cryptography, DES, Public Key Encryption, RSA, Authorization and Authentication, Firewall, Digital Signature(How it Works)

Unit IV- ELECTRONIC DATA EXCHANGE

Introduction, Concepts of EDI and Limitation, Applications of EDI, Disadvantages of EDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment System, Payment Types, Value Exchange System, Credit Card System, Electronic Fund Transfer, Paperless bill, Modern Payment Cash, Electronic Cash

Unit V- PLANNING FOR ELECTRONIC COMMERCE

Planning Electronic Commerce initiates, linking objectives to business strategies, measuring cost objectives, comparing benefits to Costs, Strategies for developing electronic commerce web sites

INTERNET MARKETING

The PROS and CONS of online shopping, the cons of online shopping, Justify an Internet business, Internet marketing techniques, The E-cycle of Internet marketing, Personalization e-commerce.

18CSU602B**COMPUTER GRAPHICS****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics
- To Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition
- To Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.
- To apply the concepts of colour models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
- To identify a typical graphics pipeline and apply graphics programming techniques to design and create computer graphics.

Course Outcomes (COs)

1. List the basic concepts used in computer graphics.
2. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
3. Describe the importance of viewing and projections.
4. Map world coordinates to device coordinates, clipping, and projections.
5. Apply the concepts of colour models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
6. Identify a typical graphics pipeline and apply graphics programming techniques to design and create computer graphics.

Unit I - INTRODUCTION

Basic elements of Computer graphics, Applications of Computer Graphics.

Unit II - GRAPHICS HARDWARE

Architecture of Raster and Random scan display devices, input/output devices.

Unit III - FUNDAMENTAL TECHNIQUES IN GRAPHICS

Raster scan line, circle and ellipse drawing, thick primitives, Polygon filling, line and polygon clipping algorithms, 2D and 3D Geometric Transformations, 2D and 3D Viewing Transformations (Projections- Parallel and Perspective), Vanishing points.

Unit IV - GEOMETRIC MODELING

Representing curves & Surfaces.

Unit V - Visible Surface determination

Hidden surface elimination. **Surface rendering-** Illumination and shading models. Basic color models and Computer Animation.

18CSU603A**ARTIFICIAL INTELLIGENCE****Semester – VI
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To gain a historical perspective of AI and its foundations.
- To become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- To investigate applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
- To experience AI development tools such as an 'AI language', expert system shell, and/or data mining tool.
- To experiment with a machine learning model for simulation and analysis.
- To explore the current scope, potential, limitations, and implications of intelligent systems.

Course Outcomes (COs)

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
4. Demonstrate proficiency developing applications in an 'AI language', expert system shell, or data mining tool.
5. Demonstrate proficiency in applying scientific method to models of machine learning.
6. Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

Unit I – INTRODUCTION

Introduction to Artificial Intelligence, Background and Applications, Turing Test and Rational Agent approaches to AI, Introduction to Intelligent Agents, their structure, behavior and environment.

Unit II - PROBLEM SOLVING AND SEARCHING TECHNIQUES

Problem Characteristics, Production Systems, Control Strategies, Breadth First Search, Depth First Search, Hill climbing and its Variations, Heuristics Search Techniques: Best First Search, A* algorithm, Constraint Satisfaction Problem, Means-End Analysis, Introduction to Game Playing, Min-Max and Alpha-Beta pruning algorithms.

Unit III - KNOWLEDGE REPRESENTATION

Introduction to First Order Predicate Logic, Resolution Principle, Unification, Semantic Nets, Conceptual Dependencies, Frames, and Scripts, Production Rules, Conceptual Graphs. Programming in Logic (PROLOG)

Unit IV- DEALING WITH UNCERTAINTY AND INCONSISTENCIES

Truth Maintenance System, Default Reasoning, Probabilistic Reasoning, Bayesian Probabilistic Inference, Possible World Representations.

Unit V- UNDERSTANDING NATURAL LANGUAGES

Parsing Techniques, Context-Free and Transformational Grammars, Recursive and Augmented Transition Nets.

18CSU603B**SYSTEM PROGRAMMING****Semester – VI
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

Unit I - ASSEMBLERS & LOADERS, LINKERS

One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

Unit II - LEXICAL ANALYSIS

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

Unit III – PARSING

Bottom up parsing- LR parser, **Intermediate representations:** Three address code generation, syntax directed translation, translation of types, control Statements.

Unit IV- STORAGE ORGANIZATION

Activation records stack allocation.

Unit V- CODE GENERATION

Object code generation

18CSU611A	PHP PROGRAMMING - PRACTICAL	Semester – VI 4H – 2C
------------------	------------------------------------	----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn array data structure using PHP scripts.
- To work with open source applications that deal with database and website development.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create PHP scripts using array.
6. Develop dynamic web pages.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick brown fox' Expected Output : Thequickbrownfox
9. Write a PHP script that finds out the sum of first n odd numbers.

10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.

11. Write a PHP script that checks if a string contains another string.

12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

13. Create a script to construct the following pattern, using nested for loop.

```
*  
* *  
* * *  
* * * *  
* * * * *
```

14. Write a simple PHP program to check that emails are valid.

15. WAP to print first n even numbers.

16. \$color = array('white', 'green', 'red')

Write a PHP script which will display the colors in the following way : Output :

white, green, red,

• green • red

• white

17. Using switch case and dropdown list display a —Hello! message depending on the language selected in drop down list.

18. Write a PHP program to print Fibonacci series using recursion.

19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

18CSU611B	UNIX / LINUX PROGRAMMING - PRACTICAL	Semester – VI 4H – 2C
------------------	---	----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objective

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques like scheduling or time management, space management and principles and how they can be implemented.
- To know about the issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

Course Outcomes(COs)

1. This course teaches the student the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation.
2. Implement operating system abstractions in the development of application programs
3. Apply the principles of concurrency and synchronization to write correct concurrent programs/software
4. Implement basic resource management techniques like scheduling or time management, space management
5. Learn about processes and processor management, memory management schemes, file system and secondary storage management.
6. Learn about issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.

List of practical

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to aCSUept a login name. If not a valid login name display message —Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of —who command along with the total number of users .
7. Write a shell script to display the multiplication table any number,

8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.
11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

**18CSU612A WEB AND E-COMMERCE TECHNOLOGIES
– PRACTICAL****4H – 2C****Instruction Hours / week: L:0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- to describe Internet trading relationships including Business to Consumer, Business-to-Business, Intra-organizational.
- To analyse the impact of E-commerce on business models and strategy
- To describe the key features of Internet, Intranets and Extranets and explain how they relate to each other.
- To understand applied cryptographic technology and Web security protocols;
- To understand the necessary infrastructure and functional components to develop Ecommerce systems;
- To understand the digital payment systems

Course Outcomes (COs)

Upon successful completion of the course students will be able to:

1. Recognize the impact of Information and Communication technologies, especially of the Internet in business operations
2. Recognize the fundamental principles e-Commerce
3. Understand the necessary infrastructure and functional components to develop Ecommerce systems
4. Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other.
5. Apply cryptographic technology and Web security protocols
6. Explain the added value, risks and barriers in the adoption of electronic fund transfer

Lab Practical: Web and E- Commerce Technologies LAB (based on the following topics):
HyperText Markup Language (HTML): structural setup; page layout; text manipulation; special characters; images; links. Intermediate: image maps; tables; frames, forms; meta tags; web forms. Cascading Style Sheets (CSS): embedding/linking; HTML element selectors; classes; ID selectors, text manipulation; background; borders and spacing; layout; context selectors and grouping, pseudo-classes; pseudo-elements.

JavaScript : writing your first script; creating HTML tags; user input and output; loops and tables; payroll calculator, forms and text fields; validating an email address; radio buttons; check boxes; self-grading tests, image rollovers; slide shows; real-time clock; controllable clock; working with cookies.

Perl/CGI 10: sample Perl operations; random numbers; lists; dealing four poker hands; time manipulation; subroutines, hash tables; files; string matching, CGI; registration lists; surveys.

SQL and regular expressions: Regular expressions: basics; repeating; positioning. Beginner: select; where; order by; insert; update; delete, like; between; in; distinct; group by; aliases;

aggregate functions; create table; alter table; drop table., nested selects; SoundEx; join; deterministic functions; non-deterministic functions.

ASP structural setup: response.write; retrieving from forms; retrieving from querystring; variables; control constructs; subroutines and functions; session state; application variables; server variables; debugging, reading and writing cookies; server-side includes; response object methods; VBScript functions; error handling; debugging, browser details; CDONTS; files; output from a recordset; global.asa; setup instructions for using IIS and ASP. Flash 3 Create Flash movies of moving and interactive objects

18CSU612B	COMPUTER GRAPHICS – PRACTICAL	Semester – VI
		4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics
- To Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition
- To Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.
- To apply the concepts of colour models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
- To identify a typical graphics pipeline and apply graphics programming techniques to design and create computer graphics.

Course Outcomes (COs)

1. List the basic concepts used in computer graphics.
2. Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
3. Describe the importance of viewing and projections.
4. Map world coordinates to device coordinates, clipping, and projections.
5. Apply the concepts of colour models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
6. Identify a typical graphics pipeline and apply graphics programming techniques to design and create computer graphics.

List of programs

1. Write a program to implement Bresenham's line drawing algorithm.
2. Write a program to implement mid-point circle drawing algorithm.
3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.
4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.
5. Write a program to apply various 2D transformations on a 2D object (use homogenous coordinates).
6. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.
7. Write a program to draw Hermite/Bezier curve.

18CSU613A**ARTIFICIAL INTELLIGENCE – PRACTICAL****Semester – VI
3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

- To gain a historical perspective of AI and its foundations.
- To become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- To investigate applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
- To experience AI development tools such as an 'AI language', expert system shell, and/or data mining tool.
- To experiment with a machine learning model for simulation and analysis.
- To explore the current scope, potential, limitations, and implications of intelligent systems.

Course Outcomes (COs)

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
4. Demonstrate proficiency developing applications in an 'AI language', expert system shell, or data mining tool.
5. Demonstrate proficiency in applying scientific method to models of machine learning.
6. Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

List of programs

1. Write a prolog program to calculate the sum of two numbers.
2. Write a prolog program to find the maximum of two numbers.
3. Write a prolog program to calculate the factorial of a given number.
4. Write a prolog program to calculate the nth Fibonacci number.
5. Write a prolog program, insert_nth(item, n, into_list, result) that asserts that result is the list into_list with item inserted as the n'th element into every list at all levels.
6. Write a Prolog program to remove the Nth item from a list.
7. Write a Prolog program, remove_nth(Before, After) that asserts the After list is the Before list with the removal of every n'th item from every list at all levels.
8. Write a Prolog program to implement append for two lists.
9. Write a Prolog program to implement palindrome(List)
10. Write a Prolog program to implement max(X,Y,Max) so that Max is the greater of two numbers X and Y.

11. Write a Prolog program to implement `maxlist(List,Max)` so that `Max` is the greatest number in the list of numbers `List`.
12. Write a Prolog program to implement `sumlist(List,Sum)` so that `Sum` is the sum of a given list of numbers `List`.
13. Write a Prolog program to implement two predicates `evenlength(List)` and `oddlength(List)` so that they are true if their argument is a list of even or odd length respectively.
14. Write a Prolog program to implement `reverse(List,ReversedList)` that reverses lists.
15. Write a Prolog program to implement `maxlist(List,Max)` so that `Max` is the greatest number in the list of numbers `List` using cut predicate.
16. Write a Prolog program to implement GCD of two numbers.
17. Write a prolog program that implements Semantic Networks/Frame Structures.

18CSU613B**SYSTEM PROGRAMMING - PRACTICAL****Semester – VI
3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

List of practical

1. To implement an assembler for a hypothetical language.
2. To get familiar with lex: write a program to recognize numbers, identifiers.
3. To get familiar with yacc: write a desk calculator

M.Sc. COMPUTER SCIENCE

CHOICE BASED CREDIT SYSTEM (CBCS)

Syllabus

Regular (2018 – 2019)

DEPARTMENT OF COMPUTER SCIENCE

FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act, 1956)

Eachanari(Post), Coimbatore – 641 021.

Tamilnadu, India

Phone No. 0422-2980011 - 15 Fax No: 0422-2980022-23

E mail ID: info@karpagam.com

Web: www.kahedu.edu.in

18CSP101**PYTHON PROGRAMMING****Semester-I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100****End Semester Exam : 3 Hours****Course Objectives**

- To Master the principles of object-oriented programming and the interplay of algorithms and data structures in well-written modular code;
- To Solve problems requiring the writing of well-documented programs in the Python language, including use of the logical constructs of that language;
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes(COs)

1. Master an understanding of scripting and the contributions of scripting languages.
2. Master an understanding of Python especially the object oriented concepts
3. Master an understanding of the built in objects of Python
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python Programs.
6. Be exposed to advanced applications such as TCP/IP network programming, multithreaded programming, Web applications.

Unit I - PYTHON BASICS

Introduction-features-Syntax and Statements- Variables and Assignments-Identifier-Operators .**Conditional and looping statement. Functions:** calling function-creating functions-Function arguments.

Unit II – NUMBERS

Introduction- Integer-Floating Point-Complex numbers-Operators-Other numeric type. **Strings**-Strings and Operator-String only operator- Built-in-Functions-Built-in-Methods-String Features. **List** : Operators-Built-in-Functions-Built-in-Methods-Features of List

Unit III - TUPLE

Introduction- Operators and Built-in-Functions-Features. **Mapping and set type Dictionaries**-Operators-Built-in and Factory Functions-Built-in- Methods. **Set type:** Introduction- Operators-Built-in Function-Built-in Methods-

Unit IV - PYTHON OBJECTS

Introduction-Standard Type- Built-in-type-Built-in functions. **Class:** Introduction- Class and Instance- Method calls. **File:** Objects- Built in Functions-Methods-Attributes-Command line Argument-File System-File Execution.

Unit V -EXCEPTION AND TOOLS

Why use it?- Exception roles-Exception in python-Try/finally statement. Regular Expression: Introduction-Special Symbols and characters-Regexes and Python- Examples of Regexes. Network Programming: Architecture- Socket- networking programming in python.

18CSP102	CRYPTOGRAPHY AND NETWORK SECURITY	Semester-I
		4H – 4C
Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100		

Course Objectives

This course will provide students with a theoretical knowledge to understand the fundamental principles of access control models and techniques and,

- To understand theory of fundamental cryptography, encryption and decryption algorithms
- To know about various encryption techniques.
- To understand various Block Ciphers, DES and AES algorithms
- To understand the concept of Public key cryptography.
- To study about message authentication and hash functions
- To impart knowledge on web security, electronic mail security, firewalls

Course Outcomes (COs)

On successful completion of the course the student should be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Understand basic concepts of system level security
6. Build secure authentication systems by use of message authentication techniques.

Unit I - INTRODUCTION

Security Trends - The OSI Security Architecture – Security Attacks – Security Services – Security Mechanisms – A Model for Network Security. Classical Encryption Techniques – Symmetric Cipher Model – Substitution Techniques - Transposition Techniques – Rotor Machines - Steganography.

Unit II -BLOCK CIPHERS AND DATA ENCRYPTION STANDARD

Block Cipher Principles – The Data Encryption Standard - The Strength of DES – Advanced Encryption Standard (AES) – Evaluation Criteria for AES – The AES Cipher – Multiple Encryption and Triple DES – Block Cipher Modes of Operation – Stream Ciphers and RC4- modular Arithmetic and Euclidean Algorithm.

Unit III - CONFIDENTIALITY USING SYMMETRIC ENCRYPTION

Placement of Encryption Function – Traffic Confidentiality – Key Distribution – Public key Cryptography and RSA – Principles of Public Key Cryptosystems – The RSA Algorithm- Basic prime numbers and Discrete Logarithms -Key Management – Diffie Hellman Key Exchange.

Unit IV - MESSAGE AUTHENTICATION AND HASH FUNCTIONS

Authentication Functions – Message Authentication Codes (MAC's) Functions – Security of Hash Functions and MAC's Digital Signatures and Authentication Protocols – Digital Signatures – Digital Signature Standard

Unit V - NETWORK SECURITY APPLICATIONS

Authentication Applications – KERBEROS – X.509 Authentication Service – Public Key Infrastructure – Electronic Mail Security – Pretty Good Privacy – S/MIME – IP Security.

18CSP103**BIG DATA ANALYTICS****Semester-I**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100****End Semester Exam : 3 Hours****Course Objectives**

- It provides grounding in basic and advanced methods to big data technology and tools like MapReduce and Hadoop and its ecosystem.
- Understand the Big Data Platform and web analytics
- Provide an overview of Apache Hadoop and Design of HDFS
- Understand Map Reduce features
- Provide hands on Hbase, Pig and HiveQL queries
- Introduction to NoSQL and Data Model
- Exposure to Graph databases Neo4J, Connecting your data and Dashboard

Course Outcomes(COs)

On successful completion of the course the student should be able to:

1. Apply Hadoop ecosystem components.
2. Access and Process Data on Hbase, Pig and HiveQL queries
3. Manage Job Execution in Hadoop Environment
4. Analyze Map Reduce Types
5. Apply Data Model and Connect your data and Dashboard
6. Participate data science and big data analytics projects

Unit I – INTRODUCTION to BIG DATA

What is big data – why big data – convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies - open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics

Unit II - HISTORY OF HADOOP

- The Hadoop Distributed File System – Components of Hadoop- Analyzing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features

Unit III - HBASE

data model and implementations – Hbase clients – Hbase examples – praxis. Cassandra – cassandra data model – cassandra examples – cassandra clients – Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

Unit IV - Introduction to NoSQL

Aggregate data models – aggregates – key-value and document data models – relationships– schemaless databases – materialized views – distribution models -peer-peer replication –consistency – relaxing consistency – version stamps – partitioning and combining – composing map-reduce calculations -Document based Database – MongoDB- Introduction- Data Model- Working with data- Replication &Sharding- Development

Unit V - Graph databases Neo4J

Key concept and characteristics-Modelling data for neo4j- Importing data into neo4j- Visualizations neo4j-Cypher Query Language-Data visualization- Creating Visual analytics with Tableau-Connecting your data-Creating Calculation-Using maps-Dashboard-Stories

18CSP104	CLOUD COMPUTING	Semester-I
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- To portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

Unit I - INTRODUCTION TO CLOUD COMPUTING

Characteristics of Cloud Computing -Paradigm shift - Benefits of cloud computing - Disadvantages of cloud computing- Role of Open Standards-Cloud Computing Architecture: Cloud computing stack-Public cloud -Private cloud -Hybrid cloud - CommUNITY cloud

Unit II – SERVICE MODELS

Infrastructure as a Service (IaaS) -Platform as a Service (PaaS) -Software as a Service (SaaS) -Identity as a Service (IDaaS) -Compliance as a Service (CaaS)- Cloud storage.

Unit III - VIRTUALIZATION TECHNOLOGIES

Load Balancing and Virtualization -Advanced load balancing -The Google cloud - Hypervisors -Virtual machine types -VMware vSphere - Machine Imaging -Porting Applications -The Simple Cloud API - AppZero Virtual Application Appliance

Unit IV - CLOUD INFORMATION SECURITY OBJECTIVES

Confidentiality Integrity and Availability -Cloud Security Services - Relevant Cloud Security Design Principles -Cloud Computing Risk Issues -The CIA Triad

Privacy and Compliance Risks -Threats to Infrastructure Data and Access Control -Cloud Access Control Issues -Database Integrity Issues -Cloud Service Provider Risks Architectural Considerations

General Issues- Trusted Cloud Computing -Identity Management and Access Control

Unit V – CASE STUDIES

Case Study on Open Source and Commercial Clouds: Microsoft Azure- Amazon EC2- Google Web services – Open Nebula.

18CSP105A	WIRELESS AND MOBILE COMPUTING	Semester-I
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To learn about the concepts and principles of mobile computing;
- To explore both theoretical and practical issues of mobile computing;
- To develop skills of finding solutions and building software for mobile computing applications.
- To identify the use of mobile wireless technologies
- To know the types of mobile wireless technologies that are currently being used
- To understand the working of mobile wireless technologies access to network resources.

Course Outcomes (COs)

1. Grasp the concepts and features of mobile computing technologies and applications
2. Have a good understanding of how the underlying wireless and mobile communication networks work, their technical features, and what kinds of applications they can support
3. Identify the important issues of developing mobile computing systems and applications
4. Organize the functionalities and components of mobile computing systems into different layers and apply various techniques for realizing the functionalities;
5. Develop mobile computing applications by analyzing their characteristics and requirements, selecting the appropriate computing models and software architectures, and applying standard programming languages and tools;
6. Organize and manage software built for deployment and demonstration.

Unit I - Mobile computing applications and Platforms

Introduction – Strengths and Weakness of Wireless – Applications – Platforms to support Mobile Computing Applications –Wireless Networks – Wireless Architecture Security and Management – Wireless Business

Unit II - Mobile Computing Applications

Key Characteristics of Mobile Applications – Messaging for users – Mobile Portals – Special Applications – Mobile agent applications

Unit III - Wireless Internet Mobile IP and Wireless Web

Internet and Web – How it works – Mobile IP – WWW for wireless – Mobile Web Services - **Mobile Computing Platforms** - Introduction – Wireless Middleware – Wireless Gateways and Mobile Application Servers – WAP – I-MODE Wireless JAVA MMIT and BREW – Voice communication

Unit IV - WIRELESS LANS

IEEE 802.11 – MANET – HiperLAN2 - **Wireless Personal Area Networks** - IEEE 802.15 – Home Networks – Blue tooth LANs – Sensor Networks - **Cellular Networks** - Principles – First Generation(1G) Cellular – Paging networks – Second Generation(2G) Cellular – Data over Cellular Networks – Third Generation Cellular (3G) Networks – Beyond 3G

Unit –V – WML

Formatting Output – Variables – Input Operations – WML Script – WML Libraries.

18CSP105B	GEOGRAPHICAL INFORMATION SYSTEM	Semester-I
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To gain a basic, practical understanding of GIS concepts, techniques.
- To analyse the basic components of GIS
- To classify the maps, coordinate systems and projections
- To process spatial and attribute data and prepare thematic maps
- To identify and rectify mapping inaccuracies
- To formulate and solve geospatial problems

Course Outcomes(COs)

At the completion of the course, students will:

1. Have a basic, practical understanding of GIS concepts, techniques and real world applications.
2. Have an understanding of the technical language of GIS.
3. Know how GIS is utilized in the larger context of business needs and IT strategies. Understand the basic concepts of geography necessary to efficiently and accurately use GIS technology.
4. Understand basic GIS data concepts.
5. Have an ability to perform basic GIS analysis of concepts. .
6. Have an understanding of GIS and its relationship to mapping software development. Have an appreciation of GIS career options and how to pursue them.

Unit I – INTRODUCTION

What is a Geographical Information Systems (GIS) – Geographically referenced data – GIS operations – Geographic Coordinate systems – Map Projections – Commonly used Map Projections – Projected Coordinate Systems – Working with Coordinate systems in GIS.

Unit II - GEORELATIONAL VECTOR DATA MODEL

Georelational data model – Representation of simple features – Topology – Nontopological Vector data – Data models for composite features.

Object based vector data model – Object based data model – The geodatabase data model – Interface – Topology rules – Advantages of Geodatabase model.

Unit III - RASTER DATA MODEL

Elements of Raster Data Model - Raster Data Structure – Data Compression – Data Conversion – Integration of Raster and Vector Data.

Data Input – Existing GIS data – Meta Data – Conversion of Existing Data – Creating New Data.

Unit IV - GEOMETRIC TRANSFORMATION

Root Mean Square (RMS) Error – Interpretation of RMS errors Digitized Maps – Re sampling of Pixel Values.

Spatial Data Editing – Location Errors – Spatial Data Accuracy Standards – Topological Errors – Topological Editing – Nontopological Editing – Other Editing operations

Unit V - DATA DISPLAY AND CRYPTOGRAPHY

Cartographic Symbolization – Types of Maps – Typography – Map Design – Map Production.

Data Exploration – Attribute and Data Query – Spatial Data Query – Raster Data Query – GIS Applications.

18CSP105C	SOFT COMPUTING	Semester-I
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To understand the scope and evolution of soft computing
- To learn the various soft computing frame works
- To be familiar with design of various neural networks
- To be exposed to fuzzy sets and fuzzy logic
- To understand fuzzy measures and reasoning
- To learn genetic programming.

Course Outcomes(COs)

1. Understand the scope and evolution of soft computing
2. Learn the various soft computing frame works
3. Be familiar with design of various neural networks
4. Be exposed to fuzzy sets and fuzzy logic
5. Understand fuzzy measures and reasoning
6. Learn genetic programming.

Unit I - INTRODUCTION

Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence – Neural Networks - Scope and Evolution– Models of Neural Networks – Feed forward Networks – Supervised Learning Neural Networks – Associative memory networks – Unsupervised learning networks – Special Networks.

Unit II - FUZZY SETS AND FUZZY LOGIC

Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations - Fuzzy Rules Non – interactive fuzzy sets – Fuzzification– Intuition inference Rank ordering – Defuzzification – Max-membership principle centroid method center of sums center of largest area.

Unit III - FUZZY MEASURES AND REASONING

Fuzzy arithmetic and measures – Fuzzy reasoning – approximate reasoning – categorical qualitative syllogistic dispositional – Fuzzy inference systems – fuzzy decision making – individual multiperson multi objective Bayesian – fuzzy logic control system – architecture model and application.

Unit IV - MACHINE LEARNING AND GENETIC ALGORITHM

Machine Learning Techniques – Machine Learning Using Neural Nets – Genetic Algorithms (GA) – Simple and General GA – Classification of Genetic Algorithm – Messy Adaptive Hybrid Parallel – Holland Classifier System.

Unit V - APPLICATION AND IMPLEMENTATION SOFT COMPUTING

Genetic algorithms -. Traveling Salesperson Problem Internet Search Techniques – Fuzzy Controllers – Bayesian Belief networks for Rocket Engine Control – Neural Network Genetic algorithm and Fuzzy logic implementation in C++ and Matlab.

18CSP111 PYTHON PROGRAMMING – PRACTICAL

**Semester-I
4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To Master the principles of object-oriented programming and the interplay of algorithms and data structures in well-written modular code;
- To Solve problems requiring the writing of well-documented programs in the Python language, including use of the logical constructs of that language;
- To Understand the basic logic statements in Python
- To Handle Strings in Python.
- To Understand Lists, Dictionaries in Python.
- To Build GUI applications

Course Outcomes(COs)

1. Master an understanding of scripting and the contributions of scripting languages.
2. Master an understanding of Python especially the object oriented concepts
3. Master an understanding of the built in objects of Python
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python Programs.
6. Be exposed to advanced applications such as TCP/IP network programming, multithreaded programming, Web applications.

List of Programs

1. Write a Python program to compute the GCD of two numbers.
2. Write a Python program to Find the square root of a number (Newton's method)
3. Write a Python program to find the sum of odd and even from a set of numbers?
4. Write a Python program to generate prime numbers between 1 and 50?
5. Write a Python program to reverse the given number and check it is palindrome or not?
6. Write a python program for matrix Multiplication.
7. Write a Python program
 - to Compare two strings
 - Find the length of the string
8. Write a Python program to generate Linear search OR Binary search
9. Write a Python program to generate Selection sort OR Insertion sort
10. Write a Python programs that take command line arguments (word count)
11. Write a Python program to Find the most frequent words in a text read from a file
12. Write a Python program to generate Simulate elliptical orbits in Pygame
13. Write a Python program to generate Simulate bouncing ball in Pygame

18CSP112**HADOOP – PRACTICAL****Semester-I
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal:40 External:60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- It provides grounding in basic and advanced methods to big data technology and tools like MapReduce and Hadoop and its ecosystem.
- Understand the Big Data Platform and web analytics
- Provide an overview of Apache Hadoop and Design of HDFS
- Understand Map Reduce features
- Provide hands on Hbase, Pig and HiveQL queries
- Introduction to NoSQL and Data Model
- Exposure to Graph databases Neo4J, Connecting your data and Dashboard

Course Outcomes(COs)

On successful completion of the course the student should be able to:

1. Apply Hadoop ecosystem components.
2. Access and Process Data on Hbase, Pig and HiveQL queries
3. Manage Job Execution in Hadoop Environment
4. Analyze Map Reduce Types
5. Apply Data Model and Connect your data and Dashboard
6. Participate data science and big data analytics projects

List of Programs

1. Perform setting up and Installing Hadoop in its three operating modes: Standalone, Pseudo distributed, Fully distributed.
2. Implement the following file management tasks in Hadoop: Adding files and directories• Retrieving files• Deleting files•
Hint: A typical Hadoop workflow creates data files (such as log files) elsewhere and copies them into HDFS using one of the above command line utilities.
3. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
4. Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather a large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structured and record-oriented.
5. Implement Matrix Multiplication with Hadoop Map Reduce
6. Write a Map Reduce program to implement Join operations on RDBMS.
7. Write a Map Reduce program to determine statistical measures a) Variance b) Max c) Min d) Range of a large data collection.
8. K-means clustering using map reduce
9. Page Rank Computation

18CSP201	INTERNETWORKING WITH TCP/IP	Semester-II
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To get an architectural overview of the TCP/IP Protocol Suite
- To understand about subnets using IP classes
- To understand the key features and functions of ARP Protocol.
- To understand how basic routing protocol works.
- To understand about DNS and its applications
- To understand the concepts of Remote Login and VPN

Course Outcomes (COs)

At the completion of the course, students will:

1. Have the ability to analyze and differentiate networking protocols used in TCP/IP protocol suite.
2. Understand the routing IP datagrams and checksum.
3. Exposed to unicast and multicast routing.
4. Learn about host name resolution and the Domain Name System (DNS).
5. Learn about services and operations of DHCP Servers and Domain Name Servers
6. Understand about SMTP and SNMP.

Unit I – INTRODUCTION

WAN WAN technologies - Protocols and Standards - TCP/IP protocol suite - Internetworking Devices - Classful IP Addressing – Subnetting – Supernetting – Classless Addressing

Unit II - ARP & RARP

Proxy ARP – ARP over ATM – ARP and RARP Protocol Format. IP Datagram – Fragmentation – Options – IP Datagram Format – Routing IP Datagrams – Checksum. ICMP – Types of Messages - Message Format – Error Reporting – Query – Checksum.

Unit III - ROUTING PROTOCOL

Unicast Routing Protocol: Intra Domain and Inter Domain Routing – Distance Vector Routing – RIP – Link State Routing – OSPF – Path Vector Routing – BGP – Multicast Routing – Multicast Routing Protocols. Group Management – IGMP Message – IGMP Operation – Process to Process Communication – UDP Operation – TCP Services - Flow Control.

Unit IV – BOOTP, DHCP

Address Discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records

Unit V - REMOTE LOGIN

FTP – SMTP – SNMP. IP over ATM Wan – Cells – Routing the Cells – ATMARP – Logical IP Subnets. VPN

18CSP202	CYBER SECURITY	Semester-II
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To state the basic concepts in information security, including security policies, security models, and security mechanisms.
- To provide an exposure to the spectrum of security activities methods methodologies and procedures with emphasis on practical aspects of Information Security.
- To understand principles of web security.
- To gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
- To understand key terms and concepts in cyber law, intellectual property and cybercrimes, trademarks and domain theft.
- To provide the learner will be able to examine secure software development practices.

Course Outcomes (COs)

A student who successfully completes this course should at a minimum be able to:

1. State the basic concepts in information security, including security policies, security models, and security mechanisms.
2. Explain concepts related to applied cryptography including the four techniques for crypto-analysis symmetric and asymmetric cryptography, digital signature, message authentication code, hash functions and modes of encryption operations.
3. Explain common vulnerabilities in computer programs including buffer overflow Vulnerabilities time-of-check to time-of-use flaws incomplete mediation.
4. The learner will gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
5. The learner will understand key terms and concepts in cyber law, intellectual property and cybercrimes, trademarks and domain theft.
6. The learner will be able to examine secure software development practices.

Unit I - INTRODUCTION TO CYBERCRIME

Definition and Information Security-who are cybercriminals? - Classification of cybercrimes. Cybercrime: The legal perspectives- cybercrimes: An Indian Perspective - cybercrime and the Indian ITA2000: Hacking and the Indian law(s) - A Global Perspective on cybercrimes: cybercrime and the Extended Enterprise - cybercrime Era: Survival Mantra for the Netizens - Concluding Remarks and Way Forward to Further Chapters.

Unit II - CYBER OFFENSES

How Criminals Plan Them: Introduction: categories of Cybercrime -How criminals Plan the Attacks: Reconnaissance Passive Attacks Active Attacks Scanning and Scrutinizing

Gathered Information Attack(Gaining and Maintaining the system Access) -social Engineering: Classification of Social Engineering – Cyber talking: Types of stalkers Cases Reported on Cyber stalking How stalking Works? real-life incident of Cyber stalking -Cybercafe and Cybercrimes - Botnets: The Fuel for cybercrime: Botnet - Attack Vector-Cloud Computing: Why cloud computing? Types of Services Cybercrime and Cloud Computing.

Unit III – CYBERCRIME

Mobile and wireless Devices-Introduction - Proliferation of Mobile and Wireless Devices - Trends in Mobility-Credit Card Frauds in Mobile and Wireless Computing Era: Types and Techniques of Credit Card Frauds - Security challenges Posed by Mobile Devices - Registry Settings for Mobile Devices - Authentication Service security: cryptographic security LDAP Security RAS Security Media Player Control Security Networking API Security - Attacks on Mobile/Cell Phones: Mobile Phone Theft Mobile Viruses Mishing Vishing Smishing Hacking Bluetooth.

Unit IV - MOBILE DEVICES

Security Implication for Organizations – Managing Diversity and Proliferation of Hand-Held Devices Unconventional/ Stealth Storage Devices Threats through Lost and Stolen Devices Protecting Data on lost devices Educating the Laptop Users - Organizational Measures for Handling Mobile devices - Related Security Issues: Encrypting Organization Databases Including Mobile Devices in Security Strategy -Organizational Security Policies and Measures in mobile Computing Era: Importance of Security policies relating to mobile Computing Devices Operating Guidelines for Implementing Mobile Devices Security Policies Organizational Policies for the Use of Mobile Hand - Held Devices - Laptops: Physical Security Countermeasures.

Unit V - TOOLS AND METHODS USED IN CYBERCRIME

Introduction - Proxy Servers and Anonymizers - Phishing: How Phishing Works? - Password Cracking: Online Attacks Offline Attacks Strong Weak and Random Passwords Random passwords - Keyloggers and Spywares: Software Keyloggers Hardware Keyloggers Anti Keylogger Spywares - Virus and Worms: Types of Virus - Trojan Horses and Backdoors: backdoor How to protect from Trojan Horses and Backdoors - Steganography: Steganalysis - DoS and DDoS Attacks: DoS AttacksClassification of DoS Attacks Types or Levels of DoS Attacks Tools Used to Launch DoS Attacks DDoS Attacks How to Protect from DoS/DDoS Attacks – SQL Injection: Steps for SQL Injection Attacks How to Prevent SQL Injection Attacks - Buffer Overflow: Types of Buffer Overflow How to Minimize Buffer Overflow - Attacks on Wireless Networks: Traditional Techniques of Attacks on Wireless Networks Theft of Internet Hours and Wi-fi-based Frauds and Misuses How to Secure the Wireless Networks.

18CSP203**MONGODB****Semester-II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100****End Semester Exam : 3 Hours****Course Objectives**

- To provide students the knowledge and skills to master the NoSQL database mongoDB.
- To Write MongoDB programs from JavaScript shell.
- To define, compare and use of MongoDB with other RDBMS
- To explain the detailed architecture, define objects, load data, query data and performance tune of MongoDB
- To perform query optimization in MongoDB
- To understand replication and sharding in MongoDB

Course Outcomes(COs)

1. To provide students the right skills and knowledge needed to develop Applications on mongoDB
2. To provide students the right skills and knowledge needed to run Applications on mongoDB
3. Writing MongoDB programs from JavaScript shell.
4. Explain the detailed architecture, define objects, load data, query data and performance tune of MongoDB
5. Perform query optimization in MongoDB
6. Understand replication and sharding in MongoDB

Unit I - GETTING STARTED

A database for the modern web – MongoDB through the JavaScript shell – Writing programs using MongoDB.

Unit II - APPLICATION DEVELOPMENT

Document-oriented data – Principles of schema design – Designing an e-commerce data model – Nuts and bolts on databases, collections, and documents. Queries and aggregation – E-commerce queries – MongoDB's query language – Aggregating orders – Aggregation in detail.

Unit III - UPDATES, ATOMIC OPERATIONS, AND DELETES

A brief tour of document updates – E-commerce updates – Atomic document processing – MongoDB updates and deletes. Indexing and query optimization: Indexing theory – Indexing in practice – Query optimization.

Unit IV – REPLICATION

Overview – Replica sets – Master-slave replication – Drivers and replication. Sharding: Overview – A sample shard cluster – Querying and indexing a shard cluster – Choosing a shard key – sharding in production.

Unit V - DEPLOYMENT AND ADMINISTRATION

Deployment – Monitoring and diagnostics – Maintenance – Performance troubleshooting

- To Understand the Introduction to IoT and Architectural Overview of IoT
- To Understand the various IoT Protocols (Datalink, Network, Transport, Session, Service)
- To understand the standardization of IoT
- To Understand the communication technologies in IoT Know the IoT protocols and web of things
- To integrate IoT with billing and networks
- To Know the various applications of IoT

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Understand building blocks of Internet of Things and characteristics.
2. Understand IoT protocols, Web of Things and Integrating IOT.
3. Understand the application areas of IOT .
4. Realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks
5. Learn about communication technologies used in IoT
6. Learn about Web of Things, Structural models and applications of IoT.

Unit I – INTRODUCTION

Internet Layers - Protocols - Packets - Services - Performance parameters - Peer-to-peer networks - Sensor networks - Multimedia - IOT Definitions and Functional Requirements –Motivation – Architecture - Web 3.0 View of IoT– Ubiquitous IoT Applications – Four Pillars of IoT – DNA of IoT - The Toolkit Approach for End-user Participation in the Internet of Things. Middleware for IoT: Overview – Communication middleware for IoT –IoT Information Security.

Unit II - IOT PROTOCOLS

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – point-to-point protocols - Ethernet protocols - cellular Internet access protocol - Machine-to-machine protocol - Modbus – KNX – Zigbee Architecture – Network layer – APS layer – Security.

Unit III - WEB OF THINGS

Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence. Cloud of Things: Grid/SOA and Cloud Computing – Cloud Middleware – Cloud Standards – Cloud Providers and Systems – Mobile Cloud Computing – The Cloud of Things Architecture.

Unit IV - INTEGRATING IoT

Integrated Billing Solutions in the Internet of Things Business Models for the Internet of Things - Network Dynamics: Population Models – Information Cascades - Network Effects - Network Dynamics: Structural Models - Cascading Behavior in Networks - The Small-World Phenomenon.

Unit V – Applications

The Role of the Internet of Things for Increased Autonomy and Agility in Collaborative Production Environments - Resource Management in the Internet of Things: Clustering, Synchronization and Software Agents. Applications - Smart Grid – Electrical Vehicle Charging - Case studies: Sensor body-area-network and Control of a smart home.

18CSP205A**ARTIFICIAL INTELLIGENCE****Semester-II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100****End Semester Exam : 3 Hours****Course Objectives**

- To gain a historical perspective of AI and its foundations.
- To become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- To investigate applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
- To experience AI development tools such as an 'AI language', expert system shell, and/or data mining tool.
- To experiment with a machine learning model for simulation and analysis.
- To explore the current scope, potential, limitations, and implications of intelligent systems.

Course Outcomes (COs)

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
4. Demonstrate proficiency developing applications in an 'AI language', expert system shell, or data mining tool.
5. Demonstrate proficiency in applying scientific method to models of machine learning.
6. Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

Unit I - PROBLEM SOLVING AND AI

Puzzles and Games – Problem States and operators – Heuristic programming – state space representations – state descriptions – graph notations – non- deterministic programs

Unit II - STATE SPACE SEARCH METHODS

Breadth first and depth first search – heuristic – admissibility – optimality of algorithms – performance measures – problem reduction representations – AND/OR graphs and higher level state space

Unit III - PROBLEM REDUCTION SEARCH METHODS

cost of solution trees – ordered search – alpha beta and minimum procedure – theorem proving in predicate calculus – syntax, semantics, Herbrand universe: variables, qualifiers, unification, resolvents

Unit IV - PREDICATE CALCULUS IN PROBLEM SOLVING

Answer extraction process – resolution – Automatic program writing – predicate calculus – proof finding methods

Unit V - EXPERT SYSTEMS

Expert systems and conventional programs – expert system organization – Knowledge engineering: knowledge representation techniques – knowledge acquisition – acquiring knowledge from experts – automating knowledge acquisition –Building an expert system – difficulties in developing an expert system

18CSP205B**MACHINE LEARNING****Semester-II****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100****End Semester Exam : 3 Hours****Course Objectives**

- To introduce students to the basic concepts and techniques of Machine Learning.
- To develop skills of using recent machine learning software for solving practical problems.
- To gain experience of doing independent study and research.
- To recognize the characteristics of machine learning that make it useful to real-world problems.
- To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
- To effectively use machine learning toolboxes.

Course Outcomes(COs)

On successful completion of the course the student should be

1. Remember the basic concepts and techniques of Machine Learning.
2. Develop skills of using recent machine learning software for solving practical problems.
3. of doing independent study and research.
4. To recognize the characteristics of machine learning that make it useful to real-world problems.
5. To characterize machine learning algorithms as supervised, semi-supervised, and unsupervised.
6. To effectively use machine learning toolboxes.

Unit I - FOUNDATIONS OF LEARNING

Components of learning – learning models – geometric models – probabilistic models – logic models – grouping and grading – learning versus design – types of learning – supervised – unsupervised – reinforcement – theory of learning – feasibility of learning – error and noise – training versus testing – theory of generalization – generalization bound – bias and variance – learning curve

Unit II - LINEAR MODELS

Linear classification – univariate linear regression – multivariate linear regression – regularized regression – Logistic regression – perceptrons – multilayer neural networks – learning neural networks structures – support vector machines – soft margin SVM – generalization and over fitting – regularization – validation

Unit III - DISTANCE-BASED MODELS

Nearest neighbor models – K-means – clustering around medoids – silhouettes – hierarchical clustering – k- d trees – locality sensitive hashing – non - parametric

regression – ensemble learning – bagging and random forests – boosting – meta silhouettes – hierarchical clustering – k- d trees – locality sensitive hashing – non - parametric regression – ensemble learning – bagging and random forests – boosting – meta learning

Unit IV - TREE AND RULE MODELS

Decision trees – learning decision trees – ranking and probability estimation trees – Regression trees – clustering trees – learning ordered rule lists – learning unordered rule lists – descriptive rule learning – association rule mining – first -order rule learning

Unit V - REINFORCEMENT LEARNING

Passive reinforcement learning – direct utility estimation – adaptive dynamic programming – temporal - difference learning – active reinforcement learning – exploration – learning an action utility function – Generalization in reinforcement learning – policy search – applications in game playing – applications in robot control

Semester-II

18CSP205C **NEURAL NETWORKS & FUZZY LOGIC** **4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To understand the fundamentals of neural networks
- To learn about the working principles of back propagation networks
- To learn about introduction and different architectures of neural network
- To understand the selection of various Parameters in BPN.
- To explore the ideas of Adaptive Resonance Theory.
- To discuss the concept of fuzzy logic systems.

Course Outcomes(COs)

A student who successfully completes this course should at a minimum be able to:

1. Have adequate knowledge about basic Concepts of Neural Networks.
2. Understand the concept of fuzziness involved in various systems.
3. Understand comprehensive knowledge of fuzzy sets, Crisp sets, Fuzzy relations and Crisp relations.
4. Learn the concepts of Fuzzy Rule Based System and Defuzzification Methods.
5. Learn about the working principles of back propagation networks
6. Explore the ideas of Adaptive Resonance Theory

Unit I - FUNDAMENTALS OF NEURAL NETWORKS

Basic Concepts of Neural Networks – Human Brain – Model of an Artificial Neuron – Neural Network Architectures – Characteristics of Neural Networks – Learning Methods – Taxonomy of Neural Network Architectures – History of Neural Network Research – Easy Neural Network Architectures – Some Application Domains.

Unit II - BACK PROPAGATION NETWORKS

Architecture of a Back Propagation Network – Back Propagation Learning – Illustration – Applications – Effects of Tuning Parameters of the Back Propagation Neural Network – Selection of Various Parameters in BPN – Variations of Standard Back Propagation Algorithm.

Unit III - ADAPTIVE RESONANCE THEORY

Introduction – ART1 – ART2 – Applications.

Unit IV - FUZZY SET THEORY

Fuzzy versus Crisp – Crisp Sets – Fuzzy Sets – Crisp Relations – Fuzzy Relations.

Unit V - FUZZY SYSTEMS

Crisp Logic – Predicate Logic – Fuzzy Logic – Fuzzy Rule Based System – Defuzzification Methods.

Semester-II

18CSP211 ROUTER CONFIGURATION – PRACTICAL 4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To get an architectural overview of the TCP/IP Protocol Suite
- To understand about subnets using IP classes
- To understand the key features and functions of ARP Protocol.
- To understand how basic routing protocol works.
- To understand about DNS and its applications
- To understand the concepts of Remote Login and VPN

Course Outcomes (COs)

At the completion of the course, students will:

1. Have the ability to analyze and differentiate networking protocols used in TCP/IP protocol suite.
2. Understand the routing IP datagrams and checksum.
3. Exposed to unicast and multicast routing.
4. Learn about host name resolution and the Domain Name System (DNS).
5. Learn about services and operations of DHCP Servers and Domain Name Servers
6. Understand about SMTP and SNMP.

List of Programs

1. Simple router configuration.
2. Access and utilize the router to set basic parameters.
3. Connect configure and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Configure verify and troubleshoot RIPv2.
7. Perform and verify routing configuration tasks for a static or default route given.
8. Configure verify and troubleshoot NAT operation on a router.
9. Configure and verify a PPP connection between routers.

Semester-II

18CSP212 **MONGODB - PRACTICAL – PRACTICAL** **4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal:40 External:60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To provide students the knowledge and skills to master the NoSQL database mongoDB.
- To Write MongoDB programs from JavaScript shell.
- To define, compare and use of MongoDB with other RDBMS
- To explain the detailed architecture, define objects, load data, query data and performance tune of MongoDB
- To perform query optimization in MongoDB
- To understand replication and sharding in MongoDB

Course Outcomes(COs)

1. To provide students the right skills and knowledge needed to develop Applications on mongoDB
2. To provide students the right skills and knowledge needed to run Applications on mongoDB
3. Writing MongoDB programs from JavaScript shell.
4. Explain the detailed architecture, define objects, load data, query data and performance tune of MongoDB
5. Perform query optimization in MongoDB
6. Understand replication and sharding in MongoDB

List of Programs

Structure of 'restaurants' collection :

```
{ "address": { "building": "1007", "coord": [ -73.856077, 40.848447 ], "street": "Morris Park Ave", "zipcode": "10462" }, "borough": "Bronx", "cuisine": "Bakery", "grades": [ { "date": { "$date": 1393804800000 }, "grade": "A", "score": 2 }, { "date": { "$date": 1378857600000 }, "grade": "A", "score": 6 }, { "date": { "$date": 1358985600000 }, "grade": "A", "score": 10 }, { "date": { "$date": 1322006400000 }, "grade": "A", "score": 9 }, { "date": { "$date": 1299715200000 }, "grade": "B", "score": 14 }, "name": "Morris Park Bake Shop", "restaurant_id": "30075445" }
```

1. Write a MongoDB query
 - a. to display all the documents in the collection restaurants.
 - b. to display the fields restaurant_id, name, borough and cuisine for all the documents in the collection restaurant.
 - c. to display the fields restaurant_id, name, borough and cuisine, but exclude the field _id for all the documents in the collection restaurant
 - d. to display the fields restaurant_id, name, borough and zip code, but exclude the field _id for all the documents in the collection restaurant.
 - e. to display all the restaurant which is in the borough Bronx
 - f. to display the first 5 restaurant which is in the borough Bronx.

- g. to display the next 5 restaurants after skipping first 5 which are in the borough Bronx.
 - h. to find the restaurants who achieved a score more than 90.
 - i. to find the restaurants that achieved a score, more than 80 but less than 100.
2. Write a MongoDB query
 - a. to find the restaurants which locate in latitude value less than -95.754168.
 - b. to find the restaurants that do not prepare any cuisine of 'American' and their grade score more than 70 and latitude less than -65.754168.
 - c. to find the restaurants which do not prepare any cuisine of 'American' and achieved a score more than 70 and not located in the longitude less than -65.754168. Note : Do this query without using \$and operator. Go to the editor
 - d. to find the restaurants which do not prepare any cuisine of 'American ' and achieved a grade point 'A' not belongs to the borough Brooklyn. The document must be displayed according to the cuisine in descending order.
3. Write a MongoDB query
 - a. to find the restaurant Id, name, borough and cuisine for those restaurants which contain 'Wil' as first three letters for its name. Go to the editor
 - b. to find the restaurant Id, name, borough and cuisine for those restaurants which contain 'ces' as last three letters for its name.
 - c. to find the restaurant Id, name, borough and cuisine for those restaurants which contain 'Reg' as three letters somewhere in its name.
4. Write a MongoDB query
 - a. to find the restaurants which belong to the borough Bronx and prepared either American or Chinese dish.
 - b. to find the restaurant Id, name, borough and cuisine for those restaurants which belong to the borough Staten Island or Queens or Bronx or Brooklyn.
 - c. to find the restaurant Id, name, borough and cuisine for those restaurants which are not belonging to the borough Staten Island or Queens or Bronx or Brooklyn.
 - d. to find the restaurant Id, name, borough and cuisine for those restaurants which achieved a score which is not more than 10.
 - e. to find the restaurant Id, name, borough and cuisine for those restaurants which prepared dish except 'American' and 'Chinees' or restaurant's name begins with letter 'Wil'.
 - f. to find the restaurant Id, name, and grades for those restaurants which achieved a grade of "A" and scored 11 on an ISODate "2014-08-11T00:00:00Z" among many of survey dates
 - g. to find the restaurant Id, name and grades for those restaurants where the 2nd element of grades array contains a grade of "A" and score 9 on an ISODate "2014-08-11T00:00:00Z".
5. Write a MongoDB query to find the restaurant Id, name, address and geographical location for those restaurants where 2nd element of coord array contains a value which is more than 42 and upto 52
6. Write a MongoDB query
 - a. to arrange the name of the restaurants in descending along with all the columns.

- b. to arranged the name of the cuisine in ascending order and for that same cuisine borough should be in descending order.
- 7. Write a MongoDB query to know whether all the addresses contains the street or not.
- 8. Write a MongoDB query which will select all documents in the restaurants collection where the coord field value is Double.
- 9. Write a MongoDB query which will select the restaurant Id, name and grades for those restaurants which returns 0 as a remainder after dividing the score by 7.
- 10. Write a MongoDB query to find the restaurant name, borough, longitude and attitude and cuisine for those restaurants which contains 'mon' as three letters somewhere in its name.

Semester-III

18CSP301**J2EE****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

- To Understand the In-depth concepts of JEE
- To Understand the in-depth Life cycle of servlets and JSP.
- To Learn how to communicate with databases using Java.
- To Handle Errors and Exceptions in Web Applications
- To Use NetBeans IDE for creating J2EE Applications
- To impart expertise in Web Application Development using J2EE.

Course Outcomes(COs)

1. Understand the In-depth concepts of JEE
2. Understand the in-depth Life cycle of servlets and JSP.
3. Learn how to communicate with databases using Java.
4. Handle Errors and Exceptions in Web Applications
5. Use NetBeans IDE for creating J2EE Applications
6. Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications

Unit I - J2EE OVERVIEW

Beginning of Java – Java Byte code – Advantages of Java –J2EE and J2SE. J2EE Multi Tier Architecture – Distributive Systems – The Tier – Multi Tier Architecture – Client Tier Web Tier Enterprise Java Beans Tier Enterprise Information Systems Tier Implementation.

Unit II - J2EE DATABASE CONCEPTS

Data – Database – Database Schema. **JDBC Objects:** Driver Types – Packages – JDBC Process – Database Connection – Statement Objects – Result Set – Meta Data.

Unit III - JAVA SERVLETS

Benefits – Anatomy – Reading Data from Client –Reading HTTP Request Headers – Sending Data to client – Working with Cookies.

Unit IV - ENTERPRISE JAVA BEANS

Deployment Descriptors – Session Java Bean –Entity Java Bean Message Driven Bean.

Unit V – JSP

What is Java Server Pages? - Evolution of Dynamic Content Technologies – JSP & Java 2 Enterprise ed.); **JSP Fundamentals:** Writing your first JSP- Tag conversions- Running JSP. **Programming JSP Scripts:** Scripting Languages – JSP tags- JSP directives – Scripting elements – Flow of Control – comments;
Java Remote Method Invocation.

Semester-III

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives**

- To understand the concepts and principles that underlies modern operating systems
- To practice component to relate theoretical principles with operating system implementation.
- To learn about processes and processor management
- To learn about concurrency and synchronization
- To understand memory management schemes, file system and secondary storage management security and protection etc.
- To use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.

Course Outcomes(COs)

At the end of the course the student will be in a position to –

1. Use basic fundamental utilities which are required again and again on daily basis to work on a modern operating system.
2. Write useful shell scripts which greatly and effectively enhance the usefulness of computers, from the point of view of programmers and application developers.
3. Understand basics of various OS related concepts, from programmer's point of view, like files, directories, kernel, inodes, APIs, system calls, processes, signals, etc.
4. Develop applications where several processes need to communicate with each other to complete a task.
5. Use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.
6. Write programs which employs advanced concepts like multithreading.

Unit I - HISTORY AND OVERVIEW OF GNU/LINUX AND FOSS 3

Definition of FOSS & GNU History of GNU/Linux and the Free Software Movement-Advantages of Free Software and GNU/Linux FOSS usage trends and potential—global and Indian.

Unit II - SYSTEM ADMINISTRATION

GNU/Linux OS installation--detect hardware configure disk partitions & file systems and install a GNU/Linux distribution ; Basic shell commands -logging in listing files editing files copying/moving files viewing file contents changing file modes and permissions process management ; User and group management file ownerships and permissions PAM authentication ; Introduction to common system configuration files & log files ; Configuring networking basics of TCP/IP networking and routing connecting to the Internet (through dialup DSL Ethernet leased line) ; Configuring additional hardware -

sound cards displays & display cards network cards modems USB drives CD writers ; Understanding the OS boot up process ; Performing every day tasks using gnu/Linux -- accessing the Internet playing music editing documents and spreadsheets sending and receiving email copy files from disks and over the network playing games writing CDs ; X Window system configuration and utilities--configure X windows detect display devices ; Installing software from source code as well as using binary packages.

Unit III - SERVER SETUP AND CONFIGURATION

Setting up email servers--using postfix (SMTP services) courier (IMAP & POP3 services) squirrel mail (web mail services) ; Setting up web servers --using apache (HTTP services) php (server-side scripting) perl (CGI support) ; Setting up file services -- using samba (file and authentication services for windows networks) using NFS (file services for gnu/Linux / Unix networks) ; Setting up proxy services --using squid (http / ftp / https proxy services) ; Setting up printer services -using CUPS (print spooler) foomatic (printer database) ; Setting up a firewall -Using netfilter and iptables.

Unit IV - PROGRAMMING TOOLS

Using the GNU Compiler Collection --GNU compiler tools ; the C preprocessor (cpp) the C compiler (gcc) and the C++ compiler (g++) assembler (gas) ; Understanding build systems --constructing make files and using make using autoconf and autogen to automatically generate make files tailored for different development environments ; Using source code versioning and management tools --using cvs to manage source code revisions patch & diff ; Understanding the GNU Libc libraries and linker --linking against object archives (.a libraries) and dynamic shared object libraries (.so libraries) generating statically linked binaries and libraries generating dynamically linked libraries.

Using the GNU debugging tools --gdb to debug programs graphical debuggers like ddd memory debugging / profiling libraries mpatrol and valgrind ; Review of common programming practices and guidelines for GNU/Linux and FOSS ; Introduction to Bash sed & awk scripting.

Unit V - APPLICATION PROGRAMMING

Basics of the X Windows server architecture ; Qt Programming ; Gtk+ Programming ; Python Programming ; Programming GUI applications with localisation support.

18CSP303	DIGITAL IMAGE PROCESSING	Semester-III
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To make the students learn the fundamental theories and techniques of digital image processing.
- To study the mathematical transforms necessary for image processing, image manipulation and a preliminary understanding of Computer Vision.
- To make students to understand the image degradation and enhancement.
- To understand the basic relationships between pixels in an image
- To know various segmentation techniques, and object descriptors.
- To implement pattern recognition to enhance an image.

Course Outcomes(COs)

1. Perform image manipulations and analysis in many different fields.
2. Apply knowledge of computing mathematics science and engineering to solve problems in multidisciplinary research.
3. Implement the understanding in sharpening the image.
4. Perform the image segmentation using the compression method.
5. Understand the image to represent in an region.
6. Analyze the basic algorithms used for image processing & image compression with morphological image processing.

Unit I – INTRODUCTION

Digital image processing – Origins of digital image processing- Examples of fields that use digital image processing-Fundamental steps in digital image processing- Components of an image processing system-Representing digital image.

Unit II - BASIC RELATIONSHIPS BETWEEN PIXELS

Basic gray level transformations- Histogram processing - Basic spatial filtering- Smoothing special filtering- Image Degradation/ Restoration process- Noise Models.

Unit III - IMAGE SEGMENTATION

Thresholding - Edge Based Segmentation – Region Based Segmentation – Matching. Image Compression: Error Criterion - Lossy Compression - Lossless Compression.

Unit IV - SHAPE REPRESENTATION AND DESCRIPTION

Region Identification - Contour Based Representation And Description – Region Based Shape Representation And Description

Unit V - IMAGE RECOGNITION

Introduction – Statistical Pattern Recognition - Neural Net- Syntactic Pattern Recognition
- Graph Matching - Clustering

SUGGESTED READINGS

18CSP304**GREEN COMPUTING****Semester-III****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

- To provide a comprehensive coverage of topics related to green computing.
- To provide an insight into Fundamentals of Green IT, Green Assets and Modeling
- To understand IT use in relation to environmental perspectives.
- To discuss Green Compliance and Green Mobile
- To relate green IT to sustainable development
- To provide deep understanding about Green Computing by discussing Case studies.

Course Outcomes(COs)

1. Give an account of the concept green IT,
2. Give an account of Green Assets and Modeling,
3. Describe green IT in grid framework in relation to technology,
4. Relate green IT to sustainable development,
5. Evaluate IT use in relation to environmental perspectives,
6. Analyze case studies based on green IT.

Unit I - FUNDAMENTALS OF GREEN IT

Business, IT, and the Environment – Green computing: carbon foot print, scoop on power – Green IT Strategies: Drivers, Dimensions, and Goals – Environmentally Responsible Business: Policies, Practices, and Metrics - Approaches to green computing - Middleware Support - Compiler Optimization - Product longevity – Software induced energy consumption - its measurement and rating.

Unit II - GREEN ASSETS AND MODELING

Green Assets: Buildings, Data Centers, Networks, and Devices – Green Business Process Management: Modeling, Optimization, and Collaboration – Green Enterprise Architecture – Environmental Intelligence – Green Supply Chains – Green Information Systems: Design and Development Models.

Unit III - GRID FRAMEWORK

Virtualizing of IT systems – Role of electric utilities, Telecommuting, teleconferencing and teleporting – Materials recycling – Best ways for Green PC – Green Data center – Green Grid framework.

Unit IV - GREEN COMPLIANCE AND GREEN MOBILE

Socio-cultural aspects of Green IT – Green Enterprise Transformation Roadmap – Green Compliance: Protocols, Standards, and Audits – Emergent Carbon Issues: Technologies and Future - Green mobile - optimizing for minimizing battery consumption - Web, Temporal and Spatial Data Mining Materials recycling.

Unit V - CASE STUDIES

The Environmentally Responsible Business Strategies (ERBS) – Case Study Scenarios for Trial Runs – Case Studies – Applying Green IT Strategies and Applications to a Home, Hospital, Packaging Industry and Telecom Sector.

SUGGESTED READINGS

Semester-III

18CSP305A**WEB ENGINEERING****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours**Course Objectives**

- To understand the concepts, principles, strategies, and methodologies of web applications development.
- To Understand the characteristics of web applications
- To Learn to Model web applications
- To be aware of Systematic methods
- To be familiar with the testing techniques for web applications
- To design and develop a web application

Course Outcomes(COs)

1. Apply the characteristics of web applications.
2. Model web applications.
3. Learn to create requirement engineering for web applications
4. Understand the various architecture of web applications
5. Design web applications.
6. Test and develop web applications.

Unit I - INTRODUCTION

Motivation – categories & characteristics of web applications – product related, usage related and development related – evolution of WE.

Unit II - REQUIREMENTS ENGINEERING (RE) FOR WEB APPLICATIONS

Introduction – fundamentals –sources of requirements – RE activities – RE specifications in WE - RE principles for web applications – adapting RE methods for web applications development – requirement types, notations, tools.

Unit III - WEB APPLICATION ARCHITECTURE

Introduction – fundamentals – definition of architecture – developing and characterising architectures – components of a generic web application architecture – layered architecture – database centric architecture - architecture for web document management – architecture for multimedia data.

Unit IV -MODELING WEB APPLICATIONS

Introduction – modeling specifics in WE – levels – aspects – phases of customizations – modeling requirements – hypertext modeling - hypertext structure modeling concepts – access modeling concepts. Web application design – web design from an evolutionary perspective – information design – software design – merging information design & software design – problems and restrictions in integrated web design – a proposed structural approach – presentation design – presentation of nodes and meshes – device independent development – approaches – interaction design – user interaction – user interface organization – navigation design – designing a link representation – designing link internals – navigation and orientation – structural dialog for complex activities – interplay with technology and architecture – functional design.

Unit V - TESTING WEB APPLICATIONS

Introduction – fundamentals – terminology – quality characteristics – test objectives – test levels – role of tester – test specifics in we – test approaches – conventional, agile - test schemes – three test dimensions – applying the scheme to web applications – test methods and techniques – link testing – browser testing – usability testing – load, stress and continues testing – testing security – test-driven development. Web project development – scope – refining frame work activities – building an WebE team - risk management – making schedule – managing quality, change – project tracking.

18CSP305B	WIRELESS APPLICATION PROTOCOL	Semester-III
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0	Marks: Int : 40 Ext : 60	Total: 100
--	--------------------------	------------

End Semester Exam : 3 Hours

Course Objectives

- To learn the concept of Wireless Application Protocols.
- To learn Development tools, Language and built Wireless Application
- To learn wireless concepts, Technologies and gateways.
- To learn the different application area of WAP.
- To understand the environment of WAP.
- To know about WTA Architecture and its security

Course Outcomes(COs)

1. Pursue research in the area of wireless communication.
2. Develop applications that are mobile-device specific and demonstrate current practice in mobile communication contexts.
3. Understand Components of the WAP Standards and Wireless Telephony Applications
4. Appreciate the contribution of Wireless Communication networks to overall technological growth.
5. Compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.
6. Design and Develop a wireless application using WML

Unit I - MOBILE DATA INTRODUCTION

The Rise of Mobile Data-Key Services for the Mobile Internet- Overview of the WAP- The origins of the WAP- WAP architecture-WAP Internal Structure-Components of the WAP Standards- WAP Gateways-Network Infrastructure Services Supporting WAP Clients-WAP Architecture Design Principles –Relationship with other standards.

Unit II - THE WIRELESS MARKUP LANGUAGE

Overview-The WML Document Model-WML Authoring-URLS Identity Content-Mark Up Basics- WML Basics-Basic Content-Events Tasks and Binding.

Unit III - VARIABLES

Other Content you can include-Controls-Miscellaneous Markup- Sending Information- Application Security-Other Data; The Meta element- Document Type Declarations- Errors and browsers Limitations-Content generation- WML Version Negotiation.

Unit IV - USER INTERFACE DESIGN

Making Wireless Applications Easy to Use- Website Design- Computer Terminals Vs Mobile Terminals-Designing a usable WAP site-structured usability method-user interface design guidelines- Design guidelines for selected WML Elements.

Unit V - WIRELESS TELEPHONY APPLICATIONS

Overview of the WTA Architecture- WTA Client Frame Work –WTA Server and Security- Design Considerations- Application Creation Tool Box- Future of WTA Enhancements.

The Mobile Internet Future: Better Content- Easier Access-Beyond Browsing – Beyond Cellular- Mobile Data Unleashed.

Semester-III

18CSP305C

SOFTWARE PROJECT MANAGEMENT

4H – 4C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100

End Semester Exam : 3 Hours

Course Objectives

- To introduce the concepts and methods required for the construction of large software intensive systems.
- To develop a broad understanding of the discipline of software engineering and management of software systems.
- To provide an understanding of both theoretical and methodological issues involve in modern software engineering project management and focuses strongly on Practical techniques.
- To apply proper theoretical, technical, and practical knowledge of software requirements, analysis, design, implementation, verification and validation, and documentation
- To develop appropriate design solutions to a given problem using software engineering approaches that integrates ethical, social, legal, and economic concerns.
- To express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment

Course Outcomes (COs)

Upon the completion of the course students will be able to :-

1. Apply the process to be followed in the software development life-cycle models.
2. Implement communication, modeling, construction & deployment practices in software development.
3. Analyze & design the software models using unified modeling language (UML).
4. Explain the concepts of various software testing methods & be able to apply appropriate testing approaches for development of software.
5. Explain the quality management & different types of metrics used in software development.
6. Apply the concepts of project management & planning

Unit I – INTRODUCTION

Software Project Management -Project evaluation and programme Management- An overview of Project planning- Stepwise planning-Selection of an appropriate project Approach.

Unit II - SOFTWARE EFFORT ESTIMATION

Problems with over- and underestimates-Software effort estimation Techniques - Estimating by analogy -Albrecht function point analysis -Function points Mark II – COSMIC full function points - COCOMO 13: a parametric productivity model. Activity

planning: The objectives of activity Planning-Project schedules - Projects and activities - Sequencing and scheduling activities - Network planning models - Formulating a network model - Adding the time dimension - The forward pass - The backward pass - Identifying the critical path.

Unit III - RISK MANAGEMENT

Introduction to Risk - Categories of risk - A framework for dealing with risk -Risk identification - Risk assessment - Risk planning - Risk management - Evaluating risks to the schedule - Applying the PERT technique - Monte Carlo simulation - Critical chain concepts. Resource allocation :-Introduction -The nature of resources - Identifying resource requirements -Scheduling resources -Creating critical paths -Counting the cost - Being specific -Publishing the resource schedule - Cost schedules -The scheduling sequence.

Unit IV - MONITORING AND CONTROL

Creating the framework-Collecting the data- Visualizing progress- Cost monitoring - Earned value analysis-Prioritizing monitoring - Getting the project back to target - Change control. Managing people in software environments: Understanding behavior - Organization behavior: a background - Selecting the right person for the job - Instruction in the best methods - Motivation - Stress -Health and safety -Some ethical and professional concern

Unit V- WORKING IN TEAMS

Becoming a team - Decision making - Organizational structures - Coordination dependencies - Dispersed and virtual teams - Communication genres -Communication plans - Leadership. Software quality: Introduction -The place of software quality in project planning - The importance of software quality - Defining software quality - ISO 9126 -Product versus process quality management -Quality management systems - Process capability models -Techniques to help enhance software quality -Testing -Quality plans

18CSP311	J2EE – PRACTICAL	Semester-III
		4H – 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Int : 40 Ext : 60
		Total: 100
End Semester Exam : 3 Hours		

Course Objectives

- To Understand the In-depth concepts of JEE
- To Understand the in-depth Life cycle of servlets and JSP.
- To Learn how to communicate with databases using Java.
- To Handle Errors and Exceptions in Web Applications
- To Use NetBeans IDE for creating J2EE Applications
- To impart expertise in Web Application Development using J2EE.

Course Outcomes(COs)

1. Understand the In-depth concepts of JEE
2. Understand the in-depth Life cycle of servlets and JSP.
3. Learn how to communicate with databases using Java.
4. Handle Errors and Exceptions in Web Applications
5. Use NetBeans IDE for creating J2EE Applications
6. Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications

List of Programs

1. Create a sign in form in servlets.
2. Write a servlet Program to lock a server.
3. Write a servlet program that returns list of information in table format.
4. Design a counter that counts number of times user has visited the site in current browsing session.
5. Write a program to retrieve cookies information
6. Build a JAVA Bean for opening an applet from JAR file.
7. Write a program to add controls in BEAN.
8. Design a counter in JAVA BEAN.
9. Write a program to stream contents of a file using JSP.
10. Write a program to insert an applet into JSP page.

18CSP312	LINUX – PRACTICAL	Semester-III
		4H – 2C
Instruction Hours / week: L: 0 T: 0 P: 4		Marks: Int : 40 Ext : 60
		Total: 100
End Semester Exam : 3 Hours		

Course Objectives

- To understand the concepts and principles that underlies modern operating systems
- To practice component to relate theoretical principles with operating system implementation.
- To learn about processes and processor management
- To learn about concurrency and synchronization
- To understand memory management schemes, file system and secondary storage management security and protection etc.
- To use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.

Course Outcomes(COs)

At the end of the course the student will be in a position to –

1. Use basic fundamental utilities which are required again and again on daily basis to work on a modern operating system.
2. Write useful shell scripts which greatly and effectively enhance the usefulness of computers, from the point of view of programmers and application developers.
3. Understand basics of various OS related concepts, from programmer's point of view, like files, directories, kernel, inodes, APIs, system calls, processes, signals, etc.
4. Develop applications where several processes need to communicate with each other to complete a task.
5. Use different IPC ways in their programs like Message Queues, Semaphores, and Shared Memories.
6. Write programs which employs advanced concepts like multithreading.

List of Programs

1. To write a Linux program to display process deadlock state.
2. To write a program to display the allocated memory.
3. To write a program to simulate the DOS Command-Copy.
4. To write a program to implement signal handling.
5. To write a simple Linux program using thread.
6. To write a program to display the date & time using TCP Sockets.
7. To write a program to display the date & time using UDP Sockets.
8. To write a program to display the cpu scheduling
9. To write a Linux program to create a lock file.
10. To write a program to display the user information

SUGGESTED READINGS

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி-I, தமிழ் முதல் பருவம்

தமிழ் முதல் தாள் 4-H,4-C
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes)

அலகு - I : இக்கால இலக்கியம்: (10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம்பிள்ளை-ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் -மலையாளக் காற்று.

குழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை.

அலகு - II : அற இலக்கியம்: (8 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் - 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (8 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV : கட்டுரை: (8 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(6 மணிநேரம்)

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு.

கற்பகம் உயர்கல்வி கலைக்கழகத் தமிழ்த்துறை வெளியீடு.

18CTU101 PROGRAMMING FUNDAMENTALS USING C / C++**Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

Unit I - INTRODUCTION TO C AND C++

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O:

Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h).

Expressions, Conditional Statements and Iterative Statements:

Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if

construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

Unit II - FUNCTIONS AND ARRAYS

Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

Unit III - DERIVED DATA TYPES (STRUCTURES AND UNIONS)

Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++:

Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

Unit IV - MEMORY ALLOCATION IN C++

Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.

File I/O, Preprocessor Directives:

Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

Unit V - USING CLASSES IN C++

Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables & Functions, Objects as parameters, Specifying the Protected and Private Access, Copy Constructors, Overview of Template classes and their use.

Overview of Function Overloading and Operator Overloading:

Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators).

Inheritance, Polymorphism and Exception Handling:

Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

Unit I - INTRODUCTION

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors – Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory Units.

Unit II - DATA REPRESENTATION AND BASIC COMPUTER ARITHMETIC

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

Unit III - BASIC COMPUTER ORGANIZATION AND DESIGN

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

Unit IV - CENTRAL PROCESSING Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

Unit V - MEMORY AND INPUT-OUTPUT ORGANIZATION

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

3. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) Prentice Hall of India, New Delhi.
4. Mano, M.M. (2013). Digital Design. Pearson Education Asia, New Delhi.
5. Carl Hamacher. (2012). Computer Organization (5th ed.). McGrawHill, New Delhi.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify the factors that goes into an individual or organizational decision on how to purchase computer equipment.
- To identify how to maintain computer equipment and solve common problems relating to computer hardware.
- To identify how software and hardware work together to perform computing tasks and how software is developed and upgraded.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the meaning and basic components of a computer system,
2. Define and distinguish Hardware and Software components of computer system,
3. Explain and identify different computing machines during the evolution of computer system, gain knowledge about five generations of computer system,
4. Identify and discuss the functional Units of a computer system, identify the various input and output Units and explain their purposes
5. Understand the role of CPU and its components, understand the concept and need of primary and secondary memory, discuss the advantages, limitations and applications of computers.
6. Understand the classification of computers, distinguish the computers on the basis of purpose, technology and size

Unit I – INTRODUCTION

Introduction to computer system, uses, types. **Data Representation:** Number systems and character representation, binary arithmetic. **Human Computer Interface:** Types of software, Operating system as user interface, utility programs.

Unit II – DEVICES

Input and output devices (with connections and practical demo), keyboard, mouse, joystick, scanner, OCR, OMR, bar code reader, web camera, monitor, printer, plotter.

Unit III – MEMORY

Primary, secondary, auxiliary memory, RAM, ROM, cache memory, hard disks, optical disks.

Unit IV - COMPUTER ORGANISATION AND ARCHITECTURE

C.P.U., registers, system bus, main memory Unit, cache memory, Inside a computer, SMPS, Motherboard, Ports and Interfaces, expansion cards, ribbon cables, memory chips, processors.

Unit V - OVERVIEW OF EMERGING TECHNOLOGIES

Bluetooth, cloud computing, big data, data mining, mobile computing and embedded systems.

Suggested Readings

1. Goel, A. (2010). Computer Fundamentals. Pearson Education, New Delhi.
2. Aksoy, P., & DeNardis, L. (2006). Introduction to Information Technology. Cengage Learning, New Delhi.
3. Sinha, P. K., & Sinha, P. (2007). Fundamentals of Computers. BPB Publishers, New Delhi.

**18CTU111 PROGRAMMING FUNDAMENTALS USING
C / C++ - PRACTICAL****Semester – I
4H – 2C**

**Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

List of Programs

1. WAP to print the sum and product of digits of an integer.
2. WAP to reverse a number.
3. WAP to compute the sum of the first n terms of the following series $S = 1 + 1/2 + 1/3 + 1/4 + \dots$
4. WAP to compute the sum of the first n terms of the following series $S = 1 - 2 + 3 - 4 + 5 - \dots$
5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.

6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.

7. WAP to compute the factors of a given number.

8. Write a macro that swaps two numbers. WAP to use it.

9. WAP to print a triangle of stars as follows (take number of lines from user):

```
*  
***  
*****  
*****  
*****
```

10. WAP to perform following actions on an array entered by the user:

i) Print the even-valued elements

ii) Print the odd-valued elements

iii) Calculate and print the sum and average of the elements of array

iv) Print the maximum and minimum element of array

v) Remove the duplicates from the array

vi) Print the array in reverse order

The program should present a menu to the user and ask for one of the options. The menu should also include options to re-enter array and to quit the program.

11. WAP that prints a table indicating the number of occurrences of each alphabet in the text entered as command line arguments.

12. Write a program that swaps two numbers using pointers.

13. Write a program in which a function is passed address of two variables and then alter its contents.

14. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.

15. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.

16. Write a menu driven program to perform following operations on strings:

a) Show address of each character in string

- b) Concatenate two strings without using strcat function.
 - c) Concatenate two strings using strcat function.
 - d) Compare two strings
 - e) Calculate length of the string (use pointers)
 - f) Convert all lowercase characters to uppercase
 - g) Convert all uppercase characters to lowercase
 - h) Calculate number of vowels
 - i) Reverse the string
17. Given two ordered arrays of integers, write a program to merge the two-arrays to get an ordered array.
18. WAP to display Fibonacci series (i)using recursion, (ii) using iteration
19. WAP to calculate Factorial of a number (i)using recursion, (ii) using iteration
20. WAP to calculate GCD of two numbers (i) with recursion (ii) without recursion.
21. Create Matrix class using templates. Write a menu-driven program to perform following Matrix operations (2-D array implementation):
a) Sum b) Difference c) Product d) Transpose
22. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).
23. Create a class Triangle. Include overloaded functions for calculating area. Overload assignment operator and equality operator.
24. Create a class Box containing length, breath and height. Include following methods in it:
a) Calculate surface Area
b) Calculate Volume
c) Increment, Overload ++ operator (both prefix & postfix)
d) Decrement, Overload -- operator (both prefix & postfix)
e) Overload operator == (to check equality of two boxes), as a friend function
f) Overload Assignment operator
g) Check if it is a Cube or cuboid
- Write a program which takes input from the user for length, breath and height to test the above class.

25. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

26. Write a program to retrieve the student information from file created in previous question and print it in following format:

Roll No. Name Marks

27. Copy the contents of one text file to another file, after removing all whitespaces.

28. Write a function that reverses the elements of an array in place. The function must accept only one pointer value and return void.

29. Write a program that will read 10 integers from user and store them in an array. Implement array using pointers. The program will print the array elements in ascending and descending order.

**18CTU112 COMPUTER SYSTEM ARCHITECTURE
- PRACTICAL****Semester – I
3H – 2C**

**Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments (Any 8 Experiments)

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To create a document in Microsoft Word with formatting options, edit, save, and print documents to include documents with lists and tables, Format text and to use styles, add a header and footer to a document, add a graphic to a document.
- To write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- To indicate the names and functions of the Excel interface components.
- To enter and edit data, Format data and cells.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Modify text using various formatting options from the editing tools under the Home tab, Set up section breaks to create different headers and footers for the odd and even pages within the document sections.
2. Demonstrate the mechanics and uses of Word tables to organize and present data, Demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
3. Demonstrate working knowledge of Word's advanced formatting techniques and presentation styles,
4. Demonstrate applicable knowledge and uses of accepted business style formatting conventions.
5. Create and design a spreadsheet for general office use, demonstrate the basic mechanics and navigation of an Excel spreadsheet.
6. Demonstrate formatting techniques and presentation styles, demonstrate the use of basic functions and formulas

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare a **grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.

- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold
- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher's name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.

a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.

b. Design a certificate in landscape orientation with a border around the document.

c. Design a Garage Sale sign.

d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:

(a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.

(b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).

Color, Style, Item

Blue, A980, Van

Red, X023, Car

Green, YL724, Truck

Name, Age, Sex

Bob, 23, M

Linda, 46, F

Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	Dolls	Trucks	Puzzles
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order: In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu
 EDIT Complete menu
 VIEW Complete menu
 INSERT Complete menu
 FORMAT Complete menu
 TABLE Complete menu
 WINDOW Complete menu
 HELP Complete menu
 TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

TOTAL AVERAGE

(a) Apply Formatting as follow:

- i. Title in TIMES NEW ROMAN
- ii. Font Size - 14
- iii. Remaining text - ARIAL, Font Size -10
- iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.
- v. Numbers in two decimal places.
- vi. Qtr. Heading in center Alignment.
- vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	
4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
>= 80	A+
>= 60 < 80	A
>= 50 < 60	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F	
1	Salesman			Sales in (Rs.)			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	Commission
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
>= 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
 - 30% of Basic if Basic \leq 1000
 - 25% of Basic if Basic $>$ 1000 & Basic \leq 3000
 - 20% of Basic if Basic $>$ 3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is \leq 1000
Rs. 75/- if Basic $>$ 1000 & Basic \leq 2000
Rs. 100 if Basic $>$ 2000
- Entertainment Allowance NIL if Basic is \leq 1000
Rs. 100/- if Basic $>$ 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is \leq 1500
Rs. 60/- if Basic $>$ 1500 & Basic \leq 3000
Rs. 80/- if Basic $>$ 3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment

Total deduction = Provident Fund + Group Insurance Premium

Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	5%	6%	7%	8%	9%
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array

formula to calculate

Simple Interest for given principal amounts given the rate of Interest and time

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
----------	------	------	------	------

S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

- (a) Calculate total sale year wise.
 (b) Calculate the net sale made by each salesman
 (c) Calculate the maximum sale made by the salesman
 (d) Calculate the commission for each salesman under the condition.
 (i) If total sales >4,00,000 give 5% commission on total sale made by the salesman.
 (ii) Otherwise give 2% commission.
 (e) Draw a bar graph representing the sale made by each salesman.
 (f) Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to					
Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

- (a) Calculate Monthly total.
 (b) Surplus = Monthly income - Monthly total.
 (c) What would be total surplus if monthly income is 1500.
 (d) How much does telephone expense for March differ from quarter average.
 (e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
----------------	------	------	------	------	-------

A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00

- (a) Compute the total revenue earned.
- (b) Plot the line chart to compare the revenue of all publisher for 4 years.
- (c) Chart Title should be ‘_Total Revenue of sam’s Bookstall (1997-2000)’
- (d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Unit I - INTRODUCTION

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II - NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III - BIODIVERSITY AND ITS CONSERVATION

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-

diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV - ENVIRONMENTAL POLLUTION

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V - SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி - I, தமிழ்

பருவம் II

18LSU201 :

தமிழ் இரண்டாம் தாள் 4-H,4-C
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

அலகு - I : பக்தி இலக்கியம்

(10 மணிநேரம்)

சைவ, வைணவ இலக்கியங்கள் - தோற்றம், வளர்ச்சி, வரலாறு.

1. சைவம் - பெரியபுராணம் - திருமூலநாயனார் புராணம்.

2. வைணவம் - பெரியாழ்வார் திருமொழி: 10 பாடல்கள்.

அலகு - II : சங்க இலக்கியம்

:

(15 மணிநேரம்)

சங்க இலக்கியங்கள் அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை : பிரசம் கலந்த - பாலை -110

குறுந்தொகை : கருங்கட்டாக் கலை - குறிஞ்சி- 69

ஐங்குறுநூறு : நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ் இன்னிசை-171

பதிற்றுப்பத்து : சிதைந்தது மன்ற - 27

பரிபாடல்: பரிபாடல் திரட்டு-மதுரை நகர்ச்சிறப்பு -

உலகம் ஒரு நிறையாத்தான்-6, மாயோன் கொப்பூழ்-7, செய்யாட்கு

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொட கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் -பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் - 'சிறுதினை மலரொடு' என்பதிலிருந்துதொடங்கி,

'அறிந்தவாறே' என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் - 'தெய்வம் சான்ற' என்பதிலிருந்து தொடங்கி, 'நல்குமதி'
என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) - கண்ணகியின் சிறப்பு:

நாகநீள் நகரொடு' என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக் கோயில் எடுத்தல்:

‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி, ‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி காட்சியளித்தல்:

‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில் தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார் கண்ணை’

என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி, ‘பதிப்பிறந்தேன்’

என்பது வரையிலான தொடர்கள்.

அலகு – IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்
2. காட்டில் ஒரு மான் - அம்பை
3. நாற்காலி – கி.ராஜநாராயணன்
4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு []

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை

வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes (COs)

- Develop the knowledge of interpersonal skills.
- Establish and maintain social relationships.
- Genres of literature will give moral values of life.
- Develop communication skills in business environment
- Communication skills will get developed.
- Develop to have language competence.

Unit I - PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

Unit II - POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

Unit III - SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

Unit IV - DRAMA

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

Unit V - GRAMMAR AND COMPOSITION

- GRAMMAR** : 1. Tenses
2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

Composition:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

Unit I - INTRODUCTION TO JAVA

Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Course Objectives, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods)

Unit II - ARRAYS, STRINGS AND I/O

Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to

Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

Unit III - INHERITANCE

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

Unit IV - EXCEPTION HANDLING AND DATABASE CONNECTIVITY

Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

Unit V - JAVA APPLET

Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

Suggested Readings

2. www.java.net/

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

Unit I

Sets: Introduction, Sets, finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting , Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

Unit II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

Unit III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

Unit IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

Unit V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Suggested Readings

18CTU203	COMPUTER NETWORKS AND INTERNET TECHNOLOGIES	Semester – II 4H – 4C
-----------------	--	----------------------------------

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To study the basics of Computer Networks.
- To study and compare various Network architectures and fundamental protocols.
- To learn about networking protocol and OSI model.
- To learn various transmission media.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites, to learn the language of HTML, DHTML, XML and PHP.
- To understand the principles of creating an effective web page, to develop skills in analyzing the usability of a website.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Identify the different types of network topologies and protocols, enumerate the layers of the OSI model and TCP/IP.
4. Employ fundamental computer theory to basic programming techniques, gain the skills and project-based experience needed for entry into web design and development careers.
5. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
6. Select and apply markup languages for processing, identifying, and presenting of information in web pages, create and manipulate web media objects using editing software.

Unit I - COMPUTER NETWORKS

Introduction to computer network, data communication, components of data communication, data transmission mode, data communication measurement, LAN, MAN, WAN, wireless LAN, internet, intranet, extranet. **Network Models:** Client/ server network and Peer-to-peer network, OSI, TCP/IP, 8L layers and functionalities.

Unit II - TRANSMISSION MEDIA AND LAN TOPOLOGIES

Introduction, Guided Media: Twisted pair, Coaxial cable, 4L Optical fiber. Unguided media: Microwave, Radio frequency propagation, Satellite. **LAN Topologies:** Ring, bus, star,

mesh and tree topologies. Network Devices: NIC, repeaters, hub, bridge, switch, gateway and router.

Unit III - INTERNET TERMS AND APPLICATIONS

Internet Terms: Web page, Home page, website, internet browsers, URL, Hypertext, 2L ISP, Web server, download and upload, online and offline. **Internet Applications:** www, telnet, ftp, e-mail, social networks, search engines, 6L Video Conferencing, e-Commerce, m-Commerce, VOIP, blogs.

Unit IV - INTRODUCTION TO WEB DESIGN

Introduction to hypertext markup language (html) 16L Document type definition, creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames, hosting options and domain name registration. **Customized Features:** Cascading style sheet (css) for text formatting and other manipulations.

Unit V - JAVASCRIPT FUNDAMENTALS

Data types and variables, functions, methods and events, 14L controlling program flow, JavaScript object model, built-in objects and operators.

Suggested Readings

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer classes like setCharAt(), setLength(), append(), insert(), concat() and equals().
9. Write a program to create a —distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the —distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference variable to another object reference variable. Further create a third object which is a clone of the first object.

11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program —DivideByZero that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
 $1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$
4. Write a C Program to perform the sum = $1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a C program in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
(i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$
10. Write a C Program to prove De – Morgan's law.

Suggested Readings

6. Hunter, D.J. (2008). Essentials of Discrete Mathematics. Jones and Bartlett Publishers, New Delhi.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To study the basics of Computer Networks.
- To study and compare various Network architectures and fundamental protocols.
- To learn about networking protocol and OSI model.
- To learn various transmission media.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites, to learn the language of HTML, DHTML, XML and PHP.
- To understand the principles of creating an effective web page, to develop skills in analyzing the usability of a website.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Identify the different types of network topologies and protocols, enumerate the layers of the OSI model and TCP/IP.
4. Employ fundamental computer theory to basic programming techniques, gain the skills and project-based experience needed for entry into web design and development careers.
5. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
6. Select and apply markup languages for processing, identifying, and presenting of information in web pages, create and manipulate web media objects using editing software.

List of Programs

1. Create HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
2. Create HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
3. Create HTML document with Table

4. Create Form with Input Type, Select and Text Area in HTML.
5. Create an HTML containing Roll No., student's name and Grades in a tabular form.
6. Create an HTML document (having two frames) which will appear as follows

About	This frame would show the contents according to the link clicked by the user on the left frame.
Department 1	
Department 2	
Department 3	

7. Create an HTML document containing horizontal frames as follows

Department Names (could be along with Logos)
Contents according to the Link clicked

8. Create a website of 6 – 7 pages with different effects as mentioned in above problems.
9. Create HTML documents (having multiple frames) in the following three formats

Frame1
Frame2

Frame1	
Frame2	Frame3

10. Create a form using HTML which has the following types of controls:
 - V. Text Box
 - VI. Option/radio buttons
 - VII. Check boxes
 - VIII. Reset and Submit buttons

List of Practicals using Javascript : Create event driven program for following:

11. Print a table of numbers from 5 to 15 and their squares and cubes using alert.
12. Print the largest of three numbers. 81
13. Find the factorial of a number n.
14. Enter a list of positive numbers terminated by Zero. Find the sum and average of these numbers.
15. A person deposits Rs 1000 in a fixed account yielding 5% interest. Compute the amount in the account at the end of each year for n years.
16. Read n numbers. Count the number of negative numbers, positive numbers and zeros in the list.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

Unit I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

Unit II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

Unit III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

Unit IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

Unit V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives**

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

Unit I

Introduction to Data Communication: Network, Protocols & standards and standards organizations - Line Configuration; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

Unit II

(cont..)digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media.

Networks Switching Techniques and Access mechanisms: Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

Unit III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANS; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols:** Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol:** Overview of DNS protocol; overview of WWW &HTTP protocol.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

Students will try to learn:

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

Unit I

DBMS Definition, Characteristics of DBMS ,Application and advantages of DBMS, Instances , Schemas and Database States, Three Levels of Architecture , Data Independence, DBMS languages, Data Dictionary, Database Users, Data Administrators.

Unit II

Data Models, types and their comparison, Entity Relationship Model, Entity Types, Entity Sets, Attributes and its types, Keys, E-R Diagram, Data Integrity RDBMS –Concept, Components and Codd's rules.

Unit III

Relational Algebra (selection, projection, union, intersection, Cartesian product, Different types of join like theta join, equi-join, natural join, outer join)

Functional Dependencies, Good & Bad Decomposition, Anomalies as a database: A consequences of bad design, Normalization: 1NF, 2NF, 3NF, BCNF, 4NF 5NF.

Unit IV

Introduction to SQL, DDL, DML, and DCL statements, Creating Tables, Adding Constraints, Altering Tables, Update, Insert, Delete & various Form of SELECT- Simple, Using Special Operators for Data Access. Aggregate functions, Joining Multiple Tables (Equi Joins),Joining a Table to itself (self Joins) Functions.

Introduction to PL/SQL: Declaration section – executable command section : conditional logic, loops, CASE statements –

Unit V

Exception handling section: predefined and user defined exceptions. Triggers: definition – types: row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions: Local and global – procedures vs functions – stored procedures, functions – create procedure syntax - create function syntax – calling procedures, functions. Replacing and dropping procedures, functions. Package header – package body – calling package members - Replacing and dropping package.

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

Unit I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

Unit II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

Unit III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

Unit IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen size s.

User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

Unit V

Database:Understanding of SQLite database, connecting with the database.

Course Objectives (CO)

- To Learn Syntax and Semantics and create Functions in Python.
- To Handle Strings and Files in Python.
- To Understand Lists, Dictionaries in Python.
- To Implement Object Oriented Programming concepts in Python
- To Build GUI applications
- To Write Python functions to facilitate code reuse.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Develop algorithmic solutions to simple computational problems
2. Read, write, execute by hand simple Python programs.
3. Structure simple Python programs for solving problems.
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

Unit I: ALGORITHMIC PROBLEM SOLVING

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

Unit II: DATA, EXPRESSIONS, STATEMENTS

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

Unit III: CONTROL FLOW, FUNCTIONS

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

Unit IV: LISTS, TUPLES, DICTIONARIES

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and

methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

Unit V: FILES, MODULES, PACKAGES

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

List of Programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.
8. Perform Queues operations using Circular Array implementation. Use Templates.

9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i) using recursion, (ii) using iteration
12. (ii) WAP to display fibonacci series (i) using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
 - (b) Deletion by copying
 - (c) Deletion by Merging
 - (d) Search a no. in BST
 - (e) Display its preorder, postorder and inorder traversals Recursively
 - (f) Display its preorder, postorder and inorder traversals Iteratively
 - (g) Display its level-by-level traversals
 - (h) Count the non-leaf nodes and leaf nodes
 - (i) Display height of tree
 - (j) Create a mirror image of tree
 - (k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

**18CTU312 DATA COMMUNICATION AND NETWORKS
- PRACTICAL****Semester – III
4H – 2C**

**Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives**

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

List of Programs

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm
6. Simulate and implement Dijkstra algorithm for shortest path routing.

Suggested Readings

1. Forouzan, B. A.(2007). Data Communications and Networking(4th ed.). New Delhi: THM.
2. Tanenbaum, A. S. (2002). Computer Networks (4th ed.). New Delhi: PHI.

4. www.w3schools.com/tcpip/default.asp

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60

Total: 100

End Semester Exam : 3 Hours

Course Outcomes (COs)

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

List of Programs

1. Create a table with following fields:

Employee table:

Field name	Constraint	Type	Size
Employee_no	Primary key	Character	6
Employee_name		Character	30
Address		Character	25
Designation		Character	15
Dob		Date	
Gender	Check	Character	1
Doj		Date	
Salary		Number	10,2

Queries:

- a) Display name of the employees whose salary is greater than "10,000".
- b) Display the details of employees in ascending order according to Employee Code
- c) Display the details of employees earning the highest salary

d) Display the names of employees who earn more than “Ravi”.

2. Create table named Student with following fields and insert the values:

Field name	field type	field size
Student Name	Character	15
Gender	Character	6
Roll No.	Character	10
Department Name	Character	15
Address	Character	25
Percentage of marks	Number	4,2

Queries:

- Calculate the average mark percentage of the students
- Display the names of the students whose percentage marks are greater than 80%
- Display the details of the students who got the highest percentage of marks
- Display the details of the students whose mark percentage between 50 and 70
- Display the details of the students whose mark percentage is greater than the mark percentage of Roll No=12CA01

3. Create a table with following fields:

Staff table:

Field name	Constraint	Type	Size
Staff_no	Primary key	Character	6
Staff_name		Character	30
Dob		Date	
Dept_code	Foreign key	Character	4
Designation		Character	15
Basic		Number	7,2

Department table:

Field name	constraint	Type	Size
Dept_code	Primary key	Character	4
Dept_name		Character	30

Execute the following queries:

- To list the staff who joined 2 years back.
- To list the staff in computer science dept.
- To list the staff_name and the dept_name in which he/she works.
- To list the maximum and minimum salary in each dept.
- To list the dept along with the total amount spent on salary
- To list the name of the employees who draw the salary more than the average salary.

4. Create a table with the following fields:

Book table:

Field name	Constraint	Type	Size
Access_no	Primary key	Character	6
Title		Character	30

Author		Character	30
Publisher		Character	30
Subject		Character	10
Price		Number	6,2

Execute the following queries:

1. The title of C and C++ books.
 2. The books written by a particular author.
 3. The books which costs between Rs.300/- and Rs.500/-
 4. The number of books available in each subject.
 5. The books in the decreasing order of the cost.
5. Create two tables course and batch with following fields
 COURSE: coursecodeno number(5), course name varchar(20), syllabus varchar(20)
 BATCH: bcode number(5), coursecode number(5), starting_date date, duration number(3), coursefee number(10,2)

Perform the following queries

- Insert the details for course and batch tables with 10 records
- Show the description of the two tables
- Select all the fields from course & batch tables
- Select all the fields from course & batch tables where coursecode=10
- Select all the fields from batch table where starting date=march 10th
- Select batch code from batch table where net income>50000
- Select coursename, batch code & starting date from batch and course tables where course code of batch table and course code of course table are equal
- Select a syllabus from course wher coursecode=5

6. Create a table with the following fields:

Account table:

Field name	Constraint	Type	Size
Acc_no	Primary key	Number	4
Cust_name		Varchar2	30
Branch_name		Varchar2	30
Cust_city		Varchar2	30

Borrower table:

Field name	Constraint	Type	Size
Acc_no	Foreign key	Number	30
Branch_name		Varchar2	30
Amount		Number	8,2

Write queries to perform different types of join.

7. Write the PL/SQL program to find the factorial and fibonacci series of given numbers.

8.(i) Write the PL/SQL program to check whether the string is Palindrome.

(ii) Write the PL/SQL program to reverse a number

(iii) Write the PL/SQL program to check whether the number is Armstrong

9. Write a PL/SQL block to create and handle user defined exception
 clientmaster

Field name	Constraint	Type	Size
Client_id		Number	6
Client_name		Varchar2	30
Address		Varchar2	50
Phone		Number	10
Balance		Number	10,2

10. Create table with following fields:

Product table:

Field name	Constraint	Type	Size
Product_code	Primary key	Varchar2	7
Product_name		Varchar2	30
Price		Number	6,2
Quantity		Number	4

Vendor table:

Field name	Constraint	Type	Size
Vendor_name		Varchar2	30
Vendor address		Varchar2	30
Product_code	Foreign Key	Varchar2	7

Create a trigger to fire when the Record is deleted and inserted.

11. Write a PL/SQL trigger to update the records while deleting the one record in another table.

Voters_master:

Field name	Constraint	Type	Size
Voterid	Primary key	Number	5
Name		Varchar2	30
Ward_no	Primary Key	Number	4
Dob		Date	
Address		Varchar2	150

New_list

Field name	Constraint	Type	Size
Voterid		Number	5
Ward_no		Number	4
Name		Varchar2	30
Description		Character	50

12. Create a table to store the salary details of the employees in a company. Declare the cursor id to contain empno, employee name and net salary. Use cursor to update the employee details.

Salary:

Field name	Constraint	Type	Size
Emp_no	Primary key	Number	4
Emp_name		Varchar2	30

Designation		Varchar2	25
Dept		Varchar2	30
Basic		Number	5

13. Create a table stock contains the itemcode varchar2(10), itemname varchar2(50), current_stock number(5), date_of_last_purchase date. Write a stored procedure to seek for an item using itemcode and delete it, if the date of last purchase is before 1 year from the current date. If not, update the current stock.

14. Create a table to contain phone_number, user_name, address. Write a function to search for address using phone_number.

18CTU314A**ANDROID PROGRAMMING - PRACTICAL****3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60****Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

List of Programs

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives (CO)

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Develop algorithmic solutions to simple computational problems
2. Read, write, execute by hand simple Python programs.
3. Structure simple Python programs for solving problems.
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

List of Programs

1. Compute the GCD of two numbers.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria :
 - Grade A: Percentage ≥ 80
 - Grade B: Percentage ≥ 70 and < 80
 - Grade C: Percentage ≥ 60 and < 70
 - Grade D: Percentage ≥ 40 and < 60
 - Grade E: Percentage < 40
3. WAP to display the first n terms of Fibonacci series.
4. WAP to find factorial of the given number.
5. Find the square root of a number (Newton's method)
6. WAP to find the Exponentiation (power of a number)
7. Find the maximum of a list of numbers
8. WAP to perform Linear search

9. WAP to perform Binary search
10. WAP to perform Selection sort
11. WAP to find first n prime numbers
12. WAP to calculate the Multiply matrices
13. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
14. Write a program using file operations.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

Unit I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

Unit II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources- Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication- Deadlocks.

Unit III

Memory Management: Physical and Virtual address space-Memory Allocation strategies – Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

Unit IV

File and I/O Management: Directory structure-File operations-File Allocation methods- Device management.

Unit V

Protection and Security: Policy mechanism-Authentication-Internal aITUess Authorization.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

Unit I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

Unit II

Requirement Analysis; Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

Unit III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

Unit IV

Design Engineering-Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

Unit V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

2. <http://www.onesmartclick.com/engineering/software-engineering.html>
3. http://www.CC.gatech.edu/classes/AY2000/cs3802_fall/

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the various characteristics of Intelligent agents
- To learn about the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing software agents
- To know about the various applications of AI.
- Understand the various searching techniques, constraint satisfaction problem and example problems- game playing techniques.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Identify problems that are amenable to solution by AI methods.
2. Identify appropriate AI methods to solve a given problem.
3. Formalize a given problem in the language/framework of different AI methods.
4. Implement basic AI algorithms.
5. Design and carry out an empirical evaluation of different algorithms on a problem formalization, and state the conclusions that the evaluation supports.
6. Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems

Unit I - INTRODUCTION TO AI AND PRODUCTION SYSTEMS

Introduction to AI-Problem formulation, Problem Definition -Production systems, Control strategies, Search strategies. Problem characteristics, Production system characteristics - Specialized production system- Problem solving methods – Problem graphs, Matching, Indexing and Heuristic functions -Hill Climbing-Depth first and Breath first, Constraints satisfaction – Related algorithms, Measure of performance and analysis of search algorithms.

Unit II - REPRESENTATION OF KNOWLEDGE

Game playing – Knowledge representation, Knowledge representation using Predicate logic, Introduction to predicate calculus, Resolution, Use of predicate calculus, Knowledge representation using other logic-Structured representation of knowledge.

Unit III - KNOWLEDGE INFERENCE

Knowledge representation -Production based system, Frame based system. Inference – Backward chaining, Forward chaining, Rule value approach, Fuzzy reasoning – Certainty factors, Bayesian Theory-Bayesian Network-Dempster – Shafer theory.

Unit IV- PLANNING AND MACHINE LEARNING

Basic plan generation systems – Strips -Advanced plan generation systems – K strips -Strategic explanations -Why, Why not and how explanations. Learning- Machine learning, adaptive Learning.

Unit V - EXPERT SYSTEMS

Expert systems – Architecture of expert systems, Roles of expert systems – Knowledge Acquisition – Meta knowledge, Heuristics. Typical expert systems – MYCIN, DART, XOON, Expert systems shells.

Suggested Readings

4. Deepak Khemani “Artificial Intelligence”, Tata Mc Graw Hill Education 2013.

Web Sites

1. <http://nptel.ac.in>

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To classify the various Scripting Languages
- To learn client and server side scripting languages (Java script and AJAX, JSP)
- To create simple Web pages and provide client side validation.
- To create dynamic web pages using server side scripting
- To master the theory behind scripting and its relationship to classic programming
- To gain some fluency programming in JavaScript, AJAX, and related languages, to design and implement one's own scripting language.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Define the CSS with its types and use them to provide the styles to the web pages at various levels.
2. Develop the modern web pages using the HTML and CSS features with different layouts as per need of applications.
3. Use the JavaScript to develop the dynamic web pages.
4. Use server side scripting with JSP to generate the web pages dynamically.
5. Gain knowledge of client side scripting, validation of forms and AJAX programming.
6. Create applications by using the concepts like JSP and Servlet

UNIT I - INTRODUCTION TO VBSCRIPT VB Script: Introduction- Embedding VBScript Code in an HTML Document Comments-Variables- Operators-Procedures- Conditional Statements- Looping Constructs - Objects and VBScript – Cookies.

UNIT II - INTRODUCTION TO JAVA SCRIPT

JavaScript- Introduction, simple programming, Obtaining User Input with prompt Dialogs, Operators (arithmetic, Decision making, assignment, logical, increment and decrement. Functions - program modules in JavaScript, programmer defined functions, function definition, Random-number generator, scope rules, global functions, recursion.

UNIT III - FUNCTIONS, ARRAYS AND OBJECTS

JavaScript: Arrays, Objects - Math Object, String Object, Date Object, Boolean & Number Object, document and window Objects. Handling event using java script

UNIT IV - CLIENT SIDE TECHNOLOGIES - AJAX– Evolution of AJAX – AJAX Framework – Web applications with AJAX – AJAX with PHP – AJAX with Databases- Ajax Client Server Architecture-XML Http Request Object-Call Back Methods.

UNIT V - SERVER SIDE SCRIPTING- JSP

Servlet Overview – Life cycle of a Servlet – Handling HTTP request and response – Using Cookies – Session tracking – Java Server Pages – Anatomy of JSP – Implicit JSP Objects – JDBC – Java Beans – Advantages – Enterprise Java Beans – EJB Architecture – Types of Beans – EJB Transactions

18CTU404B**XML PROGRAMMING****3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

Unit I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

Unit II

XML Basics: XML Structure and Syntax, Document classes and Rules.

Unit III

Other XML Concepts: Scripting XML

Unit IV

Other XML Concepts: XML as Data, Linking with XML

Unit V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

List of Programs

1. Write a program (using fork() and/or exec() commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)
4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.

5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using thread library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

Suggested Readings

1. A .Silberschatz, , P.B Galvin, G.Gagne (2008). Operating Systems Concepts, 8th ed.). John Wiley Publications.
2. A.S. Tanenbaum, (2007).Modern Operating Systems (3rd ed.). New Delhi: Pearson Education.
3. W. Stallings, (2008). Operating Systems, Internals & Design Principles (5th ed.). Prentice Hall of India.

18CTU412**SOFTWARE ENGINEERING - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- To analyze, specify and document software requirements for a software system.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Implement a given software design using sound development practices.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

S. No	Practical Title
1.	<ul style="list-style-type: none"> • Problem Statement • Process Model
2.	Requirement Analysis: <ul style="list-style-type: none"> • Creating a Data Flow • Data Dictionary, Use Cases
3.	Project Management: <ul style="list-style-type: none"> • Computing FP • Effort

	<ul style="list-style-type: none"> • Schedule, Risk Table, Timeline chart
4.	Design Engineering: <ul style="list-style-type: none"> • Architectural Design • Data Design, Component Level Design
5.	Testing: <ul style="list-style-type: none"> • Basis Path Testing

Sample Projects:

1. **Criminal Record Management:** Implement a criminal record management system for jailers, police officers and CBI officers
2. **DTC Route Information:** Online information about the bus routes and their frequency and fares
3. **Car Pooling:** To maintain a web based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation system
8. Automatic Internal Assessment System
9. Parking Allocation System
10. Wholesale Management System

Suggested Readings

18CTU413**ARTIFICIAL INTELLIGENCE - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60****Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the various characteristics of Intelligent agents
- To learn about the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing software agents
- To know about the various applications of AI.
- Understand the various searching techniques, constraint satisfaction problem and example problems- game playing techniques.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Identify problems that are amenable to solution by AI methods.
2. Identify appropriate AI methods to solve a given problem.
3. Formalize a given problem in the language/framework of different AI methods.
4. Implement basic AI algorithms.
5. Design and carry out an empirical evaluation of different algorithms on a problem formalization, and state the conclusions that the evaluation supports.
6. Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems

List of Programs

Write the following programs using PROLOG

1. Program to add two numbers.
2. Program to categorize animal characteristics.
3. Program to read address of a person using compound variable.
4. Program of fun to show concept of cut operator .
5. Program to count number of elements in a list .
6. Program to reverse the list.
7. Program to append an integer into the list .
8. Program to replace an integer from the list .
9. Program to delete an integer from the list .
10. Program to show concept of list.
11. Program to demonstrate family relationship.
12. Program to show how integer variable is used in prolog program.
13. Write a program to solve 8 queens problem
14. Solve any problem using depth first search.
15. Solve any problem using best first search.
16. Solve traveling salesman problem.

Suggested Readings

1. Kevin Night and Elaine Rich, Nair B., “Artificial Intelligence (SIE)”, Mc Graw Hill- 2008. (Units-I,II,IV & V)
2. Dan W. Patterson, “Introduction to AI and ES”, Pearson Education, 2007. (Unit-III). Peter Jackson, “Introduction to Expert Systems”, 3rd Edition, Pearson Education, 2007.
3. Stuart Russel and Peter Norvig “AI – A Modern Approach”, 2nd Edition, Pearson Education 2007.
4. Deepak Khemani “Artificial Intelligence”, Tata Mc Graw Hill Education 2013.

18CTU414A**SCRIPTING LANGUAGE - PRACTICAL****3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To classify the various Scripting Languages
- To learn client and server side scripting languages (Java script and AJAX, JSP)
- To create simple Web pages and provide client side validation.
- To create dynamic web pages using server side scripting
- To master the theory behind scripting and its relationship to classic programming
- To gain some fluency programming in JavaScript, AJAX, and related languages, to design and implement one's own scripting language.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Define the CSS with its types and use them to provide the styles to the web pages at various levels.
2. Develop the modern web pages using the HTML and CSS features with different layouts as per need of applications.
3. Use the JavaScript to develop the dynamic web pages.
4. Use server side scripting with JSP to generate the web pages dynamically.
5. Gain knowledge of client side scripting, validation of forms and AJAX programming.
6. Create applications by using the concepts like JSP and Servlet.

List of Programs

1. Create Application form using various text formats.
2. Create UNIVERSITY website using HTML tags.
3. Create a table using HTML.
4. Display your information using form controls.
5. Create style sheets with the style elements.

6. Create calculator format using java script.
7. Create an array of 10 numbers and sort them using javascript.
8. String manipulation using string object.
9. Add a simple script using Click event.
10. Create Employee details using schemas.
11. Create our department details using CSS.
12. Create Payroll system using XSL.
13. Changing image using mouseover event.
14. Create a website for a newspaper.
15. Design and apply your application form for course enrolment using Javascript.

Suggested Readings

1. Jeffrey C. Jackson, "Web Technologies--A Computer Science Perspective", Pearson Education, 2006.
2. Deitel, Deitel, Goldberg, "Internet & World Wide Web How to Program", Third Edition, Pearson Education, 2006.
3. Bryan Basham, Kathy Siegra, Bert Bates, "Head First Servlets and JSP", Second Edition
4. Uttam K Roy, "Web Technologies", Oxford University Press, 2011.
5. Robert. W. Sebesta, "Programming the World Wide Web", Fourth Edition, Pearson Education, 2007 .
6. Marty Hall and Larry Brown,|| Core Web Programming|| Second Edition, Volume I and II, Pearson Education, 2001.

Course Objectives (CO)

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

List of Programs**1. Information Structure**

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.

**2. Deconstructing an XML Document**

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

```
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies. Revised
and expanded—over 600 new pages. </description>
</coverInfo> </book>
```

3. Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

4. Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

```
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is
willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>
```

5. Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

```
<PROCEDURE><TITLE>How to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat. <WARNING></OVERVIEW>Cats
don't like to take baths. You could get hurt doing this. Be sure to obtain all the required
protective gear before you start. </WARNING><EQUIPEMENT><ITEM>Hockey Mask
<ITEM>Padded Full-body Kevlar Armor</ITEM><ITEM>Tub full of warm
water</ITEM><ITEM>Towels </ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat
Shampoo</ITEM> <EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now
is hiding under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP>
<ITEM>Using the First Aid kit, repair the damage to your head and arms.</STEP>
<STEP>Place the cat back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then
make an effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>
```

Suggested Readings

1. William, J. Pardi. XML in action web technology.
2. Michael, J. Young. Step by Step XML.

18CTU501A CRYPTOGRAPHY AND NETWORK SECURITY**4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To learn the concepts of classical encryption techniques and concepts of finite fields and number theory.
- To explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
- To explore the design issues and working principles of various authentication protocols, PKI standards.
- To explore various secure communication standards including Kerberos, IPsec, and SSL/TLS and email.
- To learn the ability to use existing cryptographic utilities to build programs for secure communication.
- To know the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Identify information security goals, classical encryption techniques and acquire fundamental knowledge on the concepts of finite fields and number theory.
2. Understand, compare and apply different encryption and decryption techniques to solve problems related to confidentiality and authentication
3. Apply the knowledge of cryptographic checksums and evaluate the performance of different message digest algorithms for verifying the integrity of varying message sizes
4. Apply different digital signature algorithms to achieve authentication and create secure applications
5. Apply network security basics, analyze different attacks on networks and evaluate the performance of firewalls and security protocols like SSL, IPsec, and PGP.
6. Apply the knowledge of cryptographic utilities and authentication mechanisms to design secure applications

Unit I

Introduction to Cryptography – security attacks – Security services- security Algorithm – Stream cipher and Block cipher – Symmetric and Asymmetric – key cryptosystems; Symmetric key algorithms: Introduction – DES – Triple DES – AES – IDEA – Blowfish – RC5.

Unit II

Public key Cryptosystem: Introduction to Number Theory – RSA Algorithm – key management – Diffie-Hellman key exchange – Introduction to elliptic curve cryptography; message authentication and hash function – hash and MAC algorithm – digital signatures and authentication protocol.

Unit III

Network security practice: Authentication applications – kerberos – X.509 authentication services and encryption techniques;;E-mail security – PGP – S/MIME – IP security

Unit IV

Web security – secure socket layer – secure electronic transaction; System security – Intruders and viruses – Firewalls – Password security.

Unit V

Case Study : Implementation of Cryptographic algorithms – RSA – DSA – ECC (C/JAVA programming). Network forensic -Security audit; Other security mechanism: Introduction to steganography – quantum cryptography – Water marking – DNA cryptography.

Suggested Readings

2. u.cs.biu.ac.il/~herzbea/book.html
3. www.flipkart.com/search-books/cryptography+and+network+security+William+stallings+ebook

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To learn the basic software debugging methods.
- To understand the White box and Black Box testing methods and techniques
- To design test plans.
- To discuss various software testing issues and solutions in software unit test, integration and system testing
- To learn the different testing tools (familiar with open source tools)
- To understand Quality Assurance models.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Investigate the reason for bugs and analyze the principles in software testing to prevent and remove bugs.
2. Implement various test processes for quality improvement
3. Design test planning.
4. Manage the test process
5. Apply the software testing techniques in commercial environment
6. Use practical knowledge of a variety of ways to test software and an understanding of some of the tradeoffs between testing techniques.

Unit – I Testing Fundamentals

Examining the Specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques. Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques.

Unit – II Examining the code

Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist. Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging-Testing the Pieces- Data Coverage- Code Coverage.

Flowgraphs and Path Testing

Path-testing Basics – Predicates, Path Predicates and Achievable Paths-Path sensitizing-Path Instrumentation-Implementation and Application of Path Testing

Unit – III Transaction-Flow Testing and Data-Flow Testing

Transaction Flows-Transaction Flow Testing Techniques. Data-Flow Testing Basics-Data-Flow Testing Strategies-Application, Tools, Effectiveness

Unit – IV Domain Testing

Domains and Paths-Domain Testing-Domains and Interface Testing-Domains and Testability

Unit – V Logic-Based Testing and State Graphs

Motivational Overview-Decision Tables-Path Expressions Again-KV Charts-Specifications
State Graphs-Good State Graphs and Bad-State Testing

Suggested Readings

3. www.softwaretestinginstitute.com

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

Unit I

Introduction to .NET: .NET framework features & architecture, CLR, common Type system, MSIL, Assemblies and class libraries. Introduction to visual studio, Project basics, types of project in .Net, IDE of VB .Net – Menu bar, Tool bar, Solution Explorer, Toolbox, Properties Window, Form Designer, Output Window, Object browser. The environment: Editor tab, format tab, general tab, docking tab. Visual development & event driven programming – Methods and events.

Unit II

The VB .Net Language: The VB .Net Language – Variables- declaring variables, Data type of variables, forcing variables declarations, scope & lifetime of a variable, constants, arrays, types of arrays, control array, Structure programming – Modularity – Information hiding – abstraction – events – subroutines and functions – message box – input box. Control flow statement: conditional statement, loop statement.

Unit III

Working with WPF: Introduction: Understanding Windows Graphics – WPF: A Higher Level API – The architecture of WPF. XAML: Basics, properties and events in XAML – loading and compiling – Layout. Classic controls: The Control class – content controls – text controls – list controls – Range based controls.

Unit IV

Objects and Collections: Understanding objects, properties, methods. Understanding collections. Files: Introduction – classification of files – processing files – handling files and folder using class – directory class – file class.

Unit V

Database programming with ADO .Net: overview of ADO, from ADO to ADO .Net, accessing data using server explorer. Creating connection, command, data adapter and data set with OLEDB and SQLDB. Display data on data bound controls, display data on a data grid. Generate reports using CrystalReportViewer.

Suggested Readings

2. www.functionx.com
3. www.dotnetspider.com
4. www.developerfusion.com
5. <http://www.wdftutorial.net/HelloWPF.html>

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. Create applications using techniques such as multiplexing, forking, multithreading

Unit I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

Unit II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

Unit III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

Unit IV

Network Applications: Remote logging; Email; WWW and HTTP.

Unit V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

3. Nemeth Synder., & Hein. (2010). Linux Administration Handbook (2nd ed.), New Delhi: Pearson Education.
4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

Unit I

Overview: Predictive and descriptive data mining techniques

Unit II

Supervised and unsupervised learning techniques

Unit III

Process of knowledge discovery in databases, pre-processing methods

Unit IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

Unit V

Scalability and data management issues in data mining algorithms, measures of interestingness.

Instruction Hours / week: L: 4 T: 0 P: Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives (CO)

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R ecosystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

Unit I: INTRODUCTION

History and Overview of R, Getting Started with R, Getting Help, Data Types, R Nuts and Bolts, **Getting Data In and out of R:** Reading and Writing Data, **Subsetting R objects:** Vector, Matrix, List and Data frames.

Unit II: R FUNCTIONALITIES

Operators in R, Vectorized Operations, **Date and Times in R:** Operations on date and times, **Managing Data frames with the dplyr package:** Data Frames, The dplyr package, dplyr Grammar, select(), arrange(), filter(), rename(), mutate(), group_by(), %>%.

Unit III: CONTROL STRUCTURES:

if_else, else_if, for loops, Nested for loop, while, repeat, next, break-Scoping Rules-**Functions in R:** lapply, tapply, split, mapply, apply-Combining Variables with the c, cbind, rbind Functions-Coding Standards in R-String Operations.

Unit IV: STATISTICAL ANALYSIS IN R

Statistical Analysis in R: Data types – Categorical – Binary – ordinal – Nominal – Continuous – Discrete – Data Dimensions – Univariate – bivariate – multivariate – Numerical Measures – Central Tendency – Mean – Median – Mode. R Packages-Debugging Tools-Simulation-R Profiler-Statistical Functions – Comparison of Samples – same groups – different groups – Independent groups - Student T Test – Dependent Test – Independent Test.

Unit V: IMPORT AND EXPORT DATA INTO R

Read CSV, Excel, SPSS, Stata, SAS Files. **Data visualization:** Base graphics system in R, Advanced R graphics: ggplot - **Reporting** – Data Preparation – Embedding R chunks – Labelling and reusing code chunks – Report Compiling – Configuring – R Packages – shiny - ggvis

		Semester – V
18CTU504A	DIGITAL IMAGE PROCESSING	Semester – V
		3H – 3C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

Unit I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

Unit II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

Unit III

Image Restoration, Basic Framework, Interactive Restoration, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Run length coding.

Unit IV

FAX compression (CCITT Group-3 and Group-4), Symbol-based coding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Wavelet series expansion, Discrete Wavelet Transform (DWT), Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

Unit V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Boundary Detection, skeletons, pruning. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding.

2. Jain, A. K. (1989). Fundamentals of Digital image Processing. New Delhi: Prentice Hall of India.
3. Castleman, K. R. (1996). Digital Image Processing. New Delhi: Pearson Education.
4. Schalkoff. (1989). Digital Image Processing and Computer Vision. New York: John Wiley and Sons.
5. Rafael, C. Gonzalez., Richard, E. Woods.,& Steven Eddins. (2004). Digital Image Processing using MATLAB. New Delhi: Pearson Education.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts

Unit I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software requirements – Uses of Multimedia. Text: Types of text – Font- Text file formats. Image: Image data representation – Image file formats – image processing software. Graphics: Advantages of graphics – Uses – Component of a graphics system.

Unit II

Audio: Sound waves – types and properties of sound – components of audio system – Digital audio – Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – video processing software. Animation: Uses of animation – computer based animation -Animation file formats – Animation software.

Unit III

Introducing photoshop elements: About elements – welcome screen – create mode – menu bar – toolbox – options bar – panels. Organizing images: Obtaining images -tagging images – searching for images – opening and saving images. Selecting areas – Layers – Text and drawing tools.

Unit IV

Understanding flash: Understanding flash basic elements – creating a simple animation. Learning Flash toolbox: Learning the toolbox – using tools. Learning flash panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – using colors – Rotating, skewing and scaling – grouping objects. Creating animation – How animation **Course Objectives (CO)**

- To learn the concepts of classical encryption techniques and concepts of finite fields and number theory.
- To explore the working principles and utilities of various cryptographic algorithms including secret key cryptography, hashes and message digests, and public key algorithms
- To explore the design issues and working principles of various authentication protocols, PKI standards.
- To explore various secure communication standards including Kerberos, IPsec, and SSL/TLS and email.
- To learn the ability to use existing cryptographic utilities to build programs for secure communication.
- To know the concepts of cryptographic utilities and authentication mechanisms to design secure applications

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Identify information security goals, classical encryption techniques and acquire fundamental knowledge on the concepts of finite fields and number theory.
2. Understand, compare and apply different encryption and decryption techniques to solve problems related to confidentiality and authentication
3. Apply the knowledge of cryptographic checksums and evaluate the performance of different message digest algorithms for verifying the integrity of varying message sizes
4. Apply different digital signature algorithms to achieve authentication and create secure applications
5. Apply network security basics, analyze different attacks on networks and evaluate the performance of firewalls and security protocols like SSL, IPsec, and PGP.
6. Apply the knowledge of cryptographic utilities and authentication mechanisms to design secure applications

List of Programs

1. Write a program to convert your college name from plain text to cipher text using transposition cipher method of encryption
2. Write a program to convert your name from plain text to cipher text using the One Time Pads method of encryption
3. Write a program to encrypt a paragraph using the data encryption standard algorithm
4. Write a program to encrypt your bio-data using the advanced encryption standard algorithm
5. Write a program to decrypt the “Network Security” theory syllabus using the RSA Algorithm.
6. Write a program that takes a binary file as input and performs bit stuffing and cyclic redundancy check computation.
7. Write a program to simulate the working of Sliding-window protocol
8. Write a program to find the shortest path in a network using Dijkstra’s Algorithm
9. Write a program to implement the token bucket algorithm for congestion control.

10. Write a program for the following chat applications:

One to One: Open a Socket connection and display what is written by one to another.

Many to Many: Each client opens a socket connection to the client server and writes to the Socket. Whatever is written by one can be seen by all. Implement symmetric key cryptography.

18CTU511B**SOFTWARE TESTING - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60****Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

1. Write a program that take three inputs (a,b and c) that represents the sides of a triangle and the output is one of the below four.
 - a) Not a triangle
 - b) Scalene triangle
 - c) Isocles triangle
 - d) Equilateral triangle
- a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
- b) Generate test cases using basis path testing
- c) Run code coverage tool

2. Write a program that determines the nature of roots of a quadratic equation. Output should be one of the following
 - Not a quadratic equation
 - Complex roots
 - Real roots
 - Single roots
 - a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
 - 1.2 Generate test cases using basis path testing
 - 1.3 Run code coverage tool
3. Write a program that checks whether the number is even or odd. Run code coverage tools and find the amount of code being covered.
4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() and do not free memory leading to memory leaks. Verify the same using Valgrind. Now, free memory using free() at the end of the program to avoid memory leaks. Verify the same using Valgrind().
5. Using Selenium IDE, write a test suite containing minimum 4 test cases.
6. Conduct a test suite for any two websites.
7. Write and test a program to login a specific webpage

18CTU512A**.NET PROGRAMMING - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60****Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities.
Translate general requirements into data-related solutions using database concepts

List of Programs

1. Write a VB .Net program to calculate simple interest and compound interest.
2. Write a VB .Net program to implement Calculator.
3. Write a VB.Net program to implement Notepad
4. Write a VB.Net program to draw several shaps and fill with color.
5. Write a VB .Net program to perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the list
6. Write a program to calculate the total marks of the student and print the grades.
7. Write a VB .Net program to implement employee payroll system
8. Write a VB .Net program to create and manipulate a file.
9. Write a program to implement a web browser
10. Write a program to maintain the details of doctors in a hospital with their specializations

11. Write a program to animate the picture using timer control.
12. Write a program to move the object from one location to another. Change the color and size of object at different time interval.
13. Write a program to place 10 pictures in the listbox. Using timer control the take the picture from listbox and change the form background after specific time interval.
14. Write a program to implement speaking program. Get the text input from the user and convert into voice.
15. Write a program to implement chatting

Suggested Readings

2. www.functionx.com
3. www.dotnetspider.com
4. www.developerfusion.com
5. <http://www.wdftutorial.net/HelloWPF.html>

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. Create applications using techniques such as multiplexing, forking, multithreading

List of Programs

1. Understanding and using of commands like ifconfig, netstat, ping, arp, telnet, ftp, finger, traceroute, whois
2. Socket Programming: Implementation of Connection-Oriented Service using standard ports.
3. Implementation of Connection-Less Service using standard ports
4. Implementation of Connection-Oriented Iterative Echo-Server, date and time, character generation using user-defined ports
5. Implementation of Connectionless Iterative Echo-server, date and time, character generation using user-defined ports.
6. Implementation of Connection-Oriented Concurrent Echo-server, date and time, character generation using user-defined ports
7. Program for connection-oriented Iterative Service in which server reverses the string sent by the client and sends it back
8. Program for connection-oriented Iterative service in which server changes the case of the strings sent by the client and sends back (Case Server).

9. Program for Connection-Oriented Iterative service in which server calculates the Net-salary of an Employee based on the following details sent by the client i) basic-sal ii) hra iii) da iv) pt v) epf ($\text{net-sala} = \text{basic} + \text{hra} + \text{da} + \text{pt} + \text{epf}$)
10. Implementation of concurrent chat server that allows current logged in users to communicate one with other.

Suggested Readings

18CTU513A**DATA MINING - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60****Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

List of Programs

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose “Use training set”, then choose “Percentage split” using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classify it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perform comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perform comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS’s C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

18CTU513B**R PROGRAMMING – PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives (CO)**

- To provide an overview of a new language R used for data science.
- To introduce students to the R programming environment and related eco-system and thus provide them with an in-demand skill-set, in both the research and business environments
- To introduce the extended R ecosystem of libraries and packages
- To demonstrate usage of as standard Programming Language.
- To familiarize students with how various statistics like mean median etc. can be collected for data exploration in R
- To enable students to use R to conduct analytics on large real life datasets.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Install and use R for simple programming tasks.
2. Extend the functionality of R by using add-on packages
3. Extract data from files and other sources and perform various data manipulation tasks on them.
4. Code statistical functions in R.
5. Use R Graphics and Tables to visualize results of various statistical operations on data.
6. Apply the knowledge of R gained to data Analytics for real life applications.

Software Lab Based on R Programming

1. Write a program that prints ‘_Hello World’ to the screen.
2. Write a program that asks the user for a number n and prints the sum of the numbers 1 to n
3. Write a program that prints a multiplication table for numbers up to 12.
4. Write a function that returns the largest element in a list.
5. Write a function that computes the running total of a list.
6. Write a function that tests whether a string is a palindrome.
7. Implement the following sorting algorithms: Selection sort, Insertion sort, Bubble Sort
8. Implement linear search.
9. Implement binary search.
10. Implement matrices addition, subtraction and Multiplication

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
 - a. Become familiar with SCILAB/MATLAB Basic commands
 - b. Read and display image in SCILAB/MATLAB
 - c. Resize given image
 - d. Convert given color image into gray-scale image
 - e. Convert given color/gray-scale image into black & white image
 - f. Draw image profile
 - g. Separate color image in three R G & B planes
 - h. Create color image using R, G and B three separate planes
 - i. Flow control and LOOP in SCILAB
 - j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
 - a. Obtain Negative image b. Obtain Flip image
 - b. Thresholding d. Contrast stretching
3. To write and execute programs for image arithmetic operations
 - a. Addition of two images
 - b. Subtract one image from other image
 - c. Calculate mean value of image

- d. Different Brightness by changing mean value
- 4. To write and execute programs for image logical operations
 - a. AND operation between two images
 - b. OR operation between two images
 - c. Calculate intersection of two images
 - d. Water Marking using EX-OR operation
 - e. NOT operation (Negative image)
- 5. To write a program for histogram calculation and equalization using
 - a. Standard MATLAB function
 - b. Program without using standard MATLAB functions
 - c. C Program
- 6. To write and execute program for geometric transformation of image
 - a. Translation
 - b. Scaling
 - c. Rotation
 - d. Shrinking
 - e. Zooming
- 7. To understand various image noise models and to write programs for
 - a. image restoration
 - b. Remove Salt and Pepper Noise
 - c. Minimize Gaussian noise
 - d. Median filter and Weiner filter
- 8. Write and execute programs to remove noise using spatial filters
 - a. Understand 1-D and 2-D convolution process
 - b. Use 3x3 Mask for low pass filter and high pass filter
- 9. Write and execute programs for image frequency domain filtering
 - a. Apply FFT on given image
 - b. Perform low pass and high pass filtering in frequency domain
 - c. Apply IFFT to reconstruct image
- 10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
- 11. Write and execute program for image morphological operations erosion and dilation.
- 12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Semester – V

18CTU514B MULTIMEDIA AND ITS APPLICATIONS – PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

List of Programs

Perform the following practical exercises GIMP/ Synfig.

1. To change from one shape to another shape
2. To perform rainy effect
3. To subtract one shape from another shape
4. To perform dreamy effect
5. To perform fractal effect
6. To perform transparent glass lettering
7. To bounce a ball
8. To perform smoky effect
9. To perform text portrait
10. To perform bokeh effect

Suggested Readings

2. Nick Vandome (2011). Photoshop Elements 9. TataMcGraw Hill.
3. Brian Underdahl (2002). Macromedia Flash MX – A Beginners Guide. Dreamtech Press.
4. Tay Vaughan (2002). Fundamentals of Multimedia (5th ed.). TataMcGraw Hill.
5. Bill Sanders (2001). Flash 5 Actionscript (1st ed.). New Delhi DreamTech Press.

Websites

1. en.wikipedia.org/wiki/Multimedia
2. www.arena-multimedia.com/
3. www.nextwavemultimedia.com/

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

Unit I**Introduction to PHP:**

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, scope of PHP

Basic Syntax, PHP variables and constants-Types of data in PHP , Expressions, scopes of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwis , ternary and MOD operator.-PHP operator Precedence and associativity

Unit II**Handling HTML form with PHP:**

Capturing Form Data -GETand POST form methods- Dealing with multi value fields - Redirecting a form after submission -**PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

Unit III**PHP Functions:**

Function, Need of Function , declaration and calling of a function-PHP Function with arguments, Default Arguments in Function-Function argument with call by value, call by reference-Scope of Function Global and Local

Unit IV**String Manipulation and Regular Expression: (3L)**

- Creating and accessing String , Searching & Replacing String
- Formatting, joining and splitting String , String Related Library functions
- Use and advantage of regular expression over inbuilt function
- Use of preg_match(), preg_replace(), preg_split() functions in regular expression.

Unit V**Array:**

- Anatomy of an Array ,Creating index based and Associative array ,Accessing array
- Looping with Index based array, with associative array using each() and foreach()
- Some useful Library function

Suggested Readings

1. Steven Holzner. (2007). PHP: The Complete Reference. New Delhi: McGraw Hill Education (India).
2. Timothy Boronczyk., & Martin, E. Psinas. (2008). PHP and MYSQL (Create-Modify-Reuse). New Delhi: Wiley India Private Limited.
3. Robin Nixon. (2014). Learning PHP, MySQL, JavaScript, CSS & HTML5 (3rd ed.). O'reilly.
4. Luke Welling.,& Laura Thompson.(2008). PHP and MySQL Web Development (4th ed.). Addition Paperback, Addison-Wesley Professsional.
5. David Sklar., & Adam Trachtenberg. PHP Cookbook: Solutions & Examples for PHP.

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

Unit I

Introduction What is Linux/Unix Operating systems, Difference between linux/unix and other operating systems , Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process.

Unit II

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

Unit III

User Management and the File System Types of Users, Creating users, Granting rights User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

Unit IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

Unit V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell.

Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

2. Michael Jang. (2011). RHCSA/ RHCE Red Hat Linux Certification: Exams (Ex200 & Ex300). Certification Press.
3. Nemeth Synder., & Hein.(2010). Linux Administration Handbook (2nd ed.). Pearson Education.
4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service.

Unit I -An Introduction to Electronic commerce

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce, Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (C2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

Unit II -The Internet and WWW

Evolution of Internet, Domain Names and Internet - Organization (.edu, .com, .mil, .gov, .net etc), Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, cost, time, reach, registering a domain name, web promotion, Target email, Banner, Exchange, Shopping Bots.

Unit III: Electronic data

Electronic data exchange introduction, concepts of EDI and Limitation, Application of eDI, Disadvantages of eDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment system, Payment types, Value exchange system, credit card system electronic fund transfer, Paperless bill, modern payment cash, Electronic cash.

Unit IV: Planning for Electronic Commerce

Planning Electronic commerce initiatives, linking objectives to business strategies, measuring cost objectives, comparing benefits to Costs, strategies for developing electronic commerce web sites.

Unit V : Internet marketing

The PROS and CONS of online shopping, the CONS of online shopping, Justify an internet business, Internet marketing techniques, The E-Cycle of Internet marketing, personalization e-commerce.

Suggested Readings

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

Unit I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. **Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

Unit II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

Unit III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2, Eucalyptus.

Unit IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

Unit V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To provide an overview of an exciting growing field of big data analytics.
- To impart to students the skills required to design scalable systems that can accept, store, and analyze large volumes of unstructured data.
- The objective of this course is to ascertain that the students know the fundamental techniques and tools used to design and analyze large volumes of data.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support.
- To understand, and practice big data analytics and machine learning approaches

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
5. Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
6. Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

UNIT-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

UNIT-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data -Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

UNIT-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

UNIT-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

UNIT-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**End Semester Exam : 3 Hours****Course Objectives (CO)**

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

Unit I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

Unit II**Lexical Analysis:**

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

Unit III**Parsing:**

Bottom up parsing- LR parser, yaITU. **Intermediate representations:** Three address code generation, syntax directed translation, translation of types, control Statements.

Unit IV

Storage organization: Activation records stack allocation.

Unit V

Code Generation: Object code generation

Suggested Readings

2. Alfred, V. Aho., Monica, S. Lam., Ravi Sethi., & Jeffrey, D. Ullman. (2006). Compilers: Principles, Techniques, and Tools (2nd ed.). New Delhi: Prentice Hall.
3. Dhamdhare, D. M. (2011). Systems Programming. New Delhi: Tata McGraw Hill.
4. Leland Beck., & Manjula, D. (2008). System Software: An Introduction to System Programming (3rd ed.). New Delhi: Pearson Education.
5. Grune, D., Van Reeuwijk, K., Bal, H. E., Jacobs, C. J. H., & Langendoen, K. (2012). Modern Compiler Design (2nd ed.). Springer.

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.
Sample string : 'The quick brown fox' Expected Output : Thequickbrownfox

9. Write a PHP script that finds out the sum of first n odd numbers.
10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
11. Write a PHP script that checks if a string contains another string.
12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.
13. Create a script to construct the following pattern, using nested for loop.

```
*  
* *  
* * *  
* * * *  
* * * * *
```

14. Write a simple PHP program to check that emails are valid.
15. WAP to print first n even numbers.
16. \$color = array('white', 'green', 'red')

Write a PHP script which will display the colors in the following way : Output :
white, green, red,
• green • red
• white

17. Using switch case and dropdown list display a —Hello! message depending on the language selected in drop down list.
18. Write a PHP program to print Fibonacci series using recursion.
19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

3. Robin Nixon. (2014). Learning PHP, MySQL, JavaScript, CSS & HTML5 (3rd ed.). O'reilly.

4. Luke Welling.,& Laura Thompson.(2008). PHP and MySQL Web Development (4th ed.). Addition Paperback, Addison-Wesley Professsional.
5. David Sklar., & Adam Trachtenberg. PHP Cookbook: Solutions & Examples for PHP.

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications.

List of Programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to alTUept a login name. If not a valid login name display message —Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of —who command along with the total number of users .
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.
11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.

13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60**Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service

List of Programs

1. Write a HTML program to implement the use of Image map.
2. Write a CSS to implement selectors in HTML
3. Write a CSS to implement pseudo – classes with in-line styles
4. Write a Javascript program to validate a web form
5. Write a Javascript program to allow visitors to see history of visiting your page
6. Write a Javascript program to change random color each 5 seconds
7. Write a perl program to read a list of n strings (from STDIN) into an array and print a random string from the list (Use srand;rand(@array))

8. Write a perl program to read a list of n numeric's from STDIN and find the max, min, range, median and mode. Input size of the list n interactively.
9. Write a perl program to read a file of words and replaces all words in the file with their uppercase equivalent (hint: use tr/a-z/A-Z/)
10. Write VBScript program to print Fibonacci series using Do..while loop and For loop.
11. Write VBScript program to generate date and time in defferent format
12. Write VBScript program to print student marklist
13. Develop an ASP code to retrieve information from forms
14. Develop an ASP code to reading and writing cookies information
15. Develop an ASP code using response object methods

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

List of Programs

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that access different programs on different platforms.
3. Working on tools used in cloud computing online-
 - a) Storage
 - b) Sharing of data
 - c) Manage your calendar, to-do lists,
 - d) A document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To provide an overview of an exciting growing field of big data analytics.
- To impart to students the skills required to design scalable systems that can accept, store, and analyze large volumes of unstructured data.
- The objective of this course is to ascertain that the students know the fundamental techniques and tools used to design and analyze large volumes of data.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support.
- To understand, and practice big data analytics and machine learning approaches

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
5. Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
6. Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

List of Programs

1. Implement a quicksort using scala.
2. Implement a auction service using scala.
3. Write a scala function to perform any 10 arithmetic operations.
4. Write a program to find the factorial of a given number using recursion.
5. Write a program for string manipulations.
6. Write a program for alphabetic order arrangement of a set of names.
7. Write a program for student records using scala list.
8. Implement any 5 map methods for maintaining customer details.
9. Implement employee records using Files
10. Write a program to copy the files using command line arguments.

18CTU613B**SYSTEM PROGRAMMING - PRACTICAL 3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

List of Programs

1. Write a program to create a text editor.
2. Write a program to implement an absolute loader.
3. Write a program to check balance parenthesis of a given program.
4. Write a program to check the valid or invalid identifier
5. Write a program to implement DFA
6. Write a program to remove blank space in a given string.
7. Write a program to identify tokens in a given string.

8. Write a program to remove special character in a given string.
9. Write a program to check given string is a keyword or not.
10. Write a program to identify tokens in a given expression.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி-I, தமிழ் முதல் பருவம் 18LSU101 :
தமிழ் முதல் தாள் 4-H,4-C
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes)

அலகு - I : இக்கால இலக்கியம்: (10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் - சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம்பிள்ளை-ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் -மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை.

அலகு - II : அற இலக்கியம்: (8 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் - 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (8 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV : கட்டுரை: (8 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:**(6 மணிநேரம்)**

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு.**கற்பகம் உயர்கல்வி கலைக்கழகத் தமிழ்த்துறை வெளியீடு.**

Semester – I

18ITU101 PROGRAMMING FUNDAMENTALS USING C / C++ 4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- To learn how to write inline functions for efficiency and performance.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. Understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Develop advanced applications using enumerated data types, function pointers and nested structures, the basic object-oriented design principles in computer problem solving.
6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

Unit I - INTRODUCTION TO C AND C++

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O:

Declaring, Defining and Initializing Variables, Course Objectives of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h).

Expressions, Conditional Statements and Iterative Statements:

Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements

(while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

Unit II - FUNCTIONS AND ARRAYS

Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

Unit III - DERIVED DATA TYPES (STRUCTURES AND UNIONS)

Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members.

Pointers and References in C++:

Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

Unit IV - MEMORY ALLOCATION IN C++

Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.

File I/O, Preprocessor Directives:

Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

Unit V - USING CLASSES IN C++

Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables & Functions, Objects as parameters, Specifying the Protected and Private Access, Copy Constructors, Overview of Template classes and their use.

Overview of Function Overloading and Operator Overloading:

Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators).

Inheritance, Polymorphism and Exception Handling:

Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

18ITU102	COMPUTER SYSTEM ARCHITECTURE	Semester – I 4H – 4C
-----------------	-------------------------------------	---------------------------------------

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Acquire a basic knowledge about computer system architecture, digital circuits and the low - level programming skills.
2. Understand the inner workings and performance capabilities of advanced microprocessors.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. Learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

Unit I - INTRODUCTION

Logic gates, Boolean algebra, circuit simplification, combinational circuits: Adders and Subtractors –Multiplexers and De multiplexers – Encoders and Decoders- sequential circuits: Flip Flop's, registers, counters and memory Units.

Unit II - DATA REPRESENTATION AND BASIC COMPUTER ARITHMETIC

Number systems, complements, fixed and floating point representation, character representation, addition, subtraction, magnitude comparison, multiplication and division algorithms for integers

Unit III - BASIC COMPUTER ORGANIZATION AND DESIGN

Computer registers, bus system, instruction set, timing and control, instruction cycle, memory reference, input-output and interrupt, Interconnection Structures, Bus Interconnection design of basic computer.

Unit IV - CENTRAL PROCESSING Unit

Register organization, arithmetic and logical micro-operations, stack organization, micro

programmed control. Instruction formats, addressing modes, instruction codes, machine language, assembly language, input output programming, RISC, CISC architectures, pipelining and parallel architecture.

Unit V - MEMORY AND INPUT-OUTPUT ORGANIZATION

Cache memory, Associative memory, mapping Input / Output: External Devices, I/O Modules, Programmed I/O, Interrupt-Driven I/O, Direct Memory Access, I/O Channels.

18ITU103	COMPUTER FUNDAMENTALS	Semester – I 4H – 4C
Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100 End Semester Exam : 3 Hours		

Course Objectives (CO)

- To identify types of computers, how they process information and how individual computers interact with other computing systems and devices.
- To identify the function of computer hardware components.
- To identify the factors that goes into an individual or organizational decision on how to purchase computer equipment.
- To identify how to maintain computer equipment and solve common problems relating to computer hardware.
- To identify how software and hardware work together to perform computing tasks and how software is developed and upgraded.
- To identify different types of software, general concepts relating to software categories, and the tasks to which each type of software is most suited or not suited.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the meaning and basic components of a computer system,
2. Define and distinguish Hardware and Software components of computer system,
3. Explain and identify different computing machines during the evolution of computer system, gain knowledge about five generations of computer system,
4. Identify and discuss the functional Units of a computer system, identify the various input and output Units and explain their purposes
5. Understand the role of CPU and its components, understand the concept and need of primary and secondary memory, discuss the advantages, limitations and applications of computers.
6. Understand the classification of computers, distinguish the computers on the basis of purpose, technology and size

Unit I – INTRODUCTION

Introduction to computer system, uses, types. **Data Representation:** Number systems and character representation, binary arithmetic. **Human Computer Interface:** Types of software, Operating system as user interface, utility programs.

Unit II – DEVICES

Input and output devices (with connections and practical demo), keyboard, mouse, joystick, scanner, OCR, OMR, bar code reader, web camera, monitor, printer, plotter.

Unit III – MEMORY

Primary, secondary, auxiliary memory, RAM, ROM, cache memory, hard disks, optical disks.

Unit IV - COMPUTER ORGANISATION AND ARCHITECTURE

C.P.U., registers, system bus, main memory Unit, cache memory, Inside a computer, SMPS, Motherboard, Ports and Interfaces, expansion cards, ribbon cables, memory chips, processors.

Unit V - OVERVIEW OF EMERGING TECHNOLOGIES

Bluetooth, cloud computing, big data, data mining, mobile computing and embedded systems.

6. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems, the uses of preprocessors and various header file directives, the characteristics of an object-oriented programming language in a program.

List of Programs

1. WAP to print the sum and product of digits of an integer.
2. WAP to reverse a number.
3. WAP to compute the sum of the first n terms of the following series $S = 1 + 1/2 + 1/3 + 1/4 + \dots$
4. WAP to compute the sum of the first n terms of the following series $S = 1 - 2 + 3 - 4 + 5 - \dots$

5. Write a function that checks whether a given string is Palindrome or not. Use this function to find whether the string entered by user is Palindrome or not.
6. Write a function to find whether a given no. is prime or not. Use the same to generate the prime numbers less than 100.
- 7.WAP to compute the factors of a given number.
8. Write a macro that swaps two numbers. WAP to use it.
9. WAP to print a triangle of stars as follows (take number of lines from user):

```
*  
***  
*****  
*****  
*****
```

10. WAP to perform following actions on an array entered by the user:
 - i) Print the even-valued elements
 - ii) Print the odd-valued elements
 - iii) Calculate and print the sum and average of the elements of array
 - iv) Print the maximum and minimum element of array
 - v) Remove the duplicates from the array
 - vi) Print the array in reverse order

The program should present a menu to the user and ask for one of the options. The menu should also include options to re-enter array and to quit the program.

11. WAP that prints a table indicating the number of occurrences of each alphabet in the text entered as command line arguments.
12. Write a program that swaps two numbers using pointers.
13. Write a program in which a function is passed address of two variables and then alter its contents.
14. Write a program which takes the radius of a circle as input from the user, passes it to another function that computes the area and the circumference of the circle and displays the value of area and circumference from the main() function.
15. Write a program to find sum of n elements entered by the user. To write this program, allocate memory dynamically using malloc() / calloc() functions or new operator.

16. Write a menu driven program to perform following operations on strings:
- a) Show address of each character in string
 - b) Concatenate two strings without using strcat function.
 - c) Concatenate two strings using strcat function.
 - d) Compare two strings
 - e) Calculate length of the string (use pointers)
 - f) Convert all lowercase characters to uppercase
 - g) Convert all uppercase characters to lowercase
 - h) Calculate number of vowels
- i) Reverse the string
17. Given two ordered arrays of integers, write a program to merge the two-arrays to get an ordered array.
18. WAP to display Fibonacci series (i)using recursion, (ii) using iteration
19. WAP to calculate Factorial of a number (i)using recursion, (ii) using iteration
20. WAP to calculate GCD of two numbers (i) with recursion (ii) without recursion.
21. Create Matrix class using templates. Write a menu-driven program to perform following Matrix operations (2-D array implementation):
- a) Sum b) Difference c) Product d) Transpose
22. Create the Person class. Create some objects of this class (by taking information from the user). Inherit the class Person to create two classes Teacher and Student class. Maintain the respective information in the classes and create, display and delete objects of these two classes (Use Runtime Polymorphism).
23. Create a class Triangle. Include overloaded functions for calculating area. Overload assignment operator and equality operator.
24. Create a class Box containing length, breath and height. Include following methods in it:
- a) Calculate surface Area
 - b) Calculate Volume
 - c) Increment, Overload ++ operator (both prefix & postfix)
 - d) Decrement, Overload -- operator (both prefix & postfix)
 - e) Overload operator == (to check equality of two boxes), as a friend function

f) Overload Assignment operator

g) Check if it is a Cube or cuboid

Write a program which takes input from the user for length, breath and height to test the above class.

25. Create a structure Student containing fields for Roll No., Name, Class, Year and Total Marks. Create 10 students and store them in a file.

26. Write a program to retrieve the student information from file created in previous question and print it in following format:

Roll No. Name Marks

27. Copy the contents of one text file to another file, after removing all whitespaces.

28. Write a function that reverses the elements of an array in place. The function must accept only one pointer value and return void.

29. Write a program that will read 10 integers from user and store them in an array. Implement array using pointers. The program will print the array elements in ascending and descending order.

List of Experiments

(Any 8 Experiments)

1. Verification of Logic Gates
2. Code converters
3. Realization of Multiplexer using basic gates
4. Encoder and Decoder
5. Realization Half and Full adders
6. Realization of Subtractor
7. Realization of Parity generator
8. Flip-Flop Circuits
9. Digital to analog Converters
10. Demonstrate a Basic Arithmetic Computing operations

Suggested Readings

2. Dos Reis, A. J. (2009). Assembly Language and Computer Architecture using C++ and JAVA. Course Technology
3. Stallings, W. (2010). Computer Organization and Architecture Designing for Performance (8th ed.) Prentice Hall of India, New Delhi.
4. Mano, M.M. (2013). Digital Design. Pearson Education Asia, New Delhi.
5. Carl Hamacher. (2012). Computer Organization (5th ed.). McGrawHill, New Delhi.

18ITU113	COMPUTER FUNDAMENTALS - PRACTICAL	Semester – I 3H – 2C
-----------------	--	---------------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To create a document in Microsoft Word with formatting options, edit, save, and print documents to include documents with lists and tables, Format text and to use styles, add a header and footer to a document, add a graphic to a document.
- To write functions in Microsoft Excel to perform basic calculations and to convert number to text and text to number.
- To indicate the names and functions of the Excel interface components.
- To enter and edit data, Format data and cells.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Modify text using various formatting options from the editing tools under the Home tab, set up section breaks to create different headers and footers for the odd and even pages within the document sections.
2. Demonstrate the mechanics and uses of Word tables to organize and present data, demonstrate working knowledge of using Word's themes and clip art to create a variety of visual effects.
3. Demonstrate working knowledge of Word's advanced formatting techniques and presentation styles,
4. Demonstrate applicable knowledge and uses of accepted business style formatting conventions.
5. Create and design a spreadsheet for general office use, demonstrate the basic mechanics and navigation of an Excel spreadsheet.
6. Demonstrate formatting techniques and presentation styles, demonstrate the use of basic functions and formulas

Practical exercises based on MS Office/ Open Office tools using document preparation and spreadsheet handling packages.

MS Word

1. Prepare a **grocery list** having four columns (Serial number, The name of the product, quantity and price) for the month of April, 06.

- Font specifications for Title (Grocery List): 14-point Arial font in bold and italics.
- The headings of the columns should be in 12-point and bold.
- The rest of the document should be in 10-point Times New Roman.
- Leave a gap of 12-points after the title.

2. Create a **telephone directory**.

- The heading should be 16-point Arial Font in bold
- The rest of the document should use 10-point font size
- Other headings should use 10-point Courier New Font.
- The footer should show the page number as well as the date last updated.

3. Design a **time-table form** for your college.

- The first line should mention the name of the college in 16-point Arial Font and should be bold.
- The second line should give the course name/teacher's name and the department in 14-point Arial.
- Leave a gap of 12-points.
- The rest of the document should use 10-point Times New Roman font.
- The footer should contain your specifications as the designer and date of creation.

4. BPB Publications plans to release a new book designed as per your syllabus. Design the **first page of the book** as per the given specifications.

- The title of the book should appear in bold using 20-point Arial font.
- The name of the author and his qualifications should be in the center of the page in 16-point Arial font.
- At the bottom of the document should be the name of the publisher and address in 16-point Times New Roman.
- The details of the offices of the publisher (only location) should appear in the footer.

5. Create the following one page documents.

- a. Compose a note inviting friends to a get-together at your house, Including a list of things to bring with them.
- b. Design a certificate in landscape orientation with a border around the document.
- c. Design a Garage Sale sign.
- d. Make a sign outlining your rules for your bedroom at home, using a numbered list.

6. Create the following documents:

- (a) A newsletter with a headline and 2 columns in portrait orientation, including at least one image surrounded by text.

(b) Use a newsletter format to promote upcoming projects or events in your classroom or college.

7. Convert following text to a table, using comma as delimiter

Type the following as shown (do not bold).

Color, Style, Item

Blue, A980, Van

Red, X023, Car

Green, YL724, Truck

Name, Age, Sex

Bob, 23, M

Linda, 46, F

Tom, 29, M

8. Enter the following data into a table given on the next page.

Salesperson	Dolls	Trucks	Puzzles
Kennedy, Sally	1327	1423	1193
White, Pete	1421	3863	2934
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067
Pillar, James	5214	3247	5467
York, George	2190	1278	1928
Banks, Jennifer	1201	2528	1203
Atwater, Kelly	4098	3079	2067

Add a column Region (values: S, N, N,S,S,S) between the Salesperson and Dolls columns to the given table Sort your table data by Region and within Region by Salesperson in ascending order: In this exercise, you will add a new row to your table, place the word Total at the bottom of the Salesperson column, and sum the Dolls, Trucks, and Puzzles columns.

9. Wrapping of text around the image.

10. Following features of menu option must be covered

FILE Complete menu

EDIT Complete menu

VIEW Complete menu

INSERT Complete menu

FORMAT Complete menu

TABLE Complete menu

WINDOW Complete menu

TOOLS All options except Online collaboration, Tools on Macro, Templates

MS Excel

1. Enter the Following data in Excel Sheet

REGIONAL SALES PROJECTION						
State	Qtr1	Qtr2	Qtr3	QTR4	Qtr Total	Rate Amount
Delhi	2020	2400	2100	3000	15	
Punjab	1100	1300	1500	1400	20	
U.P.	3000	3200	2600	2800	17	
Haryana	1800	2000	2200	2700	15	
Rajasthan	2100	2000	1800	2200	20	

**TOTAL
AVERAGE**

(a) Apply Formatting as follow:

- i. Title in TIMES NEW ROMAN
- ii. Font Size - 14
- iii. Remaining text - ARIAL, Font Size -10
- iv. State names and Qtr. Heading Bold, Italic with Gray Fill Color.
- v. Numbers in two decimal places.
- vi. Qtr. Heading in center Alignment.
- vii. Apply Border to whole data.

(b) Calculate State and Qtr. Total

(c) Calculate Average for each quarter

(d) Calculate Amount = Rate * Total .

2. Given the following worksheet

	A	B	C	D
1	Roll No.	Name	Marks	Grade
2	1001	Sachin	99	
3	1002	Sehwag	65	

4	1003	Rahul	41	
5	1004	Sourav	89	
6	1005	Har Bhajan	56	

Calculate the grade of these students on the basis of following guidelines:

If Marks	Then Grade
≥ 80	A+
$\geq 60 < 80$	A
$\geq 50 < 60$	B
< 50	F

3. Given the following worksheet

	A	B	C	D	E	F	
1	Salesman			Sales in (Rs.)			
2	No.	Qtr1	Qtr2	Qtr3	Qtr4	Total	Commission
3	S001	5000	8500	12000	9000		
4	S002	7000	4000	7500	11000		
5	S003	4000	9000	6500	8200		
6	S004	5500	6900	4500	10500		
7	S005	7400	8500	9200	8300		
8	S006	5300	7600	9800	6100		

Calculate the commission earned by the salesmen on the basis of following Candidates:

If Total Sales	Commission
< 20000	0% of sales
> 20000 and < 25000	4% of sales
> 25000 and < 30000	5.5% of sales
> 30000 and < 35000	8% of sales
≥ 35000	11% of sales

The total sales is sum of sales of all the four quarters.

4. A company XYZ Ltd. pays a monthly salary to its employees which consists of basic salary, allowances & deductions. The details of allowances and deductions are as follows:

Allowances

- HRA Dependent on Basic
 - 30% of Basic if Basic ≤ 1000
 - 25% of Basic if Basic > 1000 & Basic ≤ 3000
 - 20% of Basic if Basic > 3000
- DA Fixed for all employees, 30% of Basic
- Conveyance Allowance Rs. 50/- if Basic is ≤ 1000

Rs. 75/- if Basic >1000 & Basic ≤ 2000

Rs. 100 if Basic >2000

- Entertainment Allowance NIL if Basic is ≤ 1000 Rs. 100/- if Basic > 1000

Deductions

- Provident Fund 6% of Basic
- Group Insurance Premium Rs. 40/- if Basic is ≤ 1500
Rs. 60/- if Basic > 1500 & Basic ≤ 3000
Rs. 80/- if Basic > 3000

Calculate the following:

Gross Salary = Basic + HRA + DA + Conveyance + Entertainment

Total deduction = Provident Fund + Group Insurance Premium

Net Salary = Gross Salary – Total Deduction.

5. Create Payment Table for a fixed Principal amount, variable rate of interests and time in the format below:

No. of Installments	5%	6%	7%	8%	9%
3	XX	XX	XX	XX	XX
4	XX	XX	XX	XX	XX
5	XX	XX	XX	XX	XX
6	XX	XX	XX	XX	XX

6. Use an array formula to calculate Simple Interest for given principal amounts given the rate of Interest and time

Rate of Interest	8%
Time	5 Years
Principal	Simple Interest
1000	?
18000	?
5200	?

7. The following table gives year wise sale figure of five salesmen in Rs.

Salesman	2000	2001	2002	2003
S1	10000	12000	20000	50000
S2	15000	18000	50000	60000
S3	20000	22000	70000	70000
S4	30000	30000	100000	80000
S5	40000	45000	125000	90000

(a) Calculate total sale year wise.

(b) Calculate the net sale made by each salesman

- (c) Calculate the maximum sale made by the salesman
 (d) Calculate the commission for each salesman under the condition.
 (i) If total sales >4,00,000 give 5% commission on total sale made by the salesman.
 (ii) Otherwise give 2% commission.
 (e) Draw a bar graph representing the sale made by each salesman.
 (f) Draw a pie graph representing the sale made by salesman in 2000.

8. Enter the following data in Excel Sheet

PERSONAL BUDGET FOR FIRST QUARTER

Monthly Income (Net): 1,475

EXPENSES	JAN	FEB	MARCH	QUARTER TOTAL	QUARTER AVERAGE
Rent	600.00	600.00	600.00		
Telephone	48.25	43.50	60.00		
Utilities	67.27	110.00	70.00		
Credit Card	200.00	110.00	70.00		
Oil	100.00	150.00	90.00		
AV to					
Insurance	150.00				
Cable TV	40.75	40.75	40.75		

Monthly Total

Calculate Quarter total and Quarter average.

- (a) Calculate Monthly total.
 (b) Surplus = Monthly income - Monthly total.
 (c) What would be total surplus if monthly income is 1500.
 (d) How much does telephone expense for March differ from quarter average.
 (e) Create a 3D column graph for telephone and utilities. (f) Create a pie chart for monthly expenses.

9. Enter the following data in Excel Sheet

TOTAL REVENUE EARNED FOR SAM'S BOOKSTALL

Publisher name	1997	1998	1999	2000	total
A	Rs.1000.00	Rs.1100.00	Rs.1300.00	Rs.800.00	
B	Rs.1500.00	Rs.700.00	Rs.1000.00	Rs.2000.00	
C	Rs.700.00	Rs.900.00	Rs.1500.00	Rs.600.00	
D	Rs.1200.00	Rs.500.00	Rs.200.00	Rs.1100.00	
E	Rs.800.00	Rs.1000.00	Rs.3000.00	Rs.560.00	

- (a) Compute the total revenue earned.
 (b) Plot the line chart to compare the revenue of all publisher for 4 years.
 (c) Chart Title should be Total Revenue of sam's Bookstall (1997-2000)

(d) Give appropriate categories and value axis title.

10. Generate 25 random numbers between 0 & 100 and find their sum, average and count. How many no. are in range 50-60.

Suggested Readings

18AEC101**ENVIRONMENTAL STUDIES****Semester – I
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Unit I - INTRODUCTION

Environment Definition, Course Objectives and importance, components, Ecosystem Definition, Concept, Course Objectives, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II - NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fire works.

Unit III - BIODIVERSITY AND ITS CONSERVATION

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV - ENVIRONMENTAL POLLUTION

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods, earthquake, cyclone and landslides.

Unit V - SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி - I, தமிழ்

பருவம் II

18ENU201**ENGLISH****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives:**

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes:

- Develop the knowledge of interpersonal skills.
- Establish and maintain social relationships.
- Genres of literature will give moral values of life.
- Develop communication skills in business environment
- Communication skills will get developed.
- Develop to have language competence.

Unit I - PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

Unit II - POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

Unit III - SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

Unit IV - DRAMA

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

Unit V - GRAMMAR AND COMPOSITION

GRAMMAR : 1. Tenses
2. Articles

3. Auxiliaries (Primary and Modal)

4. Tag Questions

Composition:

1. Reading to Comprehend

2. Letter Writing

3. Resume Writing

4. General Essay

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

18ITU201**PROGRAMMING IN JAVA****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

Unit I - INTRODUCTION TO JAVA

Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Course Objectives, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods)

Unit II - ARRAYS, STRINGS AND I/O

Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods, String Buffer Classes. Simple I/O using System.out and the Scanner class, Byte and Character

streams, Reading/Writing from console and files. **Object-Oriented Programming Overview** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

Unit III - INHERITANCE

Inheritance: (Single Level and Multilevel, Method Overriding, Dynamic Method Dispatch, Abstract Classes), Interfaces and Packages, Extending interfaces and packages, Package and Class Visibility, Using Standard Java Packages (util, lang, io, net), Wrapper Classes, Autoboxing/Unboxing, Enumerations and Metadata.

Unit IV - EXCEPTION HANDLING AND DATABASE CONNECTIVITY

Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

Unit V - JAVA APPLET

Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms, Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels, buttons, textfields, layout managers, menus, events and listeners; Graphic objects for drawing figures such as lines, rectangles, ovals, using different fonts. Overview of servlets.

18ITU202**DISCRETE STRUCTURES****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

Unit I

Sets: Introduction, Sets, finite and infinite sets, uncountably infinite sets, functions, relations, properties of binary relations, closure, partial ordering relations, counting, Pigeonhole principle, Permutation and Combination, Mathematical Induction, Principle of inclusion and Exclusion.

Unit II

Growth of Functions: Asymptotic Notations, Summation formulas and properties, Bounding Summations, approximation by Integrals

Unit III

Recurrences: Recurrence relations, generating functions, linear recurrence relations with constant coefficients and their solution, Substitution Method, recurrence trees, Master theorem.

Unit IV

Graph Theory: Basic terminology, models and types, multigraphs and weighted graphs, graph representation, graph isomorphism, connectivity, Euler and Hamiltonian Paths and circuits, Planar graphs, graph coloring, trees, basic terminology and properties of trees, introduction to Spanning trees

Unit V

Propositional Logic: Logical Connectives, Well-formed Formulas, Tautologies, Equivalences, Inference Theory.

Suggested Readings

1. Kenneth Rosen. (2012). Discrete Mathematics and Its Applications (7th ed.). New Delhi: McGraw Hill.
2. Tremblay , J .P. , &Manohar, R. (1997). Discrete Mathematical Structures with Applications to Computer Science. New Delhi: McGraw-Hill Book Company.
3. Coremen, T.H., Leiserson, C.E. , & R. L. Rivest. (2009). Introduction to algorithms, (3rd ed.). New Delhi: Prentice Hall on India.

5. Hein, J. L. (2009). Discrete Structures, Logic, and Computability(3rd ed.). New Delhi: Jones and Bartlett Publishers.
6. Hunter, D.J. (2017). Essentials of Discrete Mathematics. New Delhi: Jones and Bartlett Publishers.

18ITU203**COMPUTER NETWORKS AND INTERNET
TECHNOLOGIES****Semester – II
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To study the basics of Computer Networks.
- To study and compare various Network architectures and fundamental protocols.
- To learn about networking protocol and OSI model.
- To learn various transmission media.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites, to learn the language of HTML, DHTML, XML and PHP.
- To understand the principles of creating an effective web page, to develop skills in analyzing the usability of a website.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Identify the different types of network topologies and protocols, enumerate the layers of the OSI model and TCP/IP.
4. Employ fundamental computer theory to basic programming techniques, gain the skills and project-based experience needed for entry into web design and development careers.
5. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
6. Select and apply markup languages for processing, identifying, and presenting of information in web pages, create and manipulate web media objects using editing software.

Unit I - COMPUTER NETWORKS

Introduction to computer network, data communication, components of data communication, data transmission mode, data communication measurement, LAN, MAN, WAN, wireless LAN, internet, intranet, extranet. **Network Models:** Client/ server network and Peer-to-peer network, OSI, TCP/IP, 8L layers and functionalities.

Unit II - TRANSMISSION MEDIA AND LAN TOPOLOGIES

Introduction, Guided Media: Twisted pair, Coaxial cable, 4L Optical fiber. Unguided media: Microwave, Radio frequency propagation, Satellite. **LAN Topologies:** Ring, bus, star, mesh and tree topologies. Network Devices: NIC, repeaters, hub, bridge, switch, gateway and router.

Unit III - INTERNET TERMS AND APPLICATIONS

Internet Terms: Web page, Home page, website, internet browsers, URL, Hypertext, 2L ISP, Web server, download and upload, online and offline. **Internet Applications:** www, telnet, ftp, e-mail, social networks, search engines, 6L Video Conferencing, e-Commerce, m-Commerce, VOIP, blogs.

Unit IV - INTRODUCTION TO WEB DESIGN

Introduction to hypertext markup language (html) 16L Document type definition, creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames, hosting options and domain name registration. **Customized Features:** Cascading style sheet (css) for text formatting and other manipulations.

Unit V - JAVASCRIPT FUNDAMENTALS

Data types and variables, functions, methods and events, 14L controlling program flow, JavaScript object model, built-in objects and operators.

Suggested Readings

18ITU211	PROGRAMMING IN JAVA - PRACTICAL	Semester – II 4H – 2C
-----------------	--	----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs

1. To find the sum of any number of integers entered as command line arguments
2. To find the factorial of a given number
3. To learn use of single dimensional array by defining the array dynamically.
4. To learn use of length in case of a two dimensional array
5. To convert a decimal to binary number
6. To check if a number is prime or not, by taking the number as input from the keyboard
7. To find the sum of any number of integers interactively, i.e., entering every number from the keyboard, whereas the total number of integers is given as a command line argument
8. Write a program that show working of different functions of String and StringBuffer class like setCharAt(), setLength(), append(), insert(), concat() and equals().
9. Write a program to create a —distance class with methods where distance is computed in terms of feet and inches, how to create objects of a class and to see the use of this pointer
10. Modify the —distance class by creating constructor for assigning values (feet and inches) to the distance object. Create another object and assign second object as reference

variable to another object reference variable. Further create a third object which is a clone of the first object.

11. Write a program to show that during function overloading, if no matching argument is found, then java will apply automatic type conversions(from lower to higher data type)
12. Write a program to show the difference between public and private access specifiers. The program should also show that primitive data types are passed by value and objects are passed by reference and to learn use of final keyword
13. Write a program to show the use of static functions and to pass variable length arguments in a function.
14. Write a program to demonstrate the concept of boxing and unboxing.
15. Create a multi-file program where in one file a string message is taken as input from the user and the function to display the message on the screen is given in another file (make use of Scanner package in this program).
16. Write a program to create a multilevel package and also creates a reusable class to generate Fibonacci series, where the function to generate fibonacci series is given in a different file belonging to the same package.
17. Write a program that creates illustrates different levels of protection in classes/subclasses belonging to same package or different packages
18. Write a program —DivideByZero that takes two numbers a and b as input, computes a/b, and invokes Arithmetic Exception to generate a message when the denominator is zero.
19. Write a program to show the use of nested try statements that emphasizes the sequence of checking for catch handler statements.
20. Write a program to create your own exception types to handle situation specific to your application (Hint: Define a subclass of Exception which itself is a subclass of Throwable).
21. Write a program to demonstrate priorities among multiple threads.
22. Write a program to demonstrate multithread communication by implementing synchronization among threads (Hint: you can implement a simple producer and consumer problem).
23. Write a program to create URL object, create a URLConnection using the openConnection() method and then use it examine the different components of the URL and content.
24. Write a program to implement a simple datagram client and server in which a message that is typed into the server window is sent to the client side where it is displayed.
25. Write a program that creates a Banner and then creates a thread to scrolls the message in the banner from left to right across the applet's window.
26. Write a program to get the URL/location of code (i.e. java code) and document(i.e. html file).
27. Write a program to demonstrate different mouse handling events like mouseClicked(), mouseEntered(), mouseExited(), mousePressed, mouseReleased() and mouseDragged().
28. Write a program to demonstrate different keyboard handling events.
29. Write a program to generate a window without an applet window using main() function.
30. Write a program to demonstrate the use of push buttons.

18ITU212**DISCRETE STRUCTURES - PRACTICAL****Semester – II
3H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis

List of Programs

1. Write a C Program to find the number of subsets of a set contains n elements.
2. Write a C Program to find transitive closure of a relation.
3. Write a C Program to prove
 $1/(1*2) + 1/(2*3) + \dots + 1/(n(n+1)) = n/(n+1)$
4. Write a C Program to to perform the sum = $1 + (1+2) + (1+2+3) + \dots + (1+2+\dots+n)$
5. Write a C program to print Fibonacci series till Nth term using recursion
6. Write a C program in c to calculate factorial of a number using recursion
7. Write a C Program to find a minimum spanning tree using Prim's algorithm
8. Write a C program to find the shortest path with the lower cost in a graph using Dijkstra's Algorithm
9. Write a C Program to construct the truth table for the following formula.
 (i) $P \wedge Q \wedge \neg R$ (ii) $P \wedge \neg Q \wedge R$ (iii) $P \wedge Q \wedge \neg R$

10. Write a C Program to prove De – Morgan’s law.

- To study the basics of Computer Networks.
- To study and compare various Network architectures and fundamental protocols.
- To learn about networking protocol and OSI model.
- To learn various transmission media.
- To understand the topologies of networks, layered architecture (OSI and TCP/IP) and protocol suites, to learn the language of HTML, DHTML, XML and PHP.
- To understand the principles of creating an effective web page, to develop skills in analyzing the usability of a website.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components.
3. Identify the different types of network topologies and protocols, enumerate the layers of the OSI model and TCP/IP.
4. Employ fundamental computer theory to basic programming techniques, gain the skills and project-based experience needed for entry into web design and development careers.
5. Develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies
6. Select and apply markup languages for processing, identifying, and presenting of information in web pages, create and manipulate web media objects using editing software.

List of Programs

1. Create HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
2. Create HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
3. Create HTML document with Table

4. Create Form with Input Type, Select and Text Area in HTML.
5. Create an HTML containing Roll No., student's name and Grades in a tabular form.
6. Create an HTML document (having two frames) which will appear as follows

About Department 1 Department 2 Department 3	This frame would show the contents according to the link clicked by the user on the left frame.
---	---

7. Create an HTML document containing horizontal frames as follows

Department Names (could be along with Logos)
Contents according to the Link clicked

8. Create a website of 6 – 7 pages with different effects as mentioned in above problems.
9. Create HTML documents (having multiple frames) in the following three formats

Frame1
Frame2

Frame1	
Frame2	Frame3

10. Create a form using HTML which has the following types of controls:
 - V. Text Box
 - VI. Option/radio buttons
 - VII. Check boxes
 - VIII. Reset and Submit buttons

List of Practicals using Javascript : Create event driven program for following:

11. Print a table of numbers from 5 to 15 and their squares and cubes using alert.
12. Print the largest of three numbers. 81
13. Find the factorial of a number n.
14. Enter a list of positive numbers terminated by Zero. Find the sum and average of

these numbers.

15. A person deposits Rs 1000 in a fixed account yielding 5% interest. Compute the amount in the account at the end of each year for n years.
16. Read n numbers. Count the number of negative numbers, positive numbers and zeros in the list.

18ITU301**DATA STRUCTURES****Semester – III
4H – 4C**

**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours**

Course Objectives (CO)

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

Unit I

Arrays-Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation).Stacks Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack

Unit II

Linked Lists Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular, representation of Stack in Lists; Self Organizing Lists; Skip Lists Queues, Array and Linked representation of Queue, De-queue, Priority Queues

Unit III

Trees - Introduction to Tree as a data structure; Binary Trees (Insertion, Deletion , Recursive and Iterative Traversals on Binary Search Trees); Threaded Binary Trees (Insertion, Deletion, Traversals); Height-Balanced Trees (Various operations on AVL Trees).

Unit IV

Searching and Sorting,Linear Search, Binary Search, Comparison of Linear and Binary Search, Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

Unit V

Hashing - Introduction to Hashing, Deleting from Hash Table, Efficiency of Rehash Methods, Hash Table Reordering, Resolving collision by Open Addressing, Coalesced Hashing, Separate Chaining, Dynamic and Extendible Hashing, Choosing a Hash Function, Perfect Hashing, Function.

Semester – III**18ITU302****OPERATING SYSTEMS****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To understand the structure and organization of the file system

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

Unit I

Introduction to Operating System: Basic OS Functions-Resource Abstraction-Types of Operating Systems–Multiprogramming Systems-Batch Systems-Time Sharing Systems-Operating Systems for Personal Computers & Workstations-Process Control & Real Time Systems.

Unit II

Operating System Organization: Processor and user modes-Kernels-System Calls and System Programs. **Process Management:** System view of the process and resources- Process abstraction-Process hierarchy-Threads-Threading issues-Thread libraries-Process Scheduling-Non pre-emptive and Preemptive scheduling algorithms-Concurrent and processes-Critical Section-Semaphores-Methods for inter-process communication- Deadlocks.

Unit III

Memory Management: Physical and Virtual address space-Memory Allocation strategies – Fixed and Variable partitions-Paging-Segmentation-Virtual memory.

Unit IV

File and I/O Management: Directory structure-File operations-File Allocation methods- Device management.

Unit V

Protection and Security: Policy mechanism-Authentication-Internal aITUess Authorization.

18ITU303	RELATIONAL DATABASE MANAGEMENT SYSTEMS	Semester – III 4H – 4C
-----------------	---	---

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Outcomes (COs)

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

Unit I

DBMS Definition, Characteristics of DBMS ,Application and advantages of DBMS, Instances , Schemas and Database States, Three Levels of Architecture , Data Independence, DBMS languages, Data Dictionary, Database Users, Data Administrators.

Unit II

Data Models, types and their comparison, Entity Relationship Model, Entity Types, Entity Sets, Attributes and its types, Keys, E-R Diagram, Data Integrity RDBMS –Concept, Components and Codd's rules.

Unit III

Relational Algebra (selection, projection, union, intersection, Cartesian product, Different types of join like theta join, equi-join, natural join, outer join)

Functional Dependencies, Good & Bad Decomposition, Anomalies as a database: A consequences of bad design, Normalization: 1NF, 2NF, 3NF, BCNF, 4NF 5NF.

Unit IV

Introduction to SQL: DDL, DML, and DCL statements, Creating Tables, Adding Constraints, Altering Tables, Update, Insert, Delete & various Form of SELECT- Simple, Using Special Operators for Data Access. Aggregate functions, Joining Multiple Tables (Equi Joins),Joining a Table to itself (self Joins) Functions.

Introduction to PL/SQL: Declaration section – executable command section : conditional logic, loops, CASE statements –

Unit V

Exception handling section: predefined and user defined exceptions. Triggers: definition – types: row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions: Local and global – procedures vs functions – stored procedures, functions – create procedure syntax - create function syntax – calling procedures, functions. Replacing and dropping procedures, functions. Package header – package body – calling package members - Replacing and dropping package.

Semester – III**18ITU304A****ANDROID PROGRAMMING****3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

Unit I

Introduction: History of Android, Introduction to Android Operating Systems, Android Development Tools, Android Architecture.

Unit II

Overview of object oriented programming using Java: OOPs Concepts: Inheritance, Polymorphism, Interfaces, Abstract class, Threads, Overloading and Overriding, Java Virtual Machine.

Unit III

Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project– Hello Word, run on emulator, Deploy it on USB-connected Android device.

Unit IV

User Interface Architecture: Application context, intents, Activity life cycle, multiple screen sizes.

User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes),Images, Menu, Dialog.

Unit V

Database: Understanding of SQLite database, connecting with the database.

18ITU304B	PROGRAMMING IN PYTHON	Semester – III
		3H – 3C

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To Learn Syntax and Semantics and create Functions in Python.
- To Handle Strings and Files in Python.
- To Understand Lists, Dictionaries in Python.
- To Implement Object Oriented Programming concepts in Python
- To Build GUI applications
- To Write Python functions to facilitate code reuse.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Develop algorithmic solutions to simple computational problems
2. Read, write, execute by hand simple Python programs.
3. Structure simple Python programs for solving problems.
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

Unit I

Algorithmic Problem Solving: Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

Unit II

Data, Expressions, Statements : Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

Unit III

Control Flow, Functions: Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

Unit IV

Lists, Tuples, Dictionaries : Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

Unit V

Files, Modules, Packages: Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

Semester – III**18ITU311****DATA STRUCTURES - PRACTICAL****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To teach efficient storage mechanisms of data for an easy access.
- To design and implementation of various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structures.
- To teach the concept of protection and management of data.
- To improve the logical ability

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Choose appropriate data structure as applied to specified problem definition.
2. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Identify different parameters to analyze the performance of an algorithm.
4. Apply concepts learned in various domains like DBMS, compiler construction etc.
5. Use linear and non-linear data structures like stacks, queues, linked list etc.
6. Illustrate various technique to for searching, Sorting and hashing

List of Programs

1. Write a program to search an element from a list. Give user the option to perform Linear or Binary search. Use Template functions.
2. WAP using templates to sort a list of elements. Give user the option to perform sorting using Insertion sort, Bubble sort or Selection sort.
3. Implement Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list and concatenate two linked lists (include a function and also overload operator +).
4. Implement Doubly Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
5. Implement Circular Linked List using templates. Include functions for insertion, deletion and search of a number, reverse the list.
6. Perform Stack operations using Linked List implementation.
7. Perform Stack operations using Array implementation. Use Templates.

8. Perform Queues operations using Circular Array implementation. Use Templates.
9. Create and perform different operations on Double-ended Queues using Linked List implementation.
10. WAP to scan a polynomial using linked list and add two polynomial.
11. WAP to calculate factorial and to compute the factors of a given no. (i)using recursion, (ii) using iteration
12. (ii) WAP to display fibonacci series (i)using recursion, (ii) using iteration
13. WAP to calculate GCD of 2 number (i) with recursion (ii) without recursion
14. WAP to create a Binary Search Tree and include following operations in tree: (a) Insertion (Recursive and Iterative Implementation)
(b) Deletion by copying
(c) Deletion by Merging
(d) Search a no. in BST
(e) Display its preorder, postorder and inorder traversals Recursively
(f) Display its preorder, postorder and inorder traversals Iteratively
(g) Display its level-by-level traversals
(h) Count the non-leaf nodes and leaf nodes
(i) Display height of tree
(j) Create a mirror image of tree
(k) Check whether two BSTs are equal or not
15. WAP to convert the Sparse Matrix into non-zero form and vice-versa.
16. WAP to reverse the order of the elements in the stack using additional stack.
17. WAP to reverse the order of the elements in the stack using additional Queue.
18. WAP to implement Diagonal Matrix using one-dimensional array.
19. WAP to implement Lower Triangular Matrix using one-dimensional array.
20. WAP to implement Upper Triangular Matrix using one-dimensional array.
21. WAP to implement Symmetric Matrix using one-dimensional array.
22. WAP to create a Threaded Binary Tree as per inorder traversal, and implement operations like finding the successor / predecessor of an element, insert an element, inorder traversal.
23. WAP to implement various operations on AVL Tree.

18ITU312**OPERATING SYSTEMS - PRACTICAL****Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC. To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies
- To provide necessary skills for developing and debugging programs in UNIX environment.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Describe the important computer system resources and the
2. Perform the role of operating system in their management policies and algorithms.
3. Understand the process management policies and scheduling of processes by CPU
4. Evaluate the requirement for process synchronization and coordination handled by operating system
5. Describe and analyze the memory management and its allocation policies.
6. Identify, use and evaluate the storage management policies with respect to different storage management technologies, identify the need to create the special purpose operating system.

List of Programs

1. Write a program (using fork() and/or exec() commands) where parent and child execute:
 - a) same program, same code.
 - b) same program, different code.
 - c) before terminating, the parent waits for the child to finish its task.
2. Write a program to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behaviour of Linux kernel including information on configured memory, amount of free and used memory. (memory information)

4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write program to implement FCFS scheduling algorithm.
7. Write program to implement Round Robin scheduling algorithm.
8. Write program to implement SJF scheduling algorithm.
9. Write program to implement non-preemptive priority based scheduling algorithm.
10. Write program to implement preemptive priority based scheduling algorithm.
11. Write program to implement SRJF scheduling algorithm.
12. Write program to calculate sum of n numbers using thread library.
13. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

18ITU313**RDBMS - PRACTICAL****Semester – III
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language.
- To enhance knowledge to advanced SQL topics like embedded SQL, procedures connectivity through JDBC.
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.
- To provide an overview of physical design of a database system, by discussing Database indexing techniques and storage techniques.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Explain the features of database management systems and Relational database.
2. Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
4. Retrieve any type of information from a data base by formulating complex queries in SQL.
5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
6. Build indexing mechanisms for efficient retrieval of information from a database

List of Programs

1. Create a table with following fields:

Employee table:

Field name	Constraint	Type	Size
Employee_no	Primary key	Character	6
Employee_name		Character	30
Address		Character	25
Designation		Character	15
Dob		Date	
Gender	Check	Character	1
Doj		Date	
Salary		Number	10,2

Queries:

- a) Display name of the

employees whose salary is greater than “10,000”.

- b) Display the details of employees in ascending order according to Employee Code
- c) Display the details of employees earning the highest salary
- d) Display the names of employees who earn more than “Ravi”.

2. Create table named Student with following fields and insert the values:

Field name	field type	field size
Student Name	Character	15
Gender	Character	6
Roll No.	Character	10
Department Name	Character	15
Address	Character	25
Percentage of marks	Number	4,2

Queries:

- a) Calculate the average mark percentage of the students
- b) Display the names of the students whose percentage marks are greater than 80%
- c) Display the details of the students who got the highest percentage of marks
- d) Display the details of the students whose mark percentage between 50 and 70
- e) Display the details of the students whose mark percentage is greater than the mark percentage of Roll No=12CA01

3. Create a table with following fields:

Staff table:

Field name	Constraint	Type	Size
Staff_no	Primary key	Character	6
Staff_name		Character	30
Dob		Date	
Dept_code	Foreign key	Character	4
Designation		Character	15
Basic		Number	7,2

Department table:

Field name	constraint	Type	Size
Dept_code	Primary key	Character	4
Dept_name		Character	30

Execute the following queries:

1. To list the staff who joined 2 years back.
2. To list the staff in computer science dept.
3. To list the staff_name and the dept_name in which he/she works.
4. To list the maximum and minimum salary in each dept.
5. To list the dept along with the total amount spent on salary
6. To list the name of the employees who draw the salary more than the average salary.

4. Create a table with the following fields:

Book table:

Field name	Constraint	Type	Size
Access_no	Primary key	Character	6
Title		Character	30
Author		Character	30
Publisher		Character	30
Subject		Character	10
Price		Number	6,2

Execute the following queries:

1. The title of C and C++ books.
 2. The books written by a particular author.
 3. The books which costs between Rs.300/- and Rs.500/-
 4. The number of books available in each subject.
 5. The books in the decreasing order of the cost.
5. Create two tables course and batch with following fields
 COURSE: coursecodeno number(5), course name varchar(20), syllabus varchar(20)
 BATCH: bcode number(5), coursecode number(5), starting_date date, duration number(3), coursefee number(10,2)

Perform the following queries

- Insert the details for course and batch tables with 10 records
- Show the description of the two tables
- Select all the fields from course & batch tables
- Select all the fields from course & batch tables where coursecode=10
- Select all the fields from batch table where starting date=march 10th
- Select batch code from batch table where net income>50000
- Select coursename, batch code & starting date from batch and course tables where course code of batch table and course code of course table are equal
- Select a syllabus from course wher coursecode=5

6. Create a table with the following fields:

Account table:

Field name	Constraint	Type	Size
Acc_no	Primary key	Number	4
Cust_name		Varchar2	30
Branch_name		Varchar2	30
Cust_city		Varchar2	30

Borrower table:

Field name	Constraint	Type	Size
Acc_no	Foreign key	Number	30
Branch_name		Varchar2	30
Amount		Number	8,2

Write queries to perform different types of join.

7. Write the PL/SQL program to find the factorial and fibonacci series of given numbers.

8.(i) Write the PL/SQL program to check whether the string is Palindrome.

- (ii) Write the PL/SQL program to reverse a number
 (iii) Write the PL/SQL program to check whether the number is Armstrong

9. Write a PL/SQL block to create and handle user defined exception
 clientmaster

Field name	Constraint	Type	Size
Client_id		Number	6
Client_name		Varchar2	30
Address		Varchar2	50
Phone		Number	10
Balance		Number	10,2

10. Create table with following fields:

Product table:

Field name	Constraint	Type	Size
Product_code	Primary key	Varchar2	7
Product_name		Varchar2	30
Price		Number	6,2
Quantity		Number	4

Vendor table:

Field name	Constraint	Type	Size
Vendor_name		Varchar2	30
Vendor address		Varchar2	30
Product_code	Foreign Key	Varchar2	7

Create a trigger to fire when the Record is deleted and inserted.

11. Write a PL/SQL trigger to update the records while deleting the one record in another table.

Voters_master:

Field name	Constraint	Type	Size
Voterid	Primary key	Number	5
Name		Varchar2	30
Ward_no	Primary Key	Number	4
Dob		Date	
Address		Varchar2	150

New_list

Field name	Constraint	Type	Size
Voterid		Number	5
Ward_no		Number	4
Name		Varchar2	30
Description		Character	50

12. Create a table to store the salary details of the employees in a company. Declare the cursor id to contain empno, employee name and net salary. Use cursor to update the employee details.

Salary:

Field name	Constraint	Type	Size
Emp_no	Primary key	Number	4
Emp_name		Varchar2	30
Designation		Varchar2	25
Dept		Varchar2	30
Basic		Number	5

13. Create a table stock contains the itemcode varchar2(10), itemname varchar2(50), current_stock number(5), date_of_last_purchase date. Write a stored procedure to seek for an item using itemcode and delete it, if the date of last purchase is before 1 year from the current date. If not, update the current stock.

14. Create a table to contain phone_number, user_name, address. Write a function to search for address using phone_number.

Semester – III

18ITU314A

ANDROID PROGRAMMING - PRACTICAL

3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60**Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application.
- To explore Mobile security issues.

Course Outcomes (COs)

Upon completion of this course, the students will able to

1. Describe Android platform, Architecture and features.
2. Design User Interface and develop activity for Android App.
3. Use Internet, Broadcast receivers and Internet services in Android App.
4. Design and implement Database Application and Content providers.
5. Use multimedia, camera and Location based services in Android App.
6. Discuss various security issues in Android platform

List of Programs

1. Create —Hello World application. That will display —Hello World in the middle of the screen in the emulator. Also display —Hello World in the middle of the screen in the Android Phone.
2. Create an application with login module. (Check username and password).
3. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
4. Create a menu with 5 options and selected option should appear in text box.
5. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
6. Create an application with three option buttons, on selecting a button colour of the screen will change.
7. Create and Login application as above. On successful login, pop up the message.
8. Create an application to Create, Insert, update, Delete and retrieve operation on the database.

Semester – III**18ITU314B****PROGRAMMING IN PYTHON- PRACTICAL****3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives (CO)

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Develop algorithmic solutions to simple computational problems
2. Read, write, execute by hand simple Python programs.
3. Structure simple Python programs for solving problems.
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.
6. Read and write data from/to files in Python Programs.

List of Programs

1. Compute the GCD of two numbers.
2. WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria :
 - Grade A: Percentage ≥ 80
 - Grade B: Percentage ≥ 70 and < 80
 - Grade C: Percentage ≥ 60 and < 70
 - Grade D: Percentage ≥ 40 and < 60
 - Grade E: Percentage < 40
3. WAP to display the first n terms of Fibonacci series.
4. WAP to find factorial of the given number.
5. Find the square root of a number (Newton's method)
6. WAP to find the Exponentiation (power of a number)
7. Find the maximum of a list of numbers

8. WAP to perform Linear search
9. WAP to perform Binary search
10. WAP to perform Selection sort
11. WAP to find first n prime numbers
12. WAP to calculate the Multiply matrices
13. Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.
14. Write a program using file operations.

Suggested Readings

18ITU401 DATA COMMUNICATION AND NETWORKS**4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- To study Session layer design issues, Transport layer services, and protocols.
- To gain core knowledge of Network layer routing protocols and IP addressing.
- To study data link layer concepts, design issues, and protocols.
- To read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course Outcomes (COs)

1. Describe the functions of each layer in OSI and TCP/IP model.
2. Explain the functions of Application layer and Presentation layer paradigms and Protocols.
3. Describe the Session layer design issues and Transport layer services.
4. Classify the routing protocols and analyze how to assign the IP addresses for the given network.
5. Describe the functions of data link layer and explain the protocols.
6. Explain the types of transmission media with real time applications

Unit I

Introduction to Data Communication: Network, Protocols & standards and standards organizations - Line Configuration; layered network architecture; overview of OSI reference model; overview of TCP/IP protocol suite. **Data Communication Fundamentals and Techniques:** Analog and digital signal; data-rate limits; digital to digital line encoding schemes; pulse code modulation; parallel and serial transmission;

Unit II

(cont..)digital to analog modulation-; multiplexing techniques- FDM, TDM; transmission media.

Networks Switching Techniques and Access mechanisms: Circuit switching; packet switching - connectionless datagram switching, connection-oriented virtual circuit switching; dial-up modems; digital subscriber line; cable TV for data transfer.

Unit III

Data Link Layer Functions and Protocol: Error detection and error correction techniques; data-link control- framing and flow control; error recovery protocols- stop and wait ARQ, go-back-n ARQ; Point to Point Protocol on Internet.

Unit IV

Multiple Access Protocol and Networks: CSMA/CD protocols; Ethernet LANs; connecting LAN and back-bone networks- repeaters, hubs, switches, bridges, router and gateways; **Networks Layer Functions and Protocols:** Routing; routing algorithms; network layer protocol of Internet- IP protocol, Internet control protocols.

Unit V

Transport Layer Functions and Protocols: Transport services- error and flow control, Connection establishment and release- three way handshake; **Overview of Application layer protocol:** Overview of DNS protocol; overview of WWW & HTTP protocol.

18ITU402**SOFTWARE ENGINEERING****Semester – IV
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course Objectives and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

Unit I

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella Activities, Process Models, Capability Maturity Model Integration (CMMI).

Unit II

Requirement Analysis: Initiating Requirement Engineering Process- Requirement Analysis and Modeling Techniques- Flow Oriented Modeling- Need for SRS- Characteristics and Components of SRS- Software Project Management: Estimation in Project Planning Process, Project Scheduling.

Unit III

Risk Management: Software Risks, Risk Identification Risk Projection and Risk Refinement, RMMM plan, **Quality Management-** Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects

Unit IV

Design Engineering: Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design

Unit V

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System testing Black-Box Testing, White-Box Testing and their type, Basis Path Testing

18ITU403**PROGRAMMING IN PERL****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

1. To experience learning a programming language "on your own" as is commonly the case in industry.
2. To understand the syntax and semantics of the Perl language and their similarity and differences from Java
3. To understand how to develop and implement various types of programs in the Perl language
4. To understand various forms of data representation and structures supported by the Perl language
5. To understand the appropriate applications of the Perl language
6. To recognize similarities and common characteristics of programming languages.

Course Outcome (COs)

After the completion of this course, a successful student will be able to:

1. Focus on new type of programming methods
2. Analyze the ease of the language with other languages
3. Familiar with implementation of CGI
4. Interpret the mathematical results in physical and other forms.
5. Identify, formulate and solve the Linear Differential Equations.
6. Classify and solve the contour integration of complex functions.

Unit I

Introduction: Programming Languages – Why Perl a great Language? – ASCII & Unicode – Types of Data – Operators – Variables – Interpolation – List, Arrays & Hashes.

Unit- II

Control Structures, Regular Expression and file: Loops and Decisions: Deciding if – Skip few – Looping While – Controlling loop flow – Regular Expression: Patterns – Working with regexp – Advanced topics. File and Data: File Handles – Writing to files – opening pipes – directories

Unit- III

References and Subroutine: Life Cycle – Reference with complex Data Structure. Subroutine: Understanding subroutine – Subroutine for calculations – Course Objectives in functions – Passing Complex Parameters – References to subroutine

Unit- IV

Modules & CGI: Modules: Types – Package hierarchy – Exporters – Standard modules. Object oriented Perl: Rolling your Own – Inheritance: Introduction to CGI: Writing CGI Scripts – Writing Interactive CGI Scripts – Debugging CGI Scripts

Unit- V

Networking and IPC: Networking: Obtaining Network Information – The Socket module – Socket Communication – Using IO Socket. IPC: Process – Signals – Pipes – Executing Additional Process

Suggested Readings

18ITU404A**SCRIPTING LANGUAGE****Semester – IV
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To classify the various Scripting Languages
- To learn client and server side scripting languages (Java script and AJAX, JSP)
- To create simple Web pages and provide client side validation.
- To create dynamic web pages using server side scripting
- To master the theory behind scripting and its relationship to classic programming
- To gain some fluency programming in JavaScript, AJAX, and related languages, to design and implement one's own scripting language.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Define the CSS with its types and use them to provide the styles to the web pages at various levels.
 2. Develop the modern web pages using the HTML and CSS features with different layouts as per need of applications.
 3. Use the JavaScript to develop the dynamic web pages.
 4. Use server side scripting with JSP to generate the web pages dynamically.
 5. Gain knowledge of client side scripting, validation of forms and AJAX programming.
- Create applications by using the concepts like JSP and Servlet

Unit I

Introduction To VB script: Introduction- Embedding VBScript Code in an HTML Document
Comments-Variables- Operators-Procedures- Conditional Statements- Looping Constructs -
Objects and VBScript – Cookies.

Unit II

Introduction To Java Script : JavaScript- Introduction, simple programming, Obtaining User Input with prompt Dialogs, Operators (arithmetic, Decision making, assignment, logical, increment and decrement. Functions - program modules in JavaScript, programmer defined

functions, function definition, Random-number generator, scope rules, global functions, recursion.

Unit III

Functions, Arrays And Objects : JavaScript: Arrays, Objects - Math Object, String Object, Date Object, Boolean & Number Object, document and window Objects. Handling event using java script

Unit IV

Client Side Technologies : AJAX– Evolution of AJAX – AJAX Framework – Web applications with AJAX – AJAX with PHP – AJAX with Databases- Ajax Client Server Architecture-XML Http Request Object-Call Back Methods.

Unit V

Server Side Scripting- JSP : Servlet Overview – Life cycle of a Servlet – Handling HTTP request and response – Using Cookies – Session tracking – Java Server Pages – Anatomy of JSP – Implicit JSP Objects – JDBC – Java Beans – Advantages – Enterprise Java Beans – EJB Architecture – Types of Beans – EJB Transactions

Semester – IV**18ITU404B****XML PROGRAMMING****3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Int : 40 Ext : 60 Total: 100****End Semester Exam : 3 Hours****Course Objectives (CO)**

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

Unit I

Introduction: Understanding Mark-up Languages, Introduction to XML and its Goals.

Unit II

XML Basics: XML Structure and Syntax, Document classes and Rules.

Unit III

Other XML Concepts: Scripting XML

Unit IV

Other XML Concepts: XML as Data, Linking with XML

Unit V

XML with Style: XSL –Style Sheet Basics, XSL basics, XSL style sheets.

2. Analyse the ease of the language with other languages
3. Familiar with implementation of CGI
4. Interpret the mathematical results in physical and other forms.
5. Identify, formulate and solve the Linear Differential Equations.
6. Classify and solve the contour integration of complex functions.

List of Programs

1. Write a program that converts
 - a) Hexadecimal to Decimal
 - b) Octal to Decimal
2. Write a program which gets the decimal value less than 256 and convert it to binary using only bitwise operator.
3. Write a program which stores the phone number in a hash and retrieve them by using the person's name.

4. Write a program that displays the prime number between 2 to the given number 'n'.
5. Write a program that
 - a) Counts the number of 'a' in a given paragraph
 - b) Replace multiple white space with single white space
6. Write a program that sorts the given words in alphabetical order using regular expression. The list of words must be separated with new line characters and the program must use bubble sort.
7. Write a program that can search a specified string within all the files in a given directory.
8. Write a program that sends an array of integers to a subroutine that stores the odd numbers and even numbers in different arrays and returns the sum of even numbers only.
9. Write a program that collects the integers and sends only the even number as an array to a subroutine that displays the biggest of the received even numbers.
10. Write a program that displays the basic network information of a system
11. Write a program that executes additional process during IPC.
12. Write a program that gets a set of words from the user and display the words by avoiding duplicate words.

Semester – IV**18ITU414A****SCRIPTING LANGUAGE - PRACTICAL****3H – 1C**

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To classify the various Scripting Languages
- To learn client and server side scripting languages (Java script and AJAX, JSP)
- To create simple Web pages and provide client side validation.
- To create dynamic web pages using server side scripting
- To master the theory behind scripting and its relationship to classic programming
- To gain some fluency programming in JavaScript, AJAX, and related languages, to design and implement one's own scripting language.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Define the CSS with its types and use them to provide the styles to the web pages at various levels.
2. Develop the modern web pages using the HTML and CSS features with different layouts as per need of applications.
3. Use the JavaScript to develop the dynamic web pages.
4. Use server side scripting with JSP to generate the web pages dynamically.
5. Gain knowledge of client side scripting, validation of forms and AJAX programming.
6. Create applications by using the concepts like JSP and Servlet.

List of Programs

1. Create Application form using various text formats.
2. Create UNIVERSITY website using HTML tags.
3. Create a table using HTML.
4. Display your information using form controls.
5. Create style sheets with the style elements.

6. Create calculator format using java script.
7. Create an array of 10 numbers and sort them using javascript.
8. String manipulation using string object.
9. Add a simple script using Click event.
10. Create Employee details using schemas.
11. Create our department details using CSS.
12. Create Payroll system using XSL.
13. Changing image using mouseover event.
14. Create a website for a newspaper.
15. Design and apply your application form for course enrolment using Javascript.

Suggested Readings

Semester – IV**18ITU414B****XML PROGRAMMING - PRACTICAL****3H – 1C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Int : 40 Ext : 60****Total: 100****Course Objectives (CO)**

- To expose the students to the XML family of technologies, and the latest W3C and WS-I XML standards.
- To understand the various applications of XML in the areas of information representation, Presentation Oriented Publishing, Message Oriented computing, and Application Configuration.
- To expose the students to the combined use of XML and Java technologies
- To support the development of modern applications targeted to the evolving spectrum of distributed and decentralized enterprise platforms.
- To expose the students to the advanced XML-enabled capabilities of the Java 2 development environment for Enterprise Applications.
- To demonstrate the application of XML in distributed communications enabling, enterprise systems assurance, web enabling, application enabling, and enterprise data enabling.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Create a new webpage
2. Understand the fundamental features of web applications.
3. Understand the objects and components needed for a web designing.
4. Understand the current industry support for XML technologies.
5. Sharpen the students' practical development skills via focused assignments and projects.
6. Understand what is XML and how to parse and use XML Data

List of Programs**1. Information Structure**

In this exercise, student will practice identifying the structure of an information object. For the sample document provided below: Label the information structures you see, including containing structures. 1. Draw a tree representation of the structure.

**2. Deconstructing an XML Document**

In this exercise, student will practice identifying the explicit structure within an XML document. In a sense, this is the reverse of what you did in Exercise #1. For the sample XML markup below, create a document-like representation (or a simple drawing) for the content contained within the XML tags:

```
<book>
<coverInfo>
<title>The XML Handbook</title>
<author>Charles F. Goldfarb</author>
<author>Paul Prescod</author>
<edition>Second</edition>
<description>The definitive XML resource: applications, products, and technologies. Revised
and expanded—over 600 new pages. </description>
</coverInfo> </book>
```

3. Creating XML Markup

In this exercise, create some XML markup based on the tree representation from Exercise #1 above, and the content from the original sample document.

4. Well-Formedness

This exercise checks your understanding of the constraints for well-formedness. Are the following document instances well-formed? Explain any NO answers.

```
<list><title>The first list</title><item>An item</list>
<item>An item</item><item>Another item</item>
<para>Bathing a cat is a <emph>relatively</emph> easy task as long as the cat is
willing.</para>
<bibl><title>How to Bathe a Cat<author></title>Merlin Bauer<author></bibl>
```

5. Well Formedness

This exercise is a bit more challenging than the previous example. Here is a fragment of an XML document instance. Identify all the places where it fails to match the constraints for well-formedness.

```
<PROCEDURE><TITLE>How to Bathe a Cat</TITLE>
<OVERVIEW> This procedure tells you how to bathe a cat. <WARNING></OVERVIEW>Cats
don't like to take baths. You could get hurt doing this. Be sure to obtain all the required
protective gear before you start. </WARNING><EQUIPEMENT><ITEM>Hockey Mask
<ITEM>Padded Full-body Kevlar Armor</ITEM><ITEM>Tub full of warm
water</ITEM><ITEM>Towels </ITEM><ITEM>First Aid kit</ITEM><ITEM>Cat
Shampoo</ITEM> <EQUIPMENT><INSTRUCTIONS> <STEP> Locate the cat, who by now
is hiding under the bed.</STEP><STEP>Place the cat in the tub of water.</STEP>
<ITEM>Using the First Aid kit, repair the damage to your head and arms.</STEP>
<STEP>Place the cat back in the tub and hold it down.</STEP> <STEP>Wash it really fast, then
make an effort to dry it with the towels.</STEP> <STEP>Decide not to do this again. </STEP>
</INSTRUCTIONS>
```

18ITU501A**ARTIFICIAL INTELLIGENCE****Semester – V**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To understand the various characteristics of Intelligent agents
- To learn about the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing software agents
- To know about the various applications of AI.
- Understand the various searching techniques, constraint satisfaction problem and example problems- game playing techniques.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Identify problems that are amenable to solution by AI methods.
2. Identify appropriate AI methods to solve a given problem.
3. Formalize a given problem in the language/framework of different AI methods.
4. Implement basic AI algorithms.
5. Design and carry out an empirical evaluation of different algorithms on a problem formalization, and state the conclusions that the evaluation supports.
6. Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems

Unit I - INTRODUCTION TO AI AND PRODUCTION SYSTEMS

Introduction to AI-Problem formulation, Problem Definition -Production systems, Control strategies, Search strategies. Problem characteristics, Production system characteristics - Specialized production system- Problem solving methods – Problem graphs, Matching, Indexing and Heuristic functions -Hill Climbing-Depth first and Breadth first, Constraints satisfaction – Related algorithms, Measure of performance and analysis of search algorithms.

Unit II - REPRESENTATION OF KNOWLEDGE

Game playing – Knowledge representation, Knowledge representation using Predicate logic, Introduction to predicate calculus, Resolution, Use of predicate calculus, Knowledge representation using other logic-Structured representation of knowledge.

Unit III - KNOWLEDGE INFERENCE

Knowledge representation -Production based system, Frame based system. Inference – Backward chaining, Forward chaining, Rule value approach, Fuzzy reasoning – Certainty factors, Bayesian Theory-Bayesian Network-Dempster – Shafer theory.

Unit IV- PLANNING AND MACHINE LEARNING

Basic plan generation systems – Strips -Advanced plan generation systems – K strips -Strategic explanations -Why, Why not and how explanations. Learning- Machine learning, adaptive

Learning.

Unit V - EXPERT SYSTEMS

Expert systems – Architecture of expert systems, Roles of expert systems – Knowledge Acquisition – Meta knowledge, Heuristics. Typical expert systems – MYCIN, DART, XOON, Expert systems shells.

18ITU501B**SOFTWARE TESTING****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours****Course Objectives (CO)**

- To learn the basic software debugging methods.
- To understand the White box and Black Box testing methods and techniques
- To design test plans.
- To discuss various software testing issues and solutions in software unit test, integration and system testing
- To learn the different testing tools (familiar with open source tools)
- To understand Quality Assurance models.

Course Outcomes (COs)

After completion of this course, the students will be able to

1. Investigate the reason for bugs and analyze the principles in software testing to prevent and remove bugs.
2. Implement various test processes for quality improvement
3. Design test planning.
4. Manage the test process
5. Apply the software testing techniques in commercial environment
6. Use practical knowledge of a variety of ways to test software and an understanding of some of the tradeoffs between testing techniques.

Unit I Testing Fundamentals

Examining the Specification: Getting started – Performing a high-level review of the specification – Low-level specification test techniques. Testing the software with blinders on: Dynamic Black-Box Testing- Test-to-Pass and Test-to-Fail- Equivalence Partitioning- Data testing – State testing – Other Black-box test techniques.

Unit II Examining the code

Static White-Box testing- Formal reviews – Coding Standards and Guidelines- Generic Code Review Checklist. Testing the software with X-Ray glasses: Dynamic White-Box testing- Dynamic White-Box testing versus Debugging-Testing the Pieces- Data Coverage- Code Coverage.

Flowgraphs and Path Testing

Path-testing Basics – Predicates, Path Predicates and Achievable Paths-Path sensitizing-Path Instrumentation-Implementation and Application of Path Testing

Unit III Transaction-Flow Testing and Data-Flow Testing

Transaction Flows-Transaction Flow Testing Techniques. Data-Flow Testing Basics-Data-Flow Testing Strategies-Application, Tools, Effectiveness

Unit IV Domain Testing

Domains and Paths-Domain Testing-Domains and Interface Testing-Domains and Testability

Unit V Logic-Based Testing and State Graphs

Motivational Overview-Decision Tables-Path Expressions Again-KV Charts-Specifications
State Graphs-Good State Graphs and Bad-State Testing

Suggested Readings

18ITU502A**. NET PROGRAMMING****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities. Translate general requirements into data-related solutions using database concepts

Unit I

Introduction to .NET: .NET framework features & architecture, CLR, common Type system, MSIL, Assemblies and class libraries. Introduction to visual studio, Project basics, types of project in .Net, IDE of VB .Net – Menu bar, Tool bar, Solution Explorer, Toolbox, Properties Window, Form Designer, Output Window, Object browser. The environment: Editor tab, format tab, general tab, docking tab. Visual development & event driven programming – Methods and events.

Unit II

The VB .Net Language: The VB .Net Language – Variables- declaring variables, Data type of variables, forcing variables declarations, Course Objectives & lifetime of a variable, constants, arrays, types of arrays, control array, Structure programming – Modularity – Information hiding – abstraction – events – subroutines and functions – message box – input box. Control flow statement: conditional statement, loop statement.

Unit III

Working with WPF: Introduction: Understanding Windows Graphics – WPF: A Higher Level API – The architecture of WPF. XAML: Basics, properties and events in XAML – loading and compiling – Layout. Classic controls: The Control class – content controls – text controls – list controls – Range based controls.

Unit IV

Objects and Collections: Understanding objects, properties, methods. Understanding collections. Files: Introduction – classification of files – processing files – handling files and folder using class – directory class – file class.

Unit V

Database programming with ADO .Net: overview of ADO, from ADO to ADO .Net, accessing data using server explorer. Creating connection, command, data adapter and data set with OLEDB and SQLDB. Display data on data bound controls, display data on a data grid. Generate reports using Crystal Report Viewer.

Semester – V**18ITU502B****NETWORK PROGRAMMING****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. reate applications using techniques such as multiplexing, forking, multithreading

Unit I

Transport Layer Protocols: TCP, UDP, SCTP protocol.

Unit II

Socket Programming: Socket Introduction; TCP Sockets; TCP Client/Server Example ; signal handling

Unit III

I/O multiplexing using sockets; Socket Options; UDP Sockets; UDP client server example; Address lookup using sockets.

Unit IV

Network Applications: Remote logging; Email; WWW and HTTP.

Unit V

LAN administration: Linux and TCP/IP networking: Network Management and Debugging.

Suggested Readings

4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

Semester – V**18ITU503A****DATA MINING****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

Unit I

Overview: Predictive and descriptive data mining techniques

Unit II

Supervised and unsupervised learning techniques

Unit III

Process of knowledge discovery in databases, pre-processing methods

Unit IV

Data Mining Techniques: Association Rule Mining, classification and regression techniques, clustering

Unit V

Scalability and data management issues in data mining algorithms, measures of interestingness.

Suggested Readings

18ITU503B**MACHINE LEARNING****Semester – V
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To develop an appreciation for what is involved in learning from data.
- To understand a wide variety of learning algorithms.
- To understand how to perform evaluation of learning algorithms and model selection.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To become familiar with regression methods, classification methods, clustering methods.
- To become familiar with Dimensionality reduction Techniques.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Have a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis.
2. Design and implement several machine learning algorithms in Java.
3. Identify, formulate and solve machine learning problems that arise in practical applications.
4. Have knowledge of the strengths and weaknesses of different machine learning algorithms (relative to the characteristics of the application domain) and be able to adapt or combine some of the key elements of existing machine learning algorithms to design new algorithms as needed.
5. Identify machine learning techniques suitable for a given problem
6. Solve the problems using various machine learning techniques

Unit I

Introduction: Concept of Machine Learning, Applications of Machine Learning, Key elements of Machine Learning, Supervised vs. Unsupervised Learning, Statistical Learning: Bayesian Method, The Naive Bayes Classifier

Unit II

Softwares for Machine Learning and Linear Algebra Overview : Plotting of Data, Vectorization, Matrices and Vectors: Addition, Multiplication, Transpose and Inverse using available tool such as MATLAB.

Unit III

Linear Regression: Prediction using Linear Regression, Gradient Descent, Linear Regression with one variable, Linear Regression with multiple variables, Polynomial Regression, Feature Scaling/Selection.

Logistic Regression: Classification using Logistic Regression, Logistic Regression vs. Linear Regression, Logistic Regression with one variable and with multiple variables.

Unit IV

Regularization: Regularization and its utility: The problem of Overfitting, Application of Regularization in Linear and Logistic Regression, Regularization and Bias/Variance.

Unit V

Neural Networks: Introduction, Model Representation, Gradient Descent vs. Perceptron Training, Stochastic Gradient Descent, Multilayer Perceptrons, Multiclass Representation, Backpropagation Algorithm.

Suggested Readings

18ITU504A	DIGITAL IMAGE PROCESSING	Semester – V 3H – 3C
------------------	---------------------------------	---------------------------------------

Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

Unit I

Introduction: Light, Brightness adaption and discrimination, Pixels, coordinate conventions, Imaging Geometry, Perspective Projection, Spatial Domain Filtering, sampling and quantization. Spatial Domain Filtering: Intensity transformations, contrast stretching, histogram equalization, Correlation and convolution, Smoothing filters, sharpening filters, gradient and Laplacian.

Unit II

Hotelling Transform, Fourier Transforms and properties, FFT (Decimation in Frequency and Decimation in Time Techniques), Convolution, Correlation, 2-D sampling, Discrete Cosine Transform, Frequency domain filtering.

Unit III

Image Restoration, Basic Framework, Interactive Restoration, image morphing, Restoration techniques, Noise characterization, Noise restoration filters, Adaptive filters, Linear, Position invariant degradations, Image Compression-Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Entropy of an information source, Shannon's 1st Theorem, Huffman Coding, Arithmetic Coding, Golomb Coding, LZW coding, Transform Coding, Run length coding.

Unit IV

FAX compression (CCITT Group-3 and Group-4), Symbol-based coding, Bit-allocation, Zonal Coding, Threshold Coding, JPEG, Lossless predictive coding, Lossy predictive coding, Motion Compensation

Wavelet based Image Compression: Wavelet series expansion, Discrete Wavelet Transform (DWT), Continuous Wavelet Transform, Fast Wavelet Transform, 2-D wavelet Transform, JPEG-2000 encoding, Digital Image Watermarking

Unit V

Morphological Image Processing: Basics, SE, Erosion, Dilation, Opening, Closing, Boundary Detection, skeletons, pruning. Image Segmentation: Boundary detection based techniques, Point, line detection, Edge detection, Edge linking, local processing, regional processing, Hough transform, Thresholding, Iterative thresholding.

Suggested Readings

2. Jain, A. K. (1989). Fundamentals of Digital image Processing. New Delhi: Prentice Hall of India.
3. Castleman, K. R. (1996). Digital Image Processing. New Delhi: Pearson Education.
4. Schalkoff. (1989). Digital Image Processing and Computer Vision. New York: John Wiley and Sons.
5. Rafael, C. Gonzalez., Richard, E. Woods., & Steven Eddins. (2004). Digital Image Processing using MATLAB. New Delhi: Pearson Education.

18ITU504B**MULTIMEDIA AND ITS APPLICATIONS****Semester – V
3H – 3C****Instruction Hours / week: L: 0 T: 0 P: 3 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

Unit I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software requirements – Uses of Multimedia. Text: Types of text – Font- Text file formats. Image: Image data representation – Image file formats – image processing software. Graphics: Advantages of graphics – Uses – Component of a graphics system.

Unit II

Audio: Sound waves – types and properties of sound – components of audio system – Digital audio – Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – video processing software. Animation: Uses of animation – computer based animation -Animation file formats – Animation software.

Unit III

Introducing photoshop elements: About elements – welcome screen – create mode – menu bar – toolbox – options bar – panels. Organizing images: Obtaining images -tagging images – searching for images – opening and saving images. Selecting areas – Layers – Text and drawing tools.

Unit IV

Understanding flash: Understanding flash basic elements – creating a simple animation. Learning Flash toolbox: Learning the toolbox – using tools. Learning flash panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – using colors – Rotating, skewing and scaling – grouping objects. Creating animation – How animation works – creating motion tweens – creating shape tweens. Understanding masks – creating masks.

Unit V

Creating symbols and using the library: Learning about symbols – creating symbols – using libraries. Learning Basic Actionscript concepts: Actionscript basics – data type basics. Learning basic actionscript programming: Applying Actionscript – Using Actionscript to control actions – Using Actionscript to control properties – Understanding Actions and Event Handlers.

Semester – V

18ITU511A

ARTIFICIAL INTELLIGENCE - PRACTICAL

4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the various characteristics of Intelligent agents
- To learn about the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing software agents
- To know about the various applications of AI.
- Understand the various searching techniques, constraint satisfaction problem and example problems- game playing techniques.

Course Outcomes (COs)

At the end of the course, the student should be able to:

1. Identify problems that are amenable to solution by AI methods.
2. Identify appropriate AI methods to solve a given problem.
3. Formalize a given problem in the language/framework of different AI methods.
4. Implement basic AI algorithms.
5. Design and carry out an empirical evaluation of different algorithms on a problem formalization, and state the conclusions that the evaluation supports.
6. Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems

List of Programs

Write the following programs using PROLOG

1. Program to add two numbers.
2. Program to categorize animal characteristics.
3. Program to read address of a person using compound variable.
4. Program of fun to show concept of cut operator .
5. Program to count number of elements in a list .
6. Program to reverse the list.
7. Program to append an integer into the list .
8. Program to replace an integer from the list .
9. Program to delete an integer from the list .
10. Program to show concept of list.
11. Program to demonstrate family relationship.
12. Program to show how integer variable is used in prolog program .
13. Write a program to solve 8 queens problem
14. Solve any problem using depth first search.
15. Solve any problem using best first search.
16. Solve traveling salesman problem.

Semester – V**18ITU511B****SOFTWARE TESTING - PRACTICAL****4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.
- To explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces. 4. To know basics of testing and understanding concept of software quality assurance and software configuration management process.
- To understand the need of project management and project management life cycle.
- To understand project scheduling concept and risk management associated to various type of projects.
- Implement a given software design using sound development practices.

Course Outcomes (COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Work effectively as leader/member of a development team to deliver quality software artifacts.
3. Analyze, specify and document software requirements for a software system.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its Course scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

List of Programs

1. Write a program that take three inputs (a,b and c) that represents the sides of a triangle and the output is one of the below four.
 - a) Not a triangle
 - b) Scalene triangle
 - c) Isosceles triangle
 - d) Equilateral triangle
- a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
- b) Generate test cases using basis path testing
- c) Run code coverage tool

2. Write a program that determines the nature of roots of a quadratic equation. Output should be one of the following
 - Not a quadratic equation
 - Complex roots
 - Real roots
 - Single roots
 - a) Generate test cases using boundary value analysis, equivalence class partitioning and decision table testing
 - b) Generate test cases using basis path testing
 - c) Run code coverage tool
3. Write a program that checks whether the number is even or odd. Run code coverage tools and find the amount of code being covered.
4. Write a program that dynamically allocates memory to 10 integers using malloc() or calloc() and do not free memory leading to memory leaks. Verify the same using Valgrind. Now, free memory using free() at the end of the program to avoid memory leaks. Verify the same using Valgrind.
5. Using Selenium IDE, write a test suite containing minimum 4 test cases.
6. Conduct a test suite for any two websites.
7. Write and test a program to login a specific webpage

18ITU512A**.NET PROGRAMMING - PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To design, formulate, and construct applications with VB.NET
- To integrate variables and constants into calculations applying VB.NET
- To determine logical alternatives with VB.NET decision structures
- To implement lists and loops with VB.NET controls and iteration
- To separate operations into appropriate VB.NET procedures and functions
- To assemble multiple forms, modules, and menus into working VB.NET solutions

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Grasp the fundamentals of a programming language and know the basic differences between programming languages
2. Choose the architecture based on the problem to be solved.
3. Differentiate between the types of applications supported by .Net
4. Build, compile and execute a VB .Net program
5. Apply techniques to develop error-free software
6. To build integrated VB.NET solutions using files and structures with printing capabilities.
Translate general requirements into data-related solutions using database concepts

List of Programs

1. Write a VB .Net program to calculate simple interest and compound interest.
2. Write a VB .Net program to implement Calculator.
3. Write a VB.Net program to implement Notepad
4. Write a VB.Net program to draw several shaps and fill with color.
5. Write a VB .Net program to perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the list
6. Write a program to calculate the total marks of the student and print the grades.
7. Write a VB .Net program to implement employee payroll system
8. Write a VB .Net program to create and manipulate a file.
9. Write a program to implement a web browser
10. Write a program to maintain the details of doctors in a hospital with their specializations

11. Write a program to animate the picture using timer control.
12. Write a program to move the object from one location to another. Change the color and size of object at different time interval.
13. Write a program to place 10 pictures in the listbox. Using timer control the take the picture from listbox and change the form background after specific time interval.
14. Write a program to implement speaking program. Get the text input from the user and convert into voice.
15. Write a program to implement chatting

18ITU512B	NETWORK PROGRAMMING - PRACTICAL	Semester – V 4H – 2C
------------------	--	---------------------------------------

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the 3-tier software architecture (presentation/client tier, application tier, data tier).
- To write web applications using a combination of client-side (JavaScript, HTML, XML, WML) and server-side technologies (JSP, JSF, SERVLETS).
- To write network applications using state-of-the-art RPC technologies including: RMI, CORBA, EJB, and Web Services (SOAP and UDDI).
- To understand e-mail programming (JavaMail, SMTP, POP, IMAP).
- To design and implement network applications through semester-long projects.
- To understand network routing (static and dynamic) and understand the process of implementing simple routed inter-networks.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Analyze the various transmission media, their comparative study, fiber optics and wireless media
2. Categorize the topologies of networks (LAN and WAN), Layered architecture (OSI and TCP/IP) and protocol suites.
3. TCP, UDP, SCTP protocols Ethernet and LAN administration.
4. Details of IP operations in the INTERNET and associated routing principles
5. Understand the key protocols which support the Internet
6. Create applications using techniques such as multiplexing, forking, multithreading

List of Programs

1. Understanding and using of commands like ifconfig, netstat, ping, arp, telnet, ftp, finger, traceroute, whois
2. Socket Programming: Implementation of Connection-Oriented Service using standard ports.
3. Implementation of Connection-Less Service using standard ports
4. Implementation of Connection-Oriented Iterative Echo-Server, date and time, character generation using user-defined ports
5. Implementation of Connectionless Iterative Echo-server, date and time, character generation using user-defined ports.
6. Implementation of Connection-Oriented Concurrent Echo-server, date and time, character generation using user-defined ports
7. Program for connection-oriented Iterative Service in which server reverses the string sent by the client and sends it back

8. Program for connection-oriented Iterative service in which server changes the case of the strings sent by the client and sends back (Case Server).
9. Program for Connection-Oriented Iterative service in which server calculates the Net-salary of an Employee based on the following details sent by the client i)basic-sal ii) hra iii) da iv) pt v) epf (net-sala=basic+hra+da-pt-epf)
10. Implementation of concurrent chat server that allows current logged in users to communicate one with other.

Suggested Readings

4. Steven, R. (1990). Unix Network Programming (2nd ed.). New Delhi: PHI.

18ITU513A**DATA MINING - PRACTICAL****Semester – V
4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To be familiar with mathematical foundations of data mining tools.
- To understand and implement classical models and algorithms in data warehouses and data mining
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To master data mining techniques in various applications like social, scientific and environmental context.
- To develop skill in selecting the appropriate data mining algorithm for solving practical problems
- To develop research interest towards advances in data mining

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Introduce students to the basic concepts and techniques of Data Mining.
2. Develop skills of using recent data mining software for solving practical problems.
3. Gain experience of doing independent study and research.
4. Possess some knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
5. Identify appropriate data mining algorithms to solve real world problems
6. Benefit the user experiences towards research and innovation. integration

List of Programs

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). for test options, first choose “Use training set”, then choose “Percentage split” using default 66% percentage split. Report model percent error rate.
2. Use iris dataset preprocess and classify it with j4.8 and Naive Bayes classifier. Examine the tree in the classifier output panel.
3. Using the dataset ReutersCorn – Train and ReutersGrain – Train. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis.
5. Using weka experimenter perform comparison analysis of j4.8, oneR and ID3 for vote dataset.
6. Using weka experimenter perform comparison analysis of Naive Bayes with different datasets.
7. Apply ZeroR, OneR and j4.8, to classify the iris data in an experiment using 10 train and test runs, with 66% of the data used for 34% used for testing.
8. Using Weka Knowledge flow set up a flow to load an ARFF file (batch mode) and perform a cross-validation using j4.8 (WEKS’s C4.5 implementation).

9. Draw multiple ROC curves in the same plot window, using j4.8 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them.

Semester – V**18ITU513B****MACHINE LEARNING - PRACTICAL****4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To develop an appreciation for what is involved in learning from data.
- To understand a wide variety of learning algorithms.
- To understand how to perform evaluation of learning algorithms and model selection.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To become familiar with regression methods, classification methods, clustering methods.
- To become familiar with Dimensionality reduction Techniques.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Have a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis.
2. Design and implement several machine learning algorithms in Java.
3. Identify, formulate and solve machine learning problems that arise in practical applications.
4. Have knowledge of the strengths and weaknesses of different machine learning algorithms (relative to the characteristics of the application domain) and be able to adapt or combine some of the key elements of existing machine learning algorithms to design new algorithms as needed.
5. Identify machine learning techniques suitable for a given problem
6. Solve the problems using various machine learning techniques

List of Programs

1. Perform elementary mathematical operations in Octave/MATLAB like addition, multiplication, division and exponentiation.
2. Perform elementary logical operations in Octave/MATLAB (like OR, AND, Checking for Equality, NOT, XOR).
3. Create, initialize and display simple variables and simple strings and use simple formatting for variable.

4. Create/Define single dimension / multi-dimension arrays, and arrays with specific values like array of all ones, all zeros, array with random values within a range, or a diagonal matrix.
5. Use command to compute the size of a matrix, size/length of a particular row/column, load data from a text file, store matrix data to a text file, finding out variables and their features in the current Course Objectives.
6. Perform basic operations on matrices (like addition, subtraction, multiplication) and display specific rows or columns of the matrix.
7. Perform other matrix operations like converting matrix data to absolute values, taking the negative of matrix values, adding/removing rows/columns from a matrix, finding the maximum or minimum values in a matrix or in a row/column, and finding the sum of some/all elements in a matrix.
8. Create various type of plots/charts like histograms, plot based on sine/cosine function based on data from a matrix. Further label different axes in a plot and data in a plot.
9. Generate different subplots from a given plot and color plot data.
10. Use conditional statements and different type of loops based on simple example/s.
11. Perform vectorized implementation of simple matrix operation like finding the transpose of a matrix, adding, subtracting or multiplying two matrices.
12. Implement Linear Regression problem. For example, based on a dataset comprising of existing set of prices and area/size of the houses, predict the estimated price of a given house.
13. Based on multiple features/variables perform Linear Regression. For example, based on a number of additional features like number of bedrooms, servant room, number of balconies, number of houses of years a house has been built – predict the price of a house.
14. Implement a classification/ logistic regression problem. For example based on different features of students data, classify, whether a student is suitable for a particular activity. Based on the available dataset, a student can also implement another classification problem like checking whether an email is spam or not.
15. Use some function for regularization of dataset based on problem 14.
16. Use some function for neural networks, like Stochastic Gradient Descent or back propagation - algorithm to predict the value of a variable based on the dataset of problem

18ITU514A	DIGITAL IMAGE PROCESSING - PRACTICAL	Semester – V
		3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To introduce to the students the basics of digital image processing.
- To learn the basic image transforms, segmentation algorithms and problems of object measurements.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Review the fundamental concepts of a digital image processing system.
2. Analyze images in the frequency domain using various transforms.
3. Evaluate the techniques for image enhancement and image restoration.
4. Categorize various compression techniques.
5. Interpret Image compression standards.
6. Interpret image segmentation and representation techniques.

List of Programs

1. Write program to read and display digital image using MATLAB or SCILAB
 - a. Become familiar with SCILAB/MATLAB Basic commands
 - b. Read and display image in SCILAB/MATLAB
 - c. Resize given image
 - d. Convert given color image into gray-scale image
 - e. Convert given color/gray-scale image into black & white image
 - f. Draw image profile
 - g. Separate color image in three R G & B planes
 - h. Create color image using R, G and B three separate planes
 - i. Flow control and LOOP in SCILAB
 - j. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
 - a. Obtain Negative image b. Obtain Flip image
 - b. Thresholding d. Contrast stretching
3. To write and execute programs for image arithmetic operations
 - a. Addition of two images
 - b. Subtract one image from other image

- c. Calculate mean value of image
 - d. Different Brightness by changing mean value
4. To write and execute programs for image logical operations
- a. AND operation between two images
 - b. OR operation between two images
 - c. Calculate intersection of two images
 - d. Water Marking using EX-OR operation
 - e. NOT operation (Negative image)
5. To write a program for histogram calculation and equalization using
- a. Standard MATLAB function
 - b. Program without using standard MATLAB functions
 - c. C Program
6. To write and execute program for geometric transformation of image
- a. Translation
 - b. Scaling
 - c. Rotation
 - d. Shrinking
 - e. Zooming
7. To understand various image noise models and to write programs for
- a. image restoration
 - b. Remove Salt and Pepper Noise
 - c. Minimize Gaussian noise
 - d. Median filter and Weiner filter
8. Write and execute programs to remove noise using spatial filters
- a. Understand 1-D and 2-D convolution process
 - b. Use 3x3 Mask for low pass filter and high pass filter
9. Write and execute programs for image frequency domain filtering
- a. Apply FFT on given image
 - b. Perform low pass and high pass filtering in frequency domain
 - c. Apply IFFT to reconstruct image
10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask
11. Write and execute program for image morphological operations erosion and dilation.
12. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

Suggested Readings

Semester – V

18ITU514B MULTIMEDIA AND ITS APPLICATIONS – PRACTICAL 3H – 1C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand the multimedia communications systems, application and basic principles,
- To analyze of the multimedia streaming,
- To perform and establish multimedia communication terminals,
- To present multimedia communications
- Explore a brief history of multimedia in education
- Analyze instructional and informational media (print materials, audio/visual materials and/or web-based materials, games/simulations, etc.)

Course Outcomes (COs)

Upon successful completion the student will be able to:

1. Define multimedia to potential clients.
2. Identify and describe the function of the general skill sets in the multimedia industry.
3. Identify the basic components of a multimedia project.
4. Identify the basic hardware and software requirements for multimedia development and playback.
5. Describe the process of digitizing (quantization) of different analog signals (text, graphics, sound and video).
6. Use appropriate tools for the design, development and creation of digital media artefacts.

List of Programs

Perform the following practical exercises GIMP/ Synfig.

1. To change from one shape to another shape
2. To perform rainy effect
3. To subtract one shape from another shape
4. To perform dreamy effect
5. To perform fractal effect
6. To perform transparent glass lettering
7. To bounce a ball
8. To perform smoky effect
9. To perform text portrait
10. To perform bokeh effect

Suggested Readings

1. Ranjan Parekh (2013). Principles of Multimedia (2nd ed.). TataMcGraw Hill.
2. Nick Vandome (2011). Photoshop Elements 9. TataMcGraw Hill.
3. Brian Underdahl (2002). Macromedia Flash MX – A Beginners Guide. Dreamtech Press.
4. Tay Vaughan (2002). Fundamentals of Multimedia (5th ed.). TataMcGraw Hill.
5. Bill Sanders (2001). Flash 5 Actionscript (1st ed.). New Delhi DreamTech Press.

Semester – VI**18ITU601A****PHP PROGRAMMING****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

Unit I**Introduction to PHP:**

PHP introduction, inventions and versions, important tools and software requirements (like Web Server, Database, Editors etc.) -PHP with other technologies, Course Objectives of PHP
Basic Syntax, PHP variables and constants-Types of data in PHP , Expressions, Course Objectives of a variable (local, global)-PHP Operators: Arithmetic, Assignment, Relational, Logical operators, Bitwise , ternary and MOD operator.-PHP operator Precedence and associativity

Unit II**Handling HTML form with PHP:**

Capturing Form Data -GET and POST form methods- Dealing with multi value fields - Redirecting a form after submission -**PHP conditional events and Loops:** PHP IF Else conditional statements (Nested IF and Else) -Switch case, while ,For and Do While Loop -Goto , Break ,Continue and exit

Unit III**PHP Functions:**

Function, Need of Function , declaration and calling of a function-PHP Function with arguments, Default Arguments in Function-Function argument with call by value, call by reference-Course Objectives of Function Global and Local

Unit IV

String Manipulation and Regular Expression: (3L) Creating and accessing String , Searching & Replacing String-Formatting, joining and splitting String , String Related Library functions - Use and advantage of regular expression over inbuilt function-Use of preg_match(), preg_replace(), preg_split() functions in regular expression.

Unit V**Array:**

Anatomy of an Array ,Creating index based and Associative array ,Accessing array
-Looping with Index based array, with associative array using each() and foreach()
-Some useful Library function

Suggested Readings

18ITU601B**UNIX / LINUX PROGRAMMING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

Unit I**Introduction** What are Linux/Unix Operating systems, Difference between linux/unix and other operating systems, Features and Architecture, Various Distributions available in the market, Installation, Booting and shutdown process.**Unit II**

System processes (an overview), External and internal commands, Creation of partitions in OS, Processes and its creation phases – Fork, Exec, wait

Unit III**User Management and the File System** Types of Users, Creating users, Granting rights
User management commands, File quota and various file systems available, File System Management and Layout, File permissions, Login process, Managing Disk Quotas, Links (hard links, symbolic links)

Unit IV

Shell introduction and Shell Scripting What is shell and various type of shell, Various editors present in Linux Different modes of operation in vi editor, What is shell script, Writing and executing the shell script , Shell variable (user defined and system variables)

Unit V

System calls, Using system calls Pipes and Filters, Decision making in Shell Scripts (If else, switch), Loops in shell.

Functions, Utility programs (cut, paste, join, tr, uniq utilities), Pattern matching utility (grep)

Suggested Readings

2. Michael Jang. (2011). RHCSA/ RHCE Red Hat Linux Certification: Exams (Ex200 & Ex300). Certification Press.
3. Nemeth Synder., & Hein.(2010). Linux Administration Handbook (2nd ed.). Pearson Education.
4. Richard Stevens, W. Bill Fenner., & Andrew, M. Rudoff. (2014). Unix Network Programming, The sockets Networking API, Vol. 1, (3rd ed.).

Semester – VI**18ITU602A****E-COMMERCE TECHNOLOGIES****4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service

Unit I -An Introduction to Electronic commerce

What is E-Commerce (Introduction And Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Course Objectives of E-Commerce, Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (C2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

Unit II -The Internet and WWW

Evolution of Internet, Domain Names and Internet - Organization (.edu, .com, .mil, .gov, .net etc), Types of Network, Internet Service Provider, World Wide Web, Internet & Extranet, Role of Internet in B2B Application, building own website, cost, time, reach, registering a domain name, web promotion, Target email, Banner, Exchange, Shopping Bots.

Unit III - Electronic data

Electronic data exchange introduction, concepts of EDI and Limitation, Application of eDI, Disadvantages of eDI, EDI model, Electronic Payment System: Introduction, Types of Electronic Payment system, Payment types, Value exchange system, credit card system electronic fund transfer, Paperless bill, modern payment cash, Electronic cash.

Unit IV- Planning for Electronic Commerce

Planning Electronic commerce initiatives, linking Course Outcomes (COs) to business strategies, measuring cost Course Outcomes (COs), comparing benefits to Costs, strategies for developing electronic commerce web sites.

Unit V - Internet marketing

The PROS and CONS of online shopping, the CONS of online shopping, Justify an internet business, Internet marketing techniques, The E-Cycle of Internet marketing, personalization e-commerce.

18ITU602B**CLOUD COMPUTING****Semester – VI
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. CO4: Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

Unit I

Overview of Computing Paradigm: Recent trends in Computing: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing.**Introduction to Cloud Computing:** Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing.

Unit II

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, CommUnity cloud, Case study of NIST architecture.

Unit III

Case Studies: Case study of Service model using Google App Engine, Microsoft Azure, Amazon EC2 , Eucalyptus.

Unit IV

Service Management in Cloud Computing: Service Level Agreements (SLAs), Billing & AITUounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

Unit V

Cloud Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Suggested Readings

1. Barrie Sosinsky. (2010). Cloud Computing Bible. New Delhi: Wiley-India,
2. Rajkumar Buyya., James Broberg., & Andrzej, M. Goscinski Wile. Cloud Computing: Principles and Paradigms.

18ITU603A**BIG DATA ANALYTICS****Semester – VI
3H – 3C****Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives (CO)**

- To provide an overview of an exciting growing field of big data analytics.
- To impart to students the skills required to design scalable systems that can accept, store, and analyze large volumes of unstructured data.
- The objective of this course is to ascertain that the students know the fundamental techniques and tools used to design and analyze large volumes of data.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support.
- To understand, and practice big data analytics and machine learning approaches

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
5. Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
6. Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

UNIT-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

UNIT-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data -Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

UNIT-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

UNIT-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

UNIT-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

18ITU603B**SYSTEM PROGRAMMING****Semester – VI
3H – 3C**

Instruction Hours / week: L: 3 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the role and functioning of various system programs over application program.
- To understand the need to follow the syntax in writing an application program and to learn the how the analysis phase of compiler is designed to understand the programmer's requirements without ambiguity.
- To synthesize the analysis phase outcomes to produce the object code that is efficient in terms of space and execution time.

Course Outcomes (COs)

Upon completion of the subject, students will be able to

1. Organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer
2. Grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software)
3. Apply the knowledge and techniques learnt to develop solutions to realworld problems
4. Select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools
5. Organize and manage software built for deployment and demonstration
6. Analyze requirements and solve problems using systematic planning and development approaches

Unit I

Assemblers & Loaders, Linkers: One pass and two pass assembler design of an assembler, Absolute loader, relocation and linking concepts, relocating loader and Dynamic Linking., overview of compilation, Phases of a compiler.

Unit II**Lexical Analysis:**

Role of a Lexical analyzer, Specification and recognition of tokens, Symbol table, lexical

Unit III**Parsing:**

Bottom up parsing- LR parser, yaITU. **Intermediate representations: Three** address code generation, syntax directed translation, translation of types, control Statements.

Unit IV

Storage organization: Activation records stack allocation.

Unit V

Code Generation: Object code generation

Semester – V**18ITU611A****PHP PROGRAMMING - PRACTICAL****4H –2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand how server-side programming works on the web.
- To learn PHP Basic syntax for variable types and calculations.
- To use PHP built-in functions and creating custom functions
- To understand POST and GET in form submission.
- To receive and process form submission data.
- To create a database in phpMyAdmin, to read and process data in a MySQL database

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Write PHP scripts to handle HTML forms.
2. Write regular expressions including modifiers, operators, and metacharacters.
3. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
4. Analyze and solve various database tasks using the PHP language.
5. Analyze and solve common Web application tasks by writing PHP programs
6. Get hands on experience on various techniques of web development and will be able to design and develop a complete website.

List of Programs

1. Create a PHP page using functions for comparing three integers and print the largest number.
2. Write a function to calculate the factorial of a number (non-negative integer). The function accept the number as an argument.
3. WAP to check whether the given number is prime or not.
4. Create a PHP page which accepts string from user. After submission that page displays the reverse of provided string.
5. Write a PHP function that checks if a string is all lower case.
6. Write a PHP script that checks whether a passed string is palindrome or not? (A palindrome is word, phrase, or sequence that reads the same backward as forward, e.g., madam or nurses run)
7. WAP to sort an array.
8. Write a PHP script that removes the whitespaces from a string.

Sample string : 'The quick brown fox' Expected Output : Thequickbrownfox

9. Write a PHP script that finds out the sum of first n odd numbers.

10. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.

11. Write a PHP script that checks if a string contains another string.

12. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

13. Create a script to construct the following pattern, using nested for loop.

```
*  
* *  
* * *  
* * * *  
* * * * *
```

14. Write a simple PHP program to check that emails are valid.

15. WAP to print first n even numbers.

16. \$color = array('white', 'green', 'red')

Write a PHP script which will display the colors in the following way : Output :
white, green, red,

- green • red
- white

17. Using switch case and dropdown list display a —Hello! message depending on the language selected in drop down list.

18. Write a PHP program to print Fibonacci series using recursion.

19. Write a PHP script to replace the first 'the' of the following string with 'That'.

Sample : 'the quick brown fox jumps over the lazy dog.'

Expected Result : That quick brown fox jumps over the lazy dog.

Suggested Readings

**18ITU611B UNIX / LINUX PROGRAMMING - PRACTICAL Semester – VI
4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To understand fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- To understand how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions
- To understand how the operating system abstractions can be implemented
- To understand the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- To understand basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented.
- These also include issues of performance and fairness, avoiding deadlocks, as well as security and protection.

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Develop software for Linux/UNIX systems.
2. Learn the C language and get experience programming in C.
3. Learn the important Linux/UNIX library functions and system calls.
4. Understand the inner workings of UNIX-like operating systems.
5. Obtain a foundation for an advanced course in operating systems.
6. Construct various shell scripts for simple applications

List of Programs

1. Write a shell script to check if the number entered at the command line is prime or not.
2. Write a shell script to modify —call command to display calendars of the specified months.
3. Write a shell script to modify —call command to display calendars of the specified range of months.
4. Write a shell script to accept a login name. If not a valid login name display message – —Entered login name is invalid.
5. Write a shell script to display date in the mm/dd/yy format.
6. Write a shell script to display on the screen sorted output of —who command along with the total number of users.
7. Write a shell script to display the multiplication table any number,
8. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
9. Write a shell script to find the sum of digits of a given number.
10. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.

11. Write a shell script to find the LCD (least common divisor) of two numbers.
12. Write a shell script to perform the tasks of basic calculator.
13. Write a shell script to find the power of a given number.
14. Write a shell script to find the binomial coefficient $C(n, x)$.
15. Write a shell script to find the permutation $P(n, x)$.
16. Write a shell script to find the greatest number among the three numbers.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not

18ITU612A	E-COMMERCE TECHNOLOGIES- PRACTICAL	Semester – VI
		4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To introduce the concepts, vocabulary, and procedures associated with E-Commerce and the Internet.
- To gain an overview of all aspects of E-Commerce.
- To develop the Internet and E-Commerce, options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.
- It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems
- Assess e-commerce strategies and applications, including online marketing, e-government, e-learning and global e-commerce

Course Outcomes (COs)

Upon successful completion of this course, the student will be able to:

1. Describe an example of system architecture for an e-Business.
2. List the seven major elements of web design.
3. Identify and explain fundamental web site tools including design tools, programming tools, and data processing tools.
4. Identify the major electronic payment issues and options.
5. Discuss security issues and explain procedures used to protect against security threats.
6. Identify and discuss management issues underlying e-Commerce issues including organizational structure, strategic planning, goal setting, corporate social responsibility, international arena, changing market intermediaries, resource allocation and customer service.

List of Programs

1. Write a HTML program to implement the use of Image map.
2. Write a CSS to implement selectors in HTML
3. Write a CSS to implement pseudo – classes with in-line styles
4. Write a Javascript program to validate a web form
5. Write a Javascript program to allow visitors to see history of visiting your page
6. Write a Javascript program to change random color each 5 seconds
7. Write a perl program to read a list of n strings (from STDIN) into an array and print a random string from the list (Use srand;rand(@array))

8. Write a perl program to read a list of n numeric's from STDIN and find the max, min, range, median and mode. Input size of the list n interactively.
9. Write a perl program to read a file of words and replaces all words in the file with their uppercase equivalent (hint: use tr/a-z/A-Z/)
10. Write VBScript program to print Fibonacci series using Do..while loop and For loop.
11. Write VBScript program to generate date and time in defferent format
12. Write VBScript program to print student marklist
13. Develop an ASP code to retrieve information from forms
14. Develop an ASP code to reading and writing cookies information
15. Develop an ASP code using response object methods

Semester – VI**18ITU612B****CLOUD COMPUTING -PRACTICAL****4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives (CO)

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- To apply Map-Reduce concept to applications.
- To build Private Cloud.
- To know the impact of engineering on legal and societal issues involved

Course Outcomes (COs)

Upon completion of this course, the students will be able to

1. Analyze the Cloud computing setup with it's vulnerabilities and applications using different architectures.
2. Design different workflows according to requirements and apply map reduce programming model.
3. Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
4. Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
5. Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application
6. Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

List of Programs

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that aITUess different programs on different platforms.
3. Working on tools used in cloud computing online-
 - a) Storage
 - b) Sharing of data
 - c) Manage your calendar, to-do lists,
 - d) A document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
முதல்பருவம்
(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Arts Degree Classes) 18LAU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives:

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcome:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV: Drama

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

UNIT - V: Grammar and Composition

GRAMMAR : 1. Tenses
2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

COMPOSITION:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press

COURSE OBJECTIVES:**To make the students**

- To understand the concept, functions and levels of management and how the different schools of thoughts are integrated into management principles and practices.
- To know the management functions and its application in business
- To impart the importance of human behavior and personality to resolve conflict and managing change.
- To understand the leadership and motivation theories and realise the practical implication in the individual performance and organization behavior.
- To realise the importance of groups and teamwork and managing of conflict between the members of the organization.
- To learn management theories and to adapt with present scenario.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concepts of management and the functions of management.
2. Execute the managerial functions of planning, organizing and controlling in a variety of circumstances.
3. Assess the impact of the personality traits and their perception in day to day performance.
4. Exhibit the leadership skills whenever required and work in groups and teams by motivating and resolving conflict arising in groups and adapting to change.
5. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Apply the concept of management of conflict in the team level.

UNIT I School of Management thoughts and Forms of organization :

Definition of Management –managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Management by Objectives (MBO) – Management by Exception (MBE) - Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Special forms of ownership : Franchising - Licensing - Leasing - Corporate Expansion : mergers and acquisitions - Diversification, forward and backward integration - Joint ventures, Strategic alliance

UNIT II Management Functions :

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process - Organizing – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

UNIT III Organizational behavior and Personality:

Importance of organizational Behaviour – OB Model - Attitudes – Components – Attitude and Behaviour – Job attitudes – Values – importance – Terminal and Instrumental values – Generational Values – Personality and values. Personality – Types – Factors influencing personality – Theories – Perceptions – Importance – Factors influencing perception – Judging others, perception and individual decision making

UNIT IV Learning and Leadership Theories :

Learning - Concept and Theories of Learning, Reinforcement, Motivation – Importance – Theories: Need, Content and Process Theories – Application.

Leadership – Theories – Trait and Contingency theories – Power and politics – Bases of power – Causes and consequences of political behavior

UNIT V Group, Teams, Conflict and Organizational change

Groups and Teams - Definition, Difference between Groups and teams - Stages of Group Development - Group Cohesiveness - Types of teams

Conflict: Concept, Sources - Types, Stages of conflict - Management of conflict,

Organizational Change: Concept, Resistance to change, Managing resistance to change, Implementing Change – Kurt Lewin Theory of Change

SUGGESTED READINGS:

5. Harold Koontz and Heinz Weihrich (2015), Essentials of Management: An International, Innovation and Leadership Perspective, 10th edition, McGraw Hill Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To understand the demand, supply functions and its applicability.
- To know the importance of the production function and cost and revenue concepts.
- To gain knowledge on the market structure and price determination.
- To understand the importance of macroeconomic indicators like National income, GDP, Inflation etc.
- To understand the concepts of monetary policy, Balance of payment and Money supply.
- To learn the objectives of fiscal policy

COURSE OUTCOMES:**Learners should be able to**

1. Apply the demand and supply concept in managerial decisions
2. Calculate the Cost, Revenue and breakeven point and apply it in decision making process.
3. Formulate the pricing strategies based on the market structure.
4. Gain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payments and make business decision based on the Macroeconomic indicators, inflation and business cycle
5. Understand the impact of monetary policy, money supply and Balance of payments on running a business.
6. Demonstrate capabilities as problem-solving, critical thinking, and communication skills.

UNIT I Managerial Economics; Demand and Supply:

Introduction -Meaning, nature and scope of Managerial Economics, Significance in decision making.

Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply – Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II Production, cost and Revenue function:

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors – Short & Long run – Total Product – Marginal Product – Average Product – Production Function – Law

of Returns – Law of Returns to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs – Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves – Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III Market Competition:

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly Market – Features

UNIT IV : Macro Economic Factors :

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer Payments – National Income Aggregates– Private Income – Personal Income – Personal Disposable Income – National Disposable Income – Measurement of National Income – Production Method – Income Method – Expenditure Method

Phases of Business Cycle – Causes of cyclical movements – Price Movements: Inflation, Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.

UNIT V : Monetary policy :

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy – Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget Preparation – Deficit Budget.

Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP – Disequilibrium in BOP.

Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of Interest.

5. D.N. Dwivedi (2016), Microeconomics, 4th edition, McGraw Hill Education, New Delhi

COURSE OBJECTIVES:**To make the students**

- To understand the types of communication and barriers of communication.
- To acquire knowledge on the different business correspondence used in organization
- To be aware of the different types of reports prepared for the organization.
- To understand the importance of vocabulary in business communication.
- To be aware of the use of technology and the oral presentation techniques used in communication.
- To learn to avoid common errors in English.

COURSE OUTCOMES:**Learners should be able to**

1. Communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Prepare business reports for organization needs and use appropriate technology for business communication.
4. Draft the resume and face the interview
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Develop the oral presentation and practice the good public speech

UNIT I Communication and its barriers

Nature of Communication: Process of Communication, Types of Communication (Verbal and Non-Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers.

UNIT II Business Correspondence:

Letter

Writing, presentation, inviting quotations, sending quotations, placing orders, Inviting tenders, Sales letters, claim and adjustment letters and social correspondence, Memorandum, Inter-office Memo, Notices, Agenda, Minutes. Application Letters – Preparation of Resume

UNIT III Report Writing:

Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports

UNIT IV Vocabulary and Listening :

Vocabulary: Words often confused, Words often misspelt, Common errors in English. Introduction to phonetics, need and use of it, Word stress and Sentence stress- Contrastive stress in sentences to highlight different words- Intonation- Rising and Falling tone, falling -rising tone- Word Power – Vocabulary – Jargon – rate of speech, pitch, tone – Clarity of voice.
The Importance of Listening in the Workplace: Introduction, what is listening? Barriers to Listening, Strategies for Effective Listening, Listening in a Business Context.

UNIT V Use of Technology and Interview :

Appropriate use of technology, EMAIL, WEB PAGE communication, Voice and wireless communication

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech.

4. Asha Kaul (2015), Effective Business Communication, 2nd edition, Prentice Hall India Learning Private Limited, New Delhi.
5. Rajendra Pal, J.S. Korlhalli, (2014), Essentials of Business Communication, 1st edition, S Chand Publishing, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To know the MS-word features and its application
- To be familiar with MS-Excel function and its application
- To be familiar with tools like PIVOT table, V-LOOK UP and H-LOOK UP and its applications.
- To be aware of the MS-Power point and its usage.
- To understand the usage of MS-Access and its applications
- To learn to present meeting Agenda.

COURSE OUTCOMES:**Learners should be able to**

1. Prepare documents and reports for the organization.
2. Prepare datasheet and apply the built-in functions for analyzing the data to support decision making.
3. Utilize visual aids and tools to present the data
4. Design the presentations for the business meetings
5. Store, retrieve data and make decisions based on the information.
6. Exhibit the communication skills to convey the outputs produced.

MS WORD

1. Type Chairman's speech/ Auditor's report / Minutes/ Agenda and perform the following operations:
Bold, Underline, Font Size, Style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, inserting pages and page numbers, Find and Replace.
2. Prepare an invitation for the college function using Text boxes and Clip Art.
3. Design an invoice and Account sales by using Drawing tool bar, Clip Art, Word Art, Symbols, Borders and Shading.
4. Prepare a Class Time Table and perform the following operations:
Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of Table Format.
5. Prepare a Shareholders meeting letter for 10 members using mail merge operation.
6. Prepare Bio-Data by using Wizard/Templates.

MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operations:
Data Entry, Total, Average, Result and Ranking by using arithmetic and logical functions and sorting.
2. Prepare Final Accounts (Trading Account, Statement of Profit & Loss and Balance Sheet) by using formula.

3. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a company by using chart wizard.
4. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
5. Prepare a Product Life Cycle which should contain the following stages: Introduction, Growth, Maturity, Saturation, Decline.
6. Create a pivot table for revenue generated by Sales Representatives (Order date, Customer ID, Customer Name, State, Sales person name, Product name, products category, Products quantity, unit price, quantity, mode of payment, Shipping date and revenues etc.) Use the functions- Pivot table fields, Pivot table diagrams and Pivot charts.
7. Use V lookup functions for employees' job title, salary, usage of Car and use H lookup function for employees' feedback score and salary increment

MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design presentation slides for organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design slides for the Headline News of a popular TV Channel. The Presentation Should contain the following transactions: Top down, bottom up, Zoom in and Zoom out. - The presentation should work in custom mode.
4. Design presentation slides about an organization and perform frame movement by interesting clip arts to illustrate running of an image automatically.
5. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details: Employee id, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.
2. Create mailing labels for student database which should include at least three Table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table and create an invoice in form design view.
4. Create forms for the simple table ASSETS.
5. Create report for the PRODUCT database.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
 (For I-UG Arts Degree Classes) 18LAU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

ENGLISH II

Semester – II
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives:

- To enable the learners to acquire English language skills.
- To familiarize them with English literature.
- To acquire Grammar.
- To help learners imbibe cultural values.
- To acquire skill of making correct sentences.
- To reflect originality on the application of soft skills and express in writing their views.

Course Outcome:

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT - I : PROSE

1. I Have a Dream - Martin Luther King, Jr.
2. 'First human' discovered in Ethiopia - Pallab Ghosh
3. The First Case- M.K. Gandhi

UNIT - II : POEM

1. L'Allegro - John Milton
2. God Is a Medicine Cabinet - Cynthia Atkins
3. A Prayer for my daughter - W.B. Yeats

UNIT - III : SHORT STORIES

1. The Tell Tale Heart - Edgar Allan Poe
2. Sparrows- K. Ahmad Abbas
3. The Little Match-Seller - Hans Christian Andersen

UNIT - IV: Drama

1. Tempest- Act 2-Scene 2
2. The Referee- W.H. Andrews and Geoffrey Dearmer

UNIT - V

- GRAMMAR** : 1. Voice
2. Reported Speech
 3. Interrogatives (Yes or No, 'Wh' questions)
 4. Word Class

COMPOSITION:

1. Writing Minutes and Preparing Agenda
2. Note Taking
3. Charts and Pictorial Writing.
4. Report Writing

Prescribed Text: Twilight, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Murphy Raymond, 1998 Essential English Grammar, Cambridge University Press.

COURSE OBJECTIVES:**To make the students**

- To understand the accounting concepts, convention and accounting standards.
- To acquire the knowledge to prepare the final accounts.
- To understand the depreciation methods.
- To know the inventory valuation techniques.
- To acquire the knowledge of the partnership accounting.
- To learn about financial reporting standards.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Prepare the final accounts.
3. Calculate the asset depreciation using different methods
4. Evaluate the inventory value using different methods.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the accounting discipline.
6. Understand fundamentals of partnership and to calculate profit sharing ratio

UNIT I Accounting concepts, convention and standards:

Meaning & Concept of Financial Accounting – Historical trace of Accounting - Functions and Sub fields of Accounting - Accounting Cycle – Accounting Concepts & Conventions and Generally Accepted Accounting Principles (GAAP), their implications on accounting system; IFRS –International Financial Reporting Standards

UNIT II Final accounts :

Double entry system - Classification of Accounts - Accounting Equation – Golden Rules of Accounting.

Journal, Ledger –Subsidiary ledgers - Trial Balance – Preparation of Final Accounts; Trading, Profit and Loss Account – Balance Sheet.

UNIT III Depreciation :

Meaning – Need for Depreciation – Causes – Methods: Straight Line Method, Diminishing balance Method and Annuity Method – Their impact on measurement of Business Accounting.

UNIT IV Inventory :

The basics of inventory - Inventory accounting systems - Inventory valuation methods - Inventory and its impact on financial statements

UNIT V Partnership Accounting:

Fundamentals of Partnership – Definition, meaning and features of a Partnership. Preparation of Profit and Loss Appropriation Account and Capital Accounts. Reconstitution of Partnership – Admission, Change in profit sharing ratio, Retirement and death of a partner, Dissolution of a Partnership firm.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

SUGGESTED READINGS:

1. Maheshwari, S.N., Suneel, K., Maheshwari, and Sharad, K., Maheshwari. (2018). Financial Accounting, 6th edition, Vikas Publishing House Pvt., Ltd, New Delhi.
2. R. K. Arora (2018), Financial Accounting: Fundamentals, Analysis and Reporting, Wiley, New Delhi.
3. R. Narayanaswamy, R. (2017). Financial Accounting: A Managerial Perspective. 6th Edition, PHI Learning Pvt. Ltd, New Delhi.
4. Asish K. Bhattacharyya (2017), Essentials of Financial Accounting, 4th edition, PHI Learning Private Limited, New Delhi.
5. Jain, S.P., and Narang K.L. (2016). Financial Accounting, Kalyani Publishers. New Delhi

COURSE OBJECTIVES:**To make the students**

- To understand the concept of matrices
- To acquire the knowledge of differential calculus
- To know the concepts of central tendency and dispersion
- To understand the correlation and regression concepts
- To be aware of the index numbers and trend analysis
- To learn the calculation of properties.

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Understand the uses of Uni - variate and Bi - Variate analysis
5. Apply the concept of index numbers and trend analysis in business decisions.
6. Demonstrate capabilities as problem-solving, critical thinking, and communication skills.

UNIT- I: Matrices & Basic Mathematics of Finance

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through adjoint; Applications of Matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest; Compounding and discounting of a sum using different types of rates

UNIT-II: Differential Calculus

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications

of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

UNIT-III: Uni-variate Analysis

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

UNIT-IV: Bi-variate Analysis

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

Unit V: Time-based Data: Index Numbers and Time-Series Analysis

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

SUGGESTED READINGS:

1. Sreyashi Ghosh and Sujata Sinha (2018), Business Mathematics and Statistics, 1st edition, Oxford University Press; New Delhi.
2. Asim Kumar Manna (2018), Business Mathematics and Statistics, 1st edition, McGraw Hill Education, New Delhi.
3. S.P. Gupta and P.K. Gupta (2013), Business Statistics and Business Mathematics, S Chand Publishing, New Delhi.
4. Mariappan (2015), Business Mathematics, 1st edition, Pearson Education, New Delhi.
5. J.K.Sharma, (2014) Business statistics, 4th edition, Vikas Publishing House, New Delhi

COURSE OBJECTIVES:**To make the students**

- To understand the ecosystem and its functions
- To be aware of the difference between the renewable and non-renewable resources.
- To know about biodiversity and the importance of conservation.
- To be aware of the different pollution that affects the environment.
- To know about the social issues prevailing in the environment.
- To understand importance of value education.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. React social issues in environmental pollution including disaster management.

UNIT-I: Environment and Ecosystem

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources:

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. III- effects of fireworks.

Unit III: Biodiversity and Its Conservation:

Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution :

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment:

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To understand the accounts heads available in the accounting software
- To know the mechanics of creating the vouchers
- To be aware of the inventory valuations methods available in the software
- To understand various financial statements that are built in the software
- To be aware of financial analysis tools available in the software
- To acquire the practical knowledge on to perform accounts by using Tally software

COURSE OUTCOMES:**Learners should be able to**

1. Understand the different accounting heads and its importance
2. Create vouchers by understanding the reason for posting under different heads
3. Calculate valuation of assets using the software
4. Prepare the financial statements and retrieve ratios
5. Creating backup and ensuring the accuracy of the accounting data
6. Communicate the output derived.

Practical List

1. Create a new company in integrate accounts mode and account with inventory mode
2. Create a primary and sub groups using single or multiple ledger mode
3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
4. Enter the following voucher
 - Payment vouchers
 - Receipt
 - Purchase
 - Sales
 - Credit note
 - Debit note
 - Journals
 - Memo
 - Optional
5. Create stock, stock groups and enter the vouchers
6. Prepare inventory statements using (calculate inventory using all methods)

- FIFO
 - LIFO
 - Simple Average Method
 - Weighted Average Method
7. Prepare the following ratio analysis
 - Financial ratio
 - Operating ratio
 - Investment ratio
 8. Prepare the following
 - Cash flow statement
 - Fund flow statement
 9. Preparation of reports for the following
 - Trial Balance
 - Profit & Loss A/c
 - Balance sheet
 - Bank reconciliation statement
 - Backup and restore the company information

SUGGESTED READINGS:

1. Tally education, (2018), Official Guide to Financial Accounting Using Tally. ERP 9 with GST (Release 6.4), 4th revised and updated edition, BPB Publications; New Delhi
2. Asok K. Nadhani (2018), Tally ERP Training Guide – 4th edition, BPB Publications; New Delhi
3. Sajee Kurian, (2017) Learning Tally ERP 9 with GST, 1st edition, Blessings Inc, Mumbai.
4. Ajay Maheshwari and Shubham Maheshwari(2017), Implementing GST in Tally.ERP 9,

Instruction Hours / week: L: 4 T: 0 P: 4 Marks: Internal: 40
Total: 100

External: 60

End Semester Exam: 3 Hours

Course Objectives:

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop knowledge about business communication.
- To develop knowledge about business writing.
- To acquire knowledge on communication for different purpose.
- To get knowledge to communicate in day to affairs.

Course Outcome:

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students will have honed the skills of communication which is needed for business purpose.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

Suggested Reading:

Learning to Learn: Study Skills in English Cambridge, 2015

Advanced Skills; Simon Harenas – CUP. 2015

Business Results, Woodward, OUP. 2015

Function in English. Jonathan Middlemiss et al, OUP

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of marketing, and 4Ps of Marketing
- To learn the product positioning strategies
- To apply the marketing concepts and skills lifelong.
- To update the recent developments in marketing management
- Analyze the role of advertising for social and green marketing
- To acquire the knowledge on product mix pricing strategies.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Access marketing process and segmentation
3. Apply the marketing concepts and skills lifelong.
4. Demonstrate the product management and brand identification
5. Understand the pricing and distribution management
6. Evaluate the growth of online and direct marketing

UNIT I: INTRODUCTION TO MARKETING MANAGEMENT:

Introduction: Market and Marketing, the Exchange Process, Core Concepts of Marketing - Market and Marketing, the Exchange Process, Core Concepts of Marketing, Exchange concept, Production concept, Product concept, Sales/selling concept, Modern marketing concept, Societal marketing concept, Impact of marketing concepts and its applicability, Functions of Marketing, Importance of Marketing, Marketing Orientations.

Environmental Scanning: Analysing the Organization's Micro Environment, Company's Macro Environment, Differences between Micro and Macro Environment, Techniques of Environment Scanning,

UNIT II - THE MARKET PROCESS AND SEGMENTATION

The marketing process: Introduction, Marketing Mix-The Traditional 4Ps, The Modern Components of the Mix- The Additional 3Ps, Developing an Effective Marketing Mix, Marketing Planning, Marketing Implementation and Control,

Segmentation : Concept of Market Segmentation, Benefits of Market Segmentation, Requisites of Effective Market Segmentation, The Process of Market Segmentation, Bases for Segmenting Consumer Markets, Targeting (T), Market Positioning (P)

UNIT III :PRODUCT MANAGEMENT

Decisions, Development and Lifecycle Strategies: Introduction, Levels of Products, Classification of Products, Product Hierarchy, Product Line Strategies, Product Mix Strategies, Packaging and Labelling, New Product Development, Product Life Cycle (PLC)

Brand and Branding Strategy: Introduction, Brand and Branding, Advantages and disadvantages of branding, Brand Equity, Brand Positioning, Brand Name Selection, Brand Sponsorship, Brand Development

UNIT IV : PRICING AND DISTRIBUTION MANAGEMENT

Pricing :Introduction, Factors Affecting Price Decisions, Cost Based Pricing, Value Based and Competition Based Pricing, Product Mix Pricing Strategies, Adjusting the Price of the Product, Initiating and Responding to the Price Changes.

Distribution Management: Introduction, Need for Marketing Channels, Decisions Involved in Setting up the Channel, Channel Management Strategies, Introduction to Logistics Management, Introduction to Retailing, Wholesaling,

UNIT V - PROMOTION MANAGEMENT AND RECENT DEVELOPMENTS IN MARKETING

Nature and importance of promotion; Communication process; Types of promotion: advertising, personal selling, public relations & sales promotion, and their distinctive characteristics; Promotion mix and factors affecting promotion mix decisions;

Recent developments in marketing: Social Marketing, online marketing, direct marketing, services marketing, green marketing, Rural marketing; Consumerism

SUGGESTED READINGS:

1. Philip T. Kotler, Gary Armstrong, Prafulla Agnihotri , (2018), *Principles of Marketing*, 17th edition, Pearson Education, NewDelhi
2. V. S. Ramaswamy , S. Namakumari (2018), *Marketing Management: Indian Context Global Perspective*, 6th edition, , Sage Publications India (P) Ltd., NewDelhi
3. Philip Kotler, Kevin Lane Keller, (2017), *Marketing Management*, 15th edition, Pearson Education, NewDelhi
4. Rajan Saxena (2017), *Marketing Management*, 5th edition, McGraw Hill Education, NewDelhi.
5. Philip Kotler (2017), *Marketing 4.0: Moving from Traditional to Digital*, Wiley, NewDelhi

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
- To comprehend on the contemporary issues relevant to accounting concepts.
- To analyse the alternatives using appropriate tools and techniques.
- To solve the problems and take decisions based on the result.
- To communicate orally and in written form the concepts and solutions.
- To update the recent management accounting concepts.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behavior, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyze the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Analyze the financial statement analysis using ratios, fund flow and cash flow statements.

UNIT I :INTRODUCTION

Meaning, Objectives, Nature and Scope of management accounting, Difference between cost accounting and management accounting, Cost control and Cost reduction, Cost management

UNIT II :FINANCIAL STATEMENT ANALYSIS

Horizontal and Vertical Analysis.

Ratio Analysis: Meaning, Advantages, Limitations, Classifications of ratios

Fund Flow Statement: Meaning, Uses, Limitations, Sources and uses of funds

Cash Flow Statement: Meaning, Uses, Limitations, Sources and uses of cash, AS3 Standard format.

UNIT III : STANDARD COSTING

Standard Costing : Standard Costing and Variance Analysis: Meaning of standard cost and standard costing, advantages, limitations and applications. Variance Analysis – material, labour, overheads and sales variances. Disposition of Variances, Control Ratios.

UNIT IV :MARGINAL COSTING AND DECISION MAKING

Absorption versus Variable Costing: Distinctive features and income determination. Cost-Volume Profit Analysis, Profit / Volume ratio. Break-even analysis-algebraic and graphic methods. Angle of incidence, margin of safety, Key factor, determination of cost indifference point.

Decision Making : Steps in Decision Making Process, Concept of Relevant Costs and Benefits, Various short term decision making situations – profitable product mix, Acceptance or Rejection of special/ export offers, Make or buy, Addition or Elimination of a product line, sell or process further, operate or shut down. Pricing Decisions: Major factors influencing pricing decisions, various methods of pricing

UNIT V: BUDGETARY CONTROL AND CONTEMPORARY ISSUES :

Budgeting and Budgetary Control: Concept of budget, budgeting and budgetary control, objectives, merits, and limitations. Budget administration. Functional budgets. Fixed and flexible budgets. Zero base budgeting. Programme and performance budgeting.

Contemporary Issues : Responsibility Accounting: Concept, Significance, Different Responsibility Centres, Divisional Performance Measurement: Financial and Non-Financial measures. Transfer Pricing

Note: Distribution of marks - 30% theory and 70% problems

SUGGESTED READINGS:

1. M.Y. Khan, P.K. Jain (2017), Management Accounting, 7th Edition, McGraw Hill Education, New Delhi.
2. Dr S N Maheshwari, CA Sharad K Maheshwari & Dr Suneel K Maheshwari (2018), A Textbook of Accounting for Management, 4th Edition S Chand Publishing, New Delhi.
3. AlnoorBhimani, Charles T. Horngren, Srikant M. Datar, Madhav Rajan (2015) Management and Cost Accounting, 6th edition, Pearson Education, New Delhi.
4. Narasimhan (2017), Management Accounting, Cengage Learning Publishing, New Delhi.
5. The Institute of Company Secretaries of India (2018), Corporate and Management Accounting, M P Printers

COURSE OBJECTIVES:**To make the students**

- To understand the Concept of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations.
- To communicate orally and in written form the understanding of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations.
- To apply the understanding of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations in lifelong practice.
- To know about compensation and reward management and its practice in industry.
- To be familiar with Employee relations and its application for the development of Human resources.
- To update the recent developments in Human resource policies.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations.
2. Communicate orally and in written form the understanding of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations.
3. Apply the understanding of Human Resource Management, Human Resource Planning, Recruitment, performance appraisal and employee relations in lifelong practice.
4. Assess the job analysis for a profile and understand its linkage with HR planning
5. Evaluate the training needs and draft a training programme.
6. Differentiate the Domestic and International HRM in a global perspective.

UNIT I INTRODUCTION TO HUMAN RESOURCE MANAGEMENT:

Definition and Concept, Features, Objectives, Functions, Scope and Development of Human Resource Management, Importance of Human Resource Management, Human Resource Practices.

UNIT II : HUMAN RESOURCE PLANNING, JOB ANALYSIS AND DESIGN:

Concept of Human Resource Planning (HRP), Factors in HRP, Process of HRP

Job Analysis, Job Description, Writing a Job Description, Job Specification, Job Design

UNIT III RECRUITMENT, SELECTION, INDUCTION AND TRAINING

Recruitment: Introduction, Concept of Recruitment, Factors Affecting Recruitment, Types of Recruitment

Selection: Introduction, Concept of Selection, Process of Selection, Selection Tests, Barriers in Selection

Induction: Introduction, Meaning and Definition of Induction, Need for Induction , Problems Faced during Induction , Induction Programme Planning

Training: Concept and Significance of Training, Training Needs, Training Methods, Types of Training

UNIT IV PERFORMANCE APPRAISAL, WAGES AND SALARY AND INCENTIVES

Performance Appraisal: Introduction, Concept of Performance Appraisal, Purpose of performance appraisal, Process, Methods of Performance Appraisal, Major Issues in Performance Appraisal

Wages and Salary: Introduction, Nature and Significance of Wage and Salary Administration, Theories of Wages, Methods of Wage Fixation

Incentives: Introduction, Concept of Incentives, Effective Incentive System, Types of Incentive Scheme

UNIT V EMPLOYEE RELATIONS AND INTERNATIONAL HRM

Employee Relations: Introduction, Concept of Employee Relations, Managing Discipline, Managing Grievance, Employee Counselling

International HRM: Introduction, Comparison of Domestic and International HRM, Challenges in International HRM

SUGGESTED READINGS:

1. Aswathappa, K. (2017). *Human Resource Management*, 6th edition, McGraw Hill Education, NewDelhi.
2. Dessler, G. and BijjuVarkkey (2017). *Human Resource Management*, 15th edition, Pearson Education, NewDelhi.
3. David A. Decenzo , Stephen P. Robbins, Susan L. Verhulst (2015), *Human Resource Management*, 11th edition, Wiley, NewDelhi.
4. George W Bohlander and Scott., Snell., (2016). *Principles of Human Resource Management* , 16th edition, Cengage India, NewDelhi.
5. Scott Snell, George Bohlander , Veena Vohra (2010), *Human Resources Management: A South Asian Perspective*, 1st edition, Cengage India, NewDelhi.

COURSE OBJECTIVES:**To make the students**

- To Understand the usage of information system in management decision.
- To critically analyse and evaluate the use of DSS, AI in supporting management decision
- To communicate orally and in written form the understanding of the usage of information system in management decision.
- To understand the security and ethical issues pertaining to use of information technology in management decision making.
- To apply the understanding of the usage of information system in management decision as a lifelong practice.
- To be aware of Control Issues in Management Information Systems

COURSE OUTCOMES:**Learners should be able to**

1. Understand the usage of information system in management decision.
2. Critically analyses and evaluate the use of DSS, AI in supporting management decision
3. Communicate orally and in written form the understanding of the usage of information system in management decision.
4. Understand the security and ethical issues pertaining to use of information technology in management decision making.
5. Apply the understanding of the usage of information system in management decision as a lifelong practice.
6. Demonstrate the support models and knowledge management.

UNITI: Understanding MIS and Decision Making Process

Introduction to Management Information Systems, History of MIS, Impact of MIS, Role and Importance, MIS Categories, Managers and Activities in IS, Types of Computers Used by Organizations in Setting up MIS, Hardware support for MIS

Introduction, The Decision Making Process , System Approach to Problem Solving, The Structure of Management Information System, Types of Management Systems Concepts of Management Organization

UNIT II Planning and Control and MIS Structure

Introduction, Differences between planning and control information, Systems Analysis, Systems Design

MIS Organization Structure : Introduction, MIS at Management levels, Strategic Level Planning, Operational Level Planning, Economic and Behaviour Theories.

UNIT III Enterprise Resource Planning and E-Enterprise System

Enterprise Resource Planning: Introduction, Basics of ERP, Evolution of ERP, Enterprise Systems in Large Organizations, Benefits and Challenges of Enterprise Systems

E-Enterprise System : Introduction: Managing the E-enterprise, Organisation of Business in an E-enterprise, E-business, E-commerce, E-communication, E-collaboration,

UNIT IV :Trends in MIS, MIS – Support Models and Knowledge Management

Introduction, Decision Support Systems (DSS), Artificial Intelligence (AI)

Introduction, Philosophy of Modelling, DSS: Deterministic Systems, Market Research Methods, Ratio Analysis for Financial Assessment, Management Science Models, Procedural Models, Project Planning and Control Models, Cost Accounting Systems, Operations Research Models: Mathematical Programming Techniques, Knowledge Management

UNIT V Strategic Management Information System, Security and Ethical Issues

Introduction, Background, Performance, Product differentiation and Value Chain, How IT influences Organizations' goals, The five levels, Governance Modes in the use of IT

Security and Ethical Issues: Introduction, Control Issues in Management Information Systems, Security Hazards, Ethical Issues, Technical solutions for Privacy Protection

SUGGESTED READINGS:

1. C. Laudon Kenneth, P. Laudon Jane (2018), Management Information System, 15th edition, Pearson Education, New Delhi.
2. James A. O'Brien , George M. Marakas , Ramesh Behl (2017), Management Information Systems, 10th edition, McGraw Hill, New Delhi.
3. Gupta A.K. (2010), Management Information System, S.Chand, New Delhi,
4. D.P. Goyal (2014), Management Information Systems: Managerial Perspectives, 4th edition Vikas Publication, New Delhi.
5. Jawadekar (2017) Management Information Systems: A Global Digital Enterprise Perspective, 5th edition, McGraw Hill, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of the marketing, 4-s of marketing and its application in real business situation,
- To analyse the business case studies and try to apply the theoretical learning into lifelong practice.
- To critically evaluate the appropriate alternatives and draw a solution.
- To communicate in oral and written form and prepare report
- To Work in team and exhibit leadership skills
- To know modern marketing concepts

COURSE OUTCOMES:**Learners should be able to**

1. Apply the concept of the marketing in own business concerns
2. Evaluate the case studies on pros and cons to avoid the critical situations.
3. Evaluate the appropriate alternatives and draw a solution.
4. Access the advantages and disadvantages of online marketing
5. Work in team and exhibit leadership skills
6. Demonstrate the distribution management or the selected company.

LIST OF PRACTICALS

1. **Case Studies on** Impact of marketing concepts and its applicability and bringing out the difference in Core Concepts of Marketing, Exchange concept, Production concept, Product concept, Sales/selling concept, Modern marketing concept, Societal marketing concept.
2. Perform SWOT / PEST Analysis
3. Case study on The Traditional 4Ps and The Modern Components of the Mix- The Additional 3Ps.
4. Select a company having a multiple product line, For the selected company
 - Analyse the product line and segmentation Market Positioning\
 - Product life cycle for the products
 - *Brand and Branding Strategy of the company*
 - Pricing for the products
 - Distribution Management
 - Promotion mix used by the company.
5. Analyse the case study on any two of the
 - Social Marketing, online marketing, direct marketing, services marketing, green marketing, Rural marketing; Consumerism

SUGGESTED READINGS:

1. Philip T. Kotler, Gary Armstrong, Prafulla Agnihotri , (2018), *Principles of Marketing*, 17th edition, Pearson Education, NewDelhi
2. V. S. Ramaswamy , S. Namakumari (2018), *Marketing Management: Indian Context Global Perspective*, 6th edition, , Sage Publications India (P) Ltd., NewDelhi
3. Philip Kotler, Kevin Lane Keller, (2017), *Marketing Management*, 15th edition, Pearson Education, NewDelhi
4. Rajan Saxena (2017), *Marketing Management*, 5th edition, McGraw Hill Education, NewDelhi.
5. Philip Kotler (2017), *Marketing 4.0: Moving from Traditional to Digital*, Wiley, NewDelhi

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of management accounting, costing behavior, budgeting and enrich the lifelong learning.
- To comprehend on the contemporary issues relevant to accounting concepts.
- To analyze the alternatives using appropriate tools and techniques.
- To solve the problems and take decisions based on the result.
- To communicate orally and in written form the concepts and solutions.
- To learn budget controlling mechanism for effective decision making.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behavior, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyze the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Understand the importance to prepare budget and apply the controlling mechanisms

LIST OF PRACTICALS

1. Analyse a case study on Cost control / Cost reduction.
2. Importance of the management accounting in decision making – Analyse the case.
3. To select a Company
Download the financial statements
Perform the following financial analysis and interpret

*Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis**Ratio Analysis - Liquidity of Short-Term Assets**Current Ratio - Acid-Test Ratio (Quick Ratio) - Cash Ratio**Income Statement Consideration when Determining Long-Term**Debt-Paying Ability - Times Interest Earned**Balance Sheet Consideration when Determining Long-Term**Debt Ratio - Debt/Equity Ratio**Profitability Measures**Net Profit Margin - Total Asset Turnover - Return on Assets*

Considering Only Operating Accounts - Operating Income Margin - Operating Asset Turnover - Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - The Relationship Between Profitability Ratios - Gross Profit Margin

For the Investors

Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, Dividend Yield

Book Value per Share

4. Identify the elements of cost and Prepare Cost Sheet for a selected Small Scale Company product or Services
5. Analyse a real time case study on Make or Buy Decision
6. Ask the student to prepare a monthly budget for his family and make a variance analysis (Actual expense – Budgeted)
7. Analyse a real time case study on importance of Budgeting and Budgetary control
8. Analyse the case study on Zero based budgeting
9. Analyse case study on (Any of the Two topics
 - a. Transfer Pricing
 - b. Responsibility Accounting
 - c. Inflation Accounting
 - d. Human Resource Accounting

COURSE OBJECTIVES:**To make the students**

- To understand the concept of the Human resource management and HR practices in real organization.
- To analyze the case studies, HR process and apply the theoretical learning into lifelong practice.
- To Critically evaluate the appropriate alternatives methods for HR practices and select the best methods suiting the situation.
- To Communicate in oral and written form and prepare report
- To Work in team and exhibit leadership skills
- To update the recent developments in Human Resource Management

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of the Human resource management and HR practices in real organization.
2. Analyze the case studies, HR process and apply the theoretical learning into lifelong practice.
3. Critically evaluate the appropriate alternatives methods for HR practices and select the best methods suiting the situation.
4. Communicate in oral and written form and prepare report
5. Work in team and exhibit leadership skills
6. Evaluate the reasons for grievances and able to draw a solution

LIST OF PRACTICALS

1. Select one of the company, from the best place to work in India. Study on their HR practices and write a report on Best practices and HR manager of the company.
2. Select three job advertisement in Newspaper for a selected profile and prepare presentation on job analysis and job description. For that profile.
3. Procedure for the Recruitment process.(Evaluate importance of various methods and how to select the best for a particular scenario)
4. Procedure for use of online portal for the recruitment process (Cloud computing, Talent Management)
5. Procedure for the selection process. (Evaluate importance of various methods and how to select the best for a particular scenario)
6. Procedure for induction process
7. Procedure for designing and conducting a training programming. . (Evaluate importance of various methods and how to select the best for a particular scenario)

8. Procedure for performing appraisal in an organization . (Evaluate importance of various methods and how to select the best for a particular scenario)
9. Procedure or norms for fixing the compensation package for a profile in a particular industry.
10. Procedure for the employee grievance redressal and drawing a solution.
11. Select a company and interview a HR manager and collect the detail of the HR practices followed in the company (Prepare a case study or video case).

SUGGESTED READINGS:

1. Aswathappa, K. (2017). *Human Resource Management*, 6th edition, McGraw Hill Education, NewDelhi.
2. Dessler, G. and BijjuVarkkey (2017). *Human Resource Management*, 15th edition, Pearson Education, NewDelhi.
3. David A. Decenzo , Stephen P. Robbins, Susan L. Verhulst (2015), *Human Resource Management*, 11th edition, Wiley, NewDelhi.

5. Scott Snell, George Bohlander , Veena Vohra (2010), *Human Resources Management: A South Asian Perspective*, 1st edition, Cengage India, NewDelhi.

COURSE OBJECTIVES:**To make the students**

- To Understand the usage of information system in management decision.
- To critically analyze and evaluate the use of DSS, AI in supporting management decision
- To communicate orally and in written form the understanding of the usage of information system in management decision.
- To understand the security and ethical issues pertaining to use of information technology in management decision making.
- To apply the understanding of the usage of information system in management decision lifelong practice.
- To be aware of threats in E-banking and Mobile Banking Technologies

COURSE OUTCOMES:**Learners should be able to**

1. Understand the usage of information system in management decision.
2. Critically analyze and evaluate the use of DSS, AI in supporting management decision
3. Communicate orally and in written form the understanding of the usage of information system in management decision.
4. Understand the security and ethical issues pertaining to use of information technology in management decision making.
5. Apply the understanding of the usage of information system in management decision lifelong practice.
6. Evaluate the performance of E - Governance in a state.

LIST OF PRACTICALS

1. Visit a company and know the management information system and its application in the company decision making process. (Measure efficiency in terms of Cost and time factor)
2. Understand the application of Artificial intelligence in the decision-making process of a company using a real time case.
3. Use of Google analytics in decision making process by the companies – A real time case
4. Use of the ERP systems in improvising the decision making process of the organization. – A real time case
5. Information Technology influence on organization goal – A Case study analysis
6. Information Technology usage in Accounting and finance control – A case study analysis
7. E-Governance in a state – Select a state which you feel has implemented information technology for effective governance.
8. The Threats in E-banking and Mobile Banking Technologies – A real case study analysis
9. Security threats in Implementing the Information technology in an organization and ways to mitigate same – Refer a real time case

10. Growing Need and role of CIO in an organization especially financial institutions – A Real case study analysis

Note : Refer CIO websites also for the case studies

2. James A. O'Brien , George M. Marakas , Ramesh Behl (2017), Management Information Systems, 10th edition, McGraw Hill, New Delhi.
3. Gupta A.K. (2010), Management Information System, S.Chand, New Delhi,
4. D.P. Goyal (2014), Management Information Systems: Managerial Perspectives, 4th edition Vikas Publication, New Delhi.
5. Jawadekar (2017) Management Information Systems: A Global Digital Enterprise Perspective, 5th edition, McGraw Hill, New Delhi.

Instruction Hours / week: L: 4 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- To train students in understanding the concepts of communication.
- To be familiar with the four basic skills of English.
- To train students in developing their written communication.
- To train students in developing their presentation skills.
- To acquire the skill of making grammatically correct sentences.
- To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Practice the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Refine communication competency through LSRW skills.

UNIT I: Integrated Skills

Development of speaking- Nature, Process, and Importance of Communication, Types of Communication (Verbal and Non-Verbal), Different forms of Communication, Barriers of Communication, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, and Organizational Barriers, listening and grammar skills.

UNIT II: Advanced Reading Skills

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: Advanced Writing Skills

Business Correspondence – Inviting Quotations, Sending Quotations, Placing Orders, Inviting Tender, Memorandum, Inter-Office, Memo, Notices, Agenda, Minutes, Resume Writing, and Report Writing.

UNIT IV: Business Language and Presentation

Importance of Business Language, Vocabulary Words often Confused, Words often Misspelt, Common Errors in English, Oral Presentation – Plan, PowerPoint Presentation and Visual Aids.

UNIT V: Technology and Communication

Language of Newspapers, magazines, Internet, TV and radio – their role to develop listening, reading and discussion skills, E-mail writing – Video Conferencing- Strategic importance of e-communication.

Suggested Reading:

In Business; CUP

Oxford Handbook of Writing: St. Martins Handbook of Writing

Sound Business, Julian Treasure OUP

COURSE OBJECTIVES:**To make the students**

- To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
- To analyze the research problem and design the blue print to capture data and analyze the same using appropriate statistical techniques and apply the learning lifelong.
- To critically formulate the research design and sampling design suitable for the problem.
- To communicate orally and written form the research problem, research design, sampling techniques.
- To design a report to communicate the findings and suggestion to make business decision.
- To be familiar with business research methods

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
2. Analyze the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. Critically formulate the research design and sampling design suitable for the problem.
4. Communicate orally and written for the research problem, research design, sampling techniques.
5. Design a report to communicate the findings and suggestion to make business decision
6. Apply the statistical tools for analysis and interpret

UNIT I RESEARCH AND RESEARCH PROCESS

Meaning of research; Scope of Research in Business; Purpose of Research; Types of Research, Problem identification, Review of Literature, Concept of theory - deductive and inductive theory - Concept, Construct, Definition, Variables - Research Process

UNIT II RESEARCH DESIGN AND SAMPLING DESIGN

Research Design: Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design.

Data Sources – Primary and Secondary Data.

Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non-Response, Characteristics of a good sample. Probability Sample – Simple Random

Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Non Probability Sampling – Convenience, Quota, Judgmental, snowball sampling.

UNIT III MEASUREMENT AND SCALING

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio.

Concept of Scaling, Ratings and Ranking Scale, Thurstone, Likert and Semantic Differential scaling, Paired Comparison.

Preparing questionnaire – Quality of a good questionnaire.

UNIT IV HYPOTHESIS TESTING

Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing –Tests concerning means and proportions; ANOVA, Chi-square test and other Non-parametric tests, correlation and Regression

UNIT V REPORT PREPARATION

Meaning, types and layout of research report; Steps in report writing; Citations, Bibliography and Annexure in report.

Note: Distribution of marks - 90% theory and 10% problems

SUGGESTED READINGS:

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.
2. Uma Sekaran, Roger Bougie (2018), Research Methods for Business: A Skill-Building Approach, 7th edition, Wiley, New Delhi.
3. Donald Cooper and Pamela Schindler (2017), Business Research Methods, 11th edition, McGraw Hill education, New Delhi.
4. Zikmund William G. et.al (2016), Business Research Methods, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), Research Methods for Business Students, 7th edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
- To analyze the alternatives using appropriate tools and techniques.
- To solve the problems and take decisions based on the result.
- To analyze the financial management concepts and solutions.
- To learn the team management and exhibit leadership skills.
- To update the recent developments in financial management

COURSE OUTCOMES:**Learners should be able to**

1. Apply the Concept of financial management by effective use of working capital
2. Analyze the capital budgeting decisions using appropriate tools and techniques.
3. Assess the different leverage and dividend policies.
4. Communicate orally and in written form the concepts and solutions.
5. Analyze cases in a team and exhibit leadership skills.
6. Understand the concept of capital structure and cost of capital

UNIT I : FINANCIAL MANAGEMENT AND SOURCES OF FINANCE :

Evolution, Scope and Functions of Finance Managers-Introduction; Scope of Finance; Financial Management System; Finance Functions ; Role of a Finance Manager – Treasurer and Controller, Financial Decisions, Agency Conflict and Agency cost.

Objectives of a Firm – Introduction; Profit Maximization; Shareholders' Wealth Maximization (SWM)

Sources of Finance - Introduction; Short-term Finance; Long-term Funds

Asset-Based Financing – Introduction; Lease Financing and Hire Purchase Financing.

UNIT II : TIME VALUE OF MONEY AND CAPITAL BUDGETING DECISIONS :

Time Value of Money - Introduction; Concept of Time Value of Money; Compounding Method ; Discounting Method (Problems)

Capital Budgeting Decisions- Introduction; Capital Budgeting, Capital Rationing

Capital budgeting techniques : Discounted and Non Discounted : NPV, Profitability index (Benefit Cost Ratio), Pay back Period, IRR ; (Problems)

UNIT III CAPITAL STRUCTURE THEORIES AND COST OF CAPITAL :

Capital Structure, Capital structure determinants, NI Approach, NOI approach, Traditional Approach, Relevance of Capital Structure Theories ; Irrelevance of Capital Structure

Cost of Capital; Components of Cost of capital: Cost of Debt; Cost of Preference Capital; Cost of Equity Capital, Approaches to Derive Cost of Equity; Weighted Average Cost of Capital and Weighted Marginal Cost of Capital (Problems)

UNIT IV LEVERAGE AND DIVIDEND POLICY

Financial and Operating Leverage – Introduction; Meaning of Financial Leverage, operating Leverage. Financial and Operating Leverages, EBIT-EPS Analysis, Indifference point. (Problems) Dividend Policy – Introduction; Types of dividend, Factors influencing the dividend policy; Financing and Dividend Decision; Dividend Relevance: Walter's Model

UNIT V : WORKING CAPITAL MANAGEMENT, CASH MANAGEMENT, RECEIVABLE MANAGEMENT AND INVENTORY MANAGEMENT.

Introduction; Concepts of Working Capital; Working capital Policies, Operating Cycle, (Problems) Estimation of working capital (Problems).

Management of Cash – Introduction ; Motives for Holding Cash; Facets of Cash Management; Cash Planning; Cash Forecasting and Budgeting; Determining the Optimum Cash Balance ; Investing Surplus Cash in Marketable Securities

Receivables Management :Credit Policy: Nature and Goals ;Collection Procedures

Inventory Management : Nature of Inventory, EOQ, Reorder level.

Note: Distribution of marks - 60% theory and 40% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
- To learn and apply tools and techniques to analyze the financial statement analysis.
- To critically evaluate the results of the tools applied, interpret the result.
- To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
- To utilize the knowledge of financial statement analysis for lifelong practice.
- To be familiar with the tools to use in financial statement analysis.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. Understand and examine tools and techniques to analyze the financial statement analysis.
3. Evaluate the results of the tools applied, interpret the result.
4. Access the financial statement with the use ratio analysis and interpret the results.
5. Recognize the uses and importance of financial statement
6. Measure the financial ratios to meet the corporate objectives

UNIT I : FINANCIAL REPORTING

Accounting Standards, Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

Overview of International Accounting Standards (IAS)/International Financial Reporting Standards (IFRS)- Interpretations by International Financial Reporting Interpretation Committee (IFRIC), Significant difference vis-a-vis IAS and IFRS.

Corporate Financial Reporting – Issues and problems with special reference to published financial statements

UNIT II FINANCIAL STATEMENTS - AN INTRODUCTION

Traditional Assumptions of the Accounting Model : Business Entity -Going Concern or Continuity - Time Period - Monetary Unit - Historical Cost - Conservatism - Realization - Matching - Consistency - Full Disclosure - Materiality - Industry Practices - Transaction Approach - Cash Basis - Accrual Basis

The Financial Statements : Balance Sheet (Statement of Financial Position) - Statement of Stockholders' Equity (Reconciliation of Stockholders' Equity Accounts) - Income Statement (Statement of Earnings) - Statement of Cash Flows (Statement of Inflows and Outflows of Cash)

Auditor's Opinion : Auditor's Report on the Firm's Internal Controls - Report of Management on Internal Control over Financial Reporting

Basic Elements of the Balance Sheet : Assets - Liabilities - Stockholders' Equity - Quasi-Reorganization - Accumulated Other Comprehensive Income - Equity-Oriented Deferred Compensation - Employee Stock Ownership Plans (ESOPs) - Treasury Stock - Stockholders' Equity in Unincorporated Firms

Basic Elements of the Income Statement : Net Sales (Revenues) • Cost of Goods Sold (Cost of Sales) • Other Operating Revenue • Operating Expenses • Other Income or Expense

UNIT III FINANCIAL ANALYSIS – 1

Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis

Ratio Analysis - Liquidity of Short-Term Assets

Current Assets, Current Liabilities, and the Operating Cycle

Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities

Current Assets Compared with Current Liabilities

Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) -Cash Ratio

Income Statement Consideration when Determining Long-Term

Debt-Paying Ability- Times Interest Earned

Balance Sheet Consideration when Determining Long-Term

Debt-Paying Ability

Debt Ratio - Debt/Equity Ratio

UNIT IV FINANCIAL ANALYSIS - 2

Profitability Measures

Net Profit Margin - Total Asset Turnover - Return on Assets - DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts - Operating Income Margin - Operating Asset Turnover - Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - The Relationship Between Profitability Ratios - Gross Profit Margin For the Investors

Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, Dividend Yield

Book Value per Share

Basic Elements of the Statement of Cash Flows

Financial Ratios and the Statement of Cash Flows

Operating Cash Flow/Current Maturities of Long-Term Debt and Current Notes - Payable - Operating Cash Flow/Total Debt - Operating Cash Flow per Share - Operating Cash Flow/Cash Dividends

UNIT V THE USERS OF FINANCIAL STATEMENTS

Financial Ratios as Perceived by Commercial Loan Departments : Most Significant Ratios and Their Primary Measure • Ratios Appearing Most Frequently in Loan Agreements.

Financial Ratios as Perceived by Corporate Controllers : Most Significant Ratios and Their Primary Measure • Key Financial Ratios Included as Corporate Objectives

Financial Ratios as Perceived by Certified Public Accountants
Financial Ratios as Perceived by Chartered Financial Analysts
Financial Ratios Used in Annual Reports

Note: Distribution of marks - 40% theory and 60% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To learn the Importance of SPSS and the features for in SPSS
- To understand the descriptive analytical tools available in SPSS and its appropriate application and interpretation.
- To know the univariate tools available in SPSS and its appropriate application and interpretation.
- To comprehend the parametric and non-parametric tools available and its appropriate application and interpretation.
- To remember the multivariate analysis tools available in SPSS.
- To list orally and in written form the understanding of SPSS and its features.

COURSE OUTCOMES:**Learners should be able to**

1. To understand the Importance of SPSS and the features for in SPSS
2. To apply descriptive analytical tools available in SPSS and its appropriate application and interpretation.
3. To examine the univariate tools available in SPSS and its appropriate application and interpretation.
4. To use the parametric and non-parametric tools available and its appropriate application and interpretation.
5. To understand the multivariate analysis tools available in SPSS.
6. To communicate orally and in written form the understanding of SPSS and its features.

UNIT I Overview and Data Entry

SPSS – Meaning – Scope- Limitation- Data view- Variable view- Data entry procedures
Data editing- Missing

UNIT II Descriptive Statistics

Descriptive statistics – Frequencies Distribution – Diagram – Graphs, Mean, Median, Mode, Skewness – Kurtosis – Standard Deviation.

UNIT III Non parametric and parametric test

Cross tabulation, Chi square

t test, independent sample t test, paired t test.

UNIT IV Analysis of Variance, Bivariate Analysis

ANOVA – One way, Correlation– Regression – Scree plots.

UNIT V Multivariate analysis

Multiple Regression, Factor Analysis.

BUSINESS RESEARCH METHODS (PRACTICAL)

18BAU411

Semester – IV
2E 1C

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
- To learn the research problem and design the blue print to capture data, analyse the same using appropriate statistical techniques and apply the learning lifelong.
- To Critically evaluate the appropriate scales and measurement to be used for capturing data.
- To Communicate in written form and prepare report to support decision making.
- To in team and exhibit leadership skills
- To be familiar with the business research methods.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
2. Analyze the research problem and design the instruments to capture data
3. Access the sampling design using appropriate statistical techniques, and apply the learning lifelong.
4. Evaluate the appropriate scales and measurement to be used for capturing data.
5. Design a report to communicate the findings and suggestion to make business decision
6. Apply the statistical tools for analysis and interpret

LIST OF PRACTICALS

1. Select a problem or issue. Collect 5-10 articles related to issues from reviewed journals available.
2. Analyse a case to understand the theory of deductive and inductive reasoning.
3. Analyse a case for the selection of appropriate research design
4. Analyse a case for the selection of appropriate sampling design
5. Provide a list of variables and request to classify them as nominal/ordinal/interval/ratio
6. Ask student to prepare a questionnaire for understanding the perception towards the usage of library among students/ Reading habits among youngsters/ environmental protection Ask students to perform analysis and hypothesis testing for the collected data
7. Ask students to prepare a technical report for the research undertaken (Minimum 30 pages)
8. Ask students to write the bibliography in MLA/CPA format for reference made.

Note : 6 – 8 (Team of 2-3 students)**SUGGESTED READINGS:**

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.
2. Uma Sekaran, Roger Bougie (2018), Research Methods for Business: A Skill-Building Approach, 7th edition, Wiley, New Delhi.
3. Donald Cooper and Pamela Schindler (2017), Business Research Methods, 11th edition, McGraw Hill education, New Delhi.
4. Zikmund William G. et.al (2016), Business Research Methods, Cengage India, New Delhi.

5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), Research Methods for Business Students, 7th edition, Pearson Education, New Delhi.

BBA

2018-2019

**FINANCIAL ANALYSIS AND REPORTING
(PRACTICAL)**

**Semester – IV
2F 1C**

18BAU412A

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
- To understand and apply tools and techniques to analyze the financial statement analysis.
- To critically evaluate the results of the tools applied, interpret the result.
- To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
- To utilize the knowledge of financial statement analysis for lifelong.
- To update the recent trends in financial analysis and reporting.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. Understand and examine tools and techniques to analyze the financial statement analysis.
3. Evaluate the results of the tools applied, interpret the result.
4. Access the financial statement with the use ratio analysis and interpret the results.
5. Recognize the uses and importance of financial statement
6. Measure the financial ratios to meet the corporate objectives

LIST OF PRACTICALS

1. To select a Company – Reason for selecting the company as investor

Download the financial statements

Perform the following financial analysis and interpret

2. Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis

3. Ratio Analysis - Liquidity of Short-Term Assets

Current Assets, Current Liabilities, and the Operating Cycle

Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities

Current Assets Compared with Current Liabilities

Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) - Cash Ratio

4. Debt-Paying Ability- Times Interest Earned

5. Debt Ratio - Debt/Equity Ratio

6. Net Profit Margin - Total Asset Turnover - Return on Assets – Operating Income Margin - Operating Asset Turnover

7. Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - Gross Profit Margin
8. DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts
9. For the Investors :Earnings per Common Share, Price/Earnings Ratio, Dividend Payout,- Book Value per Share

SUGGESTED READINGS:

1. Subramanyam, K. R. and John, J.W.(2014), “Financial Statement Analysis”, 10th Edition, Tata McGraw Hill, New Delhi.
2. Stephen H. Penman (2014) “Financial Statement Analysis and Security Valuation”, 4th Edition, Tata McGraw Hill, New Delhi.
3. M.S Narasimhan (2016), Financial Statement Analysis, 1st Edition, Cengage Learning India Private Limited, New Delhi.
4. Charles H. Gibson (2013), Financial Statement Analysis, 13th edition, Cengage Learning India Private Limited, New Delhi.
5. Lawrence Revsine , Daniel Collins , Bruce Johnson , Fred Mittelstaedt , Leonard Soffer (2015), Financial Reporting and Analysis, 6th Edition, McGraw-Hill Education, New Delhi.
6. Deepa Agarwal (2017), Financial Reporting and Auditors Responsibility, 2nd edition, Bloomsbury Professional India, New Delhi.
7. Deepa Agarwal (2018), The Law & Practice of Financial Reporting and Auditor’s Responsibilities under Companies Act, 2013,1st edition, Bloomsbury Professional India, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To understand the Importance of SPSS and the features for entering the data according to the variable type.
- To understand and apply the descriptive analytical tools
- To know the univariate tools and its application
- To comprehend the application of Bivariate analysis
- To understand and compute the multivariate analysis using the package.
- To be familiar with the tools used in SPSS for decision making.

COURSEOUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.
6. To understand the Importance of SPSS and the features for in SPSS

Exercise

1. Data Entry : Data View, Variable View, Coding and Recoding, Importing files, Missing Data, split files, split cases
2. Descriptive statistics : Mean, Median, Mode, Skewness, Kurtosis
3. Graphs : Pie chart, Line chart, scatter plot, bar chart
4. Cross tabulation and Chi square
5. t-test
6. paired t-test

7. independent sample t-test
8. One – Way ANOVA
9. Correlation, Regression, Scree Plot
10. Multiple regression
11. Factor Analysis

Use in-built case studies data in SPSS for performing the above exercises.

SUGGESTED READINGS:

1. Darren George, Paul Mallery (2016), *IBM SPSS Statistics 23 Step by Step*, Routledge, NewDelhi.
2. Asthana & Braj Bhushan (2017), *Statistics for Social Sciences (With SPSS Applications)*, PHI, New Delhi.
3. Keith McCormick, Jesus Salcedo, Aaron Poh, *SPSS Statistics for Dummies*, 3rd edition, Wiley, New Delhi.
4. Keith McCormick, Jesus Salcedo, Jon Peck, Andrew Wheeler, Jason Verlen (2017), *SPSS Statistics for Data Analysis and Visualization*, Wiley, NewDelhi.
5. Brian C. Cronk (2016), *How to Use SPSS®: A Step-By-Step Guide to Analysis and Interpretation*, 9th edition, Routledge, NewDelhi.

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of investing and mechanics for formulating investment decisions.
- To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
- To apply the investing concepts and skills lifelong.
- To be familiar with the fundamental analysis and investment companies.
- To know the portfolio theories to aware of issues in portfolio management
- To update the recent trends in investment management.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Illustrate the concept and speculation and Investment
3. Experience the investment decisions at the student's level
4. Formulate the strategies for diversification of investment
5. Apply the concept of investment by William Sharpe with Treynors performance index
6. Calculate and Analyze the Net Asset Value of the funds

UNIT I : The Investment and Investment Avenues

Concepts of investment – Sources of investment information- Investment Instruments.
Investment cycle.

UNIT II: Risk and Return and Valuation of Securities

Concept of total risk, factors contributing to total risk : default risk, interest rate risk, market risk, management risk, purchasing power risk, systematic and unsystematic risk,.

Risk & risk aversion. Capital allocation between risky & risk free assets-Utility analysis

Bond Valuation, Preference Share Valuation and Share Valuation: Dividend discount models- no growth, constant growth (Problems)

UNIT III Fundamental Analysis, Technical Analysis and Market Efficiency

EIC framework; Economic analysis: Leading lagging & coincident macro-economic indicators, Expected direction of movement of stock prices with macroeconomic variables in the Indian context; Industry analysis: stages of life cycle, Porter's five forces model,

SWOT analysis, financial analysis of an industry; Company analysis. Technical Analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, Trends: resistance, support, consolidation, momentum- Charts: line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, Indicators: moving averages

Efficient Market Hypothesis; Concept of efficiency: Random walk, Three forms of EMH

UNIT IV :Portfolio Management and portfolio Theory

Portfolio Management – Portfolio creating process - Portfolio Analysis: portfolio risk and return, Markowitz portfolio model: risk and return for 2 and 3 asset portfolios, concept of efficient frontier and optimum portfolio

Portfolio Theory : Capital asset pricing model – Arbitrage pricing theory – assumptions, significances and limitations of each theory

UNIT V:Mutual Funds, Portfolio Evaluation and Portfolio Revision

Mutual Funds : Introduction, calculation of Net Asset Value(NAV) of a Fund, classification of mutual fund schemes by structure and objective, advantages and disadvantages of investing through mutual funds.

Performance Evaluation using Sharpe's Treynor's and Jensen's measures.

Meaning – needs – Sharpe's performance measures – Treynor's Performance Index – Jensen's Performance Index – their significance and limitations – Portfolio revision (Problems)

Note: Distribution of marks - 80% theory and 20% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws, indirect taxes emphasizing GST and customs law.
- To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
- To comprehend on the assessment of the GST.
- To communicate orally and in written form the income tax, GST and customs law and computations of IT.
- To be familiar with the laws pertaining to the Income Tax, GST, Customs law and apply it lifelong.
- To be aware on issues arising in tax calculation

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws, indirect taxes emphasizing GST and customs law.
2. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
3. Comprehend on the assessment of the GST
4. Communicate orally and in written form the income tax, GST and customs law and computations of IT.
5. Understand with the laws pertaining to the Income Tax and apply it lifelong.
6. Compute and analyze assessable value and custom duty.

UNIT I : Income Tax Act

Definition – Income – Agricultural Income – Assessee– Previous year – Assessment year – Residential Status – Scope of Total Income – Capital and Revenue - Receipts and Expenditure – Exempted Incomes.

UNIT II : Computation of Income

Computation of Income from Salaries and Income from House Property. Computation of Profits and Gains of Business or Profession – Calculation of Capital Gain.

UNIT III : Computation of Income form other Sources

Computation of Income from Other Sources – Set-off and carry Forward of Losses - Deduction from Gross Total Income (80C, 80E and 80G only) – Assessment of Individuals. Income Tax Authorities – Procedure for Assessment – PAN Card- Tax Deducted at Source (TDS)– Residents and to Non – Residents – Tax collected at Source. Practical Applications of E-Filing.

UNIT IV :Indirect Taxes

Introduction - Features - Objectives of Taxation- Types of taxes- Direct and Indirect taxes - Indirect Tax structure-Merits and Demerits of Indirect Taxes- Recent Developments in Indirect Taxes- Goods and Services Tax Act 2016 - Introduction – Features – Benefits of GST Act. Goods and Service Tax - Important Definitions - Taxable Persons – Time of Supply of Goods and Services – Administrative set up – Classes of officers under Central and State goods and services Tax Act - Appointment of Officers – Powers of officers – Levy and collection of GST – Powers to grant exemption from tax - Registration – Procedure for registration under Schedule III – Special provisions relating to casual taxable person and non-resident taxable person – Amendment of registration – Cancellation of registration – Revocation of cancellation of registration.

UNIT V : Assessment and Customs Duty

Assessment of GST- Self-Assessment – Provisional Assessment – Scrutiny of Returns

Assessment of Non-filers of Returns – Assessment of Unregistered Persons – Assessment in certain Special Cases – Tax Invoice – Credit and Debit Notes – Payment of Tax – Tax Deducted at Source – Electronic Commerce – Definitions - Collection of Tax at Source. Customs Act 1962 – Important Definitions – Basics – Importance of Customs Duty – Constitutional authority for levy of Customs Duty – Types of Customs Duty – Prohibition of Importation and Exportation of goods – Valuation of Goods for Customs Duty – Transaction Value – Assessable Value – Computation of Assessable Value and Customs Duty.

Note: Distribution of marks - 60% theory and 40% problems

COURSE OBJECTIVES:**To make the students**

- To learn the Operations management and its application in business.
- To critically evaluate the project completion cycle using operation techniques and solve the problem.
- To recognize the importance factory location, plant location, Plant layout and facility layout.
- To formulate the production planning and control systems and ensure efficient scheduling for production.
- To gain knowledge of applying a quality management TQM tools to improve organizational effectiveness
- To update the recent developments in production and operations management

COURSE OUTCOMES:**Learners should be able to**

1. Understand the core features of the operations and production management function at the operational levels.
2. Critically evaluate the project completion cycle using operation techniques and solve the problem.
3. Evaluate and decide the best plant and factory location and layout.
4. Understand the production planning and control systems and ensure efficient scheduling for production
5. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.
6. Effectively communicate ideas, explain procedures in oral and written forms to different audiences.

UNIT 1: Introduction to Production Management:

Introduction; History of Production and Operations Management; Definitions of Production Management; Definition of Operations Management: An Outline of Operations Strategy; Factors Affecting Operations Management; Objectives of Operations Management; Functions and Scope of Operations Management.

UNIT II: Production and Process Design:

Product Selection; Definitions of Product Design and Development: Need for Product Design and Development, Origin of the Product Idea and Selection from Various Alternatives, Choosing among Alternative Products, Modifying the Existing Products, Sources of Product Innovation, Characteristics of a Good Design, Reverse Engineering, Concurrent Engineering; Process Design—Meaning, Need, Factors and Types: Framework for Process Design, Process Planning Procedure, Relationship between Process Planning and other POM Activities, Type of Process Designs.

Production Planning and Control: Nature of Production Planning and Control (PPC): Types of Plans, Elements of Production Planning, Strategy of Production Planning, Aggregate Planning; Main Functions of Production Planning and Control (PPC): Master Production Schedule (MPS); Types of Production Planning and Control Systems: Production Control; Product Scheduling: Factors Affecting Scheduling; Scheduling Procedure and Techniques

UNIT III: Project Analysis:

PERT/CPM: Definition of Project and Project Management: Characteristics of a Project, Life Cycle of a Project, Types of Projects, Scope of Project Management, Project Planning Process; Programme Evaluation Research Task (PERT) and Critical Path Method (CPM): Principles of Network Construction, Time Aspect of Projects, Crashing of a Project, Limitations of CPM and PERT

UNIT IV Plant Location and Layout:

Definition and Objectives of Plant Location: Importance of Location, Locating Foreign Operations Facilities, Location Decision Process; Layout Planning: Advantages and Functions of Layout Planning, Principles of Layout, Layout Varies on Facility Types, Flow Patterns, Objectives of a Good Plant Layout, Factors for a Good Plant Layout, Types of Layout, Methodology of Layout Planning

UNIT V : Work Study:

Work Study: Definition, Objectives, Significance and Advantages: Importance and Scope, Various Models, Work Study as a Science, Work Study and Productivity, Outline Process

Chart, Importance of Work Study; Method Study: Definition, Objectives and Procedure: Objectives of Method Study, Method Study Procedure, Therbligs; Work Measurement: Objectives of Work Measurement, Techniques of Work Measurement, Work Sampling Compared to Time Study

JIT and Quality: Definition of Just-In-Time (JIT): Process of JIT; Quality: Costs of Quality, Characteristics of Quality, Quality of the Process, Seven Tools of Statistics, Quality Planning and Improvement Tools, Specification and Control Limits: Total Quality Management (TQM): Principles of TQM, Deming's 14 Points; Six Sigma: Six Sigma Themes

BBA

2018-2019

18BAU511B

**BANKING AND INSURANCE
(PRACTICAL)**

**Semester – V
2E 1C**

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To understand the concept and products of banking and insurance company.
- To analyze the features of the banking and insurance companies apply the theoretical learning into lifelong practice.
- To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
- To Communicate in oral and written form and prepare report
- To know the various schemes available in insurance Products
- To be aware on issues in banking and insurance.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of banking and insurance its history, products and regulatory body.
2. Comprehend the uses of banking and insurance products.
3. Apply the benefits of insurance, its products in lifelong practice.
4. Formulate the strategies to aware on current updates in insurance products
5. Perform the insurance concept for all types of insurance
6. Apply the recent developments in banking and insurance industries for day to day applications

Select a bank

1. Forms of various accounts and deposits of Commercial Banks.
2. Application forms for opening accounts, Cheque Books, pass books, requisition slips for withdrawals and deposits, bank statements, format of Demand draft, Cheque, travel cheques etc.
3. Working and operations of ATM, Credit cards, E-Banking.
4. Procedure for applying personal loan – application proforma and documents to submitted
5. Procedure for applying housing loan - application proforma and documents to submitted
6. Procedure for applying corporate loan - application proforma and documents to submitted
7. Procedure for applying working capital loan - application proforma and documents to submitted

Select Insurance companies

8. Collect the format of proposal form of different kinds of insurance (life and General Insurance) and learn the process of filling them.
9. Familiarize with IRDA norms for agency license.
10. Visit any insurance office and collect the details of its Organizational Structure,
11. Life insurance companies and identifying their features - Comparative analysis (between any two insurance company)

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing.
- To communicate orally and in written form the understanding of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing.
- To critically analyze and evaluate the criteria for the functioning of the retail store and growth of retail sector in India.
- To be aware on technologies used in retail outlets.
- To understand the status of merchandise management in retailing
- To update the emerging trends in retail management.

COURSE OUTCOMES:**Learners should be able to**

1. Apply the concept of Retailing, Retail market segmentation, Retail location, merchandising, Retail operations and Retail Pricing.
2. Determine the strategies to develop the sales volume and customer centric
3. Asses the various forms of retail units and problems faced by them
4. Recognize the importance of retailing to reach the product to the end customers
5. Understand the importance of merchandise management in retailing
6. Update the recent trends in retailing as an emerging career opportunities

LIST OF PRACTICALS

1. Clicks-and-Mortar vs. Bricks-and-Mortar – An Analysis of a real time case
2. FDI flow into retail industry in India – Evaluate and comment on the current position
3. Your opinion on Recent Budget impact on Retail Sector – Refer – IBEF website
4. Analyse case on Wal-Mart in India?
5. Create a mind mapping for the job opportunities in Retail sector and the roles and responsibilities for each role (CHART or Computerised color print out)
6. Create a mind mapping for the different retail formats – merit and demerit. (CHART or Computerised color print out)
7. Conduct a survey among students/households/ working professional on their satisfaction level of purchasing online and prepare a report. (2-3 in a team)
8. Visit a Retail store of your choice and evaluate the store on following parameter – (Ask permission to take photos) (2 in a team)
 - a. Year of establishment
 - b. Promoter or management detail
 - c. Initial investment (if data permitted to access)
 - d. Location
 - e. Space Management
 - f. Visualizing
 - g. Promotion strategy
 - h. POP Display

- i. CRM practices (if any)
- j. Pricing
- k. Cost Control mechanism (if data permitted to access)
- l. Target Segment
- m. Average Footfalls per day – Visit Saturday and Sunday. (if data permitted to access)

COURSE OBJECTIVES:**To make the students**

- To understand the concept of business law and its impact in business situation.
- To analyze the cases and relate the outcome to the law pertaining to the same.
- To critically evaluate the cases and judgements and understand the practicality of the law.
- To Communicate in oral and written form and prepare report
- To enhance knowledge in the Negotiable Instruments Act 1881.
- To update the emerging trends in business law

COURSE OUTCOMES:**Learners should be able to**

1. Identify the basic legal principles behind contractual agreements.
2. Understand the relevance of business law in economic and social context.
3. Acquire problem solving techniques and will be able to present coherent, concise legal argument in partnership for achieving common goals.
4. Exhibit attributes in understanding various negotiable instruments, its features and utilization in real-time.
5. Obtain the capacity to do lifelong learning in modifications and revision done in the legal environment of business.
6. Understand the partnership concern and Limited Liability Partnership agreement features.

LIST OF PRACTICALS

Analyse the cases and write the understanding of the case and relate to law pertaining to the same.

– If the judgement is fair Why or why not?

Reference : <https://indiankanoon.org>

1. Analyse the case - Breach of contract: MillerCoors sues HCL Tech for \$100 million
2. Analyse the case -The Sale of Goods Act, 1930
 - a. Tomas Cook (India) Limited vs The Dy./Jt. Commissioner Of ... on 30 January, 2006
3. Analyse the case – Bill of Exchange - American Express Bank Ltd. vs Calcutta Steel Co. And Ors. on 18 December, 1992
4. Analyse the case – partnership Act -Ramesh Builders (India), Mumbai vs Assessee on 27 July, 2016

5. Negotiable Instruments Act, 1881
2. Analyse the Section 138 of NI - Directors' Liability in cheque bouncing cases
3. Mediation for Offence under Section 138 of Negotiable Instruments Act, 1881
 - i. Case name: Dayawati v. Yogesh Kumar Gosain (Delhi High Court)
4. SC Issues Directions for Speedy Disposal of Dishonor of Cheque Cases
 - i. Case Name: M/s Meters and Instruments Private Limited &Anr. v. Kanchan Mehta
5. Only Handing over of Dishonored Cheque does not Attract Offence under Section 138 of NI Act – case name – smt. Asha Baldwa v. Ram Gopal
6. Difference between warranty and guarantee agreement with an example of a product purchased by family. (Attach the copy of the warranty and guarantee card)
7. Prepare a mind map in chart about the Essentials of valid contract
8. Prepare a chart to portray the type of partnership and role of partners in each type.
9. Design a chart on negotiable instruments portraying
10. Cheque
11. Crossing of Cheque
12. Other requirement to be correct for a valid cheque

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of direct taxes, indirect taxes and its application.
- To know how to e-filing of IT, register GST and apply the GST provisions.
- To communicate orally and in written form the direct, indirect taxations concepts and provisions.
- To be familiar with the standards and laws pertaining to the Income Tax, GST and customs and apply the knowledge lifelong.
- To be familiar with the laws pertaining to the Income Tax, GST, Customs law and apply it lifelong.
- To be aware on issues arising in tax calculation

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws, indirect taxes emphasizing GST and customs law.
2. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
3. Comprehend on the assessment of the GST
4. Communicate orally and in written form the income tax, GST and customs law and computations of IT.
5. Understand with the laws pertaining to the Income Tax and apply it lifelong.
6. Compute and analyze assessable value and custom duty.

LIST OF PRACTICALS

1. Creation of login of e- filing and E- Filing of income tax returns,
2. Calculation of TDS
3. Compulsory On-Line filing of returns for specified assesses.
4. Application for Getting PAN / TAN
5. E- payment of tax on total income and tax calculator
6. Submit returns or various forms
7. Rectification of Mistakes
8. ITR V Receipt Status
9. Outstanding tax demand and refund status
10. Provision of GST, the provisions related to levy of UTGST.
11. Whether the following transactions will be considered as supply or not under GST laws (provisions) a) An individual buys a car for personal use and after a year sells it to a car dealer.

- b) A dealer of air-conditioners permanently transfers an air conditioner from his stock in trade, for personal use at his residence. c) Provision of service or goods by a club or association or society to its members.
12. Whether GST would be payable in following independent cases (provisions) : a) A Company Secretary makes payment of LLP Registration fees of Rs. 3,000/- on behalf of their clients and charges the client his professional fee of Rs. 15,000/- along with expenses of Rs. 3,000/- incurred in form of payment to Registrar of Companies. b) A company provides Subsidized Meal facility to employees. It pays Rs. 70/- per plate to the caterer and deducts Rs. 10/- per plate from the employee's salary. c) A pharmaceutical company supplies free samples to doctors. d) Raghunath Temple Charitable trust, registered under section 10(23C)(v) of the Income-tax Act gives on rent a community hall, located within temple premises, to public for organizing a Diwali Mela. Rent charged is Rs. 9,500. e) Northstar Trucking Ltd. has given on hire 11 trucks to Jaggi Transporters of Mumbai (a goods transport agency) for transporting goods in various parts of the country. The hiring charges for the trucks are Rs. 10,200 per truck per day.
13. Procedure for GST Registration and Filing of GST Returns
14. Procedure of furnishing details of outward supplies and of revision for rectification of errors and omissions as per CGST Act, 2017.
15. Basic documents to be filed along with bill of entry

COURSE OBJECTIVES:**To make the students**

- To understand the Operations management and its application in business.
- To critically evaluate the criteria for establishing a production plant based on analysis of real time case.
- To recognize the importance factory location, plant location, Plant layout and facility layout.
- To gain knowledge of applying a quality management TQM tools to improve organizational effectiveness
- To formulate the production planning and control production and operations management systems and ensure efficient scheduling for production.
- To update the recent developments in operations management

COURSE OUTCOMES:**Learners should be able to**

1. Understand the core features of the operations and production management function at the operational levels.
2. Critically evaluate the project completion cycle using operation techniques and solve the problem.
3. Evaluate and decide the best plant and factory location and layout.
4. Understand the production planning and control systems and ensure efficient scheduling for production
5. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.
6. Effectively communicate ideas, explain procedures in oral and written forms to different audiences.

LIST OF PRACTICALS

1. Analyse the impact of the “Make in India” Campaign on the development of manufacturing sector.
2. Prepare a mind map on Factors for a Good Plant Layout in a chart
3. Prepare a mind map on Deming’s 14 Points in a chart
4. Analyse the case on importance of six sigma and need for certified as Six sigma green belt.
5. Analyse the real case on JIT and its impact on cost control and efficiency.
6. Analyse the case study on cost of poor Quality (COPQ) and its impact on the organization.
7. In a team of 2-3 select a manufacturing firm and visit the firm and prepare a report on the following – (Ask permission to take photos)
 - a. Company name
 - b. Products manufactures

- c. Year of establishment
- d. Plant location – reason for selection of the same
- e. Technology used – reason for selection of the same
- f. Plant lay out – reason for selection of the same
- g. Production processflow – Diagram to be attached.
- h. Quality assurance methodology

COURSE OBJECTIVES:**To make the students**

- To learn about industrial relations concept and objectives.
- To know about the industrial conflict and handling the disputes.
- To focus on industrial safety and psychological problems
- To know about the different types of labor and welfare measures for labour.
- To demonstrate the understanding of legal aspects pertaining to industrial relations and labour welfare.
- To update the emerging trends in management of Industrial relations

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate descriptive knowledge of the field of industrial relations.
2. Apply the essential concepts of industrial relations and their interrelationship at the personal, organizational and national levels.
3. Investigate solutions to industrial relations and labor problems based on legal code.
4. Communicate your knowledge of industrial relations in both written and verbal formats.
5. Understand the concept of labour welfare laws
6. Assess the welfare measures meet the expectations of labour at the student level

Unit I Industrial relations and Trade unions

Introduction, Overview of Industrial Relations, Composition of Industrial Relations, Importance of Industrial Relations, Perspectives of Industrial Relations- Concepts and Approaches – Causes of poor Industrial Relations - Effects of poor Industrial Relations-Suggestions to improve Industrial Relations- Trends in India.

Trade Unions: Introduction, Trade Unions, Reasons for Joining Trade Unions, Functions of Trade Unions, Types of Trade Unions, Advantages and disadvantages of Trade unions, Trade Unions in India

Unit II Industrial Conflicts

Industrial Conflicts – Industrial disputes – Types - Causes – Handling and settling disputes – employee grievances – Steps in grievance handling - Settlement of grievance in Indian industry -

Employee discipline - Types of discipline, policy procedures with standing order format, causes and types - Kinds of punishment - Procedure for taking disciplinary action, Indian law on punishment.

Unit III Collective Bargaining

Collective Bargaining:- Concept – Function and importance – Principles and forms of collective bargaining – Procedure – Conditions for effective collective bargaining – Worker's participation in management, Negotiation Law - Role and methods of worker's participation – Management participation in Trade Unions.

Unit IV Industrial Safety

Industrial Safety – Causes of accidents – Prevention – Safety Provisions – Industrial Health and Hygiene – Factors, Importance and Problems – Occupational hazards – Diseases – Psychological problems – Counseling

Unit V Labour Welfare

Labour Welfare – Concept – Objectives – Scope – Need – Voluntary Welfare Measures – Statutory welfare measures – Welfare Funds – Education and training schemes – Child labour – Female labour – Contract labour – Construction labour – Agricultural labour and differently abled labour - CLRA (Contract Act) and Child labour – Statutory forms.

COURSE OBJECTIVES:**To make the students**

- To understand the Concept of training and development and emerging trends in training.
- To evaluate the need for the training.
- To select the appropriate training methodology based on the need.
- To design and evaluate the training
- To know the different training methods given in corporate.
- To be aware on emerging trends in training and development.

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate the knowledge of training and training methods
2. Apply the knowledge and evaluate the training needs
3. Design an appropriate training for the requirement.
4. Evaluate the training outcome
5. Communicate your knowledge of training and development in both written and verbal formats.
6. Perform the training methods in effective manner

Unit I-Introduction:

Concepts and Rationale of Training and Development; overview of training and development systems; organizing training department; training and development policies; linking training and development to company's strategy; Requisites of Effective Training ; Role of External agencies in Training and Development.

Unit II- Training Needs Assessment (TNA):

Meaning and purpose of TNA, TNA at different levels, Approaches for TNA, output of TNA, methods used in TNA.

Unit III- Training and Development Methodologies :

Overview of Training Methodologies- Logic and Process of Learning; Principles of Learning; Individual differences in learning, learning process, learning curve, learning management system; Criteria for Method Selection; Skills of an Effective Trainer; Use of Audio-Visual Aids in training; Computer Aided Instructions- Distance Learning, Open Learning, E- Learning; Technologies Convergence and Multimedia

Environment. Development Techniques for enhancing decision-making and interpersonal skills, Case-study, in-basket exercise, special projects, multiple management Programme Learning, Action learning, Syndicate Work, Games, Action Maze, Role Play; Demonstration and Practice Monitoring; Coaching; Self Diagnostic Skills, Experience Learning, Discovery Learning, Brain Storming, Counselling, Position Rotation, Team Building, and Sensitivity Training .

Unit IV-Designing Training and Development Programs:

Organisation of Training and Development programs, Training design, kinds of training and development programs- competence based and role based training; orientation and socialization; diversity training, choice of training and development methods, Preparation of trainers; developing training materials; E-learning environment; Flexible learning modules; Self development; Training process outsourcing.

Unit V-Evaluation of Training and Development and Emerging trends :

Reasons for evaluating Training and development programs, Problems in evaluation; Evaluation planning and data collection, different evaluation frameworks, Problems of Measurement and Evaluation; Costing of training, measuring costs and benefits of training program, obtaining feedback of trainees; Methods of evaluating effectiveness of Training Efforts ; Model of Training Effectiveness; Training issues resulting from the external environment and internal needs of the company.

Emerging Trends in Training and Development: Gamification, team training and six sigma training; Electronic Enabled Training Systems (EETS)

COURSE OBJECTIVES:**To make the students**

- To Understand the features of Spreadsheet applications and functions.
- To comprehend and apply computer tools and inbuilt functions on raw data.
- To communicate orally and in written form the features of spreadsheet applications and functions.
- To utilize the expertise of the Excel features and functions as a lifelong practice.
- To be familiar with uses and applications of excel for business
- To update the recent developments in excel for business.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the features of Spreadsheet applications and functions.
2. Apply various application of excel to business functions to perform the task.
3. Communicate orally and in written form the features of spreadsheet applications and functions.
4. Assess the impact of using excel for business.
5. Identify the gap between the after using excel and before in terms of profit
6. Utilize the expertise of the Excel features and functions as a lifelong practice.

UNIT I GETTING STARTED WITH EXCEL

Opening Excel, Creating and Opening Workbook- Saving and Sharing Workbook , Cell Basics - Understanding Cells, Cell Contents, Find and Replace, Formatting Cells - Font Formatting, Text Alignment, Cell Borders and fill colors, Cell styles, Formatting text and numbers, Modifying Columns, Rows and Cells - Inserting, Deleting, Moving, and Hiding rows and columns -Wrapping text and merging Cells

Printing Workbooks - Choosing a print area, Fitting and scaling content

Finalising and Protecting Workbooks

UNIT II FORMULAS AND FUNCTIONS

Formulas and Functions - Simple Formulas, Complex Formulas, Functions (Statistical, financial, Text, Data and Time)

UNIT III DATA ANALYSIS

Auto filter and Advanced filter, Creating and using outlines, Conditional formatting, Sparklines
Collating data from several worksheets

Working with Data - Freezing Panes and view options, Sorting Data, Filtering Data

Working with charts - Understanding Charts, Chart Layout and style, Other chart options

UNIT IV ADVANCED FUNCTIONS

AutoSum, IF Function, VLookup Function and Hlook up, What if Analysis – solver, Name Ranges, Charts and filter data using Slicers, Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.

UNIT V PIVOT TABLE AND VBA

Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function

VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

COURSE OBJECTIVES:**To make the students**

- To comprehend on the requirement of the industry like attitude, language, behaviour, body language, learning style etc.
- To train the student on corporate etiquettes, professional skills, English language.
- To equip the students to draft resume, face the Group discussion and interview.
- To communicate efficiently in oral and in written form as expected by the industry.
- To be aware of different cultures followed by campus and corporate.
- To be familiar with advanced level English used for communication

COURSE OUTCOMES:**Learners should be able to**

1. Recognize the role of communication skills to grooming for corporate.
2. Prepare the students to make use of reading avenues to improve the presentation skills
3. Encourage the students to participate the external events to improve professional competencies
4. Evaluate the students to be prepared for the social conversation skills
5. Determine the strategies to follow the real practice to improve the communication skill.
6. Understand the requirement of the industry like attitude, language, behavior, body language, learning style etc.

UNIT 1 Difference between campus and Corporate:

– Change management - Learn the Culture - Impact of your attitude and behavior - Consider the language – Establish and maintain relationship – Respect others - Be Confident - Keep on learning - Consider the body language.

UNIT II Grooming for Corporate:

Corporate Etiquettes - Dressing and grooming skills - Workplace etiquette - Business etiquette - E-Mail etiquette - Telephone etiquette - Meeting etiquette - Presentation Skills

UNIT III Professional Competencies:

Analytical Thinking - Listening Skills - Time management - Team Skills – Assertiveness - Stress Management - Participating in Group Discussion - Interview facing – Ownership - Attention to Detail.

UNIT IV Elementary Level English Communication

Grammar – Phonetics – One on one basic conversation skill practice **Intermediate Level English Communication:** Reading Comprehension - Listening Comprehension - Improving Vocabulary - Improving Writing Skills - Comprehension while interacting face to face.

UNIT V Advanced Level English Communication:

Recitation of short stories - Interview Skills - Group Discussion - Social Conversation Skills – Presentation - One Act Plays.

SUGGESTED READINGS:

COURSE OBJECTIVE:**To make the students**

- To understand the Concept of training and development and emerging trends in training.
- To evaluate the need for the training.
- To select the appropriate training methodology based on the need.
- To design and evaluate the training
- To know the different training methods given in corporate.
- To be aware on emerging trends in training and development.

COURSE OUTCOME:**Learners should be able to**

1. Demonstrate the knowledge of training and training methods
2. Apply the knowledge and evaluate the training needs
3. Design an appropriate training for the requirement.
4. Evaluate the training outcome
5. Communicate your knowledge of training and development in both written and verbal formats.
6. To Work in team and exhibit leadership skills

LIST OF PRACTICALS

1. Linking training and development
Refer <https://thesystemsthinker.com/charting-a-corporate-learning-strategy/>
2. Is the choice of Outsourcing Training Design and Development a good decision – Analyse a case and write the understanding.
3. Training need analysis (TNA) – Prepare mind mapping in chart for the steps to perform TNA
4. Assess a training need for the students of your college / school near by (Team of 2-3)
5. “Individual Differences in Learning Efficiency” – Analyse using a case study
6. Assess your learning style - <http://vark-learn.com/the-vark-questionnaire/> .Explain your conformation on the result.
7. Prepare a mind map in chart /A3 Paper on the criteria for the Selection of the appropriate training and development methodologies.
<http://ecoursesonline.iasri.res.in/mod/page/view.php?id=33599>
8. Select the appropriate training method to modify Attitude. Analyse a case and substantiate your understanding.
9. Gamification of a learning Tool – Write your understanding.

COURSE OBJECTIVES:**To make the students**

- To Create and format the data in excel sheet
- To utilize all the inbuilt, functions and formulas and analyze the data.
- To critically analyze the data using the what-if, solver and pivot functions.
- To communicate the outputs in written form identifying the objective and outcome of each exercise.
- To apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
- To utilize the expertise of the Excel features and functions as a lifelong practice.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the features of Spreadsheet applications and functions.
2. Apply various application of excel to business functions to perform the task.
3. Communicate orally and in written form the features of spreadsheet applications and functions.
4. Assess the impact of using excel for business.
5. Identify the gap between the after using excel and before in terms of profit
6. Utilize the expertise of the Excel features and functions as a lifelong practice.

LIST OF PRACTICALS

- Creating an excel sheet and performing all formatting tools and protecting and printing the file.
- Performing statistical functions, Performing financial functions, Performing date and text function
- Filtering the data, Conditional formatting
- Collating data from several worksheets
- Charts, Chart Layout and style, Other chart options
- IF Function,
- VLookup Function and Hlook up,
- What if Analysis – solver,
- Name Ranges,
- Charts and filter data using Slicers,
- Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.
- Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function
- VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

FACULTY OF ARTS, SCIENCE AND HUMANITIES

POSTGRADUATE (PG) PROGRAMME

MBA DEGREE PROGRAMME

REGULATIONS 2018

CHOICE BASED CREDIT SYSTEM (CBCS)

The following Regulations are effective from the academic year 2018-2019 and are applicable to the students admitted in MBA programme in the Faculty of Arts, Science, and Humanities, Karpagam Academy of Higher Education from the academic year 2018 – 2019 onwards.

**1. PROGRAMMES OFFERED, MODE OF STUDY AND
ADMISSION REQUIREMENTS**

1.1. MODE OF STUDY

Full-Time

Candidates admitted under ‘Full-Time’ should be present in the University during the complete working hours for curricular, co-curricular and extra-curricular activities assigned to them.

1.2. ADMISSION REQUIREMENTS

Candidates for admission to the first semester Master’s Degree Programme shall be required to have passed an appropriate Degree Examination of this Deemed to be University or any other University accepted by the KAHE as equivalent thereto.

2. DURATION OF THE PROGRAM

2.1. The minimum and maximum period for completion of the PG Programmes are given below:

Programme	Min. No. of Semesters	Max. No. of Semesters
MBA	4	8

2.2. Each semester normally consists of 90 working days or (6 Hrs / Day) or 540 Instructional hours for full-time mode of study. Examination shall be conducted at the end of every semester for the respective courses.

3. CREDITS

Credits means the weightage given to each course of study by the experts of the Board of Studies concerned. A total of 102 credits are prescribed for the PG programme (two years).

4. STRUCTURE OF THE PROGRAM

Every Programme will have a curriculum and syllabus consisting of core courses, elective courses, Internship, Industrial Visits/Field Visits/Out Bound Training.

a. Core :

Core consists of theory and practical and the examinations shall be conducted at the end of each semester.

b. Electives

Elective courses are to be chosen with the approval of the Head of the department concerned from the list of elective courses mentioned in the curriculum.

- Specializations are offered in ten functional areas.
- They are Finance, Marketing, Human Resources, Management information systems, Entrepreneurship, Micro and Small Business Management, Business Analytics, International Business, Operations Management and Tourism Management.
- A candidate has to select any two specialization of his/her choice.

- Each specialization consists of five electives each specialization in third semester and fourth semester respectively.
- A candidate have to select two electives in the third and three electives in fourth semester.

c. Internship

Candidates shall undergo an internship during the summer. On completion of the Internship work he/she shall submit the report to the Head of the Department. The candidate shall bring the attendance certificate from the place of internship work carried out. The Internship Report prepared according to approved guidelines and duly signed by the supervisor(s) shall be submitted to HOD for *Viva Voce* Exam. The report should be well documented as per the following approved guidelines,

1. Cover & Title Page
2. Certificate, Company Certificate and Declaration
3. Acknowledgement
4. List of Contents, List of Tables and List of Charts
5. Introduction of the Study
6. Review of Literature
7. Research Methodology
8. Data Analysis and Interpretation
9. Findings, Suggestions & Conclusion
10. Bibliography and Appendix

d. Industrial Visits / Field Visits/Out Bound Training

The students shall undertake Industrial Visits / Field Visits/ Outbound Training during the semesters.

e. Online Course

Student shall study at least one online course from SWAYAM / NPTEL / MOOC in any one of the first three semesters for which examination shall be conducted at the end of the course by the respective organizations. The student can register to the courses which are approved by the Department. The student shall produce a pass certificate from the respective organizations before the end of the third semester. The credit(s)

earned by the students will be considered as additional credit(s) over and above the required credits earned from program concerned.

5. MEDIUM OF INSTRUCTION

The medium of instruction for all courses, examinations, seminars, presentations and internship/reports shall be in English.

6. MAXIMUM MARKS

The maximum marks assigned to different courses shall be as follows:

(i) Each of the theory and practical courses shall carry a maximum of 100 marks. Out of which 40 marks are for Continuous Internal Assessment (CIA) and 60 marks for End Semester Examinations (ESE).

(ii) **Maximum marks for Internship work**

S. No	Programme	Maximum marks	CIA	ESE
1	MBA	200	80	120

(iii) Activity based course will have 50 marks of internal Evaluation. The internal evaluation forshall be as follows:

S. No	Programme	No.of Cases/Activities	Maximum marks
1	Case Analysis and Presentation.	5	50
2	Team Building and Leadership skills	5	50

7. REQUIREMENTS TO APPEAR FOR THE END SEMESTER EXAMINATION (ESE)

a. Ideally every student is expected to attend all classes and secure 100% attendance. However, in order to allow for certain unavoidable circumstances, the student is expected to attend at least 75% of the classes and the conduct of the candidate has been satisfactory during the course.

b. A candidate who has secured attendance between 65% and 74% (both included), due to medical reasons (Hospitalization / Accident / Specific Illness) or due to participation in University / District / State / National / International level sports or due to participation in Seminar / Conference / Workshop / Training Programme / Voluntary Service / Extension activities or similar programmes with prior permission from the Registrar shall be given exemption from prescribed attendance requirements and shall be permitted to appear for the examination on the recommendation of the Head of the Department concerned and Dean to condone the lack of attendance. The Head of the Department has to verify and certify the genuineness of the case before recommending to the Dean. However, the candidate has to pay the prescribed condonation fee to the University.

c. However, a candidate who has secured attendance less than 64% in the current semester due to any reason shall not be permitted to appear for the current semester examinations. But he/she will be permitted to appear for his/her supplementary examinations, if any and he/she has to redo the same semester with the approval of the “Students’ Affairs Committee” and Registrar.

8. a. FACULTY TUTOR

To help students in planning their courses of study and for general advice on the academic programme, the HOD shall allot a certain number of students to a faculty to whom they shall function as faculty tutor throughout their period of study. Faculty tutors shall advise the students and monitor their conduct of behavior and academics. Problems if any, they should be counseled periodically. The Faculty tutor is also responsible to inform the parents of their wards progress. Faculty tutor shall display the cumulative attendance particulars of his / her ward students’ periodically (once in 2 weeks) on the Notice Board to enable the students know their attendance status and satisfy the **clause 7** of this regulation.

b. ONLINE COURSE COORDINATOR

To help students in planning their online courses and for general advice on online courses, the HOD shall nominate a coordinator for the online courses. The Online course coordinator shall identify the courses which students can select for their programme from the available online courses offered by the different agencies periodically and inform the same to the students. Further, the coordinator shall advise the students regarding the online courses and monitor their course.

9. CLASS COMMITTEE

Every class shall have a class committee consisting of teachers of the class concerned, student representatives (Minimum two boys and 2 girls of various capabilities and Maximum of 6 students) and the concerned HOD / senior faculty as a Chairperson. The objective of the class committee Meeting is all about the teaching – learning process. Class Committee may be convened at least once in a month. The functions of the class committee include

- Analyzing and Solving problems experienced by students in the class room and in the laboratories.
- Analyzing the performance of the students of the class after each test and finding the ways and means to improve the performance.
- The class committee of a particular class of any department is normally constituted by the HoD / Chairperson of the class Committee. However, if the students of different departments are mixed in a class, the class committee is to be constituted by the respective faculty Dean.
- The class committee shall be constituted within the first week of each semester.
- The HoD / Chairperson of the class committee may convene the meeting of the class committee.
- The respective faculty Dean may participate in any class committee meeting.
- The Chairperson is required to prepare the minutes of every meeting, and submit the same to Dean within two days after having convened the meeting. Serious issues if any shall be brought to the notice of the Registrar by the HoD / Chairperson.

10. COURSE COMMITTEE FOR COMMON COURSES

Each common theory course offered to more than one discipline or group shall have a “Course Committee” comprising all the teachers handling the common course with one of them nominated as course coordinator. The nomination of the course coordinator shall be made by the Dean depending upon whether all the teachers handling the common course belong to a single department or to various other departments. The ‘Course committee’ shall meet in order to arrive at a common scheme of evaluation for the tests and shall ensure a uniform evaluation

of the tests. If feasible, the course committee shall prepare a common question paper for the Internal Assessment test(s).

11. PROCEDURE FOR AWARDING MARKS FOR INTERNAL ASSESSMENT

11.1 Every Faculty is required to maintain an **Attendance and Assessment Record (Log book)** which consists of attendance marked in each lecture / practical / Internship work class, the test marks and the record of class work (topic covered), separately for each course. This should be submitted to the HoD once in a fortnight for checking the syllabus coverage and the records of test marks and attendance. The HoD shall sign with date after due verification. The same should be submitted to Dean once in a month. After the completion of the semester the HoD should keep this record in safe custody for five years. Because records of attendance and assessment shall be submitted for Inspection as and when required by the University / any other approved body.

11.2 **Continuous Internal Assessment (CIA):** The performance of students in each course will be continuously assessed by the respective faculty as per the guidelines given below:

Theory Courses

S. No.	Category	Maximum Marks
1	Attendance	5
2	Test – I (first 2 ½ UNITS)	10
3	Test – II (last 2 ½ UNITS)	10
4	Journal Paper Analysis & Presentation*	15
Continuous Internal Assessment : Total		40

*Evaluated by two faculty members of the department concerned. Distribution up of marks for one Journal paper analysis: Subject matter 5 marks, Communication/PPT Presentation 4 marks, Visual aid 2 marks and Question and Discussion 4 marks

Practical Courses

S. No.	Category	Maximum Marks
1	Attendance	5
2	Observation work	5
3	Record work	5
4	Model practical examination	15
5	<i>Viva – voce</i> [Comprehensive]*	10
Continuous Internal Assessment: Total		40

* *Viva - voce* conducted during model practical examination.

Activity based courses

S. No	Programme	No.of Cases/Activities	Maximum marks
1	Case Analysis and Presentation	5	50
2	Team Building and Leadership skills	5	50

Every practical Exercise / Experiment / Activity shall be evaluated based on the conduct of Exercise/ Experiment/ Activity and records maintained

11.3 Pattern of CIA Question Paper:

Instruction	Remarks
Maximum Marks	50 Marks for all Courses.
Duration	2 hrs
Part – A	15 One mark Questions (15 x 1 = 15 Marks) Question No. 1 to 15 Multiple Choice Questions

Instruction	Remarks
Part- B	3 Eight mark Questions (3 x 8 = 24 Marks) Question No. 16 to 18 will be 'either-or' type, Question No. 16: either 16 (a) or 16 (b), Question No. 17: either 17 (a) or 17 (b), Question No. 18: either 18 (a) or 18 (b)
Part- C –Compulsory	One Eleven marks Question (1 x 11 = 11 Marks) Question No.19: Case Study

11.4 Attendance

Marks Distribution for Attendance

S. No.	Attendance %	Maximum Marks
1	91 and above	5.0
2	81 - 90	4.0
3	76- 80	3.0
4	Less than 75	0

12. KAHE EXAMINATIONS

12.1 End Semester Examination (ESE): ESE will be held at the end of each semester for each course. The question paper is for a maximum of 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks (with online)
Maximum Marks	60Marks
Duration	½ Hr for Online & 2 ½ Hours ESE
Part - A	20 One mark Questions (20x 1 = 20 Marks) Question No. 1 to 20 Online Multiple Choice Questions
Part- B	5 Two mark Questions (5 x 2 =10 Marks) Question No. 21 to 25 will be compulsory questions, covering all five UNITS of the syllabus; i.e.,

Instruction	Remarks (with online)
	Question No. 21: UNIT- I, Question No. 22: UNIT- II, Question No. 23: UNIT - III, Question No. 24: UNIT - IV, Question No. 25: UNIT– V.
Part- C	4Five mark Questions (4 x 5 =20 Marks) Question No. 26 to 29 will be ‘ either-or ’ type, one Question each from any four UNITs of the syllabus; i.e., Question No. 26: either 26 (a) or 26 (b), Question No. 27: either 27 (a) or 27 (b), Question No. 28: either 28 (a) or 28 (b), Question No. 29: either 29 (a) or 29 (b)
Part- D Compulsory	One Ten marks Question (1 x 10 = 10 Marks) Question No.30: Case Study from the remaining one UNIT

12.2 **Practical:** There shall be combined valuation. The pattern of distribution of marks shall be as given below.

Experiments	: 40 Marks
Record	: 10 Marks
Viva-voce	: 10 Marks
Total	: 60 Marks

Record Notebooks for Practical Examination

Candidate taking the Practical Examination should submit Bonafide Record Notebook prescribed for the Practical Examination. Failing which the candidate will not be permitted to take the Practical Examination.

In case of failures in Practical Examination, the marks awarded for the record at the time of first appearance of the Practical Examination should remain the same at the subsequent appearance by the candidate.

12.3. Evaluation of Internship

12.3.1 The internship shall carry a maximum mark as per clause 6 (ii). ESE will be a combined evaluation of Internal and External Examiners.

12.3.2 The internship report prepared according to approved guidelines and duly signed by the supervisor(s) shall be submitted to HoD.

The report should be well documented as per the following approved guidelines,

- a. Cover & Title Page
- b. Certificate, Company Certificate and Declaration
- c. Acknowledgement
- d. List of Contents, List of Tables and List of Charts
- e. Introduction of the Study
- f. Review of Literature
- g. Research Methodology
- h. Data Analysis and Interpretation
- i. Findings, Suggestions & Conclusion
- j. Bibliography and Appendix

12.3.3 The evaluation of the internship will be based on the internship report submitted and a *Viva-Voce* Examination by a team consisting of the supervisor, who will be the Internal Examiner and an External Examiner who shall be appointed by the KAHE. In case the guide is not available, the HoD shall act as an Internal Examiner.

12.3.4 If a candidate fails to submit the internship report on or before the specified date, candidate is deemed to have failed in the internship work and shall re-enroll for the same in a subsequent semester.

If a candidate fails in the *viva-voce* examinations he/she has to resubmit the internship report within 30 days from the date of declaration of the results. For this purpose the same Internal and External examiner shall evaluate the resubmitted report.

12.3.5 Copy of the approved internship report after the successful completion of *viva voce* examinations shall be kept in the KAHE library.

13. PASSING REQUIREMENTS

13.1 Passing minimum: There is a passing minimum for CIA and it is 20 marks out of 40 marks.

The passing minimum in ESE is 30 marks out of 60 marks. The overall passing in each course is 50 out of 100 marks (Sum of the marks in CIA and ESE examination).

13.2 If a candidate fails to secure a pass in a particular course (either CIA or ESE or Both) as per clause 13.1, it is mandatory that the candidate has to register and reappear for the examination in that course during the subsequent semester when examination is conducted for the same till a pass is secured both in CIA and ESE (vide Clause 2.1).

13.3 Candidate failed in CIA will be permitted to improve CIA marks in the subsequent semesters by writing tests and by submitting Assignments.

13.4 CIA marks (if it is pass) obtained by the candidate in the first appearance shall be retained by the Office of the Controller of Examinations and considered valid for all subsequent attempts till the candidate secures a pass in ESE.

13.5 A candidate who is absent in ESE in a Course / Practical / Internship work after having enrolled for the same shall be considered to have **failed** in that examination.

14. IMPROVEMENT OF MARKS IN THE COURSE ALREADY PASSED

Candidates desirous of improving the marks secured in a passed course in their first attempt shall reappear once (**only in ESE**) in the subsequent semester. **The improved marks shall be considered for classification but not for ranking.** If there is no improvement there shall be no change in the marks awarded earlier.

15. AWARD OF LETTER GRADES

All assessments of a course will be done on absolute marks basis. However, for the purpose of reporting the performance of a candidate, letter grades, each carrying certain number of points, will be awarded as per the range of total marks (out of 100) obtained by the candidate in each course as detailed below:

Letter grade	Marks Range	Grade Point	Description
O	91 - 100	10	OUTSTANDING
A+	81- 90	9	EXCELLENT
A	71-80	8	VERY GOOD
B+	66- 70	7	GOOD
B	61 – 65	6	ABOVE AVERAGE
C	55 - 60	5	AVERAGE
D	50 - 54	4	PASS
RA	<50	-	REAPPEARANCE
AAA	-	-	ABSENT

16. GRADE SHEET

After the declaration of the results, Grade Sheets will be issued to each student which will contain the following details:

- The list of courses enrolled during the semester and the corresponding grade scored.
- The Grade Point Average (**GPA**) for the semester and
- The Cumulative Grade Point Average (**CGPA**) of all courses enrolled from first semester onwards.

GPA of a Semester and CGPA of a programme will be calculated as follows.

GPA of a Semester

$$= \frac{\text{sum of the product of the GP by the corresponding credits of the courses offered in that semester}}{\text{sum of the credits of the courses of that semester}}$$

$$\text{i.e. GPA of a Semester} = \frac{\sum_i C_i G P_i}{\sum_i C_i}$$

CGPA of the entire programme

$$= \frac{\text{sum of the product of the GPs by the corresponding credits of the courses offered for the entire programme}}{\text{sum of the credits of the courses of the entire programme}}$$

$$\text{i.e. CGPA of the entire programme} = \frac{\sum_n \sum_i C_{ni} GP_{ni}}{\sum_n \sum_i C_{ni}}$$

where,

C_i is the credit fixed for the course 'i' in any semester

GP_i is the grade point obtained for the course 'i' in any semester

'n' refers to the Semester in which such courses are credited

Note: RA grade will be excluded for calculating **GPA** and **CGPA**.

17. REVALUATION

Candidate can apply for revaluation and retotalling of his / her semester examination answer script (**theory courses only**), within 2 weeks from the declaration of results, on payment of a prescribed fee. For the same, the prescribed application has to be sent to the Controller of Examinations through the HoD. **A candidate can apply for revaluation of answer scripts not exceeding 5 courses at a time.** The Controller of Examination will arrange for the revaluation and the results will be intimated to the candidate through the concerned HoD. Revaluation is not permitted for supplementary theory courses.

18. TRANSPARENCY AND GRIEVANCE COMMITTEE

Revaluation and Retotalling is allowed on representation (clause 17). Student may get the Xerox copy of the answer script on payment of prescribed fee, if he / she wish. The student may represent the grievance, if any, to the Grievance Committee, which consists of Dean of the Faculty, (if Dean is HoD, the Dean of another Faculty nominated by the University), HoD of the Department concerned, the faculty of the course and Dean from other discipline nominated by the University and the CoE. If the Committee feels that the grievance is genuine, the script may be sent for external valuation; the marks awarded by the External examiner will be final. The student has to pay the prescribed fee for the same.

19. ELIGIBILITY FOR THE AWARD OF THE DEGREE

A student shall be declared to be eligible for the conferment of the Degree if he / she has

- Successfully completed all the components in clause 3 and gained the required number of total credits as specified in the curriculum corresponding to his / her Programme within the stipulated period.
- No disciplinary action is pending against him / her.
- The award of the degree must be approved by the Board of Management.

20. CLASSIFICATION OF THE DEGREE AWARDED

20.1 Candidate who qualifies for the award of the Degree (vide clause 13) having passed the examination in all the courses in his / her first appearance, within the specified minimum number of semesters and securing a **CGPA not less than 8.0** shall be declared to have passed the examination in **First Class with Distinction**.

20.2 Candidate who qualifies for the award of the Degree (vide clause 13) having passed the examination in all the courses within the specified maximum number of semesters (vide clause 2.1), securing a **CGPA not less than 6.5** shall be declared to have passed the examination in **First Class**.

20.3 All other candidates (not covered in clauses 20.1 and 20.2) who qualify for the award of the degree (vide Clause 19) shall be declared to have passed the examination in **Second Class**.

21. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

21.1 A candidate, may for valid reasons and on prior application, be granted permission to withdraw from appearing for the examination of any one course or consecutive examinations of more than one course in a semester examination.

21.2 Such withdrawal shall be permitted only once during the entire period of study of the degree programme.

21.3 Withdrawal of application is valid only if it is made within 10 days prior to the commencement of the examination in that course or courses and recommended by the HoD/Dean concerned and approved by the Registrar.

21.3.1 Notwithstanding the requirement of mandatory TEN days' notice, applications for withdrawal for special cases under extraordinary conditions will be considered on the merit of the case.

21.4 Withdrawal shall not be construed as an appearance for the eligibility of a candidate for First Class with Distinction. This provision is not applicable to those who seek withdrawal during IV semester.

21.5 Withdrawal from the End semester examination is **NOT** applicable to arrears courses of previous semesters.

21.6 The candidate shall reappear for the withdrawn courses during the examination conducted in the subsequent semester.

22. PROVISION FOR AUTHORISED BREAK OF STUDY

22.1 **Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree programme.** However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for break of study. If a candidate intends to temporarily discontinue the programme in the middle of the semester for valid reasons, and to rejoin the programme in a subsequent year, permission may be granted based on the merits of the case provided he / she applies to the Registrar, but not later than the last date for registering for the end semester examination of the semester in question, through the HoD stating the reasons therefore and the probable date of rejoining the programme.

22.2 The candidate thus permitted to rejoin the Programme after the break shall be governed by the Curriculum and Regulations in force at the time of rejoining. Such candidates may have to do additional courses as per the Regulations in force at that period of time.

22.3 The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification. (Vide Clause 20). However, additional break of study granted will be counted for the purpose of classification.

22.4 The total period for completion of the Programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in clause 2.1 irrespective of the period of break of study (vide clause 22.3) in order that he/she may be eligible for the award of the degree.

22.5 If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted 'Break of Study' or 'Withdrawal' (Clause 21 and 22) is not applicable for this case.

23. RANKING

A candidate who qualifies for the PG Degree programme passing all the Examinations in the first attempt, within the minimum period prescribed for the programme of study from Semester I through Semester IV to the programme shall be eligible for ranking. Such ranking will be confined to 10% of the total number of candidates qualified in that particular programme of Study subject to a maximum of 10 ranks.

The improved marks will not be taken into consideration for ranking.

24. SUPPLEMENTARY EXAMINATION

Supplementary Examination will be conducted only for the final semester students within ten days from the date of publication of results for students who have failed in one theory course only. Such students shall apply with prescribed fee to the Controller of Examinations within the stipulated time.

25. DISCIPLINE

25.1. Every student is required to observe disciplined and decorous behavior both inside and outside the campus and not to indulge in any activity which will tend to bring down the prestige of the University. The erring students will be referred to the disciplinary committee constituted by the University, to enquire into acts of indiscipline and recommend the University about the disciplinary action to be taken.

25.2. If a student indulges in malpractice in any of the University / Internal Examination, he / she shall be liable for pUNITive action as prescribed by the university from time to time.

26. REVISION OF REGULATION AND CURRICULUM

The University may from time to time revise, amend or change the Regulations, Scheme of Examinations and syllabi if found necessary.

		18MBAPI303C	International Logistics Management	I,II,IV	a,b,c,d,e,f,g,h,i
	Operations Management	18MBAPO303A	Supply Chain Management	I,II,III,IV	a,b,c,d,e,f,g,h,i
		18MBAPO303B	Operations Strategy	I,II,III,IV	a,b,c,d,e,f,g,h,i
		18MBAPO303C	Total Quality management	I,II,III,IV	a,b,c,d,e,f,g,h,i
	Tourism Management	18MBAPT303A	Tourism Principles, Policies and Practices	I,II,IV	a,b,c,d,e,f,g,h,i
		18MBAPT303B	Tourism Products of India	I,II,IV	a,b,c,d,e,f,g,h,i
		18MBAPT303C	Recreation Management	I,II,IV	a,b,c,d,e,f,g,h,i

ELECTIVE LIST - SEMESTER IV

Semester	List of Specializations	Course Code	Name of the Elective Course	PEO	PO
IV	Finance	18MBAPF402A	Banking and Insurance	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPF402B	Mergers, Acquisitions and Corporate Restructuring	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPF402C	Financial Derivatives	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPF402D	Financial Econometrics	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Marketing Management	18MBAPM402A	New Product Development	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPM402B	Consumer Behaviour	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPM402C	Brand Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPM402D	Sales and Distribution Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Human Resources Management	18MBAPH402A	Organizational Change and Development	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPH402B	Performance Management and Appraisal	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPH402C	Competency Mapping	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPH402D	Talent Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Management Information Systems	18MBAPS402A	Information Systems Audit and Control	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPS402B	Knowledge Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPS402C	Digital and Social Media Marketing	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPS402D	System Analysis and Design	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Entrepreneurship	18MBAPE402A	Innovation Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPE402B	Family Business Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPE402C	Entrepreneurial leadership	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPE402D	Rural Entrepreneurship	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Micro and Small Business Management	18MBAPB402A	Indian Models of Economy, Business and Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPB402B	Institutional support to Small Business	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPB402C	Policy Framework for Small Business	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPB402D	Contemporary Environment in Small Business	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
	Business Analytics	18MBAPA402A	Human Resource Metrics and Analytics	I,II,III	a,b,c,d,e,f,g,h,j
		18MBAPA402B	Marketing Analytics	I,II,III	a,b,c,d,e,f,g,h,j
		18MBAPA402C	Big Data Analytics	I,II,III	a,b,c,d,e,f,g,h,j
		18MBAPA402D	Financial Analytics	I,II,III	a,b,c,d,e,f,g,h,j
	International Business	18MBAPI402A	International Finance	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPI402B	International Marketing Management	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPI402C	International Human Resource Management	I,II,III,IV	a,b,c,d,e,f,g,h,i,j
		18MBAPI402D	Cross cultural Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Operations Management	18MBAPO402A	Sourcing Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPO402B	Pricing and Revenue Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPO402C	Supply Chain Analytics	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPO402D	Services operations management	I,II,III,IV	a,b,c,d,e,f,g,h,j
	Tourism Management	18MBAPT402A	Travel Agency and Tour Operations	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPT402B	Ecotourism	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPT402C	Event Management	I,II,III,IV	a,b,c,d,e,f,g,h,j
		18MBAPT402D	Healthcare Tourism	I,II,III,IV	a,b,c,d,e,f,g,h,j

PROGRAMME OUTCOMES (PO)

- a. Postgraduates students will be able to acquire in-depth management and functional domain knowledge with an ability to differentiate, evaluate, analyze existing knowledge and apply the new knowledge relevant to the changing business environment.
- b. Postgraduates students will be able to analyze complex business problems critically by applying intellectual and creative developments gained through research based or project based approach of learning.
- c. Postgraduates students will be able to excerpt information from various sources and apply appropriate management techniques and tools to analyze and interpret data demonstrating a higher order thinking skill.
- d. Postgraduates will communicate day-to-day managerial activities confidently and effectively in written and oral communication in the organisation and society at large.
- e. Postgraduates will possess knowledge and understanding of working in teams in order to achieve common goals to exhibit their leadership skills.
- f. Postgraduates will acquire managerial positions or take up entrepreneurial ventures by applying the skills and knowledge gained.
- g. Postgraduates will be able to evaluate the implications of changing environmental factors in global perspective and cross cultural issues that affect the functioning of the organization.
- h. Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- i. Postgraduates will develop lateral thinking and conceptualization of functional knowledge and put into consideration ethics, safety, diversity, cultural, society and environmental factors while evaluating potential solutions options to solve managerial problems.
- j. Postgraduates will apply the lifelong learning and exhibit high level of commitment to identify a timely opportunity and use business innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

- I. Postgraduates will acquire knowledge of management science and apply it to solve the real-time business problems.
- II. Postgraduates will attain professional skills to develop and communicate strategic, creative and innovative ideas to excel in diverse career path.
- III. Postgraduates will be able to apply the management tools and techniques to implement systematic decision making process.
- IV. Postgraduates will be able to adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

Instruction Hours/weekL:4T:0P:0**Marks:Internal:40 External:60****Total:100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:**

To make the students

- To understand the traditional management school of thoughts, roles, responsibilities, and skills required for modern managers.
- To know the importance of planning, and decision making process.
- To recognize the need of organizing and staffing functions in organization.
- To identify the role of directing, leadership and motivation in the performance of the organization.
- To realize the need of controlling in improving the performance of the organization.
- To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results.

COURSE OUTCOMES:

Learners should be able to

1. Understand the management function and roles of the manager and become an effective planner and decisionmaker
2. Gain the knowledge and apply the skills of organizing, allocating, monitoring and controlling in the organization.
3. Identify different motivational theories and evaluate motivational strategies used in a variety of organizational settings.
4. Recognise the qualities of various leadership styles and follow the apt one.
5. Communicate the case analysis effectively in oral and written forms.

6. Analyze the complexities associated with management of the group behavior in the organization

UNIT I Management concept and School of thoughts

Management Overview: – Concept, Nature, Importance - Management Vs Administration. The Evolution of Management - Taylor and Scientific Management, Fayol's Administrative Management - Functions of management- The manager - Role of manager- Mintzberg's Roles - Social Responsibility of Managers and Ethics in Managing

UNIT II Planning and Decision Making

Planning: Meaning -The Nature – Objectives – Steps in Planning - Strategies, Policies - Procedures and methods - Management by Objectives - **Decision making: Meaning – Need - Characteristics of good decision or effective decision – Decision Making Process**

UNIT III Organising and Staffing

Organizing: Concept, Organizational Structure, Departmentation, Span of Control, Delegation of Authority, Authority and Responsibility - Organizational designs.

Staffing: Importance - Need - Elements of staffing- Functions – Processing - Proper staffing- Advantage of Proper staffing- Manpower planning- Process of recruitment and selection- Placement and Orientation- Training and Development

UNIT IV Directing, Leadership and Motivation

Directing: Concept of Direction and Supervision. Functions and qualities of supervisor. Human Factors and Motivation – Theories : Traditional theories and Contemporary theories of Motivation - Leadership - Trait, Behaviour, and contingency approaches – Transactional and Transformational leadership

UNIT V Controlling

Controlling: Need - The System and Process of Controlling – Budgetary and non budgetary Control Techniques

SUGGESTED READINGS:

1. James A. F. Stoner, R. Edward Freeman, Amitabh Deo Kodwani Daniel R. Gilbert, Ranjeet Nambudiri (2018), *Management*, 6th edition, Pearson Education, New Delhi.
2. Stephen P. Robbins, Coulter Mary (2017), *Management*, 13th edition, Pearson Education, NewDelhi.
3. Stephen P. Robbins, Coulter Mary and David De Cenzo (2017), *Fundamentals of Management*, 9th edition, Pearson Education, NewDelhi.
4. Tripathy.PC. & Reddy.PN. (2017). *Principles of Management*. New Delhi: Tata McGraw Hill.
5. Koontz and Weihrich. (2015). *Essentials of Management*. (10thedition).New Delhi: Tata McGraw

Instruction Hours/weekL:4T:0P:0

Marks:Internal:40 External:60 Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To understand the basic concepts of organizational behavior.
- To analyze the individual behavior traits required for performing as an individual or group.
- To obtain the perceiving skills to judge the situation and communicate the thoughts and ideas.
- To understand how to perform in group and team and how to manage the power, politics and conflict.
- To recognize the importance of organizational culture and organizational change.
- To realise the importance of groups and teamwork and managing of conflict between the members of the organization

COURSE OUTCOMES:

Learners should be able to

1. Analyse organizational behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization and manage the stress.
3. Manage team, power, politics and conflict arising between the members.
4. Explain how organizational change and culture affect the working relationship within organizations.
5. Understand and exhibit the communication skills to convey the thoughts and ideas of case analysis to the individuals and group.
6. Understand the application of OB using appropriate concepts, logic and rhetorical conventions

UNIT I Organization behaviour : Introduction

Organization Behavior: Meaning and definition - Fundamental concepts of OB - Contributing disciplines to the OB field – OB Model - Significance of OB in the organization success - Challenges and Opportunities for OB.

UNIT II Behaviour, personality and learning theories

Attitudes – Sources - Types - Functions of Attitudes – Attitude and Job satisfaction, Emotions and Moods – Emotional Intelligence – OB Applications of Emotions and Moods, Learning – Theories of Learning. Personality – Determinants of personality- Theories of Personality - psycho-analytical, social learning, job-fit, and trait theories. Values – Importance - Types of Values – Linking Individual personality and values to the work place.

UNIT III Perception and Communication

Perception – factors influencing perception - Person Perception – Attribution Theory – Frequently Used Shortcuts in Judging Others- Perceptual Process- Perceptual Selectivity - Organization Errors of perception – Linkage between perception and Decision making.

Communication – Process – Directions of communication – interpersonal and organizational communication – Barriers to effective communication

UNIT IV Group, Team, Power politics and conflict

Foundation of Group Behavior - Concept of Group - Types of Groups - Stages of Group Development - Group Norms - Group Cohesiveness – Group Decision making – Understanding working teams – types of teams- creating effective teams- Turning individuals to team players.

Power and Politics - Bases of Power – Power tactics. Conflict – Meaning –Transition in conflict thoughts- Conflict Process- Negotiation

UNIT V Organization culture, change and stress management.

Organizational culture- Definitions and Characteristics of Culture- Types of Culture – Creating and Maintaining an Organizational Culture. Organizational change –Meaning- Forces for Change- Managing Planned Change - Factors in Organizational Change - Resistance to change- Overcoming resistance to change. Stress – Causes of stress – Effects of Occupational Stress- Coping Strategies for Stress.

SUGGESTED READINGS:

1. Fred Luthans. (2017). *Organizational Behavior: An Evidence - Based Approach*, 12th edition, McGraw Hill Education, NewDelhi.
2. Steven Mcshane and Mary Ann Von Glinow (2017), *Organizational Behavior*, 6th edition, McGraw Hill Education, NewDelhi
3. Robbins, S. P., and Judge, T.A. (2016). *Organizational Behaviour*.(16th edition).New Delhi: Prentice Hall of India.Laurie J. Mullins (2016), *Management and Organisational behaviour*, 10th edition, Pearson Education, NewDelhi
4. Robbins, S. P., and Judge, T.A. (2016). *Essentials of Organizational Behavior*.13th edition, Pearson Education.

MANAGERIAL ECONOMICS

18MBAP103

Semester – I
4H – 3C

Instruction Hours/week

L: 3 T: 1 P : 0

Marks: Internal: 40

External:
60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
- To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
- To gain a rigorous understanding of competitive markets as well as alternative market structures.
- To understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
- To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payments.
- To Derive the equilibrium conditions for cost minimization and profit maximization

COURSE OUTCOMES:

Learners should be able to

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run and Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions

within a business cycle.

5. Understand and exhibit the communication skills to convey the thoughts and ideas of case analysis to the individuals and group.
6. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run.

UNIT I Managerial Economics : Law of Demand and Supply

Introduction - Meaning, nature and scope of Managerial Economics, Significance in decision making. Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply – Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II Production, Cost and Revenue Function

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors – Short & Long run – Total Product – Marginal Product – Average Product – Production Function – Law of Returns – Law of Returns to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs – Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves – Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III Market Competition and Price structures

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly Market – Features

UNIT IV Macro Economic Indicators

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net

Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer Payments – National Income Aggregates– Private Income – Personal Income – Personal Disposable Income – National Disposable Income – Measurement of National Income – Production Method – Income Method – Expenditure Method. Phases of Business Cycle – Causes of cyclical movements – **Price Movements: Inflation, Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.**

UNIT V Monetary Policy

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy – Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget Preparation – Deficit Budget. Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP – Disequilibrium in BOP. **Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of Interest.**

SUGGESTED READINGS:

1. Geetika and Piyali Ghosh (2017), *Managerial Economics*, 3rd edition , McGraw Hill Education, NewDelhi.
2. Christopher R.Thomas and S.Charles Maurice (2017), *Managerial Economics : foundation of business analysis and strategy*, 10th edition, McGraw Hill Education, New Delhi.
3. Paul Samuelson, William D. Nordhaus(2017), *Micro Economics*, 19th edition, McGraw Hill Education, NewDelhi
4. William F. Samuelson, Stephen G. Marks (2013), *Managerial Economics*, 6th edition, Wiley, NewDelhi,
5. Paul Samuelson, William D. Nordhaus(2011), *Macro Economics*, 19th edition, McGraw Hill Education, NewDelhi.

Instruction Hours/week L:4 T:0 P:0

Marks: Internal:40 External:60

Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To understand the nature and importance of Indian contract act and sales of goods act.
- To provide an overview of important laws that have a bearing on the conduct of business in India
- Understand the legal and fiscal structure of different forms of business organizations and their responsibilities as an employer.
- To acquire knowledge of income tax act and sales tax act and its applications in business
- To understand the existing law and practice relating to consumer protection and cyber law.
- To make the students understand the basics of legal concept and environment in which the present-day business is carried.

COURSE OUTCOMES:

Learners should be able to

1. Analyze the nature of contract law, Company law and cyber laws and its application in business.
2. Assess the legal forms of business organization and its modus operandi.
3. Recognize the application appropriate regulations of factories act and wages act in business scenario.
4. Understand and apply the concept and laws pertaining to income tax and sales tax, intellectual property rights and cyber laws and evaluate its impact on business and social environment.
5. Effectively communicate ideas, explain procedures in oral and written forms to different audiences.

6. Illustrate the consumer legislations towards consumer protection and Environment protection

UNIT-I Commercial Law

The Indian Contract Act 1872 - Definition of contract, essentials elements and types of a contract, Formation of a contract, performance of contracts, breach of contract and its remedies, Quasi contracts - Contract of Agency: Nature of agency, Creation and types of agents, Authority and liability of Agent and principal: Rights and duties of principal and agents, termination of agency.

The Sale Of Goods Act 1930 - Nature of Sales contract, Documents of title, risk of loss, Guarantees and Warranties, performance of sales contracts, conditional sales and rights of an unpaid seller- Negotiable Instruments Act 1881: Nature and requisites of negotiable instruments.

Types of negotiable instruments, liability of parties, holder in due course, special rules for Cheque and drafts, discharge of negotiable instruments.

UNIT II Company Law

Major principles – Nature and types of companies, Formation, Memorandum and Articles of Association, Prospectus, Power, duties and liabilities of Directors, winding up of companies, Corporate Governance.

UNIT III Industrial Law

An Overview of Factories Act - Payment of Wages Act - Payment of Bonus Act - Industrial Disputes Act.

UNIT IV Income Tax Act And Sales Tax Act

Corporate Tax Planning, Overview of central Sales Tax Act 1956 – Definitions, Scope, Incidence of CST, Practical issues of CST, VAT – Concepts, Scope, Methods of VAT Calculation, Practical Implications of VAT, GST, Practical implications of GST.

UNIT V Consumer Protection Act And Introduction Of Cyber Laws

Consumer Protection Act – Consumer rights, Procedures for Consumer grievances redressal, Types of consumer Redressal Machineries and Forums- Competition Act 2002 - Cyber crimes, IT Act 2000 and 2008, Cyber Laws, Introduction of IPR – Copy rights, Trade marks, Patent Act.

SUGGESTED READINGS:

1. Akhileshwar Pathak (2017), *Legal Aspects of Business*, 6th Edition, Mcgrawhill, New Delhi.
2. Daniel Albuquerque (2017), *Legal Aspects of Business*, 2nd Edition, Oxford University Press, NewDelhi,
3. Kapoor, N.D. (2017). *Elements of Mercantile Law*. S Chand Publishing, NewDelhi.
4. P.C. Tulsian, (2017), *Mercantile Laws for CA-CPT*, 2nd edition, Mcgraw hill, New Delhi.
5. Rohini Aggarawal (2014), *Mercantile and Commercial Laws*, Taxmann Publications Private Limited, NewDelhi.

COURSE OBJECTIVES:

To make the students

- To understand the financial accounting standards, conventions and principles in preparation of financial reports
- To prepare financial statements for the organization.
- To understand the tools and techniques used for analyzing the financial statements.
- To recognize the cost concepts and prepare cost sheets.
- To know the cost-volume-profit techniques and its application to determine optimal managerial decisions.
- To facilitate an understanding about accounting as an information system and also the language of the business.

COURSE OUTCOMES:

Learners should be able to

1. Understand the accounting standards and realize the difference in the GAAP and IFRS.
2. Ability to prepare, read, interpret and analyse financial statements to assess the financial performance and position of a company;
3. Understand and apply cost concepts to analyse common business management decisions such as pricing and outsourcing decisions from a financial perspective;
4. Understand the importance and application of budgeting in organizational planning and control.
5. Explain how financial transactions are processed through the accounting information system each accounting period
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the accounting decisions.

UNIT I Accounting Types and Accounting Standards

Introduction to Financial, Cost and Management Accounting - Financial accounting Vs Management accounting - Objectives and functions of Management Accounting - Generally accepted accounting principles, IFRS, Conventions and Concepts – Journal – Ledger - Trial Balance.

UNIT II Final Accounts

Three Golden Principles, Journal entry and Ledger entry. Final Accounts – Preparing Trading Account - Profit and Loss account - Balance sheet, with and without adjustments)

UNIT V Marginal Vs. Standard Costing

Managerial Decision Making Techniques like

(a) Marginal costing – Cost volume profit analysis, BEP

(b) Budgetary control, Operating and Financial Budgets, Flexible Budgets.

(c) Standard Costing – Materials Cost and Labour cost variances only.

Note: Problems 60 Marks and Theory 40 Marks.

SUGGESTED READINGS:

1. Narayanaswamy R. (2017), *Financial Accounting: A Managerial Perspective*, 6th edition, PHI Learning Private Limited, NewDelhi
2. Ramachandran,Kakani (2017), *Financial Accounting for Management*, 4th edition, Mcgraw Hill, Publications, NewDelhi.
3. M.Y. Khan , P.K. Jain (2017), *Management Accounting*, 7th edition, McgrawHill, Publications, NewDelhi.
4. Alnoor Bhimani,Charles T. Horngren,Srikant M.Datar,Madhav Rajan (2015), *Management and Cost Accounting*, 6th edition, Pearson Education, India.
5. S.N. Maheshwari, Suneel Maheshwari, Sharad K. Maheshwari (2018), *A Textbook of Accounting for Management*, S Chand Publishing, NewDelhi

COURSE OBJECTIVES:

To make the students

- To understand the classification and analysis of the data with statistical tools and techniques.
- To know the descriptive and inferential statistics, and apply them to examine business and economic data.
- To realize the applications of probability and distributions in the analytical decision making.
- To conduct statistical estimation and hypothesis testing with statistical tools and techniques.
- To understand the index number concepts and its applications.
- To Understand why statistics are important for making business

COURSE OUTCOMES:

Learners should be able to

1. Understand the basic statistical tools and techniques and its application in business decision making.
2. Perform basic statistical estimation and hypothesis testing for interpret the results.
3. Know how to specify, estimate, and use statistical models to predict and obtain reliable forecasts.
4. Develop an ability to analyse and interpret the collected data to provide meaningful information in making management decisions
5. Develop skills to design business model and Analytics projects

6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the discipline of statistics.

UNIT I Data and presentation of Data

Introduction to Statistics: Introduction to Statistics, Importance of Statistics in modern business environment. Classification, Tabulation and Presentation of Data: Introduction, Functions of Classification - Requisites of a good classification - Types of classification - Methods of classification, Tabulation - Basic difference between classification and tabulation -Parts of a table -Types of table , Frequency and Frequency Distribution - Derived frequency distributions - Bivariate and multivariate frequency distribution - Construction of frequency distribution, Presentation of Data – Diagrams, Graphical Presentation - Histogram - Frequency polygon - Frequency curve -Ogives

UNIT II Measures of Central Tendency and Dispersion

Measures of Central Tendency and Dispersion: Introduction, Objectives of statistical average, Requisites of a Good Average, Statistical Averages - Arithmetic mean - Properties of arithmetic mean - Merits and demerits of arithmetic mean, Median - Merits and demerits of median, Mode - Merits and demerits of mode, Geometric Mean, Harmonic Mean, Positional Averages, Dispersion – Range - Quartile deviations, Mean deviation ,Standard Deviation - Properties of standard deviation Coefficient of Variance

UNIT III Probability Distribution

Theory of Probability and Probability Distribution: Introduction - Definition of probability - Basic terminology used in probability theory, Approaches to probability, Rules of Probability - Addition rule - Multiplication rule, Conditional Probability, Steps Involved in Solving Problems on Probability, Bayes' Probability, Random Variables. Introduction - Random variables, Probability Distributions - Discrete probability distributions - Continuous probability distributions, Bernoulli Distribution - T, Binomial Distribution - Poisson Distribution - Normal Distribution

UNIT IV Hypothesis Testing

Testing of Hypothesis in Case of Large and Small Samples: Introduction – Large Samples – Assumptions, Testing Hypothesis - Null and alternate hypothesis - Selecting a Significance Level - Preference of type I error - Preference of type II error- Determine appropriate distribution, Two – Tailed Tests and One – Tailed Tests - Two – tailed tests. Classification of Test Statistics - Statistics used for testing of hypothesis - Test procedure - How to identify the right statistics for the test , Introduction – small samples, ‘t’ Distribution, Uses of ‘t’ test, Chi- Square - Applications of Chi-Square test - Tests for independence of attributes - Test of goodness of fit - Test for specified variance, F – Distribution and Analysis of Variance (ANOVA): Introduction, Analysis of Variance (ANOVA), Assumptions for F-test - Objectives of ANOVA - ANOVA table - Assumptions for study of ANOVA, Classification of ANOVA - ANOVA table in one-way ANOVA - Two way classifications. Simple Correlation and Regression: Introduction , Correlation - Causation and Correlation - Types of Correlation - Measures of Correlation - Scatter diagram - Karl Pearson’s correlation coefficient - Spearman’s RankCorrelationCoefficient.Regression-Regressionanalysis-Regressionlines–Regressioncoefficient , Standard Error of Estimate , Multiple Regression Analysis , Reliability of Estimates, Application of Multiple Regressions.

UNIT V Index Number

Index Numbers: Introduction, Definition of an Index Number – Relative - Classification of index numbers , Base year and current year - Chief characteristics of index numbers - Main steps in the construction of index numbers, Methods of Computation of Index Numbers – Un-weighted index numbers - Weighted index numbers, Tests for Adequacy of Index Number Formulae , Cost of Living Index Numbers of Consumer Price Index - Utility of consumer price index numbers - Assumptions of cost of living index number - Steps in construction of cost of living index numbers , Methods of Constructing Consumer Price Index - Aggregate expenditure method - Family budget method - Weight average of price relatives, Limitations of Index Numbers , Utility and Importance of Index Numbers

Note: Problems 60 Marks and Theory 40 Marks.

SUGGESTED READINGS:

1. Levin Richard , H. Siddiqui Masood, S. Rubin David, Rastogi Sanjay, (2017), *Statistics for Management*, 8th edition, pearson education, NewDelhi.
2. Amir Aczel, JayavelSounderpandian, P Saravanan (2017), *Complete Business Statistics*, 7th edition, Mcgraw Hill Education, NewDelhi.
3. Anderson et.al (2015), *Statistics for Business and Economics*, Cengage, NewDelhi.
4. Ken Black (2012), *Applied Business Statistics*, 7th edition, Wiley, NewDelhi.
5. SP Gupta (2012), *Statistical Methods*, S Chand Publishing, NewDelhi.

COURSE OBJECTIVES:

To make the students

- To provide insight on importance of technology for communication and decision making.
- To provide hands-on usage of MS-office to creating new word documents including features like tables, charts and references.
- To enable students to enter data and analyse the data with the support of Excel tools.
- To design presentation using animation, special effects and graphics.
- To facilitate the understanding of accounting package and its application.
- To Provide foundational or “computer literacy” curriculum that prepares students for life-long learning of computer concepts and skills.

COURSE OUTCOMES:

Learners should be able to

1. Create new word documents using inbuilt features like tables, charts and references.
2. Create a datasheet from collected data and analyse the data using inbuilt functions and tools.
3. Design a presentation using animation, special effects and graphics.
4. Utilize the Internet Web resources for communication.
5. Create the vouchers and prepare the company’s final account and reports.
6. Stimulate their Critical thinking by designing and developing clean and lucid writing skills.

UNIT I Document Preparation

Components of Computer – Introduction to MS Office - Word – Creating a new documents with templates and wizards- Typing, formatting, inserting table, chart, equations, symbols and pictures, Mail merge – Inserting Reference : Bibliography (APA, MLA format), end note, foot note - Using Key Board Short cuts

UNIT II Data Sheet Preparation And Analysis

Introduction to Excel – Working with work sheets – Work sheet formatting – Types of Charts – Formatting and printing, Inbuilt functions – Statistical, Financial, Date, string. – Filter – PIVOT Table.

UNIT III Designing Visual Presentation

Introduction to Power Point – Creating New Presentations - Presentation using Graphics – Presentation with Animations

UNIT IV Internet Usage For Communication

Internet and World Wide Web: Introduction to Internet – Internet access – Internet Addressing – Introduction and use of E-mail working of E-mail – E-mail names and address- Working in Blogs.

UNIT V Accounting Package

Accounting Package Tally: Introduction to tally – Create a company – Creating groups and ledger accounts – Account Voucher creation – Statement of accounts – Inventory reports display.

SUGGESTED READINGS:

9. Ajay Maheshwari and Shubham Maheshwari(2017), Implementing GST in Tally.ERP 9, 1stedition, TallyE-learning.
10. Shraddha Singh, Navneet Mehra (2014), Tally ERP 9 (Power of Simplicity): Software for Business and Accounts, V&S Publishers, NewDelhi

		Semester – I
18MBAP112	CASE ANALYSIS AND PRESENTATION	2H –1C
Instruction Hours/week	L:0T:0P:2	Marks: Internal:50 External:0 Total:50

COURSE OBJECTIVES:

To make the students

- To understand the linkage of the theoretical knowledge in solving organizational problems.
- To analyse the problems using holistic approach and draw conclusions.
- To utilize the SWOT tool for analyzing the situation and solving the problems.
- To work in groups to solve complex problems after brainstorming.
- To have insight into details for substantiating the solution derived.
- To understand about environmental forces and Present relevant information in an organization.

COURSE OUTCOMES:

Learners should be able to

1. Understand the utilization of SWOT tools in analyzing the situation
2. Develop the analytical and critical thinking skills
3. Work with teams to bring out the solution.
4. Communicate the collected case facts and analysis orally with support of visual aids
5. Enact the scenario and convince the solution derived.
6. Understand Present relevant information about the company and the industry

For the case study presentation in the class, the focus should be on the following:

1. Allocate 20 to 25 minutes for the case presentation, and another 15-20 minutes for activities to

stimulate class participation and discussion.

2. Present the key issues of the problem. The particular format and structure of the presentation will
3. depend on the specific content, and each group should find a creative, informative manner to present the information.
4. What are the environmental forces that this company is contending with or may have to contend with? Conduct a SWOT analysis. Identify where they see this company in 5 years.
5. Present relevant information about the company and the industry. Presentations should tie-in with class concepts and include current issues, interesting visuals, role-plays, and/or fun activities for class involvement. Each group should prepare a brief **handout** for the class, including highlights of the talk in outline form and/or current issues for class discussion.
6. Stimulate, motivate & lead class discussions to come up with the best answers to the case questions. Provide interesting & unique ways in which the class can participate individually or as teams in developing answers to the discussion questions.
7. Case Grading will be based on:
 - The thoroughness of identification of critical issues in the case,
 - The relevance of data/analysis on the industry and the company.
 - The team's thoroughness in exploring options/solutions to case by themselves and with the class (including necessary conceptual issues and financial analysis),
 - The ability to tie the solution to the case to concepts learned in class,
 - Evaluation/insight/critique (based on class concepts), and Professional communication skills (including professionalism, preparation, organization, delivery, etc.).

		Semester – II
18MBAP201	PRODUCTION AND OPERATIONS MANAGEMENT	5H –4C

Instruction Hours/weekL:4T: 1P:0	Marks:Internal:40 External:60	Total:100
----------------------------------	-------------------------------	-----------

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To understand the Operations management and operation strategy concepts and its application in business.
- To recognize the importance factory location, plant location, Plant layout and facility layout.
- To formulate the production planning and control systems and ensure efficient scheduling for production.
- To understand and apply the forecasting techniques in estimating the requirement of resources.
- To understand the quality management practice and TQM tools and its application in improving the organizational performance.
- To understand the concept of Materials Management – functions – material planning and budgeting and Material Requirement planning

COURSE OUTCOMES :

Learners should be able to

1. Understand the core features of the operations and production management function at the operational and strategic levels.
2. Evaluate and decide the best plant and factory location and layout.
3. Forecast the requirement and make accurate production planning , inventory planning and schedule the production.
4. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.

5. Effectively communicate ideas, explain procedures in oral and written forms to different
6. audiences.
7. Creating and delivering products & services to customers and improving process & supply chain performance

UNIT I Operations Management and Operations Strategy

Nature, Importance, historical development, transformation processes, differences between services and goods, Operations Strategy, Competitive Capabilities and Core Competencies, Operations Strategy as a Competitive Weapon, Linkage Between Corporate, Business, and Operations Strategy, Developing Operations Strategy, Elements or Components of Operations Strategy, Competitive Priorities, Manufacturing Strategies, Service Strategies, Global Strategies and Role of Operations Strategy

UNIT II Location, Layout, material handling and Maintenance

Location Strategies: Introduction, Location Planning Process

Facility or Layout Planning and Analysis: : Introduction, Objectives of Layout, Classification of Facilities, Basis for Types of Layouts, Why Layout decisions are important, Nature of layout problems, Redesigning of a layout, Manufacturing facility layouts, Types of Layouts, Layout Planning, Evaluating Plant Layouts, Assembly Line Balancing, Material handling - Material Requirements Planning (MRP) - Manufacturing Resources Planning (MRP II) - Enterprise Resource Planning (ERP) Maintenance Management- Reliability and Maintenance - Replacement Techniques

UNIT III Production Planning and controlling, Scheduling

Production planning and Control– objectives , functions, PPC in different types of manufacturing systems – Purpose of Operations Scheduling, Factors Considered while Scheduling, Scheduling Activity under PPC, Scheduling Strategies, Scheduling Guidelines, Approaches to Scheduling, Scheduling Methodology – Gantt Chart and sequencing (Problems), Scheduling in Services

UNIT IV Forecasting

Forecasting: Introduction, The Strategic Importance of Forecasting, Benefits, Cost implications

and Decision making using forecasting, Classification of Forecasting Process, Methods of Forecasting, Forecasting and Product Life Cycle, Selection of the Forecasting Method, Qualitative Methods of Forecasting, Quantitative Methods, Associative Models of Forecasting, Accuracy of Forecasting

UNIT V TQM, JIT and Supply chain

Total Quality Management: Introduction, Meaning and Dimensions of Quality, Quality Control Techniques, Quality Based Strategy, Total Quality Management (TQM), Towards TQM – ISO 9000 as a Platform, Total Productive Maintenance (TPM) - Statistical Process Control (SPC) (Problems)

Just-In-Time: Introduction, Characteristics of JIT, Key Processes to Eliminate Waste, Implementation of JIT, Pre-requisites for implementation, JIT Inventory and Supply Chains - Supply Chain Management, Managing supply chain, Supply chain integration.

Note: Problems 20 Marks and Theory 80 Marks

SUGGESTED READINGS:

1. Jay Heizer, Barry Render, Chuck Munson, Amit Sachan (2017), *Operations Management : Sustainability and Supply chain Management*, 12th edition, Pearson Education, NewDelhi.
2. Krajewski, L.J et.al (2015), *Operations Management*, 11th edition, Pearson Education, NewDelhi.
3. Russel, Taylor (2015), *Operations and Supply Chain Management*, 8th edition, Wiley, NewDelhi.
4. B. Mahadevan (2015). *Operations Management : Theory and Practice*, 3rd edition, Pearson Education, NewDelhi.
5. Pannerselvam. (2012). *Production and Operations Management*, 3rd edition, PHI, New Delhi.

COURSE OBJECTIVES:

To make the students

- To understand the marketing concepts and conduct market analysis through environment scanning
- To recognize and apply market segmentation branding and New Product development concepts in real situations.
- To identify the importance of selecting the marketing channel and the pricing strategies and its applications.
- To recognize the role of advertising, sales promotion, public relations, and market research in the success of marketing a product.
- To understand the ethical issues related to marketing and the latest development in marketing.
- To analysis Customer relationship marketing, Customer database, identifying and analyzing competitors.

COURSE OUTCOMES :

Learners should be able to

1. Understand the core concepts of marketing and the role of marketing in business and society.
2. Perform market analysis and identify the best marketing mix.
3. Determine strategies for developing new products and services for the right target segment by Conducting marketing research.
4. Understand the latest trends in marketing and apply the ethical norms in marketing domain.
5. Effectively communicate ideas, explain procedures and interpret results and solutions in

written and oral forms to the team members.

6. Analyze the importance of consumer buying motives & consumer behavior, Designing competitive strategies for Leaders

UNIT I Marketing Concept, Market Analysis and Marketing Mix

Marketing - Concepts, scope - Marketing Management Philosophies - Marketing environment - Strategic planning for Competitive advantage Marketing plan, Competitive advantage, Strategic directions, Strategic alternatives, Market Analysis and Selection: Marketing environment – macro and micro components and their impact on marketing decisions - Target market Strategy- Marketing Mix

UNIT II Market Segmentation, Branding and Product concepts

Marketing segmentation- Bases for segmenting consumer Markets and Business Markets -Steps in segmenting a Market-Strategies for selecting Target Markets, One to One Marketing- Positioning.

Product Concepts-Product-Definition, Levels of product, Types-Product Items, Product Lines and Product Mixes - New Product Development: Process-Global Issues in new product development- The spread of New Products-five categories of adopters-Product lifecycle.

Branding-Branding strategies Packaging-Global Issues in Branding and Packaging.

UNIT III Marketing Channels and Pricing strategies

Marketing Channels- Channel intermediaries and their functions- Channel structures- Channel strategy- Types of Channel relationships - Managing Channel relationship- Channel leadership, conflict and Partnering- Channels and distribution decisions for global markets- Channels and distribution decisions for services.

Pricing Concepts-Importance of Price-Pricing objectives- Pricing Decisions: Factors affecting price determination; Pricing policies and strategies; Discounts and rebates - Legality and ethics of price strategy - Pricing Tactics-Product line pricing-Pricing during difficult economic times.

UNIT IV Promotion and Marketing Research

Promotion Decisions: Communication Process; Promotion mix – advertising, personal selling, sales promotion, publicity and public relations; Determining advertising budget; Copy designing and testing; Media selection; Advertising effectiveness; Sales promotion – tools and techniques.

Marketing Research: Meaning and scope of marketing research; Marketing research process.

Marketing Organisation and Control: Organising and controlling marketing operations.

UNIT V Issues and Developments in Marketing

Social, ethical and legal aspects of marketing; Marketing of services; International marketing; Green marketing; Digital and Social Media marketing; Customer relationship marketing - Customer database, identifying and analyzing competitors - Designing competitive strategies for Leaders, Challengers, Followers and Niche's - Attracting and retaining customers.

Suggested Readings:

1. Philip T. Kotler, Gary Armstrong, Prafulla Agnihotri , (2018), *Principles of Marketing*, 17th edition, Pearson Education, NewDelhi
2. V. S. Ramaswamy , S. Namakumari (2018), *Marketing Management: Indian Context Global Perspective*, 6th edition, , Sage Publications India (P) Ltd., NewDelhi
3. Philip Kotler, Kevin Lane Keller, (2017), *Marketing Management*, 15th edition, Pearson Education, NewDelhi
4. Rajan Saxena (2017), *Marketing Management*, 5th edition, McGraw Hill Education, NewDelhi.
5. Philip Kotler (2017), *Marketing 4.0: Moving from Traditional to Digital*, Wiley, NewDelhi

COURSE OBJECTIVES:

To make the students

- To acquire knowledge in human resource management, HR audit, and Analytics.
- To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
- To understand the concepts and practical implications of performance management, Training methods and career planning.
- To know about compensation and reward management and its practice in industry.
- To be familiar with Employee relations and its application for the development of Human resources.
- To understand the methods to improve quality of work life.

COURSE OUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. Make any manager to identify various activities related to Human Resources, Job involved in HR, Training, Compensation and Labour welfare practices

UNIT I HRM and latest trends in HR

Human resource management - introduction to Human Resource Management– Functions and importance of HRM – Globalization and challenges to HR manager –Diversity management – Strategic Human resource management – HR audit accounting - HR analytics

UNIT II HRP, Selection, Recruitment and Job Analysis

Human Resource Planning and Staffing - Human resource planning and forecasting – Job Analysis –Recruitment – Employee testing and selection – Interviewing for selection – Employee Socialisation – Employee termination and Exit interviews. Job analysis and Design – Process of Job Analysis - Job description, Job specification, Job rotation, Job enrichment- Job enlargement – Job enhancement - Recruitment and selection: Sources of recruitment, Recruitment process – Process of selection - Induction and Placement.

UNIT III Training, Performance Management and career development.

Training Need assessment - Designing Training Programs – Methods and Techniques of Training and Development – training evaluation – Management development programs - Talent Management – techniques of performance appraisal – Orientation – Socialization – Process of socialization – Strategies. Training – Training process - Performance appraisal- Process – Traditional and Modern Methods - 360⁰ - 720⁰ feedback – Ethics of performance appraisal - challenges to performance appraisal – career and development planning- mentoring – coaching – succession planning

UNIT IV Compensation and Reward

Compensation and Reward Management Factors influencing pay rates – Components of compensation – Types of incentives and rewards – Employee benefits and services - Executive compensation – Employee social security – Employee engagement

UNIT V Employee Relations.

Employee Relations - Managing employee relations – Grievance Management - organizational discipline – dispute settlement – Collective bargaining – Employee Health and Safety – IHRM and Managing Expatriates - Quality of Work life – Concepts – Methods to improve quality of work life

SUGGESTED READINGS:

1. Dessler, G. and Bijju Varkkey (2017). *Human Resource Management*, 15th edition, Pearson Education, New Delhi.
2. Aswathappa, K. (2017). *Human Resource Management*, 6^{8h} edition, McGraw Hill Education, New Delhi.
3. David A. Decenzo, Stephen P. Robbins, Susan L. Verhulst (2015), *Human Resource Management*, 11th edition, Wiley, New Delhi.
4. George W Bohlander and Scott., Snell., (2016). *Principles of Human Resource Management*, 16th edition, Cengage India, New Delhi.
5. Scott Snell, George Bohlander, Veena Vohra (2010), *Human Resources Management: A South Asian Perspective*, 1st edition, Cengage India, New Delhi.

COURSE OBJECTIVES:

To make the students

- To understand the scientific approaches to decision-making through mathematical modeling and solving linear programming models.
- To use variables for formulating complex mathematical models in management science, industrial engineering and transportation science.
- To know the advanced methods for large-scale transportation, assignment problems and inventory models.
- To formulate and solve problems as networks and graphs
- To recognize the mathematical and computational modeling of real decision-making problems
- To make the students understand the principles and techniques of Operations Research
 - and their applications

COURSE OUTCOMES :

Learners should be able to

1. Understand the principles and techniques of Operations Research and their applications in decision-making.
2. Realize and apply mathematical techniques for shortest path, maximum flow, minimal spanning tree, critical path, minimum cost flow, and transshipment problems.
3. Formulate linear programming (LP) models and understand the cost minimization and profit maximization concepts.
4. Select the best strategy on the basis of decision criteria under the uncertainty.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills.

6. Understand Dynamic Programming

UNIT I Operations Research and Linear Programming

Concepts and Scope of Operations Research (OR) – Phases of OR study – Models in OR – Advantages and limitations of OR – Role of computers in OR- Formulating Linear programming models, graphical solution of linear programming models, the simplex method-outline, and computing procedure, use of artificial variables, Big M- method and Two phase method.

UNIT II Transportation Problems

Transportation Problems (TP) – Initial basic feasible solution to Transportation Cost – Northwest corner rule, Least cost method – Vogel's approximation method, Optimal solution using Modified Distribution (MODI) method, Degeneracy in TP, Unbalanced TP, Alternative optimal solutions, Maximization in TP – Assignment Problems – Hungarian method of solving assignment problem, Multiple optimum solutions, Maximisation in Assignment Problems, Unbalanced Assignment Problems, Restrictions in Assignment Problems.

UNIT III Network Analysis

Network Analysis – Construction of networks, Components and Precedence relationships – Event – activities – rules of network construction, errors and dummies in network. PERT/CPM networks –project scheduling with uncertain activity times – Critical Path Analysis – Forward Pass method, Backward Pass method – Float (or slack) of an activity and event –Time – cost trade-offs – crashing activity times.

UNIT IV Inventory Models

Inventory models – Economic order quantity models – Quantity discount models – Stochastic inventory models – Multi product models – Inventory control models in practice - Queueing models – Queueing systems and structures – Notation parameter – Single server and multi server models – Poisson input – Exponential service – Constant rate service – Infinite population.

UNIT V Decision Models

Decision models – Anatomy of Decision Theory - Decision Models: Probabilistic Decision Models: Maximum Likelihood Rule- Expected Payoff Criterion- Competitive Decision Models: Maximin, Minimax, Savage, Hurwicz, Laplace Decision Models, Game theory – Two person zero

sum games – Graphical solution- Algebraic solution– Linear Programming solution – Replacement models – Models based on service life – Economic life– Single / Multi variable search technique – Dynamic Programming. Simulation techniques: Introduction – Types of simulation- Monte Carlo Simulation

Note: Problems 60 Marks and Theory 40 Marks.

SUGGESTED READINGS:

1. Frederick S. Hillier, Gerald J. Lieberman, Bodhibrata Nag, Preetam Basu (2017), *Introduction to Operations Research*, 10th edition, McGraw Hill Education, New Delhi.
2. J.K. Sharma (2017). *Operations Research - Theory and Applications.*, 6th edition, Laxmi Publications, New Delhi.
3. G. Srinivasan (2017), *Operations Research: Principles and Applications*, PHI, New Delhi
4. Taha (2014), *Operations Research: An Introduction*, 9th edition, Pearson education, New Delhi.
5. PK Gupta, D.S Hira (1976), *Operations Research*, S Chand Publishing, New Delhi.

Instruction
Hours/week

: 4 T: 1 P : 0 Marks:

Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To understand the financial management concept and its importance and its applications in business, their relationship with the business environment and the role and functions of chief financial officer.
- To know the concept of time value of money and the rationale for using the time value of money concept in capital budgeting techniques for evaluations of business proposals.
- To recognize the availability of different source of capital and computation of cost of capital.
- To recognize the importance of financial leverage, dividend policies and capital structure theories and its application in business.
- To comprehend on the importance working capital, its determination and application.
- To understand the factors affecting working capital requirements

COURSE OUTCOMES:

Learners should be able to

1. Understand the role of a financial manager, and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time and apply the concept to Evaluate the business proposal applying capital budgeting techniques
3. Compute the cost of capital and financial leverage to estimate the optimal capital structure.
4. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and

6. communication skills related to finance decisions.
7. Develop analytical skills which facilitate the financial decision making in business situations

UNIT I Financial Management, Role of finance manager and sources of finance

Financial Management: Meaning, nature and scope of finance goal – profit vs. wealth maximization; Finance decisions – investment, financing and dividend decisions. Role of finance manager – Treasurer Vs. Controller. Agency conflict and agency cost. Indian financial System - Long Term Sources of Finance: Equity, Debentures, Preference Shares, Long term loan, Private equity, Venture capital and Angel investor. Short term Sources of Finance : Short term loan, commercial paper, certificate of deposits, commercial paper, bill of exchange, factoring.

UNIT II Time value of money and its applications.

Time value of money: Present value, future value, Annuity, Annuity Due, Perpetuity, Amortization schedule, Principles of capital budgeting – method of investment analysis – payback, APR, NPV, IRR discounted cash flow – risk and return decision – profitability index

UNIT III Capital structure and cost of capital

Capital Structure: forms – importance – optimal capital structure – theories – Factors determining capital structure – changes in capital structure – capital gearing. Cost of Capital: Cost of capital – meaning – significance – classification of cost – determination – problems – computation of cost of specific sources of finance (cost of Debt, Equity & Preference shares , Retained earnings) – Computation of weighted average cost of capital, Marginal cost of capital.

UNIT IV Leverage and Dividend policy

Leverages: Meaning – Types – Financial Leverage – Operational Leverage – Composite – Working Capital Leverage. Dividend: Approaches – determinants – types of dividend policy – effects and objects of bonus issue – Dividend theories and Models - Walter's Model, Gordon's Model and MM approach

UNIT V Working capital Management

Working capital requirements: Meaning - concept – kinds – importance of adequate working

capital - determinants of working capital - working capital policy- estimation of working capital– operating cycle/ cash conversion cycle. Cash management: optimal cash, cash budget. Inventory management: EOQ, Reorder level Receivables Management: Credit policy, receivables matrix.

Note: Mark distribution - Problems 40 marks and Theory 60 marks.

SUGGESTED READINGS:

2. Vanhorne, J. C and Wachowicz, J .M Jr . (2015). *Fundamentals of Financial Management*. 13th edition. Pearson Education, New Delhi.
3. Lawrence J. Gitman , Chad J. Zutter, (2017). *Principles of Managerial Finance*. (13th edition). Pearson Education, New Delhi.
4. Khan, M.K. and Jain, P.K.(2017). *Financial Management*, 7th edition, McGraw Hill, New Delhi
5. Chandra, P. (2017). *Financial Management Theory and Practice*, 9th edition, McGraw Hill, New Delhi:

Instruction Hours/weekL:4T:0P:0**Marks:Internal:40 External:60****Total:100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:**

To make the students

- To understand the basic framework of research and research process and its important in business decision.
- To develop an understanding of various research designs and sampling techniques and its application.
- To identify appropriate sources of information and methods of data collection for solving a business issue.
- To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
- To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
- To understand about Attitude Measurement and Scaling.

COURSE OUTCOMES :

Learners should be able to

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.

5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. Understand Norms for Using Tables, Charts and Diagrams

UNIT I Introduction to Research:

Meaning of research; Types of research- Exploratory research, Conclusive research; The process of research; Research applications in social and business sciences; Features of a Good research study. Defining the Research problem; Management Decision Problem vs Management Research Problem; Problem identification process; Components of the research problem; Formulating the research hypothesis- Types of Research hypothesis; Writing a research proposal- Contents of a research proposal and types of research proposals.

UNIT II Research Design and Sampling Design

Meaning of Research Designs; Nature and Classification of Research Designs; Exploratory Research Designs: Secondary Resource analysis, Case study Method, Expert opinion survey, focus group discussions; Descriptive Research Designs: Cross-sectional studies and Longitudinal studies; Experimental Designs, Errors affecting Research Design.

Sampling concepts- Sample vs Census, Sampling vs Non-Sampling error; Sampling Design- Probability and Non Probability Sampling design; Determination of Sample size- Sample size for estimating population mean, Determination of sample size for estimating the population proportion.

UNIT III Sources of Data collection and instrument designing

Primary and Secondary Data: Classification of Data; Secondary Data: Uses, Advantages, Disadvantages, Types and sources; Primary Data Collection: Observation method, Focus Group Discussion, Personal Interview method. Attitude Measurement and Scaling: Types of Measurement Scales; Attitude; Classification of Scales: Single item vs Multiple Item scale,

Comparative vs Non-Comparative scales, Measurement Error, Criteria for Good Measurement. Questionnaire Design: Questionnaire method; Types of Questionnaires; Process of Questionnaire Designing; Advantages and Disadvantages of Questionnaire Method. Data Processing: Data Editing- Field Editing, Centralized in house editing; Coding- Coding Closed ended structured Questions, Coding open ended structured Questions; Classification and Tabulation of Data.

UNIT IV Univariate and Bivariate Analysis of Data:

Descriptive vs Inferential Analysis, Descriptive Analysis of Univariate data- Analysis of Nominal scale data with only one possible response, Analysis of Nominal scale data with multiple category responses, Analysis of Ordinal Scaled Questions, Measures of Central Tendency, Measures of Dispersion; Descriptive Analysis of Bivariate data. Testing of Hypotheses: Concepts in Testing of Hypothesis – Steps in testing of hypothesis, Test Statistic for testing hypothesis about population mean; Tests concerning Means- the case of single population; Tests for Difference between two population means; Tests concerning population proportion- the case of single population; Tests for difference between two population proportions. Chi-square Analysis: Chi square test for the Goodness of Fit; Chi square test for the independence of variables; Chi square test for the equality of more than two population proportions. Analysis of Variance: Completely randomized design in a one-way ANOVA; Randomized block design in two way ANOVA; Factorial design. Multivariate Analysis : Factor Analysis, Discriminate analysis, Cluster analysis

UNIT V Research Report Writing and Ethical code for research

Types of research reports – Brief reports and Detailed reports; Report writing: Structure of the research report- Preliminary section, Main report, Interpretations of Results and Suggested Recommendations; Report writing: Formulation rules for writing the report: Guidelines for presenting tabular data, Guidelines for visual Representations. Ethics in Research: Meaning of Research Ethics; Clients Ethical code; Researchers Ethical code; Ethical Codes related to respondents; Responsibility of ethics in research

Note: Case study (20 Marks) and Theory 80 Marks

Chapter 4 – Theory will be covered here and practically applied using SPSS Practical

SUGGESTED READINGS:

1. Uma Sekaran, Roger Bougie (2018), *Research Methods for Business: A Skill-Building Approach*, 7th edition, Wiley, New Delhi.
2. C.R. Kothari, Gaurav Garg (2018), *Research Methodology*, Fourth Edition, New Age International Publishers, New Delhi.
3. Donald Cooper and Pamela Schindler (2017), *Business Research Methods*, 11th edition, McGraw Hill education, New Delhi.
4. Zikmund William G. et.al (2016), *Business Research Methods*, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), *Research Methods for Business Students*, 7th edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:

To make the students

- To understand the Importance of SPSS and the features for entering the data according to the variable type.
- To understand and apply the descriptive analytical tools
- To know the univariate tools and its application
- To comprehend the application of Bivariate analysis
- To understand and compute the multivariate analysis using the package.
- To learn the data editing and derive required graphs.

COURSE OUTCOMES:

Learners should be able to

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.
6. Do Multivariate analysis

UNIT I Overview and Data Entry

editing- Missing

UNIT II Descriptive Statistics

Descriptive statistics – Frequencies Distribution – Diagram –Graphs, Mean, Median, Mode, Skewness – Kurtosis – Standard Deviation.

UNIT III Non parametric and parametric test

Cross tabulation, Chi square, t test, independent sample t test, paired t test.

UNIT IV Analysis of Variance, Bivariate Analysis

ANOVA – One way, Two Way ANOVA, Correlation – Rank correlation – Regression – charts.

UNIT V Multivariate analysis

Factor Analysis, Cluster Analysis and Discriminate analysis.

18MBAP212**TEAM BUILDING AND LEADERSHIP
SKILLS(PRACTICAL)****Semester – II
2H – 1C****Instruction Hours/weekL:0T:0P:2****Marks:Internal:50 External:0****Total:50****COURSE OBJECTIVES :**

To make the students

- To understand the tools and techniques to build and maintain high performance teams
- To understand the importance of clear goals, roles, and processes for conducting effective and productive teams
- To gain the ability to use the resources of the team to identify and overcome obstacles.
- To gain ability to run effective team meetings that produce results
- To obtain the skills for team communication strategies, tools, and techniques to assure positive outcomes.
- To gain knowledge in Building Blocks of Effective Communication

COURSE OUTCOMES:

Learners should be able to

1. Apply facilitative leadership skills to promote team communication, collaboration, and performance.
2. Gain Confidence and ability to deal effectively with challenging team situations.
3. Ability to use ongoing evaluation and feedback tools to monitor team progress, tools for team problem-solving and goal attainment.
4. Utilize teamwork tools that are used to align individuals to be as effective as team members.
5. Receive and integrate feedback on decision-making practices, conflict resolution skills, and teamwork behaviors with the support of a team-based coach.
6. Manage Conflicts in Organisation

Course Content**Team Building Skills**

Goals, Roles and Processes, The Leader's Role, Definitions, What Teams Need, Your Best and Worst Experiences, Team Building Stages, Team Requirements, Team Connections,

Team Roles and Resources, Ground Rules, Utilizing Team Resources, Team Building Process, Symptoms of Team Stress, The Five Dysfunctions of Teams, Team Meetings, Facilitation Skills, Decision Strategies, Goal Setting and Problem Solving, Team Assessment.

Communication Skills

Developing Trust, Mapping Your Stakeholders, Communication Planning, Choice and Control, Building Blocks of Effective Communication, Influencing Skills, Successful Delegation, Giving Feedback for Improved Performance, Managing Conflict

SUGGESTED READINGS

COURSE OBJECTIVES:

To make the students

- To learn about strategic planning in the corporate sector.
- To analyze the environment and to identify opportunities and threat.
- To understand the planning and evaluation techniques
- To learn to apply quantitative and qualitative tools to evaluate and control
- To know how to formulate the strategies for companies.
- To understand Various approach to implementation of strategy

COURSE OUTCOMES:

Learners should be able to

1. Demonstrate a critical understanding of strategic management theories and apply lifelong.
2. Apply quantitative and qualitative tools to evaluate and control
3. Formulate appropriate strategies for companies.
4. Demonstrate capabilities of problem-solving, critical thinking, team work and communication skills
5. Communicate effectively strategic evaluation and control techniques
6. Understand the concept of Quantitative and Qualitative tools in Strategy Evaluation and Control.

UNIT I Strategic Management

Evolution, Elements in Strategic Management – Understanding Strategy - Levels of strategy – Strategic decision making – Strategic management process – Mission – Vision – Goals and Objectives – Strategic planning process - Identifying critical success factors - Strategic management Practice in India. Competitive advantage of Nations and its implication on Indian Business.

UNIT II Environment Analysis and Internal Analysis of Firm:

Concept of Environment – Environmental sectors - General environment scanning – Industry analysis – Porter’s approach. Porter’s competitive strategies - Dynamics of internal environment - Assessing internal environment through functional approach and value chain – SWOT analysis – Core competence.

UNIT III Strategy Formulation:

Generic Strategies – Grand Strategies – Strategies of leading Indian companies – Role of diversification – Limits – Means and forms. Strategic management for small organizations, Non-profit organizations and large multi-product and multiple market organizations.

UNIT IV Strategy Implementation:

Competitive cost dynamics – Experience curve – BCG approach – Cash flow implication – IA-BS Matrix – A.D. Little Life cycle approach to strategic planning – Business portfolio balancing – Assessment of economic contribution of strategy – Strategic fund programming.

UNIT V Strategy Evaluation and Control:

Various approach to implementation of strategy – Matching organization structure with strategy – 7S model – Strategic control process – Requirement of effective evaluation - Techniques of strategic evaluation and control - Du Pont’s control model - Quantitative and Qualitative tools – Balanced score Card – M Porter’s approach for Globalization – Future of Strategic Management.

INTERNATIONAL BUSINESS

3H - 3C

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To make the students to understand the concepts of International business
- To know the export procedure for production and shipment
- To enhance knowledge in EXIM policy
- To understand the Logistics and International marketing channel decision.
- To get an insight on the need for documentation, Process of obtaining Export and Import License
- To Understand the Concept of Export, EXIM strategies, custom clearance and Export incentive schemes.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the concepts of International business, trade procedures and Exim Policy apply lifelong
2. Understand the basics of shipment, foreign trade and international agencies and agreement.
3. Demonstrate capabilities of analysing problems, team work and communication skills
4. Develop knowledge on international financial institutions
5. Acquire knowledge on foreign trade.
6. Understand Financing of foreign trade and Documentation

UNIT I : Introduction to International Business:

Introduction, Introduction to International Business, Elements of International Business, Globalisation International Trade theories and their application: Introduction, Why do nations trade? Theories of International trade- mercantilism, Absolute advantage, Comparative advantage, Heckscher- Ohlin, Product life cycle theory and Porter's diamond model.

UNIT II : International Business Environment and Culture

Introduction, Economic Environment, Political Environment, Demographic environment, Legal Environment Culture and International Business: Introduction, Meaning of Culture, Country Culture, and Culture in an International Business Organization

UNIT III Foreign Investments, Regional integration & Global trade institutions

Foreign Investments, Types and Motives: Foreign investments, types of foreign investments, motives
Regional integration: Introduction, Overview of Regional Integration, Types of Integration, Regional Trading Arrangements, India and Trade Agreements

Global trade institutions: Introduction, World trade organization (WTO), International Labour Organisation (ILO)

UNIT IV : Functional Knowledge in International perspective

International Financial Management: Introduction, Overview of International Financial Management, Components of International Financial Management, Scope of International Financial Management
International Accounting Practices: Introduction, International Accounting Standards, Accounting for International Business, International Regulatory Bodies, International Financial Reporting Standards
International Marketing: Introduction, scanning international markets, mode of entering into potential markets, Global Marketing Strategies, Branding for International Markets

International Human Resource Management: Introduction, International Organizational Structures, Introduction to International Human Resource Management, Scope of International Human Resource Management

UNIT V Finance and International Trade:

Introduction, understanding payment mechanism, Documentation in International Trade, Financing Techniques, Export Promotion Schemes, Export and Import Finance

Balance of Payments, Nature of BOP – Components – Disequilibrium of BOP – Trade Barriers., Tariff – Classification – Impact – Nominal, effective, optimum tariff – Non tariff barriers

EXIM Policy - Export procedure – Offer and receipt of confirmed order – production, shipment and banking procedure – Negotiation – Documents for export trade – Export incentives to Indian exporters.

**INVESTMENT ANALYSIS
AND PORTFOLIO MANAGEMENT**

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the Concept of investing and mechanics for formulating investment decisions.
- To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
- To apply the investing concepts and skills lifelong.
- To clarify the structure and functioning of capital market.
- To expose the concepts of investment Risks and Securities.
- To facilitate them to understand and exploit the tools available for analysis.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Apply the investing concepts and skills lifelong.
3. Demonstrate capabilities of problem-solving, critical thinking, team work and communication skills
4. Demonstrate knowledge and compute value of security analysis & portfolio management and apply the concept to Evaluate the business proposal applying capital budgeting techniques
5. Understand about SAPM. Investments', its types, risk involved in investments', analysis pertaining to investments, Portfolio Theory and models on investment management.
6. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.

UNIT I : The Investment and Investment Avenues**Concepts of investment – Sources of investment information- Investment Instruments.****Investment cycle.**

UNIT II: Risk and Return and Valuation of Securities

Concept of total risk, factors contributing to total risk : default risk, interest rate risk, market risk, management risk, purchasing power risk, systematic and unsystematic risk,. **Risk & risk aversion. Capital allocation between risky & risk free assets-Utility analysis. Bond Valuation, Preference Share Valuation and Share Valuation: Dividend discount models- no growth, constant growth (Problems)**

UNIT III Fundamental Analysis, Technical Analysis and Market Efficiency

EIC framework; Economic analysis: Leading lagging & coincident macro-economic indicators, Expected direction of movement of stock prices with macroeconomic variables in the Indian context; Industry analysis: stages of life cycle, Porter's five forces model, SWOT analysis, financial analysis of an industry; Company analysis. Technical Analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, Trends: resistance, support, consolidation, momentum- Charts: line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, Indicators: moving averages Efficient Market Hypothesis; Concept of efficiency: Random walk, Three forms of EMH

UNIT IV : Portfolio Management and portfolio Theory

Portfolio Management – Portfolio creating process - Portfolio Analysis: portfolio risk and return, Markowitz portfolio model: risk and return for 2 and 3 asset portfolios, concept of efficient frontier and optimum portfolio. Portfolio Theory : Capital asset pricing model – Arbitrage pricing theory – assumptions, significances and limitations of each theory

UNIT V: Mutual Funds, Portfolio Evaluation and Portfolio Revision

Mutual Funds : Introduction, calculation of Net Asset Value (NAV) of a Fund, classification of mutual fund schemes by structure and objective, advantages and disadvantages of investing through mutual funds. Performance Evaluation using Sharpe's Treynor's and Jensen's measures. Meaning – needs – Sharpe's performance measures – Treynor's Performance Index – Jensen's Performance Index – their significance and limitations – Portfolio revision (Problems)

Note: Distribution of marks - 80% theory and 20% problems

FINANCIAL MARKETS AND SERVICES

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

- To Understand the features and functioning of the financial markets and financial services operations.
- To communicate orally and in written form the concepts features and functioning of the financial markets and financial services operations.
- To apply the knowledge of financial markets, financial services operations lifelong.
- To understand competent in creating different types of charges and documentation in respect of different types of borrowers against various types of securities.
- To apply the Concept of banking and insurance, its products in lifelong practice
- To develop a perfect understanding of the procedure and precautions to be adopted by bankers in dealing with different types of securities.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the features and functioning of the financial markets and financial services operations and apply lifelong.
2. Communicate orally and in written form the features and functioning of the financial markets and financial services operations.
3. Demonstrate capabilities of analysing problems, team work and communication skills
4. To give them an overview about insurance market
5. To gain a comprehensive knowledge on the procedural formalities in dealing with different types of customers.
6. To understand competent in creating different types of charges and documentation in respect of different types of borrowers against various types of securities

UNITI :Financial Markets

Overview of Financial systems In India – Structure, Regulation Role And Functions Of Financial Systems – Financial Instruments – Financial Markets – Capital Markets & Money Markets – Interlink Between Money Market & Capital Market – Characteristics Of Financial Markets – Functions Of Stock Exchange – Introduction To Forex. Depositories - dematerialisation services – need and operations –role of NSDL& CSDL.

UNIT II: Financial Services

Objectives of financial services – types of financial services (fund based and fees based) – capital market services & money market services – intermediaries: banking financial corporations, non banking financial corporations & insurance corporations- financial services sector problems and reforms, growth of financial services in India.

UNIT III Leasing and Hire Purchase

Leasing – History and Development – Concept and Classification – Types – Advantages – Disadvantages - Legislative Framework – Supplier, Lessor, Lessee Relationship – Sub Lease – Default and Remedies – Lease Evaluation in Lessee's and Lessor's point of view.

Hire Purchase – Concept and Characteristics – Rate of Interest – Methods of reporting adopted for hire purchase transactions - Legal aspects – Tax implication frame work for Financial Evaluation – Credit Rating – Concept – Types – Advantages and Disadvantages – Process –Agencies.

UNIT IV Factoring and Forfeiting

Factoring – Forms of Factoring Vs Bill Discounting – Factoring Vs Credit Financing – Factoring Vs Forfeiting – Forfeiting in Indian Scenario - Evaluation of a Factor – Legal aspects of Factoring – Factoring Services in India – Bill of Exchange – Definition – Features.

UNIT V Venture Capital, Credit Rating& Mutual fund

Venture capital: growth of venture capital in India- financing pattern – legal aspects and guidelines for venture capital

credit rating : Importance, Credit rating agency (CRA) CRISIL, ICRA & CARE, Credit rating process, Regulation to guide CRA.

Mutual funds: concepts and objectives – functions and portfolio classification-guidelines for mutual funds – working of public and private mutual funds in India

18MBAPF303C PROJECT APPRAISAL AND FINANCE4H - 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the fundamentals of projects, project appraisal, risk management and project management and apply life long.
- To perform the feasibility study to decide on the project selection.
- To critically evaluate the projects using financial analysis and risk management tools.
- To communicate orally and in written form the understanding of projects, project appraisal, risk management and project management
- To make them capable to analyze, apply and appreciate contemporary project management tools and methodologies in Indian context.
- To make them understand the feasibility analysis in Project Management and network analysis tools for cost and time estimation.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the fundamentals of projects, project appraisal, risk management and project management and apply lifelong.
2. Perform the feasibility study to decide on the project selection.
3. Critically evaluate the projects using financial analysis and risk management tools.
4. Demonstrate capabilities of problem-solving, critical thinking, team work and communication skills
5. Apprehend different level of project appraisal to run the business
6. Understand the concept of Performance Audit and Project Leadership

UNIT I Project Appraisal

Fundamentals, Features, identification, Project life cycle, Project Appraisal and financing, Appraisal of Promoters and Management by Lending Institutions, and its significance, IRR Spread, Determination of IRR using excel software

UNIT II Feasibility Analysis

Project feasibility study - Market Feasibility- Technical Feasibility - Financial Feasibility Economic Feasibility - Critical Success factors - Demand Forecasting Techniques.

UNIT III Financial Analysis

Assessment of Cost of project, purpose of financial analysis and appraisal, Assessment of Components of Cost of Project, Total cost of the project, Sources of Project finance, Financial Subsidies, Projected Financial Statements, Techniques of Financial analysis.

UNIT IV Project Risk Management

Business risk vs Financial risk, Risk management in Project finance, Types and Measures of Project Risk, Sensitivity Analysis, Scenario Analysis, Break Even Analysis, Simulation Analysis, Decision Tree Analysis

UNIT V Project Management

Time and Cost Overruns and Over Run Financing, Network techniques for project management, Prerequisites for Successful Project Implementation, Performance Audit, Project Leadership, Project knowledge Management, Closure and Audit

SUGGESTED READINGS:

18MBAPH303A INDUSTRIAL RELATIONS AND LABOUR WELFARE**4H - 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES:**

To make the students

- To comprehend on industrial relations, industrial conflicts, employee discipline, collective bargaining and industrial safety.
- To apply the legal aspects of industrial relations, industrial conflicts, employee discipline, collective bargaining and industrial safety lifelong.
- To learn about industrial relations concept and objectives.
- To know about the industrial conflict and handling the disputes.
- To know about the different types of labor.
- To understand Procedure for taking disciplinary action, Indian law on punishment

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on industrial relations, industrial conflicts, employee discipline, collective bargaining and industrial safety.
2. Apply the legal aspects of industrial relations, industrial conflicts, employee discipline, collective bargaining and industrial safety lifelong.
3. Demonstrate capabilities of analysing problems, team work and communication skills.
4. Gain knowledge of Industrial safety, Occupational hazards
5. Demonstrate knowledge of Statutory welfare measures – Welfare Funds – Education and training schemes
6. Know about the Education and training schemes

UNIT I Industrial Relations**Concepts and Approaches – Causes of poor Industrial Relations - Effects of poor Industrial Relations-****Suggestions to improve Industrial Relations- Trends in India. Trade unionism – Objectives - Functions****- Structure.**

UNIT II Industrial Conflicts & Employee discipline

Industrial Conflicts – Industrial disputes –Types - Causes –Handling and settling disputes – employee grievances – Steps in grievance handling- Settlement of grievance in Indian industry-

Employee discipline- Types of discipline, policy procedures with standing order format, causes and types-Kinds of punishment-Procedure for taking disciplinary action, Indian law on punishment.

UNIT III Collective Bargaining

Concept – Function and importance – Principles and forms of collective bargaining – Procedure – Conditions for effective collective bargaining – Worker’s participation in management, Negotiation Law - Role and methods of worker’s participation – Management participation in Trade Unions.

UNIT IV Industrial Safety

Industrial Safety – Causes of accidents – Prevention – Safety Provisions – Industrial Health and Hygiene – Factors, Importance and Problems – Occupational hazards – Diseases – Psychological problems – Counseling.

UNIT V Labour Welfare

Concept – Objectives – Scope – Need – Voluntary Welfare Measures – Statutory welfare measures – Welfare Funds –Education and training schemes –Child labour – Female labour –Contract labour – Construction labour – Agricultural labour and differently abled labour - CLRA (Contract Act) and Child labour – Statutory forms.

18MBAPH303B COMPENSATION AND BENEFITS MANAGEMENT 4H - 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the fundamentals of Wages, Salary, incentives, Compensation and pay scale systems and apply lifelong.
- To comprehend on the ethical laws related to compensation management.
- To critically evaluate, select the suitable methods and design the Pay structure.
- To familiar with Wages, Salary, incentives, Compensation and pay scale systems
- To understand the Concept of Equity and Compensation-Components of Compensation-
- To understand the compensation designing ,incentives and retirement plans with wage concepts.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the fundamentals of Wages, Salary, incentives, Compensation and pay scale systems and apply lifelong.
2. To comprehend on the ethical laws related to compensation management.
3. Critically evaluate, select the suitable methods and design the Pay structure.
4. Demonstrate capabilities of problem-solving, critical thinking, team work and communication skills
5. Understand the Compensation plans provided by Public sectors & Private Sectors
6. Get knowledge of Incentives and Retirement plans

UNIT I Compensation:

Concept and Nature – Concept of Equity and Compensation-Components of Compensation- Form of Compensation, Compensation Plans- Types of Compensation plans. Wage concepts – Components- Criteria of wage fixation, Types of Wages - Designing Wage, salary and Compensation Policies- Wage differentials.

UNIT II Compensation Designing

Factors affecting Compensation Designing. Incentives and Retirement plans: Basic Pay, Provisions for Dearness allowance – Calculation of total compensation package, various methods of compensating cost of living, Neutralization factors.

UNIT III Incentives and Fringe Benefits

Incentives – Definition, Types of Incentives: Individual incentives and Organization Wide incentives – Scanlon Plan, Kaiser Plan, Profit sharing, on-financial incentives, Fringe Benefits – Definition, Objectives, Types of Fringe Benefits.

UNIT IV Planning for Improved Competitiveness:

Diagnosis and Bench Marking, Obtaining Commitment; Determination of Inter and Intra-industry Compensation Differentials, Internal and External Equity in Compensation Systems. Compensation provided by Public sectors & Private Sectors.

UNIT V Social Security Laws

Laws Relating to Workmen's Compensation, Employee's State Insurance, Provident Fund, Gratuity and Maternity Relief. Wages and Bonus Laws – The Law of Minimum Wages, Payment of Wages, Payment of Bonus. Objectives and scope of Laws. The Impact of fifth pay scale on Central and State Government.

SUGGESTED READINGS:

5. Dr. Kanchan Bhatia (2015), Compensation Management, ; 1st Edition, Himalaya Publishing House, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To Understand the transformation in the role of HR functions from being a support function to strategic function and apply lifelong.
- To explore the relationship between the management of people and pursuit of an organisations strategic goals and objectives.
- To understand the HR Management and system at various levels in general and in certain specific industries or organizations.
- To make aware of the concepts, techniques and practices of human resource development
- To analyse the issues and strategies required to select and develop manpower resources
- To develop relevant skills necessary for application in HR related issues

COURSE OUTCOMES:**Learners should be able to**

1. Understand the transformation in the role of HR functions from being a support function to strategic function and apply lifelong.
2. Explore the relationship between the management of people and pursuit of an organisations strategic goals and objectives.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, problem-solving, planning and team work.
4. Understand and apply the appropriate employee relations measures and strategic HRM Concept
5. Understand the HRM functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences
6. Gain knowledge in reward strategy and employee relations strategy

UNIT I The Conceptual Framework of Strategic HRM

HRM defined, Human resource systems, Aims of HRM, Characteristics of HRM, Reservations about HRM, The concept of strategy - Strategy defined, The concept of strategy, The formulation of strategy, The concept of strategic human resource management, Strategic HRM defined, Basis of strategic HRM, Principles of strategic HRM, Aims of strategic HRM, Concepts of strategic HRM, Perspectives on strategic HRM, The best-practice approach, The best-fit approach, Bundling, The reality of strategic HRM, Practical implications of strategic HRM theory.

UNIT II The Practice Of Strategic HRM

HR strategies - What are HR strategies? What is the purpose of HR strategies? Overall HR strategies, Specific HR strategies, Criteria for an effective HR strategy, How should HR strategies be developed? Developing HR strategies, Implementing HR strategies, The strategic role of HR, The strategic nature of HR, The strategic partner model, What being strategic means, The strategic role of HR directors, The strategic role of heads of HR functions, The strategic role of HR business partners, The strategic contribution of HR advisers or assistants, The impact of strategic HRM, How HR impacts on organizational performance, How strategic HRM concepts impact on practice, Strategic HRM in action, Formulating HR strategy, The content of HR strategies, Corporate issues, Achieving integration, What are the most characteristic features of strategic HRM in action?

UNIT III Employee resourcing strategy and Talent Management strategy

The objective of employee resourcing strategy, The strategic HRM approach to resourcing, Integrating business and resourcing strategies, Bundling resourcing strategies and activities, The components of employee resourcing strategy, Human resource planning, Employee value proposition, Resourcing plans. Talent management strategy- Talent management defined, The process of talent management. Developing a talent management strategy Retention strategy, Flexibility strategy

UNIT IV Employee engagement strategy and learning and development strategy

Employee engagement strategy - Engagement and organizational commitment, The significance of engagement, Engagement and discretionary behaviour, What is an engaged employee? What are the factors that influence engagement? Strategies for enhancing engagement, Measuring engagement Learning and development strategy, Strategic human resource development (SHRD), Strategies for creating a learning culture, Organizational learning strategies, Learning organization strategy, Individual learning strategies.

UNIT V Reward strategy and Employee Relations Strategy.

Reward strategy defined, Why have a reward strategy, Characteristics of reward strategies, The structure of reward strategy, The content of reward strategy, Guiding principles, Developing reward

strategy, Effective reward strategies, Reward strategy and line management capability.. Employee relations strategy, Employee relations strategy defined, Concerns of employee relations strategy, Strategic directions, The background to employee relations strategies, The HRM approach to employee relations, Policy options, Formulating employee relations strategies, Partnership agreements, Employee voice strategies

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of Enterprise Resource Planning (ERP), ERP related technologies, its implementation, module structures of ERP, ERP vendors role, future trends in ERP and apply the learnings lifelong.
- To evaluate the need of ERP for an organization, select the best vendor and implement the module that is appropriate for the organization need.
- To enhance the understanding of the students with respect to the conceptual framework and the technological infrastructure of Enterprise Resource Planning.
- To expose the students to the implementation issues and future trends associated with ERP.
- To apprehend different Sales and Distribution tools used
- To know the future trends in ERP systems to have good relation with customers.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of Enterprise Resource Planning (ERP), ERP related technologies, its implementation, module structures of ERP, ERP vendors role, future trends in ERP and apply the learnings lifelong.
2. Evaluate the need of ERP for an organization, select the best vendor and implement the module that is appropriate for the organization need.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Apprehend application of different Sales and Distribution tools for business.
5. Know the Business benefits of ES
6. Understand the concept of Data definition language

UNIT I ERP - Introduction

Enterprise: An Overview: Business Functions and Business Processes, importance of Information: Characteristics of information; Types of information, Information System: Components of an information system; Different types of information systems; Management information system, Enterprise Resource Planning: Business modelling; Integrated data model Introduction to ERP: Defining ERP, Origin and Need for an ERP System, Benefits of an ERP System, Reasons for the Growth of ERP Market, Reasons for the Failure of ERP Implementation: Roadmap for successful ERP implementation

UNIT II ERP and Related Technologies and ERP Implementation Life Cycle

Business Process Re-engineering, Management Information systems, Decision Support Systems, Executive Information Systems- Advantages of EIS; Disadvantages of EIS, Data Warehousing, Data Mining, On-Line Analytical Processing, Product Life Cycle Management, Supply Chain Management, ERP Security
ERP Tools and Software, ERP Selection Methods and Criteria, ERP Selection Process, ERP Vendor Selection, ERP Implementation Lifecycle, Pros and cons of ERP implementation, Factors for the Success of an ERP Implementation

UNIT III ERP Modules Structure:

A Manufacturing Perspective: Role of Enterprise Resource Planning (ERP) in manufacturing, Computer Aided Design/Computer Aided Manufacturing (CAD/CAM), Materials Requirement Planning (MRP)-Master Production Schedule (MPS);Bill of Material (BOM);Inventory Records; Closed Loop MRP; Manufacturing Resource Planning (MRP-II), Manufacturing and Production Planning Module of an ERP System , Distribution Requirements Planning (DRP), Just-in-Time(JIT) & KANBAN - Kanban; Benefits of JIT; Potential Pitfalls of JIT; Kanban, Product Data Management (PDM)- Data Management, Process Management; functions of PDM; Benefits of PDM, Manufacturing Operations- Make-to-Order (MTO) and Make-to-Stock (MTS); Assemble-to-Order (ATO); Engineer-to-Order (ETO); Configure-to-Order (CTO)
ERP: An Inventory Management Perspective: Role of ERP in Inventory Management: Features of ERP inventory management system; Benefits of ERP inventory management system; Limitations of ERP inventory management system, Importance of Web ERP in Inventory Management, ERP Inventory Management Module, Sub-Modules of the ERP Inventory Management Module, Installation of ERP Inventory Management System, Failure of ERP Inventory Installation ERP: A

HR Perspective: Role of ERP in Human Resource Management: Workflow of ERP human resource management system; Advantages of ERP human resource management system,

ERP: An Finance Perspective: Role of ERP in Finance, Accounting and Finance Processes: Cash management; Capital budgeting, Features of ERP Financial Module, Benefits of ERP Financial Module, Sage Accpac ERP – A Financial ERP Tool

UNIT IV ERP: Purchase, Sales and Distribution and A CRM Perspective:

ERP: A Purchasing Perspective: Role of ERP in Purchasing, Purchase Module: Features of purchase module; Benefits of purchase module, ERP Purchase System

ERP: Sales and Distribution Perspective: Role of ERP in Sales and Distribution, Sub-Modules of the Sales and Distribution Module: Master data management, Order management, Warehouse management, Shipping and transportation, Billing and sales support, Foreign trade, Integration of Sales and Distribution Module with Other Modules. Role of ERP in CRM, Concept of CRM: Objectives of CRM; Benefits of CRM; Components of CRM, Types of CRM: Operational CRM, Analytical CRM, Sales intelligence CRM, Collaborative CRM, Sub-Modules of CRM: Marketing module; Service module; Sales module

UNIT V ERP Vendors, Consultants, and Employees& Future Directions of ERP

Vendors- Role of the Vendor; Consultants: Types of consultants; Role of a Consultant, Employees; Role of employees; Resistance by employees; Dealing with employee resistance, Role of Top Management, Role of Implementation Partner. Different ERP Vendors - ERP Vendors, SAP-AG: Products and technology R/3 overview; SAP advantage, Baan Company , Oracle Corporation: Products and technology; Oracle Application; Vertical solutions, Microsoft Corporation, Ramco Systems, Systems Software Associates Inc. (SSA), QAD

Future Directions in ERP: New Trends in ERP, ERP to ERP II-Implementation of Organisation-Wide ERP, Development of New Markets and Channels, Latest ERP Implementation Methodologies, ERP and E-business, Market Snapshot, The SOA Factor

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of software development, software project planning, estimation, scheduling, monitoring, quality assurance and software reengineering and apply learning lifelong.
- To apply appropriate tools and techniques to evaluate the project cost.
- To use problem solving techniques to schedule the project.
- To apply software testing methods and tools to ensure software quality.
- To know about the software testing methods.
- To know about the concept of quality in software development.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of software development, software project planning, estimation, scheduling, monitoring, quality assurance and software reengineering and apply learning lifelong.
2. Apply appropriate tools and techniques to evaluate the project cost.
3. Utilize problem solving techniques to schedule the project.
4. Apply software testing methods and tools to ensure software quality.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Produce quantitative analysis using specialist software

UNIT I : Software Development Organization, Roles and Overview of Project Management

The Management Spectrum; Organizational Structure; Types of Organizational Structures – Hierarchical Organizational Structure, Flat Organizational Structure, Matrix Organizational Structure,

Networked Organizational Structure, T-form Organization; Job Roles in Software Development.

Overview of Project Management: Project Management – Definitions; Factors Influencing Project Management – Project Manager, Project Management Activities, Stakeholders; Project Communication; Project Development Phases; Project Charter; Statement of Work (SoW); Project Management Associations.

UNIT II Project Planning and Estimation, Budgeting of Projects and Project Scheduling:

Tasks in Project Planning; Work Breakdown Structures (WBS); Planning Methods; Development Life Cycle Models; A Generic Project Model.. Estimation and Budgeting of Projects: Software Cost Estimation; COCOMO Model; Budgeting.

UNIT III Project Scheduling and Project Monitoring and Controlling

Project Scheduling : Scheduling Techniques – Program Evaluation and Review Technique (PERT), Gantt Chart, Critical Path Method (CPM), Automated Tools. Project Monitoring and Controlling: Project Status Reporting; Project Metrics; Earned Value Analysis (EVA); Project Communication Plan & Techniques; Steps for Process Improvement.

UNIT IV Risk Management and Configuration Management

Concepts of Risks and Risk Management , Risk Management Activities; Effective Risk Management; Risk Categories; Aids for Risk Identification; Potential Risk Treatments; Risk Components and Drivers; Risk Prioritization.. Configuration Management: Software Configuration Management (SCM) – Baselines, Software Configuration Items (SCI); SCM Process; Identification of Objects in the Software Configuration; Version Control; Change Control; Configuration Audit; Status Reporting; Goals of SCM.

UNIT V Software Quality Assurance, Testing Techniques and Software Re-Engineering

Software Quality Assurance Activities; Software Qualities; Software Quality Standards – ISO Standards for Software Organization, Capability Maturity Model (CMM), Comparison between ISO 9001 & SEI CMM, Other Standards. Testing Techniques : Software Testing Concepts; Types of Software Testing – Manual Testing, Automated Testing; Black Box Testing; White Box Testing Techniques. Software Re-Engineering: Software Maintenance Problems; Redevlopment vs. Reengineering; Business Process Reengineering; Software Reengineering Process Model; Technical Problems of Reengineering.

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of ecommerce, infrastructure, ecommerce models, risk, e-payment, and e marketing and apply learning lifelong.
- To comprehend on the legal aspects related to e-commerce.
- To analyse the technology requirements for Ecommerce
- To know the different business models available for running a e-business
- To consider the different ways of payment and payment services available
- To understand the E-supply chain management relating to e- business.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of ecommerce, infrastructure, ecommerce models, risk, e-payment, and e marketing and apply learning lifelong.
2. Comprehend on the legal aspects related to e-commerce.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Explore the wealth of online learning environment and adopt methods for system online implementation.
5. Acquitted with the recent trends and developments in technology which covers e-Commerce and knowledge management aspects.
6. Understand E-Marketing, Customer orientation and Future of Ecommerce

UNIT I Introduction to E-commerce and Evolution of E-commerce**Introduction to E-commerce - Introduction, E-commerce or Electronic Commerce- An Overview,****Electronic Commerce – Cutting edge, Electronic Commerce Framework**

Evolution of E-commerce: Introduction, History of Electronic Commerce, Advantages and Disadvantage of E-commerce, Roadmap of e-commerce in India

UNIT II Network Infrastructure, E-commerce Infrastructure and Managing the E-Enterprise

Network Infrastructure- An Overview, The Internet Hierarchy, Basic Blocks of e-commerce, Networks layers & TCP/IP protocols, The Advantages of Internet, World Wide Web

E-commerce Infrastructure: Introduction, E-commerce Infrastructure-An Overview, Hardware, Server Operating System, Software, Network Website. Managing the e-Enterprise: Introduction, e-Enterprise, Managing the e-Enterprise, E-business Enterprise, Comparison between Conventional Design and E-organisation, Organisation of Business in an e-Enterprise

UNIT III e-Commerce Process Models, Risk and management challenges

Introduction, Business Models, E-business Models Based on the Relationship of Transaction Parties, e-commerce Sales Life Cycle (ESLC) Model. Risks of Insecure Systems: Introduction, An Overview of Risks Associated with Internet Transactions, Internet Associated Risks, Intranet Associated Risks, risks associated with Business Transaction Data Transferred between Trading Partners. Management of Risk: Introduction, Introduction to Risk Management, Disaster Recovery Plans, Risk Management Paradigm. Management Challenges and Opportunities: New Business Model, Required Changes in Business Processes, Channel Conflicts, Legal and Regulatory Environment for e-commerce, Security and Privacy, Managerial Opportunities

UNIT IV Electronic Payment Systems, EDI

Electronic Payment Systems, Electronic Cash, Smart Cards and Electronic Payment Systems, Credit Card Based Electronic Payment Systems, Risks and Electronic Payment Systems. Electronic Data Interchange(EDI): The Meaning of EDI, History of EDI, EDI Working Concept, Implementation difficulties of EDI, Financial EDI, EDI and Internet

UNIT V E-Marketing, Customer orientation and Future of Ecommerce.

E-Marketing: The scope of E-Marketing, Internet Marketing Techniques. Consumer Oriented Business: Consumer Market, One-to-One Marketing, Consumer Demographics, Maintaining Loyalty, Gaining Acceptance, Online Catalogue, the Pilot Catalogue, A Unique Search Engine Future Directions: Software Agents, Technology Behind Software Agents, Types of Software Agents, Characteristics and

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of Technology management, Technology Adoption, Diffusion, Absorption , development and transfer and apply learning lifelong.
- To comprehend on the intellectual property rights.
- To apply the understanding of intellectual property rights.
- To Understand an entrepreneurial perspective, the objective is for students to analyse Enterprise Resource Planning
- To know about Purpose and function of trademarks and acquisition of trade mark rights
- To understand agencies and treaties and importance of intellectual property rights

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of Technology management, Technology Adoption, Diffusion, Absorption , development and transfer and apply learning lifelong.
2. Comprehend on the intellectual property rights.
3. Apply the understanding of intellectual property rights.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
5. Identify and evaluate opportunities for new technologies
6. Understand the basics of the four primary forms of intellectual property rights.
7. Compare and contrast the different forms of intellectual property protection in terms of their key differences and similarities.

UNIT 1:Technology Management and Technology strategy

Concept and Meaning of Technology and Technology Management- Technology; Technology management, Evolution and Growth of Technology, Role and Significance of Technology Management, Impact of Technology on Society and Business- Technology and competition; Key issues in managing technological innovation, Forms of Technology- Process technology; Product technology

Technology Strategy- Elements of an accessible technology strategy, Innovation Management, Competitive Advantage- Components of competitive advantage; Creating competitive advantage using value chain, Technology Management Evaluation or Assessment, Concept of Technology Forecasting- Characteristics of technology forecasting ; Forecasting, Forecasting Methods and Techniques,

UNIT II Technology Adoption, Diffusion,Absorption

Technology Adoption, Technology Diffusion- of technology diffusion; Perspectives of innovation diffusion process; Activities necessary for diffusion process, Technology Absorption- Role of technology absorption; Benefits of technology absorption; Constraints in technology absorption,

UNIT III Technology Generation, development and transfer

Technology Generation- Process; , Technology Development, Importance of Technology Generation and Development, Need for Technology Strategy, Importance of Research and Development (R&D)- Corporate research and product lifetimes; Production costs and R&D; Translation of R & D efforts to technology. Technology Transfer: Transfer of Technology, Models of Technology Transfer- Traditional technology transfer models; Qualitative technology transfer models, Technology Transfer Modes, Dimensions of Technology Transfer, Features of Technology Package, Routes of Technology Transfer

UNIT – IV Intellectual property and Patents

Intellectual property :Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights.

Patents : Macro economic impact of the patent system Patent and kind of inventions protected by a

patent Patent document How to protect your inventions? Granting of patent Rights of a patent How extensive is patent protection? Why protect inventions by patents? Searching a patent Drafting of a patent Filing of a patent The different layers of the international patent system (national, regional and international options)

UNIT – V: Trade Marks and Copy rights

Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting, and evaluating trade mark, trade mark registration processes.

Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law. Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer

COURSE OBJECTIVES:**To make the students**

- To Understand the social entrepreneurship, scanning opportunity for social entrepreneurship, business models, social innovation and apply learning lifelong.
- To analyse the real cases of social entrepreneurship and understand the dynamics of social entrepreneurship.
- To design strategies for successful implementation of ideas
- To Understand the systematic process to select and screen a business idea
- To Assessing and prioritizing opportunities for Social Entrepreneurs and Social Innovation
- To understand the value of Government initiative to support social entrepreneurship

COURSE OUTCOMES:**Learners should be able to**

1. Understand the social entrepreneurship, scanning opportunity for social entrepreneurship, business models, social innovation and apply learning lifelong.
2. Analyse the real cases of social entrepreneurship and understand the dynamics of social entrepreneurship.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Generate innovative ideas and find ways to apply these ideas to solve issues and problems in different industries and settings.
5. Analyze the role of government in business
6. Maintain ethical standards in individual and business life

UNIT I Social Entrepreneurship

Social entrepreneur – factors impacting transformation into social entrepreneur -traits/characteristics of social entrepreneurship-- The four distinctions of social entrepreneurship, roles and responsibilities of social entrepreneurs towards society, challenges faced by social entrepreneurship Social entrepreneurship in India, Government initiative to support social entrepreneurship.

UNIT II Opportunities For Social Entrepreneurs and Social Innovation

Methods of sensing opportunities and fields of opportunities - Assessing and prioritizing opportunities - Enterprise launching and its procedures – start-ups – incubation

Social Innovation, Design Thinking and system thinking for social innovation.

Social Entrepreneurship and the challenges of scale : What does ‘going to scale’ mean? How is it done? How much ‘scale’ is enough? How do you know? What are some key challenges for businesses trying to go to scale? For social enterprises? What are some methods for taking a social enterprise to scale? What role can major corporations, like multinationals, play in taking social enterprises to scale?

UNIT III: Form of organization, Newer business models - Social Entrepreneurs

Profit and non-profit Proprietorships – partnership - company -Non-Governmental organisation - Society – Trust and Company (sec. 25) registration - Factors determining selection of forms of registration . Business model : Types - The market intermediary model, The employment model, The fee-for-service -model, The low-income client model, The cooperative model, The market linkage model, The service subsidization model, The organization support model

UNIT IV : Funding Social Entrepreneurship - Capital/Funding/Financing

What is a social impact investor? How do they differ from venture philanthropists and how are both different from traditional venture capital and market investors? What kinds of investments do social impact investors make? Approximately how much money is available to invest through social impact investment pooled funds worldwide? Where do most social enterprises get financing for start-up, establishment, growth and expansion? How do they measure ROI? Do they provide an exit strategy for investors? What pressures are/may be impacting the investment market that may make getting funding for a socially responsible company easier than for one that is not?

UNIT V: Successful Social Entrepreneurship Initiatives

Study of successful models like Grameen Bank – Aravind Eye Care System's – LEDeG – TERI – Pasumai Payanam, Siruthuli – SEWA – Amul – Evidence from OASiS, Case Study on SELCO, case study on Annapurna – Goonj

COURSE OBJECTIVES:**To make the students**

- To Understand the venture capital, private equity, structure, regulatory aspects of VC/PE investments, Valuation models, strategies, exit strategies for P/E.and apply learning lifelong.
- To evaluate and select the best alternative applying the valuation models.
- To know Structure and Regulatory aspects of VC/PE investments
- To understand the Procedure and Challenges involved in Strategies of Private Equity
- To evaluate the performance that demonstrates enhanced competence in decision-making
- To analyse the Past Performance and Strategy

COURSE OUTCOMES:**Learners should be able to**

1. Understand the venture capital, private equity, structure, regulatory aspects of VC/PE investments, Valuation models, strategies, exit strategies for P/E.and apply learning lifelong.
2. Evaluate and select the best alternative applying the valuation models.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, problem-solving, planning and team work.
4. Understand Strategies of Private Equity
5. Gain knowledge in Valuation approaches
6. Evaluate Exit strategies for Private Equity

UNIT I Conceptual understanding of Venture Capital and Private Equity

Venture Capital –Over View of Venture Capital- Definition- Features- Types – Roles, Concept of PE and its characteristics- Definition- Difference between PE,VC and Hedge Funds- Nature of PE

Firm- Players in the PE market– Benefit of PE Finance, PE Fund — Private Equity Investments and Financing- Private Equity Multiples and Prices- Private Equity Funds and Private Equity Firms- Investment Feature and Consideration

UNIT II Structure and Regulatory aspects of VC/PE investments

Structure and Regulation of Venture Capital and Private Equity- Business Cycle of PE –Structure of VC/PE firms- Limited Liability Partnerships- Routes of VC/PE investments in India- Legal structure and terms - Regulatory Aspects of VC/PE investments

UNIT III Valuation

Valuation approaches- Risk and Returns- Analysis of Funds- Conventional Method- Revenue Multiplier Method

UNIT IV Strategies of Private Equity

Leverage Buyout- Growth Capital- Mezzanine Capital- Distressed Debt-other Strategies
Due Diligence- Procedure and Challenges- Due Diligence in Emerging PE Market-Investing in Developing Market- Past Performance and Strategy

UNIT V Exit strategies for Private Equity

Modes of exits in Indian Context and Challenges involved- IPO- Promoter Buyback
Sale to Other PE funds - Sale to other strategic Investors - Stake Swap- M& A's - Open Market- Secondary Market

PLANNING, STRUCTURING AND FINANCING SMALL BUSINESS**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the characteristic and problems of Small business.
- To Comprehend on the government initiative for the small business, Institutional support and schemes available for the support of small scale industry.
- To know the process of setting up a new venture or starting the business through franchising
- To understand about the Development bank and regulators support for small business
- To evaluate of feasibility of buying an existing enterprise
- To know about Institutional Support Schemes

COURSE OUTCOMES:**Learners should be able to**

1. Understand the characteristic and problems of Small business.
2. Comprehend on the government initiative for the small business, Institutional support and schemes available for the support of small scale industry.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, problem-solving, planning and team work.
4. Demonstrate knowledge on the ways of Development bank and regulators support for small business
5. Apprehend different level of Institutional Support Schemes to run the business
6. Maintain ethical standards in individual and business life

UNIT I Small Business

Meaning, Characteristics and Problems, Determination of the nature of the business unit: Micro, Small and Medium enterprise, Comparative evaluation of feasibility of buying an existing enterprise, setting

up a new venture or starting the business through franchising, Location strategy, Preliminary Registration with State Directorate of Industries

UNIT II Government initiative for small business

Ministry of MSME, The Micro, Small and Medium Enterprises Development Act, 2006, Startup Schemes By Indian Government For Startups, NEEDS, UYEGP, PMEGP.

UNIT III Institutional Support

SIDO, SIDBI, NSIC, SISI, Commodity Boards, State Directorate of Industries, SIDC'S, SFC, District Industries Centre. MUDRA Bank.. Testing Laboratories, Product and Process Development Centres, NISEBUD, National Service and Technology Entrepreneurship Development Board.

UNIT IV Development bank and regulators support for small business

Role of RBI, RBI Guidelines to commercial banks, lending by Commercial and Development Banks, Equity Fund Scheme, Credit Guarantee Scheme.

UNIT V Institutional Support Schemes: Interest Subsidy, Seed/Margin Money, DRI, Refinance Scheme, Composite Loan Scheme, Single Window Scheme, National Equity Fund Scheme, Bills Rediscounting Scheme.

SUGGESTED READINGS

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of bookkeeping, budgeting, capital budgeting, financing options and financial analysis tools and apply the learning lifelong in small business operations.
- To select the appropriate tools and techniques and solve problems to select the best alternative.
- To understand about the Purpose of an Operating Budget-Signs of Budget Ineffectiveness
- To evaluate the Performance Measurement Systems
- To know about the Need for Control Systems and When to Eliminate Controls
- To Comprehend on the government initiative for the small business, Institutional support and schemes available for the support of small scale industry.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of bookkeeping, budgeting, capital budgeting, financing options and financial analysis tools and apply the learning lifelong in small business operations.
2. Select the appropriate tools and techniques and solve problems to select the best alternative.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, problem-solving, planning and team work.
4. Apprehend application of Basic Control Systems
5. Know the Business benefits of Zero Working Capital and Zero Fixed Assets
6. Understand the concept of Performance Measurement Systems

UNIT I Essential General Records for Small Business

Single and Double Entry Systems - Chart of Accounts - Debits and Credit -Accounting Software- Revenue & Expense Journal-Petty Cash Record-Inventory Record- Fixed Assets Log -Accounts Receivable- Accounts Payable-Payroll Records-Independent Contractors-Travel, Transportation, and Entertainment Expenses- Customer Information Records-Business Checkbook- Receipt Files

UNIT II Budgeting for Operations

Definition or Purpose of an Operating Budget-Signs of Budget Ineffectiveness-Improvements to the Budgeting System- Responsibility Accounting-Budget Tracking and Maintenance-The System of Interlocking Budgets-Need for Budget Updating

Capital Budgeting - Investing in Long-Term Assets and Capital Budgeting - Definitions - Overview and Use of Capital Budgeting-Life Cycles-Capital Budgeting Sequence-Producing Numbers to Get Dollars, the Use of Forms, and the Capital Budgeting Model (NPV, Payback period, IRR, PI) - Miscellaneous Considerations-Product Discontinuance - Bailout

UNIT III Basic Control Systems

The Need for Control Systems -Types of Fraud - Key Controls - When to Eliminate Controls-Operating the Business - Cash Flow Concerns- Cash-What to Do with Excess Cash-Cash Flows-Introduction to Cash Flow Budgets-Indications of Cash Flow Problems- Managing Cash-Preparation of the Cash Budget-Disbursements-Net Cash Flow and Cash Balances- Exceptions to Expected Cash Flows

UNIT IV Financing

New Businesses - Zero Working Capital and Zero Fixed Assets - Types of Financing - Private Placement of Stock - Swapping Stock for Expenses - Stock Warrants - Stock Subscriptions - How to Obtain a Bank Loan - Sources of Debt Financing - Types of Loan Arrangements 168 Restrictions on Loans - Conditions That a Borrower Should Seek

UNIT V Performance Measurement Systems

Financial Ratios - Types of Financial Ratios - Using Performance Measurements for Predictions - Operating Ratios - Other Ratios - The Balanced Scorecard - Financial Analysis - Risk Analysis - Capacity Utilization - Breakeven Analysis - Taxes and Risk Management - Controlling Tax Liabilities -Risk Management - Insurance-Types of Insurance Companies- Claims Administration- Reporting -

SUGGESTED READINGS

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of scanning marketing environment, product mix, pricing, promotion and place and apply the learning lifelong in small business.
- To select the appropriate product mix, formulate the best pricing, promotion strategies for the chosen small business target segment.
- To know the Stages of and participants in buying process and buying behaviour
- To understand the Importance of Channels of distribution and Selection of appropriate channel
- To analyse the factors affecting pricing decisions
- To do Marketing Research and apply different techniques in the Research.

COURSE OUTCOMES:**Learners should be able to**

1. To Understand the concept of scanning marketing environment, product mix, pricing, promotion and place and apply the learning lifelong in small business.
2. To select the appropriate product mix, formulate the best pricing, promotion strategies for the chosen small business target segment.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Understanding the Promotion and Distribution Strategies
5. Analyse Emerging marketing environment in India.
6. Understand Rural Marketing, Marketing Research concepts and Techniques

UNIT 1: Meaning and Definition of Marketing:

Importance – Functions – Nature and scope of marketing – Marketing Environment – Market Segmentation – Criteria for market segmentation – Elements of market segmentation – Factors influencing market segmentation.

UNIT 2: Buyer Behaviour and Motivation:

Meaning of buying Motives – Diffusion Process – List of basic needs, Maslow's Hierarchy of needs – Festinger's Theory of Cognitive Dissonance – Stages of and participants in buying process – Techniques of Motivation Research – Sales forecasting – Objectives, importance, Role, Process and Limitations.

UNIT 3: Importance of product:

Classification of goods – Product mix – Product Life Cycle – Product planning – Importance. Pricing Decisions – Objectives and Advantages of Pricing Decisions – Factors affecting pricing decisions – Kinds of Pricing – Process of price Determination.

UNIT 4: Promotion and Distribution Strategies:

Promotion mix: Components – Advertising ; Personal selling; sales promotion and publicity – Importance of Channels of distribution, Channel –Selection of appropriate channel – Distribution – evaluation.

UNIT 5: Emerging marketing environment in India:

Super Markets – Departmental Stores– Service marketing – Functionaries – Rural Marketing – Marketing Research concepts and Techniques.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of Data Warehouse and its significance.
- To gain the knowledge of hardware and operational design of data warehouses
- To obtain the knowledge of planning the requirements for data warehousing.
- To understand the types of the data mining techniques and its application
- To comprehend on the concept of knowledge discovery process and its application
- To know about Visualization techniques and Knowledge discovery process

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basic principles, concepts and applications of data warehousing and data mining,
2. Comprehend the importance of Processing raw data to make it suitable for various data mining algorithms.
3. Visualize the techniques of clustering, classification, association finding, feature selection and its importance in analysing the real-world data.
4. Understand the Conceptual, Logical, and Physical design of Data Warehouses OLAP applications and OLAP deployment
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Understand Preliminary analysis of the data set using traditional query tools

UNIT I Data warehousing

Meaning and Significance – Data Warehouse Architecture: System Process – Process architecture – Design – Database scheme – Partitioning strategy – Aggregations – Data mart – Meta data – Systems and data Warehouse process managers.

UNIT II Hardware and Operational design of data warehouses

Hardware and Operational design of data warehouses – Hardware architecture – Physical layout – Security – Backup and Recovery – Service level agreement – Operating the data warehouse.

UNIT III Data warehouse Planning

Tuning and Testing – Capacity planning – Testing the data warehouses – Data warehouse features.

UNIT IV Data mining

Introduction – Information and production factor – Data mining Vs Query tools – Data mining in marketing – Self learning computer systems – concept learning.

UNIT V Knowledge discovery process

Data selection – Cleaning – Enrichment – Coding – Preliminary analysis of the data set using traditional query tools – Visualization techniques – OLAP tools – Decision trees – Association rules – Neural networks – Genetic Algorithms KDD (Knowledge discover in Database) environment.

SUGGESTED READINGS :

5. Gordon S. Linoff , Michael J.A. Berry (2012), Data Mining Techniques: For Marketing, Sales and Customer Relationship Management, 3rd edition, Wiley, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To understand the basics of data visualization
- To understand the concepts, tools and techniques of data visualization.
- To develop a structured approach to apply judgment, and generate insight from data for enhanced decision making.
- To create Maps in R and build interactive web pages
- To understand the basic functions in Tableau, like inputting data and building charts
- To Create visualizations to tell stories with data

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basics of data visualization
2. Design visualizations that represent the relationships contained in complex data sets and adapt them to highlight the ideas you want to communicate.
3. Formulate and use appropriate models of data analysis to answer business-related questions.
4. Interpret data findings effectively to any audience, orally, visually and in written formats.
5. Learn to use colors, shapes, and other tools to dig deep into data
6. Create Maps & How to build interactive web pages

UNIT I Data visualization

Introduction – Importance of visualization in analytics, exploratory and explanatory visualization, datatypes and ways to encode data, importance of limiting the amount of data presented in an analysis, data cleaning and use of data with integrity.

Downloading and installing R

Downloading and installing Tableau

UNIT II Basic Visualization Tools using R

Bar Charts

Histograms

Pie Charts

Scatter Plots

Line Plots and Regression

UNIT III Specialized Visualization Tools

Word Clouds, Radar Charts, Waffle Charts, Box Plots

UNIT IV How to create Maps & How to build interactive web pages

Creating Maps in R, Introduction to Shiny, Creating and Customizing Shiny Apps, Additional Shiny Features

UNIT V Tableau - Data visualization

Use chart type, color, size, and shape to get the most out of data visualizations.

Do basic functions in Tableau, like inputting data and building charts.

Learn to use colors, shapes, and other tools to dig deep into data.

Learn to use calculations to create new data columns.

Build Tableau dashboards.

Create visualizations to tell stories with data.

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of machine language
- To comprehend and apply the predictive analytics, basic probabilistic supervised learning, unsupervised learning and deep learning concepts in business decision making
- To develop a structured approach to apply judgment, and generate insight from data for enhanced decision making.
- To create data for analytics through Active learning and Reinforcement learning
- To understand the best practices for Supervised Learning
- To know the applications of unsupervised machine learning

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basics of machine language
2. Apply the predictive analytics modeling
3. Evaluate the best decisions applying the basic probabilistic, supervised learning, unsupervised learning and deep learning
4. Formulate and use appropriate models of data analysis to answer business-related questions.
5. Interpret and communicate data findings effectively to any audience, orally, visually and in written formats.
6. Gain knowledge in Automate Feature Extraction using Deep Learning

UNIT I Introduction:

What is Machine Language; Problems, data, and tools; Visualization. Prescriptive analytics Creating data for analytics through designed experiments, creating data for analytics through Active learning, creating data for analytics through Reinforcement learning, Graph Visualization, Data Summaries, Model Checking & Comparison.

UNIT II Basic Probabilistic Modeling

Probability and classification, Bayes optimal decisions, Naive Bayes and Gaussian class-conditional distribution, Linear classifiers, Bayes' Rule and Naive Bayes Model

UNIT III Supervised Learning

What is Supervised Machine Learning? ,Types of Supervised Machine Learning Algorithms - Bias-Variance Dichotomy, Model Validation Approaches, Logistic Regression, Linear Discriminant Analysis, Quadratic Discriminant Analysis, Regression and Classification Trees, Support Vector Machines-Challenges in Supervised machine learning, Advantages of Supervised Learning, Disadvantages of Supervised Learning -Best practices for Supervised Learning

UNIT IV Unsupervised Learning

What is Unsupervised Learning? Example of Unsupervised Machine Learning , Why Unsupervised Learning? , Types of Unsupervised Learning - Clustering, Clustering types : Hierarchical clustering, K-means clustering, K-NN (k nearest neighbors),Principal Component Analysis, Singular Value Decomposition, Independent Component Analysis - Associative Rule Mining, Supervised vs. Unsupervised Machine Learning, Applications of unsupervised machine learning , Disadvantages of Unsupervised Learning

UNIT V Deep Learning

What is Deep Learning? Deep Learning Process, Automate Feature Extraction using Deep Learning, Difference between Machine Learning and Deep Learning , When to use Machine Learning or Deep Learning?

COURSE OBJECTIVES:**To make the students**

- To understand the concept of international economics, globalization, comparative advantage theories, international macroeconomic indicators like foreign exchange, national income, balance of payment and international macroeconomic policy.
- To apply the understanding of international economies concepts, international economic indicators and international monetary policy lifelong.
- 1. To analyze the basic issues such as productivity, earnings and effective utilization of trade.
- 2. To make students to take decisions on business planning and outsourcing.
- 3. To familiarize the students with the knowledge of exchange rate and its impact.
- 4. To students learn about the balance of payments and its consequences. Enable students to acquire concepts, techniques of foreign trade.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of international economics, globalization, comparative advantage theories, international macroeconomic indicators like foreign exchange, national income, balance of payment and international macroeconomic policy.
2. Gain the knowledge and analyze the emerging global trends in business environment.
3. Develop insight on exchange of exports and imports
4. Analyze the impact of exchange rate fluctuation on home currencies
5. Evaluate the policies pursued by various economic bodies in international trade
6. Get familiarize with the export promotion measures and their benefits to their business
7. Apply the understanding of international economies concepts, international economic indicators and international monetary policy lifelong.

UNIT I Introduction:

International Economics- Meaning, Scope and Importance- Globalisation of the world economy, Globalisation challenge, International flow of goods, services, labour and capital – Gravity Model, International Resource Movements and Multinational Corporations

UNIT II Comparative advantage

The Mercantilists' Views on Trade-Labor Productivity and Comparative Advantage: The Ricardian Model -Specific Factors and Income Distribution -Resources and Trade: The Heckscher-Ohlin Model - The Standard Trade Model - External Economies of Scale and the International Location of Production-International Trade Policy -The Instruments of Trade Policy - The Political Economy of Trade Policy - Trade Policy in Developing Countries - Controversies in Trade Policy

UNIT III Exchange Rates

Exchange Rates and the Foreign Exchange Market: An Asset Approach - Money, Interest Rates, and Exchange Rates - Price Levels and the Exchange Rate in the Long Run - Output and the Exchange Rate in the Short Run - Fixed Exchange Rates and Foreign Exchange Intervention

UNIT IV National Income Accounting and the Balance of Payments

National Income Accounting - Balance of Payments, Balance of trade and Balance of payments: Concepts and Components - Equilibrium and Disequilibrium in Balance of Payments; Causes and Consequences, Measures to correct deficit in the Balance of Payments. International Monetary System, Devaluation; Merits, Demerits and Limitations, Foreign Trade Multiplier; Concept and Limitations

UNIT V International Macroeconomic Policy

International Monetary Systems: Bretton Woods system – evolution and operation, US BOP deficit and fall of Bretton Woods System, IMF, World Bank – Objectives, Functions and operations

Semester - III
4H - 4C**INTERNATIONAL TRADE PROCEDURES AND DOCUMENTATION****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**COURSE OBJECTIVES:****To make the students**

- To Understand the Concept of Export, EXIM strategies, custom clearance and Export incentive schemes.
- To communicate orally and in written form the understanding of Export, EXIM strategies, custom clearance and Export incentive schemes.
- To apply the understanding of Export, EXIM strategies, custom clearance and Export incentive schemes.
- To have an exposure in broad conceptual focus on documentation in exports and imports
- To Understand the concept of International Distribution system and Logistics
- To understand the Logistics and International marketing channel decision.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Export, EXIM strategies, custom clearance and Export incentive schemes.
2. Communicate orally and in written form the understanding of Export, EXIM strategies, custom clearance and Export incentive schemes.
3. Apply the understanding of Export, EXIM strategies, custom clearance and Export incentive schemes.
4. Gain the knowledge on value of international trade relations to outsource their business
5. Students know about the value of trade of their economies and other economies
6. Understand Information Technology in International Business

UNIT I Export Procedures and Documents:

The Search for an overseas buyer, Processing an Export Order, Negotiation of Documents, Role of Banks in Export-Import Transactions. Methods of Payments and INCO Terms: Methods of Payment, Financing Exporters and Importers, Instruments of Payment.

UNIT II : EXIM Strategies, Export Marketing and Methods of Financing Exporters and Business Risk Management:

EXIM Business Plan and Strategy, Export Strategy Formulation, Export Financing, Import Strategy (Sourcing Strategy), International Marketing, Export Marketing – Going Global, Different Forms of International Trade. Methods of Financing Exporters and Business Risk Management: Pre-Shipment Finance, Post Shipment Export Advance, Factoring and Insurance, Types of Risks, Quality and Pre Shipment Inspection.

UNIT III Custom Clearance of Import, Export Cargo & Logistics and Characteristics of Modes of Transportation:

Clearance of Import Cargo, Clearance of Export cargo, Custom Valuation, The Harmonized System, Carnets, New Developments in Custom Clearance Procedure. Logistics and Characteristics of Modes of Transportation: Planning Physical Distribution, Benefits of Efficient Logistics System, Concept of Marketing Logistics System, Critical Elements of a Logistics System, International Transport System.

UNIT IV Characteristics of Shipping Industries and Containerization and Leasing Practices:

History of Shipping Industry, Characteristics of Shipping Industry, Role of Intermediaries in Shipping Industry, Latest Trends in Logistics Operations, Ocean Freight Structure.

Containerization and Leasing Practices: Containerization – Concept and Operation, History of Containerization, Types of Containers, Benefits of Containerization, Global Trade and containerization, Container Leasing Practices and Inland Container Depots.

UNIT V Export Incentive Schemes & Information Technology in International Business:

Duty Exemption Scheme, Duty Remission Scheme, Export Promotion Capital Goods Scheme, Special Economic Zones. Information Technology in International Business: Electronic Procurement, Electronic Marketing, Electronic Logistics.

SUGGESTED READINGS :

1. Dr. Khushpat S. Jain, Apexa V. Jain (2017) Foreign Trade - Theory, Procedures, Practices and Documentation, Himalaya Publishing House, New Delhi.

5. Abhishek A. Rastogi (2015), Handbook On Foreign Trade Policy 2015-2020, 1st edition, Lexis Nexis, New Delhi

COURSE OBJECTIVES:**To make the students**

- It is to impart the basic components of International Logistics and integrating all the subsystems of Logistics
- To understand the various processes involved in International Trade and the various types of Marketing Channels and its role in Logistics.
- To introduce the Concept of Multimodal transportation, their legal classifications, Characteristics and the choice of transport.
- To understand the basic concepts of Containerisation and also focuses on Chartering.
- To impart basic knowledge on Inventory management, Packaging and various kinds of packing.
- To apply the understanding of basic components of International Logistics and integrating all the subsystems of Logistics lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the basic components of International Logistics and integrating all the subsystems of Logistics
2. Understand the various processes involved in International Trade and the various types of Marketing Channels and its role in Logistics.
3. Know the Concept of Multimodal transportation, their legal classifications, Characteristics and the choice of transport.
4. Comprehend the basic concepts of Containerisation and Chartering.
5. Understand the Inventory management, Packaging and various kinds of packing.
6. Apply the understanding of basic components of International Logistics and integrating all the subsystems of Logistics lifelong.

7. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.

UNIT – I Overview Logistics:

Definition, Evolution, Concept, Components, Importance, Objectives; Logistic Subsystem; The work of Logistics; Integrated Logistics; Barrier to Internal Integration. Logistics Service Providers: 3PL/4PL Services- Differences between 3PL & 4PL: 4PL Common Services for 3PL/4PL: Invoice management, call centers, warehouse/distribution facilities - Carrier management- 4PL Specialties: Implementation Center: Business process analysis/scoping, Development of all activities into an open systems framework- Product/Skill Centers: Supply chain engineering –4PL Value Added services: Knowledge Transfer, Business Development and Functional Support.

UNIT – II Marketing and Logistics Customer Focused Marketing;

International Marketing: Introduction, Definition, Basis for International Trade, Process, Importance; International Marketing Channel: Role of Clearing Agent, Various Modes of Transport, Choice and Issues for Each Mode, Transport Cost Characteristics- Importance of Global Logistics- Export Logistics: Special Aspects of EX-IM logistics- Picking, Packing, Vessel Booking [Less-than Container Load(LCL) / Full Container Load (FCL)], Customs, Documentation, Shipment, Delivery to distribution centers, distributors and lastly the retail outlets- Import Logistics: Documents Collection- Valuing Bonded Warehousing- Customs Formalities- Clearing- Distribution to Units Security& Insurance- Multimodal Transport- UN International convention on MT of Goods- Terminal Networks: Types and Roles.

UNIT – III Basics of Transportation

Transportation Functionality and Principles; Multimodal Transport: Modal Characteristics; Modal Comparisons; Legal Classifications; International Air Transport; Air Cargo Tariff Structure; Freight: Definition, Rate; Freight Structure and Practice

UNIT – IV Containerization and Chartering Containerization:

Genesis, Concept, Classification, Benefits and Constraints; Inland Container Depot (ICD): Roles and Functions, CFS, Export Clearance at ICD; CONCOR; ICDs under CONCOR; Chartering: Kinds of Charter, Charter Party, and Arbitration.

UNIT V Inventory Management and Packaging Inventory Management:

Introduction, Characteristics, Functionality, Components, Planning; Packaging and Packing: Labels, Functions of Packaging, Designs, Kinds of Packaging; Packing for Transportation and Marking: Types of Boxes, Container, Procedure, Cost, Types of Marking, Features of Marking

SUGGESTED READINGS:

1. Ram Singh (2015), International Trade Logistics, 1st edition, Oxford University Press, New Delhi.
2. Donald F. Wood, Anthony Barone, Paul Murphy, Daniel Wardlow(2012), International Logistics, 1st edition, Springer
3. Robert Chira, (2016), International Logistics Management, Authorhouse
4. Paul R. Murphy Jr., Donald Wood (2003), Contemporary Logistics: International Edition, Pearson Education, New Delhi.
5. V.V Sople(2012), Logistics Management, 3rd Edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of supply chain, inventory management, supply contracts, supply chain integration and global logistics.
- To apply the understanding of supply chain, inventory management, supply contracts, supply chain integration and global logistics lifelong.
- To understand the concept of supply chain and logistics.
- To familiarize the key drivers of supply chain performance.
- To understand the analytical tools necessary to solve supply chain problems.
- To get an in-depth knowledge in International supply chain

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of supply chain, inventory management, supply contracts, supply chain integration and global logistics.
2. Apply the understanding of supply chain, inventory management, supply contracts, supply chain integration and global logistics lifelong.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Understand the importance of accurate planning and product data management as a part of Logistics Management.
5. Familiarize the key drivers of Logistics outsourcing.
6. Get an in-depth knowledge in Transactional Logistics

UNIT I Concept of supply chain

Supply chain, integrated supply chain, Growth of Supply chain, Strategic decision in supply chain, Scope of Supply Chain Management, Scope, Supply Chain Management as a Management Philosophy, Function of SCM, Why Supply Chain Management, Value chain for Supply Chain Management.

UNIT II Inventory Management & Risk Pooling

Introduction and forms of inventory Single stage inventory control Economic lot size model Effect of demand uncertainty Single period models Initial inventory Multiple order opportunities Periodic review policy Continuous review policy, Risk pooling Centralized versus decentralized systems Managing inventory in the supply chain Practical issues, Risk pooling Centralized versus decentralized systems Managing inventory in the supply chain Practical issues, Approaches to forecast future demand Network design Inventory positioning and logistics coordination Resource allocation

UNIT III Supply Contracts

Strategic components Contracts for make-to-stock supply chain Contracts for make-to-order supply chain Contracts with asymmetric information Contracts for nonstrategic components- The Value of Information The bullwhip effect Supply chain coordination structures Information sharing & incentives Information and supply chain trade-offs Centralized and decentralized decision making and performance impacts Learning organization principles.

UNIT IV Supply Chain Integration

Functional Products Innovative products - Efficient supply chains - Responsive supply chains - Agile supply chains - Supply Chain Integration Push, pull, and push-pull systems Demand-driven strategies Impact of lead time Impact of the Internet on supply chain strategies- Distribution Strategies Direct shipment distribution Intermediate inventory storage point strategies – Transshipment- Strategic Alliances Framework for strategic alliances Third-party logistics Retailer-Supplier Partnerships, Distributor integration- Procurement and Outsourcing Strategies Outsourcing benefits and risks A Framework for Buy/Make Decisions Procurement strategies -E-Procurement

UNIT V Global Logistics, Risk Management and IT for supply chain

Types of global forces Risk management Issues in international supply chains- Coordinated Product and Supply Chain Design - Design for logistics Supplier integration into new product development -

SUGGESTED READINGS:

2. Russel, Taylor (2015), Operations and Supply Chain Management, 8th edition, Wiley India.
3. Sunil Chopra, Peter Meindl, et al.(2018), , Supply Chain Management, 7th edition, Pearson Education, New Delhi.
4. F. Robert Jacobs, Richard Chase (2017), Operations and Supply Chain Management, 14th edition, McGraw Hill, New Delhi.
5. Janat Shah, (2016), Supply Chain Management: Text and Cases, 2nd edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of operations, capacity, purchase, inventory and linkages to strategic formulation, implementation, monitoring and control.
- To apply the understanding of concept of operations, capacity, purchase, inventory and linkages to strategic formulation, implementation, monitoring and control lifelong.
- To understand Process Technology strategy and Improvement strategy
- To know the challenges to operations strategy formulation
- To analyse the content of operations strategy and the relative importance of performance objectives changes over time.
- To know the dynamics of monitoring and control and Implementation risk

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of operations, capacity, purchase, inventory and linkages to strategic formulation, implementation, monitoring and control.
2. Apply the understanding of concept of operations, capacity, purchase, inventory and linkages to strategic formulation, implementation, monitoring and control lifelong.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Understand the principles and techniques of Operations Research and their applications
5. Understand why Capacity strategy and Purchasing and supply strategy
6. Understand the importance of Formulation and implementation strategy.

UNIT I : Operation strategy

Why is operations excellence fundamental to strategic success? What is strategy? What is operations strategy? What is the content of operations strategy? The operations strategy matrix- What is the process of operations strategy- Operations performance can make or break any organisation- The five generic performance objectives - The relative importance of performance objectives changes over time - Trade-offs – are they inevitable? - Targeting and operations focus-Substitutes for strategy :‘New’ approaches to operations - Key questions - Total quality management - Lean operations - Business process reengineering - Six sigma

UNIT II Capacity strategy and Purchasing and supply strategy :

What is capacity strategy? - The overall level of operations strategy - The number and size of sites - Capacity change - Location of capacity- Purchasing and supply strategy :What is purchasing and supply strategy? - Do or buy? The vertical integration decision - Contracting and relationships - Which type of arrangement? - Supply network dynamics - Managing suppliers over time - Purchasing and supply chain risk

UNIT III Process Technology strategy and Improvement strategy

What is process technology strategy? - Scale/scalability – the capacity of each unit of technology - Degree of automation/‘analytical content’ – what can each unit of technology do? - Degree of coupling/connectivity – how much is joined together? - The product–process matrix - The challenges of information technology - Evaluating process technology- Improvement strategy : Introduction - Development and improvement -Setting the direction -Importance–performance mapping - Developing operations capabilities -Deploying capabilities in the market

UNIT IV Product and service development and Organisation

Introduction - The strategic importance of product and service development - Product and service development as a process - A market requirements perspective on product and service development - An operations resources perspective on product and service development - The process of operations strategy

UNIT V Formulation and implementation, Monitoring and control.

Formulation and implementation : Introduction - Formulating operations strategy - What is the role of alignment? - Analysis for formulation - The challenges to operations strategy formulation - How do we know when the formulation process is complete? Implementing operations strategy :the process of operations strategy - Monitoring and control - Introduction- Strategic monitoring and control - Contents Monitoring implementation – tracking performance - The dynamics of monitoring and control

SUGGESTED READINGS:

1. Nigel Slack, Michael Lewis, MohitaGangwar Sharma (2018), Operations Strategy, 5th edition, Pearson Education, New Delhi.
2. Gary Pisano, David Upton, Steven Wheelwright Robert Hayes(2011), Operations, Strategy and Technology: Pursuing the Competitive Edge, Wiley India, New Delhi.
3. Jay Heizer, Barry Render, Chuck Munson , Amit Sachan (2017), Operations Management , 12th edition, Pearson Education, New Delhi.
4. Richard B. Chase, Ravi Shankar, F. Robert Jacobs (2018), Operations and Supply Chain Management, 15th edition, Mc Graw Hill, New Delhi.
5. B. Mahadevan (2015), Operations Management : Theory and Practice, 3rd edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:

- To understand the basic concepts of total quality management and appreciate its importance in today's business environment.
- To understand the quality management practice and TQM tools and its application in improving the organizational performance.
- To acquire required diagnostic skills and use various quality tools.
- To get exposure on tools and techniques like six sigma, 7 old quality control
- To familiarize the students about the Quality Management System.
- To Identify the key competencies needed to be an effective manager.

COURSE OUTCOMES:**Learners should be able to**

1. Obtain the knowledge of applying a quality management TQM tools to improve organizational effectiveness.
2. Acquire required diagnostic skills and use various quality tools.
3. Get exposure on tools and techniques like six sigma, 7 old quality control
4. Familiarize about the Quality Management System.
5. Apply the Quality tools and techniques in improving the performance.
6. Understand the concept of quality management(QM), QM Principles, tools and techniques and quality systems.

UNIT I INTRODUCTION

Introduction – Need for quality – Evolution of quality – Definitions of quality – Dimensions of product and service quality – Basic concepts of TQM – TQM Framework – Contributions of Deming, Juran and Crosby – Barriers to TQM – Quality statements – Customer focus – Customer orientation, Customer satisfaction, Customer complaints, Customer retention – Costs of quality.

UNIT II TQM PRINCIPLES

Leadership – Strategic quality planning, Quality Councils – Employee involvement – Motivation, Empowerment, Team and Teamwork, Quality circles Recognition and Reward, Performance appraisal – Continuous process improvement – PDCA cycle, 5S, Kaizen – Supplier partnership – Partnering, Supplier selection, Supplier Rating.

UNIT III TQM TOOLS AND TECHNIQUES I

The seven traditional tools of quality – New management tools – Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – FMEA – Stages, Types.

UNIT IV TQM TOOLS AND TECHNIQUES II

Control Charts – Process Capability – Concepts of Six Sigma – Quality Function Development (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Performance measures.

UNIT V QUALITY SYSTEMS

Need for ISO 9000 – ISO 9001-2008 Quality System – Elements, Documentation, Quality Auditing – QS 9000 – ISO 14000 – Concepts, Requirements and Benefits – TQM Implementation in manufacturing and service sectors..

COURSE OBJECTIVES:**To make the students**

- To realize the potential of tourism industry in India;
- To understand the various elements of Tourism Management;
- To familiarize with the Tourism policies in the national and international context.
- To apply the knowledge of tourism principles, policies and practices lifelong.
- To analyse the present trends in Domestic and Global tourism
- To understand the Code of conduct for safe and Sustainable Tourism for India.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the potential of tourism industry in India;
2. Understand the various elements of Tourism Management;
3. Familiarize with the Tourism policies in the national and international context.
4. Apply the knowledge of tourism principles, policies and practices lifelong.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Understand Overview of Five Year Plans

UNIT- I Tourism; an overview:

Elements, Nature and Characteristics - Typology of Tourism – Classification of Tourists - Tourism network - Interdisciplinary approaches to tourism - Historical Development of Tourism - Major motivations and deterrents to travel.

UNIT-II Tourism Industry;

Structure and Components: Attractions – Accommodation – Activities – Transportation - F&B –

Shopping - Entertainment - Infrastructure and Hospitality – Emerging areas of tourism - Rural, Eco, Medical, MICE, Literary, Indigenous, Wellness, Film, Golf, etc., – Ideals of Responsible Tourism - Alternate Tourism - Case Studies on International Tourism.

UNIT-III Tourism Impacts

Tourism Area Life Cycle (TALC) - Doxey's Index - Demonstration Effect – Push and Pull Theory - Tourism System - Mathieson and Wall Model & Leiper's Model - Stanley Plog's Model of Destination Preferences - Demand and Supply in tourism - Tourism regulations - Present trends in Domestic and Global tourism – MNC's in Tourism Industry.

UNIT-IV Tourism Organizations:

Role and Functions of World Tourism Organization (WTO), Pacific Asia Travel Association(PATA) , World Tourism & Travel Council (WTTC) - Ministry of Tourism, Govt. of India, ITDC, Department of Tourism, FHRAI, IHA, IATA, TAAI, IATO.

UNIT-V Overview of Five Year Plans

Overview of Five Year Plans with special reference to Eleventh Five Year Plan for Tourism Development and Promotion, National Action Plan, National Tourism Policy - Code of conduct for safe and Sustainable Tourism for India.

COURSE OBJECTIVES:**To make the students**

- To understand the vast Tourist resources of India;
- To conceptualize a tour itinerary based on variety of themes
- To identify and understand the features of emerging tourist destinations all over the world
- To apply the knowledge of tourism resources, importance of tourist destination lifelong.
- To understand the Emerging Manmade resources in tourism
- To know the Major tourism circuits of India

COURSE OUTCOMES:**Learners should be able to**

1. Understand the vast Tourist resources of India;
2. Conceptualize a tour itinerary based on variety of themes
3. Identify and understand the features of emerging tourist destinations all over the world
4. Apply the knowledge of tourism resources, importance of tourist destination lifelong.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Understand Emerging Tourism Destinations of India

UNIT - I Tourism products:

Definition, Types and unique features - Tourism resources of India - Natural, Socio cultural, Diversities in Landform & Landscape - Outstanding Geographical features - Climate, Flora & Fauna.

UNIT – II Natural resources:

Wildlife sanctuaries - National parks - Biosphere reserves - Mountain Tourist Resources and Hill stations – Islands – Beaches - Caves & Deserts of India.

UNIT – III Major tourism circuits of India:

Inter State and Intra-State Circuits - Religious Circuits - Heritage Circuits - Wildlife Circuits. Cases of select destinations - Kerala, Rajasthan & Goa.

UNIT – IV Manmade resources:

Adventure sports - Commercial attractions - Amusement Parks – Gaming - Shopping - Live Entertainments - Supplementary accommodation - House boats - Tree houses - Home stays - Tourism by rail - Palace on wheels - Deccan Odyssey & Golden chariot.

UNIT - V Emerging Tourism Destinations of India:

Ecotourism - Rural Tourism - Golf Tourism - Wine Tourism - Camping Tourism - Medical Tourism - MICE Tourism - Pilgrimage Tourism.

COURSE OBJECTIVES:**To make the students**

- To understand the dynamics of recreation products and their significance for tourism industry;
- To familiarize with the theoretical and practical issues of recreation management;
- To comprehend on the marketing trends in recreation.
- To apply the understanding of recreation products, recreation management and marketing recreation lifelong
- To understand the Demand and Supply for Recreation and Tourism
- To know Tourism and recreation planning and policy

COURSE OUTCOMES:**Learners should be able to**

1. Understand the dynamics of recreation products and their significance for tourism industry;
2. Comprehend with the theoretical and practical issues of recreation management;
3. Understand the marketing trends in recreation.
4. Apply the understanding of recreation products, recreation management and marketing recreation lifelong
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Gain knowledge in Environmental perspectives on coastal recreation and tourism

UNIT-I Recreation:

An overview - Range of Recreation Businesses: Recreation Vehicles, parks, adventure travel, winter sports, historic sites, camping, resorts, motor coach operators, enthusiast groups, recreation product

manufacturers - Development of the geography of tourism and recreation - Recreation Theories - Recreation and leisure services.

UNIT-II Recreational Resources

the Demand and Supply for Recreation and Tourism - Recreational demand - Recreational and Tourist Motivation - Barriers to Recreation - Gender and Social Constraints.

UNIT-III Recreation Management:

Impact of recreation on tourism - Recreation Resource Management - Tourism and recreation planning and policy - Urban and rural recreation - Relationships between leisure, recreation and tourism.

UNIT-IV Marketing of Recreation:

Marketing Recreation services and facilities- Customers of recreational products - Marketing plan- Marketing Mix for recreation-Case studies.

UNIT- V Trends in the recreation industry

Tourism recreation and climate change - Tourists and recreational demand for wilderness, National Parks and natural areas - Supply of the wilderness and outdoor recreation experience - Environmental perspectives on coastal recreation and tourism.

SUGGESTED READINGS:

5. William C. Gartner & David W. Lime (2000), Trends in Outdoor, Recreation, Leisure and Tourism, 1st edition, CABI.

COURSE OBJECTIVES:

To make the students

- To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
- To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
- To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
- To apply the theoretical and practical learning of doing research into lifelong practice.
- To Communicate in oral and written form and prepare report
- To enhance students knowledge in international culture and negotiation, where employability is made easy.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report

6. Understand the concept of organizational study

The students should select a problem in Accounting, Finance, Marketing or any other areas related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - History and growth of organisation
 - Organisation chart
 - Products and services offered
 - Competitors analysis
 - SWOT/PEST analysis
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives
- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

During second semester vacation each student shall undertake an Internship for 30 Days. The summer internship may be a general study of all functional areas of a company or may be a functional focus on a specialized functional area of management in a company. The report should be certified by the concerned organization where the student has undertaken the internship. He /She shall also submit a detailed report for Viva-voce Examination.

COURSE OBJECTIVES:

To make the students

- To understand Indian ethos and values
- To appreciate the concepts of business ethics in leadership
- To analyze and resolve ethical dilemma
- To develop knowledge and understanding about the theoretical perspectives and frameworks of corporate governance, ethical, environmental and social dimensions.
- To focus on various natural and manmade hazards and its preparedness measures to come out of such calamities.
- To make students understand social responsibility of business and its impact.

COURSE OUTCOMES:

Learners should be able to

1. Understand Indian ethos and values
2. Appreciate the concepts of business ethics in leadership
3. Analyze and resolve ethical dilemma
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
5. Maintain Managing Ethical Dilemma
6. Understand ethical issues related to business and good governance necessary for long term survival

of business.

UNIT I Elements of Indian ethos

union rather than dominion status of human beings–renunciation of self–laws of karma: Law of creation, law of humility, law of growth, law of responsibility, law of connection – Brain stalling, the Indian ethos for management–corporate Karma leadership (connecting company and cause, integrating, philanthropy into work environment)

UNIT II Management ideas form Vedas

Management ideas form Vedas, Mahabharata, Bible, Quran, Artha Shastra, Thirukkural, Kautilya's Arthashastra. Indian Heritage in Business, Management. Production and consumption–Ethics Vs Ethos, Indian Vs Western Management, Work Ethos and values for Indian managers–Relevance of value based management in global change–Impact of values on take holders, Trans-cultural Human values, Secular Vs spiritual values, value system in work culture.

UNIT III Stress management

Stress management meditation for mental health, yoga, contemporary approaches to leadership—Joint Hindu Family Business– Leadership Qualities of Karta– Indian systems of learning–Gurukul system of learning– Advantages–disadvantages of Karma, importance of Karma to managers– Nishkama Karma, Laws of Karma, Law of creation–Law of Humility–Law of Growth–Law of Responsibility–Law of Connection–Corporate Karma

UNIT IV Understanding the need for ethics

Understanding the need for ethics, ethical values, myths and ambiguity, ethical codes, ethical principles in business; Theories of Ethics, Absolutism Vs Relativism, Technological approach, the Deontological approach, Kohlberg's six stages of moral development (CMD)

UNIT V Managing Ethical Dilemma;

Managing Ethical Dilemma; Characteristics, ethical decision making, ethical reasoning, the dilemma resolution process; ethical dilemmas in different business areas of finance, marketing, HRM, international business. Ethical culture in Organization, Developing codes of ethics and conduct, ethical and value based leadership. Role of scriptures in understanding ethics, Indian Wisdom & Indian approaches towards business ethics.

COURSE OBJECTIVES:**To make the students**

- To Understand the Concept of banking and insurance its history, products and regulatory body.
- To communicate orally and in written form the Concept of banking and insurance its history, products and regulatory body.
- To apply the Concept of banking and insurance, its products in lifelong practice.
- To make the students understand the various services offered and various risks faced by banks To make them aware of various banking innovations after nationalization
- To give them an overview about insurance market
- To gain a comprehensive knowledge on the procedural formalities in dealing with different types of customers.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of banking and insurance its history, products and regulatory body.
2. Communicate orally and in written form the Concept of banking and insurance its history, products and regulatory body.
3. Apply the Concept of banking and insurance, its products in lifelong practice.
4. Demonstrate techniques of leasing provides new avenues in business
5. Gain familiarity in hire purchase
6. Gain knowledge in Tax implication frame work for Financial Evaluation and Credit Rating

UNIT I Banking - Introduction and Regulatory Framework

Introduction to Banking: History of Banking Business and banker, Banking system and its impact in the economy. **Regulatory Framework:** RBI - Acts and Regulations - Role and functions of RBI - Monetary policy and tools - Policy rates, CRR and SLR.

UNIT II Banking – Growth and Development:

Commercial banks - structure of the Indian banking system - PSU and Private banks - Foreign banks. RRBs and Cooperative bank - Developmental financial institutions. Current development – retail banking - corporate banking - international banking. NBFCs- Electronic banking: Internet banking –

credit and debit cards-ECS, NEFT, RTGS – risks in e-banking

UNIT III Products and Services In Banks And Risk Management In Banks:

Savings and Deposit products, Loans and advances - priority sector lending - export credit. Risk management in banks – an overview

UNIT IV Introduction To Insurance, Life And Health Insurance :

Introduction to Insurance : History - purpose and importance - functions – benefits - classification of Insurance Policies-Insurance contracts – assurance - legal and regulatory framework - Regulator – IRDA. **Life insurance and Health Insurance:** Need for life and health insurance, Classification of policies - Advantages - comparison of different policies - Role of hospitals and TPAs-Govt. sponsored schemes.

UNIT V MOTOR VEHICLES INSURANCE, MARINE INSURANCE AND OTHER TYPES OF INSURANCE

Motor Vehicles Insurance and Marine Insurance: Importance of Vehicle and Marine Insurance– Legal terms - Classification of policies - claims and settlement. **Other Types of Insurance:** Fire insurance, Flood, burglary, cattle, crop, engineering and liability policies - Reinsurance

MERGERS, ACQUISITIONS AND CORPORATE RESTRUCTURING**Instruction Hours / week: L: 4T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the Concept mergers, Demergers, LBO, MBO, JV its valuation and accounting.
- To compute, analyse and evaluate the corporate restructuring decisions and its impact on company..
- To communicate orally and in written form the understanding of mergers, Demergers, LBO, MBO, JV its valuation and accounting.
- To understand international M & A activity and role of M & A in international trade growth
- To analyse the impact of government policies and political and economic stability on international M&A decisions
- To understand cultural profiling and assessment of cultural compatibility

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept mergers, Demergers, LBO, MBO, JV its valuation and accounting.
2. Compute, analyse and evaluate the corporate restructuring decisions and its impact on company..
3. Communicate orally and in written form the understanding of mergers, Demergers, LBO, MBO, JV
4. Understand the concessions under Income Tax Act for mergers and unwillingness to pay and inability to pay
5. Gain knowledge in Valuation and accounting

6. Understand Legal and Regulatory Framework of M & A and Post Merger Integration

UNIT I Introduction to Merger and Acquisition:

Meaning of mergers and acquisitions (M & A), motives behind the M & A, advantages and disadvantages of M & A, types of mergers and steps for a successful merger. Strategic Evaluation of M & A Opportunities- selection approaches and criteria, modalities of fixing the acquisition price, key steps in the strategic planning of a merger, feasibility analysis in respect of cash and stock deals, describes fair value: institutional criteria and special features of acquisition of sick companies.

UNIT II M & A Activity and Demerger Activity :

Merger process right from planning the merger till implementation, five-stage model, methods of financial mergers and capital budgeting decision. Synergy and Value Creation in Mergers - synergy and its different types, role of industry life cycle, value creation in synergy, theoretical factors that would affect M & A activity. Corporate Restructuring- meaning of corporate restructuring, need for corporate restructuring, methods of corporate restructuring. International M & A –Introduction of international M & A activity, the opportunities and threats, role of M & A in international trade growth, the external advantages in differential products, impact of government policies and political and economic stability on international M&A decisions, recommendation for effective cross-border M & A. Demergers- Meaning of demerger, characteristics of demerger, structure of demerger, and tax implication of demergers

UNIT III LBO, MBO, JV and Take overs.

LBOs, MBOs, MLPs and ESOPs - meaning of LBO, MBO, MLP , ESOP, governance and mode of purchase in LBO, key motives behind an MBO, structure of MBO, types of MLP and ESOP, regulations that govern ESOPs. Joint Ventures - Meaning of joint ventures, characteristics of a joint venture, states the rationale for joint ventures, role of joint ventures in business strategy, defines joint venture and complex learning, tax aspects of joint ventures, international joint ventures, reasons for failure of joint ventures, and joint venture vis-à-vis anti-trust policy. Takeover Defences - types of takeovers, techniques of bidding

for a takeover, defences against takeover bids, regulations and amendments, and guidelines for takeovers

UNIT IV Valuation and accounting

Valuation - valuation approaches, basis of valuation, different methods of valuation, valuation of synergy, corporate control and LBO. Accounting for Amalgamation –Meaning of amalgamation, types of amalgamation, methods of accounting for amalgamation, meaning of consideration, treatment of goodwill, reserves and other profits

UNIT V Legal and Regulatory Framework of M & A and Post Merger Integration :

Provisions of the Companies Act, 1956 relating to M & A, buyback of shares, provisions of SEBI act, 1992 and 1997, provisions relevant to M & A activity in the Income Tax Act, and Foreign Exchange Management Act. Post-Merger Integration - integration planning, factors in post-merger integration model, post-merger integration model, strategic interdependence and autonomy, political and cultural aspects in integration, cultural profiling and assessment of cultural compatibility, HRM issues, and problems in integration and five rules of integration process

COURSE OBJECTIVES:**To make the students**

- To understand the concept of derivative, derivative types as a hedging tool and application of derivative in India.
- To apply the derivative as a hedging tool.
- To apply the understanding of derivative, derivative types as a hedging tool.
- To understand Basic Principles of Option Trading
- To know the Functions and Growth of Futures Markets and Futures Market Trading Mechanism
- To understand the Regulation of Financial Derivatives in India

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of derivative, derivative types as a hedging tool and application of derivative in India.
2. Apply the understanding of derivative, derivative types as a hedging tool lifelong.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, problem solving, planning and team work.
4. Explain about concepts of Bonds, Derivatives, Futures and Options management pertaining to investments
5. Gain knowledge in Clearing, settlement and risk management in commodity trading.
6. Gain knowledge in Emerging Structure of Derivatives Markets in India

UNIT – I Derivatives

Features of a Financial Derivative – Types of Financial Derivatives – Basic Financial derivatives –

History of Derivatives Markets – Uses of Derivatives – Critiques of Derivatives – Forward Market: Pricing and Trading Mechanism Forward Contract concept – Features of Forward Contract Classification of Forward Contracts – Forward Trading Mechanism – Forward Prices Vs Future Prices.

UNIT – II Options and Swaps

Concept of Options – Types of options – Option Valuation – Option Positions Naked and Covered Option – Underlying Assets in Exchange-traded Options – Determinants of Option Prices – Binomial Option Pricing Model – Black-Scholes Option Pricing – Basic Principles of Option Trading – SWAP: Concept, Evaluation and Features of Swap – Types of Financial Swaps – Interest Rate Swaps – Currency Swap – Debt Equity Swap.

UNIT – III Futures

Financial Futures Contracts – Types of Financial Futures Contract – Evolution of Futures Market in India – Traders in Futures Market in India – Functions and Growth of Futures Markets – Futures Market Trading Mechanism – Specification of the Future Contract – Clearing House – Operation of Margins – Settlement – Theories of Future prices – Future prices and Risk Aversion – Forward Contract Vs. Futures Contracts.

UNIT – IV Hedging and Stock Index Futures

Concepts – Perfect Hedging Model – Basic Long and Short Hedges – Cross Hedging – Basis Risk and Hedging – Basis Risk Vs Price Risk – Hedging Effectiveness – Devising a Hedging Strategy – Hedging Objectives – Management of Hedge – Concept of Stock Index – Stock Index Futures – Stock Index Futures as a Portfolio management Tool – Speculation and Stock Index Futures – Stock Index Futures Trading in Indian Stock Market.

UNIT – V Financial Derivatives Market in India

Need for Derivatives – Evolution of Derivatives in India – Major Recommendations of Dr. L.C. Gupta Committee – Equity Derivatives – Strengthening of Cash Market – Benefits of Derivatives in India – Categories of Derivatives Traded in India – Derivatives Trading at NSE/BSE Eligibility of Stocks – Emerging Structure of Derivatives Markets in India -Regulation of Financial Derivatives in India – Structure of the Market – Trading systems – Badla system in Indian Stock Market – Regulatory Instruments.

SUGGESTED READINGS:

1. John C. Hull , SankarshanBasu (2018), Options, Future & Other Derivatives, 10th edition, Pearson Education, New Delhi.
2. Don M. Chance, Robert Brooks , Sanjay Dhamija (2019), An Introduction to Derivatives and Risk Management, 10th edition, Cengage Learning.
3. Gupta S L (2017), Financial Derivatives : Theory, Concepts And Problems, 2nd Edition PHI Learning Pvt Limited,
4. Sundaram Das (2017), Derivatives Principles and Practice, 1st Edition, McGraw Hill Education,
5. T. V. Somanathan , V. AnanthaNageswaran , Harsh Gupta (2017), Derivatives, 2nd Edition, Cambridge University Press.
6. N R Parasuraman (2014), Fundamentals of Financial Derivatives, 3rd Edition , Wiley Publishing,

COURSE OBJECTIVES:**To make the students**

- To understand the concept of econometrics and econometric modeling and apply it lifelong.
- To comprehend on the tools and techniques and apply the same for modeling the financial data.
- To know the Assumptions and interpretation of multiple regression equation
- To understand the Detection techniques and remedial measures
- To analyse Regression through the origin, Log-Linear models, Semilog models and Reciprocal models
- To know the Model selection criteria, Types of specification errors and their consequences

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of econometrics and econometric modeling and apply it lifelong.
2. Comprehend on the tools and techniques and apply the same for modeling the financial data.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, problem solving, planning and team work.
4. Gain knowledge in Functional forms of regression models
5. Understand Detection techniques and remedial measures in Multicollinearity
6. Understand Model selection criteria

UNIT 1: Econometrics - Introduction

Nature and Scope of econometrics, Methodology of econometrics Classical Linear Regression Model (CLRM): Two Variable Regression Model: Concept of Population Regression Function & Sample Regression Function, Stochastic & non stochastic model, Method of OLS, Assumptions of CLRM, Properties of OLS estimators, Gauss-Markov Theorem, Goodness of fit, Hypothesis Testing: Interval estimation and test of significance approach.

UNIT II: Multiple Regression Analysis:

Assumptions and interpretation of multiple regression equation, R^2 and R^2 , Hypothesis testing: for individual and overall significance, for equality of two regression coefficients, and for linear equality restrictions.

UNIT III: Functional forms of regression models:

Regression through the origin, Log-Linear models, Semilog models, Reciprocal models. Dummy Variable Regression models: Nature of dummy variable, ANOVA and ANCOVA models, Interaction effect of dummy variables, Dummy variable v/s Chow test. Relaxing CLRM assumptions:

UNIT IV: Multicollinearity:

Nature, Consequences, Detection techniques and remedial measures. Heteroscedasticity: Nature, Consequences, Detection techniques and remedial measures. Autocorrelation: Nature, Consequences, Detection techniques and remedial measures.

UNIT V: Model Specification:

Model selection criteria, Types of specification errors and their consequences, Methods to detect the specification error, Nested v/s Non-Nested model, Tests of Non-Nested hypotheses.

SUGGESTED READINGS

3. Christopher Dougherty (2016), Introduction to Econometrics, 5th Edition, Oxford University Press.
4. Anil K. Bera , Sergey Ivliev , Fabrizio Lillo (2016), Financial Econometrics and Empirical Market Microstructure, 1st Edition , Springer.
5. Chris Brooks (2014), Introductory Econometrics for Finance, , 3rd EditionCambridge University Press

COURSE OBJECTIVES:**To make the students**

- To understand the concept of new product development process and apply it lifelong.
- To comprehend on the idea creation, development and testing techniques.
- To equip the students with the various dimensions of product management such as Brand Positioning and its Preference.
- To develop familiarity and competence with the strategies
- To understand the tactics involved in building, leveraging and defending strong brands in different sectors.
- To equip the students with the various dimensions of product management such as Brand Positioning and its Preference.

COURSE OUTCOMES:**Learners should be able to**

1. To understand the concept of new product development process and apply it lifelong.
2. To comprehend on the idea creation, development and testing techniques.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Assess alternative business models
5. Analyze the market, the competition and the buying behavior of consumers
6. Understand Pricing Strategies and Testing of New Products

UNIT 1: Basics of New Product Strategy

What is New Product Development and Why is it so important? The New Product Development Process Principles of Success. Strategic Planning and Opportunity Identification for new products Types of opportunities and types of new products. Develop a strategy for a new product- New Product Strategy-decisions- consumer behavior adoption and diffusion of innovations. Cases : Innovation at Karpagam Academy of Higher Education (Deemed to be University), Coimbatore – 641 021

3M, P&G – New Model for Innovation

UNIT II: Idea Generation

Generation of new product ideas and identifying new market opportunities, New Product Planning Process-stage gate system- Business models, disruptive technologies, product architecture and product platforms. Start with a market opportunity and conduct an ideation session to identify new product ideas (a variation on this option is to start with any product ideas that you may have and evaluate them in the context of a market opportunity). Select one idea. Analyze the market, the competition and the buying behavior of consumers. If appropriate, assess alternative business models. Specify the target market, the value proposition and the positioning for the product.

UNIT III: concept development, Evaluation and Test

Concept development, Product and positioning, Concept evaluation techniques, Testing Physical offers. Product Design (Case: Apple – Design Thinking & Innovation) Testing and forecasting.

UNIT IV: Brand Development

Brand decisions and Brand identity development, Designing and branding a product. Selecting a brand name. (Case :Dove: Evolution of a Brand)

UNIT V: Pricing Strategies and Testing of New Products

Pre-test Marketing - Preparing a Launch Plan (Case: Red Bull/Judo in Action), Market Testing Pricing, Packaging, Integrated Marketing : Customer and Channel Marketing, Innovation Marketing (Case: Virgin Mobile)

SUGGESTED READINGS

1. C. Merle Crawford L.C. Anthony Benedetto (2011), “New Products Management”, 9th Edition, McGraw Hill.
2. Karl Ulrich and Steven Eppinger(2017), Product Design and Development, 5th edition, McGraw Hill.
3. Michael Baker and Susan Hart (2007), Product Strategy and Management, Second Edition, Financial Times/ Prentice Hall.
4. Robert G.Cooper (2017), WINNING AT NEW PRODUCTS, Creating Value through Innovation, Basic Books
5. Ramanuj Majumdar, (2008), “Product Management in India”, Third Edition, Prentice Hall Publication

COURSE OBJECTIVES:**To make the students**

- To understand the consumer behaviour concepts, dimensions used in consumer behaviour research.
- To recognize the Internal Influencing factors that affect the Consumer Behaviour
- To identify the external Influencing factors that affect the Consumer Behaviour
- To conceptualize on the consumer decision making process.
- To know the application consumer behaviour concepts to access the changing behavior of the customers.
- To provide an insight into the marketing research area emphasizing the consumer's needs and solutions to it in a scientific approach.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the importance of Culture, Subculture, Social Class, Reference Groups and Family Influences in Consumer Behaviour.
2. Explore, analyse and compare the core theories of consumer behaviour and its application in both consumer and organizational markets
3. Appraise models of Consumer Behaviour and determine their relevance to particular marketing situations
4. Critique the theoretical perspectives associated with consumer decision making, including recognising cognitive biases and heuristics
5. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to investment decisions.
6. Gain knowledge in Problem Recognition and Information Search

UNIT I Introduction to Consumer Behaviour and Consumer Research

Introduction to Consumer Behaviour, Dimensions of Consumer Behaviour, Consumer Research, Consumer Behaviour and Marketing Strategy

UNIT II Internal Influences on Consumer Behaviour: Motivation and Consumer Learning, Memory and Involvement:

Motivation and Involvement :Consumer Motivation: Introduction, Needs and Goals, motivational Conflict, Defense Mechanisms, Motive Arousal, Motivational Theories, Maslow's hierarchy of needs, Motivation Research

UNIT III Internal Influences on Consumer Behaviour : Consumer Personality, Consumer Perception, Consumer Attitudes, Consumer Behaviour and Marketing Communications

Personality, Self-Image, and Life Style: Consumer Personality: Introduction, Self-concept, personality Theories, Brand Personality, emotions. Consumer Perception :Introduction, Sensation (Exposure to Stimuli), Perceptual Selection, Perceptual Organisation, Factors that Distort Individual Perception, Price Perceptions, Perceived Product and Service Quality, Consumer Risk Perceptions. Consumer Attitude Formation and Change :Introduction, Functions of Attitude, Attitude Models, Factors that Inhibit Relationship between Beliefs, Feelings and Behaviour, Learning Attitudes, Changing Attitudes, Attitude Change Strategies. Communication and Consumer Behaviour :Consumer Behaviour and Marketing Communications: Introduction, Marketing Communication Flow, Communications Process, Interpersonal Communication, Persuasive Communications, source, message, message appeals, communication feedback

UNIT IV External Influences on Consumer Behaviour

The Influences of Culture on Consumer Behaviour :Cultural Influences on Consumer Behaviour: Introduction, Characteristics of Culture, Values, Sub-cultures, Cross-cultural Influences, Cultural Differences in Non-verbal Communications. Subcultures and Consumer Behaviour : Social Class and Group Influences on Consumer Behaviour:Introduction,natureofSocialClass,SocialClassCategories, Money and Other Status Symbols, Source of Group Influences, Types of Reference Groups, Nature of Reference Groups, reference Group Influences, Applications of Reference Group Influences, Conformity to Group Norms and Behaviour, Family Life Cycle Stages, nature of Family Purchases and Decision- making, Husband-wife Influences, Parent-child Influences, Consumer Socialization of Children, word-of-Mouth Communications within Groups, opinion Leadership. Diffusion of

Innovation: Introduction, Types of Innovation, Diffusion Process, Factors Affecting the Diffusion of Innovation, The Adoption Process, Time Factor in Diffusion Process, Culture, Communication and Diffusion

UNIT V Consumer Decision Making

Situational Influence on Consumer's Decision and the Decision Models: Introduction, Nature of Situational Influence, Situational Variables, Types of Consumer Decisions, Nicosia Model of Consumer Decision-making (Conflict Model), Howard-Sheth Model (also called Machine Model), Engel, Blackwell, Miniard Model (also called Open System)

Consumer Decision making Process– Problem Recognition, Information Search and Evaluation of Alternatives: Introduction, Problem Recognition, Information Search, Evaluation of Alternatives, Outlet Selection, Purchase and Post Purchase Behaviour, Introduction, Outlet Selection and Purchase, Post Purchase Behaviour. Organizational Buying Behaviour :Introduction, Organizational Buyer Characteristics, Purchase and Demand Patterns, Factors Influencing Organizational Buyer Behaviour, organizational Buyer Decision Process, Organizational Buying Roles

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To understand the basic Principles of branding and apply lifelong.
- To craft and evaluate brand strategies
- To evaluate brand extension and its contribution to parent brand
- To develop an understanding of brand equity and a range of performance related outcomes.
- To understand Brand image Building and Brand Loyalty programmes
- To know about Brand Adoption Practices and brand extension

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basic Principles of branding and apply lifelong.
2. Craft and evaluate brand strategies
3. Evaluate brand extension and its contribution to parent brand
4. Develop an understanding of brand equity and a range of performance related outcomes.
5. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to branding.
6. Measuring Brand Performance

UNIT I Introduction

Understanding of Brands – Definitions - Branding Concepts – Functions of Brand - Significance of Brands – Different Types of Brands – Co branding – Store brands.

UNIT II Brand Strategies

Strategic Brand Management process – Building a strong brand – Brand positioning – Establishing Brand values – Brand vision – Brand Elements – Branding for Global Markets – Competing with foreign brands.

UNIT III Brand Communications

Brand image Building – Brand Loyalty programmes – Brand Promotion Methods – Role of Brand ambassadors, celebrities – On line Brand Promotions.

UNIT IV Brand Extension

Brand Adoption Practices – Different type of brand extension – Factors influencing Decision for extension – Re-branding and re-launching.

UNIT V Brand Performance

Measuring Brand Performance – Brand Equity Management - Global Branding strategies - Brand Audit – Brand Equity Measurement – Brand Leverage -Role of Brand Managers– Branding challenges & opportunities.

COURSE OBJECTIVES:**To make the students**

- To understand the basic Principles of selling and distribution management.
- To design and forecast sales and sales budget.
- To formulate strategies to manage the sales force team.
- To understand the different distribution channels.
- To give a broad understanding on Sales Management and its implications.
- To identify the role of sales force management in the organization.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basic Principles of selling and distribution management.
2. Design and forecast sales and sales budget.
3. Formulate strategies to manage the sales force team.
4. Understand the different distribution channels.
5. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to selling and distribution management.
6. Gain knowledge in designing channel systems and channel management

UNIT I Introduction to Sales & Distribution Management:

Nature and scope of sales management, personal selling objectives, Types of sales management positions, Theories of personal selling, personal selling strategies, sales forecasting and budgeting decisions, emerging trends in selling, ethical leadership,

UNIT II Sales Territories & Quotas:

Designing Sales Territories, sales quotas and sales organisation structures, Forecasting Sales and Developing Budgets Sales Territories Ethics in Sales

UNIT III The Personal Selling Process :

Introduction to Personal Selling, Selling process, Dealing with Buying Objections; The Closing

Process; Follow Up Service & Sales Relationships; Branding (Personal & Products)/Explanation of Branding Brochure Branding Yourself for Personal Success, relationship selling,

UNIT IV Sales Force Management:

Recruitment and selection of sales force, Training, motivating and compensating the salesforce,

The Field of Sales Force Management, Sales Force Organization, Profiling and Recruiting Sales People

Selecting and Hiring Applicants Developing, Delivering, and Reinforcing a Sales Training Program

Sales Quotas and Expenses Leadership of the Sales Force Leadership of the Sales Force, Team Building

Motivating a Sales Force Sales Force Compensation , controlling the salesforce

UNIT V Distribution Management:

Introduction, need and scope of distribution management, marketing channels strategy, levels of channels, institutions for channels- retailing wholesaling, designing channel systems, channel management.

SUGGESTED READINGS:

1. Krishna K. Havaladar, Vasant M. Cavale(2017), Sales and Distribution Management, 3rd edition, McGraw Hill.
2. Richard R. Still, Edward W. Cundiff , Norman A. P. Govoni, Sandeep Puri, (2017), Sales and Distribution Management, 6th edition, Pearson Education,

5. Ramendra Singh(2016), Sales and Distribution Management, Vikas Publishing.
6. Nag(2017), Sales and Distribution Management, 1st edition, McGraw Hill.

COURSE OBJECTIVES:**To make the students**

- To understand and Critically examine the philosophies, values, assumptions associated with organizational paradigms from a change management perspective and to be able to apply organizational development as a meta theory
- To explore the practice of change management and its limits with strategic management and to understand the management of change process and examine individual group and organizational reactions to change
- To probe the development role of HR practitioner as facilitators and managers of change and to develop key competencies suitable for application in OD interventions.
- To make the students be aware of the need and ways of changes in organization as a whole.
- To create a critical appreciation and knowledge of understanding the determinants of organizational development.
- To provide an in-depth under-standing of the role of organizational interventions.

COURSE OUTCOMES:**Learners should be able to**

1. Understand and analyze different approaches to managing organizational change and understand and utilize the competencies required for effective change management at organization, group and individual levels.
2. Devise effective intervention strategies and function as an internal HR consultant to an organization in transition,
3. Critically evaluate, in an organizational development framework, the theoretical and practical links between development models
4. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to organization change and development concepts.

5. Understand creating support systems , managing transition and process oriented strategies
6. Design OD interventions

UNIT I Introduction to organizational Development

Definition, growth and relevance, history and evolution, Theories of planned change, general model of planned change, different types of planned change and critique of planned change. OD practitioner role, competencies and professional ethics.

UNIT II OD Process and Designing OD Interventions

OD process: Initiating OD relationship, contracting and diagnosing the problem, Diagnosing models, open systems, individual level group level and organizational level diagnosis; collection and analysis for diagnostic information, feeding back the diagnosed information

Designing OD interventions

Human process interventions:- coaching, training and development, process consultation, third part intervention, and team building. Organization confrontation meeting, intergroup relations intervention, and large group intervention, Techno structural interventions:- Structural design, downsizing, reengineering, employee involvement, work design, socio technical systems approach

UNIT III HR and Strategic interventions

HRM interventions:- performance management, goal setting, performance coaching, appraising and rewarding, Career planning, workforce diversity interventions, wellness and work-life balance, Strategic interventions: Competitive strategies, collaborative strategies, organizational transformation, culture change, self designing organizations, learning and knowledge management.

UNIT IV Organizational change

Nature of change, forces of change, reinventing Kurt Levin, organizational routines and mental models, change need analysis, content of change, types and styles of change, building capability for change, providing leadership to change, action research and dialogue, types of change, organizational vision, cultural change, strategic planning, creating support systems and managing transition, process oriented strategies and competitor oriented strategies and customer oriented strategies.

UNIT V: Appreciating change, Mobilizing support and executing change

External environment as drivers of change, business cycles, industry cycles, technology and strategic change, industry evolution and concentration, developing a change agenda, Cognition and organizational change, mental models, organizational learning, Senge's five disciplines, business models and value propositions, refining the change agenda

Mobilizing support and executing change

Four approaches to change, parallel organization, ownership and involvement in change, dealing with political aspects of change, the psychology of persuasion, communicating to influence, targeting influence efforts, framing change, making difficult choices, negotiating change. Executing change: challenges of execution, execution framework, developing cross functional linkages, aligning policies, and removing structural impediments, developing new routines for innovation and improvement, considering human element.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To understand the concept of performance management and theoretical framework applied to evaluate the performance of individual or group.
- To comprehend on the performance management process, documentation, types, and ethics pertaining to performance management.
- To understand, critically evaluate, select and apply the best performance appraisal system based on the scenario.
- To Demonstrate capabilities of teamwork, critical thinking, and communication skills related to Performance Management and Appraisal.
- To analyse the Performance Appraisal of Bureaucrats
- To understand the Concepts related to Performance and Reward

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of performance management and theoretical framework applied to evaluate the performance of individual or group.
2. Comprehend on the performance management process, documentation, types, and ethics pertaining to performance management.
3. Understand, critically evaluate, select and apply the best performance appraisal system based on the scenario.
4. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to Performance Management and Appraisal.
5. Gain knowledge acquisition process and performance evaluation used
6. Understand Manager's Responsibility in Performance Planning Mechanics and Documentation

UNIT I Introduction to Performance Management and Theoretical Framework of Performance

Management

Definition of Performance Evaluation, Evolution of Performance Management, Aims of Performance Management, Purpose of Performance Management, Employee Engagement and Performance Management, Principles of Performance Management, Overview of Performance Management as a System, Linkage of Performance Management to Other HR Dimensions of Performance Management Theoretical Framework of Performance Management: Goal Theory and its Application in Performance Management, Control Theory and its Application in Performance Management, Social Cognitive Theory and its Application in Performance Management, Organisational Justice Theory and its Application in Performance Management

UNIT II Process of Performance Management:

Performance Management Process, Performance Management Planning Process, Mid-cycle Review Process, End-cycle Review Process, Performance Management Cycle at a Glance

Performance Management Planning and Development: Introduction, Performance Management Planning, the Planning Process, Performance Agreement, Drawing up the Plan, Evaluating the Performance Planning Process

Mechanics of Performance Management Planning and Documentation: The Need for Structure and Documentation, Manager's Responsibility in Performance Planning Mechanics and Documentation, Employee's Responsibility in Performance Planning Mechanics and Documentation, Mechanics of Performance Management Planning and Creation of PM Document

UNIT III Performance Appraisal (PA):

Definitions and Dimensions of PA, Purpose of PA and Arguments against PA, Necessity of Performance Appraisal and its Usage by Organisations, Characteristics of Performance Appraisal, Performance Appraisal Process,

Performance Appraisal Methods: Performance Appraisal Methods, Traditional Methods, Modern Methods, and Performance Appraisal of Bureaucrats – A New Approach

360-Degree Appraisal: Introduction, the Impact of 360-Degree Feedback on Organisations, Concept of 360-Degree Feedback System, Purpose, Methodology, Ratings, Advantages and Disadvantages of the Method, The Process of 360-Degree Feedback, Operating 360-Degree Appraisal

Performance Appraisal Feedback: Feedback – Role, Types and Principles, Situations Requiring Feedback and Pitfalls, Components of a Feedback and Steps in giving a Constructive Feedback, Levels of Performance Feedback

UNIT IV Issues in Performance Management

Team Performance, Performance of Learning Organisations and Virtual Teams: Team Performance Management, Performance Management and Learning Organisations, Performance Management and Virtual Teams. Role of Line Managers, Performance Management and Reward: Role of Line Managers in Performance Management, Performance Management and Reward, Concepts related to Performance and Reward, Linking Performance to Pay – A Simple System Using Pay Band, Linking Performance to Total Reward, Challenges of Linking Performance and Reward

UNIT V Ethics in Performance Appraisal:

Ethics – An Overview, Ethics in Organisations, Ethics in Performance Management, Realities of Ethics in Performance Management, Ensuring Ethics in Performance Management

SUGGESTED READINGS

COURSE OBJECTIVES:**To make the students**

- To Understand the process of competency mapping and profiling.
- To comprehend the integration of competency profiling to other HR applications and apply the learning lifelong.
- To differentiate the various types of competencies i.e. team competency, role competency.
- To Design of competency and Competency Gap Analysis
- To Identify the role competencies and elemental competencies
- To know the importance of competency driven culture and Career Development Tools

COURSE OUTCOMES:**Learners should be able to**

1. Understand the process of competency mapping and profiling.
2. Comprehend the integration of competency profiling to other HR applications and apply the learning lifelong.
3. Differentiate the various types of competencies i.e. team competency, role competency.
4. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to competency mapping.
5. Gain knowledge in Integration of competency Based HR Systems
6. Understand Ethics in Performance Appraisal

UNIT I Introduction to Competency

Introduction: Concept and definition of Role and competency, Characteristics of competency, Core Competency, Competency versus competence, Performance versus competency; skills versus competency, behavior indicators, Types of competencies - generic/specific, threshold/performance, and differentiating and technical, managerial and human;

Competency Method in Human Resource : Features of Competency Methods, Historical Development, Definitions,, Competencies Applications - Competency Frameworks (competency management framework or competency model),Competency Maps, and Competency Profiles.

UNIT II Using Competency Profiles in HR

Competency Frameworks - development of personal competency framework, Lancaster Model of managerial competencies, competency modeling framework developing a competency model Understanding job positions, Data collection instruments for job descriptions, Stages in design and implementation of competency model, Validation of the competency model after data gathering

UNIT III Design of competency and Competency Gap Analysis

Team Competencies (project driven), Role competencies (Role wise); Competency identification Consolidation of checklist, Rank Order and finalization, Validation, and Benchmark; Competency assessment - 360 degrees , Competency Mapping - Strategy-Structure Congruence, Structure Role Congruence, Vertical & horizontal Role linkages, Positioning to bring in competitive advantage

UNIT IV Mapping Jobs via Model

Identification of Role competencies, elemental competencies, assessment center, what do the assessment centers assess? Design of assessment center, Use of psychometric testing in assessment center, 360 degree feedback, potential appraisal through assessment center, Creating Competency Dictionary.

UNIT V Competency mapping and Integration of competency Based HR Systems

Steps in development of competencies map : Studying job, processes, and environment, studying attributes of good performer; Strategy structure congruence, Structure Role congruence - Each role to be unique, Non-Repetitive, and Value adding; Vertical and horizontal role congruence, Ensure non repetitive tasks in two different roles, Ensure core competencies for each task, Link all the above and position to bring in competitive advantage. Using competency maps for Competency profiling - Job competency profiling, Role competency, profiling Functional competency profiling, Core competency profiling Competency based selection, competency based interviews, competency based performance management, competency driven careers, and competency linked remuneration, competency driven

MBA	2018 - 2019
18MBAPH402D	Semester - IV
TALENT MANAGEMENT	4H - 4C
Instruction Hours / week: L: 4 T: 0 P: 0	Marks: Internal: 40 External: 60 Total: 100
	End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

- To Understand the concept, process of talent management and its linkages with selection, career development, employee engagement and retention.
- To apply the understanding of Understand the concept, process of talent management and its linkages with selection, career development, employee engagement and retention lifelong.
- To analyse Talent acquisition management solutions and Preparation of recruitment plan
- To understand Comprehensive approach to Retaining employees and Managing Voluntary Turnover
- To know the concept of employer branding and formulating a recruitment strategy
- To understand the Best Practices of Talent Management in India

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept, process of talent management and its linkages with selection, career development, employee engagement and retention.
2. Apply the understanding of Understand the concept, process of talent management and its linkages with selection, career development, employee engagement and retention lifelong.
3. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to talent management.
4. Assess Comprehensive approach to Retaining employees
5. Understand Contemporary Talent Management Issues, Challenges and Best Practices
6. Gain knowledge in Designing Integrated Rewards, Sustainable Talent Management and Reward Model

UNIT I Introduction to Talent Management:

Introduction, Talent Management – Overview, Talent Management – History, the Scope of Talent Management, Role of Talent Management, in building sustainable competitive advantage to a firm, Key Processes of Talent Management, Talent vs knowledge people, Source of Talent Management, Consequences of Failure in Managing Talent, Tools for Managing Talent. Building Blocks for Talent Management: Introduction, Effective Talent Management System, Building Blocks of Effective Talent Management System

UNIT II Talent Acquisition:

Job analysis-Method of collecting information, developing questionnaires, interviews, developing job description & job specification. Developing HR planning process (using MS-Excel and quantitative tools), Recruitment Process, Strategic Trends in Talent Acquisition, Talent acquisition management solutions; Preparing recruitment plan, E-recruitment (using various job portals), searching & downloading applicant profile by using job portals, selecting recruitment source, preparing recruitment budget, employer branding, formulating a recruitment strategy (specifically for Managerial/Executive jobs), Selection process, Use of assessment centres, selection errors & minimising selection errors, Reliability & Validity tests, Choosing the types of interviews

UNIT III Elements of Talent Management

The element of Talent Management-The resourcing strategy- Attraction and retention policies and programs – Talent Audit – Role Development – Talent relationship management – Performance management – Total reward - Learning and development - Career management
Talent Management Strategy Building the talent pipeline; Employee engagement; Employee engagement strategies; Talent management to drive culture of excellence, Leadership development

UNIT IV Talent Engagement and Retention:

Comprehensive approach to Retaining employees, Managing Voluntary Turnover, dealing with Job Withdrawal, Strategic Compensation plan for Talent Engagement, Defining the Elements of Total Rewards, Integrated Rewards Philosophy, Designing Integrated Rewards, Sustainable Talent Management and Reward Model

UNIT V Contemporary Talent Management Issues, Challenges, Best Practices:

Introduction, Organisational Issues, Talent Management Challenges, Best Practices of Talent

SUGGESTED READINGS

COURSE OBJECTIVES:**To make the students**

- To Understand the auditing of information system
- To critically analyse and evaluate the need of Information system audit for the business continuity
- To understand the security, ethical and regulatory issues pertaining to use of information technology in auditing.
- To apply the understanding of the usage of latest developed information system in auditing as a lifelong practice.
- To understand Information system Assurance and its Practical Aspects
- To know the concept of Cyber forensic and cyber fraud investigation

COURSE OUTCOMES:**Learners should be able to**

1. Understand the auditing of information system
2. Critically analyse and evaluate the need of Information system audit for the business continuity
3. Understand the security, ethical and regulatory issues pertaining to use of information technology in auditing.
4. Apply the understanding of the usage of latest developed information system in auditing as a lifelong practice.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Understand information technology regulatory issues

UNIT I : CONCEPTS OF GOVERNANCE AND MANAGEMENT OF INFORMATION SYSTEMS

Introduction – Key concepts of governance – Information technology and governance –Benefits of governance – Corporate governance and It Governance – IT Governance and Governance of Enterprise IT (GEIT) – Corporate Governance, Enterprise Risk Management and Internal Controls – Role of It in enterprise – IT Strategy Planning –Risk Management – GOBIT 5 Business Framework – IT Compliance Review – Information system Assurance –**Information System Concepts** – Introduction – Overview and their Practical Aspects – Relative Importance of information systems from strategic and operational perspective - Information as a key business asset and its relation to business objectives and processes – Various types of business Applications – Overview of underlying It Technologies

UNIT II: PROTECTION OF INFORMATION SYSTEM

Introduction – Need for Protection of information system – information system security – Information security Policy –Information systems control – Classification of Information system controls – Managerial control and their categories – Application control and their categories –Information Technology general controls – Control over data integrity and security – financial control – Personal computer controls –Cyber frauds

UNIT III: BUSINESS CONTINUITY PLANNING AND DISASTER RECOVERY PLANNING

– Introduction – Need of business continuity Management (BCM) - BCM Policy – Business Continuity Planning – Developing a Business Continuity Planning – Components of BCM Process – BCM Process – BCM Information collection Process – BCM Strategy Process – BCM Development and implementation process – BCM Testing and maintenance Process – BCM Training Process - Types of Plan – Types of Back ups – Alternate Processing Facility Arrangements - Disaster Recovery Procedural Plan – Audit of the BCP / DRP

UNIT IV: ACQUISITION, DEVELOPMENT AND IMPLEMENTATION OF INFORMATION SYSTEM:

Introduction – Business Process Design – System Development – System Development Methodology – System Development Life Cycle – operation Manuals – Auditors Roles in SDLC – **Auditing of Information system** – Introduction – Controls and Audit – the IS Audit – Performing IS Audit –IS

Audit and Audit Evidence – Audit Evaluation techniques for physical and environmental controls – Managerial control and their audit trials – Application control and their audit trials – Audit of Application and security controls –

UNIT V INFORMATION TECHNOLOGY REGULATORY ISSUES: The IT Act and its objectives – Definitions – Digital signature and electronic signature – Electronic governance – Secure electronic records and secure electronic signature – Penalties, compensation and adjudication – offences – intermediaries not to liable in certain cases – Examiner of electronic evidence – Miscellaneous – Cyber forensic and cyber fraud investigation – Security standards **Emerging Technologies-** Introduction – Grid Computing – Cloud Computing – Mobile computing – Green Computing – Bring your own device (BYOD) –Social Media Web 2.0 and Web 3.0

COURSE OBJECTIVES:**To make the students**

- To understand the concepts of Knowledge Management
- To understand and apply the tools used for capturing tacit knowledge and learning from the captured knowledge lifelong.
- To acquainted with the recent trends and developments in technology which covers Key Challenges Facing the Evolution of Knowledge Management and knowledge management aspects.
- To understand Telecommunications and Networks in Knowledge Management
- To know the Future of Knowledge Management and Protecting Intellectual Property
- To understand the Information Mapping in Information Retrieval

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concepts of Knowledge Management
2. Understand and apply the tools used for capturing tacit knowledge and learning from the captured knowledge lifelong.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
4. Understand Business strategies related to Knowledge Management
5. Gain knowledge in Transformation of an enterprise through Knowledge Management
6. Do Knowledge Creation and Codification

UNIT I Introduction& Technologies to Manage Knowledge

An Introduction to Knowledge Management - The foundations of knowledge management- including cultural issues- The Evolution of Knowledge management: From Information Management to

Knowledge Management - Key Challenges Facing the Evolution of Knowledge Management - Ethics for Knowledge Management.

Technologies to Manage Knowledge: Artificial Intelligence and Understanding Knowledge: Cognitive Psychology , Data, Information and Knowledge , Kinds of Knowledge, Expert Knowledge, Thinking and Learning in Humans , Knowledge vs Intelligence, dumb search, Heuristic search in Knowledge-Based Systems, Knowledge Based Systems for KM,

UNIT II Creating the Culture Of Learning

Organization and Knowledge Management - Building the Learning Organization. Knowledge Markets: Cooperation among Distributed Technical Specialists – Tacit Knowledge and Quality Assurance.

Capturing the Tacit Knowledge: Expert Evaluation, Developing Relationship with Experts , Fuzzy Reasoning & Quality of Knowledge Capture , Interviewing as a Tacit Knowledge Capture Tool

UNIT III Knowledge Management Tools

Telecommunications and Networks in Knowledge Management - Internet Search Engines and Knowledge Management - Information Technology in Support of Knowledge Management - Knowledge Management and Vocabulary Control - Information Mapping in Information Retrieval - Information Coding in the Internet Environment - Repackaging Information.

On-Site Observation (Action Protocol) , Brainstorming, Electronic Brainstorming, Protocol Analysis (Think-Aloud Method) , Consensus Decision Making, Repertory Grid ,Nominal Group Technique (NGT) , Delphi Method ., Concept Mapping, Blackboarding .

UNIT IV Knowledge Creation and Codification:

Knowledge Creation & Knowledge Architecture: Knowledge Creation, Nonaka's Model of Knowledge Creation & Transformation, Knowledge Architecture , Acquiring the KM System.

Modes of Knowledge Conversion, Codifying Knowledge, Codification, Tools/Procedures Knowledge Maps, Decision Table , Decision Tree, Frames, Production Rules, Case-Based Reasoning , Knowledge-Based Agents , Knowledge Developer's Skill Set , Knowledge Requirements , Skills Requirements .

UNIT V Learning from Data

Learning from Data: The Concept of Learning , Data Visualization , Neural Network (Artificial) as Learning Model, Supervised/Unsupervised Learning ., Applications in Business , Relative Fit with KM , Association Rules , Classification Trees .

Discovering New Knowledge – Data Mining: Objectives of Data Mining, Classical statistics & statistical pattern recognition, Induction of symbolic rules, Induction trees, Artificial Neural Networks, Supervised Learning: Back Propagation, Unsupervised Learning: Kohonen Network, The Future of Knowledge Management, Protecting Intellectual Property (IP)

**DIGITAL AND
SOCIAL MEDIA MARKETING**

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the Concept of Digital marketing using social media.
- To learn tools and utilize the tools of digital marketing and social media.
- To understand the linkage of digital marketing, social media and analytics
- To know the Role of Digital Marketing in developing brands
- To analyse ORM and the need ORM
- To measuring the results of campaign and best practices of video ads

COURSE OUTCOMES:**Learners should be able to**

1. To Understand the Concept of Digital marketing using social media.
2. To learn tools and utilize the tools of digital marketing and social media.
3. To understand the linkage of digital marketing, social media and analytics
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
5. Gain knowledge in Website designing with WordPress
6. Understand Social media Marketing Tools

UNIT I Introduction of the digital marketing**Digital vs. Real Marketing - Digital Marketing Channel, Creating initial digital marketing plan -****Content management - SWOT analysis - Target group analysis****What is Digital Marketing? Benefits of Digital Marketing. Digital marketing platforms and strategies.****Comparing digital with traditional marketing. Issues arise when Digital Marketing goes wrong. Role**

of Digital Marketing in developing brands, drive sales, encourage product and service development and innovation, aid recruitment and training.

UNIT II Website

What is website? What is domain name? Types of domains. Register a domain name. Webhosting concepts. Types of websites – HTML, CSS and Java Script. Popular CMS.. Website designing with WordPress: What is WordPress? Benefits of using WP. Admin interface basics. Theme settings and customization. Content management in WP. Categories, tags and posts. Pages and subpages. Custom content types. Adding a menu to the website. Plugins and widgets. Using Plugins in site. Adding widgets to the website. Best plugins in WP.

UNIT III Social media Marketing Tools

Creating a Facebook page • Visual identity of a Facebook page • Types of publications
Facebook Ads • Creating Facebook Ads • Ads Visibility. Business opportunities and Instagram options
• Optimization of Instagram profiles • Integrating Instagram with a Web Site and other social networks
• Keeping up with posts

Business tools on LinkedIn • Creating campaigns on LinkedIn • Analyzing visitation on LinkedIn
Creating business accounts on YouTube • YouTube Advertising • YouTube Analytics- E-mail marketing • E-mail marketing plan • E-mail marketing campaign analysis • Keeping up with conversions-Digital Marketing Budgeting - resource planning - cost estimating - cost budgeting - cost control-Google AdWords- creating accounts • Google AdWords- types- Introduction to Search Engine Optimization: How the search engine works? SEO Optimization • Writing the SEO content

Mobile marketing: Growth in mobile industry. Benefits of mobile marketing and its goals. Creating a mobile website. App creation strategy. Video marketing: Importance of video marketing. Create a video campaign. Location targeting and bidding strategies. Measuring the results of campaign. Best practices of video ads.

UNIT IV Online Reputation Management:

What is ORM and why we need ORM? Examples of ORM. Areas to analyze in ORM. Generate a ORM

report. Things to do in ORM – Monitor search results, complaint sites, reviews, sites and blogs, and social media.

UNIT V Merging digital and social marketing and data analytics.

Analytics and its importance for business. Key performance metrics in analytics. Audience reports. Traffic reports. Behavior reports. Conversion tracking.

COURSE OBJECTIVES:**To make the students**

- To Understand the principles, methods and techniques of systems development
- To Comprehend on the problems relating to systems development.
- To understand and apply the various stages of a phased systems analysis method
- To apply the tools for designing and analyzing the software required.
- To provides practical knowledge on security aspects of system.
- To describe the concepts of systems analysis and information systems development

COURSE OUTCOMES:**Learners should be able to**

1. Understand the principles, methods and techniques of systems development
2. Comprehend on the problems relating to systems development.
3. Understand and apply the various stages of a phased systems analysis method
4. Apply the tools for designing and analyzing the software required.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work.
6. Understand System Implementation

UNIT I Introduction to System:

Introduction: Definition of a System, Types of Systems, Delineating Systems, Products, and Tools, Precedented versus Unprecedented Systems: Analytical Representation of a System: Systems that require engineering Data and Information -Types of information: operational, tactical, strategic and statutory Project Team Skills and Roles: Skills and Roles of a Project Team, Business Analyst, Systems Analyst, Infrastructure Analyst, Change Management Analyst, Project Manager

UNIT II The Architecture of Systems & SDLC

Introduction: Introducing the System Architecture Construct: Introduction of the System Elements: Understanding System Element Entity Relationships: Guiding Principles: The Systems Development Life Cycle: Feasibility: Analysis: Planning and Design: Implementation: Testing, Maintenance. Requirements determination, requirements specifications, Feasibility analysis, final specifications, hardware and software study, Role of systems analyst – attributes of a systems analyst – tools used in system analysis

UNIT III System Design:

System design, system implementation, system evaluation, system modification, Structured Design, Input design, and Output design, Form Design. Systems Development Methodologies: Rapid Application Development, Newer (current) methodologies, selecting the Appropriate Development Methodology. Data oriented systems design: Entity relationship model – E-R diagrams – relationships cardinality and participation – normalizing relations – various normal forms and their need – some examples of relational data base design. Object oriented systems modelling: What are objects? – Why objects? – Objects and their properties – classes – inheritance – polymorphism – how to identify objects in an application – how to model systems using objects – some cases of object oriented system modeling

UNIT IV System Analysis

Introduction to System analysis, Problem Definition, Information requirements, Information gathering tools, Tools of structured Analysis – Data Flow Diagrams, Data Dictionary, Decision Tree, Decision tables and structured English., File Organization, Sequential Indexed Sequential, Chaining and Inverted list organization. System Testing: Test Plan AND test data, types of system test.

UNIT V System Implementation:

Implementation Plan, activity network for conversion, combating resistance to change. Hardware/Software Selection: Procedure for selection, Major phases in selection, Make v/s buy decision, Criteria for software selection.

SUGGESTED READINGS

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of innovation and creativity and apply the learning lifelong.
- To comprehend and apply the techniques for generating ideas creatively and applying the same.
- To focus on different matters of importance related to Technology and Innovation Management.
- To understanding the Divergent Thinking and Generation of Creative Ideas
- To develop tools that prepare the mind for creative thought
- To design Creative Society and Organization

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of innovation and creativity and apply the learning lifelong.
2. Comprehend and apply the techniques for generating ideas creatively and applying the same.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work
4. Gain knowledge on business concepts and innovation of new products
5. Understand Brainstorming, Lateral thinking and Synectics
6. Gain knowledge Designing Creative Society and Organization-Creativity Training

UNIT I Concept of Innovation

Need for innovation – Ways to innovate – Innovation opportunities Corporate Innovation Process-
Integrated Strategic Planning for Innovation

UNIT II What is Creativity

Individual and Group Creativity – Convergent Thinking – Divergent Thinking and Generation of
Creative Ideas - Thinking Hats Methods

UNITIII Intuition

Logical thinking-Heuristics and models-Tools that prepare the mind for creative thought – Levels of model of innovation – Model of innovation - Industrial design.

UNITIV Idea generating techniques

Brainstorming – Lateral thinking - Synectics-Nominal groups. Quality Circles-Suggestion systems- Attribute listing- Redefinition technique-Randomstimulus-Thinking Hats-Idea sensitive area-Ishikawa diagram-Principles behind techniques.

UNITV Developing and applying creativity

Designing Creative Society and Organization-Creativity Training-Applications: Process redesign-Reengineering-Creative bench marking.

COURSE OBJECTIVES:**To make the students**

- To Understand the concept family business, managing family business and formulation of succession planning.
- To comprehend on the importance of family culture and its uniqueness in fostering generation entrepreneurship.
- To understand effective governance of the shareholder and firm relationship
- To understand the pitfalls to avoid in estate and ownership transfer planning
- To know the lifecycle stages influencing family business strategy
- To Measure the performance of family firms

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept family business, managing family business and formulation of succession planning.
2. Comprehend on the importance of family culture and its uniqueness in fostering generation entrepreneurship.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work
4. Gain knowledge in Measuring performance of family firms
5. Understand Strategic Planning and the family business
6. Gain knowledge in intergenerational growth in entrepreneurial families

UNIT I Theories on Family Business

Nature, Importance and Uniqueness of Family Business – Systems Theory Perspective – Agency Theory Perspective – Strategic Perspective: Competitive Advantage (Resource Based View) – The Stewardship Perspective.

UNIT II Family Culture

Family Culture – Zero sum dynamics and family culture – Family systems perspective – role Family Genograms – Family Emotional Intelligence – ECI-U Model – Family Business interaction factor – benefits of family meetings – unity and continuity – family employment policy – Conflict management.

UNIT III Ownership in Family Business

Enterprise ownership – shareholder priorities - effective governance of the shareholder– firm relationship – Role of Board - role of shareholder meetings, family meetings, and meetings of the family council – Ownership structure – Family business consultants and non-family managers – Board’s role in adaptation over the generations.

UNIT IV Succession Planning

Succession planning – profile of successful successors - rewards and challenges for latter-generation family members – desirable next-generation attributes – crafting the next generation career plan – Vision plan – sibling and cousin teams – Handling disagreements – CEO exit styles and transfer of power – role types of the CEO spouse and the transfer of power - Estate Planning – Trust – pitfalls to avoid in estate and ownership transfer planning - Measuring performance of family firms

UNIT V Strategic Planning and The Family Business

Strategic Planning and the family business – Zero-sum family dynamic – Sources of Value creation - the lifecycle stages influencing family business strategy - Culture – Changing the culture – Three states of evolution – OD approach to change – Business Rejuvenation matrix – Intrapreneurship: intergenerational growth in entrepreneurial families – continuing the spirit of enterprise: lessons from successful family businesses

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of entrepreneurial leadership, types and qualities of leaders steering entrepreneurship.
- To comprehend on the different leadership styles fostering the performance of team and managing the organization.
- To understand Influence, Power, Politics and Ethics for Leadership, Relationship Building, Motivating Others, Self-Determination Theory
- To know about Problem decomposition, information search techniques, techniques of assumption variation
- To analyse Leading Teams, Developing Teamwork, Motivation and Coaching Skills of the Entrepreneurial Leader Communicating
- To Understand Social, Environmental, Economic Responsibility and Sustainability

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of entrepreneurial leadership, types and qualities of leaders steering entrepreneurship.
2. Comprehend on the different leadership styles fostering the performance of team and managing the organization.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work
4. Gain knowledge in Self-Determination Theory and the Facilitation of Intrinsic Motivation, Social Development, and Well-Being
5. Understand Various forms of management creativity
6. Gain knowledge in Developing Leaders and Planning Succession, Leadership Issue for Future Entrepreneurs

UNIT I Entrepreneurial leader

Who is a leader? The critical link between leadership and entrepreneurial success. What is an entrepreneurial leader? Images of Entrepreneurial Leadership, Leadership Traits, Characteristics and Motives, Entrepreneurial Dreams and Aspirations, Leading Yourself, How to Play to Your Strengths, The Personal Leadership Strategy, The Board of Directors (BOD), How ethics define you. Three Principles of Entrepreneurial leadership,

UNIT II Traits and Types of Entrepreneurs

Self- and Social Awareness to Guide Action, Cognitive Ambidexterity, The Underlying Mental Model of the Entrepreneurial Leader, Creation Logic in Innovation: From Action Learning to Expertise Prediction Logic: Analytics for Entrepreneurial Thinking. Types of Entrepreneurs and their Challenges; Charismatic and Transformational Leaders; Leadership Styles, Situational Leadership and Social Responsibility, Strategic Leadership

UNIT III : Power, Politics and Creativity

Influence, Power, Politics and Ethics for Leadership, Relationship Building, Motivating Others, Self-Determination Theory and the Facilitation of Intrinsic Motivation, Social Development, and Well-Being, Leading Change, Negotiating Corporate Change, Hiring and Firing. Creativity: Definition and importance. Various forms of management creativity – Creative Intelligence: Model of creative intelligence, problem sensitivity, problem restructuring, flexibility, guessing, Elaboration, Originality and thinking patterns. Creativity techniques: Problem decomposition, information search techniques, techniques of assumption variation, unblocking techniques, mutual stimulation and instigation technique, fusion technique. Role of divergent and convergent thinking in decision-making process.

UNIT IV : Team Work

Leading Teams, Developing Teamwork, Motivation and Coaching Skills of the Entrepreneurial Leader Communicating, negotiating and Resolving Conflict. Organizational Culture - Organizational Culture and Leading Change,

UNIT V Leadership in a Diverse World

Developing Leaders and Planning Succession, Leadership Issue for Future Entrepreneurs, Leading

COURSE OBJECTIVES:**To make the students**

- To Understand the concept of rural entrepreneurship, factors influencing the rural entrepreneurship and the strategies to select and formulate a business plan for rural entrepreneurs.
- To understand and apply the ecosystem to support the entrepreneurship venture in rural area.
- To know about Natural and Human Resource Base Panchayati Raj System & Government Schemes
- To analyse Recent Trends in Rural Entrepreneurship
- To know Project Appraisal Government Policies for Micro and Small Enterprises Rural Business Environment
- To understand Growth and Replicability issues Entrepreneurial Opportunities

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of rural entrepreneurship, factors influencing the rural entrepreneurship and the strategies to select and formulate a business plan for rural entrepreneurs.
2. Understand and apply the ecosystem to support the entrepreneurship venture in rural area.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, critical thinking, analysing, planning and team work
4. Gain knowledge in Self-Determination Theory and the Facilitation of Intrinsic Motivation, Social Development, and Well-Being

5. Understand Various forms of management creativity
6. Gain knowledge in Developing Leaders and Planning Succession, Leadership Issue for Future Entrepreneurs

UNIT I Introduction of Rural Entrepreneurship

Understanding Entrepreneurship Evolution of Entrepreneurship in Rural India Types of Rural Entrepreneurship Entrepreneurial Competencies Challenges for Rural Entrepreneurs

UNIT II Institutional EcoSystems for Promotion of Rural Entrepreneurship

Rural Eco-System, Natural and Human Resource Base Panchayati Raj System & Government Schemes Rural Skill Sets and Enhancing Opportunities Institutional Support for Finances and Technical Back-stopping Private-Public Partnership and Corporate Social Responsibility Systems

UNIT III Micro and Small Rural Enterprise

Understanding Micro and Small Enterprises Project Identification and Selection Project Formulation, Project Appraisal Government Policies for Micro and Small Enterprises Rural Business Environment- Social, Economic, Political and Cultural Issues

UNIT IV Rural Enterprise Incubation

Scanning Rural Environment- Economic, Technical, Technological & Market Business Opportunity Identification and Project Selection Business Plan Preparation Forward and Backward Linkages Market Linkages Development Rural Marketing

UNIT V Recent Trends in Rural Entrepreneurship

Study of Rural Entrepreneurs- Growth and Replicability issues Entrepreneurial Opportunities-Potential and Limitations Active Interaction with key Stakeholders- Panchayats, NGOs, Schools etc Working Together and Finalize Interventions -Networking with all Rural Support Systems (Case studies in India)

**INDIAN MODELS OF ECONOMY,
BUSINESS AND MANAGEMENT**

4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To Understand the concept of Indian economy and Indian Models of economy
- To select the appropriate business model suitable for the economic condition.
- To Comprehend on the sustainability innovation, Patent, IPR and its impact in Entrepreneurship
- To Exhibit group leadership, oral and written communication, critical thinking, analysing, planning and team work.
- To analyse emerging global power, growth and development in recent years
- To understand the Features of the Indian Business models and reason for the failure of the western models

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of Indian economy and Indian Models of economy
2. Select the appropriate business model suitable for the economic condition.
3. Comprehend on the sustainability innovation, Patent, IPR and its impact in Entrepreneurship
4. Exhibit group leadership, oral and written communication, critical thinking, analysing, planning and team work.
5. Gain knowledge in Sustainability Innovation and Entrepreneurship
6. Understand Experimentation in Innovation Management, Idea Championship, Participation for Innovation and Co-creation for Innovation

UNIT I Indian economy over the years

Indian Economy - agriculture, trade, industry and other critical sector under the Ancient periods, Common Era, British Period, Independent India

UNIT II Western Economy & Indian Economic Models – Features and Challenges

Karpagam Academy of Higher Education (Deemed to be University), Coimbatore – 641 021

Western Economy over the years : Overview. Feudalism, Mercantilism, Capitalism, Colonial economies, Industrialisation, Communism, Globalisation, Market capitalism and Recent developments
Features of western models – Problems & Challenges. Economic models in independent India - Socialistic and market models. Functioning models of India : Features, Uniqueness, Strength and Weakness

UNIT III Business models

What is a Business Model ,Who is an Entrepreneur, Western Vs. Indian Models, India as an emerging global power, growth and development in recent years, issues and opportunities – Non corporate, Cluster and Corporate model.Features of the Indian Business models and reason for the failure of the western models. Recent Business models : Blue Ocean Strategy-I, Blue Ocean Strategy-II.

UNIT IV Sustainability Innovation and Entrepreneurship

Types of Sustainable Entrepreneurship, Conditions for Sustaining Innovation, SME strategic involvement in sustainable development, Exploration of business models for material efficiency services.

UNIT V : Management of Innovation

Experimentation in Innovation Management, Idea Championship, Participation for Innovation, Co-creation for Innovation , Proto typing to Incubation, relation of IPR, Management of Innovation, creation of IPR, Types of IPR, Patents in India, Copyrights and other important IP. Business Models and value proposition, Business Model Failure: Reasons and Remedies, Incubators : Business Vs Technology, Managing Investor for Innovation, Future markets and Innovation needs for India.

COURSE OBJECTIVES:**To make the students**

- To comprehend the basic understanding of the Institutional support system available to small business and their functioning.
- To apply the understanding of the institutional support available to small business in lifelong practice.
- To understand the Role of RBI, RBI Guidelines to commercial banks, lending by Commercial and Development Banks
- To know about Institutional Support Mechanism
- To understand the concept of Research Development and Training Facilities
- To gain knowledge in Assistance to Ancillary Industries, Incentives for MSMEs in Backward Areas.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the basic understanding of the Institutional support system available to small business and their functioning.
2. Apply the understanding of the institutional support available to small business in lifelong practice.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
4. Understand Institutional support schemes
5. Gain knowledge in Marketing Assistance, Research Development and Training Facilities and Export Assistance to MSMEs
6. Understand Role of RBI, RBI Guidelines to commercial banks, lending by Commercial and Development Banks

UNIT I Institutional Support Mechanism:

SIDO, SIDBI, NSIC, SISI, Commodity Boards, State Directorate of Industries, SIDC'S, SFC, District Industries Centre. MUDRA Bank.

UNIT II Institutional Support Mechanism: Testing Laboratories, Product and Process Development Centres, NISEBUD, National Service and Technology Entrepreneurship Development Board.

UNIT III Institutional Support Schemes: Role of RBI, RBI Guidelines to commercial banks, lending by Commercial and Development Banks, Equity Fund Scheme, Credit Guarantee Scheme,

UNIT IV Institutional Support Schemes:

Interest Subsidy, Seed/Margin Money, DRI, Refinance Scheme, Composite Loan Scheme, Single Window Scheme, National Equity Fund Scheme, Bills Rediscounting Scheme.

UNIT V Functional Assistance

Marketing Assistance, Research Development and Training Facilities, Export Assistance to MSMEs, Technology Upgradation, Assistance to Ancillary Industries, Incentives for MSMEs in Backward Areas.

9. Development Commissioner, “SSI in India (2010)- An Engine of Growth”, Development Commissioner, New Delhi,
10. Development Commissioner, “ SIDO’s Half Century”,(2004) Development Commissioner SSI, Government of India, 2004

COURSE OBJECTIVES:**To make the students**

- To understand the different policies applicable to small business and the implications on small businesses.
- To comprehend on policy pertaining to credit, technology, tax benefits and Special Economic Zone. (SEZs) for small business and apply the learning lifelong.
- To understand about National Service and Technology Entrepreneurship Development Board
- To know the Government's Purchase Preferences Policy for Small Industries Products
- To analyse the Policy of Technology Upgradation in small enterprises
- To understand the Tax concession to SSI in rural and backward areas

COURSE OUTCOMES:**Learners should be able to**

1. Understand the different policies applicable to small business and their implications on small businesses.
2. Comprehend on policy pertaining to credit, technology, tax benefits and Special Economic Zone. (SEZs) for small business and apply the learning lifelong.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
4. Apprehend different level of Institutional Support Schemes to run the business
5. Maintain ethical standards in individual and business life
6. Demonstrate knowledge on the ways of Development bank and regulators support for small business

UNIT I Policy Environment :

Policy Environment for Small Scale Sector, Pre and Post 1991 Industrial Policy, New Policy Measures, Reports of various Working Groups on SSIs: Kothari Committee 2,000, Ganguly Committee 2004.

UNIT II Policy Support Mechanism: Reservation of Items for Small Scale Industries, Rationale, Procedures, Criticism, De-reservation, Removal of Quantity Restrictions, Government's Purchase

Preferences Policy for Small Industries Products, Price Preference Policy for SSI products.

UNIT III Credit and Technology policy

Policy of Priority Credit, Equity Participation, Equity issues by small enterprises through OCTEI, Policy of Technology Upgradation in small enterprises, Technology Bureau for Small Enterprises.

UNIT IV Taxation Benefit to SSI:

Need for tax benefits, Tax Holiday, Rehabilitation Allowances, Expenditure on Scientific Research, Amortization of certain Preliminary Expenses, Tax concession to SSI in rural and backward areas, Expenditure on acquisition of Patents and Copyrights.

UNIT V Policy on Handling Sickness in Small Industries:

Causes and consequences of Sickness, Measures to prevent sickness in small units. Measures for Export Promotion: Export Processing Zones (EPZs), Special Economic Zones (SEZ), Measures for Export Promotion, Organizational support for Export Promotion

9. Development Commissioner, “SSI in India (2010)- An Engine of Growth”, Development Commissioner, New Delhi,
10. Development Commissioner, “ SIDO’s Half Century”,(2004) Development Commissioner SSI, Government of India, 2004

COURSE OBJECTIVES:**To make the students**

- To understand the changing scenario in the Liberalization, Privatisation & Globalization (LPG) era, environment and policies fostering small business, rural entrepreneurship, women entrepreneurship and international entrepreneurship.
- To apply the understanding of the changing scenario in the LPG era, environment and policies fostering small business, rural entrepreneurship, women entrepreneurship and international entrepreneurship as lifelong practice.
- To understand the Provisions pertaining to promotion and development of SMEs
- To know the concept of Women Entrepreneurship and its Challenges
- To understand Strategic Issues in International Entrepreneurship
- To analyse the Entrepreneurial entry into International Business

COURSE OUTCOMES:**Learners should be able to**

1. Understand the changing scenario in the Liberalization, Privatisation & Globalization (LPG) era, environment and policies fostering small business, rural entrepreneurship, women entrepreneurship and international entrepreneurship.
2. Apply the understanding of the changing scenario in the LPG era, environment and policies fostering small business, rural entrepreneurship, women entrepreneurship and international entrepreneurship as lifelong practice.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
4. Understand Micro, Small and Medium Enterprises Development Act (SMEDA)
5. Gain knowledge in Changing scenario of SMEs in the era of Liberalization, Privatisation & Globalization (LPG)

6. Demonstrate knowledge on the ways of Development bank and regulators support for small business

UNIT I Changing scenario

Changing scenario of SMEs in the era of Liberalization, Privatisation & Globalization (LPG), Competitiveness, Quality control and Branding, Need for professionalism in management of small business in India, social responsibilities of small business owners, Make in India, startup initiative by the government.

UNIT II SMEDA Act

Micro, Small and Medium Enterprises Development Act (SMEDA) 2006, Objective, Definition, Provisions pertaining to promotion and development of SMEs

UNIT III Rural Entrepreneurship

Rural Entrepreneurship: Concept, Need, Problems, Methods of Developing Rural Entrepreneurship

UNIT IV Women Entrepreneurship

Women Entrepreneurship: Concept, Challenges, Strategies, Institutional Support to Women Entrepreneurs, Self Help Groups (SHG)

UNIT V International Entrepreneurship

International Entrepreneurship: Concept and Nature, International versus Domestic Entrepreneurship—Political, Legal, Cultural and Technological Environment; Strategic Issues in International Entrepreneurship; Barriers to International Trade- Protectionism, Trade Blocs; GATT: Entrepreneurial entry into International Business- Exporting, Licensing, Turnkey Projects, Joint Ventures, Management Contracts.

SUGGESTED READINGS

1. Charantimath, Poornima M, (2018), Entrepreneurship Development Small Business Enterprise, Pearson Education.
2. Hisrich, Robert D., Michael P Peters, Entrepreneurship: Starting, Developing and Managing a New Enterprise, 4th edition, Mc Graw Hill.

6. Desai Vasant, (2009) “Small Scale Industries & Entrepreneurship”, Himalaya Publishing House, Delhi

COURSE OBJECTIVES:**To make the students**

- To have the conceptual understanding of the HR metrics and analytics
- To Understand the importance of HR metrics and analytics in measuring HR's impact and drive business results.
- To Identify the right HR metrics (what to measure, types of measurements etc.,) – aligning HR and business goals.
- To utilize metrics into analytics for effective management decisions and align to Strategic decision making.
- To describe the key elements of the HR scoreboard
- To Translate HR metrics results into actionable business decisions for upper management

COURSE OUTCOMES:**Learners should be able to**

1. Possess the conceptual understanding of the HR metrics and analytics
2. Understand the importance of HR metrics and analytics in measuring HR's impact and drive business results.
3. Identify the right HR metrics (what to measure, types of measurements etc.,) – aligning HR and business goals.
4. Utilize metrics into analytics for effective management decisions and align to Strategic decision making.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
6. Understand which metrics you will need and Implement

UNIT I HR analytics – Introduction

Why We Measure in HR? Understand the reasons for measurements - Explain the strategy-focused organization - Describe how you should measure for HR data

HR Analytics Overview - What HR Analytics? Importance of HR Analytics.

The Business Balanced Scorecard & KPIs - Understand the HR Value Chain - Explain the different scorecards - Describe the business balanced scorecard

UNIT II HR Metrics

Concepts, Objectives - Historical evolution of HR metrics.- Defining Metrics - Describe the components of metrics - Understand the different measures in metrics - Explain how and why metrics are used in an organization - - the HR measurement model- HCM:21 (human capital management for the twenty-first century)- HR efficiency measures, HR Effectiveness measures, HR value / impact measures

UNIT III HR Metrics and KPIs

The HR Scorecard and Related Metrics - Describe the HR Scoreboard - Understand the HR value chain measurements - Describe the key elements of the HR scoreboard

Define metrics from strategy to KPI - Explain the performance matrix in HR - Understand several key metrics for your business- Designing effective Metrics that matters - Deciding what metrics are important to your business. - HR metrics design principles. - Approaches for designing HR metrics: The Inside-Out Approach, The Outside-In Approach

Align HR metrics with business strategy, goals and objectives - Link HR to the strategy map -Creating levels of metrics measures:

UNIT IV Building HR functions metrics

Building HR functions metrics - Workforce Planning Metrics - Recruitment Metrics - Training & Development Metrics - Compensation & Benefits Metrics - Employee relations & Retention Metrics

Aligning Metrics to Support Organizational Decision Making - Describe how you can become a trusted business partner - Explain how you can select the right methodology - Understand how to use the root cause analysis

UNIT V Implementation

Implementation: Building Support - Describe the rules of building support - Explain how you can build support for your metrics - Understand that involvement and commitment go hand in hand

Implementing HR Metrics - Understand which metrics you will need - Explain how you can fight through the data swamp - Describe how data quality affects your metrics

Translating HR metrics results into actionable business decisions for upper management (Using Excel Application exercises, HR dashboards).

SUGGESTED READINGS:

5. Jac Fitz-Enz and John R. Mattox II (2014), Predictive Analytics for Human Resources, Wiley India.

COURSE OBJECTIVES:**To make the students**

- To have the conceptual understanding of the marketing metrics and analytics
- To Understand the importance of marketing metrics and analytics in measuring marketing's impact and drive business results.
- To Identify the right marketing metrics (what to measure, types of measurements etc.,) – aligning HR and business goals.
- To utilize metrics into analytics for effective management decisions and align to Strategic decision making.
- To Identify the size of the opportunity for growth and begin to identify the methods to achieve it the value of the different shopper groups
- To derive the market share in terms of Units, Revenue, concentration ratio and Herfindahl

COURSE OUTCOMES:**Learners should be able to**

1. Possess the conceptual understanding of the marketing metrics and analytics
2. Understand the importance of marketing metrics and analytics in measuring marketing's impact and drive business results.
3. Identify the right marketing metrics (what to measure, types of measurements etc.,) – aligning HR and business goals.
4. Utilize metrics into analytics for effective management decisions. And align to Strategic decision making.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
6. Understand Non financial measures, Brand Awareness, Test-drive, Churn, CSAT and Customer Satisfaction

UNIT I Introduction

Introduction - Analytics v/s Analysis – Business Analytics, Business domains within Analytics, Introduction to Marketing Analytics, Introduction to Models, introduction to Metrics
Market Insight - Market Data Source – treatment of outliers, Market sizing, PESTLE Market analysis, Porter Five Force Analysis

UNIT II Multichannel Segmentation and positioning

Identify differences in behavior of online, in-store & multi-channel shoppers Identify the size of the opportunity for growth and begin to identify the methods to achieve it The value of the different shopper groups- Key measures - Spend per visit, Spend per shopper, Units per visit, Units per shopper, Frequency of Purchase (Visits per shopper), Estimate the profitability of each segment in terms of Cost of Acquiring, Cost of Retention, Profitability and Lifetime value analysis

UNIT III Business strategy and Marketing Operations

Business Strategy - Strategic Scenarios, Strategic Decision Models, Strategic Metrics
Business Operations – Forecasting, Predictive Analytics, data Mining, Balanced Scorecard, Critical Success Factors,
Market share Analysis - Derive the market share in terms of Units, Revenue, concentration ratio, Herfindahl-Hirschman Index - HHI
Competitive Analysis - Competitive Information, Competitive Analysis, Competitive Actions, Difference between leaders and laggards

UNIT IV Marketing Mix Analytics

Product and Service Analytics - Conjoint Analysis, Decision Tree Model, Portfolio Resource Allocation, Product/ service Metrics, Attribute Preference testing
Price Analytics - Pricing Techniques, Pricing Assessment, Profitable pricing, Pricing for Business Markets, Price Discrimination
Distribution analytics - Distribution Channel Characteristics, Retail Location selection, Channel Evaluation and Selection, Multi-channel Distribution, Distribution Channel Metrics
Promotion Analytics - Promotion Budget estimation, Promotion Budget Allocation – Ad value equivalence model, Promotion Metrics for traditional Media, Promotion Metrics for social

UNIT V Financial and Non - Financial Measures

Non financial measures - Brand Awareness, Test-drive, Churn, CSAT- Customer Satisfaction,

Acceptance Rate / take-off, Customer Life time value estimation

Financial measures – ROMI, Web Analytics- Cost per click, Transaction Conversion Ratio,

Return on Dollar spend(ROA), Bounce rate , Word of Mouth (WOM)

COURSE OBJECTIVES:**To make the students**

- To have the conceptual understanding of big volume of data and its utilization in decision making.
- To comprehend on the industry usage of big data in different functions across sectors.
- To Understand and apply the appropriate tools and techniques for analyzing the big data.
- To understand Big Data and the New School of Marketing, Digital Marketing and Web Analytics
- To know Discrete Probability distribution, Continuous Probability distribution and Random sampling from Probability Distribution
- To evaluate an ARIMA Model and Reasons to Choose and Cautions

COURSE OUTCOMES:**Learners should be able to**

1. Possess the conceptual understanding of big volume of data and its utilization in decision making.
2. Comprehend on the industry usage of big data in different functions across sectors.
3. Understand and apply the appropriate tools and techniques for analyzing the big data.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand Big Data and the New School of Marketing
6. Gain knowledge in Probability distribution and Data Modeling

UNIT I Introduction to Big Data Analytics& Big Data Technology

Big data, users of big data, big data and strategy : A Linkage, The Expanding Universe of Unstructured Data, Big Data Technology : Big Data Computation, Big data Storage. Open-Source Technology for Big Data Analytics, The Cloud and Big Data, Crowdsourcing Analytics, Inter- and Trans-Firewall Analytics, Mobile Business Intelligence

UNIT II Big data – Industry users

People : Rise of the Data Scientist, Learning over Knowing, Agility, Scale and Convergence, Multidisciplinary Talent, Innovation, Cost Effectiveness, The 90/10 Rule and Critical Thinking, Analytic Talent and Executive Buy-in, Developing Decision Sciences Talent, Holistic View of Analytics .Big data in Business: Big Data and the New School of Marketing , Digital Marketing , Web Analytics, Social and Affiliate Marketing.. Fraud and Big Data Risk and Big Data - Credit Risk Management, Big Data and Algorithmic Trading - Crunching Through Complex Interrelated Data - Intraday Risk Analytics, a Constant Flow of Big Data. Geospatial Intelligence, Health care - “Disruptive Analytics”

UNIT III Descriptive Statistical Measures

Population and samples, Measures of location, Measures of Dispersion, Measures of variability, measures of Association. Probability distribution and Data Modeling – Discrete Probability distribution, Continuous Probability distribution, Random sampling from Probability Distribution, Data Modeling and Distribution fitting. Hypothesis Testing, Difference of Means, Wilcoxon Rank-Sum Test, Type I and Type II Errors, Power and Sample Size, ANOVA

UNIT IV – Clustering, Association And Classification

Data Mining : Scope of Data Mining, Data Exploration and Reduction, Unsupervised learning – cluster analysis, Association rules, Supervised learning- Partition Data, Classification Accuracy, prediction Accuracy, k-nearest neighbors, Classification and regression trees, Logistics Regression.

UNIT V Time series analysis

Overview of Time Series Analysis, Box-Jenkins Methodology, ARIMA Model., Autocorrelation Function (ACF), Autoregressive Models, Moving Average Models, ARMA and ARIMA Models, Building and Evaluating an ARIMA Model, Reasons to Choose and Cautions

SUGGESTED READINGS:

1. EMC Education Services(2015), Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data
2. Seema Acharya, Subhashini Chellappan (2015), Big Data and Analytics (WIND) , Wiley India.

3. Bart Baesens(2014), Analytics in a Big Data World: The Essential Guide to Data Science and its Applications, Wiley India.

5. Mayank Bhushan (2018), Big Data and Hadoop- Learn by Example, BPB Publications.

COURSE OBJECTIVES:**To make the students**

- To have the conceptual understanding of the financial metrics and analytics
- To select appropriate tools and techniques for analyzing the finance data and apply the same.
- To analyze financial data and make decisions to maximise return and minimize risk.
- To understand the overview of Time Series Analysis and Box-Jenkins Methodology
- To know the Association rules and Supervised learning
- To apply Principle component analysis

COURSE OUTCOMES:**Learners should be able to**

1. Possess the conceptual understanding of the financial metrics and analytics
2. Select appropriate tools and techniques for analyzing the finance data and apply the same.
3. Analyze financial data and make decisions to maximise return and minimize risk.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand Association and Classification for finance data
6. Gain knowledge in CAPM model and Beta calculation

UNIT I Data science - Finance

Understanding data in finance, sources of data, cleaning and pre-processing data

Corporate finance data, stock price data, derivative data, credit card fraud data,

UNIT II Descriptive statistics for finance data

Mean, median, variance, Standard deviation, coefficient of variation, skewness, kurtosis, normality test, correlation and Regression, Hypothesis Testing- parametric and non parametric test

Difference of Means, Wilcoxon Rank-Sum Test, Type I and Type II Errors, Power and Sample Size,

ANOVA

UNIT III Time series analysis for finance data

Overview of Time Series Analysis, Box-Jenkins Methodology, ARIMA Model., Autocorrelation Function (ACF), Autoregressive Models, Moving Average Models, ARMA and ARIMA Models, Building and Evaluating an ARIMA Model, Reasons to Choose and Cautions,

UNIT IV Association and Classification for finance data

Association rules, Supervised learning- Partition Data, Classification Accuracy, prediction Accuracy, k-nearest neighbors, Classification and regression trees, Logistics Regression
Factor analysis, - Principle component analysis.

UNIT V Financial models

CAPM model, Beta calculation, VAR, Mean variance analysis, Markowitz model, EVA, Black Scholes Model.

SUGGESTED READINGS:

5. Sheldon Natenberg(2014), Option Volatility and Pricing: Advanced Trading Strategies and Techniques, 2nd Edition, MCGraw Hill.

COURSE OBJECTIVES:**To make the students**

- To understand the exchange rate movements, hedging using currency derivatives, and analyse the impact on international trade and investments
- To comprehend on the basics of international financial markets, international financial options and foreign direct investments and its application.
- To understand the concept of Management of Foreign Exchange Exposure
- To know the Exchange rate movements, factors that influence exchange rates, movements in cross exchange rates and concepts of international arbitrage
- To analyse the International capital structure, cost of capital and the capital structure of MNCs
- To understand capital budgeting from parent firm's perspective and expecting the future expected exchange rate analysis

COURSE OUTCOMES:**Learners should be able to**

1. Understand the exchange rate movements, hedging using currency derivatives, and analyse the impact on international trade and investments
2. Comprehend on the basics of international financial markets, international financial options and foreign direct investments and its application in lifelong practice.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
4. Develop knowledge on international financial institutions
5. Acquire knowledge on foreign trade.
6. Understand Financing of foreign trade and Documentation

UNIT I International Financial Environment:

International Financial Environment, 'Globalization', Goals of International Financial Management. Balance of Payments: concepts and principles of balance of payments and its various components. The Current Account Deficit and Surplus and Capital Account Convertibility.

UNIT II Exchange Rates and Currency Derivatives

Exchange rate movements, factors that influence exchange rates, movements in cross exchange rates, concepts of international arbitrage, interest rate parity, and purchasing power parity and the International Fisher effect.

Currency Derivatives: forward markets and the different concepts, currency futures markets and currency options markets and functions.

Unit III Nature and Measurement of Foreign Exchange Exposure:

Nature and measurement of foreign exchange exposure. Types of exposures and the various types of translation methods.

Management of Foreign Exchange Exposure: concept of exposure forward and foreign exchange exposure, various tools and techniques of foreign risk management and the risk management products.

Unit IV International Capital Structure and International Capital Budgeting:

International capital structure, cost of capital, the capital structure of MNCs, cost of capital in segmented versus integrated markets. Introduction of international capital budgeting, adjusted present value model, capital budgeting from parent firm's perspective and expecting the future expected exchange rate analysis

UNIT V Country Risk, International Taxation and FDI

Country Risk Analysis: country risk factors, assessment of risk factors. Techniques through which the country risks can be assessed as well as measured. International Taxation: international tax system, principles of taxation, double taxation, tax havens and transfer pricing. International tax management strategy and Indian tax environment. Foreign Direct Investment, International Portfolio and Cross-Border Acquisitions: flow, cost and benefits of Foreign Direct Investment. ADR and GDR, concept of portfolio, cases on cross border acquisitions.

18MBAPI402B**INTERNATIONAL
MARKETING MANAGEMENT****4H - 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- To understand the concept of International marketing environment and the international market entry modes
- To comprehend the 4Ps of marketing in international perspective.
- To formulate marketing strategies appropriate for international marketing of products and services.
- To have an exposure in international marketing management concept
- To understand the international marketing management and market segmentation.
- To know the process of promoting the product in the international market

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of International marketing environment and the international market entry modes and apply lifelong.
2. Comprehend the 4Ps of marketing in international perspective.
3. Formulate marketing strategies appropriate for international marketing of products and services.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand about the various disciplines contribution in understanding buyer behaviour in a holistic manner familiar with the advances in International marketing
6. Acquire knowledge to analyze consumers behaviour and use them in designing marketing strategies

UNIT I Introduction to International Marketing**Introduction, Scope of International Marketing, International Marketing vs. Domestic Marketing,
Karpagam Academy of Higher Education (Deemed to be University), Coimbatore – 641 021**

Principles of International Marketing, Customer value and the value equation, Competitive or differential advantage, Management Orientations, MNCs and TNCs, Benefits of international marketing.

UNIT II International Market Environment

International Marketing Environment : Introduction, Political Environment, Political systems, legal and Regulatory Environment, Socio-cultural Environment, Economic Environment, Technological Environment, Challenges in Global Marketing.

International Marketing Research Introduction, Concept of Marketing Research, Need for Marketing Research, Approach to Marketing Research, Scope of International Marketing Research, International Marketing Research Process, market surveys, marketing information system

International Market Entry Strategies Introduction, Different Entry Modes and Market Entry Strategies, joint Ventures, Strategic Alliances, Direct Investment, Manufacturing and Franchising.

UNIT III International Product Policy and Planning

International Product Policy and Planning :Introduction, Products: National and International, the new Product Development, International Product Planning, Product Adoption and Standardization, International Market Segmentation, Influences on Marketing Plan and Budget, International Product Marketing, Marketing of Services

UNIT IV International Pricing Policy:

International Pricing Policy: Introduction, Price and Non-Price Factors, Methods of Pricing, International Pricing Strategies, Dumping and Price Distortion, Counter Trade

UNIT V International Promotional Strategies & Legal and Ethical Issues in International Marketing

International Promotional Strategies Introduction, Communications Process, principles of communication, Status of Promotion, Promotion Appeals, Media Selection, Personal Selling, Public Relations and Publicity, Sales Promotion, advertising, e-marketing

Legal and Ethical Issues in International Marketing Introduction, Nature of International Business Disputes and Proposed Action, Legal Concepts Relating to International Business, International Dispute Settlement Machinery, ethical Consideration in International Marketing and Marketing Communications.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To understand the concept of International Human resource management, staffing, training and industrial relation pertaining to international work force management and apply the learning lifelong.
- To formulate recruitment, training policies pertaining to international human resource management.
- To understand the concepts and practical implications of performance management, Training methods and career planning International HRM.
- To know about compensation and reward management and its practice of International HRM in industry
- To be familiar with Employee relations and its application for the development of International HRM
- To understand the Current scenario in international training and development

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of International Human resource management, staffing, training and industrial relation pertaining to international work force management and apply the learning lifelong.
2. Formulate recruitment, training policies pertaining to international human resource management.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
4. Recognize the dynamic relationship between strategy, people, technology, and the processes that drive organizations.
5. Gain knowledge in Emerging Trends and Perspectives in HRM Cross Cultural Dimensions
6. Integrate the knowledge of International HRM concepts to take correct business decisions

UNIT I International Human Resource Management

An Overview, Introduction and Concepts in International Human Resource Management, Developments leading to International HRM Perspectives, International Human Resource Management Models of IHRM-Matching model, Harvard Model, Contextual Model, 5P Model European Model. SHRM: Evolution of MNE's, Business strategies, IHRM Strategies, SIHRM. Barriers in effective global HRM. Socio-cultural context, Organizational dynamics and IHRM:

Role of culture in International HRM, Country and Regional Cultures, Country Culture versus MNE Culture. Culture and employee management issues/ impact of Country culture on IHRM

UNIT II Staffing Practices in International Human Resource Management

International Workforce planning and staffing: International labour market International Recruitment function; head-hunters, cross-national advertising, e-recruitment; International staffing choice, different approaches to multinational staffing decisions, Types of international assignments, Selection criteria and techniques, use of selection tests, interviews for international selection, international staffing issues, Successful expatriation, role of an expatriate, female expatriation, repatriation, re-entry and career issues.

UNIT III Industrial Relations and Strategic HRM

International Practices in Industrial Relations, Shifts in IHRM and IR, International Strategic Human Resource Management, International Labour Standards, Global Unions, Regional Integration and Framework Agreements, HR/IR issues in MNCs and Corporate Social Responsibility

Unit IV Developing Global Mindset:

Global Leadership, Cross cultural context and international assignees, Current scenario in international training and development, training & development of international staff, types of expatriate training, sensitivity training, Career Development, repatriate training, developing international staff and multinational teams, knowledge transfer in multinational companies.

Unit V International Workforce and International HRIS:

Working with multicultural and ethnic groups, Health and safety and International Assignees, Crisis Management, Global HR Shared Services, Managing HR in virtual organization.

Emerging trends in International HRM, Sensitivity to Cultural Diversity, Global Organisation Structures, Emerging Trends in Employee Relations and Employee Involvement, Convergence or divergence in personnel management in developed and developing economies, International HRM and Strategic Research. HRIS: Meaning, Role of IT in HR, Designing of HRIS, Applications of HRIS in Employee Management, Limitation of HRIS

SUGGESTED READINGS:

5. Anne-Wil Harzing , Ashly Pinnington(2017), International Human Resource Management, 4th edition, SAGE Texts.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of cross cultural management and impact of cross cultural issues on business strategy, business functioning.
- To apply the cross cultural concept in managing workforce, managing teams and performing leadership role in organization.
- To understand International migration and cultural issues
- To know the Distinctive cultures of industry and trade guilds today's working culture
- To understand the Leadership in an international context
- To analyse Cross-cultural negotiations in practice

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of cross cultural management and impact of cross cultural issues on business strategy, business functioning and apply the learning lifelong.
2. Apply the cross cultural concept in managing workforce, managing teams and performing leadership role in organization.
3. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
4. Recognize Cultural impact on corporate strategy
5. Gain knowledge in Emerging Trends and Perspectives in Cross Cultural Dimensions
6. Integrate the knowledge of Big Data and A.I. on multi-cultural organisations

UNIT I Introduction

Facets of Culture - Levels of Culture. National cultural dimensions in the business context - National cultural dimensions in the business - International migration and cultural issues. European cultures -

American and Australian cultures - Business culture in Australia and New Zealand. Asian cultures - African and Middle Eastern cultures

UNIT II Cultural Values

Value orientations and dimensions - Reconciling cultural dilemmas - Doing business in emerging markets, Organisational structures - Corporate cultures - Distinctive cultures of industry and trade guilds today - How HR managers shape corporate. Management tasks and cultural values - Other views on values - Harassment, discrimination, gender (in)equality, and stress factors in the workplace: the role of effective executive

UNIT III Cultural impact on corporate strategy

Strategic alliances, M&As, JVs and business cultures - Marketing in a cross-cultural environment – Marketing communications across cultures-Different conceptions of leadership - Leadership in an international context - Organisational change and cultural process - Organisational change in a global environment

UNIT IV Managing diversity in a global environment and International negotiations

Managing diversity in a global environment - Diversity and transcultural competence in organisations - Communicating within and between cultures - Barriers in cross-cultural management communication- International negotiations - Cross-cultural negotiations in practice

UNIT V Managing cross-cultural teams

Managing cross-cultural teams - Dealing with conflict in a cross-cultural environment - Globalisation and multicultural team management in the 'new world order' after 2016 - The impact of Big Data and A.I. on multi-cultural organisations

Becoming a competent intercultural communicator - Ethics in cross-cultural management - Corruption, cronyism, kleptocracy - Corporate Governance: does culture matter?

SUGGESTED READINGS:

5. Richard M. Steers, LuciaraNardon , et al. (2016), Management across Cultures: Developing Global Competencies, 3rd edition, Cambridge University Press

COURSE OBJECTIVES:**To make the students**

- To understand the concept of sourcing and its importance as strategic organizational function.
- To apply the tools and techniques to select the best vendor to deliver quality goods on time and apply the learning lifelong.
- To understand the sourcing in the global perspective.
- To evaluate of existing vendors and develop vendor performance measures
- To understand the managing price fluctuation and volatility in international finance
- To know the Global Trade Barriers and Dealing with international suppliers

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of sourcing and its importance as strategic organizational function.
2. Apply the tools and techniques to select the best vendor to deliver quality goods on time and apply the learning lifelong.
3. Understand the sourcing in the global perspective.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand the importance of Managing price fluctuation and volatility in international finance
6. Gain knowledge in Industry Best Practices, Measurement of sourcing performance and Benchmarking in Retail Purchasing

UNIT I: Understanding Sourcing as a Strategic Organizational Function

Evolution of purchasing, Purchasing, sourcing and vendor management as a key organizational function, Purchasing objectives, Impact of strategic purchasing on profitability, Make or Buy Decisions, Types and methods of sourcing in retail; centralized vs decentralized, single sourcing vs multiple sourcing, day-to-day vs long range sourcing

UNIT II The Sourcing Process

Market analysis and supplier research, Prime sources of supplier information, Request for Proposal, Fundamental steps of the buying process, terms and condition of purchase, Buying Documentation, Negotiation, Use of IT in sourcing, Global Tenders and E-Procurement, Reverse Auctions, Expanded role of global purchasing

UNIT III Vendor Selection and Management

Vendor selection process, Evaluation of existing vendors, Developing vendor performance measures, new vendor development process, working with suppliers to manage quality, JIT and TQM in sourcing, Key supplier account management, Vendor relationship development, Negotiation skills, Vendor monitoring, Promoting SME suppliers.

UNIT IV Cross functional Approach to Sourcing

Overview of material management function and supply chain alignment, Role of purchasing in supporting inventory objectives, Goals of Inventory Control, Hedging vs. Forward Buying, Risk management, Managing price fluctuation and volatility in international finance, matching supply with customer demand, managing inward logistics, Transportation modes and warehousing

UNIT V Global Trends and Issues in Sourcing

Global Trade Barriers, Dealing with international suppliers, UNO and GATT conventions, Legal, socio-cultural issues in international buying, Environmental issues-Green Purchasing- Industry Best Practices, Measurement of sourcing performance, Benchmarking in Retail Purchasing.

SUGGESTED READINGS:

1. Fred Sollish, John Semanik(2018), Strategic Global Sourcing Best Practices, Wiley India.
2. Robert B. Handfield et.al (2012), Sourcing and Supply Chain Management. 5th edition, Cengage Learning.
3. Wilhelm Kohler, ErdalYalcin (2018), Developments in Global Sourcing, MIT Press
4. Sudhi Seshadri (2014), Sourcing Strategy: Principles, Policy and Designs, Springer.
5. Dr Kenneth Lysons, Dr Brian Farrington (2016), Procurement and Supply Chain Management , 9th edition, Pearson Education.

COURSE OBJECTIVES:**To make the students**

- To understand the concept of pricing and revenue management.
- To apply the economy, network and capacity control on revenue management and apply the learning lifelong.
- To understand the different type of pricing and choosing appropriate pricing method.
- To analyse the Challenge of Network Control and Theory of Optimal Network Control
- To understand stochastic gradient methods and Asymptotic Analysis of Network Problems
- To know the Revenue Opportunity Assessment and Revenue Benefits Measurement

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of pricing and revenue management.
2. Apply the economy, network and capacity control on revenue management and apply the learning lifelong.
3. Understand the different type of pricing and choosing appropriate pricing method
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand the importance of Pre-commitment and Demand Uncertainty and Peak-load pricing under perfect competition
6. Gain knowledge in Natural Gas Storage and Transmission in Revenue Management in Practice

UNIT I Introduction to Revenue Management [RM]

Meaning of RM, Conceptual frame work of RM, overview of RM System, Scope of RM in Air Lines, Railways, Hospitality Industries

UNIT II Pricing and Revenue Management

Meaning of Price, Types of Pricing, Dynamic Pricing –Introduction and overview, Single Product

Dynamic Pricing with and without Replenishment, Multi Product and Multi Source Pricing, Finite Population Models and Price Skimming, Promotions Optimization, Auction, Revenue Equivalence, Optimal Auction, Relationship to List Pricing

UNIT III Economy of Revenue Management

Introduction, Perfect Competition, Perfectly Competitive Markets, Firm level decision under perfect competition, Pre-commitment and Demand Uncertainty, Peak-load pricing under perfect competition, Identifiable peak periods competition, Monopoly Pricing, Price and capacity competition in Oligopoly, Demand Forecasting .

UNIT IV Network and Capacity Control in Revenue Management

Promise and Challenge of Network Control, Types of Controls, Theory of Optimal Network Control– Structure of Optimal Control, Bid Price Control, Non Optimality of Bid Price Control, Evidence in support of Bid Price, Bid Prices Opportunity Cost, Approximations based on network models– Deterministic Linear Programming, Non-linear programming and Randomized linear programming model, approximations based on decomposition, stochastic gradient methods and Asymptotic Analysis of Network Problems

UNIT V Revenue Management in Practice

Study of Customers, Products, Pricing and Revenue Management Practice applied to Airlines, Hotels, Rental Car, Retailing, Media and Broadcasting, Natural Gas Storage and Transmission, Electricity Generation and Transmission, Tour Operators, Casinos, Cruises and Ferry Ships, Passenger Railways, Air Cargo, Freight, Theatres and Sporting Events and Manufacturing. Revenue Opportunity Assessment and Revenue Benefits Measurement

SUGGESTED READINGS:

5. Dr Ian Yeoman (Editor), Una McMahon-Beattie (2010), Revenue Management: A Practical Pricing Perspective, Palgrave Macmillan

COURSE OBJECTIVES:**To make the students**

- To equip with an understanding of the “importance and role of supply chain analytics” in the modern business enterprises
- To comprehend on how business firms can take advantage with the help of supply chain analytics.
- To apply supply chain analytics with analytical platforms.
- To understand the Calibration Model Establishes Position and Performance Gap, Models for Purchasing, Procurement and Strategic Sourcing
- To know the concept Models for Order Management and Inventory Management
- To understand the Future trends of Supply Chain Modelling

COURSE OUTCOMES:**Learners should be able to**

1. Equip with an understanding of the “importance and role of supply chain analytics” in the modern business enterprises
2. Comprehend on how business firms can take advantage with the help of supply chain analytics.
3. Apply supply chain analytics with analytical platforms.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand the different ways of payment and payment services available.
6. Gain knowledge in supply chain analytics management

UNIT I Introduction to Supply Chain Analytics:

Definition, relevance and scope Supply Chain Analytics, recent trends in Supply Chain Analytics

UNIT II Overview of Supply Chain Models and Modelling Systems:

Descriptive models, Optimization modes, Off-the shelf modelling system (SLIM), Supply chain operations reference model (SCOR), The network KEIRETSU, Nature-Inspired Intelligence in Supply Chain Management

UNIT III Application of Supply Chain Models – I

A Calibration Model Establishes Position and Performance Gap, Models for Purchasing, Procurement, and Strategic Sourcing, Logistics Models, from Manufacturing to Accepted Delivery, Models for Forecasting, Demand Management, and Capacity Planning, Models for Order Management and Inventory Management

UNIT IV Application of Supply Chain Models – II

Models for Sales and Operations Planning, Advanced Planning and Scheduling Models, Models for Supplier Relationship Management, Models for Customer Relationship Management, Models for Collaborative Design and Manufacturing, Collaborative Planning, Forecasting, and Replenishment Models

UNIT V Future trends of Supply Chain Modelling:

Recent developments in theory technology and practices. Future developments and expected improvement in efficiency levels and operational simplicity

COURSE OBJECTIVES:**To make the students**

- To understand the concept of operations management in services sector.
- To comprehend on understanding of services design, service quality, service facility.
- To apply capacity and demand assessment tools in service operations.
- To understand Front-office Back-office Interface and service decoupling.
- To know Managing Service Experience, experience economy and Measuring Service Quality
- To understand Inventory Management in Services sector

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of operations management in services sector.
2. Comprehend on understanding of services design, service quality, service facility.
3. Apply capacity and demand assessment tools in service operations.
4. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
5. Understand process flow diagram, process steps and simulation
6. Gain knowledge in supply management tactics, operations planning and control

UNIT I Introduction

Services – Importance, role in economy, service sector – growth; Nature of services -Service classification , Service Package, distinctive characteristics , open-systems view; Service Strategy – Strategic service vision, competitive environment, generic strategies, winning customers; Role of information technology; stages in service firm competitiveness; Internet strategies - Environmental strategies.

UNIT II Service Design

New Service Development – Design elements – Service Blue-printing - process structure – generic

approaches –Value to customer; Retail design strategies – store size – Network configuration ;
Managing Service Experience –experience economy, key dimensions ; Vehicle Routing and
Scheduling

UNIT III Service Quality

Service Quality- Dimensions, Service Quality Gap Model; Measuring Service Quality –SERVQUAL
- Walk-through Audit; Quality service by design - Service Recovery - Service Guarantees; Service
Encounter – triad, creating service orientation, service profit chain; Front-office Back-office Interface
– service decoupling.

UNIT IV Service Facility

Service scapes – behaviour - environmental dimensions – framework; Facility design – nature,
objectives, process analysis – process flow diagram, process steps, simulation; Service facility layout;
Service Facility Location – considerations, facility location techniques – metropolitan metric,
Euclidean, centre of gravity, retail outlet location , location set covering problem

UNIT V Managing Capacity and Demand

Managing Demand – strategies; Managing capacity – basic strategies, supply management tactics,
operations planning and control; Yield management; Inventory Management in Services– Retail
Discounting Model, Newsvendor Model; Managing Waiting Lines –Queuing systems, psychology of
waiting; Managing for growth- expansion strategies, franchising , globalization.

COURSE OBJECTIVES:**To make the students**

- To know the current trends and practices in the tourism and travel trade sector
- To understand travel agency, tour operation business and functions of travel agency
- To know the tour packaging & pricing
- To assess the role and responsibility of travel trade associations
- To understand the Wholesale and Retail Travel Agency business
- To analyse the Changing Scenario of Travel Trade

COURSE OUTCOMES:**Learners should be able to**

1. Understand the current trends and practices in the tourism and travel trade sector
2. Be aware of travel agency, tour operation business and functions of travel agency
3. Know the tour packaging & pricing
4. Assess the role and responsibility of travel trade associations
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
6. Understand Classifications of Tour Packages

UNIT-I Travel Trade

Historical Perspectives - Emergence of Thomas Cook and American Express Company - Types of Tour Operators - Wholesale and Retail Travel Agency business - Linkages and Integration with the Principal Service Providers - the Changing Scenario of Travel Trade.

UNIT-II Travel Agency and Tour Operation Business

Functions of Travel Agency - Setting up a full-fledged Travel Agency - Sources of Income of a travel agency - Diversification of Business - Travel Insurance, Forex, Cargo & MICE – Documentation - IATA Accreditation - Recognition from Government.

UNIT-III Itinerary Planning & Development

Meaning, Importance and Types of Itinerary - Resources and Steps for Itinerary Planning - Do's and Don't's of Itinerary Preparation - Tour Formulation and Designing Process - FITs & Group Tour Planning and Components - Special Interest Tours (SITs).

UNIT-IV Tour Packaging & Pricing

Importance of Tour Packaging – Classifications of Tour Packages - Components of Package Tours - Concept of costing - Types of costs - Components of tour cost - Preparation of cost sheet - Tour pricing - Calculation of tour price - Pricing strategies - Tour packages of Thomas Cook, SOTC, Cox & Kings and TCI.

UNIT-V Role and Responsibility of Travel Trade Associations:

Objectives - Roles and functions of UFTAA, PATA, ASTA, TAAI, IATO, ATAOL, ADTOI, IAAI, FIYTO, TAFI.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To comprehend the theories and practices of ecotourism;
- To be familiar with the model of ecotourism projects; and significance of ecotourism;
- To identify issues and challenges of conservation of ecotourism
- To understand the role of the regulatory bodies and society to preserve ecotourism
- To gain knowledge in Sustainable Ecotourism and Resource Management
- To understand the Role of International Ecotourism Society

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the theories and practices of ecotourism;
2. Familiar with the model of ecotourism projects; and significance of ecotourism;
3. Identify issues and challenges of conservation of ecotourism
4. Understand the role of the regulatory bodies and society to preserve ecotourism
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
6. Gain knowledge in Ecotourism Development Agencies

UNIT I Fundamentals of Ecology

Basic Laws & ideas in Ecology- Function and Management of Ecosystem-Biodiversity and its Conservation-Pollution-Ecological Foot Prints - Relationship between Tourism & Ecology.

UNIT II Ecotourism

Evolution, Principles, Trends and Functions of Ecotourism - Mass Tourism Vs Ecotourism -Typology of Eco-tourists - Ecotourism Activities & Impacts -Western Views of Ecotourism - Qubec Declaration 2002 - Kyoto Protocol 1997 - Oslo Declaration 2007.

UNIT III Ecotourism Development

Sustainable Ecotourism - Resource Management - Socioeconomic Development - Ecotourism Policies, Planning and Implementation - Eco-friendly Facilities and Amenities - Carrying Capacity - Alternative Tourism -Responsible ecotourism Ecotourism Programming.

UNIT IV Conservation of Ecotourism

Protected Area Management through Ecotourism - Stakeholder Engagement - Community Participation - Types of Participation, Issues and Challenges - Ecotourism Projects - Case Studies on Periyar National Park, Thenmala Eco Project, Similipal Ecotourism Project, Sunderban Ecotourism Project, Kaziranga National Park, Run of Kutch, Nandadevi Biosphere Reserve, Corbett National Park, Gulf of Mannar, Kruger National Park, South Africa.

UNITV Ecotourism Development Agencies

Role of the International Ecotourism Society - the UNWTO, UNDP, WWF - Department of Forest and Environment - Government of India, ATREE, equations.

EVENT MANAGEMENT

Semester - IV
4H - 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES:****To make the students**

- To familiarize with the essentials of Event Management;
- To understand the potential of MICE and Event Tourism
- To plan and execute the plan for an Event within time schedule and cost.\
- To Identify event marketing, customer care, marketing tools to develop and communicate appropriate event management
- To be aware of travel industry fairs and its significance
- To understand the nature and demand of Conference markets

COURSE OUTCOMES:**Learners should be able to**

1. Be familiar with the essentials of Event Management;
2. Understand the potential of MICE and Event Tourism
3. Plan and execute the plan for an Event within time schedule and cost
4. Identify event marketing, customer care, marketing tools to develop and communicate appropriate event management
5. Be aware of travel industry fairs and its significance
6. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work

UNIT I Introduction to Events:

Scope - Nature and Importance – Types of Events - Unique features and similarities – Practices in Event Management - Key steps to a successful event.

UNIT II The Dynamics of Event Management:

Event Planning and organizing – Problem Solving and Crisis Management – Leadership and Participants Management – Managing People and Time – Site and Infrastructure Management.

UNIT III Introduction to MICE:

Planning MICE, Components of the Conference Market, Characteristics of Conferences and Conventions, MICE as a supplement to Tourism, the nature and demand of Conference markets- The Economic and Social significance of Conventions, process of Convention Management.

UNIT IV Event Marketing

Customer care – Marketing tools – Promotion, Media Relations and Publicity - Event Co-ordination - Visual and Electronic Communication – Event Presentation – Event Evaluation – Case Studies of events of National and International importance.

UNIT V Travel Industry Fairs

Benefits of Fairs - ITB, WTM, BTF, TTW, FITUR, KTM, IITM, CII-Events, PATA Travel Mart.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

- To understand the growing importance of medical tourism in contemporary world.
- To comprehend and analyze the push pull factors for medical tourists to select the appropriate medical tourism destination
- To be aware of the legal aspects related to the medical tourism.
- To understand the growth and development of medical tourism in India.
- To know the Certification and Accreditation in health and medical tourism
- To understand the Current and futuristic trends, Potentials, Issues and Challenges

COURSE OUTCOMES:**Learners should be able to**

1. Understand the growing importance of medical tourism in contemporary world.
2. Comprehend and analyze the push pull factors for medical tourists to select the appropriate medical tourism destination
3. Aware of the legal aspects related to the medical tourism.
4. Understand the growth and development of medical tourism in India.
5. Exhibit behaviour and performance that demonstrates enhanced competence in decision-making, group leadership, oral and written communication, analysing, planning and team work
6. Understand Legal Aspects of Medical Tourism

UNIT I Introduction to Health Tourism:

Origin and development over ages - health as a motivator to travel, - Ancient centres of healing, Quality of Life (QOL) – Concept - Scope of Health Measures. Health: Concept, Definitions and Importance of health to People, Business and Government.

UNIT II Medical tourism:

Concept, typology Genesis and growth of Medical Tourism - benefits of medical tourism, Factors responsible for growth of health and medical tourism. Medical Tourism Business- Global medical

tourism scenario, Stakeholders, countries promoting medical tourism – Health and Medical Tourism markets at global level

UNIT III Medical tourism product and package:

Factors and Steps for designing product and tour package, development, issues and considerations, Approvals and formalities, Pre-tour arrangements, tour operations and post-tour management, Health Insurance, Claiming Health Insurance

UNIT IV Legal Aspects of Medical Tourism:

Certification and Accreditation in health and medical tourism, Ethical, legal, economic and environmental issues in health and medical tourism. An Introduction to National Accreditation Board for Hospitals & Healthcare (NABH) and Joint Commission International (JCI).

UNIT V Medical tourism in India:

Centres/Destinations, Current and futuristic trends, Potentials, Issues and Challenges, Trousing the challenges, Government Support.

COURSE OBJECTIVES:**To make the students**

- To comprehend on the requirement of the industry like attitude, language, behaviour, body language, learning style etc.
- To train the student on corporate etiquettes, professional skills, English language.
- To equip the students to draft resume, face the Group discussion and interview.
- To communicate efficiently in oral and in written form as expected by the industry.
- To make student familiar with Verbal communication and Non - Verbal communication.
- To make the students understand presentation skills and its importance.

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate critical and innovative thinking.
2. Display competence in oral, written, and visual communication.
3. Apply communication theories.
4. Show an understanding of opportunities in the field of communication.
5. Use current technology related to the communication field.
6. Respond effectively to cultural communication differences.
7. Communicate ethically.
8. Demonstrate positive group communication exchanges.

UNIT 1 Difference between campus and Corporate:

Change management - Learn the Culture - Impact of your attitude and behavior - Consider the language – Establish and maintain relationship – Respect others - Be Confident - Keep on learning - Consider the body language.

UNIT II Grooming for Corporate:

Corporate Etiquettes - Dressing and grooming skills - Workplace etiquette - Business etiquette - E-Mail etiquette - Telephone etiquette - Meeting etiquette - Presentation Skills

UNIT III Professional Competencies:

Analytical Thinking - Listening Skills - Time management - Team Skills – Assertiveness - Stress Management - Participating in Group Discussion - Interview facing – Ownership - Attention to Detail.

UNIT IV Elementary Level English Communication

Grammar – Phonetics – One on one basic conversation skill practice **Intermediate Level English Communication:** Reading Comprehension - Listening Comprehension - Improving Vocabulary - Improving Writing Skills - Comprehension while interacting face to face.

UNIT V Advanced Level English Communication:

Recitation of short stories - Interview Skills - Group Discussion - Social Conversation Skills – Presentation - One Act Plays.

பகுதி – I, தமிழ்

முதல் பருவம்

18LSU101 :

தமிழ் முதல் தாள்

4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம்பிள்ளை-ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் -மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்:

(8 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:**(8 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV : கட்டுரை:**(8 மணிநேரம்)**

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:**(6 மணிநேரம்)**

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு.

கற்பகம் உயர்கல்வி கலைக்கழகத் தமிழ்த்துறை வெளியீடு.

18ENU101

ENGLISH

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives:

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT – IV : DRAMA

1. The Merchant of Venice- Act 4-Scence 1
2. The Death Trap- Saki

UNIT – V : GRAMMAR AND COMPOSITION

- GRAMMAR:
1. Tenses
 2. Articles
 3. Auxiliaries (Primary and Modal)
 4. Tag Questions

Composition:

CALCULUS

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The concepts of essentials of concavity, inflection points and its geometrical applications.
- The Higher order derivatives and its applications in business, economics and life sciences.
- The Leibniz rule and its applications in exponential and trigonometric.
- The concepts of volumes by slicing, disks and washers' methods, volumes by cylindrical shells, parametric equations and parameterizing a curve.
- The concepts of vector functions, operations with vector-valued functions, limits and continuity of vector functions.
- Recognize the appropriate tools of calculus to solve applied problems.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Understand the concepts of hyperbolic functions.
2. Explore the concept of reduction formula and calculate limits in indeterminate forms by a repeated use of L'Hospital rule.
3. Use single and multiple integration to calculate the arc length, area and volume.
4. Understand the techniques of sketching conics and properties of conics.
5. Know about the knowledge on application of vector functions.
6. Acquire the knowledge on application of Kepler's second law.

UNIT – I**DIFFERENTIAL CALCULUS**

Hyperbolic functions, higher order derivatives-Leibniz rule and its applications to problems of type $e^{ax+b}\sin x$, $e^{ax+b}\cos x$, $(ax+b)^n\sin x$, $(ax+b)^n\cos x$.

UNIT II**INTEGRAL CALCULUS**

Reduction formulae-derivations and illustrations of reduction formulae of the type $\int \sin nx \, dx$, $\int \cos nx \, dx$, $\int \tan nx \, dx$, $\int \sec nx \, dx$, $\int \log x^n \, dx$, $\int \sin^n x \cos^m x \, dx$. Curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences.

UNIT III**APPLICATIONS OF INTEGRATION**

Volumes by slicing-disks and washers methods-volumes by cylindrical shells-parametric equations-Parameterizing a curve-arc length-arc length of parametric curves-area of surface of revolution.

UNIT IV**CURVE SKETCHING**

Concavity and Inflection points-asymptotes-Techniques of sketching conics-reflection properties of conics, rotation of axes and second degree equations, classification into conics using the discriminant, polar equations of conics.

UNIT V**VECTOR FUNCTIONS**

Introduction to vector functions-operations with vector-valued functions- limits and continuity of vector functions-differentiation and integration of vector functions-tangent and normal components of acceleration-modeling ballistics and planetary motion-Kepler's second law.

ALGEBRA

Semester – I
7H – 6C

Instruction Hours / week: L: 6 T: 1 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The functions, relations, systems of linear equations and linear transformations.
- How to identify, evaluate and simplify algebraic expressions using the correct operations.
- The basic concepts of linear algebra.
- The concepts of principles of mathematical induction.
- The solution and application of linear systems.
- The application of matrix, inverse of matrix and system of linear equations.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Know about the basic concepts of set theory.
2. Describe the categories of functions.
3. Understand the algorithms on operation.
4. Use matrix operations to solve system of linear equations.
5. Learn how to find characteristic equation, eigen value and eigen vector for matrix.
6. Know about the applications of linear systems and linear independence.

UNIT I**BASICS OF SETS**

Polar representation of complex numbers-nth roots of unity-De Moivre's theorem for rational Indices and its applications-Sets-Finite and infinite sets-Equality sets-Subsets-Comparability -Proper subsets-Axiomatic development of set theory-Set operations.

UNIT II**FUNCTIONS**

Equivalence relations-Functions-Composition of functions-Invertible functions-One to one Correspondence and cardinality of a set-Well-ordering property of positive integers.

UNIT III**DIVISIBILITY AND CONGRUENCE RELATIONS**

Division algorithm-Divisibility and Euclidean algorithm-Congruence relation between integers-Principles of Mathematical Induction-Statement of Fundamental Theorem of Arithmetic.

UNIT IV**SYSTEM OF LINEAR EQUATIONS**

Systems of linear equations-row reduction and echelon forms-vector equations, the matrix equation $Ax=b$ -Solution sets of linear systems-Applications of linear systems-Linear independence.

UNIT V**LINEAR TRANSFORMATIONS**

Introduction to linear transformations-Matrix of a linear transformation-Inverse of a matrix-Characterizations of invertible matrices. Subspaces of \mathbb{R}^n -Dimension of subspaces of \mathbb{R}^n and rank of a matrix-Eigen values-Eigen Vectors and Characteristic-Equation of a matrix.

LOGIC AND SETS

Semester – I
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- First-order formula of predicate logic is a tautology using a natural-deduction style formal system.
- The formal definitions of predicates, operations on sets and pertaining to relations.
- The concepts of Set operations and the laws of set theory and Venn diagrams.
- Composition of relations, Types of relations, Partitions, Partial ordering relations and n-ary relations.
- The enhancement of logical thinking and its application to computer science.
- The methods of mathematical logic.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Acquire the knowledge about propositions, conjunction, disjunction, logical equivalences and counting principle.
2. Identify between binding variables and negations.
3. Use the language of set theory, interpreting issues in different areas of mathematics.
4. Know the concepts Difference and Symmetric difference of two sets.
5. Mastery in the concepts of relations.
6. Study Composition of relations, Types of relations, Partitions, Partial ordering relations and n-ary relations.

UNIT I**LOGIC AND CONNECTIONS**

Introduction-Propositions-Truth table-Negation-Conjunction and disjunction-Implications-Biconditional propositions-Converse-Contra positive and inverse propositions and precedence of logical operators.

UNIT II**PROPOSITIONAL EQUIVALENCE**

Logical equivalences-Predicates and quantifiers: Introduction-Quantifiers-Binding variables and Negations.

UNIT III**SETS**

Subsets-Set operations and the laws of set theory and Venn diagrams-Examples of finite and infinite sets.

UNIT IV**FINITE SETS AND COUNTING PRINCIPLE**

Empty set-Properties of empty set-Standard set operations-Classes of sets-Power set of a set-Difference and Symmetric difference of two sets-Set identities-Generalized union and intersections.

UNIT V**RELATIONS**

Product set-Composition of relations, Types of relations-Partitions-Equivalence Relations with example of congruence modulo relation-Partial ordering relations-n-ary relations.

18MMU111

CALCULUS (PRACTICAL)

Semester – I
3H – 2C

Instruction Hours / week: L: 0 T: 0 P: 3

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- To demonstrate comprehension in relevant area of calculus
- Problem solving through (computer language) programming.
- The basic structure of the programme, declaration and usage of variables.
- The basic MATLAB (matrix laboratory) programme.
- The usage of MATLAB in order to facilitate understanding and visualization of mathematical problems
- The practical preparation knowledge to apply the acquired knowledge and skills.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment.
2. Acquire the problem solving skills through computer programming.
3. Understand to write diversified solutions using programming language.
4. Plot of graphs of functions (exponential, logarithmic, trigonometric).
5. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
6. Deal with different input/output methods.

List of Practical (Any 8 programs)

1. Plotting of graphs of function e^{ax+b} , $\log(ax+b)$, $1/(ax+b)$, $\sin(ax+b)$, $\cos(ax+b)$, $|ax+b|$ and to illustrate the effect of a and b on the graph.
2. Plotting the graphs of polynomial of degree 4 and 5, the derivative graph, the second derivative graph and comparing them.
3. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
4. Obtaining surface of revolution of curves.
5. Tracing of conics in cartesian coordinates/ polar coordinates.
6. Sketching ellipsoid, hyperboloid of one and two sheets, elliptic cone, elliptic, paraboloid, hyperbolicparaboloid using cartesian coordinates.
7. Matrix addition.
8. Matrix multiplication.

9. Inverse of a matrix.

10. Transpose of a matrix

18MMU201	DIFFERENTIAL EQUATIONS	Semester – II 4H – 4C
Instruction Hours / week: L: 4 T: 0 P: 0	Marks: Internal: 40	External: 60 Total: 100 End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- First order exact differential equations, linear homogeneous and non homogeneous equations of higher order with constant coefficients.
- The complete solution of a non-homogeneous differential equation with constant coefficients by the method of undetermined coefficients.
- The transform of a periodic function.
- The applications of the inverse Laplace transform.
- The Euler's equations, method of variation of parameters.
- The predatory-prey model and its analysis, epidemic model of influenza and its analysis.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the concepts of explicit, implicit and singular solutions of a differential equation.
2. Acquire knowledge on linear and bernoulli's equaitons.
3. Know the concepts of population model.
4. Understand the method of solving differential equation using variation of parameters. Identify the applications of differential equations.
5. Know about the concepts of Laplace Transform.
6. Understand the concept of inverse Laplace transform.

UNIT I

DIFFERENTIAL EQUATIONS

Differential equations and mathematical models-General-Particular-Explicit-Implicit and singular solutions of a differential equation.

UNIT II

TYPES OF DIFFERENTIAL EQUATIONS

Exact differential equations and integrating factors-Separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.

UNIT III

SECOND ORDER LINEAR EQUATIONS

General solution of homogeneous equation of second order-Principle of super position for homogeneous equation, Wronskian: its properties and applications-Linear homogeneous and non-Homogeneous equations of higher order with constant coefficients-Euler's equation-Method of undetermined coefficients-Method of variation of parameters.

UNIT IV**LAPLACE TRANSFORMS**

Definition-Sufficient conditions for the existence of the Laplace Transform-Laplace Transform of periodic functions- Some general theorems-Evaluation of integrals using Laplace Transform.

UNIT V**INVERSE LAPLACE TRANSFORMS**

Solving ordinary differential equations with constant coefficients using Laplace Transforms-Solving a system of differential equations using Laplace Transforms.

18MMU202

THEORY OF EQUATIONS

Semester – II
7H – 6C

Instruction Hours / week: L: 6 T: 1 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The solution of Reciprocal and Binomial Equations and properties of the derived functions.
- About the properties of polynomials.
- The concepts of Relations between the roots and coefficients and applications of theorems.
- About algebraic Solution of the Cubic and Biquadratic and Properties of the Derived Functions.
- The algebraic solutions of cubic and biquadratic equations.
- The relation between coefficients of the equation and its roots.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Learn about the properties of polynomials.
2. Find positive, negative and imaginary roots using Descartes rule.
3. Identify the relation between coefficients of the equation and its roots.
4. Familiarize about the transformations of equations.
5. Know about the algebraic solutions of cubic and biquadratic equations.
6. Understand Algebraic Solution of the Cubic and Biquadratic.

UNIT I**GENERAL PROPERTIES OF POLYNOMIALS**

Theorem relating to polynomials when the variable receives large values, similar theorem when the variable receives small values-Continuity of a rational integral function - Form of the quotient and remainder when a polynomial is divided by a Binomial - Tabulation of functions - Graphic representation of a polynomial - Maximum and minimum values of polynomials

UNIT II**GENERAL PROPERTIES OF EQUATIONS**

Theorems relating to the real roots of equations - Existence of a root in the general equation. Imaginary roots - Theorem determining the number of roots of an equation.

Descartes' rule of signs for positive roots - Descartes' rule of signs for negative roots - Use of Descartes' rule in proving the existence of imaginary roots - Theorem relating to the substitution of two given numbers for the variable.

UNIT III

RELATIONS BETWEEN THE ROOTS AND COEFFICIENTS

Theorem - Applications of the theorem - Depression of an equation when a relation exists between two of its roots - The cube roots of unity - Symmetric functions of the roots – Examples - Theorems relating to symmetric functions - Examples.

UNIT IV

TRANSFORMATION OF EQUATIONS

Roots with signs changed - Roots multiplied by a given quantity - Reciprocal roots and reciprocal equations - To increase or diminish the roots by a given quantity - Removal of terms - Binomial coefficients.

Solution of reciprocal and binomial equations: Reciprocal equations - Binomial equations. Propositions embracing their leading general Properties - The special roots of the equation - Solution of binomial equations by circular functions - Examples.

UNIT V

ALGEBRAIC SOLUTION OF THE CUBIC AND BIQUADRATIC

The algebraic solution of the cubic equation - Application to numerical equations - Expression of the cubic as the difference of two cubes - Solution of the cubic by symmetric functions of the roots – Examples.

Properties of the Derived Functions: Graphic representation of the derived function - Theorem relating to the maxima and minima of a polynomial - Rolle's Theorem. Corollary - Constitution of the derived functions

18MMU203	REAL ANALYSIS	Semester – II 8H – 6C
Instruction Hours / week: L: 6 T: 2 P: 0	Marks: Internal: 40	External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The fundamental properties of the real numbers that underpin the formal development of real analysis
- About the extreme points, Root test, Ratio test.
- The alternating series, and series of functions.
- The concepts of real Sequence, Bounded sequence, Cauchy convergence criterion for sequences.
- The basic theorems on monotone sequences and their convergence.
- About the Power series and radius of convergence.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand about the categories of sets.
2. Acquire the knowledge on limits and convergence of sequences.
3. Know the types of test of convergence for series.
4. Familiarize about the basic theorems on monotone sequences.
5. Know about the radius of convergence.
6. Understand the Power series and radius of convergence.

UNIT I

REAL NUMBERS SYSTEM

Finite and infinite sets-Examples of countable and uncountable sets-Real line-Bounded sets-Suprema and infima-completeness property of \mathbb{R} , Archimedean property of \mathbb{R} , intervals.

UNIT II

SEQUENCES

Real Sequence- Bounded sequence- Cauchy convergence criterion for sequences. Limit of a sequence. Limit Theorems. Cauchy's theorem on limits- Order preservation and squeeze theorem Monotone sequences and their convergence (monotone convergence theorem without proof).

**UNIT III
SERIES**

Infinite series. Cauchy convergence criterion for series- Positive term series- Geometric series- comparison test- Convergence of p-series- Root test- Ratio test- Alternating series- Leibnitz's test (Tests of Convergence without proof). Definition and examples of absolute and conditional convergence.

**UNIT IV
MONOTONE SEQUENCES**

Monotone Sequences- Monotone Convergence Theorem. Subsequences- Divergence Criteria-Monotone Subsequence Theorem (statement only)- Bolzano Weierstrass Theorem for Sequences. Cauchy sequence- Cauchy's Convergence Criterion. Concept of cluster points and statement of Bolzano - Weierstrass theorem.

**UNIT V
SEQUENCE AND SERIES OF FUNCTIONS**

Sequence of functions- Series of functions- Point wise and uniform convergence. M-test- Statements of the results about uniform convergence and integrability and differentiability of functions- Power series and radius of convergence.

18MMU211	DIFFERENTIAL EQUATIONS (PRACTICAL)	Semester – II 3H – 2C
Instruction Hours / week: L: 0 T: 0 P: 3		Marks: Internal: 40
		External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Problem-solving through programming.
- Hands-on training using lab components.
- Plotting of second order solution of differential equations and recursive sequences.
- Cauchy's root test and Ratio test by plotting the ratio.
- The exponential growth and decay, the population growth of species or the change in investment return over time.
- The usage of program to solve the differential equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Demonstrate comprehension in fundamental topics of computing, algorithms, computer organization and software systems.
2. Have applied knowledge of areas of computing to create solutions to challenging problems, including specify, design, implement and validate solutions for new problems.
3. Be aware of current research activity in computing through activities including reading papers, hearing research presentations.
4. Know about successfully planning and completing an individual research project in computing or its application.
5. Understand Cauchy's root test and Ratio test by plotting the ratio.
6. Acquire the knowledge on Growth model and Decay model.

List of Practical (Any 8 programs)

1. Plotting of second order solution family of differential equation.
2. Growth model (exponential case only).
3. Decay model (exponential case only).
4. Lake pollution model (with constant/seasonal flow and pollution concentration).
5. Case of single cold pill and a course of cold pills.
6. Limited growth of population (with and without harvesting).
7. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
8. Plotting of recursive sequences.
9. Verify Bolzano-Weierstrass theorem through plotting of sequences and hence identify convergent subsequences from the plot.

10. Study the convergence/divergence of infinite series by plotting their sequences of partial sum.
11. Cauchy's root test by plotting n th roots.
12. Ratio test by plotting the ratio of n^{th} and $(n+1)^{\text{th}}$ term.

18AEC201

ENVIRONMENTAL STUDIES**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The awareness about environmental problems among people.
- About various renewable and nonrenewable resources of the region.
- The appropriate judgments and decisions for the protection and improvement of the earth.
- The concept of Environmental Pollution, effects and control measures of urban and industrial wastes.
- About the concepts of Social Issues and the Environment.
- The causes and effects of Environmental pollution.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Create the awareness about environmental problems among people.
2. Motivate the public to participate in environment protection and improvement.
3. Know about the Role of Information Technology in environment and human health.
4. Develop an attitude of concern for the environment and biodiversity at global.
5. Investigate the Environmental Pollution, effects and control measures of urban and industrial wastes.
6. Solve Environment Protection Act, Wildlife Protection Act. Forest Conservation Act.

UNIT I**ENVIRONMENT**

Definition- Scope and importance- components- Ecosystem Definition- Concept- Scope- importance- Structure and functions of ecosystem. Energy flow- Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II**NATURAL RESOURCES**

Renewable and non-renewable resources: Natural resources and associated problems. Forest resources- Water resources- Mineral resources- Food resources- Energy resources- Land resources : Use and over-utilization- Exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable life styles. Ill-effects of fireworks.

UNIT III**BIODIVERSITY AND ITS CONSERVATION**

Introduction- definition: genetic- Species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: Consumptive use- productive use- social- ethical- Aesthetic and option values. Biodiversity at global- National and local levels. India as a mega-Diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss- Poaching of wildlife- Man-wildlife conflicts.

Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV

ENVIRONMENTAL POLLUTION

Definition- Causes- effects and control measures of Air pollution- Water pollution- Soil pollution- Marine pollution- Noise pollution- Thermal pollution- Nuclear hazards- Solid waste management: Causes- effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Foods- earthquake- cyclone and landslides.

UNIT V

SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development. Urban problems related to energy. Water conservation- rain water harvesting- watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change- global warming- acid rain- ozone layer depletion- nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth- variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

18MMU301

PDE AND SYSTEMS OF ODE

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The various methods of solving Differential equations which is very much used in the field of Engineering.
- The Method of Separation of Variables for solving first order partial differential equations.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The concept of second order linear homogeneous, non-homogeneous differential equations with constant coefficients.
- The application of The Euler method-The modified – Euler method -The Runge-Kutta method.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Understand the basic concepts partial differential equations.
2. Gain knowledge about forming the differential equations method of separation of Variables, Initial Boundary Value Problems and method of successive approximations.
3. Know about the Reduction of second order Linear Equations to canonical forms.
4. Study the Method of separation of variables and Solving the Vibrating String.
5. Understand the Basic Theory of linear systems in normal form.
6. Use the Numerical methods to solve the real world problems.

UNIT I**PARTIAL DIFFERENTIAL EQUATIONS**

Basic concepts and Definitions -Mathematical Problems. First Order Equations: Classification - Construction and Geometrical Interpretation- Method of characteristics for obtaining General Solution of Quasi Linear Equations- Canonical Forms of First-order Linear Equations.

UNIT II**CLASSIFICATION OF SECOND ORDER LINEAR EQUATIONS**

Method of Separation of Variables for solving first order partial differential equations. Derivation of Heat equation -Wave equation and Laplace equation. Classification of second order partial differential equations - linear equations as hyperbolic-Parabolic or Elliptic.

UNIT III**CAUCHY PROBLEM AND WAVE EQUATIONS**

Reduction of second order Linear Equations to canonical forms- The Cauchy problem- The Cauchy-Kowalewskaya theorem -Cauchy problem of an infinite string - Initial Boundary Value Problems -

Semi-Infinite String with a fixed end - Semi-Infinite String with a Free end- Equations with non-homogeneous boundary conditions -Non- Homogeneous Wave Equation.

UNIT IV**METHOD OF SEPARATION OF VARIABLES**

Solving the Vibrating String problems- Solving the Heat Conduction problem - Systems of linear differential equations - Types of linear systems differential operators - An operator method for linear systems with constant coefficients.

UNIT V**BASIC THEORY OF LINEAR SYSTEMS IN NORMAL FORM**

Homogeneous linear systems with constant coefficients -Two Equations in two unknown functions-The method of successive approximations-The Euler method-The modified – Euler method -The Runge-Kutta method.

GROUP THEORY I**Semester – III**
8H – 6C**Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Group homomorphism, isomorphism, automorphism and its related properties.
- The concept of internal and external direct product.
- The properties of cyclic groups, permutations and cosets.
- The concepts Abelian groups, divisible and reduced groups and Torsion group.
- The extension of group structure to finite permutation groups.
- The basic concepts of group actions and their applications.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Expertise on fundamental of groups.
2. Know about Subgroups and its properties.
3. Understand the concept of cyclic groups and its properties.
4. Acquire the knowledge on basic concepts of Permutation group.
5. Apply Cauchy's theorem for finite abelian groups.
6. Understand the concepts of Isomorphism.

UNIT I**GROUPS**

Definition and Examples of Groups - Elementary Properties of Groups.

UNIT II**FINITE GROUPS AND SUBGROUPS**

Terminology and Notation - Subgroup Tests -Examples of Subgroups.

UNIT III**CYCLIC GROUPS**

Properties of Cyclic Groups - Classification of Subgroups of Cyclic Groups.

UNIT IV**PERMUTATION GROUPS**

Definition and Notation - Cycle Notation - Properties of Permutations.

UNIT V**ISOMORPHISM**

Definition and Examples- Cayley's theorem - Properties of isomorphism – Automorphism.

18MMU303A

ANALYTICAL GEOMETRY

Semester III
6H – 4C

Instruction Hours / week: L: 4 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Geometry and its applications in the real world
- Geometric ideas in the language of the mathematician.
- Parabola, Ellipse and Hyperbola.
- The relation between areas of a triangle and its projection, relation between areas of a polygon.
- The General Equations Tracing of Curves.
- The fundamental theorems of isomorphism.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Acquiring knowledge of straight lines and area of triangle..
2. Know about Reflection properties of parabola.
3. Acquire the knowledge on basic concepts of Hyperbola and their applications.
4. Study the angles between two directed lines, the projection of a segment.
5. Understand the General Equations Tracing of Curves.
6. Know about particular cases of Conic sections.

UNIT I**COORDINATES**

Lengths of straight lines and areas of triangle- Polar coordinates. Locus- Equation to a locus. Straight line: Equation of a straight line- angle between two straight line. Length of a perpendicular techniques for sketching parabola- ellipse and hyperbola. Reflection properties of parabola.

UNIT II**PARABOLA AND ELLIPSE**

Classification of quadratic equations representing lines. Parabola : Loci Connected with the parabola - Three normals passing through a given points - Parabola referred to two tangent as axes. Ellipse: Auxiliary circle and eccentric angle - Equation to a tangent - Some properties of Ellipse - Poles and polar - Conjugate diameters - Four normals through any points.

UNIT III**HYPERBOLA**

Asymptotes – equations referred to the asymptotes axes-One variables examples. Spheres: The Equation of a sphere - Tangents and tangent plane to a sphere - The radical plane of two spheres cylindrical surfaces. Illustrations of graphing standard quadric surfaces like cone, Ellipsoid.

UNIT IV**THE ANGLES BETWEEN TWO DIRECTED LINES**

The projection of a segment - Relation between a segment and its projection - The projection of a broken line - the angle between two planes - Relation between areas of a triangle and its projection - Relation between areas of a polygon.

UNIT V**POLAR EQUATION TO A CONIC**

General Equations Tracing of Curves- Particular cases of Conic sections- Transformation of equations to center as origin- Equations to asymptotes - Tracing a parabola - Tracing a central conic - Eccentricity and foci of general conic.

18MMU303B

COMPUTER GRAPHICS

Semester – III
6H – 4C

Instruction Hours / week: L: 4 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The scope of this course is to provide students with distinguished knowledge in the field of two- and three-dimensional computer graphics for Animation.
- Different hardware used for graphical requirement.
- How to display 3D objects in a 2D display devices using projection techniques.
- How to create realistic images using color and shading techniques.
- Computer Animation and Design of Animation Sequences.
- Designing and implementing practical graphic solutions to challenging problems in different application domains.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Transfer to the students the skills required for designing and implementing practical graphic solutions to challenging problems in different application domains and make them a competent product.
2. Understand different hardware used for graphical requirement.
3. Perform visual computations for geometrical drawings.
4. Display 3D objects in a 2D display devices using projection techniques.
5. Create realistic images using color and shading techniques.
6. Developed Computer Animation and Design of Animation Sequences.

UNIT I**A SURVEY OF COMPUTER GRAPHICS**

Video Display Devices - Refresh Cathode Ray Tubes - Raster Scan Displays - Random Scan Displays - Color CRT Monitors - Direct - View Storage Tubes - Flat Panel Displays - Three Dimensional Viewing Devices - Raster Scan and Random Scan graphic storages Displays processors and Character generators, color display techniques.

UNIT II**INPUT DEVICES**

Keyboards - Mouse - Track Ball and Space ball - Joysticks - Data Glove - Digitizers - Image Scanners - Touch Panels - Light Pens - Voice Systems. Hard Copy Devices: Printers and Plotters, Interactive input/output devices

Point, lines and Curves : Scan conversion, Line Drawing Algorithms: DDA Algorithm - Bresenham's Line Algorithm. Circle Generating Algorithms: Mid Point Circle Algorithm, Ellipse Generating Algorithm, Conic-section generation, polygon filling anti aliasing.

UNIT III**TWO DIMENSIONAL GEOMETRIC TRANSFORMATIONS**

Basic Transformations: Translation –Rotation – Scaling - Composite Transformations: Translations – Rotations - Scalings. General Pivot Point Rotation - General Fixed Point Scaling. Two – Dimensional Viewing: The Viewing Pipeline - Window to viewport Transformation - Clipping Operations: Point Clipping - Line Clipping Algorithms- Cohen Sutherland Line Clipping - Polygon Clipping: Sutherland – Hodgeman Polygon Clipping Algorithm - Text Clipping.

UNIT IV**THREE DIMENSIONAL TRANSFORMATIONS**

Three – Dimensional Display methods, Three – Dimensional Transformations : Translation –Rotation – Scaling, Three Dimensional viewing : Viewing pipeline - Viewing coordinates - Parallel Projection – . Perspective Projections.

UNIT V**VISIBLE SURFACE DETECTION METHODS**

Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - Area Sub division Method.

Computer Animation: Design of Animation Sequences-General Computer Animation functions – Raster Animations – Computer animation Languages – Key Frame Systems – Motion Specifications.

18MMU304**PHYSICS I****Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The basic theories and experiments in Physics.
- The fundamentals of physics.
- About the electronic component like Diode, transistor etc.
- The analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
- The graphical relationship of resistance, capacitor and inductor.
- About the circuit connection.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Demonstrate proficiency in mathematics and the mathematical concepts to understand physics.
2. Design and conduct an experiment (or series of experiments) demonstrating their understanding of the scientific method and processes.
3. Demonstrate an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
4. Know about the Laws of thermodynamics.
5. Know about the Intrinsic and extrinsic semiconductor.
6. Understand the graphical relationship of resistance, capacitor and inductor.

UNIT-I**PROPERTIES OF MATTER**

Elastic constants of an isotropic solid -Stress – Strain - Relations connecting them - Poisson's ratio - Bending of beams - Uniform and non-uniform bending - Bending moment of a bent beam - cantilever - Static and dynamic methods - Torsion in a wire - Rigidity modulus determination by Static and dynamic methods. Surface tension and Surface energy- Pressure difference across a spherical surface- Pressure difference across a curved surface.

UNIT-II**MECHANICS**

Motion of bodies in 2-D - Newton's laws - projectile motion – range- maximum height – projectile from space flight- Rotational motion – Rotation with constant angular acceleration –angular momentum of particles – rigid body – spinning top – conservation of angular momentum – Planetary motion – Kepler's laws – universal law of gravitation.

UNIT-III**THERMAL PHYSICS**

Laws of thermodynamics – Reversible and irreversible process – Heat engine – Carnot's theorem. Black body – Stefan's law – Newton's law of cooling – Newton's law of cooling from Stefan's law – Experimental determination of Stefan's constant – Wien's displacement law – Rayleigh – Jean's law – Planck's law.

UNIT-IV

OPTICS AND LASER PHYSICS

Reflection – Refraction – Snell's law – Total internal reflection – Interference – Diffraction – Polarization – Coherence. Stimulated emission and absorption – Einstein's theory of radiation – population inversion – optical pumping – meta stable state – conditions for laser actions – Ruby laser – Helium – neon laser – applications of lasers – Raman effect – Raman shift – stokes and anti-stokes lines.

UNIT-V

BASIC ELECTRONICS

Intrinsic and extrinsic semiconductor – PN Junction diode – Biasing of PN junction – V-I characteristics of junction diode – Rectifiers – Half wave – Full wave and bridge rectifiers – Zener diode – Characteristics of Zener diode – Voltage regulator – Transistor – Characteristics of transistor – CB, CE mode – Transistors as an amplifier.

18MMU311

PDE AND SYSTEMS OF ODE - PRACTICAL

Semester – III
4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The various methods of solving Differential equations which is very much used in the field of Engineering.
- The Method of Separation of Variables for solving first order partial differential equations.
- The basic concepts of Reduction of second order Linear Equations to canonical forms
- The Systems of linear differential equations and its applications.
- The Equations with non-homogeneous boundary conditions.
- The Canonical Forms of First-order Linear Equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Gain knowledge about forming the differential equations method of separation of Variables, Initial Boundary Value Problems and method of successive approximations.
2. Understand the elementary theory of partial differential equations, and solve it using various techniques.
3. Determine solutions to second order linear homogeneous, non-homogeneous differential equations with constant coefficients.
4. Solve the Canonical Forms of First-order Linear Equations.
5. Understand the Equations with non-homogeneous boundary conditions.
6. The application of The Euler method-The modified – Euler method -The Runge-Kutta method.

List of Practical:

1. Solution of second order ordinary differential equations with initial conditions.
2. Solving Non Homogeneous Wave Equation.
3. Solving the Heat Conduction Problem.
4. Solving two dimensional Laplace equations.
5. Solving system of linear differential Equations.
6. Solution of differential equation using Euler method.
7. Solution of differential equation using Modified Euler method.
8. Solution of differential equation using 4th order Runge-Kutta method.

18MMU312

PHYSICS-I-PRACTICAL**Semester – III**
4H – 2C**Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

This course enables the students to learn

- The basic understanding of laboratory technique and to educate and motivate the students in the field of Physics.
- A deep knowledge of fundamentals of optics.
- The practical knowledge by applying the experimental methods to correlate with the Physics theory.
- The usage of electrical and optical systems for various measurements.
- The intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- The physical Principles and applications of Electronics.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Perform basic experiments in mechanics and electricity and analyze the data.
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Know the physical Principles and applications of Electronics.
4. Apply the analytical techniques and graphical analysis to the experimental data.
5. Apply the various procedures and techniques for the experiments.
6. Use the different measuring devices and meters to record the data with precision.
7. Apply the mathematical concepts/equations to obtain quantitative results

ANY EIGHT EXPERIMENTS

1. Young's Modulus-Non Uniform bending-Pin and Microscope
2. Young's Modulus-Static cantilever
3. Acceleration due to gravity-Compound pendulum
4. Determination of spring constant of the given spring.
5. Determine the radius of capillary tube using microscope.
6. Refractive Index of a solid prism (I-d) curve-Spectrometer
7. Co-efficient of thermal conductivity-Lee's disc method
8. Wavelength of spectral lines -Grating-minimum deviation method-Spectrometer.
9. Characteristics of a Zener and Junction diode
10. μ of a lens-Newton's ring method

11. Thickness of a thin wire-Air wedge method
12. Determine the surface tension - Drop weight method
13. Determine the wavelength of He-Ne laser.
14. Determination of the Coefficient of Viscosity of a given liquid using Burette method
15. Construct a single stage amplifier using transistor

18MMU401

NUMERICAL METHODS

Semester – IV
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The basic concepts of numerical methods.
- The Numerical integration and differentiation, numerical solution of ordinary differential equations.
- The Engineering problems which are impossible to solve by analytical means.
- Numerical methods to solve linear system of equations.
- The numerical solution of initial value problems and boundary value problems.
- The appropriate numerical methods to solve algebraic and transcendental equations.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Study the concept of Newton's Method.
2. Realize the system of linear algebraic equations along with specified methods.
3. Know about the basic concepts of Interpolation.
4. Understand the Gregory forward and backward difference interpolation.
5. Familiar with numerical integration and differentiation, numerical solution of ordinary differential equations.
6. Use the solutions of differential equations by Runge-Kutta methods.

UNIT I**CONVERGENCE-ERRORS**

Relative- Absolute- Round off-Truncation. Transcendental and Polynomial equations: Bisection method - Newton's method - False Position method - Secant method - Rate of convergence of these methods.

UNIT II**SYSTEM OF LINEAR ALGEBRAIC EQUATIONS**

Gaussian Elimination - Gauss Jordan methods – Gauss Jacobi method - Gauss Seidel method and their convergence analysis – LU decomposition - Power method.

UNIT III**INTERPOLATION**

Lagrange and Newton's methods. Error bounds - Finite difference operators. Gregory forward and backward difference interpolation – Newton's divided difference – Central difference – Lagrange and inverse Lagrange interpolation formula.

UNIT IV**NUMERICAL DIFFERENTIATION AND INTEGRATION**

Gregory's Newton's forward and backward differentiation- Trapezoidal rule-Simpson's rule- Simpsons 3/8th rule- Boole's Rule.Midpoint rule-Composite Trapezoidal rule- Composite Simpson's rule.

UNIT V**ORDINARY DIFFERENTIAL EQUATIONS**

Taylor's series - Euler's method – modified Euler's method - Runge-Kutta methods of orders two and four.

18MMU402

GROUP THEORY II

Semester – IV
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Group homomorphism, isomorphism, automorphism and its related properties.
- Different types of groups such as normal subgroups, factor groups
- Familiar with various direct product of groups.
- Sylow's theorems, Cauchy's theorem and Index theorem.
- The concept of internal and external direct product.
- The applications of group actions and Generalized Cayley's theorem.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Expertise on fundamental theorems of cosets and Lagrange's.
2. Know about external direct products and its developments.
3. Understand the concept of normal subgroups and factor groups.
4. Acquire the knowledge on basic concepts of group homomorphism.
5. Study about fundamental theorems of Abelian groups.
6. Understand the Isomorphism Classes of Abelian Groups

UNIT I**COSETS AND LAGRANGE'S THEOREM**

Properties of Cosets - Lagrange's Theorem and Consequences - An Application of Cosets to Permutation Groups.

UNIT II**EXTERNAL DIRECT PRODUCTS**

Definition and Examples - Properties of External Direct Products - The Group of Units Modulo n as an External Direct Product - Applications.

UNIT III**NORMAL SUBGROUPS AND FACTOR GROUPS**

Normal Subgroups - Factor Groups - Applications of Factor Groups - Internal Direct Products.

UNIT IV**GROUP HOMOMORPHISMS**

Definition and Examples - Properties of Homomorphisms - The First Isomorphism Theorem.

UNIT V**FUNDAMENTAL THEOREM OF FINITE ABELIAN GROUPS**

The Fundamental Theorem - The Isomorphism Classes of Abelian Groups - Proof of the Fundamental Theorem.

GRAPH THEORY**Semester – IV**
6H – 4C**Instruction Hours / week: L: 4 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Definitions and Basic properties of graphs.
- The fundamental concepts in graph theory.
- A blended method to prove theorems.
- The concept of Trees, spanning trees and its properties.
- Basic concepts in graph theory and a variety of different problems in Graph Theory.
- Gain the knowledge of various graphs algorithms will also be taught along with its analysis.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Understand and Apply the fundamental concepts in graph theory.
2. Understand basic results related with Eulerian and Hamiltonian graphs.
3. Study about Chromatic polynomial, Matching and Covering.
4. Know about the fundamental concepts of trees.
5. Understand the Spanning trees, rank and nullity.
6. Mastery in Dijkstra's algorithm-Floyd- Warshall algorithm

UNIT I**GRAPHS**

Definition-Examples and basic properties of graphs-Directed Graphs-Types of Directed Graphs-Pseudo graphs-Complete graphs-Bi- partite graphs- Isomorphism of graphs.

UNIT II**PATHS AND CIRCUITS**

Paths and circuits-Strongly Connected Components -Eulerian circuits-Hamiltonian cycles Random graphs-Planargraphs-Networks.

UNIT III**GRAPH COLORING**

The adjacency matrix-weighted graph-Incidence matrix-Submatrices-Circuit Matrix-Path Matrix - Chromatic Number -Chromatic polynomial, Matching –Covering-Four Color Problem.

UNIT IV**TREES**

Trees and its properties- minimally connected graph -Pendant vertices in a tree -Distance and centers in a tree-rooted and binary tree-Levels in binary tree-height of a tree-Spanning trees -rank and nullity.

UNIT V**APPLICATIONS OF GRAPHS**

Travelling salesman's problem-shortest path-Dijkstra's algorithm-Floyd- Warshall algorithm.

OPERATING SYSTEM: LINUX

Semester – IV
6H – 4C

Instruction Hours / week: L: 4 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The main components of OS and their working.
- The memory allocation methods, page replacement algorithms, file allocation methods, multi-threading, process synchronization, and CPU scheduling.
- The basic components of a computer operating system, and the interactions among the various components.
- The capabilities and limitations of computer operating systems, process management, processor scheduling, deadlocks, memory management, secondary memory management, file management and I/O systems.
- Introduce the concepts of process and thread and their scheduling policies.
- Design the components of operating system.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiar with the memory allocation methods, page replacement algorithms, file allocation methods, multi-threading, process synchronization, and CPU scheduling.
2. Describe the main components of OS and their working.
3. Explain the concepts of process and thread and their scheduling policies.
4. Solve synchronization and deadlock issues.
5. Compare the different techniques for managing memory, I/O, disk and files.
6. Design components of operating system.

UNIT I**INTRODUCTION**

Mainframe systems Desktop Systems – Multiprocessor systems – distributed systems – real time systems. Process: - Process concepts – Operation on process – cooperation process - Inter process Communication - Mutual Exclusion - Critical sections- primitives – Semaphores – Deadlock: System Model, Deadlock characterization, Deadlock prevention, avoidance, detection, recovery from deadlock.

UNIT II**STORAGE MANAGEMENT**

Memory Management - swapping- Contiguous memory allocation – paging, segmentation – segmentation with paging – Virtual memory :Virtual storage organization – Demand Paging, Process Creation – Page replacement – Thrashing.

UNIT III**PROCESSOR SCHEDULING**

Preemptive scheduling : - Scheduling Criteria – Scheduling Algorithms – FCFS- SJF- Priority – RoundRobin –Multilevel Queue – Multilevel Feedback Queue . Multiprocess schedule: Real time schedule, Algorithm evaluation: Deterministic Modeling, Queue Model, Simulation.

UNIT IV

FILE SYSTEMS

Introduction – File System Concepts – Access Methods – Directory structure – File Sharing – Allocation Methods – Free space management –Efficiency and performance – Recovery Disk Performance Optimization: Introduction – Disk structure – Disk scheduling – Disk management.

UNIT V

LINUX-THE OPERATING SYSTEM

Linux History- Linux features- Linux distributions- Linux's relationship to Unix- Overview of Linux Architecture- Installation- Start up scripts- System process (an overview)- Linux Security- The Ext2 and Ext3 File Systems: General characteristics of the Ext3 File System- File permissions- User Management: Types of users- The powers of Root- Managing users (adding and deleting) : using the command line and GUI Tools.

Resource Management in Linux: File and Directory management- System calls for files process management- Signals- IPC: Pipes- FIFOs- System V IPC- Message Queues- System calls for processes- Memory Management- Library and System calls for Memory.

18MMU404**PHYSICS-II****Semester – IV
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Basic knowledge on material properties.
- Magnetism and digital electronics.
- To educate and motivate the students in the field of science.
- The unit cell for some crystal structure, be able to draw the atomic packing arrangement for a specific crystallographic plane.
- The use of X-ray diffraction measurements in determining crystalline structures.
- The relation in between Electromagnetic theory.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Explain how physics applies to phenomena in the world around them.
2. Recognize how and when physics methods and principles can help address problems in their major and then apply those methods and principles to solve problems.
3. Study the theory of Photoelectric effect.
4. List different types of atomic spectra.
5. Understand the importance of Mosley's law and Bragg's law.
6. Understand the concept of digital electronics.

UNIT – I**ELECTROSTATICS**

Coulombs law – electric field – Gauss's law and its applications – potential – potential due to various charge distribution. Parallel plate capacitors – dielectrics- current – galvanometer – voltmeter – ammeter- potentiometric measurements.

UNIT - II**MAGNETISM**

Magnetic field – Biot Savart's law – B due to a solenoid – Amperes law – Faradays law of induction – Lenz's law. Magnetic properties of matter –Dia, para and ferro - Cycle of magnetization – Hysteresis – B-H curve – Applications of B-H curve.

UNIT - III**MODERN PHYSICS**

Einstein's Photoelectric effect-characteristics of photoelectron –laws of photoelectric emission- Einstein's photo electric equations- Compton effect-matter waves-De-Broglie Hypothesis. Heisenberg's uncertainty principle-Schrödinger's equation- particle in a box.

UNIT-IV**ATOMIC AND NUCLEAR PHYSICS**

Atom Models : Sommerfield's and Vector atom Models – Pauli's exclusion Principle – Various quantum numbers and quantization of orbits. X-rays : Continuous and Characteristic X-rays – Mosley's Law and importance – Bragg's Law.

Nuclear forces –characteristics - nuclear structure by liquid drop model – Binding energy – mass defect – particle accelerators – cyclotron and betatron – nuclear Fission and nuclear Fusion.

UNIT - V**DIGITAL ELECTRONICS**

Decimal – binary – octal and hexadecimal numbers– their representation, inter-conversion, addition and subtraction, negative numbers. Sum of products – product of sums – their conversion – Simplification of Boolean expressions - K-Map – min terms – max terms - (2, 3 and 4 variables). Basic logic gates – AND, OR, NOT, NAND, NOR and EXOR gates – NAND and NOR as universal building gates – Boolean Algebra – Laws of Boolean Algebra – De Morgan's Theorems – Their verifications using truth tables.

NUMERICAL METHODS - PRACTICAL**Semester – IV**
4H – 2C**Instruction Hours / week: L: 0 T: 0 P: 4 Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Exercise user defined functions to solve real time problems.
- Illustrate flowchart and algorithm to the given problem.
- The basic structure of the programme, declaration and usage of variables.
- The basic MATLAB (matrix laboratory) programme.
- The usage of Matlab in order to facilitate understanding and visualization of mathematical problems
- Practical approach to apply the acquired knowledge and skills in professional and specialist courses.

Course outcomes (COs)

On successful completion of this course, the student will be able to

1. Acquire the basic knowledge of MATLAB and explore the structure of the numerical methods.
2. Use different memory allocation methods.
3. Deal with different input/output methods.
4. Use different data structures.
5. Express their ideas in terms of the syntax of the computer package MATLAB.
6. Apply the MATLAB prog
- 7.
8. ramme in the real world situation involving numerical problems.

List of Practical (using MATLAB/Mathematica/ SCILAB)
(Any 10 Programs)

1. Calculate the sum $1/1 + 1/2 + 1/3 + 1/4 + \dots + 1/N$.
2. To find the absolute value of an integer.
3. Enter 100 integers into an array and sort them in an ascending order.
4. Bisection Method.
5. Newton Raphson Method.
6. Secant Method.
7. Regula Falsi Method.
8. LU decomposition Method.
9. Gauss-Jacobi Method.

10. Gauss-Seidel Method.
11. Lagrange Interpolation or Newton Interpolation.
12. Simpson's rule.

18MMU412

PHYSICS-II-PRACTICAL

Semester – IV
4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objective

This course enables the students to learn

- The concepts in integrated chips.
- The optical and electronic properties of solids through experimentations.
- The usage of electrical and optical systems for various measurements.
- The intellectual communication skills and discuss the basic principles of scientific concepts in a group.
- The physical Principles and applications of Electronics.
- The various procedures and techniques for the experiments.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Perform basic experiments in mechanics, heat and electricity and analyze the data.
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Know the physical Principles and applications of Electronics.
4. Apply the various procedures and techniques for the experiments.
5. Apply the mathematical concepts/equations to obtain quantitative results.
6. Develop basic communication skills through working in groups in performing the laboratory experiments and by interpreting the results.

Any 8 Experiments

1. Determine the magnetic dipole moment (m) of a bar magnet - Tan A
2. Determine the magnetic dipole moment (m) of a bar magnet - Tan B
3. Field Intensity-Circular coil- Vibration magnetometer
4. Moment of a magnet-Circular coil-Deflection Magnetometer
5. Study of logic gates using IC's.

6. Study of NOR gate as Universal building block.
7. Study of NAND gate as Universal building block.
8. Verification of Basic logic gates using discrete components.
9. To study the variation in current and voltage in a series LCR circuit
10. To study the variation in current and voltage in a parallel LCR circuit
11. Transistor characteristics – CE & CB

18MMU501A

MULTIVARIATE CALCULUSSemester – V
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The basics concept of functions of several variables.
- Mastery in the skills of limit and continuity functions of two variables.
- Definition and compute partial derivatives, directional derivatives and differentials.
- Find local extreme values of functions of several variables, test for saddle points, examine the conditions for the existence of absolute extreme values.
- Differential, integral and double integral calculus for functions of more than one variable.
- The mathematical tools and methods are used extensively in the physical sciences, engineering and economics.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the functions of several variables.
2. Know about the Extrema of functions of two variables.
3. Use double, triple and its applications.
4. Know about the change of variables in double integrals and triple integrals
5. Synthesize the key concepts of line integrals and its applications.
6. Ability to apply the knowledge of Green's theorem and Stoke's theorem

UNIT I**FUNCTIONS OF SEVERAL VARIABLES**

Limit and continuity of functions of two variables, partial differentiation, total differentiability and differentiability, sufficient condition for differentiability. Chain rule for one and two independent parameters-Directional derivatives, the gradient-Maximal and normal property of the gradient-Tangent planes.

UNIT II**EXTREMA OF FUNCTIONS OF TWO VARIABLES**

Method of Lagrange multipliers, constrained optimization problems, Definition of vector field, divergence and curl.

UNIT III**DOUBLE INTEGRATION OVER RECTANGULAR REGION**

Double integration over non-rectangular region, double integrals in polar co-ordinates-Triple integrals, Triple integral over a parallelepiped and solid regions. Volume by triple integrals-Cylindrical and spherical co-ordinates. Change of variables in double integrals and triple integrals.

UNIT IV**LINE INTEGRALS**

Applications of line integrals-Mass and Work. Fundamental theorem for line integrals- Conservative vector fields-Independence of path.

UNIT V**GREEN'S THEOREM**

Surface integrals-Integrals over parametrically defined surfaces. Stoke's Theorem-The Divergence theorem.

18MMU501B

THEORY OF REAL FUNCTIONSSemester – V
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The solution of Reciprocal and Binomial Equations and properties of the derived functions.
- About the relations between the roots and coefficients.
- The concept of continuous functions and limits of functions.
- The Applications of mean value theorem to inequalities and approximation of polynomials.
- Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions.
- The transformations of equations.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Learn about the Limits of functions.
2. Understand uniform continuity, non-uniform continuity criteria, uniform continuity theorem.
3. Know about the, algebra of differentiable functions.
4. Familiarize about the sequence of functions.
5. Know about the infinite series.
6. Understand the concept of series of functions.

UNIT I**LIMITS**

Limits of Functions-Limit theorems-some Extensions of the Limit concept.

UNIT II**CONTINUOUS FUNCTIONS**

Continuous Functions-Combinations of Continuous Functions-Continuous functions on Intervals-Uniform Continuity-Continuity and Gauges-Monotone and Inverse Functions.

UNIT III**DIFFERENTIATION**

The Derivative-The Mean Value theorem-L'Hospital rules-Taylor's theorem.

UNIT IV**SEQUENCES OF FUNCTIONS**

Pointwise and Uniform Convergence-Interchange of Limits-The Exponential and logarithmic Functions-the trigonometric functions.

UNIT V**INFINITE SERIES**

Absolute Convergence-Tests for Absolute Convergence-Tests for Non-absolute Convergence-Series of functions.

18MMU502A	RING THEORY AND LINEAR ALGEBRA I	Semester – V 8H – 6C
Instruction Hours / week: L: 6 T: 2 P: 0	Marks: Internal: 40	External: 60 Total: 100 End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Linear transformations, homomorphism, isomorphism and its properties.
- The basic definitions of Rings, subrings, vector spaces, subspaces, algebra of subspaces, isomorphism and its properties.
- The concept of ideals and maximal ideals
- Fundamental characteristics of vector spaces.
- Concepts of linear transformations and their role in modern mathematics.
- The concept of ring homomorphisms, properties of ring homomorphisms.

Course Outcomes (COs)

On successful completion of this course, the student will be able to:

1. Understand the concept of rings, subrings, vector spaces, subspaces, algebra of subspaces, isomorphism and its properties.
2. Understand the concept of ring homomorphisms, properties of ring homomorphisms.
3. Know about the Vector spaces and dimension.
4. Analyze Linear transformations and matrix representation of a linear transformation.
5. Study change of coordinate matrix and its properties.
6. Understand Isomorphism theorems I, II and III, field of quotients.

UNIT I

RINGS

Definition and examples of rings- properties of rings-Subrings- Integral domains and fields- characteristic of a ring. Ideal- ideal generated by a subset of a ring- factor rings- operations on ideals- prime and maximal ideals.

UNIT II

RING HOMOMORPHISMS

Ring homomorphisms-Properties of ring homomorphisms-Isomorphism theorems I, II and III, field of quotients.

UNIT III

VECTOR SPACES

Vector spaces-Subspaces-Algebra of subspaces- quotient spaces- Linear combination of vectors- Linear span-Linear independence-Basis and dimension-Dimension of subspaces.

UNIT IV

LINEAR TRANSFORMATIONS

Linear transformations- Null space- Range- rank and nullity of a linear transformation- matrix representation of a linear transformation- Algebra of linear transformations.

UNIT V**ISOMORPHISM**

Isomorphism: Isomorphism theorems-Invertibility and isomorphisms-Change of coordinate matrix.

SUGGESTED READINGS

18MMU502B**NUMBER THEORY****Semester – V**
8H – 6C**Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Numbers, functions and its properties.
- Beauty and clarity of number theoretic functions.
- The challenging problems in number theory.
- How number theory is related to and used in cryptography.
- The concepts of divisibility, congruence, greatest common divisor, prime, and prime-factorization.
- The Law of Quadratic Reciprocity and other methods to classify numbers as primitive roots, quadratic residues, and quadratic non-residues.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the Linear Diophantine equation,
2. Know about the Fermat's Little theorem.
3. Mastery in the Mobius Inversion formula.
4. Familiar with the concepts of primitive roots
5. Acquire knowledge of the Legendre symbol and its properties.
6. Acquire concepts of Public key encryption, RSA encryption and decryption

UNIT I**DIVISIBILITY, PRIMES AND CONGRUENCES**

Linear Diophantine equation- Prime counting function- statement of prime number theorem- Goldbach conjecture- linear congruences- Complete set of residues- Chinese Remainder theorem.

UNIT II**FERMAT'S LITTLE THEOREM**

Fermat's Little theorem- Wilson's theorem. Number theoretic functions- Sum and number of divisors- Totally multiplicative functions - Definition and properties of the Dirichlet product.

UNIT III**NUMBER THEORETIC FUNCTIONS**

The Mobius Inversion formula- The greatest integer function- Euler's phi- function- Euler's theorem reduced set of residues-Some properties of Euler's phi-function.

UNIT IV**PRIMITIVE ROOTS AND INDICES**

Order of an integer modulo n- primitive roots for primes- Composite numbers having primitive roots- Euler's criterion- The Legendre symbol and its properties.

UNIT V**THE QUADRATIC RECIPROCITY LAW**

Quadratic reciprocity-Quadratic congruences with composite moduli. Public key encryption- RSA encryption and decryption- the equation $x^2 + y^2 = z^2$ - Fermat's Last theorem.

SUGGESTED READINGS

PROBABILITY AND STATISTICS**Semester – V**
8H – 6C**Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective:**

This course enables the students to learn

- Basic concepts in probability theory and statistical measures.
- Commonly used probability distributions (both discrete and continuous).
- Central Limit theorem and their applications in various disciplines.
- The nature of uncertainty and randomness and set up data collection methods that are free of bias.
- Appropriate methods to draw conclusions based on sample data by constructing and/or evaluating tables, graphs, and numerical measures of characteristics of data.
- The foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the basic concepts of Measures of central tendency.
2. Know about the Probability Concepts and its properties.
3. Know about the Discrete distributions and its types.
4. Study the Continuous distributions and its types.
5. Understand the Basic Theory of Chebyshev's inequality.
6. Chapman-Kolmogorov equations, classification of states.

UNIT I**BASICS OF STATISTICS**

Meaning and definition of statistics-Frequency Distribution Measures of central tendency: Arithmetic Mean- Median- Mode. Measures of dispersion – Range- Coefficient of range- Quartile deviation- Coefficient of Quartile deviation- Standard deviation and Coefficient of variation.

UNIT II**PROBABILITY CONCEPTS**

Trial- Event- Sample space- mutually exclusive event- Exclusive and exhaustive events- Dependent and independent events- simple and compound events- Mathematical properties- Permutation and combination- Probability axioms- Addition and multiplication theorem- Real random variables (discrete and continuous)- Cumulative distribution function- probability density functions- mathematical expectation- moments- Moment generating function- characteristic function.

UNIT III**DISCRETE DISTRIBUTIONS**

Binomial distribution- Poisson distribution- And its properties- Joint probability density functions- Marginal and conditional distributions- Expectation of function of two random variables- Conditional expectations- Independent random variables.

UNIT IV**CONTINUOUS DISTRIBUTIONS**

Uniform distribution- normal distribution- Standard normal distribution- exponential distribution. Joint cumulative distribution function and its properties- Joint probability density functions (No derivations) and simple problems. Bivariate distribution- Correlation coefficient- joint moment generating function (jmgf) and calculation of covariance (from jmgf)- Linear regression for two variables.

UNIT V**LIMIT THEOREMS AND MARKOV CHAINS**

Chebyshev's inequality- Statement and interpretation of (weak) law of large numbers and strong law of large numbers- Central Limit theorem for independent and identically distributed random variables with finite variance- Markov Chains- Chapman-Kolmogorov equations- classification of states.

18MMU503B

BOOLEAN ALGEBRA AND AUTOMATA THEORY**Semester – V**
8H – 6C**Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Lattice and algebraic system, Basic properties of algebraic systems
- Finite Automata and regular languages
- The foundations of computability theory
- A strong background in reasoning about finite state automata and formal languages.
- Mathematical arguments using logical connectives and quantifiers.
- The various categories of languages and grammars in the Chomsky hierarchy.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand how lattices and Boolean algebra are used as tools and mathematical models in the study of networks.
2. Define various categories of automata.
3. Context free grammars and pushdown automata.
4. Understand Turing machine as a model of computation.
5. Define the various categories of Undecidability.
6. Knowledge about Post Correspondence Problem.

UNIT I**LATTICES AND BOOLEAN ALGEBRAS**

Definition of ordered set with examples and basic properties of ordered sets- Maps between ordered sets - Duality principle- lattices as ordered sets- Lattices as algebraic structures- Sublattices- Products and homomorphisms- Modular and distributive lattices.

Boolean algebras: Boolean polynomials- Minimal forms of Boolean polynomials- Quinn- McCluskey method- Karnaugh diagrams- Switching circuits and applications of switching circuits.

UNIT II**THE CENTRAL CONCEPT OF AUTOMATA**

Alphabets- strings- and languages. Finite Automata and Regular Languages: Deterministic and non-Deterministic finite automata- Regular expressions-Regular languages and their relationship with finite automata- Pumping lemma and closure properties of regular languages.

UNIT III**CONTEXT FREE GRAMMARS AND PUSHDOWN AUTOMATA**

Context free grammars (CFG)- Parse trees-ambiguities in grammars and languages- Pushdown automaton (PDA) and the language accepted by PDA- deterministic PDA- Non- deterministic PDA-

properties of context free languages-normal forms- pumping lemma- Closure properties- Decision properties.

UNIT IV**TURING MACHINES**

Turing machine as a model of computation- Programming with a Turing machine- Variants of Turing machine and their equivalence.

UNIT V**UNDECIDABILITY**

Recursively enumerable and recursive languages- Undecidable problems about Turing machines: halting problem- Post Correspondence Problem and undecidability problems About CFGs.

18MMU504**INTRODUCTION TO ACCOUNTING****Semester – V
6H – 4C****Instruction Hours / week: L: 4 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The fundamental accounting concepts and principles.
- The capability to perform the basic accounting functions.
- The recognition, valuation, measurement and recording of the most common business transactions and the preparation of accounting statements.
- the “Fundamental Issues in Accounting” and comprises.
- How people analyze the corporate financial under different conditions and understand why people describe the financial statements in different manner.
- The Financial Statement Analysis associate with Financial Data in the organization.

Course Outcomes (COs)

On successful completion of this course, the student will be able to:

1. Use the fundamental accounting equation to analyze the effect of business transactions on an organization's accounting records and financial statements.
2. Enrich the ability to use a basic accounting system to create (record, classify, and summarize) the data needed to solve a variety of business problems.
3. Develop the ability to use accounting concepts, principles, and frameworks to analyze and effectively communicate information to a variety of audiences.
4. Promote the ability to use accounting information to solve a variety of business problems.
5. Demonstrate the applicability of the concept of Accounting to understand the managerial Decisions and financial statements.
6. Apply the Financial Statement Analysis associate with Financial Data in the organization.

UNIT I**INTRODUCTION TO ACCOUNTING**

Meaning and Need for Accounting – Definition and Objectives of Accounting – Advantages and Limitations of Accounting – Accounting Rules – Bases of Accounting - Basic accounting concepts and conventions. Methods of Accounting – Double Entry system – Types of Accounts – Double Entry book keeping – Journals and Ledger Accounts.

UNIT II**SUBSIDIARY BOOKS**

Purchase Book – Sales Book – Purchase return Book and Sales return Book – Cash Book Simple Cash Book – Two Column Cash Book – Three Columnar Cash Book – Trial balance – Errors – Rectifications of Errors – Bank Reconciliation Statement .

UNIT III

MANUFACTURING ACCOUNT

Trading Account – Profit & Loss Account – Balance sheet – Problems with simple Adjustments.

UNIT IV

AVERAGE DUE DATE AND ACCOUNT CURRENT

Determination of due date - Average due date as basis for calculation of interest. Account Current – Meaning and Definition – Procedure for calculating days of interest - Preparation of Account – Product Method – Red-ink Interest – Interest table method.

UNIT V

DEPRECIATION ACCOUNTING

Meaning and Characteristics – Causes and Objectives – Methods of providing Depreciation – Straight line Method – Diminishing Balance Method – Distinction between Straight line and Written Down Value Method – Annuity Method – Depreciation Fund or Sinking Fund Method .

SUGGESTED READINGS

18MMU601A METRIC SPACES AND COMPLEX ANALYSIS**Semester – VI
8H – 6C****Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The theory of functions of a complex variable with examples.
- Metric spaces, Continuous mappings and Convergence of sequences and series.
- Techniques of complex analysis that make practical problems easy (e.g. graphical rotation and scaling as an example of complex multiplication)
- Subsets of a metric space are open, closed, connected, bounded, totally bounded and/or compact.
- Function on a Complex number, and differentiability on complex functions.
- The Cauchy's Theorem, Cauchy's integral formula, Liouville's Theorem and Laurent's expansion.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Understand the various properties of metric spaces
2. Definite continuous mappings - sequential criterion.
3. Understand the basic concepts of Riemann equations, sufficient conditions for differentiability.
4. Explore various properties of Analytic functions.
5. Understand the Contour integrals and its examples.
6. Apply the concept Liouville's theorem and the fundamental theorem of algebra.

UNIT I**METRIC SPACES**

Definition and examples - Sequences in metric spaces - Cauchy sequences.

Complete Metric Spaces - Open and closed balls – neighbourhood - open set - interior of a set. Limit point of a set - closed set - diameter of a set - Cantor's theorem – Subspaces - dense sets – separable spaces.

UNIT II**CONTINUOUS MAPPINGS**Continuous mappings - sequential criterion and other characterizations of continuity – Uniform Continuity – Homeomorphism - Contraction mappings - Banach Fixed point Theorem - Connectedness - connected subsets of \mathbb{R} .**UNIT III****LIMITS**

Limits - Limits involving the point at infinity - continuity. Properties of complex numbers – regions in the complex plane - functions of complex variable - mappings. Derivatives, differentiation formulas - Cauchy-Riemann equations, sufficient conditions for differentiability.

UNIT IV**ANALYTIC FUNCTIONS**

Analytic functions, examples of analytic functions, exponential function, Logarithmic function, trigonometric function, derivatives of functions, definite integrals of functions.

Contours: Contour integrals and its examples - upper bounds for moduli of contour integrals - Cauchy-Goursat theorem, Cauchy integral formula.

UNIT V**CONVERGENCE**

Liouville's theorem and the fundamental theorem of algebra. Convergence of sequences and series, Taylor series and its examples - Laurent series and its examples, absolute and uniform convergence of power series.

18MMU601B RIEMANN INTEGRATION AND SERIES OF FUNCTIONS**Semester – VI**
8H – 6C**Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives****This course enables the students to learn**

- The Riemann integration, Point wise and uniform convergence of sequence of functions and Series of functions.
- The concept of continuous functions and their bounded variation property.
- Difference between Riemann Integration and Riemann Stieltjes Integration of functions.
- Fundamental theorems of Calculus and Improper integrals.
- The concept of cauchy criterion for uniform convergence and Weierstrass M-Test.
- About pointwise and uniform convergence of sequence of functions.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Understand Riemann sum and definition of Riemann integral.
2. Convergence of Beta and Gamma functions
3. Know about Pointwise and uniform convergence of sequence of functions
4. Theorems on the continuity and derivability of the sum function of a series of functions.
5. Understand Cauchy criterion for uniform convergence and Weierstrass M-Test.
6. Limit superior and Limit inferior and integration of power series.

UNIT I**RIEMANN INTEGRATION**

Riemann integration - inequalities of upper and lower sums - Riemann conditions of integrability - Riemann sum and definition of Riemann integral through Riemann sums - equivalence of two definitions- Riemann integrability of monotone and continuous functions, Properties of the Riemann integral.

UNIT II**CONTINUOUS FUNCTIONS**

Definition and integrability of piecewise continuous and monotone functions. - Intermediate Value theorem for Integrals - Fundamental theorems of Calculus - Improper integrals - Convergence of Beta and Gamma functions.

UNIT III**CONVERGENCE**

Pointwise and uniform convergence of sequence of functions - Theorems on continuity - derivability and integrability of the limit function of a sequence of functions.

UNIT IV**SERIES OF FUNCTIONS**

Series of functions - Theorems on the continuity and derivability of the sum function of a series of functions - Cauchy criterion for uniform convergence and Weierstrass M-Test.

UNIT V**LIMITS**

Limit superior and Limit inferior - Power series - radius of convergence - Cauchy Hadamard Theorem - Differentiation and integration of power series - Abel's Theorem - Weierstrass Approximation Theorem.

18MMU602A

RING THEORY AND LINEAR ALGEBRA II

Semester – VI
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The behavior of polynomials and operators.
- The Rings and basic properties of rings and ideals.
- The concepts of unique factorization domains, Euclidean domains.
- The transpose of a linear transformation and its matrix in the dual basis.
- The Inner product spaces and norms, Gram-Schmidt orthogonalisation process.
- Least Squares Approximation and Spectral theorem.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Polynomial rings over commutative rings, dual spaces, dual basis, double dual, minimal solutions to systems of linear equations, normal and self-adjoint operators.
2. Understand the Divisibility in integral domains.
3. Study the transpose of a linear transformation and its matrix in the dual basis.
4. Know about the Inner product spaces and norms.
5. Study Least Squares Approximation, minimal solutions to systems of linear equations.
6. Know about the Orthogonal projections and Spectral theorem.

**UNIT I
RINGS**

Polynomial rings over commutative rings- Division algorithm and consequences- Principal ideal domains- Factorization of polynomials- Reducibility tests- irreducibility tests- Eisenstein criterion- Unique factorization in $\mathbb{Z}[x]$.

**UNIT II
INTEGRAL DOMAINS**

Divisibility in integral domains- Irreducibles- Primes- unique factorization domains- Euclidean domains.

**UNIT III
VECTOR SPACES**

Dual spaces- Dual basis- Double dual- transpose of a linear transformation and its matrix in the dual basis- annihilators- Eigen spaces of a linear operator- Diagonalizability- invariant subspaces and Cayley-Hamilton theorem- The minimal polynomial for a linear operator.

**UNIT IV
INNER PRODUCT SPACES**

Inner product spaces and norms- Gram-Schmidt orthogonalisation process- Orthogonal complements- Bessel's inequality- The adjoint of a linear operator.

UNIT V
OPERATORS

Least Squares Approximation- Minimal solutions to systems of linear equations- Normal and self-adjoint operators- Orthogonal projections and Spectral theorem.

LINEAR PROGRAMMING

Semester – VI
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Fundamental concepts of duality, economic interpretation of dual constraints and game theory.
- The simplex method to solve small linear programming models by hand, given a basic feasible point.
- Formulation of a given simplified description of a suitable real-world problem as a linear programming model.
- Revised Simplex Method, Parametric Linear Programming, Integer Linear Programming: Branch and Bound Method, Cutting Plane Method.
- Mathematical Formulation of LPP, Solution of LPP: Graphical Method with special cases, Simplex Method, Big-M Method, Two Phase method. Special cases in simplex method, Duality theory, Dual Simplex algorithm.
- Solution of Transportation problem and Assignment Problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Formulate a LPP and solve it by simplex and graphical method. Also do post optimal analysis of the formulated problem or other application areas.
2. Understand the concepts of Duality, Primal Dual relationship.
3. Solve a Transportation and its types.
4. Analysis Assignment problem and its models.
5. Know the concept of game theory.
6. Study the games with mixed strategies, graphical solution procedure, linear programming solution of games.

UNIT I**LINEAR PROGRAMMING**

Introduction to Linear Programming Problem – Graphical Linear Programming Solution- Theory of Simplex Method-Optimality and unboundedness-the Simplex algorithm –Simplex method in tableau format- Introduction to artificial variables – two –phase method – Big –M method and their comparison.

UNIT II**PRIMAL DUAL PROBLEMS**

Duality – Definition of the dual Problems-Formulation of the dual Problem-Primal Dual relationship: Review of simplex matrix Operations –Simplex tableau Layout-Optimal Dual Solution-Simplex Tableau computations. Economic interpretation of the dual: Economic Interpretation of Dual Variables- Economic Interpretation of Dual Constraints.

UNIT III**TRANSPORTATION METHOD**

Transportation Problem: Definition of the Transportation model – Nontraditional Transportation model – The Transportation Algorithm: Determination of the Starting Solution-Northwest –corner method, Least – corner method, Vogel approximation method- Iterative Computations of the Transportation Algorithm.

UNIT IV**THE ASSIGNMENT MODEL**

The Assignment Model: Introduction to Assignment model- Mathematical Formulation of Assignment model- Hungarian method for solving assignment problem –Simplex Explanation of the Hungarian method.

UNIT V**GAME THEORY**

Game theory: Formulation of two person zero games – Solving two person zero sum games, games with mixed strategies, graphical solution procedure, linear programming solution of games.

18MMU603**COST AND MANAGEMENT ACCOUNTING****Semester – VI**
6H – 4C**Instruction Hours / week: L: 4 T: 2 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The area of cost and management accounting
- The major differences and similarities between financial and management accounting
- The role of management accountant in an organization, and the importance of upholding ethical standards
- Methods and techniques needed by managers for performing functions such as costing, cost allocations.
- The concepts preparation of flexible budgets and variance analysis.
- The Financial Statement Analysis.

Course Outcomes (COs)

On successful completion of this course, the student will be able to:

1. Asses the significance and role of cost accounting
2. Import the knowledge on the nature of elements of cost and cost sheet preparation
3. Enrich the knowledge on the preparation of various budgets
4. Analyze the Financial Statement Analysis
5. Prepare budget and budgetary control
6. Acquire knowledge of Profit analysis.

UNIT I

Meaning – Definition – Scope – Objectives – Function-Merits and demerits of cost and management accounting – Distribution between cost, management and financial accounting – Elements of cost – Cost concepts and costs classification.

UNIT II

Preparation of cost sheet – stores control – EOQ – maximum, minimum, reordering levels, – Pricing of materials issues – FIFO, LIFO, Average cost, Standard price. Methods of labour cost – remuneration and incentives.

UNIT III

Financial Statement Analysis – Preparation of comparative and common size statements – analysis and interpretation – Trend Analysis. Ratio analysis – classification of ratios – liquidity, profitability, solvency ratios – inter firm comparison.

UNIT IV

Fund flow analysis and cash flow analysis (problems only)

UNIT V

Standard costing – Variance Analysis – Material and Labour – variances. Marginal costing – Cost Volume Profit analysis. Budget and Budgetary Control – Preparation of various budgets.

18MMP101

ALGEBRA

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The fundamental concepts of algebraic ring theory and fields.
- The basic central ideas of linear algebra such as linear transformations.
- How to find the Eigen values, Eigen vectors,
- How to test if a polynomial is irreducible Finite Field (Galois Fields).
- Develop capabilities with an axiomatic treatment of mathematics.
- Develop an understanding of the structure of sets with operations on them.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Understand the concept and the properties of finite abelian groups.
2. Get pre-doctoral level knowledge in ring theory.
3. Attain good knowledge in field theory.
4. Define and study in details the properties of linear transformations.
5. Analyze the concept of trace and transpose.
6. Demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts quadratic forms.

UNIT I**GROUP STRUCTURES**

Another counting principle – application of theorems – Cauchy theorem – Sylow's theorem – Direct product – Finite Abelian groups.

UNIT II**RINGS AND FIELDS**

Ring Theory- Basic definition- More ideals and quotient rings- Euclidean rings-A Particular Euclidean Rings –Polynomial Rings-Polynomial over the Rational Field.

UNIT III**EXTENSION FIELDS**

Fields – Extension Fields-Finite Extension of F – Some basic Definitions and Theorem – Roots of a Polynomial – More about Roots – The elements of Galois Theory.

UNIT IV**LINEAR ALGEBRA AND MATRICES**

Linear Transformations-The Algebra of Linear Transformation – Characteristic Root-Matrices-Canonical Forms –Triangular form-Nilpotent Transformations–Jordan form.

UNIT V**TRANSFORMATION OF MATRICES**

Trace and Transpose – Trace of T-Symmetric Matrix –Determinants–Hermitian Transformation, Unitary Transformation and Normal Transformation – Real quadratic forms.

18MMP102

REAL ANALYSIS

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The basic principles of real analysis.
- Apply mathematical concepts and principles to perform numerical and symbolic computations.
- How to identify sets with various properties such as finiteness, countability, infiniteness, uncountability.
- Have the knowledge of real functions-limits of functions and their properties.
- Understand the importance of undefined terms, definitions, and axioms.
- Use a variety of proof techniques to prove theorems using axioms, definitions, and previous results.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Get specific skill in Riemann Stieltjes integral and Lebesgue integral.
2. Attain knowledge in infinite series.
3. Demonstrate an understanding of the uniform convergence and differentiation.
4. Enrich their knowledge of measure theory and extremum problems.
5. Solve given problems at a high level of abstraction based on Implicit function.
6. Describe the fundamental properties of the real numbers that underpin the formal development of real analysis.

UNIT I**THE RIEMANN – STIELTJES INTEGRAL**

Introduction – Basic Definitions – Linear Properties – Integration by parts – Change of variable in a Riemann – Stieltjes Integral – Reduction to a Riemann Integral – Step functions as integrators – Reduction of a Riemann – Stieltjes Integral to a finite sum – Monotonically increasing – Additive and linear properties – Riemann condition – Comparison theorems – Integrators of bounded variation – Sufficient condition for Riemann Stieltjes integral.

UNIT II**INFINITE SERIES AND INFINITE PRODUCTS**

Introduction – Basic definitions – Ratio test and root test – Dirichlet test and Able's test – Rearrangement of series – Riemann's theorem on conditionally convergent series – Sub series - Double sequences – Double series – Multiplication of series – Cesaro summability.

UNIT III

SEQUENCES OF FUNCTIONS

Basic definitions – Uniform convergence and continuity - Uniform convergence of infinite series of functions – Uniform convergence and Riemann – Stieltjes integration – Non uniformly convergent sequence – Uniform convergence and differentiation – Sufficient condition for uniform convergence of a series.

UNIT IV

THE LEBESGUE INTEGRAL

Introduction- The class of Lebesgue – integrable functions on a general interval- Basic properties of the Lebesgue integral- Lebesgue integration and sets of measure zero- The Levi monotone convergence theorem- The Lebesgue dominated convergence theorem- Applications of Lebesgue dominated convergence theorem- Lebesgue integrals on unbounded intervals as limit of integrals on bounded intervals- Improper Riemann integrals- Measurable functions.

UNIT V

IMPLICIT FUNCTIONS AND EXTREMUM PROBLEMS

Introduction – Functions with non zero Jacobian determinant – Inverse function theorem – Implicit function theorem – Extrema of real valued functions of one variable and several variables

NUMERICAL ANALYSIS**Semester – I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- To develop the working knowledge on different numerical techniques.
- To solve algebraic and transcendental equations.
- Appropriate numerical methods to solve differential equations.
- To provide suitable and effective methods for obtaining approximate representative numerical results of the problems.
- To solve complex mathematical problems using only simple arithmetic operations. The approach involves formulation of mathematical models of physical situations that can be solved with arithmetic operations.
- Provide a basic understanding of the derivation, analysis, and use of these numerical methods, along with a rudimentary understanding of finite precision arithmetic and the conditioning and stability of the various problems and methods.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Identify the concept of numerical differentiation and integration.
2. Provide information on methods of iteration.
3. Solve ordinary differential equations by using Euler and modified Euler method.
4. Study in detail the concept of boundary value problems.
5. Attain mastery in the numerical solution of partial differential equations.
6. Apply numerical methods to obtain approximate solutions to mathematical problems.

SOLUTIONS OF NON LINEAR EQUATIONS

Newton's method-Convergence of Newton's method- Bairstow's method for quadratic factors. Numerical Differentiation and Integration: Derivatives from difference tables – Higher order derivatives – divided difference. Trapezoidal rule – Romberg integration – Simpson's rules.

UNIT II**SOLUTIONS OF SYSTEM OF EQUATIONS**

The Elimination method: Gauss Elimination and Gauss Jordan Methods – LU decomposition method.
Methods of Iteration: Gauss Jacobi and Gauss Seidal iteration-Relaxation method.

UNIT III

SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS

One step method: Euler and Modified Euler methods–Rungekutta methods. Multistep methods: Adams Moulton method – Milne’s method

UNIT IV

BOUNDARY VALUE PROBLEMS AND CHARACTERISTIC VALUE PROBLEMS

The shooting method: The linear shooting method – The shooting method for non-linear systems.
Characteristic value problems –Eigen values of a matrix by Iteration-The power method.

UNIT V

NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS

Classification of Partial Differential Equation of the second order – Elliptic Equations. Parabolic equations: Explicit method – The Crank Nicolson difference method. Hyperbolic equations – solving wave equation by Explicit Formula.

ORDINARY DIFFERENTIAL EQUATIONS**Semester – I****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The formulation and solutions of ordinary differential equations and get exposed to physical problems with applications.
- Linear homogeneous and non homogeneous equations of higher order with constant coefficients.
- The concept of solve the system of first order equations.
- Understanding the elementary linear oscillations.
- Understand all of the concepts relating to the order and linearity of ordinary differential equations, analytic and computational solution methods for ordinary differential equations, and the real-world applications of ordinary differential equations.
- Apply your understanding of the concepts, formulas, and problem solving procedures to thoroughly investigate relevant physical models.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Model a simple physical system to obtain a first and second order differential equation.
2. Understand the basic notions of linearity, superposition, existence and uniqueness of solution to differential equations and use these concepts in solving linear differential equations.
3. Identify homogeneous equations, homogeneous equations with constant coefficients and exact linear differential equations.
4. Solve higher order and system of differential equations of Successive approximation.
5. Understand the difficulty of solving problems for elementary linear oscillations.
6. Identify, analyze and subsequently solve physical situations whose behavior can be described by ordinary differential equations.

UNIT I**SECOND ORDER LINEAR EQUATIONS**

Second order linear equations with ordinary points – Legendre equation and Legendre polynomial – Second order equations with regular singular points – Bessel equation.

UNIT II**EXISTENCE AND UNIQUENESS SOLUTIONS**

System of first order equations – existence and uniqueness theorems – fundamental matrix.

UNIT III

NON HOMOGENEOUS EQUATIONS

Non homogeneous linear system – linear systems with constant coefficient – Linear systems with periodic coefficients.

UNIT IV

SUCCESSIVE APPROXIMATION AND NON UNIQUENESS SOLUTIONS

Successive approximation – Picard's theorem – Non uniqueness of solution – continuation and dependence on initial conditions – existence of solution in the large existence and uniqueness of solution in the system.

UNIT V

OSCILLATION THEORY

Fundamental results – Sturms comparison theorem – elementary linear oscillations – comparison theorem of Hille winter – Oscillations of $x'' + a(t)x = 0$ elementary non linear oscillations.

ADVANCED DISCRETE MATHEMATICS

Semester – I

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The concept of algebraic structures, lattices and its special categories which plays an important role in the field of computers.
- The fundamental concepts in graph theory, with a sense of some its modern applications.
- Some fundamental mathematical concepts and terminology.
- How to count some different types of discrete structures.
- Introduce students to the techniques, algorithms, and reasoning processes involved in the study of discrete mathematical structures.
- Introduce students to set theory, inductive reasoning, elementary and advanced counting techniques, equivalence relations, recurrence relations, graphs, and trees.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Develop new algebraic structures.
2. Think critically and analytically by modeling problems from social and natural sciences with the help of theory of graphs.
3. Apply discrete mathematics in formal representation of various computing constructs
4. Work effectively in groups on a project that requires an understanding of graph theory.
5. Demonstrate different traversal methods for trees and graphs.
6. Recognize the importance of analytical problem-solving approach.

UNIT I**ALGEBRAIC STRUCTURES**

Introduction- Algebraic Systems: Examples and General Properties: Definition and examples - Some Simple Algebraic Systems and General properties - Homomorphism and isomorphism - congruence relation - Semigroups and Monoids: Definitions and Examples - Homomorphism of Semigroups and Monoids.

UNIT II**LATTICES**

Lattices as Partially Ordered Sets: Definition and Examples - Principle of duality - Some Properties of Lattices - Lattices as Algebraic Systems – Sublattices - Direct product, and Homomorphism.

UNIT III**BOOLEAN AND SOME SPECIAL LATTICES**

Complete, Complemented and Distributive Lattices - Boolean Algebra: Definition and Examples - Subalgebra - Direct product and Homomorphism - join irreducible - atoms and antiatoms.

UNIT IV**GRAPH THEORY**

Definition of a graph - applications, Incidence and degree - Isolated and pendant vertices - Null graph, Path and Circuits: Isomorphism - Subgraphs, Walks - Paths and circuits - Connected graphs, disconnected graphs – components - Euler graph.

UNIT V**TREES**

Trees and its properties - minimally connected graph - Pendant vertices in a tree - distance and centers in a tree - rooted and binary tree. Levels in binary tree - height of a tree - Spanning trees - rank and nullity.

NEURAL NETWORKS AND FUZZY LOGIC

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The introduction and different architectures of neural networks.
- The applications of neural networks.
- To cater the knowledge of Fuzzy Logic Control and use these for controlling real time systems.
- The fundamental concepts of fuzzy logic and artificial neural networks.
- The concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
- The importance of tolerance of imprecision and uncertainty for design of robust & low cost intelligent machines.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Obtain the fundamentals and types of neural networks.
2. Have a broad knowledge in developing the different algorithms for neural networks in Topology.
3. Analyze recurrent neural networks.
4. Acquire a broad knowledge in fuzzy logic principles.
5. Expose the students to the concepts of Classical and fuzzy sets
6. Provide adequate knowledge about the Fuzzy controllers.

EVOLUTION OF NEURAL NETWORKS

Artificial Neural Network: Basic model, Classification, Feed forward and Recurrent topologies, Activation functions; Learning algorithms: Supervised, Un-supervised and Reinforcement; Fundamentals of connectionist modeling: McCulloch – Pits model, Perceptron, Adaline, Madaline.

UNIT II**MULTI-LAYER PERCEPTRONS**

Topology of Multi-layer perceptron, Back propagation learning algorithm, limitations of Multi-layer perceptron. Radial Basis Function networks: Topology, learning algorithm, Kohonen's self-organizing network: Topology, learning algorithm; Bidirectional associative memory Topology, learning algorithm, Applications.

UNIT III**RECURRENT NEURAL NETWORKS**

Basic concepts, Dynamics, Architecture and training algorithms, Applications; Hopfield network: Topology, learning algorithm, Applications; Industrial and commercial applications of Neural networks: Semiconductor manufacturing processes, Communication, Process monitoring and optimal control, Robotics, Decision fusion and pattern recognition.

UNIT IV**CLASSICAL AND FUZZY SETS**

Introduction, Operations and Properties, Fuzzy Relations: Cardinality, Operations and Properties, Equivalence and tolerance relation, Value assignment: cosine amplitude and max-min method; Fuzzification: Membership value assignment- Inference, rank ordering, angular fuzzy sets. Defuzzification methods, Fuzzy measures, Fuzzy integrals, Fuzziness and fuzzy resolution; possibility theory and Fuzzy arithmetic; composition and inference; Considerations of fuzzy decision-making.

UNIT V**FUZZY LOGIC CONTROL**

Basic structure and operation of Fuzzy logic control systems; Design methodology and stability analysis of fuzzy control systems; Applications of Fuzzy controllers. Applications of fuzzy theory.

SUGGESTED READINGS

5. Sivanadam ,S.N, Sumathi S and Deepa,S.N, (2006) Introduction to Neural Network using MATLAB 6.0., McGraw Hill Education, New Delhi.
6. Sivanadam ,S.N, Sumathi S and Deepa,S.N, (2006) Introduction to Fuzzy logic using MATLAB, McGraw Hill Education, New Delhi.

18MMP105C

COMBINATORICS

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Improve mathematical proof writing skills.
- Cater mathematical verbal communication skills.
- Afford problem-solving skills.
- Combinatorial proofs of identities and inequalities.
- Model and analyze computational processes using analytic and combinatorial methods.
- Structures to represent mathematical and applied questions, and they will become comfortable with the combinatorial tools commonly used to analyze such structures.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Cognition in various combinatorial methods.
2. Solve recurrence relations through computational skills.
3. Apply the inclusion/exclusion principle.
4. Develop fundamental knowledge of combinatorics and Euler function.
5. Analyze combinatorial objects satisfying certain properties and answer questions related to Necklace problem.
6. Know the concept of Burnside's lemma.

UNIT I**COMBINATORIAL NUMBERS**

Basic Combinatorial Numbers – Stirling numbers of the second kind – Recurrence formula for P_{nm} .

UNIT II**GENERATING FUNCTIONS**

Generating functions – Recurrence relations- Bell's formula.

UNIT III**MULTINOMIAL COEFFICIENTS**

Multinomial – Multinomial theorem- Inclusion and Exclusion principle.

UNIT IV**FORBIDDEN POSITIONS**

Euler function –Permutations with forbidden positions –the Menage Problem.

UNIT V

SPECIAL TYPE OF COMBINATORIAL PROBLEMS

Problem of Fibonacci –Necklace problem – Burnside’s lemma.

SUGGESTED READINGS

1. Krishnamurthy, V. (2002), Combinatorics: Theory and Applications, East West Press Pvt. Ltd.
2. Balakrishnan V.K., (1995). Theory and problems of Combinatorics, Schaums outline series, McGraw Hill Professional.
3. Alan tucker, (2002). Applied Combinatorics, 4th edition, John wiley & Sons, New York.

18MMP106

MECHANICS

Semester – I

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- How to use Newton's laws of motion to solve advanced problems involving the dynamic motion of classical mechanical systems.
- Applications of differential equations in advanced mathematical problems.
- To solve dynamics problems such as conservation of energy and linear and angular momentum.
- Parameters defining the motion of mechanical systems and their degrees of freedom.
- The components of a force in rectangular or nonrectangular coordinates. \ddot{y} Determine the resultant of a system of forces.
- Complete and correct free-body diagrams and write the appropriate equilibrium equations from the free-body diagram.

Course Outcomes (COs)

On successful completion of this course students will be able to

1. Understand the concept of the D'Alembert's principle .
2. Derive the Lagrange's equation for holonomic and non holonomic constraints.
3. Classify Scleronomic and Rheonomic systems .
4. Solve the problems of Hamilton equations of motion.
5. Study of the canonical transformations.
6. Know the concept of Hamilton Jacobi Theory.

UNIT I**SURVEY OF ELEMENTARY PRINCIPLES**

Constraints - Generalized coordinates, Holonomic and non- holonomic systems, Scleronomic and Rheonomic systems. D'Alembert's principle and Lagrange's equations – Velocity – dependent potentials and the dissipation function – some applications of the Lagrange formulation.

UNIT II**VARIATION PRINCIPLES AND LAGRANGE'S EQUATIONS**

Hamilton's principle – Some techniques of calculus of variations – Derivation of Lagrange's Equations from Hamilton's principle – Extension of Hamilton's principle to non-holonomic systems – Conservation theorems and symmetry properties.

UNIT III**HAMILTON EQUATIONS OF MOTION**

Legendre Transformations and the Hamilton Equations of motion-canonical equations of Hamilton – Cyclic coordinates and conservation theorems – Routh's procedure - Derivation of Hamilton's equations from a variational principle – The principle of least action.

UNIT IV**CANONICAL TRANSFORMATIONS**

The equations of canonical transformation – Examples of Canonical transformations – Poisson Brackets and other Canonical invariants – integral invariants of Poincare, Lagrange brackets.

UNIT V**HAMILTON JACOBI THEORY**

Hamilton Jacobi equations for Hamilton's principle function – Harmonic oscillator problem - Hamilton Jacobi equation for Hamilton's characteristic function – Separation of variables in the Hamilton-Jacobi equation.

SUGGESTED READINGS

1. Goldstein. H. (2011), Classical Mechanics Third Edition, Narosa Publishing House, New Delhi.
2. Gantmacher, F., (2013). Lectures in Analytic Mechanics, MIR Publishers, Moscow.
3. Gelfand, I. M., and Fomin, S. V., (2003), Calculus of Variations, Prentice Hall, New Delhi.
4. Loney, S. L., (2015). An elementary treatise on Statics, Kalyani Publishers, New Delhi.

18MMP111

NUMERICAL ANALYSIS - PRACTICAL

Semester – I

4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- In-depth understanding of functional, logic, and programming paradigms.
- How to implement several programs in languages other than the one emphasized in the core curriculum.
- This course provides an introduction to the basic concepts and techniques of numerical solution of algebraic equation.
- This course is to provide students with an introduction to the field of numerical analysis.
- Understand the concept of Gauss elimination method.
- How to find the differential equation in numerical method.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Know the concepts for problem solving.
2. Acquire new knowledge in computing, including the ability to learn about new ideas and advances, techniques, tools, and languages, and to use them effectively; and to be motivated to engage in life-long learning
3. Comprehend important issues related to the development of computer-based systems in a professional context using a well-defined process.
4. Be familiar with programming with numerical packages.
5. Be aware of the use of numerical methods in modern scientific computing.
6. To develop the mathematical skills of the students in the areas of numerical methods.

List of Practical

1. Solution of non-linear equation-Bairstow's method for quadratic factors.
2. Solution of simultaneous equations-Gauss Elimination.
3. Solution of simultaneous equations-Gauss Jordan.
4. Solution of simultaneous equations-Gauss Jacobi.
5. Solution of simultaneous equations-Gauss Seidal.
6. Solution of simultaneous equations-Triangularisation.
7. Numerical integration-Trapezoidal rule.

8. Numerical integration-Simpson's rules.
9. Solution for ordinary differential equation-Euler method.
10. Solution for ordinary differential equation- Runge Kutta Second order.
11. Solution for parabolic equation - Explicit method.
12. Solution for parabolic equation - The Crank Nicolson method.

18MMP201

COMPLEX ANALYSIS**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The manipulation skills in the use of Cauchy's theorem.
- Fundamental concepts of complex variable theory.
- To develop the skill of contour integration to evaluate complicated real integrals via residue calculus.
- The development of functions of one complex variable.
- Contour integral using parametrization, fundamental theorem of calculus and Cauchy's integral formula.
- Taylor series of a function and determine its circle or annulus of convergence

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Explain the role of the Conformal mapping.
2. Evaluate complex contour integrals and some of their consequences.
3. Determine the Taylor series or the Laurent series of an analytic function in a given region
4. Describe the convergence properties of a power series.
5. Know the basic properties of singularities of analytic functions.
6. Demonstrate familiarity with a range of examples of these concepts of conformal mapping.

UNIT I**CONFORMALITY**

Conformal mapping-Linear transformations- cross ratio- symmetry- Oriented circles-families of circles-level curves.

UNIT II**FUNDAMENTAL THEOREMS ON COMPLEX INTEGRATIONS**

Complex integration-rectifiable Arcs- Cauchy's theorem for Rectangle and disc-Cauchy's integral formula-higher derivatives.

UNIT III**HARMONIC FUNCTIONS**

Harmonic functions-mean value property-Poisson's formula-Schwarz theorem, Reflection principle-Weierstrass theorem- Taylor series and Laurent series.

UNIT IV

ENTIRE FUNCTIONS

Partial Fractions- Infinite products – Canonical products-The gamma function – Stirling's Formula – Entire functions – Jensen's formula.

UNIT V

CONFORMAL MAPPINGS

Riemann Mapping Theorem – Boundary behaviour – Use of Reflection Principle – Analytical arcs – Conformal mapping of polygons- The Schwartz - Christoffel formula.

18MMP202

TOPOLOGY

Semester – II
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

Course Objectives

This course enables the students to learn

- Topological properties of sets.
- The properties of compact spaces and connected spaces.
- To explore the foundations of linear subspace.
- The concepts of metric spaces and topological spaces.
- Metric spaces and metrizability of topological spaces; separation axioms.
- Interior, closure and boundary: applications to geographic information systems

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Know concept of metric spaces.
2. Acquire knowledge about various types of topological spaces and their properties.
3. Know the result of Compactness problems and theorems.
4. Admire the deep mathematical results like Urysohn's lemma.
5. Create examples and counterexamples in the fundamental concepts of separation space.
6. Formulate and analyze topological problems in connected space.

UNIT I**TOPOLOGY OF METRIC SPACES**

Topological spaces, Basis for a topologies, the order topology, the product topology $X \times Y$, the subspace topology.

UNIT II**TOPOLOGICAL PROPERTIES**

Closed set and limit points, continuous functions, the product topologies, the metric topologies.

UNIT III**CONNECTEDNESS**

Connected spaces, connected subspaces of the real line, components and local connectedness.

UNIT IV**COMPACTNESS**

Compact spaces, compact subspaces of the Real line, limit point compactness, local compactness.

UNIT V**COUNTABILITY AND SEPARATION AXIOMS**

The countability axioms, the separation axioms, normal spaces, The Urysohn lemma, The Urysohn metrization theorem, the Tietze Extension theorem.

18MMP203

OPTIMIZATION TECHNIQUES**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The basic concepts of integer linear programming.
- How to solve quadratic programming problems, dynamic programming problems and non-linear programming problems.
- Classical optimization techniques and numerical methods of optimization.
- Know the basics of different evolutionary algorithms.
- Explain Integer programming techniques and apply different optimization techniques to solve various models.
- Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Understand the concept of linear programming and integer programming.
2. Develop optimal decision policy skill.
3. Familiarize with real life applications of inventory models.
4. Skill in decision analysis.
5. Mastery in Beale's method and simplex method.
6. Use classical optimization techniques and numerical methods of optimization.

UNIT I**INTEGER LINEAR PROGRAMMING**

Types of Integer Linear Programming Problems - Concept of Cutting Plane - Gomory's All Integer Cutting Plane Method - Gomory's mixed Integer Cutting Plane method Branch and Bound Method. - Zero-One Integer Programming – Real life application in Integer Linear Programming.

UNIT II**DYNAMIC PROGRAMMING**

Characteristics of Dynamic Programming Problem - Developing Optimal Decision Policy - Dynamic Programming under Certainty - DP approach to solve LPP.

UNIT III**PROBABILISTIC INVENTORY MODEL**

Real life application -Continuous review models- Probabilistic Economic order quantity (EOQ) Model. Single-period models – No setup model – setup model. Multi period model.

UNIT IV**DECISION ANALYSIS**

Real life application - Decision making under certainty- Analytic hierarchy process. Decisions under Risk- Decision Trees-based expected value criterion, variations of the expected value criterion. Decisions under Uncertainty Real life application in Decision Analysis

UNIT V**NON-LINEAR PROGRAMMING METHODS**

Examples of NLPP - General NLPP - Graphical solution - Quadratic Programming - Wolfe's modified Simplex Methods - Beale's Method.

PARTIAL DIFFERENTIAL EQUATIONS**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The basic concepts of solution of PDE and its applications.
- About initial and boundary value problems for PDEs of first and second order which includes Laplace Equation, Diffusion Equation and Wave Equation.
- Introduce students to how to solve linear Partial Differential with different methods.
- Technique of separation of variables to solve PDEs and analyze the behavior of solutions in terms of eigen function expansions.
- Solutions of PDEs are determined by conditions at the boundary of the spatial domain and initial conditions at time zero.
- Basic questions concerning the existence and uniqueness of solutions, and continuous dependence of initial and boundary data.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Classify linear and Non linear first order differential equations with constant coefficients.
2. Describe the method of separable variables and integral transforms.
3. Solve the elementary Laplace equation with symmetry.
4. Acquire the knowledge of wave equation and vibrating membranes.
5. Enrich their knowledge about diffusion equations with sources.
6. Finding the solutions of differential equation with initial and boundary conditions.

UNIT I**FIRST ORDER PARTIAL DIFFERENTIAL EQUATIONS**

Non linear partial differential equation of first order –Compatible systems of first order equations – Special type of first order equations- Partial differential equations of second order – The origin of second order equations – Linear partial differential equations with constant coefficient equations with variable coefficients.

UNIT II**SEPARATION OF VARIABLES**

Method of separation of variables –The method of integral transforms.

UNIT III**LAPLACE EQUATION**

Elementary solutions of Laplace equations- Families of Equi-potential surfaces - Boundary Value problems-separation of variables-problems with axial symmetry.

UNIT IV**WAVE EQUATION**

Elementary solutions of one dimensional wave equation-Vibrating membrane - Applications of calculus of variations- Green's functions for the wave equation.

UNIT V**DIFFUSION EQUATION**

The resolution of Boundary value problems for the Diffusion equation- Elementary solutions of diffusion equation - Separation of variables- use of Green's functions- Diffusion with Sources.

18MMP205 A

GRAPH THEORY AND ITS APPLICATIONS**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The fundamental concepts in Graph Theory and some of its modern applications.
- The use of these methods in subsequent courses in the design and analysis of algorithms, computability theory, software engineering, and computer systems.
- Apply graph-theoretic terminology and notation.
- Analyze new networks using the main concepts of graph theory.
- Central theorems about trees, matching, connectivity, colouring and planar graphs.
- Describe and apply some basic algorithms for graphs.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Understanding the basic concepts of Euler graphs and Trees.
2. Determine whether graphs are Planer and/or non planer
3. Overview of properties of trees and a minimal spanning tree for a given weighted graph.
4. Identify induced subgraphs, cliques, matchings, covers in graphs.
5. Understand the concept of Directed Graphs.
6. Know the concept of domination in graphs.

UNIT I**GRAPHS**

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits – Connectedness – Components – Euler Graphs – Hamiltonian Paths and Circuits – Trees – Properties of trees – Distance and Centers in Tree – Rooted and Binary Trees - Spanning trees – Fundamental Circuits.

UNIT II**SPANNING TREES**

Spanning Trees in a Weighted Graph – Cut Sets – Properties of Cut Set – All Cut Sets – Fundamental Circuits and Cut Sets – Connectivity and separability – Network flows – 1-Isomorphism – 2-Isomorphism – Combinational versus Geometric Graphs – Planer Graphs – Different Representation of a Planer Graph.

UNIT III**MATRIX REPRESENTATION OF A GRAPH**

Incidence matrix – Sub matrices – Circuit Matrix – Path Matrix – Adjacency Matrix – Chromatic Number – Chromatic partitioning – Chromatic polynomial - Matching - Covering – Four Color Problem.

UNIT IV

COUNTING TREE

Directed Graphs – Types of Directed Graphs - Types of enumeration, counting labeled trees, counting unlabelled trees, Polya's counting theorem, graph enumeration with Polya's theorem.

UNIT V

DOMINATION IN GRAPHS

Introduction – Terminology and concepts – Applications – Dominating set and domination number – Independent set and independence number – History of domination in graphs.

THEORY OF ELASTICITY

Semester – II

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The theoretical fundamentals of theory of elasticity.
- The ability to use the principles of theory of elasticity in engineering problems.
- To solve advanced solid mechanics problems using classical methods and to characterize materials with elastics constitutive relations.
- To make students understand the principle of strain energy function.
- Be proficient with basic concepts in continuum mechanics of solids, including of strain, internal force, stress and equilibrium in solids.
- Be able to characterize materials with elastic constitutive relations.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Know the concept of Tensor Analysis.
2. Analyze solid mechanics problems using classical methods and energy methods.
3. Apply various failure criteria for general stress states at points.
4. Get advanced knowledge about stresses, strains.
5. Understand the theory of elasticity including strain/displacement and Hooke's law relationships.
6. Apply the concept of strain energy function.

UNIT I**TENSOR ANALYSIS**

Co-ordinate transformations-contravariant and covariant vectors and tensors-symmetric and anti-symmetric tensors- metric tensor – conjugate tensor-associated tensors –Christoffel's symbols and transformations laws – covariant derivative – permutation symbols and tensors – relative and absolute tensors.

UNIT II**ANALYSIS OF STRAIN**

Deformation –Affine transformation – infinitesimal affine deformations – A geometrical interpretation of components of strain – strain quadric of Cauchy – Principal strains and invariants general infinitesimal deformation – examples of strain – saint-Venant's equations of compatibility – finite –deformations.

UNIT III

ANALYSIS OF STRESS

Body and surface forces – stress tensor – equations of equilibrium in Cartesian co-ordinates – transformation of co-ordinates – stress quadric of Cauchy principal stresses – invariants of stress tensor – maximum normal and shear stresses- Mohr's diagram – examples of stress.

UNIT IV**EQUATION OF ELASTICITY**

Generalized Hooke's law- homogeneous isotropic medium – elastic module for isotropic media – simple tension – pure shear – hydrostatic pressure – equilibrium equations for an isotropic elastic solid – Beltrami- Michell compatibility equations.

UNIT V**DYNAMICAL EQUATIONS**

Dynamical equations of isotropic elastic solid – strain energy function – uniqueness of solution – statement of saint – Venant's principle.

FUNDAMENTALS OF ACTUARIAL MATHEMATICS

Semester – II

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The fundamental theories of actuarial science as they apply in life insurance, general insurance and superannuation.
- How to assess the suitability of actuarial, financial and economic models in solving actuarial problems
- Interpretation and critically evaluating the articles in the actuarial research literature.
- About the concept of educational annuity plan.
- Understand the Premium Conversion tables for calculation of Policy values.
- The concept of Premiums for Annuity Plans.

Course Outcomes (COs)

On successful completion of this course the student will be able

1. Explain the basic concepts of accounts and calculations of interest rates in banking / financial institution system.
2. Describe about Premiums of Life Insurance and Endowment Assurance (Pure, Double and Marriage) and Educational Annuity plan.
3. Define Annuity and Summarize / calculate different values Annuities.
4. Find the Annuity values for various Annuities.
5. Calculation of Net Premiums for Assurance Plans.
6. Leant about how to read Mortality Table and from that how to calculate the Probability of Survival and Death.

UNIT I**BASIC CONCEPTS OF ACTUARIAL MATHEMATICS**

Accumulated Value – Present Value – Formula for present value- Annuities Certain- present Values- Amounts - Deferred Annuities –Perpetuities - Present Value of an Immediate Annuity Certain – Accumulated Value of Annuity – Relation between S_n and a_n – Present Value of Deferred Annuity Certain – Accumulated Value of a term of n years – Perpetuity – Present Value of an Immediate Perpetuity of 1 p.a. – Present Value of a Perpetuity due of 1 p.a. – Deferred Perpetuity with Deferment Period of m years – Mortality Table – The Probabilities of Survival and Death.

UNIT II**CALCULATION OF DIFFERENT INSURANCE PREMIUMS**

Life Insurance Premiums – General considerations - Assurance Benefits – Pure Endowment Assurance – Endowment Assurance – Temporary Assurance or Term Assurance - Whole Life Assurance – Pure Endowment Assurance – Endowment Assurance – Double Endowment Assurance Increasing Temporary Assurance – Increasing Whole Life Assurance – Fixed Term (Marriage) Endowment – Educational Annuity Plan.

UNIT III

VARIOUS VALUES OF ANNUITIES

Life Annuities and Temporary Annuities – Commutation Functions N_x – To Find the Present Value of an Annuity Due of Re.1 p.a. for Life – Temporary Immediate Life Annuity – Expression for $a_x : n$ – Deferred Temporary Life Annuity – Variable Life Annuity – Increasing Life Annuity – Variations in the Present Values of Annuities – Life Annuities Payable at Frequent Intervals.

UNIT IV

ANNUAL PREMIUMS AND ANNUITY PLANS

Net Premiums for Assurance Plans – Natural Premiums – Level Annual Premium – Symbols for Level Annual Premium under Various Assurance Plans – Mathematical Expressions for level Annual Premium under Level Annual Premium under Various Plans for Sum Assure of Re. 1 – Net Premiums – Consequences of charging level Premium – Consequences of withdrawals – Net Premiums for Annuity Plans – Immediate Annuities – Deferred Annuities.

UNIT V

POLICY VALUE AND ITS CALCULATION

Premium Conversion tables – Single Premium Conversion tables – Annual Premium Conversion Tables – Policy Values – Two kinds of Policy values – Policy value in symbols – Calculation of Policy Value for Unit Sum Assure – Other Expressions for Policy Value – Surrender Values – Paid up Policies – Alteration of Policy Contracts.

18MMP206

FLUID DYNAMICS**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The concepts of fluid, its properties and behavior under various conditions of internal and external flows.
- The fundamentals of Fluid Dynamics, which is used in the applications of Aerodynamics, Hydraulics, Marine Engineering, Gas dynamics etc.
- To imbibe basic laws and equations used for analysis of static and dynamic fluids
- About the Two-Dimensional Motion of the fluid.
- Identify the fundamental kinematics of a fluid element.
- State the conservation principles of mass, linear momentum, and energy for fluid flow.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Classify and exploit fluids based on the physical properties of a fluid.
2. Compute correctly the kinematical properties of a fluid element.
3. Apply the concept of Bernoulli's theorem in steady motion.
4. Understand both flow physics and mathematical properties of governing Navier-Stokes equations and define proper boundary conditions for solution.
5. Provide the student with the basic mathematical background and tools to model fluid motion.
6. Develop a physical understanding of the important aspects that govern incompressible flow that can be observed in a variety of situations in everyday life.

UNIT I**INTRODUCTORY NOTIONS**

Velocity – Stream Lines and Path Lines – Stream Tubes and Filaments – Fluid Body – Density – Pressure. Differentiation following the Fluid – Equation of continuity – Boundary conditions – Kinematical and physical – Rate of change of linear momentum – Equation of motion of an in viscid fluid.

UNIT II**EQUATION OF MOTION OF A FLUID**

Euler's momentum Theorem – Conservative forces – Bernoulli's theorem in steady motion – energy equation for in viscid fluid – circulation – Kelvin's theorem – vortex motion – Helmholtz equation.

UNIT III

TWO DIMENSIONAL FLOW

Two Dimensional Motion – Two Dimensional Functions – Complex Potential – basic singularities – source – sink – Vortex – doublet – Circle theorem. Flow past a circular cylinder with circulation – Blasius Theorem – Lift force. (Magnus effect)

UNIT IV

VISCOUS FLOWS

Viscous flows – Navier-Stokes equations – Vorticity and circulation in a viscous fluid – Steady flow through an arbitrary cylinder under pressure – Steady Couette flow between cylinders in relative motion – Steady flow between parallel planes.

UNIT V

LAMINAR BOUNDARY LAYER IN INCOMPRESSIBLE FLOW

Boundary Layer concept – Boundary Layer equations – Displacement thickness, Momentum thickness – Kinetic energy thickness – integral equation of boundary layer – flow parallel to semi infinite flat plate – Blasius equation and its solution in series.

SUGGESTED READINGS

1. Milne Thomson .L.M., (1968). Theoretical Hydrodynamics, Fifth edition, Dover Publications INC, NewYork.
2. Curle.N., and Davies H.J., (1971), Modern Fluid Dynamics Volume-I , D Van Nostrand Company Ltd., London.
3. Yuan, S.W, (1976). Foundations of Fluid Mechanics, Prentice- Hall, India.
4. Shanthi swarup, (2003), Fluid dynamics, Krishna Prakasan media Pvt Ltd, Meerut.

18MMP211

OPTIMIZATION TECHNIQUES - PRACTICAL

Semester – II

4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4**Marks: Internal: 40****External: 60 Total: 100**

This course enables the students to learn

Course Objectives

- To provide the students an exposure to develop well-structured optimization techniques knowledge arising process in various level of science.
- The course aims at building capabilities in the students for analyzing different situations in the industrial/ business scenario involving limited resources and finding the optimal solution within constraints.
- This module aims to introduce students to use Probabilistic Model and techniques.
- The course aims at providing fundamental knowledge and exposure of the concepts, theories and practices in the field of management.
- Study the basic components of an optimization problem.
- Formulation of design problems as mathematical programming problems.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Use the object oriented concepts for implementation of Optimization Techniques.
2. Implement the data structure concepts for Optimization Techniques problems.
3. Acquire skills to solve various multivariable optimization problems
4. Solve of different optimization problems.
5. Identify and develop operational research models from the verbal description of the real system.
Understand the mathematical tools that are needed to solve optimization problems.
6. Use mathematical software to solve the proposed models.

List of Practical

1. Solution for a system of equations- Simplex method.
2. Decision making with minimax criteria.
3. Decision making under risk.
4. Travelling salesman problem to find the shortest path.
5. Write a C program to calculate the minimum cost using North West Corner Rule.

6. To calculate the EOQ for purchasing model without shortage using C program.
7. To calculate the EOQ for manufacturing model without shortage using C program.
8. To calculate the EOQ for manufacturing model with shortage using C program.
9. To calculate the EOQ for purchasing model with shortage using C program.
10. Probabilistic Model-EOQ.

18MMP301

FUNCTIONAL ANALYSIS

Semester – III

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- The concept of Banach spaces and related theorems
- The specific techniques for bounded operators over normed and Hilbert spaces.
- The demonstrate significant applications of the theory of functional analysis.
- The ideas and some of the fundamental theorems of functional analysis.
- Understand how to use the main properties of compact operators.
- Apply the spectral analysis of compact self-adjoint operators to the resolution of integral equations.

Course Outcomes (COs)

After successful completion of this course the students will be able to

1. Develop Banach spaces from vector spaces.
2. Describe the open mapping theorem.
3. Discuss Hilbert spaces and its properties.
4. Study in detail about the adjoint of an operator.
5. Handle complex problems concerning topics within the area of Functional Analysis.
6. Understand and apply fundamental theorems from the theory of normed and Banach spaces.

UNIT I**BANACH SPACES**

Banach Spaces-Normed linear space – Definitions and Examples-Theorems. Continuous Linear Transformations – Some theorems- Problems. The Hahn- Banach Theorem –Lemma and Theorems. The Natural imbedding of N in N^{**} -Definitions and Theorems.

UNIT II**OPEN MAPPING THEOREM**

The Open Mapping Theorem- Theorem and Examples –Problems.The closed graph theorem. The conjugate of an operation- The uniform boundedness theorem- Problems.

UNIT III**HILBERT SPACES**

The Definition and Some Simple Properties – Examples and Problems.

Orthogonal Complements - Some theorems .Ortho-normal sets – Definitions and Examples- Bessel's inequality- The conjugate space H^* .

UNIT IV**THE ADJOINT OF AN OPERATOR**

Definitions and Some Properties-Problems. Self- adjoint operators –
Some Theorems and Problems. Normal and Unitary operators –theorems and problems.
Projections - Theorems and Problems.

UNIT V**BANACH ALGEBRAS**

The definition and some examples of Banach algebra – Regular and singular
elements – Topological divisors of zero – The spectrum – The formula for the spectral radius.

18MMP302

NUMBER THEORY**Semester – III****4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- Mathematical concepts and principles to perform numerical and symbolic computations.
- Investigate and solve mathematical and statistical problems.
- Write clear and precise proofs.
- Communicate effectively in both written and oral form.
- Some foundational ideas in number theory without the technical baggage often associated with a more advanced courses.
- The opportunity to develop an appreciation of pure mathematics while engaged in the study of number theoretic results.

Course Outcomes (COs)

On successful completion of this course, students will be able to

1. Identify and apply various properties of and relating to the integers including the Well-Ordering Principle, primes, unique factorization, the division algorithm, and greatest common divisors.
2. Identify how number theory is related to and used in cryptography.
3. Identify certain number theoretic functions and their properties.
4. Understand the concept of a congruence and use various results related to congruences including the Chinese Remainder Theorem.
5. Solve certain types of Diophantine equations.
6. Acquire a broad knowledge in Greatest Integer Function.

UNIT I**DIVISIBILITY**

Introduction - Divisibility - Primes - The Binomial Theorem

UNIT II**CONGRUENCES**

Congruences - Solutions of Congruences - The Chinese Remainder Theorem - Techniques of Numerical Calculation - Public-Key Cryptography - Prime Power Moduli - Prime Modulus

UNIT III**CONGRUENCES (CONTINUITY)**

Primitive Roots and Power Residues - Congruences of Degree Two, Prime Modulus - Number Theory from an Algebraic Viewpoint - Groups, Rings, and Fields

UNIT IV**QUADRATIC RECIPROCITY AND QUADRATIC FORMS**

Quadratic Residues - Quadratic Reciprocity - The Jacobi Symbol - Binary Quadratic Forms -

Equivalence and Reduction of Binary Quadratic Forms - Sums of Two Squares - Positive Definite Binary Quadratic Forms

UNIT V**SOME FUNCTIONS OF NUMBER THEORY**

Greatest Integer Function - Arithmetic Functions - The Mobius Inversion Formula - Recurrence Functions - Combinatorial Number Theory

SUGGESTED READINGS

18MMP303

MATHEMATICAL MODELING

Semester – III

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Enrich the fundamental of mathematical modeling skills.
- The construction and analysis of mathematical models inspired by real life problems
- Several modeling techniques and the means to analyze the resulting systems.
- To analyze a model and to apply an appropriate method to calculate a solution in order to predict the behavior of the system.
- Assess and articulate what type of modeling techniques are appropriate for a given physical system.
- Make predictions of the behavior of a given physical system based on the analysis of its mathematical model.

Course Outcomes (COs)

On successful completion of this course the student will be able to

1. Solve problems involving dynamic models, and probabilistic models.
2. Understand the use of modern technology in solving real-world to Epidemic models.
3. Problems through ordinary differential equations, probability theory, graphs.
4. Formulate a mathematical model given a clear statement of the underlying scientific principles.
5. Solve basic linear difference equations and solve application problems.
6. Know the concept of mathematical modeling through Graphs.

UNIT I**MATHEMATICAL MODELING THROUGH ORDINARY DIFFERENTIAL EQUATIONS OF FIRST ORDER:**

Linear Growth and Decay Models – Non-Linear Growth and Decay Models – Compartment Models – Dynamics problems – Geometrical problems.

UNIT II**MATHEMATICAL MODELING THROUGH SYSTEMS OF ORDINARY DIFFERENTIAL EQUATIONS OF FIRST ORDER:**

Population Dynamics – Epidemics – Compartment Models – Economics – Medicine, Arms Race, Battles and International Trade – Dynamics.

UNIT III

MATHEMATICAL MODELING THROUGH ORDINARY DIFFERENTIAL EQUATIONS OF SECOND ORDER

Planetary Motions – Circular Motion and Motion of Satellites – Mathematical Modelling through Linear Differential Equations of Second Order – Miscellaneous Mathematical Models.

UNIT IV**MATHEMATICAL MODELING THROUGH DIFFERENCE EQUATIONS**

Simple Models – Basic Theory of Linear Difference Equations with Constant Coefficients – Economics and Finance – Population Dynamics and Genetics – Probability Theory.

UNIT V**MATHEMATICAL MODELING THROUGH GRAPHS**

Solutions that can be modeled through Graphs – Mathematical Modeling in Terms of Directed Graphs, Signed Graphs, Weighted Digraphs and Unoriented Graphs.

SUGGESTED READINGS

18MMP304

MATHEMATICAL STATISTICS

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- To understand the basic concepts in probability generating functions, sample moments and their functions, sampling, significance tests and statistical measures
- Probability distributions, significance of testing hypothesis and its interpretation,
- Estimation, ANOVA and their applications in various disciplines.
- Understand the concept of estimation.
- The knowledge of fixed-sample and large-sample statistical properties of point and interval estimators.
- Understanding of how to design experiments and surveys for efficiency.

Course Outcomes (COs)

After successfully completed this module the students will be able to

1. Explain the concepts of probability, including conditional probability.
2. Explain the concepts of random variable, probability distribution, distribution function, expected value, variance and higher moments, and calculate expected values and probabilities associated with the distributions of random variables.
3. Summarize the main features of a data set and test statistical hypotheses.
4. Define basic discrete and continuous distributions, be able to apply them and simulate them in simple cases.
5. Explain the concepts of analysis of variance and use them to investigate factorial dependence.
6. Describe the main methods of estimation and the main properties of estimators, and apply them.

UNIT I**PROBABILITY**

Random Events – Preliminary remarks – random events and operations performed on them – the system of axioms of the theory of probability – conditional probability – Baye's theorem – Independent Events – functions of random variables –Introduction to hypothesis testing, type of errors, standard errors, confidence interval, confidence limits. Significance level.

UNIT II**SAMPLE MOMENTS AND THEIR FUNCTIONS**

Notion of a sample and a statistic - Distribution functions of X , S^2 and (X, S^2) -Chi-square distribution - Student t-distribution -Fisher's Z-distribution -Snedecor's F -distribution -Distribution of sample mean from non-normal populations.

UNIT III

SIGNIFICANCE TEST

Concept of a statistical test -Parametric tests for small samples and large samples Chi-square test - Kolmogorov Theorem-Smirnov Theorem-Tests of Kolmogorov and Smirnov type The Wald-Wolfovitz and Wilcoxon-Mann-Whitney tests -Independence Tests by contingency tables.

UNIT IV

ESTIMATION

Preliminary notion -Consistency estimation -Unbiased estimates -Sufficiency - Efficiency - Asymptotically most efficient estimates -methods of finding estimates -confidence Interval.

UNIT V

ANALYSIS OF VARIANCE

One way classification and two-way classification. Hypotheses Testing: Power functions -OC function- Most Powerful test -Uniformly most powerful test -unbiased test.

18MMP305A FORMAL LANGUAGES AND AUTOMATA THEORY**Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The basic concepts in automata theory and theory of computation.
- To identify different formal language classes and their relationships.
- This course focuses on the basic theory of Computer Science and formal methods of computation like automata theory, formal languages, grammars.
- Design automata, regular expressions and context free grammars for accepting or generating a certain language.
- Design grammars and recognizers for different formal languages
- Determine the decidability and intractability of computational problems.

Course Outcomes (COs)

On successful completion of this course the students will be able to:

1. Understand the definition of Automata.
2. Know about the different concepts in automata theory and formal languages such as formal proofs, non-deterministic automata, regular expressions, regular languages context-free grammars, context-free languages.
3. Discuss the acceptability of a string by finite automation.
4. Applications of Pumping Lemma.
5. Design automata, regular expressions and context-free grammars accepting or generating certain languages.
6. Acquire concepts relating to the theory of computation and computational models including decidability and intractability.

UNIT I**FINITE AUTOMATA**

Definition of an Automation - Description of Finite Automaton – Transition systems - Property of transition functions - Acceptability of a string by a finite Automaton - Non deterministic finite automaton - The equivalence of DFA and NDFA.

UNIT II**FORMAL LANGUAGES**

Formal Languages - Basic Definitions and examples - Chomsky classification of Languages - Languages and their relation - Recursive and Recursively Enumerable sets- Operations on Languages.

UNIT III

REGULAR EXPRESSIONS AND LANGUAGES

Regular expressions - Finite Automata and Regular expressions.

UNIT IV

REGULAR SETS

Pumping Lemma for Regular sets - Applications of Pumping Lemma - Closure Property of Regular sets - Regular sets and Regular grammars.

UNIT V

CONTEXT FREE GRAMMARS

Context free Languages and Derivation trees - Ambiguity in Context free grammars - Simplification of Context free grammars (examples only).

18MMP305B

MAGNETOHYDRODYNAMICS

Semester – III

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- To understand fundamentals of magnetohydrodynamics which describes the dynamics of electrically conducting fluids
- To figure out the applications of magnetohydrodynamics to the various science and engineering fields
- Basics of electromagnetic theory and vector calculus.
- Able to understand the concept of flow and Stability.
- The basic properties of electrically-conducting fluids.
- The role of the Lorentz force and its relevance to plasma confinement, dynamo theory and the dynamics of magnetic waves.

Course Outcomes (COs)

On successful completion of this course the student will be able to:

1. Provide the details of the derivation of ideal and resistive MHD equations.
2. Demonstrate the basic properties of ideal MHD.
3. Describe electromagnetic boundary conditions.
4. Explain MHD waves.
5. Describe the derivation of fluid equations, energy equation.
6. Describe electromagnetic fields in the energy and momentum fluxes.

UNIT I

Review of equation of motions of viscous compressible fluid flow –Introduction of MHD-Electromagnetic field equations-Maxwell's equations and their Physical significance- Maxwell's equations in the moving frame of reference-Invariance under Galilean Transformation-Electromagnetic effects and the magnetic Reynolds number-induction equation –Alfven's Theorem-Physical Significance-Consequence of Alfven's Theorem-Ferraro's Law of irritation-The magnetic Energy- the mechanical equations and the mechanical effects-Electromagnetic stresses.

UNIT II

Magnetohydrostatics and steady states-Hydro magnetic equilibrium and forces free magnetic fields-boundary conditions – Boundary conditions in the case of force free magnetic fields-free surface of an isolated fluid mass- Chandrasekhar's theorem-General solution of force free magnetic field when is constant-some examples of force free fields.

UNIT III

Hydromagnetics of the laboratory- steady laminar motion-Hartmann flow (MHD Poiseuille's flow)- Domination of viscous forces over magnetic forces and vice versa-physical significance- Important dimensionless of MHD and their physical significance-electromagnetic boundary conditions-tensor electrical conductivity, Hall current and ion slip – simple flow problems with tensor electrical conductivity.

UNIT IV

Magneto hydrodynamic waves- Waves in an infinite fluid of infinite electrical conductivity- Alfven waves in incompressible fluid in viscid fluid of infinite electrical conductivity-Waves of finite amplitude –propagation of velocity and current density with Alfven velocity-MHD waves in incompressible fluid- Alfven wave and two magneto acoustic waves- the limit of zero magnetic Prandtl number of significance.

UNIT V

Stability of hydro magnetic systems- theory and applications-methods of investigation-small perturbations and instability-Energy principle-normal mode analysis-simple illustrative examples-the stability of Hartman layer-Squire's theorem-Orr-Sommerfeld equation-Instability of linear pinch-methods of stabilize- Flute Instability- A general criterion for stability-Bernstein's method of small oscillations(normal mode analysis) for hydro magnetic stability-jeans criterion for Gravitational stability-Chandrasekhar's generalization for MHD and rotating fluids.

FUZZY TOPOLOGY**Semester – III**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives:**

This course enables the students to learn

- The basic concepts of fuzzy topological spaces
- Separation axioms in Fuzzy Topological spaces
- To study about Fuzzy relations
- To study α - connectedness and α - compactness.
- Understand the concept of fuzzy nonlinear simulation.
- The development of Fuzzy Arithmetic.

Course Outcomes (COs)

On successful completion of this course the student will be able to:

1. Able to learn fuzzy set theory.
2. Understand the concept of Operations on Fuzzy Sets
3. Mastery in fuzzy relations and fuzzy graphs
4. Attain in-depth knowledge in fuzzy relations.
5. Understand the knowledge of Fuzzy Logic.
6. Gain knowledge about the fundamental concepts of α - shading families.

UNIT I**FUZZY SET THEORY**

Introduction - Sets and Subsets – Fuzzy Subsets – Basic Operations on Fuzzy Subsets – Graphical Representation of Some Terms – Concept of Uncertainty – Support of a Fuzzy set and r-cut or r-level. Types of Fuzzy Sets: Introduction - Different Types of Fuzzy Sets – Further Operations on Fuzzy Sets – t-norms and t-conorms or s-norms – The Extension Principle and Application – Operations for Type 2 Fuzzy Sets – Algebraic Operations with Fuzzy Numbers and Arithmetic.

UNIT II**FUZZY RELATIONS AND FUZZY GRAPHS**

Introduction - Fuzzy Relations – Properties of a Fuzzy Relation - Fuzzy Graph – Fuzzy Network.

UNIT III**FUZZY TOPOLOGICAL SPACES**

Introduction - Fuzzy Topology – Intuitionistic Fuzzy Topological space .Induced Fuzzy Topological spaces:
Introduction - Lower Semi Continuous Function – Induced Fuzzy Topological Spaces.

UNIT IV**CONNECTEDNESS IN FUZZY TOPOLOGICAL SPACE**

Introduction - Fuzzy Separated Sets – Fuzzy Connectedness – Some Stronger and Weaker Form of Fuzzy Connectedness.

UNIT V**SEPARATION AXIOMS**

Introduction - Fuzzy Separation Axiom- Unification of Fuzzy Separation Axiom.

SUGGESTED READINGS

18MMP306

MATHEMATICAL METHODS

Semester – III
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Range of mathematics tools with emphasis on engineering applications.
- To think quantitatively and analyse problems critically.
- Understand the concept of Volterra integral and Fredholm theory.
- The concepts of Functional dependent on higher order derivatives.
- Understand and be able to use the language, symbols and notation of mathematics.
- Develop mathematical curiosity and use inductive and deductive reasoning when solving problems.

Course Outcomes (COs)

On successful completion of this course the students will be able to,

1. Calculate the Fourier transform of elementary functions from the definition.
2. Find the Fourier transforms of functions of one variable.
3. Calculate the Laplace equation in half plane of standard functions both from the definition and by using tables.
4. Equation with separable kernel and Fredholm alternative approximation Method.
5. Select and combine the necessary Laplace transform techniques to solve second-order ordinary differential equations.
6. Understand the concept of Functionals of the integral forms

UNIT I

Fourier Transforms – Definition of Inversion theorem –Fourier cosine transforms - Fourier sine transforms – Fourier transforms of derivatives -Fourier transforms of some simple functions - Fourier transforms of rational function.

UNIT II

The convolution integral – convolution theorem – Parseval's relation for Fourier transforms – solution of PDE by Fourier transform – Laplace's Equation in Half plane – Laplace's Equation in an infinite strip - The Linear diffusion equation on a semi-infinite line - The two-dimensional diffusion equation.

UNIT III

Types of Integral equations–Equation with separable kernel- Fredholm Alternative Approximate method – Volterra integral equations–Classical Fredholm theory – Fredholm's First, Second, Third theorems.

UNIT IV

Application of Integral equation to ordinary differential equation – initial value problems – Boundary value problems – singular integral equations – Abel Integral equation .

UNIT V

Variation and its properties – Euler's equation – Functionals of the integral forms - Functional dependent on higher order derivatives – functionals dependent on the functions of several independent variables – variational problems in parametric form.

18MMP311 MATHEMATICAL STATISTICS– PRACTICAL**Semester – III
4H – 4C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- It is well recognized nowadays the importance of Statistics as an indispensable tool for obtaining and spreading information.
- Importance has been enhanced by the use of computational resources and particularly the software SPSS, that showed, during the last decades, to be an effective tool for treating and analyzing statistical data.
- Ability to use SPSS procedures in handling data files and performing statistical analysis, and to interpret the outputs provided by the program.
- Acquiring sensitivity and critical thinking towards arguments and conclusions based on statistical studies.
- Understanding the fundamental principles underlying descriptive and inferential statistical reasoning.

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Describe and classify data using statistical terminology.
2. Use SPSS to conduct basic descriptive analyses and graphical presentations.
3. Define the null hypothesis and the alternative hypothesis and Interpret P values and confidence intervals.
4. Understand different measures of effect (e.g. mean difference).
5. Know when to use basic statistical hypothesis tests (t-tests, chi-squared tests, correlation) and how to carry out these tests using SPSS.
6. Appreciate how to present and interpret these results in scientific reports.

List of Practical:

1. Introduction to SPSS Package

2. Working with windows in SPSS
3. Defining variables in variable view window in SPSS
4. Drawing of graphs and diagrams in SPSS Package
5. Standard deviation for individual and discrete series using SPSS Package.
6. Standard deviation continuous series using SPSS Package.
7. Coefficient of variation for individual and discrete series using SPSS Package.
8. Calculation of Mean and variance for binomial distribution using SPSS Package.
9. Calculation of Mean and variance for Poisson distribution using SPSS Package.
10. Karl Pearson's Correlation using SPSS Package.
11. Rank Correlation Coefficient using SPSS Package.
12. Testing Hypothesis using t - test in SPSS Package.
13. Testing Hypothesis using Z - test in SPSS Package.
14. Testing Hypothesis using chi-square - test in SPSS Package.
15. Interpretation of results in the SPSS output viewer.

18MMP401

MEASURE THEORY

Semester – IV

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

This course enables the students to learn

- Perspective on the broader impact of measure theory in ergodic theory.
- To apply the general principles of measure theory and integration.
- About the concept of Measurable spaces.
- To understand the basic concepts Riemann integral and Lebesgue integral.
- Basic knowledge of measure theory needed to understand probability theory, statistics and functional analysis.
- Develop the ideas of Lebesgue integration and its properties.

Course Outcomes (COs)

After successful completion of this course the students will be able to:

1. Get a clear view of the fundamentals of measure theory.
2. Acquaint with the proofs of the fundamental theorems underlying the theory of Lebesgue integration.
3. Identify the broader impact of measure theory in ergodic theory and ability to pursue further studies in this area.
4. Mastery in the measure spaces and its properties.
5. Apply the theorems of monotone and dominated convergence and Fatou's lemma.
6. Apply Lebesgue decomposition and the Radon-Nikodym theorem.

UNIT I**LEBESGUE MEASURE**

Introduction – Outer measure – Measurable sets and Lebesgue Measure – A non measurable set – Measurable set – Measurable functions – Littlewoods's three principles.

UNIT II**THE LEBESGUE INTEGRAL**

The Riemann integral – The Lebesgue integral of a bounded function over a set finite measure – The integral of a non negative function – The general Lebesgue integral – Convergence in measure.

UNIT III**DIFFERENTIATION**

Differentiation of monotone function, Functions of bounded variation-differentiation of an integral-Absolute continuity.

UNIT IV**MEASURE SPACES**

Measure spaces-Measurable functions-Integration-General convergence Theorems.

UNIT V**SIGNED MEASURES**

Signed measures-The Radon-Nikodym theorem-the L^p spaces.

STOCHASTIC PROCESSES**Semester – IV**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to learn

- The mathematical theory of random variables and random processes
- How queueing theory are used as tools and mathematical models in the study of networks.
- The theoretical concepts and techniques for solving problems that arises in practice
- Markov processes in discrete and continuous time.
- The essential mathematical tools for handling random processes.
- The familiarize the students with the stochastic simulation techniques.

Course Outcomes (COs)

On successful completion of the course, students will be able to:

1. Capable to expose the students to different types mathematical models with a view of random processes.
2. Understanding in the concept of birth and death process.
3. Solve the Kolmogorov equations problems.
4. Compute probabilities of transition between states and return to the initial state after long time intervals in Markov chains.
5. Identify classes of states in Markov chains and characterize the classes.
6. Stochastic Processes in Queuing Systems.

UNIT I**STOCHASTIC PROCESSES**

Definition of Stochastic Processes – Markov chains: definition, order of a Markov Chain – Higher transition probabilities – Classification of states and chains.

UNIT II**MARKOV PROCESS WITH DISCRETE STATE SPACE**

Poisson process – and related distributions – Properties of Poisson process, Generalizations of Poisson Processes – Birth and death Processes – continuous time Markov Chains.

UNIT III**MARKOV PROCESSES WITH CONTINUOUS STATE SPACE**

Introduction, Brownian motion – Wiener Process and differential equations for Wiener process, Kolmogorov equations – First passage time distribution for Wiener process – Ornstein – Uhlenbeck process.

UNIT IV

BRANCHING PROCESSES

Introduction – properties of generating functions of Branching process– Distribution of the total number of progeny, Continuous- Time Markov Branching Process, Age dependent branching process: Bellman-Harris process.

UNIT V

STOCHASTIC PROCESSES IN QUEUING SYSTEMS

Concepts – Queuing model M/M/1 – transient behavior of M/M/1 model – Birth and death process in Queuing theory: M/M/1 – Model related distributions – M/M/1 - M/M/S/S – loss system - M/M/S/M – Non birth and death Queuing process: Bulk queues – $M(x)/M/1$.

Undergraduate Programme – B.Sc Microbiology Programme

Outcomes

Programme Outcomes of UG Microbiology: Students of all undergraduate microbiology degree Programmes at the time of graduation will be able to

- a. Scientific Knowledge: Microbiology majors able to make observations, develop hypotheses, and design and execute experiments using advanced methods. Able to discuss science and scientific methodology. They will have a good knowledge of Intellectual Property Rights.
- b. Laboratory Skills: Microbiology students will master the following laboratory skills: aseptic culture techniques, microscopy, and use of appropriate methods to identify microorganisms and to use high laboratory equipments. They are able to practice safe microbiology, using appropriate protective and emergency procedures.
- c. Data analysis skills: Systematically collect, record, and analyze data, identify sources of error, interpret the results, and reach logical conclusions.
- d. Problem-Solving Skills: Microbiology students will be able to analyze and interpret results from a variety of microbiological methods, and apply these methods to analogous situations. Use mathematical and graphing skills and reasoning to solve problems in microbiology.
- e. Communication Skills: Microbiology majors will demonstrate competence in written and oral communication.
- f. Cooperation/Social Responsibility: Microbiology majors able to understand and appreciate the value of cooperating and working effectively with peers and be able to demonstrate a commitment to the process of developing such skills.
- g. Able to understand the importance of microorganisms in various industries such as pharmaceuticals, food, biofertilizers and biopesticides etc, Students will have a major knowledge on concepts of immunology, biotechnology, molecular biology, biochemistry, genetics. Able to explain the beneficial and harmful role of microorganisms in environment.

Programme Specific Outcomes (PSOs)

- h. Students will have a major knowledge on concepts of immunology, biotechnology, molecular biology, biochemistry, genetics. Able to explain the beneficial and harmful role of microorganisms in environment. Able to understand the importance of microorganisms in various industries such as pharmaceuticals, food, biofertilizers and biopesticides etc,
- i Describe how microorganisms are used as *model systems* to study basic biology, genetics, metabolism and ecology.
- j. Identify ways microorganisms play an *integral role* in disease, and microbial and immunological methodologies are used in disease treatment and prevention.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Programme Educational Objectives of UG Microbiology: The major objectives of the undergraduate course is

PEO-I: To impart knowledge on basic concepts of microbiology. To understand the beneficial and harmful role of microorganisms in the environment.

PEO-II: To understand the fundamentals of physiological reactions including metabolic pathways and biochemical reactions in microorganisms.

PEO-III: To develop human resource and entrepreneurs in Microbiology with the ability to independently start their own ventures or small biotech units in the field of biotechnology.

PEO-IV: Understand modern microbiology - practices and approaches with an emphasis in technology application in pharmaceutical, medical, industrial, environmental and agricultural areas.

PEO-V: Become familiar with public policy, bio-safety, and intellectual property rights issues related to microbiology applications nationally and globally

PEO-VI: Gain experience with standard bioinstrumentations and molecular tools and approaches utilized: manipulate genes, gene products and organisms.

PEO-VII: To demonstrate the written and oral communication skill .To develop the problem solving and data interpretation skills.

பகுதி - I தமிழ்ப்பாடத்திட்டம் (2018-2019)

Instruction Hours / week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

பருவம் I - தமிழ்முதல்தாள்
(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்'; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல்.
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

**KARPAGAM ACADEMY OF HIGHER EDUCATION
DEPARTMENT OF ENGLISH**

18ENU101

ENGLISH I

**Semester – I
4H – 4C**

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives:

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV: Drama

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

UNIT - V: Grammar and Composition

GRAMMAR :

1. Tenses
2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

COMPOSITION:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

18MBU101	INTRODUCTION TO MICROBIOLOGY AND MICROBIAL DIVERSITY	Semester-I 4H –4C
----------	--	----------------------

Instruction Hours / week: L: 3 T: 1P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong, fundamental foundation in microorganisms for advanced studies in biological sciences, particularly to improve their **skills** in microbiology field.
- To identify and understand the principle components of a light microscope
- To provide an overview of the biology of algae, ii) use the study of algae to provide a basis for understanding the evolutionary pathways to higher plants
- To explain why the study of fungi such as yeast and molds is within the discipline of microbiology
- To describe the unique characteristics of fungi
- To explain laboratory diagnosis, prevention and control of protozoa

COURSE OUTCOMES

1. After completion of this course paper, the students clearly understand the contributions of various scientists for development of microbiology field and **skills** associated with it.
2. This course will demonstrate the diversity of microbes and their applications.
3. Students will know about the various field of Microbiology
4. Students will know the role of microorganism in fermentation and spoilage
5. Able to understand the special features of algae, fungi and protozoa
6. Familiarize with morphologic criteria to differentiate the most common protozoan

Unit I- History of microbiology

Development of microbiology as a discipline, spontaneous generation vs biogenesis. Contribution of Anton von Leewenhoek, Golden era of Microbiology Louis Pasteur, Robert Koch, Joseph Lister, Alexander Flemming. Role of microorganism in fermentation, Germ theory of disease, Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Ellie Metchnikoff, Edward Jenner. Microscopy Application in industries, Application in medicine, Application in agriculture, Application in biotechnology, Application in biology.

Unit II- Classification of microorganisms

Bergey's Manual, Binomial Nomenclature and Universal Phylogenetic tree. Classification system: Phenetic and Phylogenetic, Whittaker's Five Kingdom and Carl Woese's three kingdom classification system and their utility. Difference between prokaryotic and eukaryotic microorganism. Major diversity of microbial life. General characteristics of Bacteria, Bacterial ultra-structure and Nutrients.

Unit III- Algae

General characteristics of algae including algal cell ultra-structure. Classification of algae-

Chlamydomonas, Volvox, Diatoms, red algae and brown algae. Application of Algae in agriculture, industry, environment and food. **General characteristics of Actinobacteria.**

Unit IV-Fungi

General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra- structure. Economic importance of fungi .Classification of fungi.

Unit V- Parasites

General characteristics, special references with *Entamoeba histolytica*, *Trichomonas*, *Giardia* and *Plasmodium*. Classification and **general properties of viruses.**

		Semester – I
18MBU102	BACTERIOLOGY	4H – 4C
Instruction Hours / week: L: 4 T: 0P: 0		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of bacteria that improves their chances in employability.
- To learn techniques and methods used in the cultivation and isolation of bacteria.
- To obtain with the knowledge about the habitat and characteristics of prokaryotes in detail.
- To prepare the specimen and identify the morphology of the bacteria
- To know about the culture media
- To obtain with the knowledge about the habitat and characteristics of various physiological groups of bacteria and archaea in detail.

COURSE OUTCOME

After completion of this course candidate able to:

1. Understand the basic microbial structure and function and this course provide an understanding of the concepts of bacteriology which is one of the basic requirements for their employability
2. Understand the structural similarities and differences among various physiological groups of bacteria and archaea
3. Demonstrate theory and practical skills in staining procedures
4. Understand various Culture media and their applications
5. Understand various physical and chemical means of sterilization
6. Know General bacteriology and microbial techniques for isolation of pure culture of bacteria

Unit I- Structure of bacteria

Cell shape and arrangement, glycocalyx, capsule, flagella, fimbriae and pili. Cell-wall structure and composition of Gram-positive, Gram-negative and archae cell wall. Action of antibiotics and enzymes on the cell wall (sphaeroplasts, protoplasts, and L-forms). Cell Membrane- Structure, function and chemical composition of bacterial and Archaeal cell membranes. Cell organelles. Endospore: Structure, formation, stages of sporulation.

Unit II – Microscopic staining

Staining-principle and types of staining (Simple and Differential). Pure culture technique- microbial preservation- cultivation of anaerobic bacteria.

Unit III- Media and Sterilization

Culture media-types, composition. Sterilization technique-Physical and Chemical methods of microbial control-types and mode of action. Bacterial growth curve-bacterial motility and cell count technique. Calculation of generation time and specific growth rate.

Unit IV- Microbial classification

Aim and principles of classification, systematics and taxonomy, concept of species, taxa, strain; conventional, molecular and recent approaches to polyphasic bacterial taxonomy, evolutionary chronometers, rRNA oligonucleotide sequencing, signature sequences, and protein sequences.

Unit V- Archae, bacteria and Eubacteria

Archae bacteria and Eubacteria- General characteristics, Classification (Overview), metabolism and ecological significance. Gram Positive and Gram Negative (Low G+C and High G+C)-General characteristics with suitable examples. Cyanobacteria: An Introduction.

8. Cappucino, J., and Sherman. N. (2010). Microbiology: A Laboratory Manual. 9th edition. Pearson Education Limited
9. Srivastava, S., and Srivastava, P.S. (2003). Understanding Bacteria. Kluwer Academic Publishers, Dordrecht.

Instruction Hours / week: L: 4 T: 0P:0**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To provide the knowledge on basics of biochemistry and its applications and to highlight the technical skill.
- To describe the classification and functions of lipids.
- To summarize the structure and classification of enzymes
- To state the Structure and types of DNA
- To analyse the functions and properties of phosphoglycerides
- To understand about storage and structural polysaccharides.

COURSE OUTCOME (CO'S)**Upon completion of this course students will be able to**

1. Understand the structures of enzymes, proteins, carbohydrates and fats
2. Understand the functions of biomolecules
3. Analyze the process of metabolism
4. Understand of nucleic acids and their importance to combine and analyses information.
5. Structure and classification of enzymes, specificity of enzymes
6. Summarize the DNA & RNA structure and base pairing schemes

Unit I- Basics of Chemistry

Atoms and molecules, cell structure, cell organelles, developing membrane structure, transport of molecules, Beer and Lambert's Law, Colorimeter, Anabolism and catabolism and standard for energy change.

Unit II- Carbohydrates

Monosaccharides-families, stereo isomerism, epimers, Mutarotation and anomers. Forms of glucose and fructose, Fischer and Haworth projection. Sugar derivatives. Disaccharides- occurrence, concept of reducing and non-reducing sugars and Haworth projections. Polysaccharides-storage and structural polysaccharides.

Unit III- Lipids

Classification and functions of lipids. Storage lipids- structure and function of fatty acids. Triacylglycerols. Saponification. Structural lipids- structure, functions and properties of phosphoglycerides and sphingolipids.

Unit IV- Proteins

Classification and functions of proteins and amino acids, Structure of amino acids and concept of zwitterion. Ninhydrin reaction. Natural modifications of amino acids in proteins. Non protein amino acids, Oligopeptides: Structure and functions of glutathione, insulin and aspartame. Primary and Secondary structure of proteins- alpha helix, beta pleated sheet. Tertiary and quaternary structures of proteins. Human haemoglobin structure.

Structure and classification of enzymes, mechanism of action of enzymes. Km equation and enzyme activity. Allosteric enzyme and its mechanism. Multienzyme complex. Enzyme inhibition. Vitamins-

classification and characteristics, sources and importance.

Unit V- Nucleic Acids

Nucleic Acids-Purines &Pyrimidinesnucleotides, RNA, & DNA base pairing schemes, types of RNA: mRNA, rRNA, tRNA, aminoacyltRNAsynthetase, Secondary structure of DNA, Watson and Crick model. Denaturation of DNA keto-enoltautomerism and consequences.

18MBU111

BASIC MICROBIOLOGY – PRACTICAL

Semester – I
(3H –2C)

Instruction Hours / week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

To develop skills related to

- Isolation and culture techniques of bacteria
- The external feature of bacteria and colony characteristics. Various staining techniques
- The external feature of bacteria and colony characteristics.
- Sterilization of heat sensitive materials
- Counting of microorganism in the environment
- Isolation of parasites from edible fruits.

COURSE OUTCOME (CO'S)

1. This practical paper will build the student to describe and distinguish the bacterial colonies.
2. They also will create knowledge on preparing permanent temporary mounts for fungi, protozoans and algae.
3. Students will able to understand the parasites and its nature.
4. They can able to handle the pathogens safely.
5. Students able to describe the *Spirogyra*, *Chlamydomonas* and *Volvox*
6. Students able to handle the instruments in the microbiology laboratory

EXPERIMENTS

1. Microbiology Good Laboratory Practices and Biosafety.
2. To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, hot air oven, microscope, pH meter) used in the microbiology laboratory.
3. Preparation of culture media for bacterial cultivation.
4. Sterilization of heat sensitive material by membrane filtration and assessment for sterility.
5. Demonstration of the presence of micro flora in the environment by exposing nutrient agar plates to air.
6. Temporary mounts Lacto phenol cotton blue mount – *Rhizopus*, *Penicillium*, *Aspergillus*.
7. Study of *Spirogyra* and *Chlamydomonas*, *Volvox* using temporary mounts.
8. Study of the following protozoans using permanent mounts/photographs: *Amoeba*, *Entamoeba*, and *Plasmodium*

SUGGESTED READINGS

18MBU112

BACTERIOLOGY-PRACTICAL

Semester – I
(3H – 2C)

Instruction Hours / week: L: 0 T: 0P: 3

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To provide a strong base in the fundamentals of bacteria.
- To learn techniques and methods used in the cultivation and isolation of bacteria.
- To develop **skills** related to preservation of bacterial cultures.
- To learn about bacterial specialized structure using staining methods
- To learn the bacterial special structure capsule and spore
- To measure the bacterial size

COURSE OUTCOME

After Completion of this course candidate can able to demonstrate:

1. Theory and practical skills in staining procedures
2. Various Culture media and their applications
3. Various microbial culture techniques to obtain isolation of pure cultures of bacteria
4. Bacterial endospore and capsule
5. Able to analyze the Bacterial size
6. Able explain the bacterial motility and flagella

EXPERIMENTS

1. Preparation of different media: synthetic media BG-11, Complex media - Nutrient agar, McConkey agar, EMB agar.
2. Micrometry.
3. Motility by hanging drop method.
4. Simplestaining
5. Negativestaining
6. Gram'sstaining
7. Acid fast staining – demonstration permanent slide only.
8. Capsulestaining
9. Endosporestaining.
10. Isolation of pure cultures of bacteria by streaking method - Quadrant, Continuous and T-streaking.
11. Preservation of bacterial cultures by various techniques - Agar slants and deeps - Mineral Oil, Glycerol stocks
12. Estimation of Colony Forming Unit (CFU) count by spread plate method/pour platemethod.

I18MBU113

BASIC BIOCHEMISTRY-PRACTICAL

Semester –
(4H –2C)

Instruction Hours / week: L: 0 T: 0 P:4

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To familiarize the students with the basic cellular processes at molecular level
- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.
- To expertise in Qualitative/Quantitative tests of carbohydrates, reducing sugars, Protein and lipids
- To study the protein secondary and tertiary structures
- To study the effect of temperature, pH and heavy metals on enzyme activity.
- To gain the knowledge on vitamin estimation

COURSE OUTCOME**Upon the completion this course student will acquire**

1. The practical knowledge and the skills associated about various techniques used in Biochemistry.
2. The skill in qualitative and quantity analysis of carbohydrates, protein and lipid
3. An understanding in protein secondary and tertiary structures
4. An insight in enzyme activity and its physical factors influence the activity
5. Knowledge on vitamin estimation
6. Cognitive skill and students able to solve the numerical problems

EXPERIMENTS

1. Properties of water, concept of pH and buffers, preparation of buffers and numerical problems to explain the concepts.
2. Numerical problems on calculation of standard free energy change and equilibrium constant.
3. Standard free energy change of coupled reactions.
4. Qualitative/Quantitative tests for carbohydrates, reducing sugars and non-reducing sugars.
5. Qualitative/Quantitative tests for lipids and proteins.
6. Study of protein secondary and tertiary structures with the help of models.
7. Study of enzyme kinetics—calculation of V_{max} , K_m , K_{cat} values.
8. Study effect of temperature, pH and heavy metals on enzyme activity.
9. Estimation of any one vitamin.

VIROLOGY

Semester – II
(4H –4C)

Instruction Hours / week: L: 4 T: 0P: 0

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To study general aspects of viral morphology and classification, replication, interactions and immunity to viruses
- To discuss the application of various immunological and molecular diagnostic tools.
- To explain the students about the virus classification
- To distinguish the architecture of viruses and their features
- To Know the methods used in studying viruses
- Discern the replication strategies of representative viruses from the seven Baltimore classes

COURSE OUTCOME (CO'S)

1. This paper will have clear understanding the role of various in plant, animal and human disease
2. Candidate able to understand their skill based various mechanisms to enter and escape from host.
3. Comprehend the intricate interaction between viruses and host cells
4. Understand the interactions between viruses and the host immune system
5. It will explain the terms Oncogenes and tumor suppressor genes, and how tumor viruses interact with these products and their intersecting pathways and cause oncogenesis.
6. Explain vaccine strategies and mechanisms of antiviral drugs and interferons

Unit I- History of viruses

History of viruses. Structure, Classification, nomenclature of viruses. Isolation, purification and cultivation of viruses. Viral assay. Concept of viroids, virusoids, satellite viruses, Virophage and Prions.

Unit II- Bacteriophages

Diversity, classification, one step multiplication curve, lytic and lysogenic phages (lambda phage) concept of early and late proteins, regulation of transcription in lambda phage

26

Unit III- Transmission of virus

Modes of viral transmission, Salient features of viral Nucleic acid-unusual bases, overlapping genes, splicing genes, terminal redundancy, cohesive ends, capping and tailing. Viral genome Organisation.

Unit IV- Viral multiplication and replication

Viral multiplication and replication-Interaction, and entry, assembly, maturation and release of virions. Oncogenic viruses and its types, mechanism. Viral replication strategies as per Baltimore classification. **Prevention and control of viral diseases.**

Unit V- Antiviral compounds

Antiviral compounds and their mode of action. Interferon and their mode of action. General principles of viral vaccination. Immunization schedule. Use of viral vectors in cloning and expression, gene therapy and phage display.

MICROBIAL PHYSIOLOGY AND METABOLISM

Semester-II
(4H – 4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVE**

- To familiarize the students with the basic cellular processes at molecular level
- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.
- To expertise in Qualitative/Quantitative tests of carbohydrates, reducing sugars, Protein and lipids
- To study the protein secondary and tertiary structures
- To study the effect of temperature, pH and heavy metals on enzyme activity.
- To gain the knowledge on vitamin estimation

COURSE OUTCOME**Upon the completion this course student will acquire**

- 1.The practical knowledge and the skills associated about various techniques used in Biochemistry.
- 2.The skill in qualitative and quantity analysis of carbohydrates, protein and lipid
- 3.An understanding in protein secondary and tertiary structures
- 4.An insight in enzyme activity and its physical factors influence the activity
- 5.Knowledge on vitamin estimation
- 6.Cognitive skill and students able to solve the numerical problems

Unit I- Microbial nutrition

Microbial nutrition–nutrient requirements, Nutritional groups of microorganisms.Uptake of nutrients by cell – Passive, Facilitated diffusion, Active transport, Group translocation and Iron uptake.

Unit II- Microbial growth

Different phases of growth curve - generation time. Measurement of microbial growth. Batch, Continuous and Synchronous culture, Diauxic growth, Influence of environmental factors on growth (Temperature, pH, solute, water activity, oxygen and pressure).

Unit III- Carbohydrate metabolism

Carbohydrate metabolism – EMP, ED, Pentose phosphate pathway, TCA cycle, Aerobic respiration, oxidative phosphorylation, electron transport chain (Prokaryotic and Eukaryotic), substrate level phosphorylation. Anaerobic respiration.Uncouplers and inhibitors.

Unit IV- Anaerobic respiration

Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/nitrite and nitrate/ammonia respiration; fermentative nitrate reduction). Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways.

Unit V- Cyanobacteria

Photosynthesis – bacteria and cyanobacteria, photosynthetic pigments – oxygenic (cyanobacterial)²⁸

and Anoxygenic (Purple, green bacteria) photosynthesis. Nitrogen metabolism-overview of nitrogen cycle.

18MBU203

MICROBIAL GENETICS

Semester – II
(4H –4C)

Instruction Hours / week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics.
- Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology that improve their chances of employability in biotechnological industries
- To explain the mutagen and process of mutation
- To explain about DNA as a genetic material
- To paraphrase the genetic material structure and model
- To explain the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes

COURSE OUTCOME (CO'S)

1. This course provided candidates with basic knowledge and understanding of Molecular Biology with special reference to microbial genome.
2. Students undertaking this course will be able to describe the nature of molecular world and its application in modern Microbiological sectors.
3. Students able to understand the properties, structure and function of genes in microorganism at the molecular level
4. Describe the importance of genetic code and operon concept
5. Discuss the molecular mechanisms underlying mutations and repair mechanisms
6. Able to summarize the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes

Unit I- History of genetics

Concept of Genetics, Mendelian principles, DNA as a genetic material, Experimental evidence – Chromosomal theory of inheritance. DNA structure, models of DNA, DNA replication, transcription, translation, RNA structure and types.

Unit II- Plasmids

Types of plasmids- replication, partitioning, host range, plasmid-incompatibility, amplification, curing and application.

Unit III- Genetic code

Genetic code- Operon concept-Lactose, tryptophan. Genetic recombination in bacteria - Conjugation, Transformation –Transduction and its types. Gene Mapping techniques-gene and chromosome walking.

Unit IV- Mutations

Mutations and mutagenesis, types of mutations and mutagens. Identification of mutants- Ames test.

30

Unit V- Transposons

Transposons-definition, types of Transposons, mechanism of transposition and application. Mu transposon and eukaryotic transposable elements. Applications.

18MBU211

VIROLOGY–PRACTICAL

Semester – II
(3H –2C)

Instruction Hours / week: L: 0 T: 0P:3

Marks: Internal:40 External: 60 Total:100

End Semester Exam: 6 Hours

COURSE OBJECTIVES

- Describe the structure and replication strategies of the individual viruses discussed, including the processes of entry into cells, control of gene transcription.
- Define the process of virus latency and describe in molecular terms control of the process and activation of viral genomes during reactivation.
- Describe the growth behavior differences between normal cells and cells transformed by oncogenic DNA and RNA viruses.
- To study general aspects of viral morphology and classification.
- Cultivation of viruses and various methods of propagation.
- To discuss the application of various immunological and molecular diagnostic tools.

COURSE OUTCOME (CO'S)

1. Upon paper completion, students will have skill based knowledge on structure of plants, animal, bacteria and viruses.
2. This paper also enables the student on isolation, propagation of various viruses.
3. It will help the students to understand the plant and animal viruses.
4. Students can distinguish the viruses According to their characteristic features.
5. It will explain the research activities involved in virology studies.
6. Skill based viral analysis can be performed in medical research.

EXPERIMENTS

1. Study of the structure of important animal viruses (rhabdo, influenza, paramyxo hepatitis B and retroviruses) using electron micrographs –Demonstration.
2. Study of the structure of important plant viruses (caulimo, Gemini, tobacco ring spot, cucumber mosaic and alpha-alpha mosaic viruses) using electron micrographs – Demonstration.
3. Study of the structure of important bacterial virus (ϕ X174, T4, λ) using electron micrograph – Demonstration.
4. Isolation and enumeration of bacteriophages (PFU) from water/sewage sample using double agar layer technique
5. Studying isolation and propagation of animal viruses by chick embryo technique
6. Study of cytopathic effects of viruses using photographs
7. Perform local lesion technique for assaying plant viruses.

18MBU212 MICROBIAL PHYSIOLOGY AND METABOLISM–PRACTICAL (3H –2C)**Instruction Hours / week: L: 0 T: 0P: 3****Marks: Internal: 40 External: 60 Total:100
End Semester Exam: 6 Hours****COURSE OBJECTIVES**

- To enhance the students' knowledge on various aspects of microbial physiology like growth, extremophiles studies and chemical characterization of microbes.
- To improve their **skills** in handling microorganisms
- To analyze the growth condition of the bacteria.
- To facilitate the students to deal with the bacterial strain
- To demonstrate the fermentation technique
- To demonstrate the generation time and thermal death time of bacteria

COURSE OUTCOME**Upon successful completion of this practical course**

1. The students will be able to analyze the bacteria growth and growth condition
2. Able to identify the various factors for optimal growth of *E.coli*.
3. Understand the basic microbial structure and functions of various physiological groups of prokaryotes.
4. Able to utilize the various Culture media in the proper physical condition for fermentation
5. Able to explain the microbial metabolism – Autotrophy and heterotrophy modes of nutrition
6. Students able to understand the physical and chemical growth requirements of bacteria and thermal death time of bacteria.

EXPERIMENTS

1. Study and plot the growth curve of *E. coli* by turbidometric and standard plate count methods.
2. Calculations of generation time and specific growth rate of bacteria from the graph plotted with the given data
3. Effect of temperature on growth of *E.coli*
4. Effect of pH on growth of *E.coli*
5. Effect of carbon and nitrogen sources on growth of *E.coli*
6. Effect of salt on growth of *E.coli*
7. Demonstration of alcoholic fermentation
8. Demonstration of the thermal death time and decimal reduction time of *E.coli*.

SUGGESTED READINGS

18MBU213

MICROBIAL GENETICS- PRACTICAL

Semester – II
(4H –2C)

Instruction Hours / week: L: 0 T: 0 P:4

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 6Hours

COURSE OBJECTIVES

- To focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics.
- Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology that improve their chances of **employability** in biotechnological industries
- To study the effect of chemical and physical mutagens on prokaryotic cell
- To isolate the extra chromosomal from bacteria
- To Interpret the DNA quantity and purity
- To identify the mutant strains using appropriate techniques

COURSE OUTCOME (CO'S)

1. Students undertaking this practical shall be able to describe the key concept in the basic Microbial Genetics
2. Effectively understand the implication of mutation and its characteristics.
3. Further, the experiments would allow students to recall and relate the information gained from Microbial Genetics theory paper and **skills** associated with it
4. Students able demonstrate the gene transfer techniques
5. Students can estimate the genetic materials
6. Able to distinguish the plasmid and Genomic DNA

EXPERIMENTS

1. Preparation of Master and Replica Plates.
2. Study the effect of chemical (HNO₂) and physical (UV) mutagens on bacterial cells.
3. Study survival curve of bacteria after exposure to ultraviolet (UV) light.
4. Isolation of Plasmid DNA from *E.coli*.
5. **Estimation of DNA**
6. Study different conformations of plasmid DNA through Agarose gel electrophoresis.
7. Demonstration of Bacterial Conjugation.
8. Demonstration of bacterial transformation and transduction.
9. Demonstration of AMES test.

SUGGESTED READINGS

ENVIRONMENTAL STUDIES

Semester – II
(4H –4C)

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3Hours

COURSE OBJECTIVES

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and/or practitioners.
- To create awareness among the students to know about various renewable and nonrenewable resources of the region, enables environmentally literate citizens (by knowing the environmental acts, rights, rules, legislation, etc.)
- To make appropriate judgments and decisions for the protection and **skills** associated with improvement of the earth.

COURSE OUTCOMES (COS)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Unit I- Ecosystem

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II- Natural Resources

Natural Resources - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

Unit III- Biodiversity and Its Conservation

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega- diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man- wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex- situ conservation of biodiversity.

Unit IV- Environmental Pollution

Environmental Pollution - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V- Social Issues and the Environment

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

SUGGESTED READINGS

4. Tripathy, S.N., and Panda, S., (2004). Fundamentals of Environmental Studies; 2nd Edition, Vrianda Publications Private Ltd., New Delhi.
5. Kumar, A., (2004). A Textbook of Environmental Science; APH Publishing Corporation, New Delhi.
6. Verma, P.S., Agarwal, V.K., (2001). Environmental Biology (Principles of Ecology); S.Chand and Company Ltd., New Delhi.
7. Kaushik, A., Kaushik, C.P., (2004). Perspectives in Environmental Studies, New Age International Pvt. Ltd. Publications, New Delhi.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES

- To encode the **employability** importance of the role of microorganisms in food industries both in beneficial and harmful ways.
- This course aims to provide instruction in the general principles of food microbiology.
- Hands on practicals complimented with an industry-based project, give a real-world perspective to microbiological challenges faced by the food industry.
- The course covers the microbiology of food preservation and food commodities; principles and methods for the microbiological examination of foods and microbiological quality control.
- To develop an understanding of the major principles of and current issues in the several topical areas that collectively constitute Food Microbiology
- It will help the students to understand the dairy Technology.

COURSE OUTCOME

1. Provides job oriented information about the role of microorganisms in many food, and beverage industries both in production and spoilage processes.
2. Develop job based output on industrial based technologies on Food microbiology.
3. It will explain the interactions between microorganisms and the food environment, and factors influencing their growth and survival.
4. Discuss the microbiology of different types of food commodities.
5. Explain why microbiological quality control programmes are necessary in food production.
6. Students able to describe mode of food intoxication in human.

Unit I

Natural flora and source of contamination of foods in general. Intrinsic and extrinsic factors that affect growth and survival of microbes in foods. Microbial spoilage of various foods – Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods

Unit II

Principles of food preservation. Physical methods of food preservation: temperature (low, high, canning, and drying) irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging. Chemical methods of food preservation: salt, sugar, organic acids, SO₂, nitrite and nitrates, antibiotics and bacteriocins, sterilization of dry heat, moist heat, chemical, physical and radiation.

Unit III

Fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese. Other fermented foods: Idly, sauerkraut, soy sauce and tempeh. Probiotics: Health benefits, types of microorganisms used, probiotic foods available in market.

Unit IV

Causative agents, foods involved, symptoms and preventive measures of the following diseases, Food intoxications: *Staphylococcus aureus*, *Clostridium botulinum* and mycotoxins. Food infections: *Bacillus cereus*, *Vibrio parahaemolyticus*, *Escherichia coli*, Salmonellosis, Shigellosis, *Yersinia enterocolitica*, *Listeria monocytogenes* and *Campylobacter jejuni*, fungal diseases.

Unit V

Cultural and rapid detection methods of food borne pathogens in foods and introduction to predictive microbiology. HACCP, FSSAI (ISO 9001:2008) Indices of food sanitary quality (record maintenance and standards) and sanitizers.

SUGGESTED READINGS

Instruction Hours / week: L: 4 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To encompasses the employability use of microorganisms in the manufacture of food or industrial products.
- The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
- This course covers the principles of various processes associated with the production and recovery of different bio-products derived from microorganisms.
- The students will be able to discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- It will make the students to explore their practical skills in entrepreneurial activities.
- It will deliver the large scale production of microbial products techniques in advanced level.

COURSE OUTCOME

- Provides knowledge in the large scale production of industrial product, providing the trends to cater the needs of industry.
- This will help the students to enhance their employment knowledge on microbiology based commercial products.
- The aim of the course is to give the students broad theoretical and practical skills in industrial microbiology.
- This course covers the principles of various processes associated with the production and recovery of different bio-products derived from microorganisms.
- The students will be able to discuss the role of microorganisms in industry.
- To carry out experiments to produce microbial metabolites.

Unit I

Brief history and developments in industrial microbiology. Sources of industrially important microbes and methods for their isolation, primary and secondary screening methods. Strain improvement method (protoplast fusion, mutation and recombinant DNA technology).

Unit II Preservation and maintenance of industrial strains. Media formulation (molasses, corn - steep liquor, sulphite waste liquor, whey, yeast extract and protein hydrolysates).

Unit III

Types of fermentation processes – Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-batch and continuous fermentations. Components of a typical bio-reactor, Types of bioreactors – Laboratory, pilot- scale and production fermenters, constantly stirred tank and air-lift fermenters. Measurement and control of fermentation parameters - pH, temperature, dissolved oxygen, foaming and aeration.

Unit IV

Separation of cells – filtration and centrifugation. Cell disruption – physical, chemical and enzymatic methods. Product separation – solvent extraction and precipitation. Lyophilization and spray drying. Methods of immobilization, advantages and applications of immobilization.

Unit V

Microbial production of industrial products-Citric acid, Ethanol, Penicillin, Glutamic acid, Vitamin B₁₂, Enzymes (DHA, amylase, protease, lipase, chitinase) Wine, Beer, probiotics (*Lactobacillus*, *Bacillus* and yeast) (micro-organisms involved, media, fermentation conditions, downstream processing and uses).

SUGGESTED READINGS

1. Stanbury PF, Whitaker A and Hall SJ. (2006). Principles of Fermentation Technology. 2nd edition, Elsevier Science Ltd.

5. Casida LE. (1991). Industrial Microbiology. 1st edition. Wiley Eastern Limited.
6. Patel A.H. (1996). Industrial Microbiology. 1st edition, Macmillan India Limited.
7. Waites M.J., Morgan N.L., Rockey J.S. and Higon G. (2001). Industrial Microbiology: An Introduction. 1st edition. Wiley – Blackwell.

Instruction Hours / week: L: 4 T: 0P:0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To provide the informative understanding on Advances in Biochemistry and its applications.
- It serves as good research knowledge on various metabolic pathways that prevails inside the human body.
- It will explain the basic concepts on carbohydrates and their structural properties.
- Students can able to distinguish types of lipids and their properties.
- It will determine the genetic concepts of nucleic acid in all living forms.
- Students will study different types of enzymes and their activities.

COURSEOUTCOME (CO'S)

- A candidate can able to understand metabolic pathways of carbohydrates, proteins, Lipids and Nucleic acid.
- This [skill](#) based course will provide clear understanding about the Biological oxidation.
- Students can able to define the structural identification of sugar molecules.
- It will narrate the fundamentals of enzyme analysis and their activation sites.
- Students can be able to differentiate different types of lipids.
- Students can understand the fundamentals on nucleic acid synthesis and protein synthesis.

Unit I- Introduction to metabolism

Bioenergetics - Thermodynamics principles, Concepts of free energy, Standard free energy, Biological oxidation- reduction reactions, redox potential, High Energy phosphate compounds.

Unit II- Carbohydrate metabolism

Glycolysis, TCA cycle, Glycogenesis, Glycogenolysis, HMP shunt, Gluconeogenesis, Glucuronic acid pathway.

Unit III- Lipid metabolism

Fatty acid oxidation – α , β , ω oxidation. Biosynthesis of saturated and unsaturated fatty acids. Metabolism of cholesterol, triglycerides and ketone bodies.

Unit IV- Protein metabolism

Ketogenic and Glucogenic amino acids. Degradation of proteins: Deamination, Transamination and Decarboxylation, Urea cycle.

Unit V- Nucleic acid metabolism and Biological oxidation

Biosynthesis and degradation of purine and pyrimidine nucleotides. Mitochondrial Electron Transport Chain: electron carriers, sites of ATP production, inhibitors of ETC, Oxidative phosphorylation:- structure of ATPase complex, chemiosmotic theory, inhibitors of oxidative phosphorylation and uncouplers, Mitochondrial shuttle system.

SUGGESTED READINGS

1. Fundamentals of Biochemistry, J.L. Jain, S.Chand publications, 2004.
2. Lehninger's Principles of Biochemistry (2000) by Nelson, David I. and Cox, M.M. Macmillan /Worth, NY.
3. Harper's Biochemistry Robert K. Murray, Daryl K. Granner, Peter A. Mayes, Victor W. Rodwell, 24th edition, Prentice Hall International. Inc.

5. Principles of Biochemistry, David L. Nelson, Michael M.Cox, Lehninger, 4th edition, W.H. Freeman and company.
6. Biochemistry, LubertStryer, 4th edition, W.H. Freeman & Co, 1995.
7. Fundamentals of Biochemistry (1999) by Donald Voet, Judith G.Voet and Charlotte W Pratt, John Wiley & Sons, NY.

Instruction Hours / week: L: 3 T: 0 P: 0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To make the students better to understand the aspects of skilled manufacturing practices, kinds of pathogenic microorganisms in food and quality control in food and pharmaceutical industries.
- Develop industry oriented skills on developing drugs and food.
- To make the students to understand the food quality systems and advancement universally.
- It will explain the students about all kinds of bio safety levels in laboratories.
- To train the students to be competent working professionals in the food industry and pharmaceutical industry.
- To help the students to explain the production of quality food by imparting better nutritional, sanitation & hygiene concepts.

COURSE OUTCOME

Imparts skilled knowledge on good manufacturing practices and food spoilage of different types of foods.

1. Develop skills on Food and drug based microbiological analysis.
2. To encourage students to the entrepreneurs and develop the capacity for setting up small scale enterprises with respect to food and pharmaceuticals within the country.
3. To organize functions for creating awareness about the importance of safe processed nutritious food.
4. To provide diagnostic analysis of food and pharmaceutical products.
5. The students will be able to discuss the role of microorganisms in industry.
6. To carry out experiments to produce microbial metabolites.

Unit I

Good laboratory practices – Good microbiological practices. Biosafety cabinets – Working of biosafety cabinets, using protective clothing, specification for BSL-1, BSL-2, BSL-3. Discarding biohazardous waste – Methodology of Disinfection, Autoclaving & Incineration.

Unit II

Sampling procedures for food, water, and air Culture and microscopic methods – Standard plate count, membrane filtration, most probable numbers, direct microscopic counts, Biochemical and immunological methods: Limulus lysate test for endotoxin, gel, lot agglutination precipitation sterility testing for pharmaceutical products. Molecular methods – Nucleic acid probes, PCR based detection, biosensors.

Unit III

Enrichment culture technique, Detection of specific microorganisms – on XLD agar, Salmonella Shigella Agar, Mannitol salt agar, EMB agar, MacConkey Agar, Saboraud Agar.

Unit IV

Ascertaining microbial quality of milk by MBRT, Rapid detection methods of microbiological quality of milk at milk collection centres (COB, 10 min Resazurin assay).

Unit V

Hazard analysis of critical control point (HACCP) - Principles, flow diagrams, limitations. Microbial Standards for Different

18MBU304B

MICROBIAL DIAGNOSIS IN HEALTH CLINIC

Semester – III
(3H – 3C)

Instruction Hours / week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**COURSE OBJECTIVES**

- To provide an **employment** understanding of the natural history of infectious diseases in order to deal with the etiology, laboratory diagnosis, treatment and control of infections in the community.
- This course is aimed to Identify the species of pathogenic bacteria and fungi
- Determine the modes of transmission of infectious diseases and pathogenesis
- Know of the theoretical foundations for the differentiation of the major pathogenic groups
- To Determine the antimicrobials to be used in the sensitivity testing of different types of pathogens.
- Analyze and solve case studies involving bacterial and fungal agents

COURSE OUTCOME

1. Provides employment knowledge to identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents.
2. It describes the basic mechanisms of pathogenesis of infectious diseases.
3. It explains the basic principles of diagnosis, antimicrobial treatment, prevention and control of infectious diseases in the hospital and community.
4. It help the students to understand the host immune system and explain the host response to infection
5. Understand and interpret basic laboratory tests for the diagnosis of infectious diseases.
6. Apply the principles of molecular and immunological techniques for the diagnosis of infectious diseases.

Unit I

Bacterial, Viral, Fungal and Protozoan Diseases of various human body systems, Disease associated clinical samples for diagnosis.

Unit II

How to collect clinical samples (oral cavity, throat swab, tissue sample, skin, Blood, CSF, urine and faeces) and precautions required. Method of transport of clinical samples to laboratory and storage.

Unit III

Examination of sample by staining – Gram stain, Ziehl-Neelson staining for tuberculosis, Giemsa-stained thin blood film for malaria. Preparation and use of culture media - Blood agar, Chocolate agar, Lowenstein-Jensen medium, MacConkey agar, distinct colony properties of various bacterial pathogens.

Unit IV

Serological Methods - Agglutination, ELISA, immune fluorescence, Nucleic acid based methods – PCR, Nucleic acid probes, Typhoid, HBV, HCV, HIV and Denque.

Unit V

Importance, Determination of resistance/sensitivity of bacteria using disc diffusion method (Kirby Bauer Method) Determination of minimal inhibitory concentration (MIC) of an antibiotic by broth dilution method (LC₅₀, LC₉₀).

18MBU311	FOOD AND DAIRY MICROBIOLOGY – PRACTICAL	Semester – III (4H – 2C)
----------	---	-----------------------------

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 9 Hours

COURSE OBJECTIVES

- To encode the importance of the role of microorganisms in food industries both in beneficial and harmful ways.
- To obtain a good **entrepreneurial** understanding of food and dairy products and become qualified as microbiologist in food and dairy industries.
- Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
- To know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
- Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods.
- To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries.

COURSE OUTCOME

1. Provides necessary entrepreneurial information on the food, dairy Microbiology in safety and quality perspective.
2. It will help to study the importance in the prevention of contamination that might be caused by the microorganisms.
3. To Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
4. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation
5. Students can able to understand of the basis of food safety regulations and Discuss the rationale for the use of standard methods and procedures for the microbiological analysis of food
6. Acquire, discover, and apply the theories and principles of food microbiology in practical, real-world situations and problems.

EXPERIMENTS

1. MBRT of milk samples
2. Standard plate count of milk sample.
3. Alkaline phosphatase test to check the efficiency of pasteurization of milk.
4. Isolation of food borne bacteria from food products.
5. Isolation of spoilage microorganisms from spoiled vegetables/fruits.
6. Isolation of spoilage microorganisms from bread.
7. Preparation of yogurt.

18MBU312

INDUSTRIAL MICROBIOLOGY – PRACTICAL

Semester – III
(4H – 2C)

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 4 External: 60 Total: 10
End Semester Exam: 9 Hours**COURSE OBJECTIVES**

- To encompass the use of microorganisms in the manufacture of food or industrial products on the basis of employment.
- Get equipped with a theoretical and practical understanding of industrial microbiology
- Appreciate how microbiology is applied in manufacture of industrial products
- Know how to source for microorganisms of industrial importance from the environment
- Know about design of bioreactors, factors affecting growth and production, heat transfer, oxygen transfer
- Understand the rationale in medium formulation & design for microbial fermentation, sterilization of medium and air.

COURSE OUTCOME

1. Provides knowledge in the large scale production of industrial product, and teaches the modern employment trends to cater the needs of industry.
2. Students will differentiate the types of fermentation processes
3. Understand the biochemistry of various fermentations
4. Identify techniques applicable for Improvement of microorganisms based on known biochemical pathways and regulatory mechanisms
5. Comprehend the techniques and the underlying principles in downstream processing
6. Students can able to explore the practical skills in research activities.

EXPERIMENTS

1. Study of different parts of fermenter
2. Study the growth curve: Haemocytometer; Glycol stock and stability of vials at different time
3. Microbial fermentation – Production and estimation (qualitative and quantitative) of
 - a) Enzymes : Amylase, Protease and DHA
 - b) Amino acid : Glutamic acid
 - c) Organic acid : Citric acid
 - d) Alcohol : Ethanol
4. A visit to any educational institute/industry to see an industrial fermenter, and other downstream processing operations.
5. Assess quality of probiotics in tablets and nutritional supplements; stability of vials at different time

Semester – III

18MBU313

ADVANCED BIOCHEMISTRY - PRACTICAL

(4H –2C)

Instruction Hours / week: L: 0 T: 0P:4

Marks: Internal: 40 External: 60 Total:100

End Semester Exam: 3 Hours

COURSE OBJECTIVE

- To familiarize the students with the some basic analytical techniques in Biochemistry.
- To make students to gain knowledge with these techniques used for purification and structural predication of bioorganic compounds.
- An ability to acquire in-depth theoretical and practical knowledge of Biochemistry and the ability to apply the acquired knowledge to provide cost efficient solutions in Biochemistry.
- An ability to properly understand the technical aspects of existing technologies that help in addressing the biological and medical challenges faced by humankind.
- An ability to translate knowledge of Biochemistry to address environmental, intellectual, societal and ethical issues through case studies presented in the class.
- An ability to apply fundamental knowledge related to pure sciences in an interdisciplinary manner for providing innovative solutions to need based problems for global impact.

COURSE OUTCOME

1. Students will get **skill** based practical knowledge about various techniques used in Biochemistry.
2. An ability to critically analyze scientific data, draw objective conclusions and apply this knowledge for human welfare.
3. Students should be able to demonstrate expertise and ethical perspective on areas related to Biochemistry.
4. An ability to gain domain knowledge and know-how for successful career in academia, industry and research.
5. Promoting lifelong learning to meet the ever evolving professional demands by developing ethical, inter personal and team skills
6. Students can develop skill based analysis in research activities.

EXPERIMENTS

1. Estimation of Protein by Lowry's method
2. Estimation of Cholesterol by Zak's method
3. Estimation of Phosphorus by Fiske Subbarow method
4. Determination of effect of pH, temperature and substrate concentration of Salivary Amylase
5. Separation of sugar by paper chromatography
6. Separation of amino acid by thin layer chromatography
7. Separation of plant pigments by thin layer / column chromatography

SUGGESTED READING

1. Biochemical Methods 1992, by S.Sadasivam and A. Manickam, Second Edition, New Age International Publishers, New Delhi
2. Laboratory Manual in Biochemistry, 1981. J.Jayaraman, New Age International publishers, NewDelhi

18MBU314A**Semester – III
(3H – 1C)****MICROBIAL QUALITY CONTROL IN FOOD AND
PHARMACEUTICAL INDUSTRIES – PRACTICAL****Instruction Hours / week: L: 0 T: 0 P: 3****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVE**

- To make the students better to understand the aspects of skilled manufacturing practices, kinds of pathogenic microorganisms in food and quality control in food and pharmaceutical industries.
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management.
- Food safety systems including hazard analysis critical control points and preventative control plans
- Principles of enumeration and identification of micro-organisms, using both traditional and rapid methods as well as the pharmacopoeial methods for the detection of specified organisms.
- To gain theoretical and practical knowledge on food and pharma industries.
- To encourage students to the entrepreneurs and develop the capacity for setting up small scale enterprises with respect to food within the country.

COURSE OUTCOME

- This paper imparts skilled knowledge on good manufacturing practices and food spoilage of different types of foods
- Students can develop their entrepreneurial skills in food and pharma sectors.
- Good Manufacturing Practices (GMP) and associated guidelines for drugs, natural health products, cannabis and food
- Good documentation Practices (GDP) and Data Integrity (DI)
- Validation for equipment, methods, cleaning and process
- Quality systems such as investigations, document management systems, Standard Operating Procedures (SOP), change management system, recall management and inspection management.

EXPERIMENTS

1. Good manufacturing practices.
2. Most probable number test.
3. Isolation of pathogens from food samples.
4. Methylene blue reduction test.
5. Enumeration of microbial population from pharmaceutical samples.

2. Garg N, Garg KL and Mukerji KG (2010). Laboratory Manual of Food Microbiology I K International Publishing House Pvt. Ltd.
3. Jay JM, Loessner MJ, Golden DA (2005) Modern Food Microbiology, 7th edition. Springer.
4. Baird RM, Hodges NA and Denyer SP (2005). Handbook of Microbiological Quality control in Pharmaceutical and Medical Devices, Taylor and Francis Inc.

18MBU314B**Semester – III
(3H – 1C)****MICROBIAL DIAGNOSIS IN HEALTH CLINIC - PRACTICAL****Instruction Hours / week: L: 0 T: 0 P: 3****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES**

- To provide **employment** oriented understanding of the natural history of infectious diseases in order to deal with the etiology, laboratory diagnosis, treatment and control of infections in the community.
- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease.
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

COURSE OUTCOME

1. Acquire knowledge to identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents on the basis of employment.
2. Helps to understand the use of lab animals in medical field.
3. Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
4. Explain the methods of microorganism's control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.
5. Demonstrate theory and practical skills in microscopy and their handling techniques and staining procedures.
6. It will help the students to understand the general bacteriology and microbial techniques for isolation of pure cultures of Microorganisms.

EXPERIMENTS

1. Collection and processing of clinical specimen – Sputum.
2. Collection and processing of clinical specimen – Urine.
3. Collection and processing of clinical specimen – Blood.
4. Collection and processing of clinical specimen – Stool.
5. Antibiotic sensitivity testing by Kirby-Bauer method
