							28	280	420	700
SEMESTER IV										
18ASP491	Project	2,3	2,1 1	0	0	0	15	80	120	200

The following are the Elective papers

List of Elective Papers		
S.No	Course Code	Subjects
1.	18ASP105(A)	எண்கணிதம் (Numerology)
2.	18ASP105(B)	ஆடிப்படை வாஸ்த்து – I (Fundamentals of Vasthu – I)
3.	18ASP105(C)	அங்கலட்சணம் மற்றும் மச்சங்கள் (Samuthrika Lakshanam)
4.	18ASP205(A)	நவரத்தினங்கள் (Gemology)
5.	18ASP205(B)	நவீன வாஸ்த்து – II (Modern Vasthu – II)
6.	18ASP205(C)	கைரேகை சாஸ்திரம் (Palmistry)
7.	18ASP305(A)	தாஜிகம் (Thajigam)
8.	18ASP305(B)	அஷ்டவர்க்கம் (Astavargam)
9.	18ASP305(C)	16 வர்க்க சக்கரங்களும் பலன்களும் (Predictions through 16 Varga Chakras)

Programme outcomes

- 1) சோதிட முதுகலை மாணவர்கள் வானவியல் பற்றிய, சோதிடவியல் பற்றிய வரலாற்றை அறிவதால் இத்துறையின் பழமையையும் பெருமையையும் புரிந்து கொள்வார்கள்
- 2) சோதிடவியலின் அடிப்படைத்தன்மைகள் இராசி காரகத்துவங்கள், கோள்களின் காரகத்துவங்கள், பாவக காரகத்துவங்கள் ஆகியவற்றை பற்றிய ஆழ்ந்த அறிவு சாதக பலன்கள் நிர்ணயிப்பத்தில் முக்கிய பங்கு வகிக்கும்.
- 3) சோதிடவியலுக்கு பெரும் புகழ் சேர்த்த சோதிட அறிஞர்களின் பலன் கூறும் முறைகளை தெரிந்து கொள்வதினால் இத்துறையில் பல சாதனைகள் பல செய்ய ஆர்வம் ஏற்படும்
- 4) எண்கணிதம், வாஸ்த்து, கைரேகை, நவரத்தினங்கள், அங்கலட்சணங்கள் ஆகிய துணைப்பாடங்களுக்கு சோதிடவியலே ஆதாரம் என்பது புலப்படும்.
- 5) சாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்லும் வகையில் பிரசன்ன முறைகள் மூலம் பலன்கள் அறிந்து கொள்ளலாம்.
- 6) நாடி முறை, ஜெயமினி முறை, கிருஷ்ணமூர்த்தி பத்ததி முறை, மேலைநாட்டு முறை ஆகிய முறைகளில் பலன்கள் சொல்லப்படுவது சோதிட துறையின் வளர்ச்சிக்கு ஆதாரங்கள் ஆகும்.

- 7) நல்ல முகூர்த்தங்களில் ஆரம்பிக்கும் செயல்கள் நல்ல பலன்களைத் தரும், தீய முகூர்த்தங்களில் ஆரம்பிக்கப்படும் செயல்கள் துன்பத்தை விளைவிக்கும் என்பதை உணரமுடியும்.
- 8) மருத்துவ சோதிடத்தின் மூலம் நோய் ஏற்படும் உடல் பாவகம், நோயின் தன்மை, நோய் ஏற்படும் காலம், நோய் தீர்க்கும் முறைகள் ஆகியவற்றை தெளிவாக அறிய முடியும்.
- 9) சோதிட கணித முறைகளை அறிந்து கொள்வதின் மூலம் இக்கால விஞ்ஞானம், கணினி முதலியன அழிந்தாலும் சோதிட கணித முறைகள் அழியாமல் பாதுகாக்க முடியும்.
- 10) அஷ்டவர்க்கங்கள், தாஜிகம், பதினாறு வர்க்க சக்கரங்கள் பற்றிய அறிவு, சாதக பலன்களை சொல்லுவதில் துல்லியத்தை நிர்ணயிக்க உதவும்.
- 11) கல்வி, திருமணம், தொழில், புத்திரபேறு முதலியவை பற்றிய கேள்விகளுக்கு தெளிவான பலன்களை சொல்ல முடியும்.

Programme Specific outcomes

- 12) தனிமனிதனின் பிரச்சனைகளுக்கு சோதிட ரீதியில் சரியான தீர்வை கொடுக்க முடியும்.
- 13) எதிர்காலத்தில் நடக்கக்கூடிய நன்மை, தீமைகளை முன் கூட்டியே அறிந்து, அதற்காக முன் எச்சரிக்கை நடவடிக்கைகளை எடுத்துக் கொள்ள முடியும்.
- 14) சோதிட சாஸ்திரம் தனிமனிதனின் வளர்ச்சிக்கும், நாட்டின் வளர்ச்சிக்கும் ஒரு வழிகாட்டியாக அமையும்.

Programme Educational Objectives (PEOs)

PEO 1 : சோதிடவியல் முதுகலைப்பட்ட தாரிகளுக்கு வானவியல் அறிவு, சோதிடவியலின் வரலாறு, சோதிடவியலின் அடிப்படைத் தன்மைகள், கோள்கள், இராசிகள், பாவகங்கள் பற்றிய அறிவு உள்ளதால் கால தேச வர்த்தமானங்களுக்கு ஏற்ற வகையில் பலன்கள் கூறுவதற்கான திறமைகள் வளரும்.

PEO 2 : சாதக பலன்கள் சொல்லுவதற்கு சோதிட சாஸ்திரத்தில் பல முறைகள் உண்டு. அனைத்து முறைகளிலும் நன்கு பயிற்சி அளித்து, இத்துறையில் வலிமை உள்ளவர்களாக மாற்ற முடியும். இவர்கள் இத்துறையில் புதிய கண்டுபிடிப்புகளை கண்டுபிடிக்க முடியும். சோதிடத்தின் துணை சாஸ்த்திரங்களான கைரேகை, வாஸ்து, எண்கணிதம் முதலியவற்றிலும் அறிவு வளரும்.

PEO 3 : இது ஒரு தெய்வீக கலை என்பதால் சோதிட முதுகலை பட்டதாரிகள் ஒழுக்கத்தில் சிறந்தவர்களாகவும், சோதிட அறிவில் தன்னிகரற்றவர்களாகவும் மாற்றம் ஏற்படும். தற்காலத்தில் சமுதாயத்தில் ஏற்படும் அனைத்து தனி மனித பிரச்சனைகளுக்கும் தீர்வு காணமுடியும்.

KARPAGAM ACADEMY OF HIGHER EDUCATION

DEPARTMENT OF ASTROLOGY

Marks Allocation

Continuous Internal Assessment (CIA):

The performance of students in each will be continuously assessed by the respective faculty as per the guidelines given below:

Theory Courses

S.No	Category	Maximum Marks
1.	Attendance	5
2.	Test-I#	10
3.	Test-II#	10
4.	Journal Paper Analysis & Presentation	15
Continuous Internal Assessment : Total		40

- The Mark obtained in the seminar should be entered in automation software on or before 60th working day of the semester.
- # Test answer scripts in should be evaluated and marks awarded should be entered in automation software on or before 4th working day after the last date

Practical Courses (Astrology):

S.No	Category	Maximum Marks
1.	Attendance	5
2.	Observation Work	5
3.	Record Work	5
4.	Model Examination (Related with astrology)	15
5.	Viva –Voce [Comprehensive]	10
Continuous Internal Assessment : Total		40

- Includes Viva-voce Conducted during every regular practical class and the model exam practical.
Every practical exercise/experiment and records should be maintained.

UNIVERSITY EXAMINATIONS

End Semester Examination(ESE): ESE will be held at the end of each semester for each course. The question paper is for a maximum of 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks
Maximum Marks	60 marks for all Semester Examination
Duration	3 Hours
Part –A	10 out of 15 two mark Questions (10x2=20 Marks) (Not exceeding 3 questions from each unit)
Part-B	5 Eight mark Questions(5x8=40 Marks) <ul style="list-style-type: none"> • One Question from any one of the units is compulsory. It shall be oriented to analysis/design/application/case studies. • 4 Questions are in ‘either –or’ choice. • (One Question each from the remaining 4 units)

Admission eligibility: Any degree passed in a recognized university

நோக்கங்கள் :

- 1) ஜோதிடத்தின் தோற்றம் எந்த நாட்டில் ஏற்பட்டது என்பதில் தெளிவு உண்டாகும்.
- 2) வானசாஸ்திர வளர்ச்சியை வரலாற்று ரீதியாகக் கற்றுக் கொள்வதால் ஆய்வு மனப்பான்மை உண்டாகும்.
- 3) இந்திய ஜோதிடத்தை அறிந்து கொள்வதால் இந்தியர்களின் ஜோதிடத்திறமை எவ்வாறு இருந்துள்ளது என்று உணரலாம்.
- 4) வேதாங்க ஜோதிடம், அதர்வன ஜோதிடம் ஆகியவற்றில் சொல்லப்பட்டுள்ள கருத்துக்களை தெரிந்துக் கொள்ளலாம்.
- 5) அயல் நாட்டு ஜோதிடவியலின் வரலாற்றை தெரிந்துக் கொள்வது.
- 6) நாஸ்ட்ரடாமஸ் போன்ற தீர்க்க தரிசிகளை பற்றி தெரிந்துக் கொள்வது.

பயன்கள்

- 1) இந்திய ஜோதிடத்தின் வரலாற்றை அறிந்து கொள்வதால் நமது கலாச்சாரத்தின் தொன்மையை அறியலாம்.
- 2) இந்தியர்களின் வானசாஸ்திர புலமை, ஜோதிடவியல் புலமை ஆகியவற்றை அறிந்துக் கொள்வதால் ஆய்வு மேற்படிப்புகளில் பயனுள்ள முடிவுகளை எடுக்க முடியும்.
- 3) ஜாதகத்தை கணிப்பதற்கு பஞ்சாங்க நூல் வேண்டும், பஞ்சாங்க நூல்கள் வானசாஸ்திரத்தின் அடிப்படையில் உருவாக்கப்பட்டவைகளாகும்: எனவே பஞ்சாங்க நூல்கள் யாரால் எப்படி உருவாக்கப்பட்டவை என்ற அறிவு அவசியமாகிறது.
- 4) பராசரர் போன்ற ரிஷிகளின் பெருமைகள் நமக்கு புரியும்.
- 5) வேதங்கள், புராணங்கள், இதிகாசங்களின் பெருமை புரியும்.
- 6) இந்திய ஜோதிட வரலாற்றை அயல் நாட்டு ஜோதிட வரலாற்றோடு ஒப்பு நோக்க முடியும்.

UNITS:

1. **வானியலும் ஜோதிடமும்**
வானசாஸ்திரம் - கோள்களின் அமைப்புக்கள் - சூரிய குடும்பம் - பூ கோளமும் வான் கோளமும் - கிரகங்களுக்கு ஆட்சி வீடு அமைத்தமுறை. கெப்ளரின் விதிகள். கிரக வகை. கிரகங்களுக்கு திசை வருடம் நிர்ணயம் செய்த முறை.
2. **ஜோதிடத்துடன் தொடர்புகள்**
புமியின் இயக்கமும் ஜோதிடமும். இராசி சக்கரம் என்னும் மகா அற்புதம். இராசி மண்டலமும், நட்சத்திரப் பிரிவுகளும். வானவியல் வளர்ச்சி – கிழமைகளின் வரிசை முறை ஜாதக அடிப்படை. கிரகங்களுக்கு உச்ச ராசி அமைத்த முறை. சந்திரன் இயக்கமும் - ராகு, கேதுவும்.
3. **ஜோதிட வரலாறு - பாபிலோனியா - எகிப்து – கிரேக்கம்**

ஈரல் ஜோதிடம் - ஜோதிடவியலின் தோற்றம் - வானவியல் ஜோதிடம் - பூவுலகில் கோள்களின் தாக்கம் தனிமனித ஜாதகம் - சகுனங்கள். சகுனங்களின் பிரிவுகள் - சால்திய ஜோதிடம் - ஜாதக பலன் கூறும் முறைகள் எனிப்திய ஜோதிடம் - நாட்காட்டி முறை - கிளாடியஸ்தாலமி.

4. மேலை நாடுகளின் சோதிட வரலாறு

சுமேரியர் - மெசபடோமியர் - பாபிலோனியா - சால்தியா. எனிப்து - கிரேக்கம் - வானசாஸ்திர மறுமலர்ச்சி - நிக்கோலஸ் கோபர் நிகஸ் - கலிலியே கலில் - ஜோகன்னஸ் கெப்ளர் - ஐசக் நியூட்டன். கிரேக்க ஜோதிடர்கள் - ரோமன் ஜோதிடம் - சீன ஜோதிடம் - அரேபிய ஜோதிடம் - இஸ்லாமிய அரசர்கள் - ஹென்றி கார்னியியஸ் அக்ரிப்பா, டாக்டர் ஜான்டி.

5. ஜோதிட வரலாறு - இந்தியா

வேதாங்க ஜோதிடம் - வேதகால மாதங்கள் - வேதகால திதிகள் - முகூர்த்தங்கள் - பதினெட்டு சித்தாந்தங்கள் - இந்திய வானசாஸ்திர அறிஞர்கள். வராகமிகிரார். அதர்வன வேத ஜோதிடம் - வடமொழி ஜோதிட அறிஞர்கள். ஆரியபட்டா - I ஆரியபட்டா - II, பாஸ்கராச்சார்யா - ப்ரித்யுயசத - காளிதாசர் - சமணர்களின் ஜோதிடம்.

குறிப்புதவி நூல்கள்

- | | |
|---|-----------------------|
| 1. Hindu Astrology and the West | B.V.Raman. |
| 2. கிருக்ஷணமூர்த்தி பத்ததி முறை | K.S. கிருக்ஷணமூர்த்தி |
| 3. வானசாஸ்திரம் | M.L. ராஜா |
| 4. வானியலும் ஜோதிடமும் | M.K. தாமோதரன் |
| 5. Ancient Hindu Astrology for the Modern Western Astrologer (1986) | James T.Braha |

நோக்கங்கள்

- 1) கோள்களின் வடிவங்கள், நிறங்கள், குணங்கள், தன்மைகள் இவைகளை தெரிந்துக் கொள்வது அவசியமாகும்.
- 2) கோள்கள் குறிப்பிடும் உடல் உறுப்புக்கள் மற்றும் நோய்கள் பலன்கள் கூறுவதில் முக்கிய பங்குவகிக்கின்றன.
- 3) கோள்கள் குறிப்பிடும் தொழிகள் எவை என்பதை தெரிந்துக் கொண்டு, ஜாதகர்களை சரியான வழியில் வழிகாட்ட முடியும்.
- 4) நாம் கூறும் பலன்கள் எக்காலகட்டத்தில் நடைபெறும் என்பதை அறிய தசா, புத்தி, கோசாரம் பற்றிய அறிவு நமக்கு தேவைப்படுகிறது.
- 5) கோள்களின் இணைவு மூலம் ஜாதகரின் வாழ்க்கையில் ஏற்படும் பலன்களை அறிவது.
- 6) கோள்களின் காரகத்துவங்கள் பார்வைகள் மூலம் ஜாதக பலன்களை மிக துல்லியமாக கணிக்க முடியும்.

பயன்கள்

- 1) ஜாதக பலன்கள் நிர்ணயிப்பதில் கோள்களின் காரகத்துவங்களுக்கு முக்கிய பங்குண்டு.
- 2) கோள்களின் தன்மைகள், குணங்களின் அடிப்படையில் ஜாதகங்களின் தன்மையும், குணங்களும் இருக்கும் என்பதில் சந்தேகம் இல்லாமல் பலன்கள் கூறமுடியும்.
- 3) கோள்கள் குறிப்பிடும் உடல் உறுப்புகளில் மிக துல்லியமாக நோய்களை கணித்து கூறமுடியும்.
- 4) கோள்களின் சேர்க்கையை கொண்டு விதவிதமான தொழில்களை ஜாதகர்களுக்கு சுட்டி காட்ட முடியும். தசா, புத்தி, கோசத்தை கொண்டு நிகழ்ச்சிகள் நடக்கும் காலத்தை நிர்ணயிக்கலாம்.
- 5) கோள்களின் பலத்தைக் கொண்டு ஜாதக பலன்களை முடிவு செய்ய முடியும்.
- 6) 2,10க்கு அதிபதியான கோள்களை கொண்டு ஜாதகர் எந்த தொழில் மூலம் பணம் சம்பாதிப்பார் என்பதை அறிய முடியும்.

UNITS**1. கோள்களின் குணங்கள்**

கோள்கள் - வடிவங்கள் - நிறங்கள் - இருப்பிடம் - கோள்களின் உருவம் - பாலினம் - சமித்து - திக்கு, மலர் - ரத்தினம் - தானியம் - உலோகம் - சுவை நீச்ச ராசி - மூலத்திரிகோண ராசிகளாட - உச்ச ராசிகள் - கோள்களின் நட்சத்திரங்கள். கோள்களின் தேவதை - அதிதேவதைகள் - கேத்திரம். பகை - நட்பு, ஆடை , நிறம்.

2. கோள்களின் காரகங்கள்

குணங்கள் - தன்மைகள் - கோள்கள் குறிக்கும் இடங்கள் - வீட்டு உபயோக பொருட்கள் - உறவுகள் - விலங்கினங்கள் - மரங்கள் - மனிதர்களின் குணாதிசயங்கள் - பஞ்சபூத தன்மை - நவரத்தினங்கள். கோள்கள் குறிக்கும் தெய்வங்கள் - கலைகள் - வயது - பேச்சு - சுழ்நிலைகள் - அன்றாடம் பயன்படுத்தும் பொருட்கள்.

3. கோள்கள் குறிப்பிடும் உடல் உறுப்புக்கள் மற்றும் நோய்கள்.
காலபுருஷ ராசியும் -உடல் உறுப்புக்களும் - கோள்கள் சுட்டும் உடல் பாகங்கள்- நோய்கள் - முக அவயங்கள் - உடலின் உட்புற உறுப்புகள். கோள்கள் சேர்க்கையினால் ஏற்படும் நோய்கள் - கோள்களின் பார்வையால் ஏற்படும் நோய்கள்.
4. கோள்கள் குறிப்பிடும் தொழில்கள்
பத்தாம் பாவமும் தொழில்களும் - பத்தாம் பாவத்தில் நின்ற கோள்கள் - சுட்டும் தொழில்கள் - பத்தாம் பாவக - நவாம்ச அதிபதி -குறிப்பிடும் தொழில்கள்- உதாரண ஜாதகங்களுடன் விளக்கம் - வேலைகள் - கோள்கள் சுட்டி காட்டும் வேலைகளை தன்மை, சர, ஸ்திர, உபய ராசிகளில் கோள்கள் அமர்வதால் ஏற்படும் வேலைகள் - தொழில் முனைவோர்கள்.
5. கோள்கள் குறிப்பிடும் திசாக்கள் - திசாக்களின் வகைகள் - திசா, புத்தி, அந்தரம் - சூட்சுமகணிதம் - தசாபுத்தி பலன்கள் . குறிப்பாக சனிதசா - சனி புத்தி தரும் பலன்கள் - ஏழரைநாட்டுசனி - சூரியனின் தசா புத்தி பலன்கள் - சந்திர திசா புத்திபலன்கள். செவ்வாய் தசா புத்தி பலன்கள்

குறிப்பதவி நூல்கள்

- | | |
|--------------------------------|---|
| 1. உத்திரகாலாமிருதம் | S.A.குமாரஸ்வாமி ஆச்சாரியார். |
| 2. Prasana Marga | B.V.Raman |
| 3. Pointer to Profession | T.P.Trivedi & R.Asthana |
| 4. Brihat Parasara Hora Sastra | G.C.Sharma |
| 5. ப்ருஹத் ஜாதகம் | C.G.ராஜன் |
| 6. குடும்பஜோதிடம் | ஸ்ரீராமய்யங்கார்-ஸ்ரீஸ்ரீனிவாஸாசாரியார் |
| 7. Mundane Astrology | B.V.Raman |
| 8. ஜோதிடமும் நவகிரகங்களும் | முருகு இராசேந்திரன் |

நோக்கங்கள்

- 1) ஜாதகம் இல்லாதவர்களுக்கு ஜாதக பலன்கள் சொல்வதற்காகவும், பிறப்பு ஜாதகத்தில் பிறந்த நேரம் சரியாக இல்லாத போது பலன்கள் மாறுவதை, பிரஸன்னம் தடுக்கும்.
- 2) பிரசன்ன ஜோதிடமுறையில் கேள்வியாளரின் நிலை, ஆடை தொடும் உறுப்பு முதலியவை கொண்டு பலன் அறியலாம்.
- 3) பலவகையான ஆருட லக்னங்கள் கண்டுபிடித்தல், சகுனம், நிமித்தங்கள், அஷ்டமங்கல பிரஸன்னம் ஆகியவற்றின் மூலம் ஜோதிடத்தின் ஆழத்தை புரிந்துக் கொள்ள முடியும்.
- 4) சகுனம், நிமித்தங்களின் மூலம் ஜாதகரின் கேள்விகளும் பதில் கூற முடியும்.
- 5) வெற்றிலை ஜோதிடம் மூலம் ஜாதகரின் கடந்த காலம், நிகழ்கால பலன்களை தெளிவாக கூற முடியும்.
- 6) அஷ்ட மங்கல பிரசன்னம் மூலம் ஜாதகரின் குறிப்பிட்ட கேள்விகளுக்கு பதில்கள் கூற முடியும்.

பயன்கள்

- 1) பலன்கள் கூறுவதில் மிக துல்லியத்தை கொடுப்பது பிரசன்ன ஜோதிடமாகும்.
- 2) பிறப்பு ஜாதகம் இல்லாமலும், கேட்கப்பட்ட கேள்விகளுக்கு பதில் சொல்ல முடியும்.
- 3) பிரஸன்னத்தின் மூலம் நம் முன்னோர்களின் நிலையையும், நம்முடைய பூர்வ கர்மங்களின் நன்மை, தீமைகளை பற்றிய தன்மையையும் தெளிவாக புரிந்துக் கொள்ளலாம்.
- 4) இப்பிறப்பில் செய்யப்பட்ட நல்வினை, தீவினை ஆகியவை பற்றியும் பிரஸன்னத்தின் மூலம் அறியலாம்.
- 5) அஷ்ட மங்கல பிரசன்னம் மூலம் கேள்வியாளர் பிரச்சினைகளை எளிதாக கண்டு பிடிக்க முடியும்.
- 6) விவாஹ பிரசன்னம், நஷ்ட பிரசன்னம், ஆயுள் பிரசன்னம், ரோக பிரசன்னம் மூலம் கேள்வியாளரின் கேள்விகளுக்கு பதில்கள் கூற முடியும்.

UNITS**1. பிரசன்னத்தில் ஜோதிடர் கேள்வியாளர் பங்கு.**

ஜோதிடருக்கான கோட்பாடுகள் - கேள்வியாளர் கொண்டுவரும் பொருட்கள் - கேள்வி கேட்பவர் நிற்கும் திசைகள் - தொடும் அங்கங்கள் - அதற்கான பலன்கள் - ஜோதிடரின் சுவாசம். பிறப்பு ஜாதகத்திற்கும் பிரசன்ன ஜாதகத்திற்கும் உள்ள வித்தியாசம் - மருதயு லக்ஷணம் - பிரசன்னாஹரம்- ஸ்ப, கோல, கிதரமுக திரேக்காணம்.

2. கேள்வியாளரின் நிலை- ஆடை மற்றும் லட்சணங்கள்.

கால்களை எடுத்து வைத்தல் - கால்களை ஆட்டுதல் - தயக்கம் - மூன்றாம் நபர் கடந்து செல்லுதல் - கைகளை பிசைதல் - தன்னை அடித்துக் கொள்ளுதல் - மரண தொடர்பு கர்மங்கள்- நிற்கும் போது, உட்காரும் போது உள்ள நிலைகள். தற்காலிக

நிமித்தங்கள் - பிரச்னம் நடக்கும் நேரத்தில் நடக்கும் காரியங்கள் - மிருகங்களின் சப்தம். சுப, அசுப சப்தங்கள் - கிரகங்களின் அதிதேவதைகள்.

3. பிரசன்னத்தில் லக்னம் நிர்ணயித்தல்

ஆறு வித ஆருட லக்னங்கள் ஸ்வர்ணாருடம் - உதயாருடம் - உதய வர்ன அம்ஸ ஆருடம் - சாத்திர ஆருடம் - அங்கஸ் பரஷ்ட ஆருடம் - சந்திர ராசி.

4. பிரசன்ன வகைகள் - அஷ்டமங்கலம்

தெய்வானுக்கிரகம் - குலதெய்வானுக்கிரகம் - பிதுர் சாபம் - மாதர் சாபம் - சர்ப்ப தோஷம் - வாக்தோஷம் - திருஷ்ட தோஷம் - சத்ரு தோஷம்- பிராமண தோஷம் - குரு, குருபத்னி சாபம் - விஷபோஜனம் - வாஸ்து தோஷம். பிரச்சன - நிரகமம் - மார்கம் - மந்திர கதி . பிரச்சன கிரியை - சூத்திரம் - திரிஸபிடம் - அஷ்டமங்கல பலன்கள்.

5. சோழிப்பிரசன்னம்- தேங்காய்- ஆருடம்- பலகரைசோதிடம் - பஞ்ச பட்சி முறை நட்சத்திரங்களுக்குரிய பட்சிகள் - பஞ்ச பட்சிகளின் தொழில் முறை, படுபட்சிபலன் கூறும் முறைகள் ஆறு விதிகள்

நோக்கங்கள்

- 1) பன்னிரு ராசிகளின் காரகத்துவங்களை தெரிந்துக் கொள்வதால் பலன்களை தெளிவாக முடிவு செய்ய முடியும்.
- 2) ராசிகளின் தன்மை, வடிவம், இருப்பிடம், மரங்கள், மிருகங்கள் என்பவை பலன் சொல்வதில் முக்கிய பங்கு வகிக்கின்றன.
- 3) பன்னிரு பாவகங்களின் காரகத்துவங்களும் தெளிவாக புரிந்துக் கொண்டால் மட்டுமே ஜாதகப் பலன்களை வரையறுத்து கூற முடியும்.
- 4) 27 நட்சத்திரங்களின் தன்மை, குணம், வடிவம் இவைகளும் பலன் கூறுவதில் முக்கிய பங்கு வகிக்கின்றன.
- 5) ராசியில் நிற்கும் கிரகம் பாவகத்தில் மாறி நின்றால் பலன்கள் மாறுவதை அறிய முடியும்.
- 6) பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் ஜாதக பலன் மாற்றங்களை அறிவது.

பயன்கள்

- 1) சூர்யாதி, சந்திராதி, பஞ்ச மஹா புருஷ யோகங்கள் பற்றி தெரிந்துக் கொள்வதால் ஜாதகருக்கு எப்படிப்பட்ட யோகத்தின் அடிப்படையில் பலன்கள் நடைபெறும் என்பதை கூறமுடியும்.
- 2) கேள்வியாளர்களின் கேள்விக்கு ஏற்ற பதிலை சொல்வதற்கு மேஷம் முதல் மீனம் வரையுள்ள இராசிகளின் தன்மை மற்றும் காரகத்துவங்களும், 12 பாவகங்கள் எதை குறிப்பிடுகின்றன என்பனவற்றை பற்றிய அறிவு வேண்டும்.
- 3) கோள்கள் நிற்கின்ற நட்சத்திரங்களின் அடிப்படையில் பலன்கள் மாறுவதை காணமுடியும்.
- 4) ஒரு கோள் எந்த ராசியில், எந்த பாவகத்தில் எந்த நட்சத்திரத்தில் அமர்கின்றது என்பதை பொருத்து பலன்கள் சொல்ல முடியும்.
- 5) லக்னம், லக்னாதிபதி எந்த நட்சத்திரத்தில் நிற்கின்றதோ அதை பொருத்து ஜாதகரின் பலன்கள் நிர்ணயிக்க முடியும்.
- 6) கோள்களின் நிலை தெரியாமலேயே லக்னத்தை கொண்டு பலன்களை வரையறுக்க முடியும்.

UNITS**1. பன்னிரு ராசிகள் காரகத்துவம்**

மேஷம் முதல் மீனம் வரை பன்னிரு ராசிகளின் இருப்பிடம் -வடிவம் - சிறப்பு அம்சங்கள். பன்னிரு ராசிகளுக்கும் ஆதிபத்ய முறையில் பலன்கள். ஒவ்வொரு ராசியில் உள்ள நட்சத்திர அடிப்படையில் பயன்கள். ஒவ்வொரு ராசியிலும் ஆட்சி, உச்சம், நீச்சம் அடையும் கிரகங்களை கொண்டு பலன்கள். **ராசி அதிபதி – நட்சத்திராதிபதியின் ஆதிபத்ய பலன்கள் - கிரக பார்வையால் ஏற்படும் ராசிகாரத்துவ மாற்றங்கள்.**

2. பாவகங்களின் காரகத்துவம்

பன்னிரு பாவகங்கள் குறிப்பிடும் நிலைகள். பன்னிரு பாவகங்கள் குறிக்கும் - உயிர்காரத்துவங்கள். உடல் உறுப்புகள் - நன்மை, தீமைகள். ஒவ்வொரு பாவகமும் குறிப்பாக உணர்த்தும் காரத்துவங்கள். மறைவு ஸ்தனங்கள்- தனஸ்தானம் - லாபஸ்தானம் - களத்திர ஸ்தானம். குடும்பஸ்தானம் - தைரியம், வீரம் - வேலை - சொந்த தொழில் - அசையா சொத்துக்கள் குறிக்கும் பாவகங்கள். பாவகங்கள் பலம், பலஹீனம் - திதிசூன்யம் - ஒவ்வொரு பாவகமும் குறிக்கும் பொருட்கள் உறவுகள், உணர்வுகள் - இன்ப துன்பங்கள்.

3. **பல வகையான யோகங்கள் சூர்யாதி, சந்திராதி, பஞ்ச மஹா புருச யோகங்கள்**

பத்ரயோகம் - மாளவியா யோகம் - சச யோகம் - ஹம்சயோகம் - ருஷயோகம். சூரியனால் ஏற்படும் யோகங்கள் - புத ஆதித்ய யோகம் சந்திரனால் ஏற்படும் யோகங்கள் - ராஜயோகங்கள். பஞ்சமஹா புருஷயோகம் - ருஷயோகம். மாளவியா யோகம் - **பத்திர யோகம் - ஹம்ச யோகம் - சசயோகம்.**

4. **இருபத்தியேழு நட்சத்திரங்களின் அமைப்பு**

அசுவனி முதல் ரேவதி வரை இருபத்தியேழு நட்சத்திரங்களின் வடிவம்- நட்சத்திரங்கள் ராசியின் தன்மை, ராசி அதிபதியின் தன்மைக்கு ஏற்ற வகையில் பலன்கள் தரும் முறைகள். **நட்சத்திரங்கள் குறிக்கும் மரங்கள் - பொருட்கள் - தொழில்கள் - இடங்கள் - ஊர்கள் - தொழில்கள்.**

5. **இருபத்தியேழு நட்சத்திரங்களின் குணம் மற்றும் தன்மைகள்**

பாவாதிபதிகள் நட்சத்திரங்களில் நிற்பதால் ஏற்படும் பலன்கள். கோள்கள் நட்சத்திரங்களில் உச்ச நீச்சம் அடைவதால் ஏற்படும் பலன்கள். நட்சத்திராதிபதி, ராசியாதிபதி, பாவாதிபதி ஆகியவர்களை ஒன்று சேர்த்து பலன் கூறும் முறை.

நோக்கங்கள்:

- 1) எண் கணிதம் பற்றிய அடிப்படையான கருத்துக்களை தெரிந்துக் கொள்ள வேண்டும்.
- 2) 1 முதல் 9 வரையுள்ள எண்கள் எந்தெந்த கிரகங்களை குறிக்கின்றது என்ற அறிவை பெற வேண்டும்.
- 3) 1 முதல் 30 தேதிகளில் பிறந்தவர்கள் எப்படிப்பட்ட குணாதிசயங்களுடன் வாழ்கிறார்கள் என்பதை இந்த எண்கணித சாஸ்திரம் நமக்கு தெளிவாக விளக்கும்.
- 4) பிறவி எண், விதி எண், பெயர் எண்களின் கூட்டு தொகை இவைகளை கொண்டு பலன் கூறும் முறையை தெரிந்துக் கொள்ளலாம்.
- 5) எண் கணிதம், ஜோதிட சாஸ்திரம் ஆகிய இரண்டிற்கும் உள்ள தொடர்பை அறிதல்.
- 6) ஒருவரின் பெயரை கொண்டு வாழ்நாள் முழுவதும் பலன்களை அறிதல்.

பயன்கள்:

- 1) எண் கணித சாஸ்திரத்திற்கு ஜோதிட சாஸ்திரமே அடிப்படை என்ற கருத்தை தெளிவாக புரிந்துக் கொள்ளுதல்.
- 2) பெயர்களின் சப்தங்களுக்கு எவ்வளவு வலிமை உண்டு என்பதை உதாரணங்களின் மூலம் தெரிந்துக் கொள்ளலாம்.
- 3) விதி எண் நாம் அனுபவித்துக் கொண்டிருக்கின்ற இன்ப துன்பங்களை படம் பிடித்து காட்ட கூடியது.
- 4) எண் கணிதம் மூலம் பெயர் மாற்றம் செய்து ஜாதகர்களின் வாழ்க்கை துன்பங்களை நீங்குவது.
- 5) பெயரில் திருத்தங்கள் செய்வதன் மூலம் பல அறிய பலன்களை அடைய முடியும்.
- 6) ஜாதகர் பிறந்த தேதியையும், கூட்டு எண்ணையும் கொண்டு வாழ்நாள் பலன்கள் சொல்ல முடியும்.

UNITS**1. எண்கணிதம் பற்றிய முக்கிய குறிப்பு, எண்களின் பொருள்**

எண்கள் குறிக்கும் கோள்கள் - ஆங்கில எழுத்துக்கள் எண்களின் குணாதிசயங்கள். பெயர் வைக்கும் முறை பெயர்களின் எண்கள் கூட்டு எண். ஜோதிடவியலின் அடிப்படையில் எண்கணிதம். எண்கணிதத்தின் வரலாறு – தோற்றம் - வளர்ச்சி புகழ் பெற்ற எண்கணித நிபுணர்கள்.

2. எண்களில் விளக்கங்கள் (எண்களின் ஆற்றல்)

பெயர்களின் கூட்டு எண்களின் பலன்கள் - வாழ்வில் ஏற்றம் தரும் எண்கள், கஷ்டத்தை தரும் எண்கள் - உயர்வை தரும் எண்கள். பதவியை தரும் எண்கள், புகழை தரும் எண்கள். அவமானத்தை தரும் எண்கள் - ஏற்ற இறக்க முடைய எண்கள். தெய்வீகமான எண்கள்.

3. எண்களின் செயல்பாடு – எண் நிறம், தன்மை, அதிபதி

1,2,3 ஆகிய எண்களை பிறவி எண்களாக கொண்டவர்களின் பலன்கள். பிறப்பு ஜாதகத்தை கொண்டு பெயர் அறியும் முறை. 4,5,6 ஆகிய எண்களை பிறவி எண்களை கொண்டவர்களின் பலன்கள். 7,8,9 ஆகிய எண்களை பிறவி எண்களை கொண்டவர்களின் குணதிசயங்கள்.

4. பிறவி எண், விதி எண் பெயர் என அறியும் முறை

பிறவி எண், விதி எண் இரண்டையும் சேர்த்து பலன்கள் நிர்ணயம் முறைகள். ஒரு எண்ணுக்கு நன்மையும், தீமையும் ஏற்படுத்தும் எண்கள். திருமண பொருதத்தில் எண்கணிதத்தின் பங்கு. முகூர்த்தம் குறிப்பதில் எண்கணிதத்தின் பங்கு. **மன பொருத்தம் - பெயர் பொருத்த பார்த்தல்.**

5. 9 கோள்களின் வக்கர எண்கள் பலவீன எண்கள்

எண்களிடத்தில் பரிகாரங்கள். நோய்கள் மற்றும் பல பிரச்சினைகளை தீர்க்கும் முறை. வாழ்வின் ஏற்ற தாழ்வுகளை மாற்றும் பெயர் மாற்றம். **பெயர்களை மாற்றும் முறை, சப்த அலைகள், பெயர் மாற்றத்தினால் கைரேகையில் ஏற்படும் மாற்றம். தமிழில் பெயர் ஜோதிடம்.**

நோக்கங்கள் :

- 1) வீடு கட்டுவதற்கும், கட்டிடம் கட்டுவதற்கும் நிலம் தேர்வு செய்தல் அவசியமாகும். இப்பாடப் பகுதியில் தெளிவாக தெரிந்துக் கொள்ளலாம்.
- 2) நிலத்தின் வடிவம், கோணங்கள், சல்லியம் கண்டு பிடித்தல் முதலியவை இடத்தை தேர்வு செய்வதில் முக்கிய பங்கு வகிக்கின்றது.
- 3) வீடு அல்லது கட்டிடம் கட்டுவதற்கு ஒவ்வொரு அளவுகளும் எவ்வளவு அளவு இருக்க வேண்டும் என்பதை பற்றிய அறிவும் இதன் மூலம் கிடைக்கும்.
- 4) ஜோதிட சாஸ்திரமே வாஸ்து சாஸ்திர அடிப்படையாகும்.
- 5) வீட்டில் ஒவ்வொரு அறையும் அமையக் கூடிய இடங்களை முடிவு செய்ய முடியும்.
- 6) அறைகள் அமைப்பு, ஜன்னல் அமைப்பு மூலம் பலன்கள் அறிய முடியும்.

பயன்கள் :

- 1) வீடுகள், கட்டிடங்கள் எந்த திசையை பார்த்த வண்ணம் இருக்க வேண்டும், தலைவாசல், பின்வாசல் ஆகியவற்றின் திசைகள் வீட்டில் தங்கியுள்ளவர்களுக்கு எவ்வித பலனை தரும் என்பதை இப்பாட பகுதியில் தெரிந்துக் கொள்ளலாம்.
- 2) வீட்டிற்குள் நடப்பதையும், நடக்க போவதையும் அக்கட்டிடத்தின் வாஸ்துவின் மூலம் தெரிந்துக் கொள்ள முடியும்.
- 3) வாஸ்து சாஸ்திரம் நமது தலை எழுத்தை மாற்றும் சக்தி படைத்தது.
- 4) ஆரோக்கியமான வாழ்விற்கு துணைபுரியும்
- 5) செல்வம் நிறைந்த வாழ்விற்கு துணைபுரியும்
- 6) கல்வி, ஒழுக்கம் நிறைந்த வாழ்விற்கு துணை புரியும்.

UNITS**1. நிலம் தேர்வு செய்தல்**

வாஸ்து என்பதன் பொருள் - நிலத்தின் தன்மை – நிறம் - மணம் - சுவை – அமைப்பு - வசிக்கத்தக்க விலக்கத்தக்க நிலம் சல்லியம். வாஸ்து புருஷனின் புராணகால வரலாறு. வீடுகட்ட சிறந்த மனைகள் - வீடுகட்ட விலக்கத்தக்க மனைகள்.

2. நிலத்தின் வடிவம்

நிலத்தின் வடிவம் - சதுரம் - செவ்வகம் - வட்டம் - முக்கோணம் - நீள் சதுரம் - சக்கரம் - கிண்ணம் பாணை – பலவித கோணங்கள் - தன்மைகள் - மனைகளின் அமைப்பு – மனைகளின் வடிவங்களால் ஏற்படும் பலன்கள் - மனைகளின் வடிவத்தை சீர்திருத்தம் செய்தல்.

3. நிலத்தடி சோதனை

சல்லியம் கண்டுபிடித்தல் - பிரச்சனம் - சகுனம் - நிமித்தம் - நட்சத்திரம் - வாயிலாகச் சல்லியம் கண்டுபிடித்தல் - நீக்குதல் - கஜ பிருஷ்டம் - கூர்ம பிருஷ்டம் - தைத்ய பிருஷ்டம் - நாக பிருஷ்டம்.

4. நிலத்தை அளத்தல் ஆயம் கணித்தல்

அங்குல அளவு - கை அளவு - பொதுவான அளவு முறைகள் - ஆயம் கணித்தல் - பலன் - பார்வை – கதவு நிலம் அதிபதி – கால்நடைகள் - ஒன்பது வர்க்கம் கணக்கிடுதல் - திசைகளை நிர்ணயித்தல் - வீடு கட்டத் தகுதியான பாகங்கள்

5. கட்டுமானம்

வீடு – உயரம் - தலைவாசல் - ஒற்றை அறை - இரட்டை அறை – பதினாறு
வகையான கட்டுமானம் - நிலத்தின் தோஷம் - திசை – மரம் - அஸ்திவாரம் - கதவு -
சன்னல் - மனையடி சாஸ்திரம்.

6. பல வகையான சோதிட இணைய தளங்கள்

நோக்கங்கள்

- 1) பொதுவான முகத்தின் லட்சணத்தை கொண்டு ஜாதகரின் குணாதிசயங்களை சொல்ல முடியும்.
- 2) ஜோதிடத்திற்கும் அங்கலட்சணத்திற்கும் நெருங்கிய தொடர்பு உள்ளது. ஒரு மனிதனை பார்த்து அவனுடைய ஜாதக கட்டங்களை எழுதுகின்ற அளவிற்கு அறிவை வளர்க்க முடியும்.
- 3) உடலின் வலிமை, நிறம், உயரம், மச்சங்களின் பலன்கள் அந்த ஜாதகரின் வாழ்கையில் நடக்கும் நிகழ்ச்சிகளை தெரிவிக்கும்.
- 4) ஒருவரை பார்த்த மாத்திரத்தில் அவருடைய குணங்களை சொல்வது நோக்கமாகும்.
- 5) சமுதாயத்தில் எச்சரிக்கை உணர்வோடு வாழ்வது.
- 6) நம்மை பற்றிய, மற்றவர்கள் பற்றிய எதிர்கால பலன்களை தெரிந்துக் கொள்வது.

பயன்கள்:

- 1) ஒரு மனிதனை பார்த்த மாத்திரத்தில் அவனுடைய குணம், இறந்த கால வாழ்க்கை, நிகழ்கால வாழ்க்கை எதிர்கால வாழ்க்கை பற்றி தெரிந்துக் கொள்ளலாம்.
- 2) மனித உடலின் அங்கங்களின் வடிவம், அமைப்பு, நிறம், அளவு, தன்மை முதலியவற்றை தெளிவாக புரிந்துக் கொண்டால் அம்மனிதனை பற்றிய அனைத்து மறைக்கப்பட்ட உண்மைகளையும் நம்மால் சொல்ல முடியும்.
- 3) மனிதர்கள் மட்டும் இன்றி வளர்ப்பு பிராணிகளுக்கு அங்கலட்சணம் பார்க்கப்பட்டன. அவைகள் எஜமானனுக்கு எவ்வகையில் உதவும் என்பதும் சொல்ல முடியும்.
- 4) ஒரு மனிதனின் ஆயுள் ஆரோக்யத்தை சொல்ல முடியும்.
- 5) திருமண வாழ்க்கையை புரிந்துக் கொள்ளலாம்.
- 6) வேலை, தொழில் அமைப்பு, புத்ர பாக்யங்களை தெரிந்துக் கொள்ளலாம்.

UNITS**1. பொதுவான முக லட்சணம்**

மூக்கின் லட்சணங்கள் - வாயின் லட்சணங்கள் - உதடுகளின் லட்சணம் - பற்களின் லட்சணங்கள் - காதுகளின் அமைப்பு. நடை லட்சணம், சாயல் - தோற்றப் பொலிவு.

2. அங்கத்துடிப்புகள்

நாக்கின் லட்சணங்கள் - காதுகளின் அமைப்பு. கன்னங்கள் - சிரிப்பும் அழகையும் - முகவாய்க்கட்டு - கழுத்தின் லட்சணங்கள். நிற லட்சணம் - சுழிகள் - வாசை

3. தலை முடியின் லட்சணம்

தாடி மீசைகளின் லட்சணங்கள் - முதுகின் லட்சணங்கள் - தோள்களின் லட்சணங்கள் கைகளின் லட்சணங்கள் - மணிக் கட்டுகள் உள்ளங்கைகள் - புறங்கைகள்.

4. நெற்றியின் லட்சணம், கண்களின் லட்சணங்கள்

கைரேகை லட்சணங்கள் - விரல்கள் லட்சணங்கள் - நகங்களின் லட்சணங்கள் - இடும்பும் வயிறும் - தொடைகளின் லட்சணங்கள் - ஆண்குறியும் விதைகளும் - கால்களின் லட்சணங்கள் - கணுக்கால்கள்.

5. உடல் மச்சங்களும் பலன்களும் , மச்சங்களின் வடிவ லட்சணங்களும் பலன்களும்

சாமுதிரிகா லட்சணமும் ஜோதிடவியல் சம்பந்தமும் - மச்சங்களின் வகைகள் - ராசி சக்கரத்தை கொண்டு மச்சகளின் இருப்பிடத்தை நிர்ணயித்தல். நான்கு ஜாதிப் பெண்கள் பத்மினி - அத்தினி - சங்கிளி - சித்தினி. பெண்களின் அங்க லட்சணங்கள் - உள்ளங்கால்கள் - கால்விரல்கள். பெண்களின் நடையழகு

சோதிட ஆய்வு திரட்டு -1(2013)
கற்பகம் பல்கலைக்கழகம்
கோயம்புத்தூர் |

நோக்கங்கள் :

- 1) பன்னிரு ராசிகளில் கோள்கள் அடையும் ஆட்சி, உச்சம், நீச்சம், பகை, மூலத்திரிகோணம் ஆகிய பலன்கள் கோள்களின் பலத்தை அறிவதில் முக்கிய பங்கு வகிக்கின்றன.
- 2) பாவகத்தில் கோள்கள் நின்ற பலன்களும் ஜாதகத்திற்கு பலன் சொல்வதற்கு துணையாக இருக்கும்.
- 3) கோள்களின் இணைவு பலன்கள் ஜாதகபலன் நிர்ணயத்திற்கு பெரும் பங்காற்றுகின்றது.
- 4) திசா புத்தி கோட்சார பலன்கள் நிகழ்ச்சிகள் நடக்கும் காலகட்டத்தை துல்லியமாக எடுத்துரைப்பதாகும்.
- 5) கோள்களின் இணைவு மூலம் ஜாதகரின் வாழ்க்கையில் ஏற்படும் பலன்களை அறிவது.
- 6) கோள்களின் காரகத்துவங்கள் பார்வைகள் மூலம் ஜாதக பலன்களை மிக துல்லியமாக கணிக்க முடியும்.

பயன்கள் :

- 1) கோள்களின் பார்வைகள், சிறப்பு பார்வைகள் ஜாதகரின் வாழ்க்கையில் எப்படிப் பட்ட தாக்கத்தை ஏற்படுத்துகின்றன என்பதை தெரிந்துக் கொள்ள முடியும்.
- 2) கோள்களின் வலிமையை கொண்டு அக்கோள் ஜாதகருக்கு எவ்வளவு பலனை தரும் என்பதை கணிக்கலாம்.
- 3) பாவகங்களில் நிற்கும் கோள்களின் தன்மைகளுக்கு ஏற்ற வகையில் ஜாதகரின் வாழ்க்கை அமைகிறது.
- 4) தர்ம, அர்த்த, காம, மோட்ச திரிகோணங்களில் நிற்கும் கிரகங்களை கொண்டு ஜாதகரின் பிறவியின் நோக்கம் தெரிந்துக் கொள்ளலாம்.
- 5) கோள்களின் பலத்தைக் கொண்டு ஜாதக பலன்களை முடிவு செய்ய முடியும்.
- 6) 2,10க்கு அதிபதியான கோள்களை கொண்டு ஜாதகர் எந்த தொழில் மூலம் பணம் சம்பாதிப்பார் என்பதை அறிய முடியும்.

UNITS**1. கோள்களின் பலன்கள்**

ஆட்சி, உச்சம், நீச்சம், திரிகோணம், கேந்திரம் வர்க்கப்பலன்கள் - பன்னிரு ராசிகளில் கோள்கள் அடையும் ஆட்சி – உச்ச- நீச்ச- பகை- மூலத்திரிகோண பலன்கள்

2. பாவகத்தில் கோள்களின் பலன்கள்

தர்ம - அர்த்த - காம - மோட்ச - கேந்திர - கோண பலன்கள் - நட்சத்திரங்களின் கோள்கள் நின்ற பலன்கள்.

3. கோள்களின் பார்வை பலன்கள் மற்றும் கோட்சார பலன்கள்

கோள்களின் பொதுப் பார்வைகள் - சிறப்பு பார்வைகள் குரு – சனி – செவ்வாய் - ராகு - கேதுக்களின் பார்வைகள் - கோள்களின் கோட்சாரப் பலன்கள்.

4. கோள்கள் இணைவு பலன்கள்

இரண்டு அல்லது அதற்கு மேற்பட்ட கோள்கள் இணைதல் மற்றும் பலன்கள்-யோகி கோள் - அவயோகி கோள்.

5. கோள்களின் திசு புத்தி பலன்கள்

போதகர் - காரகன் - பாசகன் - வேதகன்.

நோக்கங்கள்

- 1) கேள்வியாளர்களின் தூரப் பயணங்களை பற்றியும், தனது தொழிலில் ஏற்படும் ஏற்ற தாழ்வுகள் பற்றியும் பிரஸன்ன முறையில் பலன்கள் கூறப்படும்.
- 2) புத்திர பேறு அறிதல் பற்றிய கேள்விகளுக்கு பிரஸன்ன முறையில் பதில்கள் சொல்வதற்கு பயிற்சியளித்தல்.
- 3) விவாஹ பிரஸன்ன முறையில் திருமணத்தை பற்றிய அனைத்து கேள்விகளுக்கும் பதில் கூற முடியும்.
- 4) ரோக பிரஸன்ன முறையில் ஜாதகருக்கு ஏற்பட்ட நோயை அறிந்து அதற்கு பரிகாரமும் சொல்ல முடியும்.
- 5) சகுனம், நிமித்தங்களின் மூலம் ஜாதகரின் கேள்விகளும் பதில் கூற முடியும்.
- 6) வெற்றிலை ஜோதிடம் மூலம் ஜாதகரின் கடந்த காலம், நிகழ்கால பலன்களை தெளிவாக கூற முடியும்.

பயன்கள் :

- 1) ஜாதகம் இல்லாதவர்களும் ஜோதிடத்தின் மூலம் பலன்களும் பரிகாரங்களும் தெரிந்துக் கொள்ளலாம்.
- 2) நிகழ் காலத்தில் ஏற்படுகின்ற தொழில் தடை, திருமண தடை முதலியவைகளை முன்கூட்டியே அறிந்து அவைகளுக்கு தீர்வும் அளிக்கலாம்.
- 3) குழந்தை ஆணா? பெண்ணா? எக்கால கட்டத்தில் பிறக்கும், அக்குழந்தையால் பெற்றோர்களில் வாழ்க்கையில் ஏற்படும் மாற்றங்கள் ஆகியவை தெரிவுப்படுத்தப்படும்.
- 4) நோய் வருவதற்கு காரணம், அதை தீர்க்கும் முறையும் சொல்லப்படும்.
- 5) அஷ்ட மங்கல பிரசன்னம் மூலம் கேள்வியாளர் பிரச்சினைகளை எளிதாக கண்டு பிடிக்க முடியும்.
- 6) விவாஹ பிரசன்னம், நஷ்ட பிரசன்னம், ஆயுள் பிரசன்னம், ரோக பிரசன்னம் மூலம் கேள்வியாளரின் கேள்விகளுக்கு பதில்கள் கூற முடியும்.

UNITS

1. **பிரசன்ன முறையில் நீண்ட தூரப் பயணங்களை அறிதல்**
பிராணத்திற்கு ஏற்ற காலம் - பிரயாணத்தில் ஏற்படும் தடைகள் - கஷ்டங்கள் - கண்டங்கள்- நோய்கள்.
2. **பிரசன்ன முறையில் தொழில் அறிதல்**
வேலை கிடைக்குமா? கிடைக்காதா? வேலை கிடைக்கும் காலம் - எத்துறை சார்ந்த வேலை அமையும்.

3. பிரசன்ன முறையில் திருமண விவரம் அறிதல்
ஏழாம் பாவகத்தைக் கொண்டு மனைவியை அறிதல் - சுக்கிரனின் பங்கு
திருமண காலம் -மனைவியின் குணங்களை அறிதல்- பல்வேறு பொருத்த
நிலைகள்-
4. பிரசன்ன முறையில் புத்திர பேறு அறிதல்
குழந்தைப்பேறு அறிதல் - சந்தானவிருத்தி அறிதல்.
நிசேகம் லக்னம் குறித்தல் - குழந்தைப் பேறு அறிதல் - சந்தான விருத்தி
5. பிரசன்ன முறையில் நோய் மற்றும் வழக்கு அறிதல்
பிரசன்னத்தில் நோய்கள் அறிதல் - பல்வேறு வகையான நோய்களுக்கு-
கோள்களின் நிலைகள் - கர்ம விபாக முறையில் பரிகாரங்கள் - நோய்
வருங்காலம் - தீர்தல்

நோக்கங்கள்:

- 1) கோள்கள் பன்னிரு ராசிகளில் ஏற்படுத்தும் பலன்கள் ஜாதகனை எவ்வகையில் பாதிக்கிறது.
- 2) கோள்கள் பன்னிரு பாவகங்களில் நிற்பதால் ஏற்படும் பலன்கள் ஜாதகனை எப்படி செயல்பட வைக்கின்றன.
- 3) லக்னம் முதல் பன்னிரு பாவாதிபதிகள் பாவகங்களில் மாறி நிற்பதால் ஏற்படும் பலாபலன்கள் ஜாதகனுக்கு எப்படிப்பட்ட தாக்கத்தை உண்டு செய்கின்றது.
- 4) நட்சத்திரங்களில் கோள்கள் நிற்பதால் ஏற்படும் பலன்கள், ஜாதக பலன்களில் ஒரு முக்கிய திருப்பு முனையாகும்.
- 5) ராசியில் நிற்கும் கிரகம் பாவகத்தில் மாறி நின்றால் பலன்கள் மாறுவதை அறிய முடியும்.
- 6) பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் ஜாதக பலன் மாற்றங்களை அறிவது.

பயன்கள்:

- 1) பன்னிரு பாவகங்களில் பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் பலன்கள், ஜாதகனை அடையும் முறைகள் தெளிவாக எடுத்து சொல்ல முடியும்.
- 2) பாவாதிபதிகள் தான் நிற்கும் நட்சத்திரங்களை பொருத்து பலன்களை மாற்றியமைக்கும் தன்மை பெற்றவை. இவைகளை தெளிவாக பார்க்க முடியும்.
- 3) கோள்களின் இலக்ன ஆதிபத்திய பலன்கள், எதிர்பாராத மாற்றங்களை ஏற்படுத்துவதை உணர முடியும்.
- 4) ஒரு கோள் எந்த ராசியில், எந்த பாவகத்தில் எந்த நட்சத்திரத்தில் அமர்கின்றது என்பதை பொருத்து பலன்கள் சொல்ல முடியும்.
- 5) லக்னம், லக்னாதிபதி எந்த நட்சத்திரத்தில் நிற்கின்றதோ அதை பொருத்து ஜாதகரின் பலன்கள் நிர்ணயிக்க முடியும்.
- 6) கோள்களின் நிலை தெரியாமலேயே லக்னத்தை கொண்டு பலன்களை வரையறுக்க முடியும்.

UNITS**1. பன்னிரு ராசிகளில் கோள்கள் நிற்கும் பலன்கள்.**

பன்னிரு ராசிகளில் சூரியன் முதல் ஒன்பது கோள்கள் நிற்பதால் ஏற்படும் பலன்கள்- கோள்களின் சேர்கையால் ஏற்படும் பலன்கள். ராசி அதிபதி – நட்சத்திராதிபதியின் ஆதிபத்ய பலன்கள் - கிரக பார்வையால் ஏற்படும் ராசிகாரத்துவ மாற்றங்கள்.

2. பன்னிரு பாவகங்களில் ஒன்பது கோள்கள் நிற்பதால் ஏற்படும் பலன்களை வரையறுத்தல் - விளக்கம் கூறுதல்.

சூரியன் - சந்திரன் - செவ்வாய்- புதன் - குரு- சுக்கிரன் - சனி - ராகு - கேது - தனித்தனியே மற்றும் சேர்க்கை பெற்று ஏற்படுத்தும் பலன்கள். குடும்பஸ்தானம் - தைரியம், வீரம் - வேலை - சொந்த தொழில் - அசையா சொத்துக்கள் குறிக்கும் பாவகங்கள். பாவகங்கள் பலம், பலஹீனம் - திதிசூன்யம் - ஒவ்வொரு பாவகமும் குறிக்கும் பொருட்கள் உறவுகள், உணர்வுகள் - இன்ப துன்பங்கள்.

3. **பன்னிரு பாவகங்களில் பாவாதிபாதிகள் மாறி நிற்பதால் ஏற்படும் பலன்களை வரையறுத்தல்**
பன்னிரு பாவகங்கள் பாவகங்களின் ஆதிபத்தியம் -லக்னம் முதல் பன்னிரு பாவகங்களில் பாவாதிபாதிகள் நிற்பதால் ஏற்படும் பலன்கள். சூரியனால் ஏற்படும் யோகங்கள் - புத ஆதித்ய யோகம் சந்திரனால் ஏற்படும் யோகங்கள் - ராஜயோகங்கள். பஞ்சமஹா புருஷயோகம் - ருஷயோகம். மாளவியா யோகம் - பத்திர யோகம் - ஹம்ச யோகம் - சசயோகம்.
4. **நட்சத்திரங்களில் கோள்கள் இருப்பதால் ஏற்படும் பலன்கள்.**
இருபத்தியேழு நட்சத்திரங்களும் உரிய கோள்களும் - இருபத்தியேழு நட்சத்திரங்களில் கோள்கள் நிற்பதால் ஏற்படும் பலன்கள். நட்சத்திரங்கள் குறிக்கும் மரங்கள் - பொருட்கள் - தொழில்கள் - இடங்கள் - ஊர்கள் - தொழில்கள்.
5. **நட்சத்திரங்களில் நின்ற கோள்களின் இலக்ன ஆதிபத்தியப் பலன்கள்**
ஒவ்வொரு லக்னத்திலும் பிறந்தவர்களின் பலன்களை ஆதிபத்ய முறையில் வரையறை செய்தல். நட்சத்திராதிபதி, ராசியாதிபதி, பாவாதிபதி ஆகியவர்களை ஒன்று சேர்த்து பலன் கூறும் முறை.

- 1) பல்வேறு லக்னங்களை கொண்டு மாணவர்கள் பலன் சொல்லும் முறையை தெரிந்துக் கொள்ள வேண்டும். ராசியைக் கொண்டு பலன் கூறும் முறை.
- 2) பன்னிரு பாவாதிபதிகளின் நிலைகள் கொண்டு பலன் கூறுதல், கோள்களின் சேர்க்கை, பார்வை பலன்களின் தாக்கம் ஆகியவற்றை புரிந்துக் கொள்ளுதல்.
- 3) நாடி முறை, ஜெய்முனி முறை, கிருஷ்ணமூர்த்தி பத்ததி முறை ஆகிய பல முறைகளில் பலன்கள் காணும் விதத்தை தெரிந்துக் கொள்ளுதல்.
- 4) பல்வேறு முறைகளில் பலன் சொல்வது நோக்கமாகும்.
- 5) ஜாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்வது.
- 6) இன்றைய ஜோதிட வளர்ச்சியை, புதிய கண்டுபிடிப்புகளை ஏற்றுக் கொள்வது.

பயன்கள்:

- 1) எந்தமுறையில் பலன்கள் சொன்னாலும், ஒரே மாதிரியான பலன்கள் ஜாதகருக்கு சொல்ல முடியும். பலன்களில் மாற்றங்கள் ஏற்படாது என்பதை புரிந்துக் கொள்வது.
- 2) பலன்காணுவதற்கு நாமும் புதிய முறைகளை கண்டு பிடிக்கலாம் என்ற எண்ணம் வளரும்.
- 3) ஒரு முறையில் கண்டுபிடித்த பலன்களை மறுமுறையில் உறுதி செய்வது.
- 4) நமக்கு தெரிந்த முறையில் பலன் கூறி பழகலாம்.
- 5) எந்த முறையில் பலன் கூறினாலும் பலன் ஒன்றாக தான் இருக்கும் என்பதை நிரூபிக்கலாம்.
- 6) எளிமையான முறையில் பலன்கள் நிர்ணயம் செய்யலாம்.

UNITS

1. **பராசரர் முறையில் பலன் கூறுதல்**
பல்வேறு லக்னங்களைக் கொண்டு பலன் கூறுதல் - ராசியைக் (சந்திரன்) கொண்டு பலன் கூறுதல் பன்னிரு பாவாதிபதிகளின் நிலைகளைக் கொண்டு பலன் அறிதல் - கோள்களின் பார்வையைக் கொண்டு பலன் கூறுதல்
2. **நாடி முறை**
நாடி விதிகள்- நாடி பார்வை முறைகளை கொண்டு பலன் கூறுதல்
3. **ஜெய்முனி முறை**
ஜெய்முனி பார்வை - சிறப்பு லக்னங்கள்
4. **உத்திரகாலமிர்த முறையில் பலன் கூறுதல்**
5. **கிருஷ்ணமூர்த்தி பத்ததி முறையில் பலன் கூறுதல்.**
உப நட்சத்திரங்கள் - குறிகாட்டிகள்

நோக்கங்கள்:

- 1) மனித வாழ்க்கையில் மிக முக்கிய சடங்காக உள்ளது திருமண சடங்காகும். ஒரு ஆணையும் பெண்ணையும் சேர்த்து வைப்பதில் ஜோதிடவியலுக்கு முக்கிய பங்குள்ளது என்பதை மாணவர்களுக்கு புரியவைப்பது.
- 2) திருமணத்திற்கு பிறகு ஏற்படும் நிகழ்வுகளை முன்கூட்டியே எச்சரிப்பது மட்டுமல்லாமல், அந்த நிகழ்வுகளால் பாதிப்பு ஏற்படா வண்ணம் அறிவுரை வழங்குகிறது.
- 3) இருதார யோகம், விவாகரத்து, தாமத திருமணம் போன்ற திருமணம் சம்பந்தப்பட்ட அனைத்து கேள்விகளுக்கும் மாணவர்கள் பதில் அளிக்கும் வகையில் இப்பாடதிட்டம் அமைந்துள்ளது.
- 4) விவாஹரத்திற்கான காரணகரியங்களை தெரிந்துக் கொள்ள முடிவும்.
- 5) இளமையில் திருமணம், தாமத திருமணம் ஆகியவற்றிற்காக கிரக அமைப்பை புரிந்துக் கொள்ள முடியும்.
- 6) தம்பதியர்களின் ஆயுள் ஆரோக்யத்தையும் கணக்கில் எடுத்து பொருத்தம் பார்க்க வேண்டும்.

பயன்கள்:

- 1) சரியான தம்பதியர்களை சேர்த்து வைப்பதற்கு இப்பாட பகுதி உறுதுணையாக இருக்கும்.
- 2) திருமண வாழ்க்கையின் தராதரத்தை முடிவு செய்வதற்கு இப்பாட பகுதி மிகவும் உதவியாக இருக்கும்.
- 3) தம்பதியர்களின் இன்பமான வாழ்க்கைக்கு உதவியாக ஜோதிடவியலின் அறிவு இங்கே பயன்படுத்த படுகிறது.
- 4) சமுதாய அமைப்பில் ஜோதிடர்களின் பங்கு இப்பாட பகுதியின் மூலம் வெளிப்படும்.
- 5) குழந்தை பாக்கியத்தையும் கணக்கில் எடுத்துக் கொள்ள வேண்டும்.
- 6) தம்பதியர்களின் குணங்களை ஒப்பு நோக்க பயனுள்ளதாக இருக்கும்.

UNITS**செய்முறைத்தேர்வு**

1. திருமண தசப்பொருத்தம் கூறுதல்
2. இருதார திருமண யோக ஜாதகஸ்தர்களைப் பற்றிய விளக்கம் தருதல்
3. விவாகரத்து ஜாதகங்களை ஆய்வு செய்து, காரண காரிய விளக்கங்களை கோள்களைக் கொண்டு விளக்கம் தருதல்
4. தாமத திருமணம் உரிய காரணங்களை பாவகங்களைக் கொண்டும் கோள்களைக் கொண்டும் விளக்கம் தருதல்
5. குழந்தைபேறு குறித்து ஜாதக ஆய்வு செய்தல்

நோக்கங்கள்:

- 1) பலன் கூறுவதற்கு பலமுறைகள் இருந்தாலும், மாணவர்கள் பழங்கால முறையான தாஜிக முறையில் பலன் கூறுவதற்கு உதவியாக இருக்கும்.
- 2) தாஜிக முறையில் யோகங்களுக்கு பலன்கள் கூறுவது ஒரு வித்யாசமான முறை என்றே புரிந்துக் கொள்ளலாம்.
- 3) ஒவ்வொரு வருடத்திற்கும் ஒரு ஜாதகம் கணித்து பலன் சொல்லும் முறையை மாணவர்கள் அறியும் நோக்கில் இப்பாட பகுதி அமைந்துள்ளது.
- 4) ஜாதகர்களின் வருங்கால ஜோதிட பலன்களை கூறுவது.
- 5) கோள்களின் நிலைகளை மிக துல்லியமாக கணித்தல்
- 6) பலன்கள் நடைபெறும் காலங்களை முன்கூட்டியே எடுத்துரைத்தல்.

பயன்கள்:

- 1) பழமையான முறைகளில் ஒன்றான இத்தாஜிக முறை. ஒரு வித்யாசமான கோணத்தில் பலன்களை கூற வைக்கும்.
- 2) ஒரு வருடத்தில் ஏற்படும் நன்மை, தீமைகளை வரையறுத்து கூறுவதில் வல்லமைவுடையது தாஜிக முறையாகும்.
- 3) வாழ்நாள் முழுவதும் ஜாதகரின் வாழ்க்கையில் ஏற்படும் இன்பதுன்பங்களை சொல்ல முடியும்.
- 4) கோள்களின் பலம், பலஹீனம் ஆகியவற்றை தெளிவாக அறிய முடியும்.
- 5) ஒவ்வொரு வருடத்திலும் ஏற்படும் பலன்களை கோட்சார கிரகங்களை கொண்டு முடிவு செய்ய முடியும்.
- 6) பாவகங்களில் நிற்கும் கோள்களால் ஏற்படும் பலன்களை துல்லியமாக கணிக்க முடியும்.

UNITS**1. வருட சாதகம் கணித்தல்**

வருட பிறந்த நாள் - வருட அதிபதி- இலக்கினம் - கோள்களின் நிலை, திதி – முந்தா – **முந்தா இராசி அதிபதி** – மந்தா இராசியல் நிற்கும் கோள்கள் - வருட அதிபதியைக் காணுதல்

2. சகமங்கள்

தாஜிக முறைப்படி சகம ஸ்புடங்கள் கணித்தல் - பலன் அறியும் விதம்

3. யோகங்கள்

தாஜிக முறையில் கூறப்படும் யோகங்களும் அதன் பலன்களும்

4. வருட தசை கணித்தல்

தாஜிகா முறைப்படி – வருட தசை கணித்தல், தசையில் புத்தியைக் கணித்தல் - **பொது தசா பலன்கள்**

5. சாதக பலன் நிர்ணயித்தல்

வருட சாதகத்தில் - பாவங்களின் நிற்கும் கோள்களால் ஏற்படும் பலன்கள் - அந்த வருடத்தில் ஏற்படக்கூடிய தீயபலன்கள் - **தீய பலன்கள் நீக்கும் விதம்.**

குறிப்பு நூல்கள்

1. பி.எஸ். அய்யர், தஜக நீலகண்டியம், கேரள சோதிட பதிப்பகம், மதுரை
2. பி.வி. ராமன் வாஷபல், யு.பி.எஸ்.பி.டி பப்ளிகேசன்ஸ், புது தில்லி
3. சுமித் ஷா வாஷபல், சாகர் பப்ளிகேசன்ஸ், புது தில்லி
4. நீலகண்டர், உரை டி.பி. சாக்சேனா, தஜிக் நீலகாந்தி, ரஞ்சன் பப்ளிகேசன்ஸ், புது தில்லி
5. கே.எஸ். சரக் பிரடெக்டிவ் டெக்னிக் இன் வாஷ பலா, சிஸ்டம் விஷன், புது தில்லி
6. பலவகையான சோதிட இணை தளங்கள்

நோக்கங்கள்:

- 1) அஷ்டவர்க்க முறையில் பலன்கள் சொல்ல தேவையான அடிப்படை செய்திகளை இப்பாட பகுதி மூலம் தெரிந்துக் கொள்ளலாம்.
- 2) கோள்கள் அஷ்ட வர்க்கத்தில் கொடுக்கும் பரல்களுக்கு ஏற்ற வகையில் பலன்களில் ஏற்படும் தாரதம்யத்தை மாணவர்கள் புரிந்துக் கொள்ளலாம்.
- 3) கோச்சார கிரகங்கள் அஷ்டவர்க்கங்களில் ஏற்படுத்தும் பலன்களை நிர்ணயம் செய்யலாம்.
- 4) சூரிய, சந்திர அட்டக வர்க்கங்களில் கோச்சார சூரியனை கொண்டு சுப முகூர்த்தங்கள் முடிவு செய்யலாம்.
- 5) செவ்வாய் பின் பின்னாட்டக வர்க்கத்தில் கோச்சார செவ்வாய் வரும் காலத்தை கொண்டு சகோதர, சகோதரிகளை பற்றி அறியலாம்.
- 6) அஷ்டக வர்க்க கணிதம் மூலம் ஆயுள் கணிதம் துல்லியமாக கணிக்கலாம்.

பயன்கள் :

- 1) அஷ்ட வர்க்கங்களை கொண்டு முகூர்த்த நிர்ணயம் செய்யலாம், தொழில் நிர்ணயம் செய்யலாம்.
- 2) ஜாதகர்களுக்கு ஏற்படும் நோய், திருமண வாழ்க்கை, புத்ர பாக்யம் போன்ற அனைத்து விதமான பலன்களையும் மிக துல்லியமாக வரையறுத்து கூற முடியும்.
- 3) பலன் கூறுவதில் ரிஷிகளின் அறிவு கூர்மையை புரிந்துக் கொள்ள முடியும்.
- 4) அஷ்டக வர்க்க கணிதம் மூலம் திருமணப் பொருத்தம் நிர்ணயம் செய்ய முடியும்.
- 5) மகிழ்ச்சிகரமான திருமண வாழ்க்கைக்கு சுக்கிர பின்னாஷ்ட வர்க்கத்தின் மூலம் அறியலாம்.
- 6) புனித யாத்திரை, புதிய முயற்சிகள், தொழில் தொடங்குதல் ஆகியவற்றை சூரிய சஞ்சாரத்தின் மூலம் முடிவு செய்யலாம்.

UNITS**அஷ்டவர்க்கம்**

1. **அஷ்டவர்க்கம் கணித்தல்**
அஷ்டவர்க்கம் அறிமுகம் - முக்கியத்துவம் - கோள்கள் பரல் தரம் ஸ்தானங்கள் - சமுதாய – **பிரஸ்தார அஷ்டவர்க்கம்**
2. **அஷ்டவர்க்க சோதனைகள் மற்றும் சுத்த பிண்டம் கணித்தல் - திரிகோண சோதனை –**
ஏகாதிபத்திய சோதனை – கிரக குணாகரம், இராசி குணாகரம் - சுத்த பிண்டம்
3. **அஷ்டவர்க்க பொது பலன்கள்**
பன்னிரண்டு பாவங்களில் உள்ள பரல்களின் பலன் - கோள்கள் தரும் பரல்களின் பலன் - **பாவகம் மற்றும் கோள்களின் பொதுப் பலன்கள்**

4. **அஷ்டவர்க்க சிறப்புப் பலன்கள்**

சுத்த பிண்டம் கணித அடிப்படையிலும் - கோள்கள் ஒரு பாவத்தில் கொடுத்துள்ள பரல்களின் அடிப்படையிலும் - பலன் நிர்ணயித்தல் - ஆயுள் கணித்தல் - **பாவக பலன் நடைபெறும் காலம் கணித்தல்**

5. **அஷ்டவர்க்க கோசார பலன்கள்**

கோள்களின் தற்கால நிலை – பரல்களுக்கு ஏற்றவாறு தரும் பலன்கள் - கச்சயா கணக்கிடுதல் - கோள்கள் கச்சயாவை கடக்கும் கால அளவு - பலன்கள்

குறிப்பு நூல்கள்

1. பராசரர் - உரை, கிரிஸ் சந்த சர்மா, பிருகத் பராசரா ஜோரா சாஸ்திரம், சாகர் பப்ளிகேசன்ஸ், புது தில்லி
2. சி.எஸ் பட்டேல் மற்றும் சி.ஏ. சுப்பிரமணிய சாஸ்திரிகள். அஷ்டவர்க்கம், சாகர் பப்ளிகேசன்ஸ், புது தில்லி
3. பி.எஸ். சாஸ்திரி, சீக்ரேட்ஸ் ஆஃப் அஷ்டவர்க்கம், ரஞ்சன் பப்ளிகேசன்ஸ், புது தில்லி
4. பீ.வி ராமன், அஷ்டவர்க்கம் சிஸ்டம் ஆஃப் பிரடிக்கசன், பு.பி எஸ்.பி.டி. பப்ளிகேசன்ஸ். புது தில்லி
5. பல வகையான சோதிட இணை தளங்கள்

நோக்கங்கள் :

- 1) ஒவ்வொரு கேள்விக்கும் ஒவ்வொரு வர்க்க சக்கரங்களை ஏற்படுத்தி அதன் மூலம் பலன்கள் துல்லியமாக சொல்ல முடியும்.
- 2) கோள்களின் உண்மையான வலிமை வர்க்க சக்கரங்களில் மட்டுமே வெளிப்படும்.
- 3) இராசி சக்கரத்தை கொண்டு மேலோட்டமான பொது பலன்களை மட்டுமே சொல்ல முடியும் ஆனால் வர்க்கங்கள் கொண்டு துல்லியமான, ஆழமான, விளக்கமான பலன்களை சொல்ல முடியும்.
- 4) நவாம்சத்தை கொண்டு ஜாதகரின் திருமண வாழ்க்கையின் சாராம்சத்தை புரிந்துக் கொள்ள முடியும்.
- 5) சதுர்விம்சாம்சத்தை கொண்டு ஜாதகரின் கல்வியின் தரத்தை நிர்ணயம் செய்ய முடியும்.
- 6) சப்தாம்சத்தை கொண்டு, புத்ர பாக்யத்தை அறிய முடியும்.

பயன்கள்:

- 1) வர்க்க சக்கர முறையில் பலன் சொல்வது என்பது ஒரு உயர்தர முறையில் பலன்கள் சொல்வதாகும்.
- 2) ஜாதகரின் வாழ்க்கையில் மறைந்து கிடக்கின்ற பலபல உண்மைகளை வெளி உலகத்திற்கு காட்டும் ஒரு பல பலன் சொல்லும் முறை என்றால் அது மிகையல்ல.
- 3) நமது வாழ்வில் நடக்கும் அனைத்து நிகழ்ச்சிகளுக்கும் காரண காரியங்களோடு, கோள்கள் சம்பந்தம் உள்ளது என்பதை புரிந்துக் கொள்ள முடியும்.
- 4) சதுர்த்தாம்சத்தை கொண்டு அசையா சொத்துகளின் நிலையை அறிய முடியும்.
- 5) தசாம்சத்தை கொண்டு ஜாதகரின் வேலையின் நிலையை முடிவு செய்யலாம்.
- 6) ஏகாதாம்சத்தை கொண்டு ஒருவரின் சொந்த தொழில் நலனை அறியலாம்.

UNITS**16 வர்க்கச் சக்கரங்களும் பலன்களும்**

1. **ஸ்தான பலம் மற்றும் திக்பலம்**
ஸ்தான பலம் - உச்ச - சப்த வாகிய - ஓஜ உக்ம - கேந்திர திரிகோண பலம் - திக்பலம் - திசைகள் - கோள்களின் பலம் - பலவீனம் - **பலன் D2, D3** கட்டமைப்புகள், பலன்கள்
2. **காலபலம் மற்றும் சேஷ்டாபலம்**
கோள்களின் தற்காலிக பலம் - பகல் - இரவு - திரிபாகம் - வருடம் - மாதம் - நாள் - நேர அதிபதி - கோள்களின் கோசார பலம் - உள்வட்டம் - வெளிவட்டம் - விரைவாக - மெதுவாகச் செல்லும் - கோள்களின் பலம் - பலவீனம் - பலன் D4, D16, D24 கட்டமைப்புகள், பலன்கள்
3. **நைசர்க்கிய பலம் மற்றும் திருக் பலம்**

கோள்களின் இயற்கை பலம் - கோள்களின் பார்வை பலம் - பலவீனம் - பலன் D5,D6,D7 கட்டமைப்புகள், பலன்கள்

4. பாவக பலம்

பாவக பலம் - பால காரகம் - பகல் - இரவு - பிறப்பு பலம் - இஷ்ட பலம் - கஷ்ட பலம் நிகர பலம் D8, D9, D10, D11, D12, D20, D30 கட்டமைப்புகள், பலன்கள்

5. சாதக பலன் நிர்ணயித்தல்

பல அடிப்படையில் கோள்கள் - பாவகம் - தசா புக்தி கோசார – பலன் நிர்ணயித்தல்

குறிப்புதவி நூல்கள்

1. பராசரர், உரையாசிரியர் - கிரிஸ் சந்த் சர்மா, பிருகத் பராசரா ஜோரா சாஸ்திரம், சாகர் பப்ளிகேசன்ஸ், புது தில்லி
2. மந்திரேஸ்வரர், உரையாசிரியர், சு.எ. குமார சுவாமி ஆச்சாரியார், பல தீபிகை, ஆனந்த நிலையம் சென்னை
3. கல்யாணவர்மர், உரையாசிரியர் சு.ஏ. குமாரசுவாமி ஆச்சாரியார். சாராவளி. ஆனந்த நிலையம் சென்னை
4. கிருஷ்ண குமார், சட்பல ரகசியம், ஆல்.பா பப்ளிகேசன்ஸ், புது தில்லி
5. எஸ்.எம். சதாசிவம், சட்பலம், இந்து பப்ளிகேசன்ஸ், சென்னை
6. பல வகையான சோதிட இணைய தளங்கள்
7. Sanjay Rath, varga chakra, Saagar publication.
8. P.V.R. Narasimha Rao, Vedic Astrology an intergrated Approach. Sagar publication.
9. Crux of vedic Astrology- timing of events by Sanjay Rath, Sagar publication.
10. V.P.Goel, Comprehensive prediction by Division charts, Sagar publication.

நோக்கங்கள்

- 1) பராசரர் முறையில் பன்னிரு இலக்ன சாதகங்களுக்கு ஆதிபத்திய முறையில் பலன் கூறுதல் மாணவர்களின் சோதிட அறிவை பரைசாற்றுவதாக அமையும்
- 2) மேலும் பன்னிரு இலக்ன சாதகங்களுக்கு நட்சத்திர சார ஆதிபத்திய முறையில் பலன்கள் கூறுதல் மாணவர்களின் நுட்பமான சோதிட அறிவு இந்த செய்முறைத் தேர்வின் மூலம் வெளிப்படும்
- 3) பலன்களாக சொல்லப்படும் நிகழ்வுகள் எக்காலகட்டத்தில் ஏற்படும் என்பதை விம்ஷோத்திரி தசா புத்தியின் மூலம் கூறுவது இந்த செய்முறைத் தேர்வின் நோக்கமாகும்.
- 4) அஷ்டவர்க்க பலன்கள் மூலம் கோட்சார பலன்களை சொல்வதும், மேலை நாட்டுமுறையில் பலன்கள் கூறுவதும் மாணவர்களை பல முறைகளில் பலன் கூறவைப்பதற்கான முயற்சியாகும்.
- 5) கிரகங்கள் நிலைகள் இல்லாமலேயே, லக்னத்தின் நிலை கொண்டு ஜாதகரின் வாழ்நாள் பலன்கள் சொல்வது.
- 6)

பயன்கள்

- 1) இந்த செய்முறை பயிற்சியின் மூலம் மாணவர்கள் உயர்தரமான சோதிட அறிவை பெறுவார்கள்
- 2) தங்களிடம் வருகின்ற சாதகங்களின் வாழ்வில் வழிகாட்டியாகவும் நன்மை செய்பவர்களாகவும் இருப்பார்கள்
- 3) மற்றவர்களுக்கு சோதிட சாஸ்திரரதின் மூலம் வழிகாட்டுவதால் தெய்வீக நிலையை அடைய வழி ஏற்படும்.
- 4) பாரம்பரிய முறையில் ஜாதக பலன்களை மிக துல்லியமாக கூற முடியும்.
- 5) ஒரு கிரகம் எந்த நட்சத்திரத்தில் நின்று, எந்த ஆதிபத்யம் பெற்றுள்ளதோ அதன் அடிப்படையில் பலன்கள் சொல்ல முடியும்.
- 6) இந்திய ஜோதிட முறையை மேலை நாட்டு ஜோதிட முறையும் ஒப்பிட முடியும்.

செய்முறைத்தேர்வு (Practical) :III**UNITS**

1. பன்னிரு லக்ன சாதகங்களுக்கு ஆதிபத்திய முறையில் பலன் கூறுதல்.
2. பன்னிரு லக்ன சாதகங்களுக்கு நட்சத்திர சார ஆதிபத்திய முறையில் பலன் கூறுதல்.
3. விம்ஷோத்திரி தசா புத்தி கணித்துப் பலன் கூறுதல்.
4. அஷ்டவர்க்க ஜனன பரல்கள் மூலம் கோச்சார பலன்களைக் கூறுதல்.
5. மேலை நாட்டு முறையில் பலன் கூறுதல்.

B.Sc., BIOCHEMISTRY

PREAMBLE

- Biochemistry is the study of chemistry and relating to, biological organisms.
- Biochemistry is sometimes viewed as a hybrid branch of organic chemistry which specializes in the chemical processes and chemical transformations that take place inside living organisms.
- All life forms alive today are generally believed to have descend from a single proto-b ancestor, which could explain why all known living things naturally have similar biochemistries.
- Biochemistry essentially remains the study of the structure and functions of cellular components (such as enzymes and cellular organelles) and the processes carry out both by and by organic macromolecules - especially proteins, but also carbohydrates, lipids, nucleic acids and other biomolecules.
- Biochemistry is most simply put, the chemistry of life.

KARPAGAM ACADEMY OF HIGHER EDUCATION

PROGRAMME OUTCOME (POs).

The Biochemistry graduate will be able to acquire

- a. Critical Thinking and Language Training:** The ability to analyze information objectively, make a reasonable judgment and conclusion by evaluating data, facts, observe phenomenon, and research findings from a set of information and distinguish among priorities to solve a problem. To train them to communicate science by improving their English vocabulary. Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.
- b. Ethics:** Recognize different value systems including your own, understand the moral dimension of your decisions, and accept responsibility for them.
- c. Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings. Demonstrate empathetic social concern and equity centred national development, and ability to act with an informed awareness of issues and participate in civic life through volunteerism.
- d. Understanding cellular function:** To equip them with basic and advanced knowledge in cell biology in order to get entry/placed in cell based research and development institution/laboratories.
- e. Protein based skills:** To make them understand protein, enzymes and human physiology to lay a foundation and to get through competitive examinations. To equip them to get placed in recombinant protein production industries/laboratory.
- f. Understanding of endocrine system and metabolism:** To train them on the regulatory role of hormone on the metabolism of carbohydrates, lipids, amino acids and nucleic acid.
- g. Molecular and Genetic understanding:** To train them on the genetic regulation of immune system and to use computational tools.
- h. Environment and Sustainability:** Understand the issues of environmental contexts and sustainable development.
- i. Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.
- j. Skill development:** To gain hands on experience on various biochemical experiments and equip them to interpret the data.

PROGRAMME SPECIFIC OUTCOME (PSOs)

- k. Be able to demonstrate foundation knowledge in the areas of Biochemistry like Biology, Biomolecules, Protein Biochemistry, Molecular Biology, Pharmacology, Chemistry and Hormonal Biochemistry
- l. Be able to integrate knowledge learned in discipline specific courses like Microbiology, Plant Biochemistry, Nutritional biochemistry, Biostatistics, Drug Biochemistry, Biotechnology
- m. To use standard laboratory protocols in biochemistry, modern instrumentations, proper laboratory safety protocols and classical techniques to carry out experiments and also computers in data acquisition and processing and use available software as a tool in analysis.
- n. To understand the applications of biological sciences in Genetics, Biochemical correlations of diseases, Microbiology, Genetic engineering and Biotechnology

PROGRAMME EDUCATIONAL OBJECTIVE (PEO)

- I. To give students a basic knowledge in biochemistry and to teach on ethics.
- II. To develop analytical and critical-thinking skills that allows independent exploration of biological phenomena through the scientific methods.
- III. To acquaint knowledge on modern methods of biochemical experimentation and implement for future studies.
- IV. To motivate students for social responsibilities and to educate them on ethical values in addition to inculcating environmental awareness.
- V. To enable them to execute a research objective through experimentation.

TAMIL-14H-4C

பகுதி - I தமிழ்ப்பாடத்திட்டம் (2018-2019)

Instruction Hours /week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 H

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனை மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

- இந்தியகுடியுரிமைப்பணிமுதலானபோட்டித்தேர்வுகளில், விருப்பப்பாடமாகஇடம்பெறுகின்ற தமிழ்இலக்கியவரலாறு' குறித்தமுழுமையானஅறிமுகம்பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல்மற்றும்தொல்லியல்சார்ந்தஆவணத்தேடலுக்குரியஆய்வுமனப்பான்மையுடன் இலக்கியங்களைஅணுகுதல்.
- தமிழின்வளர்ச்சித்துறையாகிய, 'அறிவியல்தமிழ்' ; 'இணையதமிழ்' குறித்தபன்னோக்குஅணுகுமுறையிலானஆய்வுச்சிந்தனைமேம்பாடு.
- வேலைவாய்ப்புக்குரியசுயதிறன்மேம்பாட்டுடன், படைப்பாக்கத்திறன்மேம்பாடும்பெற்றிருத்தல்.
- சமுதாயமற்றும்வாழ்வியல்மதிப்புகளைப்பேணுவதற்குக்கருவியாகஇலக்கியங்களைநாடுகின்ற ப்பான்மைவளர்ச்சி.
- மொழிபெயப்புத்துறைசார்ந்தவேலைவாய்புத்திறன்பெற்றிருத்தல்

(இளநிலைஅறிவியல்பட்டவகுப்புகளுக்குரியது)

அலகு - I :இக்காலஇலக்கியம்:(10 மணிநேரம்)**கல்வி:** மகாகவிபாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.**இன்றைய நிலை :** கவிமணிதேசிகவிநாயகம்பிள்ளை–

ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிறப்பிபாலசுப்பிரமணியன் – மலையாளக்காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் – விரல்மீட்டியமழை.

பெண்ணியம் : கவிஞர் சுகந்திசுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அறிவுக்கியம்: (8 மணிநேரம்)

கொன்றைவேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழிநானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (8 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர்முகுனப்பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப்பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: (8 மணிநேரம்)

1. உயர்தனிச்செம்மொழி-பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை- அ. இராசமாணிக்கனார்
3. வாழ்க்கை- இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - பூரீகண்ணன்
5. மணற்கேணி - நெ.து. சுந்தரவாடிவேலு

அலகு- V : மொழிப்பயிற்சி: (6 மணிநேரம்)

1. பொருத்தமானதமிழ்ச்சொற்களைப்பயன்படுத்துதல்
2. செய்யுள்பொருளுணர்திறன்
3. மொழிபெயர்ப்புப்பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாடநூல்: கற்பகச்சோலை – தமிழ்ஞா.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறை வெளியீடு.

18ENU101 ENGLISH4H- 4C**(For all undergraduate students admitted from 2018 onwards)****Instruction hours/week: L:4 T:0 P:0Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 H**Course Objectives:**

- To train students to acquire proficiency in English
- To explore different genres of literature and learning grammar
- To provide aesthetic pleasure through literature
- To inculcate moral values through literature
- To develop ethical values
- To give basic grammar knowledge

Course outcomes (CO's):

1. Develop the knowledge of interpersonal skills
2. Establish and maintain social relationships
3. Genres of literature will give moral values of life
4. Develop communication skills in business environment
5. Communication skills will get developed
6. Develop to have language competence

UNIT - I: Prose

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II: Poem

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III: Short stories

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV: Drama

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

UNIT - V: Grammar and Composition

Grammar: 1. Tenses

2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

Composition: 1. Reading to Comprehend

2. Letter Writing
3. Resume Writing
4. General Essay

Prescribed Text: Reminisce, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

18BCU101

MOLECULES OF LIFE

4H-4C

Instruction hours/week: L: 3 T: 1 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 H

Course Objectives

Equip the students:

- To understand the properties and importance of water in biological system
- To know the various biomolecules present in biological system
- To introduce the importance of vitamins in human body
- To know the biological significance of carbohydrate metabolites in living systems
- To understand the functional role of nucleic acid in living systems
- To introduce the importance of vitamins in human body

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Recognize water as a universal solvent and elixir of life by knowing its importance
2. Identify the properties and classification of carbohydrates
3. Recall the role of various lipids in biomembrane including signal transduction
4. Categories the amino acids and know their properties
5. Differentiate the structure, properties and functions of DNA and RNA
6. List the functions and deficiency disease of fat and water soluble vitamins

Unit I: The foundations of biochemistry and water

Cellular and chemical foundations of life. Unique properties, weak interactions in aqueous systems, ionization of water, buffers, water as a reactant and fitness of the aqueous environment.

Unit II: Carbohydrates and glycobiology

Monosaccharides - structure of aldoses and ketoses, ring structure of sugars, conformations of sugars, mutarotation, anomers, epimers and enantiomers, structure of biologically important sugar derivatives, oxidation of sugars. Formation of disaccharides, reducing and non-reducing disaccharides. Polysaccharides – homo- and heteropolysaccharides, structural and storage polysaccharides. Structure and role of proteoglycans, glycoproteins and glycolipids (gangliosides and lipopolysaccharides). Carbohydrates as informational molecules, working with carbohydrates

Unit III: Lipids

Building blocks of lipids - fatty acids, glycerol, ceramide. Storage lipids - triacyl glycerol and waxes. Structural lipids in membranes – glycerophospholipids, galactolipids and sulpholipids, sphingolipids and sterols, structure, distribution and role of membrane lipids. Plant steroids. Lipids as signals, cofactors and pigments.

Unit IV: Amino acids and Nucleic acids

Structure and classification, physical, chemical and optical properties of amino acids. Nucleotides - structure and properties. Nucleic acid structure – Watson-Crick model of DNA. Structure of major species of RNA - mRNA, tRNA and rRNA. Nucleic acid chemistry

UV absorption, effect of acid and alkali on DNA. Other functions of nucleotides - source of energy, component of coenzymes, second messengers.

Unit V: Vitamins

Structure and active forms of water soluble and fat soluble vitamins, deficiency diseases and symptoms, hypervitaminosis

18BCU102

CELL BIOLOGY 4H-4C

Instruction hours/week: L:4T:0P:0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students:

- To understand the structural organization of prokaryotic cells
- To understand the structural organization of eukaryotic cells
- To understand the technical basis of membrane biology
- On the structure and functions of various sub-cellular organelle
- To understand the cytoskeletal network and extracellular matrix
- To understand the cell cycle, cell division and cell death process

Course Outcomes (CO's)

1. Differentiate the prokaryotic and eukaryotic cell
2. Understand the principle behind studying the cell morphology using various microscope
3. Identify the structure and functions of each organelle in cell
4. Recognise the mechanism behind the protein sorting and transport to their destinations like lysosome, mitochondria and chloroplast
5. Maintenance of cytoskeleton structure and function of micro, macro and intermediary filaments
6. Identify the proteins involved in cell cell interaction
7. Enumerate the phases of cell cycle, events in cell division and mechanism of cell death

Unit I: Introduction to cell biology

Prokaryotic (*archaea and eubacteria*) and eukaryotic cell (animal and plant cells), cells as experimental models.

Plasma membrane: Composition, Fluid mosaic model

Tools of cell biology: Light microscopy, phase contrast microscopy, fluorescence microscopy, confocal microscopy, electron microscopy, FACS. Centrifugation for sub-cellular fractionation.

Unit II: Structure of different cell organelles

Structure of nuclear envelope, nuclear pore complex. Selective transport of proteins to and from the nucleus. Regulation of nuclear protein import and export.

ER structure. Targeting proteins to ER, smooth ER and lipid synthesis. Export of proteins and lipids from ER and into ER. Protein folding in ER

Peroxisomes and Zellweger syndrome.

Unit III: Protein trafficking

Organization of Golgi. Lipid and polysaccharide metabolism in Golgi. Protein sorting and export from Golgi. N and O-linked glycosylation.

Lysosome. – Acid hydrolases, phagocytosis and autophagy.

Mitochondria-Structure and functions, protein import and mitochondrial assembly,

protein export from mitochondrial matrix.
Chloroplasts- Import and sorting of chloroplast proteins.

Unit IV: Cytoskeletal proteins

Structure and organization of actin filaments. Treadmilling and role of ATP in microfilament polymerization, organization of actin filaments. Non-muscle myosin. Intermediate filament proteins, assembly and intracellular organization. Assembly, organization and movement of cilia and flagella.

Unit V: Cell wall and extracellular matrix

Prokaryotic and eukaryotic cell wall, cell matrix proteins. Cell-matrix interactions and cell-cell interactions. Adherence junctions, tight junctions, gap junctions, desmosomes, hemidesmosomes, focal adhesions and plasmodesmata.

Cell cycle, cell death and cell renewal: Eukaryotic cell cycle, restriction point, and checkpoints. Cell division. Apoptosis and necrosis - brief outline. Salient features of a transformed cell.

		Semester I
18BCU103	MEMBRANE BIOLOGY AND BIOENERGETICS	4H-4C
Instruction hours/week: L:4 T:0P:0		Marks: Internal: 40 External: 60 Total: 100
		End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the basis of membrane proteins (intrinsic and extrinsic)
- To understand the basis of membrane lipids (phospholipids and glycolipids)
- To understand the basis of membrane carbohydrates
- To understand the basis of membrane model system for drug delivery
- To understand the transport of biomolecules across membranes
- To understand the role of membrane components on energy production

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basis of membrane proteins (intrinsic and extrinsic)
2. Understand the basis of membrane lipids (phospholipids and glycolipids)
3. Understand the basis of membrane carbohydrates
4. Understand the basis of membrane model system for drug delivery
5. Understand the transport of biomolecules across membranes
6. Understand the role of membrane components on energy production.

Unit I: Biomembranes, membrane structures and membrane dynamics

Composition of biomembranes- prokaryotic, eukaryotic, neuronal and sub-cellular membranes. Study of membrane proteins. Fluid mosaic model with experimental proof. Monolayer, planer bilayer and liposomes as model membrane systems. Polymorphic structures of amphiphilic molecules in aqueous solutions- micelles and bilayers. CMC, critical packing parameter. Membrane asymmetry. Macro and micro domains in membranes. Membrane skeleton, lipid rafts, caveolae and tight junctions. RBC membrane architecture. Lateral, transverse and rotational motion of lipids and proteins. Techniques used to study membrane dynamics - FRAP, TNBS labeling etc. Transition studies of lipid bilayer, transition temperature. Membrane fluidity, factors affecting membrane fluidity.

Unit II: Membrane transports

Thermodynamics of transport. Simple diffusion and facilitated diffusion. Passive transport- glucose transporter, anion transporter and porins. Primary active transporters- P type ATPases, V type ATPases, F type ATPases. Secondary active transporters- lactose permease, Na⁺-glucose symporter. ABC family of transporters- MDR, CFTR. Group translocation. Ion channels- voltage-gated ion channels (Na⁺/K⁺ voltage-gated channel), ligand-gated ion channels (acetyl choline receptor), aquaporins, bacteriorhodopsin. Ionophores - valinomycin, gramicidin.

Unit III: Vesicular transport, membrane fusion and bioenergetics

Types of vesicle transport and their function- clathrin, COP I and COP II coated vesicles.

Molecular mechanism of vesicular transport. Membrane fusion. Receptor mediated endocytosis of transferrin. Laws of thermodynamics, state functions, equilibrium constant, coupled reactions, energy charge, ATP cycle, phosphorylation potential, phosphoryl group transfers. Chemical basis of high standard energy of hydrolysis of ATP, other phosphorylated compounds and thioesters. Redox reactions, standard redox potentials and Nernst equation. Universal electron carriers.

Unit IV: Oxidative phosphorylation

Mitochondria. Electron transport chain- its organization and function. Inhibitors of ETC and uncouplers. Peter Mitchell's chemiosmotic hypothesis. Proton motive force. Fo F1ATP synthase, structure and mechanism of ATP synthesis. Metabolite transporters in mitochondria. Regulation of oxidative phosphorylation. ROS production and antioxidant mechanisms. Thermogenesis. Alternative respiratory pathways in plants.

Unit V: Photophosphorylation

General features of photophosphorylation, historical background, Hills reaction, photosynthetic pigments, light harvesting systems of plants and microbes and resonance energy transfer. Bacterial photophosphorylation in purple bacteria, Green sulfur bacteria and *Halobacterium salinarum*. Photophosphorylation in plants - structure of chloroplast, molecular architecture of Photosystem I and Photosystem II, Z-scheme of photosynthetic electron flow, oxygen evolving complex and action of herbicides. Cyclic photophosphorylation and its significance. Photo inhibition. Evolution of oxygenic photosynthesis.

18BCU111 MOLECULES OF LIFE 3H-2C
PRACTICAL

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training:

- To know the safety measures to be followed in laboratory
- To prepare molar, normal and ppm solutions
- On buffer preparation
- To separate the biomolecules using chromatography techniques
- To identify the biomolecules qualitatively
- To quantify the biomolecules using colorimetry

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Gain knowledge on lab safety
2. Prepare reagents and solutions
3. Understand the basis of buffer preparation
4. Understand the principle and working procedure behind chromatographic separations
5. Understand the principle and working procedure behind staining techniques
6. Understand the principle and working procedure behind colorimetric techniques

Experiments

1. Safety measures in laboratories.
2. Preparation of normal and molar solutions.
3. Preparation of buffers.
4. Determination of pKa of acetic acid and glycine.
5. Qualitative tests for carbohydrates, lipids, amino acids, proteins and nucleic acids.
6. Separation of amino acids/ sugars/ bases by thin layer chromatography.
7. Estimation of vitamin C.
8. Estimation of vitamin E.

SUGGESTED READING

1. Nelson, D.L. and Cox, M.M., W.H. Freeman., Lehninger: Principles of Biochemistry (2013) 6th ed., and Company (New York), ISBN:13: 978-1-4641-0962-1 / ISBN:10:1-4641-0962-1.

4. Sadasivam, S., and Manickam, A., (2009). Biochemical Methods, New Age International Publishers, New Delhi.

Course Objectives

To impart hands-on training:

- On different parts of light microscopy
- On how to visualize the cells
- On phase contrast microscopy
- On how to identify different stages of mitosis and meiosis
- On staining techniques to identify the cell types
- On how to count the cells using hemocytometer

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Identify the spotters of light microscopy
2. Be able to visualize the cells
3. Use the phase contrast microscopy at appropriate magnifications
4. Identify the cells using staining techniques
5. Interpret various stages of cell division
6. Count the cells manually using hemocytometer

Experiments

1. Preparation of onion root squash and observation of cell
2. Visualization of animal and plant cell by methylene blue staining
3. Identification of different stages of mitosis in onion root tip.
4. Identification of different stages of meiosis in grasshopper testis.
5. Cell size determination using ocular stage micrometer
6. Micrographs of different cell components (dry lab).
7. Sub-cellular fractionation.
8. Visualization of nuclear fraction by acetocarmine stain.
9. Staining and visualization of mitochondria by Janus green stain.

PRACTICAL****Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training:

- On different qualitative methods to estimate glucose
- On different quantitative methods to estimate glucose
- On fermentation techniques
- On isolation methods for lipids
- To understand the quantitative analysis of enzymes involved in carbohydrate metabolism
- To understand the quantitative analysis of enzymes involved in lipid metabolism

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Use different qualitative methods to estimate glucose
2. Use different quantitative methods to estimate glucose
3. Perform fermentation techniques
4. Understand the quantitative analysis of enzymes involved in carbohydrate metabolism
5. Isolate lipid from the given sample
6. Estimate enzymes involved in lipid metabolism

Experiments

1. Effect of lipid composition on the permeability of a lipid monolayer.
2. Determination of CMC of detergents.
3. RBC ghost cell preparation and to study the effect of detergents on membranes.
4. Separation of photosynthetic pigments by TLC.
5. Isolation of mitochondria from liver and assay of marker enzyme SDH.
6. Study photosynthetic O₂ evolution in hydrilla plant.
7. Isolation of chloroplast from spinach leaves, estimation of chlorophyll.

PROTEINS 4H-4C

Instruction hours/week: L:3 T:1 P:0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To build their understanding on proteins
- On different molecular techniques used for separation of proteins
- On different molecular techniques used for characterization of proteins
- To study the three dimensional structure of proteins using computational tools
- To enrich the biological significance of proteins
- To identify appropriate technique to use during their project work

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Build on their understanding of proteins
2. Use different molecular techniques used for separation of proteins
3. Use different molecular techniques used for characterization of proteins
4. Understand the three dimensional structure of proteins using computational tools
5. Identify the biological significance of proteins
6. Use appropriate technique during their project work

Unit I: Introduction, Extraction and Separation of Proteins

Introduction - Amino acids and their properties - hydrophobic, polar and charged amino acids. Biologically important peptides - hormones, antibiotics and growth factors. Multimeric proteins, conjugated proteins and metallo proteins. Diversity of function. Extraction of proteins for downstream processing - Solubilization of proteins from their cellular and extracellular locations. Use of simple grinding methods, homogenization, ultrasonication, French press and centrifugation. Separation techniques - Ammonium sulphate fractionation, solvent fractionation, dialysis and lyophilization.

Unit II: Purification and Characterization of proteins

Chromatographic Techniques - Ion-exchange chromatography, molecular sieve chromatography, hydrophobic interaction/reverse phase chromatography, affinity chromatography, HPLC (Normal and Reverse phase) and FPLC. Characterization of proteins - Determination of purity, molecular weight, extinction coefficient and sedimentation coefficient, IEF, SDS-PAGE and 2-D electrophoresis.

Unit III: Structural Organization and Analysis of proteins

Organization of protein structure into primary, secondary, tertiary and quaternary structures. N-terminal and C-terminal amino acid analysis. Sequencing techniques - Edman degradation. Generation of overlap peptides using different enzymes and chemical reagents. Disulfide bonds and their location. Mass spectrometric analysis, tandem MS. Solid phase peptide synthesis

Unit IV: Three dimensional structures of protein and Protein Structure Database

Nature of stabilizing bonds - covalent and non covalent. Importance of primary structure in folding. The peptide bond - bond lengths and configuration. Dihedral angles psi and phi. Helices, sheets and turns. Ramachandran map. Techniques used in studying 3-D structures - X-ray diffraction and NMR. Motifs and domains. Tertiary and quaternary structures. Structures of myoglobin and haemoglobin. Denaturation and renaturation of Ribonuclease A. Introduction to thermodynamics of folding and molten globule. Assisted folding by molecular chaperones, chaperonins and PDI. Defects in protein folding. Diseases –Alzheimer's and Prion based. Protein sequence and structure databases (PDB). Use of sequence and domain information. Viewing protein structures using *in silico* tools.

Unit V: Specialized Proteins and its Applications

Myoglobin and haemoglobin - Oxygen binding curves, influence of 2,3-BPG, CO₂ and Cl⁻ Hill plot. Cooperativity between subunits and models to explain the phenomena – concerted and sequential models. Haemoglobin disorders. Antibodies - Antibody structure and binding to antigens. Actin-myosin motors - ATP activated actin - myosin contractions. Membrane Proteins - Integral and membrane associated proteins. Hydropathy plots to predict transmembrane domains. Significance of membrane proteins - bacteriorhodopsin.

18BCU202

ENZYMES4H-4C

Instruction hours/ week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students:

- To understand the basic concepts of enzymes
- To study the kinetics of enzyme catalysed reactions
- To learn the mechanism of action of enzymes and enzyme inhibition concepts
- To understand various modes of enzyme regulation
- To learn the application of enzymes in health
- To learn the application of enzymes in diseases

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basic concepts on enzymes
2. Relate the initial velocity and substrate concentration of enzymes and be able to understand the kinetics of inhibition reactions
3. Understand the basis of enzyme inhibitor drugs
4. Be able to understand the regulation pattern of various enzymes
5. Relate the regulation pattern of enzymes for its application in health and diseases
6. Understand the application of enzymes as marker in various disease conditions

Unit I: Introduction to enzymes and enzyme catalysis

Introduction - Nature of enzymes - protein and non-protein (ribozyme). Cofactor and prosthetic group, apoenzyme, holoenzyme. IUBMB classification of enzymes. Features of enzyme catalysis- Factors affecting the rate of chemical reactions, collision theory, activation energy and transition state theory, catalysis, reaction rates and thermodynamics of reaction. Catalytic power and specificity of enzymes (concept of active site), Fischer's lock and key hypothesis, Koshland's induced fit hypothesis.

Unit II: Enzyme kinetics

Relationship between initial velocity and substrate concentration, steady state kinetics, equilibrium constant - monosubstrate reactions. Michaelis-Menten equation, Lineweaver-Burk plot, Eadie-Hofstee and Hanes plot. K_m and V_{max} , K_{cat} and turnover number. Effect of pH, temperature and metal ions on the activity of enzyme. Bisubstrate reactions - Types of bi bi reactions (sequential – ordered and random, ping pong reactions). Differentiating bi substrate mechanisms (diagnostic plots, isotope exchange).

Unit III: Mechanism of action of enzymes and Enzyme inhibition

Mechanism of action of enzymes - General features - proximity and orientation, strain and distortion, acid base and covalent catalysis (chymotrypsin, lysozyme). Metal

activated enzymes and metalloenzymes, transition state analogues. Enzyme Inhibition - Reversible inhibition (competitive, uncompetitive, non-competitive, mixed and substrate). Mechanism based inhibitors - antibiotics as inhibitors.

Unit IV: Regulation of enzyme activity

Control of activities of single enzymes (end product inhibition) and metabolic pathways, feedback inhibition (aspartate transcarbamoylase), reversible covalent modification phosphorylation (glycogen phosphorylase). Proteolytic cleavage-zymogen. Multienzyme complex as regulatory enzymes. Occurrence and isolation, phylogenetic distribution and properties (pyruvate dehydrogenase, fatty acyl synthase) Isoenzymes - properties and physiological significance (lactate dehydrogenase).

Unit V: Coenzymes

Coenzymes in enzyme catalysed reactions and Applications of enzymes. Structure and Functions of TPP, FAD, NAD, pyridoxal phosphate, biotin, coenzyme A, tetrahydrofolate, lipoic acid. Applications of enzymes - Application of enzymes in diagnostics (SGPT, SGOT, creatine kinase, alkaline and acid phosphatases), enzyme immunoassay (HRPO), enzyme therapy (Streptokinase). Immobilized enzymes – Preparation techniques and its applications.

18BCU203

HUMAN PHYSIOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students:

- On the concept of homeostasis
- On the physiological functioning of cardiovascular system
- On the physiological functioning of renal system
- On the physiological functioning of gastro-intestinal and hepatic system
- On the physiological functioning of muscular skeletal system
- On the physiological functioning of reproductive system

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the concept of homeostasis
2. Understand the physiological functioning of cardiovascular system
3. Understand the physiological functioning of renal system
4. Understand the physiological functioning of gastro-intestinal and hepatic system
5. Understand the physiological functioning of muscular skeletal system
6. Understand the physiological functioning of reproductive system

Unit I: Homeostasis and the organization of body fluid compartments

Intracellular, extracellular and interstitial fluid. Homeostasis, control system and their components. Plasma as an extracellular fluid, RBC, molecular mechanism of blood coagulation, role of vitamin K in coagulation, anticoagulant and fibrinolytic systems. Anemias, polycythemia, haemophilia and thrombosis.

Respiration : Organization of the pulmonary system. Mechanism of respiration, pulmonary ventilation and related volumes, pulmonary circulation. Principles of gas exchange and transport. Regulation of respiration. Pulmonary oedema and regulation of pleural fluid. Hypoxia, hypercapnea, pulmonary distress, emphysema, ARDS.

Unit II: Cardiovascular physiology

Pressure, flow and resistance. Anatomy of heart. Physiology of the cardiac muscle, automaticity of the cardiac muscle contraction, excitation contraction coupling, relationship between cardiac cycle, heart sound, ventricular volumes and the ECG, control of cardiac function and output. The arterial system, venous system, the microcirculation and mechanics of capillary fluid exchange. Control of blood flow to the tissues. Portal circulations. Arterial pressure and its regulation. Hypertension, congestive heart disease, atherosclerosis and myocardial infarction.

Unit III: Renal physiology

Anatomy of the kidney and the nephron. Regulation of renal blood flow. Cell biology of the Bowman's capsule. Physiology of glomerular filtration and GFR. Tubular

processing of the glomerular filtrate. Micturition reflex and voluntary control of micturition. Regulation of ECF electrolyte and water content, blood volume and long term blood pressure. Blood buffer systems, renal and pulmonary control of blood pH, renal clearance. Assessment of kidney function. Acidosis and alkalosis. Glomerular nephritis, renal failure, dialysis and diuretics.

Unit IV: Gastrointestinal and hepatic physiology

Histology of the gastrointestinal tract. Propulsion and motility of food and digested material. Enteric reflexes, secretory functions of the gastrointestinal tract, digestion and absorption of macro and micronutrients. Peptic ulcer, Sprue, celiac disease, IBD, regurgitation, diarrhoea and constipation. Anatomy of the hepatic lobule and blood flow into the liver. Formation and secretion of bile. enterohepatic cycle, reticuloendothelial system, metabolic importance of liver. Liver function tests. Jaundice, liver cirrhosis and fatty liver.

Musculoskeletal system :Bone structure and formation. Physiology of muscle contraction in striated and non-striated muscle.

Unit V: Reproductive physiology

Sex determination and differentiation. Development of female and male genital tracts. Spermatogenesis, capacitation and transport of sperm, blood testis barrier. Ovarian function and its control. Uterine changes, fertilization and implantation. Placenta as a feto- maternal unit, gestation and parturition.

Neurochemistry and neurophysiology: Central Nervous system. Peripheral Nervous system. Blood brain barrier and CSF. Membrane potentials. Synaptic transmission. Neurotransmitters. Sensory receptors and neural pathways. Somatic sensation, EEG, sleep, coma, learning and memory.

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training:

- Qualitative analysis of proteins
- Quantitative analysis of proteins
- Determination of isoelectric point of proteins
- Separation of proteins using chemical methods
- Electrophoretic separation of proteins using SDS-PAGE
- Immune based separation of proteins

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Perform qualitative analysis of proteins
2. Quantify the amount of protein in the given sample
3. Determine isoelectric point of given protein
4. Separate the protein using ammonium sulphate method
5. Perform SDS-PAGE for separation of proteins
6. Perform affinity chromatography

Experiments

1. Estimation of proteins using UV absorbance and Biuret method.
2. Microassay of proteins using Lowry/Bradford method.
3. Isoelectric pH of casein.
4. Ammonium sulphate fractionation of serum proteins.
5. Separation of albumin from serum using anion-exchange chromatography.
6. SDS-PAGE analysis of proteins.

To impart hands-on training:

- To know the sources of enzymes and study the extraction and partial purification of enzymes
- To standardize the optimum pH required for the maximum activity of a given enzyme
- To standardize the optimum substrate concentration required for the maximum activity of a given enzyme
- To standardize the optimum temperature required for the maximum activity of a given enzyme
- To analyse the inhibition pattern by various competitive inhibitors for the enzyme acid phosphatase purified from germinated mung bean
- To assay the activity of Lactate dehydrogenase and glucose – 6 – phosphate dehydrogenase enzymes as diagnostic markers

Course outcome (CO's)

After successful completion of the course, the student will:

1. Identify the source of enzymes and study the extraction and partial purification of enzymes
2. Identify the optimum pH required for the maximum activity of a given enzyme
3. Identify optimum substrate concentration required for the maximum activity of a given enzyme
4. Identify the optimum temperature required for the maximum activity of a given enzyme
5. Analyse the inhibition pattern by various competitive inhibitors for the enzyme acid phosphatase purified from germinated mung bean
6. Assay the activity of Lactate dehydrogenase and glucose – 6 – phosphate dehydrogenase enzymes

Experiments

1. Partial purification of acid phosphatase from germinating mung bean.
2. Assay of enzyme activity and specific activity, e.g. acid phosphatase.
3. Effect of pH on enzyme activity
4. Determination of K_m and V_{max} using Lineweaver-Burk graph.
5. Enzyme inhibition - calculation of K_i for competitive inhibition.

6. Continuous assay of lactate dehydrogenase.
7. Assay of glucose-6-phosphate dehydrogenase.

**HUMAN PHYSIOLOGY 4H-2C
PRACTICAL****Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training on:

- Counting of different cell types using microscopy
- Estimation of haemoglobin in the given blood sample
- Determination of the group of the given blood sample
- Separation of isoenzymes by electrophoresis
- Measurement of blood pressure using sphygmomanometer
- Fixing and staining of microtome sections of tissues for histopathology observations

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Count of different cell types (RBC, WBC) using microscopy
2. Perform the estimation of haemoglobin in the given blood sample
3. Perform and identify the grouping (ABO and Rh) of the given blood sample
4. Separate isoenzymes by electrophoresis
5. Perform blood pressure measurement using sphygmomanometer
6. Perform fixing and staining of microtome sections of tissues for histopathology observations

Experiments

1. Hematology.
 - a. RBC and WBC counting
 - b. Differential leucocyte count.
 - c. Clotting time.
 - d. Bleeding time
2. Estimation of haemoglobin.
3. Determination of blood groups
4. Separation of plasma proteins (Group Experiment).
5. Determination of total iron binding capacity.
6. Pulmonary function tests, spirometry and measurement of blood pressure.
7. Separation of isoenzymes by electrophoresis (Group Experiment).
8. Histology of connective tissue, liver and/ brain - permanent slides.
9. Case studies (Renal clearance, GFR, ECG).

18AEC201	ENVIRONMENTAL STUDIES	Semester II 4H-4C
Instruction hours/week: L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100		
End Semester Exam: 3 Hours		

Course Objectives

Equip the students:

- To understand the concepts and components of ecosystem
- To understand the significance of eco components and measures to maintain ecosystem
- To teach the ethical and legal perspectives on ecosystem management
- To understand the undesired effects of environmental pollution
- To devise a strategy to avoid environmental pollution
- To understand the concept of conservation

Course Outcomes (CO's)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Understand the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
7. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and/or practitioners.

UNIT I: Introduction- Environment

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources : Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

Unit III: Biodiversity and Its Conservation

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Course objective

Equip the students:

- An overview on various metabolic pathways in human
- An overview on various metabolic pathways in plants
- To understand the pathways related with energy production through catabolism of carbohydrates and lipids
- To understand the pathways related with energy production through anabolism of carbohydrates and lipids
- To recognize the metabolic pathways that involve with the synthesis of macromolecule
- To know the biomolecule homeostasis mechanism

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Students are able to understand the breakdown of macromolecules like carbohydrate and lipids
2. Recognise the energy production pathways like glycolysis, glycogenolysis and TCA cycle
3. Interpret the central role of TCA cycle in energy metabolism
4. Relate the Calvin cycle with the synthesis of starch and sucrose and integration of carbohydrate metabolism in plant
5. Understand the energy requirement and energy balance through glucose homeostasis
6. Relate the interdependence of metabolic pathways

Unit I: Basic design of metabolism

Autotrophs, heterotrophs, metabolic pathways, catabolism, anabolism, ATP as energy currency, reducing power of the cell.

Glycolysis: Glycolysis - a universal pathway, reactions of glycolysis, fermentation, fates of pyruvate, feeder pathways for glycolysis, galactosemia.**Gluconeogenesis and pentose phosphate pathway :** Synthesis of glucose from non-carbohydrate sources, reciprocal regulation of glycolysis and gluconeogenesis, pentose phosphate pathway and its importance.**Unit II: Glycogenesis & TCA**

Glycogenesis and glycogenolysis, regulation of glycogen metabolism, glycogen storage diseases.

Citric acid cycle : Production of acetyl CoA, reactions of citric acid cycle, anaplerotic reactions, amphibolic role, regulation of citric acid cycle, glyoxalate pathway, coordinated regulation of glyoxalate and citric acid pathways.

Unit III: Synthesis of carbohydrates

Calvin cycle, regulation of calvin cycle, regulated synthesis of starch and sucrose, photorespiration, C4 and CAM pathways, synthesis of cell wall polysaccharides, integration of carbohydrate metabolism in plant cell.

Unit IV: Fatty acid oxidation

Digestion, mobilisation and transport of cholesterol and triacyl glycerols, fatty acid transport to mitochondria, β oxidation of saturated, unsaturated, odd and even numbered and branched chain fatty acids, regulation of fatty acid oxidation, peroxisomal oxidation, ω oxidation, ketone bodies metabolism, ketoacidosis.

Fatty acid synthesis : Fatty acid synthase complex. Synthesis of saturated, unsaturated, odd and even chain fatty acids and regulation.

Unit V: Biosynthesis of Eicosanoids, cholesterol, steroids and isoprenoids

Synthesis of prostagladins, leukotrienes and thromboxanes. Synthesis of cholesterol, regulation of cholesterol synthesis. Synthesis of steroids and isoprenoids.

Biosynthesis of membrane lipids

Synthesis of membrane phospholipids in prokaryotes and eukaryotes, respiratory distress syndrome, biosynthesis of triacylglycerol, biosynthesis of plasmalogens, sphingolipids and glycolipids, lipid storage diseases.

Starve-feed cycle

Well-fed state, early fasting state, fasting state, early re-fed state, energy requirements, reserves and caloric homeostasis, five phases of glucose homeostasis.

Instruction hours/week: L: 4 T:0 P:0Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****Course objectives**

Equip the students:

- To understand the structure and functions of amino acids
- To understand the structure and functions of nucleic acids
- To understand the basis of diseases associated with amino acid catabolism
- To understand the basis of diseases associated with nucleic acid catabolism
- To understand the interconnection between amino acids and nucleic acids and central dogma concept
- To understand the biosynthesis of amino acids and nucleic acids

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Identify basic structures, names, and properties of nucleic acids
2. Demonstrate overview of amino acid metabolism and catabolism of amino acids
3. Understand the chemical logic of metabolic pathways
4. Recognize and understand basic mechanisms of pathway regulation
5. Understand the central dogma concept
6. Understand the basis of amino acid and nucleic acid disorders

Unit I: Overview of amino acid metabolism

Nitrogen cycle, incorporation of ammonia into biomolecules. Metabolic fates of amino groups. Digestion and absorption of dietary proteins. Protein calorie malnutrition - Kwashiorkor and Marasmus. Nitrogen balance, transamination, role of pyridoxal phosphate, glucose-alanine cycle, Krebs's bicycle, urea cycle and inherited defects of urea cycle.

Catabolism of amino acids: Catabolic pathways of individual amino acids. Glucogenic and ketogenic amino acids. Metabolism of one carbon units.

Unit II: Catabolism of amino acids

Disorders of amino acids metabolism, phenylketonuria, alkaptonuria, maple syrup urine disease, methylmalonic acidemia (MMA), homocystinuria and Hartnup's disease.

Biosynthesis of amino acids

Overview of amino acid synthesis. Biosynthesis of non-essential amino acids and its regulation.

Unit III: Precursor functions of amino acids

Biosynthesis of creatine and creatinine, polyamines (putrescine, spermine, spermidine), catecholamines (dopamine, epinephrine, norepinephrine) and neurotransmitters (serotonin, GABA). Porphyrin biosynthesis, catabolism and disorders of porphyrin metabolism.

Unit IV: Biosynthesis of purine and pyrimidine nucleotides

De novo synthesis of purine and pyrimidine nucleotides, regulation and salvage pathways.

Deoxyribonucleotides and synthesis of nucleotide triphosphate

Biosynthesis of deoxyribonucleotides and its regulation, conversion to triphosphates, biosynthesis of coenzyme nucleotides.

Unit V: Degradation of purine and pyrimidine nucleotides

Digestion of nucleic acids, degradation of purine and pyrimidine nucleotides. Inhibitors of nucleotide metabolism. Disorders of purine and pyrimidine metabolism – Lesch-Nyhan syndrome, Gout, SCID, adenosine deaminase deficiency.

Integration of metabolism

Integration of metabolic pathways (carbohydrate, lipid and amino acid metabolic pathways), tissue specific metabolism (brain, muscle, and liver).

18BCU303	CHEMISTRY- I	Semester III 4H - 4C
Instruction Hours/week: L: 3 T:1 P:0 Marks: Internal:40 External: 60 Total:100		
End Semester Exam: 3 Hours		

Course Objectives

Equip the students:

- On the molecular orbital theory, preparation and properties of inorganic compounds
- On the theory of covalent bond, polar effects and stereochemistry of organic compounds
- About important industrial chemicals like silicones, fuel gases
- About Fertilizers and their impact on environment
- On the elements of photochemistry, chemical kinetics and chromatography
- About the dyes, chemotherapy and vitamins

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the molecular orbital theory, preparation and properties of inorganic compounds
2. Understand the theory of covalent bond, polar effects and stereochemistry of organic compounds
3. Have knowledge about important industrial chemicals like silicones, fuel gases
4. Know the classes of fertilizers and their impact on environment
5. Understand the elements of photochemistry, chemical kinetics and chromatography.
6. Understand about the dyes, chemotherapy and vitamins

UNIT-I

Chemical Bonding: Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H_2 , N_2 and F_2 molecules. Diborane: Preparation, properties and structure. $NaBH_4$: Preparation and uses. Borazole: Preparation and properties. Interhalogen compounds: ICl , BrF_3 , IF_5 - preparation, properties, uses and structure. Basic properties of iodine. Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure. Per acids of sulphur: Preparation, properties, uses and structure.

UNIT- II

Covalent Bond and Stereoisomerism: Covalent Bond: Orbital overlap, hybridization and geometry of CH_4 , C_2H_4 and C_2H_2 . Polar effects: Inductive effect-electromeric effect-mesomeric effect- steric effect- hyperconjugation. **Stereoisomerism:** Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation-

resolution- geometrical isomerism of maleic and fumaric acids-keto-enol tautomerism of acetoacetic esters.

UNIT-III

Industrial Chemistry: Silicones: Synthesis, properties and uses. Fuels gases: Natural gas-water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required).Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime-triple superphosphate- potassium nitrate-ammonium nitrate. Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

UNIT-IV

Elements of Photochemistry, Chemical Kinetics and Chromatography: Elements of Photochemistry: Photochemical laws-Beer Lambert's law-Grotthuss-Draper law-Stark-Einstein law (statement only). **Chemical Kinetics:** Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions-effect of temperature on reaction rate-energy of activation. **Chromatography:** Principles and applications of Column, Paper and Thin Layer Chromatography.

UNIT- V

Dyes, Chemotherapy and Vitamins: Dyes: Terms used chromophore, auxochrome, bathochromic shift and hypsochromic shift- classification of dyes- based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes- preparation.

Chemotherapy: Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of penicillins and Chloromycetin. **Vitamins:** Diseases caused by the deficiency of vitamins A, B₁, B₂, C and D-sources of these vitamins.

Course objectives

To impart hands-on training:

- On different qualitative methods to estimate glucose
- On different quantitative methods to estimate glucose
- On fermentation techniques
- On isolation methods for lipids
- To understand the quantitative analysis of enzymes involved in carbohydrate metabolism
- To understand the quantitative analysis of enzymes involved in lipid metabolism

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Use different qualitative methods to estimate glucose
2. Use different quantitative methods to estimate glucose
3. Perform fermentation techniques
4. Understand the quantitative analysis of enzymes involved in carbohydrate metabolism
5. Isolate lipid from the given sample
6. Estimate enzymes involved in lipid metabolism

Experiments

1. Estimation of blood glucose
2. Sugar fermentation of microorganisms
3. Assay of salivary amylase
4. Isolation of lecithin, identification by TLC, and its estimation
5. Isolation of cholesterol from egg yolk and its estimation

SUGGESTED READING

**18BCU312 METABOLISM OF AMINO ACIDS AND NUCLEIC ACIDS 4H-2C
PRACTICAL****Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training:

- To assay clinically relevant transaminases
- To assess the levels of urea, uric acid and creatinine in urine sample using qualitative methods
- To assess the levels of urea, uric acid and creatinine in urine sample using quantitative methods
- To interpret the results on amino acids and nucleic acids in clinical cases
- To introduce case studies related to amino acid disorders
- To introduce case studies related to nucleic acid disorders

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Assay clinically relevant transaminases
2. Assess the levels of urea, uric acid and creatinine in urine sample using qualitative methods
3. Assess the levels of urea, uric acid and creatinine in urine sample using quantitative methods
4. Interpret the results on amino acids and nucleic acids in clinical cases
5. Understand case studies related to amino acid disorders
6. Understand case studies related to nucleic acid disorders

Experiments

1. Assay of serum transaminases – SGOT and SGPT.
2. Estimation of serum urea.
3. Estimation of serum uric acid.
4. Estimation of serum creatinine.

18BCU313

CHEMISTRY PRACTICAL-14H-2C

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

To impart hands-on training on:

1. Preliminary tests for identification of an organic compound
2. Detection of elements
3. Identification of aromatic or aliphatic compound
4. Different functional groups and its nature
5. Confirmatory test for aldehydes, ketones, amines and amides
6. Confirmatory test for carbohydrates, phenol, acids, esters and nitro compounds

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Perform preliminary tests for identification of an organic compound
2. Perform and detect the elements present in the given compound
3. Identify and differentiate between aromatic and aliphatic compound
4. Identify different functional groups and its nature
5. Perform confirmatory test for aldehydes, ketones, amines and amides
6. Perform confirmatory test for carbohydrates, phenol, acids, esters and nitro compounds

Experiments**Systematic analysis of an organic compound**

- Preliminary tests
- Detection of elements present
- Aromatic or aliphatic
- Saturated or unsaturated
- Nature of the functional group,
- Confirmatory tests– aldehydes, ketones, amines, amides, diamide, carbohydrates, phenols, acids, esters & nitro compounds.

Note: Each student should analyse minimum 6 compounds.

2. Ramasamy, R. (2011). *Allied Chemistry Practical Book*. Karur: Priya Publications.
3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu, A. R. (2015). *Basic Principles of Practical Chemistry* (2nd ed.). New Delhi: S. Chand Publications.

Course Objectives

Equip the students:

- On maintenance of safety documents.
- On the preparation of SOPs
- On the detection of radioisotopes
- Interpretation of virtual lab experiment
- Different methods of centrifugation (differential/density gradient)
- Determination of pKa for biological buffers using Henderson-Hasselbach equation

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Maintain safety documents.
2. Prepare SOPs
3. Detect radioisotopes
4. Interpret virtual lab experiments
5. Use different methods of centrifugation (differential/density gradient)
6. Determine pKa for biological buffers using Henderson-Hasselbach equation in a given situation

Unit I: Biochemical reagents and solutions

Good laboratory practices: Quality concepts, personal protective equipment. General safety-biological safety, chemical safety and fire safety. Principles of GLP: Test Facility Organization and Personnel, Test Systems, Test and Reference Items, Standard Operating Procedures. Preparation and storage of solutions. Concepts of solution concentration (molarity, molality, normality) and storing solutions. Proper techniques on the use of a pipette, volumetric flask. Use, calibration and maintenance of micropipette.

Unit II: Buffers

Concept of a buffer, buffers solutions, pH indicator, Henderson-Hasselbach equation, working of a pH meter. Measurement of pH – glass electrode, pH scale.

Colorimetry: Colour and absorption spectra. Beer Lamberts – deviation from Beer's law. Working of single cell photoelectric colorimeter. Measurement of extinction. Calibration curve.

Unit III: Spectrophotometric techniques

Principle, instrumentation and applications of UV-visible and fluorescence, FT-IR, NIR, Nuclear Magnetic Resonance (NMR) spectroscopy. Spectroscopy in clinical diagnosis, Raman spectra in clinical diagnosis.

Centrifugation techniques: Principles and techniques of preparative and analytical centrifuge.

Unit IV: Radioactive Isotopes

Radioactive decay, units of radioactivity, detection and measurement of radioactivity – GM counter, Scintillation counter, Autoradiography, biochemical applications of radio isotopes.

Unit V: Virtual labs

Objectives, salient features, the role of Virtual Laboratories in Science Education. Introduction and importance of virtual labs in Biochemistry. Virtual lab for immunological techniques.

18BCU304B	CONCEPTS IN GENETICS	Semester III 3H-3C
Instruction hours/week: L: 3 T:0 P:0Marks: Internal: 40External: 60 Total: 100		
End Semester Exam: 3 Hours		

Course Objectives

Equip the students:

- On understanding of the principles and concepts of genetics
- On the concepts of genetic disorders
- On the concepts of different types of mutations (inversions, deletions, duplications and translocations)
- On understanding the structure-function relationship of a specific gene
- On different model systems to study hereditary concepts
- On pedigree analysis

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the principles and concepts of genetics
2. Understand the basis of genetic disorders
3. Comprehend different types of mutations (inversions, deletions, duplications and translocations)
4. Understand the structure-function relationship of a specific gene
5. Use appropriate model systems to study hereditary concepts
6. Perform pedigree analysis

Unit I: Model organisms, Mendelism and chromosomal basis of heredity

Model organisms: *Escherichia coli*, *Saccharomyces cerevisiae*, *Drosophila melanogaster*, *Caenorhabditis elegans*, *Danio rerio* and *Arabidopsis thaliana*, Basic principles of heredity. Laws of probability & binomial expansion, formulating and testing genetic hypothesis, chromosomal basis of Mendelism -Sutton and Boveri hypothesis with experimental evidences.

Unit II: Extensions of Mendelism, genetics of a gene, bacteria and viruses

Allelic variation and gene function- dominance relationships, multiple alleles, lethal alleles and null alleles. Pleiotropy gene interaction- epistatic and non-epistatic, interaction between gene(s) and environment. Penetrance and expressivity, norm of reaction and phenocopy. Complementation test, limitations of *cis-trans* test, intragenic complementation, rII locus of phage T4 and concept of cistron. Mechanism of genetic exchange - conjugation, transformation and transduction. Gene mapping in bacteria.

Unit III: Genetics of eukaryotes and Human pedigree analysis

Linkage and crossing over, genetic mapping in eukaryotes, centromere mapping with ordered tetrads, cytogenetic mapping with deletions and duplications in *Drosophila*, detection of linked loci by pedigree analysis in humans and somatic cell hybridization for positioning genes on chromosomes. Pedigree conventions, characteristics of dominant and recessive inheritance. Applications of pedigree analysis.

Unit IV: Developmental genetics, epigenetics and chromosomal aberrations

Model organism for genetic analysis, *Drosophila* development, maternal effect genes, morphogens and zygotic gene activity in development, sex chromosomes and sex determination, dosage compensation of X-linked genes. Extra nuclear inheritance, tests for organelle heredity and maternal effect, epigenetic mechanisms of transcriptional regulation & genomic imprinting. Variations in chromosome number- monosomy and trisomy of sex and autosomes. Variations in chromosome structure- inversions, deletions, duplications and translocations.

Unit V: Complex traits inheritance, population & evolutionary genetics

Inheritance of complex trait, analysis of quantitative traits, narrow and broad sense heritability, quantitative trait loci (QTL) and their identification. Hardy- Weinberg law, predicting allele and genotype frequencies and exceptions to Hardy-Weinberg principle. Molecular evolution - analysis of nucleotide and amino acid sequences, molecular phylogenies, homologous sequences, phenotypic evolution and speciation.

Instruction hours/week: L:0 T:0P:3 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training:

- On the strength of concentrated acids
- On serial dilution of concentrated solutions
- How to determine the molar extension coefficient?
- How to obtain UV spectrum for a given compound?
- How to quantify nucleic acids using spectrophotometer?
- How to estimate the purity of nucleic acids

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Know the strength of laboratory acids and bases
2. Prepare serial dilution of concentrated solutions
3. Determine the molar extension coefficient
4. Obtain UV spectrum for a given compound
5. Quantify nucleic acids using spectrophotometer
6. Assess the purity of nucleic acids

Experiments

1. Preparation of a molar solutions
2. Preparation of normal solutions
3. Preparation of percentage and ppm solutions.
4. Preparation of dilute acids from concentrated acids
5. Preparation of various dilute solutions
6. Conversion of milli equivalent solution to milli molar equivalent solution (eg- KCl, MgSO₄)
7. Preparation of a buffer of given pH and molarity.
8. Determination of the absorption maxima and molar extinction coefficient (of a relevant organic molecule).
9. Measurement of UV spectrum of compounds .
10. Determination of concentration of a protein solution by Lowry/BCA method.
11. Determination of nucleic acid concentration and purity

SUGGESTED READING

PRACTICAL****CONCEPTS IN GENETICS****3H-1C****Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training:

1. Sex determination
2. On the method of induction of polyploidy
3. On utility of buccal epithelial cells for genetic assessments
4. On verification of Monohybrid crosses.
5. On calculation of allele and genotype frequencies
6. On plasmid conjugation in bacteria (transformation)

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Execute sex determination
2. Understand induction methods of polyploidy
3. Use buccal epithelial cells for genetic assessments
4. Understand monohybrid crosses.
5. Calculate allele and genotype frequencies
6. Understand bacterial transformation

Experiments

1. Squash preparation of salivary glands of Dipteran larva to observe polytene chromosomes.
2. Induction of polyploidy in onion roots.
3. Smear technique to demonstrate sex chromatin in buccal epithelial cells.
4. Monohybrid crosses in *Drosophila* for studying autosomal and sex-linked inheritance.
5. PTC testing in a population and calculation of allele and genotype frequencies.
6. Study of abnormal human karyotype and pedigrees (dry lab).
7. Conjugation in bacteria.

Course Objectives

Equip the students:

- On the genome organization
- To study the mechanism of replication DNA in prokaryotes
- To study the mechanism of replication DNA in eukaryotes
- To study the mechanism of transcription in both prokaryotes and eukaryotes
- To understand the mechanism of recombination and transposition of DNA
- To understand DNA damage, mutation and DNA repair process

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the genome organization
2. Understand the mechanism of replication DNA in prokaryotes
3. Understand the mechanism of replication DNA in eukaryotes
4. Understand the mechanism of transcription in both prokaryotes and eukaryotes
5. Understand the basis of recombination and transposition of DNA
6. Understand DNA damage, mutation and DNA repair process

Unit I: Structure, Genes and genomic organization of DNA

DNA structure, features of the double helix, various forms of DNA, denaturation and reassociation of DNA. Genes and genomic organization - Genome sequence and chromosome diversity, definition of a gene, organization of genes in viruses, bacteria, animals and plants. Nucleosome structure and packaging of DNA into higher order structures.

Unit II: Replication of DNA in Prokaryotes

The chemistry of DNA synthesis, DNA polymerase, the replication fork, origin of replication, enzymes and proteins in DNA replication, various modes of replication, stages of replication of *E. coli* chromosome, relationship between replication and cell division,

Unit 3: Replication of DNA in Eukaryotes

Replication in eukaryotes. Comparison of replication in prokaryotes and eukaryotes. Inhibitors of DNA replication and applications in medicine. Supercoiling of DNA and its importance, topoisomerases, critical role of topoisomerases in cell, topoisomerase inhibitors and their application in medicine.

Unit IV: Recombination and transposition of DNA

Homologous recombination, proteins and enzymes in recombination, site-specific recombination, serine and tyrosine recombinases, biological roles of site-specific recombination, transposition, three classes of transposable elements, importance of transposable elements in horizontal transfer of genes and evolution.

Unit V: Molecular basis of mutations and DNA repair

Importance of mutations in evolution of species. Types of mutations - transition, transversions, frame shift mutations, mutations induced by chemicals, radiation, transposable elements, Ames test. Various modes of DNA repair - Replication errors and mismatch repair system, repair of DNA damage, direct repair, base excision repair, nucleotide excision repair, recombination repair, translation DNA synthesis.

SUGGESTED READING

1. Watson, J.D., Baker, T.A., Bell, S.P., Gann, A., Levine, M. and Losick, R., (2008). Molecular Biology of the Gene 6th ed., Cold Spring Harbor Laboratory Press, Cold spring Harbor (New York), ISBN:0-321-50781 / ISBN:978-0-321-50781-5.

3. Snustad, D.P., and Simmons, M.J., (2010). Principles of Genetics 5th ed., John Wiley & Sons Asia, ISBN:978-0-470-39842-5.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To utilize stages of transcription for drug development
- To understand the stages of RNA biosynthesis
- To understand the antibiotics mechanism of action and applications in medicine
- To understand the specialized system for protein degradation
- To gain knowledge on RNA interference in the treatment of HIV and Cancer
- To gain knowledge on DNA repair mechanisms

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the mechanism of action of drugs
2. Understand the stages of RNA biosynthesis
3. Understand the mechanism of action of broad spectrum and specific antibiotics
4. Utilize the specialized system for protein degradation
5. Gain knowledge on RNA interference in the treatment of HIV and Cancer
6. Gain knowledge on DNA repair mechanisms.

Unit I: Biosynthesis of RNA in prokaryotes

RNA polymerases, transcription cycle in bacteria, sigma factor, bacterial promoters, identification of DNA binding sites by DNA footprinting, the three stages of RNA synthesis, initiation, elongation and termination, rho-dependent and rho-independent termination. Inhibitors of transcription and applications as anti-microbial drugs.

Unit II: Biosynthesis of RNA in eukaryotes

Comparison between prokaryotic and eukaryotic transcription. Transcription by RNA polymerase II, RNA polymerase II core promoters, general transcription factors, various types of RNA processing, transcription by RNA polymerase I and III. Inhibitors of eukaryotic transcription and their applications. Comparison of fidelity of transcription and replication. **RNA splicing**- Chemistry of RNA splicing, the spliceosome machinery, splicing pathways, group I and group II introns, alternative splicing, exon shuffling, RNA editing.

Unit III: Biosynthesis of proteins

The genetic code-Degeneracy of the genetic code, wobble in the anticodon, features of the genetic code, nearly universal code. **Biosynthesis of proteins**- Messenger RNA, transfer RNA, attachment of amino acids to tRNA, the ribosome - initiation, elongation and termination of translation, regulation of translation. Comparison of prokaryotic and eukaryotic protein synthesis. Use of antibiotics in understanding protein synthesis and applications in medicine. **Protein targeting and degradation** - Post translational modifications, glycosylation, signal sequences for nuclear transport, bacterial signal

sequences, import of proteins by receptor mediated endocytosis, specialized systems for protein degradation.

Unit IV: Regulation of gene expression in prokaryotes

Principles of gene regulation, negative and positive regulation, concept of operons, regulatory proteins, activators, repressors, DNA binding domains, regulation of lac operon and trp operon, induction of SOS response, synthesis of ribosomal proteins, regulation by genetic recombination, transcriptional regulation in λ bacteriophage.

Unit V: Regulation of gene expression in eukaryotes

Heterochromatin, euchromatin, chromatin remodeling, regulation of galactose metabolism in yeast, regulation by phosphorylation of nuclear transcription factors, regulatory RNAs, riboswitches, RNA interference, synthesis and function of miRNA molecules, phosphorylation of nuclear transcription factors.

SUGGESTED READING

1. Nelson, D.L. and Cox, M.M., (2013). Lehninger: Principles of Biochemistry 6th ed., W.H. Freeman & Company (New York), ISBN:13: 978-1-4292-3414-6 / ISBN:10-14641-0962-1.
2. Watson, J.D., Baker, T.A., Bell, S.P., Gann, A., Levine, M. and Losick, R., (2008). Molecular Biology of the Gene 6th ed., Cold Spring Harbor Laboratory Press, Cold Spring Harbor (New York), ISBN:0-321-50781 / ISBN: 978-0-321-50781-5.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Equip the students:

- To be conversant with the extraction of metals
- About coordination chemistry
- On the preparation, properties, uses and structure of naphthalene and heterocyclic compounds
- To acquire knowledge on electrochemistry, biological functions of amino acids and proteins
- To acquire knowledge on thermodynamic laws, entropy, enthalpy change and the principles of electroplating.
- To acquire knowledge on aromatic and heterocyclic compounds

Course Outcomes (CO's)

After successful completion of the course, the student will understand:

1. The metallurgy of metals and the theories of coordination compounds and
2. The industrial importance of EDTA, haemoglobin and chlorophyll.
3. The concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds.
4. The preparation, classifications and properties of amino acids, proteins and carbohydrates.
5. The concepts of first and second laws of thermodynamics
6. The fundamentals of electrochemistry

Unit-I

Metals and Coordination Chemistry: Metals: General methods of extraction of metals-methods of ore dressing-types of furnaces-reduction methods-electrical methods-types of refining-Van Arkel process-Zone refining. **Coordination Chemistry:** Nomenclature-theories of Werner, Sidgwick and Pauling-chelation and its industrial importance-EDTA-haemoglobin-chlorophyll-applications in qualitative and quantitative analysis.

Unit-II

Aromatic Compounds and Heterocyclic Compounds:

Aromatic Compounds: Aromaticity-Huckel's $(4n+2)$ rule- aromatic electrophilic substitution in benzene- mechanism of nitration, halogenation, alkylation, acylation and sulphonation. Naphthalene: Isolation, preparation, properties and structure. **Heterocyclic Compounds:** Preparation and properties of pyrrole, furan, thiophene and pyridine.

Unit-III

Amino acids, Proteins and Carbohydrates: **Amino acids:** Classification, preparation and properties. Peptides-preparation of peptides (Bergmann method only). **Proteins:** Classification, properties, biological functions and structure. **Carbohydrates:** Classification, preparation and properties of glucose and fructose- discussion of open chain and ring structures of glucose and fructose-glucose-fructose interconversion.

Unit-IV

Energetics: Type of systems-processes and their types - isothermal, adiabatic, reversible, irreversible and spontaneous processes-statement of first law of thermodynamics-need for the second law of thermodynamics-heat engine-Carnot cycle-efficiency-Carnot theorem-thermodynamics scale of temperature-Joule-Thomson effect-Enthalpy- Entropy and its significance-Free energy change.

Unit-V

Electrochemistry: Kohlrausch law-conductometric titrations-hydrolysis of salts-galvanic cells-E.M.F.-standard electrode potentials-reference electrodes-electrochemical series and its applications-buffer solution-buffer solution in the biological systems-pH and its determination-principles of electroplating.

SUGGESTED READING

2. Puri, B.R., Sharma, L. R., & Kalia, K. C. (2017). *Principles of Inorganic Chemistry* (33rd Edition). Jalandar: Vishal Publishing Company.
3. Bahl, A., & Bahl, B.S. (2015). *A Textbook of Organic Chemistry* (21st Revised Edition). New Delhi: S.Chand& Company Pvt. Ltd.
4. Puri, B. R., Sharma, L. R. &Pathania, M. S. (2014). *Elements ofPhysical Chemistry* (46th Edition). Jalandhar: Vishal Publishing Company.
5. Gopalan, R., & Sundaram, S. (2013). *Allied Chemistry* (III Edition). New Delhi: Sultan Chand & Sons.

Course objectives

To impart hands-on training on:

- The isolation of prokaryotic chromosomal DNA
- The isolation of eukaryotic chromosomal DNA
- Determination of melting temperature for the given nucleotide sequence
- Concepts of hyper and hypo chromicity
- Determination of viscosity
- Verification of Chargaff's rule (purine=pyrimidine)

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Isolate prokaryotic chromosomal DNA
2. Isolate eukaryotic chromosomal DNA
3. Determine the melting temperature for the given nucleotide sequence
4. Know the concepts of hyper and hypo chromicity
5. Determine the viscosity of DNA
6. Verify Chargaff's rule (purine=pyrimidine)

Experiments

1. Isolation of chromosomal DNA from *E. coli* cells.
2. Isolation of chromosomal RNA from *E. coli* cells.
3. Ultraviolet absorption spectrum of DNA and RNA.
4. Determination of DNA and RNA concentration by A₂₆₀nm.
5. Determination of the melting temperature and GC content of DNA.
6. A study on the viscosity of DNA solutions.
7. Verification of Chargaff's rule by paper chromatography.

SUGGESTED READING

1. Watson, J.D., Baker, T.A., Bell, S.P., Gann, A., Levine, M. and Losick, R., (2008). Molecular Biology of the Gene 6th ed., Cold Spring Harbor Laboratory Press, Cold Spring Harbor (New York), ISBN:0-321-50781 / ISBN:978-0-321-50781-5.
2. Nelson, D.L., and Cox, M.M., (2013). Lehninger: Principles of Biochemistry 6th ed., W. H. Freeman & Company (New York), ISBN:13: 978-1-4292-3414-6 / ISBN:10-14641-0962-1.
3. Snustad, D.P., and Simmons, M.J., (2010). Principles of Genetics 5th ed., John Wiley & Sons Asia, ISBN:978-0-470-39842-5.

Course Objectives

To impart hands-on training:

- To analyze total nucleic acids from plant tissue
- To analyze total nucleic acids from animal tissue
- To isolate mRNA using affinity chromatography
- On the synthesis of cDNA
- On the gene expression using RT-PCR
- To study Lac Operon

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Estimate total nucleic acids from plant tissue
2. Estimate total nucleic acids from animal tissue
3. Isolate mRNA using affinity chromatography
4. Synthesize cDNA
5. Perform RT-PCR
6. Test Lac Operon in E. coli cells

Experiments

1. Extraction of total nucleic acids from plant/animal tissue.
2. Isolation of mRNA from yeast by affinity chromatography.
3. cDNA synthesis
4. Assessment of gene expression using RT-PCR.
5. Induction of Lac Operon.

SUGGESTED READING

1. Nelson, D.L., and Cox, M.M., (2013). Lehninger: Principles of Biochemistry 6th ed., W.H. Freeman & Company (New York), ISBN:13: 978-1-4292-3414-6 / ISBN:10-14641-0962-1.

Course Objectives

To impart hands-on training on:

- Estimation of sodium carbonate and sodium hydroxide
- Estimation of sulphuric acid
- Estimation of potassium permanganate
- Estimation of ferrous sulphate using permanganometry
- Estimation of oxalic acid using permanganometry
- Estimation of calcium using permanganometry

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Estimate sodium carbonate and sodium hydroxide using standards
2. Estimate sulphuric acid using standard oxalic acid
3. Estimate potassium permanganate by alkalimetry method
4. Estimate ferrous sulphate using standard Mohr's salt
5. Estimate oxalic acid using standard ferrous sulphate
6. Estimate calcium using direct method

Experiments**Volumetric analysis****A. Acidimetry & Alkalimetry**

1. Estimation of sodium carbonate using standard sodium hydroxide.
2. Estimation of sodium hydroxide using standard sodium carbonate.
3. Estimation of sulphuric acid using standard oxalic acid.
4. Estimation of potassium permanganate using standard sodium hydroxide.

B. Permanganometry

1. Estimation of ferrous sulphate using standard Mohr's salt.
2. Estimation of oxalic acid using standard ferrous sulphate.
3. Estimation of calcium-direct method.

1. Thomas, A.O. (2012). *Practical Chemistry for B.Sc. Main Students*. Cannanore: Kerala, Scientific Book Centre.
2. Ramasamy, R. (2011). *Allied Chemistry Practical Book*. Karur: Priya Publications.
3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu A. R. (2015). *Basic Principles of Practical Chemistry* (2nd edition). New Delhi: S. Chand Publications.

Course Objectives

Equip the students:

- To understand basis and importance of bioinformatics and computer aided drug design
- To get exposed to different types of biological databases
- To look at a biological problem from a computational point of view
- To find out the methods for analyzing the expression, structure and function of proteins, and understanding the relationships between species
- To get knowledge on different methods for construction of a phylogenetic tree
- About the basics and importance of Proteomics and Genomics

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basics of computer aided drug design
2. Perform experiment pair wise and multiple sequence alignment and will analyze the secondary and tertiary structures of protein sequences
3. Understand the data structure (databases) used in bioinformatics and interpret the information
4. Perform search on protein and metabolic pathway databases
5. Perform BLAST to identify the sequence of amino acids
6. Construct a phylogenetic tree using bioinformatics

Unit I: Introduction to bioinformatics

Computer fundamentals - programming languages in bioinformatics, role of supercomputers in biology. Historical background. Scope of bioinformatics - genomics, proteomics, computer aided drug design (structure based and ligand based approaches) and Systems Biology. Applications of bioinformatics.

Unit II: Biological databases and data retrieval

Introduction to biological databases - primary, secondary and composite databases, NCBI, nucleic acid databases (GenBank, EMBL, DDBJ, NDB), protein databases (PIR, Swiss-Prot, TrEMBL, PDB), metabolic pathway database (KEGG, EcoCyc, and MetaCyc), small molecule databases (PubChem, Drug Bank, ZINC, CSD). Structure viewers (RasMol, J mol), file formats.

Unit III: Sequence alignment

Similarity, identity and homology. Alignment – local and global alignment, pairwise and multiple sequence alignments, alignment algorithms, amino acid substitution matrices (PAM and BLOSUM), BLAST and CLUSTALW.

Unit IV: Phylogenetic analysis

Construction of phylogenetic tree, dendrograms, methods of construction of phylogenetic trees - maximum parsimony, maximum likelihood and distance methods.

Unit V: Protein structure prediction analysis and gene prediction

Levels of protein structure. Protein tertiary structure prediction methods –homology modeling, fold recognition and *ab-initio* methods. Significance of Ramachandran map. Introduction to genomics, comparative and functional genomics, gene structure in prokaryotes and eukaryotes, gene prediction methods and tools.

SUGGESTED READING

3. Baxevanis, A.D., and Ouellette, B.F., (2005). Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins, 3rd ed., John Wiley & Sons, Inc. (New Jersey), ISBN: 0-47147878-4.
4. Ghosh, Z., and Mallick, B., (2008). Bioinformatics – Principles and Applications (2008), 1st ed. Oxford University Press (India), ISBN: 9780195692303.

Course objectives

Equip the students on:

- The basic principles involved in protein purification
- The basic chemical methods used for protein separation
- The principle, working and applications of different chromatographic techniques for protein characterization
- The principle, working and applications of different electrophoretic techniques for protein purification.
- The principle and applications of dialysis
- Advanced protein purification techniques

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basic principles pertaining to protein purification
2. Perform gel exclusion, affinity and ion exchange chromatography for protein purification
3. Perform SDS PAGE and identify the molecular weight of the protein
4. Understand the principle, instrumentation and applications of HPLC
5. Perform dialysis technique
6. Identify and apply appropriate techniques for purification of the given protein sample

Unit I: Salting in and salting out

Salting in and salting out- Principle, Debye-Huckel theory, Hofmeister series, Ionic strength, Ammonium sulfate precipitation, applications

Unit II: Gel exclusion Chromatography

Gel exclusion Chromatography- Principle, instrumentation and applications of gel exclusion chromatography, data analysis Advantages and disadvantages.

Unit III: Polyacrylamide gel electrophoresis

Polyacrylamide gel electrophoresis- Principle, instrumentation and applications of PAGE. Gel polymerization- APS, TEMED. Separation and determination of molecular weight of proteins SDS, running gel, stacking gel, electrophoresis buffer.

Unit IV: HPLC

HPLC -Principle, instrumentation and applications of HPLC. Preparation of column, adsorbent materials, void volume, efficiency factor. Van Deemter equation Applications- Manufacturing, legal, research and medical.

Unit V: Dialysis

Dialysis- Principle and types- Hemodialysis, pediatric, intestinal and peritoneal dialysis.
Dialyzable substances. Medical applications.

**BIOINFORMATICS 3H-1C
PRACTICAL****Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course objectives**

To impart hands-on training on:

- Sequence retrieval from NCBI database
- Searching Protein and DNA structure from PDB
- Different molecular file formats for saving a protein/DNA sequence
- Different sequence alignment databases.
- Applying the statistical approaches and models for phylogenetic analysis and tree reconstruction.
- Different protein structure prediction databases

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Be able to retrieve a sequence from NCBI database
2. Be able to search a protein from PDB
3. Understand the different molecular file formats for saving a protein/DNA sequence
4. Apply different sequence alignment databases such as BLAST and CLUSTALW.
5. Apply the statistical approaches and models for phylogenetic analysis and tree reconstruction.
6. Analyze and predict the protein structure using structure prediction databases

Experiments**1. Biological databases and data retrieval**

Sequence retrieval (protein and gene) from NCBI.
 Structure download (protein and DNA) from PDB.
 Molecular file formats - FASTA, GenBank, Genpept, GCG, CLUSTAL, Swiss-Prot, FIR.
 Molecular viewer by visualization software.

2. Sequence alignment

BLAST suite of tools for pairwise alignment.
 Multiple sequence alignment using CLUSTALW.

3. Phylogenetic analysis

Generating phylogenetic tree using PHYLIP.

4. Protein structure prediction and analysis

Primary sequence analyses (Protparam).
 Secondary structure prediction (GOR, nnPredict, SOPMA).
 Tertiary structure prediction (SWISSMODEL).
 Protein structure evaluation - Ramachandran map (PROCHECK).

5. Gene structure prediction and analysis

Gene prediction using GENSCAN and GLIMMER.

Course objectives

Equip the students on:

- The fundamentals of hormones and receptors
- Different mechanisms of hormonal actions
- Understanding of physiological and biochemical actions of hypothalamic, thyroid and pituitary hormones
- The role and applications of gastrointestinal hormones
- Understanding the clinical significance of adrenal and gonadal hormones
- Understanding of various endocrine disorders

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Gain knowledge on functions, classification and transport of hormones
2. Understand the role of secondary messengers, effector systems and protein kinases, tyrosine kinases in hormonal action
3. Have knowledge on the biochemical action and regulation of various endocrine hormones
4. Understand the role and applications of gastrointestinal hormones
5. Have knowledge on the role and functions of adrenal and gonadal hormones
6. Be able to identify an endocrine disorder if symptoms are available

Unit I: Introduction to hormones and receptors

Functions of hormones and their regulation. Chemical signaling - endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Chemical classification of hormones, transport of hormones in the circulation and their half-lives. Hormone therapy. General introduction to Endocrine methodology. Hormone receptors - extracellular and intracellular. Receptor - hormone binding, Scatchard analysis. G protein coupled receptors, G proteins

Unit II: Mechanisms of hormonal actions

Second messengers - cAMP, cGMP, IP₃, DAG, Ca²⁺, NO. Effector systems - adenylate cyclase, guanylate cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG). Growth factor signaling, PDGF, EGF, IGF-II, and erythropoietin. Receptor tyrosine kinases - EGF, insulin, erythropoietin receptor; ras - MAP kinase cascade, JAK - STAT pathway. Steroid hormone/ thyroid hormone receptor mediated gene regulation. Receptor regulation and cross talk.

Unit III: Hypothalamic, pituitary and thyroid hormones

Hypothalamic - pituitary axis. Study the physiological and biochemical actions of hypothalamic hormones, pituitary hormones - GH, prolactin, TSH, LH, FSH, POMC peptide family, oxytocin and vasopressin, feedback regulation cycle. Endocrine disorders - gigantism, acromegaly, dwarfs, pigmies and diabetes insipidus. Thyroid gland. Biosynthesis of thyroid hormone and its regulation; its physiological and biochemical action. Pathophysiology - Goiter, Graves disease, cretinism, myxedema, Hashimoto's disease.

Unit IV: PTH, calcitonin and gastrointestinal hormones

PTH, Vitamin D and calcitonin. Mechanism of Ca^{2+} regulation and pathways involving bone, skin, liver, gut and kidneys. Pathophysiology - rickets, osteomalacia, osteoporosis. Regulation of release of insulin, glucagon, gastrin, secretin, CCK, GIP, adipolectin, leptin and ghrelin. Summary of hormone metabolite control of GI function. Physiological and biochemical action. Pathophysiology - diabetes type I and type II.

Unit V: Adrenal and gonadal hormones

Aldosterone, renin angiotensin system, cortisol, epinephrine and norepinephrine. Fight or flight response, stress response. Pathophysiology – Addison's disease, Conn's syndrome, Cushing syndrome. Male and female sex hormones. Interplay of hormones during reproductive cycle, pregnancy, parturition and lactation. Hormone based contraception.

18BCU502A CLINICAL BIOCHEMISTRY 3H-3C**Instruction hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives**

Equip the students on:

- Organization of clinical laboratory
- Specimen collection
- Precision, accuracy
- Quality control
- Automated systems
- Assessment of organ functions

Course outcomes (CO's)**After successful completion of the course, the student will**

1. Know about organization of clinical laboratory
2. Specimen collection
3. Precision, accuracy calculations
4. Quality control
5. Automated systems
6. Know to use the diagnosis to assess organ functioning

Unit I: Introduction

Organization of clinical laboratory, Introduction to instrumentation and automation in clinical biochemistry laboratories safety regulations and first aid. General comments on specimen collection, types of specimen for biochemical analysis. Precision, accuracy, quality control, precautions and limitations.

Unit II: Evaluation of biochemical changes in diseases

Basic hepatic, renal and cardiovascular physiology. Biochemical symptoms associated with disease and their evaluation. Diagnostic biochemical profile.

Unit III: Assessment of glucose metabolism in blood

Clinical significance of variations in blood glucose. Diabetes mellitus.

Lipid profile

Composition and functions of lipoproteins. Clinical significance of elevated lipoprotein.

Unit IV: Liver function tests

Serum enzymes in liver disease- Serum transaminases (SGOT and SGPT), and phosphatases.

Renal function tests - Introduction, clinical significance of GGT, LDH and creatine phosphokinase in kidney function.

Urine analysis - Physical examination of urine

Unit V: Tests for cardiovascular diseases

Tests for cardiovascular diseases- ECG, Involvement of enzymes in diagnostics of heart disease including aspartate transaminase, isoenzymes of creatine kinase and lactate

dehydrogenase and troponin.
Tumour markers for diagnosing various cancers.

Course objectives

Equip the students with:

- Inborn errors of metabolism
- Nutritional disorders
- Life style disorders
- Autoimmune diseases
- Contagious diseases
- Vaccine strategies

Course outcomes (CO's)

After successful completion, the students will understand:

1. Inborn errors of metabolism
2. Nutritional disorders
3. Life style disorders
4. Autoimmune diseases
5. Contagious diseases
6. Vaccine strategies

Unit I: Inborn errors of metabolism

Alkaptonuria, Phenylketonuria, Glycogen and Lipid storage diseases, SCID, Clotting disorders.

Unit II: Nutritional deficiency based diseases

Kwashiorkar, Marasmus, Beri-beri, Scurvy, Pellagra, Anaemia, Night blindness, Rickets, Osteomalacia, Osteoporosis, Wilson's disease.

Unit III: Life style diseases

Obesity, Cardiovascular diseases, Atherosclerosis, Diabetes mellitus-II. Inflammatory Bowel Disease (IBD).

Hormonal Imbalances

Outline of hormone action and imbalances leading to disease - precocious puberty, hyper and hypopituitarism. Hyper and hypothyroidism.

Unit 4: Autoimmune diseases

Concepts in immune recognition - self and non self discrimination, organ specific autoimmune diseases - Hashimoto's thyroiditis, Grave's disease, myasthenia gravis. Systemic diseases - SLE, rheumatoid arthritis; Diabetes Mellitus-I.

Diseases caused due to misfolded proteins

Alzheimer's, Huntington's disease, Kuru, Creutzfeldt-Jakob disease, Sickle cell anaemia, Thalassemia.

Unit V: Infectious diseases

Viral infection (polio, measles, mumps, influenza, HIV); Bacterial infections (tetanus, diphtheria, tuberculosis, typhoid, cholera); Protozoan (*Plasmodium* and *Trypanosoma*) and parasitic infections. Vaccines against diseases. General strategies in the design and development of vaccines.

18BCU503A

BASIC MICROBIOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Origin of microbiology field and theories
- Diverse nature of microbial organisms
- Life cycle of viruses
- Life cycle of bacteria
- Life cycle of algae, fungi and protozoa

Course outcomes (CO's)

After successful completion, the students will understand:

1. Origin of microbiology field and theories
2. Diverse nature of microbial organisms
3. Life cycle of viruses
4. Life cycle of bacteria
5. Life cycle of algae, fungi and protozoa
6. Emerging microbial threats

Unit I: History of Development of Microbiology

Development of microbiology as a discipline, Spontaneous generation vs. biogenesis. Contributions of Anton von Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister, Alexander Fleming. Role of microorganisms in fermentation, Germ theory of disease, Development of various microbiological techniques and golden era of microbiology, Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Elie Metchnikoff and Edward Jenner

Unit II: Diversity of Microbial world

Binomial Nomenclature, Whittaker's five kingdom and Carl Woese's three kingdom classification systems and their utility. Difference between prokaryotic and eukaryotic microorganisms. General characteristics of different groups: acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Algae, Fungi and Protozoa) with emphasis on distribution and occurrence, morphology, mode of reproduction and economic importance.

Unit III: Viruses, viroids and prions

An introduction to viruses with special reference to the structure and replication of the following: Poxvirus, Poliovirus, HIV, T4 and λ phage, lytic and lysogenic cycles.

Unit IV: Bacteria

An account of typical eubacteria, chlamydiae & rickettsiae (obligate intracellular parasites), mycoplasma, and archaeobacteria (extremophiles). Applications of bacteria in industry, environment and food.

Unit V: Algae, Fungi and Protozoa

History of phycology; General characteristics of algae including occurrence, thallus organization, algae cell ultra structure, pigments, flagella, eyespot food reserves and vegetative, asexual and sexual reproduction. Applications of Algae in agriculture, industry, environment and food. Historical developments in the field of Mycology, significant contributions of eminent mycologists. General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra- structure, thallus organization and aggregation, fungal wall structure and synthesis, asexual reproduction, sexual reproduction, heterokaryosis, heterothallism and parasexual mechanism. Economic Importance of Fungi in Agriculture, environment, Industry, medicine, food, biodeterioration, mycotoxins. General characteristics with special reference to Amoeba.

18BCU503B	NUTRITIONAL BIOCHEMISTRY	4H-4C
Instruction hours/week: L:4 T:0 P:0		
Marks: Internal: 40 External: 60 Total: 100		
End Semester Exam: 3 Hours		

Course objectives

Equip the students with

- Concepts of nutrition
- Calorific value of carbohydrates, fats and proteins
- Recommended dietary allowances
- Nutrition as a strategy to prevent diseases
- Nutrition deficiency disorders
- Food drug interactions

Course outcomes (CO's)

After successful completion, the students will understand

1. Concepts of nutrition
2. Calorific value of carbohydrates, fats and proteins
3. Recommended dietary allowances
4. Nutrition as a strategy to prevent diseases
5. Nutrition deficiency disorders
6. Food drug interactions

Unit I: Introduction to Nutrition and Energy Metabolism

Defining Nutrition, role of nutrients. Unit of energy, Biological oxidation of foodstuff. measurement of energy content of food, Physiological energy value of foods, SDA. Measurement of energy expenditure. Direct and Indirect Calorimetry, factors affecting thermogenesis, energy utilization by cells, energy output – Basal and Resting metabolism, physical activity, factors affecting energy input - hunger, appetite, energy balance Energy expenditure in man. Estimating energy requirements, BMR factors Recommended Nutrient Intakes (RNI) and Recommended Dietary Allowances for different age groups.

Unit II: Dietary carbohydrates, lipid and health

Review functions of carbohydrates. Digestion, absorption, utilization and storage, hormonal regulation of blood glucose. Dietary requirements and source of carbohydrates, Dietary fiber, role of fibre in lipid metabolism, colon function, blood glucose level and GI tract functions.

Review of classification, sources, functions, digestion, absorption, utilization and storage. Essential Fatty Acids; Functions of EFA, RDA, – excess and deficiency of EFA. Lipotropic factors, role of saturated fat, cholesterol, lipoprotein and triglycerides. Importance of the following: a) Omega – fatty acids. Omega 3/ omega 6 ratio b) Phospholipids c) Cholesterol in the body d) Mono, Polyunsaturated and Saturated Fatty Acids. Dietary implications of fats and oils, Combination ratios of n6 and n3, MUFA, PUFA and SFA.

Unit III: Dietary Proteins and health

Review of functions of proteins in the body, Digestion and absorption. Essential and Non-

essential amino acids. Amino Acid Availability Antagonism, Toxicity and Imbalance, Amino acid Supplementation. Effects of deficiency. Food source and Recommended Dietary Allowances for different age group. Amino acid pool. NPU, Biological Value , Nitrogen balance. PEM and Kwashiorkor.

Unit IV: Fat and water soluble Vitamins, Minerals

Vitamin A, C, E, K and D Dietary sources, RDA, Adsorption, Distribution, Metabolism and excretion (ADME), Deficiency. Role of Vitamin A as an antioxidant, in Visual cycle, dermatology and immunity. Role of Vitamin K in Gamma carboxylation. Role of Vitamin E as an antioxidant. Extra-skeletal role of Vitamin D and its effect on bone physiology. Hypervitaminosis. Vitamin C role as cofactor in amino acid modifications. Niacin- Metabolic interrelation between tryptophan, Niacin and NAD/ NADP. Vitamin B6- Dietary source, RDA, conversion to Pyridoxal Phosphate. Role in metabolism, Biochemical basis for deficiency symptoms. Vitamin B12 and folate; Dietary source, RDA, absorption, metabolic role Biochemical basis for deficiency symptoms. Calcium, Phosphorus and Iron - Distribution in the body digestion, Absorption, Utilization , Transport, Excretion, Balance, Deficiency, Toxicity, Sources, RDA. Calcium: Phosphorus ratio, Role of iron in prevention of anemia. Iodine and iodine cycle. Iodine, Fluoride, Mg, Cu, Zn, Se, Manganese, Chromium, Molybdenum Distribution in the human body, Physiology, Function, deficiency, Toxicity and Sources

Unit V: Assessment of Nutritional status, Food and drug interactions and Nutraceuticals

Anthropometric measurements; Z scores, BMI, skinfold, circumference ratios. Biochemical assessment; Basal metabolic panel, Comprehensive metabolic panel, CBC, Urine Analysis, Assessment of Anemia, ROS assessment, GTT and glycosylated Hb, Differential diagnosis of B12 and folate. Nutrient interactions affecting ADME of drugs, Alcohol and nutrient deficiency, Anti-depressants, psychoactive drugs and nutrient interactions, Appetite changes with drug intakes and malnutrition. Food as medicine.

18BCU504A PLANT BIOCHEMISTRY 4H-4C**Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives**

Equip the students with

- Plant cell structure
- Synthesis of proteins by plants
- Metabolism in plants
- Microenvironment for plant growth
- Nitrogen fixation
- Biosynthesis of secondary metabolites by plants

Course outcomes (CO's)

After successful completion, the students will understand

1. The difference between Animal and Plant cell structure
2. Significance of plant proteins
3. Metabolism in plants
4. Various microenvironment required for plant growth
5. The process of nitrogen fixation
6. Biosynthesis of secondary metabolites by plants

Unit I: Plant cell structure and Photosynthesis

Structure of Plasma membrane, Vacuole and tonoplast membrane, cell wall, plastids and peroxisomes. Photosynthesis - Structure of PSI and PSII complexes, Light reaction, Cyclic and non cyclic photophosphorylation.

Unit II: Carbon assimilation and Plant Respiration

Carbon assimilation - Calvin cycle and regulation; C4 cycle and Crassulacean acid metabolism (CAM). Respiration - Overview of glycolysis, Alternative reactions of glycolysis, Regulation of plant glycolysis, Translocation of metabolites across mitochondrial membrane, TCA cycle, Alternative NAD(P)H oxidative pathways; Cyanide resistant respiration and Photorespiration.

Unit III: Nitrogen metabolism

Biological Nitrogen fixation by free living and in symbiotic association, structure and function of enzyme Nitrogenase. Nitrate assimilation: Nitrate and Nitrite reductase. Primary and secondary ammonia assimilation in plants; ammonia assimilation by Glutamine synthetase-glutamine oxoglutarate amino transferase (GS-GOGAT) pathway. Seed storage proteins in legumes and cereals.

Unit IV: Regulation of plant growth and Plant tissue culture

Introduction to plant hormones and their effect on plant growth and development, Regulation of plant morphogenetic processes by light. Plant tissue culture - Cell and tissue culture techniques, types of cultures: organ and explants culture, callus culture, cell suspension culture and protoplast culture. Plant regeneration pathways: organogenesis and somatic embryogenesis. Applications of cell and tissue culture and somoclonal variation.

Unit V: Plant Secondary metabolites

Representatives alkaloid group and their amino acid precursors, function of alkaloids, Examples of major phenolic groups; simple phenylpropanoids, Coumarins, Benzoic acid derivatives, flavonoids, tannins and lignin, biological role of plant phenolics, Classification of terpenoids and representative examples from each class, biological functions of terpenoids.

Course objectives

Equip the students with

- Concept of infection
- Classification of infectious pathogens
- Steps involved in the infection of a pathogenic bacteria
- Steps involved in the infection of a pathogenic viruses
- Steps involved in the infection of a pathogenic parasites
- Methods to prevent/treat infections

Course outcomes (CO's)

After successful completion, the students will understand

1. Concept of infection
2. Variety of infectious pathogens
3. The process of infection by pathogenic bacteria
4. The process of infection by pathogenic viruses
5. The process of infection by pathogenic parasites
6. How to prevent/treat infections

Unit I: Classification of infectious agents

Bacteria, Viruses, protozoa and fungi. Past and present emerging and re-emerging infectious diseases and pathogens. Source, reservoir and transmission of pathogens, Antigenic shift and antigenic drift. Host parasite relationship, types of infections associated with parasitic organisms. Overview of viral and bacterial pathogenesis. Infection and evasion.

Unit II: Overview of diseases caused by bacteria

Detailed study of tuberculosis: History, causative agent, molecular basis of host specificity, infection and pathogenicity, Diagnostics, Therapeutics, inhibitors and vaccines. Drug resistance and implications on public health. Other bacterial diseases including Typhoid, Diphtheria, Pertussis, Tetanus, Typhoid and Pneumonia.

Unit III: Overview of diseases caused by Viruses

Detailed study of AIDS, history, causative agent, pathogenesis, Diagnostics, Drugs and inhibitors. Other viral diseases including hepatitis, influenza, rabies, chikungunya and polio.

Unit IV: Overview of diseases caused by Parasites

Detailed study of Malaria, history, causative agents, Vectors, life cycle, Host parasite interactions, Diagnostics, Drugs and Inhibitors, Resistance, Vaccine development. Other diseases including leishmaniasis, amoebiasis.

Unit V: Overview of diseases caused by other organisms

Fungal diseases, General characteristics. Medical importance of major groups, pathogenesis, treatment.

To impart hands-on training on

- Qualitative and quantitative measurement of glucose
- Calcium assessment methods (inorganic)
- Assay of insulin using enzyme linked immunosorbent assay
- Basis of pregnancy detection kit
- Assessments of electrolytes to understand hormonal functioning
- Case studies related to hormonal imbalance

Course outcomes (CO's)

After successful completion, the students will understand

1. The different Qualitative and quantitative methods of glucose estimation
2. Titrimetric and colorimetric methods for Calcium assessment
3. Enzyme linked immunosorbent assay
4. The principle behind the making of hCG kit and working procedure
5. Assessments of electrolytes to understand hormonal functioning
6. The fundamental defects due to hormonal imbalance

Experiments

1. Glucose tolerance test.
2. Estimation of serum Ca^{2+} .
3. Estimation of serum T4.
4. hCG based pregnancy test.
5. Estimation of serum electrolytes.
6. Case studies.

18BCU601

IMMUNOLOGY 4H-4C

Instruction hours/week: L:3 T:1 P:0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Organs involved in immunity
- Acquired and innate arms of immune system
- The significance of humoral and cell mediated immunity during infection
- Various immunodeficiency diseases and hypersensitive reactions
- Structure and function of various immune cells and their role to combat infection
- Principles of vaccination

Course outcomes (CO's)

After successful completion, the students will understand

1. Organs involved in immunity
2. Acquired and innate arms of immune system
3. The significance of humoral and cell mediated immunity during infection
4. Various immunodeficiency diseases and hypersensitive reactions
5. Structure and function of various immune cells and their role to combat infection
6. Principles of vaccination

Unit I: Cells and organs of the immune system and immunity

Hematopoiesis, cells of the immune system, primary and secondary lymphoid organs and tissues (MALT). Anatomical barriers, cell types of innate immunity, soluble molecules and membrane associated receptors (PRR), connections between innate and adaptive immunity, cell adhesion molecules, chemokines, leukocyte extravasation, localized and systemic response.

Unit II: Antigens, Antibodies and receptor diversity

Antigens and haptens, factors that dictate immunogenicity, B and T cell epitopes. Structure and distribution of classes and subclasses of immunoglobulins (Ig), Ig fold, effector functions of antibody, antigenic determinants on Ig and Ig super family. Dreyer-Bennett hypothesis, multigene organization of Ig locus, mechanism of V region DNA rearrangement, ways of antibody diversification.

Unit III: Biology of the B and T lymphocyte and complement system

Antigen independent phase of B cell maturation and selection, humoral response – T-dependent and T-independent response, anatomical distribution of B cell populations. Structure and role of T cell receptor, and co-receptor, T cell development, generation of receptor diversity, selection and differentiation. Complement activation by classical, alternate and MB lectin pathway, biological consequences of complement activation, regulation and complement deficiencies.

Unit IV: Cell mediated cytotoxic responses and hypersensitivity

General properties of effector T cells, cytotoxic T cells (T_c), natural killer cells; NKT cells and antibody dependent cellular cytotoxicity (ADCC). Organ specific and systemic autoimmune diseases, possible mechanisms of induction of autoimmunity, Gell and Coombs classification, IgE mediated (Type I) hypersensitivity antibody mediated cytotoxic (Type II) hypersensitivity, immune complex mediated (type III) hypersensitivity and cell mediated (Type IV) hypersensitivity.

Unit V: Antigen presentation, MHC complex and transplantation

General organization and inheritance of MHC, structure, distribution and role of MHC class I and class II proteins, linkage disequilibrium, pathways of antigen processing and presentation. Immunological basis of graft rejection, clinical manifestations, immunosuppressive therapy and privileged sites. Vaccines - active and passive immunization, types of vaccines.

SUGGESTED READING

Course objective**Equip the students on:**

- Principles behind recombinant DNA technology
- Tools required for recombinant DNA technology
- Cloning and expression vectors
- Production of industrial relevant proteins
- Production of drugs for clinical applications
- Application of rDNA technology in crop improvement

Course outcomes (CO's)

After successful completion, the students will understand

1. The principles behind recombinant DNA technology
2. Various tools required for recombinant DNA technology
3. Cloning and expression vectors
4. Production of industrial relevant proteins
5. Production of drugs for clinical applications like insulin
6. Application of rDNA technology in crop improvement

Unit I: Introduction to recombinant DNA technology

Overview of recombinant DNA technology. Restriction and modification systems, restriction endonucleases and other enzymes used in manipulating DNA molecules, separation of DNA by gel electrophoresis. Extraction and purification of plasmid and bacteriophage DNA.

Joining of DNA fragments : Ligation of DNA molecules. DNA ligase, sticky ends, blunt ends, linkers and adapters. Synthetic oligonucleotides, synthesis and use.

Unit II: Cloning vectors for prokaryotes and eukaryotes

Plasmids and bacteriophages as vectors for gene cloning. Cloning vectors based on *E. coli* plasmids, pBR322, pUC8, pGEM3Z. Cloning vectors based on M13 and λ bacteriophage. Vectors for yeast, higher plants and animals.

DNA sequencing : DNA sequencing by Sanger's method, modifications based on Sanger's method. Automated DNA sequencing. Pyrosequencing.

Unit III: Introduction of DNA into cells and selection for recombinants

Uptake of DNA by cells, preparation of competent cells. Selection for transformed cells. Identification for recombinants - insertional inactivation, blue-white selection. Introduction of phage DNA into bacterial cells. Identification of recombinant phages. Introduction of DNA into animal cells, electroporation.

Methods for clone identification

The problem of selection, direct selection, marker rescue. Gene libraries, identification of a clone from gene library, colony and plaque hybridization probing, methods based on detection of the translation product of the cloned gene.

Unit IV: Polymerase chain reaction

Fundamentals of polymerase chain reaction, designing primers for PCR. Studying PCR products. Cloning PCR products. Real time PCR.

Expression of cloned genes : Vectors for expression of foreign genes in *E. coli*, cassettes and gene fusions. Challenges in producing recombinant protein in *E. coli*. Production of recombinant protein by eukaryotic cells. Fusion tags and their role in purification of recombinant proteins.

Unit V: Applications of genetic engineering in Biotechnology

Site-directed mutagenesis and protein engineering. Applications in medicine, production of recombinant pharmaceuticals such as insulin, human growth hormone, factor VIII. Recombinant vaccines. Gene therapy. Applications in agriculture - plant genetic engineering, herbicide resistant crops, problems with genetically modified plants, safety concerns.

Course Objective

Equip the students with:

- Literature search tools
- Usage of research tools
- Processing of data and statistical analysis
- Template for research draft preparation
- Communication of research outputs
- Fundamentals of plagiarism and IPR

Course outcomes (CO's)

After successful completion, the students will understand

1. Literature search tools such as Pubmed, Scopus, Google scholar
2. Usage of research tools (Data export, management of citation styles)
3. Processing of data and statistical analysis
4. Template for research draft preparation (Structure of an article)
5. Communication of research outputs (Usage of MS-PPT and verbal skills)
6. Fundamentals of plagiarism and IPR

Unit I: Introduction to Research Methodology

Introduction to Research Methodology - Objectives and motivation in research. Defining the Research Problem - Selecting and defining a research problem, reviewing and conducting literature search, developing a research plan.

Unit II: Design of Experiment

Different experimental designs – single and multifactorial design, Making measurements and sources of error in measurements, Methods of data collection and record keeping.

Unit III: Data Processing and Statistical Analysis

Processing operations, tabulation, and graphical representation, Statistics in research: Concepts of sample and population, Measure of central tendency, dispersion, asymmetry (skewness, kurtosis), Normal distribution (p-value), Statistical tests and hypothesis (Standard error, t-test, chi-square test), and regression analysis.

Unit IV: Writing research paper

Writing research paper - abstract, introduction, methodology, results and discussion. Reference formatting styles, Harvard and Vancouver systems. Citation styles – APA and MLA. Introduction to journals and types of publications, research article, review article, short communication, letter to editor. Plagiarism.

Unit V: Intellectual Property Rights (IPR)

Copyright – Conceptual basis, International Protection of Copyright and Related rights. Indian Copyright Act and Laws. Duration, renewal and termination of Copyright.

Patents - Introduction to Indian Patent Act and Laws. Indian Patent System, Types of patents, Patent Search and Indian Patent filing.

18BCU603A DRUG BIOCHEMISTRY 4H-4C

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Definition and classification of drugs
- Basics of Pharmacokinetics of a drug
- Basics of Pharmacodynamics in living system
- Mechanism of action of drugs
- Toxicity assessment
- Drug abuse

Course outcomes (CO's)

After successful completion, the students will understand

1. Definition and classification of drugs
2. Basics of Pharmacokinetics of a drug
3. Basics of Pharmacodynamics in living system
4. Mechanism of action of drugs
5. Toxicity assessment
6. Drug abuse

Unit I: Introduction to drug Biochemistry

Classification, routes of administration – factors influencing dosage and drug action, Absorption and distribution of drugs, binding of drugs to plasma proteins, Drug Dose relationship (LD_{50} , ED_{50} , therapeutic index), Drug – Receptor interaction, Drug binding forces, Receptor theories, Drug – Receptor interaction. Bioavailability; Pharmacokinetics.

Unit II: Drug metabolism

Drug Biotransformation pathways - phase I – oxidation, reduction and hydroxylation. Phase II- Conjugation, Elimination of drugs from body system. Storage of drugs in adipose tissue.

Unit III: Drug abuse

Drug abuse; drug dependence; drug resistance- Biological mechanism, ways to overcome.

Chemotherapy: Antibacterials – Mode of action of sulfonamides, penicillin, streptomycin, tetracycline, chloramphenicol, antiviral drugs, antifungal drugs; Antimetabolites of folate, purines & pyrimidines, Anti tubercular drugs.

Unit IV: Mechanism of action drugs

Mechanism of action drugs used in the treatment of diabetes mellitus (Acarbose, Biguanides), AIDS (Azidophymidine, Didanosine), cancer (Methotrexate, Busulfan), heart (Amrinone, Digoxin) and kidney disorder (Benzophiadiazines, furosemide); antiepileptic drug (Lamictal, Tapclob), drugs for cough (Dextromethorphan Hydrobromide, Noscaphine) and bronchial asthma (Salbutamol, Aminophylline), diuretics (Manitol, Xanthine), anti ulcer drugs (Cimetidine, Ranitidine) and drugs for fever (Paracetamol, Ibuprofen).

Unit V: Toxicology

Introduction, definition and disciplines of toxicology, classification of toxicity and toxicants, Mechanisms of toxic effect, treatment of intoxication, methods in toxicology testing, heavy metal toxicity and chelation therapy. Environmental pollution, mycotoxins, mushroom poisons

SUGGESTED READING

1. Satoskar, R.S., Bhandarkar, S.P., and Ainapuri, S.S., (2003). Pharmacology and Pharmacotherapeutic, 18th edition, PopularPrakashan, Mumbai.
2. Hamilton, D., Philips, R.J., and Scott, D., (2004). Occupational, Industrial and Environmental Toxicology, Mosby Inc Publishers.
3. Berg, G., Hendrickson, R.G., and Morocco, A., (2005). Medical Toxicology Review. McGraw Hill Mical Publishing Company.
4. Foye, W., (2012). Principles of Medicinal Chemistry, 7th edition, B.I. Wanerly Pvt. Ltd, New Delhi.
5. Grahame-Smith, D.G., and Aronson, J.K., (2002). Oxford textbook of ClinicalPharmacology and Drug Therapy: 3rd edition. Oxford University Press.
6. Tripathy, K.D., (2009). Essentials of Medical Pharmacology, Jaypee brothers medical publishers, New Delhi.

Course objectives

Equip the students with:

- Definition and representation styles of data
- Analysis of data using correlation to understand the interdependence
- Analysis of data using regression to understand the interdependence
- To learn various measures of central values and standard deviation.
- To understand the relationship between two variables.
- To test the significance of a particular data by various parameters.

Course outcomes (CO's)

After successful completion, the students will:

1. Use appropriate representation styles to present the data
2. Perform correlation analysis
3. Perform regression analysis
4. Calculate mean, median, mode and standard deviation.
5. Calculate the relationship between two variables.
6. Test the significance of a particular data by various parameters.

Unit I: Introduction of Biostatistics

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Unit II: Calculation of Biostatistics

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion- Range, standard deviation, Coefficient of variation.

Unit III: Correlation

Correlation – Meaning and definition - Scatter diagram –Karl Pearson's correlation coefficient. Rank correlation.

Unit IV: Regression

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

Unit V: Test of significance

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit.

18BCU611	IMMUNOLOGY PRACTICAL	Semester VI 4H-2C
-----------------	-----------------------------	------------------------------

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

The course is intended to provide comprehensive understanding of

- Isolation of lymphocytes
- Purification of immunoglobulins using protein A
- Immunodiffusion techniques (Single and Double)
- Agglutination techniques
- Blood grouping
- ELISA

Course outcomes (CO's)

1. Will perform isolation of lymphocytes
2. Purify of immunoglobulins using protein A
3. Perform Immunodiffusion techniques (Single and Double)
4. Agglutination techniques
5. Blood grouping
6. ELISA

Experiments

1. Isolation of lymphocytes from blood and macrophages from peritoneal cavity or spleen.
2. Purification of immunoglobulins.
3. Assays based on precipitation reactions - Ouchterlony double diffusion (ODD) and Mancini radial immunodiffusion.
4. Assays based on agglutination reactions - Blood typing (active) & passive agglutination.
5. Enzyme linked immune-sorbent assay (ELISA).

3. Murphy, K., Mowat, A., and Weaver, C.T., (2012). Janeway's Immunobiology 8th ed., Garland Science (London & New York), ISBN: 978-0-8153-4243-4.

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Handling of *Escherichia coli*
- Isolation of plasmid DNA from *Escherichia coli*
- Restriction digestion using enzymes
- Amplification using PCR
- Transformation of plasmid into *Escherichia coli*
- Western blotting demonstration

Course outcomes (CO's)

After successful completion, the students will

1. Know the precautions of handling *Escherichia coli*
2. Isolate the plasmid DNA from *Escherichia coli*
3. Restriction digestion using enzymes such as EcoRI, Hind III
4. Amplify the rDNA using PCR
5. Understand the techniques related to transformation of plasmid into *Escherichia coli*
6. Understand the steps involved in Western blot analysis

Experiments

1. Isolation and estimation of DNA, RNA and protein from animal source
2. Isolation of plasmid DNA from *E. coli* cells.
3. Agarose gel electrophoresis of DNA
4. Digestion of plasmid DNA with restriction enzymes.
5. Amplification of a DNA fragment by PCR.
6. Transformation of *E. coli* cells with plasmid DNA.
7. Western Blotting(Demo)

SUGGESTED READING

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training in:

- Literature survey related to life sciences/medical research
- Exporting the data to appropriate format
- Collating the data
- Identifying the gap
- Originality in writing
- IPR concepts

Course outcomes (CO's)

After successful completion, the student will:

1. Perform Literature survey related to life sciences/medical research
2. Export the data to appropriate format
3. Collate the data
4. Identify the gap in the literature
5. Inculcate originality in writing
6. Understand IPR concepts

Exercises

1. A teacher (adviser) who would guide the student will discuss with student and identify a topic of mutual interest.
2. The student will collect the literature, collate the information and write the same in the form of a term paper with proper incorporation of using different styling systems.
3. The student will identify scope of research on the topic and will frame objectives to be addressed in the project through a work plan.
4. The student will write standard operating protocols (SOPs) and identify requirement for equipment and reagents.
5. Student will be trained to write results, discussion and conclusion pertaining to their topic.
6. Each student will be asked to make presentation about the project including literature available, objective sought and work plan including methodologies as described above.
7. Patent search in USPTO, Espacenet, WIPO and InPASS databases (demo).

SUGGESTED READING

Instruction hours/week: L:0 T:0 P:4

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

To impart hands-on training in:

- Handling of small experimental animals
- Enteral and parenteral route of drug administration
- Assessment of behavioural changes
- Assessment of drug toxicity
- Calculation of LD₅₀
- Monitoring for adverse effects of drugs

Course outcomes (CO's)

After successful completion, the student will:

1. Handle small experimental animals such as rats, mice and rabbits
2. Learn Enteral and parenteral route of drug administration
3. Learn to assess behavioural changes
4. Learn to assess drug toxicity
5. Learn the basis of LD₅₀
6. Monitor adverse effects of drugs

Experiments

1. Handling of small experimental animals
2. Route of drug administration – Oral and parenteral
3. Behavioural Changes upon drug Administration
4. Liver toxicity Studies
 - SGOT
 - SGPT
 - GGT
5. Renal toxicity studies
 - Urea
 - Uric acid
 - Creatinine
6. LD₅₀ Determination

PRACTICAL****Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course objectives**

To impart hands-on training in the usage of software's to perform:

- Measures of central tendency
- Coefficient of variation
- Correlation analysis
- RANK Correlation test
- Regression analysis
- T-test

Course outcomes (CO's)

After successful completion, the student will:

1. Measure mean, median and mode
2. Perform Coefficient of variation
3. Execute Correlation analysis
4. Perform Regression analysis
5. Perform RANK correlation test
6. Analysis the difference between means using T-test

Experiments

1. Mean for individual, discrete series using SPSS Package.
2. Mean for continuous series using SPSS Package.
3. Median for individual and discrete series using SPSS Package..
4. Median for continuous series using SPSS Package..
5. Mode for individual and discrete series using SPSS Package..
6. Standard deviation for individual and discrete series using SPSS Package.
7. Coefficient of variation for individual and discrete series using SPSS Package.
8. Karl Pearson's Correlation using SPSS Package.
9. Rank Correlation Coefficient for Untied Rank using SPSS Package.
10. Rank Correlation Coefficient for Tied Rank using SPSS Package.

M.Sc., - BIOCHEMISTRY

PREAMBLE

- Biochemistry is the study of chemistry and relating to biological organisms.
- Biochemistry is sometimes viewed as a hybrid branch of organic chemistry which specializes in the chemical processes and chemical transformations that take place inside of living organisms.
- Biochemistry incorporates everything in size between a molecule and a cell and all the interactions between them.
- Biochemistry essentially remains the study of the structure and function of cellular components (such as enzymes and cellular organelles) and the processes carried out both on and by organic macromolecules - especially proteins, but also carbohydrates, lipids, nucleic acids and other biomolecules.
- All life forms alive today are generally believed to have descended from a single proto-biotic ancestor, which could explain why all known living things naturally have similar biochemistries.
- Biochemistry is most simply put the chemistry of life.

Code: 18BCP101

18 - Academic Year
BC - Biochemistry
P - Master's Degree
First Digit - Semester number (1, 2, 3 and)
Second digit - Theory (0); Practical (1); Project (9)
Last digit - Paper number in the concerned semester (1, 2...)

PROGRAMME OUTCOME(POs)

PG biochemistry graduate will be able to achieve

- a. **Critical Thinking and Effective Communication:** The teaching is intended to kindle the critical thinking of the student to address problems (Problem based learning) and equip them to list out their understanding (Activity based learning). The syllabus also includes journal paper presentation and analysis on specific topics of all subjects which will be evaluated by faculty handling the subject.
- b. **Future Career:** To prepare students for future careers in the various fields of biochemistry such as academic and research institution.
- c. **Societal Contribution and Social Interaction:** The Biochemistry Programme will benefit the society on the whole by adding to the highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe. Inside the classrooms group discussion is encouraged on topics during the last five minutes of class to improve the understanding and to share the knowledge and view point. Outside the classroom, various outreach programme are conducted on various health initiatives.
- d. **Identification and Differential Diagnosis:** To acquire biochemist position in leading hospitals and scientist position in industries.
- e. **Ethics:** Students learn about the significance of having right moral features to develop good interpersonal skills.
- f. **Environment and Sustainability:** Understand the role of citizen to maintain sustainable environment and encourage Eco-friendly initiatives.
- g. **Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context of health and disease.

PROGRAMME SPECIFIC OUTCOME (PSOs)

- i. To prepare students for future careers in various fields of biochemistry by enhancing analytical and critical-thinking skills in which a core understanding of the chemistry of biological processes is important for the understanding of human health and disease.
- j. To equip highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe.
- k. The skills acquired in the programme will help the students in acquiring scientific, academic and industrial positions such as Analyst, Research Scientist at Pharma (R&D) Industries, Academician, Project Associates (JRF, SRF), Doctoral Research positions abroad at India and abroad. Clinical biochemist at renowned hospitals, medical coding, Scientific writers.

PROGRAMME EDUCATIONAL OBJECTIVE (PEOs)

- I. The course aims to impart advanced and in depth understanding on all the human physiological and pathological state. To understand the molecular process and their perturbation during disease.
- II. The programme covers various aspects of Biomolecule estimation and regulation to ascertain health and disease state. metabolic pathways alterations along with their regulation at the replication, transcriptional, translational, and post-translational levels including by studying DNA, RNA and protein molecules, immunology, endocrinology, advancements in rDNA technologies to circumvent genetic disorders.
- III. Further to enrich research understanding various genomic, proteomic and bioinformatics tools are added. Animal cell culture, IPR, Biostatistics, research methodology, clinical research and Plant tissue culture are offered as elective papers to get specialized in a specific area. The final semester is devoted exclusively to enrich the students to address specific research objective.

Mapping of PEOs and POs

POs	a	b	c	d	e	f	g	i	j	k
PEO I	X		X			X				
PEO II	X		X	X	X	X		X	X	X
PEO III	X	X	X	X	X		X		X	X

Course objectives**Equip the students:**

- To understand the biological significance of polysaccharides in living systems
- To understand the structure of amino acids and proteins and their biological significance in living systems
- To know the structure, properties and biological significance of lipids in biological systems
- To understand lipid peroxidation and the importance of antioxidants in degenerative diseases
- To understand the structure and functional role of nucleic acid in living systems
- To understand the nucleic acid interaction with proteins and their molecular aspects.

Course outcomes (CO's)**After successful completion of the course, the student will:**

1. Understand the structure and organization of storage and structural polysaccharides in living system
2. Recognize the structure and importance of proteins and amino acids in biological system.
3. Recall the role of lipids in bio membrane including signal transduction
4. Equip with the knowledge on antioxidants and their importance
5. Differentiate the structure, types, properties and functions of DNA and RNA
6. Recognize the nucleic acid interaction with proteins and gain knowledge in molecular techniques.

UNIT I: Polysaccharides

Brief review of carbohydrates, classification. Occurrence, structure and biological functions of cellulose, chitin, starch and glycogen. Fructans, arabinans and galactans (brief account). Dietary fibre. Occurrence, structure, and biological functions of bacterial cell wall polysaccharides and blood group antigens. Structure and significance of glycoconjugates -Glycosaminoglycans – structure and biological role of hyaluronic acid, chondroitin sulfate and heparin, sialic acid; glycoproteins and glycolipids.

UNIT II: Proteins

Review of structure and classification of amino acids. Orders of protein structure. Primary structure – determination of amino acid sequence of proteins. The peptide bond – The Ramachandran plot. Secondary structures – α -helix, β -sheet and β -turns. Fibrous proteins- Collagen triple helix-Structure and assembly. Globular proteins-forces involved, folding process and folding patterns. Tertiary structure –Myoglobin organization. Quaternary structure of proteins- Structure of haemoglobin. Models for

haemoglobin allostery. Quaternary structure-basics only. Protein function as enzymes, defensive and transport.

UNIT III: Lipids

Introduction, classification, structure and functions of simple lipid, compound lipids-phospholipids, glycolipids, storage lipids and cholesterol. Eicosanoids-prostaglandins, thromboxanes and leukotrienes. Properties of lipids-Micelles, bilayers and liposomes. Significance of lipid anchored protein-prenylated, fatty acylated and GPI anchored proteins. Lipoproteins – classification, composition and biological functions. Lipids as signals, cofactors and pigments (Brief account). Lipid peroxidation and antioxidants.

UNIT IV: Nucleic acids

DNA double helical structure – Watson and Crick model. A, B and Z forms of DNA. Tertiary and quadraplex structures of DNA. DNA supercoiling and linking number. Properties of DNA – DNA bending, buoyant density, viscosity, denaturation and renaturation – The cot curve – Chemical synthesis of DNA.

Major classes of RNA – mRNA, rRNA, tRNA, snRNA, siRNA, hnRNA – structure and biological functions. Secondary and tertiary structure of tRNA and rRNA.

UNIT V: Nucleic acid interaction with proteins

DNA binding motifs in proteins – the basic helix loop helix (bHLH) motif, zinc finger, the leucine zipper, helix-loop helix and homeo domain. RNA binding motifs in proteins. Molecular aspects of protein-nucleic acid binding – direct interactions. Techniques characterizing nucleic acid-protein complex – chromatin immunoprecipitation assay, DNase I footprinting.

SUGGESTED READINGS

1. Nelson, D., and Cox, M. W.H. (2012) Lehninger Principles of Biochemistry (4th Ed.) New York, Freeman and Company.
2. Murray, R.K., Bender, D.A., Botham, K.M., and Kennelly, P.J., (2012). Harper's illustrated Biochemistry, 29th Edition. McGraw-Hill Medical. London.
3. Zubay, G., (2009). Biochemistry, Wm.C Brown Publishers, Saunders and Company, Philadelphia.
4. Voet, D., Voet, J. G., & Pratt, C. W. (2008). Fundamentals of biochemistry: Life at the molecular level. Hoboken, NJ: Wiley.
5. Nucleic acid structure and recognition. Neidle, Oxford University Press, 2002
6. Nucleic acids in Chemistry and Biology. Blackburn and Gait, IRL Press, 1996
7. Rawn, J.D., (2004). Biochemistry, First Indian reprint, Panima Publishing Corporation, New Delhi.

Course objectives**Equip the students:**

- To understand the structure of enzymes and their classifications.
- To analyse the active site of enzymes by various experimental approaches.
- To learn the kinetics of enzyme catalysed reactions.
- To learn the importance of enzyme immobilization and its wide applications in medicine and industries.
- To study various fermentor designs, culture systems and the application of fermentation process in industry.
- To learn the fermented products preparation, downstream processing and its industrial applications.

Course outcomes (CO's)**After successful completion of the course, the student will:**

1. Understand the mechanism of action of enzymes and their classifications.
2. Recall the kinetics of enzyme catalyzed reactions
3. Understand the enzyme immobilization concept and apply the knowledge to produce more products out of it.
4. Gain knowledge in designing fermentor based on Industrial needs
5. Have clear understanding of microbe's implication to derive a product and the role of enzymes in downstream process.
6. Clear in concept of various culture techniques and apply the suitable one for a particular application.

UNIT I: Enzymes

Enzymes Nomenclature and classification of Enzymes with examples; Structure and functions of coenzymes and cofactors. Active site, the investigation of active site structure – The identification of binding sites, catalytic sites-trapping the E-S complex. Use of substrate analogs, enzyme modification by treatment with proteolytic enzymes, photo oxidation and chemical modification of amino acid side chains. Affinity labeling studies and super reactive amino acid chains. The 3-D structural features of active sites as revealed by X-ray crystallographic and chemical studies, site directed mutagenesis. catalytic triad. Lock and key model, Induced fit model. Factors affecting enzyme activity. Isolation, purification and characterization of enzymes. Mechanism of enzyme action –Acid base and covalent catalysis (Chymotrypsin, lysozyme), metal activated and metalloenzymes.

UNIT II: Enzyme Kinetics

Derivation of MM equation, LB plot, Eadie Hofstee plot and Hanes plot. Bisubstrate reactions-types of bi-bi reactions, differentiating bi substrate mechanisms-diagnostic

plots, isotope exchange. Enzyme inhibition-Types and differentiation of competitive, uncompetitive and non-competitive inhibition, Allosteric inhibition, feed-back inhibition and regulation. Reversible covalent modification (glycogen phosphorylase); proteolytic cleavage (Zymogen); multi enzyme complex as regulatory enzymes (PDH); isoenzymes (LDH). Mechanism based inhibitors-antibiotics as inhibitors. Mechanism of action of enzymes - chymotrypsin and lysozyme. Enzyme based diagnostic techniques.

UNIT III: Immobilization of enzymes

Methods of immobilization - adsorption, covalent binding, entrapment, membrane confinement. Effect of immobilization on enzyme. Use of enzymes in clinical diagnosis and industries. Enzyme engineering. Artificial enzymes and synzymes, Abzymes, ribozymes, enzymes in organic solvents.

Biosensors – glucose oxidase, cholesterol oxidase, urease and antibodies as biosensors.

UNIT IV: Microbial Growth

Balanced and Unbalanced microbial growth; Measurement of growth; Principles of microbial growth and culture systems- culture, fed culture, semi-continuous culture and continuous culture. Isolation and screening of industrially important microbes. Important strains for better yield. Design of a fermenter. Types of bioreactor-Continuous stirred tank, Bubble column, Airlift, Fluidized bed, Packed bed and Photobioreactor.

Solid substrate fermentation and Media fermentation. Examples of bioprocess for the production of biomass. Microbial metabolic products-primary and secondary metabolites.

UNIT V: Production of fermented products and downstream processing

Production of alcohol and alcoholic beverages. Microbial production of Organic acids: Source, recovery and uses of Citric acid, Lactic acid, Acetic acid and L-ascorbic acid. Production of antibiotics: Penicillin and Tetracyclin. Bioinsecticides: Production of Bacterial and fungal polysaccharides, commercial production of Xanthan gum and pullulan. Production of edible mushroom and SCP.

Biofertilizers *Phosphobacterium* and *Rhizobium sp.*; **Biopesticides, leaching of ores by microbes, microbial treatment of wastewater – aerobic and anaerobic methods.**

18BCP103 BIOINSTRUMENTATION AND GOOD LABORATORY PRACTICE**4H-4C****Instruction hours/week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course objective****Equip the students:**

- To learn centrifugation techniques and their applications in biological system.
- To understand the principle of colorimetry and advanced spectrophotometric techniques
- To learn the basics, advanced techniques and applications of chromatography
- To learn the importance of calibration of analytical instruments.
- To learn the principle and applications of electrophoresis and radioisotopic techniques in biological sample analysis
- In good laboratory practices procedures.

Course outcomes (CO's)**After successful completion of the course, the student will:**

1. Apply the centrifugation techniques in biological system
2. Use colorimetry and spectrophotometry for sample analysis
3. Use chromatographic techniques for sample analysis
4. Calibrate analytical instruments
5. Detect radioisotopes and analyze samples using electrophoretic techniques
6. Follow the good laboratory practices procedures.

UNIT I: Centrifugation

Types of centrifuges, Principles and applications of analytical and preparative centrifuges, density gradient and ultra centrifugation. Relative molecular mass determination and sedimentation coefficient. Sub cellular fractionation of cellular components. Applications. Separation of cells on the basis of density.

Colorimetry: Beer's law and Lambert's law. Principle of photoelectric colorimeter

Spectroscopy: Properties of electromagnetic radiations, Instrumentation and applications of UV Visible and mass spectroscopy, FTIR, NIR, reverse spectroscopy. Spectrofluorimetry, atomic spectroscopy, NMR spectroscopy. Advantages and disadvantages and advancements of spectroscopic methods.

UNIT II: Chromatography

Principles, Types – paper chromatography, thin layer chromatography and HPTLC, Column chromatography - Ion exchange chromatography, affinity chromatography, gel filtration chromatography, Low pressure liquid chromatography (LPLC) and High-Performance Liquid Chromatography (HPLC)- Normal and Reverse Phase Gas -liquid chromatography Mass spectroscopy (GC – MS), LC-MS, MALDI-TOF, ICPMS, Application of Chromatography. Separation of phytoconstituents using TLC.

UNIT III: Electrophoresis

Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel electrophoresis (SDS-PAGE), native PAGE, isoelectric focusing, immunoelectrophoresis, 2D gel electrophoresis. Pulse field gel electrophoresis, capillary electrophoresis, gel documentation – Applications. Blotting techniques.

UNIT IV: Radioisotopic techniques

Introduction, nature of radio activity, types and rate of radioactive decay, units of radio activity, detection and measurement of radioactivity-Geiger-Muller counter, solid and liquid scintillation counter. Autoradiography, X-ray diffraction and circular dichroism. Non-radioactive, fluorescent methods. Applications of radioisotopes in biological sample analysis.

Flowcytometry: Principles and applications.

Microscopic Imaging techniques: Atomic Force Microscopy, Confocal fluorescent microscopy, SEM and TEM

UNIT V: Good Laboratory Practices

Quality concepts, personal protective equipment. General safety-biological safety, chemical safety and fire safety. data generation and storage, quality control documents, retention samples, records, audits of quality control facilities. List of Regulations to be followed. Laboratory safety procedure- glass ware, equipment safety, hands protection, precaution to be undertaken to prevent accident and contamination. GLP – an overview and basic information, Scope. Principles of GLP: Test Facility Organization and Personnel, Test Systems, Test and Reference Items, Standard Operating Procedures, Performance of the Study, Reporting of Study Result, Storage and Retention of Records and Materials. Responsibilities in GLP. Implementing of GLP in non GLP analytical laboratory.

Molecular Biology, 7th Low Price Edition, Cambridge University Press, India.

Course objectives**Equip the students**

- To recall the knowledge in organization and dynamics of mitochondria.
- To understand the molecules within the cell and interaction between cells that allows construction of multicellular organisms.
- To understand cytoskeleton network and extracellular matrix.
- To learn cell signaling mechanisms and pathways
- To understand cell cycle, cell division and cell death process.
- To recognize cancer and mutational changes at gene level.

Course outcomes (CO's)**Upon successful completion of this course, participants will be able to:**

1. Recognize the organization and dynamics of mitochondria.
2. Recognize cell cell interaction and their mechanism.
3. Maintain cytoskeleton structure and functions of micro, macro and intermediary filaments.
4. Recognize the cell signaling mechanisms and pathways.
5. Enumerate the phases of cell cycle, events in cell division and mechanism of cell death
6. Relate properties of cancerous cells to mutational changes in gene function.

UNIT I: Membrane

Membrane bilayer- models, Membrane lipids- fluidity, asymmetry, phase transition, Liposomes. **Langmuir trough, Metamorphic mosaic model, Techniques for determination of membrane protein topology**

Membrane proteins – Types, Orientation, Mobility – Experiments, flippases, proteins of RBC membrane, RBC ghosts, Bacteriorhodopsin, Porins – aquaporin. solubilisation of proteins, lipid anchored proteins, Carbohydrates – cell surface carbohydrates – Lectins and selectins.

UNIT II: Membrane transport

Passive diffusion, facilitated diffusion in erythrocytes, Carriers and ion channels, Ion concentration gradients.

Uniporter Catalyzed transport, active transport systems. Transport process driven by ATP- Ion pumps: Calcium ATPase; $\text{Na}^+ \text{K}^+$ ATPase; Mechanism, Gastric $\text{H}^+ \text{K}^+$ ATPase, ABC superfamily – ATPases that transport peptides and drugs (MDR proteins).

Co-transport by Symporters and antiporters, Group translocation.

Osmosis, receptor mediated endocytosis and its significance.

UNIT III: Mitochondria

Mitochondria – Reduction potential, Free energy and entropy, electron transport chain – Complexes, Q-cycle, Cyt C oxidase complex, Translocation of protons and the

establishment of a proton motive force, machinery for ATP formation and chemi-osmotic mechanism, ATP synthase – Experiments, inhibitors and uncouplers of oxidative phosphorylation.

Microfilaments – Actin – Structures, Assembly, Myosin. Microtubules – Organization and dynamics, kinesin and dynein. Cilia and flagella – Structure and functions, intermediary filaments.

Mitochondrial transport system: ATP/ADP exchange, malate-glycero phosphate shuttle

UNIT IV: Cell – Matrix interaction

Cell – Cell interaction: Extra cellular matrix; Collagen, hyaluronan and proteoglycans, laminin, integrins, **Fibrillin**, **elastin** and fibronectins.

Cell – Cell adhesion: Specialized junctions – Desmosomes, Gap junctions, Tight junctions. Adhesion molecules – Cadherins (E and N), Connexins.

Cell – Cell signaling – Role of Signaling molecules and their receptors; functions of cell surface receptors, pathways of intracellular signal transduction, second messengers, G-protein coupled receptors, receptor tyrosine kinases, Ras, MAP kinases in cellular growth and functions.

UNIT V: Cell cycle and cancer

Cell cycle and its control, Cell cycle control in mammalian cells, checkpoints in cell cycle regulation.

Cancer: Properties of tumour cells and genetic basis and onset of cancer.

Tumour viruses – DNA & RNA Viruses as transforming agents – mechanism.

Tumour suppressor genes and functions of their products. Carcinogenic and anticarcinogenic effect of chemicals and radiation. Apoptosis (Programmed cell death) – pathways, regulators and effectors on apoptosis and necrosis.

Instruction hours/week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To recollect the knowledge in plant cell organelles and their functions
- To understand the functions and regulations of major biosynthetic pathways of plants,
- To learn and understand the role of plant growth substances in various stages of plant growth
- Obtaining knowledge on tissue culture techniques
- To learn metabolic engineering to increase the production of plant secondary metabolites
- To become familiar with the transformation process and its applications

Course outcomes (CO's)**Upon successful completion of this course, participants will be able to:**

1. Recall the understanding of plant cell organelles and their functions
2. Recognize the source of food for other organisms and their synthesis in plants
3. Recall the role of plant growth substances in various stages of plant growth
4. Equip with tissue culture techniques
5. Understand the role of secondary metabolites and their production and importance
6. Equip with gene transfer techniques

UNIT I: Plant cell

Structure of plant cell – cell wall, vacuoles, plastids, mitochondria, peroxisomes and Golgi complex. Overview of photosynthesis: photosynthetic apparatus, reaction center, photosystems I and II, mechanism of photosynthesis-cyclic and non cyclic photophosphorylation; evidences in support of light and dark reactions.

Solute transport and photo assimilate translocation – Uptake, transport and translocation of water, ions, solutes and macromolecules from soil.

UNIT II: Assimilatory mechanisms in plants

Photorespiration and water consumption, CO₂ assimilation by C₃ and C₄ plants, CAM plants. Nitrogen assimilation; reduction of nitrate, nitrogen fixation in symbiotic and non-symbiotic plants, nitrogen cycle. Sulphate metabolism in leaf; sulfite reduction and sulphur cycle, glutathione synthesis. Carbon and phosphorus cycles.

UNIT III: Lipid metabolism in plants

Biosynthesis of fatty acids in plastids, synthesis of waxes, triacyl glycerols and glycolipids. Synthesis of chlorophyll. Carotenoid formation. Synthesis of nitrogenous compounds: caffeine synthesis, ureide synthesis in nodulated legumes. Secondary oxidative mechanisms: β - oxidation, ω - oxidation, glyoxylate pathway.

UNIT IV: Plant growth substances

Chemistry, biosynthesis, mode of action and physiological role of auxins, gibberellins, cytokinins, abscisic acid and ethylene. Factors influencing endogenous growth- Biotic and Abiotic factors. Phytochromes: molecule, biological display, functions as light sensor. **Cryptochromes and phototropins, stomatal movement, photoperiodism and biological clock.** Senescence: biochemical changes, regulation.

UNIT V: Plant secondary metabolites

Synthesis of secondary metabolites- shikimate pathway. Alkaloids, flavonoids, terpenoids, phenols and glycosteroids-Occurrence, distribution & functions, Production of secondary metabolites in plants, stages of secondary metabolite production.

Plant Tissue Culture- Totipotency, meristematic and nodal cultures-Callus induction. Somatic embryogenesis. Metabolic engineering for increased production of secondary metabolites.

Plant Transformation Technology – **Ti and Ri plasmid and their transfer mechanisms. Methods of transformation, chloroplast transformation. Agrobacterium mediated transformation.**

ECOLOGY AND EVOLUTIONARY BIOLOGY

Instruction hours/week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objective**Equip the students**

- To gain an appreciation for the diversity of life
- To understand how organisms, interact with each other and their environment
- To gain a basic understanding of how populations function,
- To learn how communities are structured
- To understand behavioral ecology
- To be aware of the central role that evolution plays in biology

Course outcomes (CO's)**After completion of this course the student will**

1. Appreciate the diversity of life
2. Interact with each other and their environment
3. Have practical understanding of species interaction
4. Built a structured community
5. Expertise in behavioral ecology
6. Recognize the central role of ecology and evolution in biology

UNIT I: Ecology

Population ecology; metapopulation dynamics; growth rates; density independent growth; density dependent growth; niche concept; Species interactions: Plant-animal interactions; mutualism, commensalism, competition and predation; trophic interactions; functional ecology; ecophysiology; behavioral ecology.

UNIT II: Community Ecology

Community assembly, organization and evolution; biodiversity: species richness, evenness and diversity indices; endemism; species-area relationships; Ecosystem structure, function and services; nutrient cycles; biomes; habitat ecology; primary and secondary productivity; invasive species; global and climate change; applied ecology.

UNIT III: Basics of Evolution

Origin, evolution and diversification of life; natural selection; levels of selection. Types of selection (stabilizing, directional etc.); sexual selection; genetic drift; gene flow; adaptation;

convergence; species concepts; Life history strategies; adaptive radiation; biogeography and evolutionary ecology.

UNIT IV: Origin of genetic variation

Mendelian genetics; polygenic traits, linkage and recombination; epistasis, gene-environment interaction; heritability; population genetics; Molecular evolution; molecular clocks; systems of classification: cladistics and phenetics; molecular systematics; gene expression and evolution.

UNIT V: Behavioral Ecology

Classical ethology; neuroethology; evolutionary ethology; chemical, acoustic and visual signaling; Mating systems; sexual dimorphism; mate choice; parenting behavior Competition; aggression; foraging behavior; predator–prey interactions; Sociobiology: kin selection, altruism, costs and benefits of group-living.

3. Hall, B.J, (2011) Evolution, Jones and Bartlett Publishers, 1st Edition, USA.
4. McMillan, Victoria E. (2012). Writing Papers in the Biological Sciences, 5th Edition. Bedford/St. Martin's Press, Boston. ISBN- 0-312-64971-1.

Instruction hours/week: L:4 T:0 P:0
Total: 100

Marks: Internal: 40

External: 60

End Semester Exam: 3 Hours

Course objectives

Equip the student

- To explain the relationship among physicochemical and biological factors, dosage forms,
- To understand the routes of administration and therapeutic outcomes;
- To illustrate the principles of pharmaceutics and biopharmaceutics in dosage form design and development;
- To describe production procedures
- To learn quality control measurements and stability improvements for tablets and sterile products and different routes of drug administration in principles and applications
- To identify the needs and differences in drug use for various patient groups, and devise appropriate strategies from perspectives of dosage forms.

Course outcomes (CO's)

After completion of this course the student will

1. Explain biopharmaceutical, physiological, biochemical and cell biology-related aspects
2. Understand the transport and metabolism of drugs in the gastrointestinal tract and in the liver.
3. Explain mechanisms behind the transport of drug and metabolism and how drugs can interact with other drugs and food and methods to study these
4. Have developed its ability to plan, compile, analyse and report experiment that has importance for biopharmaceutical issues -
5. Recognize the regulatory requirements within the biopharmaceutical area
6. Describe the role of biopharmaceutics in drug development within the pharmaceutical industry

UNIT I: Phytochemistry

Authentication of medicinal plants, Biosynthesis of primary and secondary metabolites - alkaloids, terpenoids. Phenolic compounds and coumarins. Classification and sources of alkaloids. Major classes in phenolic compounds – carotenoids, flavonoids, tannins and phenolic acids. Classification of terpenoids.

UNIT II: Techniques in plants

General extraction and isolation techniques for compounds from plants. Techniques involved in extraction of phytochemicals – Perculation, Soxhlet extraction, Supercritical Fluid extraction, Pilot scale extraction, reflux and other methods. Factors affecting extraction.

UNIT III: Isolation and purification techniques

Isolation and purification techniques – Thin layer and Column chromatography. Chemical fingerprinting – HPLC, HPTLC, FTIR, NMR and GC-MS.

UNIT IV: Biotechnology of medicinal plants

Production of secondary metabolites from plant culture. Indian Standard Specifications (ISI) laid down for sampling and testing of various drugs in finished form by the Bureau of Indian Standards. Toxicity testing in drugs and Safety.

UNIT V: Bioactive studies

Anticancer, antidiabetic, anti-inflammatory, hepatoprotectives, antimicrobials from medicinal plants. Antioxidants of plant origin – Reactive Oxygen Species (ROS), antioxidant polyphenols.

SUGGESTED READINGS

1. Harborne, J.B., (1998). Phytochemical methods to modern techniques of plant analysis. Chapman & Hall, London.
2. Trease, G.E., Evans, M.C., (1979). Textbook of Pharmacognosy, 12th edition. Balliere-Tindal, London.
3. Khan, I.A., and Khanum, A., (Eds.). (2004). Role of Biotechnology in medicinal and Aromatic plants, Vols. I-X. Ukaaz Publications, Hyderabad.

Course objectives

- To provide hands on experience on preparation of buffers and determination of pH of solutions
- To estimate the macromolecules quantitatively thro colorimetric procedures
- To perform fluorometric experiments and titrimetry
- To separate the macromolecules using TLC and column chromatography.
- To perform the secondary metabolite quantification using HPLC.
- Gain hands on training in protein extraction and purification techniques.

Course outcomes (CO's)**After completion of this course the student will**

1. Prepare buffers and reagents based on the needs of experiments
2. Estimate macromolecules quantitatively thro colorimetric procedures
3. Estimate vitamins and calcium using fluorimetry and titrimetry
4. Quantify secondary metabolites using HPLC
5. Separate the macro molecules using TLC and column chromatography
6. Extract and purify protein from various sources

Colorimetry

1. Isolation and estimation of starch from potato (Anthrone method)
2. Isolation and estimation of glycogen from liver (Anthrone method)
3. Estimation of Total carotenoids (Spectroscopic method)
4. Estimation of fructose in fruits (Resorcinol method)
5. Estimation of ascorbic acid (DNPH method)
6. Estimation of Vitamin E (Dipyrridyl method)
7. Estimation of methionine (Sodium nitroprusside method)
8. Determination of saponification and iodine number of fat or oil

Fluorimetry

9. Estimation of thiamine from cereals or fruits
10. Estimation of riboflavin

Titrimetry

11. Estimation of lactose in milk
12. Estimation of calcium in milk

Separation techniques

13. Separation of amino acids by paper chromatography- circular, ascending &

Descending.

14. Separation of plant pigments by TLC.

15. Separation of plant pigments by column chromatography.

16. Estimation of quercetin using HPLC (Demo).

Cell biology:

15. Preparation of standard buffer and determination of pH of buffers.

16. Subcellular fractionation by differential centrifugation and purity assessment with marker enzymes (Group Experiment).

17. Salting out of proteins using ammonium sulphate precipitation

SUGGESTED READINGS

1. Jayaraman, J., (2007). Laboratory Manual in Biochemistry, New Age International Publishers, New Delhi.
2. Sadasivam, S., and Manickam, A., (2009). Biochemical Methods, New Age, International Publishers, New Delhi.
3. Singh, S.P., (2009). Practical Manual of Biochemistry, CBS Publishers, New Delhi.

Course objectives**Equip the students**

- To screen phytochemicals and estimate the amount of secondary metabolites
- To handle microbiological techniques
- To identify microbes in soil and water samples
- To isolate, characterize and purify microbial enzymes
- To perform antibacterial activity of active compounds
- To gain hands on experience in plant tissue culture

Course outcomes (CO's)**After completion of this course the student will perform**

1. Phytochemical screening and secondary metabolite estimation
2. Microbiological techniques
3. Microbial identification in soil and water samples
4. Isolation, characterization and purification of microbial enzymes.
5. Antibacterial activity of active compounds
6. Callus induction and regeneration of plantlets

Plant Biochemistry

1. Phytochemical screening of any one selected medicinal plant
2. Estimation of Tannins
3. Estimation of Flavonoids
4. Estimation of Chlorophyll
5. Estimation of Phenols

MICROBIOLOGY

6. Isolation of pure culture – serial dilution, pour plate, spread plate, streak plate methods.
7. Colony morphology – colony counting.
8. Staining techniques- simple, differential, spore, and fungal staining.
9. Antibiotic resistance / sensitivity test (Disc method)
10. Estimation of bacteria- growth curve of bacteria and generation time.
11. Identification of microorganisms – biochemical tests (IMVIC test)(Group Experiment)
12. Microbiology of potable water
13. Isolation, characterization and purification of ANY one of the following microbial enzymes
 - a) Amylase

b) Protease

14. Assay of Antibacterial of ANY ONE selected medicinal plant by Disc or Well diffusion and broth dilution method.
15. Assay of antifungal activity of ANY ONE selected medicinal plant by Disc or Well diffusion. TLC- Bioautography.

PLANT TISSUE CULTURE (Group experiment)

16. Preparation of tissue culture media
17. Surface sterilization
18. Induction of meristem culture
19. Callus induction.
20. Regeneration of shoot and root from callus culture.

SUGGESTED READINGS

1. Wagner, H., and Bladt, S., (1996). Plant drug analysis. Springer Science & Business media 2nd edition
2. Jayaraman, J., (2011). Laboratory Manual in Biochemistry, New Age International Publishers, New Delhi.
3. Kannan, N., (2003). Laboratory Manual in Microbiology, Panima Publishing Corporation, Bangalore.
4. Sadasivam, S., and Manickam, A., (2009). Biochemical Methods, New Age, International Publishers, New Delhi.

7. Varley, H., (2003). Practical Clinical Biochemistry, CBS Publishers, New Delhi.

Course objectives**Equip the students**

- To shed knowledge on generation and transformation of energy in metabolic pathways.
- To know the metabolic pathway of carbohydrate and their regulation with associated disorders.
- To learn fatty acid synthesis and degradation and their regulation
- To study the regulation of amino acid metabolism and its regulations with Metabolic disorders.
- To understand the inter relationship of carbohydrate, lipid, protein and nucleic acid metabolism and understand the importance of TCA cycle.
- To aware about the homeostasis of glucose metabolites by intrinsic and extrinsic control mechanism.

Course outcomes (CO's)**After completion of this course the student will perform**

1. Gain knowledge on glucose anabolic and catabolic pathways that ultimately control the glucose homeostasis.
2. know the metabolic pathway of amino acid and their regulation with associated disorders.
3. learn fatty acid synthesis and degradation and their regulation
4. Able to explain the role of lipids, their metabolism and their stringent control by hormones and other factors.
5. Understand the anabolic and catabolic processes associated with amino acids and nucleic acids and their regulation.
6. Able to understand the energy homeostasis during starvation and energy excess

UNIT I: Introduction to control of enzyme activity

Allosteric interaction; Reversible covalent modification; proteolytic action; control of amount of enzyme; control of rates of enzyme degradation; feedback inhibition; feed forward stimulation. Role of compartmentation. Elucidation of Metabolic pathways- Single- and Multi-step pathways. Experimental approaches to study the metabolism- using metabolic inhibitors and isotopes.

UNIT II: Carbohydrate Metabolism

An overview of Glycolysis and Gluconeogenesis. Role of LDH. Regulation of Glycolysis and Gluconeogenesis-Reciprocal control of Glycolysis and Gluconeogenesis, TCA cycle-steps, regulation at branch points; Glycogen Metabolism: Overview of glycogenesis and

glycogenolysis. Reciprocal control of glycogenesis and glycogenolysis. **Alternative pathways of metabolism-HMP shunt, Entner- doudoroff pathway, glucuronate and Glyoxalate pathway, cori cycle.** Hormonal regulation of fuel metabolism; Metabolic disorders-Diabetes mellitus and insipidus.

UNIT III: Lipid metabolism

An overview of fatty acid synthesis and degradation, Regulation of fatty acid synthesis- control of acetyl CoA carboxylase and fatty acid synthetase complex; Reciprocal control of fatty acid synthesis and degradation. Biosynthesis of triacyl glycerol, phosphatidyl choline, phosphatidyl ethanolamine and sphingomyelin and their regulation. Synthesis and degradation of cholesterol and its regulation. **Metabolism of prostaglandins-COX and LOX pathways. Metabolic fate of VLDL, LDL and HDL.** Obesity and regulation of body mass. Metabolic disorders- Atherosclerosis, Hyper and hypo lipoproteinemia.

UNIT IV: Amino acid metabolism

Regulation of synthesis of pyruvate, serine, glutamate, aspartate, aromatic and histidine family of amino acids (Flow chart only) . Key role of glutamate dehydrogenase and glutamine synthetase in nitrogen metabolism and their allosteric regulations. Amino acid degradation- Oxidative deamination, Non oxidative deamination, decarboxylation and transamination. Ammonia formation and disposal- urea cycle and its regulation. **Catabolism of carbon skeleton of amino acids.** Biosynthesis of heme (porphyrin) and its regulations. Molecules derived from amino acids. Metabolic disorders- Alkaptonuria, phenyl ketonuria.

UNIT V: Nucleic acid metabolism

De novo synthesis of purine and its regulation – Role of PRPP amino transferase. De novo synthesis of pyrimidine and its regulation – Role of aspartate carbomyl transferase. Regulation of deoxy ribonucleotides by activators and inhibitors. Integration of metabolism. **Metabolism during starvation.** Tissue specific metabolism- Metabolic profile of major organs- Brain, Muscle, Liver and Adipose tissue. Metabolic disorders- Gout, SCID.

SUGGESTED READINGS

1. Lehninger, L., Nelson, D.L., and Cox, M.M., (2012). Principles of Biochemistry, 6th edition WH Freeman and Company, New York.

6. Smith. 2003. Principles of Biochemistry, McGraw– Hill International Book Company, London.
7. Zubay, G., (2009). Biochemistry, W.C Brown Publishers, Saunders and Company, Philadelphia.

Course objectives**Equip the students**

- To acquire the knowledge on Organization of DNA in a genome and transposons
- To know the mechanism behind replication and repair.
- To enable the knowledge on transcription and translation.
- To understand the mechanism of Regulation of gene expression in prokaryotes
- To study the structure and remodeling of chromatin
- To learn the mechanism of Eukaryotic gene regulation

Course outcomes (CO's)**After completion of this course the student will**

1. Acquire the knowledge on molecular structure of genes.
2. Understand the structure of nucleic acids and the DNA replication process
3. Learn about the process of transcription
4. Understand the mechanism of translation
5. Learn about gene regulation in prokaryotes
6. Learn about gene regulation in eukaryotes

UNIT I: Molecular structure of genes

Molecular definition of gene, chromosomal organization of genes and non-coding DNA, protein coding genes, tandemly repeated genes, single sequence DNA. Structural organization of eukaryotic chromosomes- histone proteins, chromatin, functional elements. Mobile DNA elements- bacterial IS elements, transposons, viral transposons and non- viral transposons. Mutation- types.

UNIT II: DNA replication and repair

General features of chromosomal replication. Enzymology of DNA replication, DNA replication machinery. Replication in prokaryotes and eukaryotes- Initiation, elongation and termination. DNA damage-types. Repair mechanism of DNA damage-all types.

UNIT III: Transcription

Prokaryotic gene transcription- Initiation, elongation and termination. Eukaryotic gene transcription- transcription unit, RNA polymerases- types, Transcription and processing of mRNA, tRNA and rRNA. Regulatory sequences in protein coding genes-TATA box, initiators, CpG island, promoter-proximal element, activators and repressors of transcription, Multiple transcription control elements. Regulation of transcription factor activity by lipid-soluble hormones.

UNIT IV: Translation

Deciphering genetic code, features. Wobble hypothesis. Initiation, elongation and

termination of prokaryotic and eukaryotic translation. Fidelity of translation. Post translational modifications-all types; Protein targeting-Targeting protein to nucleus, ER, Golgi complex. Protein degradation- ubiquitin mediated degradation.

UNIT V: Prokaryotic gene regulation

Operon model, Lac, trp and ara operons. Regulatory proteins-DNA binding domain, protein-protein interaction domain. Recombination- holiday model, Rec BCD enzymes, Rec A protein, Messelson Radding model, site- specific recombination. Antisense RNA technology.

Eukaryotic gene regulation: Transcriptionally active chromatin, chromatin remodeling, DNA binding transactivators and coactivators. Regulation of gene expression by intracellular and intercellular signal, RNAi.

SUGGESTED READINGS

7. Cooper, G.M., and Hausman, R.E., (2013). Cell-A Molecular Approach, 6th Edition.. Sinauer Associates. USA

Course objective**Equip the students**

- To interpret the Mendelian Principle and experiments
- To infer the environmental effects and human intelligence
- To acquire the knowledge on diagnosis of infectious disease and molecular probes used in diagnosis, gametogenesis and fertilization
- To gain knowledge on chemical changes in cell division and cleavage
- To understand and discuss ramifications of inheritance, gene structure and function, gene mutation, and research related to genetics and its applications.
- To comprehend cellular mechanisms of developmental stages.

Course outcomes (CO's)**After completion of this course the student will perform**

1. Comprehensive, detailed understanding of the chemical basis of heredity
2. Comprehensive and detailed understanding of genetic methodology
3. Quantification of heritable traits in families and populations provides insight into cellular and molecular mechanisms.
4. Comprehensive detailed understanding of cellular mechanisms of developmental stages.
5. ramifications of inheritance, gene structure and function, gene mutation, and research related to genetics and its applications.
6. knowledge on chemical changes in cell division and cleavage

UNIT-I: Mendelian Principle and experiments

Mendelian inheritance-principles; Mendel's experiments-monohybrid, dihybrid trihybrid and multihybrid crosses. Interaction of genes: incomplete dominance, codominance, epistasis, complementary genes, duplicate genes, polymeric genes, modifying genes; lethal genes. Environmental influence of gene expression: penetrance and expressivity; temperature, light, phenocopies. Environmental effects and twin studies; human intelligence. Quantitative or polygenic inheritance: Inheritance of kernel color in wheat; corolla length in tobacco skin color inheritance in man, transgressive and regressive variation. Multiple alleles; Sex determination; Extra chromosomal inheritance. Genetic abnormalities

UNIT-II: Prenatal Screening

Amniocentesis; Prenatal diagnosis of genetic diseases, XX and XY karyotyping, DNA/RNA probes. DNA probes in the diagnosis of infectious diseases; Mycobacterial, plasmodial, HIV and HPV infections during development. Molecular probes in diagnosis of genetic diseases: Down syndrome, Cystic fibrosis, Sickle cell anemia, Alkaptonuria, Phenylketonuria, Klinefelter syndrome and Cancer (breast cancer, Leukaemia, Burkets lymphoma).

UNIT-III: Developmental Stage I

Gametogenesis – Origin of germ cells – Significance of different stages of gametogenesis
Oogenesis – Types of eggs–growth, development and maturation of oocyte, Egg envelopes, Polarity and symmetry, Spermatogenesis–Sperm Structure, Types of sperm, Fertilization – Approach of spermatozoon–Reaction of egg, essence of activation – Changes in egg cytoplasm during fertilization.

UNIT-IV: Developmental Stage II

Cell division in cleavage – Chemical changes–Patterns of embryonic cleavage – Morula and Blastula – Role of egg cortex – Morphogenetic gradients – Fate map – Gastrulation – Primary organ, Rudimental organs, Organizer – Morphogenetic movements- invagination, extension, ingression movements and locomotion.

UNIT-V: Developmental Stage III

Organogenesis: Induction and differentiation of Brain, eye, ear, limb, Heart, kidney, Development of Immune system, Genetic basis of differentiation – selective action of genes–gene action in development – Nuclear transplantation–apoptosis during development– aging–Teratogens and Teratogenesis.

SUGGESTED READINGS

Instruction hours / week: L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To make students understand the essential features of the interdisciplinary field of science for better understanding the biological data.
- To retrieve the sequence analysis of Nucleic acid and protein
- To create opportunity to interact with algorithms, tools and data in current scenario.
- To make the students look at a biological problem from a computational point of view.
- To find out the methods for analyzing the expression, structure and function of proteins,
- To understand the relationships between species.

Course outcomes (CO's)**After completion of this course the student will perform**

1. Acquire the knowledge on biological data, submission and retrieval from databases.
2. Able to make experiment pair wise and multiple sequence alignment
3. Analyze the secondary and tertiary structures of protein sequences.
4. Understand the data structure (databases) used in bioinformatics and interpret the information (especially: find genes; determine their functions),
5. Understand and be aware of current research and problems relating to this area.

UNIT I: Concepts of Bioinformatics

Definition, concepts of Bioinformatics: Objectives, History of Bioinformatics, Milestones, Genome sequencing projects, Human Genome Project- Science, applications and ELSI.

Introduction to Biological databases: Types of databases, sequence databases-nucleic acid sequence databases, GenBank, protein sequence database, Swiss-Prot, PIR, motif database-PROSITE, structural databases, bibliographic databases and organism specific databases-GMOD- Searching and retrieval of data-Entrez and SRS.

UNIT II: Sequence Alignment

Introduction to sequence Alignment: Pairwise and multiple sequence alignment, substitution matrices, **Dynamic programming algorithms-Needleman and Wunsch and Smith-Waterman**, Similarity searching programs, BLAST, FASTA, Multiple sequence alignment – CLUSTAL, **Introduction and application to phylogenetic trees, basic terminologies**, Phylogenetic analysis-PHYLIP theory of phylogeny, tree building methods.

UNIT III: Protein prediction strategies and programs

Protein Secondary Structure Prediction, three-dimensional structure prediction-Comparative modeling, threading, **Concepts of Molecular modeling, Model refinement, evaluation of the**

model, protein folding and visualization of molecules – Visualization tools-RasMol, Deep View.

UNIT IV: Gene Identification and Prediction

Genome sequencing, Genome database-SWISS-2D PAGE database, Gene Mark, Gene Scan, Pattern Recognition, Global gene expression studies-DNA Micro array.

UNIT V: Applications of Bioinformatics

Applications of Bioinformatics-Molecular medicine, biotechnology, agricultural, Computer Aided Drug Designing-structure and ligand-based drug designing, ADME profiles, QSAR. receptors, docking, Introduction to molecular dynamics simulation.

SUGGESTED READINGS

7. Rastogi S.C and Mendiratta, N., (2006). Bioinformatics Methods and applications Genomics, Proteomics and Drug Discovery 2nd Edition, Parag Rastogi Publication, India.
8. Sundararajan, S., and Balaji, R., (2003). Introduction to Bioinformatics, Himalaya Publishing House, Mumbai.

Course objectives**Equip the students**

- To make the student to understand the concept of gene manipulation and gene transfer technologies.
- To understand the concept of recombinant DNA technology or genetic engineering
- To interpret the characterization of recombinant protein
- To infer the knowledge on cDNA
- To expose students to application of recombinant DNA technology in biotechnological research.
- To train students in strategizing research methodologies employing genetic engineering techniques.

Course outcomes (CO's)**After completion of this course the student will**

1. Understand the application of genetic engineering techniques in basic and applied experimental biology
2. Learn the concept of recombinant DNA technology or genetic engineering
3. Understand the expression of gene cloning vectors
4. Explore the knowledge on genomic library
5. Proficiency in designing and conducting experiments involving genetic manipulation.
6. Describe DNA fingerprinting, and restriction fragment length polymorphism (RFLP) analysis and their applications.

UNIT I: Introduction to gene manipulation

Basic techniques- Isolation and purification of nucleic Acids, Agarose gel Electrophoresis. Hybridization of nucleic acids-probes and types. Hybridization techniques-Southern, Northern, Western blotting. DNA and RNA markers.

UNIT II: Gene cloning vectors

Plasmids, bacteriophages, phagemids, cosmids, Artificial chromosomes- BAC, YAC, HAC. Restriction mapping of DNA fragments, Map construction, Cloning in *E. coli*- Vector engineering and codon optimization. Gene expression in *E.coli*. Expression vector- PET vector. Genomic library.

UNIT III: Isolation and characterization of gene transcripts

Introduction, Converting mRNA transcripts into cDNA, Screening representative cDNA libraries, Functional sequencing of cDNA expression libraries. Expressed cDNAs compared

with computer databases. Characterization of recombinant proteins- Processing, purification and refolding and stabilization-Insulin, hGH, tpA.

UNIT IV: Mutagenesis

Site-directed mutagenesis, *In vitro* mutagenesis-Linkers, synthetic oligonucleotides and transposons, Role of Tagging in gene analysis, Identification and isolation of genes through T-DNA or transposons.

Gene therapy- Different strategies for gene therapy, therapeutics based on targeted exhibition of gene expression and mutation correction *in vivo*, Gene therapy for inherited diseases, ADA, FH, Cystic fibrosis.

UNIT V: Transgenics

Gene transfer techniques- Microinjection, biolistic methods, vector based transfer.

Transgenic plants: Agrobacterium & Ti plasmids. Methods of engineering herbicide resistance plants, Stress resistance plants and modification of plant nutritional content (amino acids, β - carotene) Plants as bioreactors: edible vaccines.

Transgenic animals: Method of Engineering transgenic mice, transgenic cattle- applications Biosafety- regularities and concerns. Societal impact of genetically modified food.

SUGGESTED READINGS

7. Strachan, T., and Read, A.P., (2003). Human Molecular Genetics, 3rd edition. John Wiley and Sons,Toronto. Canada.

Course objectives**Equip the students**

- To impart the knowledge on basic tissue culture techniques and limitations in products
- To study about tissue culture laboratory and safety – biohazards
- To extrapolate the different types of culture media
- To understand the various types of cultures
- To learn synchronization of cell cultures and cell division
- To know the importance of stem cell research and its applications.

Course outcomes (CO's)**After completion of this course the student will be able to**

1. Demonstrate foundational knowledge of Cell culture techniques and competence in laboratory techniques.
2. Set up a tissue culture lab to carry out research based on cell lines.
3. Extrapolate the different types of culture media
4. Understand the various types of cultures
5. Learn synchronization of cell cultures and cell division
6. Know the importance of stem cell research and its applications.

UNIT I: Introduction to cell culture

Introduction, importance, history of cell culture development, different tissue culture techniques including primary and secondary culture, continuous cell lines, suspension culture, organ culture, advantages and limitations medical/pharmaceutical products of animal cell culture-genetic engineering of animal cells and their applications. Risks in a tissue culture laboratory and safety - biohazards.

UNIT II: Different types of cell culture media

Different types of cell culture media, growth supplements, serum free media, balanced salt solution, other cell culture reagents, culture of different tissues and its application. Facilities for animal cell culture-infrastructure, equipment, culture vessels. Biology and characterization of cultured cells-cell adhesion, proliferation, differentiation, morphology of cells and identification.

UNIT III: Types of cell culture techniques

Primary cell culture techniques - mechanical disaggregation, enzymatic disaggregation, separation of viable and non-viable cells. Mass culture of cells - manipulation of cell line selection - types of cell lines -maintenance of cell lines - immobilization of cells and its

application - synchronization of cell cultures and cell division - production of secondary metabolites - biotransformation - Induction of cell line mutants and mutations - cryopreservation – germplasm conservation and establishment of gene banks.

UNIT IV: Animal cell culture scale up

Animal cell culture scale up: Scale up in suspension - stirrer culture, continuous flow culture, air-lift fermentor culture; Scale up in monolayer - Roller bottle culture, multi surface culture, multi array disks, spirals and tubes - monitoring of cell growth. Organ culture - whole embryo culture - specialized culture techniques - measurement of cell death.

UNIT V: Tissue engineering

Tissue engineering: Design and engineering of tissues - tissue modeling. Embryonic stem cell engineering - ES cell culture to produce differential cells - Human embryonic stem cell research. Transgenic animals-transgenic animals in xenotransplantation

SUGGESTED READINGS

Course objectives**Equip the students**

- To provide a comprehensive theoretical knowledge on genomics and proteomics
- To learn the fundamentals, current techniques and applications.
- To update and strengthen basic concepts in proteomics and genomics
- To address the modern biological issues.
- To use the different methodologies, techniques and tools commonly used in genome sequencing, assembly and annotation.
- To understand the Characterization of protein complexes

Course outcomes (CO's)**After completion of this course the student will be able to**

1. Identify and describe the different components in prokaryotic and eukaryotic genomes and proteomes.
2. Identify molecular mechanisms responsible for diseases.
3. Use the different methodologies, techniques and tools commonly used in genome sequencing, assembly and annotation.
4. Use the different methodologies, techniques and tools commonly used in proteomics.
5. Address the modern biological issues.
6. Characterize the protein complexes

UNIT I: Genome Analysis

Introduction to Genes, Genome organization –prokaryotes and eukaryotes, Genetic markers- RFLP, Mini and Micro satellite, STS, EST, SSCP, RAPD, RFLP, SNP and SSR. Human Genome and Genomic analysis: Size, features, composition and characteristics of human genome – Sequence repeats, transposable elements, gene structure and pseudogenes.

UNIT II: Sequencing Genomes

Sequencing Genomes- methodology, chain termination method, chemical degradation method, shotgun sequencing and assembly of contiguous DNA sequence. cDNA and genomic library construction. Genomic Mapping: Different types of Genome maps and their uses, Genetic and Physical mapping techniques. Map resources. Practical uses of genome maps, NGS

UNIT III: Gene Expressions and Microarrays

Concepts of microarrays, spotter analysis, Normalization –total intensity, using regression techniques, ratio statistics. Clustering Gene expression profiles-hierarchical, single-linkage, complete linkage, and average linkage. Tools for microarray analysis- MADAM, spot finder, SAGE Applications of Microarrays- Bioinformatics challenges in micro array design and analysis.

UNIT IV: Analytical Proteomics

RP-HPLC, Proteome analysis- 2D gel electrophoresis: general strategy, immobilized pH gradients, sample preparation, isoelectric focusing, second dimension PAGE, staining, transfer of proteins from 2D gels, image acquisition and analysis of 2D gels. 2DE databases. Mass Spectrometry – ESI MS and MALDI techniques and applications.

UNIT V: Experimental Proteomics

Characterization of protein complexes – protein-protein interactions, yeast two-hybrid system and protein micro arrays. Proteomics in drug discovery.

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To understand the Molecular structure, functions of cells, molecules such as DNA, RNA, proteins.
- To understand the principles of animal cell culture and its application.
- To learn the knowledge on quantity of DNA by Diphenylamine method
- To infer the Estimation of RNA by Orcinol method
- To know the Preparation of competent *E coli*- transformation
- To explore the knowledge on Ligation of DNA

Course outcomes (CO's)**After completion of this course the student will perform**

1. To demonstrate knowledge and understanding of the molecular machinery of living cells, cell and tissue culture to manipulate.
2. To explore the genomes of animals for ways to improve the livestock for food production and biomedical purpose as well as and to analyse, interpret, and participate in reporting to their peers on the results of their laboratory experiments.
3. Identification of DNA by Agarose gel electrophoresis
4. Estimation of RNA by Orcinol method
5. Preparation of competent *E coli*- transformation
6. Ligation of DNA

MOLECULAR BIOLOGY

1. Isolation of DNA and RNA from liver
2. Estimation of DNA and RNA - UV method
3. Estimation of DNA by Diphenylamine method
4. Estimation of RNA by Orcinol method
5. Estimation of Protein by Lowry's method
6. Culturing and Isolation of Plasmid DNA
7. Agarose gel electrophoresis of DNA
8. Restriction digestion analysis of DNA (Demonstration)
9. Preparation of competent *E coli*- transformation (demonstration)
10. Determination of Molecular weight of polypeptides by SDS PAGE (group)
11. Polymerase Chain Reaction for amplification of DNA (demonstration)
12. Ligation of DNA
13. Southern Blot Analysis (Demonstration)
14. Western Blotting (Demonstration)

ANIMAL TISSUE CULTURE (Demonstration)

15. Preparation and Sterilization of media

16. Cell lines and maintenance -Trypsinisation, Passaging, Staging
17. Cell counting and cell staining
18. Cell viability determination – Tryphan blue exclusion.

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

To make the students

- To provide hands on experience on various biological databases
- To learn the retrieval of data from the biological databases
- To make them learn about pair wise and multiple sequence analysis.
- To learn and apply the statistical approaches
- To study the models for phylogenetic analysis and tree reconstruction.
- To teach them protein prediction methods and its validation.

Course outcomes (CO's)

The students shall be able to

1. The course will enable students to use various biological databases
 2. The importance functions in the biological system.
 3. The use computational approaches for pair wise, multiple and phylogenetic analysis.
 4. Aware to predict the physio-chemical properties, protein structure and validation using computer-based labs.
 5. Solve the biological problems using various computational tools and techniques.
 6. Visualization of Protein structure by RASMOL.
-
1. Biological Databanks Sequence databases, Structure Databases, Specialized databases
 2. Data base file formats.
 3. Data retrieval tools and methods (PUBMED, ENTREZ, SRS)
 4. Sequence Similarity searching (NCBI- BLAST, FASTA)
 5. Protein sequence analysis (ExpASY proteomics tools)
 6. Multiple sequence alignment (Clustal-W)
 7. Gene structure and function prediction (Using ORF Finder, Genscan, GeneMark)
 8. Molecular Phylogeny (PHYLIP)
 9. Sequence Analysis using EMBOSS
 10. Protein structure visualization – RASMOL (Menu function and Command line entries), Deep View.

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives**Equip the students with**

1. Specialized immune cells and their function
2. Mechanisms of humoral immunity
3. Mechanisms of cell mediated immunity
4. Hyperactivation of immune cell and associated pathogenesis
5. Basis behind immunodeficiency diseases
6. Utility of immune based principles in diagnostic field

Course outcomes (CO's)**After successful completion, the students will understand:**

1. The structure and functions of specialized immune cells
2. Basis of humoral immunity
3. Basis of cell mediated immunity
4. Hypersensitivity reactions (I-V)
5. Hereditary and acquired immunodeficiency diseases
6. Utility of immune based principles in diagnostic field

UNIT I: Cells and Organs of the Immune System

Primary and secondary lymphoid organs, Overview of immune stem cells - Lymphoid cells, mononuclear, granulocytes, mast cells and dendritic cells. Lymphoid classes B, T and NK – B & T Cell maturation, activation and differentiation; Lymphocyte surface markers, CD nomenclature. Innate immune responses: Physical, chemical, biological barrier immunity. Cell-mediated and humoral response, soluble molecules and membrane associated receptors (PRR), connections between innate and adaptive immunity cell adhesion molecules, complements (classical and alternate pathways), chemokines, leukocyte extravasation, localized and systemic response.

UNIT II: Antigen

Epitope, B cell and T cell epitope, haptens, viral and bacterial antigens; factors influencing adjuvant technology. Immunoglobulins-domains, B cell receptors, antigenic determinants on immunoglobulins, Immunoglobulin super family. Immunoglobulin genes: multigene family; Immunoglobulin rearrangement- antibody diversity - Burnet's clonal selection theory. Cell-mediated immunity – MHC: organization, MHC molecules and genes, MHC class-I/II and non-MHC antigen presentations.

UNIT III: Hypersensitivity and Autoimmunity

Coombs & Gell classification, IgE mediated (Type I), antibody mediated cytotoxic (Type II), immune- complex mediated (type III) and cell-mediated (Type IV) hypersensitivity, Principles of autoimmunity and autoimmune diseases, MHC and immune responsiveness,

transplantation and rejection, tumor immunology, primary and secondary immunodeficiency disorders.

UNIT IV: Immunity to infection

Definition and types of immunity, Vaccines: active and passive immunization, types of vaccines with examples. Immune responses against bacterial, viral, fungal and parasitic agents. Evasion of infectious agents from immune system, Monoclonal antibodies - Production and applications.

UNIT V: Immunodiagnostics

Antigen-antibody interactions - precipitation reaction, agglutination tests - haemagglutination; complement fixation test, direct and indirect immunofluorescence, immunoprecipitation, RIA, ELISA, CMIA, ECLIA, Immunoblotting, effector cell assay, hemadsorption, hemolytic plaque and ELISPOT assays.

Course objectives**Equip the students with:**

- Biological fluid collection and analysis
- Blood cell counting
- Assessment of inflammatory markers
- Estimation of clinically relevant enzymes
- Diagnosis of cancer
- Assessment of endocrine pathophysiology

Course outcomes (CO's)**After successful completion, the students will:**

1. Collect and analyze biological fluid
2. Count the total RBC and different WBC using hemocytometer
3. Learn the assessment of CRP, RA and ESR
4. Perform estimation of clinically relevant enzymes
5. Understand the cancer marker assessment
6. Understand the endocrine pathophysiology

UNIT I: Clinical Samples

Blood collection, processing and transfusion process. Normal blood profile. Cerebrospinal fluid: Composition, clinical investigation of CSF in meningitis. Amniotic fluid: Origin, composition and analysis of amniotic fluid. Collection of urine Urine preservatives. Test for urine compounds. Clinical significance of urinary components.

UNIT II: Serology and Hematology

C- reactive protein test, immunological test for pregnancy. Rheumatoid arthritis (RA) test, ESR. Coagulation test, prothrombin test. Haemoglobin Normal and abnormal Hb, separation of haemoglobin, Thalassemia, Hemoglobinopathies. Disorder of erythrocyte metabolic pathways, erythrocyte enzyme disorders. Porphyrins and disorder: porphyrias.

UNIT III: Clinical Pathology

Myocardial infarctions, hepatobiliary disease. - Enzyme tests in determination of myocardial infarction. Diagnostic enzymes: Principles of diagnostic enzymology. Clinical significance of aspartate aminotransferase, alanine aminotransferase, creatine kinase, aldolase and lactate dehydrogenase. Enzymes of pancreatic origin and biliary tract. Clinical significance of electrolytes. AIDS- Clinical diagnosis. Diagnosis of genetic diseases by molecular biology techniques (cystic fibrosis, Hemachromatosis, thalassemias, sickle cell diseases).

UNIT IV: Oncology

Oncogenes and cell cycle, Etiology-Free radical induced cancer. Free radical scavengers. Antioxidants in disease prevention. Benign and malignant types- Different stages of cancer progression- Cancer Markers. Therapy-Chemotherapy, radiotherapy, hormonal therapy and phytotherapy. Diagnosis of various cancers.

UNIT V: Pathophysiology

Pathophysiology of hypothalamus and pituitary (dwarfism, Klienfelter syndrome, adenoma, galactorrhea, amenorrhea). Pathophysiology of thyroid cretinism, myxedema, hashimoto's (autoimmune thyroid disorder), hypo- and hyperparathyroidism, bone (osteopenia and osteoporosis), adrenal (Cushing syndrome and Addison's disease) Pancreas (IDDM and NIDDM) and gonads (cystic ovaries, endometriosis, hypogonadism, cryptorchidis and testicular carcinoma).

7. Murray, R.K., Granner, D.K., Mayes, P.A., Rodwell, V.W.,(2012). Harper's illustrated Biochemistry, Appleton and Lange Publishers, London, 29th edition

Course objectives**Equip the students with:**

1. Hypothalamo - Hypophyseal axis
2. Classification of hormones
3. Mechanism of action of peptide and steroid hormones
4. Endocrine pathologies
5. Endocrinology of pregnancy
6. Investigative techniques in endocrinology

Course outcomes (CO's)**After successful completion, the students will understand:**

1. Hypothalamo - Hypophyseal axis
2. Different classification of hormones
3. Functioning of peptide and steroid hormones
4. The molecular and cellular basis of endocrine pathologies
5. Role of hormones in different stages of gestation
6. The techniques involved in the assessment of endocrine functions

Unit I: General Introduction

General Introduction, Hypothalamo-hypophyseal axis, Chemical signaling – endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Chemical classification of hormones, transport of hormones in the circulation and their half-lives. Hormone receptors – extracellular, transmembrane and intracellular. Receptor – hormone binding, Scatchard analysis, recycling and degradation of receptors. Releasing/release-inhibiting hormones (TRH, GnRH, CRH, GHRH, somatostatin, dopamine), their structure, secretion and regulation.

Unit II: Protein/Peptide hormones

Protein/Peptide hormones, Steroid and Thyroid hormones, GH, prolactin, ACTH, insulin, glucagon, PTH and calcitonin, and glycoprotein hormones (TSH, FSH, LH and hCG) – Structure, synthesis, secretion, regulation, transport and metabolism.

Unit III: Hormones and gonads

Physiological action of hormones in the regulation of spermatogenesis, sperm maturation, oogenesis and menstrual/estrus cycles. Gonadal and adrenal steroidogenesis. Cell-cell communication – Two cell concept. Hormonal control of implantation, gestation, parturition and lactation; hormonal contraception. Semen analysis.

Unit IV: Hormone action

Protein and steroid hormone receptors and their signaling cascades; non-genomic actions; Ras-Raf-MAPK signaling - PI3K signaling. Genomic actions of hormones - thyroid hormone nuclear receptor superfamily. Renin-angiotensin system, atrial natriuretic hormones. Vasopressin and water retention.

Unit V: Investigative techniques in endocrinology

Hormone assays, RIA, IRMA, ELISA, Radio receptor assay, extraction, purification, and quantification of hormone receptors (cell surface, cytosolic and nuclear receptors). Radiolabeling techniques – Radioiodination of peptides, autoradiography. Properties of different types of radioisotopes commonly used in biology, radioactivity, detection and measurement of radioactivity, safety guidelines and disposal procedures.

SUGGESTED READINGS

5. Widmaier, E.P., Raff, H. and Strang, K.T. Vander's Human Physiology (2008) 11th ed., McGraw Hill International Publications, ISBN: 978-0-07-128366-3.

Course objectives**Equip the students with**

- Pharmacokinetics
- Pharmacodynamics
- Drug tolerance and dependence
- Genetically engineered drugs
- Mechanism of action of drugs
- Undesired effects of drugs

Course outcomes (CO's)**After successful completion, the students will understand**

1. What the body does to a drug
2. What a drug does to a body
3. Drug dependence
4. The principles and procedure for genetically engineered drugs
5. How the drugs elicit the desired effect
6. Undesired effects of drugs

UNIT I: Basic concepts of Drugs

Drugs – Introduction, sources and routes of administration, Structural features and pharmacological activity, prodrug concept, Adsorption – factors modifying drug absorption. Distribution, metabolism - phase I, II reactions, action of cytochrome P450 and excretion of drugs.

Drug receptors – Localization, types and subtypes, models and theories. G-protein coupled receptor and ion-channel linked receptors. Examples of drug-receptor interactions. Agonists and antagonists. Bioavailability of drug

UNIT II: Assay of Drug

Drug tolerance and drug dependence. Principles of basic pharmacokinetics. Adverse response to drugs, drug intolerance, pharmacogenetics, drug allergy, tachyphylaxis, drug abuse, vaccination against infection, factors modifying drug action and effect. Assay of drug potency: chemical, bioassay and immunoassay.

UNIT III: Engineered Protein

Genetically engineered protein and peptide agents as drugs, Novel drug delivery systems, anti-AIDS drug development, oncogenes as targets for drugs, multidrug resistance phenotypes, production of secondary metabolites by plant tissue culture. Genome based medicine.

UNIT IV: Mechanism of action of drugs used in therapy

Mechanism of action of drugs used in therapy of Respiratory system – cough, bronchial asthma, pulmonary tuberculosis. Antimicrobial drugs – sulphonamides, trimethoprim,

penicillins, aminoglycosides and bacterial resistance, Cancer chemotherapy. Thyroid and antithyroid drugs, insulin and oral antidiabetic drugs, antifertility and ovulation inducing drugs. Pharmacotherapy of gout and rheumatoid arthritis, Immuno therapy – Immunosuppressants and immunostimulants, Enzymes in therapy.

UNIT V: Neurotransmitter Drugs

Brain – Neurotransmitters, encephalins and endorphins; general function of autonomic and somatic nervous system; cholinergic transmission and receptors; adrenergic transmission and receptors; muscarinic receptors. Non steroidal and anti inflammatory drugs; adrenergic blocking drugs; cholinergic blocking drugs; muscarinic blocking drugs; parkinson's disease; Alzheimer's disease. Neurodegenerative disorders – Amyotrophic lateral sclerosis, senile dementia, schizophrenia, Huntington's disease.

5. Grahame-Smith, D.G., and Aronson, J. K., (2002). Oxford textbook of Clinical Pharmacology and Drug Therapy: 3rd edition. Oxford University Press.
6. Foye, W.O., Lemke, T.L., Williams, D.A., (2012). Principles of Medicinal Chemistry, 7th edition, B.I. Wanerly Pvt. Ltd, New Delhi.
7. Wolf, E.,(1995). Burgers Medicinal Chemistry and Drug Discovery. Principles and Practice, John Wiley and Sons, Manfred.

Course objectives**Equip the students with:**

- Definition and representation styles of data
- Analysis of data using correlation to understand the interdependence
- Analysis of data using regression to understand the interdependence
- To learn various measures of central values and standard deviation.
- To understand the relationship between two variables.
- To test the significance of a particular data by various parameters.

Course outcomes (CO's)**After successful completion, the students will:**

1. Use appropriate representation styles to present the data
2. Perform correlation analysis
3. Perform regression analysis
4. Calculate mean, median, mode and standard deviation.
5. Calculate the relationship between two variables.
6. Test the significance of a particular data by various parameters.

UNIT I: Introduction to Biostatistics

Definition and scope of Biostatistics- Statistical survey-organizing , planning and executing the survey; Sources of data-primary and secondary data, Collection of data-Methods of data collection; Classification and tabulation of data- Graphical and diagrammatic representation. Measures of central tendency – Arithmetic mean, median, mode, quartiles, deciles and percentiles. Measures of dispersion- Range, quartile deviation, mean deviation and standard deviation, Coefficient of variation.

UNIT II: Correlation and Regression

Correlation: Meaning and definition - Scatter diagram –Karl Pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT III: Probability

Probability- Definition, concepts, theorems (proofs of the theorems not necessary) and calculations of probability-simple problems, theoretical distributions-Binomial, Poisson and Normal distribution – simple problems

UNIT IV: Sampling distribution and test of significance

Sampling distribution and test of significance – concepts of sampling, testing of hypothesis, errors in hypothesis testing, standard errors and sampling distribution– Student's t test, F-

test, Chi square test - goodness of fit. Analysis of variance – one way and two way classification. CRD, RBD Designs. Duncan's multiple range tests.

UNIT V: Introduction to Research

Research: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs.

Sources of information: Journals, eJournals, books, biological abstracts, preparation of index cards, review writing, article writing – structure of article, selection of journals for publication – Impact factor – citation index and H index. Proposal writing for funding. IPR and patenting. Concepts and types.

SUGGESTED READINGS

1. Gupta, S.P., (2007). Statistical Methods, Sultan Chand & Co, New Delhi.
2. Kothari, C.R., (2009). Research Methodology – Methods and Techniques, 3rd edition, New Age International Pvt. Ltd, New Delhi.
3. Sundar Rao, P.S.S., and Richard, J., (2006). Introduction to Biostatistics and Research Methods, PHI Publication, New Delhi.
4. Sandhu, T., (1990). Research Techniques in Biological Sciences, Anmol Publishers, New Delhi.

Course objectives**Equip the students with:**

- The process of drug discovery
- Pre-clinical studies
- Components of clinical research (Phases)
- Questionnaire preparation
- Fundamentals of IPR
- Patents laws

Course outcomes (CO's)**After successful completion, the student will understand:**

1. Steps involved in drug discovery
2. Using small experimental animals
3. Phase 2 and Phase 3 trials
4. Questionnaire preparation
5. Intellectual property rights
6. Patents laws

UNIT I: Drug discovery and Development

Introduction to Pharmaceutical Industry, New drug discovery-Target Identification- Target Prioritization/ validation, Lead identification, Lead optimization; Preclinical studies - Preclinical technology, Chemistry manufacturing and controls / Pharmaceutics Pharmacology/Toxicology

UNIT II: Basics of Clinical Research

Definition of clinical research and development, History of randomized trial Literature - Finding and Evaluation databases of Scientific Literature; Critiquing of Research Projects, Time management and resource implications

UNIT III: Epidemiology

Experimental Procedures - Controlled Experiments, Sampling Techniques, Questioner Design, Validity and reliability of observations, Primary variables, Acquisition and using secondary data, Randomization and Blinding: Theory and practice

UNIT IV: IPR

Introduction to Copyright - Conceptual Basis, International Protection of Copyright and Related rights- An Overview (International Convention/Treaties on Copyright). Indian Copyright Law -The Copyright Act, 1957 with its amendments, Ownership, transfer and duration of Copyright, Renewal and Termination of Copyright.

UNIT V: Patent

Introduction to Patent Law - Paris Convention, Patent Cooperation Treaty, WTO- TRIPS, Harmonisation of CBD and TRIPs. Indian Patent Law- The Patents Act, 1970, Amendments to the Patents Act, Patentable Subject Matter, Patentability Criteria, Procedure for Filing Patent Applications, Patent Granting Procedure.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students with**

- Nutrition as a drug
- Dietary management of diabetes
- Dietary management of obesity
- Dietary management of cardiovascular diseases
- Nutrition deficiency affecting hematopoiesis and diet for individual with cancer
- Dietary management of musculoskeletal diseases

Course outcomes (CO's)**After successful completion, the students will understand:**

1. Nutrition as a drug
2. Dietary management of diabetes
3. Dietary management of obesity
4. Dietary management of cardiovascular diseases
5. Nutrition deficiency affecting hematopoiesis and diet for individual with cancer
6. Dietary management of musculoskeletal diseases

UNIT-1: Nutrition

Foods for normal nutrition. Diets in gastrointestinal diseases-Acute gastrointestinal conditions, chronic and non-acute disorders of the upper gastrointestinal tract, lower gastrointestinal conditions, pancreatitis, liver diseases, gall stones, appendicitis, cholelithiasis. Diet for hepatitis

Nutrition for critically ill- Burns, Enteral nutrition, Enteral feeding vs parenteral feeding, Indications of enteral nutrition, Types of enteral feed formula, Complications of enteral feeding. Parenteral nutrition- Techniques of infusion, Complications of parenteral feeding.

UNIT II: Diet for diabetes mellitus

Nutrition recommendations for patient with diabetes, Meal planning, Exchange list of different food groups, Diabetic diets based on exchange list, Diabetic diets menu wise.

Diets in Renal disease- Acute renal failure, Proteinuria, Indoor diet charts for renal patients.

UNIT III: Diet for Cardiovascular Diseases

Risk Factors, Hypertension, Atherosclerosis, Stroke and other peripheral diseases, Cardiomyopathy and cardiac failure, Rheumatic heart disease, dietary management, general guidelines for coronary heart disease, Dietary recommendations of WHO. Diet for Acute cardiac diseases

Obesity- Body fat distribution, Health risks of obesity, Weight reduction, Factors contributing to obesity.

UNIT IV: Cancer and diet therapy

Influence of diet on carcinogenesis, Dietary risk factors and cancers at various sites in the human body, diet therapy, eating well during cancer treatment, managing eating problems during treatment

Diet for inborn errors of metabolism- phenylketonuria, Galactosaemia, Celiac disease.

UNIT V: Nutrition related disease

Nutrition related bone disease- osteoporosis.

Dietary factors in dental disease- Starch & dental cavities, protective factor in food

Blood –Nutrition deficiency affecting hematopoiesis.

Instruction hours/week: L:0 T:0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**To impart hands-on training in:**

- Assays of clinically relevant enzymes
- Diagnostic utility of enzyme assays
- Radial immunodiffusion
- Double immunodiffusion
- Immunoelectrophoresis
- Glucose tolerance test

Course outcomes (CO's)**After successful completion, the students will understand:**

1. Various methods of assaying clinically relevant enzymes
2. The diagnostic significance of enzyme assays
3. Working knowledge principle of Radial immunodiffusion
4. Working knowledge principle of Double immunodiffusion
5. Working knowledge principle of Immunoelectrophoresis
6. Working knowledge principle of Glucose tolerance test

ENZYMOLOGY

1. Determination of the activity of the following serum enzymes:
 - a. LDH
 - b. Acid phosphatase
 - c. Alkaline phosphatase
 - d. Aspartate amino transferase
 - e. Alanine amino transferase
 - f. 5' nucleotidase
 - g. Sodium potassium ATPase
 - h. Ceruloplasmin

IMMUNOLOGY (DEMONSTRATION)

2. Raising of antibodies- single soluble and particulate antigen
3. Immunodiffusion- single radial and double diffusion.
4. Immunoelectrophoresis.
5. Rocket immunoelectrophoresis
6. ELISA
7. Bacterial Agglutination: WIDAL
8. Antibody titration – ELISA

Case study-Report

9. Serum enzyme in liver disease

10. Serum enzyme in cardiac disease
11. Serum enzyme in cancer disease
12. Glucose Tolerance Test

Instruction hours/week: L:0 T:0 P:4**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives****To impart hands-on training in:**

- The estimation of biomolecules such as glucose and cholesterol
- Assessment of renal function through the analysis of urea and uric acid in serum
- Assessment of liver function through the estimation of bilirubin
- The determination and significance of A/G ratio
- Handling experimental animals
- Various routes of injections

Course outcomes (CO's)**Upon successful completion of this course, students will be able to:**

1. Explain the physiopathological bases and the biochemical markers of the most prevalent diseases in our population
2. Perform the estimation of biomolecules such as glucose and cholesterol
3. Assess renal function through the analysis of urea and uric acid in serum
4. Assess liver function through the estimation of bilirubin
5. Determine A/G ratio and interpret its relevance
6. Handle the small experimental animals
7. Understand the differences and significance of routes of injections

Clinical analysis

1. Estimation of glucose in serum
2. Estimation of cholesterol in serum
3. Estimation of urea in the urine and serum
4. Estimation of uric acid in the urine and serum
5. Estimation of chloride in the urine and serum
6. Estimation of calcium in the urine and serum
7. Estimation of magnesium in the urine and serum
8. Analysis of urinary calculi
9. Estimation of Bilirubin in serum(Kit method)
10. Determination of A/G ratio
11. Estimation of triglyceride in serum (Kit method)
12. Estimation of HDL in serum (Kit method)

ANIMAL STUDIES (Group experiment)

13. Handling of animals
14. Methods of injection
15. Induction of liver toxicity
16. Assay of lipid peroxidation in rat liver.

PROGRAMME OUTCOMES (POs)

- a) Graduates will acquire in-depth understanding of basic concept, knowledge about biochemistry and cell organelles, their functions for applied field, allied subject and life skills.
- b) The students will be able to discuss the metabolic aspects of biomolecules.
- c) The Graduates will gain the technical capability of handling, isolating and identifying various organisms from different sources.
- d) Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students.
- e) The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes.
- f) Understand the role of different types of cells, effectors and effectors mechanisms in immune-technology by the students.
- g) Develop skills associated with screening of industrially important strains, various aspects of bioprocess technology and rDNA technology by the graduates.
- h) The student will be able to understand the production of enzymes from different sources and enzyme characterization and kinetic actions in living organisms.
- i) The student will be able to understand the production of transgenic plants and animals for human and environmental welfare.
- j) Understand the basic concepts and modern knowledge of bioinformatics by graduates.
- k) Apply the knowledge and skills gained from molecular aspects should be useful in developing new innovations in different life forms by the graduates.
- l) The student will be able design, solve the application-oriented problem in biotechnological field through project-based learning.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

To enable the student to emerge as:

- m) Proficiency to work on biotechnological concepts and interdisciplinary areas of science and technology towards product and process development for industrial and academic research applications.
- n) An expert in Biotechnology and allied fields (medical, microbial, agricultural, environmental, plant and animal) for utilizing the practical skills to address biotechnological challenges.
- o) Proficiency to demonstrate entrepreneurial and leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

To impart the following PEOs to the students of Under-graduates in Biotechnology:

PEO I : To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills.

PEO II : To provide information about the molecular methods which involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms.

PEO III : To impart the basics and current molecular tools in the areas of Molecular Diagnostics, Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where biological system is employed.

PEO IV : To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life.

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல்.
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு – I : இக்கால இலக்கியம்:

(10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம் பிள்ளை – ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் – மலையாளக் காற்று.

சூழலியல் : கவிஞர். வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம்: கவிஞர். சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்:

(10 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்:

(10 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

- To train students to acquire proficiency in English.
- To explore different genres of literature and learning grammar.
- To provide aesthetic pleasure through literature.
- To inculcate moral values through literature.
- To develop ethical values.
- To give basic grammar knowledge.

Course Outcomes

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV: Drama

1. The Merchant of Venice- Act 4-Scence 1
2. The Death Trap- Saki

UNIT - V: Grammar and Composition**GRAMMAR :**

1. Tenses
2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

COMPOSITION:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

Prescribed Text:

Reminisce, Published by the Department of English, KarpagamAcademy of Higher Education.

Suggested Reading:

1. Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press

Course Objectives

The main objectives of the course are,

- To provide clear understanding on the underlying principles, structures and functions of bio molecules.
- To acquire fundamental knowledge about the anabolism and catabolism in living organisms.
- To obtain the facts of metabolism and its disorders in the living system.
- To implement experimental protocols, and adapt them to plan and carry out simple investigations.
- To expose the students to a wide range of careers that combine biology, plants and medicine.
- To understand the principles that govern the structures of macromolecules and their participation in molecular recognition.

Course Outcomes

The learners will be able to,

1. To acquire knowledge on the structure, functional relationship of proteins, nucleic acid, carbohydrates and their roll in various biological processes.
2. To know about the role of various enzymes in metabolic process.
3. To quench the in-depth concepts of metabolism related disorders.
4. To know how genes are transmitted between generations, and how and when errors can arise.
5. To plan and safely perform fundamental techniques in molecular and cellular biology.
6. To get awareness of the ethical aspects of molecular science.

UNIT- I

Introduction to macromolecules: Amino acids & Proteins: Structure, properties and function of Amino acids and Protein, Amino acid and protein classification. Protein Purification. Denaturation and renaturation of proteins. Fibrous and globular proteins.

UNIT-II

Carbohydrates and Metabolism: Carbohydrates: Structure, Function and properties of Monosaccharides, Disaccharides and Polysaccharides. Bacterial cell wall polysaccharides, Glycoprotein's and their biological functions; Glycolysis: Fate of pyruvate under aerobic and anaerobic conditions. Pentose phosphate pathway and its significance, Gluconeogenesis, Glycogenolysis and glycogen synthesis. TCA cycle.

UNIT-III

Enzymes: Nomenclature and classification of Enzymes, Holoenzyme, apoenzyme, Cofactors, coenzyme, groups, metalloenzymes, monomeric & oligomeric enzymes, activation energy and transition state, enzyme activity, specific activity, common features of active sites, Role of: NAD⁺, NADP⁺, FMN/FAD, coenzymes A, Thiamine pyrophosphate, Pyridoxal phosphate, lipoic-acid, Biotin vitamin B12, Tetrahydrofolate and metallic ions. Photosynthesis – Photosystem I and II.

UNIT-IV

Lipids: Structure and functions –Classification, nomenclature and properties of fatty acids, essential fatty acids. Phospholipids, sphingolipids, glycolipids, cerebrosides, gangliosides, Prostaglandins, Cholesterol. β -oxidation of fatty acids.

UNIT-V

Nucleic acids: Structure and functions: Physical & chemical properties of Nucleic acids, Nucleosides & Nucleotides, purines & pyrimidines, Biologically important nucleotides, Double helical model of DNA structure, A, B & Z – DNA, denaturation and renaturation of DNA

Suggested Reading:

1. Buchanan, B., Gruissem, W., & Jones, R. (2015). *Biochemistry and Molecular Biology of Plants* (2nd ed.). American Society of Plant Biologists.
2. Nelson, D.L., & Cox, M.M. (2013). *Lehninger: Principles of Biochemistry* (6th ed.). New York: W.H. Freeman and Company.
3. Murray, R.K., Bender, D.A., Botham, K.M., & Kennelly, P.J., (2012). *Harper's illustrated Biochemistry* (29th ed.). London : McGraw-Hill Medical.
4. Berg, J. M., Tymoczko, J. L., & Stryer, L. (2006). *Biochemistry* (6th ed.). Newyork : W.H. Freeman & Company.
5. Hopkins, W.G., & Huner, P.A. (2008). *Introduction to Plant Physiology* (2nd ed.). John Wiley & Sons.

Course Objectives

The main objectives of the course are,

- To provide the fundamental knowledge on structures and role of basic components in prokaryotic and eukaryotic cells.
- To understand the structures and role of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles
- To understand the mechanism of cellular components underlying mitotic cell division.
- To understand how energy is used and generated in cells.
- To understand that evolution entails changes in the genetic composition of cells.
- To understand the gene expression regulation during embryogenesis and mis-regulation in carcinogenesis.

Course Outcomes

The learners will be able to,

1. Understand the composition of prokaryotic and eukaryotic cells and its function.
2. Acquire information about intracellular and extracellular organelles and their functions.
3. Gain their knowledge to prevent cellular abnormalities and associated disorders.
4. Test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations.
5. Apply their knowledge of cell biology to selected examples of changes or losses in cell function.
6. Apply their knowledge of causal relationships between molecule/cell level phenomena ("modern" genetics) and organism-level patterns of heredity ("classical" genetics).

UNIT- I

Cell: Introduction and classification of organisms by cell structure, cytosol, compartmentalization of eukaryotic cells, cell fractionation. Cell Membrane and Permeability: Chemical components of biological membranes, organization and Fluid Mosaic Model, membrane as a dynamic entity, cell recognition and membrane transport.

UNIT- II

Extracellular Matrix: Composition, molecules that mediate cell adhesion, membrane receptors for extra cellular matrix, macromolecules, regulation of receptor expression and function. Signal transduction.

UNIT- III

Membrane Vacuolar system, cytoskeleton and cell motility: Structure and function of microtubules, Microfilaments, Intermediate filaments. Endoplasmic reticulum: Structure, function including role in protein segregation. Golgi complex: Structure, biogenesis and functions including role in protein secretion.

UNIT-IV

Cell organelles: Lysosomes, Vacuoles and micro bodies: Structure and functions Ribosomes: Structures and function including role in protein synthesis. Mitochondria: Structure and function, Genomes, biogenesis. Chloroplasts: Structure and function, genomes, biogenesis Nucleus: Structure and function, chromosomes and their structure.

UNIT-V

Cell abnormalities: Carcinogenesis, agents promoting carcinogenesis, characteristics and molecular basis of cancer.

Suggested Reading:

1. Karp, G. (2013). *Cell and Molecular Biology: Concepts and Experiments* (7th ed.). Hoboken, US: John Wiley & Sons. Inc.
2. Cooper, G.M., & Hausman, R.E. (2013). *The Cell: A Molecular Approach* (6th ed.). Washington, USA: ASM Press & Sunderland, D.C., Sinauer Associates.
3. Becker, W.M., Kleinsmith, L.J., Hardin. J., & Bertoni, G. P. (2009). *The World of the Cell* (7th ed.). San Francisco: Pearson Benjamin Cummings Publishing.
4. De Robertis, E.D.P., & De Robertis, E.M.F. (2006). *Cell and Molecular Biology* (8th ed.). Lippincott Williams and Wilkins, Philadelphia.

Course Objectives

The student should know

- The molecular orbital theory, preparation and properties of inorganic compounds.
- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
- Elements of photochemistry, chemical kinetics and chromatography.
- About the dyes, chemotherapy and vitamins.
- About the Column, Paper and Thin Layer Chromatography.

Course Outcomes

The student understands

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
4. Elements of photochemistry, chemical kinetics and chromatography.
5. About the dyes, chemotherapy and vitamins.
6. Principles and applications of Column, Paper and Thin Layer Chromatography.

UNIT-I

Chemical Bonding: Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H_2 , N_2 and F_2 molecules. Diborane: Preparation, properties and structure. $NaBH_4$: Preparation and uses. Borazole: Preparation and properties. Interhalogen compounds: ICl , BrF_3 , IF_5 - preparation, properties, uses and structure. Basic properties of iodine. Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure. Per acids of sulphur: Preparation, properties, uses and structure.

UNIT- II

Covalent Bond: Orbital overlap, hybridization and geometry of CH_4 , C_2H_4 and C_2H_2 . Polar effects: Inductive effect-electromeric effect- mesomeric effect- steric effect- hyperconjugation.

Stereoisomerism: Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation- resolution- geometrical isomerism of maleic and fumaric acids-keto-enol tautomerism of acetoacetic esters.

UNIT-III

Industrial Chemistry: Silicones: Synthesis, properties and uses. Fuels gases: Natural gas-water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required).Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime-triple superphosphate- potassium nitrate-ammonium nitrate. Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

UNIT-IV

Elements of Photochemistry, Chemical Kinetics and Chromatography: Elements of Photochemistry: Photochemical Laws-B Beer Lambert's law-Grotthuss-Draper law-Stark-Einstein law (statement only).

Chemical Kinetics: Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions-effect of temperature on reaction rate-energy of activation.

Chromatography: Principles and applications of Column, Paper and Thin Layer Chromatography.

UNIT- V

Dyes, Chemotherapy and Vitamins: Dyes: Terms used chromophore, auxochrome, bathochromic shift and hypsochromic shift- classification of dyes – based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes- preparation. **Chemotherapy:** Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of penicillins and chloromycetin. **Vitamins:** Diseases caused by the deficiency of vitamins A, B₁, B₂, C and D-sources of these vitamins.

Suggested Reading:

1. Veeraiyan, V., & Vasudevan, A.N.S. (2005). *Text Book of Allied Chemistry* (2nd ed.). Chennai: Highmount Publishing House.
2. Puri, B.R., & Sharma L.R. (2002). *Principles of Inorganic Chemistry*. Jalandar: Shoban lal & Company Ltd.
3. Bahl, B.S., & Arun Bahl, (2005). *Advanced Organic Chemistry*. New Delhi: S. Chand & Company Ltd.
4. Puri, Sharma & Pathania, (2003). *Physical Chemistry*. Jalandhar: Vishal Publishing Company Ltd.
5. Gopalan, R. & Sundaram, S. (2003). *Allied Chemistry* (3rd ed.). New Delhi: Sultan Chand & Sons.

Course Objectives

The main objectives of the course are,

- To acquire skill on various experimental methods and techniques on order to analyze the given biological samples.
- To know the standard procedures for handling the biochemical assays and instruments.
- To know the threshold levels of primary biochemical markers.
- To analyze common organic reagents and compounds based on their properties.
- To analyze biological compounds from unknown mixture/origin.
- To Understand Good laboratory practices in a laboratory.

Course Outcomes

The learners will be able to,

1. Gain skills on quantitative estimation methods for various biomolecules from natural sources.
2. Acquire handling skills to handle the spectroscopy instrumentations.
3. Obtain skills on primary screening of biochemical markers in samples.
4. Develop skills to prepare useful reagents in the laboratory.
5. Use of handling of glass wares, minor equipment for conducting experiments.
6. Learn safety and precautionary measures for working in a laboratory.

Practical

1. Preparation of buffers.
2. Qualitative tests for Carbohydrates, lipids and proteins
3. Principles of Colorimetry: (i) Beer's law, estimation of protein. (ii) To study relation between absorbance and % transmission.
4. Separation of Amino acids by paper chromatography.
5. Estimation of blood glucose by glucose oxidase method.
6. To study activity of any enzyme under optimum conditions.
7. Determination of - pH optima, temperature optima, K_m value, V_{max} , Effect of inhibitor (Inorganic phosphate) on the enzyme activity.
8. To study the effect of pH, temperature on the activity of salivary amylase enzyme.

Suggested Reading:

4. Berg, J. M., Tymoczko, J. L., & Stryer, L. (2006). *Biochemistry* (6th ed.). Newyork : W.H. Freeman &Company.
5. Hopkins, W.G., & Huner, P.A. (2008). *Introduction to Plant Physiology* (2nd ed.). John Wiley & Sons.

Course Objectives

The main objectives of the course are,

- To enable students to learn the basics of prokaryotic and eukaryotic cells
- To develop practical biological skills such as staining, sterilization, dialysis etc.
- To prepare students for subsequent biological courses that require an understanding of the physiology of organisms such as cell division, enzyme activity etc.
- To understand the basics of techniques to study cells.
- To prepare students to handle the equipment available and identify the suitable and appropriate experiments for their experiments.
- To learn aseptic techniques and microbial culture methods.

Course Outcomes

The learners will be able to,

1. Understand the unique features of plant and animal cells.
2. Gain the practical skills on tissue mounting techniques to visualize the cell morphology.
3. Acquire knowledge about cell's response to various environmental conditions.
4. Able to differentiate the cells of various living organisms and get awareness of physiological processes of cell.
5. Able to observe and correctly identify different cell types, cellular structures using different microscopic techniques.
6. Able to handle the equipment available and identify the suitable and appropriate experiments for their experiments.

Practical

1. Study of Prokaryotic and Eukaryotic cell, Structure.
2. Study the effect of temperature and organic solvents on semi permeable membrane.
3. Demonstration of dialysis.
4. Study of plasmolysis and de-plasmolysis.
5. Cell division in onion root tip.
6. Microtomy: Fixation, block making, section cutting, double staining of animal tissues like liver, pancreas, kidney.
7. Preparation of Nuclear, Mitochondrial and cytoplasmic fractions.
8. Determination of enzyme activity in organelles using sprouted seed or any other suitable source.

Suggested Reading:

1. Karp, G. (2013). *Cell and Molecular Biology: Concepts and Experiments* (7th ed.). Hoboken, US: John Wiley & Sons. Inc.
2. De Robertis, E.D.P., & De Robertis, E.M.F. (2006). *Cell and Molecular Biology* (8th ed.). Lippincott Williams and Wilkins, Philadelphia.
3. Cooper, G.M., & Hausman, R.E. (2013). *The Cell: A Molecular Approach* (6th ed.). Washington, USA: ASM Press & Sunderland, D.C., Sinauer Associates.
4. Becker, W.M., Kleinsmith, L.J., Hardin. J., & Bertoni, G. P. (2009). *The World of the Cell* (7th ed.). San Francisco: Pearson Benjamin Cummings Publishing.

Course Objectives

- To make the student able to identify the elements and the functional groups present in an organic compound.
- This helps students to gain experience to predict the functional group transformations, simple reaction mechanisms
- To know about synthesis of organic molecules by multi-step synthesis strategies.
- In addition of that, the course will also help students to understand the reaction mechanism subjects in later stages of their study.
- They will be able to evaluate critically chemistry-related information from a variety of sources.
- They will understand how chemical principles are applied to address current problems in a variety of fields.

Course Outcomes

On successful completion of the course the students should have

1. Learnt about the qualitative analysis of organic compounds.
2. Learnt the detection of elements and functional groups present in an organic compound by systematic analysis.
3. Recognize various organic functional groups.
4. Understand the types of reactions in Organic Chemistry.
5. To provide laboratory experience to the students by performing experiments
6. Based on topics: surface chemistry, photochemistry and macromolecules.

Systematic analysis of an organic compound

- Preliminary tests
- Detection of elements present
- Aromatic or aliphatic
- Saturated or unsaturated
- Nature of the functional group,
- Confirmatory tests– aldehydes, ketones, amines, diamide, carbohydrates, phenols, acids, esters & nitro compounds.

Note: Each student should analyse minimum 6 compounds.

2. Ramasamy, R. (2008). *Allied Chemistry Practical Book*. Karur: Priya Publications.
3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu, A. R. (2004). *Basic Principles of Practical Chemistry* (2nd ed.). New Delhi: S. Chand Publications.

பகுதி - I

கற்பகம் உயர்கல்வி கலைக்கழகம்

தமிழ்த்துறை

பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)

இரண்டாம் பருவம்

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

(For I-UG Science Degree Classes) 18LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல்.
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

இழைத்த-9, கார்த்திகை காதில்-10, ஈவாரைக் கொண்டாடி-11.

கலித்தொகை : சுடர்தொடி கேளாய்: குறிஞ்சிக்கலி- 36

அகநானூறு : அன்னாய் வாழி வேண்டன்னை - குறிஞ்சி - 48

புறநானூறு : யாதும் ஊரே யாவருங் கேளிர் –பொதுவியல்- 192

ஆ). பத்துப்பாட்டு

திருமுருகாற்றுப்படை - பழமுதிர்ச்சோலையின் சிறப்பு

முருகன் இருப்பிடங்கள் – ‘சிறுதினை மலரொடு’ என்பதிலிருந்து

தொடங்கி,

‘அறிந்தவாறே’ என்பது வரையிலான தொடர்கள்: 218-249.

முருகன் அருள்புரிதல் – ‘தெய்வம் சான்ற’ என்பதிலிருந்து தொடங்கி,

‘நல்குமதி’ என்பது வரையிலான தொடர்கள்: 286-295.

அலகு - III : காப்பியம்

(6 மணிநேரம்)

சிலப்பதிகாரம்:

மங்கல வாழ்த்துப் பாடல்: (21-29) – கண்ணகியின் சிறப்பு:

‘நாகநீள் நகரொடு’ என்பதிலிருந்து தொடங்கி,

‘கண்ணகி என்பாண் மன்னோ’ என்பது வரையிலான தொடர்கள்.

நடுகற்காதை: (207-234) - சேரன் செங்குட்டுவன் கண்ணகிக்குக்

கோயில் எடுத்தல்: ‘அருந்திறலரசர்’ என்பதிலிருந்து தொடங்கி,

‘மன்னவரேறென்’ என்பது வரையிலான தொடர்கள்.

வாழ்த்துக்காதை: (482-485) - செங்குட்டுவனுக்குக் கண்ணகி

காட்சியளித்தல்: ‘என்னே’ என்பதிலிருந்து தொடங்கி, ‘விசும்பில்

தோன்றுமால்’ என்பது வரையிலான தொடர்கள்.

வழக்குரை காதை: பத்தினிப் பெண்டிர் எழுவர் கதை: ‘நீர்வார்

கண்ணை’ என்பதிலிருந்து தொடங்கி, ‘புகாரென் பதியே’ என்பது

வரையிலான தொடர்கள்.

வஞ்சினமாலை: ‘வன்னி மரமும்’ என்பதிலிருந்து தொடங்கி,

‘பதிப்பிறந்தேன்’ என்பது வரையிலான தொடர்கள்.

அலகு - IV : சிறுகதை

(10 மணிநேரம்)

1. குளத்தங்கரை அரசமரம் – வ.வே.சு.ஐயர்

2. காட்டில் ஒரு மான் - அம்பை

3. நாற்காலி – கி.ராஜநாராயணன்

4. நகரம் – சுஜாதா

அலகு- V : மொழிப்பயிற்சி

(7 மணிநேரம்)

படைப்பிலக்கியப் பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)

மொழிபெயர்ப்பு

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Course Objectives

The main objectives of the course are,

- To deliver the basic concepts of heredity in different living organisms
- To gain the information about the level of genome organization in various living organisms
- To obtain the knowledge about transmission of genetic information across generation at the individual and population level
- To understand how to identify and classify mutations in DNA.
- To relate the structure and function of the DNA molecule to its functional role in encoding genetic material.
- To describe the basic aspects of the flow of genetic information from DNA to proteins.

Course Outcomes

The learners will be able to,

1. Acquire knowledge about the central theories and methodologies traditional, molecular and population genetics.
2. Acquire information on sex- linked inheritance and associated diseases.
3. Understand the role of genetics in breeding and natural selection.
4. Apply the principles of inheritance as formulated by Mendel.
5. Apply the Hardy-Weinberg Law in analyzing population genetics for gene frequency, sex linkage, equilibrium, and heterozygote frequency.
6. Acquire knowledge about the relationship between genetic, physical, and cytogenetic maps.

UNIT- I

Introduction: Historical developments in the field of genetics. Organisms suitable for genetic experimentation and their genetic significance. Prokaryotic genetics. Cell Cycle: Mitosis and Meiosis: Control points in cell-cycle progression in yeast. Role of meiosis in life cycles of organisms.

UNIT-II

Mendelian genetics: Mendel's experimental design, monohybrid, di-hybrid and tri hybrid crosses, Law of segregation & Principle of independent assortment. Verification of segregates by test and back crosses, Chromosomal theory of inheritance, Allelic interactions: Concept of dominance, recessiveness, incomplete dominance, co-dominance, semi-dominance, pleiotropy, multiple alleles, pseudo-allele, essential and lethal genes, penetrance and expressivity.

UNIT-III

Chromosome and genomic organization: Eukaryotic nuclear genome nucleotide sequence composition – unique & repetitive DNA, satellite DNA. Centromere and telomere DNA sequences, repetitive transposed sequences- SINEs & LINEs. Genetic organization of prokaryotic and viral genome. Structure and characteristics of bacterial and eukaryotic chromosome, chromosome morphology, concept of euchromatin and heterochromatin. Concept of cistron, exons, introns, genetic code, gene function.

UNIT-IV

Chromosome and gene mutations: Definition and types of mutations, causes of mutations, Ames test for mutagenic agents, screening procedures for isolation of mutants and uses of mutants, variations in chromosomes structure - deletion, duplication, inversion and translocation (reciprocal and Robertsonian). Sex determination, sex linkage, sex linked diseases: Mechanisms of sex determination, Fragile-X-syndrome and chromosome, sex influenced dominance, sex limited gene expression, sex linked inheritance.

UNIT-V

Genetic linkage, crossing over and chromosome mapping: Linkage and Recombination of genes in a chromosome crossing over. Extra chromosomal inheritance: Rules of extra nuclear inheritance, maternal effects, maternal inheritance, cytoplasmic inheritance, organelle heredity, genomic imprinting. Evolution and population genetics: In breeding and out breeding, Hardy Weinberg law (prediction, derivation), allelic and genotype frequencies, changes in allelic frequencies, systems of mating, evolutionary genetics, natural selection.

Suggested Reading:

1. Gardner, E.J., Simmons, M.J., & Snustad, D.P. (2006). *Principles of Genetics* (8th ed.). John Wiley & Sons.
2. Snustad, D.P., & Simmons, M.J. (2009). *Principles of Genetics* (5th ed.). USA: John Wiley and Sons Inc.
3. Russell, P. J. (2009). *Genetics- A Molecular Approach* (3rd ed.). Benjamin Cummings.
4. Griffiths, A.J.F., Wessler, S.R., Lewontin, R.C., & Carroll, S.B. (2007). *Introduction to Genetic Analysis* (9th ed.). W. H. Freeman & Co.

Course Objectives

- To make the student to be conversant with the extraction of metals, coordination chemistry, preparation, properties uses and structure of naphthalene and heterocyclic compounds.
- To make the student acquire sound knowledge of electrochemistry, biological functions of amino acids and proteins.
- To educate students on chemistry of carboxylic acids, nitro compounds and carbohydrates.
- To impart basic understanding on Thermodynamics
- To educate students on topics Electrochemistry
- To educate on thermodynamic laws, entropy, enthalpy change and the principles of electroplating.

Course Outcomes

1. The students will be able to understand the metallurgy of metals and the theories of coordination compounds and the industrial importance of EDTA, haemoglobin and chlorophyll.
2. The students will be able to understand the concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds.
3. The students will be able to understand the preparation, classifications and properties of amino acids, proteins and carbohydrates.
4. The students will be able to understand the concepts of first and second laws of thermodynamics.
5. The students will be able to understand the fundamentals of electrochemistry.
6. To expose students on radical analysis in inorganic mixtures; Determination of surface tension and viscosity of liquids.

Unit-I

Metals and Coordination Chemistry:

Metals: General methods of extraction of metals-methods of ore dressing-types of furnaces-reduction methods-electrical methods-types of refining-Van Arkel Process-Zone refining.

Coordination Chemistry: Nomenclature-theories of Werner, Sidgwick and Pauling-chelation and its industrial importance-EDTA-haemoglobin-chlorophyll-applications in qualitative and quantitative analysis.

Unit-II

Aromatic Compounds and Heterocyclic Compounds:

Aromatic Compounds: Aromaticity-Huckel's $(4n+2)$ rule- aromatic electrophilic substitution in benzene-mechanism of nitration, halogenation, alkylation, acylation and sulphonation. Naphthalene: Isolation, preparation, properties and structure. **Heterocyclic Compounds:** Preparation and properties of pyrrole, furan, thiophene and pyridine.

Unit-III

Amino acids, Proteins and Carbohydrates: **Amino acids:** Classification, preparation and properties. Peptides-preparation of peptides (Bergmann method only). **Proteins:** Classification, properties, biological functions and structure. **Carbohydrates:** Classification, preparation and properties of glucose and fructose- discussion of open chain and ring structures of glucose and fructose-glucose-fructose interconversion.

Unit-IV

Energetics: Type of systems-processes and their types - isothermal, adiabatic, reversible, irreversible and spontaneous processes-statement of first law of thermodynamics-need for the second law of

thermodynamics-heat engine-Carnot cycle-efficiency-Carnot theorem-thermodynamics scale of temperature-Joule-Thomson effect- Enthalpy- Entropy and its significance-Free energy change.

Unit-V

Electrochemistry: Kohlrausch law-conductometric titrations-hydrolysis of salts-galvanic cells-E.M.F.-standard electrode potentials-reference electrodes- electrochemical series and its applications-buffer solution-buffer solution in the biological systems-pH and its determination-principles of electroplating.

Suggested Reading:

1. Veeraiyan, V., & Vasudevan, A.N.S. (2005). *Text Book of Allied Chemistry* (2nd ed.). Chennai: Highmount Publishing House.
2. Puri, B.R., & Sharma L.R. (2002). *Principles of Inorganic Chemistry*. Jalandar: Shoban Lal & Company Ltd.
3. Bahl, B.S., & Arun Bahl, (2005). *Advanced Organic Chemistry*. New Delhi: S.Chand & Company Ltd.
4. Puri, Sharma & Pathania, (2003). *Physical Chemistry*. Jalandhar: Vishal Publishing Company Ltd.
5. Gopalan, R. & Sundaram, S. (2003). *Allied Chemistry* (3rd ed.). New Delhi: Sultan Chand & Sons.

Course Objectives

The main objectives of the course are

- To inculcate knowledge on fundamentals of microorganisms.
- To learn the structural organization, morphology and reproduction of microbes.
- To know the principles of Microscopy and advancements in Microscopy
- To deal with the study of genetic, metabolic strategies and ecology of microorganisms.
- To learn the basic knowledge of the main microbiological techniques to be applied in the laboratory.
- To develop understanding about microbial metabolism, growth, energy generation and disease caused.

Course Outcomes

On completion of the course, students are able to

1. Gain rigorous knowledge on historical perspective of Microbiology
2. Acquire basic knowledge on different structure of microbes.
3. Get Ideas on different type of microscope.
4. Acquire basic knowledge the different applications of microbiology in biotechnology.
5. Acquire basic knowledge of genetic, metabolic strategies and ecology of microorganisms.
6. Acquire basic knowledge about microbial metabolism, growth, energy generation and disease caused.

UNIT-I

Fundamentals, History, Scope and Evolution of Microbiology: Classification of microorganisms: Microbial taxonomy, criteria used to include molecular approaches, Microbial phylogeny and current classification of bacteria.

UNIT-II

Microbial Diversity: Distribution and characterization Prokaryotic and Eukaryotic cells, Morphology and cell structure of major groups of microorganisms eg. Bacteria, Algae, Fungi, Protozoa and Unique features of viruses.

UNIT-III

Cultivation and Maintenance of microorganisms: Nutritional categories of micro-organisms, Media, Types of media, Methods of isolation, Stating and types, Purification and preservation.

UNIT-IV

Microbial growth: Growth curve, Microbial growth kinetics, batch and continuous culture, Measurement of growth, growth factors, factors affecting growth of bacteria. Bacterial Reproduction: Transformation, Transduction and Conjugation. Endospores and sporulation in bacteria.

UNIT-V

Water Microbiology: Bacterial pollutants of water, coliforms and non coliforms. Sewage composition and its disposal. Food Microbiology: Important microorganism in food Microbiology: Moulds, Yeasts, bacteria. Major food born infections and intoxications, Preservation of various types of foods. Fermented Foods.

Suggested Reading:

4. Madigan, M.T., Martinko, J.M., & Parker, J. (2010). *Brock Biology of Microorganisms*. (13th ed.). Pearson/Benjamin Cummings.
5. Willey, J.M., Sherwood, L.M., & Woolverton, C.J. (2008). *Prescott, Harley and Klein's Microbiology* (7th ed.). McGraw Hill Higher Education.
6. Tortora, G.J., Funke, B.R., & Case, C.L. (2008). *Microbiology: An Introduction* (9th ed.). Pearson Education.
7. Stanier, R.Y., Ingraham, J.L., Wheelis, M.L., & Painter, P.R. (2005). *General Microbiology* (5th ed.). McMillan.
8. Pelczar, M.J., Chan, E.C.S., & Krieg, N.R. (1993). *Microbiology* (5th ed.). McGraw Hill Book Company

Course Objectives

The main objectives of the course are,

- To learn about prokaryotic and eukaryotic genetic system using modern techniques.
- To inculcate knowledge on cell division stages.
- To develop skills on cell mounting techniques.
- To develop skills on karyotyping
- To inculcate knowledge on pedigree analysis.
- To learn about the mendelian laws and the experiment outcomes.

Course Outcomes

The learners will be able to

1. Gain rich knowledge on genetic model system used in research.
2. Acquire basic knowledge on different stages in cell division.
3. Get Ideas on pedigree analysis for detection of genetic disorders.
4. Acquire basic knowledge on karyotyping
5. Acquire basic knowledge of genetic variations among microorganisms.
6. Apply the principles of inheritance as formulated by Mendel.

Practical

1. Permanent and temporary mount of mitosis.
2. Permanent and temporary mount of meiosis.
3. Mendelian deviations in dihybrid crosses
4. Demonstration of - Barr Body -*Rhoeo* translocation.
5. Karyotyping with the help of photographs
6. Pedigree charts of some common characters like blood group, color blindness and PTC tasting.
7. Study of polyploidy in onion root tip by colchicine treatment.

Suggested Reading:

1. Snustad, D.P., & Simmons, M.J. (2009). *Principles of Genetics* (5th ed.). USA: John Wiley and Sons Inc.
2. Klug, W.S., Cummings, M.R., & Spencer, C.A. (2009). *Concepts of Genetics* (9th ed.). Benjamin Cummings.
3. Gardner, E.J., Simmons, M.J., & Snustad, D.P. (2006). *Principles of Genetics* (8th ed.). John Wiley & Sons.
4. Russell, P. J. (2009). *Genetics- A Molecular Approach* (3rd ed.). Benjamin Cummings.
5. Griffiths, A.J.F., Wessler, S.R., Lewontin, R.C., & Carroll, S.B. (2007). *Introduction to Genetic Analysis* (9th ed.). W. H. Freeman & Co.

Course Objectives

- The student on successful completion of the course should learn the principles of volumetric analysis
- To estimate the compounds by acidimetry, alkalimetry and permanganometry.
- Experimental practice of quantitative volumetric analysis.
- The objective of the titration is the determination of the concentration or the mass of the minimum formula from the titrated chemical material composing a pure liquid or a solution.
- The main objective of volumetric analysis is to determine the amount of a substance in a given sample.
- When dealing with volumetric analysis the concept of concentration cannot be avoided. Molarity i.e. moles per litre or decimeter is widely used unit of concentration.

Course Outcomes

1. Student will be able to learn the principles of quantitative analysis of inorganic compounds.
2. Student will be able to learn the estimation of sample present in a solution by volumetric analysis
3. Understand the concepts of quantitative analysis
4. Recognize the indicators, acid and bases used in volumetric analysis
5. Estimate the amount of substance present in a given solution
6. Utilize the mathematical skills doing calculations

Practical Volumetric Analysis

A. Acidimetry & Alkalimetry

1. Estimation of sodium carbonate using standard sodium hydroxide.
2. Estimation of sodium hydroxide using standard sodium carbonate.
3. Estimation of sulphuric acid using standard oxalic acid.
4. Estimation of potassium permanganate using standard sodium hydroxide.

B. Permanganometry

1. Estimation of ferrous sulphate using standard Mohr's salt.
2. Estimation of oxalic acid using standard ferrous sulphate.
3. Estimation of calcium-direct method.

Suggested Reading:

1. Ramasamy, R. (2008). *Allied Chemistry Practical Book*. Karur: Priya Publications.
2. Thomas, A.O. (2010). *Practical Chemistry for B.Sc. Main Students*. Cannanore: Kerala, Scientific Book Centre.
3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu A. R. (2004). *Basic Principles of Practical Chemistry* (2nd ed.). New Delhi: S. Chand Publications.

Course Objectives

The main objectives of the course are

- To understand the basic principles of microscopy ultra-structure of microbes along with staining and sterilization methods
- To understand various accessories for microbiology practicals.
- To acquaint the students with various aspects of basic and applied microbiology.
- To understand the biochemical characterization of isolated microbes.
- To develop practical biological skills such as staining, sterilization etc.
- To develop skills on primary screening of microorganisms.

Course Outcomes

On completion of the course, students are able to

1. Develop basic skill in aseptic techniques
2. Have outline knowledge on isolation, sub culture and maintenance of microbes.
3. Gain experience in microbiological laboratory practices and skills in the design and execution of microbiology related research.
4. Develop skills to prepare useful medias for microbial growth in the laboratory.
5. Use of handling of glass wares, minor equipment for conducting experiments.
6. Learn safety and precautionary measures for working with microbes in a laboratory.

Practical

1. Preparation of media & sterilization methods
2. Methods of Isolation of bacteria from different sources.
3. Staining methods: simple staining, Gram staining, spore staining, negative staining, hanging drop.
4. Biochemical characterization of isolated microbes.
5. Enumeration of microorganism - total & viable count.
6. Determination of bacterial cell size by micrometry.

Suggested Reading:

3. Willey, J.M., Sherwood, L.M., & Woolverton, C.J. (2008). *Prescott, Harley and Klein's Microbiology* (7th ed.). McGraw Hill Higher Education.

Course Objectives

The main objectives of the course are,

- To create awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To learn about the environment, resources available, biodiversity and its conservation
- To understand the current scenarios- to find ways for protection and betterment of or habitat.
- To Understand the concepts and methodologies to analyze the interactions between social and environmental processes.

Course Outcomes

The learners will be able to,

1. Understand the concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Study the concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Learn the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Creating the awareness about environmental problems among people.

UNIT-I

Environment: Definition, scope and importance, components, Ecosystem Definition, Classification of ecosystem, Concept, Structure and functions of ecosystem. Energy flow, Food chains and food webs, Ecological succession.

UNIT-II

Natural Resources: - Renewable and Non-renewable Resources: Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. III-effects of fire works.

UNIT-III

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive, productive, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT-IV

Environmental Pollution: - Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT-V

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

5. Singh, M.P., & Singh B.S., & Soma Dey S. (2004). *Conservation of Biodiversity and Natural Resources*. New Delhi: Daya Publishing House.
6. Daniel Botkin B., & Edward Keller A. (1995). *Environmental Science*. New York: John Wiley and Sons, Inc.
7. Uberoi, N.K. (2005). *Environmental Studies*. New Delhi: India, Excel Books Publications.

Course Objectives

The main objectives of the course are,

- To understand the physiological conditions of the plants and metabolism.
- To understand the basic concepts of Photosystems and their importance in plant growth.
- To gain the information about the economic importance of algae and fungi.
- To develop familiarity with plant development, biochemistry, and metabolism.
- To be familiar with cutting edge technology employed in contemporary plant biology.
- To integrate their knowledge of plant physiology to relevant cultural, social, and legal aspects of their lives.

Course Outcomes

The learners will be able to,

1. Gain adequate knowledge on plant biodiversity and importance.
2. Understand the molecular mechanisms of macro and micro nutrients in plant growth.
3. Get the basic and applied knowledge of plant physiology, growth, development and metabolism.
4. Impart an insight into the various plant water relations
5. Understand the mechanism of various metabolic processes in plants
6. Equip students with skills and techniques related to plant physiology so that they can design their own experiments

UNIT-I

Anatomy: The shoot and root apical meristem and its histological organization, simple & complex permanent tissues, primary structure of shoot & root, secondary growth, growth rings, leaf anatomy (dorsi-ventral and isobilateral leaf)

UNIT-II

Plant water relations and micro & macro nutrients: Plant water relations: Importance of water to plant life, diffusion, osmosis, plasmolysis, imbibition, guttation, transpiration, stomata & their mechanism of opening & closing. Micro & macro nutrients: criteria for identification of essentiality of nutrients, roles and deficiency systems of nutrients, mechanism of uptake of nutrients, mechanism of food transport.

UNIT-III

Carbon and nitrogen metabolism: Photosynthesis- Photosynthesis pigments, concept of two photo systems, photophosphorylation, calvin cycle, CAM plants, photorespiration, compensation point. Nitrogen metabolism- inorganic & molecular nitrogen fixation, nitrate reduction and ammonium assimilation in plants.

UNIT-IV

Growth and development: Growth and development: Definitions, phases of growth, growth curve, growth hormones (auxins, gibberlins, cytokinins, abscisic acid, ethylene). Physiological role and mode of action, seed dormancy and seed germination, concept of photoperiodism and vernalization.

UNIT-V

Stress Physiology: Stress adaptation mechanism: Definitions, Indicators of stress response - morphological, physiological, biochemical and molecular level. Stress adaptation and tolerance mechanism – biotic and abiotic stress, Effect of stress on crop productivity, Global warming - physiological effects on crop productivity

Suggested Reading:

1. Hopkins, W.G., & Huner, P.A. (2008). *Introduction to Plant Physiology*. John Wiley & Sons.
2. Nelson, D.L., & Cox, M.M. (2004). *Lehninger Principles of Biochemistry* (4th ed.). New York: USA, W.H. Freeman & Company.
3. Dickinson, W.C. (2000). *Integrative Plant Anatomy*. USA: Harcourt Academic Press.
4. Taiz, L., & Zeiger, E. (2006). *Plant Physiology* (4th ed.). MA: USA, Sinauer Associates Inc.
5. Esau, K. (1977) *Anatomy of Seed Plants*. Wiley Publishers.
6. Salisbury, F.B, & Ross, C.W. (1991). *Plant Physiology*. Wadsworth Publishing Co. Ltd.

Course Objectives

The main objectives of the course are

- To emphasize the basic knowledge about the structure and functions of nucleic acids (DNA/RNA) and proteins.
- To obtain the adequate knowledge on the structure and functions of biomolecules.
- To gain the information about the DNA damage and repair mechanisms.
- To understand the mechanisms behind gene regulations.
- To understand the mechanism behind translation and transcription
- To understand the mutations and its significance

Course Outcomes

The learners will be able to,

1. Achieve knowledge about the functions of nucleic acids and proteins.
2. Acquire an in-depth knowledge of chemical and molecular processes that occur in and between the cells.
3. Gain an insight into the most significant molecular and cell-based methods used today to expand our understanding of biology.
4. Acquire knowledge about the mechanisms behind gene regulations.
5. Gain knowledge about mechanism behind translation and transcription
6. Acquire an in-depth knowledge about mutation and its significance

UNIT-I

DNA structure and organization: DNA as genetic material, Structure of DNA, Types of DNA, Organization of DNA in prokaryote and eukaryotic cells, Chromosome biology – histone and non-histone proteins, organization.

UNIT-II

DNA replication: Replication of DNA in prokaryotes and eukaryotes: Semi-conservative nature of DNA replication, Bi-directional replication, DNA polymerases, Replication complex: Pre-priming proteins, primosome, replisome, Rolling circle replication, Unique aspects of eukaryotic chromosome replication, Fidelity of replication.

UNIT-III

Transcription and RNA processing: RNA structure and types of RNA, Transcription in prokaryotes: Prokaryotic RNA polymerase, role of sigma factor, promoter, Initiation, elongation and termination of RNA chains Transcription in eukaryotes: Eukaryotic RNA polymerases, transcription factors, promoters, enhancers, mechanism of transcription initiation, promoter clearance and elongation RNA splicing and processing: processing of pre-mRNA: 5' cap formation, polyadenylation, splicing, rRNA and tRNA splicing.

UNIT-IV

Regulation of gene expression and translation: Regulation of gene expression in prokaryotes: Operon concept (inducible and repressible system), Genetic code and its characteristics, Prokaryotic and eukaryotic translation: ribosome structure and assembly, Charging of tRNA, aminoacyl tRNA synthetases, Mechanism of initiation, elongation and termination of polypeptides, Fidelity of translation, Inhibitors of translation, Posttranslational modifications of proteins.

UNIT-V

DNA damage, repair and homologous recombination: DNA damage and repair: causes and types of DNA damage, mechanism of DNA repair: Photoreactivation, base excision repair, nucleotide excision repair, mismatch repair, trans-lesion synthesis, recombinational repair, nonhomologous end joining. Homologous recombination: models and mechanism.

Suggested Reading:

1. Karp, G. (2013). *Cell and Molecular Biology: Concepts and Experiments* (7th ed.). Hoboken, US: John Wiley & Sons. Inc.
2. Watson, J. D., Baker T.A., Bell, S. P., Gann, A., Levine, M., & Losick, R. (2008). *Molecular Biology of the Gene* (6th ed.). Cold Spring Harbour Lab. Press, Pearson Pub.
3. De Robertis, E.D.P., & De Robertis, E.M.F. (2006). *Cell and Molecular Biology* (8th ed.). Lippincott Williams and Wilkins, Philadelphia.
4. Becker, W.M., Kleinsmith, L.J., Hardin. J., & Bertoni, G. P. (2009). *The World of the Cell* (7th ed.). San Francisco: Pearson Benjamin Cummings Publishing.

Course Objectives

The main objectives of the course are,

- To understand the basic concepts of immunology.
- To expose students to use these principles of immune system to combat infections.
- To gain the information about the auto immune diseases.
- To elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses
- To understand the basic knowledge of immunological processes at a cellular and molecular level
- To learn central immunological principles and concepts

Course Outcomes

The learners will be able to,

1. Gain about the various cells and organs involved in the immune system.
2. Understand the molecular mechanisms of antigen-antibody interactions and also the molecular mechanisms behind the immune response evoked after infection by various pathogens.
3. Learn the theoretical basis for the various immunological techniques.
4. Describe which cell types and organs present in the immune response
5. Apply basic techniques for identifying antigen antibody interactions.
6. Illustrate various mechanisms that regulate immune responses and maintain tolerance

UNIT-I

Immune Response: An overview, components of mammalian immune system, Antigens- Essential features of Ag, haptens, Carrier molecule, Immunological valence, Antigenic determinants. Adjuvants: Freund's complete and incomplete. Antibodies - Molecular structure of Immuno-globulins or Antibodies, Humoral & Cellular immune responses, T lymphocytes & immune response (cytotoxic T-cell, helper T-cell, suppressor T-cells), T-cell receptors, genome rearrangements during B-lymphocyte differentiation, Antibody affinity maturation class switching, assembly of T-cell receptor genes by somatic recombination.

UNIT-II

Regulation of immunoglobulin gene expression: Clonal selection theory, allotypes & idiotypes, allelic exclusion, immunologic memory, heavy chain gene transcription, genetic basis of antibody diversity, hypotheses (germ line & somatic mutation), antibody diversity.

UNIT-III

Hypersensitivity Reactions (HS): Type I: Allergies and anaphylaxis; Type II: Antibody mediated HS reactions; Mechanism and pathogenicity; Type III: Immune complex mediated HS reactions: Mechanism & pathogenicity; Type IV: Delayed type (or) cell-mediated HS reactions; Mechanisms and pathogenicity. Type V: Stimulatory HS reactions. Mechanism and pathogenesis.

UNIT-IV

Major Histocompatibility complexes: Class I & class II MHC antigens, antigen processing. Immunity to infection – immunity to different organisms, pathogen defense strategies, avoidance of recognition. Autoimmune diseases, Immunodeficiency-AIDS.

UNIT-V

Vaccines & Vaccination: Adjuvants, cytokines, DNA vaccines, recombinant vaccines, bacterial vaccines, viral vaccines, vaccines to other infectious agents, passive & active immunization Introduction to immunodiagnostics – RIA, ELISA.

Suggested Reading:

2. Delves, P., Martin, S., Burton, D., & Roitt, I.M. (2006). *Roitt's Essential Immunology* (11th ed.). Wiley-lackwell Scientific Publication, Oxford.
3. Goldsby, R.A., Kindt, T.J., Osborne, B.A. (2007). *Kuby's Immunology* (6th ed.). New York: W.H. Freeman and Company.
4. Murphy, K., Travers, P., & Walport, M. (2008). *Janeway's Immunobiology* (7th ed.). New York: Garland Science Publishers.
5. Peakman, M., & Vergani, D. (2009). *Basic and Clinical Immunology* (2nd ed.). Edinberg: Churchill Livingstone Publishers.
6. Richard, C., & Geiffrey, S. (2009). *Immunology* (6th ed.). Wiley Blackwell Publication.

Course Objectives

The main objectives of the course are

- To understand the basic knowledge of copy rights and related property rights.
- To develop the entrepreneurship skills using biological product formation.
- To provide the information of filling the patents and copy rights
- To disseminate knowledge on trademarks and registration aspects
- To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects
- To learn about current trends in IPR and Govt. steps in fostering IPR

Course Outcomes

On completion of the course, students are able to

1. Acquire the knowledge on filling and submission of copy rights and related property rights.
2. Gain knowledge in developing new pilot scale / large scale industries and associated formalities
3. Understand the importance of patenting /copyrights/Trade marks
4. Acquire the knowledge on fundamental aspects of Intellectual property Rights to students who are going to play a major role in development and management of innovative projects in industries.
5. Disseminate knowledge on patents, patent regime in India and abroad and registration aspects
6. Disseminate knowledge on copyrights and its related rights and registration aspects

UNIT-I

Introduction to Indian Patent Law: World Trade Organization and its related intellectual property provisions. Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

UNIT-II

Entrepreneurship: Selection of a product, line, design and development processes, economics on material and energy requirement, stock the product and release the same for making etc. The basic regulations of excise: Demand for a given product, feasibility of its production under given constraints of raw material, energy input, financial situations export potential etc.

UNIT-III

Bioethics: Necessity of Bioethics, different paradigms of Bioethics – National & International. Ethical issues against the molecular technologies.

UNIT-IV

Biosafety: Introduction to biosafety and health hazards concerning biotechnology. Introduction to the concept of containment level.

UNIT-V

Good Laboratory Practices (GLP) and Good Manufacturing Practices (GMP), NABL, FSSAI.

Suggested Reading:

1. David H. Holt, (1992). *Entrepreneurship: New Venture Creation*.
2. Jack M. Kaplan, (2015). *Patterns of Entrepreneurship*.
3. Gupta, C.B., Khanka, S.S. (2002). *Entrepreneurship and Small Business Management*. Sultan Chand & Sons.
4. Sateesh, M.K., (2010). *Bioethics and Biosafety*, I. K. International Pvt Ltd.
5. Sree Krishna, V, (2007) *Bioethics and Biosafety in Biotechnology*. New age International publishers.

Course Objectives

The main objectives of the course are,

- To study the bio-analytical tools and their applications.
- To have sufficient knowledge on the separation of compounds from a mixture.
- To know the application of PCR in biotechnology.
- To develop the skills to understand the theory and practice of bio analytical techniques.
- To provide scientific understanding of analytical techniques and detail interpretation of results.
- To learn how to design experiments and understand the instrumentation.

Course Outcomes

On completion of the course, students are able to

1. Know the working principle, maintenance, and calibrations of bioanalytical tools and technique
2. Estimate the number of biomolecules using the Bioanalytical tool
3. Implement the bioanalytical techniques to analyze the biomolecules
4. Use selected analytical techniques.
5. Be familiar with working principals, tools and techniques of analytical techniques.
6. To understand the strengths, limitations and creative use of techniques for problem-solving.

UNIT-I

Microscopy: Simple microscopy, phase contrast microscopy, florescence and electron microscopy (TEM and SEM), pH meter, absorption and emission spectroscopy

UNIT-II

Colorimetry: Principle and law of absorption fluorimetry, colorimetry, spectrophotometry (visible, UV, infrared), centrifugation, cell fractionation techniques, isolation of sub-cellular organelles and particles.

UNIT-III

Chromatography: Introduction to the principle of chromatography. Paper chromatography, thin layer chromatography, column chromatography: silica and gel filtration, affinity and ion exchange chromatography, gas chromatography, HPLC.

UNIT-IV

Electrophoresis: Introduction to electrophoresis. Starch-gel, polyacrylamide gel (native and SDS-PAGE), agarose-gel electrophoresis,

UNIT-V

Applications: Pulse field gel electrophoresis, immuno- electrophoresis, isoelectric focusing, Western blotting. Introduction to Biosensors and Nanotechnology and their applications.

Suggested Reading:

1. Karp, G. (2013). *Cell and Molecular Biology: Concepts and Experiments* (7th ed.). Hoboken, US: John Wiley & Sons. Inc.
2. Cooper, G.M., & Hausman, R.E. (2013). *The Cell: A Molecular Approach* (6th ed.). Washington, USA: ASM Press & Sunderland, D.C., Sinauer Associates.
3. De Robertis, E.D.P., & De Robertis, E.M.F. (2006). *Cell and Molecular Biology* (8th ed.). Lippincott Williams and Wilkins, Philadelphia.
4. Becker, W.M., Kleinsmith, L.J., Hardin. J., & Bertoni, G. P. (2009). *The World of the Cell* (7th ed.). San Francisco: Pearson Benjamin Cummings Publishing.

Course Objectives:

The main objectives of the course are,

- Know importance and scope of plant physiology.
- To understand the plants and plant cells in relation to water.
- Understand the process of photosynthesis in higher plants with and their pigments.
- Understand the respiration in higher plants with particular emphasis on aerobic and anaerobic respiration.
- Learn about the movement of sap and absorption of water in plant body.
- Understand the plant movements.

Course Outcomes:

The learners will be able to

1. Study and impart knowledge about the occurrence, distribution, structure and life history of plants.
2. Enable the students to learn in detail about mono and dicot plant activity.
3. Learn the phylogeny concepts in plants.
4. Understand water relation of plants with respect to various physiological processes.
5. Explain root nodules from a leguminous plant
6. Classify stress indicators

Practical

1. Preparation of stained mounts of anatomy of monocot and dicot's root, stem & leaf.
2. Demonstration of plasmolysis by *Tradescantia* leaf peel.
3. Demonstration of opening & closing of stomata
4. Demonstration of guttation on leaf tips of grass and garden nasturtium.
5. Separation of photosynthetic pigments by paper chromatography.
6. Demonstration of aerobic respiration.
7. Preparation of root nodules from a leguminous plant.
8. Estimation of stress indicators – Proline and osmolyte estimation

Suggested Reading:

1. Dickinson, W.C. (2000). *Integrative Plant Anatomy*. USA: Harcourt Academic Press.
2. Nelson, D.L., & Cox, M.M. (2004). *Lehninger: Principles of Biochemistry* (4th ed.). New York: USA, W.H. Freeman and Company.
3. Salisbury, F.B., & Ross, C.W. (1991). *Plant Physiology*. Wadsworth Publishing Co. Ltd.
4. Taiz, L., & Zeiger, E. (2006). *Plant Physiology* (4th ed.). MA: USA, Sinauer Associates Inc.

Course Objectives

The main objectives of the course are,

- To inculcate practical skill in chromosomal and plasmid DNA separation by electrophoresis.
- To develop skills on extraction of proteins from plant and animal sources
- To detect the reverse mutation for carcinogenicity.
- To learn what genes are and how they are inherited
- To learn what are the solutions required for molecular biology experiments and how to prepare it
- To understand the principles and applications of molecular biology

Course Outcomes

The learners will be able to

1. Perform the experiments for isolation, purification and visualize the nucleic acid from various sources
2. Acquire skills on plasmid DNA extraction.
3. Gain basic knowledge on DNA extraction and separation by electrophoresis.
4. Know the protocol for detection of mutation in microbes.
5. Understand what genes are and how they are inherited
6. Know how they control cellular activity and they respond to environment

List of Practicals

1. Preparation of solutions for Molecular Biology experiments.
2. Isolation of chromosomal DNA from bacterial cells.
3. Isolation of Plasmid DNA by alkaline lysis method
4. Agarose gel electrophoresis of genomic DNA & plasmid DNA
5. Preparation of restriction enzyme digests of DNA samples
6. Demonstration of AMES test or reverse mutation for carcinogenicity

Suggested Reading:

1. Karp, G. (2010). *Cell and Molecular Biology: Concepts and Experiments* (6th ed.). John Wiley & Sons. Inc.
2. Watson, J. D., Baker, T.A., Bell, S. P., Gann, A., Levine, M., & Losick, R. (2008). *Molecular Biology of the Gene* (6th ed.). Cold Spring Harbour Lab. Press, Pearson Pub.
3. Sambrook, J., Fritsch, E.F., & Maniatis, T. (2001). *Molecular Cloning-A Laboratory Manual*. (3rd ed.). Cold Spring Harbor Laboratory Press.

Course Objectives

The main objectives of the course are,

- To understand the basic concepts of immunology.
- To expose students to use these principles of immune system to combat infections.
- To gain the information about the auto immune diseases.
- To familiarize students with the various immunological techniques
- To identify the cellular and molecular basis of immune responsiveness.
- To describe immunological response and how it is triggered and regulated.

Course Outcomes

The learners will be able to,

1. Gain about the various cells and organs involved in the immune system.
2. Understand the molecular mechanisms of antigen-antibody interactions and also the molecular mechanisms behind the immune response evoked after infection by various pathogens.
3. Learn the theoretical basis for the various immunological techniques.
4. Transfer knowledge of immunology into clinical decision-making through case studies presented in class.
5. Demonstrate a capacity for problem-solving about immune responsiveness.
6. Describe the roles of the immune system in both maintaining health and contributing to disease.

List of Practicals

1. Differential leucocytes count
2. Total leucocytes count
3. Total RBC count
4. Haemagglutination assay
5. Haemagglutination inhibition assay
6. Separation of serum from blood
7. Double immunodiffusion test using specific antibody and antigen.
8. ELISA.

Suggested Reading:

Course Objectives

The main objectives of the course are

- To understand the basic knowledge of copy rights and related property rights.
- To develop the entrepreneurship skills using biological product formation.
- To provide the information of filling the patents and copy rights
- To disseminate knowledge on trademarks and registration aspects
- To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects
- To learn about current trends in IPR and Govt. steps in fostering IPR

Course Outcomes

On completion of the course, students are able to

1. Acquire the knowledge on filling and submission of copy rights and related property rights.
2. Gain knowledge in developing new pilot scale / large scale industries and associated formalities
3. Understand the importance of patenting /copyrights/Trade marks
4. Acquire the knowledge on fundamental aspects of Intellectual property Rights to students who are going to play a major role in development and management of innovative projects in industries.
5. Disseminate knowledge on patents, patent regime in India and abroad and registration aspects
6. Disseminate knowledge on copyrights and its related rights and registration aspects

Practical

1. Proxy filing of Indian Product patent
2. Proxy filing of Indian Process patent
3. Planning of establishing a hypothetical biotechnology industry in India
4. A case study on clinical trials of drugs in India with emphasis on ethical issues.
5. Case study on women health ethics.
6. Case study on medical errors and negligence.
7. Case study on handling and disposal of radioactive waste

Suggested Reading:

1. Jack Kaplan, M., (2009). *Patterns of Entrepreneurship* (3rd ed.).

Course Objectives

The main objectives of the course are,

- To study the bio-analytical tools and their applications.
- To have sufficient knowledge on the separation of compounds from a mixture.
- To know the application of PCR in biotechnology.
- To develop the skills to understand the theory and practice of bio analytical techniques.
- To provide scientific understanding of analytical techniques and detail interpretation of results.
- To learn how to design experiments and understand the instrumentation.

Course Outcomes

On completion of the course, students are able to

1. Know the working principle, maintenance, and calibrations of bioanalytical tools and technique
2. Estimate the number of biomolecules using the Bioanalytical tool
3. Implement the bioanalytical techniques to analyze the biomolecules
4. Use selected analytical techniques.
5. Be familiar with working principals, tools and techniques of analytical techniques.
6. To understand the strengths, limitations and creative use of techniques for problem-solving.

Practical

1. Native gel electrophoresis of proteins
2. SDS-polyacrylamide slab gel electrophoresis of proteins under reducing conditions.
3. Preparation of the sub-cellular fractions of rat liver cells.
4. Preparation of protoplasts from leaves.
5. Separation of amino acids by paper chromatography.
6. To identify lipids in a given sample by TLC.
7. To verify the validity of Beer's law and determine the molar extinction coefficient of NADH.

Suggested Reading:

1. Karp, G. (2010). *Cell and Molecular Biology: Concepts and Experiments* (6th ed.). John Wiley & Sons. Inc.
2. De Robertis, E.D.P. & De Robertis, E.M.F. (2006). *Cell and Molecular Biology* (8th ed.). Philadelphia: Lippincott Williams and Wilkins.

4. Becker, W.M., Kleinsmith, L.J., Hardin, J. & Bertoni, G. P. (2009). *The World of the Cell* (7th ed.). Pearson Benjamin Cummings Publishing, San Francisco.

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation, screening of industrial important microbes
- To derive industrially important products from microbes.
- To acquire knowledge on Downstream processing.
- To learn the principle and applications of bioprocess technology.
- To learn the fundamental calculation in bioprocessing.
- To learn the schematic diagram of upstream and downstream processing for product recovery and purification.

Course Outcomes

The learners will be able to

1. Gain overall knowledge of industrial biotechnology.
2. Obtain information about the application of industrially important microbes.
3. Know the screening, extraction and purification of enzymes.
4. Designing of bioreactors and control necessary for maximizing production.
5. Select and optimize media for maximum production of microbial metabolites.
6. Designing of protocols for strain improvement and separation of molecules after fermentation process.

UNIT- I

Introduction to bioprocess technology. Range of bioprocess technology and its chronological development. Basic principle components of fermentation technology. Types of microbial culture and its growth kinetics– Batch, Fed batch and Continuous culture. Types of fermentation- submerged, solid state.

UNIT-II

Design of bioprocess vessels- Significance of Impeller, Baffles, Sparger; Types of culture/production vessels- Airlift; Cyclone Column; Packed Tower and their application in production processes. Principles of upstream processing – Media preparation, Inocula development and sterilization.

UNIT-III

Bioreactor control and monitoring, Introduction to oxygen requirement in bioprocess; mass transfer coefficient; factors affecting KLa. Bioprocess measurement and control system with special reference to computer aided process control.

UNIT-IV

Downstream processing: Filtration, Centrifugation, Cell disruption, Chromatography, liquid-liquid extraction, product recovery and purification. Effluent treatment- product recovery, sludge process, waste disposal.

UNIT-V

Application: Microbial production of ethanol, amylase, lactic acid, and Single Cell Proteins. Fermentation economics.

Suggested Reading:

1. Patel, A.H. (2007). *Industrial Microbiology*. Macmillan India Ltd.
2. Stanbury, P.F., Whitaker, A. & S.J. Hall. (2007). *Principles of fermentation technology*. Elsevier Science Ltd.
3. Casida, L.E. (1991). *Industrial Microbiology*. (1st ed.). Wiley Eastern Limited.
4. Crueger, W., & Crueger, A. (2000). *Biotechnology: A textbook of Industrial Microbiology* (2nd ed.). New Delhi: Panima Publishing Co.
5. Patel, A.H. (1996). *Industrial Microbiology*. (1st ed.). Macmillan India Limited.

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation nucleic acids and Protein.
- To learn the strategies for gene transfer in plants and animals.
- To acquire knowledge on genome mapping.
- To familiarize the student with emerging field of biotechnology
- To acquaint the students to versatile tools and techniques employed in recombinant DNA technology.
- To learn the history and recent developments in rDNA technology, Enzymes used in rDNA technology

Course Outcomes

On completion of the course, students are able to

1. Outline the fundamental steps in a genetic engineering procedure.
2. Describe the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production.
3. Explain the usefulness of plasmid preparations, how they are performed, and how the concentration and purity of plasmid samples can be determined.
4. Discuss cloning strategies and techniques used to probe DNA for specific genes of interest.
5. Conceptualize PCR technique in medical and forensic science.
6. Summarize various applications of rDNA technology in human health care and safety regulations.

UNIT-I

Introduction to r-DNA technology: Basic tools and applications – isolation and purification of nucleic acids, Enzymes used in cloning - restriction enzymes, ligases, polymerases, kinases, phosphatases. Gene recombination and gene transfer – transformation, episomes, plasmids and other cloning vectors (bacteriophage-derived, artificial chromosomes), microinjection, electroporation, ultrasonication.

UNIT-II

Selection and screening of recombinant clones: Probes – radio labeled and non radio-labeled, guessmers and degenerate probes. Sequence dependent and independent screening, southern, northern hybridization, colony and plaque hybridization, *in situ* chromosomal hybridization, chromosome walking, Genome mapping, DNA fingerprinting, Polymerase chain reaction (PCR), RT- (Reverse transcription) PCR.

UNIT-III

Expression and characterization of cloned DNA: Expression vectors, optimization of protein expression in heterologous systems, Fusion proteins, *In vitro* translation systems. Preparation and comparison of Genomic and cDNA library.

UNIT-IV

Random and site-directed mutagenesis: Primer extension and PCR based methods of site directed mutagenesis, Random mutagenesis, Gene shuffling, production of chimeric proteins, Protein engineering concepts and examples (any two).

UNIT-V

Applications of Genetic Engineering: In plants: use of *Agrobacterium tumefaciens* and *A. rhizogenes*, Ti plasmids, Strategies for gene transfer to plant cells, Direct DNA transfer to plants, Gene targeting in plants, Use of plant viruses as episomal expression vectors.

In animals: Production and applications of transgenic mice, role of ES cells in gene targeting in mice, Therapeutic products - blood proteins, human hormones, immune modulators and vaccines (one example each). Ethical, legal and social issues.

Suggested Reading:

1. Clark, D.P., & Pazdernik, N.J. (2009). *Biotechnology-Appling the Genetic Revolution*. USA: Elsevier Academic Press.
2. Brown, T.A., (2006). *Gene Cloning and DNA Analysis* (5th ed.). Oxford: UK, Blackwell Publishing.
3. Primrose, S.B., & Twyman, R.M. (2006). *Principles of Gene Manipulation and Genomics* (7th ed.). Oxford: UK, Blackwell Publishing.
4. Glick, B.R., & Pasternak, J.J. (2003). *Molecular Biotechnology- Principles and Applications of recombinant DNA*. Washington: ASM Press.

Course Objectives

The main objectives of the course are,

- To impart the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- To develop the knowledge on gene sequencing methods.
- To know the structure and interactions of proteins.
- To describe advanced genomics and proteomics technologies and the ways in which their data are stored
- To use bioinformatics techniques to query examples of genomic and proteomic databases to analyse cell biology
- To describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of genetic markers in genome mapping.
2. Application of 2D technique to analyze the structure of protein.
3. Analyze the genomic and proteomic data.
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology.
5. Discuss how biological systems information relating to genes, proteins and cellular structures can be used to model living cells, and even to create new synthetic cells
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.

UNIT-I

Introduction to Genomics, Gene and Pseudogenes, Gene structure, DNA sequencing methods – manual and automated: Maxam and Gilbert and Sangers method. Pyrosequencing, Genome Sequencing: Shotgun and Hierarchical (clone contig) methods, Computer tools for sequencing projects: Genome sequence assembly software.

UNIT-II

Managing and Distributing Genome Data: Web based servers and software for genome analysis: ENSEMBL, VISTA, UCSC Genome Browser, NCBI genome. Selected Model Organisms' Genomes and Databases.

UNIT-III

Genomic mapping: Genetic markers – VNTR, mini and micro satellites, STS, SNPs, ESTs. Types of genome maps, Mapping techniques – Physical and genetic mapping, Map resources, Practical uses genome maps.

UNIT-IV

Introduction to protein structure, Chemical properties of proteins. Physical interactions that determine the property of proteins. Short-range interactions, electrostatic forces, van der Waal interactions, hydrogen bonds, Hydrophobic interactions. Determination of sizes -Sedimentation analysis, gel filtration, Native PAGE, SDS-PAGE. Determination of covalent structures – Edman degradation.

UNIT-V

Introduction to Proteomics, Analysis of proteomes. 2D-PAGE. Sample preparation, solubilization, reduction, resolution. Reproducibility of 2D-PAGE. Mass spectrometry-based methods for protein identification. De novo sequencing using mass spectrometric data.

Suggested Reading:

Course Objectives

The main objectives of the course are,

- To impart the basic and recent developments in the field of Industrial fermentation
- To impart knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices.
- To discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- To learn how to conduct experiments related to industrial fermentation and produce microbial metabolites
- To learn about the downstream and upstream process in fermentation technology.
- To learn about the influence of factors affecting the production of various microbial metabolites

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of growth kinetics.
2. Design a fermenter and parameters to be monitored and controlled in fermentation process.
3. Gain knowledge about the principle of sterilization necessary for fermentation.
4. Acquire knowledge about the cell growth and product formation.
5. Evaluate the kinetics and mechanism of microbial growth.
6. Develop protocol for scale-up and harvesting from shake flask to bench top fermenter.

UNIT-I

Microbial products: Microbial products of pharmacological interest, steroidal fermentations and transformations. Over production of microbial metabolite, Secondary metabolism – its significance and products. Metabolic engineering of secondary metabolism for highest productivity. Enzyme and cell immobilization techniques in industrial processing, enzymes in organic synthesis, proteolytic enzymes, hydrolytic enzymes, glucose isomerase, enzymes in food technology/ organic synthesis.

UNIT-II

Purification and characterization: Purification & characterization of proteins, Upstream and downstream processing, solids and liquid handling. Distribution of microbial cells, centrifugation, filtration of fermentation broth, ultra centrifugation, liquid extraction, ion-exchange recovery of biological products. Experimental model for design of fermentation systems, Anaerobic and Aerobic fermentations.

UNIT-III

Enzyme Kinetics: Rate equations for enzyme kinetics, simple and complex reactions. Inhibition kinetics; effect of pH and temperature on rate of enzyme reactions. Mathematical derivation of growth kinetics, mathematical derivations of batch and continuous culture operations.

UNIT-IV

Production of industrial chemicals, biochemicals and chemotherapeutic products: Propionic acid, butyric acid, 2-3 butanediol, gluconic acid, itaconic acid, Biofuels: Biogas, Ethanol, butanol, hydrogen, biodiesel, microbial electricity, starch conversion processes; Microbial polysaccharides; Microbial insecticides; microbial flavours and fragrances, newer antibiotics, anti cancer agents, amino acids.

UNIT-V

Mass Transfer operations: Single stage CSTR; mass transfer in aerobic fermentation; resistances encountered; overall mass transfer co-efficient (K_a) determination, factors depending on scale up principle and different methods of scaling up. Metabolic engineering of antibiotic biosynthetic pathways.

Suggested Reading:

1. Stanbury PF, Whitaker A and Hall SJ. (2006). *Principles of Fermentation Technology* (2nd ed.). Elsevier Science Ltd.
2. Crueger W and Crueger A. (2000). *Biotechnology: A textbook of Industrial Microbiology* (2nd ed.). Panima Publishing Co. New Delhi.
3. Casida LE. (1991). *Industrial Microbiology*. Wiley Eastern Limited.

Course Objectives

The main objectives of the course are,

- To understand the kinetics and mechanisms of action of enzymes, to become familiar with the basic methods of studying enzymes, and to appreciate how individual reactions are controlled and integrated into the metabolic pathways of the cell.
- To acquire theoretical and experimental knowledge will enable students to find appropriate employment in different development, scientific-research laboratories.
- To understand the topics related to the practical use of enzymes, including nomenclature and kinetics, preparation and storage methods, use of enzymes in biotechnology and bioanalytics including biosensors and enzyme reactors.
- To provide general knowledge on protein structure and function, as well as the experimental techniques in protein chemistry and protein engineering
- To develop the ability of identifying the experimental techniques required to solve specific problems related to proteins and enzyme functions
- To train students in the evaluation of the consequences of biochemical and biological tools in their professional activities

Course Outcomes

On completion of the course, students are able to

1. Understand the chemical principles of enzyme catalysis, including cofactor chemistry
2. Show insight in the action of enzymes as biocatalysts and in factors that influence enzyme activity
3. Understand the kinetics of enzymatic reactions
4. Show awareness of the influence of enzyme structure on catalytic properties
5. Show experience with purification, handling and characterization of proteins
6. Show insight in the physico-chemical properties of proteins that underlie purification methods.

UNIT-I

Isolation, crystallization and purification of enzymes: homogeneity of enzyme preparation, methods of enzyme analysis. Enzyme classification (rationale, overview and specific examples) Zymogens and their activation (Proteases and Prothrombin). Enzyme substrate complex: concept of E-S complex, binding sites, active site, specificity, Kinetics of enzyme activity, Michaelis-Menten equation and its derivation, Different plots for the determination of K_m and V_{max} and their physiological significance, factors affecting initial rate, E, S, temp. & pH. Collision and transition state theories, Significance of activation energy and free energy.

UNIT-II

Enzyme-Substrate reactions: Two substrate reactions (Random, ordered and ping-pong mechanism) Enzyme inhibition types of inhibition, determination of K_i , suicide inhibitor. Mechanism of enzyme action: General mechanistic principle, factors associated with catalytic efficiency: proximity, orientation, distortion of strain, acid-base, nucleophilic and covalent catalysis. Techniques for studying mechanisms of action, chemical modification of active site groups, specific examples:- chymotrypsin, lysozyme, GPDH, aldolase, RNase, Carboxypeptidase and alcohol dehydrogenase. Enzyme regulation: Product inhibition, feed back control, covalent modification.

UNIT-III

Allosteric enzymes: Allosteric enzymes with special reference to aspartate transcarbamylase and phosphofructokinase. Qualitative description of concerted and sequential models. Negative cooperativity and half site reactivity. Enzyme - Enzyme interaction, Protein ligand binding, measurements analysis of binding

isotherm, cooperativity, Hill and scatchard plots, kinetics of allosteric enzymes. Isoenzymes– multiple forms of enzymes with special reference to lactate dehydrogenase. Multienzyme complexes. Ribozymes. Multifunctional enzyme-eg Fatty Acid synthase.

UNIT-IV

Properties of Enzymes: Thermal stability and catalytic efficiency of enzyme, site directed mutagenesis and enzyme engineering– selected examples, Delivery system for protein pharmaceuticals, structure function relationship in enzymes, structural motifs and enzyme evolution. Methods for protein sequencing. Methods for analysis of secondary and tertiary structures of enzymes. Protein folding *in vitro* & *in vivo*.

UNIT-V

Enzyme Technology: Methods for large scale production of enzymes. Immobilized enzyme and their comparison with soluble enzymes, Methods for immobilization of enzymes. Immobilized enzyme reactors. Application of Immobilized and soluble enzyme in health and industry. Application to fundamental studies of biochemistry. Enzyme electrodes.

Suggested Reading:

1. Robert Murray, K., David Bender, A., Kathleen Botham, M., Peter Kennelly, J., Victor Rodwell, W., Anthony Weil, P. (2009). *Harper's illustrated Biochemistry* (28th ed.). McGrawHill.
2. Lubert Stryer, (2006). *Biochemistry* (6th ed.). WH Freeman.

4. Mary K., & Shawn O. Farrell, (2005). *Biochemistry* (5th ed.). Cenage Learning.
5. Nicholas Price, & Lewis Stevens (1999) *Fundamentals of Enzymology*. Oxford University Press.

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation, screening of industrial important microbes
- To derive industrially important products from microbes.
- To acquire knowledge on single cell proteins.
- To learn the principle and applications of bioprocess technology.
- To learn the fundamental calculation in bioprocessing.
- To learn the schematic diagram of upstream and downstream processing for product recovery and purification.

Course Outcomes

The learners will be able to

1. Gain overall knowledge of bioprocess technology.
2. Obtain information about the application of industrially important microbes.
3. Know the screening, extraction and purification of enzymes.
4. Designing of bioreactors and control necessary for maximizing production.
5. Select and optimize media for maximum production of microbial metabolites.
6. Designing of protocols for strain improvement and separation of molecules after fermentation process.

Practical

1. Bacterial growth curve.
2. Calculation of thermal death point (TDP) of microbial samples.
3. Production and analysis of ethanol.
4. Production and analysis of amylase.
5. Production and analysis of lactic acid.
6. Isolation of industrially important microorganism from natural resources.

Suggested Reading:

1. Stanbury, P.F., Whitaker, A. & Hall, S.J. (2006). *Principles of Fermentation Technology* (2nd ed.). Elsevier Science Ltd.
2. Crueger, W., & Crueger, A. (2000). *Biotechnology: A textbook of Industrial Microbiology* (2nd ed.). New Delhi: Panima Publishing Co.
3. Casida, L.E. (1991). *Industrial Microbiology* (1st ed.). Wiley Eastern Limited.
4. Patel, A.H. (1996). *Industrial Microbiology* (1st ed.). Macmillan India Limited.

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation nucleic acids and Protein.
- To learn the strategies for gene transfer in plants and animals.
- To acquire knowledge on genome mapping.
- To familiarize the student with emerging field of biotechnology
- To acquaint the students to versatile tools and techniques employed in recombinant DNA technology.
- To learn the history and recent developments in rDNA technology, Enzymes used in rDNA technology

Course Outcomes

On completion of the course, students are able to

1. Outline the fundamental steps in a recombinant DNA technique.
2. Describe the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production.
3. Explain the usefulness of plasmid preparations, how they are performed, and how the concentration and purity of plasmid samples can be determined.
4. Discuss cloning strategies and techniques used to probe DNA for specific genes of interest.
5. Conceptualize PCR technique in medical and forensic science.
6. Utilize versatile tools and techniques employed in recombinant DNA technology.

Practical

1. Isolation of chromosomal DNA from plant cells
2. Isolation of chromosomal DNA from *E. coli*
3. Qualitative and quantitative analysis of DNA using spectrophotometer and agarose gel Electrophoresis.
4. Plasmid DNA isolation
5. Restriction digestion of DNA/ Plasmid DNA
6. Ligation of DNA insert into plasmid vector
7. Preparation of Competent cells
7. Transformation of competent cells.
8. Demonstration of PCR.

Suggested Reading:

1. Brown, T.A. (2006). *Gene Cloning and DNA Analysis* (5th ed.). Oxford: UK, Blackwell Publishing.
2. Primrose, S.B., & Twyman, R.M. (2006). *Principles of Gene Manipulation and Genomics* (7th ed.). Oxford: UK, Blackwell Publishing.
3. Sambrook, J., Fritsch, E.F., & Maniatis, T. (2001). *Molecular Cloning-A Laboratory Manual*. (3rd ed.). Cold Spring Harbor Laboratory Press.

Course Objectives

The main objectives of the course are,

- To import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- To develop the knowledge on gene sequencing methods.
- To know the structure and interactions of proteins.
- To describe advanced genomics and proteomics technologies and the ways in which their data are stored
- To use bioinformatics techniques to query examples of genomic and proteomic databases to analyse cell biology
- To describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of genetic markers in genome mapping.
2. Application of 2D technique to analyze the structure of protein.
3. Analyze the genomic and proteomic data.
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology.
5. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
6. Utilize the various databases at NCBI and other sites for protein localization

Practical

1. Use of SNP databases at NCBI and other sites
2. Use of OMIM database
3. Detection of Open Reading Frames using ORF Finder
4. Proteomics 2D PAGE database
5. Software for Protein localization.
6. Software for protein secondary sequencing prediction
7. Hydropathy plots
8. Native PAGE
9. SDS-PAGE

Suggested Reading:

4. Sambrook & Russell (3rd ed.). (1989). *Molecular Cloning: A Laboratory Manual* (Vols. 1 to 3). Cold Spring Harbor Laboratory Press.

Course Objectives

The main objectives of the course are,

- To impart the basic and recent developments in the field of Industrial fermentation
- To impart knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices.
- To discuss the role of microorganisms in industry, as well as to carry out experiments to produce microbial metabolites.
- To learn how to conduct experiments related to industrial fermentation and produce microbial metabolites
- To learn about the downstream and upstream process in fermentation technology.
- To learn about the influence of factors affecting the production of various microbial metabolites

Course Outcomes

On completion of the course, students are able to

1. Have a clear understanding on the application of growth kinetics
2. Design a fermenter and parameters to be monitored and controlled in fermentation process.
3. Gain knowledge about the principle of sterilization necessary for fermentation.
4. Acquire knowledge about the cell growth and product formation.
5. Evaluate the kinetics and mechanism of microbial growth.
6. Develop protocol for scale-up and harvesting from shake flask to bench top fermenter.

Practical

1. Comparative analysis of design of a batch and continuous fermenter.
2. Calculation of Mathematical derivation of growth kinetics.
3. Solvent extraction & analysis of a metabolite from a bacterial culture.
4. Perform an enzyme assay demonstrating its hydrolytic activity (protease/peptidase/glucosidase etc.)

Suggested Reading:

Course Objectives

The main objectives of the course are,

- To understand the kinetics and mechanisms of action of enzymes, to become familiar with the basic methods of studying enzymes, and to appreciate how individual reactions are controlled and integrated into the metabolic pathways of the cell.
- To acquire theoretical and experimental knowledge will enable students to find appropriate employment in different development, scientific-research laboratories.
- To understand the topics related to the practical use of enzymes, including nomenclature and kinetics, preparation and storage methods, use of enzymes in biotechnology and bioanalytics including biosensors and enzyme reactors.
- To provide general knowledge on protein structure and function, as well as the experimental techniques in protein chemistry and protein engineering
- To develop the ability of identifying the experimental techniques required to solve specific problems related to proteins and enzyme functions
- To train students in the evaluation of the consequences of biochemical and biological tools in their professional activities

Course Outcomes

On completion of the course, students are able to

1. Understand the chemical principles of enzyme catalysis, including cofactor chemistry
2. Show insight in the action of enzymes as biocatalysts and in factors that influence enzyme activity
3. Understand the kinetics of enzymatic reactions
4. Show awareness of the influence of enzyme structure on catalytic properties
5. Show experience with purification, handling and characterization of proteins
6. Show insight in the physico-chemical properties of proteins that underlie purification methods.

Practical

1. Purification of an enzyme from any natural resource
2. Quantitative estimation of proteins by Bradford/Lowry's method.
3. Perform assay for the purified enzyme.
4. Calculation of kinetic parameters such as K_m , V_{max} , K_{cat}

Suggested Reading:

Course Objectives

The main objectives of the course are,

- To understand the physiological conditions of the plants and metabolism.
- To understand the basic concepts of photosystems and their importance in plant growth.
- To gain the information about the economic importance of algae and fungi.
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Algae
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Fungi
- Studied some plant diseases with special reference to the causative agents, symptoms, etiology and control measures.

Course Outcomes

The learners will be able to,

1. Gain adequate knowledge on plant biodiversity and importance.
2. Understand the molecular mechanisms of macro and micro nutrients in plant growth.
3. Get the basic and applied knowledge of plant physiology, growth, development and metabolism.
4. Discuss about importance of morphological structure, classification, reproduction and economic importance of Algae.
5. Know the control measures of plant diseases.
6. Explain about structure, classification, reproduction, life cycle and economic importance of Bryophytes.

UNIT-I

Algae: General character, classification and economic importance. Life histories of algae belonging to various classes: Chlorophyceae – *Volvox*, *Oedogonium*, Xanthophyceae – *Vaucheria*, Phaeophyceae – *Ectocarpus*, Rhodophyceae-*Polysiphonia*

UNIT-II

Fungi: General characters, classification & economic importance. Life histories of Fungi: Mastigomycotina-*Phytophthora*, Zygomycotina-*Mucor*, Ascomycotina- *Saccharomyces*, Basidiomycotina-*Agaricus*, Deutromycotina-*Colletotrichum*

UNIT-III

Lichens: Classification, general structure, reproduction and economic importance.

UNIT-IV

Bryophytes: General characters, classification & economic importance. Life histories of following: *Marchantia*, *Funaria*.

UNIT-V

Plant Diseases: Casual organism, symptoms and control of following plant diseases. Rust and Smut of Wheat. White rust of Crucifers. Late blight of Potato. Red rot of Sugarcane. Citrus Canker.

Suggested Reading:

1. Lee, R.E. (2008). *Phycology* (4th ed.). USA: Cambridge University Press.
2. Sambamurty, (2008). *A Textbook of Bryophytes, Pteridophytes, Gymnosperms and Paleobotany*. IK : International Publishers.

4. Van den Hoek, C., Mann, D.J. & Jahns, H.M. (1995). *Algae: An introduction to Phycology*. Cambridge Univ. Press.
5. Vander-Poorteri, (2009). *Introduction to Bryophytes*. COP.
6. Webster, J. & Weber, R. (2007). *Introduction to Fungi* (3rd ed.). Cambridge: Cambridge University Press.

Course Objectives

The main objectives of the course are,

- To give knowledge on molecular analysis in forensic science.
- To offer knowledge to assess DNA finger printing
- To understand the evidence for suspecting victims in crime
- To handle the evidences left out at the crime scene.
- To understand the basic methods for examine the different types of questioned documents.
- To understand the Classification of fire arms.

Course Outcomes

On completion of the course, students are able to

1. Demonstrate competency in the collection, processing, analyses, and evaluation of evidence.
2. Demonstrate competency in the principles of crime scene investigation, including the recognition, collection, identification, preservation, and documentation of physical evidence.
3. Demonstrate an understanding of the scientific method and the use of problem-solving within the field of forensic science.
4. Identify the role of the forensic scientist and physical evidence within the criminal justice system.
5. Demonstrate the ability to document and orally describe crime scenes, physical evidence, and scientific processes.
6. Identify and examine current and emerging concepts and practices within the forensic science field.

UNIT- I

Introduction and principles of forensic science: Forensic science laboratory and its organization and service, tools and techniques in forensic science, branches of forensic science, causes of crime, role of modus operandi in criminal investigation. Classification of injuries and their medico-legal aspects, method of assessing various types of deaths.

UNIT-II

Classification of fire arms and explosives: Introduction to internal, external and terminal ballistics. Chemical evidence for explosives. General and individual characteristics of handwriting, examination and comparison of handwritings and analysis of ink various samples.

UNIT-III

Toxicology and Finger printing: Role of the toxicologist, significance of toxicological findings, Fundamental principles of fingerprinting, classification of fingerprints.

UNIT-IV

DNA finger printing: Principle of DNA fingerprinting, application of DNA profiling in forensic medicine, Investigation Tools, eDiscovery, Evidence Preservation, Search and Seizure of Computers,

UNIT-V

Cyber security: Introduction to Cyber security and recent techniques. development of finger print as science for personal identification,

Suggested Reading:

1. Bernard J. Glick, Jack J. Pasternak , & Cheryl L. Patten. (2010). *Molecular Biotechnology- Principles and Applications of recombinant DNA* (4th ed.). Washington: ASM Press.

6. Saferstein R., (2015). *Criminalistics: An Introduction to Forensic Science* (11th ed.). New Jersey: Prentice Hall.

Course Objectives

The main objectives of the course are,

- To give knowledge on Bioinformatics and its application
- To offer knowledge to assess biological databases
- To understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- To understand the various online databases for submitting and retrieving data's
- To understand how the phylogeny plays a vital role in finding ambiguities.
- To get practiced with the tools and techniques for analysing the data.

Course Outcomes

On completion of the course, students are able to

1. Understand The relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes.
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences

UNIT-I

History and milestone of Bioinformatics: The notion of Homology. Sequence Information Sources, EMBL, GENBANK, Entrez, Unigene, Understanding the structure of each source and using it on the web. Genome sequencing projects – Steps, Human Genome Project and other genome projects.

UNIT-II

Basic concepts of biomolecules: Protein and amino acid, DNA and RNA - Sequence, Structure and function. Protein Information Sources, PDB, SWISSPROT, TREMBL, Understanding the structure of each source and using it on the web. Introduction of Data Generating Techniques and Bioinformatics problem posed by them- Restriction Digestion, Chromatograms, Blots, PCR, Microarrays, Mass Spectrometry.

UNIT-III

Sequence and Phylogeny analysis: Detecting Open Reading Frames, Outline of sequence Assembly, Mutation/Substitution Matrices, Pairwise Alignments, Introduction to BLAST, using it on the web, Interpreting results, Multiple Sequence Alignment, Phylogenetic Analysis. Introduction to BLAST, using it on the web, Interpreting results, Multiple Sequence Alignment, Phylogenetic Analysis.

UNIT-IV

Biological databases: Types of databases, Sequence databases, Nucleic acid sequence databases - Primary (GenBank, EMBL, DDBJ), Secondary (UniGene, SGD, EMI Genomes, Genome Biology), Protein sequence database – Primary (PIR, SWISS-PROT), Secondary (PROSITE, Pfam), Structural databases (PDB, SCOP, CATH), Bibliographic databases and Organism specific databases.

UNIT-V

Searching Databases: SRS, Entrez, Sequence Similarity Searches-BLAST, FASTA, Data Submission. Genome Annotation: Pattern and repeat finding, Gene identification tools. Gene prediction: Gene prediction in prokaryote and eukaryotes. Extrinsic approaches and Ab initio approaches. Predicting the protein secondary structure (Domain, blocks, motifs), Predicting protein tertiary structure (Homology, Ab-initio, threading and fold recognition) and visualization of predicted structure.

Suggested Reading:

2. Pevsner, J. (2009). *Bioinformatics and Functional Genomics* (2nd ed.). Wiley-Blackwell.
3. Campbell, A.M., & Heyer, L.J. (2006). *Discovering Genomics, Proteomics and Bioinformatics* (2nd ed.). Benjamin Cummings.

Course Objectives

The main objectives of the course are,

- To develop the skills on morphological identification of plants.
- Understand the diversity among various plants
- Know the systematic morphology and structure of Pteridophytes.
- Learn about the general characters and classification in Pteridophytes, heterospory and origin of seed habit.
- Know about the structure, life history and Economic importance of Gymnosperms.
- Studied the methods of fossilization and fossil plants

Course Outcomes

The learners will be able to

1. Study and impart knowledge about the occurrence, distribution, structure and life history of plants
2. Learn in detail about vegetative and reproductive parts of plants.
3. Learn the phylogeny and evolutionary concepts in plants.
4. Learn how to handle a fossilized specimen
5. Acquire knowledge about the structure, life history and Economic importance of Gymnosperms
6. Learn the skills on morphological identification of plants

UNIT-I

Pteridophytes: General characters of pteridophytes, affinities with bryophytes and gymnosperms, classification, economic importance, study of life histories of fossil pteridophytes – *Rhynia*.

UNIT-II

Pteridophytes: Type studies: Life histories of *Selaginella*- (Heterospory and seed habit), *Equisetum*, *Pteris*, *Lycopodium*.

UNIT-III

Gymnosperms: General characters, classification, geological time scale, theories of fossil formation, types of fossils, fossil gymnosperms- *Williamsonia* & *Glossopteris*, telome and stele concept.

UNIT-IV

Gymnosperms: Type studies: Life histories of *Cycas* and *Pinus* and economic importance of gymnosperms.

UNIT-V

Angiosperms: General characters, classification, monocot, dicot, floral characters, economic importance.

Suggested Reading:

1. Sambamurty, (2008). *A Textbook of Bryophytes, Pteridophytes, Gymnosperms and Paleobotany*. IK International Publishers.
2. Bhatnager, S.P. & Moitra, A. (1996). *Gymnosperms*. New Delhi: New Age International (P) Ltd. Publishers.
3. Wickens, G.E. (2004). *Economic Botany: Principles and Practices*. Dordrecht: Netherlands, Springer. Kuwer Publishers.
4. Parihar, N.S. (1996). *The Biology and Morphology of Pteridophytes*. Allahabad: Central Book Depot.

Course Objectives

The main objectives of the course are,

- To introduce biotechnological methods for production of transgenic plants.
- To give knowledge about various methods of gene transfer in plants.
- To cognize and get the knowledge on micro propagation to protect endangered plants.
- To explain the basics of the physiological and molecular processes that occur during plant growth and development and during environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of plants
- To understand the processes involved in the planning, conduct and execution of plant biotechnology experiments

Course Outcomes

On completion of the course, students are able to

1. Understand the growth conditions required to culture the plants in *invitro* conditions.
2. Inculcate the deep understanding of Gene expression system of plants
3. Acquire knowledge on producing Transgenic plants
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
5. Learn the structure and organization of plant genome
6. Learn the basic techniques for hybridization in producing transgenic plants

UNIT-I

Introduction: Cryo and organogenic differentiation, Types of culture: Seed, Embryo, Callus, Organ, Cell and Protoplast culture. Micropopagation Axillary bud proliferation, Meristem and shoot tip culture and culture, organogenesis, embryogenesis, advantages and disadvantages of micropropagation

UNIT-II

In vitro culture: haploid production Androgenic methods: Anther culture, Microspore culture and oogenesis. Significance and use of haploids, Ploidy level and chromosome doubling, diplodization, Gynogenic haploids, factors effecting gynogenesis, chromosome elimination techniques for production of haploids in cereals.

UNIT-III

Hybridization: Protoplast Isolation and fusion Methods of protoplast isolation, Protoplast development, Somatic hybridization, identification and selection of hybrid cells, Cybrids, Potential of somatic hybridization limitations. Somaclonal variation Nomenclature, methods, applications basis and disadvantages. Plant Growth Promoting bacteria. Nitrogen fixation, Nitrogenase, Hydrogenase, Nodulation, Bio control of pathogens, Growth promotion by free-living bacteria.

UNIT-IV

Structure and organization of plant genome: regulation of plant genome expression, transcriptional, translational and post transcriptional regulation of plant genome. Transfer of nucleic acid to plant cells - Direct

transformation by electroporation and particle gun bombardment. - *Agrobacterium*, Ti plasmid vector Theory and techniques for the development of new genetic traits.

UNIT-V

Transgenic plants: herbicides and pest resistant plants, Drought, Salinity and cold tolerant plants; Molecular farming / pharming: carbohydrates, lipids, therapeutic proteins, edible vaccines, purification strategies; Oleosin partition technology.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of life and gradual evolution of human and other animals
- To ascertain the evolutionary concepts through fossil study of Eukaryotes from Prokaryotes
- To explain Origin of Life especially Prokaryotes as well as Eukaryotes in detail.
- To give detailed explanation of key concepts of Population Genetics in terms of Hardy-Weinberg Law, Genetic Drift and Types of Natural Selection.
- To provide adequate knowledge about Micro-evolutionary changes, Speciation and Adaptive Radiation.
- To impart descriptive knowledge regarding Origin and Evolution of Man

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of Evolutionary Biology.
2. Expertise on the concepts of evolution, chromosomal aberrations; recombination and random assortment.
3. Acknowledge on the Qualitative Studies Based on Field Observations
4. To develop comprehensive knowledge regarding various Sources of Variations and their role in evolution.
5. To explore salient features of various theories of evolution comprising of Lamarckism, Darwinism and Neo-Darwinism.
6. To impart detailed understanding of Qualitative Studies Based on Field Observations.

UNIT- I

Historical Review of Evolutionary Concept: Pre-Darwinian ideas – List of contributors influencing Darwin indicated as a *timeline*. Lamarckism – Merits and demerits. Darwinism – Merits and demerits, Post-Darwinian era –Modern synthetic theory; biomathematics and the theory of population genetics leading to Neo-Darwinism

UNIT- II

Life's Beginnings: Chemogeny – An overview of pre-biotic conditions and events; experimental proofs to abiotic origin of micro- and macro-molecules. Current concept of chemogeny – RNA first hypothesis. Biogeny – Cellular evolution based on proto-cell models (coacervates and proteinoid micro-spheres). Origin of photosynthesis – Evolution of oxygen and ozone buildup. Endosymbiotic theory – Evolution of Eukaryotes from Prokaryotes

UNIT-III

Evidences of Evolution: Paleobiological – Concept of Stratigraphy and geological timescale; fossil study (types, formation and dating methods). Anatomical – Vestigial organs; Homologous and Analogous organs (concept of parallelism and convergence in evolution). Taxonomic – Transitional forms/evolutionary intermediates; living fossils. Phylogenetic – a) Fossil based – Phylogeny of horse as a model. b) Molecule based – Protein model (Cytochrome C); gene model (Globin gene family)

UNIT-IV

Sources of Evolution – Variations as Raw Materials of Change: Types of variations – Continuous and discontinuous; heritable and non-heritable. Causes, classification and contribution to evolution – Gene mutation; chromosomal aberrations; recombination and random assortment (basis of sexual reproduction); gene regulation. Concept of micro- and macro-evolution – A brief comparison

UNIT-V

Forces of Evolution – Qualitative Studies Based on Field Observations: Natural selection as a guiding force – Its attributes and action Basic characteristics of natural selection. Colouration, camouflage and mimicry, Co-adaptation and co-evolution, Man-made causes of change – Industrial melanism; brief mention of drug, pesticide, antibiotic and herbicide resistance in various organisms. Modes of selection, Polymorphism, Heterosis and Balanced lethal systems. Genetic Drift (Sewall Wright effect) as a stochastic/random force – Its attributes and action. Basic characteristics of drift; selection vs. drift, Bottleneck effect. Founder principle.

Suggested Reading:

1. Ridley, M. (2004). *Evolution* (3rd ed.). Blackwell.
2. Hall, B. K., & Hallgrimson, B. (2008). *Strickberger's Evolution* (4th ed.). Jones and Barlett
3. Zimmer, C., & Emlen, D. J. (2013). *Evolution: Making Sense of Life*. Roberts & Co.

Course Objectives

The main objectives of the course are,

- To introduce biotechnological methods for production of transgenic animals.
- To give knowledge about various methods of gene transfer in animals.
- To cognize and get the knowledge on techniques to protect endangered animals.
- To explain the basics of the physiological and molecular processes for animals facing environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of animals
- To understand the processes involved in the planning, conduct and execution of animal biotechnology experiments

Course Outcomes

On completion of the course, students are able to

1. Understand the growth conditions required to culture the animals in *invitro* conditions.
2. Inculcate the deep understanding of Gene expression system of animals
3. Acquire knowledge on producing Transgenic animal
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of animal biotechnology experiments
5. Learn the structure and organization of animal genome
6. Learn the basic techniques for hybridization in producing transgenic animal.

UNIT- I

Animal Tissue Culture: Laboratory design: aseptic techniques – handling instruments: Microscopes, Clean-bench, etc., and bio safety. Animal Cell Culture Media: Natural and artificial media – their constituents; Physicochemical properties of media; Serum supplemented and serum-free media; Sterilization methods.

UNIT - II

Primary Cell Culture: Methods of tissue disaggregation - isolations of tissues from chick embryo, mouse and human; Continuous and established cell cultures; Cell separation and characterization; Organ culture- types.

UNIT-III

Gene transfer methods in Animals: Microinjection, Embryonic Stem cell, gene transfer, Retrovirus & Gene transfer. Introduction to transgenesis. Transgenic Animals – Mice, Cow, Pig, Sheep, Goat, Bird, Insect. Zebra Fish.

UNIT-IV

Animal propagation : Artificial insemination, Animal Clones. Conservation Biology – Embryo transfer techniques. Introduction to Stem Cell Technology and its applications.

UNIT-V

Production and applications: Genetic modification in Medicine - gene therapy, types of gene therapy, vectors in gene therapy, molecular engineering, problems and ethics.

Suggested Reading:

1. Glick, B.R., & Pasternak, J.J. (2009). *Molecular biotechnology- Principles and applications of recombinant DNA* (4th ed.). Washington, USA: ASM press.
2. Watson, J.D., Myers, R.M., Caudy, A., & Witkowski, J.K. (2007). *Recombinant DNA genes and genomes- A short course* (3rd ed.). NY: USA, Freeman & Co.
3. Butler, M. (2004). *Animal cell culture and technology: The basics* (2nd ed.). Bios scientific publishers.
4. Griffiths, A.J.F., Miller, J.H., Suzuki, D.T., Lewontin, R.C., & Gelbart, W.M. (2009). *An introduction to genetic analysis* (9th ed.). NY: USA, Freeman & Co.

Course Objectives

The main objectives of the course are,

- To provide the students with an in-depth knowledge of the diversity in form, structure and habits of invertebrates.
- To learn the basics of systematic and understand the hierarchy of different categories.
- To learn the diagnostic characters of different phyla through brief studies of examples.
- To obtain an overview of economically important invertebrate fauna.
- To explain the organizational hierarchies and complexities of invertebrates.
- To describe the evolutionary trends in external morphology and internal structure.

Course Outcomes

The learners will be able to

1. Outline the origin and classification of animal kingdom
2. Describe the origin of animals and how they differ from other living organisms;
3. Explain the relationship between animal diversity and evolutionary derived changes in animal body plans
4. Analyze the various modes of adaptations in animals
5. Identify and classify with examples the invertebrates
6. Analyze the various modes of adaptations in animals

UNIT- I

- a) Outline of classification of Non- Chordates up to subclasses. Coelomata, Acoelomata, Symmetries, Deutrostomes, Protostomes.
- b) Protozoa: Locomotion, Reproduction, evolution of Sex, General features of *Paramecium* and *Plasmodium*. Pathogenic protozoans

UNIT-II

- a) Porifera: General characters, outline of Classification; skeleton, Canal System
- b) Coelenterata: General Characters, Outline of classifications Polymorphism, Various types of stinging cells; Metagenesis, coral reefs and their formation.

UNIT-III

- a) Platyhelminthes- General Characters; Outline of classification; Pathogenic flatworms: Parasitic adaptations.
- b) Aschelminthes: General features, Outline of classification, Pathogenic roundworms and their vectors in relation to man: Parasite adaptation.

UNIT-IV

- a) Annelida: - General features, Outline of classification, Coelom: Metameric segmentation, General features of Earthworm, Vermicomposting.
- b) Arthropoda: General Features, Outline of Classification; Larval forms of crustacean, Respiration in Arthropoda; Metamorphosis in insects; Social insects; Insect vectors of diseases; Apiculture, Sericulture.

UNIT-V

- a) Mollusca: general features, Outline of classification, Shell Diversity; Torsion in gastropoda,
- b) Echinodermata: General features, Outline of Classification Larval forms
- c) Hemichordata: Phylogeny: Affinities of *Balanoglossus*.

Suggested Reading:

1. Ruppert, Edward, E., Fox Richard, S. & Barnes Robert, D. (2009). *Invertebrate Zoology: A Functional Evolutionary Approach* (7th ed.). Thomson Brooks/Cole.
2. Barnes, R.S.K., Calow, P., Olive, P.J.W., Golding, D.W. & J.I., Spicer (2002). *The Invertebrates: A New Synthesis* (3rd ed.). Blackwell Science.
3. Barrington, E.J.W. (1979). *Invertebrate Structure and Functions* (2nd ed.). E.L.B.S. and Nelson.
4. Kent, G.C., & Carr, R.K. (2000). *Comparative Anatomy of the Vertebrates* (9th ed.). The McGraw-Hill Companies.

Course Objectives:

The main objectives of the course are,

- To understand the physiological conditions of the plants and metabolism.
- To understand the basic concepts of diversified growth.
- To gain the information about the economic importance of algae and fungi.
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Algae
- Learn about the structure, pigmentation, food reserves and methods of reproduction of Fungi
- Studied some plant diseases with special reference to the causative agents, symptoms, etiology and control measures.

Course Outcomes

The learners will be able to,

1. Gain adequate knowledge on plant biodiversity and importance.
2. Understand the molecular mechanisms of macro and micro nutrients in plant growth.
3. Get the basic and applied knowledge of plant physiology, growth, development and metabolism.
4. Discuss about importance of morphological structure, classification, reproduction and economic importance of Algae.
5. Know the control measures of plant diseases.
6. Explain about structure, classification, reproduction, life cycle and economic importance of Bryophytes.

Practical

1. Comparative study of thallus and reproductive organs of various algae mentioned in theory.
2. Comparative study of vegetative and reproductive parts of various fungi mentioned in theory.
3. Study and section cutting and lectophenol mount of plant disease materials studied in theory.
4. Study of various types of lichens.
5. Study of external features & anatomy of vegetative and reproductive parts of Marchantia and Funaria.
6. Collection of plant disease materials and bryophytes available locally.

Suggested Reading:

1. Aneja, K.R., & Mehrotra, R.S. (2015). *An Introduction to Mycology* (2nd ed.). New Age International publishers.
2. Agrios, G.N. (2004). *Plant Pathology* (5th ed.). UK: Academic Press.
3. Kumar, H.D. (1999) *Introductory Phycology*. Aff. East-West Press Pvt Ltd., Delhi.
4. Lee, R.E. (2008). *Phycology* (4th ed.). USA: Cambridge University Press.
5. Sambamurty, (2008). *A Textbook of Bryophytes, Pteridophytes, Gymnosperms and Paleobotany*. IK International Publishers.

Course Objectives

The main objectives of the course are,

- To give knowledge on molecular analysis in forensic science.
- To offer knowledge to assess DNA finger printing
- To understand the evidence for suspecting victims in crime
- To handle the evidences left out at the crime scene.
- The basic methods for examine the different types of questioned documents.
- Identify the E-Mail Investigation and related Recovering deleted evidences

Course Outcomes

On completion of the course, students are able to

1. Apply the Laboratory skills to participate in the career needs of Forensic community.
2. Become trained in the laboratory skills of different division of Forensic Science.
3. Be able to work with different R&D organizations.
4. Identify the role of the forensic scientist and physical evidence within the criminal justice system.
5. Demonstrate the ability to document and orally describe crime scenes, physical evidence, and scientific processes.
6. Identify and examine current and emerging concepts and practices within the forensic science field.

Practical

1. Documentation of crime scene by photography, sketching and field notes.
2. a. Simulation of a crime scene for training.
b. To lift footprints from crime scene.
3. Case studies to depict different types of injuries and death.
4. Separation of nitro compounds (explosives)/ ink samples by thin layer chromatography.
5. Investigate method for developing fingerprints by Iodine crystals.
6. PCR amplification on target DNA and DNA profiling,
7. E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Recovering deleted evidences, Password Cracking.

Suggested Reading:

1. Tilstone, W.J., Hastrup, M.L., & Hald, C. (2013). *Fisher's Techniques of Crime Scene Investigation*. CRC Press.
2. Bernard J. Glick, Jack J. Pasternak, & Cheryl L. Patten. (2010). *Molecular Biotechnology- Principles and Applications of recombinant DNA* (4th ed.). Washington: ASM Press.
3. Nanda, B.B., & Tiwari, R.K. (2001). *Forensic Science in India: A Vision for the Twenty First Century*. New Delhi: Select Publishers.
4. Bhasin, M.K., & Nath S. (2002). *Role of Forensic Science in the New Millennium*. Delhi: University of Delhi.
5. James, S.H., & Nordby J.J. (2005). *Forensic Science: An Introduction to Scientific and Investigative Techniques* (2nd ed.). CRC Press, Boca Raton.
6. Eckert, W.G., & Wright, R.K. (1997). *An Introduction to Forensic Sciences* (2nd ed.). CRC Press, Boca Raton (1997).
7. Saferstein R. (2004). *Criminalistics: An Introduction to Forensic Science* (8th ed.). New Jersey: Prentice Hall.

Course Objectives

The main objectives of the course are,

- To give knowledge on Bioinformatics and its application
- To offer knowledge to assess biological databases
- To understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- To understand the various online databases for submitting and retrieving data's
- To understand how the phylogeny plays a vital role in finding ambiguities.
- To get practiced with the tools and techniques for analysing the data.

Course Outcomes

On completion of the course, students are able to

1. Understand The relationship between sequence - structure - function of genes.
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences.
3. Inculcate knowledge on building 3D structures of genes.
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information.
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences.

Practical

1. Sequence information resource
2. Understanding and use of various web resources: EMBL, Genbank, Entrez, Unigene, Protein information resource (PIR)
3. Understanding and using: PDB, Swissprot, TREMBL
4. Using various BLAST and interpretation of results.
5. Retrieval of information from nucleotide databases.
6. Sequence alignment using BLAST.
7. Multiple sequence alignment using Clustal W.

Suggested Reading:

1. Ghosh, Z., & Bibekanand M. (2008). *Bioinformatics: Principles and Applications*. Oxford University Press.
2. Pevsner, J. (2009). *Bioinformatics and Functional Genomics* (2nd ed.). Wiley-Blackwell.
3. Campbell, A. M., & Heyer, L.J. (2006). *Discovering Genomics, Proteomics and Bioinformatics* (2nd ed.). Benjamin Cummings.

Course Objectives

The main objectives of the course are,

- To develop the practical skills on morphological identification of plants.
- Understand the diversity among various plants
- Know the systematic morphology and structure of Pteridophytes.
- Learn about the general characters and classification in Pteridophytes, heterospory and origin of seed habit.
- Know about the structure, life history and Economic importance of Gymnosperms.
- Studied the methods of fossilization and fossil plants

Course Outcomes

The learners will be able to

1. Study and impart practical knowledge about the occurrence, distribution, structure and life history of plants
2. Learn in detail about vegetative and reproductive parts of plants.
3. Learn the phylogeny and evolutionary concepts in plants.
4. Learn how to handle a fossilized specimen
5. Acquire knowledge about the structure, life history and Economic importance of Gymnosperms
6. Learn the skills on morphological identification of plants

Practical

1. Examination of morphology and anatomy of vegetative and reproductive parts of *Selaginella*.
2. Examination of morphology and anatomy of vegetative and reproductive parts of *Equisetum*.
3. Examination of morphology and anatomy of vegetative and reproductive parts of *Pteris*.
4. Examination of morphology and anatomy of vegetative and reproductive parts of – *Cycas* & *Pinus*
5. Examination of morphology and anatomy of vegetative and reproductive parts of –*Pinus*
6. Plant collection -pteridophytes.
7. Plant collection - gymnosperms.

Suggested Reading:

1. Sambamurty, (2008). *A Textbook of Bryophytes, Pteridophytes, Gymnosperms and Paleobotany*. IK International Publishers.
2. Wickens, G.E. (2004). *Economic Botany: Principles and Practices*. Dordrecht: Netherlands, Springer, Kluwer Publishers.
3. Bhatnager, S.P., & Moitra, A. (1996). *Gymnosperms*. New Delhi: New Age International (P) Ltd. Publishers.
4. Parihar, N.S. (1996). *The Biology and Morphology of Pteridophytes*. Allahabad: Central Book Depot.

Course Objectives:

The main objectives of the course are,

- To develop the skills on morphological identification of suitable explants.
- Understand the growth hormones of culture medium
- Know the systematic morphology and structure of plants.
- Learn about the general culture techniques.
- Know about the sterilization process in PTC Lab.
- Studied the methods of Micropropagation

Course Outcomes:

The learners will be able to

1. Study and impart knowledge about the occurrence, distribution, of plants and suitable explants.
2. Learn in detail about growth hormones.
3. Learn the sterilize and prepare an explant of plants.
4. Learn how to handle a PTC equipments
5. Acquire knowledge about aseptic condition maintained in lab
6. Learn the skills on plant culture techniques

List of Practical

1. Preparation of simple growth nutrient (knop's medium), full strength, half strength, solid and liquid.
2. Preparation of complex nutrient medium (Murashige & Skoog's medium).
3. To selection, Pure, sterilize and prepare an explant for culture.
4. Significance of growth hormones in culture medium.
5. To demonstrate various steps of Micropropagation using banana/tomato/potato.
6. To demonstrate the meristem culture.

Suggested Reading:

1. Bhojwani, S.S., & Razdan, (2004). *Plant Tissue Culture and Practice*.
2. Brown, T.A., (2006). *Gene Cloning and DNA Analysis* (5th ed.). Oxford: UK, Blackwell Publishing.

8. Slater, A., Scott, N.W. ,& Fowler, M.R. (2008). *Plant Biotechnology: The Genetic Manipulation of Plants*. Oxford University Press.

Course Objectives

The main objectives of the course are

- To obtain practical concepts of types of fossils
- To ascertain the evolutionary concepts through fossil study of Eukaryotes from Prokaryotes
- To explain Origin of Life especially Prokaryotes as well as Eukaryotes in detail.
- To give detailed explanation of key concepts of living fossil
- To provide adequate knowledge about Micro-evolutionary changes, Speciation and Adaptive Radiation.
- To impart descriptive knowledge regarding Origin and Evolution of Man

Course Outcomes

On completion of the course, students are able to

1. Get hold of the practical knowledge on fundamentals of Evolutionary Biology.
2. Expertise on the Sampling techniques.
3. Acknowledge on the Qualitative Studies Based on Field Observations
4. To develop comprehensive knowledge regarding various Sources of Variations and their role in evolution.
5. To explore salient features of various theories of evolution comprising of Lamarckism, Darwinism and Neo-Darwinism.
6. To impart detailed understanding of Analogy, Homology, Paleontological Evidences, Embryological Evidences and Molecular Phylogeny.

List of Practicals**(A) Evidence of fossils**

1. Study of types of fossils (e.g. trails, casts and moulds and others) and Index fossils of Palaeozoic era
2. Connecting links/transitional forms - Eg. Euglena, Neopilina, Balanoglossus, Chimaera, Tiktaalik, Archaeopteryx, Ornithorhynchus
3. Living fossils - Eg. Limulus, Peripatus, Latimeria, Sphaenodon
4. Vestigial, Analogous and Homologous organs using photographs, models or specimen.

(B) Variations

1. Sampling of human height, weight and BMI for continuous variation.
2. Sampling for discrete characteristics (dominant vs recessive) for discontinuous variations e.g hitch-hiker's thumb, dexterity, tongue rolling, ear lobe (data categorization into 16 groups based on the combination of 4 traits; assigning each subject to the respective group).

(C) Selection Exemplifying Adaptive strategies (Colouration, Mimetic form, Co-adaptation and co-evolution; Adaptations to aquatic, fossorial and arboreal modes of life) using Specimens.**(D) Neo-Darwinian Studies**

1. Calculations of genotypic, phenotypic and allelic frequencies from the data provided
2. Simulation experiments using coloured beads/playing cards to understand the effects of Selection and Genetic drift on gene frequencies (E) Phylogeny.

Suggested Reading:

1. Ridley, M. (2004). *Evolution* (3rd ed.). Blackwell.
2. Hall, B. K., & Hallgrimson, B. (2008). *Strickberger's Evolution* (4th ed.). Jones and Barlett
3. Zimmer, C., & Emlen, D. J. (2013). *Evolution: Making Sense of Life*. Roberts & Co.
4. Barton, Briggs, Eisen, Goldstein, & Patel, (2007). *Evolution*. Cold Spring Harbor Laboratory Press.

Course Objectives

The main objectives of the course are,

- To introduce biotechnological methods for ATC.
- To give knowledge about various methods of gene transfer in animals.
- To cognize and get the knowledge Theory and Practical: Glass ware sterilization, Media sterilization, Laboratory sterilization.
- To explain the basics of the physiological and molecular processes for animals Facing environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of animals
- To understand the processes involved in the planning, conduct and execution of animal biotechnology experiments

Course Outcomes

On completion of the course, students are able to

1. Understand the growth conditions required to culture the animals in *invitro* conditions.
2. Inculcate the deep understanding of Laboratory sterilization
3. Acquire knowledge on DNA isolation from animal tissue
4. Understand the Minimal Essential Growth medium
5. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of animal biotechnology experiments
6. Learn the structure and organization of animal genome

Practical

1. Sterilization techniques: Glass ware sterilization, Media sterilization, Laboratory sterilization.
2. Sources of contamination and decontamination measures.
3. Preparation of Hanks Balanced salt solution
4. Preparation of Minimal Essential Growth medium
5. Isolation of lymphocytes for culturing
6. DNA isolation from animal tissue
7. Quantification of isolated DNA.
8. Resolving DNA on agarose gel.

Suggested Reading:

1. Glick, B.R., & Pasternak, J.J. (2009). *Molecular biotechnology- Principles and applications of recombinant DNA* (4th ed.). Washington, USA: ASM press.
2. Griffiths, A.J.F., Miller, J.H., Suzuki, D.T., Lewontin, R.C., & Gelbart, W.M. (2009). *An introduction to genetic analysis* (9th ed.). NY: USA, Freeman & Co.

4. Butler, M. (2004). *Animal cell culture and technology: The basics* (2nd ed.). Bios scientific publishers.

Course Objectives

The main objectives of the course are,

- To provide the students with an in-depth knowledge of the diversity in form, structure and habits of invertebrates.
- To learn the basics of systematic and understand the hierarchy of different categories.
- To learn the diagnostic characters of different phyla through brief studies of examples.
- To obtain an overview of economically important invertebrate fauna.
- To explain the organizational hierarchies and complexities of invertebrates.
- To describe the evolutionary trends in external morphology and internal structure.

Course Outcomes

The learners will be able to

1. Outline the origin and classification of animal kingdom
2. Describe the origin of animals and how they differ from other living organisms;
3. Explain the relationship between animal diversity and evolutionary derived changes in animal body plans
4. Analyze the various modes of adaptations in animals
5. Identify and classify with examples the invertebrates
6. Analyze the various modes of adaptations in animals

Practicals

1. Identification and Classification of Any these of the following –Porifera: *Scypha*, *Leucosolenia*, *Euspongia*, *Hylonema*, *Euplectella* Cnidaria: *Medrepora*, *Millepora*, *Physalia*, *Porpita*, *Varella*, *Aurelia*, *Metridium* Platyhelminthes: *Taenia*, *Fasciola*, Aschelminthes: *Ascaris*, *Ancylostoma*, *Enterobius* Annelida: *Pheretima*, *Hirudinaria*, *Chaetopterus*, *Nereis*, *Aphrodite* Arthropoda: *Julus*, *Scolopendra*, *Peripatus*, *Carcinus*, *Limulus*, *Lepisma*, *Dragonfly*, *Musca*, *Acheta* mollusca: *Pila*, *Unio*, *Mytilus*, *Loligo*, *Sepia*, *Octopus*, *Solen* Echinodermata: *Asterias*, *Ophiothrix*, *Echinus*, *Holothuria*, *Astrophyton* Hemichordata: *Balanoglossus*

2. Identification of slides with two points of identification. *Amoeba*, *Paramoecium*, *Ceratium*, *Plasmodium*, *Opalina*, L.S. Sponge, Spicules of sponges, L.S. *Hydra*, *Obelia*, *Bougainvillia*, Larvae of *Fasciola*, Seta of Earthworm, Radula

3. Ecological Note – On any of the specimens in Exercise No 1 Models of dissection of Earthworm, Cockroach Earthworm: Digestive, Nervous System, Cockroach: Digestive Reproductive, Nervous System.

Suggested Reading:

1. Barnes, R.S.K., Calow, P., Olive, P.J.W., Golding, D.W. & J.I., Spicer (2002). *The Invertebrates: A New Synthesis* (3rd ed.). Blackwell Science.

4. Kent, G.C., & Carr, R.K. (2000). *Comparative Anatomy of the Vertebrates* (9th ed.). The McGraw-Hill Companies.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of molecules and its effect on human and other animals.
- To ascertain the diagnostics tools for infectious diseases.
- To achieve a complete knowledge about molecular diagnostics techniques on human welfare.
- To understand the utility and limitations of various molecular diagnostic tests used for managing patient care.
- To attain the concepts of molecular methods used in clinical microbiology.
- To recognize the importance of proper specimen collection and preparation for molecular detection.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of molecular diagnostic techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyse the concept of disease management.

UNIT-I

Enzyme Immunoassays: Comparison of enzymes available for enzyme immunoassays, conjugation of enzymes. Solid phases used in enzyme immunoassays. Homogeneous and heterogeneous enzyme immunoassays. Enzyme immunoassays after immuno blotting. Enzyme immuno histochemical techniques. Use of polyclonal or monoclonal antibodies in enzymes immuno assays. Applications of enzyme immunoassays in diagnostic microbiology.

UNIT-II

Molecular methods in clinical microbiology: Applications of PCR, RFLP, Nuclear hybridization methods, Single nucleotide polymorphism and plasmid finger printing in clinical microbiology Laboratory tests in chemotherapy: Susceptibility tests: Micro-dilution and macro-dilution broth procedures. Susceptibility tests : Diffusion test procedures. Susceptibility tests: Tests for bactericidal activity. Automated procedures for antimicrobial susceptibility tests.

UNIT-III

Diagnosis and Standardization: Automation in microbial diagnosis, rapid diagnostic approach including technical purification and standardization of antigen and specific antibodies.

UNIT-IV

Diagnostic immunology: Concepts and methods in idiotypes. Anti idiotypes and molecular mimicry and receptors. Epitope design and applications. Immunodiagnostic tests. Immuno-florescence. Radioimmunoassay.

UNIT-V

GC, HPLC, Electron microscopy, flow cytometry and cell sorting. Transgenic animals.

5. Joklik, W.K., Willett, H.P., & Amos, D.B. (1995). *Zinsser Microbiology* (19th ed.). Appleton- Century-Crofts publication.

Course Objectives

The main objectives of the course are

- learn the basics and lay strong foundation in understanding the biotechnological techniques in human welfare.
- To ascertain the knowledge about solid waste management and wastewater treatment.
- To achieve a novel treatment strategy for waste.
- To learn DNA based methods used in forensic science laboratory
- To obtain knowledge about biotechnological approaches beneficial for industries
- Exposure of simple concepts that will complement the course “Biotechnology in Human Welfare

Course Outcomes

On completion of the course, students are able to

1. Apply the biotechnology concept for environmental and social welfare.
2. Expertise on the concepts of treatment strategies for waste to renewable energy.
3. Able to produce by-products from waste with help of biotechnology techniques.
4. Able to apply DNA based methods used in forensic science laboratory
5. Able to entry into a wide range of biotechnology industries and research enterprises.
6. Development of non-toxic therapeutic agents, recombinant live and DNA vaccines and gene therapy

UNIT- I

Industry: Protein engineering; enzyme and polysaccharide synthesis, activity and secretion, alcohol and antibiotic formation.

UNIT-II

Agriculture: N₂ fixation: transfer of pest resistance genes to plants; interaction between plants and microbes; qualitative improvement of livestock.

UNIT-III

Environments: Chlorinated and non-chlorinated organ pollutant degradation; degradation of hydrocarbons and agricultural wastes, stress management, development of biodegradable polymers such as PHB.

UNIT-IV

Forensic science: DNA finger printing and its applications in human welfare. Identification of origin-Paternity, crime.

UNIT-V

Health: Development of non-toxic therapeutic agents, recombinant live vaccines, gene therapy, diagnostics, monoclonal in *E. coli*, human genome project.

Suggested Reading:

1. Sateesh, M.K. (2010). *Bioethics and Biosafety*. I. K. International Pvt Ltd.
2. Sree Krishna, V. (2007) *Bioethics and Biosafety in Biotechnology*. New age international publishers.

Course Objectives

The main objectives of the course are

- To identify common infectious agents and the diseases that they cause.
- To evaluate methods used to identify infectious agents in medical microbiology lab.
- To recall microbial physiology including metabolism, regulation and replication of pathogenic microbes.
- To explain general and specific mechanisms by which an infectious agent causes disease.
- To recognize and diagnose common infectious diseases from the clinical presentation and associated microbiology.
- To describe the epidemiology of infectious agents including how infectious diseases are transmitted.

Course Outcomes

On completion of the course, students are able to

1. Apply the biotechnology concept for controlling infectious agents.
2. Expertise on the concepts of metabolism, regulation and replication of pathogenic microbes.
3. Able to get knowledge on the toxins released by microbes.
4. Able to enter into a wide range of biotechnology industries with research enterprises.
5. Develop of non-toxic therapeutic agents from microbes
6. Able to get knowledge on Fungal and Protozoan infections

UNIT- I

Introduction: Normal microflora of human body, nosocomial infections, carriers, septic shock, septicemia, pathogenicity, virulence factors, toxins, biosafety levels. Morphology, pathogenesis, symptoms, laboratory diagnosis, preventive measures and chemotherapy of gram positive bacteria: *S.aureus*, *S.pyogenes*, *B.anthraxis*, *C.perferinges*, *C.tetani*, *C.botulinum*, *C.diphtheriae* *M.tuberculosis*, *M. leprae*.

UNIT-II

Pathology: Morphology, pathogenesis, symptoms, laboratory diagnosis, preventive measures and chemotherapy caused by gram negative bacteria: *E. coli*, *N. gonorrhoea*, *N. meningitidis*, *P. aeruginosa*, *S. typhi*, *S. dysenteriae*, *Y. pestis*, *B. abortus*, *H. influenzae*, *V. cholerae*, *M. pneumoniae*, *T. pallidum* *M. pneumoniae*, *Rickettsiaceae*, *Chlamydiae*.

UNIT- III

Diseases caused by viruses: Picornavirus, Orthomyxoviruses, Paramyxoviruses, Rhabdoviruses, Reoviruses, Pox virus, Herpes virus, Papova virus, Retro viruses (including HIV/AIDS) and Hepatitis viruses.

UNIT- IV

Fungal and Protozoan infections: Dermatophytoses (*Trichophyton*, *Microsporun* and *Epidermophyton*) Subcutaneous infection (*Sporothrix*, *Cryptococcus*), systemic infection (*Histoplasma*, *Coccidioides*).

UNIT- V

Opportunistic fungal infections (*Candidiasis*, *Aspergillosis*), Gastrointestinal infections (*Amoebiasis*, *Giardiasis*), Blood-borne infections (*Leishmaniasis*, *Malaria*).

Suggested Reading:

1. Brooks, G.F., Carroll, K.C., Butel, J.S., & Morse, S.A. (2007). *Jawetz, Melnick and Adelberg's Medical Microbiology* (24th ed.). McGraw Hill Publication.
2. Goering, R., Dockrell, H., Zuckerman, M., & Wakelin, D. (2007). *Mims' Medical Microbiology* (4th ed.). Elsevier.
3. Willey, J.M., Sherwood, L.M., & Woolverton, C.J. (2008). *Prescott, Harley and Klein's Microbiology* (7th ed.). McGraw Hill Higher Education.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of biotechnology to solve the environmental problems
- To ascertain the knowledge about solid waste management and wastewater treatment.
- To achieve a novel treatment strategy for waste to Bioenergy.
- To gain knowledge about the biological and biotechnological measures for restoring environment.
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the management strategies followed up by the industries and government.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Bio-management of soil
2. Bio-management of Petroleum Contaminants
3. Environmental significance of genetically modified microbes, plants and animals
4. Biosurfactants
5. Treatment of municipal waste and Industrial effluents
6. Genetic engineering of bacteria and their potential for bioremediation

UNIT-I

Bioremediation: Bioremediation of soil & water contaminated with oil spills, heavy metals and detergents. Degradation of lignin and cellulose using microbes. Phyto-remediation. Degradation of pesticides and other toxic chemicals by micro-organisms- degradation aromatic and chlorinated hydrocarbons and petroleum products.

UNIT- II

Waste management: Treatment of municipal waste and Industrial effluents. Solid waste management (an introduction).

UNIT- III

Bio-fertilizers and Bioleaching: Bio-fertilizers Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil. Algal and fungal biofertilizers (VAM). Bioleaching, Enrichment of ores by microorganisms (Gold, Copper and Uranium).

UNIT-IV

Fuels: Conventional fuels and their environmental impact – Firewood, Plant, Animal, Water, Coal and Gas. Modern fuels and their environmental impact – Methanogenic bacteria, Biogas, Microbial hydrogen Production, Conversion of sugar to alcohol Gasohol

UNIT- V

GMO's: Environmental significance of genetically modified microbes, plants and animals.

7. Milton Wainwright, (1999). *Introduction to Environmental Biotechnology*. Spring.
8. Gilbert Masters, (2007). *Principles of Environmental Engineering* (3rd ed.). Prentice Hall.
9. Metcalf, & Eddy. (2002). *Wastewater Engineering* (4th ed.). McGraw-Hill Higher Education.

Course Objectives

The main objectives of the course are

- To gain mathematical approach for analyzing the data.
- To learn the knowledge about graphical and diagrammatic representation of Statistical data.
- To learn the knowledge about Scope and applications of biostatistics
- To learn the knowledge about collection, processing and presentation of data and Testing of hypothesis
- To learn the knowledge about Measures of central tendency, Measures of dispersion
- To learn the knowledge about Correlation analysis and regression analysis

Course Outcomes

On completion of the course, students are able to

1. Apply the statistical tool knowledge for research data analysis.
2. Understand the concept of various hypothesis regarding data analysis.
3. To perform analysis for the data based on graphical representation (Bar, multiple bars, histogram, pie chart etc.)
4. To perform analysis to determine the mean, median, mode and standard deviation of given sample/data
5. To perform analysis, determine the probability of given sample/data
6. To perform the t-test/F-Test and Chi-square test of given data

UNIT-I

Statistics: Meaning, Definitions, Introduction to Bio-Statistics -Types of Data, Collection of data; Primary & Secondary data, Classification and tabulation of data, construction of frequency distribution. Graphical and diagrammatic representation of Statistical data.

UNIT-II

Measures of central tendency: Mean, Median and Mode. Measures Dispersion – Absolute and relative measures dispersion – Range, Standard deviation and coefficient of variation. Measures of Skewness and Kurtosis.

UNIT-III

Probability: Probability classical & axiomatic definition of probability, Theorems on total and compound probability), Elementary ideas of Binomial, Poisson and Normal distributions.

UNIT-IV

Population and Sample: parameter and statistic, sampling, methods of sampling, confidence level, critical region, testing of hypothesis and standard error, large sample test and small sample test. Problems on test of significance, t-test, *chi*-square test for goodness of fit and analysis of variance (ANOVA)

UNIT-V

Correlation and regression: Types of correlation, degrees of correlation, methods of calculating correlation coefficient – scatter diagram, Karl Pearson and Spearman rank correlation coefficients. Regression – regression lines, regression equation, regression coefficients, methods of forming regression equations. Emphasis on examples from Biological Sciences.

Suggested Reading:

2. Glaser, A.N. (2001). *High Yield TM Biostatistics*. USA: Lippincott Williams and Wilkins.
3. Edmondson, A., & Druce, D. (1996). *Advanced Biology Statistics*. Oxford University Press.
4. Danial, W. (2004). *Biostatistics: A foundation for Analysis in Health Sciences*. John Wiley and Sons Inc.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of Geological consideration of Atmosphere
- To ascertain the knowledge about Energy transfer in an Ecosystem.
- To obtain knowledge Pollution and environmental Health.
- To gain knowledge about the biotechnological measures for restoring environment.
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the management strategies by Bio-transformation.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Principles & Concepts of Ecosystem
2. Ecological efficiencies
3. Environmental significance of Detection of Environmental pollutants
4. Bio-geochemical cycles
5. Hazardous wastes Environmental cleanup
6. Genetic engineering of bacteria and their potential for bioremediation

UNIT-I

Our Environment: Geological consideration of Atmosphere, Hydrosphere, Lithosphere Scope of Ecology. Development & Evolution of Ecosystem. Principles & Concepts of Ecosystem. Structure of ecosystem. Strata of an ecosystem. Types of ecosystem including habitats. Cybernetics & Homeostasis. Biological control of chemical environment.

UNIT-II

Energy flow: Energy transfer in an Ecosystem, Food chain, food web, Energy budget, Production & decomposition in a system. Ecological efficiencies, Trophic structure & energy pyramids, Ecological energetic, principles pertaining to limiting factors, Bio-geochemical cycles (Nitrogen, Carbon and Phosphate cycles).

UNIT-III

Pollution: Pollution and environmental Health related to Soil, Water, Air, Food, Pesticides, Metals, Solvents, Radiations Carcinogen, Poisons. Detection of Environmental pollutants. Indicators & detection systems.

UNIT-IV

Biotechnology and Environment: Environmental biotechnologies, Biotechnologies in protection and preservation of environment. Bioremediation, Waste disposal.

UNIT-V

Case studies: Bio-transformation, Plastic, Aromatics, Hazardous wastes Environmental cleanup.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of Identification of pathogenic bacteria
- To ascertain the diagnostics tools for infectious diseases – RFLP, RAPD.
- To achieve a complete knowledge about molecular diagnostics techniques on microbial infection.
- To understand the utility and limitations of various molecular diagnostic tests used for managing patient care.
- To attain the concepts of molecular methods used in clinical microbiology.
- To recognize the importance of proper specimen collection and preparation for molecular detection.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of molecular diagnostic techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyses the concept of disease management

Practical

1. Perform/demonstrate RFLP, RAPD and analysis
2. Kirby-Bauyer method (disc-diffusion method) to study antibiotic sensitivity of a bacterial culture
3. A kit-basd detection of a microbial infection (Widal test)
4. Study of Electron micrographs (any four).
5. Perform any one immuno diagnostic test (Typhoid, Malaria, Dengue)

Suggested Reading:

1. Willey, J.M., Sherwood, L.M., & Woolverton, C.J. (2008). *Prescott, Harley and Klein's Microbiology* (7th ed.). McGraw Hill Higher Education.

(Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

Course Objectives:

The main objectives of the course are

- Learn the basics and lay strong foundation in understanding the biotechnological techniques in human welfare.
- To ascertain the knowledge about Endophyte.
- To achieve a estimation treatment strategy.
- To learn about ethical issues.
- To obtain knowledge about biotechnological approaches beneficial for industries
- To expose simple experiments that will complement the course "Biotechnology in Human Welfare"

Course Outcomes:

On completion of the course, students are able to

1. Apply the biotechnology concept for industry products.
2. Expertise on the concepts of treatment strategy.
3. Able to understand the plant part infected with a microbe.
4. Able to enter into a wide range of research enterprises.
5. Get expertise in Bioethics.
6. Understand the concepts of complement course "Biotechnology in Human Welfare"

List of Practicals

1. Fermentation - Protein/ enzymes/ alcohol.
2. Study of a plant part infected with a microbe
3. To perform quantitative estimation of residual chlorine in water samples
4. Isolation and analysis of DNA from minimal available biological samples
5. Case studies on Bioethics (any two)

(Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

Suggested Reading:

1. Sateesh, M. K. (2010). *Bioethics and Biosafety*. I. K. International Pvt Ltd.
2. Sree Krishna, V. (2007). *Bioethics and Biosafety in Biotechnology*. New Age International publishers.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of Identification of pathogenic bacteria
- To ascertain the diagnostics tools for infectious diseases
- To achieve a complete knowledge about diagnostics techniques on microbial infection.
- To understand the utility and limitations of various diagnostic tests used for managing patient care.
- To attain the concepts of molecular methods used in clinical microbiology.
- To recognize the importance of proper specimen collection and preparation for molecular detection.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of diagnostic techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyse the concept of disease management.

Practical

1. Identification of pathogenic bacteria (any two) based on cultural, morphological and biochemical characteristics.
2. Growth curve of a bacterium.
3. To perform antibacterial testing by Kirby-Bauer method.
4. To prepare temporary mounts of *Aspergillus* and *Candida* by appropriate staining.
5. Staining methods: Gram's staining permanent slides showing acid fast staining, Capsule staining and spore staining.

Suggested Reading:

1. Brooks, G.F, Carroll, K.C, Butel, J.S., & Morse, S.A. (2007). *Jawetz, Melnick and Adelberg's Medical Microbiology* (24th ed.). McGraw Hill Publication.
2. Goering, R., Dockrell, H., Zuckerman, M., & Wakelin, D. (2007). *Mims' Medical Microbiology*. (4th ed.). Elsevier.
3. Willey, J.M., Sherwood, L.M., & Woolverton, C.J. (2008). *Prescott, Harley and Klein's Microbiology*. (7th ed.). McGraw Hill Higher Education.

Course Objectives

The main objectives of the course are

- To obtain practical knowledge to solve the environmental problems
- To ascertain the knowledge about wastewater treatment.
- To achieve a water treatment strategy.
- To gain knowledge about for restoring environment
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the microbial load in water sample.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Environmental problems
2. Wastewater treatment
3. BOD and its calculation
4. COD and its calculation
5. Bacterial Examination of Water
6. Biofertilizers

Practical

1. Calculation of Total Dissolved Solids (TDS) of water sample.
2. Calculation of BOD of water sample.
3. Calculation of COD of water sample.
4. Bacterial Examination of Water by MPN Method.
5. Production of bio fertilizers using waste.

Suggested Reading:

1. Santra, S.C. (2011). *Environmental Science* (3rd ed.). New Central Book Agency.
2. Pradipta Kumar Mohapatra, (2007). *Environmental Biotechnology*. I.K. International Publishing House.

7. Milton Wainwright, (1999). *Introduction to Environmental Biotechnology*. Spring.
8. Gilbert Masters, (2007). *Principles of Environmental Engineering* (3rd ed.). Prentice Hall.

Course Objectives

The main objectives of the course are

- To gain mathematical approach for analyzing the data.
- To learn the knowledge about graphical and diagrammatic representation of Statistical data.
- To learn the knowledge about Scope and applications of biostatistics
- To learn the knowledge about collection, processing and presentation of data and Testing of hypothesis
- To learn the knowledge about Measures of central tendency, Measures of dispersion
- To learn the knowledge about Correlation analysis and regression analysis

Course Outcomes

On completion of the course, students are able to

1. Apply the statistical tool knowledge for research data analysis.
2. Understand the concept of various hypothesis regarding data analysis.
3. To perform analysis for the data based on graphical representation (Bar, multiple bars, histogram, pie chart etc.)
4. To perform analysis to determine the mean, median, mode and standard deviation of given sample/data
5. To perform analysis, determine the probability of given sample/data
6. To perform the t-test/F-Test and Chi-square test of given data

Practical

Based on graphical Representation

1. Drawing of bar and multiple bar diagram
2. Drawing of Histogram
3. Drawing of Pie diagram

Based on measures of Central Tendency

4. Calculation of Mean for individual, discrete series using SPSS Package
5. Mean for continuous series using SPSS Package
6. Median for individual and discrete series using SPSS Package
7. Median for continuous series using SPSS Package
8. Mode for individual and discrete series using SPSS Package

Based on measures of Dispersion

9. Standard deviation for individual and discrete series using SPSS Package
10. Coefficient of variation for individual and discrete series using SPSS Package

Based on Distributions Binomial, Poisson and Normal

11. Calculation of Mean and variance for binomial distribution using SPSS Package
12. Calculation of Mean and variance for Poisson distribution using SPSS Package

Based on t, f, z and Chi-square

13. Karl Pearson's Correlation using SPSS Package
14. Rank Correlation Coefficient for Untied Rank using SPSS Package
15. Rank Correlation Coefficient for Tied Rank using SPSS Packag

Suggested Reading:

1. Le, C.T. (2003). *Introductory biostatistics*. USA: John Wiley.
2. Glaser, A.N. (2001). *High Yield TM Biostatistics*. USA: Lippincott Williams and Wilkins.
3. Edmondson, A., & Druce, D. (1996). *Advanced Biology Statistics*. Oxford University Press.
4. Danial, W. (2004). *Biostatistics: A foundation for Analysis in Health Sciences*. John Wiley and Sons Inc.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of biotic and abiotic components of any simple ecosystem
- To ascertain the knowledge about Simpson's and Shannon- Weiner diversity index.
- To achieve a life table and fecundity table.
- To gain knowledge about Principle of GPS.
- To involve in the present scenarios of types of soil, their texture
- To update about the endangered/ threatened species.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Ecosystem of soil
2. GPS and related concepts
3. Soil and their texture
4. Population density
5. Treatment of municipal waste and Industrial effluents
6. Species variation and threatened species.

Practical

1. Study of all the biotic and abiotic components of any simple ecosystem- natural pond or terrestrial ecosystem or human modified ecosystem.
2. Determination of population density in a terrestrial community or hypothetical community by quad rate method and calculation of the Simpson's and Shannon- Weiner diversity index for the same community.
3. Principle of GPS (Global Positioning System).
4. Study of the life table and fecundity table, plotting of the three types of survivorship curves from the hypothetical data.
5. Study of the types of soil, their texture by sieve method and rapid tests for –pH, chlorides, nitrates, carbonates and organic carbon
6. Study any five endangered/ threatened species- one from each class.

Suggested Reading:

18BTU691

PROJECT – VIVA VOCE

8H-6C

Total hours/week: 8 hrs

Marks: Internal:40 External:60 Total: 100

Course Objectives

The main objectives of the course are

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research.

Elective courses*

Elective – 1 (18BTP105)		Elective – 2 (18BTP205)		Elective – 3 (18BTP305)	
Course code	Name of the course (Theory)	Course Code	Name of the course (Theory)	Course Code	Name of the course (Theory)
18BTP105A	Biodiversity, Biosafety And IPR	18BTP205A	Pharmaceutical Biotechnology	18BTP305A	Applied Biotechnology
18BTP105B	Nano-Biotechnology	18BTP205B	Agricultural Biotechnology	18BTP305B	System Biology
18BTP105C	Bio-energy Technology	18BTP205C	Industrial Toxicology	18BTP305C	Tissue Engineering

*Electives are Transborder / cross disciplinary / Discipline centric elective nature.

Blue – Employability

Green – Entrepreneurship

Red – Skill Development

PROGRAMME OUTCOMES (POs)

- a) Graduates will be able to have knowledge on the basic and applied theories.
- b) Providing a broad educational and analytical knowledge necessary to make the students for appearing in competitive examinations
- c) Ability to design and conduct experiments as well as to interpret the results.
- d) An expert to work on Biotechnological concepts and allied fields (immuno, medical, microbial, Food, agricultural, environmental, plant and animal) with modern tools and techniques towards product and process development for academic, industrial and research application.
- e) Generating the graduates with an ability to identify, formulate and solve to deliver process/product with professional, societal and ethical responsibilities.
- f) Graduates will be able to visualize and work on multidisciplinary laboratory problems.
- g) Graduates will be able to update the current knowledge of interdisciplinary subjects related to biotechnology

PROGRAMME SPECIFIC OUTCOMES (PSOs)

To enable the student to emerge as:

- h) Biotechnologist to recognize the societal need and lifelong learning.
- i) Proficient to demonstrate entrepreneurial and leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO I: The post-graduates of Biotechnology will be able to acquire in-depth knowledge of the basic and applied subjects of Biotechnology and allied fields.

PEO II: The post-graduates of Biotechnology are equipped to design, analyze, conduct and interpret the experiments and data for the development of process/product within the realistic constraints.

PEO III: The post-graduates of Biotechnology will be able to acquire the knowledge and ability to use the concept of theories, practical skills and recent technological tools in solving any technological and professional issues independently in a global and societal context.

PEO IV: The graduates of Biotechnology will continue learning to update and to become an entrepreneur in a competitive world of technology and also contribute to all forms of life.

MAPPING OF PEOs AND POs

PEOs			Programme Outcome (s)

PEO IV							x	x	x

18BTP101

BIOCHEMISTRY AND MICROBIOLOGY

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The main objectives of the course are

- To understand the key concepts of biomolecules and its organization
- To attain strong theoretical knowledge on three-dimensional construction of biological macromolecules and the principles of molecular recognition
- To understand the functions and importance of various biomolecules
- To inculcate knowledge on fundamentals of microorganisms
- To learn the structural organization, morphology and reproduction of microbes
- To understand the application of microorganisms in different fields of life sciences

Course Outcomes

On completion of the course, students are able to

1. Understand Biochemistry as discipline and milestone discoveries in life sciences that led to establishment of Biochemistry as separate discipline
2. Understand fundamental properties of elements, their role in formation of biomolecules and in chemical reactions within living organisms
3. Draw or describe the structure of amino acids, proteins, enzymes, chemical messengers, carbohydrates, lipids, and nucleic acid
4. Acquire basic knowledge on different structure of microbes
5. Discuss the diseases caused by microorganisms
6. Demonstrate how to control the growth of microbes

UNIT – I Introduction:

Chemical basis of life; Bonding; Theories; Composition of living matter; Water – properties, pH, ionization and hydrophobicity; Emergent properties of biomolecules in water; Biomolecular hierarchy; Biomolecules –Structure, classifications and properties of carbohydrates, amino acids, proteins, lipids, Ribonucleic acids and deoxy-ribonucleic acids, nucleoprotein complexes.

UNIT – II Metabolisms:

Carbohydrates, lipids (fatty acid oxidation and biosynthesis), amino acids biosynthesis, nucleotides (de novo synthesis and salvage pathways). Disorders of lipid, carbohydrate, nucleic acid, amino acid metabolism. Inborn errors of metabolism. Metabolomics.

UNIT – III Bioenergetics:

TCA Cycle, glycolysis, gluconeogenesis, Pentose phosphate shunt, Embden-Meyerhof pathway, urea cycle, interconnection of pathways, Metabolic regulation, Bioenergetics: Respiratory chain, ATP cycle, energy-rich compounds.

UNIT– IV Microbial Diversity and techniques:

Diversity- Bacteria, fungi, algae - distribution, reproduction, characteristics, nutrition. Techniques - staining, Microscopy - Principle, types, applications. Microbial growth - nutrients, media, isolation, maintenance, preservation, curve, measurements, factors, regulation.

UNIT – V Applications, Diseases and control measures:

Causative agent, pathology, diagnosis, control and treatment of Bacterial - TB, Cholera and Typhoid. Protozoan – Amoebiasis and Malaria. Viral - AIDS. Control of microorganisms – drugs, chemotherapy, antimicrobial agents.

18BTP102

CELL BIOLOGY AND MOLECULAR GENETICS**Semester – I**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

The objectives of the course are to make the students to

- Understand the structures and functions of basic components of eukaryotic cells, especially macromolecules, membranes, and organelles
- Understand how the cellular components are used to generate and utilize energy in cells
- Understand the cellular components underlying cell division
- To impart knowledge in genetics and genome organizations in organisms
- To understand the principles of extensions to Mendelian inheritance, including multiple allelism, lethal alleles, and gene interactions
- To obtain knowledge on normal chromosome number, structure, and behavior in human cells, and understand the cause and effect of alterations in chromosome number and structure

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the structures and basic components of eukaryotic cells
2. Illustrate how the cellular components are used for various cellular activities
3. Demonstrate the pathways involved in various cellular events including cell cycle
4. Understand the inheritance of genes among plants and animals and the genetic makeover as well as the physical appearance of organisms
5. Describe Mendelian inheritance, the interaction of genes among organism and to determine the inheritance of gene in human being
6. Illustrate the effect of chromosomal abnormalities in human diseases

UNIT– I Cell Organization and regulation:

Structure of prokaryotic and eukaryotic cells, Structural organization and function of intracellular organelles (Nucleus, Endoplasmic Reticulum, Golgi complex, Mitochondria, Chloroplast, Lysosomes, Peroxisomes and vacuoles, Cytoskeletons. Chromatin organization and packaging. Nucleic Acid - Replication, Types, Transcription, Post Transcriptional Modification, Translation and Post Translational modification, regulation of gene expression.

UNIT – II Regulation of Gene Expression:

Structure of model membrane, lipid bilayer and membrane protein diffusion, osmosis, ion channels, active transport, and ion pumps. Intracellular protein sorting- Mechanism and regulation of intracellular transport in mitochondria, chloroplast, endoplasmic reticulum and nucleus. Electrical properties of membranes. Cell cycle and its regulation, Molecular events Check points, Cyclins and protein kinases.

UNIT – III Genetics:

Mendelian and Non-Mendelian principles. Concept of gene : Allele, multiple alleles, pseudoallele, complementation tests. Genetic recombination, Genetic mapping, linkage and crossing over. Mutations- Types of Mutation, Genetic analysis of Mutations, DNA repair Mechanisms.

UNIT – IV Methods of genetic transfers:

Transformation, conjugation, transduction. mapping genes by interrupted mating, Linkage maps, tetrad analysis, mapping with molecular markers, mapping by using somatic cell hybrids. Introduction to Transposable elements – Discovery and types, Nomenclature - Insertion sequences - Mechanism – Transposons of E. coli, Bacteriophage and Yeast.

UNIT – V Microbial and Human genetics:

Gene transfer in Bacteria, Bacteriophages - properties, Structure, Role of phages as vectors. Human genetics - Pedigree analysis, linkage testing, karyotypes, genetic disorders, Eugenics. Epigenetics & Genome Imprinting. Structural and numerical alterations of chromosomes, ploidy and their genetic implications, Quantitative genetics - Polygenetic inheritance, heritability and its measurements, QTL Mapping.

18BTP103

ECOLOGY, EVOLUTIONARY AND DEVELOPMENTAL BIOLOGY

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand the principles about the evolution
- Understand the concepts about the evolution
- Understand the origin of biotic community
- Understand the problems occur in the biosphere
- Understand the significance of nature using scientific methods
- Understand the significance of Developmental Aspects Of Living Organism

Course Outcomes

On successful completion of course, students should be able to

1. Learn the fundamental principles and concepts of evolutionary theory and ecology
2. Use this knowledge to explore the evolution
3. Students will also learn basic ecological theory
4. Students will also learn principles in understanding and proposing solutions to the major environmental problems facing the biosphere
5. Describe evolutionary and ecological patterns & processes related to the survival, diversity
6. Describe relationships, distribution, abundance and interactions of organisms, their populations and environments

UNIT– I Ecological principles:

The Environment: Physical, biotic environment; interactions. Habitat and Niche: Concepts, types. Population Ecology: Characteristics, growth curves; regulation; life history strategies (r and K selection); concept of metapopulations. Species Interactions: Types. Community Ecology, Ecological Succession: Types; mechanisms; changes, concept of climax.

UNIT – II Ecosystem, Applied and conservation Ecology:

Ecosystem structure; function; energy flow and mineral cycling (C,N,P), structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, eustarine). Biogeography: Major terrestrial biomes; theory; biogeographical zones of India. Applied Ecology: pollution; global change; biodiversity: status, monitoring and documentation; major drivers, management approaches. Conservation Biology: Principles, approaches, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves).

UNIT – III Evolutionary Biology:

Emergence, Lamarck; Darwin–concepts, Mendelism; Origin of cells and unicellular evolution: Concept of Oparin and Haldane; The first cell; Evolution of prokaryotes, eukaryotic, unicellular eukaryotes. Origins of unicellular and multi cellular organisms; plants and animals; Molecular Evolution: Concepts, tools.

UNIT – IV Population genetics:

Populations, Hardy-Weinberg Law, Speciation; Convergent evolution. Brain, Behavior and Evolution: Approaches, methods. Biological clocks; Development of behavior; Social communication; Habitat, Domestication and behavioral changes

Developmental Biology:

Concepts, determination and differentiation; morphogenetic gradients; genomic equivalence and the cytoplasmic determinants; imprinting; mutants and transgenics in analysis of development

UNIT – V Gametogenesis, fertilization and early development:

Production, development in animals, plants; formation, germination or establishment in plants, animals. Morphogenesis and organogenesis in animals: Cell aggregation and differentiation Dictyostelium, Drosophila, amphibia and chick; organogenesis (*Caenorhabditis elegans*, vertebrates), development- environmental regulation of normal development; sex determination. Morphogenesis and organogenesis in plants: Organization, development and transition - shoot, root, leaf, floral in Arabidopsis and Antirrhinum

18BTP104

BIOINSTRUMENTATION AND BIOSTATISTICS

Instruction Hours / week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand fundamental principles of bioinstrumentation commonly used in biomedical engineering research labs and hospitals
- Comprehend the colorimetric principles
- Recognize the concepts on centrifugation and chromatography
- Obtain key knowledge on electrophoresis
- Understand key concepts on biostatistics and its various parameters
- Attain strong knowledge on the applications of biostatistics and its relevant softwares

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate an understanding the bioinstrumentation principles with respect to device design and applications
2. Identify, explain and judge safety issues related to biomedical instrumentation
3. Apply the principles in the context of bioinstrumentation interactions with tissues, organs and human body to explain the measurement results and to develop the instrumentations
4. Recognize the definition of statistics, its subject and its relation with the other sciences
5. Collect data relating to variable/variables to be examined
6. Calculate descriptive statistics from the acquired data

UNIT – I Colorimetry:

Color and absorption spectra, Beer's and Lambert's law. Principle of photoelectric colorimeter, Spectroscopy – Properties of electromagnetic radiations, Instrumentation and applications of – UV Visible light spectroscopy, Spectrofluorimeter, atomic spectroscopy, NMR spectroscopy and MALDI –TOF, Mass spectroscopy GC – MS, IR and FTIR.

UNIT – II Centrifugation:

Principle, types of centrifuges, Principles and applications of analytical- and preparative centrifuge, density gradient and ultra-centrifuge. **Chromatography:** Principles, Type – Paper, thin layer, ion-exchange, affinity, gel filtration, HPLC and HPTLC

UNIT – III Electrophoresis:

Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel (SDS-PAGE), native PAGE, isoelectric focusing, immuno, pulsefield, gel, capillary, 2D electrophoresis, gel documentation.

UNIT- IV Biostatistics:

Data collection, classification and presentation of tabulation. Measures of central tendency – mean, median and mode. Measures of dispersion – mean deviation, standard deviation, standard error and analysis of variance.

UNIT- V Applications of biostatistics:

Probability and probability distribution – theorems, binomial, poisson and normal distribution. Correlation and regression – simple correlation, correlation co-efficient, simple and linear regression analysis. Test of significance - F, t, DMRT and chi-square test. Randomized block design. Statistical and graphical software.

18BTP105B

BIODIVERSITY, BIOSAFETY AND IPR

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Introduce basic concepts of biodiversity and how to conserve biodiversity
- Discuss about various aspects of biosafety regulations and IPR concerns arising from the commercialization of biotech products
- Understand balanced integration of scientific and social knowledge in sustainable development
- Attain the benefits of GM technology and related issues
- Identify and discuss the issues and concepts salient to the research process
- Recognize and discuss the complex issues inherent in selecting a research problem, selecting an appropriate research design, and implementing a research project

Course Outcomes

On successful completion of the course, students will be able to

1. Apply the knowledge to protect endangered species
2. Recognize importance of biosafety practices and guidelines in research
3. Apply intellectual property law principles including copyright, patents, designs and trademarks to real problems and analyze the social impact of intellectual property law and policy
4. Comprehend the importance of protection of new knowledge and innovations and its role in business.
5. Gain more insights into the regulatory affairs
6. Demonstrate knowledge of research processes such as reading, evaluating, and developing, and to identify, explain, compare, and prepare the key elements of a research proposal and report

UNIT – I Biodiversity:

Introduction, types, Concepts. Values, uses, Measures of biodiversity. Vegetation types of India. Hotspot biodiversity areas in India, Red Listed plants and RED Data Book, Threatened plants and animals of India. Role of biotechnology; Conservation biodiversity - In situ and ex situ methods. Molecular markers and their application in plant conservation.

UNIT – II Biosafety:

Introduction; Background; Biological Safety Cabinets; Primary Containment for Biohazards; Biosafety Levels; Biosafety Levels; Recommended Biosafety Levels, Cartagena protocol on biosafety.

Biological risk assessment: Biosafety guidelines for Genetically Modified Microorganisms (GMM) and Plants (GMP)-Risk assessment, guidelines for research activities, Guidelines for environmental release of GMM, GMP and GLP. GATT and World Trade Organizations. Establishment and functions of GATT, WTO and WIPO. WTO Guidelines and Summits. Physical and Intellectual Property. Tangible and Intangible property. Roles of IBSC, RCGM and GEAC.

UNIT – III Intellectual Property Rights:

Types of IP: Patents, Trademarks, Copyright and Related Rights. **Agreements and Treaties:** History of GATT and TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; PCT; Indian Patent Act 1970 and recent amendments.

UNIT – IV Patent application:

Rules governing patents. Patent related cases. Licensing - Flavr Savr™ tomato as a model case. Biopiracy and case studies on patents (Basmati rice, Turmeric, and Neem). Biotechnological examples of patent, trademark, trade secret, copy right. Traditional Knowledge.

UNIT – V Bioethics:

Introduction. Animal Rights. General issues related to environmental release of transgenic plants, animals and microorganisms. Ethical issues related to research in embryonic stem cell cloning. Ethical, Legal and Social Implications (ELSI) of Human Genome Project.

18BTP105B

NANO BIOTECHNOLOGY

4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Obtain fundamental concepts of nanobiotechnology
- Offer a strong knowledge in the interface between chemistry, physics and biology on the nanostructural level with a focus on biotechnological usage
- Provide advanced training in the area of nanobiotechnology
- Understand the interaction of nanomaterials with biological molecules and cells
- Learn nanomaterials and their use with biocomponents to synthesize and address larger systems
- Produce highly skilled individuals suited for the fast-changing requirements of today's advanced workforce

Course Outcomes

On successful completion of the course, students will be able to

1. Recognize the role of bio nanotechnology as an interdisciplinary tool and to understand how to use these new tools in to solve problems in biological systems
2. Demonstrate knowledge and understanding of biomolecules and biomolecular interactions, and the relationship between molecular dynamics, nanoscale physics and macroscopic system behavior
3. Explain biophysical mechanisms in the context of nanobiotechnology application areas
4. Analyze and discuss the engineering requirements of multidisciplinary technology based on biology
5. Explain the challenges of commercializing new technologies
6. Demonstrate technical and cognitive skills associated with nanobiotechnology

UNIT – I Nanotechnology:

Definition, The fundamental Science behind nanotechnology- electrons, atoms and ions, molecules, metals, biosystems. Nanoanalysis

UNIT– II Microfluidics and Lab-on-a-chip:

Materials of Microfluidic Components. Silicon, Glass, polymers, fluid structure, fabrication methods. Surface modifications, Spotting, Detection mechanics.

UNIT– III Natural Nano-scale sensors:

Biosensors. Biomedical applications: drugs, drug delivery, molecular motors. Neuro electronic interfaces, Nanoluminescent tags, imaging and mapping. Defined networks of Neuronal cells *in vitro*, physiology of information processing within Neuronal Networks, Topographical patterning, Photolithographic patterning, Photochemical patterning.

UNIT – IV Microcontact printing of proteins:

Strategies for printing proteins on surfaces, Contact processing with hydrogel stamps, Affinity contact printing, Micro contact printing polypeptides and proteins, Printing one type of biomolecules, substrates, resolution and contrast of patterns, Activity of printed molecules, Printing multiple types of proteins, Molds and stamps, Surface chemistry, Characterization of printed patterns.

UNIT – V Nanotechnology & Environment:

Nanoparticles in bio- degradation, nano-material-based adsorbents for water treatment, possible mutagenic properties of nanoparticles, nanoparticle bioaccumulation. Nanoparticles in biomedical and clinical applications

18BTP105C

BIO-ENERGY TECHNOLOGY

Semester – I
4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Provide an overview of the basic process of bioenergy
- Understand different strategies to convert biomass to biofuels
- Obtain knowledge on the available technologies and how these could meet the growing demand for energy in the future
- Understand biomass biodegradability and bioconversion rate in relation to energy yields
- Describe biochemical processes of biomass conversion to bioenergy production with focus on fermentation and anaerobic digestion
- Understand technological potentials of biogas, bioethanol, biofuel and biohydrogen

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate bioenergy production processes adequate to diverse biomass characteristics
2. Discuss state-of-the-art technologies of generating biofuels from sustainable bioresources
3. Discuss and propose feasible biofuel technologies and biofuel products from selected biomasses
4. To illustrate a bio-energy thermo-chemical conversion process
5. Design biogas reactor capacity and propose optimal and economically viable technical operational condition
6. Demonstrate sequential bioethanol and biogas production and compare bioethanol and biogas scenarios with respect to energy recovery

UNIT – I Biofuel:

Introduction, features, undesirable features, Energy crops – wood, sugar and starch crops, hydrocarbon producing crops. Modes of utilization of biomass.

UNIT – II Biogas:

Substrate, digester, microorganisms, process of biogas production, factors affecting biogas yield, precautions, advantages and disadvantages.

UNIT – III Bioethanol:

Introduction, bioethanol vs. petrol, production of bioethanol – yeast, sugar and starch crops, ethanol recovery.

UNIT – IV Biodiesel:

Introduction, lipids as a source of biodiesel – algae, sunflower, rapeseed, linseed, soybean, jatropha, peanut, biodiesel from hydrocarbons. Biobutanol – *Clostridium*, molasses.

UNIT – V Biohydrogen:

Hydrogen as fuel – production - methods - electrolysis of water, gasification, biological agents. Biohydrogen production – anaerobic fermentation, photolyses and photosynthetic methods.

18BTP111

BIOCHEMISTRY AND MICROBIOLOGY – PRACTICAL I

Semester – I
4H – 2C

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Give knowledge on Biochemistry, microbiology and its application
- Offer knowledge to execute the experiments flawlessly
- Understand quantification of sugars, aminoacids and lipids
- Understand various cell types and its components
- Understand how to perform fractionation of cellular components
- Get practiced with the tools and techniques for analyzing chromatography

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the quantification of sugars, aminoacids and lipids
2. Interpret the outcome of experiments that involve cell biology techniques
3. Interpret the outcome of experiments that involve microbiology techniques
4. Discuss the various macromolecular components of cells and their functions
5. Describe cell permeability in plants and animal cells
6. Discuss the various staining techniques

List of Practicals**Biochemistry**

1. Quantification of proteins – Lowry *et al*/ Bradford method
2. Quantification of sugars – Anthrone method
3. Total free amino acids
4. Quantification of lipids
5. Quantification of Ascorbic acid
6. Thin Layer Chromatography (Amino acids / fatty acids/ sugar/ nucleic acids)
7. Effect of pH, temperature, substrate concentration (any one enzyme - Catalase / SOD / amylase by OD method)

Microbiology

1. Pure culture technique –pour spread, loop out technique and streaking, preservation,
2. Staining technique –grams and fungal.
3. Motility –Flagellar staining, hanging drop and soft agar analysis.
4. Growth curve (Bacteria and Fungi) and Biomass estimation

18BTP112

CELL BIOLOGY AND MOLECULAR GENETICS - PRACTICAL II

Semester – I
4H – 2C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Give knowledge on, Cell Biology and Molecular Genetics and its application
- Understand various cell types and its components
- Understand how to perform fractionation of cellular components
- Get practiced with the tools and techniques for analyzing cells
- Understand how to view Cell division stages
- Know about practical handling techniques

Course Outcomes

On successful completion of the course, students will be able to

1. Interpret the outcome of experiments that involve the use of cell biology and molecular genetics techniques
2. Discuss the various macromolecular components of cells and their functions
3. Describe cell permeability in plants and animal cells
4. Explain the basic steps involved in chromosome preparation and nuclear staining.
5. Perform cell division experiments

List of Practicals**Cell Biology**

1. Identification of cell types- Microbe/plant /Human
2. Fractionation of cellular component – Nuclear Components, Mitochondria, Chloroplast.
3. Sucrose Fractionation of Castor Bean
4. Lipid Solubility of Membranes
5. Cell permeability – RBC/plant cells.
6. Cell division (Mitosis/Meiosis)

Molecular Genetics

1. Drosophila Giant Chromosome preparation
2. Nuclear staining (Giemsa / acridine orange /feulgen)
3. Metaphase preparation and karyotyping (Human leucocytes/ onion root tip)
4. Conjugation
5. Transduction

JOURNAL PAPER ANALYSIS AND PRESENTATION

Semester – I
2H – 0C

18BTP201

RECOMBINANT DNA TECHNOLOGY**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with emerging field of biotechnology: Recombinant DNA Technology
- Understand the basic concepts of recombinant DNA Technology and genetic engineering
- Acquaint versatile tools and techniques employed in recombinant DNA technology
- Obtain the principles of versatile DNA modifying enzymes, cloning strategies, and vector types for selection and screening of recombinant clones
- Understand the concepts of nucleic acid labeling techniques
- Illustrate creative use of modern tools and techniques for manipulation and analysis of genomic sequences and to use recombinant DNA technology in biotechnological research

Course Outcomes

On successful completion of the course, students will be able to

1. Outline the fundamental steps in recombinant DNA technology
2. Demonstrate the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production
3. Explain the value of plasmid preparations and how the concentration and purity of plasmid samples can be determined
4. Confer cloning strategies and techniques used in DNA probing for specific genes of interest
5. Conceptualize PCR technique in clinical research
6. Recapitulate various applications of recombinant DNA technology in human health care and safety regulations

UNIT – I Tools in Genetic Engineering:

Nucleic acid manipulating enzymes- restriction- nucleases, ligases, polymerases, modification enzymes - kinases, phosphatases, adapters and linkers. Polynucleotide tailing.

UNIT – II Cloning Vectors:

Plasmid - conjugative and non-conjugative plasmid, Types of Plasmid- Natural plasmids, Artificial plasmid- pBR322 and PUC series. Phage vectors. Plant Vector – Ti plasmid. Animal viral vectors - Retroviral viral vectors, Shuttle vectors, cosmid, phagemid, fosmid. Artificial chromosomes –BACs, YACs.

UNIT- III Gene transfer methods:

Physical, chemical and biological methods of gene transfer- prokaryotes - eukaryotes. Screening and analysis of recombinants, DNA and RNA probes – construction. Analysis of cloned foreign genes. Hybridization techniques – Southern Blotting, Northern Blotting and Western Blotting.

UNIT – IV Analytical Techniques:

PCR, RAPD, RFLP, AFLP, SSCP, protein engineering- site directed mutagenesis, PCR mediated. Alteration of restriction sites, Molecular diagnosis and therapy of cancer, DNA based detection of microbial infection/ contamination, sequence analysis, SNP, NGS, gene editing tool CRISPR.

UNIT – V Application:

Antisense technology, RNAi technology, terminator gene technology, gene therapy- *in vivo* and *ex vivo*. Gene delivery systems - viral and non viral; DNA marker technology in plants, DNA fingerprinting, genetically engineered biotherapeutics and vaccines.

18BTP202

FERMENTATION AND BIOPROCESS TECHNOLOGY**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices
- Describe power requirements in bioreactors, modeling of bioprocesses, and traditional and new concepts in bioprocess monitoring, and the biological basis for industrial fermentations
- Understand biological and engineering principles for cultivating microorganisms in fermentors
- Obtain knowledge on assessing biological and engineering principles for cultivating microorganisms in fermentors
- Understand the importance of monitoring foam control, nutrient dosing, sterile sampling and filter sterilization
- Attain key concepts in calibration and maintenance of process critical for fermentation such as aeration, agitation and pH

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate factors that contribute in enhancement of cell and product formation during fermentation process
2. Analyze kinetics of cell and product formation in batch, continuous and fed-batch cultures
3. Differentiate the rheological changes during fermentation process
4. Develop protocol for scale-up and harvesting from shake flask to bench top fermentor
5. Analyze the bioprocess paradigms including scale-down, bioprocess simulation and economics in biological manufacturing
6. Examine considerations in bioprocess simulation and economics, sterilization in biological manufacturing, and clinical implications of bioprocesses

UNIT –I Introduction:

Isolation and screening of industrially important strains- primary and secondary screening. Strain improvement, mutation, selection of mutants, recombination – bacteria, fungi and actinomycetes, assay and fermented products. Fermentations- submerged, solid state.

UNIT – II Media:

Media formulation – sterilization – batch and continuous sterilization, sterilization of air, fibrous filters. Microbial kinetics: batch, fed-batch and continuous cultures, phases of batch growth. kinetics of cell growth, product formation, substrate utilization, product inhibition kinetics, yield concept and productivity.

UNIT – III Design of fermenter:

Types – CSTR, Tower, jet loop, air lift fermenter, bubble column, packed bed. Fundamentals of process control and monitoring – on line and off line analysis, feedback control, PID controller, computer aided control.

UNIT – IV Downstream processing:

Cell distribution methods for intracellular products; foam separation, precipitation. Filtration – micro and ultra-filtration; Solvent extraction-, chromatographic separation- FPLC, HPLC, dialysis, centrifugation, distillation, drying, crystallization, turbidity analysis and cell yield determination. Fermentation products- available in market.

UNIT –V Kinetics:

Transport phenomena – Rheological properties, determination of O₂ mass transfer, heat transfer, role of aeration and agitation, factors affecting O₂ transfer. Production of chemicals – alcohol, antibiotics – Penicillin and Streptomycin, Single cell proteins.

18BTP203

ENZYME TECHNOLOGY

Semester – II
4H – 4C

Instruction Hours / week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Understand about the characteristics of enzyme system
- Obtain key concepts on enzyme- Nomenclature and classification of enzymes
- Comprehend the principles of enzyme with Thermal stability and catalytic efficiency of enzyme
- Understand strong fundamental knowledge in enzymology
- Attain the principals involved in enzyme technology including Methods for large scale production of enzymes.
- Recognize the application of Enzymes used in different industries

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various enzyme process including Delivery system for protein pharmaceuticals, structure function relationship in enzymes
2. Describe the organization Artificial enzymes; Isolation and purification of industrially important enzymes
3. Recognize how pathways and regulatory networks
4. Appreciate the underlying mechanisms of Immobilized and soluble enzyme in health and industry
5. Illustrate the role of enzyme system
6. Apply the knowledge of this course in research and enzyme

UNIT – I Definition:

Nomenclature and classification of enzymes, Isozymes, characteristics of enzymes, Enzyme cofactors, Catalytic power, Catalytic strategies, Substrate specificity, Lock and key model, Induced fit hypothesis, Active site- structure, substrate binding, role of catalytic amino acid residues, Catalytic mechanisms of enzymes with representative examples, Types of enzyme inhibition, regulation, kinetics of enzyme-catalyzed reactions, effect of pH and temperature, Thermodynamics, Enzyme pathways and regulatory networks.

UNIT – II Properties of Enzymes:

Thermal stability and catalytic efficiency of enzyme, site directed mutagenesis and enzyme engineering– selected examples, Delivery system for protein pharmaceuticals, structure function relationship in enzymes, structural motifs and enzyme evolution. Methods for analysis of secondary and tertiary structures of enzymes. Protein folding *in vitro* & *in vivo*.

UNIT – III Improvement of enzymes:

Strategies for the discovery of improved and novel enzymes for industrial applications (homology and structure based approaches, screening methods, use of mutants). Optimization of industrial enzymes by mutagenesis; Protein engineering strategies to improve enzyme stability, specificity and activity; Enzyme immobilization - types, advantages, drawbacks and applications; Artificial enzymes; Isolation and purification of industrially important enzymes.

UNIT – IV Enzyme Technology:

Methods for large scale production of enzymes. Immobilized enzyme and their comparison with soluble enzymes, Methods for immobilization of enzymes. Immobilized enzyme reactors. Application of Immobilized and soluble enzyme in health and industry. Application to fundamental studies of biochemistry. Enzyme electrodes.

UNIT – V Applications of enzymes:

Enzymes used in different industries, Enzyme catalysis in organic solvents, enzyme replacement therapy – definition, modes of administration, enzyme deficiency disorders and enzyme therapy; Application of enzymes: Cosmetic benefits, Enzyme-based biosensors; Enzymes in clinical diagnosis: primary and secondary serum enzymes, Intracellular distribution of diagnostic enzymes, Enzyme markers of Xenobiotic toxicity - Pharmacogenomics related to polymorphism of drug metabolizing enzymes, , KEGG (Kyoto Encyclopedia of Genes and Genomes) pathway.

18BTP204

IMMUNOTECHNOLOGY

Semester – II
4H – 4C

Instruction Hours / week: L:4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand about our immune system and the immune response of cells and organs
- Obtain key concepts on gene-re-arrangement of immunoglobulin and T-cell receptor genes, and antigen processing and presentation
- Comprehend the principles of immunological techniques like hybridoma technology and catalytic antibodies synthesis
- Understand strong fundamental knowledge in tumor immunology
- Attain the principles involved in vaccine technology including recombinant vaccines
- Recognize the basic concepts in bone marrow and other organs transplantation

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various immunological process including innate and adaptive immunity, cells and organs of immune system, antigen and antibody interaction, immunogenicity and antigenicity, epitopes and antibody structure
2. Describe the organization of Ig genes, class switching in constant regions of genes and expression and regulation of Ig genes
3. Recognize how antigens are processed, presented and immune activation occurs via B- and T- cells activation
4. Appreciate the underlying mechanisms of auto-immune diseases and allergic reactions
5. Illustrate the role of immune system in tumor formation
6. Apply the knowledge of this course in research and pharmacological industries.

UNIT – I Introduction:

History and scope, Immunity – types, Antigen and Antibody - biology, structure and functions, super antigens, antigen- antibody interactions, primary and secondary immune response. Humoral and cell mediated immunity.

UNIT – II Immune system:

Hematopoiesis and differentiation, Lymphocytes, Lymphoid organs: Primary and secondary lymphoid organs. Antigen recognition and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation. **Complement system** - Classical and alternate pathway. MHC I and II complex.

UNIT– III Transplantation:

MLR, MHC and HLA typing, bone marrow transplantation, organ transplants, immunosuppressive therapy. Hybridoma technology and monoclonal antibodies, immuno-diagnosis and application of monoclonal antibodies in biomedical research, human monoclonal antibodies and catalytic antibodies, Xeno transplantation from various species.

UNIT – IV Hyper-sensitivity reactions, auto-immune disorders. Tumor immunology:

Tumor antigens, immune response to tumours, cancer immunotherapy. Immunodeficiencies – primary and secondary.

UNIT –V Vaccines:

Vaccine technology including DNA vaccines, identification of B and T epitopes for vaccine development. Immunodiagnosis of infectious diseases, immuno screening of recombinant library.

18BTP205 A

PHARMACEUTICAL BIOTECHNOLOGY**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Obtain basic skills necessary for employing biotechnology principles in together with various pharmaceutical parameters
- Understand novel formulation approaches for better delivery of biotechnology derived drugs, such as reverse micelles, liposomes, microemulsions and microencapsulation
- Attain knowledge on the delivery of peptides and proteins by the parenteral, oral, transdermal and nasal routes of administration
- Recognize novel biotechnology products and their use in therapeutics and diagnostics
- Comprehend the physical and chemical properties of the solution/colloidal/dispersion that influence physical stability of the bioactive macromolecule with emphasis on aggregation behavior, its identification and its impact on bioactivity
- Learn about special storage, handling, reconstitution and administration conditions and techniques for drug delivery systems containing bioactive macromolecules

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate different pharmaceutical parameters of current biotechnology products
2. Determine parameters related to stability and formulation of biotechnology products
3. Discuss quality control procedures related to biotechnology products
4. Demonstrate novel formulation methods for better delivery of biotechnology derived drugs
5. Evaluate different techniques related to separation and purification of cell types; conduct techniques for measuring cell turnover and growth, conduct cytotoxicity assays
6. Join pharmaceutical biotechnology labs and industries as a research assistant

UNIT –I Introduction:

Classification of Pharmaceuticals - Solutions, suspensions, tablets, capsules. Drugs and its sources, Routes of Drug Administration, Absorption and Bioavailability, Distribution, Drug metabolism, Drug theories, Drug Receptor interactions, Pro-drug concept.

UNIT – II Biotechnology and health:

Drug design; drug development; random screen up, target identification and validation, drug discovery, drug delivery. Drug abuse, self-poisoning. pharmacogenomics, biochip.

UNIT – III Biotechnology and Pharmacy:

Genetically engineered protein and peptide agents, novel drug delivery systems – non convectional routes of administration, Anti-AIDS drug development, oncogenes as targets for drugs, Multi-drug resistance, vaccine

development and role of genetic engineering in controlling infectious diseases, gene therapy, and stem cell therapy.

UNIT – IV Enzyme Technology:

Sources of enzymes, extraction and purification: Applications pharmaceutical, therapeutic and clinical. Production of amyloglucosidase, glucose isomerase, amylase and trypsin, Techniques of immobilization of enzymes and their applications in the industry. Reactors for immobilized systems and perspective of enzyme engineering.

UNIT -V Novel Drug Delivery Systems:

Introduction to the drug carrier, liposome as a drug carrier, biodegradable polymers as a drug-carrier. Modified Drug Release: The sustained release, first order release approximation, multiple dosing.

18BTP205B

AGRICULTURAL BIOTECHNOLOGY**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objective:**

The objectives of the course are to make the students to

- To provide various techniques and aspects regarding agribiotechnology
- To equip students with theoretical knowledge regarding the techniques and applications of agribiotechnology
- This paper has been designed to give the students comprehensive training in the agribiotechnology and its application for increasing agricultural production, environment improvement
- To help students to get a career in Industry/R&D/Academic
- To learn about genome organization in plants, basic techniques in tissue culture and its applications
- To know about Genetic transformation in plants, metabolic engineering, production of pharmaceuticals and industrial products and plant molecular farming

Course Outcomes:

On successful completion of the course, students will be able to

1. Describe the genome organizations in plants
2. Elaborate on the plant cell and tissue culture systems
3. Explain the genetic transformation techniques in plants
4. Demonstrate the application of genetic transformation techniques in plants
5. Evaluate the importance of metabolic engineering
6. Carryout agricultural farming with plants

UNIT –I Plant tissue culture and its application:

Recombinant DNA technology, methods of gene transfer in plants, Development of transgenics for abiotic & biotic stress tolerance Tools and techniques used in agriculture biotechnology.

UNIT –II Genetic and Molecular basis:

Heterosis and Apomixis and their significance, Mutations and polyploidy in crop improvement, Molecular markers, Marker assisted breeding, QTL mapping, Origin, evolution and cultivation practices of the major crop plants

UNIT –III Improvement of crop plants:

Increase in iron, protein and amino acids, golden rice colours – anthocyanins, betalaines, crocin and crocetin. Flavours—capsaicin, vanillin, stevioside, thaumatin. Developing vaccine and plantibodies, terminator technology and male sterility;

UNIT – IV Biotic and abiotic resistance:

Virus -coat protein mediated, nucleocapsid gene, antisense and RNAi, Fungal diseases: chitinase, 1-3 beta glucanase, RIP, antifungal proteins, thionins, PR proteins, Insect pests resistance: Bt genes, Non-Bt like protease inhibitors, alpha amylase inhibitor, nematodes resistance and herbicide resistance: phosphinothricin, glyphosate, sulfonyl urea, atrazine. Drought, salinity, thermal stress, flooding and submergence tolerance

UNIT – V Genetic engineering for increasing crop productivity:

Enhancing photosynthetic, nutrient use and nitrogen fixing efficiencies of plants, Genetic Engineering for quality improvement: Seed storage proteins; essential amino acids, Vitamins and minerals, heterologous protein

production in transgenic plants, biodegradable plastics, Plants as biofactories, Biosafety and risk assessment of GM crops.

18BTP205 C

INDUSTRIAL TOXICOLOGY**Semester – II**
4H – 4C**Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Students will acquire knowledge and learn the terminology of the field of Industrial toxicology, understand and be able to describe in detail the toxicological effects of certain dangerous substances
- Describe the relationship of dose - response, and the principle of determining the theoretical expertise on the mutagenic, teratogenic and carcinogenic effects of toxic substances.
- Obtain knowledge of current legislation on health protection while working with chemical agents, carcinogenic and mutagenic factors, and biological factors
- Learn about toxic effects of elements and their compounds. Toxic effects of heavy metals.
- Understand the classification of substances under the new legislation.
- Gather and critically interpret toxicological information from diverse resources for human health hazard and risk assessment

Course Outcomes

On successful completion of the course, students will be able to

1. Describe toxicology as a discipline in the overall health sciences framework
2. Explain the basic concepts of chemical hazard and exposure as determinants of chemical toxicity
3. Describe key pathways and mechanisms of chemical absorption, distribution, metabolism, storage and excretion in the human body
4. Explain dose-response relationships as the basis of toxicity
5. Outline the derivation of reference dose and other related measures of occupational exposure
6. Describe the scientific basis of occupational exposure assessments and practical methods for their determination

UNIT – I Introduction

Scope, Divisions of Toxicology, General principles of toxicology, - Classification of Toxic Agents. Mechanism of action of toxicants, Routes of exposure-absorption and translocation.

UNIT – II Toxicokinetics:

Absorption, Distribution, Metabolism and Excretion, Factors influencing Toxicity, Dose-effect and Dose response relationship- LD50, LC50.

UNIT – III Human Toxicology:

Pollution induced biochemical, hematological and pathological changes, Immunotoxicity, genotoxicity and carcinogenic effects

UNIT – IV Ecotoxicology:

Influence of ecological factors on the effects of toxicity; Pollution of the Ecosphere by industries; degradable and non-degradable toxic substances; food chain. Eco-system influence on the fate and transport of toxicants.

UNIT – V Regulatory issues and testing:

Bacterial mutation assays, Mammalian cell mutation assays, *in vitro* chromosome aberration assays, *In vivo* carcinogenicity assays and Comet assay.

**RECOMBINANT DNA, FERMENTATION AND
BIOPROCESS TECHNOLOGY – PRACTICAL III**

Instruction Hours / week: L:0 T: 0 P:4

Marks: Internal: 40 External:60 Total: 100
End Semester Exam: 3 Hours**Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in the emerging field of biotechnology: Recombinant DNA technology
- Perform basic molecular biology techniques including DNA and RNA isolation from microbes, plants and animals
- Acquaint versatile tools and techniques employed in recombinant DNA technology such as restriction and digestion, ligation, transformation and PCR
- Gain adequate knowledge on screening of industrially important microorganisms
- Comprehend the enzyme immobilization technique
- Get knowledge on wine production

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out DNA and RNA isolation from microbes, plants and animals
2. Perform recombinant DNA techniques including restriction and digestion, ligation, transformation and PCR
3. Explain the wine production and alcohol determination
4. Extract amylase enzyme from microbial sources
5. Perform the enzyme immobilizing technique
6. Join in research and clinical labs as a project/ research assistant

List of Practicals**Recombinant DNA Technology**

1. Isolation and analysis of total DNA from Microbes (*E. coli*), plant
2. Isolation and analysis of plasmid DNA
3. Isolation and analysis of total RNA
4. Restriction digestion of DNA, Ligation of DNA
5. Transformation of plasmid DNA using calcium chloride
6. Amplification by PCR
7. Southern blotting (Demonstration)
8. Northern blotting (Demonstration)
9. Western blotting (Demonstration)

Fermentation Technology

1. Isolation and secondary screening of industrially important microorganisms
2. Production of amylase or protease, Enzyme immobilization
3. Wine Production an alcohol determination by chromic acid method
4. Downstream processing by Solvent extraction

IMMUNO - AND ENZYME TECHNOLOGY – PRACTICAL IV

Semester – II
4H – 2C

Instruction Hours / week: L: 0 T:0 P: 4

Marks: Internal: 40 External: 60 Total:100
End Semester Exam: 3**Course Objectives**

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in the emerging field of biotechnology: immuno technology
- Perform and understand basic immuno techniques
- Acquaint versatile tools and techniques employed in immuno technology such as methods of immunoelectrophoresis
- Gain hands on experience in immunological tools used in diagnosis, such as immunoelectrophoresis, ELISA and WIDAL test
- Comprehend the applications of Immunological techniques in human health care

Understand the calculations of kinetic parameters such as K_m , V_{max} , K_{cat}

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out the immuno laboratory techniques
2. Perform the enzyme related assays
3. Explain the preparation of sample for analysis.
4. Describe the basic knowledge about antigen and antibody interaction using rocket immune electrophoresis.
5. Perform various techniques like Immunoelectrophoresis, and ELISA etc.
6. Join in research and clinical labs as a project/ research assistant

List of Practicals**Immuno-technology**

1. ABO blood grouping, Preparation of serum from blood
2. Methods of immunization, Methods of bleeding, Hemolysis
3. Single and Double radial immunodiffusion
4. Immunoelectrophoresis
5. Rocket Immunoelectrophoresis
6. Counter Current Immunoelectrophoresis
7. WIDAL test
8. DOT-ELISA

Enzyme technology

1. Purification of an enzyme from any natural resource
2. Quantitative estimation of proteins by Bradford/Lowry's method.
3. Perform assay for the purified enzyme.
4. Calculation of kinetic parameters such as K_m , V_{max} , K_{cat}

PLANT AND ANIMAL BIOTECHNOLOGY

Semester –III
4H – 4C

Instruction Hours/week: L:4 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Introduce biotechnological methods for production of transgenic plants
- Get knowledge about various methods of gene transfer in plants
- Cognize and get the knowledge on animal culture
- Explain the basics of the physiological and molecular processes that occur during plant growth and development and during environmental adaptations
- Use basic biotechnological techniques to explore molecular biology of plants and animals
- Understand the processes involved in the planning, conduct and execution of plant and animal biotechnology experiments

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the growth conditions required to culture the plants and animal in *in vitro* conditions
2. Inculcate the deep understanding of Gene expression system of plants
3. Acquire knowledge on producing transgenic plants
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
5. Discuss the structure and organization of plant and animal genome
6. Demonstrate the basic techniques for hybridization in producing transgenic plants and animals

UNIT – I

Micropropagation: Tissue culture media – composition and preparation, Callus and suspension culture, somaclonal variation, micropropagation, organogenesis, somatic embryogenesis, Embryo culture and embryo rescue. Haploidy; protoplast fusion and somatic hybridization; cybrids; anther, pollen and ovary culture for production of haploid plants and homozygous lines. Plant hardening transfer to soil, green house technology.

UNIT – II

Plant genetic engineering: Methodology; Plant transformation with Ti plasmid of *Agrobacterium tumefaciens*; Ti plasmid derived vector systems, Ri plasmids; Physical methods of transferring genes to plants - Microprojectile bombardment, Electroporation; Manipulation of gene expression in plants; Production of marker free transgenic plants.

UNIT – III

Animal Cell culture: Types, disaggregation of tissue, primary culture, established culture; suspension culture, organ culture, embryo culture, three-dimensional culture and tissue engineering, feeder layers; cell synchronization; cryopreservation. Biology and characterization of cultured cells, tissue typing; cell – cell interaction; measuring parameters of growth; measurement of cell death – apoptosis and its determination.

UNIT– IV

Animal genetic engineering: Molecular cell techniques: cell transformation- physical, chemical and biological methods; manipulation of genes; cell and organism cloning; green fluorescent protein and its application. Gene

therapy. *In vitro* fertilization and stem cell research.

UNIT – V

Applications of plant and animal genetic transformation:

In Plants: Productivity and performance: herbicide resistance, insect resistance, virus resistance, fungal resistance, nematode resistance, Induction of abiotic stress and cold stress. Delay in fruit ripening, LEA protein, plantibodies, edible vaccines - primary and secondary metabolite modification, biopolymers, plant-based enzyme engineering. **In Animal:** Transgenic animals; transgenic animals as models for human diseases; transgenic animals in live- stock improvement; Ethical issues in animal biotechnology.

18BTP302

GENOMICS, PROTEOMICS AND BIOINFORMATICS

Semester –III
4H – 4C

Instruction Hours/week: L:4 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- Develop the knowledge on gene sequencing methods
- Know the structure and interactions of proteins
- Describe advanced genomics and proteomics technologies and the ways in which their data are stored
- Use bioinformatics techniques to query examples of genomic and proteomic databases to analyze cell biology
- Describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On successful completion of the course, students will be able to

1. Have a clear understanding on the application of genetic markers in genome mapping
2. Application of 2D technique to analyze the structure of protein
3. Analyze the genomic and proteomic data
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology
5. Discuss how biological systems information relating to genes, proteins and cellular structures can be used to model living cells, and even to create new synthetic cells
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study

UNIT – I

Genomics: Genome – Human Genome project (HGP)-Merits and limitations of Chemical sequencing method – Dideoxy method – mRNA sequencing – cDNA library – Shotgun method – Automated sequencing – Next generation sequencing – Pyrosequencing –Genome mappings – Restriction mappings – Fluorescence *in situ* hybridization (FISH) – Genetic markers – SNP, VNTR, RFLP, Minisatellite and Microsatellite – Applications of genome mappings.

UNIT – II

Proteomics: Proteome –SDS-PAGE – IEF – 2D Gel electrophoresis –Sample preparations – Merits and limitations - Mass spectrometry – ESI-MS – Molecular weight estimations – Studying Protein-protein interactions – Structural analysis – Protein folding pathways analysis – Tandem Mass spectrometry - Protein sequencing – MALDI-MS.

UNIT – III

Omics Databases: Genome databases – ENSEMBL - VISTA – FlyBase – OMIM – Protein databases – NCBI – UniProt – Secondary databases – PROSITE - 2D PAGE Database - Structural databases – PDB– SCOP – CATH.

UNIT – IV

Sequence and Structural Alignments: Sequence similarity searching tools – Protein BLAST – Nucleotide BLAST – tBLASTn – BLASTx – Pairwise alignments – Multiple sequence alignments – Clustal Omega - Protein structure alignment – DALI - Phylogenetic tree construction and analysis.

UNIT – V

Structure prediction tools: Secondary structure predictions – Empirical and knowledge-based methods – Predicting three-dimensional structures of proteins – strategies, tools, merits and limitations of comparative modeling – threading/fold recognition and *Ab initio* methods – Stereochemical and structural analysis – Molecular visualization tools.

18BTP303

FOOD BIOTECHNOLOGY

Semester –III
4H – 4C

Instruction Hours/week: L:4 T:0 P:0

Marks: Internal: 40 External:60 Total:100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand the concepts of food biotechnology
- Attain strong knowledge on primary sources of microorganisms in food
- Explore the methods for development and preservation of fermented foods
- Recognize the nutritive values of fermented foods
- Understand the concepts of food adulteration and food safety
- Obtain strong knowledge on food spoilage

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the beneficial role of microorganisms in fermented foods and in food processing and the microbiology of different types of fermented food products
2. Understand the significance and activities of microorganisms in food and role of intrinsic and extrinsic factors on growth and survival of microorganisms in foods
3. Know the spoilage mechanisms in foods and thus identify methods to control deterioration and spoilage
4. Recognize and describe the characteristics of important pathogens and spoilage microorganisms in foods
5. Learn various methods for their isolation, detection and identification of microorganisms in food and employ in industries
6. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation

Unit – I

Introduction: History and Scope of Food Biotechnology, Nutritive value of food, Role of microbes in food biotechnology – bacteria, fungi and yeast. Fermented foods – Types, Changes during Fermentation, Nutritive value of fermented foods.

Unit – II

Food Microbiology: Primary Sources of Microorganisms in food. Food-borne Bacteria, Molds and Yeasts. Intrinsic- and Extrinsic Parameters of food affecting microbial count. Detection of Microorganisms in food - SPC, Membrane filters, Dry films. Bacterial Toxins - Botulism and Staphylococcal toxin. Fungal Toxins - Aflatoxins.

Unit – III

Fermented Foods: Origin, scope and development and preservation- Cheese, Yoghurt, Butter, miso, tempeh, kefir, koumiss, acidophilus milk, sourkraut, pickles and vinegar. Fresh juice production –Mango, orange, and pineapple. Technological aspects of industrial production of beer, wine and baker's yeast.

Unit – IV

Food Spoilage and Preservation: Causes of Food Spoilage, Spoilage of Fruits, Vegetables, Meat, Soft Drinks, Eggs, Dairy products. Food Preservation through chemicals - Acids, Salts, Sugars, Antibiotics, Ethylene oxide, Antioxidants. Other Methods of Food Preservation -Radiations, Low and High temperature, Drying. Food packaging materials and their properties.

Unit – V

Food Adulteration and Food Safety: Adulteration, Responsibility for food safety, Food Additives - Definition, Types and Functional characteristics. Natural Colors -Types, Applications, Advantages of natural colors. Sweeteners - Types and Applications. Adulteration Detection systems and sensors. Food safety - HACCP System to food protection, FSSAI guidelines.

18BTP304

ENVIRONMENTAL BIOTECHNOLOGY

Semester –III
4H – 4C

Instruction Hours/week: L:3 T:1 P:0

Marks: Internal: 40 External:60 Total:100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand the various components of the environmental biotechnology including ecosystems, biodiversity, threats and policy
- Obtain knowledge on the sources for environmental pollution and its remedial measures
- Understand toxic chemicals and their impact on environment and human health
- Attain key concepts on the role of microbes in remediation of environmental pollutants
- Learn various technologies, tools and techniques in the field of environmental biotechnology
- Understand the importance of biological techniques in controlling air pollution

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various types of ecosystems, biodiversity components, environmental threats and Policy
2. Discuss the impact of environmental pollution and its remediation measures
3. Recognize various global and regional environmental concerns due to natural causes and/or human activities
4. Illustrate the role of Toxic chemicals in the environment and their associated health issues in humans
5. Investigate some examples of different types of environmental pollution and their impacts
6. Appreciate the scientific, ethical and/or social issues associated with certain applications of biotechnology for alleviating the environmental concerns

UNIT – I

Ecosystem – Concept and management of ecosystems. Energy budget. Energy Transfer and energy pyramids. Environmental pollution and its problems- Air, water, soil. Biogeochemical cycle (Carbon, nitrogen and phosphorous cycle). Response of plant, animal and microbes to external factors.

UNIT – II

Genetically Engineered Microorganisms (GEMs) in environment: Role of environmental biotechnology in management of environmental problems, Bioremediation, advantages and disadvantages; In situ and ex-situ bioremediation; slurry bioremediation; Bioremediation of contaminated ground water and phytoremediation of soil metals; microbiology of degradation of xenobiotics. Bioleaching.

UNIT – III

Sewage, waste water treatment and solid waste management: chemical measure of water pollution, conventional biological treatment, role of microphyte and macrophytes in water treatment; Recent approaches to biological waste water treatment, composting process and techniques, use of composted materials.

UNIT – IV

Biological decomposition: Organic carbon, Nitrogen and Phosphate removal. Biological removal, biotransformation, and biosorption of metal ions. Aerobic- and Anaerobic degradation of Xenobiotics. Bioaugmentation for degradation of Xenobiotics. Industrial sources of waste water. Treatment strategies.

UNIT – V

Biofuels and biological control of air pollution: plant derived fuels, biogas, landfill gas, bioethanol, biohydrogen; Biodiesel, Microbial Fuel Cell. Use of biological techniques in controlling air pollution; Removal of chlorinated hydrocarbons from air. Sustainability, Maintenance and Swatch Bharat aspects in environmental biotechnology.

Instruction Hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Obtain basic skills necessary for employing biotechnology principles in together with various plant biotechnology
- Understand novel formulation approaches for better delivery of biotechnology derived drugs, such as reverse micelles, liposomes, microemulsions and microencapsulation
- Attain knowledge on the delivery of peptides and proteins by the parenteral, oral, transdermal and nasal routes of administration
- Recognize novel biotechnology products and their use in therapeutics and diagnostics
- Comprehend the physical and chemical properties of the solution/colloidal/dispersion that influence physical stability of the bioactive macromolecule with emphasis on aggregation behavior, its identification and its impact on bioactivity
- Learn about special storage, handling, reconstitution and administration conditions and techniques for drug delivery systems containing bioactive macromolecules

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate different pharmaceutical parameters of current biotechnology products
2. Determine parameters related to stability and formulation of biotechnology products
3. Discuss quality control procedures related to biotechnology products
4. Demonstrate novel formulation methods for better delivery of biotechnology derived drugs
5. Evaluate different techniques related to separation and purification of cell types; conduct techniques for measuring cell turnover and growth, conduct cytotoxicity assays
6. Join pharmaceutical biotechnology lab and industries as a research assistant

UNIT – I

Plant Biotechnology: Genetic engineering of plants: Insect resistance, Virus resistance, Stress tolerant plants, Flower pigmentation, Modification of plant nutritional content, Delayed fruit ripening, Artificial seeds. Biofertilizers: Definition and advantages, Strain selection – Inoculum development – Mass production – Packaging – Quality control of different Biofertilizers.

UNIT – II

Animal Biotechnology: Transgenic cattle, super ovulation, Embryo transfer, production of recombination products- Growth hormones, Human Interferon, Vaccines, Monoclonal antibody, Gene knockout and mice model

for Human genetic disorder, stem cell therapy.

UNIT – III

Industrial Biotechnology: Fermentors – Types, Production of enzymes- Amylases, proteases and Lipases. Antibiotics – Penicillin. Aminoacids –Glutamic acid. Production of alcohol, Xanthan gum and SCP. **Alcoholic:** Fermented and distilled their preparation and sources. **Production of dairy products:** Cheese. Yoghurt, buttermilk, kefir, koumiss, acidophilus milk. Pickles – Dill pickles, slippery pickles, soft and black pickles. Fermented Vegetables – Sauerkraut.

UNIT – IV

Environmental Biotechnology: Biosensors – Types, xenobiotics degradation, Bioleaching, sewage treatment, Biogas production, Role of superbug in biodegradation, Bioremediation – *Insitu* and *Exsitu*.

UNIT – V

Bioethics and Biosafety: Intellectual property rights. General ethics & ethical issues, Animal rights, Environmental safety of GMOs. Regulation of GMOs, Bioethics for future.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand the new concept of system biology applied to the area of biotechnology
- Build the knowledge in computational methods in biotechnology
- Acquire requisite skills for the design and development of high throughput screening and to retrieve and submit the data, genome database and other databases and analysis
- Learn the computational tools for applying biotechnology in research
- Study the techniques involved in structural and functional proteomics
- Utilize the bioinformatics tools to design and development of novel drugs

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the basic concepts of System Biology
2. Differentiate various Metabolic Networks and Models in System Biology
3. Understand the various databases available for data collection and interpretation
4. Understand the scope and applications of tools
5. Utilize the computational tools for applying biotechnology in research
6. Study and deduce the molecular characterization of human genome

UNIT – I

Introduction to Systems Biology: Introduction to Systems Biology. Need for System Analysis in Biology. Basic Concepts in System Biology: Component vs System, Links and Functional States, Links to Networks, Hierarchical Organization in Biology.

systems, scales, static/dynamic, approaches, limitations, reductionism; central dogma; mathematical models; computational analysis; statistics of prokaryotes and eukaryotes.

UNIT – II

Metabolic Networks and Models in System Biology: Basic Features of Metabolic Networks. Reconstruction Methods of Metabolic Networks. Models as Dynamical Systems. SYN1, SYN3 and molecular simulation, Parameter Problem. Meanings of Robustness.

UNIT – III

Systems Biology Databases KEGG (Kyoto Encyclopedia of Genes and Genomes). BRENDA (BRAunschweig ENzyme DAtabase). BioSilico. EMP (Embden-Meyerhof-Parnas). MetaCyc and AraCyc. SABIO-RK (System for the Analysis of Biochemical Pathways - Reaction Kinetics). BioModels.

UNIT – IV

Tools for System Biology: Cell Designer. Ali Baba. Cell Profiler. JDesigner. Bio-SPICE (Biological Simulation Program for Intra and Inter Cellular Evaluation). SBML (Systems Biology Markup Language). SBGN (Systems Biology Graphical Notation). SBML-SAT (SBML based Sensitivity Analysis Tool).

UNIT – V

Premises & Promises of Systems Biology: Premise of Systems Biology. Promise of Systems Biology. Challenges of Systems Biology. Applications of Systems Biology.

18BTP305C

TISSUE ENGINEERING AND REGENERATIVE MEDICINE

Semester –III
4H – 4C

Instruction Hours/week: L:4 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam: 3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand tissue growth and development as well as the tools and theoretical information necessary to design tissues and organs.
- Recognize the need of controlling all factors related to biomaterials architecture such as cell biology, biochemistry pathways, and surface characterization and modification.
- Comprehend various physical and chemical stimuli that control the structure of biomaterials
- Get knowledge in which cell types are available to be used in tissue engineering applications
- Understand the relevance of the extracellular matrix and its interaction with materials
- Obtain knowledge on bioreactors used in tissue engineering

Course Outcomes

On successful completion of the course, students will be able to

1. Describe and use the fundamental tools and techniques used in tissue engineering
2. Compare and contrast various strategies for repairing tissues
3. Show mastery of fundamental topics in tissue engineering including stem cells, plasticity, transdifferentiation, and cloning
4. Describe and the developments of biomaterials for regenerative therapies and tissue engineering
5. Discuss and give an example of how biomaterials are used to fabricate devices for clinical use
6. Illustrate the basic concepts of cell culture and critical components of bioreactor/tissue design

UNIT – I

Introduction to Tissue engineering and Regenerative medicine. Tissue engineering and cells as therapeutic agents. Tissue structure and organization, extra cellular matrix, and tissue dynamics.

UNIT – II

Cellular fate processes. Cell division and cell death. Coordination of cellular fate processes and malfunctions in soluble signaling. Cell-extra cellular matrix interactions and cell-cell communications.

UNIT – III

Cell and Tissue Culture. Separation, Culture environment and maintenance of cells *in vitro*. Microscopic characterization of tissues. Basic tools to detect cell fate and cell functions.

UNIT – IV

Stem cells and growth factor delivery, and Bioreactors. Stem cell properties, types, resources and application in tissue engineering and regenerative medicine. Gene transfer. Bioreactors in tissue engineering.

UNIT – V

Biomaterials and scaffold fabrication. Introduction and microscopic characterization of biomaterials. Degradable materials, porosity, mechanical strength, 3-D architecture and cell incorporation. Bioengineered scaffolds for bone, cartilage, tendons, ligaments, skin, liver, pancreas and blood vessels. Case study and regulatory issues.

18BTP311

PLANT AND ANIMAL BIOTECHNOLOGY – PRACTICAL V

Semester –III
4H – 2C

Instruction Hours/week:L:0T:0 P:4

Marks:Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

The objectives of the course are to make the students to

- Understand the new concept of biology applied to the area of biotechnology
- Gain hands-on experience to learn the principles behind plant and animal biotechnology
- Know the process involved in isolation, separation, manipulation of plant and animal tissues
- Apply the technology in research and development and pharmaceutical industries
- Execute the recent technology involved in plant and animal cell culture
- Describe the principles of gene manipulation

Course Outcomes

On successful completion of the course, students will be able to

1. Acquaint with principles, technical requirement, scientific and commercial applications in plant and animal biotechnology
2. Support methodologies in plant and animal tissue/cell culture
3. Be able to describe basic principles and techniques in genetic manipulation and genetic engineering
4. Be able to describe gene transfer technologies in plants and animals
5. Be able to describe techniques and problems in plant and animal cloning
6. Become motivated to set goals towards pursuing graduate school and higher-level positions, such as lab manager and key scientist in plant and animal biotechnological research institutes and industries

List of Practicals**Plant Tissue Culture Techniques**

1. *In vitro* Germination of Seeds
2. Micropropagation
3. Callus induction, differentiation and regeneration
4. Suspension culture
5. Embryo Culture
6. Synthetic seed production
7. Protoplast isolation
8. *Agrobacterium*-mediated gene transformation

Animal Biotechnology

9. Preparation and Filter-sterilization of Animal Tissue Culture Medium
10. Chicken embryo fibroblast Culture
11. Quantification of cells haemocytometer
12. Quantification of viable and non-viable cells by trypan blue dye exclusion method
13. Identification of leukocyte subsets and total count.

14. Blood leukocyte culture
15. Soft agar assay
16. Cryopreservation and revival of cell lines.

3. Slater, A., Scott, N.W. & Fowler, M.R. (2008). *Plant Biotechnology: The Genetic Manipulation of plants* (2nd ed.). Oxford University Press, Oxford, United Kingdom.

Course Objectives

The objectives of the course are to make the students to:

- Give knowledge on Bioinformatics and its application.
- Offer knowledge to assess biological databases.
- Understand and to analyze protein/nucleotide sequences and to predict its 3D structure.
- Understand the various online databases for submitting and retrieving data.
- Understand how the phylogeny plays a vital role in finding ambiguities.
- Get practiced with the tools and techniques for analyzing the data.

Course Outcomes

On successful completion of the course, students will be able to:

1. Understand The relationship between sequence - structure - function of genes.
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences.
3. Inculcate knowledge on building 3D structures of genes.
4. Locate and use the main databases at the NCBI and EBI resources.
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information.
6. Use selected tools at RasMol, JMol and PyMol to run simple analyses on genomic sequences

List of Practicals

1. Exploring of primary databases (Proteins and Nucleic acids) and sequence retrieval
2. Physicochemical and structural analyses of primary sequences (Proteins and Nucleic acids)
3. Sequence similarity searches and pairwise alignments
4. Multiple sequence alignments and phylogenetic analysis
5. Comparative modeling using online and standalone tools
6. Molecular visualization tools: RasMol, JMol andPyMol
7. Structural analysis and verification tools
8. Molecular dockings of biological macromolecules

JOURNAL PAPER ANALYSIS AND PRESENTATION

**Semester – III
2H – 0C**

PROJECT – VIVA VOCE**Semester – IV**
15C**Instruction Hours/week: L: 0T:0P:0****Marks:** Internal: 80 External:120 Total: 200**Course Objectives**

The main objectives of the course is

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research

பகுதி - I, தமிழ்ப்பருவம் I

18LSU101 :

தமிழ்முதல்தாள்

4-H,4-C

(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்'; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல்.
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு - I :இக்காலஇலக்கியம்:**(10 மணிநேரம்)**

கல்வி	:	மகாகவிபாரதியார் - சுயசரிதை -ஆங்கிலக் கல்வி.
இன்றைய நிலை	:	கவிமணி தேசிக விநாயகம் பிள்ளை-ஒற்றுமையே உயிர்நிலை.
மனிதநேயம்	:	கவிஞர்சிறப்பிபாலசுப்பிரமணியன் -மலையாளக் காற்று.
சூழலியல்	:	கவிஞர்வைதீஸ்வரன் - விரல் மீட்டிய மழை.
பெண்ணியம்	:	கவிஞர்சுகந்தி சுப்பிரமணியம் - புதையுண்ட வாழ்க்கை.

அலகு - II :அறஇலக்கியம்:**(10 மணிநேரம்)**

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் - 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III :சிறநிலக்கியம்:**(10 மணிநேரம்)**

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு - IV :கட்டுரை:

(10 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்
3. வாழ்க்கை - இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி:

(8 மணிநேரம்)

1. படைப்பிலக்கியப் பயிற்சிகள் (கதை,கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. இலக்கணப் பயிற்சிகள்

பாடநூல்:கற்பகச்சோலை – தமிழ்ஏடு.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறைவெளியீடு.

Semester-I		
18ENU101	ENGLISH	4H 4C
Instruction Hours/week:L:40 T:0 P:0 C:4Marks: Internal:40 External: 60 Total:100		
End Semester Exam: 3 hrs		

Course Objectives

- To enable the learners to acquire English language skills at a faster pace.
- To train the learners to reflect on the literary works and communicate flexibly.
- Know about the Prose and Poetry
- To develop the Short Story:
- Learn about Vocabulary, Grammar and Composition:
- Know about Proverb Expansion

Course Outcomes

1. Enable the learners to acquire English language skills at a faster pace.
2. Trained the learners to reflect on the literary works and communicate flexibly.
3. Knowledge about the Prose and Poetry
4. Development of the Short Story:
5. Learnt about Vocabulary, Grammar and Composition:
6. Knowledge about Proverb Expansion

UNIT - I : PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us - Dr.A.P.J. Abdul Kalam

UNIT - II : POEM

1. The Stolen Boat - William Wordsworth
2. A River - A.K. Ramanujan
3. The Sailor - Safaa Fathy

UNIT - III : SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Romance of a Busy Broker - O.Henry
3. The Nightingale and the Rose - Oscar Wilde.

UNIT - IV

- GRAMMAR** : 1. Tenses
 2. Auxiliaries (Primary and Modal)
 3. Articles
 4. Tag Questions

UNIT - V**FUNCTIONAL ENGLISH**

1. Filling the blanks with the suitable form of verb in a conditional sentence.

2. Dialogue Writing
3. Changing positive to negative without altering the meaning
4. Fill in the blank with suitable modal
5. Framing a question to a statement
6. Rewrite the sentences changing the underlined word as directed

Prescribed Text: Reminisce, Published by the Department of English, Karpagam University.

Suggested Reading: Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

Semester-I

18CHU101 INORGANIC CHEMISTRY I: Atomic structure and chemical bonding 5H 5C**Instruction Hours/week:L: 5 T:0 P:0Marks: Internal:40External: 60 Total:100****End Semester Exam: 3 hrs****Course Objectives**

Students should be able

- To discuss the limitations of classical mechanics and its drawbacks.
- To discuss the radial and angular part of orbitals
- To explain the fundamentals of quantum mechanics and Schrödinger equation for simple atoms.
- To predict and write the electronic configuration of elements.
- To explain a different types of bonding like ionic and covalent bonding.
- To interpret a knowledge about the various theories of bonding like VSEPR, Valence Bond Theory and Molecular Orbital Theory of covalent bonding.

Course Outcomes

The students

1. Explain the atomic theory of matter, composition of the atom, which defines the identity of a given element.
2. Understood the radial and angular part of orbitals
3. Explain the relative sizes, masses, and charges of the proton, neutron, and electron, and their assembly to form different atoms.
4. Define the term isotope, and their atomic and mass numbers.
5. Use the Periodic Table to rationalize similarities and differences of elements, including physical and chemical properties and reactivity.
6. Predict common ionic charges of group 1A, 2A, 3A, 6A, and 7A elements based on position in the periodic table.

Atomic Structure:**UNIT I**

Review of: Bohr's theory and its limitations, dual behaviour of matter and radiation, de Broglie's relation, Heisenberg Uncertainty principle. Hydrogen atom spectra. Need of a new approach to atomic structure. What is Quantum mechanics? Time independent Schrodinger equation and meaning of various terms in it. Significance of ψ and ψ^2 , Schrödinger equation for hydrogen atom. Radial and angular parts of the hydrogenic wavefunctions (atomic orbitals) and their variations for $1s$, $2s$, $2p$, $3s$, $3p$ and $3d$ orbitals (Only graphical representation). Radial and angular nodes and their significance. Radial distribution functions and the concept of the most probable distance with special reference to $1s$ and $2s$ atomic orbitals.

UNIT II

Significance of quantum numbers, orbital angular momentum and quantum numbers ml and ms . Shapes of s , p and d atomic orbitals, nodal planes. Discovery of spin, spin quantum number (s) and magnetic spin quantum number (ms). Rules for filling electrons in various orbitals, Electronic

configurations of the atoms. Stability of half-filled and completely filled orbitals, concept of exchange energy. Relative energies of atomic orbitals, Anomalous electronic configurations.

Chemical Bonding and Molecular Structure

UNIT III

Ionic Bonding: General characteristics of ionic bonding. Energy considerations in ionic bonding, lattice energy and solvation energy and their importance in the context of stability and solubility of ionic compounds. Statement of Born-Landé equation for calculation of lattice energy, Born-Haber cycle and its applications, polarizing power and polarizability. Fajan's rules, ionic character in covalent compounds, bond moment, dipole moment and percentage ionic character

UNIT IV

Covalent bonding: VB Approach: Shapes of some inorganic molecules and ions on the basis of VSEPR and hybridization with suitable examples of linear, trigonal planar, square planar, tetrahedral, trigonal bipyramidal and octahedral arrangements. Concept of resonance and resonating structures in various inorganic and organic compounds.

UNIT V

MO Approach: Rules for the LCAO method, bonding and antibonding MOs and their characteristics for *s-s*, *s-p* and *p-p* combinations of atomic orbitals, nonbonding combination of orbitals, MO treatment of homonuclear diatomic molecules of 1st and 2nd periods (including idea of *s-p* mixing) and heteronuclear diatomic molecules such as CO, NO and NO⁺. Comparison of VB and MO approaches.

Suggested Readings:

2. Cotton, F.A., Wilkinson, G. & Gaus, P.L. (2008). Basic Inorganic Chemistry. 3rd ed. John Wiley & sons.
3. Madan, R. L. (2015). Chemistry for Degree Students, S. Chand & Company Pvt. Ltd. Ram Nagar, New Delhi.
4. Douglas, B.E., McDaniel, D.H. & Alexander, J.J. (2010). Concepts and Models in Inorganic Chemistry. John Wiley & Sons.
5. Huheey, J.E., Keiter, E.A., Keiter, R.L. & Medhi, O.K. (2006). Inorganic Chemistry: Principles of Structure and Reactivity. Pearson Education India.

Semester-I

5H 5C

18CHU102

PHYSICAL CHEMISTRY I: States of matter and ionic equilibrium

Instruction Hours/week: L: 5 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 hrs

Course objectives

Enable the students

- To understand the Kinetic molecular model of a gas and about the molecular velocities
- To provide a knowledge about the behaviour of real gases
- To provide knowledge about the structure of the liquid state and its properties like surface tension and viscosity.
- To provide knowledge about the solid state, symmetries present and different types of crystals.
- To provide a knowledge about the theory of ionic equilibria, ionisation of electrolytes and salt hydrolysis.
- To provide a knowledge about the buffer solutions and acid-base titrations.

Course outcomes (CO's)

Students are able to

1. Understand the postulates of Kinetic theory of gases, kinetic molecular model of gases and about the molecular velocities
2. Has the knowledge, why real gases deviate from ideal gases, Vander Waals equation of state and about critical constants.
3. Has the knowledge about the structure of the liquid state and its properties like surface tension and viscosity.
4. Understood about the solid state, symmetries present and different types of crystals.
5. Has knowledge about the theory of ionic equilibria, ionisation of electrolytes and salt hydrolysis.
6. Know to formulate the buffer solutions and the choice of indicators to acid-base titrations.

UNIT I

Gaseous state: Kinetic molecular model of a gas: postulates and derivation of the kinetic gas equation; collision frequency; collision diameter; mean free path and viscosity of gases, including their temperature and pressure dependence, relation between mean free path and coefficient of viscosity, calculation of ζ from η ; variation of viscosity with temperature and pressure. Maxwell distribution and its use in evaluating molecular velocities (average, root mean square and most probable) and average kinetic energy, law of equipartition of energy, degrees of freedom and molecular basis of heat capacities.

UNIT II

Behaviour of real gases: Deviations from ideal gas behaviour, compressibility factor, Z , and its variation with pressure and temperature for different gases. Causes of deviation from ideal behaviour. Van der Waals equation of state, its derivation and application in explaining real gas

behaviour, calculation of Boyle temperature. Isotherms of real gases and their comparison with Van der Waals isotherms, continuity of states, critical state, relation between critical constants and Van der Waals constants, law of corresponding states.

Liquid state: Qualitative treatment of the structure of the liquid state; physical properties of liquids, vapour pressure, surface tension coefficient of viscosity, and their determination. Effect of addition of various solutes on surface tension and viscosity. Explanation of cleansing action of detergents. Temperature variation of viscosity of liquids and comparison with that of gases.

UNIT III

Solid state: Nature of the solid state, law of constancy of interfacial angles, law of rational indices, Miller indices, elementary ideas of symmetry, symmetry elements and symmetry operations, qualitative idea of point and space groups, seven crystal systems and fourteen Bravais lattices; X-ray diffraction, Bragg's law, a simple account of rotating crystal method and powder pattern method. Analysis of powder diffraction patterns of NaCl, CsCl and KCl.

UNIT IV

Ionic equilibria: Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect; Ostwald dilution law, dissociation constants of mono and diprotic acids. Salt hydrolysis-calculation of hydrolysis constant, degree of hydrolysis and pH for different salts.

UNIT V

Buffer solutions; derivation of Henderson equation and its applications. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle. Qualitative treatment of acid – base titration curves (calculation of pH at various stages). Theory of acid–base indicators; selection of indicators and their limitations.

5. Mortimer, R. G. (2009). Physical Chemistry. 3rd Ed. NOIDA, UP : Elsevier.

		Semester-I
18CHU103	ORGANIC CHEMISTRY I: Basics and Hydrocarbons	4H 4C
Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100		
End Semester Exam: 3 hrs		

Course objectives

- To describe knowledge on the basics of organic chemistry
- To gain knowledge in particularly the shapes of molecules, electron displacement effects, reagents, intermediates and fundamental types of reactions.
- To explain the students about the stereochemistry, projection formulae of molecules, geometrical isomerism and optical isomerism
- To explain the preparation and conformation analysis of alkanes.
- To paraphrase a knowledge about the preparation and properties of alkenes and alkynes, mechanisms of reactions and rules behind the reactions.
- To summarise a knowledge about the aromaticity of molecules and about electrophilic aromatic substitutions.

Course outcomes

1. Describe molecular structure and bonding in organic molecules.
2. Classify organic compounds by structure, use the IUPAC nomenclature, and identify conformational effects in organic compounds.
3. Predict the products of reactions of alkenes and describe the mechanisms showing how the products are formed.
4. Draw and interpret reaction coordinate diagrams, and relate the energetic changes associated with chemical reactions to equilibrium constants and rate; and differentiate kinetic versus thermodynamic control of reactions.
5. Identify the types of isomerism in organic compounds, to identify and classify chiral centers, and explain the physical and chemical consequences of chirality.
6. Correctly represent the structures and bonding of alkynes, and describe the mechanisms for reactions of alkynes and predict the products of such reactions.
7. Identify compounds in which resonance is important, predict the effect of resonance on the stability of compounds and reactive intermediates, and draw resonance structures.
8. Identify conjugated pi systems and explain the effect of conjugation on molecular structure and reactivity; and predict the products of reactions of dienes.
9. Describe mechanisms for substitution and elimination reactions, and predict the effect of nucleophile, leaving group, and solvent on the relative rates of S₁ versus S₂ reactions, and E₁ versus E₂ reactions, as well as on the relative rates of substitution versus elimination.

UNIT I**Basics of Organic Chemistry**

Hybridization, Shapes of molecules

Electronic Displacements: Inductive, electromeric, resonance and mesomeric effects, hyperconjugation and dipole moment; Hydrogen bonding (Applications to be discussed with relevant topics) Homolytic and Heterolytic fission with suitable examples. Curly arrow rules, formal charges; Electrophiles and Nucleophiles; Types, shape and relative stability of Carbocations, Carbanions, Free radicals and Carbenes. Introduction to types of organic reactions: Addition, Elimination and Substitution reactions.

UNIT II

Stereochemistry:

Fischer, Newmann and Sawhorse Projection formulae and their interconversions; Geometrical isomerism: cis-trans, syn-anti and E/Z notations with C.I.P rules.

Optical Isomerism: Optical Activity, Specific Rotation, Chirality/Asymmetry, Enantiomers, Molecules with two or more chiral-centres, Diastereoisomers, meso structures, Racemic mixture and their resolution. Relative and absolute configuration: D/L and R/S designations.

UNIT III

Chemistry of Aliphatic Hydrocarbons

Carbon-Carbon sigma bonds

General methods of preparation, physical and chemical properties of alkanes: Wurtz Reaction, Wurtz-Fittig Reactions, Free radical substitutions: Halogenation-relative reactivity and selectivity.

Cycloalkanes and Conformational Analysis

Conformational analysis of alkanes: Relative stability and Energy diagrams. Types of cycloalkanes and their relative stability, Baeyer strain theory: Chair, Boat and Twist boat forms of cyclohexane with energy diagrams; Relative stability of mono substituted cycloalkanes.

Unit IV

Chemistry of Aliphatic Hydrocarbons

Carbon-Carbon pi bonds:

General methods of preparation, physical and chemical properties of alkenes and alkynes, Mechanism of E1, E2, E1cb reactions. Saytzeff and Hofmann eliminations. Electrophilic additions and their mechanisms (Markownikoff/ Anti Markownikoff addition), mechanism of oxymercuration-demercuration, hydroboration-oxidation, ozonolysis, reduction (catalytic and chemical), syn and anti-hydroxylation (oxidation). 1,2- and 1,4-addition reactions in conjugated dienes and Diels-Alder reaction; Allylic and benzylic bromination and mechanism, e.g. propene, 1-butene, toluene, ethyl benzene.

Reactions of alkynes: Acidity, Electrophilic and Nucleophilic additions. Hydration to form carbonyl compounds, Alkylation of terminal alkynes.

UNIT V

Aromatic Hydrocarbons

Aromaticity: Hückel's rule, aromatic character of arenes, cyclic carbocations/carbanions and heterocyclic compounds with suitable examples. Electrophilic aromatic substitution: halogenation, nitration, sulphonation and Friedel-Craft's alkylation/acylation with their mechanism. Directing effects of the groups.

18CHU111 ATOMIC STRUCTURE AND CHEMICAL BONDING - PRACTICAL		Semester-I
		2H 1C

Instruction Hours/week:L: 0 T:0 P:2Marks: Internal:40 External: 60 Total:100
End Semester Exam: 3 hrs

Course objectives

- To illustrate the principles of volumetric analysis.
- To categorize a versatile knowledge of solution preparations
- To prepare solutions with appropriate concentrations, titrations
- How to handle the apparatus while doing a titration.
- To analyse the knowledge about the calculations involved in the estimation of compounds
- using volumetric analysis.
- To estimate the amount of solution present quantitatively.

Course outcomes (CO's)

The Students are able

1. Summarize the principles of volumetric analysis.
2. Gained knowledge about the preparations of solutions
3. Understood the preparation of appropriate concentrations, titrations
4. Handled the respective apparatus while doing a titration.
5. Analyse the calculations involved in volumetric analysis and in the estimation of compounds using volumetric analysis.
6. The lab will also provide hands-on opportunities to develop and apply this knowledge

Inorganic Chemistry - Volumetric Analysis

1. Estimation of sodium carbonate and sodium hydrogen carbonate present in a mixture.
2. Estimation of oxalic acid by titrating it with KMnO_4 .
3. Estimation of water of crystallization in Mohr's salt by titrating with KMnO_4 .
4. Estimation of Fe (II) ions by titrating it with $\text{K}_2\text{Cr}_2\text{O}_7$ using internal indicator.
5. Estimation of Cu (II) ions iodometrically using $\text{Na}_2\text{S}_2\text{O}_3$.

Suggested Readings:

1. Svehla, G. (2012). Vogel's Qualitative Inorganic Analysis. Pearson Education.
2. Mendham, J. (2009) Vogel's Quantitative Chemical Analysis, Pearson.

Semester-I**18CHU112****STATES OF MATTER AND 2H 1C****IONIC EQUILIBRIUM - PRACTICAL****Instruction Hours/week: L: 0 T: 0 P: 2 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 hrs****Course Objectives**

The students develop the skills to categorize

- Surface tension of a liquid
- Study the variation of surface tension with different concentration of detergent solutions.
- Viscosity of a liquid
- Prepare a buffer solution and to measure its pH.
- Monitor the pH of a solution during the course of a titration.
- Indexing of a given powder diffraction pattern of a cubic crystalline system.

Course Outcomes

The students develop the practical skill have categorized the

1. Determination of surface tension of a liquid
 2. Determination the viscosity of a liquid
 3. Prepare a buffer solution and to measure the pH of a solution
 4. Monitor the pH of a solution during the course of a titration.
 5. The lab will also provide hands-on opportunities to develop and apply this knowledge
 6. Indexing of a given powder diffraction pattern of a cubic crystalline system.
-
1. **Surface tension measurements**
 - a. Determination of the surface tension of a liquid.
 - b. Study the variation of surface tension with different concentration of detergent solutions.
 2. **Viscosity measurement.**
 - a. Determination of co-efficient of viscosity of an unknown aqueous solution.
 - b. Study the variation of co-efficient of viscosity with different concentration of Poly Vinyl Alcohol (PVA) and determine molar of PVA.
 - b. Study the variation of viscosity with different concentration of sugar solutions.
 3. **Solid State:**
 - a. Indexing of a given powder diffraction pattern of a cubic crystalline system.
 4. **pH metry:**
 - a. Study the effect of addition of HCl/NaOH on pH to the solutions of acetic acid, sodium acetate and their mixtures.
 - b. Preparation of buffer solutions of different pH values (i). Sodium acetate-acetic acid (ii). Ammonium chloride-ammonium hydroxide
 - c. pH metric titration of (i) strong acid with strong base, (ii) weak acid with strong base. Determination of dissociation constant of a weak acid.

Suggested Readings:

1. Khosla, B. D., Garg, V. C. & Gulati, A.(2011).Senior Practical Physical Chemistry. New Delhi :R. Chand &Co.

Semester-I
18CHU113 BASICS AND HYDROCARBONS – PRACTICAL 4H 2C

Instruction Hours/week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 hrs

Course objectives

To develop skills in

- To purify organic compounds by crystallisation.
- To calibrate the thermometer, determine the melting point, and to analyse the effect of impurities on the melting point.
- To determine the boiling point of a liquid by distillation method.
- To explain the principles of chromatography and to separate organic compounds by paper and thin layer chromatography.
- To detect the elements present in an organic compound.
- To prepare few organic compounds using standard organic reactions.

Course Outcomes (CO's)

The student will be able to

1. Purify organic compounds by crystallisation.
 2. Characterisation of the compounds by elemental analysis, melting point, and effect of impurities on the melting point.
 3. To separate organic compounds by paper chromatographic and TLC methods
 4. To Preparation of organic compounds.
 5. The lab will also provide hands-on opportunities to develop and apply this knowledge.
 6. Understood the principles of chromatography and to separate organic compounds by paper and thin layer chromatography
-
1. Checking the calibration of the thermometer
 2. Purification of organic compounds by crystallization using the following solvents:
a. Water, b. Alcohol, c. Alcohol-Water
 3. Determination of the melting points of unknown organic compounds.
 4. Effect of impurities on the melting point – mixed melting point of two unknown organic Compounds
 5. Determination of boiling point of liquid compounds. (boiling point lower than and more than 100 °C by distillation)
 6. Chromatography
 - a. Separation of a mixture of two amino acids by ascending paper chromatography
 - b. Separation of a mixture of two sugars by ascending paper chromatography
 - c. Separation of a mixture of o- and p-nitrophenol or o- and p-aminophenol by thin layer chromatography (TLC)
 7. Detection of extra elements
 8. Organic Preparations

- (i) Preparation of Benzophenoneoxime.
- (ii) Preparation of Phenylbenzoate

**18CHU201 PHYSICAL CHEMISTRY II: Chemical
Thermodynamics and its applications 5H 5C**

Instruction Hours/week: L: 5 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 hrs

Course Objectives

- To provide the basics of chemical thermodynamics and the concept of first law of Thermodynamics.
- To provide the knowledge about the thermo chemistry and to explain about the 2nd law of Thermodynamics.
- To explain the concepts of third law of thermodynamics and systems of variable composition.
- To explain about the usage of chemical thermodynamics in chemical equilibrium.
- To provide a knowledge about solutions and colligative properties.
- To recognise the forces which drive the chemical reactions in forward direction and the concept of the interchange of energy in a system.

Course Outcomes

1. Students will explain and apply the concepts of thermodynamics to chemical and physical systems. Know to calculate Q, W, ΔU and ΔH for various process.
2. Students understood the concepts of thermochemistry and the concept of entropy.
3. Students know about the third law of thermodynamics, free energy functions and about the Systems of Variable Composition
4. Students will be able to derive essential mathematical relationships in thermodynamics, and chemical equilibria.
5. Know to list the colligative properties of solutions, explaining how and why each property is affected by an increase by the amount of solute
6. Recognise the forces which drive the chemical reactions in forward direction and the concept of the interchange of energy in a system.

UNIT I

Chemical Thermodynamics: Intensive and extensive variables; state and path functions; isolated, closed and open systems.

First law: Concept of heat, Q, work, W, internal energy, U, and statement of first law; enthalpy, H, relation between heat capacities, calculations of Q, W, ΔU and ΔH for reversible, irreversible and free expansion of gases (ideal and Van der Waals) under isothermal and adiabatic conditions.

UNIT II

Thermochemistry: Heats of reactions: standard states; enthalpy of formation and enthalpy of combustion and its applications; effect of temperature (Kirchhoff's equations) and pressure on enthalpy of reactions.

Second Law: Concept of entropy; thermodynamic scale of temperature, statement of the second law of thermodynamics. Calculation of entropy change for reversible and irreversible processes.

UNIT III

Third Law: Statement of third law, concept of residual entropy, calculation of absolute entropy of molecules. Free Energy Functions: Gibbs and Helmholtz energy; variation of S, G, A with T, V, P; Free energy change and spontaneity. Relation between Joule-Thomson coefficient and other thermodynamic parameters; inversion temperature; Gibbs-Helmholtz equation; Maxwell relations; thermodynamic equation of state.

Systems of Variable Composition: Partial molar quantities, dependence of thermodynamic parameters on composition; Gibbs Duhem equation, chemical potential of ideal mixtures, change in thermodynamic functions in mixing of ideal gases.

UNIT IV

Chemical Equilibrium: Criteria of thermodynamic equilibrium, degree of advancement of reaction, chemical equilibria in ideal gases. Thermodynamic derivation of relation between Gibbs free energy of reaction and reaction quotient. Equilibrium constants and their quantitative dependence on temperature, pressure and concentration (Le Chatelier Principle, Quantitatively). Free energy of mixing and spontaneity. Equilibrium between ideal gases and a pure condensed phase.

UNIT V

Solutions and Colligative Properties: Dilute solutions; lowering of vapour pressure, Raoult's and Henry's Laws and their applications. Thermodynamic derivation using chemical potential to derive relations between the four colligative properties [(i) relative lowering of vapour pressure, (ii) elevation of boiling point, (iii) Depression of freezing point, (iv) osmotic pressure] and amount of solute. Applications in calculating molar masses of normal, dissociated and associated solutes in solution.

18CHU202	INORGANIC CHEMISTRY II: Metallurgy and S-Block and P-block elements	Semester-II 4H 4C
----------	--	------------------------------------

Instruction Hours/week:L: 4 T:0 P:0Marks: Internal:40External: 60 Total:100
End Semester Exam: 3 hrs

Course objectives

The student will recite knowledge on

- The general principles of metallurgy
- S-block elements
- Complexes of s-block elements
- Chemistry of p-block elements
- Chemistry Hydrides, oxides and oxacids
- Preparation, properties, structure and uses of some types of inorganic compounds.

Course Outcomes

It enabled the students have discuss

1. The basic principles and methods involved in the metallurgy
2. The basic properties of s-block elements and their compounds
3. The complex formation tendency of s-block elements and their structure
4. The basic properties of p-block elements and their compounds.
5. Chemistry Hydrides, oxides and oxacids
6. The preparation, properties, structure and uses of borazine, silicates, silicones, interhalogen compounds, phosphonitrilic and clathrates.

UNIT I**General Principles of Metallurgy**

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon and carbon monoxide as reducing agent. Electrolytic Reduction, Hydrometallurgy with reference to cyanide process for silver and gold. Methods of purification of metals: Electrolytic process, Van Arkel-de Boer process and Mond's process, Zone refining.

UNIT II**Chemistry of s Block Elements:**

- (i) General characteristics: melting point, flame colour, reducing nature, diagonal relationships and anomalous behavior of first member of each group.
- (ii) Reactions of alkali and alkaline earth metals with oxygen, hydrogen, nitrogen and water.
- (iii) Common features such as ease of formation, thermal stability and solubility of the following alkali and alkaline earth metal compounds: hydrides, oxides, peroxides, superoxides, carbonates, nitrates, sulphates.

UNIT III**Complexes of s-block elements:**

- (i) Complex formation tendency of s-block elements; structure of the following complexes: crown ethers and cryptates of Group I; basic beryllium acetate, beryllium nitrate, EDTA complexes of calcium and magnesium.
- (ii) Solutions of alkali metals in liquid ammonia and their properties.

UNIT IV

Chemistry of *p* Block Elements:

Electronic configuration, atomic and ionic size, metallic/non-metallic character, melting point, ionization enthalpy, electron gain enthalpy, electronegativity, Allotropy of C, P, S; inert pair effect, diagonal relationship between B and Si and anomalous behaviour of first member of each group.

Structure, bonding and properties: acidic/basic nature, stability, ionic/covalent nature, oxidation/reduction, hydrolysis, action of heat of the following:

- Hydrides : hydrides of Group 13 (only diborane), Group 14, Group 15 (EH_3 where E = N, P, As, Sb, Bi), Group 16 and Group 17.
Oxides : oxides of phosphorus, sulphur and chlorine
Oxoacids : oxoacids of phosphorus and chlorine; peroxy acids of sulphur
Halides: halides of silicon and phosphorus

UNIT V

Preparation, properties, structure and uses of the following compounds:

Borazine

Silicates, silicones,

Phosphonitrilic halides $\{(\text{PNCl}_2)_n \text{ where } n = 3 \text{ and } 4\}$

Interhalogen and pseudohalogen compounds

Clathrate compounds of noble gases, xenon fluorides (MO treatment of XeF_2).

Suggested Readings:

**18CHU203 ORGANIC CHEMISTRY II:5H 5C
containing Functional Groups**

**Semester-II
Oxygen****Instruction Hours/week:L:5 T:0 P:0Marks: Internal:40External: 60 Total:100****End Semester Exam: 3 hrs****Course Objectives**

To provide the students a knowledge on

- Chemistry of halogenated compounds alkyl
- The preparation, properties and relative reactivity of alcohols and phenols
- Preparation, properties and standard reactions of carbonyl compounds.
- Chemistry of Organometallic compounds, Ethers and Epoxides and Addition reactions
- Chemistry of carboxylic acids and their derivatives.
- Chemistry of aryl halides and their uses

Course Outcomes (CO's)

The students will able to

1. Understand the chemistry of alkyl halides and aryl halides.
2. Understand the preparation, properties and relative reactivity of alcohols and phenols
3. Understand Preparation, properties and standard reactions of carbonyl compounds
4. Understand the preparations, reactions and applications of epoxides, ethers and organometallic compounds
5. Understand the preparations and properties of carboxylic acid and its derivatives.
6. Explain the chemistry of aryl halides.

UNIT I**Chemistry of Halogenated Hydrocarbons:**

Alkyl halides: Methods of preparation and properties, nucleophilic substitution reactions – SN1, SN2 and SNi mechanisms with stereochemical aspects and effect of solvent; nucleophilic substitution vs. elimination.

Aryl halides: Preparation (including preparation from diazonium salts) and properties, nucleophilic aromatic substitution; S_NAr, Benzyne mechanism.

Relative reactivity of alkyl, allyl, benzyl, vinyl and aryl halides towards nucleophilic substitution reactions.

UNIT II**Alcohols, Phenols:**

Alcohols: preparation, properties and relative reactivity of 1°, 2°, 3° alcohols, Bouvaelt-Blanc Reduction; Oxidation of diols by periodic acid and lead tetraacetate, Pinacol-Pinacolone rearrangement;

Phenols: Preparation and properties; Acidity and factors affecting it, Ring substitution reactions, Reimer-Tiemann and Kolbe's-Schmidt Reactions, Fries and Claisen rearrangements with mechanism;

UNIT III

Carbonyl Compounds:

Structure, reactivity, preparation and properties; Nucleophilic additions, Nucleophilic addition-elimination reactions with ammonia derivatives with mechanism; Mechanisms of Aldol and Benzoin condensation, Knoevenagel condensation, Claisen-Schmidt, Perkin, Cannizzaro and Wittig reaction, Beckmann and Benzil-Benzilic acid rearrangements, haloform reaction and Baeyer Villiger oxidation, α – substitution reactions, oxidations and reductions (Clemmensen, Wolff-Kishner, LiAlH_4 , NaBH_4 , MPV, PDC)

UNIT IV

Organometallic compounds, Ethers and Epoxides and Addition reactions

Organometallic compounds of Mg (Grignard reagent) – Use in synthesis of organic compounds. *Ethers and Epoxides*: Preparation and reactions with acids. Reactions of epoxides with alcohols, ammonia derivatives and LiAlH_4

Addition reactions of α , β - unsaturated carbonyl compounds: Michael addition. Active methylene compounds: Keto-enol tautomerism. Preparation and synthetic applications of diethyl malonate and ethyl acetoacetate.

UNIT V

Acids and their Derivatives:

General methods of preparation, physical properties and reactions of monocarboxylic acids, effect of substituents on acidic strength. Typical reactions of dicarboxylic acids, hydroxy acids and unsaturated acids.

Preparation and reactions of acid chlorides, anhydrides, esters and amides; Comparative study of nucleophilic substitution at acyl group -Mechanism of acidic and alkaline hydrolysis of esters, Claisen condensation, Dieckmann and Reformatsky reactions, Hofmann- bromamide degradation and Curtius rearrangement.

Suggested Readings:

4. Finar, I. L. (2013). *Organic Chemistry*. Volume 1. Edition-VI. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).
5. Graham Solomons, T.W. (2012). *Organic Chemistry*. John Wiley & Sons, Inc.
6. Jain M.K. & Sharma S.C. (2015). *Modern Organic Chemistry*, 4th Edition, Vishal publishing Co New Delhi.

			Semester-II
18CHU211	CHEMICAL THERMODYNAMICS AND ITS APPLICATIONS- PRACTICAL	2H 1C	

Instruction Hours/week:L: 0 T:0 P:2Marks: Internal:40 External: 60 Total:100
End Semester Exam: 3 hrs

Course Objectives

The Students have a present knowledge

- To measure the heat capacity of a calorimeter
- To determine the enthalpy of neutralisation.
- To determine the ionisation of solution.
- To determine the enthalpy of hydration of salt.
- To measure the integral enthalpy of solution
- To determine the basicity of a diprotic acid

Course Outcomes (CO's)

It enables the students calculate

1. The heat capacity of a calorimeter
2. The enthalpy of neutralisation,
3. Calculated the ionisation of solution.
4. Calculated the enthalpy of hydration of salt.
5. The integral enthalpy of solution
6. The basicity of a diprotic acid

Thermochemistry:

- (a) Determination of heat capacity of a calorimeter for different volumes using (i) change of enthalpy data of a known system (method of back calculation of heat capacity of calorimeter from known enthalpy of solution of sulphuric acid or enthalpy of neutralization), and (ii) heat gained equal to heat lost by cold water and hot water respectively
- (b) Determination of enthalpy of neutralization of hydrochloric acid with sodium hydroxide.
- (c) Determination of the enthalpy of ionization of ethanoic acid.
- (d) Determination of integral enthalpy (endothermic and exothermic) solution of salts.
- (e) Determination of basicity of a diprotic acid by the thermochemical method in terms of the changes of temperatures observed in the graph of temperature versus time for different additions of a base. Also calculate the enthalpy of neutralization of the first step.
- (f) Determination of enthalpy of hydration of salt.
- (g) Study of the solubility of benzoic acid in water and determination of ΔH .

Suggested Readings:

1. Khosla, B. D.; Garg, V. C. & Gulati, A. (2011). *Senior Practical Physical Chemistry*. New Delhi: R. Chand & Co.
2. Athawale, V. D. & Mathur, P. (2011). *Experimental Physical Chemistry*. New Delhi: New Age International.

18CHU212 S-BLOCK AND P-BLOCK ELEMENTS–PRACTICAL 4H 2C

Instruction Hours/week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 hrs

Course Objectives**The students have to analyse**

- The estimate the metal ions by iodimetric titrations
- The estimate the metal ions by complexometric titrations using EDTA
- The carryout the preparations of inorganic metal complexes.
- Prepare cuprous chloride
- Prepare Manganese (III) phosphate
- Prepare potash alum and chrome alum.

Course Outcomes**The students have analyse**

1. The iodometric titration methods.
2. The complexometric titration methods
3. The preparation the s and p-block metal complexes.
4. Preparation of cuprous chloride
5. Preparation of Manganese (III) phosphate
6. Preparation of potash alum and chrome alum.

(A) Iodo / Iodimetric Titrations

- (i) Estimation of Cu(II) and $K_2Cr_2O_7$ using sodium thiosulphate solution (Iodometrically).
- (ii) Estimation of Potassium dichromate using sodium thiosulphate solution iodometrically

(B) Complexometric titrations using disodium salt of EDTA

- (i) Estimation of Mg^{2+} , Zn^{2+}
- (ii) Estimation of Ca^{2+} by substitution method

(C) Inorganic preparations

- (i) Cuprous Chloride, Cu_2Cl_2
- (ii) Manganese (III) phosphate, $MnPO_4 \cdot H_2O$
- (iii) Aluminium potassium sulphate $KAl(SO_4)_2 \cdot 12H_2O$ (Potash alum) or Chrome alum.

Suggested Readings

1. Vogel, A.I. (1978). A Textbook of Quantitative Inorganic Analysis, ELBS.
2. Marr, G. and Rockett, R.W. (1972). Practical Inorganic Chemistry, Van Nostrand Reinhold.
3. Deepak Pant.P. (2010). Inorganic Chemistry Practical, BookRix.

Semester-II**18CHU 213 OXYGEN CONTAINING FUNCTIONAL GROUPS - PRACTICAL**

Instruction Hours/week: L: 0 T: 0 P: 2 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 hrs****Course Objectives**

The Students have a present knowledge

- To analyse the organic functional groups like alcohols, phenols carbonyl and carboxylic acid groups
- To demonstrate the preparations of organic compounds by acylation reactions
- To demonstrate the preparations of organic compounds by benzylation reactions.
- To carry out the iodoform reactions and selective reductions.
- To prepare semicarbazone derivatives of ketones
- To prepare S-Benzylisothiuronium salt of aromatic acids.

Course Outcomes

The student know to classifying the

1. Identification the organic functional groups like alcohols, phenols carbonyl and carboxylic acid groups
 2. Preparation organic compounds by acylation reactions
 3. Preparation organic compounds by benzylation reactions.
 4. Iodoform reactions and selective reductions.
 5. Preparations semicarbazone derivatives of ketones
 6. Preparations S-Benzylisothiuronium salt of aromatic acids.
-
1. Functional group tests for alcohols, phenols, carbonyl and carboxylic acid group.
 2. Organic preparations:
 - i. Acetylation of one of the following compounds: amines (aniline, o-, m-, p- toluidines and o-, m-, p-anisidine) and phenols (β -naphthol, vanillin, salicylic acid) by any one method:
 - a. Using conventional method.
 - b. Using green approach
 - ii. Benzoylation of one of the following amines (aniline, o-, m-, p- toluidines and o-, m-, p-anisidine) and one of the following phenols (β -naphthol, resorcinol, p- cresol) by Schotten-Baumann reaction.
 - iii. Oxidation of ethanol/ isopropanol (Iodoform reaction).
 - iv. Selective reduction of meta dinitrobenzene to m-nitroaniline.

- v. Hydrolysis of amides and esters.
- vi. Semicarbazone of any one of the following compounds: acetone, ethyl methyl ketone, cyclohexanone, benzaldehyde.
- vii. S-Benzylisothiuronium salt of one each of water soluble and water insoluble acids (benzoic acid, oxalic acid, phenyl acetic acid and phthalic acid).
- viii. Aldol condensation using either conventional or green method.

The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

Suggested Readings

6. Ahluwalia, V.K. & Aggarwal, R. (2000). *Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis*. University Press.
7. Ahluwalia, V.K. & Dhingra, S. (2000). *Comprehensive Practical Organic Chemistry: Qualitative Analysis*. University Press.

Course Objectives

It enables the students to

- The fundamental terms and definitions of environment
- Recall the Renewable and Non-renewable Resources.
- Quote the Biodiversity and Its Conservation
- Outline about Environmental Pollution
- Discuss the disaster management
- Discuss the Social Issues and the Environment

Course outcomes (CO's)**The students know about the explanation of**

1. Fundamental terms and definitions of environment
2. Renewable and Non-renewable Resources.
3. Biodiversity and Its Conservation
4. Environmental Pollution
5. Gained knowledge about disaster management
6. Social Issues and the Environment

UNIT-I

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II: Natural Resources**Renewable and Non-renewable Resources:**

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Fire accidents and prevention.

UNIT III: Biodiversity and Its Conservation

Introduction, definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV: Environmental Pollution

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V: Social Issues and the Environment

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Semester-III		
18CHU301	MATHEMATICS -I	4H 4C
Instruction Hours/week:L: 4 T:0 P:0Marks: Internal:40External: 60 Total:100		
End Semester Exam:3 hrs.		

Course Objectives

This course enables the students to learn

- The concepts of Matrices and their properties.
- Techniques of differentiation and integration.
- To Know about vectors and calculus
- To know about differential calculus
- Know the properties of definite integrals
- Mastery in the concepts of vector and scalar fields

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Solve simultaneous equations with the help of matrices.
2. Mastery in the concepts of vector and scalar fields.
3. Gain the intellectual knowledge of complex functions and their applications.
4. Acquire fundamental knowledge in the techniques of differentiation.
5. Know the properties of definite integrals.
6. The concepts of Matrices and their properties.
7. Techniques of differentiation and integration

UNIT I

Matrices: Different types of matrices – Inverse of a matrix – Solution of simultaneous equations by matrix method- Cayley-Hamilton theorem(Statement only)-Verification.

UNIT II

Vector calculus: Concepts of vector and scalar fields- Derivative of a vector - The Del operator, Gradient – Divergence of a vector – Curl of a vector- Directional derivative – Formula involving ∇ operator. Laplacian Operator.

UNIT III

Complex variables: Analytical function –Cauchy –Riemann equations – The necessary and sufficient condition for $f(z)$ to be analytic – Polar form of C-R equation-Properties of analytic function – Construction of analytic functions – Milne Thomson method.

UNIT IV

Differential calculus: Differentiation- Curvature and radius of Curvature in Cartesian and Polar form – Evolutes – Involute.

UNIT V

Integral Calculus: Definite and Indefinite integrals – Methods of Integration – Integration by substitution – Integration by parts.

SUGGESTED READINGS

1. Venkataraman. M. K.,(1998). Engineering Mathematics, The National Publications & Co., Chennai.
2. Manickavasagam Pillai.T.K , and S. Narayanan, 2002.“Calculus”, Volume I, and Volume II S.V Printers & Publishers, Chennai (Unit IV, V)
3. Sastry .S.S,2009, Engineering mathematics, PHI learning Pvt. Ltd, New Delhi (Unit-III)

Semester-III

18CHU302PHYSICAL CHEMISTRY III:Phase equilibria and chemical kinetics 4H 4C**Instruction Hours/week:L: 4 T:0 P:0Marks: Internal:40External: 60 Total:100****End Semester Exam:3 hrs.****Course Objectives**

The students should be able

- To illustrate the phase equilibrium.
- Understand the Clacius-Clapeyron equation and its applications.
- To explain the theory behind three component systems
- To summarize about electrochemical cells and EMF measurements
- To discuss the applications of EMF measurements
- To contrast the fundamentals of surface chemistry

Course Outcomes

The students have gained knowledge to summarise

1. The concept of Phase equilibria and phase diagrams
2. Understood the Clacius-Clapeyron equation and its applications.
3. About three component systems and their characteristic properties
4. Different types of electrochemical cells and EMF measurements
5. Applictions of EMF measurements in determining thermodynamic properties
6. The basics of surface chemistry.

UNIT I

Phase Equilibria: Concept of phases, components and degrees of freedom, derivation of Gibbs Phase Rule for nonreactive and reactive systems; Clausius-Clapeyron equation and its applications to solid-liquid, liquid-vapour and solid-vapour equilibria, phase diagram for onecomponent systems (H_2O and S), with applications. Phase diagrams for systems of solid-liquid equilibria involving eutectic, congruent and incongruent melting points.

UNIT II

Three component systems: triangular plots, water-chloroform-acetic acid system. Binary solutions: Gibbs-Duhem-Margules equation, its derivation and applications to fractional distillation of binary miscible liquids (ideal and non ideal), azeotropes, lever rule, partial miscibility of liquids, CST, miscible pairs, steam distillation. Nernst distribution law: its derivation and applications.

UNIT III

Electrochemical Cells: Rules of oxidation/reduction of ions based on half-cell potentials, applications of electrolysis in metallurgy and industry. Chemical cells, reversible and

irreversible cells with examples. Electromotive force of a cell and its measurement, Nernst equation; Standard electrode (reduction) potential and its application to different kinds of half-cells. **Electrochemical series and its applications.**

UNIT IV

Application of EMF measurements in determining (i) free energy, enthalpy and entropy of a cell reaction, (ii) equilibrium constants, and (iii) pH values, using hydrogen, quinone-hydroquinone, glass and $\text{SbO/Sb}_2\text{O}_3$ electrodes. Concentration cells with and without transference, liquid junction potential; determination of activity coefficients and transference numbers. Qualitative discussion of potentiometric titrations (acid-base, redox, precipitation).

UNIT V

Surface chemistry: Physical adsorption, chemisorption, adsorption isotherms (Langmuir and Freundlich). nature of adsorbed state. Qualitative discussion of BET. **The role of surface chemistry in chromatography (TLC and Column) and Gibb's adsorption isotherm.**

18CHU303INORGANIC CHEMISTRY III:**Coordination Chemistry****4H 4C****Instruction Hours/week:L:4 T:0 P:0Marks: Internal:40External: 60 Total:100****End semester Exam:3 hrs****Course Objectives**

The students should be able

- To discuss the key features of coordination compounds,
- Understand the nomenclature, isomerism and types in coordination compounds.
- To describe the various theories to explain the characteristics of coordination compounds.
- To contrast the nature of transition elements and their compounds.
- To contrast about the occurrence, preparation and properties of Lanthanides and actinides.
- To discuss about the fundamentals of Inorganic reaction mechanisms.

Course Outcomes

The students have gained knowledge to summarise

1. Recognise the role played by transition metal complexes play in Inorganic Chemistry.
2. Understood the nomenclature, isomerism and types in coordination compounds.
3. Describe the structure and bonding theories, electronic and magnetic properties of the transition metal complexes and their kinetic studies.
4. Explain the theories of bonding in coordination compounds and their experimental behaviour.
5. Recognise and explain the interaction of metal ions with biological ligands.
6. Explain the role of Inorganic “substances” in living systems and the use of metal ions in medicinal therapy and diagnosis

UNIT I**Coordination Chemistry I:**

IUPAC nomenclature of coordination compounds, isomerism in coordination compounds. Stereochemistry of complexes with 4 and 6 coordination numbers. Chelate effect, polynuclear complexes, Labile and inert complexes.

UNIT II**Coordination Chemistry II:**

Werner's theory, valence bond theory (inner and outer orbital complexes), electroneutrality principle and back bonding. Crystal field theory, measurement of $10 Dq$ (Δ_o), CFSE in weak and strong fields, pairing energies, factors affecting the magnitude of $10 Dq$ (Δ_o , Δ_t). Octahedral vs. tetrahedral coordination, tetragonal distortions from octahedral geometry Jahn-Teller theorem, square planar geometry. Qualitative aspect of Ligand field and MO Theory.

UNIT III**Transition Elements:**

General group trends with special reference to electronic configuration, colour, variable valency, magnetic and catalytic properties, ability to form complexes. Stability of various oxidation states and e.m.f. (Latimer diagrams) Different between the first, second and third transition series. Chemistry of Cr, Mn, Fe and Co in various oxidation states with special reference to the following compounds: peroxo compounds of chromium, potassium dichromate, potassium permanganate, potassium ferrocyanide, potassium ferricyanide, sodium nitroprusside and sodium cobaltinitrite.

UNIT IV

Lanthanides and Actinides:

Electronic configuration, oxidation states, colour, spectral and magnetic properties, lanthanide contraction, separation of lanthanides (ion-exchange method only).

Actinides: Occurrence, Preparation of elements, Electronic structure, Oxidation State and general properties. Thorium: Extraction of Thorium.

UNIT V

Inorganic Reaction Mechanism

Introduction to inorganic reaction mechanisms. Substitution reactions in square planar complexes, Trans- effect, theories of trans effect. Thermodynamic and Kinetic stability.

Suggested Readings

1. Purcell, K.F & Kotz, J.C. (1980). *An Introduction to Inorganic Chemistry*. W.B. Saunders Co.
2. Huheey, J.E. (1993). *Inorganic Chemistry*. Prentice Hall.
3. Cotton, F.A. & Wilkinson, G. (1999). *Advanced Inorganic Chemistry*. Wiley-VCH.
4. Greenwood, N.N. & Earnshaw A. (2006). *Chemistry of the Elements*. Butterworth-Heinemann.

8. Wahid Malik, Madan. R.D., and Tuli, G.D. (2004). *Selected topics in Inorganic Chemistry*. New Delhi. S. Chand & Co.
9. Lee, J.D. (2013). *Concise Inorganic Chemistry*, ELBS.

Instruction Hours/week:L:0 T:0 P:4Marks: Internal:40 External: 60 Total:100
End Semester Exam: 3 hrs

Course Objectives

This course enables the students

- To develop skills for quantitative estimation using computer language.
- To code various differentiation and integration methods in a modern computer language.
- To plot the graphs of function
- To Know about matrix addition
- To Know about matrix multiplication
- Inverse matrix

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Solve complicated matrix related problems like matrix inverse and matrix multiplication.
2. Acquire problem-solving skills through computer programming.
3. Plot various functions and parametric curves.
4. Know about matrix addition
5. Know about matrix multiplication
6. Inverse matrix

List of Practical

1. Matrix addition.
2. Matrix multiplication.
3. Inverse of a matrix.
4. Transpose of a matrix
5. Plotting of graphs of function e^{ax+b} , $\log(ax+b)$, $1/(ax+b)$, $\sin(ax+b)$, $\cos(ax+b)$, $|ax+b|$ and to illustrate the effect of a and b on the graph.
6. Plotting the graphs of polynomial of degree 4 and 5, the derivative graph, the second derivative graph and comparing them.
7. Sketching parametric curves. (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
8. Obtaining surface of revolution of curves.

**18CHU312 PHASE EQUILIBRIA AND CHEMICAL KINETICS-4H 2C
PRACTICAL****Instruction Hours/week:L:0 T:0 P:4Marks: Internal:40 External: 60 Total:100****End Semester Exam: 3 hrs****Course Objectives**

It enables the students to Paraphrase the

- To Determine of critical solution temperature (CST) and
- To Determine of eutectic temperature
- To Determine distribution coefficients of two immisible solutions.
- To construct of the phase diagram using cooling curves or ignition tube method: a. simple eutectic and b. congruently melting systems.
- To apply their knowledge in Potentiometry to laboratory.
- To perform the potentiometric titrations.

Course Outcomes

The students able to determine,

1. Apply their knowledge in Phase equilibria
2. Determination of critical solution temperature (CST) and
3. Determination of eutectic temperature
4. Determination distribution coefficients of two immisible solutions.
5. Apply their knowledge in Potentiometry to laboratory.
6. Perform the titrations potentiometrically.

Phase Equilibria:

- I. Determination of critical solution temperature and composition at CST of the phenolwatersystem and to study the effect of impurities of sodium chloride and succinic acidon it.
- II. Phase equilibria: Construction of the phase diagram using cooling curves or ignition tubeethod: a. simple eutectic and b. congruently melting systems.
- III. Distribution of acetic/ benzoic acid between water and chloroform or cyclohexane.
- IV. Study the equilibrium of at least one of the following reactions by the distribution method:
 - (i) $I_2(aq) + I^-(aq) \rightarrow I_3(aq)$
 - (ii) $Cu^{2+}(aq) + nNH_3 \rightarrow Cu(NH_3)_n^{2+}$

Potentiometry:

- V. Perform the following potentiometric titrations: i. Strong acid vs. Strong base ii. Weakacid vs. Strong base. iii. Dibasic acid vs. Strong base iv. Potassium dichromate vs. Mohr'ssalt

SuggestedReadings

3. Halpern, A. M. & McBane, G. C. (2003). *Experimental Physical Chemistry*. 3rd Ed. New York : W.H. Freeman & Co.

18CHU313COORDINATION CHEMISTRY–PRACTICAL4H 2C**Instruction Hours/week:L:0 T:0 P:4Marks: Internal:40 External: 60 Total:100****End semester Exam:3hrs.****Course Objectives**

- Explain the principle of gravimetric analysis
- To estimate the amount of nickel present in the NiDMG
- Prepare coordination complexes
- To measure the 10Dq by spectrophotometrically.
- Justify the properties of coordination complexes
- To synthesise the ligand transfer reaction by substitution method.

Course outcomes

The students have to

1. Determine metals like Ni, Cu and Fe using the principle of gravimetric analysis
2. Estimate the amount of nickel present in the NiDMG
3. Prepare coordination complexes
4. Measurement of 10 Dq by spectrophotometric method
5. Justify the properties of coordination complexes
6. Synthesis of ammine complexes of Ni(II) and its ligand exchange reactions (e.g.bidentate ligands like acetylacetone, DMG, glycine) by substitution method.

Gravimetric Analysis:

- i. Estimation of nickel (II) using Dimethylglyoxime (DMG).
- ii. Estimation of copper as CuSCN
- iii. Estimation of iron as Fe₂O₃ by precipitating iron as Fe(OH)₃.

Inorganic Preparations:

- i. Tetraamminecopper (II) sulphate, [Cu(NH₃)₄]SO₄.H₂O
- ii. Acetylacetonate complexes of Cu²⁺/Fe³⁺
- iii. Tetraamminecarbonatocobalt (III) nitrate
- iv. Potassium tri(oxalato)ferrate(III)

Properties of Complexes

- i. Measurement of 10 Dq by spectrophotometric method
- ii. Synthesis of ammine complexes of Ni(II) and its ligand exchange reactions (e.g.bidentate ligands like acetylacetone, DMG, glycine) by substitution method.

Suggested Readings

1. Vogel, A.I. (2002). *A text book of Quantitative Analysis*. ELBS.
2. Marr, G. & Rockett, B.W.(1972). *Practical Inorganic Chemistry*. Van Nostrand Reinhold.

18CHU304APHARMACEUTICAL CHEMISTRY3H 3C**Instruction Hours/week:L:03 T:0 P:0Marks: Internal:40External: 60 Total:100****End Semester Exam:3hrs.****Course Objectives**

The course enables the students to

- Perform the drug discovery process.
- To utilize the software to predict the ADMET.
- Build the synthesis of analgesic, antipyretic, anti-inflammatory agents
- Build the synthetic process of Central Nervous System and cardiovascular drugs.
- Restate the fermentation process
- Modify to prepare antibiotics and related compounds.

Course Outcome

The students have knowledge to create about the

1. Drug discovery
2. Utilization of the software using prediction of ADMET
3. Procedures to prepare analgesic, antipyretic, anti-inflammatory agents
4. Synthesis of Central Nervous System and cardiovascular drugs.
5. Fermentation process and preparation of antibiotics.
6. Modified the preparation of antibiotics and related compounds

UNIT 1

Drug discovery, design and development; Basic Retrosynthetic approach.ADMET proprieties,Lipinski's rule of five, Cheminformatics tools,Synthon,FGL.

UNIT II

Synthesis of therepresentative drugs of the following classes: analgesic agents, antipyretic agents, anti-inflammatory agents (Aspirin, paracetamol, Ibuprofen); antibiotics (Chloramphenicol);antibacterial and antifungal agents (Sulphonamides; Sulphanethoxazol, Sulphacetamide,Trimethoprim); antiviral agents (Acyclovir),

UNIT III

Synthesis of therepresentative drugs of the following classes: Central Nervous System agents (Phenobarbital,Diazepam),Cardiovascular (Glyceryl trinitrate), antilaprosy (Dapsone), HIV-AIDS relateddrugs (AZT- Zidovudine).Blood Brain Barrier(BBB).

UNIT IV**Fermentation**

Aerobic and anaerobic fermentation. Production of Ethyl alcohol and citric acid,

UNIT V

Production of (i) Antibiotics; Penicillin, Cephalosporin, Chloromycetin and Streptomycin, (iii) Lysine, Glutamic acid, Vitamin B2, Vitamin B12 and Vitamin C.

Suggested Readings

1. Patrick, G.L.(1995). *Introduction to Medicinal Chemistry*. 65. UK: Oxford University Press
2. Hakishan, V.K. Kapoor,(1996). *Medicinal and Pharmaceutical Chemistry*, New Delhi: Vallabh Prakashan. Pitampura.
3. William O. Foye, Thomas L., Lemke & David A. William.(2008). *Principles of Medicinal Chemistry*. New Delhi: B.I. Waverly Pvt. Ltd.

Course Objectives

The course enables the student to gain knowledge in the mathematics and computer science to

- Interpret the Uncertainty in experimental techniques
- Statistical treatment
- Error analysis
- Summarise the types of algebraic operations
- Explain computer programming and to handle numeric data
- Illustrate the numerical modelling

Course Outcomes

1. Interpret the Uncertainty in experimental techniques and Statistical treatment
2. Under stood the knowledge of error analysis.
3. Formulate a set of calculations that can address a relevant research question;
4. Use one or several computer programs and extract useful information;
5. Write a research paper that describes methods, results, and interpretation;
6. Assess the meaning and validity of calculations that appear in the chemical literature.

UNIT I**Mathematics**

Fundamentals, mathematical functions, polynomial expressions, logarithms, the exponential function, units of a measurement, interconversion of units, constants and variables, equation of a straight line, plotting graphs. Uncertainty in experimental techniques: Displaying uncertainties, measurements in chemistry, decimal places, significant figures, combining quantities. Uncertainty in measurement: types of uncertainties, combining uncertainties. Statistical treatment. Mean, standard deviation, relative error. Data reduction and the propagation of errors. Graphical and numerical data reduction. Numerical curve fitting: the method of least squares (regression).

UNIT II

Algebraic operations on real scalar variables (e.g. manipulation of Van der Waals equation in different forms). Roots of quadratic equations analytically and iteratively (e.g. pH of a weak acid). Numerical methods of finding roots (Newton-Raphson, binary – bisection, e.g. pH of a weak acid not ignoring the ionization of water, volume of a Van der Waals gas, equilibrium constant expressions). Differential calculus: The tangent line and the derivative of a function, numerical differentiation (e.g., change in pressure for small change in volume of a Van der Waals gas, potentiometric titrations). Numerical integration (Trapezoidal and Simpson's rule, e.g. entropy/enthalpy change from heat capacity data).

UNIT III

Computer programming:

Constants, variables, bits, bytes, binary and ASCII formats, arithmetic expressions, hierarchy of operations, inbuilt functions. Elements of the BASIC language. BASIC keywords and commands. Logical and relative operators. Strings and graphics. Compiled versus interpreted languages. Debugging. Simple programs using these concepts. Matrix addition and multiplication. Statistical analysis.

UNIT IV

Introductory writing activities: Introduction to word processor and structure drawing (ChemSketch) software. Incorporating chemical structures, chemical equations, expressions from chemistry (e.g. Maxwell-Boltzmann distribution law, Bragg's law, van der Waals equation, etc.) into word processing documents.

Handling numeric data: Spreadsheet software (Excel), creating a spreadsheet, entering and formatting information, basic functions and formulae, creating charts, tables and graphs. Incorporating tables and graphs into word processing documents. Simple calculations, plotting graphs using a spreadsheet (Planck's distribution law, radial distribution curves for hydrogenic orbitals, gas kinetic theory- Maxwell-Boltzmann distribution curves as function of temperature and molecular weight), spectral data, pressure-volume curves of van der Waals gas (van der Waals isotherms), data from phase equilibria studies. Graphical solution of equations.

UNIT V

Numeric modelling: Simulation of pH metric titration curves. Excel functions LINEST and Least Squares. Numerical curve fitting, linear regression (rate constants from concentration time data, molar extinction coefficients from absorbance data), numerical differentiation

(e.g. handling data from potentiometric and pH metric titrations, pK_a of weak acid), integration (e.g. entropy/enthalpy change from heat capacity data).

Statistical analysis: Gaussian distribution and Errors in measurements and their effect on data sets. Descriptive statistics using Excel.

Suggested Readings

Course Objective

The course enables the student to

- Develop the synthesis of pharmaceutical drugs like aspirin
- Synthesis of magnesium bisilicate.
- Determine the melting point of aspirin
- Spectral characterization of aspirin
- Determine the melting point of antacid
- Spectral characterization of antacid

Course Outcome

The students restate the

1. Synthesis of pharmaceutical drugs like aspirin
2. Synthesis of magnesium bisilicate.
3. Determination of the melting point of aspirin
4. Spectral characterization of aspirin
5. Determine the melting point of antacid
6. Spectral characterization of antacid

Methodology**Practicals**

1. Preparation of Aspirin and its analysis.
2. Preparation of magnesium bisilicate (Antacid).

Suggested Readings

1. Patrick G.L. (1995): Introduction to *Medicinal Chemistry*. UK:Oxford University Press.

18CHU314B IT SKILLS FOR CHEMISTS-PRACTICAL3H 1C**Instruction Hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3hrs****Course Objectives**

The course enables the student to

- Describe the rules and the methods to be followed in the computer programming.
- Describe the basic programme of curve fitting
- Describe the numerical differentiation and intergration.
- Interpret Statistical analysis of the numeric data.
- Draw the chemical structure using software
- Under stand the statistical significance testing.

Course Outcome

The students have to explained the

1. The rules and the methods to be followed in the computer programming.
2. the basic programme of curve fitting
3. The numerical differentiation and intergration.
4. Interpretion of Statistical analysis of the numeric data.
5. Draw the chemical structure using software
6. Under stood the statistical significance testing.

BASIC programs for curve fitting, numerical differentiationand integration (Trapezoidalrule, Simpson's rule), finding roots (quadratic formula, iterative, Newton-Raphson method).Structure drawing software.

Statistical significance testing: The *t* test. The *F*test.

Presentation: Presentation graphics

MATHEMATICS II4H 4C

Semester-IV

Instruction Hours/week:L:4 T:0 P:0Marks: Internal:40External: 60 Total:100

End semester exam:3hrs

Course Objectives

This course enables the students to learn

- The Concept of Fourier analysis and solving boundary value problems.
- Techniques of Fourier and Laplace transform
- To solve differential equations.
- Numerical techniques of differentiation and integration.
- To know about Fourier series
- To know about differential equation.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Appreciate the physical significance of Fourier series
2. Understand the mathematical principles on transforms.
3. Apply mathematical foundation to formulate and solve problems arising in physics
4. Synthesize numerical techniques for practical problems
5. know about Fourier series
6. know about differential equation.

UNIT I

Fourier series: Definition – Finding Fourier coefficients for a given periodic function with period 2π – Odd and Even functions – Half Range Series

UNIT II

Fourier Transforms: Definition of Fourier Transform-Properties of Fourier Transform- Inverse Fourier transform-Convolution theorem-Finite Fourier Sine & Cosine Transform –Parseval's theorem.

UNIT III

Laplace Transforms: Definition of Laplace Transform - Properties of Laplace Transform, Inverse Laplace Transform. Application of Laplace Transform.

UNIT IV

Differential Equations: Types of Linear differential equations with constant coefficients – Simultaneous differential equations with constant coefficient.

UNIT V

Numerical methods: Solving simultaneous equations—Gauss Elimination method, Gauss Jordan method, Gauss Jacobi Method, Gauss – Seidel method. Numerical Integration – Trapezoidal Rule, Simpson’s Rule.

3. Sastry .S.S,2009, Engineering mathematics, PHI learning Pvt. Ltd, New Delhi (Unit-III)

18CHU402PHYSICAL CHEMISTRY IV:Electrochemistry4H 4C**Instruction Hours/week:L:4 T:0 P:0Marks: Internal:40External: 60 Total:100****End semester exam:3hrs****Course Objectives**

The course enables the students to

- Explain the types of conductance measurements and the factors affecting it
- Describe the ionic mobilities and the applications of conductance measurements
- Discuss the order and molecularity of reactions and the integrated rate expressions for different types of first order reactions.
- To knowledge about chemical kinetics
- Summarize the fundamentals of catalysis
- Restate the fundamentals of photochemistry.

Course Outcome

The students have to restated

1. The types of conductance measurements and the factors affecting it.
2. The ionic mobilities and the applications of conductance measurements
3. The order and molecularity of reactions and the integrated rate expressions for different types of first order reactions.
4. Gained knowledge about chemical kinetics.
5. The fundamentals of catalysis
6. The fundamentals of photochemistry.

UNIT I

Conductance: Quantitative aspects of Faraday's laws of electrolysis Arrhenius theory of electrolytic dissociation. Conductivity, equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes. Molar conductivity at infinite dilution. Kohlrausch law of independent migration of ions. Debye-Hückel-Onsager equation, Wien effect, Debye-Falkenhagen effect, Walden's rules.

UNIT II

Ionic velocities, mobilities and their determinations, transference numbers and their relation to ionic mobilities, determination of transference numbers using Hittorf and Moving Boundary methods. Applications of conductance measurement: (i) degree of dissociation of weak

electrolytes, (ii) ionic product of water (iii) solubility and solubility product of sparingly soluble salts, (iv) conductometric titrations, and (v) hydrolysis constants of salts.

UNIT III

Chemical Kinetics: Order and molecularity of a reaction, rate laws in terms of the advancement of a reaction, differential and integrated form of rate expressions up to second order reactions, experimental methods of the determination of rate laws, kinetics of complex reactions (integrated rate expressions up to first order only): (i) Opposing reactions (ii) parallel reactions and (iii) consecutive reactions and their differential rate equations (steady-state approximation in reaction mechanisms) (iv) chain reactions.

Unit IV

Temperature dependence of reaction rates; Arrhenius equation; activation energy. Collision theory of reaction rates, Lindemann mechanism, qualitative treatment of the theory of absolute reaction rates.

Catalysis: Types of catalyst, specificity and selectivity, mechanisms of catalyzed reactions at solid surfaces. Enzyme catalysis, Michaelis-Menten mechanism, acid-base catalysis.

Unit V

Photochemistry: Characteristics of electromagnetic radiation, Lambert-Beer's law and its limitations, physical significance of absorption coefficients. Laws of photochemistry, quantum yield, actinometry, examples of low and high quantum yields, photochemical equilibrium and the differential rate of photochemical reactions, photosensitized reactions, quenching. Role of photochemical reactions in biochemical processes, photostationary states, chemiluminescence.

Course Objectives

This course enables the students to

- Discuss the principle and the theory behind the UV spectroscopy.
- Discuss the principle and the theory behind the IR spectroscopy.
- Explain the principle and the theory behind the NMR spectroscopy.
- Summarize about the occurrence, classification and their biological importance carbohydrates
- Justify about the classification of dyes.
- Justify about polymers and their types, preparation and uses.

Course Outcome

The Student have gained knowledge about

1. The principle and the theory behind the UV spectroscopy.
2. The principle and the theory behind the IR spectroscopy.
3. The principle and the theory behind the NMR spectroscopy.
4. The occurrence, classification and their biological importance carbohydrates
5. The classification of dyes
6. Preparation ,types, properties and uses of polymers.

UNIT 1**Organic Spectroscopy**

General principles to absorption and emission spectroscopy.

UV Spectroscopy: Types of electronic transitions, λ_{\max} , Chromophores and Auxochromes, Bathochromic and Hypsochromic shifts, Intensity of absorption; Application of Woodward Rules for calculation of λ_{\max} for the following systems: α,β -unsaturated aldehydes, ketones, carboxylic acids and esters; Conjugated dienes: alicyclic, homoannular and heteroannular; Extended conjugated systems (aldehydes, ketones and dienes); distinction between cis and trans isomers. Application of UV Spectroscopy.

UNIT II

IR Spectroscopy: Fundamental and non-fundamental molecular vibrations; IR absorption positions of O, N and S containing functional groups; Effect of H-bonding, conjugation, resonance and ring size on IR absorptions; Fingerprint region and its significance; application in functional group analysis.

UNIT III

NMR Spectroscopy: Basic principles of Proton Magnetic Resonance, chemical shift and factors influencing it; Spin – Spin coupling and coupling constant; Anisotropic effects in alkene, alkyne, aldehydes and aromatics, Interpretation of NMR spectra of simple compounds. Applications of IR, UV and NMR for identification of simple organic molecules.

UNIT IV

Carbohydrates

Occurrence, classification and their biological importance. Monosaccharides: Constitution and absolute configuration of glucose and fructose, epimers and anomers, mutarotation, determination of ring size of glucose and fructose, Haworth projections and conformational structures; Interconversions of aldoses and ketoses; Killiani- Fischer synthesis and Ruff degradation; Disaccharides – Structure elucidation of maltose, lactose and sucrose. Polysaccharides – Elementary treatment of starch, cellulose and glycogen.

UNIT V

Dyes

Classification, Colour and constitution; Mordant and Vat Dyes; Chemistry of dyeing; Synthesis and applications of: Azo dyes – Methyl orange; Triphenyl methane dyes - Malachite green and Rosaniline; Phthalein Dyes – Phenolphthalein; Natural dyes – structure elucidation and synthesis of Alizarin and Indigotin; Edible Dyes with examples.

Polymers

Introduction and classification including di-block, tri-block and amphiphilic polymers; Polymerisation reactions - Addition and condensation - Mechanism of cationic, anionic and free radical addition polymerization; Metallocene-based Ziegler-Natta polymerisation of alkenes; Preparation and applications of plastics – thermosetting (phenol-formaldehyde, Polyurethanes) and thermosoftening (PVC, polythene); Fabrics – natural and synthetic (acrylic, polyamido, polyester); Rubbers – natural and synthetic: Buna-S, Chloroprene and Neoprene; Vulcanization; Polymer additives; Introduction to; Biodegradable and conducting polymers with examples.

Suggested Readings

2. Morrison, R. T. & Boyd, R. N. (1992). *Organic Chemistry*. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).
3. Billmeyer, F. W. (1984). *Textbook of Polymer Science*. John Wiley & Sons, Inc.
4. Gowariker, V. R., Viswanathan, N. V. & Sreedhar, J. (2003). *Polymer Science*. New Age International (P) Ltd. Pub.
5. Finar, I. L. (2002). *Organic Chemistry: Stereochemistry and the Chemistry of Natural Products*. Volume 2. Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).
6. Clayden, J., Greeves, N., Warren, S. & Wothers, P. (2000). *Organic Chemistry*. Oxford University Press.
7. Singh, J.; Ali, S.M. & Singh, J. (2010). *Natural Product Chemistry*. Prajati Prakashan.

Course Objectives

This course enables the students to learn

- To solve simultaneous linear algebraic equations using various methods.
- To evaluate definite integrals using numerical techniques.
- Problem-solving through (computer language) programming.
- Numerical Integration – Simpson's one third rule
- Numerical Integration – Simpson's three eighth rule
- Numerical Integration – Trapezoidal rule

Course Outcomes (COs)

On successful completion of this course, the student will be able to

1. Familiarize with the programming environment for numerical methods.
2. Develop proficiency in skills to solve the algebraic equations.
3. Evaluate the definite integrals using computer programming techniques
4. Numerical Integration – Simpson's one third rule
5. Numerical Integration – Simpson's three eighth rule
6. Numerical Integration – Trapezoidal rule

List of Practical

1. Compute Fourier Coefficients.
2. Solution of simultaneous linear algebraic equations – Gauss Elimination method
3. Solution of simultaneous linear algebraic equations – Gauss Jordan method
4. Solution of simultaneous linear algebraic equations – Gauss Jacobi method
5. Solution of simultaneous linear algebraic equations – Gauss Seidal method
6. Numerical Integration – Simpson's one third rule
7. Numerical Integration – Simpson's three eighth rule
8. Numerical Integration – Trapezoidal rule

Course Objectives

This course enables the students to

- Perform in the conductance measurement,
- Determine of cell constant
- Determine the conductometric titrations
- Determine the kinetic aspects and rate measurements of different types of reactions.
- Determine the Acid hydrolysis of methyl acetate with hydrochloric acid.
- Determine the Saponification of ethyl acetate

Course Outcome

The Student have interpreted to

1. Measured the conductance
2. Determination of the cell constant
3. Determination of conductometric titrations
4. The kinetic aspects and rate measurements of different types of reactions.
5. Determination the Acid hydrolysis of methyl acetate with hydrochloric acid.
6. Determination of the Saponification of ethyl acetate

Conductometry:

- I. Determination of cell constant
- II. Determination of conductivity, molar conductivity, degree of dissociation and dissociation constant of a weak acid.
- III. Perform the following conductometric titrations: i. Strong acid vs. strong base ii. Weak acid vs. strong base iii. Mixture of strong acid and weak acid vs. strong base iv. Strong acid vs. weak base

Chemical Kinetics:

- IV. Study the kinetics of the following reactions.
 1. Iodide-persulphate reaction (i) Initial rate method; (ii) Integrated rate method
 2. Acid hydrolysis of methyl acetate with hydrochloric acid.
 3. Saponification of ethyl acetate.
 4. Comparison of the strengths of HCl and H₂SO₄ by studying kinetics of hydrolysis of methyl acetate.

Suggested Readings

18CHU413

ORGANIC SPECTROSCOPY - PRACTICAL

4H 2C

Instruction Hours/week:L:0 T:0 P:4Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3hrs

Course objectives

The student will able to develop and identify the

- Extraction caffeine from tea leaves.
- Preparation urea formaldehyde resin
- Qualitative analysis of unknown organic compounds
- Simple organic compounds by IR spectroscopy
- Simple organic compounds by NMR spectroscopy
- Preparation of methyl orange

Course outcome

The students have to catagorize and demonstrate

1. About the Extraction of caffeine from tea leaves.
2. The Preparation of urea formaldehyde resin
3. The qualitative analysis of unknown organic compounds
4. Identify simple organic compounds by IR spectroscopy
5. Identify simple organic compounds by NMR spectroscopy
6. The Preparation of methyl orange

Spectroscopic methods UV, IR and NMR

1. Extraction of caffeine from tea leaves.
2. Preparation of Methyl Orange/ urea formaldehyde resin.
3. Qualitative analysis of unknown organic compounds containing monofunctional groups(carbohydrates, aryl halides, aromatic hydrocarbons, nitro compounds, amines and amides) andsimple bifunctional groups, e.g. salicylic acid, cinnamic acid, nitrophenols etc.
4. Identification of simple organic compounds by IR spectroscopy and NMR spectroscopy(Spectra to be provided).

Suggested Readings

2. Mann, F.G. & Saunders, B.C. (2009). *Practical Organic Chemistry*. Pearson Education
3. Furniss, B.S., Hannaford, A.J., Smith, P.W.G. &Tatchell, A.R. (2012). *Practical Organic Chemistry*. 5th Ed. Pearson.
4. Ahluwalia, V.K. &Aggarwal, R. (2000). *Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis*. University Press.
5. Ahluwalia, V.K. &Dhingra, S. (2000). *Comprehensive Practical Organic Chemistry: QualitativeAnalysis*. University Press.

Course objectives

This course enables the students to

- Summarize the twelve principles of green chemistry
- To know the special emphasis of an atom economy.
- Explain the catalysis and alternate sources of energy.
- Describe the process involved in the real word cases like Surfactants for CO₂
- Synthetic azo pigments to replace toxic organic and inorganic pigments.
- Determination of environmentally safe marine antifoulant and plastic (poly lactic acid) made from corn.

Course outcome

1. Recognise the impact of green chemistry on human health and the environment.
2. Knowledge about the special emphasis of an atom economy.
3. Demonstrate the knowledge of the twelve principles of Green Chemistry which they can apply to a range of work places for a safer, less toxic and heal thier environment.
4. Described the process involved in the real word cases like Surfactants for CO₂
5. Synthetic azo pigments to replace toxic organic and inorganic pigments.
6. Determination of environmentally safe marine antifoulant and plastic (poly lactic acid) made from corn.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT I*Theory and Hand-on Experiments*

Introduction: Definitions of Green Chemistry. Brief introduction of twelve principles of Green Chemistry, with examples, special emphasis on atom economy, reducing toxicity, green solvents,

UNIT II

Green Chemistry and catalysis and alternative sources of energy, Green energy and ustainability
Green energy (microwave, ultra sound and sona chemist).

UNIT III**The following Real world Cases in Green Chemistry should be discussed:**

Surfactants for carbon dioxide – Replacing smog producing and ozone depleting solvents with CO₂ for precision cleaning and dry cleaning of garments.

UNIT IV

Designing of environmentally safe marine antifoulant. Right fit pigment: Synthetic azo pigments to replace toxic organic and inorganic pigments.

UNIT V

An efficient, green synthesis of a compostable and widely applicable plastic (polylactic acid) made from corn.

Suggested Readings

2. Matlack, A.S. (2001). *Introduction to Green Chemistry*. Marcel Dekker.
3. Cann, M.C. & Connely, M.E. (2000). *Real-World cases in Green Chemistry*, American Chemical Society. Washington.

Semester-IV**18CHU404B ANALYTICAL CLINICAL BIOCHEMISTRY 3H 3C****Instruction Hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100****End Semester Exam:3hrs.****Course objectives**

This course enables the student to

- Classify the basic structure of carbohydrates, and fermentation processes.
- Classification and biological importance of Proteins.
- Classification and biological importance of lipids.
- Properties, functions and biochemical functions of steroid hormones
- Know the about enzyme ,classification , mechanism and factors affectingenzyme activity.
- Identify the biochemistry of diseases.

Courseoutcome

The students have knowledge to categorize

1. The basic structure of carbohydrates.
2. Classification and biological importance of Proteins.
3. Classification and biological importance of lipids.
4. Properties, functions and biochemical functions of steroid hormones
5. Knowledge about enzyme, classification, mechanism and factors affectingenzyme activity.
6. The biochemistry of diseases.

Unit I

Carbohydrates: Biological importance of carbohydrates, Metabolism, Cellular currency ofenergy (ATP), Glycolysis, Alcoholic and Lactic acid fermentations, Krebs cycle.Isolation and characterization of polysachharides.

Unit II

Proteins: Classification, biological importance; Primary and secondary and tertiary structuresof proteins: α -helix and β - pleated sheets, Isolation, characterization, denaturation of proteins.*Enzymes:* Nomenclature, Characteristics (mention of Ribozymes), Classification; Active site,Mechanism of enzyme action, Stereospecificity of enzymes, Coenzymes and cofactors,Enzyme inhibitors, Factors affecting enzyme activity-effect of pH, temperature on enzyme activity, enzymeinhibition.

Introduction to Biocatalysis: Importance in “Green Chemistry” andChemical Industry.

Unit III

Lipids: Classification. Biological importance of triglycerides and phosphoglycerides and cholesterol; Lipid membrane, Liposomes and their biological functions and underlying applications. Lipoproteins.

Unit IV

Properties, functions and biochemical functions of steroid hormones. Biochemistry of peptide hormones.

Structure of DNA (Watson-Crick model) and RNA, Genetic Code, Biological roles of DNA and RNA: Replication, Transcription and Translation, Introduction to Gene therapy.

Unit V

Biochemistry of disease: A diagnostic approach by blood/ urine analysis.

Blood: Composition and functions of blood, blood coagulation. Blood collection and preservation of samples. Anaemia, Regulation, estimation and interpretation of data for blood sugar, urea, creatinine, cholesterol and bilirubin.

Urine: Collection and preservation of samples. 6. Formation of urine. Composition and estimation of constituents of normal and pathological urine.

Suggested Readings

1. Cooper, T.G. (1977). *Tool of Biochemistry*. John Wiley and Sons.
2. Keith Wilson & John Walker. (1994). *Practical Biochemistry*. Cambridge University Press.
3. Alan H Gowenlock, (2005). Varley's. *Practical Clinical Biochemistry*. CBS Publisher.
4. Thomas M. Devlin. (2009). *Textbook of Biochemistry*. Academic Internet Publishers.
5. Berg, J.M., Tymoczko, J.L. & Stryer, L. (2002). *Biochemistry*. W.H. Freeman.
6. Nelson, D. L. & Cox, M. M. (2008). *Lehninger's Principles of Biochemistry*. 7th Ed. W. H. Freeman.
7. Harwood. (1990). *Series on Analytical Chemistry*. John Wiley & Sons.

18CHU414A GREEN METHODS IN CHEMISTRY–PRACTICAL 3H 1C**Instruction Hours/week:L:0 T:0 P:3 Marks: Internal:40 External: 60 Total:100****End Semester Exam: 3 hrs****Course objectives**

This course enables the student to

- Apply the principles and the practical aspects of green chemistry
- Prepare biodiesel from vegetable oil.
- Prepare phthalocyanine complex of Cu (II).
- Characterise the biodiesel.
- Mechano chemical solvent free synthesis of azomethine.
- Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II)

Course outcome

The students have to use

1. The basic principles and practical aspects like preparations and characterization in green approach.
2. Preparation and characterization of biodiesel from vegetable oil.
3. Characterization of biodiesel from vegetable oil.
4. Preparation of phthalocyanine complex of Cu(II).
5. Mechano chemical solvent free synthesis of azomethine.
6. Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II).

Practical's

1. Preparation and characterization of biodiesel from vegetable oil.
2. Preparation of phthalocyanine complex of Cu(II).
3. Mechano chemical solvent free synthesis of azomethine.
4. Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II).

Suggested Readings

1. Anastas, P.T. & Warner, J.K. (2005). *Green Chemistry- Theory and Practical*. Oxford University Press.

Semester-IV

18CHU414B ANALYTICAL CLINICAL BIOCHEMISTRY–PRACTICAL 3H 1C**Instruction Hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3 h****Course outcome**

The course enables the student to

- Identify and estimate carbohydrates.
- Identify and estimate lipids.
- Estimate the iodine number of oils
- Determine the saponification number of oils.
- Determine Cholesterol.
- Determine proteins

Course outcome

The students have to perform

1. The Identification and estimation of carbohydrates, iodine number and saponification number of oils
2. The Identification and estimation of lipids.
3. Estimation of the iodine number of oils
4. Determination the saponification number of oils.
5. Determination of Cholesterol
6. The determination of proteins

Identification and estimation of the following:

1. Carbohydrates – qualitative and quantitative.
2. Lipids – qualitative.
3. Determination of the iodine number of oil.
4. Determination of the saponification number of oil.
5. Determination of cholesterol using Liebermann- Burchard reaction.
6. Proteins – qualitative.
7. Isolation of protein.
8. Determination of protein by the Biuret reaction.
9. Determination of nucleic acids

Suggested Readings

1. Cooper, T.G. (1977). *Tool of Biochemistry*. John Wiley and Sons.
2. Keith Wilson & John Walker.(1994).*Practical Biochemistry*. Cambridge University Press.

18CHU501

PHYSICS I

4H 4C

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3 hrs.

Course Objectives:

- To understand basic theories and experiments in Physics.
- To understand the fundamentals of physics.
- To educate and motivate the students in the field of science
- To know about thermal physics
- To learn about Laser and optics physics
- To learn about fundamentals of electronics

Course Outcomes:

1. Students will demonstrate proficiency in mathematics and the mathematical concepts to understand physics.
2. Students will design and conduct an experiment (or series of experiments) demonstrating their understanding of the scientific method and processes.
3. Students will demonstrate an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
4. knowledge about thermal physics
5. Learnt about Laser and optics physics
6. Learnt about fundamentals of electronics

UNIT-I

PROPERTIES OF MATTER: Elastic constants of an isotropic solid - Stress – Strain - Relations connecting them - Poisson's ratio - Bending of beams - Uniform and non-uniform bending - Bending moment of a bent beam - cantilever - Static and dynamic methods - Torsion in a wire - Rigidity modulus determination by Static and dynamic methods. Surface tension and Surface energy- Pressure difference across a spherical surface- Pressure difference across a curved surface.

UNIT-II

MECHANICS: Motion of bodies in 2-D - Newton's laws - projectile motion – range- maximum height – projectile from space flight- Rotational motion – Rotation with constant angular acceleration – angular momentum of particles – rigid body – spinning top – conservation of angular momentum – Planetary motion – Kepler's laws – universal law of gravitation.

UNIT-III

THERMAL PHYSICS: Laws of thermodynamics – Reversible and irreversible process – Heat engine – Carnot's theorem.

Black body – Stefan's law – Newton's law of cooling – Newton's law of cooling from Stefan's law – Experimental determination of Stefan's constant – Wien's displacement law – Rayleigh – Jean's law – Planck's law.

UNIT-IV

OPTICS AND LASER PHYSICS: Reflection – Refraction – Snell's law – Total internal reflection – Interference – Diffraction – Polarization – Coherence

Stimulated emission and absorption – Einstein’s theory of radiation - population inversion – optical pumping – meta stable state – conditions for laser actions – Ruby laser – Helium – neon laser – applications of lasers – Raman effect – Raman shift – stokes and anti-stokes lines.

UNIT-V

BASIC ELECTRONICS: Intrinsic and extrinsic semiconductor – PN Junction diode – Biasing of PN junction – V-I characteristics of junction diode – Rectifiers – Half wave – Full wave and bridge rectifiers – Zener diode – Characteristics of Zener diode – Voltage regulator – Transistor – Characteristics of transistor – CB, CE mode – Transistors as an amplifier.

SUGGESTED READINGS

18CHU502	ORGANIC CHEMISTRY III:	Semester-V
Nitrogen Containing Functional Groups, Heterocyclic chemistry and natural products		4H 4C
Instruction Hours/week:L: 4 T:0 P:0Marks: Internal:40External: 60 Total:100		
End semester Exam: 3 hrs.		

CourseObjectives

The students should be able

- To contrast the preparation and properties of compounds with nitrogen containing functional groups.
- Understand the preparation and properties of diazoniumsalts.
- Learn about polynuclear hydrocarbons,
- Know about five, six and fused membered heterocyclic compounds.
- To discuss the preparation and reactions of alkaloids
- To discuss the preparation and reactions of terpenes.

CourseOutcomes

The students have summarise

1. The preparation and properties of compounds with nitrogen containing functional groups.
2. Understood the preparation and properties of diazonium salts.
3. Learned about the polynuclear hydrocarbons.
4. Knowledge about five, six and fused membered heterocyclic compounds.
5. The preparation and reactions of alkaloids
6. The preparation and reactions of terpenes..

UNIT I**Nitrogen Containing Functional Groups**

Preparation and important reactions of nitro compounds, nitriles and isonitriles.

Amines: Preparation and properties: Effect of substituent and solvent on basicity; Gabrielphthalimide synthesis, Carbylamine reaction, Mannich reaction, Hoffmann's exhaustivemethylation, Hofmann-elimination reaction; Distinction between 1°, 2° and 3° amines withHinsberg reagent and nitrous acid.

UNIT II

Diazonium Salts: Preparation and their synthetic applications.

Polynuclear Hydrocarbons

Aromaticity of polynuclear hydrocarbons, structure elucidation of naphthalene; Preparation and properties of naphthalene, phenanthrene and anthracene.

UNIT III

Heterocyclic Compounds

Classification and nomenclature, Structure, aromaticity in 5-numbered and 6-membered rings containing one heteroatom; Synthesis, reactions and mechanism of substitution reactions of: Furan, Pyrrole (Paal-Knorr synthesis, Knorr pyrrole synthesis, Hantzsch synthesis), Thiophene, Pyridine (Hantzsch synthesis),

UNIT IV

Indole (Fischer indole synthesis and Madelung synthesis), Quinoline and isoquinoline, (Skraup synthesis, Friedlander's synthesis, Knorr quinoline synthesis, Doebner- Miller synthesis, Bischler-Napieralski reaction, Pictet-Spengler reaction, Pomeranz-Fritsch reaction)

UNIT V

Alkaloids

Natural occurrence, General structural features, Isolation and their physiological action, Hoffmann's exhaustive methylation, Emde's modification; Structure elucidation and synthesis of Nicotine. Medicinal importance of Nicotine, Hygrine, Quinine, Morphine, Cocaine, and Reserpine.

Terpenes

Occurrence, classification, isoprene rule; Elucidation of structure and synthesis of Citral.

8. Singh, J.; Ali, S.M. & Singh, J. (2010). *Natural Product Chemistry*. Prajati Parakashan.

Course objectives

This course enables the student to

- Recognize the history of polymeric materials, criteria, kinetics and characterization of polymerisation.
- Criteria for polymeric material formation.
- Learn Kinetics of polymerization.
- Understand Characterisation of polymerisation.
- To know the Structure property relationships of polymer
- Justify the properties of polymers

Course outcome

The students have list the knowledge like

1. History of polymeric materials.
2. Criteria for polymeric material formation.
3. Learned Kinetics of polymerization.
4. Understood Characterisation of polymerisation.
5. Knowledge about Structure property relationships of polymer.
6. Properties of polymers.

UNIT I**Introduction and history of polymeric materials:**

Different schemes of classification of polymers, Polymer nomenclature, Molecular forces and chemical bonding in polymers, Texture of Polymers.

Functionality and its importance:

Criteria for synthetic polymer formation, classification of polymerization processes, Relationships between functionality, extent of reaction and degree of polymerization. Bifunctional systems, Poly-functional systems.

UNIT II**Kinetics of Polymerization:**

Mechanism and kinetics of step growth, radical chain growth, ionic chain (both cationic and anionic) and coordination polymerizations, Mechanism and kinetics of copolymerization, polymerization techniques.

Crystallization and crystallinity:

Determination of crystalline melting point and degree of crystallinity, Morphology of crystalline polymers, Factors affecting crystalline melting point.

UNIT III

Nature and structure of polymers-Structure Property relationships.

Determination of molecular weight of polymers (M_n , M_w , etc) by end group analysis, viscometry, light scattering and osmotic pressure methods. Molecular weight distribution and its significance. Polydispersity index.

UNIT IV

Glass transition temperature (T_g) and determination of T_g , Free volume theory, WLF equation, Factors affecting glass transition temperature (T_g).

Polymer Solution – Criteria for polymer solubility, Solubility parameter, Thermodynamics of polymer solutions, entropy, enthalpy, and free energy change of mixing of polymer solutions, Flory-Huggins theory, Lower and Upper critical solution temperatures.

UNIT V

Properties of Polymers (Physical, thermal, Flow & Mechanical Properties). Brief introduction to preparation, structure, properties and application of the following polymers: polyolefins, polystyrene and styrene copolymers, poly(vinyl chloride) and related polymers, poly(vinyl acetate) and related polymers, acrylic polymers, fluoro polymers, polyamides and related polymers. Phenol formaldehyde resins (Bakelite, Novalac), polyurethanes, silicone polymers, polydienes, Polycarbonates, Conducting Polymers, [polyacetylene, polyaniline, poly(p-phenylene sulphide), polypyrrole, polythiophene].

Suggested Readings

2. G. Odian. (2004). *Principles of Polymerization*. John Wiley.
3. F.W. Billmeyer. (1972). *Text Book of Polymer Science*. John Wiley.
4. P. Ghosh. (2001). *Polymer Science & Technology*. Tata McGraw-Hill.
5. R.W. Lenz. (1968). *Organic Chemistry of Synthetic High Polymers*. John Wiley.

Course objectives

The course enables the students have to perform

- The Synthesis and modification of inorganic solids of technological importance
- Understand about the inorganic solids of technological importance
- The Synthesis and properties of nanomaterials
- The Synthesis of engineering materials used for mechanical construction
- The Synthesis and properties of composite materials
- The Synthesis and properties of speciality polymers

Course outcome

The student have identified

1. The Synthesis and modification of inorganic solids
2. Understood about inorganic solids of technological importance
3. The Synthesis and properties of nanomaterials
4. The Synthesis of engineering materials used for mechanical construction
5. The Synthesis and properties of composite materials
6. The Synthesis and properties of speciality polymers

UNIT I**Synthesis and modification of inorganic solids:**

Conventional heat and beat methods, Co-precipitation method, Sol-gel methods, Hydrothermal method, Ion-exchange and Intercalation methods.

Inorganic solids of technological importance:

Solid electrolytes – Cationic, anionic, mixed Inorganic pigments – coloured solids, white and black pigments. Molecular material and fullerides, molecular materials & chemistry – one-dimensional metals, molecular magnets, inorganic liquid crystals.

UNIT II**Nanomaterials:**

Overview of nanostructures and nanomaterials: classification. Preparation of gold and silver metallic nanoparticles, self-assembled nanostructures-control of nanoarchitecture-one dimensional control. Carbon nanotubes and inorganic nanowires. Bio-inorganic nanomaterials, DNA and nanomaterials, natural and antisical nanomaterials, bionano composites.

UNIT III**Introduction to engineering materials for mechanical construction:**

Composition, mechanical and fabricating characteristics and applications of various types of cast irons, plain carbon and alloy steels, copper, aluminium and their alloys like duralumin, brasses and bronzes, cutting tool materials, super alloys, thermoplastics, thermosets and composite materials.

UNIT IV

Composite materials:

Introduction, limitations of conventional engineering materials, role of matrix in composites, classification, matrix materials, reinforcements, metal-matrix composites, polymer-matrix composites, fibre-reinforced composites, environmental effects on composites, applications of composites.

UNIT V

Speciality polymers:

Conducting polymers - Introduction, conduction mechanism, polyacetylene, polyparaphenylene and polypyrrole, applications of conducting polymers, Ion-exchange resins and their applications. Ceramic & Refractory: Introduction, classification, properties, raw materials, manufacturing and applications.

18CHU511 PHYSICS I - PRACTICAL 4H 2C**Instruction Hours/week: L:0 T:0 P:3 Marks: Internal:40 External: 60 Total:100****End Semester Exam: 3 hrs.****Course Objective**

- To acquire basic understanding of laboratory technique and
- To educate and motivate the students in the field of Physics
- To allow the students to have a deep knowledge of fundamentals of optics.
- To learn about Young's modulus experiments
- Know about the surface tension experiments
- To learn about spectrometer experiments

Course outcome**Students can able to**

1. Perform basic experiments in mechanics and electricity and analyze the data.
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Knowledge the physical Principles and applications of Electronics.
4. Students have a deep knowledge of fundamentals of optics.
5. Learnt about Young's modulus experiments
6. Know ledge about the surface tension experiments
7. Learnt about spectrometer experiments

ANY TEN EXPERIMENTS**Experiments**

1. Young's Modulus-Non Uniform bending-Optic lever
2. Young's Modulus-Static cantilever
3. Acceleration due to gravity-Compound pendulum
4. Determination of spring constant of the given spring.
5. Determine the radius of capillary tube using microscope.
6. Refractive Index of a solid prism (I-d) curve-Spectrometer
7. Co-efficient of thermal conductivity-Lee's disc method
8. Wavelength of spectral lines -Grating-minimum deviation method-Spectrometer.
9. Characteristics of a Zener and Junction diode
10. μ of a lens-Newton's ring method
11. Thickness of a thin wire-Air wedge method
12. Determine the surface tension - Drop weight method
13. Determine the wavelength of He-Ne laser.
14. Determination of the Coefficient of Viscosity of a given liquid using Burette method
15. Construct a single stage amplifier using transistor

**18CHU512 NITROGEN CONTAINING FUNCTIONAL GROUPS, 4H 2C
HETEROCYCLIC CHEMISTRY AND NATURAL PRODUCTS - PRACTICAL****Instruction Hours/week: L: 0 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End semester exam: 3 hrs.****Course Objective**

This course enables the student to

- Identify the presence of nitro
- Identify the presence of amine
- Identify the presence of amide groups
- Identify functional groups like alcohols.
- Identify functional groups of carboxylic acids.
- Identify the functional groups like phenols, carbonyl compounds and esters

Course Outcome

The students have analysed the

1. Functional group tests for nitrogen containing organic compounds
 2. Identification of nitro group
 3. Identification of amine group
 4. Identification of amide
 5. Tests used in the Identification of functional groups like alcohols, carboxylic acids
 6. Identification of phenols, carbonyl compounds and esters
-
1. Functional group test of nitro, amine and amide groups.
 2. Qualitative analysis of unknown organic compounds containing simple functional groups (alcohols, carboxylic acids, phenols, carbonyl compounds and esters)

Suggested Readings

1. Mann, F.G. & Saunders, B.C. (2009). *Practical Organic Chemistry*. Pearson Education
2. Furniss, B.S., Hannaford, A.J., Smith, P.W.G. & Tatchell, A.R. (2012). *Practical Organic Chemistry*. 5th Ed. Pearson.
3. Ahluwalia, V.K. & Aggarwal, R. (2000). *Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis*. University Press
4. Ahluwalia, V.K. & Dhingra, S. (2000). *Comprehensive Practical Organic Chemistry: Qualitative Analysis*. University Press.

Course objectives

- This course enables the student have to apply
- Have hands on experience to prepare different types of polymers by various methods
- To do the purification of polymers
- To characterise the polymers by chemical and instrumental methods.
- To prepare isophthaloyl chloride
- Determine hydroxyl number of a polymer using colorimetric method
- Analyse the polymers

Course outcome

The students have demonstrate and perform

1. The preparation of different types of polymers by various methods
2. The purification of polymers
3. The characterization the polymers by chemical and instrumental methods.
4. Preparation of isophthaloyl chloride
5. Determination of hydroxyl number of a polymer using colorimetric method
6. Analysis of the polymers

Polymer synthesis

1. Free radical solution polymerization of styrene (St) / Methyl Methacrylate (MMA) / Methyl Acrylate (MA) / Acrylic acid (AA).
 - a. Purification of monomer
 - b. Polymerization using benzoyl peroxide (BPO) / 2,2'-azo-bis-isobutyronitrile (AIBN)
2. Preparation of nylon 66/6
 1. Interfacial polymerization, preparation of polyester from isophthaloyl chloride (IPC) and phenolphthalein
 - a. Preparation of IPC
 - b. Purification of IPC
 - c. Interfacial polymerization
3. Redox polymerization of acrylamide
4. Precipitation polymerization of acrylonitrile
5. Preparation of urea-formaldehyde resin
6. Preparations of novalac resin/resold resin.
7. Microscale Emulsion Polymerization of Poly(methylacrylate).

Polymer characterization

1. Determination of molecular weight by viscometry:
 - (a) Polyacrylamide-aq.NaNO₂ solution

- (b) (Poly vinyl propylidene (PVP) in water
2. Determination of the viscosity-average molecular weight of poly(vinyl alcohol) (PVOH) and the fraction of —head-to-head— monomer linkages in the polymer.
3. Determination of molecular weight by end group analysis: Polyethylene glycol (PEG) (OH group).
4. Testing of mechanical properties of polymers.
5. Determination of hydroxyl number of a polymer using colorimetric method.

Polymer analysis

1. Estimation of the amount of HCHO in the given solution by sodium sulphite method
2. Instrumental Techniques
3. IR studies of polymers
4. DSC analysis of polymers
5. Preparation of polyacrylamide and its electrophoresis
*at least 7 experiments to be carried out.

Suggested Readings

1. Malcolm P. Stevens (1999). *Polymer Chemistry: An Introduction*. 3rd Ed. Oxford University Press.
2. Harry R. Allcock, Frederick W. Lampe and James E. Mark, (2003). *Contemporary Polymer Chemistry*. 3rd ed. Prentice-Hall
3. Fred W. Billmeyer, (1984). *Textbook of Polymer Science*. 3rd ed. Wiley-Interscience
4. Joel R. Fried, (2003). *Polymer Science and Technology*. 2nd ed. Prentice-Hall.
5. Petr Munk & Tejraj M. Aminabhavi, (2002). *Introduction to Macromolecular Science*. 2nd ed. John Wiley & Sons
6. L. H. Sperling, (2005). *Introduction to Physical Polymer Science*. 4th ed. John Wiley & Sons.
7. Malcolm P. Stevens, (2005). *Polymer Chemistry: An Introduction*. 3rd ed. Oxford University Press.
8. Charles E. Carraher, (2013). *Seymour/ Carraher's Polymer Chemistry*. 9th ed. Jr.

Course objectives

The course helps the student to

- Explain the ion exchange method
- Explain the cation exchange method
- coprecipitation methods of novel inorganic solids
- Discuss the method for the preparation of nanoparticles
- Nano particle preparation using green method
- Prepare the hydrogel by coprecipitation method

Course outcome

The students have demonstrated

1. The cation exchange method
2. The ion exchange method
3. coprecipitation methods of novel inorganic solids
4. The method for the preparation of nanoparticles
5. Nano particle preparation using green method
6. Preparation of the hydrogel by coprecipitation method

Suggested Reading:

1. Fahlman, B.D. (2004). *Materials Chemistry*, Springer.

Course objectives

This course enables the student to

- Describe the principles of cheminformatics
- Explain the Representation of molecules and chemical reactions
- Predict the searching methods for chemical structures
- Predict the properties of molecules using computational methods
- QSAR studies
- Interpret the computer assisted structure elucidations.

Course outcome

The students have presented the knowledge about

1. The principles of cheminformatics
2. The Representation of molecules and chemical reactions
3. The searching methods for chemical structures
4. The prediction of the properties of molecules using computational methods
5. QSAR studies
6. The computer assisted structure elucidations

UNIT I

Introduction to Chemoinformatics: History and evolution of chemoinformatics, Use of chemoinformatics, Prospects of chemoinformatics, Molecular Modelling and Structure elucidation.

UNIT II

Representation of molecules and chemical reactions: Nomenclature, Different types of notations, SMILES coding, Matrix representations, Structure of Molfiles and Sdfiles, Libraries and toolkits, Different electronic effects, Reaction classification.

UNIT III

Searching chemical structures: Full structure search, sub-structure search, basic ideas, similarity search, three dimensional search methods, basics of computation of physical and chemical data and structure descriptors, data visualization.

UNIT IV

Applications: Prediction of Properties of Compounds; Linear Free Energy Relations; Quantitative Structure-Property Relations; Descriptor Analysis; Model Building; Modelling Toxicity; Structure-Spectra correlations; Prediction of NMR, IR and Mass spectra;

UNIT V

Computer Assisted Structure elucidations; Computer Assisted Synthesis Design, Introduction to drug design; Target Identification and Validation; Lead Finding and Optimization; Analysis of HTS data; Virtual Screening; Design of Combinatorial Libraries; Ligand-Based and Structure Based Drug design; Application of Chemoinformatics in Drug Design.

Suggested Readings

1. Andrew R. Leach & Valerie, J. Gillet (2007). *An introduction to Chemoinformatics*. Springer: The Netherlands.
2. Gasteiger, J. & Engel, T. (2003). *Chemoinformatics: A text-book*. Wiley-VCH.
3. Gupta, S. P. (2011). *QSAR & Molecular Modeling*. New Delhi: Anamaya Pub.

Semester-V**18CHU504B CHEMISTRY OF COSMETICS & PERFUMES 3H 3C**

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100**End Semester Exam: 3 hrs.****Course objectives**

This skill enhancement course helps the student to

- Develop the preparation of hair dyes, hair spray and shampoos
- Develop the preparation of Hair spray
- Describe the preparation and uses of lotions,
- Describe the preparation and uses lipsticks
- Describe the preparation and uses talcum powder and Creams.
- Demonstrate the chemistry of essential oils

Course outcome

The students have formulate the knowledge about

1. The preparation of hair dyes, hair spray and shampoos
2. The preparation and uses of lotions,
3. The preparation and uses of lipsticks and
4. The preparation and uses of talcum powder
5. The preparation and uses of creams
6. The chemistry of essential oils

Unit I

A general study including preparation and uses of the following: Hair dye, hair spray, Shampoo.

Unit II

Preparation and uses of suntan lotions, face powder, lipsticks, talcum powder, nail enamel,

Unit III

Preparation and uses of creams (cold, vanishing and shaving creams), antiperspirants and artificial flavours.

Unit IV

Essential oils and their importance in cosmetic industries with reference to Eugenol, Geraniol, sandalwood oil

Unit V

Essential oils and their importance in cosmetic industries with reference to eucalyptus rose oil, 2-phenyl ethyl alcohol, Jasmone, Civetone, Muscone.

Suggested Readings

1. E. Stocchi. (1990). *Industrial Chemistry*. Vol –I. UK : Ellis Horwood Ltd.
2. P.C. Jain, M. Jain (2004). *Engineering Chemistry*. Delhi: Dhanpat Rai & Sons.
3. Sharma, B.K. & Gaur, H. (1996). *Industrial Chemistry*. Meerut : Goel Publishing House.

Course objectives

The course helps the student to

- Apply the applications of cheminformatics in drug design.
- Draw the chemical structure using chemdraw software.
- Molecular docking studies were carried using Autodock software.
- Predict ADME using swissadme software
- Learn Lipinski's rule of five using swissadme software.
- Predict drug likeness

Course outcome

The students know to perform the cheminformatics aspects in the drug designing process.

1. Applied the applications of cheminformatics in drug design.
2. Draw the chemical structure using chemdraw software.
3. Molecular docking studies were carried using Autodock software.
4. Prediction ADME using swissadme software
5. Learned Lipinski's rule of five using swissadme software.
6. Prediction of drug likeness

Hands-on Exercises

Application of Chemoinformatics in Drug Design

Suggested Readings

1. Andrew R. Leach & Valerie, J. Gillet. (2007). *An introduction to Chemoinformatics*. Springer: The Netherlands.
2. Gasteiger, J. & Engel, T. (2003). *Chemoinformatics: A text-book*. Wiley-VCH.

Semester-V**18CHU514B CHEMISTRY OF COSMETICS & PERFUMES - PRACTICAL 3H 1C**

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100**End Semester Exam: 3 hrs.****Course objectives**

This course enables the student to

- Prepare of talcum powder.
- Prepare of shampoo.
- Prepare of enamels.
- Prepare of hair remover.
- Prepare of face cream.
- Prepare of nail polish and nail polish remover.

Course outcomes

Students have knowledge to compose about the

1. Preparation of talcum powder.
2. Preparation of shampoo.
3. Preparation of enamels.
4. Preparation of hair remover.
5. Preparation of face cream.
6. Preparation of nail polish and nail polish remover.

Preparations of cosmetics and perfumes

1. Preparation of talcum powder.
2. Preparation of shampoo.
3. Preparation of enamels.
4. Preparation of hair remover.
5. Preparation of face cream.
6. Preparation of nail polish and nail polish remover.

Suggested Readings

1. E. Stocchi. (1990). *Industrial Chemistry*, Vol –I. UK: Ellis Horwood Ltd.

B.Sc. Chemistry

2018-2019

Semester-VI

18CHU601

PHYSICS II

4H 4C

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3 hrs.

Course Objectives:

- To give the basic knowledge on material properties.
- To acquire knowledge on magnetism
- To know about digital electronics.
- To educate and motivate the students in the field of science.
- To know about Electrostatics
- To know about atomic and nuclear physics.

Course Outcomes:

Students can able to

1. Explain how physics applies to phenomena in the world around them.
2. Recognize how and when physics methods
3. principles can help address problems in their major
4. Apply those methods and principles to solve problems.
5. Gained knowledge about digital electronics and Electrostatics
6. Gained knowledge about atomic and nuclear physics.

UNIT – I

Electrostatics: Coulombs law – electric field – Gauss’s law and its applications – potential – potential due to various charge distribution. Parallel plate capacitors – dielectrics- current – galvanometer – voltmeter – ammeter- potentiometric measurements.

UNIT - II

Magnetism: Magnetic field – Biot Savart’s law – B due to a solenoid – Amperes law – Faradays law of induction – Lenz’s law. Magnetic properties of matter –Dia, para and ferro - Cycle of magnetization – Hysteresis – B-H curve – Applications of B-H curve.

UNIT - III

Modern Physics: Einstein’s Photoelectric effect-characteristics of photoelectron –laws of photoelectric emission-Einstein’s photo electric equations- Compton effect-matter waves-De-Broglie Hypothesis. Heisenberg’s uncertainty principle-Schrödinger’s equation- particle in a box.

UNIT-IV

Atomic and Nuclear Physics: Atom Models : Sommerfield's and Vector atom Models – Pauli's exclusion Principle – Various quantum numbers and quantization of orbits. X-rays : Continuous and Characteristic X-rays – Mosley's Law and importance – Bragg's Law.

Nuclear forces –characteristics - nuclear structure by liquid drop model – Binding energy – mass defect – particle accelerators – cyclotron and betatron – nuclear Fission and nuclear Fusion.

UNIT - V

Digital Electronics: Decimal – binary – octal and hexadecimal numbers– their representation, inter-conversion, addition and subtraction, negative numbers. Sum of products – product of sums – their conversion – Simplification of Boolean expressions - K-Map – min terms – max terms - (2, 3 and 4 variables). Basic logic gates – AND, OR, NOT, NAND, NOR and EXOR gates – NAND and NOR as universal building gates – Boolean Algebra – Laws of Boolean Algebra – De Morgan's Theorems – Their verifications using truth tables.

SUGGESTED READINGS

1. Narayanamurthi, Electricity and Magnetism, The National Publishing Co, First edition, 1988.
2. J. B. Rajam, Atomic Physics., S. Chand & Company Limited, New Delhi, First edition, 1990.

5. Digital fundamentals – by Floyd 8th edition Pearson education 2006
6. R. S. Sedha, A text book of Digital Electronics, S. Chand & Co, New Delhi, First edition ,2004.

Course Objectives

This course enables the student to discuss

- The Theoretical Principles in Qualitative Analysis to identify the cations and anions
- The classification of organometallic compounds based on bond type
- The few important metal complexes of commercial importance
- About 18 electron rule
- The catalytic property of organometallic compounds.
- The Metal ions present in biological systems

Course Outcome

The student have discussed

1. The Theoretical Principles in Qualitative Analysis to identify the cations and anions
2. The classification of organometallic compounds based on bond type
3. Few important metal complexes of commercial importance
4. About 18 electron rule
5. The catalytic property of organometallic compounds.
6. The Metal ions present in biological systems

UNIT I

Theoretical Principles in Qualitative Analysis (H₂S Scheme)

Basic principles involved in analysis of cations and anions. Solubility products, common ioneffect.Principals involved in separation of cations into groups and choice of group reagents.Interfering anions (fluoride, borate, oxalate and phosphate) and need to remove them after Group II.

UNIT II

Organometallic Compounds

Definition and classification of organometallic compounds on the basis of bond type.Concept of hapticity of organic ligands. Metal carbonyls: 18 electron rule, electron count of mononuclear, polynuclear and substituted metal carbonyls of 3d series. General methods of preparation (direct

combination, reductive carbonylation, thermal and photochemical decomposition) of mono and binuclear carbonyls of 3d series. Structures of mononuclear and binuclear carbonyls of Cr, Mn, Fe, Co and Ni using VBT. π -acceptor behaviour of CO (MO diagram of CO to be discussed), synergic effect and use of IR data to explain extent of back bonding.

UNIT III

Zeise's salt: Preparation and structure, evidences of synergic effect and comparison of synergic effect with that in carbonyls. Metal Alkyls: Important structural features of methyl lithium (tetramer) and trialkyl aluminium (dimer), concept of multicentre bonding in these compounds. Ferrocene: Preparation and reactions (acetylation, alkylation, metallation, Mannich Condensation). Structure and aromaticity. Comparison of aromaticity and reactivity with that of benzene.

UNIT IV

Catalysis by Organometallic Compounds

Study of the following industrial processes and their mechanism:

1. Alkene hydrogenation (Wilkinson's Catalyst)
2. Synthetic gasoline (Fischer Tropsch reaction)
3. Polymerisation of ethene using Ziegler-Natta catalyst

UNIT V

Metal ions present in biological systems, classification of elements according to their action in biological system. Geochemical effect on the distribution of metals. Sodium / K-pump, carbonic anhydrase and carboxypeptidase. Excess and deficiency of some trace metals. Toxicity of metal ions (Hg, Pb, Cd and As), reasons for toxicity, Use of chelating agents in medicine, Cisplatin as an anti-cancer drug. Iron and its application in bio-systems, Haemoglobin, Myoglobin; Storage and transfer of iron.

PHYSICS II PRACTICAL

4H 2C

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3 hrs.

Course Objective

- To enhance the students to understand the concepts in integrated chips.
- To understand the optical and electronic properties of solids through experimentations
- Determine the magnetic dipole moment (m) of a bar magnet - Tan A & Tan B
- Verify of Basic logic gates using discrete components.
- Study of NOR & NAND gate as Universal building block.
- Study of logic gates using IC's.

Course Outcomes:

Students can able to

1. Perform basic experiments in mechanics, heat and electricity and analyze the data
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Gained knowledge about the physical Principles and applications of Electronics.
4. Determine the magnetic dipole moment (m) of a bar magnet - Tan A & Tan B
5. Verification of Basic logic gates using discrete components.
6. Studied the NOR & NAND gate as Universal building block.
7. Studied logic gates using IC's.

Any 8 Experiments

1. Determine the magnetic dipole moment (m) of a bar magnet - Tan A
2. Determine the magnetic dipole moment (m) of a bar magnet - Tan B
3. Field Intensity-Circular coil- Vibration magnetometer
4. Moment of a magnet-Circular coil-Deflection Magnetometer
5. Study of logic gates using IC's.
6. Study of NOR gate as Universal building block.
7. Study of NAND gate as Universal building block.
8. Verification of Basic logic gates using discrete components.
9. To study the variation in current and voltage in a series LCR circuit
10. To study the variation in current and voltage in a parallel LCR circuit
11. Transistor characteristics – CE & CB

Semester-VI

18CHU612 ORGANOMETALLIC CHEMISTRY- PRACTICAL 4H 2C

Instruction Hours/week:L:0 T:0 P:4Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3hrs

Course Objectives

This lab course enables the student to

- Identify the anions and the cations in a mixture by Qualitative semimicro analysis
- Understand the chemistry of different reactions
- Identify the interfering anion
- Outline the principles behind the spot tests
- chromatographic separations
- Paper chromatographic separation of nickel and cobalt, copper and cadmium

Course Outcome

The students have

1. Identified the anions and the cations in a mixture by Qualitative semi micro analysis
2. Understood the chemistry of different reactions.
3. Identified the interfering anion
4. Define the principles behind the spot tests and
5. Define the Principles of chromatographic separations
6. Paper chromatographic separation of nickel and cobalt, copper and cadmium

Qualitative semimicro analysis of mixtures containing 3 anions and 3 cations. Emphasis should be given to the understanding of the chemistry of different reactions. The following radicals are suggested:

CO_3^{2-} , NO_2^- , S^{2-} , SO_3^{2-} , $\text{S}_2\text{O}_3^{2-}$, CH_3COO^- , F^- , Cl^- , Br^- , I^- , NO_3^- , BO_3^{3-} , $\text{C}_2\text{O}_4^{2-}$, PO_4^{3-} , NH_4^+ , K^+ , Pb^{2+} , Cu^{2+} , Cd^{2+} , Bi^{3+} , Sn^{2+} , Sb^{3+} , Fe^{3+} , Al^{3+} , Cr^{3+} , Zn^{2+} , Mn^{2+} , Co^{2+} , Ni^{2+} , Ba^{2+} , Sr^{2+} , Ca^{2+} , Mg^{2+}

Mixtures should preferably contain one interfering anion, **or** insoluble component (BaSO_4 , SrSO_4 , PbSO_4 , CaF_2 or Al_2O_3) **or** combination of anions e.g. CO_3^{2-} and SO_3^{2-} , NO_2^- and NO_3^- ,

Cl^- and Br^- and I^- , Br^- and I^- , NO_3^- and Br^- , NO_3^- and I^-

Spot tests should be done whenever possible.

Principles involved in chromatographic separations. Paper chromatographic separation of following metal ions:

- i. Ni (II) and Co (II)
- ii. Cu(II) and Cd(II)

Suggested Reading

MOLECULAR MODELLING AND DRUG DESIGN 4H 4C

Instruction Hours/week: L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3 hrs.

Course objectives

The course enables the students to summarize

- The introductory concepts of molecular modelling
- The force fields involved with different types of interactions
- The Energy Minimization and Computer Simulation
- The Molecular Dynamics & Monte Carlo Simulation
- The Structure Prediction and Drug Design
- QSAR studies

Course outcomes

The students are contrast

1. The introductory concepts of molecular modelling
2. The force fields involved with different types of interactions
3. About the Energy Minimization and Computer Simulation
4. About the Molecular Dynamics & Monte Carlo Simulation
5. About the Structure Prediction and Drug Design
6. QSAR studies

UNIT I

Introduction to Molecular Modelling:

Introduction. Useful Concepts in Molecular Modelling: Coordinate Systems. Potential Energy Surfaces. Molecular Graphics. Surfaces. Computer Hardware and Software. The Molecular Modelling Literature.

UNIT II

Force Fields:

Fields. Bond Stretching. Angle Bending. Introduction to nonbonded interactions. Electrostatic interactions. van der Waals Interactions. Hydrogen bonding in Molecular Mechanics. Force Field Models for the Simulation of Liquid Water.

UNIT III

Energy Minimization and Computer Simulation:

Minimization and related methods for exploring the energy surface. Non-derivative method, First and second order minimization methods. Computer simulation methods. Simple thermodynamic properties and Phase Space. Boundaries. Analyzing the results of a simulation and estimating Errors.

UNIT IV

Molecular Dynamics & Monte Carlo Simulation:

Molecular Dynamics Simulation Methods. Molecular Dynamics using simple models. Molecular Dynamics with continuous potentials. Molecular Dynamics at constant temperature and pressure. Metropolis method. Monte Carlo simulation of molecules. Models used in Monte Carlo simulations of polymers.

UNIT V

Structure Prediction and Drug Design:

Structure prediction - Introduction to comparative Modeling. Sequence alignment. Constructing and evaluating a comparative model. Predicting protein structures by 'Threading', Molecular docking. Structure based de novo ligand design, Drug Discovery – Chemoinformatics – QSAR.

Suggested Readings

1. Leach, A.R. (2001). *Molecular Modelling Principles and Application*, Longman.
2. Haile, J.M. (1997). *Molecular Dynamics Simulation Elementary Methods*, John Wiley and Sons.
3. Gupta, S.P. (2008). *QSAR and Molecular Modeling*. Springer. Anamaya Publishers.

Course objectives

The lab course enables the students to analyse

- Qualitative and quantitative calculations involved in the molecular modelling and its usefulness in drug design
- Compare the optimized C-C bond lengths in ethane, ethene, ethyne and benzene. Visualize the molecular orbitals of the ethane σ bonds and ethene, ethyne, benzene and pyridine π bonds.
- Perform a conformational analysis of butane. (b)
- Determine the enthalpy of isomerization of *cis* and *trans*-2-butene.
- Relate the charge on the hydrogen atom in hydrogen halides with their acid character.
- Compare the basicities of the nitrogen atoms in ammonia, methylamine, dimethylamine and trimethylamine.
- Compare the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2-propanol.

Course outcomes

The students have analysed

1. The Qualitative and quantitative calculations involved in the molecular modelling and its usefulness in drug design
 2. Comparison of the optimized C-C bond lengths in ethane, ethene, ethyne and benzene. Visualize the molecular orbitals of the ethane σ bonds and ethene, ethyne, benzene and pyridine π bonds.
 3. Performed a conformational analysis of butane.
 4. Determination of the enthalpy of isomerization of *cis* and *trans*-2-butene.
 5. Relate the charge on the hydrogen atom in hydrogen halides with their acid character.
 6. Comparison of the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2-propanol.
 7. Compare the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2-propanol.
-
- i. Compare the optimized C-C bond lengths in ethane, ethene, ethyne and benzene. Visualize the molecular orbitals of the ethane σ bonds and ethene, ethyne, benzene and pyridine π bonds.
 - ii. (a) Perform a conformational analysis of butane. (b) Determine the enthalpy of isomerization of *cis* and *trans*-2-butene.
 - iii. Visualize the electron density and electrostatic potential maps for LiH, HF, N₂, NO and CO and comment. Relate to the dipole moments. Animate the vibrations of these molecules.

- iv. (a) Relate the charge on the hydrogen atom in hydrogen halides with their acid character. (b) Compare the basicities of the nitrogen atoms in ammonia, methylamine, dimethylamine and trimethylamine.
- v. (a) Compare the shapes of the molecules: 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2-propanol. Note the dipole moment of each molecule. (b) Show how the shapes affect the trend in boiling points: (118 °C, 100 °C, 108 °C, 82 °C, respectively).
- vi. Build and minimize organic compounds of your choice containing the following functional groups. Note the dipole moment of each compound: (a) alkyl halide (b) aldehyde (c) ketone (d) amine (e) ether (f) nitrile (g) thiol (h) carboxylic acid (i) ester (j) amide.
- vii. (a) Determine the heat of hydration of ethylene. (b) Compute the resonance energy of benzene by comparison of its enthalpy of hydrogenation with that of cyclohexene.
- viii. Arrange 1-hexene, 2-methyl-2-pentene, (*E*)-3-methyl-2-pentene, (*Z*)-3-methyl-2-pentene, and 2,3-dimethyl-2-butene in order of increasing stability.
- ix. (a) Compare the optimized bond angles H₂O, H₂S, H₂Se. (b) Compare the HAH bond angles for the second row dihydrides and compare with the results from qualitative MO theory.

Note: Software: ChemSketch, ArgusLab (www.planaria-software.com), TINKER 6.2 (dasher.wustl.edu/ffe), WebLab Viewer, Hyperchem, or any similar software

		Semester-VI
18CHU604A	BASIC ANALYTICAL CHEMISTRY	3H 3C

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External: 60 Total:100

End Semester Exam: 3 hrs.

Course objectives

The course enables the students have to interpret

- The interdisciplinary nature of analytical chemistry
- The various methods involved in the analysis of soil ,
- Analyse water
- Analys food products
- Concepts of pH
- The various methods involved in the analysis of cosmetics

Course outcome

The course enables the students have to interpreted

1. The interdisciplinary nature of analytical chemistry
2. The various methods involved in the analysis of soil ,
3. Analysis water
4. Analysis of food products
5. Concepts of pH
6. The various methods involved in the analysis of cosmetics

UNIT I

Introduction: Introduction to Analytical Chemistry and its interdisciplinary nature. Concept of sampling. Importance of accuracy, precision and sources of error in analytical measurements. Presentation of experimental data and results, from the point of view of significant figures.

UNIT II

Analysis of soil: Composition of soil, Concept of pH and pH measurement, Complexometric titrations, Chelation, Chelating agents, use of indicators

- a. Determination of pH of soil samples.
- b. Estimation of Calcium and Magnesium ions as Calcium carbonate by complexometric titration.

UNIT III

Analysis of water: Definition of pure water, sources responsible for contaminating water, water sampling methods, water purification methods.

- a. Determination of pH , acidity and alkalinity of a water sample.
- b. Determination of dissolved oxygen (DO) of a water sample.

UNIT IV

Analysis of food products: Nutritional value of foods, idea about food processing and food preservations and adulteration.

- a. Identification of adulterants in some common food items like coffee powder, asafoetida, chilli powder, turmeric powder, coriander powder and pulses, etc.
- b. Analysis of preservatives and colouring matter.

Chromatography: Definition, general introduction on principles of chromatography, paper chromatography, TLC etc.

- a. Paper chromatographic separation of mixture of metal ion (Fe^{3+} and Al^{3+}).
- b. To compare paint samples by TLC method.

Ion-exchange: Column, ion-exchange chromatography etc. Determination of ion exchange capacity of anion / cation exchange resin (using batch procedure if use of column is not feasible).

UNIT V

Analysis of cosmetics: Major and minor constituents and their function

- a. Analysis of deodorants and antiperspirants, Al, Zn, boric acid, chloride, sulphate.
- b. Determination of constituents of talcum powder: Magnesium oxide, Calcium oxide, Zinc oxide and Calcium carbonate by complexometric titration.

18CHU604B PESTICIDE CHEMISTRY 3H 3C**Instruction Hours/week: L:3 T:0 P:0 Marks: Internal: 40 External: 60 Total:100****End Semester Exam: 3 hrs.****Course objectives**

The course enables the students to design

- The synthesis and manufacture of many natural fertilizers
- The synthesis and manufacture of many synthetic fertilizers
- The synthesis and manufacture of organochlorines
- The synthesis and manufacture organophosphorous compounds
- The synthesis and manufacture of quinine pesticides
- The synthesis and manufacture of anilides

Course outcomes

The students have designed

1. The synthesis and manufacture of many natural fertilizers
2. The synthesis and manufacture of many synthetic fertilizers
3. The synthesis and manufacture of organochlorines
4. The synthesis and manufacture organophosphorous compounds
5. The synthesis and manufacture of quinine pesticides
6. The synthesis and manufacture of anilides

Unit I

General introduction to pesticides (natural and synthetic), benefits and adverse effects.

Unit II

Changing concepts of pesticides, structure activity relationship.

Unit III

Synthesis and technical manufacture and uses of representative pesticides in the following classes: Organochlorines (DDT, Gammexene,)

Unit IV

Synthesis and technical manufacture and uses of Organophosphates (Malathion, Parathion); Carbamates (Carbofuran and carbaryl)

Unit V

Synthesis and technical manufacture and uses of Quinones (Chloranil), Anilides (Alachlor and Butachlor).

Practicals

1. To calculate acidity/alkalinity in given sample of pesticide formulations as per BIS specifications.
2. Preparation of simple organophosphates, phosphonates and thiophosphates

Suggested Reading

1. Cremllyn, R. (1978). *Pesticides. Preparation and Modes of Action*. New York: John Wiley & Sons.

Course objectives

The course enables the students have to interpret

- Estimation of macro nutrients
- The various methods involved in the analysis of soil ,
- Analyse of water
- Analyse food products
- Spectrophotometric Identification and Determination of Caffeine and Benzoic Acid in SoftDrink
- Spectrophotometric determination of Iron in Vitamin

Course outcome

The course enables the students have to interpreted

1. Estimation of macro nutrients
2. The various methods involved in the analysis of soil
3. Analysis water
4. Analysis of food products
5. The various methods involved in the analysis of cosmetics
6. Spectrophotometric Identification and Determination of Caffeine and Benzoic Acid in SoftDrink
7. Spectrophotometric determination of Iron in Vitamin

Applications (Any one):

- a. To study the use of phenolphthalein in traps cases.
- b. To analyze arson accelerants.
- c. To carry out analysis of gasoline.

Instrumental demonstrations:

- a. Estimation of macro nutrients: Potassium, Calcium, Magnesium in soil samples by flamephotometry.
- b. Spectrophotometric determination of Iron in Vitamin / Dietary Tablets.
- c. Spectrophotometric Identification and Determination of Caffeine and Benzoic Acid in Soft Drink.

The lab course enables the student to solve

- the calculation of acidity in given sample of pesticide formulation
- the calculation of alkalinity in given sample of pesticide formulation
- the synthesis of simple organophosphates,
- the synthesis of phosphonates
- the synthesis of thiophosphates
- Alayse organophosphates, phosphonates and thiophosphates

Course outcomes

The students have solved

1. the calculation of acidity in given sample of pesticide formulation
2. the calculation of alkalinity in given sample of pesticide formulation
3. the synthesis of simple organophosphates
4. the synthesis of phosphonates
5. the synthesis of thiophosphates
6. Alaysis of organophosphates, phosphonates and thiophosphates

Practicals

1. To calculate acidity/alkalinity in given sample of pesticide formulations.
2. Preparation of simple organophosphates, phosphonates and thiophosphates

M.Sc. CHEMISTRY
CHOICE BASED CREDIT SYSTEM (CBCS)

Syllabus
2018-2019

DEPARTMENT OF CHEMISTRY
FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)
(Established under section 3 of UGC Act, 1956)
Pollachi Main Road, Eachanari (Post), Coimbatore- 641021,

Tamil Nadu, India

Phone: 0422 – 2980011 – 15 Fax No: 0422 – 2980022-23

Email: info@karpagam.com Web: www.kahedu.edu.in

Programme Learning Outcomes (PLO)

- a. Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Analytical, Inorganic, Organic and Physical Chemistries.
- b. Students will be able to design and carry out scientific experiments as well as accurately record and analyze the results of such experiments.
- c. Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
- d. Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.
- e. Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.
- f. Students will appreciate the central role of chemistry in our society and use this as a basis for ethical behavior in issues facing chemists including an understanding of safe handling of chemicals, environmental issues and key issues facing our society in energy, health and medicine.
- g. Students will be able to function as a member of an interdisciplinary problem solving team.
- h. The graduate has specific skills in planning and conducting advanced chemical experiments and applying structural-chemical characterisation techniques.
- i. Are able to use modern instrumentation and classical techniques, to design experiments, and to properly record the results of their experiment.
- j. Are able to use modern library searching and retrieval methods to obtain information about a topic, chemical, chemical technique, or an issue relating to chemistry.

Programme Specific outcome (PSO)

- k. A graduate with a Master's degree in Chemistry has in-depth and detailed functional knowledge of the fundamental theoretical concepts and experimental methods of chemistry.
- l. Students should have an advanced level understanding of the following areas of chemistry - Analytical, Inorganic, Organic, and Physical Chemistry. They should master graduate level understanding of their major area(s) of research.
- m. Students should be able to communicate scientific results in writing and in oral presentation.

- n. Students should become proficient in their specialized area of chemistry and acquire the basic tools needed to carry out independent chemical research

Programme Educational Objectives

PEO-1

The Masters in Chemistry will extend your depth and breadth of knowledge in all branches of chemistry, suitable for a professional chemist capable of conducting research.

PEO-2

To carryout research in the trust areas of chemistry. Will be able to communicate effectively the scientific information and research results in written and oral formats, to both professional scientists and to the public.

PEO-3

To motivate critical thinking and analytical skills to solve complex chemical problems and the Ability to handle problems of practical relevance to society while complying with economical, environmental, ethical, and safety factors.

PEO-4

To practice chemistry by performance of experiments in the laboratory classes. To perform accurate quantitative measurements with an understanding of the theory and use of contemporary chemical instrumentation, interpret experimental results, perform calculations on these results and draw reasonable, accurate conclusions

Course Objectives

This course enables the students

- To understand aromaticity.
- To provide a versatile knowledge of different name reactions and their application in synthesis.
- To learn about familiar addition and elimination reactions.
- To gain knowledge about reaction intermediates.
- To understand the principles and reaction mechanisms involving various electrophilic and nucleophilic, addition and elimination reactions.
- To relate the different organic reaction mechanisms.

Course outcomes (CO's)

On the completion of this course, students should have to

1. Learned the concept aromaticity and various types of aromaticity
2. Familiarized the various types of electrophilic and nucleophilic substitution reactions and their Mechanism
3. Learned the familiar addition and elimination reactions
4. Learned the concept of reaction intermediates.
5. Understood about the synthesis aromatic compounds using electrophilic and nucleophilic substitution, addition and elimination reactions.
6. Described the various organic reaction mechanisms.

UNIT I - Aromaticity and chemical methods in mechanisms

Aromaticity - introduction - aromaticity of benzenoid and heterocyclic compounds. Non-benzenoid aromatics – annulenes, azulenes, ferrocenes and fulvenes.

Kinetic and non-kinetic methods of study of reaction mechanisms - kinetic methods-Primary and secondary kinetic isotopic effects. Non-kinetic methods - study of intermediates, isotopic labeling, stereochemical studies, energy profile diagrams and cross over experiments. Hammond's postulate. Kinetic and thermodynamic control.

Linear free energy relationship - Hammett equation and Taft equation.

UNIT II – Addition Reactions

Electrophilic, nucleophilic and free radical addition to double and triple bonds - hydration, hydroxylation, Michael addition, hydroboration and epoxidation.

Addition reactions to carbonyl compounds – Mannich reaction, Meerwein Ponderoff-Verley reduction, Grignard, Claisen, Dieckmann, Stobbe, Knoevenagel, Darzen, Wittig, Thorpe and Benzoin reactions.

UNIT III – Electrophilic substitution reactions

Aromatic electrophilic substitution reactions-formylations–Gattermann, Gattermann Koch and Riemeier Tiemann reactions. Kolbes, Bischler-Napieralski and Hofmann-Martius reactions. Friedel crafts alkylation and acylations and Vilsmeier-Haack reaction.

Aliphatic electrophilic substitution reactions - mechanisms- SE1, SE2 and SEi - structure reactivity relationship, typical electrophilic substitution reactions - Friedel crafts acylation at olefinic carbon, Stork enamine reaction and decarboxylation of aliphatic acids.

UNIT IV – Nucleophilic substitution reactions

Aliphatic nucleophilic substitution reactions- mechanisms - SN1, SN2, ion pair and SNi-substitution at vinyl carbon. Stereochemistry of nucleophilic substitution reaction - effect of substrate structure - solvent effects - leaving group effect – nucleophilicity, ambident nucleophiles and ambident substrates- neighbouring group participation.

Aromatic nucleophilic substitution reactions - benzyne mechanism, intermediate complex mechanism and SN1 mechanism, structure reactivity relationship.

Ziegler alkylation and Chichibabin reaction.

UNIT V- Elimination reactions

Mechanisms - E1, E2, Ei and E1cB mechanisms- stereochemistry of eliminations. Hofmann rule-Saytzeff rule-Bredts rule – Substitution versus Elimination. Typical elimination reaction - Chugaev reaction, Hofmann degradation and Cope elimination.

Carbenes and nitrenes - structure, generation and reactions.

Retrosynthesis: Disconnections, synthon, linear and convergent synthesis, umpolung of reactivity

18CHP102	INORGANIC CHEMISTRY-I	Semester-I
	(NUCLEAR CHEMISTRY AND METALLIC CLUSTERS)	4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100
External Semester Exam: 3 Hrs

Course Objectives

This course enables the students,

- To learn the nuclear structure, stable and unstable atomic nuclei, nuclear reactions and different modes of radioactive decay and also methods for measurements of radioactivity.
- To analyses the various defects and its application on inorganic crystals.
- To understand the detection of radioactive rays and to measure the radiation.
- To learn about the fundamentals of metallic clusters.
- To understand the chemistry of boranes and related compounds.
- To apply the knowledge to know about the various forms of inorganic compounds

Course outcomes

On the completion of this course, Students should have to

1. Described the basic concepts of nuclear chemistry and types of nuclear reactions.
2. Discriminate the various defects and also known about its application on inorganic crystals
3. Understood the Basics of metallic clusters, preparation, properties and applications of metallic clusters
4. Learned the structure and bonding in molecules / ions and predict the structure of molecules / ions.
5. Described the type of defects in metals and about semi conductors
6. Understood the inorganic and organometallic chemistry, catalysis in the molecular level

UNIT I – Inorganic Clusters

Inorganic chains – rings - cages and clusters (definition and structure) - metal clusters - dinuclear clusters - trinuclear clusters - tetranuclear clusters - hexanuclear clusters – organometallic clusters. Silicates and siloxanes.

Boranes, boron hydrides (structure and properties) – carboranes - metallocarboranes - Wade's theory -closo-nido and arachno structures - borazines, phosphazenes – Sulphur- Nitrogen ring compounds. Isopoly and heteropoly acids of V, Cr, Mo and W.

UNIT II – Metallic State and Organometallic chemistry

Metallic state-free electron, band and zone theories - non stoichiometry - point defects in solids - Schottky and Frenkel defects - linear effects - dislocation - effects due to

dislocation - electrical properties of solids - insulators-intrinsic semiconductors - n and p type and super conductors - ceramics elementary treatment.

Basic Organometallic Chemistry: Common notation used in organometallic chemistry- Metal-ligand interactions; Basic principles of ligand-field theory; molecular orbital theory - 18-electron rule - Common organometallic bonding modes – Introduction to Metal-centered organometallic reactions.

UNIT III – Heterogenous catalytic reactions

Organometallic compounds in homogeneous catalytic reactions-coordinative unsaturation – acid-base behavior reaction – migration of atoms or groups from metal to ligand – insertion reaction – reactions of coordinated ligands – catalytic reactions of alkenes – isomerisation of alkenes – hydrogenation – hydroformylation and hydrosilation of alkenes – alkene polymerization and oligomerisation – fluxional molecules.

UNIT IV- Nuclear Chemistry

Nuclear Chemistry - the nucleus - subatomic particles and their properties, binding energy. N/P ratios in stable and meta stable nuclei - different type of nuclear forces - liquid model- shell model. Modes of radioactive decay - α , β and γ decay radiation, electron capture, nuclear isomerism and internal conversion.

UNIT V – Nuclear Reactions

Nuclear reactions - Bethes's notation, Q-value, columbic barrier, cross section, different types of nuclear reactions - projectiles capture - particle emission, spallation, fission, fusion, theories of fission, use of fission products, nuclear reactors - fissile and fertile isotopes- U^{233} , U^{235} , Pu^{239} , Th^{232} , -atomic power projects in India, stellar energy, synthetic elements - application of radio isotopes - Hot atom chemistry.

18CHP103	PHYSICAL CHEMISTRY- I (QUANTUM CHEMISTRY AND GROUP THEORY)	Semester-I 4H 4C
<hr/>		
Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100 External Semester Exam: 3 Hrs		

Course Objectives

This course enables the students,

- To study the fundamentals and applications of classical mechanics and quantum chemistry
- To understand the structure of an atom and different approximation methods
- To learn the concept of Group theory and their applications.
- To discuss the molecular phenomena and its model problems
- To explain the probabilities, amplitudes, averages, expectation values and observables.
- To analyses the concept of group theory to predict the spectroscopic properties of a molecules

Course Outcomes (CO's)

On the completion of this course, Students should have to

1. The differences between classical and quantum mechanics. The limitations of classical mechanics.
2. the connection of quantum mechanical operators to observables
3. probabilities, amplitudes, averages, expectation values, and observables
4. how molecular phenomena can be related to model problems
5. the fundamentals of group theory
6. the connection between common approximation methods and standard chemical frameworks (Born-Oppenheimer approximation, molecular orbitals, for example)
7. Identified the point groups of molecules and apply the concept of group theory to predict the spectroscopic properties.

UNIT I – Failure of classical mechanics and Operators

Failure of classical mechanics and the success of quantum theory in explaining black body radiation and photoelectric effect.

The time dependent and time independent Schrodinger equations - Born's interpretation of the wave function. Requirements of the acceptable wave function.

Algebra of operators. Sums and products of operators - commutator - linear operators- eigen functions and eigen values - correspondence between physical quantities in classical mechanics and operators in quantum mechanics - Hamiltonian operator - angular momentum operator.

Quantization of angular momentum and its spatial orientation - average values - postulates of quantum mechanics.

UNIT II – Schrodinger equation

Particle in a one-dimensional box - quantization of energy - normalization of wave function - orthogonality of the particle in a one-dimensional box wave functions. Illustration of the uncertainty principle and correspondence principle with reference to the particle in a one-dimensional box - particle in a three dimensional box - separation of variables.

Solving of Schrodinger equation for one-dimensional harmonic oscillator. Harmonic oscillator model of a diatomic molecule. Illustration of the uncertainty principle and correspondence principle with reference to harmonic oscillator.

Solving of Schrodinger equation for a rigid rotor. Rigid rotor model of a diatomic molecule.

UNIT III – Approximation Methods

Schrodinger equation for the H-atom (or H-like species)- separation of variables - energy levels. Radial distribution functions - orbitals and orbital shapes. Probability density and radial distribution functions.

Need for approximation methods. The perturbation theory- application of perturbation method to systems such as anharmonic oscillator and He-atom.

The variation method - application of variation method to systems such as anharmonic oscillator and He-atom.

UNITIV – Symmetry elements and Matrices

Symmetry elements and symmetry operations - definition of identical and equivalent elements configurations - effect of performing successive operations commutative and non-commutative - inverse operations.

Groups and their basic properties - definition of a group - basic properties of a group-definition of abelian - cyclic- isomorphic, finite, infinite groups and subgroup. Symmetry classification of molecules into point groups-Schoenflies symbol (only-difference between point group and space group).

Matrices- Definition of matrix, square matrix, diagonal matrix, null matrix, unit matrix, row matrix, column matrix, symmetric matrix, skew symmetric matrix and conjugate matrix. Multiplication, commutative and non commutative-determination of inverse of a matrix, block multiplication of matrices-addition and subtraction of matrices.

Matrix notations for symmetry operations of C_{2v} and C_{3v} groups-construction of character tables for C_{2v} and C_{3v} point groups.

UNIT V – Group theory

Definition of reducible and irreducible representations - irreducible representations as orthogonal vectors - direct product rule, the great orthogonality theorem and its consequences - determinations of the characters for irreducible representation of C_{2v} and C_{3v} point groups using the orthogonality theorem.

Group theory and Vibrational spectroscopy - vibrational modes as basis for group representation - symmetry selection rules for IR and Raman spectra, Mutual exclusion principle - classification of vibrational modes.

18CHP104	ORGANIC AND INORGANIC SPECTROSCOPY	Semester-I 4H 4C
Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100		
External Semester Exam: 3 Hrs		

Course Objective

This course enables the students

- To learn about Electronic spectroscopy.
- To understand about IR spectroscopy.
- To understand the basic concept of NMR spectroscopy
- To apply the different aspects of NMR spectroscopy to predict the structure of compounds.
- To learn about the mass spectroscopy and Mossbauer spectroscopy.
- To learn about the invaluable tools in synthetic chemistry for the confirmation of known molecules and elucidation of shape and structures of unknown compounds of high complexity with a high degree of certainty.

Course outcomes

On completion of this course, students to have

1. Understood the basic concepts of Electronic and IR spectroscopy.
2. Understood the valuable concepts in NMR spectroscopy.
3. Learned the basic knowledge about Mass spectroscopy.
4. Applied the different aspects of NMR spectroscopy to predict the structure of compounds.
5. Analyzed and identified simple organic molecules by using UV, IR, ^1H -NMR and ^{13}C -NMR and Mass spectral data.
6. The students learned how to interpret the spectral data and to identify the structure of the molecules

UNIT I – Ultraviolet and Visible Spectroscopy

Electronic spectra of diatomic molecules - laws of photochemistry - electronic absorption transitions-correlation of electronic structure with molecular structure - simple chromophoric groups - effects of conjugation - Woodward -Fisher rules for α , β unsaturated carbonyl compounds & dienes - aromatic systems with extended conjugation - applications to organic and inorganic compounds - Instrumentation.

UNIT II – Infrared Spectroscopy

The vibrating diatomic molecules-the simple harmonic oscillator and anharmonic oscillator - the diatomic rotor - factors influencing vibrational frequencies - identification of fundamental groups.

Fingerprint region-application to organic and inorganic compounds-Instrumentation.

UNIT III- NMR Spectroscopy

Principle of NMR spectroscopy – description of the PMR instrument, factors affecting chemical shifts-chemical shift equivalence and magnetic equivalence - spin-spin coupling - first order and non first order spectra - Hetero nuclear coupling in ^1H NMR - deuterium exchange - high field spectra - double resonance-shift reagents-applications to organic and inorganic compounds. FT NMR.

^{13}C NMR spectroscopy-factors affecting the chemical shifts - broad band and off-resonance decoupling - applications in organic chemistry.

UNIT IV – Mass Spectroscopy

Principles of mass spectrometry – resolution - description of single focusing and double focusing electron impact mass spectrometers - presentation and analysis of spectra - determination of molecular formulae - Nitrogen rule- Stevenson's rule - isotope abundance analysis - meta stable ions and peaks the molecular ion peak - fragmentation processes - Retro Diels - Alder rearrangement - McLafferty rearrangement - ortho effect - fragmentation associated with functional groups - aldehydes, ketones, carboxylic acids, esters, amides, alcohols, thiols, amine, ethers, sulphides and halides..

UNIT V – Mossbauer Problems

Mossbauer spectroscopy – principles - spectrometer - isomer shift - quadrapole interaction - nuclear Zeeman splitting – applications.

Problems involving UV, IR, NMR, Mass spectral data (for compounds not more than 10 carbon atoms).

Semester-I

ELECTIVE I			
18CHP105-A	GREEN CHEMISTRY	4H	4C
Instruction Hours/week: L:4 T:0 P:0		Marks: Internal:40	External: 60 Total:100
External Semester Exam: 3 Hrs			

Course Objectives

This course enables the students

- To introduce the concept of Green chemistry.
- To understand the basics of Medicinal chemistry.
- To introduce the 12 principles of Green chemistry as well as the tools of Green chemistry.
- To demonstrate how to evaluate a reaction or process and determine “Greener” alternatives.
- To focus on the application of greener routes to improve industrial processes and to produce important products.
- To understand the greener synthetic pathway to produce pharmacological compounds.

Course outcomes

The student understood the following

1. Designed of chemical products and processes that reduce or eliminate the use and generation of hazardous substances.
2. Created awareness for reducing waste, minimizing energy consumption in organic synthesis.
3. Implemented techniques of green synthesis in organic reactions
4. Used the various alternative resources for green technology in organic synthesis.
5. Understood the various greener synthetic pathways and implement it in the production of pharmacological compounds.
6. Applied the concept of microwaves and ionic liquids in various chemical reactions.

UNIT I- Introduction to Green Chemistry and Principles of Green Chemistry

What is Green Chemistry? Need for Green Chemistry. Goals of Green Chemistry. Limitations/ Obstacles in the pursuit of the goals of Green Chemistry. Twelve principles of Green Chemistry with their explanations.

UNIT II-Designing a Green Chemical synthesis

Designing a Green synthesis using these principles: prevention of waste/ byproducts; maximum incorporation of the materials used in the process into the final products, atom economy, and calculation of atom economy of the rearrangement, addition, substitution and elimination reactions. Green solvents– supercritical fluids, water as a solvent for organic reactions, ionic

Master of Science, Department of Chemistry, Karpagam Academy of Higher Education, (Deemed to be University), Coimbatore - 641 021.

liquids, fluorous biphasic solvent, PEG, solvent less processes, immobilized solvents and how to compare greenness of solvents.

UNIT III – Alternative sources of Energy

Energy requirements for reactions – alternative sources of energy: use of microwaves and ultrasonic energy. Microwave assisted reactions in water: Hofmann elimination, methyl benzoate to benzoic acid, oxidation of toluene and alcohols; microwave assisted reactions in organic solvents. Diels-Alder reaction and decarboxylation reaction. Ultrasound assisted reactions: sono chemical Simmons-Smith Reaction (Ultrasonic alternative to iodine).

UNIT IV- Green synthesis/reaction

Green starting materials, Green reagents, Green solvents, reaction conditions, Green catalysis and Green synthesis- Real world cases (Traditional processes and green ones) Synthesis of Ibuprofen, Adipic acid, disodium iminodiacetate (alternative to Strecker synthesis).

UNIT V- Hazard assessment and mitigation in chemical industry

Future trends in Green Chemistry-oxidation-reduction reagents and catalysts; biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; Noncovalent derivatization. Biomass conversion, emission control and biocatalysis.

SUGGESTED READINGS

Semester-I

ELECTIVE I

18CHP105-B

MEDICINAL CHEMISTRY

4H 4C

Instruction Hours/week:L:4T:0P:0 Marks: Internal:40 External: 60 Total:100

External Semester Exam: 3 Hrs

Course Objectives

This course enables the students

- To understand the basics of Medicinal chemistry.
- To know the drug targets, drug metabolism and about clinical training..
- To understand the in-silico techniques involved in drug development.
- To clear discussion about membrane and receptors in drug delivery process.
- To apply the various theoretical laws to predict the pharmaco-kinetics of the compounds.
- To analyses the molecular receptor binding and molecular recognition of the natural and synthetic compounds.

Course Outcomes

On the completion of the course, students to

1. Understood the basics of Medicinal chemistry.
2. Knew the drug targets, drug metabolism and about clinical training.
3. Understood in-silico techniques involved in drug development.
4. Discussed about membrane and receptors in drug delivery process.
5. Applied the various theoretical laws to predict the pharmaco-kinetics of the compounds.
6. Analyzing the molecular receptor binding and molecular recognition of the natural and synthetic compounds.

UNIT I - Drug discovery, design and development

Synthesis of the representative drugs of the following classes: analgesic, antipyretic and anti-inflammatory agents (Aspirin, paracetamol and Ibuprofen); antibiotics (Chloramphenicol); antibacterial agents (Sulphonamides), antiviral agents (Acyclovir), Central Nervous System agents (Phenobarbital and Diazepam).

UNIT II- Insilco Drug Design and Computer Assisted New Lead Design

Introduction, historical perspective, drug compounds, preparation and organization for drug seeking, common stages in the drug seeking campaign, sources of hits, leads and candidate drugs, natural products: higher plant and animal products, combinatorial libraries, lead optimization. Introduction, basic concepts, molecular recognition by receptor and ligand design, active conformation, approaches to discover new functions, approaches to the cases with known and

unknown receptor structure and molecular docking study. Introduction to drug metabolism, toxicity and pharmacokinetics, toxicology considerations, problems and drawbacks on drug discovery and development.

UNIT III - Membranes and Receptors

Drug transport mechanism and absorption processes, pharmacodynamic and pharmacokinetic aspects, prodrugs and bioactivation, receptor theories and receptor models, drug receptor interactions drug design, physiochemical principles and basis of drug design, different methods of drug design,

UNIT IV - QSAR

Electronic effects; Hammett equation, Lipophilicity effects; Hansch equation, Steric Effects; Taft Equation; Experimental and theoretical approaches for the determination of physico-chemical parameters, parameter inter-dependence; linearity versus non-linearity; The importance of biological data in the correct form; Molecular docking and dynamics: Rigid docking, flexible docking and manual docking.

UNIT V- Molecular Recognition in Drug-Receptor Binding

Molecular forces and binding energetic, enzyme inhibitors - modes of inhibition and general approaches. Antibacterial drugs - major drug classes and drug resistance, antiviral drugs- major drug classes and drug resistance, anticancer drugs- major cancer drug targets, major drug classes and drug resistance.

Semester-I

ELECTIVE I

18CHP105-C	MOLECULAR MODELLING & DRUG DESIGN	4H	4C
Instruction Hours/week:L:4T:0 P:0		Marks: Internal:40 External: 60	Total:100
		External Semester Exam: 3 Hrs	

Course Objectives

This course enables the students

- To the students should be acquainted with theoretical and practical knowledge of molecular modeling tools and techniques for drug design and discovery.
- To get knowledge of molecular modeling software will be useful for commercial projects related to drug discovery and developments.
- To understand the detailed knowledge and skill is given in the course and the students get acquired the same after studying the course.
- To study about the importance of pharmacophores in drug discovery process.
- To practice some online softwares to predict the physical and biological properties of natural/synthesized molecules.
- To apply the in-silico techniques to evaluate the drug-receptor binding affinities of the compounds.

Course outcomes (CO's)

On completion of this course, students have

1. Gained the knowledge on the molecular modeling and field effects as a part of drug discovery.
2. Understood on the various stages and various targets of drug discovery.
3. Learned the importance of the pharmacophores in drug discovery.
4. Studied the importance of the role of computer aided drug design in drug discovery.
5. Practiced some online softwares to predict the physical and biological properties of natural/synthesized molecules.
6. Applied the in-silico techniques to evaluate the drug-receptor binding affinities of the compounds.

UNIT I- Introduction to Molecular Modelling

Introduction-Useful concepts in molecular modelling: Coordinate systems. Potential energy surfaces. Molecular graphics. Surfaces. Computer hardware and software. The molecular modelling literature.

UNIT II- Force Fields

Fields. Bond stretching. Angle bending. Introduction to nonbonded interactions. Electrostatic interactions. Van der Waals Interactions. Hydrogen bonding in molecular mechanics. Force field models for the simulation of liquid water.

UNIT III- Basics of molecular modelling

Basics of molecular modelling, methods, steps involved in MM, selection of target and template, homology modelling, refinement and validation-SAVES server, the critical assessment of protein structure prediction (CASP), superposition of proteins using different tools, RMSD, presentation of protein conformations, hydrophobicity factor, shape complementary.

UNIT IV - Pharmacophore

Historical perspective and viewpoint of pharmacophore, functional groups considered as pharmacophores, Ehrlich's "Magic Bullet", Fischer's "Lock and Key", two-dimensional pharmacophores, three-dimensional approach of pharmacophores, criteria for pharmacophore model, pharmacophore model generation software tools, molecular alignments, handling flexibility, alignment techniques, scoring and optimization, pharmacophores, validation and usage, automated pharmacophore generation methods, GRID-based pharmacophore models, pharmacophores for hit identification, pharmacophores for human ADME/tox-related proteins.

UNIT V - Computer aided Chemistry: Structure Prediction and Drug Design

Introduction to molecular docking, rigid docking, Flexible docking, manual docking, advantage and disadvantage of flex-X, flex-S, AUTODOCK and other docking software, scoring functions, simple interaction energies, GB/SA scoring (implicit solvation), CScore (consensus scoring algorithms).

18CHP111 ORGANIC CHEMISTRY PRACTICAL-I		Semester -I
(QUALITATIVE ANALYSIS AND SINGLE STAGE PREPARATIONS)		4H 2C
Instruction Hours/week:L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100		
		External Semester Exam: 6 Hrs

Course Objectives

The course enables the students should have

- To learn about the qualitative analysis by semi micro-qualitative analysis method.
- To learn the preparation of inorganic complexes.
- To describe the basic concept and advantages of semi- micro qualitative analysis.
- To understand the systematic separation d-block elements
- To study the step wise procedure to predict the anions along with metals
- To identify the d-block elements with their special tests.

Course Outcomes

Students have to,

1. Learned about the qualitative analysis by semi micro-qualitative analysis method.
2. Learned the preparation of inorganic complexes.
3. Described the basic concept and advantages of semi- micro qualitative analysis.
4. Understood the systematic separation d-block elements
5. Studied the step wise procedure to predict the anions along with metals
6. Identified the d-block elements with their special tests.

Contents

Analysis of two – component mixtures: Separation and characterization of compounds.

Note: Each student should analyze a minimum of six organic mixtures.

Preparations involving one stage comprising of the following process: Nitration, acylation, halogenation, diazotisation, rearrangement, hydrolysis, reduction, alkylation and oxidation and one preparation illustrating the following: Benzoin condensation, Cannizzaro reaction, Perkin reaction, Reimer-Tiemann reaction, Sandmeyer reaction, Fries rearrangement, Skraup synthesis-single stage.

Note: Each student should do a minimum of six preparations involving single stage.

(QUANTITATIVE ANALYSIS AND DOUBLE STAGE PREPARATIONS)				
<hr/>				
Instruction Hours/week:L:0 T:0 P:4		Marks: Internal:40	External: 60	Total:100
			External Semester Exam: 6 Hrs	

Course Objectives

Course enables the students should have

- To learn about the basic principles about quantitative analyses.
- To study the concepts and systematic procedure in gravimetric analysis.
- To must know about the systematic procedure for estimation.
- To describe the synthesis method for in-organic co-ordination complexes
- To separate the molecules and identify its nature through chromatography technique.
- To apply this ideas and concepts to water treatment process, food science and forensic fields.

Course Outcomes

On successful completion of the course the students should have

1. Learned about the basic principles about quantitative analyses.
2. Studied the concepts and systematic procedure in gravimetric analysis.
3. Knew about the systematic procedure for estimation.
4. Described the synthesis method for in-organic co-ordination complexes
5. Known about separate the molecules and identify its nature through chromatography technique.
6. Applied this ideas and concepts to water treatment process, food science and forensic fields.

Contents

Estimation of phenol, ethyl methyl ketone, glucose, nitro, amino and methoxy groups, unsaturation in an organic compound.

Analysis of oils Reichert- Meissl value, Iodine value, saponification value and acetyl value.

Double stage preparations- Anthranilic acid and pthalimides.

Extraction and estimation of active constituents

Only for learning purpose and demo (Not for exam)

- a. Lactose from milk.
- b. Caffeine from tea.

- c. Nicotine from tobacco extract.
- d. Citric acid or ascorbic acid from a tablet or from a natural source.
- e. Curcumin from turmeric.
- f. Lycopene from tomato.

18CHP201	ORGANIC CHEMISTRY-II	Semester - II
(REARRANGEMENTS, REACTIONS, PHOTOCHEMISTRY AND PERICYCLIC REACTIONS)		
Instruction Hours/week:L: 4 T:0 P:0	Marks: Internal:40	External: 60 Total:100
Course Objectives		
External Semester Exam: 3 Hrs		

Course Objectives

On successful completion of the course the students should have

- To know about versatile knowledge of rearrangements
- To understand the different organic (radical and concerted) reactions and their applications in synthesis.
- To learn the principles of conformational analysis and stereochemistry.
- To explain the concepts in organic photochemistry
- To describe the basic ideas about pericyclic reactions
- To implement this basic concept to design and produce the new organic molecules

Course outcomes (CO's)

1. Understood the versatile knowledge of rearrangements
2. Understood the different organic reactions (radical and concerted).
3. Learned about the principle of conformational analysis and stereochemistry.
4. Explained about the molecular rearrangements, Pericyclic reactions and Cyclo addition and sigmatropic reactions
5. Described the basic ideas of pericyclic reactions.
6. Designed new form of organic compounds using these basic concepts.

UNIT I – Molecular rearrangements

Intramolecular 1,2 - shifts - Wagner - Meerwein and Pinacol-Pinacolone rearrangements.

Migration to carbonyl carbon – Demjanov and Neber rearrangements.

Rearrangements to electron deficient nitrogen and oxygen – Baeyer – Villiger, Dienone - phenol, Favorskii, Fries, Wolff, Benzidine, Hoffmann Rearrangement and Stevens rearrangements.

Non-cyclic rearrangements – Chapman and Wallach rearrangements.

UNIT II – Conformational analysis and stereochemistry

Stereochemistry of sulphur and nitrogen compounds, stereoselective and stereospecific reactions - R/S-notation of optically active carbon compounds. Optical isomerism of biphenyls, allenes and spiranes. Planar chirality - cyclophanes and ansa compounds - geometrical isomerism - E/Z notation-configuration in aldoximes and ketoximes. Conformation in cyclic system–decalins, perhydrophenanthrene and perhydroanthracene. Conformation and reactivity of cyclohexanes.

UNIT III – Radical reactions

Configuration and generation of short lived free radicals-characteristics of free radical reactions – radical substitution, radical additions and rearrangement of free radicals. Typical reactions such as Sandmeyer, Gomberg, Pechmann, Ullmann, Pschorr and Hunsdiecker reactions.

Oxidation and reductions- mechanisms – aromatisation, oxidation of alcohols and glycols, ozonolysis, Sommelet reaction and selectivity in reduction-metal hydride reduction- reduction of nitro compounds and acyloin condensation.

UNIT IV – Organic Photochemistry

Introductory theory of light absorption- Jablonski diagram-photophysical processes- excimers and exciplexes - energy transfer-geometry of excited states – quantum efficiency - photochemical reaction of ketones- Norrish type-I and type-II reactions. Paterno Buchi reaction- cis and trans isomerisation-Photo-Fries rearrangement and Ene reaction and Di-pi methine rearrangement. Barton reaction.

UNIT V – Pericyclic reactions

Definition-classification-characteristic features- the electrocyclic reaction-Woodward – Hofmann rules- orbital correlation diagram- the Frontier molecular orbital theory-electrocyclic conversion of 1,3-dienes and 1,3,5-trienes. Cycloaddition – [2+2] addition-Diel's Alder reaction- stereochemistry of Diel's Alder reaction. Sigmatropic reactions – [1,3], [1,5] and [3,3] sigmatropic shifts - Cope and Claisen rearrangements.

18CHP202	INORGANIC CHEMISTRY- II (CO-ORDINATION CHEMISTRY)	Semester-II 4H 4C
Instruction Hours/week:L: 4 T:0 P:0		Marks: Internal:40 External: 60 Total:100
		External Semester Exam: 3 Hrs

Course objectives

This course enables the students

- To understand the theories of bonding in coordination compounds.
- To study the kinetics and mechanisms of reactions of complex compounds.
- To understand the magnetic properties of coordination compounds.
- To learn about the coordination compounds present in the biological systems and their functions.
- To remember the types of coordination compounds like metal carbonyls, carbocyclic pi complex in coordination compounds
- To evaluate the geometries of simple molecules.

Course Outcomes

On the completion of this course, students should have to

1. Learned how to name coordination compounds and to be able to draw the structure based on its name
2. Used Crystal Field Theory to understand the magnetic properties (and in simple terms the colour) of coordination compounds
3. Described the stability of metal complexes by the use of formation constants and to calculate thermodynamic parameters from them
4. Recognized the types of coordination compounds like metal carbonyls, carbocyclic pi complexes in coordination compounds
5. Familiar with some reactions and applications of coordination compounds
6. Predicted the geometries of simple molecules

UNIT I – Coordination Chemistry and bonding

Nomenclature, isomerism and methods of preparation of coordination complexes- types of ligands.

Bonding: Valence bond theory- Crystal field theory – Crystal field effects in tetrahedral, octahedral and square planar symmetries. Crystal field stabilization energy - weak and strong fields- spectrochemical series. Molecular orbital theory: based on group theoretical approach. M.O. diagram of Oh, Td & square planar symmetries involving pi bonding- experimental evidence for the presence of pi bonding. Magnetic behaviour of the transition metal ions in crystal field and molecular orbital theories.

UNIT II – Electronic spectra of complexes

Term symbols for d configuration. Characteristics of d-d transition and selection rules. Weak and strong field limits. Orgel and Tanabe - Sugano diagrams. Jahn-Teller tetrahedral distortion and spin orbit couplings. Nephelauxetic effect - charge transfer spectra.

UNIT III – Metal carbonyls

Methods of preparation, structure, bonding and reactions. Carbonylate ions. Carbonyl hydrides– Vaska's compound, complexes of molecular nitrogen and oxygen. Nitrosyl complexes, dinitrogen complexes. Complexes of unsaturated hydrocarbons- alkenes, allyl and pentadienyl complexes.

UNIT IV – Carbocyclic pi complexes

Cyclopentadienyl and related complexes synthesis, bonding, structure and reaction. Arene complexes-complexes of biochemical importance: Cytochromes, Haemoglobin, Myoglobin, Cyanocobalamine, Chlorophyll- structure and functions.

UNIT V- Reactions of coordination compounds

Substitution reactions in square planar and octahedral complexes – Trans effect – mechanism of redox reactions.

Homogeneous catalysis by coordination compounds – hydroformylation –carboxylation of methanol – hydrogenation of unsaturated organic compounds.

18CHP203	PHYSICAL CHEMISTRY- II (CHEMICAL KINETICS AND ELECTROCHEMISTRY)	Semester-II 4H 4C
<hr/> Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100 External Semester Exam: 3 Hrs		

Course Objectives

This course enables the students

- To provide knowledge on fundamental understanding of chemical kinetics and to establish a relationship between the rate of reaction and the concentration of the reactants (the rate law, or rate equation).
- To apply the chemical kinetics concept to study the enzyme mechanisms.
- To provide knowledge to the students about coulometric methods and its application.
- To investigate the adsorption, classification of adsorption and factors affecting of adsorption over corrosion application.
- To remember the basic polarography concepts.
- To understand the theories of catalysis and types of catalysis.

Course outcomes

On the completion of this course, student have to

1. Student understood theories of reaction rates, how reaction rates are measured and represented in rate laws.
2. Understood the applications of chemical kinetics in studying enzyme mechanisms
3. Provided the knowledge of coulometric methods and applications.
4. Evaluated the electrochemical principles involved in corrosion and energy storage.
5. Remembered the basic polarography techniques.
6. Understood the theories of catalysis and types of catalysis

UNIT I – Theory of reaction rates

Arrhenius theory- hard - sphere collision theory of gas – phase reactions. Activated complex theory or Absolute reaction rate theory (ARRT) for ideal gas reactions (in terms of partition functions).

Reactions in solution: Comparison between gas-phase and solution reactions. The influence of the solvent on the reactions between ions. Influence of ionic strength on rates of reactions in solution - primary salt effect-influence of pressure on rates of reactions in solution -significance of volume and entropy of activations.

Study of fast reactions: Flow methods, pulse methods, relaxation methods, shock-tube method and nuclear magnetic resonance method.

UNIT II – Homogenous catalysis

Specific and general acid - base catalysis. Bronsted catalysis law- Hammett acidity functions. Enzyme catalysis (single substrate reaction only). Michaelis Menten law - Influence of pH and temperature on enzyme catalysis.

Surface phenomenon and heterogeneous catalysis: Adsorption and free energy relation at interfaces. Gibb's adsorption isotherm- physisorption and chemisorptions- Adsorption isotherms (Freundlich & Langmuir). Kinetics of heterogeneous catalysis- Langmuir - Hinshelwood and Langmuir - Rideal - Eley mechanisms.

UNIT III – Inter ionic attraction theory

Debye – Huckel – Onsager equation - Falkenhagen effect- Wien effect. Activity and activity coefficient- ionic strength- Debye – Huckel limiting law and its applications.

Theories of double layer. Helmholtz – Perrin - Gouy chapmann – Stern theories.

Nernst equation, redox systems and electrochemical cells

UNIT IV - Polarography

Current – voltage relationships-the dropping mercury electrode. Diffusion current- half – wave potentials. Applications of polarography- Amperometric titrations.

Fundamental principles of coulometric methods- constant current and controlled potential methods- simple applications.

UNIT V – Kinetics of corrosion

Importance–graphical presentation of kinetic data-exchange current density- different types of polarization of electrodes. Activation polarization and Tafel plots-mixed potential theory-application of electrode kinetics to experimental observations-faradic impedance and corrosion.

		Semester-II
18CHP204	INDUSTRIAL CHEMICALS AND ENVIRONMENT	4H 4C
Instruction Hours/week:L: 4 T:0 P:0		Marks: Internal:40 External: 60 Total:100
		External Semester Exam: 3 Hrs

Course Objectives

The course enables the students to

- Understand the industrial gases and inorganic chemicals which have an impact on the environment.
- Study about the general principles of metallurgy.
- Learn the environment and its segments.
- Discuss about the water pollution and water treatment.
- Explain the application of bio-catalysis in energy saving techniques.
- Apply this technique to design energy saving devices with eco-friendly method.

Course Outcomes

The course enables the students to

1. Understood the industrial gases and inorganic chemicals which have an impact on the environment.
2. Studied about the general principles of metallurgy.
3. Learned the environment and its segments.
4. Discussed about the water pollution and water treatment.
5. Explained the application of bio-catalysis in energy saving techniques.
6. Applying this technique to design energy saving devices with eco-friendly method.

UNIT I – Industrial Gases and Inorganic Chemicals

Industrial Gases: Large scale production, uses, storage and hazards in handling of the following gases: oxygen, nitrogen, argon, neon, helium, hydrogen, acetylene, carbon monoxide, chlorine, fluorine, sulphur dioxide and phosgene.

Inorganic Chemicals: Manufacture, application, analysis and hazards in handling the following chemicals: hydrochloric acid, nitric acid, sulphuric acid, caustic soda, common salt, borax, bleaching powder, sodium thiosulphate, hydrogen peroxide, potash alum, chrome alum, potassium dichromate and potassium permanganate.

UNIT II – Industrial Metallurgy: General Principles of Metallurgy

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon as reducing agent.

Hydrometallurgy, methods of purification of metals (Al, Pb, Ti, Fe, Cu, Ni, Zn): electrolytic, oxidative refining, Kroll process, Parting process, Van Arkel-de Boer process and Mond's process. Preparation of metals (ferrous and nonferrous) and ultrapure metals for semiconductor technology.

UNIT III – Environment and its segments

Ecosystems. Biogeochemical cycles of carbon, nitrogen and sulphur.

Air Pollution: Major regions of atmosphere. Chemical and photochemical reactions in atmosphere. Air pollutants: types, sources, particle size and chemical nature; Photochemical smog: its constituents and photochemistry. Environmental effects of ozone, Major sources of air pollution.

Pollution by SO₂, CO₂, CO, NO_x, H₂S and other foul smelling gases. Methods of estimation of CO, NO_x, SO_x and control procedures. Effects of air pollution on living organisms and vegetation. Greenhouse effect and Global warming, Ozone depletion by oxides of nitrogen, chlorofluorocarbons and halogens, removal of sulphur from coal. Control of particulates.

Unit IV- Water Pollution

Hydrological cycle, water resources, aquatic ecosystems, Sources and nature of water pollutants, techniques for measuring water pollution, Impacts of water pollution on hydrological and ecosystems.

Water purification methods. Effluent treatment plants (primary, secondary and tertiary treatment). Industrial effluents from the following industries and their treatment: electroplating, textile, tannery, dairy, petroleum and petrochemicals, agro, fertilizer, etc. Sludge disposal.

Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion exchange). Water quality parameters for waste water, industrial water and domestic water.

Unit V – Energy, Environment and Biocatalysis

Sources of energy: Coal, petrol and natural gas. Nuclear fusion / fission, solar energy, hydrogen, geothermal, tidal and hydel, etc. Nuclear pollution: Disposal of nuclear waste, nuclear disaster and its management.

Biocatalysis: Introduction to biocatalysis: Importance in “Green chemistry” and chemical industry.

18CHP205A	ELECTIVE-II RESEARCH METHODOLOGY FOR CHEMISTRY	Semester - II 4H 4C
-----------	---	--------------------------------

Instruction Hours/week:L:4 T:0 P:0 Marks: Internal:40 External: 60 Total:100
External Semester Exam: 3 Hrs

Course Objectives

The course enables the students to

- Understand how to do literature survey about a particular scientific problem.
- Learn about the digital sources available for the literature collection.
- Study the methods of doing scientific research and how to write scientific papers.
- Discuss about the chemical safety and ethical handling of chemicals.
- Understand about the data analysis.
- Know about, how to handle the chemicals in safer way and how to analysis the data.

Course Outcomes

On the completion of this course, students to

1. Understood how to do literature survey about a particular scientific problem.
2. Learned about the digital sources available for the literature collection.
3. Studied the methods of doing scientific research and how to write scientific papers.
4. Discussed about the chemical safety and ethical handling of chemicals.
5. Understood about the data analysis.
6. Knew about, how to handle the chemicals in safer way and how to analysis the data.

Unit I- Literature Survey

Print: Sources of information: Primary, secondary, tertiary sources; Journals: Journal abbreviations, abstracts, current titles, reviews, monographs, dictionaries, text-books, current contents, introduction to chemical abstracts and beilstein, subject index, substance index, author index, formula index, and other indices with examples.

Unit II – Digital and Information Technology and Library Resources

Web resources, E-journals, journal access, TOC alerts, hot articles, citation index, impact factor, H-index, E-consortium, UGC infonet, E-books, internet discussion groups and communities, blogs, preprint servers, search engines, scirus, Google scholar, chemindustry, Wiki-databases, chemspider, science direct, scifinder, Scopus.

Information Technology and Library Resources: The Internet and World Wide Web.

Internet resources for chemistry. Finding and citing published information.

Unit III – Methods of Scientific Research and Writing Scientific Papers

Reporting practical and project work. Writing literature surveys and reviews. Organizing a poster display. Giving an oral presentation.

Writing scientific papers – justification for scientific contributions, bibliography, description of methods, conclusions, the need for illustration, style, publications of scientific work. Writing ethics. Avoiding plagiarism.

Unit IV – Chemical Safety and Ethical Handling of Chemicals

Safe working procedure and protective environment, protective apparel, emergency procedure and first aid, laboratory ventilation. Safe storage and use of hazardous chemicals, procedure for working with substances that pose hazards, flammable or explosive hazards, procedures for working with gases at pressures above or below atmospheric – safe storage and disposal of waste chemicals, recovery, recycling and reuse of laboratory chemicals, procedure for laboratory disposal of explosives, identification, verification and segregation of laboratory waste, disposal of chemicals in the sanitary sewer system, incineration and transportation of hazardous chemicals.

Unit V- Data Analysis and Electronics

Data Analysis: The Investigative Approach: Making and Recording Measurements. SI Units and their use. Scientific method and design of experiments.

Analysis and Presentation of Data: Descriptive statistics. Choosing and using statistical tests.

Chemometrics. Analysis of variance (ANOVA), Correlation and regression, Curve fitting, fitting of linear equations, simple linear cases, weighted linear case, analysis of residuals, General polynomial fitting, linearizing transformations, exponential function fit, r and its abuse. Basic aspects of multiple linear regression analysis.

Electronics: Basic fundamentals of electronic circuits and their components used in circuits of common instruments like spectrophotometers, typical circuits involving operational amplifiers for electrochemical instruments. Elementary aspects of digital electronics.

ELECTIVE-II		Semester - II
18CHP205B	ANALYTICAL CHEMISTRY	4H 4C
Instruction Hours/week:L: 4 T:0 P:0		Marks: Internal:40 External: 60 Total:100
External Semester Exam: 3 Hrs		

Course objectives

This course enables the students

- To learn about quantitative inorganic analysis.
- To understand the different colorimetric analysis.
- To learn about electrochemical methods of analysis.
- To learn different chromatographic techniques.
- To understand how to analyze the data obtained.
- To Explain about various analytical techniques for inorganic compounds.

Course Outcomes (CO's)

On successful completion of the course the students should have to

1. Learned about quantitative inorganic analysis.
2. Understood the different colorimetric analysis.
3. Learned the electrochemical methods of analysis.
4. Understood the different chromatographic techniques.
5. Learned about how to analyze the data obtained.
6. Explained the various analytical techniques for inorganic compounds

UNIT I- Quantitative Inorganic Analysis

Theoretical basis of quantitative inorganic analysis-common ion effect solubility product, effect of acid, temperature and solvent upon the solubility of a precipitate.

Supersaturation-Von Weimarn concept. Formation and treatment of precipitates-co-precipitation and post-precipitation. Precipitation from homogeneous solution. Specific and selective precipitants.

Principles of acid-base, oxidation-reduction, precipitation and complexometric titrations-indicators used in such titrations. Uses of organic reagents in inorganic quantitative and qualitative analysis.

UNIT II- Data analysis

Errors in chemical analysis-Defining terms: Mean median, accuracy and precision – classification of errors: Systematic errors and random errors. Improving accuracy of analysis – mean, standard deviation and Q-test. Comparison of results – Least square, 't'-test, 'F'-test and 'Chi' square test. Validation of analytical methods: Precision, accuracy, robustness, quantification, linearity and range.

UNIT III – Techniques in Inorganic Chemistry

Colorimetry: Theoretical and practical aspects of colorimetric analysis. Flame emission and atomic absorption spectroscopy – types of atomic spectroscopy – emission methods – absorption methods – fluorescence methods – source and atomizers for atomic spectroscopy – flame atomizers – electrothermal atomizers – principle and applications of atomic absorption spectroscopy. Advantages of atomic absorption spectrometry over flame photometry.

UNIT IV - Electrochemical Methods of Analysis

Cyclic voltammetry, coulometry and amperometry-principle and applications.

Thermal characterization techniques: Principle and applications of differential thermal analysis (DTA), differential scanning calorimetry (DSC) and thermogravimetric analysis (TGA) thermometric titration.

UNIT V- Chromatographic Methods

Classification – techniques and applications in column, size-exclusion, ion exchange, paper and thin layer chromatography.

Gas chromatography and high performance liquid chromatography (HPLC)-principle, equipment design, sample injection system, columns, detectors and applications.

ELECTIVE-II		Semester - II
18CHP205C	ORGANOMETALLIC CHEMISTRY	4H 4C
Instruction Hours/week:L:4 T:0 P:0	Marks: Internal:40	External: 60
		Total:100
External Semester Exam: 3 Hrs		

Course objectives

This course enables the students

- To learn about nature of the bonding between organic ligands and metals.
- To understand about the metal alkyl complexes.
- To learn about the alkene and cyclopentadienyl complexes.
- To understand about the usage of organometallic compounds as catalysts
- To learn about the organometallic compound used as the catalyst in hydrogenation and hydroxylation of olefins.
- To study the concept of oxidation and polymerization of olefins.

Course Outcomes

On the completion of the course

1. Learned about the Alkyls and Arene complexes
2. Understood the bonding in olefin, acetylene and allyl systems
3. Known about the concepts of synthesis, structure and bonding in metallocenes
4. Understood the Organometallic reaction mechanisms and its applications
5. Learned about the Catalysis, hydrogenation of olefins and oxoprocess
6. Studied the concept of oxidation of olefins and polymerization

UNIT I - Metal carbonyls

Definition of organometallic compound - 18 electron rule - effective atomic number rule
classification of organometallic compounds - the metal carbon bond types - ionic bond - sigma covalent bond - electron deficient bond - delocalised bond - dative bond - metal carbonyl complexes - synthesis - structure and reactions of metal carbonyls - the nature of M- CO bonding - binding mode of CO and IR spectra of metal carbonyls - metal carbonyls- metal carbonyl anions - metal carbonyl hydrides - metal carbonyl halides - metal carbonyl clusters - Wades rule and isolobal relationship - metal nitrosyls - dinitrogen complexes - dioxygen complexes.

UNIT II - Metal alkyl complexes

Stability and structure - synthesis by alkylation of metal halides - by oxidative addition - by nucleophilic attack on coordinated ligands - metal alkyl and 18 electron rule - reactivity of metal alkyls - M-C bond cleavage reactions - insertion of CO to M-C bonds - double carbonylation - insertions of alkenes and alkynes - insertions of metals with C-H bonds - alkylidene and alkylidyne complexes - synthesis of alkylidene complexes in low oxidation states and in high

oxidation states - bonding in alkylidene complexes - synthesis and bonding in alkylidyne complexes - reactivity of alkylidene and alkylidyne complexes.

UNIT III - Alkene complexes

Synthesis of alkene complexes by ligand substitution - by reduction and by metal atom synthesis - bonding of alkenes to transition metals - bonding in diene complexes - reactivity of alkene complexes - ligand substitution - reactions with nucleophiles - olefin hydrogenation - hydrosilation - Wacker process - C-H activation of alkenes - alkyne complexes - bonding in alkyne complexes - reactivity of alkynes - alkyne complexes in synthesis - cobalt catalysed alkyne cycloaddition.

Porphyrins, metalloenzymes, oxygen transport, electron transfer reaction.

UNIT IV- Cyclopentadienyl complexes

Metallocenes - synthesis of metallocenes - bonding in metallocenes - reactions of metallocenes - $\text{Cp}_2\text{Fe}/\text{Cp}_2\text{Fe}^+$ couples in biosensors - bent sandwich complexes - bonding in bent sandwich complexes - metallocene halides and hydrides - metallocene and stereospecific polymerisation of 1-alkenes - cyclopentadiene as a non-spectator ligand - monocyclopentadienyl (half-sandwich) complexes - synthesis and structures of allyl complexes - arene complexes - synthesis - structure and reactivity of arene complexes - multidecker complexes.

Porphyrins, metalloenzymes, oxygen transport, electron transfer reactions

UNIT V - Organometallic compounds in homogeneous catalytic reactions

Coordinative unsaturation - acid-base behaviour reaction - migration of atoms or groups from metal to ligand - insertion reaction - reactions of coordinated ligands - catalytic reactions of alkenes - isomerisation of alkenes - hydrogenation - hydroformylation and hydrosilation of alkenes - alkene polymerisation and oligomerisation - fluxional molecules.

18CHP211	INORGANIC CHEMISTRY PRACTICAL-I (QUALITATIVE ANALYSIS AND PREPARATIONS)	Semester - II 4H 2C
----------	--	------------------------

Instruction Hours/week:L:0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

External Semester Exam: 6 Hrs

Course Objectives

The course enables the students should have

- To learn about the qualitative analysis by semi micro-qualitative analysis method.
- To learn the preparation of inorganic complexes.
- To describe the basic concept and advantages of semi- micro qualitative analysis.
- To understand the systematic separation d-block elements
- To study the step wise procedure to predict the anions along with metals
- To identify the d-block elements with their special tests.

Course Outcomes

Students have to,

1. Learned about the qualitative analysis by semi micro-qualitative analysis method.
2. Learned the preparation of inorganic complexes.
3. Described the basic concept and advantages of semi- micro qualitative analysis.
4. Understood the systematic separation d-block elements
5. Studied the step wise procedure to predict the anions along with metals
6. Identified the d-block elements with their special tests.

Contents

Thallium, Tungsten, Selenium, Tellurium, Molybdenum, Cerium, Thorium, Titanium, Zirconium, Vanadium, Beryllium, Uranium and Lithium.

Note: Each student should analyze a minimum of six inorganic mixtures.

About ten preparations involving different techniques selected from the following:

Lead tetra acetate, dipyridinium hexaplumbate, hydroxylamine hydrochloride, ortho and para-hydroxy phenyl mercuric chloride, potassium cupric chloride, chrome alum, copperI chloride, tris(thio urea) copper(I) Chloride, potassium trioxalato- aluminato(III), potassium trioxalato-chromate(III), potassium trioxalato- ferrate(III), hexammine cobalt(III)chloride, chloropentammine chromium(III), chloro aquo pentammine chromium(III) nitrate, tetrammine copper(II) sulphate, ammonium hexa chloro stanate(IV).

Note: Each student should do a minimum of ten preparations.

18CHP212	INORGANIC CHEMISTRY PRACTICAL –II	Semester - II
	(QUANTITATIVE ANALYSIS AND COMPLEX PREPARATIONS)	4H 2C

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100
External Semester Exam: 6 Hrs

Course Objectives

Course enables the students should have

- To learn about the basic principles about quantitative analyses.
- To study the concepts and systematic procedure in gravimetric analysis.
- To must know about the systematic procedure for estimation.
- To describe the synthesis method for in-organic co-ordination complexes
- To separate the molecules and identify its nature through chromatography technique.
- To apply this ideas and concepts to water treatment process, food science and forensic fields.

Course Outcomes

On successful completion of the course the students should have

1. Learned about the basic principles about quantitative analyses.
2. Studied the concepts and systematic procedure in gravimetric analysis.
3. Knew about the systematic procedure for estimation.
4. Described the synthesis method for in-organic co-ordination complexes
5. Known about separate the molecules and identify its nature through chromatography technique.
6. Applied this ideas and concepts to water treatment process, food science and forensic fields.

Contents

Analysis of mixture of ions – volumetry and gravimetry. Any four Complexometric titration- estimation of zinc, nickel, magnesium and calcium ions using Eriochrome black-T or murexide indicator.

Titrimetry: Oxidation using ceric and vanadium salts.

Chromatography: Column, Paper and Thin layer chromatography.

Titration in non aqueous solvents.

Preparation, analysis and study of co-ordination complexes (any 5).

SUGGESTED READINGS

18CHP206	WATER MANAGEMENT	Semester-II
Instruction Hours/week:L:0 T:0 P:0	Marks: External: 100 Total:100	4C
	External Semester Exam: 3 Hrs	

Course Objectives

The course enables the students

- To understand the Importance of drinking water
- To learn the factors to produce water pollution
- To study the parameters to be checked during water analysis.
- To create water sewage treatment plant ideas and reuse the treated water
- To know the various water treatment process.
- To apply the concepts to control the water pollution in the environment.

Course Outcomes

On the completion of this course, students should have to

1. Understood the Importance of drinking water
2. Learned the factors to produce water pollution
3. Studied the parameters to be checked during water analysis.
4. Create small water sewage treatment plant ideas and reuse the treated water
5. Knew the various water treatment processes.
6. Applying the concepts to control the water pollution in the environment.

UNIT I- Water Quality Parameters and Their Determination

Physical, chemical and biological standards, significance of these contaminants over the quality and their determinations – electrical conductivity – turbidity – P^H , total Solids, TDS, alkalinity – hardness – chlorides – BOD – COD – TOC – Nitrate – Sulphate – Fluoride – Iron – Arsenic – Mercury.

Algal and Plankton analysis – Bio mass and chlorophyll estimation – microbial estimation – Standard Plate Count – MPN of Coliforms – estimation of MPN – Bio assay – requirements of Bio assay.

UNIT II - Ground and Surface Water Pollution and Control Measures

Surface water and ground water pollution – harmful effects – Pollution of major rivers – Protecting ground water from pollution – Ground water pollution due to fluoride, Iron, chromium and arsenic – Sources, ill effects and treatment methods.

Water pollution control – stabilization of the eco system – waste treatment reclamation – various approaches to prevent and control water pollution.

UNIT III- Water Treatment Methods

Treatment for community supply – screening, sedimentation, coagulation, filtration – Removal of micro organisms – chlorination, adding bleaching powder, UV irradiation and ozonation.

Desalination of blackish water – electrodialysis – Reverse osmosis - Demineralization of water for Industrial purposes – boiler problems – scale and sludge formation – prevention of scale formation – Internal and external treatment – lime soda – Zeolite process.

UNIT IV- Sewage and Industrial Effluent Treatment

Sewage – characteristics – purpose of sewage treatment – methods of sewage treatment – Primary – secondary and tertiary – role of algae in sewage treatment.

Types of industrial wastes – treatment of effluents with organic and inorganic impurities – Treatment of waste waters from specific industries – Pulp and Paper – chemical industry – food processing – water Hyacinth in the treatment of industrial effluents.

UNIT V - Water Management

Water resource management – rain water harvesting methods – percolation ponds – check dams – roof top collection methods – Water management in industries – Recycling and reuse of waste water – Metal recovery from metal bearing waste water – Recovery of Zinc and Nickel.

18CHP301	ORGANIC CHEMISTRY- III (NATURAL PRODUCTS)	Semester-III 4H 4C
Instruction Hours/week:L: 4 T:0 P:0		Marks: Internal:40 External: 60 Total:100
		External Semester Exam: 3 Hrs

Course Objectives

On successful completion of the course the students should have,

- To Study about Isolation, classification and structure determination of simple terpenoids.
- To learn about Isolation, classification and structure determination of simple steroids and alkaloids
- To know the structure of proteins, enzymes and nucleic acids.
- To discuss about the biological application of DNA and RNA.
- To list the various reagents used in organic synthesis
- To apply this fundamentals to clarify the pharmacological and biological activity of organic molecules

Course outcomes

The students have

1. Studied about Isolation, classification and structure determination of simple terpenoids.
2. Learned about Isolation, classification and structure determination of simple steroids and alkaloids
3. Knew the structure of proteins, enzymes and nucleic acids.
4. Discussed about the biological application of DNA and RNA.
5. Remembered the various reagents used in organic synthesis
6. Applied this fundamentals to clarify the pharmacological and biological activity of organic molecules

UNIT-I

Terpenoids: Isolation and classification of terpenoids – general methods of determining structure of terpenoids –structural elucidation and synthesis of Zingiberene, Eudesmol, Abietic acid, Caryophyllene and Santonin-biosynthesis of monoterpenoids.

UNIT-II

Steroids: Introduction – structural elucidation and synthesis of Cholesterol (synthesis not necessary), Ergosterol, Vitamin D, Equilenin, Oestrone, Testosterone and Progesterone. Bile acids – biosynthesis of sterols.

UNIT-III

Alkaloids: Definition of an alkaloid-extraction of alkaloids-general properties - general methods of determining structure of alkaloids – structural elucidation and synthesis of Atropine, Morphine and Quinine -biosynthesis of quinoline alkaloids.

UNIT-IV

Proteins: General nature of proteins - classification of proteins –primary secondary and tertiary structure of proteins- synthesis of peptides – oxytocin- insulin.

Enzymes: Nomenclature and classification - cofactors – specificity of enzyme action- mechanism of enzyme action. Nucleic acids - structures of RNA and DNA and their biological importance.

UNIT- V

Reagents in organic synthesis: Preparations and synthetic applications of DDQ, DBU, Dimethyl sulfoxide, trimethyl silyl iodide, Osmium tetroxide, Selenium dioxide, Dicyclohexylcarbodiimide (DCC), LDA, DIBAL-H and Mercuric acetate.

18CHP302	PHYSICAL CHEMISTRY- III (THERMODYNAMICS)	Semester-III 4H 4C
<hr/>		
Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100		
External Semester Exam: 3 Hours		

Course Objectives

The course enables the student to

- Understand about thermodynamics and Non-ideal systems
- Learn the third law of thermodynamics
- Study the classical Maxwell-Boltzman and quantum statistics
- Know about partition functions and determining thermodynamic properties
- Understand heat capacity of solids.
- Apply the thermodynamic factors in various organic synthesis processes (how the reaction condition and reaction rate various depend on the thermodynamic factors).

Course Outcomes

The students have to,

1. Understood about thermodynamics and Non-ideal systems
2. Learned the third law of thermodynamics
3. Studied the classical Maxwell-Boltzman and quantum statistics
4. Knew about partition functions and determining thermodynamic properties
5. Understood heat capacity of solids.
6. Applied the thermodynamic factors in various organic synthesis processes (how the reaction condition and reaction rate various depend on the thermodynamic factors).

UNIT – I

Thermodynamics and Non-ideal systems: Chemical potential and the definition of fugacity. Determination of fugacity of gases by graphical method and from equations of state. Variation of fugacity with temperature. Fugacity and the standard states for non ideal gases.

Definition of activity. Activity coefficient. Temperature coefficient of activity. Standard

states. Applications of activity concept to solutions. The rational and practical approaches. Measurement of activity of solvent from colligative properties. Determination of activity of solute.

UNIT – II

Third Law of Thermodynamics: Probability and third law. Need for third law. Nernst heat theorem and other forms stating third law. Thermodynamic quantities at absolute zero. Statistical meaning of third law and apparent exception.

Mathematical Introduction: Theories of permutation & combination, laws of probability.

Distribution laws. Gaussian distribution.

UNIT – III

Classical Maxwell – Boltzmann Statistics: Maxwell distribution law for molecular velocities and molecular speeds in an ideal gas. Velocity and speed distribution functions. Experimental verification of Maxwell distribution law. Evaluation of average speed, root mean square speed and most probable speed from distribution law. Distribution function in terms of the kinetic energy of an ideal gas. The principle of equipartition of energy and the calculation of heat capacities of ideal gases. Limitations of the principle of equipartition of energy.

Quantum statistics: Maxwell-Boltzmann statistics. Thermodynamic probability. Thermodynamic probabilities of systems in equilibrium. Boltzmann expression for entropy. Stirling's approximation. State of maximum thermodynamics probability. LAGRANGIAN multipliers. Thermodynamic probabilities of systems involving energy levels. Maxwell-Boltzmann distribution law. Evaluation of α and β in MB distribution law.

UNIT – IV

Partition function: Definition, justification of nomenclature, microcanonical and canonical ensembles. Molecular partition and canonical function. The relation between the total partition function of a molecule and the separate partition functions. Translational partition function, rotational partition function. Effect of molecular symmetry on rotational partition function. Ortho and para hydrogen. Vibrational partition function. Electronic partition function. Evaluation of thermodynamic properties E , H , S , A , G , C_v and C_p from monoatomic and diatomic ideal gas molecules partition functions. Thermodynamic properties of polyatomic ideal gases. Calculation of equilibrium constants of reaction involving ideal gases from partition functions.

UNIT – V

Heat capacities of solids: Einstein's and Debye's theories of heat capacities of solids. Bose-Einstein and Fermi-Dirac Statistics: Bose Einstein distribution law- Entropy of Bose Einstein gas. Planck distribution law of black body radiation. Fermi-Dirac distribution law. Entropy of a Fermi-Dirac gas. Heat capacities of the electron gas and the heat capacities of metals. Negative absolute temperature.

SUGGESTED READINGS:

18CHP303	PHYSICAL METHODS IN CHEMISTRY (INSTRUMENTATION)	Semester -III 4H 4C
Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100 External Semester Exam: 3 Hours		

Course Objectives

The course successfully enables the student,

- To understand different chromatographic methods.
- To discuss about electron spectroscopy and thermal analysis
- To learn Circular Dichroism and Optical Rotatory Dispersion
- To describe the Electron Spin Resonance spectroscopy
- To know about flame emission spectroscopy.
- To apply the chromatographic and spectroscopic concepts for separation and identification of mixture compounds/complex/metals.

Course outcomes

The students have to

1. Understood different chromatographic methods.
2. Discussed about electron spectroscopy and thermal analysis
3. Learned Circular Dichroism and Optical Rotatory Dispersion
4. Described the Electron Spin Resonance spectroscopy
5. Knew about flame emission spectroscopy.
6. Applied the chromatographic and spectroscopic concepts for separation and identification of mixture compounds/complex/metals.

UNIT – I

Chromatography: Theory, instrumentation, basic principles & application in the chemical analysis of the following – columns, paper, thin layer and ion exchange-gel permeation-HPLC applications in chemical analysis-gas chromatography.

UNIT – II

Thermal analysis: Differential thermal analysis DTA and differential scanning calorimetry DSC - basic principles - thermo gravimetric analysis.

Electron spectroscopy: ESCA XPS: Principle, chemical shifts - description of ESCA spectrometer, X-ray sources, samples, analysis, detectors and recording devices-applications.

Auger electron spectroscopy AES and Ultra-Violet photo electron spectroscopy UPS/PES principles and applications.

UNIT – III

Circular Dichroism and Optical Rotatory Dispersion: Basic principles -cotton effects-octants rule –axial halo ketone rule-application of ORD and CD. Tyndal Scattering-turbidimetry and nephelometry-applications. Atomic absorption spectroscopy.

UNIT – IV

ESR spectroscopy: Theory - derivative curves - g shift - hyperfine splitting-isotropic and anisotropic systems-zero field splitting and Kramer degeneracy. Identification of free radicals – applications to copper complexes.

UNIT – V

Flame Emission Spectroscopy: Introduction, flames and flame spectra, flames temperature, chemical reaction in flame and flame background. Flame photometers, Flame spectrophotometers, photosensitive detectors, single beam and double beam instruments, calibration curve, errors in flame photometers, applications.

18CHP304	NANOCHEMISTRY	Semester-III 4H 4C
<hr/> Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100 External Semester Exam: 3 Hours		

Course Objectives

The course enables the student

- To know the history and perspectives of Nanotechnology.
- To learn about the various types and significant of 1D, 2D and 3D nanoparticles
- To list the various types of nanoparticles and its application.
- To discuss about carbon based nanomaterials and its properties
- To explain the metal oxide based nano materials
- To motivate and lead the student in the field of nanotechnology.

Course Outcomes

The completion of this course, students

1. Knew about the history and perspectives of Nanotechnology.
2. Learned about the various types and significant of 1D, 2D and 3D nanoparticles
3. Remembered the various types of nanoparticles and its application.
4. Discussed about carbon based nanomaterials and its properties
5. Explained the metal oxide based nano materials
6. Motivated and lead them in the pathway of nanotechnology

UNIT I: Introduction: History scope and perspectives of nano-chemistry

UNIT II: Synthesis and stabilization of nanoparticles, chemical reduction; reactions in micelles, emulsions, and dendrimers; photochemical and radiation chemical reduction; cryochemical synthesis: Physical methods, particles of various shapes and films.

UNIT III: Experimental techniques: Electron microscopy: Transmission electron microscopy: probe

Microscopy: Probe microscopy: diffraction techniques X-ray diffraction, neutron diffraction: Miscellaneous

Techniques, comparison of spectral techniques used for elemental analysis

UNIT IV: Size effects in nanochemistry: Models of reactions of metal atoms in matrices; properties;

Kinetic peculiarities of chemical processes on the surface of nanoparticles; Thermodynamic features of nanoparticles.

UNIT V: Applications of nanoparticle in various fundamental research, industries, medical field and environmental issue; toxicity, biosafety and ethical issue in application of nanoparticle

	ELECTIVE-III	Semester-III
18CHP305A	POLYMER CHEMISTRY	4H 4C
Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100		
External Semester Exam: 3 Hours		

Course Objectives

The course enables the student

- To study about the basic concepts of polymerization.
- To explain the coordination polymerization and apply the Ziegler-natta catalyst in polymer synthesis.
- To understand the molecular weight determination methods of the polymer and apply it to identify the polymer properties.
- To discuss about the polymer processing and properties of commercial polymers
- To apply the polymer processing technique to prepare the polymer products
- To list out the commercial polymers and its application

Course outcomes

The students have

1. Studied about the basic concepts of polymerization.
2. Explained the coordination polymerization and apply the Ziegler-natta catalyst in polymer synthesis.
3. Understood the molecular weight determination methods of the polymer and apply it to identify the polymer properties.
4. Discussed about the polymer processing and properties of commercial polymers
5. Applied the polymer processing technique to prepare the polymer products
6. Remembered the commercial polymers and its application

UNIT – I

Polymer Basic Concepts: Monomers, repeat units, degree of polymerization, linear, branched and network polymers. Condensation polymerization: Mechanism of stepwise polymerization. Kinetics and statistics of linear stepwise polymerization. Addition polymerization: Free radical, cationic and anionic polymerization. Polymerization conditions. Polymerization in homogeneous and heterogeneous systems.

UNIT – II

Co-ordination Polymerization: Kinetics, mono and bimetallic mechanism of co-ordination polymers. Ziegler Natta catalyst, co-polymerization: Block and graft co-polymers, kinetics of copolymerization. Types of co-polymerization. Reactivity ratio.

UNIT–III

Molecular Weight and Properties: Polydispersion – average molecular weight concept, number, weight and viscosity average molecular weights. Measurement of molecular weights. Viscosity, light scattering, osmotic and ultracentrifugation methods. Polymer structure and physical properties – crystalline melting point T_m . The glass transition temperature. Determination of T_g . Relationship between T_m and T_g .

UNIT – IV

Polymer Processing: Plastics, elastomers and fibres. Compounding, processing techniques: calendering, die casting, rotational casting, film casting, injection moulding, blow moulding extrusion, moulding, thermoforming, foaming, reinforcing and fibre spinning.

UNIT – V

Properties of Commercial Polymers: Polyethylene, polyvinyl chloride, polyamides, polyesters, phenolic resins, epoxy resins and silicone polymers. Functional polymers, fire retarding polymers and electrically conducting polymers. Biomedical polymers – contact lens, dental polymers, artificial heart, kidney, skin and blood cells.

SUGGESTED READINGS:

4. Flory, P. J. (1953). *Principles of Polymer Chemistry*. New York: Cornell University Press.
5. Odian, G. (2004). *Principles of Polymerization* (IV Edition). New York: John Wiley & Sons.

	ELECTIVE-III	Semester-III
18CHP305B	TEXTILE CHEMISTRY	4H 4C
Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100		
External Semester Exam: 3 Hours		

Course Objectives

The course enables the student

- To understand about the classification, Chemical structure, production, properties and uses of fibers.
- To learn about the dyeing process on fibers.
- To discuss the classification of dyes
- To learn the Pollution Control in Textile Industry.
- To explain the various finishing process of fibers.
- To apply this fundamentals to fabricate the material and its dying process.

Course outcomes

On the successful completion of this course, Students

1. Understood about the classification, Chemical structure, production, properties and uses of fibers.
2. Learned about the dyeing process on fibers.
3. Discussed the classification of dyes
4. Learned the Pollution Control in Textile Industry.
5. Explained the various finishing process of fibers.
6. Applied these fundamentals to fabricate the material and its dying process.

UNIT- I

Fibers: General classification of fibers-chemical structure, production, properties and uses of the following natural fibers (a) natural cellulose fibers (cotton and jute) (b) natural protein fiber (wool and silk).

Chemical structure, production, properties and uses of the following synthetic fibers. (i) Manmade cellulosic fibers (Rayon, modified cellulose fibers) (ii) Polyamide fibers (different types of nylons) (iii) Poly ester fibers.

UNIT- II

Dyeing Process: Impurities in raw cotton and grey cloth, wool and silk- general principles of the removal – scouring – bleaching – desizing – kierboiling- chemicking.

Dyeing - Dyeing of wool and silk –fastness properties of dyed materials – dyeing of nylon, terylene and other synthetic fibres.

UNIT- III

Finishing: Finishes given to fabrics- mechanical finishes on cotton, wool and silk, method used in process of mercerizing –anti-crease and anti-shrink finishes –water proofing.

UNIT-IV

Types of Dyes: Quinonoid dyes-examples and structure-Anthroquinone and Mordant dyes-synthesis and applications of Alizarin-Phthalocyanin dyes-Copper Phthalocyanin-synthesis and applications.

Diphenylmethane dyes- Auramine-Triphenylmethane dyes-Malachite green, Crystal violet, Pararosaniline-preparation and applications.

Indigo dyes-preparation and application-derivatives of Indigo- synthesis and uses of Indigosol and tetrahaloindigo.

Phthalein dyes-Phenolphthalein- preparation and applications.

Xanthene dyes-Rhodamine B, Fluorescein-Eosin- preparation and applications.

UNIT-V

Pollution Control in Textile Industry: Textile effluent-characteristics, effect of untreated effluent, degradability of wastes. Effluent treatment plants-aerated lagoon, photo oxidation process.

SUGGESTED READINGS:

18CHP305C	ELECTIVE-III INDUSTRIAL CHEMISTRY (APPLIED BIOINORGANIC CHEMISTRY, INORGANIC DRUG TARGETS AND METALS IN MEDICINE)	Semester - II 4H 4C
Instruction Hours/week:L: 4 T:0 P:0		Marks: Internal:40 External: 60 Total:100 External Semester Exam: 3 Hours

Course Objectives

This course enables the students

- To give the knowledge of the role of metals in human body
- To learn about the physical methods in bioinorganic chemistry, metal biomolecules interactions, complexes, and drug discovery.
- To give knowledge in Binding of Metal Ions and Complexes to Biomolecules
- To Learn about complexes and chelating agents
- To Provide fundamental knowledge in Drug Discovery and Design
- To apply these parameters to discover new pharmacokinetic molecules.

Course Outcomes

On the completion of this course, student should

1. Knew the knowledge of the role of metals in human body
2. Learned about the physical methods in bioinorganic chemistry, metal biomolecules interactions, complexes, and drug discovery.
3. Understood the knowledge in Binding of Metal Ions and Complexes to Biomolecules
4. Learned about complexes and chelating agents
5. Provided the fundamental knowledge in Drug Discovery and Design
6. Applied these parameters to discover new pharmacokinetic molecules.

UNIT- I

Metals in the Human Body: General principles - the elements in the human body - biological significance, storage and transport of Fe, Zn, Cu, Mo, Co, Cr, V and Ni - metal functions in metalloproteins -metallo enzyme functions -supplying elements to the body - metals and human health.

UNIT- II

Physical Methods in Bioinorganic Chemistry: X-ray methods - magnetic resonance methods - mossbauer spectroscopy - magnetic measurements -other instrumental methods -atomic force microscopy - fast and time-resolved methods - stopped-flow kinetic methods - flash photolysis - time-resolved crystallography.

UNIT- III

Binding of Metal Ions and Complexes to Biomolecules: Nucleic acid structures - fundamental interactions with nucleic acids - binding interactions of tris(phenanthroline) metal complexes with DNA - techniques to monitor binding - applications of metal complexes that bind to nucleic acids -biopolymer promoted metal ligand interactions.

UNIT- IV

Complexes and Chelating Agents: Labile and inert complexes - metal-ligand selectivity-HSAB approach-chelate effect and Irving-William series -survey of metals used for diagnosis and chemotherapy-radiodiagnostic agents-Magnetic Resonance Imaging (MRI) - gold and other metal phosphines-main-group and transition metal compounds - miscellaneous metals in medicine-chelating agents and therapy - EDTA-evolution, chemical properties, *in vivo* chelation of radionuclides, dosage and toxicity .

UNIT-V

Drug Discovery and Design: Outline- therapeutic index, chemotherapeutic index, structure-activity relationship (SAR) and quantitative structure-activity relationship (QSAR)- Factors governing drug design- computer aided drug design-cancer chemotherapy-bioinorganic chemistry (DNA binding) of platinum anticancer drugs (cisplatin and carboplatin)-mechanism of action studies-clinical trials and their significance- production and quality control- patent protection.

18CHP311	PHYSICAL CHEMISTRY PRACTICAL –I (MOLECULAR WEIGHT DETERMINATION AND CONDUCTOMETRIC TITRATIONS)	Semester-III 4H 2C
<hr/>		
Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100		
External Semester Exam: 6 Hours		

Course Objectives

This course enables the students should have

- To Learn about the heat of solution, determination of molecular weight and distribution coefficient
- To study about basic concepts of conductometric titrations.
- To understand the various laws in electrochemistry.
- To apply the conductometric method for the solutions and measure its conductivity
- To know about how to handle the conductivity meter, spectrophotometer.
- To may realize the how distribution co-efficient influence the solubility of various systems.

Course Outcomes

On the completion of this course, students

1. Learned about the heat of solution, determination of molecular weight and distribution coefficient
2. Studied about basic concepts of conductometric titrations.
3. Understood the various laws in electrochemistry.
4. Applied the conductometric method for the solutions and measure its conductivity
5. Knew about how to handle the conductivity meter, spectrophotometer.
6. Applied the knowledge to realize the how distribution co-efficient influence the solubility of various systems.

Contents

Heat of solution from solubility.

Molecular weight determination by

- i. Freezing point depression of solvents benzene and water by Beckmann method
- ii. By Rast micro methods

Distribution of activity and activity co-efficient by freezing point method.

Distribution co-efficient and determination of equilibrium constant.

Conductivity experiments:

Determination of-

- i) Equivalent conductance of a strong electrolyte and verification of Debye-Huckel Onsager law.
- ii) Verification of Ostwald dilution law and Kohlraush law for weak electrolytes.

Conductometric determination of pK_a of a weak acid.

Hydrolysis constant of aniline hydrochloride.

Determination of the solubility of a sparingly soluble salt.

Conductometric titrations:

Acid-base and precipitation titrations including mixture of halides.

SUGGESTED READINGS:

1. Lepse, P. A., & Lyle B. P., (1986). *Lab Manual for Lingren's Essentials of Chemistry*. New Delhi: Prentice Hall.

5. Thomas, A.O, (2003). *Practical Chemistry*. Cannanore: Scientific Book Center.
6. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu, A. R. (2004). *Basic Principles of Practical Chemistry* (II Edition). New Delhi: S. Chand Publications.

18CHP312	PHYSICAL CHEMISTRY PRACTICAL- II	Semester-III
	(CHEMICAL KINETICS AND POTENTIOMETRIC TITRATIONS)	4H 2C
Instruction Hours/week:L: 0 T:0 P:4		Marks: Internal:40 External: 60 Total:100
		External Semester Exam: 3 Hours

Course Objectives

This course enables the students should have

- To learn about the principles of electrochemistry and determination EMF
- To understand about the basic needs of Chemical Kinetics and Potentiometric titrations.
- To study the principles about adsorption process.
- To know about how to handle the potentiometer, electrodes and spectrophotometer.
- To apply the knowledge of chemical kinetics in various preparation organic/inorganic compounds.
- To investigate the metal concentration in water samples using adsorption technique.

Course Outcomes

On the completion of this course, students to

1. Learned about the principles of electrochemistry and determination EMF
2. Understood about the basic needs of Chemical Kinetics and Potentiometric titrations.
3. Studied the principles about adsorption process.
4. Knew about how to handle the potentiometer, electrodes and spectrophotometers.
5. Applying the knowledge of chemical kinetics in various preparation organic/inorganic compounds.
6. Investigating the metal concentration in water samples using adsorption technique.

Contents

Electromotive force determination of standard potentials of Cu, Zn and Ag.

Determination of pH and pKa values using hydrogen and quinhydrone electrodes and glass electrode pH meter- potentiometric acid-base titrations.

Determination of formal redox potential of a redox system and redox titrations.

Determination of solubility product of a sparingly soluble salt concentration cell and chemical cell.

Determination of activity co-efficients from emf data.

Precipitation titration of a mixture of halides.

Chemical kinetics:

- i. Evaluation of Arrhenius parameters using acid hydrolysis of an ester.
- ii. Base catalyzed hydrolysis of an ester conductometrically.
- iii. Rate of reaction between persulphate and iodide ions study of salt over the persulphate-iodide reaction.

Evaluation of catalytic constants for weak acids and verification of Bronsted catalysis law.

Adsorption Experiments:

Adsorption of oxalic acid and acetic acid on activated charcoal-Fruendlich isotherm.

SUGGESTED READINGS:

என்பதிலிருந்துதொடங்கி, 'விசும்பில்தோன்றுமால்'
என்பதுவரையிலானதொடர்கள்.

வழக்குரைகாதை:பத்தினிப்பெண்டிர்எழுவர்கதை:
'நீர்வார்கண்ணை' என்பதிலிருந்துதொடங்கி,
'புகாரென்பதியே' என்பதுவரையிலானதொடர்கள்.

வஞ்சினமாலை: 'வன்னிமரமும்'
என்பதிலிருந்துதொடங்கி, 'பதிப்பிறந்தேன்'
என்பதுவரையிலானதொடர்கள்.

சூளாமணி: மந்திரசாலைச்சருக்கம் (தேர்ந்தெடுக்கப்பெற்ற 25
பாடல்கள்)

அலகு - IV :சிறுகதை

1. குளத்தங்கரைஅரசமரம் - வ.வே.சு.ஐயர்
2. காட்டில்ஒருமான் - அம்பை
3. நாற்காலி - கி.ராஜநாராயணன்
4. நகரம் - சுஜாதா
5. எஸ்தர் - வண்ண நிலவன்
6. மரப்பாச்சி - உமா மகேஸ்வரி

அலகு- V :மொழிப்பயிற்சி

படைப்பிலக்கியப்பயிற்சிகள் (கதை, கவிதை,கட்டுரை, உரைநடை)
மொழிபெயர்ப்பு

பாடநூல்:கற்பகச்சோலை -
தமிழ்ஏடு.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறைவெளியீடு.

Course Objectives:

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To acquire Grammar.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

Course Outcomes:

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT - I : PROSE

1. I Have a Dream - Martin Luther King, Jr.
2. 'First human' discovered in Ethiopia - Pallab Ghosh
3. The First Case- M.K. Gandhi

UNIT - II : POEM

1. L'Allegro - John Milton
2. God Is a Medicine Cabinet - Cynthia Atkins
3. A Prayer for my daughter - W.B. Yeats

UNIT - III : SHORT STORIES

1. The Tell Tale Heart - Edgar Allan Poe
2. Sparrows- K. Ahmad Abbas
3. The Little Match-Seller - Hans Christian Andersen

UNIT - IV: Drama

1. Tempest- Act 2-Scene 2
2. The Referee- W.H. Andrews and Geoffrey Dearmer

UNIT - V**GRAMMAR : 1. Voice****2. Reported Speech****3. Interrogatives (Yes or No, 'Wh' questions)**

4. Word Class

Composition:

1. Writing Minutes and Preparing Agenda
2. Note Taking
3. Charts and Pictorial Writing.
4. Report Writing

SUGGESTED READING:

1. Twilight, Published by the Department of English, Karpagam Academy of Higher Education.
2. Murphy Raymond, 1998 Essential English Grammar, Cambridge University Press.

18CMU201	CORPORATE ACCOUNTING	8H	Semester – II
Instruction Hours / week: L: 6 T: 2 P: 0	Marks: Internal: 40 External: 60	Total: 100	– 6C
End Semester Exam: 3 Hours			

COURSE OBJECTIVES:**To make the students**

1. To understand the accounting process for Share capital and debenture and its application
2. To prepare final accounts for corporates
3. To understand the accounting standard and its application in inter-holding companies
4. To solve problems relating to Holding Company Accounts, Liquidation of Companies and various other Accounts
5. To understand and apply accounting process for Banking industry.
6. To understand and apply accounting process for Banking industry.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and apply the accounting process related corporate accounting
2. Prepare final accounts for corporate entity.
3. Understand the accounting standard and apply the same for corporate entity and amalgamation.
4. Understand the difference of banking balance sheet and non-banking balance sheet
5. Enhance the problem-solving skills and analytical skills in the accounting context.
6. Enhance the facts on issue and redemption of share capitals

Unit I

Accounting for Share Capital and Debentures: Issue, Forfeiture and Reissue of Forfeited Shares - Concept & Process of Book Building - Issue of Rights and Bonus Shares - Buyback of Shares - Redemption of Preference Shares Issue and Redemption of Debentures

Unit II

Final Accounts: Preparation of Profit and Loss Account and Balance Sheet of Corporate Entities – Excluding Calculation of Managerial Remuneration - Disposal of Company Profits- Valuation of Goodwill and Valuation of Shares - Concepts and Calculation: Simple Problem only

Unit III

Amalgamation of Companies: Concepts and Accounting Treatment as per Accounting Standard: 14 (ICAI) (excluding inter- company holdings). Internal Reconstruction -Concepts and Accounting Treatment (excluding scheme of reconstruction)

Unit IV

Accounts of Holding Companies/Parent Companies :Preparation of Consolidated Balance Sheet with one Subsidiary Company - Relevant Provisions of Accounting Standard: 21 (ICAI).

Unit V

Accounts of Banking Companies: Difference Between Balance sheet of Banking and Non-banking Companies - Prudential Norms - Asset Structure of a Commercial Bank - Non-Performing Assets (NPA). Cash Flow Statement - Concept of Funds - Preparation of Cash Flow Statement as per Indian Accounting Standard (Ind- AS): 7.

18CMU202		BUSINESS MATHEMATICS AND STATISTICS		Semester – II
				8H – 6C
Instruction Hours/ week: L: 6 T: 2 P : 0		Marks: Internal: 40	External: 60	Total: 100
End Semester Exam: 3 Hours				

COURSE OBJECTIVES**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. To overcome on issues in the construction of index numbers

UNIT- I: Matrices & Basic Mathematics of Finance

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through ad joint; Applications of Matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest; Compounding and discounting of a sum using different types of rates

UNIT-II: Differential Calculus

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

UNIT-III: Uni-variate Analysis

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean:properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

UNIT-IV: Bi-variate Analysis

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

Unit V: Time-based Data: Index Numbers and Time-Series Analysis

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

18AEC201	ENVIRONMENTAL STUDIES	Semester – II		
		4H	–	4C
Instruction Hours / week: L: 4 T: 0 P: 0		Marks: Internal: 40	External: 60	Total: 100
		End Semester Exam: 3 Hours		

COURSE OBJECTIVES:**To make the students**

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To be aware on environmental legislation.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners

UNIT-I: Environment and Ecosystem

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

Unit II: Natural Resources - Renewable and Non-renewable Resources:

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of

an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. III-effects of fireworks.

Unit III: Biodiversity and Its Conservation:

Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV: Environmental Pollution :

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

Unit V: Social Issues and the Environment:

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

Course Objectives:

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop knowledge about business communication.
- To develop knowledge about business writing.
- To acquire knowledge on communication for different purpose.
- To get knowledge to communicate in day to affairs.

Course Outcomes:

- Students learnt the basics and purposes of listening skill.
- Students will know the importance of speaking.
- Students developed the speaking skills on telephone, business and also in travel
- Learnt some effective vocabulary learning strategies.
- Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
- Students will have honed the skills of communication which is needed for business purpose.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

SUGGESTED READING:

Learning to Learn: Study Skills in English Cambridge, 2015

Advanced Skills; Simon Harenas – CUP. 2015

Function in English. Jonathan Middlemiss et al, OUP

COURSE OBJECTIVES:**To make the students**

1. To Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. To learn the tools and techniques to calculate cost and solve the problems.
3. To select the best methods of costing and apply critically based on the situation
4. To communicate orally and in written form the cost accounting concepts, methods and book keeping procedure for cost accounting.
5. To gain a lifelong learning for applying the cost concepts in analyzing the business problems.
6. To know the reconciliation of the cost and financial accounting.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. Apply tools and techniques to calculate cost and solve the problems.
3. Select the best methods of costing by critically analyzing and apply the same to appropriate situation
4. Communicate orally and in written the cost concepts
5. Gain the lifelong learning of cost concepts and apply in the business environment.
6. Reconcile Cost and Financial Accounting.

UNIT 1: Introduction

Meaning, objectives and advantages of cost accounting; Difference between cost accounting and financial accounting; Cost concepts and classifications; Elements of cost; Installation of a costing system; Role of a cost accountant in an organisation

UNIT 2: Elements of Cost: Material and Labour

Materials: Material/inventory control techniques. Accounting and control of purchases, storage and issue of materials. Methods of pricing of materials issues — FIFO, LIFO, Simple Average, Weighted Average, Replacement, Standard Cost. Treatment of Material Losses

Labour: Accounting and Control of labour cost. Time keeping and time booking. Concept and treatment of idle time, over time, labour turnover and fringe benefits. Methods of wage payment and the Incentive schemes- Halsey, Rowan, Taylor's Differential piece wage.

UNIT 3: Elements of Cost: Overheads

Classification, allocation, apportionment and absorption of overheads; Under- and over-absorption; Capacity Levels and Costs; Treatments of certain items in costing like interest on capital, packing expenses, bad debts, research and development expenses; Activity based cost allocation.

UNIT 4: Methods of Costing

UNIT costing, Job costing, Contract costing, Process costing (process losses, valuation of work in progress, joint and by-products), Service costing (only transport).

UNIT 5: Book Keeping in Cost Accounting

Integral and non-integral systems; Reconciliation of cost and financial accounts

Note: Distribution of marks - 20% theory and 80% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To learn the tools and techniques to compute the tax for the various income heads.
3. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
4. To communicate orally and in written form the income tax concepts and computations.
5. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.
6. To prepare a statement of income for a person.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
4. Communicate orally and in written the Income tax computation under various income heads and deductions.
5. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.
6. Prepare a statement of income for a person.

UNIT I BASIC CONCEPTS

An Overview of Income Tax Act, 1961 : Background, Important definitions- Income - Agricultural Income - Assessee - Previous year - Assessment year, Residential Status, Basis of Charge, Scope of Total Income, Tax Rates in accordance with the applicable Finance Act for the relevant assessment year.

UNIT II COMPUTATION OF INCOME UNDER THE HEAD OF SALARY AND COMPUTATION OF INCOME UNDER THE HEAD OF HOUSE PROPERTY

Salary – Coverage, Employer and Employee Relationship, Allowances, Monetary and Non-Monetary Perquisites – Valuation and Taxability, Profits in lieu of Salary, Deductions against Salary, Incomes exempt from Tax and not includible in 'Salary', Deduction to be made from salary in respect of Provident Fund under the provisions of the Provident Fund and Miscellaneous

Provisions of Act 1952 and tax treatment of employers' contribution to Provident Fund, Tax Deducted at Source on Salary Income and Compliances.

Computation of Income under the head of House Property : Chargeability, Owner of house property, Determination of Annual Value, Deduction from Net Annual Value, Treatment of Unrealized Rent, Arrears of Rent, Exemptions, Computation of Income from a let out House Property, Self-Occupied Property.

UNIT III COMPUTATION OF INCOME – PROFITS AND GAINS FROM BUSINESS AND PROFESSION :

Profits and Gains from Business and Profession: Business and Profession – An overview, Chargeability, Profits and Losses of Speculation Business, Deductions Allowable, Expenses Disallowed, Deemed Profits u/s 41, Maintenance of Accounts, Tax Audit, Presumptive Base Taxation.

Chargeability, Capital Gains, Capital Assets & Transfer, Types of Capital Gains, Mode of Computation of Capital Gains, Exemptions and Deduction, Special Provision – Slump Sale, Compulsory Acquisition, Fair Market Value, Reference to valuation officer.

UNIT IV COMPUTATION OF INCOME FROM OTHER SOURCES :

Taxation of Dividend u/s 2(22)(a) to (e), Provisions relating to Gifts, Deductions, Other Miscellaneous Provisions.

Exemptions/Deduction, Clubbing provisions, Set Off and/or Carry Forward of Losses, Rebate and Relief : Income's not included in Total Income, Tax holidays, Clubbing of Income, Aggregation of Income, Set off and/or Carry forward of losses, Deductions (General and Specific), Rebates and Reliefs.

UNIT V COMPUTATION OF TOTAL INCOME AND TAX LIABILITY

TDS/TCS, Returns, Refund & Recovery : Tax Deduction at Source 'TDS' & Tax Collection at Source 'TCS', Advance Tax & Self-Assessment Tax 'SAT', Returns, Signatures, E-Filing, Interest for default in furnishing return of Income, Collection, Recovery of Tax, & Refunds, Assessment, Appeals, Revisions, Settlement of Cases, Penalties etc., Assessment, Appeals & Revisions, Settlement of Cases, Penalties, Offences & Prosecution.

Tax Planning & Tax Management : Tax Planning, Tax Management and Tax avoidance through legitimate tax provisions, Various Avenues.

International Taxation – An Overview : Double Taxation Avoidance Agreement 'DTAA', Residency Issues, Tax Heaven, Controlled Foreign Corporation (CFC), Concept of Permanent Establishment, Business Connection, General Anti Avoidance Rules 'GAAR', Advance Ruling – Practical Aspect, Transfer Pricing –An Overview.

Note: Distribution of marks - 30% theory and 70% problems

SUGGESTED READINGS:

1. Dr. H.C Malhotra, Dr. S P Goyal(2019), Income Tax Law and Practice, 60th edition, Sathya Bawan Publication, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. To learn the audit techniques, corporate governance and CSR practices.
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance and CSR.
6. To know the information related to global reporting initiatives

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. Recall the audit techniques, corporate governance and CSR practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance and CSR practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance and CSR.
6. Reminiscence with statistics on global reporting.

UNIT I INTRODUCTION

Definition-Nature-Scope and Objectives of Independent Financial Audit : Basic Principles Governing an Audit, Concept of Auditor's Independence - Error and Fraud- Classification of Audit -Standards on Auditing (SA) : Concept and Purpose - Audit procedures and techniques - Audit Evidence : Concept, Need, Procedures to obtain Audit Evidence

UNIT II AUDIT RISK AND INTERNAL CONTROL SYSTEM

Audit Risk : Concept and Types, Relationship with audit materiality - Professional Skepticism.

Internal Control : Definition, Objectives, Evaluation, Internal Control Check List, Internal Control Questionnaire and COSO's Internal Control Framework - Internal Check : Definition, Objectives and General Principles on Internal Check for selected transactions - Internal Audit : Definition, Objectives, Regulatory Requirement, Use of Internal Auditor's Work by Statutory Auditor.

UNIT III VOUCHING, VERIFICATION AND VALUATION

Vouching :Meaning, Objectives - Difference with Routine Checking – Factors to be Considered during Vouching of Different items

Verification and Valuation: Concept, objectives, Importance, Difference with Vouching, Difference between Verification and Valuation, Verification and Valuation of Different Items.

UNIT IV AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

Audit of Companies: Qualification, Disqualification, Appointment, Reappointment and Rotation, Casual Vacancy, Removal and Resignation, Ceiling, Remuneration, Rights, Duties and Liabilities of Company Auditor - Audit Committee - Branch Audit and Joint Audit - Divisible Profit and Dividend (Final, Interim and Unclaimed/Unpaid): Provision of the Act and Legal Decisions and Auditor's Responsibility

Audit report and certificate: Definition – Distinction between Report and Certificate- Different Types of Report Contents of Audit Report (As per Companies Act and Standards on Auditing) True and Fair View – Concept Materiality – Concept and Relevance

Special areas of Audit: Cost Audit- Concepts, objectives, Relevant Provisions of Companies Act Management Audit – Concepts, Objectives, Advantages Tax Audit – Concepts, Objectives, Legal Provisions Social Audit – Propriety Audit – Performance Audit – Environment Audit (Concepts only)

UNIT V CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

Conceptual framework of Corporate Governance: Theories & Models, Broad Committees; Corporate Governance Reforms. Common Governance Problems Noticed in various Corporate Failures. Codes & Standards on Corporate Governance, Clause 49 and Listing Agreement, Green Governance

Concept of CSR, Corporate Philanthropy, Strategic Planning and Corporate Social Responsibility; Relationship of CSR with Corporate Sustainability; CSR and Business Ethics, CSR and Corporate Governance; CSR provisions under the Companies Act 2013; CSR Committee; CSR Models, Codes, and Standards on CSR, Global Reporting Initiatives, ISO 26000

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand Tally, its features and its importance in supporting accounting activity.
2. To communicate orally and in written form the Features of Tally in capturing accounting procedures.
3. To gain lifelong knowledge of Tally features and integration of accounting and computer for effective decision making.
4. To be familiar with the incorporation of GST standards into accounting and computerised accounting process.
5. To Know the integration of accounting and computer for effective decision making.
6. To apply the tally concepts in organizations.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the knowledge of Tally, its features and its importance.
2. Communicate orally and in written form the Features of Tally in capturing accounting procedures.
3. Gain lifelong knowledge of Tally features and integration of accounting and computer for effective decision making.
4. Familiarize on the incorporation of GST standards into accounting and computerized accounting process.
5. Integrate accounting concepts and computer for effective decision making.
6. Practical application of tally concepts in organizations.

UNIT I User Interface and Company Management

Introduction to Tally ERP9, Gateway of Tally and User Interface, Masters – Ledgers, Understanding Ledgers, Masters – Groups, Understanding Groups, Masters –Billwise Debtors and Creditors Ledgers, Payment Voucher - Understanding Default Vouchers

Day Book - Understanding Day Book Reports, Altering and Deleting Transactions, Pre-Allocation of Bills, Receipt Voucher - Understanding Receipt Vouchers, Contra Vouchers, Cheque Printing, CTS Cheque Printing System, Debit and Credit Notes, Debit Note Returns, Bank Reconciliation, Understanding BRS Process

UNIT II Inventory

Masters : Inventory : Understanding Inventory - Integrating Accounts and Inventory, Manual Stock Valuation without Inventory,

Billing Features, Purchase Order Processing, Sales Order Processing, Stock Transfers, Understanding Stock Transfers, Manufacturing Vouchers, Batch Wise Details, Re-Order Level

UNIT III TDS, Payroll, Finalization process

Multi Language, Export, Import, Backup and Restore, Tax Deducted at Source (TDS), Payroll Accounting

Finalization Process - Depreciation Entries - Creating General Reserves - Provision for Taxation - Bad Debt Reserves - Partnership Firm - Transferring Profits - Outstanding Expenses and Accrued Income - Changing Financial Year, Voucher Types and Class, Point of Sales, Scenarios and Optional Vouchers

UNIT IV GST

Goods and Services Tax (GST)- About Goods and Services Tax (GST) - Activating Tally in GST - Setting Up GST (Company Level, Ledger Level or Inventory Level, GST Taxes & Invoices- Understanding SGST, CGST&IGST.

Purchase Voucher with GST :Updating GST Number for Suppliers

Sales Voucher with GST :Updating GST Number for Suppliers

UNIT V Budgets and Reporting

Budgets and Controls, Budget Masters and Configurations, Cost Centres and Cost Categories, Understanding Cost Centres, Understanding Profit, Customer and Supplier Balance Checking- Customer and Supplier Bill Wise Checking- Overdue Payables and Receivables - Outstanding Reports and Printing - Confirmation of Accounts - Negative Ledgers Report

Purchase and Sales Reporting, Stock Analysis and Reports, Cash and Bank Reports, Search, Filter and Sorting, Financial Reports

Data Security, Tally Audit, Tally Synchronization, Multi-Currency, Printing Reports

SUGGESTED READINGS:

**AUDITING AND CORPORATE GOVERNANCE
(PRACTICAL)****18CMU311A****Semester – III
2H – 1C****Instruction Hours / week: L: 0 T: 0 P: 2****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand and Analyse the Auditing standards and standards for the audit evidence
2. To classify and apply vouching, verification and valuation technique to appropriate situation
3. To Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. To communicate orally and in written form about the findings and solution.
5. To Work in teams and exhibit leadership skills and practice the learnings of auditing and corporate governance lifelong.
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and Analyse the Auditing standards and standards for the audit evidence.
2. Classify and apply vouching, verification and valuation technique to appropriate situation
3. Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. Communicate orally and in written form about the findings and solution.
5. Work in teams and exhibit leadership skills and practice the learnings of auditing and corporate governance lifelong.
6. Reminiscence with statistics on global reporting.

UNIT 1: INTRODUCTION

1. Analyse the importance of Standards on Auditing (SA) : SA 200 SA 210, SA 230, SA 240, SA 300, SA 520, SA 530, SA 550, SA 580 and SA 610
2. Analyse the importance of Audit Evidence : SA 500 - 509

UNIT – II Audit Risk and Internal Control System

3. Audit Risk : Analyse SA 320 and 330
4. Analyse the COSO's Internal Control Framework for selected industry of your choice.

UNIT III VOUCHING, VERIFICATION AND VALUATION

5. How to Vouch/Verify/Value
 - a. Goods sent out on Sale or Return Basis
 - b. Borrowing from Banks.
 - c. Goods sent on consignment

- d. Foreign travel expenses
- e. Receipt of capital subsidy
- f. Provision for income tax
- g. payment of taxes
- h. Advertisement Expenses
- i. Sale of Scrap

UNIT IV :AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

- 6. Case Study on Auditors in on Satyam fraud
- 7. Analyse the provisions amended to the appoint of auditor and audit in Companies Act.

UNIT V :CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

- 8. Any Case study on Corporate Governance to be analysed from below list
- 9. Any Case study on Corporate Governance to be analysed from below list

Maxwell Communication (UK), Enron (USA), WorldCom (USA), Satyam Computer Services Limited (all need to be more emphasized); BCCI (UK), Anderson Worldwide (USA), Vivendi (France), Harshad Mehta and Kingfisher Airlines Scam (all to be covered in brief); Common Governance Problems noticed in various corporate failures; Codes and Standards on Corporate Governance: Cadbury, OECD, Oxley Act; Initiatives in India: CII, SEBI, Clause 49 of Listing Agreement, Kumar Mangalam Committee, Naresh Chandra Committee, Narayan Murthy Committee, LODR.

- 10. Analyse CSR initiative of any Indian company

SUGGESTED READINGS:

- 1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
- 2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
- 3. Dr. T R Sharma, Dr. Gourav Sankalp (2018), Auditing and Corporate Governance, Sathiya Bhawan Publications, Agra
- 4. Ashok Sharma (2019), Auditing and Corporate Governance, VK Global Publications Pvt. Ltd., New Delhi.
- 5. Sharma, J.P., (2016), Corporate Governance, Business Ethics, and CSR, 2nd edition, Ane Books Pvt Ltd, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the accounts heads, vouching, inventory valuations, TDS and Pay roll process available in the accounting software
2. To classify the items under items heads
3. To Generate the financial Reports, TDS and pay roll reports and evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerised system as a lifelong learning.
6. To apply the tally concepts in organizations

COURSE OUTCOMES:**Learners should be able to**

1. Familiarize on the accounts heads, vouching, inventory valuations, TDS and Pay roll process available in the accounting software
 2. Classify the items under items heads
 3. Generate the financial Reports, TDS and pay roll reports and evaluate the output.
 4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
 5. To apply the utilization of computerised system as a lifelong learning..
 6. Practical application of tally concepts in organizations.
-
1. Create a Company and Ledgers in Tally.
 2. Create a Accounting voucher with example in tally.
 3. Create different types of GST Invoices in Tally.
 4. Create Debit/Credit Notes, Memorandum & Post Dated Vouchers in Tally
 5. Create Stock Group, Stock Items and Unit of Measurement in Tally.
 6. Create an Inventory and Manufacturing Vouchers.
 7. Prepare Balance Sheet, Profit/Loss Account, Stock Summary and Ratio Analysis in Tally
 8. Create a payroll in tally with suitable example.
 9. Do the following exercise with the example that given below

Create a company in Tally by your name.

Create 3 stock items named milk, roti and mobile. Opening balances of these 3 stock items would be milk – 10 liters, roti – 20 pieces and mobile – 5 numbers.

Now, create sales ledgers – one for 28% GST rate and one for 5% GST rate.
Also, create purchase ledgers in the same way each of 28% GST and 5% GST.

Create 1 sundry debtor outside your state and 1 sundry debtor inside your state.
Similarly, create 1 sundry creditor outside your state and 1 sundry creditor inside your state.

Now, create GST Taxation ledgers for CGST, SGST and IGST for input as well as output taxation of GST. Totally, there will be 6 GST taxation ledgers.

Now, create a purchase entry in which you will purchase 5 liters of milk at 5% GST rate for Rs50 per liter, 5 pieces of roti for Rs10 per piece and 3 numbers of mobile for Rs25,000 per mobile.

GST rate for roti and mobile is 28%. Purchase this from inside your state.
Also, fill in the E-Way bill details.

Now, create a sales entry. Sell all the milk at Rs.55 per liter with the same rate of GST as it was purchased. Sell 20 pieces of roti at Rs.20 per piece and 1 mobile phone at Rs. 50,000 per mobile at the same rates of GST as it was purchased.
This sale will be outside the state. Also, fill in the E-Way bill details.

Now, check the profit and loss account and see what is the total value of sales for 5% GST.

Go to Stock Summary and see what is the gross profit on sales of milk under the FIFO and LIFO methodology of stock valuations.

Check the Ratio Analysis and see what is the current ratio and quick ratio.

SUGGESTED READINGS:

2. Asok K. Nadhani (2018), Tally ERP Training Guide – 4th edition, BPB Publications; New Delhi
3. Sajee Kurian, (2017) Learning Tally ERP 9 with GST, 1st edition, Blessings Inc, Mumbai.
4. Ajay Maheshwari and Shubham Maheshwari(2017), Implementing GST in Tally.ERP 9, 1st edition, Tally E-Learning.
5. Shraddha Singh, Navneet Mehra (2014), Tally ERP 9 (Power of Simplicity): Software for Business and Accounts, V&S Publishers, New Delhi

Course Objectives:**To make the students**

1. To train students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:**Learners should be able to**

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Practice the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Refine communication competency through LSRW skills.

UNIT I INTEGRATED SKILLS

Development of speaking- Nature, Process, and Importance of Communication, Types of Communication (Verbal and Non-Verbal), Different forms of Communication, Barriers of Communication, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, and Organizational Barriers, listening and grammar skills.

UNIT II: ADVANCED READING SKILLS

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: ADVANCED WRITING SKILLS

Business Correspondence – Inviting Quotations, Sending Quotations, Placing Orders, Inviting Tender, Memorandum, Inter-Office, Memo, Notices, Agenda, Minutes, Resume Writing, and Report Writing.

UNIT IV: BUSINESS LANGUAGE AND PRESENTATION

Importance of Business Language, Vocabulary Words often Confused, Words often Misspelt, Common Errors in English, Oral Presentation – Plan, PowerPoint Presentation and Visual Aids.

UNIT V: TECHNOLOGY AND COMMUNICATION

Language of Newspapers, magazines, Internet, TV and radio – their role to develop listening, reading and discussion skills, E-mail writing – Video Conferencing- Strategic importance of e-communication.

SUGGESTED READING:

In Business; CUP

Oxford Handbook of Writing: St. Martins Handbook of Writing

Sound Business, Julian Treasure OUP

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. To Critically formulate the research design and sampling design suitable for the problem.
4. To communicate orally and written form the research problem, research design, sampling techniques.
5. To design a report to communicate the findings
6. To give suggestion to make business decision.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
2. Analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. Critically formulate the research design and sampling design suitable for the problem.
4. Communicate orally and written for the research problem, research design, sampling techniques.
5. Design a report to communicate the findings.
6. Provide suggestion to make business decision

UNIT I RESEARCH AND RESEARCH PROCESS

Meaning of research; Scope of Research in Business; Purpose of Research; Types of Research, Problem identification, Review of Literature, Concept of theory - deductive and inductive theory - Concept, Construct, Definition, Variables - Research Process

UNIT II RESEARCH DESIGN AND SAMPLING DESIGN

Research Design: Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design.

Data Sources – Primary and Secondary Data.

Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non-Response, Characteristics of a good sample. Probability Sample – Simple Random

Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Non Probability Sampling – Convenience, Quota, Judgmental, snowball sampling.

UNIT III MEASUREMENT AND SCALING

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio.

Concept of Scaling, Ratings and Ranking Scale, Thurstone, Likert and Semantic Differential scaling, Paired Comparison.

Preparing questionnaire – Quality of a good questionnaire.

UNIT IV HYPOTHESIS TESTING

Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing –Tests concerning means and proportions; ANOVA, Chi-square test and other Nonparametric tests, correlation and Regression

UNIT V REPORT PREPARATION

Meaning, types and layout of research report; Steps in report writing; Citations, Bibliography and Annexure in report.

Note: Distribution of marks - 90% theory and 10% problems

SUGGESTED READINGS:

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.
2. Uma Sekaran, Roger Bougie (2018), Research Methods for Business: A Skill-Building Approach, 7th edition, Wiley, New Delhi.
3. Donald Cooper and Pamela Schindler (2017), Business Research Methods, 11th edition, McGraw Hill education, New Delhi.
4. Zikmund William G. et.al (2016), Business Research Methods, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), Research Methods for Business Students, 7th edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. To learn and compute the GST liabilities.
3. To know how to register GST and apply the GST provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the GST.
6. To be familiar with the customs and utilize for lifelong practical application.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. Comprehend and compute GST liabilities.
3. Know the procedure to register GST and apply GST provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining GST and customs and utilize for lifelong practical application.
6. Application of GST provisions for business concerns.

UNIT I CONCEPT OF INDIRECT TAXES

Concept of Indirect Taxes at a glance : Background; Constitutional powers of taxation; Indirect taxes in India – An overview; Pre-GST tax structure and deficiencies; Administration of Indirect Taxation in India; Existing tax structure.

UNIT II BASICS OF GOODS AND SERVICES TAX ‘GST’

Basics concept and overview of GST; Constitutional Framework of GST; GST Model – CGST / IGST / SGST / UTGST; Taxable Event; Concept of supply including composite and mixed supply; Levy and collection of CGST and IGST; Composition scheme & Reverse Charge; Exemptions under GST.

UNIT III CONCEPT OF TIME, VALUE & PLACE OF TAXABLE SUPPLY:

Basic concepts of Time and Value of Taxable Supply; Basics concept of Place of Taxable Supply. Input Tax Credit & Computation of GST Liability- Overview.

UNIT IV PROCEDURAL COMPLIANCE UNDER GST :

Registration; Tax Invoice, Debit & Credit Note, Account and Record, Electronic way Bill; Return, Payment of Tax, Refund Procedures; Audit.

Basic overview on Integrated Goods and Service Tax (IGST), Union Territory Goods and Service tax (UTGST), and GST Compensation to States.

UNIT V OVERVIEW OF CUSTOMS ACT :

Overview of Customs Law; Levy and collection of customs duties; Types of Custom duties; Classification and valuation of import and export goods; Exemption; Officers of customs; Administration of Customs Law; Import and Export Procedures; Transportation, and Warehousing; Duty Drawback; Demand and Recovery; Confiscation of Goods and Conveyances; Refund.

Note: Distribution of marks - 30% theory and 70% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong practice.
6. To prepare Cash flow and fund flow statements.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Preparation of statement of cash and fund flow.
- 6.

UNIT I : FINANCIAL REPORTING

Accounting Standards, Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

Overview of International Accounting Standards (IAS)/International Financial Reporting Standards (IFRS)- Interpretations by International Financial Reporting Interpretation Committee (IFRIC), Significant difference vis-a-vis IAS and IFRS.

Corporate Financial Reporting – Issues and problems with special reference to published financial statements

UNIT II FINANCIAL STATEMENTS - AN INTRODUCTION

Traditional Assumptions of the Accounting Model : Business Entity - Going Concern or Continuity - Time Period - Monetary Unit - Historical Cost - Conservatism - Realization - Matching - Consistency - Full Disclosure - Materiality - Industry Practices - Transaction Approach - Cash Basis - Accrual Basis

The Financial Statements :Balance Sheet (Statement of Financial Position) - Statement of Stockholders' Equity (Reconciliation of Stockholders' Equity Accounts) - Income Statement (Statement of Earnings) - Statement of Cash Flows (Statement of Inflows and Outflows of Cash)

Auditor's Opinion :Auditor's Report on the Firm's Internal Controls - Report of Management on Internal Control over Financial Reporting

Basic Elements of the Balance Sheet :Assets - Liabilities - Stockholders' Equity - Quasi-Reorganization - Accumulated Other Comprehensive Income - Equity-Oriented Deferred Compensation - Employee Stock Ownership Plans (ESOPs) - Treasury Stock - Stockholders' Equity in Unincorporated Firms

Basic Elements of the Income Statement :Net Sales (Revenues) • Cost of Goods Sold (Cost of Sales) • Other Operating Revenue • Operating Expenses • Other Income or Expense

UNIT III FINANCIAL ANALYSIS – 1

Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis

Ratio Analysis - Liquidity of Short-Term Assets

Current Assets, Current Liabilities, and the Operating Cycle

Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities

Current Assets Compared with Current Liabilities

Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) -Cash Ratio

Income Statement Consideration when Determining Long-Term

Debt-Paying Ability- Times Interest Earned

Balance Sheet Consideration when Determining Long-Term

Debt-Paying Ability

Debt Ratio - Debt/Equity Ratio

UNIT IV FINANCIAL ANALYSIS - 2

Profitability Measures

Net Profit Margin - Total Asset Turnover - Return on Assets - DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts - Operating Income Margin - Operating Asset Turnover - Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - The Relationship Between Profitability Ratios - Gross Profit Margin For the Investors

Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, Dividend Yield

Book Value per Share

Basic Elements of the Statement of Cash Flows

Financial Ratios and the Statement of Cash Flows

Operating Cash Flow/Current Maturities of Long-Term Debt and Current Notes - Payable - Operating Cash Flow/Total Debt - Operating Cash Flow per Share - Operating Cash Flow/Cash Dividends

UNIT V THE USERS OF FINANCIAL STATEMENTS

Financial Ratios as Perceived by Commercial Loan Departments :Most Significant Ratios and Their Primary Measure • Ratios Appearing Most Frequently in Loan Agreements.

Financial Ratios as Perceived by Corporate Controllers :Most Significant Ratios and Their Primary Measure • Key Financial Ratios Included as Corporate Objectives

Financial Ratios as Perceived by Certified Public Accountants

Financial Ratios as Perceived by Chartered Financial Analysts

Financial Ratios Used in Annual Reports

Note: Distribution of marks - 40% theory and 60% problems

COURSE OBJECTIVES:**To make the students**

1. To know the uses of spreadsheet for business.
2. To Understand the features of Spreadsheet applications and functions.
3. To comprehend and apply computer tools and inbuilt functions on raw data.
4. To communicate orally and in written form the features of spreadsheet applications and functions.
5. To utilize the expertise of the Excel features and functions as a lifelong practice.
6. To learn shortcut methods in spreadsheet.

COURSE OUTCOMES:**Learners should be able to**

1. Utilize application of spreadsheet for business reporting purpose.
2. Understand the features of Spreadsheet applications and functions.
3. Comprehend and apply computer tools and inbuilt functions on raw data.
4. Communicate orally and in written form the features of spreadsheet applications and functions.
5. Utilize the expertise of the Excel features and functions as a lifelong practice.
6. Use shortcut methods in spreadsheet

UNIT I GETTING STARTED WITH EXCEL

Opening Excel, Creating and Opening Workbook- Saving and Sharing Workbook , Cell Basics - Understanding Cells, Cell Contents, Find and Replace, Formatting Cells - Font Formatting, Text Alignment, Cell Borders and fill colors, Cell styles, Formatting text and numbers, Modifying Columns, Rows and Cells - Inserting, Deleting, Moving, and Hiding rows and columns -Wrapping text and merging Cells Printing Workbooks - Choosing a print area, Fitting and scaling content Finalising and Protecting Workbooks

UNIT II FORMULAS AND FUNCTIONS

Formulas and Functions - Simple Formulas, Complex Formulas, Functions (Statistical, financial, Text, Data and Time)

UNIT III DATA ANALYSIS

Auto filter and Advanced filter, Creating and using outlines, Conditional formatting, Sparklines
Collating data from several worksheets

Working with Data - Freezing Panes and view options, Sorting Data, Filtering Data Working with charts - Understanding Charts, Chart Layout and style, Other chart options

UNIT IV ADVANCED FUNCTIONS

AutoSum, IF Function, VLookup Function and Hlook up, What if Analysis – solver, Name Ranges, Charts and filter data using Slicers, Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.

UNIT V PIVOT TABLE AND VBA

Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

SUGGESTED READINGS:

B.COM.	2018-2019
18CMU411	Semester – IV
RESEARCH METHODOLOGY	2H – 1C
(PRACTICAL)	
Instruction Hours / week L: 0 T: 0 P:2	Marks: Internal: 40 External: 60 Total: 100
	End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data.
3. To analyse the same using appropriate statistical techniques and apply the learning lifelong.
4. To Critically evaluate the appropriate scales and measurement to be used for capturing data.
5. To Communicate in written form and prepare report to support decision making.
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
 2. Analyse the research problem and design the instruments to capture data
 3. Analyse the same using appropriate statistical techniques, and apply the learning lifelong.
 4. Critically evaluate the appropriate scales and measurement to be used for capturing data.
 5. Communicate in written form and prepare report to support decision making.
 6. Work in team and exhibit leadership skills
-
1. Select a problem or issue. Collect 5-10 articles related to issues from reviewed journals available.
 2. Analyse a case to understand the theory of deductive and inductive reasoning.
 3. Analyse a case for the selection of appropriate research design
 4. Analyse a case for the selection of appropriate sampling design
 5. Provide a list of variables and request to classify them as nominal/ordinal/interval/ratio
 6. Ask student to prepare a questionnaire for understanding the perception towards the usage of library among students/ Reading habits among youngsters/ environmental protection Ask students to perform analysis and hypothesis testing for the collected data
 7. Ask students to prepare a technical report for the research undertaken (Minimum 30 pages)
 8. Ask students to write the bibliography in MLA/CPA format for reference made.

Note : 6 – 8 (Team of 2-3 students)

SUGGESTED READINGS:

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.

4. Zikmund William G. et.al (2016), Business Research Methods, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), Research Methods for Business Students, 7th edition, Pearson Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. To know how to register GST.
3. To apply the GST provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the GST and customs and apply the knowledge lifelong.
6. To learn and compute the GST liabilities.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
 2. Know the procedure to register GST and apply GST provisions to business situations.
 3. Communicate orally and in written form the indirect taxations concepts and provisions.
 4. Familiar with the standards and laws pertaining GST and customs and apply the knowledge lifelong.
 5. Application of GST provisions for business concerns.
 6. Comprehend and compute GST liabilities.
-
1. Provision of GST, the provisions related to levy of UTGST.
 2. Whether the following transactions will be considered as supply or not under GST laws (provisions) a) An individual buys a car for personal use and after a year sells it to a car dealer.
b) A dealer of air-conditioners permanently transfers an air conditioner from his stock in trade, for personal use at his residence. c) Provision of service or goods by a club or association or society to its members.

3. Whether GST would be payable in following independent cases (provisions) : a) A Company Secretary makes payment of LLP Registration fees of Rs. 3,000/- on behalf of their clients and charges the client his professional fee of Rs. 15,000/- along with expenses of Rs. 3,000/- incurred in form of payment to Registrar of Companies. b) A company provides Subsidized Meal facility to employees. It pays Rs. 70/- per plate to the caterer and deducts Rs. 10/- per plate from the employee's salary. c) A pharmaceutical company supplies free samples to doctors. d) Raghunath Temple Charitable trust, registered under section 10(23C)(v) of the Income-tax Act gives on rent a community hall, located within temple premises, to public for organizing a Diwali Mela. Rent charged is Rs. 9,500. e) Northstar Trucking Ltd. has given on hire 11 trucks to Jaggi Transporters of Mumbai (a goods transport agency) for transporting goods in various parts of the country. The hiring charges for the trucks are Rs. 10,200 per truck per day.
4. Procedure for GST Registration and Filing of GST Returns
5. Procedure of furnishing details of outward supplies and of revision for rectification of errors and omissions as per CGST Act, 2017.
6. XYZ Education Advisory promotes the courses of foreign universities among prospective students. It has tied up with various Universities all over the world. These Universities have engaged them for promotional and marketing activities for promotion 17 of the courses taught by them and making the prospective students aware about the course fee and other associated costs, market intelligence about the latest educational trend in the territory and ensuring payment of the requisite fees to the Universities if the prospective students decide upon pursuing any course promoted by the Applicant. XYZ Education Advisory receives consideration in the form of commission from the foreign University for these services rendered to prospective students. It wants to know whether the service provided to the Universities abroad would be considered "export" within the meaning of Section 2(6) of the Integrated Goods and Services Act, 2017, and, therefore, a zero-rated supply under the CGST Act 2017?
7. IGST Model - "export of goods" and "export of services". How are exports be treated under GST? Siddharth Transports Ltd., is running a regular tourist bus service, carrying passengers and goods from Coimbatore, Tamil Nadu to Trivandrum, Kerala, with effect from 1st August, 2017 and is charging IGST on transportation services under forward charge mechanism. Discuss whether on Inter-state movement of tourist buses from one depot to another of Siddharth Transports Ltd. would be leviable to IGST.
8. Prescribed offences under CGST/SGST Act

9. Provisions for Anti-Profiteering measure and National Anti-Profiteering Authority (NAA).
10. The applicability of GST Rates for hotels and restaurants.
11. BharghavPesticides Ltd., a domestic company, intends to start a business in Kolkata, involving supply of certain goods, mostly meant for foreign buyers in China. There is some difficulty in the classification of the goods. Can the company seek advance ruling from the Authority for Advance Ruling formed under CGST Act, 2017 in respect of the issue of classification of goods? Can the company also seek ruling on issues involving place of supply?
12. Who is a 'casual taxable person' under the GST? Mr. A of Ludhiana is participating in Hitex Furniture Expo in Haryana where he has no fixed place of business and exhibiting his products. During the expo, the said products will be sold to the people attending and intending to purchase such products. In such scenario, Mr. A required to obtain registration in the state of Haryana? If yes, how?
13. Basic documents to be filed along with bill of entry

2018-2019

**FINANCIAL ANALYSIS AND REPORTING
(PRACTICAL)**

**Semester – IV
2H – 1C**

18CMU413A

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong.
6. To prepare Cash flow and fund flow statement

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Utilize the knowledge of financial statement analysis for lifelong.
6. Preparation of statement of cash and fund flow.

1. To select a Company – Reason for selecting the company as investor

Download the financial statements

Perform the following financial analysis and interpret

2. Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis
3. Ratio Analysis - Liquidity of Short-Term Assets
Current Assets, Current Liabilities, and the Operating Cycle
Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities

- Current Assets Compared with Current Liabilities
Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) -Cash Ratio
4. Debt-Paying Ability- Times Interest Earned
 5. Debt Ratio - Debt/Equity Ratio
 6. Net Profit Margin - Total Asset Turnover - Return on Assets – Operating Income Margin - Operating Asset Turnover
 7. Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - Gross Profit Margin
 8. DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts
 9. For the Investors : Earnings per Common Share, Price/Earnings Ratio, Dividend Payout,- Book Value per Share

SUGGESTED READINGS:

**EXCEL FOR BUSINESS
(PRACTICAL)**

**Semester – IV
4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To Create and format the data in excel sheet
2. To utilize all the inbuilt, functions and formulas and analyse the data.
3. To critically analyse the data using the what-if, solver and pivot functions.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
6. To learn shortcut methods in spreadsheet.

COURSE OUTCOMES:

Learners should be able to

1. Create and format the data in excel sheet
 2. Utilize all the inbuilt, functions and formulas and analyse the data.
 3. Critically analyse the data using the what-if, solver and pivot functions.
 4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
 5. Apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
 6. Use shortcut methods in spreadsheet
-
1. Creating an excel sheet and performing all formatting tools and protecting and printing the file.
 2. Performing statistical functions, Performing financial functions, Performing date and text function
 3. Filtering the data, Conditional formatting

4. Collating data from several worksheets
5. Charts, Chart Layout and style, Other chart options
6. IF Function,
7. VLookup Function and Hlook up,
8. What if Analysis – solver,
9. Name Ranges,
10. Charts and filter data using Slicers,
11. Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.
12. Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function
13. VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of laws related to constitution of company, finance structure, management team.
2. To comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. To analyse few real time cases relevant to company laws
4. To communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. To be familiar with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. To know the online registration and online filing process of documents.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of laws related to constitution of company, finance structure, management team.
2. Comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. Analyse few real time cases relevant to company laws
4. Communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. Familiarize with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. Online registration and online filing process of documents.

UNIT 1: INTRODUCTION AND INCORPORATION AND ITS CONSEQUENCES

Administration of Company Law [including National Company Law Tribunal (NCLT), National Company Law Appellate Tribunal (NCLAT), Special Courts]; Characteristics of a company; lifting of corporate veil; types of companies including one-person company, small company and dormant company; association not for profit; illegal association; formation of company, on-line filing of documents, promoters, their legal position, pre-incorporation contract; on-line registration of a company, Memorandum of Association & Articles of Association and their Alteration, Doctrine of Ultra-Vires, Constructive Notice, Indoor Management, Alter Ego

UNIT 2: FINANCIAL STRUCTURE OF COMPANIES

Concept of Capital and Financing of Companies– Sources of Capital; Classes and Types of Shares; Equity Shares with Differential Rights; Issue of Shares at Par, Premium and Discount; Forfeiture and Surrender of Shares; Bonus Issues; Rights Issues; Issue of Sweat Equity Shares; Employees Stock Option Scheme; Private Placement; preference shares and other forms of securities, Alteration of Share Capital– Reduction of Capital; Buy–Back of Shares

Prospectus– Definition; Abridged Prospectus; Red–Herring Prospectus; Shelf Prospectus; Information Memorandum; Contents, Registration; Misrepresentations and Penalties

Debt Capital – Debentures, Debenture Stock, Bonds; Recent Trends and Dynamics of Corporate, Debt Financing; Debenture Trust Deed and Trustees; Conversion of and Redemption of Debentures Securing of Debts: Charges ; Creation, Modification and Satisfaction of Charges

Allotment and Certificates – General Principles and Statutory Provisions related to Allotment;

Minimum Subscription; Irregular Allotment; Procedure of Issue of Share Certificates and Warrants

UNIT III: MANAGEMENT:

Classification of directors, women directors, independent director, small shareholder's director; Disqualifications, director identity number (DIN); Appointment; Legal positions, powers and duties; removal of directors; Key managerial personnel, managing director, manager; Meetings of shareholders and board; Types of meeting, convening and conduct of meetings, postal ballot, meeting through video conferencing, e-voting; Committees of Board of Directors - Audit Committee, Nomination and Remuneration Committee, Stakeholders Relationship Committee, Corporate Social Responsibility Committee.

UNIT IV: ACCOUNTS, AUDIT AND DIVIDENDS

Books of Accounts : Financial Statements.

Auditors – Appointment, Resignation and Removal; Qualification and Disqualification; Rights, Duties and Liabilities, Audit and Auditor's Report, Cost Audit and Special Audit

Profit and Ascertainment of Divisible Profits, Declaration and Payment of Dividend, Treatment of Unpaid and Unclaimed Dividend, Transfer of Unpaid and Unclaimed Dividend to Investor Education and Protection Fund, Board's Report and Disclosures Contents and Annexure to Board's Report, Directors' Responsibility Statement – Preparation and Disclosures, Compliance Certificate – Need and Objective; Issue and Signing by Practising Company Secretary, Corporate Governance Report

UNIT V: WINDING UP

Concept and modes of Winding Up. Insider-Trading, Whistle-Blowing – Insider-Trading; meaning and legal provisions; Whistleblowing: Concept and Mechanism.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
2. To analyse the alternatives using appropriate tools and techniques.
3. To solve the problems and take decisions based on the result.
4. To communicate orally and in written form the concepts and solutions.
5. To analyse cases in a team and exhibit leadership skills.
6. To plan and manage the cash flows.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
2. Analyse the alternatives using appropriate tools and techniques.
3. Solve the problems and take decisions based on the result.
4. Communicate orally and in written form the concepts and solutions.
5. Analyse cases in a team and exhibit leadership skills.
6. Plan and Manage the cash flows in companies.

UNIT I : FINANCIAL MANAGEMENT AND SOURCES OF FINANCE :

Evolution, Scope and Functions of Finance Managers- Introduction; Scope of Finance; Financial Management System; Finance Functions ; Role of a Finance Manager – Treasurer and Controller, Financial Decisions, Agency Conflict and Agency cost.

Objectives of a Firm – Introduction; Profit Maximization; Shareholders' Wealth Maximization (SWM)

Sources of Finance - Introduction; Short-term Finance; Long-term Funds

Asset-Based Financing – Introduction; Lease Financing and Hire Purchase Financing.

UNIT II : TIME VALUE OF MONEY AND CAPITAL BUDGETING DECISIONS :

Time Value of Money - Introduction; Concept of Time Value of Money; Compounding Method ; Discounting Method (Problems)

Capital Budgeting Decisions- Introduction; Capital Budgeting, Capital Rationing

Capital budgeting techniques : Discounted and Non Discounted : NPV, Profitability index (Benefit Cost Ratio), Pay back Period, IRR ; (Problems)

UNIT III CAPITAL STRUCTURE THEORIES AND COST OF CAPITAL :

Capital Structure, Capital structure determinants, NI Approach, NOI approach, Traditional Approach, Relevance of Capital Structure Theories ; Irrelevance of Capital Structure

Cost of Capital; Components of Cost of capital: Cost of Debt; Cost of Preference Capital; Cost of Equity Capital, Approaches to Derive Cost of Equity; Weighted Average Cost of Capital and Weighted Marginal Cost of Capital (Problems)

UNIT IV LEVERAGE AND DIVIDEND POLICY

Financial and Operating Leverage – Introduction; Meaning of Financial Leverage, operating Leverage.

Financial and Operating Leverages, EBIT-EPS Analysis, Indifference point. (Problems)

Dividend Policy – Introduction; Types of dividend, Factors influencing the dividend policy; Financing and Dividend Decision; Dividend Relevance: Walter's Model

UNIT V : WORKING CAPITAL MANAGEMENT, CASH MANAGEMENT, RECEIVABLE MANAGEMENT AND INVENTORY MANAGEMENT.

Introduction; Concepts of Working Capital; Working capital Policies, Operating Cycle, (Problems) Estimation of working capital (Problems).

Management of Cash – Introduction ; Motives for Holding Cash; Facets of Cash Management; Cash Planning; Cash Forecasting and Budgeting; Determining the Optimum Cash Balance ; Investing Surplus Cash in Marketable Securities

Receivables Management :Credit Policy: Nature and Goals ;Collection Procedures

Inventory Management : Nature of Inventory, EOQ, Reorder level.

Note: Distribution of marks - 60% theory and 40% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To analysis the financial statement of a company.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Making decisions based on the financial statement analysis.

UNIT I : INTRODUCTION

Meaning, Objectives, Nature and Scope of management accounting, Difference between cost accounting and management accounting, Cost control and Cost reduction, Cost management

UNIT II : FINANCIAL STATEMENT ANALYSIS

Horizontal and Vertical Analysis.

Ratio Analysis: Meaning, Advantages, Limitations, Classifications of ratios

Fund Flow Statement: Meaning, Uses, Limitations, Sources and uses of funds

Cash Flow Statement: Meaning, Uses, Limitations, Sources and uses of cash, AS3 Standard format.

UNIT III : STANDARD COSTING

Standard Costing : Standard Costing and Variance Analysis: Meaning of standard cost and standard costing, advantages, limitations and applications. Variance Analysis – material, labour, overheads and sales variances. Disposition of Variances, Control Ratios.

UNIT IV : MARGINAL COSTING AND DECISION MAKING

Absorption versus Variable Costing: Distinctive features and income determination. Cost-Volume Profit Analysis, Profit / Volume ratio. Break-even analysis-algebraic and graphic methods. Angle of incidence, margin of safety, Key factor, determination of cost indifference point.

Decision Making: Steps in Decision Making Process, Concept of Relevant Costs and Benefits, Various short term decision making situations – profitable product mix, Acceptance or Rejection of special/ export offers, Make or buy, Addition or Elimination of a product line, sell or process further, operate or shut down. Pricing Decisions: Major factors influencing pricing decisions, various methods of pricing

UNIT V: BUDGETARY CONTROL AND CONTEMPORARY ISSUES :

Budgeting and Budgetary Control: Concept of budget, budgeting and budgetary control, objectives, merits, and limitations. Budget administration. Functional budgets. Fixed and flexible budgets. Zero base budgeting. Programme and performance budgeting.

Contemporary Issues: Responsibility Accounting: Concept, Significance, Different Responsibility Centres, Divisional Performance Measurement: Financial and Non-Financial measures. Transfer Pricing

Note: Distribution of marks - 30% theory and 70% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the accounting for advanced issues in partnership, BFSI sector and special transaction.
2. To comprehend on the working of accounting standards
3. To solve the problems and take decisions based on the result.
4. To learn the accounting for advanced corporate issues that could be applied lifelong.
5. To communicate orally and in written form the concepts and solutions.
6. To know the accounting procedure for branches and also to ascertain the financial position of each branch separately.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the accounting for advanced issues in partnership, BFSI sector and special transaction.
2. Comprehend on the working of accounting standards
3. Solve the problems and take decisions based on the result.
4. Understand the accounting for advanced corporate issues that could be applied lifelong.
5. Communicate orally and in written form the concepts and solutions.
6. Acquire knowledge on accounting procedure for branches and also to ascertain the financial position of each branch separately.

UNIT I FINANCIAL STATEMENTS

Conceptual Framework for Preparation and Presentation of Financial Statements : Introduction-scope, users and their information needs.

The objective of financial statements : financial position, performance and cash flows, notes and supplementary schedules, Underlying assumptions : accrual basis, going concern, consistency, Qualitative characteristics of financial statements, The elements of financial statements, Recognition of the elements of financial statements, Concepts of capital and capital maintenance

UNIT II ACCOUNTING STANDARDS

Working knowledge of:

AS 4 : Contingencies and Events occurring after the Balance Sheet Date

AS 5 : Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies

AS 11 : The Effects of Changes in Foreign Exchange Rates (Revised 2003)

AS 12 : Accounting for Government Grants

AS 16 : Borrowing Costs
AS 19 : Leases
AS 20 : Earnings Per Share
AS 26 : Intangible Assets
AS 29 : Provisions, Contingent Liabilities and Contingent Assets.

UNIT III ADVANCED ISSUES IN PARTNERSHIP ACCOUNTS

Dissolution of partnership firms including piecemeal distribution of assets; Amalgamation of partnership firms; Conversion into a company and Sale to a company.

UNIT IV COMPANY ACCOUNTS

- Accounting for employee stock option plan, Buy back of securities, Equity shares with differential rights, Underwriting of shares and debentures, Redemption of debentures
- Advanced problems for business acquisition, Amalgamation and reconstruction (excluding problems of amalgamation of inter-company holding)
- Accounting involved in liquidation of companies, Statement of Affairs (including deficiency/surplus accounts) and Liquidator's statement of account of the winding up.
- Financial Statements of Banking, Financial Services and Insurance (BFSI) ,Insurance, Non-Banking Financial Companies, Mutual funds and regulatory requirements thereof.
- Valuation of goodwill

UNIT V ACCOUNTING FOR SPECIAL TRANSACTIONS

Departmental and branch accounts including foreign branches

Consolidated Financial Statements

Concept of consolidation and simple problems on Consolidated Financial Statements with single subsidiary (excluding problems involving acquisition of Interest in Subsidiary at Different Dates; Different Reporting Dates; Disposal of a Subsidiary and Foreign Subsidiaries)

Note: Distribution of marks - 30% theory and 70% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To analyse the business case studies and try to apply the theoretical learning into lifelong practice.
5. To Critically evaluate the appropriate alternatives and draw a solution.
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Analyse the business case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I : INTRODUCTION TO MARKETING MANAGEMENT:

Introduction: Market and Marketing, the Exchange Process, Core Concepts of Marketing - Market and Marketing, the Exchange Process, Core Concepts of Marketing, Exchange concept, Production concept, Product concept, Sales/selling concept, Modern marketing concept, Societal marketing concept, Impact of marketing concepts and its applicability, Functions of Marketing, Importance of Marketing, Marketing Orientations.

Environmental Scanning: Analysing the Organization's Micro Environment, Company's Macro Environment, Differences between Micro and Macro Environment, Techniques of Environment Scanning,

UNIT II - THE MARKET PROCESS AND SEGMENTATION

The marketing process: Introduction, Marketing Mix-The Traditional 4Ps, The Modern Components of the Mix- The Additional 3Ps, Developing an Effective Marketing Mix, Marketing Planning, Marketing Implementation and Control,

Segmentation : Concept of Market Segmentation, Benefits of Market Segmentation, Requisites of Effective Market Segmentation, The Process of Market Segmentation, Bases for Segmenting Consumer Markets, Targeting (T), Market Positioning (P)

UNIT III :PRODUCT MANAGEMENT

Decisions, Development and Lifecycle Strategies: Introduction, Levels of Products, Classification of Products, Product Hierarchy, Product Line Strategies, Product Mix Strategies, Packaging and Labelling, New Product Development, Product Life Cycle (PLC)

Brand and Branding Strategy: Introduction, Brand and Branding, Advantages and disadvantages of branding, Brand Equity, Brand Positioning, Brand Name Selection, Brand Sponsorship, Brand Development

UNIT IV : PRICING AND DISTRIBUTION MANAGEMENT

Pricing : Introduction, Factors Affecting Price Decisions, Cost Based Pricing, Value Based and Competition Based Pricing, Product Mix Pricing Strategies, Adjusting the Price of the Product, Initiating and Responding to the Price Changes.

Distribution Management: Introduction, Need for Marketing Channels, Decisions Involved in Setting up the Channel, Channel Management Strategies, Introduction to Logistics Management, Introduction to Retailing, Wholesaling,

UNIT V - PROMOTION MANAGEMENT AND RECENT DEVELOPMENTS IN MARKETING

Nature and importance of promotion; Communication process; Types of promotion: advertising, personal selling, public relations & sales promotion, and their distinctive characteristics; Promotion mix and factors affecting promotion mix decisions;

Recent developments in marketing: Social Marketing, online marketing, direct marketing, services marketing, green marketing, Rural marketing; Consumerism

18CMU503B		INVESTMENT MANAGEMENT		Semester – V	
				4H	– 3C
Instruction Hours / week: L: 4 T: 0 P : 0		Marks: Internal: 40 External: 60		Total: 100	
End Semester Exam: 3 Hours					

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of investing and mechanics for formulating investment decisions.
2. To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. To apply the investing concepts and skills lifelong.
4. To analyse the EIC framework make decisions based on investing in different avenues.
5. To Critically evaluate the risk return parameters and select the best alternative.
6. To Communicate in written form and prepare report

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. Apply the investing concepts and skills lifelong.
4. Analyse the EIC framework make decisions based on investing in different avenues.
5. Critically evaluate the risk return parameters and select the best alternative.
6. Communicate in written form and prepare report

UNIT I : The Investment and Investment Avenues

Concepts of investment – Sources of investment information- Investment Instruments. Investment cycle.

UNIT II: Risk and Return and Valuation of Securities

Concept of total risk, factors contributing to total risk : default risk, interest rate risk, market risk, management risk, purchasing power risk, systematic and unsystematic risk,.

Risk & risk aversion. Capital allocation between risky & risk free assets-Utility analysis

Bond Valuation, Preference Share Valuation and Share Valuation: Dividend discount models- no growth, constant growth (Problems)

UNIT III Fundamental Analysis, Technical Analysis and Market Efficiency

EIC framework; Economic analysis: Leading lagging & coincident macro-economic indicators, Expected direction of movement of stock prices with macroeconomic variables

in the Indian context; Industry analysis: stages of life cycle, Porter's five forces model, SWOT analysis, financial analysis of an industry; Company analysis. Technical Analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, Trends: resistance, support, consolidation, momentum- Charts: line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, Indicators: moving averages

Efficient Market Hypothesis; Concept of efficiency: Random walk, Three forms of EMH

UNIT IV :Portfolio Management and portfolio Theory

Portfolio Management – Portfolio creating process - Portfolio Analysis: portfolio risk and return, Markowitz portfolio model: risk and return for 2 and 3 asset portfolios, concept of efficient frontier and optimum portfolio

Portfolio Theory : Capital asset pricing model – Arbitrage pricing theory – assumptions, significances and limitations of each theory

UNIT V:Mutual Funds, Portfolio Evaluation and Portfolio Revision

Mutual Funds : Introduction, calculation of Net Asset Value(NAV) of a Fund, classification of mutual fund schemes by structure and objective, advantages and disadvantages of investing through mutual funds.

Performance Evaluation using Sharpe's Treynor's and Jensen's measures.

Meaning – needs – Sharpe's performance measures – Treynor's Performance Index – Jensen's Performance Index – their significance and limitations – Portfolio revision (Problems)

Note: Distribution of marks - 80% theory and 20% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of micro and macroeconomic factors and its application in business.
2. To communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. To apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. To analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. To Critically evaluate the appropriate alternatives and draw a solution
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of micro and macroeconomic factors and its application in business.
2. Communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. Apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. Analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I BUSINESS ECONOMICS; DEMAND AND SUPPLY:

Introduction -Meaning, nature and scope of Business Economics, Significance in decision making.

Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply – Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II PRODUCTION, COST AND REVENUE FUNCTION:

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors – Short & Long run – Total Product – Marginal Product – Average Product – Production Function – Law of Returns – Law of Returns to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs – Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves – Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III MARKET COMPETITION:

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly Market – Features

UNIT IV : MACRO ECONOMIC FACTORS :

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer Payments – National Income Aggregates– Private Income – Personal Income – Personal Disposable Income – National Disposable Income – Measurement of National Income – Production Method – Income Method – Expenditure Method

Phases of Business Cycle – Causes of cyclical movements – Price Movements: Inflation, Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.

UNIT V : MONETARY POLICY :

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy – Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget Preparation – Deficit Budget.

Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP – Disequilibrium in BOP.

Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of Interest.

Note: Distribution of marks - 80% theory and 20% problems

2018-2019

18CMU504B

**MANAGEMENT AND
ORGANIZATION BEHAVIOUR**

Semester – V

6H – 5C

Instruction Hours / week: L: 6 T: 0 P: 0

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of management, Behaviour as individual, group and organization.
2. To communicate orally and in written form Concept of management, Behaviour as individual, group and organization.
3. To apply the Concept of management, Behaviour as individual, group and organization life long.
4. To analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. To Work in team and exhibit leadership skills
6. To Critically evaluate the appropriate alternatives and draw a solution.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of management, Behaviour as individual, group and organization.
2. Communicate orally and in written form Concept of management, Behaviour as individual, group and organization.
3. Apply the Concept of management, Behaviour as individual, group and organization lifelong.
4. Analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I SCHOOL OF MANAGEMENT THOUGHTS AND FORMS OF ORGANIZATION :

Definition of Management –managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Management by Objectives (MBO) – Management by Exception (MBE) - Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Special forms of ownership :

Franchising - Licensing - Leasing - Corporate Expansion : mergers and acquisitions - Diversification, forward and backward integration - Joint ventures, Strategic alliance

UNIT II MANAGEMENT FUNCTIONS :

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process - Organizing – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

UNIT III ORGANIZATIONAL BEHAVIOR AND PERSONALITY:

Importance of organizational Behaviour – OB Model - Attitudes – Components – Attitude and Behaviour – Job attitudes – Values – importance – Terminal and Instrumental values – Generational Values – Personality and values.

Personality – Types – Factors influencing personality – Theories – Perceptions – Importance – Factors influencing perception – Judging others, perception and individual decision making

UNIT IV LEARNING AND LEADERSHIP THEORIES :

Learning - Concept and Theories of Learning, Reinforcement, Motivation – Importance – Theories: Need, Content and Process Theories – Application.

Leadership – Theories – Trait and Contingency theories – Power and politics – Bases of power – Causes and consequences of political behavior

UNIT V GROUP, TEAMS, CONFLICT AND ORGANIZATIONAL CHANGE

Groups and Teams - Definition, Difference between Groups and teams - Stages of Group Development - Group Cohesiveness - Types of teams

Conflict: Concept, Sources - Types, Stages of conflict - Management of conflict,

Organizational Change: Concept, Resistance to change, Managing resistance to change, Implementing Change – Kurt Lewin Theory of Change

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of banking and insurance its history, products and regulatory body.
2. To communicate orally and in written form the Concept of banking and insurance its history, products and regulatory body.
3. To apply the Concept of banking and insurance, its products in lifelong practice.
4. To apply the learning of the bank functions and operations lifelong.
5. To comprehend and apply the laws related to banking.
6. To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of banking and insurance its history, products and regulatory body.
2. Communicate orally and in written form the Concept of banking and insurance its history, products and regulatory body.
3. Apply the Concept of banking and insurance, its products in lifelong practice.
4. Apply the learning of the bank functions and operations lifelong.
5. Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
6. Comprehend and apply the laws related to banking.

UNIT I BANKING - INTRODUCTION AND REGULATORY FRAMEWORK

Introduction to Banking: History of Banking Business and banker, Banking system and its impact in the economy.

Regulatory Framework: RBI - Acts and Regulations - Role and functions of RBI - Monetary policy and tools - Policy rates, CRR and SLR.

UNIT II BANKING – GROWTH AND DEVELOPMENT:

Commercial banks - structure of the Indian banking system - PSU and Private banks - Foreign banks. RRBs and Cooperative bank - Developmental financial institutions. Current development - retail banking - corporate banking - international banking. NBFCs

Electronic banking: Internet banking – credit and debit cards-ECS, NEFT, RTGS – risks in e-banking

UNIT III PRODUCTS AND SERVICES IN BANKS AND RISK MANAGEMENT IN BANKS:

Savings and Deposit products, Loans and advances - priority sector lending - export credit

Risk management in banks – an overview

UNIT IV INTRODUCTION TO INSURANCE, LIFE AND HEALTH INSURANCE :

Introduction to Insurance : History - purpose and importance - functions – benefits - classification of Insurance Policies-Insurance contracts – assurance - legal and regulatory framework - Regulator – IRDA

Life insurance and Health Insurance: Need for life and health insurance, Classification of policies - Advantages - comparison of different policies - Role of hospitals and TPAs-Govt. sponsored schemes.

UNIT V MOTOR VEHICLES INSURANCE, MARINE INSURANCE AND OTHER TYPES OF INSURANCE

Motor Vehicles Insurance and Marine Insurance: Importance of Vehicle and Marine Insurance– Legal terms - Classification of policies - claims and settlement

Other Types of Insurance: Fire insurance, Flood, burglary, cattle, crop, engineering and liability policies - Reinsurance

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial markets, Financial Institutions and regulatory body.
2. To communicate orally and in written form the Concept of Financial markets, Financial Institutions and regulatory body.
3. To apply the Concept of Financial markets, Financial Institutions and regulatory body in lifelong practice.
4. To Understand the Concept of banking and treasury operations.
5. To communicate orally and in written form the Concept of investment banking and private equity
6. To apply the Concept of mutual fund and commodity market.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Financial markets, Financial Institutions and regulatory body.
2. Communicate orally and in written form the Concept of Financial markets, Financial Institutions and regulatory body.
3. Apply the Concept of Financial markets, Financial Institutions and regulatory body in lifelong practice.
4. Understand the Concept of banking and treasury operations.
5. Communicate orally and in written form the Concept of investment banking and private equity
6. Apply the Concept of mutual fund and commodity market.

UNIT I FINANCIAL MARKETS, INSTITUTIONS AND REGULATORY BODY

Introduction to Financial Markets, Role of Financial Market in Economics Development of a country, stakeholders in Financial Market, Indian Financial Market Scenario
Institutions and Intermediaries – Depository, Stock and Commodity Exchange- Indian and Global, Intermediaries, Institutional Investors, FPIs, Custodians, Clearing Houses
Regulators : Ministry of Finance, SEBI, RBI,

UNIT II CAPITAL MARKETS AND MONEY MARKETS

Capital Market-Primary - New Issue Market-Domestic and Global, private Placement, QIP, Disinvestment, Right Issue.
Capital Market- Secondary - Secondary Market, Stock Market operations, Indian Debt Market
Money Market - Basics of Money Market, Money Market Instruments, Money Market Participants, Repo and reserve repo, CRR, SLR, MIBOR, LIBOR, Government Security Market

UNIT III BANKING, ALM AND TREASURY OPERATIONS

Banking - Banking-Management, Capital Adequacy including RBI & Basel Norms, Asset Reconstruction - Impact of various Policies of Financial Markets -Credit Policy of RBI, Fed Policy, Inflation Index, CPI, WPI, ETC.

Asset-Liability Management(ALM), Banking as source of capital including NBFCs - concept of project financing, working capital management, Reverse mortgage

Treasury operations - rating and development of funds risk management - Preventive controls - Early signals, Credit Risk, Credit Derivatives, credit default swaps, collateralise debt obligations, pricing of credit derivative instruments,

UNIT IV INVESTMENT BANKING AND PRIVATE EQUITY

Investment Banking – Concept, function, challenges, Development in investment banking, Merchant Banking and issue management

Private Equity – Meaning, venture capital, Buyouts, special cases, hurdle rate, paid in capital, term sheet, Cost of Investing in private Equity, Exit Routes, Valuation of private Equity transaction, private equity fund

UNIT V MUTUAL FUND, CREDIT RATING AND COMMODITY MARKET

Mutual Funds – Meaning, Evolution, Types, Performance Measures, NAV, Mutual fund organization, Advantage and disadvantage of mutual fund, Exchange Traded Fund, Real Estate Investment Trust, Infrastructure investment Trust.

Credit Rating – introduction, rating Services, objective and types, uses, credit rating process, rating revisions, credit rating agencies in India and Abroad, Limitation with case studies

Commodity Market - What are commodity Markets, Role of commodity markets, Commodity market in India, Application of derivative in commodities, Global Commodities Exchanges

6. Skill development for translation based employment.

அலகு – I :இக்காலஇலக்கியம்:

கல்வி: மகாகவிபாரதியார் –சுயசரிதை - ஆங்கிலக்கல்வி.

இன்றையநிலை: கவிமணிதேசியவிநாயகம் -

ஒற்றுமையே உயிர்நிலை: கவிஞர் அப்துல் ரகுமான் - காலவழு

மனிதநேயம்: கவிஞர் சிற்பிபாலசுப்பிரமணியன் – மலையாளக்

காற்றுகவிஞர்தாமரை- மழைக்குறிப்பு

சூழலியல் : கவிஞர் வைதீஸ்வரன் -விரல்மீட்டியமழை

பெண்ணியம் : கவிஞர் சுகந்திசுப்பிரமணியம் – புதையுண்ட

வாழ்க்கைகவிஞர்வைரமுத்து – அம்மா

வாழ்க்கை :கவிஞர்தருமுசிவராம் – வாழ்வுப்பாடல்

இயற்கை : பாவேந்தர்பாரதிதாசன் – அழகின்சிரிப்பு – வான்.

அலகு – II :அறஇலக்கியம்:

கொன்றைவேந்தன்: 1 - 50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் -20 குறள்கள்

பழமொழிநானூறு: 5 பாடல்கள்

வேதநாயகம்பிள்ளைநீதிநூல்: 74 -78 பாடல்கள்

பெருவாயின்முள்ளியார்ஆசாரக்கோவை: 5 பாடல்கள்

அலகு - III :சிறுநிலக்கியம்:

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர்முருகன்பிள்ளைத்தமிழ்: 2 பாடல்கள்

குற்றாலக்குறவஞ்சி: 5 பாடல்கள்

முக்கூடற்பள்ளு : 5 பாடல்கள்

கலிங்கத்துப்பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு – IV :கட்டுரை:

1. உயர்தனிச்செம்மொழி- பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை- அ.இராசமாணிக்கனார்
3. வாழ்க்கை-இளவழகனார்
4. ஆளுமைத்திறன்அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி:

1. படைப்பிலக்கியப்பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள்இலக்கணப்பயிற்சிகள்

பாடநூல்:

கற்பகச்சோலை –

தமிழ்ஏடு.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறைவெளியீடு.

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To train students to acquire proficiency in English.
2. To explore different genres of literature and learning grammar.
3. To provide aesthetic pleasure through literature.
4. To inculcate moral values through literature.
5. To develop ethical values.
6. To give basic grammar knowledge.

3. Prepare business reports for organization needs.
4. Use appropriate technology for business communication.
5. Draft the resume and to develop skills to face the interview
6. Increase the communication skill of students

UNIT I Communication and its barriers

Nature of Communication: Process of Communication, Types of Communication (Verbal and Non-Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers.

UNIT II Business Correspondence:

Letter Writing, presentation, inviting quotations, sending quotations, placing orders, Inviting tenders, Sales letters, claim and adjustment letters and social correspondence, Memorandum, Inter-office Memo, Notices, Agenda, Minutes. **Application Letters – Preparation of Resume**

UNIT III Report Writing:

Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports

UNIT IV Vocabulary and Listening :

Vocabulary: Words often confused, Words often misspelt, Common errors in English. Introduction to phonetics, need and use of it, Word stress and Sentence stress- Contrastive stress in sentences to highlight different words- Intonation- Rising and Falling tone, falling -rising tone- Word Power – Vocabulary – Jargon – rate of speech, pitch, tone – Clarity of voice.

The Importance of Listening in the Workplace: Introduction, what is listening? Barriers to Listening, Strategies for Effective Listening, Listening in a Business Context.

UNIT V Use of Technology and Interview :

Appropriate use of technology, EMAIL, WEB PAGE communication, Voice and wireless communication

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech.

SUGGESTED READINGS:

18LAU201	தமிழ் இரண்டாம் தாள்	Semester – II 6H – 6C
----------	---------------------	--------------------------

Instruction Hours / week L: 6 T: 0 P: 0

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. Learning way of thinking and expressive ability.
2. Improving the scope of research.
3. Realizing the subtle parts of life that literature conveys.
4. Realizing the role that literature plays in the maturation of the human mind.
5. Awareness raising on awareness, culture etc. in the growing community.
6. Preparing students for government exams.

COURSE OUTCOMES:**Learners should be able to**

1. Complete introduction to ‘History of Tamil Literature’, which is an optional subject in competitive examinations such as Indian Citizenship.
2. Access to literature with a research-oriented approach to inscriptional, manuscript, and archaeological research.
3. ‘Scientific Tamil’, the field of development of Tamil; Development of multi-pronged research thinking on ‘Internet Tamil’.
4. Having creative self-improvement and creativity development for employment.
5. An attitude of seeking literature in support of social and biological values.
6. Skill development for translation-based employment.

அலகு – I :பக்தி இலக்கியம்

சைவ, வைணவஇலக்கியங்கள் - தோற்றம் ,வளர்ச்சி, வரலாறு

1. சைவம் -பெரியபுராணம் - திருமூலநாயனார்புராணம்.
- 2.வைணவம் - பெரியாழ்வார்திருமொழி: 10 பாடல்கள்

அலகு – II :சங்கஇலக்கியம் :

சங்கஇலக்கியங்கள்அறிமுகம்

அ). எட்டுத்தொகை

நற்றிணை: 1. பிரசம்கலந்த – பாலை-110

2.தடமருப்புஎருமை- மருதம்-130

குறுந்தொகை : 1. கருங்கட்டாக்கலை – குறிஞ்சி- 69

2. உள்ளதுசிதைப்போர்- பாலை-283

ஐங்குறுநூறு : 1. நெய்தல்-தொண்டிப்பத்து:

திரைஇமிழ்இன்னிசை-181

2. அன்னாய்வாழிவேண்டன்னை-203

பதிற்றுப்பத்து : 1. சிதைந்ததுமன்ற-27

2. மீன்வயின்நிற்ப-90

பரிபாடல்: பரிபாடல்திரட்டு-மதுரைநகர்ச்சிறப்பு:

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60 Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To acquire Grammar.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

COURSE OUTCOMES:**Learners should be able to**

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT - I : PROSE

1. I Have a Dream - Martin Luther King, Jr.
2. 'First human' discovered in Ethiopia - Pallab Ghosh
3. The First Case- M.K. Gandhi

UNIT - II : POEM

1. L'Allegro - John Milton
2. God Is a Medicine Cabinet - Cynthia Atkins
3. A Prayer for my daughter - W.B. Yeats

UNIT - III : SHORT STORIES

1. The Tell Tale Heart - Edgar Allan Poe
2. Sparrows- K. Ahmad Abbas
3. The Little Match-Seller - Hans Christian Andersen

UNIT - IV: Drama

1. Tempest- Act 2-Scene 2
2. The Referee- W.H. Andrews and Geoffrey Dearmer

UNIT - V

GRAMMAR : 1. Voice
2. Reported Speech
3. Interrogatives (Yes or No, 'Wh' questions)
4. Word Class

COMPOSITION:

1. Writing Minutes and Preparing Agenda
2. Note Taking
3. Charts and Pictorial Writing.
4. Report Writing

Prescribed Text: Twilight, Published by the Department of English, Karpagam Academy of Higher Education.

Suggested Reading: Murphy Raymond, 1998 Essential English Grammar, Cambridge University Press.

COURSE OBJECTIVES:**To make the students**

1. To understand the accounting process for Share capital and debenture and its application
2. To prepare final accounts for corporates
3. To understand the accounting standard and its application in inter-holding companies
4. To solve problems relating to Holding Company Accounts, Liquidation of Companies and various other Accounts
5. To understand and apply accounting process for Banking industry.
6. To understand and apply the accounting process of non-banking Industry

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and apply the accounting process related corporate accounting
2. Prepare final accounts for corporate entity.
3. Understand the accounting standard and apply the same for corporate entity and amalgamation.
4. Enhance the problem-solving skills and analytical skills in the accounting context.
5. Understand the accounting process of banking industry
6. Understand the accounting process of non-banking industry

UNIT I Accounting for Share Capital and Debentures:

Issue, Forfeiture and Reissue of Forfeited Shares - Concept & Process of Book Building - Issue of Rights and Bonus Shares - Buyback of Shares - Redemption of Preference Shares Issue and Redemption of Debentures

UNIT II Final Accounts:

Preparation of Profit and Loss Account and Balance Sheet of Corporate Entities – Excluding Calculation of Managerial Remuneration - Disposal of Company Profits- Valuation of Goodwill and Valuation of Shares - Concepts and Calculation: Simple Problem only

UNIT III Amalgamation of Companies:

Concepts and Accounting Treatment as per Accounting Standard: 14 (ICAI) (excluding inter- company holdings). Internal Reconstruction -Concepts and Accounting Treatment (excluding scheme of reconstruction)

UNIT IV Accounts of Holding Companies/Parent Companies :

Preparation of Consolidated Balance Sheet with one Subsidiary Company - Relevant Provisions of Accounting Standard: 21 (ICAI).

UNIT V Accounts of Banking Companies:

Difference Between Balance sheet of Banking and Non-banking Companies - Prudential Norms - Asset Structure of a Commercial Bank - Non-Performing Assets (NPA). Cash Flow Statement - Concept of Funds - Preparation of Cash Flow Statement as per Indian Accounting Standard (Ind- AS): 7.

Note: Distribution of marks - 20% theory and 80% problems

		Semester – II	
18BPU202	BUSINESS MATHEMATICS AND STATISTICS	8H	– 6C
Instruction Hours / week L: 6 T: 2 P: 0		Marks: Internal: External: 60	Total: 100
End Semester Exam: 3 Hours			

COURSE OBJECTIVES**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. To overcome on issues in the construction of index numbers

UNIT- I: Matrices & Basic Mathematics of Finance

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through adjoint; Applications of Matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest; Compounding and discounting of a sum using different types of rates

UNIT-II: Differential Calculus

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

UNIT-III: Uni-variate Analysis

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

UNIT-IV: Bi-variate Analysis

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and

Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

UNIT V: Time-based Data: Index Numbers and Time-Series Analysis

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

Note: Distribution of marks - 20% theory and 80% problems

SUGGESTED READINGS:

1. Sreyashi Ghosh and Sujata Sinha (2018), Business Mathematics and Statistics, 1st edition, Oxford University Press; New Delhi.
2. Asim Kumar Manna (2018), Business Mathematics and Statistics, 1st edition, McGraw Hill Education, New Delhi.
3. S.P. Gupta and P.K. Gupta (2013), Business Statistics and Business Mathematics, S Chand Publishing, New Delhi.
4. Mariappan (2015), Business Mathematics, 1st edition, Pearson Education, New Delhi.
5. J.K.Sharma, (2014) Business statistics, 4th edition, Vikas Publishing House, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To describe the various laws prevailing in India for protecting natural resources

COURSE OUTCOMES:**Learners should be able to**

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. Understand the laws prevailing in India for protecting the nature

UNIT-I: Environment and Ecosystem

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II: Natural Resources - Renewable and Non-renewable Resources:

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. III-effects of fireworks.

UNIT III: Biodiversity and Its Conservation:

Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV: Environmental Pollution:

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V: Social Issues and the Environment:

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

18ENU301**ENGLISH III****Semester – III****8H – 6C****Instruction Hours / week: L: 4 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives:****To make the students**

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop knowledge about business communication.
4. To develop knowledge about business writing.
5. To acquire knowledge on communication for different purpose.
6. To get knowledge to communicate in day to affairs.

Course Outcomes:**Learners should be able to**

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students will have honed the skills of communication which is needed for business purpose.
- 7.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

COURSE OBJECTIVES:**To make the students**

1. To Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. To learn the tools and techniques to calculate cost and solve the problems.
3. To select the best methods of costing and apply critically based on the situation
4. To communicate orally and in written form the cost accounting concepts, methods and book keeping procedure for cost accounting.
5. To gain a lifelong learning for applying the cost concepts in analyzing the business problems.
6. To learn the Inventory control techniques

COURSE OUTCOMES:**Learners should be able to**

1. Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. Apply tools and techniques to calculate cost and solve the problems.
3. Select the best methods of costing by critically analyzing and apply the same to appropriate situation
4. Communicate orally and in written the cost concepts
5. Gain the lifelong learning of cost concepts and apply in the business environment.
6. Apply the inventory control techniques

UNIT 1: Introduction

Meaning, objectives and advantages of cost accounting; Difference between cost accounting and financial accounting; Cost concepts and classifications; Elements of cost; Installation of a costing system; Role of a cost accountant in an organization.

UNIT II: Elements of Cost: Material and Labour

Materials: Material/inventory control techniques. Accounting and control of purchases, storage and issue of materials. Methods of pricing of materials issues — FIFO, LIFO, Simple Average, Weighted Average, Replacement, Standard Cost. Treatment of Material Losses Labour: Accounting and Control of labour cost. Time keeping and time booking. Concept and treatment of idle time, over time, labour turnover and fringe benefits. Methods of wage payment and the Incentive schemes- Halsey, Rowan, Taylor's Differential piece wage.

UNIT III: Elements of Cost: Overheads

Classification, allocation, apportionment and absorption of overheads; Under- and over-absorption; Capacity Levels and Costs; Treatments of certain items in costing like interest on capital, packing expenses, bad debts, research and development expenses; Activity based cost allocation.

UNIT IV: Methods of Costing

UNIT costing, Job costing, Contract costing, Process costing (process losses, valuation of work in progress, joint and by-products), Service costing (only transport).

UNIT V: Book Keeping in Cost Accounting

Integral and non-integral systems; Reconciliation of cost and financial accounts

Note: Distribution of marks - 20% theory and 80% problems

BUSINESS PROCESS SERVICES IN**Semester – III****18BPU302****FINANCE AND ACCOUNTING****8H – 6C****Instruction Hours / week L: 6 T: 2 P: 0****Marks: Internal: External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the finance and accounting concept and the need to outsource finance and accounting activities
2. To comprehend the standards pertaining to the accounting, compliances like SOX and internal audit framework like COSO.
3. To understand the mechanics of purchase, inventory control, accounts payables-receivables and General ledger in the F & A Technology.
4. To communicate orally and in written form the mechanics of purchase, inventory control, accounts payables-receivables and General ledger in the F & A Technology.
5. To gain a lifelong learning for applying the F&A Technology in BPS business.
6. To demonstrate the purchase management

COURSE OUTCOMES:**Learners should be able to**

1. Understand the finance and accounting concept and the need to outsource finance and accounting activities
2. Comprehend the standards pertaining to the accounting, compliances like SOX and internal audit framework like COSO.
3. Understand the mechanics of purchase, inventory control, accounts payables-receivables and General ledger in the F & A Technology.
4. Communicate orally and in written form the mechanics of purchase, inventory control, accounts payables-receivables and General ledger in the F & A Technology.
5. Gain a lifelong learning for applying the F&A Technology in BPS business.
6. Impart the students with the importance of purchase management

UNIT I Accounting Overview, Basics of Businesses Outsourcing Need and its current Trend

Basic Accounting Principles, Concept, Convention - Systems of Book Keeping - Recording, Classifying and Summarizing of Transaction - Final Accounts

Types of Business Organizations - Business Partnerships - Types of BPOs - Merits and Demerits on various BPO options - Accounting Business Process Cycle - Evolving of Outsourcing - Need for outsourcing Horizontal Services - Current Trend in F&A Outsourcing.

UNIT II Purchase Management:

Activities before Purchasing, Quotations, Negotiation, Costs associated with Purchases etc - How a Purchase Order is raised, types of Purchase Orders, Contracts etc., Warehouse Receipt procedures, Returns, Issues and various Documents - Accounting Impact - Inventory Control - Types of discount offered by Vendors - Basics of Distribution Strategies, Integration of Strategic Partnering, Outsourcing and Procurement Strategies - Freight Negotiation, FTL, Payments, Conditions etc.,

UNIT III Accounts Payables and Accounts Receivable:

Various Activities in Accounts Payable and Accounting Impact - Types of Invoice Matching and resolving issues - Invoice Payment, Procedures and Mode of payment - Employee Payment (T&E and Various Cards) - Debit Balance, Write back, Discount adjustments and various actions - Help desk and support Activities - Vendor Account Reconciliation - Latest developments (Vendor Portal, EDI, E-Invoicing, Tools etc.,) - Effective management of AP leads to working Capital improvement.

Various Activities in Accounts Receivable and Accounting Impact - Background check for Customers (D&B Report, Credit Rating) Credit Limit, Customer Contract / Order - Management) - Mode of receiving Payment, Actions for non-receipt, Netting off - Revenue Recognition - Collection - Cash Applications - Adjustment of Discounts, Rebate, QPS discount, Write off etc., - Disputes Handling procedures - Customer Help desk and support Activities - Customer Account Reconciliation - Latest Developments (Customer Portal, E-Invoicing, Tools etc.,) - Effective management of AR leads to working Capital improvement.

UNIT IV General Ledger & Emerging trend in F&A Technology

Activities in General Ledger - What is Subsidiary and Control Accounts - Chart of Accounts and maintenance, Cost Centre, Profit Centre, - Adjustment journals - Cost Allocation etc. - Bank Reconciliation - Fixed Asset Maintenance - Inter Company - Accounting and Reconciliation - Tax Accounting - Transactional Element - Generation of Final Accounts - Various Reports (Statutory Reports, Schedules, Variance Analysis).

Modules and usage of ERPs - Basic Screens required to be understood for F&A process - Report generation - XBRL, Platform, Counting, Data Privacy Law etc.

UNIT V Accounting Standard, Controls and Compliance Operating model of Business Process services

Basics of Accounting Standard - Differences between various GAAPs (US, UK, Indian and IFRS)

COSO, Internal Controls & Audit, ISO Standards (applicable to BPO) / CMMI Certification.etc., - PCI Data Security Standard / Security Audit / Data Privacy and Protection SOX - Compliance / SSAE 16 /ISAE 3402 - SOD, Access, Incident Management, BCP etc.,

How the various transaction flows are happening - BPO Terminologies - Importance of Process Documents Service Level Measurements Contractual elements - Governance model - Internal Reporting - Delivery Excellence - Integration of support functions - Future and Challenges

SUGGESTED READINGS:

TCS BPS study material

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. To learn the audit techniques, corporate governance and CSR practices.
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. To be familiar with the standards and laws pertaining to the auditing,
6. To learn the Corporate Governance and CSR.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. Recall the audit techniques, corporate governance and CSR practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance and CSR practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing
6. Give an insight about the corporate Governance and CSR.

UNIT I INTRODUCTION

Definition-Nature-Scope and Objectives of Independent Financial Audit : Basic Principles Governing an Audit, Concept of Auditor's Independence - Error and Fraud- Classification of Audit -Standards on Auditing (SA) : Concept and Purpose - Audit procedures and techniques - Audit Evidence : Concept, Need, Procedures to obtain Audit Evidence

UNIT II AUDIT RISK AND INTERNAL CONTROL SYSTEM

Audit Risk : Concept and Types, Relationship with audit materiality - Professional Skepticism.

Internal Control : Definition, Objectives, Evaluation, Internal Control Check List, Internal Control Questionnaire and COSO's Internal Control Framework - Internal Check :

Definition, Objectives and General Principles on Internal Check for selected transactions - Internal Audit : Definition, Objectives, Regulatory Requirement, Use of Internal Auditor's Work by Statutory Auditor

.UNIT III VOUCHING, VERIFICATION AND VALUATION

Vouching: Meaning, Objectives - Difference with Routine Checking – Factors to be considered during Vouching of Different items

Verification and Valuation: Concept, objectives, Importance, Difference with Vouching, Difference between Verification and Valuation, Verification and Valuation of Different Items.

UNIT IV AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

Audit of Companies: Qualification, Disqualification, Appointment, Reappointment and Rotation, Casual Vacancy, Removal and Resignation, Ceiling, Remuneration, Rights, Duties and Liabilities of Company Auditor - Audit Committee - Branch Audit and Joint Audit - Divisible Profit and Dividend (Final, Interim and Unclaimed/Unpaid): Provision of the Act and Legal Decisions and Auditor's Responsibility

Audit report and certificate: Definition – Distinction between Report and Certificate-Different Types of Report Contents of Audit Report (As per Companies Act and Standards on Auditing) True and Fair View – Concept Materiality – Concept and Relevance

Special areas of Audit: Cost Audit- Concepts, objectives, Relevant Provisions of Companies Act Management Audit – Concepts, Objectives, Advantages Tax Audit – Concepts, Objectives, Legal Provisions Social Audit – Propriety Audit – Performance Audit – Environment Audit (Concepts only)

UNIT V CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

Conceptual framework of Corporate Governance: Theories & Models, Broad Committees; Corporate Governance Reforms. Common Governance Problems Noticed in various Corporate Failures. Codes & Standards on Corporate Governance, Clause 49 and Listing Agreement, Green Governance

Concept of CSR, Corporate Philanthropy, Strategic Planning and Corporate Social Responsibility; Relationship of CSR with Corporate Sustainability; CSR and Business Ethics, CSR and Corporate Governance; CSR provisions under the Companies Act 2013; CSR Committee; CSR Models, Codes, and Standards on CSR, Global Reporting Initiatives, ISO 26000

SUGGESTED READINGS:

1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
3. Dr. T R Sharma, Dr. Gourav Sankalp (2018), Auditing and Corporate Governance, Sathiya Bhawan Publications, Agra
4. Ashok Sharma (2019), Auditing and Corporate Governance, VK Global Publications Pvt. Ltd., New Delhi.
5. Sharma, J.P., (2016), Corporate Governance, Business Ethics, and CSR, 2nd edition, Ane Books Pvt Ltd, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of insurance, insurance products and services and the regulatory environment guiding the insurance function.
2. To comprehend on the risk mitigation concepts and usage of insurance products to mitigate risk and insurance contract in Indian market.
3. To communicate orally and in written form the understanding of insurance operations, functions, risk associated with and law pertaining to insurance functioning.
4. To apply the learning of the insurance procedures, products, services and operations lifelong.
5. To comprehend on the insurance industry, its regulatory body, insurance laws that supports the mitigation of risk.
6. To learn about the Life insurance and Annuity

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of insurance, insurance products and services and the regulatory environment guiding the insurance function.
2. Comprehend on the risk mitigation concepts and usage of insurance products to mitigate risk and insurance contract in Indian market.
3. Communicate orally and in written form the understanding of insurance operations, functions, risk associated with and law pertaining to insurance functioning.
4. Apply the learning of the insurance procedures, products, services and operations lifelong.
5. Comprehend on the insurance industry, its regulatory body, insurance laws that support the mitigation of risk.
6. In depth knowledge about the life insurance and annuity

UNIT I Concept of Risk:

Risk Management - Basic concepts (Hazards, Perils, Assets, etc.) - Fundamentals of Insurance - Characteristics of a valid contract - Insurance contract - Principles & Practices of Insurance Contract - Important terminologies & parties in insurance contract - Types of Insurance (Personal, Commercial, Health, Life, etc. - History of Insurance - Types of Insurance companies - Business units in an Insurance company - Overview of Insurance Life Cycle (Underwriting, Policy Servicing, Claims, etc.) - Reinsurance concept.

UNIT II Life Insurance and Annuity:

Important terminologies in a Life Insurance policy - Parties in a Life Insurance policy - Individual Life Insurance plans - Supplementary Benefits - Policy Provisions - Ownership rights - Life Insurance policy life cycle (New business & Underwriting, Policy servicing, Claims, etc.)

Insight into Annuity :Concept of Annuity - Types of Annuity - Annuity contract provisions - Annuity : USA – Fixed Annuity, Fixed Index Annuity, Variable Annuity - Qualified & Non-Qualified Annuity - Principles of Group Insurance - Group Life Insurance - Group Retirement Plans

UNIT III Property and Casualty Insurance :

Concepts - Hazards, Perils, Catastrophe, Property Damage & Business Interruption, Policy exclusions, Indemnity, Deductibles, Retention, Premiums, Limits, Salvage, Subrogation, etc. - Insurance Providers – Co-Insurance, Reinsurance, Captive Insurance - Underwriting process - Policy Servicing process - Claims process – Reinsurance.

UNIT IV Health Insurance:

Concept of Healthcare Insurance - How Healthcare Insurance works - Key Challenges of Healthcare Industry - Healthcare Eco System - Healthcare regulations &Standards ; HIPAA – Medicare – Medicaid – Medclaim - Individual Health Insurance policies - Group Health Insurance policies - Managed Care.

UNIT V Retirement Plans:

Concept of Retirement Services - Retirement Planning - Asset Allocation & Asset Classes - Life stages of an Investor - Defined Benefit & Defined Contribution - Individual Retirement Arrangement in USA - Third Party Administrator for Retirement Services in USA - Life cycle of Participants in a plan (enrollment, contribution,etc.) - Categories of Pension in UK – DWP&TPR- Annuity & Income Drawdown Plan.

SUGGESTED READINGS:

TCS BPS study material

COURSE OBJECTIVES:**To make the students**

1. To understand and Analyse the Auditing standards and standards for the audit evidence
2. To classify and apply vouching, verification and valuation technique to appropriate situation
3. To Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. To communicate orally and in written form about the findings and solution.
5. To Work in teams and exhibit leadership skills and practice the learning's of auditing and corporate governance lifelong.
6. To study about the Internal control system

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and Analyse the Auditing standards and standards for the audit evidence.
2. Classify and apply vouching, verification and valuation technique to appropriate situation
3. Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. Communicate orally and in written form about the findings and solution.
5. Work in teams and exhibit leadership skills and practice the learning's of auditing and corporate governance lifelong.
6. Apply internal control system

UNIT 1: INTRODUCTION

1. Analyse the importance of Standards on Auditing (SA) :SA 200 SA 210, SA 230, SA 240, SA 300, SA 520, SA 530, SA 550, SA 580 and SA 610
2. Analyse the importance of Audit Evidence : SA 500 - 509

UNIT – II Audit Risk and Internal Control System

3. Audit Risk :Analyse SA 320 and 330
4. Analyse the COSO's Internal Control Framework for selected industry of your choice.

UNIT III VOUCHING, VERIFICATION AND VALUATION

5. How to Vouch/Verify/Value

- a. Goods sent out on Sale or Return Basis
- b. Borrowing from Banks.
- c. Goods sent on consignment
- d. Foreign travel expenses
- e. Receipt of capital subsidy
- f. Provision for income tax
- g. payment of taxes
- h. Advertisement Expenses
- i. Sale of Scrap

UNIT IV : AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

6. Case Study on Auditors in on Satyam fraud

7. Analyse the provisions amended to the appoint of auditor and audit in Companies Act.

UNIT V: CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

8. Any Case study on Corporate Governance to be analysed from below list

9. Any Case study on Corporate Governance to be analysed from below list

Maxwell Communication (UK), Enron (USA), WorldCom (USA), Satyam Computer Services Limited (all need to be more emphasized); BCCI (UK), Anderson Worldwide (USA), Vivendi (France), Harshad Mehta and Kingfisher Airlines Scam (all to be covered in brief); Common Governance Problems noticed in various corporate failures; Codes and Standards on Corporate Governance: Cadbury, OECD, Oxley Act; Initiatives in India: CII, SEBI, Clause 49 of Listing Agreement, Kumar Mangalam Committee, Naresh Chandra Committee, Narayan Murthy Committee, LODR.

10. Analyse CSR initiative of any Indian company

SUGGESTED READINGS:

1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
3. Dr. T R Sharma, Dr. Gourav Sankalp (2018), Auditing and Corporate Governance, Sathiya Bhawan Publications, Agra
4. Ashok Sharma (2019), Auditing and Corporate Governance, VK Global Publications Pvt. Ltd., New Delhi.
5. Sharma, J.P., (2016), Corporate Governance, Business Ethics, and CSR, 2nd edition, Ane Books Pvt Ltd, New Delhi.

BUSINESS PROCESS SERVICES IN INSURANCE (PRACTICAL)**Semester – III****18BPU311B****2H – 1C****Instruction Hours / we L: 0 T: 0 P: 2****Marks: Internal External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand the concept, products, services, regulatory body and laws pertaining to insurance.
- 2 To analyse the features of the insurance and apply the theoretical learning into lifelong practice of BPS industry.
- 3 To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
- 4 To comprehend and apply the laws related to insurance.
- 5 To Communicate in oral and written form and prepare report
- 6 To work in teams and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

- 1 Understand the concept, products, services, regulatory body and laws pertaining to insurance.
- 2 Analyse the features of the insurance and apply the theoretical learning into lifelong practice of BPS industry.
- 3 Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
- 4 Comprehend and apply the laws related to insurance.
- 5 Communicate in oral and written form and prepare report
- 6 Work in teams and exhibit leadership skills

Select Insurance companies

1. Collect the format of proposal form of different kinds of insurance (life and General Insurance) and learn the process of filling them.
2. Familiarize with IRDA norms for agency license.
3. Visit any insurance office and collect the details of its Organizational Structure,
4. Life insurance companies and identifying their features - Comparative analysis (between any two insurance company)
5. Understand the implication of bancassurance in supporting insurance industry.
6. Understand the implication of micro insurance, group insurance and crop insurance and its impact on the economy.
7. Premium calculation procedure

8. Analyse the real time Cases on procedure to avail Motor Insurance Marine insurance, Property insurance and fire insurance.
9. Procedure for the Insurance Claims (Life and General Insurance separately)
10. Understand Healthcare regulations & Standards ; HIPAA

ENGLISH IV

Semester – IV

8H – 6C

Instruction Hours / week: L: 4 T: 0 P: 4 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

- 1.To train students in understanding the concepts of communication.
- 2.To be familiar with the four basic skills of English.
- 3.To train students in developing their written communication.
- 4.To train students in developing their presentation skills.
- 5.To acquire the skill of making grammatically correct sentences.
- 6.To reflect originality on the application of soft skill views and express in writing their views.

COURSE OUTCOMES:**Learners should be able to**

- 1.Students have acquired proficiency in communication.
- 2.Students have become adept in written communication and presentation skills.
- 3.Practice the skill of writing in English and that of public speaking.
- 4.Establish and maintain social relationships.
- 5.Develop communication skills in business environment.
- 6.Refine communication competency through LSRW skills.

UNIT I: Integrated Skills

Development of speaking- Nature, Process, and Importance of Communication, Types of Communication (Verbal and Non-Verbal), Different forms of Communication, Barriers of Communication, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, and Organizational Barriers, listening and grammar skills.

UNIT II: Advanced Reading Skills

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: Advanced Writing Skills

Business Correspondence – Inviting Quotations, Sending Quotations, Placing Orders, Inviting Tender, Memorandum, Inter-Office, Memo, Notices, Agenda, Minutes, Resume Writing, and Report Writing.

UNIT IV: Business Language and Presentation

Importance of Business Language, Vocabulary Words often Confused, Words often Misspelt, Common Errors in English, Oral Presentation – Plan, PowerPoint Presentation and Visual Aids.

UNIT V: Technology and Communication

Language of Newspapers, magazines, Internet, TV and radio – their role to develop listening, reading and discussion skills, E-mail writing – Video Conferencing- Strategic importance of e-communication.

Suggested Reading:

In Business; CUP

RESEARCH METHODOLOGY

Semester – IV

18BPU401

6H – 5C

Instruction Hours / week L: 6 T: 0 P: 0

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. To Critically formulate the research design and sampling design suitable for the problem.
4. To communicate orally and written form the research problem, research design, sampling techniques.
5. To design a report to communicate the findings and suggestion to make business decision.
6. To have an in depth knowledge about the measurement and scaling in research

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
2. Analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. Critically formulate the research design and sampling design suitable for the problem.
4. Communicate orally and written for the research problem, research design, sampling techniques.
5. Design a report to communicate the findings and suggestion to make business decision
6. Apply the measurement and scaling in research

UNIT I RESEARCH AND RESEARCH PROCESS

Meaning of research; Scope of Research in Business; Purpose of Research; Types of Research, Problem identification, Review of Literature, Concept of theory - deductive and inductive theory - Concept, Construct, Definition, Variables - Research Process

UNIT II RESEARCH DESIGN AND SAMPLING DESIGN

Research Design: Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design.

Data Sources – Primary and Secondary Data.

Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non-Response, Characteristics of a good sample. Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Non Probability Sampling – Convenience, Quota, Judgmental, snowball sampling.

UNIT III MEASUREMENT AND SCALING

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio.

Concept of Scaling, Ratings and Ranking Scale, Thurstone, Likert and Semantic Differential scaling, Paired Comparison.

Preparing questionnaire – Quality of a good questionnaire.

UNIT IV HYPOTHESIS TESTING

Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing –Tests concerning means and proportions; ANOVA, Chi-square test and other Nonparametric tests, correlation and Regression

UNIT V REPORT PREPARATION

Meaning, types and layout of research report; Steps in report writing; Citations, Bibliography and Annexure in report.

Note: Distribution of marks - 90% theory and 10% problems

	RETAIL, CPG AND	Semester – IV
18BPU402	MARKET RESEARCH	6H – 5C
Instruction Hours / week L: 6 T: 0 P: 0		Marks: Internal: External: 60 Total: 100
End Semester Exam: 3 Hours		

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
2. To analyse the classification of FMCG industry, retail formats and media research options and apply the learning lifelong.
3. To Critically formulate the research design for media research and retail research and understand ways to evaluate the best alternative.
4. To communicate orally and written form the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
5. To design a report to communicate the findings and suggestion to make business decision.
6. To study about media research

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
2. Analyse the classification of FMCG industry, Retail formats and media research options and apply the learning lifelong.
3. Critically formulate the research design for media research and retail research and understand ways to evaluate the best alternative.
4. Communicate orally and written form the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
5. Design a report to communicate the findings and suggestion to make business decision.
6. Gain knowledge about the media research

UNIT I Introduction about Market Research:

What is market research, How does it differ from marketing research? , Different market research tools and research methodologies

UNIT II Consumer Packaged Goods :

Characteristics of FMCG Products, Consumer Goods Industry, Classification Introduction, Consumer Packaged Goods Food and beverage industry classification, Major Players

UNITIII Retailing and Retail Research:

Basics of Retailing: What is retailing, Significance of Retail and the future of Retailing
Retail Formats - Strategy behind different formats of Retail Function of a Retailer - Retail
Function Flow Global Retailers

Retail Research: Characteristics of Retail Data, Retail Research Reports, Product Coding,
Product Reference, Product Features, Features coding, Items coding, Store reference, Price
Range

UNIT IV Consumer research:

Consumer Research, Consumer Marketing Research, Consumer Marketing Research, Key
Consumer Research Methodologies, Key Consumer Research Methodologies, Stages of
New Product Development

UNIT V Panel Services and Media Research :

Panel Services: What is Panel data, Uses of Consumer Panel, Panel Research Reports

Media Research: Media Research, Media Data, Characteristics of Media Data,
Importance of media data validation, Media research report

18BPU403A		FINANCIAL ANALYSIS AND REPORTING		Semester – IV	
				4H	– 3C
Instruction Hours / week L: 4 T: 0 P: 0			Marks: Internal:	External: 60	Total: 100
End Semester Exam: 3 Hours					

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong practice.
6. To have an in depth knowledge about the auditor's report and ratio analysis

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Utilize the knowledge of financial statement analysis
6. Acquire knowledge about the auditor's report and ratio analysis

UNIT I : FINANCIAL REPORTING

Accounting Standards, Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

Overview of International Accounting Standards (IAS)/International Financial Reporting Standards (IFRS)- Interpretations by International Financial Reporting Interpretation Committee (IFRIC), Significant difference vis-a-vis IAS and IFRS.

Corporate Financial Reporting – Issues and problems with special reference to published financial statements.

UNIT II FINANCIAL STATEMENTS - AN INTRODUCTION

Traditional Assumptions of the Accounting Model :Business Entity -Going Concern or Continuity - Time Period - Monetary Unit - Historical Cost - Conservatism - Realization - Matching - Consistency - Full Disclosure - Materiality - Industry Practices - Transaction Approach - Cash Basis - Accrual Basis

The Financial Statements :Balance Sheet (Statement of Financial Position) - Statement of Stockholders' Equity (Reconciliation of Stockholders' Equity Accounts) - Income Statement (Statement of Earnings) - Statement of Cash Flows (Statement of Inflows and Outflows of Cash)

Auditor's Opinion :Auditor's Report on the Firm's Internal Controls - Report of Management on Internal Control over Financial Reporting

Basic Elements of the Balance Sheet :Assets - Liabilities - Stockholders' Equity - Quasi-Reorganization - Accumulated Other Comprehensive Income - Equity-Oriented Deferred Compensation - Employee Stock Ownership Plans (ESOPs) - Treasury Stock - Stockholders' Equity in Unincorporated Firms

Basic Elements of the Income Statement :Net Sales (Revenues) • Cost of Goods Sold (Cost of Sales) • Other Operating Revenue • Operating Expenses • Other Income or Expense

UNIT III FINANCIAL ANALYSIS – 1

Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis

Ratio Analysis - Liquidity of Short-Term Assets

Current Assets, Current Liabilities, and the Operating Cycle

Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets -Current Liabilities

Current Assets Compared with Current Liabilities

Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) -Cash Ratio

Income Statement Consideration when Determining Long-Term

Debt-Paying Ability- Times Interest Earned

Balance Sheet Consideration when Determining Long-Term

Debt-Paying Ability

Debt Ratio - Debt/Equity Ratio

UNIT IV FINANCIAL ANALYSIS - 2

Profitability Measures

Net Profit Margin - Total Asset Turnover - Return on Assets - DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts - Operating Income Margin - Operating Asset Turnover - Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - The Relationship Between Profitability Ratios - Gross Profit Margin

For the Investors

**Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, Dividend Yield
Book Value per Share**

Basic Elements of the Statement of Cash Flows

Financial Ratios and the Statement of Cash Flows

Operating Cash Flow/Current Maturities of Long-Term Debt and Current Notes - Payable -
Operating Cash Flow/Total Debt - Operating Cash Flow per Share - Operating Cash
Flow/Cash Dividends

UNIT V THE USERS OF FINANCIAL STATEMENTS

Financial Ratios as Perceived by Commercial Loan Departments :Most Significant Ratios
and Their Primary Measure • Ratios Appearing Most Frequently in Loan Agreements.

Financial Ratios as Perceived by Corporate Controllers :Most Significant Ratios and Their
Primary Measure • Key Financial Ratios Included as Corporate Objectives

Financial Ratios as Perceived by Certified Public Accountants

Financial Ratios as Perceived by Chartered Financial Analysts

Financial Ratios Used in Annual Reports

Note: Distribution of marks - 40% theory and 60% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of banking operations, functions, risk associated with and law pertaining to banking functions,
2. To comprehend on the banking system, its regulatory body related to banks that facilitates the BPS process.
3. To communicate orally and in written form the understanding of banking operations, functions, risk associated with and law pertaining to banking functions
4. To apply the learning of the bank functions and operations lifelong practice in BPS.
5. To have an understanding about the retail banking and retail wealth management
6. To study the consumer loan mortgages and Trade finance

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of banking operations, functions, risk associated with and law pertaining to banking functions,
2. Comprehend on the banking system, its regulatory body related to banks that facilitates the BPS process.
3. Communicate orally and in written form the understanding of banking operations, functions, risk associated with and law pertaining to banking functions
4. Apply the learning of the bank functions and operations lifelong practice in BPS
5. Describe retail banking and retail wealth management.
6. Acquire the understanding of consumer loan mortgages and trade finance

UNIT 1 : Overview of Banking

Overview of Banking : Functions and Products of a Bank, Liabilities—Deposits, Assets--- Loans and Advances, Payments, Risk Management

Common across all products : Financial Accounting, Customer Service Data&Voice, covering maintenance, disputes and complaints, Metrics management productivity, quality SLA Tracking and monitoring, Pricing methodologies available, Commonly available Certifications ISO-COPC-CMMI-PCI etc, Risks and Controls-AML-KYC-Info security etc

UNIT II: Retail Banking

Account Originations - Account Servicing :Issuer of Cheque Books/Cards Pins, AML/KYC Checks, Account Conversions and Closures, Customer Correspondence, ATM Management, Time Deposits – Placements, Maintenance, Breakage, Liquidation, Roll Over, Booking and Top up - **Payment Processing - Retail Wealth Management** : Mutual Fund processing, Mutual Fund processing , Equities , Bonds, Structured Notes, Corporate actions, Reconciliation

Risk -Control and Information Security

UNIT III : Cards

Basics of Cards :Types of Cards,transaction overview,components of Cards, Entities involved,overview on associations

Originations :Policy,Account opening,dispatch,delivery,Card Maintenance

Payments :Concepts, applications, investigations, Statement validations

Products on Cards :Rewards programs,merchandising offers

Authorisation and Risk reviews :Settlement lifecycle,authorisations,settlement and reconciliation, Accounting and Interchange settlement,settlements to associations - Parameter Design : Referral authorization - Financial Accounting - Bank A/c and payment Reconciliations - GL and ATM Reconciliations - Customer Relationship Management - Dispute Processing and Fraud Investigations - Collections including Data Review, Field Collections and A/c maintenances and Collection Audit

UNIT IV : Consumer Loan Mortgages and Trade Finance

Lead Generation : Regulation Requirements - **Mortgage Originations** : Sales/ New Application Management, Support and Settlement Services, Pre Underwriting,Underwriting, Verification and Closing, Quality Control and Repurchase, Mortgage Servicing - **Customer Service** : A/c Maintenance, Payment Processing, A/c Closure – **Collection** : Default Management, Front End Activities, Foreclosure and Loss Mitigation, Bankruptcy, Support functions, Quality Assurance - **Domain Learning and Development - Regulatory Agencies**

Introduction to Trade - Parties & Terminology used in International Trade, Risks Associated & its mitigants, Role of banks & Documents in International Trade - **Letter of Credit (L/C)** : Parties to L/C & Types of L/C , Issuance, Advising, Amendment, Confirmation, Document Checking, Acceptance & Payment - **Collection** : Parties to Collection & Types of Collection, Document Checking, Acceptance & Payment - **Method of Payment**: Advance, Open Account, Documentary Collection & Documentary Credit

Guarantee / SBLC – Types of Guarantee – Issuance, Amendment, Claim / Settlement & Cancellation

Reimbursement – Authorization, Claim / Payment, Clean Payment, Irrevocable Undertaking, FI Advance

Loans & Finances - Syndicated Loans, Corporate Advances, Receivable Finance, Supplier Finance, Commodity Finance, Channel Finance & Bill Finance / Discounting

Basics and outline of UCP 600, ISBP, URC 522, URR 725, URDG and ISP98

Value Added Services :After Service– Customer Service (Voice / Non-voice), Investigation, Reconciliation, Proofing & Reporting, Trade Compliance - **Overview** on specialized training course for CDCS certification

UNIT V : Cash Management and Payment Services

Cash Management Overview :Cash Management Product Suite A Glance and Brief on all Products - **Payments Life Cycle**: Payments Originations and various products in Originations Phase

Introduction to Funds Transfer :Various types of Funds transfer(Clearing,Treasury Payments,Bills receivables,Collections,lockbox,loans/deposits, Bulk Remittances etc

Pre Funds Transfer : A -/c Opening and Maintenance, Workflow Management - Funds Transfer - Payments : Instruction Acceptance - Payment Security - Call Back and Other Controls - Routing and Accounting Entries - Settlement and Payment Structuring, Various Clearing Systems , Overview - Post Funds Transfer : **Nostro Reconciliations** - Proofing - Investigations - Financial Messaging - Tracking - MIS and Treasury Reporting - Amendments and Collections

Risk management around payments- few case studies.STP Analysis and Improvements.

(PRACTICAL)

2H

– 1C

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data, analyses the same using appropriate statistical techniques and apply the learning lifelong.
3. To critically evaluate the appropriate scales and measurement to be used for capturing data.
4. To Communicate in written form and prepare report to support decision making.
5. To Work in team and exhibit leadership skills
6. To design a questionnaire

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
 2. Analyse the research problem and design the instruments to capture data, analyse the same using appropriate statistical techniques, and apply the learning lifelong.
 3. Critically evaluate the appropriate scales and measurement to be used for capturing data.
 4. Communicate in written form and prepare report to support decision making.
 5. Work in team and exhibit leadership skills
 6. Acquired knowledge to design a questionnaire
-
1. Select a problem or issue. Collect 5-10 articles related to issues from reviewed journals available.
 2. Analyse a case to understand the theory of deductive and inductive reasoning.
 3. Analyse a case for the selection of appropriate research design
 4. Analyse a case for the selection of appropriate sampling design
 5. Provide a list of variables and request to classify them as nominal/ordinal/interval/ratio
 6. Ask student to prepare a questionnaire for understanding the perception towards the usage of library among students/ Reading habits among youngsters/ environmental protection
Ask students to perform analysis and hypothesis testing for the collected data
 7. Ask students to prepare a technical report for the research undertaken (Minimum 30 pages)
 8. Ask students to write the bibliography in MLA/CPA format for reference made.

Note :6 – 8 (Team of 2-3 students)

RETAIL, CPG AND MARKET RESEARCH

Semester – IV

18BPU412

(PRACTICAL)

2H

– 1C

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
2. To analyse the classification of FMCG industry, Retail formats and media research options and apply the learning lifelong.
3. To Critically formulate the research design for media research and retail research and understand ways to evaluate the best alternative.
4. To communicate orally and written form the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
5. To design a report to communicate the findings and suggestion to make business decision.
6. To identify the process of new product development

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
2. Analyse the classification of FMCG industry, Retail formats and media research options and apply the learning lifelong.
3. Critically formulate the research design for media research and retail research and understand ways to evaluate the best alternative.
4. Communicate orally and written form the concept of marketing research, consumer goods, retailing and media research and its application in BPS industry.
5. Design a report to communicate the findings and suggestion to make business decision.
6. Acquire the knowledge about the new process development

1. Identify a market research problem and formulate a market research plan for finding a solution.
2. Select Consumer Packaged Goods Food industry classification and identify the major players
3. Select beverage industry classification and identify the major players
4. Understand the Retail Formats, try to visit the retail stores of the different format and justify the retail format adopted by the outlet.
5. Mind map the stages of new product development
6. In a team of (2-3) conduct a survey to understand consumer behaviour for the purchase of FMCG or beverages. Analyse and prepare a report.

7. Select the best media to advertise a small business of your choice. Justify the selection of media.
8. Analyse the case on e-retailing (Brick and mortar Vs. Click Model)
9. Analyse the real time cases on the technology used in retailing (like RFID, barcoding etc)

SUGGESTED READINGS:

TCS BPS study material

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong.
6. To acquire the knowledge in ratio analysis

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Utilize the knowledge of financial statement analysis for lifelong.
6. Apply ratio analysis to identify financial performance of the firms

1. To select a Company – Reason for selecting the company as investor

Download the financial statements

Perform the following financial analysis and interpret

2. Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis
3. Ratio Analysis - Liquidity of Short-Term Assets
Current Assets, Current Liabilities, and the Operating Cycle

- Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities
- Current Assets Compared with Current Liabilities
- Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) - Cash Ratio
- 4. Debt-Paying Ability- Times Interest Earned
- 5. Debt Ratio - Debt/Equity Ratio
- 6. Net Profit Margin - Total Asset Turnover - Return on Assets – Operating Income Margin - Operating Asset Turnover
- 7. Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - Gross Profit Margin
- 8. DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts
- 9. For the Investors :Earnings per Common Share, Price/Earnings Ratio, Dividend Payout,- Book Value per Share

**BUSINESS PROCESS SERVICES IN BANKING
(PRACTICAL)**

2H

– 1C

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept, products, services, regulatory body and laws pertaining to banking Practice and its application in BPS.
2. To analyse the features of the banking apply the theoretical learning into lifelong practice in BPS sector.
3. To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
4. To comprehend and apply the laws related to banking.
5. To Communicate in oral and written form and prepare report
6. To work in teams and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept, products, services, regulatory body and laws pertaining to banking Practice and its application in BPS.
2. Analyse the features of the banking apply the theoretical learning into lifelong practice in BPS sector.
3. Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
4. Comprehend and apply the laws related to banking.
5. Communicate in oral and written form and prepare report
6. Work in teams and exhibit leadership skills

Select a bank

1. Forms of various accounts and deposits of Commercial Banks.
2. Application forms for opening accounts, Cheque Books, pass books, requisition slips for withdrawals and deposits, bank statements, format of Demand draft, Cheque, travel cheques etc.
3. Action taken for the dishonoring of cheque and laws supporting the action.
4. Working and operations of ATM, Credit cards, E-Banking.
5. Procedure for applying personal loan – application proforma and documents to submitted
6. Procedure for applying housing loan - application proforma and documents to submitted

7. Procedure for applying corporate loan - application proforma and documents to submitted
8. Procedure for applying working capital loan - application proforma and documents to submitted
9. Understanding the procedure and documents to be submitting to comply the KYC norms
10. Efforts taken by bank for financial inclusion initiative.
11. Difference in Basel I, II and III Accord, comment on the efforts taken by bank on complying the accord.

SUGGESTED READINGS:

TCS BPS study material

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of laws related to constitution of company, finance structure, management team.
2. To comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. To analyse few real time cases relevant to company laws
4. To communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. To be familiar with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. To have an in depth knowledge about the role of directors

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of laws related to constitution of company, finance structure, management team.
2. Comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. Analyse few real time cases relevant to company laws
4. Communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. Familiarize with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. Acquire understanding about the role of directors

UNIT 1: INTRODUCTION AND INCORPORATION AND ITS CONSEQUENCES

Administration of Company Law [including National Company Law Tribunal (NCLT), National Company Law Appellate Tribunal (NCLAT), Special Courts]; Characteristics of a company; lifting of corporate veil; types of companies including one-person company, small company and dormant company; association not for profit; illegal association; formation of company, on-line filing of documents, promoters, their legal position, pre-incorporation contract; on-line registration of a company, Memorandum of Association & Articles of Association and their Alteration, Doctrine of Ultra-Vires, Constructive Notice, Indoor Management, Alter Ego

UNIT 2: FINANCIAL STRUCTURE OF COMPANIES

Concept of Capital and Financing of Companies– Sources of Capital; Classes and Types of Shares; Equity Shares with Differential Rights; Issue of Shares at Par, Premium and Discount; Forfeiture and Surrender of Shares; Bonus Issues; Rights Issues; Issue of Sweat Equity Shares; Employees Stock Option Scheme; Private Placement; preference shares and other forms of securities, Alteration of Share Capital– Reduction of Capital; Buy–Back of Shares

Prospectus– Definition; Abridged Prospectus; Red–Herring Prospectus; Shelf Prospectus; Information Memorandum; Contents, Registration; Misrepresentations and Penalties

Debt Capital – Debentures, Debenture Stock, Bonds; Recent Trends and Dynamics of Corporate, Debt Financing; Debenture Trust Deed and Trustees; Conversion of and Redemption of Debentures
Securing of Debts: Charges ; Creation, Modification and Satisfaction of Charges

Allotment and Certificates – General Principles and Statutory Provisions related to Allotment;

Minimum Subscription; Irregular Allotment; Procedure of Issue of Share Certificates and Warrants

UNIT III: MANAGEMENT:

Classification of directors, women directors, independent director, small shareholder's director; Disqualifications, director identity number (DIN); Appointment; Legal positions, powers and duties; removal of directors; Key managerial personnel, managing director, manager; Meetings of shareholders and board; Types of meeting, convening and conduct of meetings, postal ballot, meeting through video conferencing, e-voting; Committees of Board of Directors - Audit Committee, Nomination and Remuneration Committee, Stakeholders Relationship Committee, Corporate Social Responsibility Committee.

UNIT IV: ACCOUNTS, AUDIT AND DIVIDENDS

Books of Accounts : Financial Statements.
Auditors – Appointment, Resignation and Removal; Qualification and Disqualification; Rights, Duties and Liabilities, Audit and Auditor's Report, Cost Audit and Special Audit

Profit and Ascertainment of Divisible Profits, Declaration and Payment of Dividend, Treatment of Unpaid and Unclaimed Dividend, Transfer of Unpaid and Unclaimed Dividend to Investor Education and Protection Fund, Board's Report and Disclosures Contents and Annexure to Board's Report, Directors' Responsibility Statement

– Preparation and Disclosures, Compliance Certificate – Need and Objective; Issue and Signing by Practising Company Secretary, Corporate Governance Report

UNIT V: WINDING UP

Concept and modes of Winding Up. Insider-Trading, Whistle-Blowing – Insider-Trading; meaning and legal provisions; Whistleblowing: Concept and Mechanism.

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of capital markets in domestic and global scenario, the securities traded private equity, mutual fund and hedge funds and its application.
2. To calculate the NAV and analyse the performance of mutual fund scheme
3. To apply the hedge fund strategies and fund accounting principles along with theoretical knowledge of capital market in BPS operations.
4. To communicate orally and in written form the understanding of capital markets in domestic and global scenario, the securities traded, Investment management, private equity, mutual fund and hedge funds and its application.
5. To apply the knowledge of capital market operations, in lifelong practice at BPS sector.
6. To have a knowledge about investment banking
- 7.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of capital markets in domestic and global scenario, the securities traded, Investment management, private equity, mutual fund and hedge funds and its application.
2. Calculate the NAV and analyse the performance of mutual fund scheme
3. Apply the hedge fund strategies and fund accounting principles along with theoretical knowledge of capital market in BPS operations.
4. Communicate orally and in written form the understanding of capital markets in domestic and global scenario, the securities traded, Investment management, private equity, mutual fund and hedge funds and its application.
5. Apply the knowledge of capital market operations, in lifelong practice at BPS sector.
6. Demonstrate investment banking

UNIT I Introduction to Capital Markets:

Types of Securities -Equities - Fixed Income & Govt. Securities - Derivatives - OTC Products - Participants in a Trade & Global Financial Markets - Financial Markets – Exchange - OTC Products and Financial Markets - Participants in a Trade - Overview of regulators & important regulations

UNIT II Investment Banking:

Basics of Investment Banking-Trade Life Cycle - Clearing and Settlement - Securities Lending - Prime Brokerage - Collateral Management - Corporate Actions -Mandatory & Voluntary - Corporate Actions: How they affect securities.

UNIT III Mutual Funds and Hedge Funds

Mutual Funds - Transactions in Mutual Funds - Fund Expenses - Transfer Agency

Hedge Funds - Understanding Hedge Funds - Hedge Fund strategies.

UNIT IV Private Equity and Fund Accounting & NAV calculations

Private Equity: Private Equity - Understanding Private Equity Operations

Fund Accounting & NAV calculations - Performance reporting - Reconciliations in Asset Management

UNIT V Risk Management

Risk Management: Counterparty Credit Risk Management - Market Risk Management

SUGGESTED READINGS

MANAGEMENT ACCOUNTING

Semester – V

18BPU502A

8H – 6C

Instruction Hours / week L: 6 T: 2 P: 0

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To gain understanding about the ratio analysis

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Apply ratio analysis to understand the financial performance of the firms

UNIT I : INTRODUCTION

Meaning, Objectives, Nature and Scope of management accounting, Difference between cost accounting and management accounting, Cost control and Cost reduction, Cost management

UNIT II :FINANCIAL STATEMENT ANALYSIS

Horizontal and Vertical Analysis.

Ratio Analysis: Meaning, Advantages, Limitations, Classifications of ratios

Fund Flow Statement: Meaning, Uses, Limitations, Sources and uses of funds

Cash Flow Statement: Meaning, Uses, Limitations, Sources and uses of cash, AS3 Standard format.

UNIT III: STANDARD COSTING

Standard Costing: Standard Costing and Variance Analysis: Meaning of standard cost and standard costing, advantages, limitations and applications. Variance Analysis – material, labour, overheads and sales variances. Disposition of Variances, Control Ratios.

UNIT IV: MARGINAL COSTING AND DECISION MAKING

Absorption versus Variable Costing: Distinctive features and income determination. Cost-Volume Profit Analysis, Profit / Volume ratio. Break-even analysis-algebraic and graphic methods. Angle of incidence, margin of safety, Key factor, determination of cost indifference point.

Decision Making : Steps in Decision Making Process, Concept of Relevant Costs and Benefits, Various short term decision making situations – profitable product mix, Acceptance or Rejection of special/ export offers, Make or buy, Addition or Elimination of a product line, sell or process further, operate or shut down. Pricing Decisions: Major factors influencing pricing decisions, various methods of pricing

UNIT V: BUDGETARY CONTROL AND CONTEMPORARY ISSUES :

Budgeting and Budgetary Control: Concept of budget, budgeting and budgetary control, objectives, merits, and limitations. Budget administration. Functional budgets. Fixed and flexible budgets. Zero base budgeting. Programme and performance budgeting.

Contemporary Issues: Responsibility Accounting: Concept, Significance, Different Responsibility Centres, Divisional Performance Measurement: Financial and Non-Financial measures. Transfer Pricing

Note: Distribution of marks - 30% theory and 70% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of business process, its need in India.
2. To evaluate the BPS business and operation using metrics.
3. To understand and apply various techniques of process mapping in BPS sector.
4. To understand the risk types and apply various techniques to mitigate risk.
5. To communicate orally and in written form the understanding of managing the business process using various techniques.
6. To understand the risk management

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of business process, its need in India.
2. Evaluate the BPS business and operation using metrics.
3. Understand and apply various techniques of process mapping in BPS sector.
4. Understand the risk types and apply various techniques to mitigate risk.
5. Communicate orally and in written form the understanding of managing the business process using various techniques.
6. Gain knowledge about the various risk and risk management

UNIT I Introduction to Process Management:

Process Definition - Recognition of Business Processes - Core Processes Vs Support Processes - Components of Process Management - Understanding Internal customer Vs End User

UNIT II BPS Overview

Outsourcing Environment - Need for Outsourcing - Business Processes outsourced to India - . BPS Life Cycle - Sales/ Solutioning - Transition - Steady State - Value Creation.

UNIT III Metrics Management:

Overview of Metrics Management - Service Level Agreements - Business Metrics Vs Operations Metrics - Target Setting

Unit IV Mapping: Process Mapping Techniques - Process Levels - Process Mapping – Symbols, SIPOC - Kano Model - SIPOC Fundamentals - Customer Expectations in Business Process Outsourcing.

Unit V: Risk Management: Introduction to Risk - Risk Types - Operational Risk - Information Security Risk - Financial Risk - Strategic Risk - Risk Mitigation Plans.

Instruction Hours / we L: 6 T: 0 P: 0		Marks: Internal External: 60	Total: 100
End Semester Exam: 3 Hours			

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of micro and macroeconomic factors and its application in business.
2. To communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. To apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. To analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. To Critically evaluate the appropriate alternatives and draw a solution
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of micro and macroeconomic factors and its application in business.
2. Communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. Apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. Analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I BUSINESS ECONOMICS; DEMAND AND SUPPLY:

Introduction Meaning, nature and scope of Business Economics, Significance in decision making.

Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply – Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II PRODUCTION, COST AND REVENUE FUNCTION:

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors – Short & Long run – Total Product – Marginal Product – Average Product – Production Function – Law of Returns – Law of Returns to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs – Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves – Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III MARKET COMPETITION:

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly Market – Features

UNIT IV: MACRO ECONOMIC FACTORS:

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer Payments – National Income Aggregates– Private Income – Personal Income – Personal Disposable Income – National Disposable Income – Measurement of National Income – Production Method – Income Method – Expenditure Method

Phases of Business Cycle – Causes of cyclical movements – Price Movements: Inflation, Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.

UNIT V: MONETARY POLICY

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy – Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget Preparation – Deficit Budget.

Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP – Disequilibrium in BOP.

Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of Interest.

Note: Distribution of marks - 80% theory and 20% problems

BUSINESS PROCESS SERVICES IN CAPITAL MARKET

Semester – V

18BPU511B

(PRACTICAL)

2H

– 1C

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the capital markets in domestic and global scenario, the securities traded, Investment management, private equity, mutual fund and hedge funds and its application.
2. To Analyse the capital market operations, intermediary's role and apply the same in BPS sector.
3. To Critically evaluate the performance of mutual funds and analyse the capital market operations of domestic market in comparison with the global market.
4. To Apply the knowledge of capital market operations, in lifelong practice at BPS sector.
5. To learn about the securities traded in capital market
6. To acquire knowledge about the hedge funds and hedging strategies

COURSE OUTCOMES:**Learners should be able to**

1. Understand the capital markets in domestic and global scenario, the securities traded, Investment management, private equity, mutual fund and hedge funds and its application.
 2. Analyse the capital market operations, intermediaries role and apply the same in BPS sector.
 3. Critically evaluate the performance of mutual funds and analyse the capital market operations of domestic market in comparison with the global market.
 4. Apply the knowledge of capital market operations, in lifelong practice at BPS sector.
 5. Gain knowledge about the securities traded in capital market
 6. Describe hedge funds and hedging strategies
-
1. Draw the diagram of Indian financial system and enumerate the role of capital market. Compare and analyse the Indian capital market operations with global financial markets
 2. List out the securities that can be traded in the financial markets (India Vs. Global Financial market)
 3. Mind map the trade life cycle of an investor.

4. Take a corporate action and check the reaction of share price from the 30 days of announcement
5. Download NAV of two mutual fund scheme and compare the performance and select the best scheme
6. Identify the intermediaries and players in the markets and enumerate their roles
 - a. Institutional Investors/Custodians / Clearing Houses / Role of Regulators
7. Download the Red herring Prospectus from SEBI Website and submit the review of the content of RHP
8. Private Equity in India and the industry that uses Private Equity – Refer SEBI
9. Familiarise on the mutual fund industry, No.of Asset Management Company in India and the volume of asset under management.(Refer AMFI website)
10. Application of Hedge fund and hedging strategies – India Vs. Abroad

18BPU601B	MANAGING BUSINESS PROCESSES- II	6H	– 5C
Instruction Hours / week L: 6 T: 0 P: 0		Marks: Internal: External: 60	Total: 100

COURSE OBJECTIVES:**To make the students**

1. To Understand the quality standards and quality assurance.
2. To comprehend and utilize the tools and techniques to reduce the defect.
3. To gain knowledge of problem-solving techniques and apply the same in BPS sector.
4. To understand the Lean and six sigma concept and its application in managing the business processes.
5. To communicate orally and in written form the understanding of managing the business process using various techniques.
6. To study the transaction monitoring cycle, inspection and feedback

COURSE OUTCOMES:**Learners should be able to**

1. Understand the quality standards and quality assurance.
2. Comprehend and utilize the tools and techniques to reduce the defect.
3. Gain knowledge of problem-solving techniques and apply the same in BPS sector.
4. Understand the Lean and six sigma concept and its application in managing the business processes.
5. Communicate orally and in written form the understanding of managing the business process using various techniques.
6. Gain understanding about the transaction monitoring cycle, inspection and feedback

UNIT I Quality Management:

Introduction to Quality Management - Quality Definition - Quality Control Vs Quality Assurance - International Quality Standards

UNIT II Transaction Monitoring Process:

Sampling inspection - Transaction monitoring cycle – Inspection – Feedback – RCA-Assurance

UNIT III Defects Management:

Overview of Defects Management - Defect vs Defective - Opportunity - Definition, DPU/DPMO calculations - FPY & COQ - Value Stream Mapping - Standard Operating Procedures.

UNIT IV Problem Solving Techniques:

Systematic Problem solving basics (P D C A) - Problem Solving Tools – Brainstorming - Basic 7QC Tools - Why Why Analysis - FMEA (Process Failure Mode Effects Analysis).

UNIT V Process Improvement Methods:

Need for Process Improvement - Kaizen - Introduction to Lean Methodology - Introduction to Six Sigma methodology

COURSE OBJECTIVES:**To make the students**

1. To Understand the features of Spreadsheet applications and functions.
2. To comprehend and apply computer tools and inbuilt functions on raw data.
3. To communicate orally and in written form the features of spreadsheet applications and functions.
4. To utilize the expertise of the Excel features and functions as a lifelong practice.
5. To study about the simple formulas ,complex formulas and functions
6. To study about the pivot table and VBA

COURSE OUTCOMES:**Learners should be able to**

1. Understand the features of Spreadsheet applications and functions.
2. Comprehend and apply computer tools and inbuilt functions on raw data.
3. Communicate orally and in written form the features of spreadsheet applications and functions.
4. Utilize the expertise of the Excel features and functions as a lifelong practice.
5. Apply the simple formulas, complex formulas and functions
6. Apply pivot table and Recording a VBA, variables in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

UNIT I GETTING STARTED WITH EXCEL

Opening Excel, Creating and Opening Workbook- Saving and Sharing Workbook , Cell Basics - Understanding Cells, Cell Contents, Find and Replace, Formatting Cells - Font Formatting, Text Alignment, Cell Borders and fill colors, Cell styles, Formatting text and numbers, Modifying Columns, Rows and Cells - Inserting, Deleting, Moving, and Hiding rows and columns -Wrapping text and merging Cells
 Printing Workbooks - Choosing a print area, Fitting and scaling content
 Finalising and Protecting Workbooks

UNIT II FORMULAS AND FUNCTIONS

Formulas and Functions - Simple Formulas, Complex Formulas, Functions (Statistical, financial, Text, Data and Time)

UNIT III DATA ANALYSIS

Auto filter and Advanced filter, Creating and using outlines, Conditional formatting, Sparklines Collating data from several worksheets

Working with Data - Freezing Panes and view options, Sorting Data, Filtering Data

Working with charts - Understanding Charts, Chart Layout and style, Other chart options

UNIT IV ADVANCED FUNCTIONS

AutoSum, IF Function, VLookup Function and Hlook up, What if Analysis – solver, Name Ranges, Charts and filter data using Slicers, Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.

UNIT V PIVOT TABLE AND VBA

Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function

VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

		Semester – VI	
18BPU603A	MANAGEMENT INFORMATION SYSTEM	6H	– 5C
Instruction Hours / week L: 6 T: 0 P: 0		Marks: Internal: External: 60	Total: 100
End Semester Exam: 3 Hours			

COURSE OBJECTIVES:**To make the students**

1. To Understand the usage of information system in management decision.
2. To critically analyse and evaluate the use of DSS, AI in supporting management decision
3. To communicate orally and in written form the understanding of the usage of information system in management decision.
4. To understand the security and ethical issues pertaining to use of information technology in management decision making.
5. To apply the understanding of the usage of information system in management decision as a lifelong practice.
6. To learn about the enterprise resources planning

COURSE OUTCOMES:**Learners should be able to**

1. Understand the usage of information system in management decision.
2. Critically analyse and evaluate the use of DSS, AI in supporting management decision
3. Communicate orally and in written form the understanding of the usage of information system in management decision.
4. Understand the security and ethical issues pertaining to use of information technology in management decision making.
5. Apply the understanding of the usage of information system in management decision as a lifelong practice.
6. Gain knowledge about the Basics of ERP, Evolution of ERP, Enterprise Systems in Large Organizations, Benefits and Challenges of Enterprise Systems

UNIT I: Understanding MIS and Decision-Making Process

Introduction to Management Information Systems, History of MIS, Impact of MIS, Role and Importance, MIS Categories, Managers and Activities in IS, Types of Computers Used by Organizations in Setting up MIS, Hardware support for MIS

Introduction, The Decision Making Process , System Approach to Problem Solving, The Structure of Management Information System, Types of Management Systems Concepts of Management Organization

UNIT II Planning and Control and MIS Structure

Introduction, Differences between planning and control information, Systems Analysis, Systems Design

MIS Organization Structure : Introduction, MIS at Management levels, Strategic Level Planning, Operational Level Planning, Economic and Behaviour Theories.

UNIT III Enterprise Resource Planning and E-Enterprise System

Enterprise Resource Planning: Introduction, Basics of ERP, Evolution of ERP, Enterprise Systems in Large Organizations, Benefits and Challenges of Enterprise Systems

E-Enterprise System : Introduction: Managing the E-enterprise, Organisation of Business in an E-enterprise, E-business, E-commerce, E-communication, E-collaboration,

UNIT IV: Trends in MIS, MIS – Support Models and Knowledge Management

Introduction, Decision Support Systems (DSS), Artificial Intelligence (AI)

Introduction, Philosophy of Modelling, DSS: Deterministic Systems, Market Research Methods, Ratio Analysis for Financial Assessment, Management Science Models, Procedural Models, Project Planning and Control Models, Cost Accounting Systems, Operations Research Models: Mathematical Programming Techniques, Knowledge Management

UNIT V Strategic Management Information System, Security and Ethical Issues

Introduction, Background, Performance, Product differentiation and Value Chain, How IT influences Organizations' goals, The five levels, Governance Modes in the use of IT

Security and Ethical Issues: Introduction, Control Issues in Management Information Systems, Security Hazards, Ethical Issues, Technical solutions for Privacy Protection

SUGGESTED READINGS:

		Semester – VI	
18BPU603B	STRATEGIC MANAGEMENT	6H	– 5C
Instruction Hours / week L: 6 T: 0 P: 0		Marks: Internal: External: 60	Total: 100
End Semester Exam: 3 Hours			

COURSE OBJECTIVES:

To make the students

1. To Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. To critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. To communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
4. To apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
5. To learn the formulation of vision, mission and objectives
6. To study about the external environment and SWOT Analysis

COURSE OUTCOMES:

Learners should be able to

1. Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. Critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. Communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
4. Apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
5. Acquire the knowledge to formulate vision, mission and objectives
6. Gain understanding about the external environment and SWOT analysis

UNIT I : Strategic Management - Introduction

An Introduction Strategic thinking Vs Strategic management Vs Strategic planning, Meaning of strategic management, concept of strategy, policy and strategy, strategy and tactic, Strategy and strategic plan, Nature of strategic plan, nature of strategic decisions, approaches to strategic decision making, levels of strategies, The strategic management process, strategic management: merits and demerits

UNIT II Vision, Mission and Objectives

Vision, Mission, Objectives, Goals and Ethics What is mission, concept of goals, Integration of individual and organization goals: A Challenge, How Objectives are pursued, how are mission and objectives are formulated, why do mission and objective

change, vision mission, objectives, goals and Strategy: Mutual relationships, core of strategic management: vision, ethics and strategy

UNIT III External environment:

Analysis and appraisal Concept of environment, environmental analysis and appraisal, why environmental scanning and analysis, component of environment, SWOT: A tool of environment analysis, techniques of environmental search and analysis, ETOP: A technique of diagnosis, decision making on environmental information.

UNIT IV Organization Change, Agile and innovation

Planned and unplanned change, causes or forces of organisational change, managing planned change, choosing a change strategy.

Introduction to Agile - Why Agile, What is Agile, SCRUM, SCRUM Enhancers, DevOPs,

Creativity and innovation in organisations, organizational creativity and innovation process, learning organisation. Design Thinking, LEAN, Anti Patterns, Agile for Non software, Design Thinking.

UNIT V Generic competitive strategy and Strategic Evaluation

Generic vs. competitive strategy, the five generic competitive strategy, competitive marketing strategy option, offensive vs. defensive strategy, Corporate strategy:- Concept of corporate strategy, offensive strategy, defensive strategy, scope and significance of corporate strategy

Strategic evaluation and control:- Evaluation of strategy and strategic control, why strategy evaluating, criteria for evaluation and the evaluation process, strategic control process, types of external controls.

MANAGING BUSINESS PROCESSES- II

Semester – VI

18BPU611B**(PRACTICAL)****2H****– 1C****Instruction Hours / week L: 0 T: 0 P: 2****Marks: Internal: External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the quality standards and quality assurance.
2. To comprehend and utilize the tools and techniques to reduce the defect.
3. To gain knowledge of problem-solving techniques and apply the same in BPS sector.
4. To understand the Lean and six sigma concept and its application in managing the business processes.
5. To communicate orally and in written form the understanding of managing the business process using various techniques.
6. To learn the application of Basic 7QC Tools for solving problem

COURSE OUTCOMES:**Learners should be able to**

1. Understand the quality standards and quality assurance.
2. Comprehend and utilize the tools and techniques to reduce the defect.
3. Gain knowledge of problem-solving techniques and apply the same in BPS sector.
4. Understand the Lean and six sigma concept and its application in managing the business processes.
5. Communicate orally and in written form the understanding of managing the business process using various techniques.
6. Acquire the knowledge about the application of Basic 7QC Tools for solving problem

1. Identify the International Quality Standards
2. Procedure for sample inspection
3. Tools used for performing the root Cause Analysis
4. COPQ – Case study to analyse the importance of COPQ
5. Application of the P D C A as Quality tools
6. Application of the Basic 7QC Tools for solving problem
7. Application of the Why Why Analysis for solving problem
8. Application of FMEA (Process Failure Mode Effects Analysis) for solving problem
9. Analyse real time case on Kaizen

10. Analyse real time case on Lean methodology

11. Analyse real time case on Six Sigma methodology

ENTREPRENEURSHIP

Semester – VI

18BPU612A

(PRACTICAL)

2H

– 1C

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of the entrepreneurship, idea creation, starting up new ventures, business plan and applying for funding and patent.
2. To analyse the case studies and try to apply the theoretical learning into lifelong practice.
3. To Critically evaluate the appropriate alternatives available as entrepreneur and draw a solution.
4. To Communicate in oral and written form and prepare business plan and the report.
5. To Work in team and exhibit leadership skills
6. To study about the planning and entrepreneurship venture

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of the entrepreneurship, idea creation, starting up new ventures, business plan and applying for funding and patent.
2. Analyse the case studies and try to apply the theoretical learning into lifelong practice.
3. Critically evaluate the appropriate alternatives available as entrepreneur and draw a solution.
4. Communicate in oral and written form and prepare business plan and the report.
5. Work in team and exhibit leadership skills
6. Acquire knowledge about the planning and entrepreneurship venture

1. To Select company and Visit the Entrepreneur and collect the details regarding their Entrepreneurial Qualities like Risk taking ability, Personality qualities, Creativity and innovation initiatives in product or services. Prepare a case study or Video case on the Entrepreneur. (TEAM PROJECT 2-3 numbers)
2. To study on any one Family business house in India and enumerate on the growth.
3. To study on Generation Entrepreneurship and how they did success planning
4. To study on the social entrepreneurship venture with a successful case study.
5. To study on the various association available for the support of the entrepreneurship in a particular industry

6. To study on various sources of funding including venture capital and procedure to procure support.
7. Visit a bank and understand the procedure and documents for applying for corporate loan
8. Select a business Idea and Draft a Business Plan for a business Idea (TEAM PROJECT 2-3 numbers)
 - Market feasibility
 - Technical feasibility
 - Management feasibility
 - Financial feasibility
9. Procedure for opening a Start ups and the government support to start up initiatives.
10. Procedure for applying IPR and Patent.

EXCEL FOR BUSINESS

Semester – VI

18BPU612B

(PRACTICAL)

4H

– 2C

Instruction Hours / week L: 0 T: 0 P: 4

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Create and format the data in excel sheet
2. To utilize all the inbuilt, functions and formulas and analyse the data.
3. To critically analyse the data using the what-if, solver and pivot functions.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
6. To learn about pivot table and VBA

COURSE OUTCOMES:**Learners should be able to**

1. Create and format the data in excel sheet
 2. Utilize all the inbuilt, functions and formulas and analyse the data.
 3. Critically analyse the data using the what-if, solver and pivot functions.
 4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
 5. Apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
 6. Apply pivot table and VBA, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.
-
1. Creating an excel sheet and performing all formatting tools and protecting and printing the file.
 2. Performing statistical functions, Performing financial functions, Performing date and text function
 3. Filtering the data, Conditional formatting
 4. Collating data from several worksheets
 5. Charts, Chart Layout and style, Other chart options
 6. IF Function,
 7. VLookup Function and Hlook up,
 8. What if Analysis – solver,

9. Name Ranges,
10. Charts and filter data using Slicers,
11. Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.
12. Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function
13. VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

MANAGEMENT INFORMATION SYSTEM

2H

– 1C

(PRACTICAL)

Instruction Hours / week L: 0 T: 0 P: 2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the usage of information system in management decision.
2. To critically analyse and evaluate the use of DSS, AI in supporting management decision
3. To communicate orally and in written form the understanding of the usage of information system in management decision.
4. To understand the security and ethical issues pertaining to use of information technology in management decision making.
5. To apply the understanding of the usage of information system in management decision lifelong practice.
6. To learn the use of Google analytics in decision making process

COURSE OUTCOMES:**Learners should be able to**

1. Understand the usage of information system in management decision.
 2. Critically analyse and evaluate the use of DSS, AI in supporting management decision
 3. Communicate orally and in written form the understanding of the usage of information system in management decision.
 4. Understand the security and ethical issues pertaining to use of information technology in management decision making.
 5. Apply the understanding of the usage of information system in management decision lifelong practice.
 6. Apply Google analytics in decision making process
-
1. Visit a company and know the management information system and its application in the company decision making process. (Measure efficiency in terms of Cost and time factor)
 2. Understand the application of Artificial intelligence in the decision-making process of a company using a real time case.
 3. Use of Google analytics in decision making process by the companies – A real time case

4. Use of the ERP systems in improvising the decision making process of the organization. – A real time case
5. Information Technology influence on organization goal – A Case study analysis
6. Information Technology usage in Accounting and finance control – A case study analysis
7. E-Governance in a state – Select a state which you feel has implemented information technology for effective governance.
8. The Threats in E-banking and Mobile Banking Technologies – A real case study analysis
9. Security threats in Implementing the Information technology in an organization and ways to mitigate same – Refer a real time case
10. Growing Need and role of CIO in an organization especially financial institutions – A Real case study analysis

Note : Refer CIO websites also for the case studies

(PRACTICAL)

2H

– 1C

Instruction Hours / week L: 0 T:0 P:2

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. To critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. To understand the application of the latest concepts like Scrum framework , Agile methodology and design thinking
4. To communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
5. To apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
6. To Work in teams and exhibit leadership skills.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. Critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. Understand the application of the latest concepts like Scrum framework , Agile methodology and design thinking
4. Communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
5. Apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
6. Work in teams and exhibit leadership skills.

Select a company

1. Download the mission and Vision Statement and Evaluate the mission statement to analyse if it captures all the nine elements of the mission statement.
2. Environmental scanning
 - i. Industry analysis – Porter's approach. Porter's competitive strategies - Dynamics of internal environment (REFER IBEF website)
 - ii. SWOT analysis

- iii. Identify the Core competence of the company
- 3. Understand the **scrum** framework and its application in the organization
- 4. Analyse the real time case on mergers and acquisition strategy and its impact on company performance
- 5. Analyse the real time case on joint venture strategy and its impact on company performance
- 6. Analyse the application of 7S model and its implication.
- 7. Analyse a real case to analyse the usage of Design Thinking and Agile Methodology for Innovation
- 8. Procedure for evaluation the strategy of a company.
- 9. Identify the indicators that could be used from the economy and company to formulate the strategy

		Semester – VI	
18BPU691	PROJECT	8H	– 6C
Instruction Hours / week L: 8 T: 0 P: 0		Marks: Internal: External: 60	Total: 100
End Semester Exam: 3 Hours			

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills
7. To utilise the IT applications for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilise the IT applications for analysis and preparation of report

The students should select a problem in Accounting, Finance, Marketing or any other arears related to commerce.

Report should contain

- Introduction
- Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives

- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

FACULTY OF ARTS, SCIENCE AND HUMANITIES
UNDERGRADUATE (UG) PROGRAMMES
BCOM DEGREE PROGRAMME
REGULAR PROGRAMME
REGULATIONS - 2018
CHOICE BASED CREDIT SYSTEM (CBCS)

The following regulations are effective from the academic year 2018-2019 and are applicable to candidate admitted to Undergraduate Degree (UG) programmes in the Faculty of Arts, Science, and Humanities, Karpagam Academy of Higher Education (KAHE) from the academic year 2018-2019 onwards.

**1. PROGRAMMES OFFERED, MODE OF STUDY AND
ADMISSION REQUIREMENTS**

1.1. U.G. Programmes Offered

A candidate may undergo a programme in any one of the undergraduate programme approved by the KAHE as given below.

S. No.	DEGREE	DISCIPLINE
1	B. Sc.	Biochemistry
2	B. Sc.	Biotechnology
3	B. Sc.	Computer Science
4	B.Sc.	Mathematics
5	B.Sc.	Physics
6	B. Sc.	Chemistry
7	B. Sc.	Microbiology
8	B. Sc.	Information Technology
9	B. Sc.	Computer Technology
10	BCA	Computer Application
11	B. Com.	Commerce
12	B.Com (CA)	Commerce with Computer Applications
13	B. Com. (PA)	Commerce with Professional Accounting
14	B. Com. (BPS)	Commerce with Business Process Services
15	B.B.A.	Business Administration

1.2 Mode of Study

Full-Time

Candidates admitted under 'Full-Time' should be present in the KAHE during the complete working hours for curricular, co-curricular and extra-curricular activities assigned to them.

1.3 Eligibility for Admission

A candidate for admission to the first year of the UG Degree programme shall be required to have passed the Higher Secondary Examination (10 + 2) [Academic or Vocational] prescribed by the Government of Tamil Nadu Board or any similar examination of any other Board accepted by the KAHE as equivalent thereto.

2. DURATION OF THE PROGRAMMES

2.1. The minimum and maximum period for the completion of the U.G. Programmes are given below:

	Min. No. of Semesters	Max. No. of Semesters
B.A, B.Sc., B.Com, B.Com (PA), B.Com (CA), B.Com (BPS), BCA, BBA	6	12

2.2. Each semester normally consists of 90 working days or 450 Instructional hours of study. Examination shall be conducted at the end of every semester for the respective courses

3. CREDITS

Credit means the weightage given to each course of study by the experts of the concerned Board of Studies. Total credits 140 as per UGC Guidelines for the UG programme (Three Years).

4. STRUCTURE OF THE PROGRAMME

4.1 Tamil or any one of the Indian / Foreign Languages viz, Malayalam, Hindi, French, Sanskrit as an additional course for Science Programme. Four credits are awarded for each course and the examinations will be conducted at the end of each semester.

For Arts programme, there are two additional courses (English III and IV) offered during the Second year - third and fourth semester. Six credits are awarded for each course, and the examinations will be conducted at the end of each semester.

4.2. Core Course, Discipline-Specific Elective, Generic Elective, Skill Enhancement Course, Project, Ability Enhancement Compulsory Course, self-study course.

a. Core Course

Core consists of theory and practical for Department domains for which examinations shall be conducted at the end of each semester. The students have to study 12 Core Courses compulsorily.

b. Discipline Specific Electives

There are six Discipline Specific Elective Courses (DSE) for Science Programme. DSE is offered in the fifth and sixth semesters of third year. The examination shall be conducted at the end of each semester. Final year students (V and VI Semesters) will have to choose three elective courses in V semester and two elective courses in the VI Semester from the list of elective courses given in the curriculum, in addition to the project work.

There are four Discipline Specific Elective Courses for Arts Programme. DSE is offered in the fifth and sixth semesters of third year programme. The examination shall be conducted at the end of each semester. Final year students (V and VI Semesters) will have to choose two elective courses in V semester and two elective courses in the VI Semester from the list of elective courses given in the curriculum.

c. Generic Elective

An elective course chosen generally from an unrelated discipline/subject, with an intention to seek exposure is called a Generic Elective.

The students in the Final year Arts programme have to choose two Generic Electives- one each in the Fifth and Sixth Semester from the list of elective courses given in the curriculum.

Note: A particular elective course will be offered if at least one third of the class opt that course. If less, the elective selected may be studied as a self-study course.

d. Skill Enhancement Courses

Skill Enhancement Courses are offered in the third and fourth semesters of second year programme and in the fifth and sixth semesters of the third year programme. Second year students (III and IV Semesters) will have to choose one elective course each in both III and IV Semesters from the list of elective courses given in the curriculum. Similarly, final year students (V and VI Semesters) will have to choose one elective course each in both V and VI Semesters from the list of elective courses given in the curriculum. The examination shall be conducted at the end of each semester.

Note: A particular elective course will be offered if at least one third of the class opt that course. If less, the elective selected may be studied as a self-study course.

e. Project Work

The Project work shall during the fifth semester vacation for a duration of 60-90 days and Project Report shall be submitted at the end of the sixth semester. The project shall be an individual or group task. HoD of the department concerned shall assign a project supervisor who in turn shall monitor the project work of the student(s). A project/ dissertation work may be given *in lieu* of a discipline-specific, elective paper.

**f. Ability Enhancement Compulsory Course
Ability Enhancement Compulsory Course-1**

The course (English for Science Programme / Business Communication for Arts Programme) shall be offered during the first semester for which examinations shall be conducted at the end of the semester.

Ability Enhancement Compulsory Course-2

Students shall study the course Environmental Studies in the second Semester for which examinations shall be conducted at the end of the semester.

g. **Online Course**

Student shall study at least one online course from SWAYAM / NPTEL / MOOC in any one of the first five semesters for which examination shall be conducted at the end of the course by the respective organizations. The student can register to the courses which are approved by the Department. The student shall produce a pass certificate from the respective organizations before the end of the fifth semester. The credit(s) earned by the students will be considered as additional credit(s) over and above the required credits earned from programme concerned.

h. **Extension Activities**

Every student is encouraged to participate in at least any one of the following activities:

- NSS
- NCC
- Sports / Mass drill
- YRC
- Club activities
- Other Co-curricular and Extracurricular activities

The student's performance shall be examined by the staff in-charge of Extension Activities along with the faculty tutor and the Head of the respective department on the following parameters.

- 75 % weightage for active participation in Extension Activities in / out of the KAHE.
- 25 % weightage for Exemplary Awards / Prizes.

Marks for Co-curricular and Extra-curricular shall be sent to the CoE before the commencement of the sixth End Semester Examinations. The mark sheet will carry the following **remarks** as per the following range of marks.

Marks Range	Description
80 – 100	Excellent
70 – 79	Very Good

60 – 69	Good
50 – 59	Satisfactory
<50	Poor

The above activities shall be conducted outside the regular working hours of the KAHE.

5. MEDIUM OF INSTRUCTION

The medium of instruction and examinations for the courses under Language I – Tamil / Hindi / Malayalam / French / Sanskrit shall be in the language concerned. For all other courses, the medium of instruction and examination shall be in English.

6. MAXIMUM MARKS

Each of the theory and practical courses shall carry a maximum of 100 marks. Out of which 40 marks is awarded for Continuous Internal Assessment (CIA) and 60 marks for End Semester Examinations (ESE).

Evaluation: Evaluation in the courses comprises two parts, one is the Continuous Internal Assessment (CIA) and the other one is the End Semester Examination (ESE).

7. REQUIREMENTS TO APPEAR FOR THE END SEMESTER EXAMINATION

- a. Ideally, every student is expected to attend all classes and secure 100% attendance. However, in order to allow for certain unavoidable circumstances, the student is expected to attend at least 75% of the classes and the conduct of the candidate has been satisfactory during the course.
- b. A candidate who has secured attendance between 65% and 74% (both included), due to medical reasons (Hospitalization / Accident / Specific Illness) or due to participation in University / District / State / National / International level sports or due to participation in Seminar / Conference / Workshop / Training Programme / Voluntary Service / Extension activities or similar programmes with prior permission from the Registrar shall be given exemption from prescribed attendance requirements and shall be permitted to appear for the examination on the recommendation of the Head of the Department concerned and Dean to condone the lack of attendance. The Head of the Department has to verify and certify the genuineness of the case before recommending to the Dean concerned. However, the candidate has to pay the prescribed condonation fee to the KAHE.
- c. However, a candidate who has secured attendance less than 64% in the current semester due to any reason shall not be permitted to appear for the current semester examinations. But he/she

will be permitted to appear for his/her supplementary examinations, if any and he/she has to re-do the same semester with the approval of the “Students’ Affairs Committee” and Registrar.

8. a. FACULTY TUTOR

To help students in planning their courses of study and for general advice on the academic programme, the HoD shall allot a certain number of students to a faculty to whom they shall function as faculty tutor throughout their period of study. Faculty tutors shall advise the students and monitor their conduct of behavior and academics. Problems if any, they should be counseled periodically. The Faculty tutor is also responsible to inform the parents of their wards’ progress. Faculty tutor shall display the cumulative attendance particulars of his / her ward students’ periodically (once in 2 weeks) on the Notice Board to enable the students know their attendance status and satisfy the **clause 7** of this regulation.

b. ONLINE COURSE COORDINATOR

To help students in planning their online courses and for general advice on online courses, the HOD shall nominate a coordinator for the online courses. The Online course coordinator shall identify the courses which students can select for their programme from the available online courses offered by the different agencies periodically and inform the same to the students. Further, the coordinator shall advice the students regarding the online courses and monitors their course.

9. CLASS COMMITTEE

Every class shall have a class committee consisting of the faculty members of the various courses of the class concerned, student representatives (Minimum 2 boys and 2 girls of various capabilities and Maximum of 6 members) and the concerned HoD / senior faculty as Chairperson. The objective of the Class Committee Meeting is all about the teaching – learning process. Class Committee may be convened at least once in a month. The functions of the class committee include

- Analysing and solving problems experienced by students in the class room and in the laboratories.
- Analyzing the performance of the students of the class after each test and finding the ways and means to improve the performance.
- The class committee of a particular class of any department is normally constituted by the HoD / Chairperson of the class Committee. However, if the students of different departments are mixed in a class, the class committee is to be constituted by the respective Dean of the Faculty.
- The class committee shall be constituted within the first week of each semester.
- The HoD / Chairperson of the Class committee may convene the meeting of the class committee.
- The respective Dean of the Faculty may participate in any Class committee meeting.

- The Chairperson is required to prepare the minutes of every meeting, and submit the same to Dean concerned within two days after having convened the meeting. Serious issues if any shall be brought to the notice of the Registrar by the HoD / Chairperson.

10. COURSE COMMITTEE FOR COMMON COURSES

Each common theory course offered to more than one discipline or department shall have a “Course committee” comprising all the teachers handling the common course with one of them nominated as Course Coordinator. The nomination of the course coordinator shall be made by the respective Dean depending upon whether all the teachers handling the common course belong to a single department or to various other departments. The ‘course committee’ shall meet in order to arrive at a common scheme of evaluation for the tests and shall ensure a uniform evaluation of the tests. If feasible, the course committee shall prepare a common question paper for the Internal Assessment test(s).

11. PROCEDURE FOR AWARDING MARKS FOR INTERNAL ASSESSMENT

11.1 Attendance and assessment: Every Faculty is required to maintain an **Attendance and Assessment Record (Log book)** which consists of attendance marked in each lecture / practical / project work class, the test marks and the record of class work (topic covered), separately for each course. This should be submitted to the HoD once in a fortnight for checking the syllabus coverage and the records of test marks and attendance. The HoD shall sign with date after due verification. The same should be submitted to respective Dean once in a month. After the completion of the semester the HoD should keep this record in safe custody for five years. Because records of attendance and assessment shall be submitted for Inspection as and when required by the KAHE / any other approved body.

11.2 Continuous Internal Assessment (CIA): The performance of students in each course will be continuously assessed by the respective faculty as per the guidelines given below:

Theory Courses

S. No.	Category	Maximum Marks
1.	Assignment*	5
2.	Attendance	5
3	Seminar	5
4.	Test – I (1 ½ units- Unit I and II)	8
5	Test – II (1 ½ units Unit II and III)	8
6	Test III (2 units Unit IV and V)	9
Continuous Internal Assessment : Total		40

* Two Assignments (Assignment I before Internal Test – I and assignment II before Internal Test – II).

Practical Courses

S. No.	Category	Maximum Marks
1.	Attendance	5
2.	Observation work	5
3.	Record work	5
4.	Model Examination	20
5.	<i>Viva – voce</i> [Comprehensive]*	5
Continuous Internal Assessment: Total		40

* Includes *Viva- voce* conducted during the model Exam practical.

Every practical Exercise / Experiment shall be evaluated based on the conduct of Exercise/ Experiment and records maintained.

11.3 Pattern of Test Question Paper

Portions for Internal Test – I : First 1 ½ Units (Unit I and II)

Portions for Internal Test – II : Second 1 ½ Units (Unit II and III)

Portions for Internal Test – III : Two units (Unit IV and V)

Instruction	Remarks
Maximum Marks	50 marks
Duration	2 Hours
Part – A	Objective type (20x1=20)
Part – B	Short Answer Type (3 x 2 = 6)
Part - C	3 Eight mark questions ‘either – or’ choice (3 x 8 = 24 Marks)

11.4 Attendance

Marks Distribution for Attendance

S. No.	Attendance (%)	Maximum Marks
1	91 and above	5.0
2	81 - 90	4.0
3	76 - 80	3.0
4	Less than 75	0

S. No.	Attendance (%)	Maximum Marks
1	91 and above	5.0
2	86 - 90	4.0
3	81 - 85	3.0
4	75 - 80	2.0
5	Less than 75	0

12. KAHE EXAMINATIONS

12.1 End Semester Examination (ESE): End Semester Examination will be held at the end of each semester for each course. The question paper is for maximum 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks
Maximum Marks	60 marks for ESE.
Duration	3 hours (½ Hr for Part – A Online & 2 ½ Hours for Part – B and C
Part - A	20 Questions (20 x 1 = 20 Marks) Question No. 1 to 20 Online Multiple Choice Questions
Part- B	5 Questions (5 x 2 = 10 Marks) Covering all the five units of the syllabus Question No. 21 to 25
Part- C	5 six mark Questions (5 x 6 = 30 Marks.) Question No. 26 to 30 will be ‘either-or’ type, covering all five units of the syllabus; i.e., Question No. 26: Unit - I, either 26 (a) or 26 (b), Question No. 27: Unit - II, either 27 (a) or 27 (b), Question No. 28: Unit - III, either 28 (a) or 28 (b), Question No. 29: Unit - IV, either 29 (a) or 29 (b), Question No. 30: Unit - V, either 30 (a) or 30 (b)

12.2 Practical: There shall be combined valuation. The pattern of distribution of marks shall be as given below.

S. No.	Category	Maximum Marks
1	Experiments	40 Marks
2	Record	10 Marks
3	<i>Viva-voce</i>	10 Marks
4	Total	60 Marks

Record Notebooks for Practical Examination

Candidate taking the practical examination should submit Bonafide record notebook prescribed for the practical examination; Failing which the candidate will not be permitted to take the practical examination.

In case of failures in Practical Examination, the marks awarded for the record at the time of first appearance of the Practical Examination should remain the same at the subsequent appearance by the candidate.

12.3. Evaluation of Project Work

12.3.1 The project work shall carry a maximum of 100 marks. (CIA - 40 and ESE – 60*)

*Combined valuation of Internal and External Examiners.

12.3.2 The project report prepared according to approved guidelines and duly signed by the supervisor(s) shall be submitted to HoD.

12.3.3 The evaluation of the project will be based on the project report submitted and a *viva-voce* Examination by a team consisting of the supervisor, who will be the Internal Examiner and an External Examiner who shall be appointed by the KAHE. In case the guide is not available, the HoD shall act as an Internal Examiner for the same.

12.3.4 If a candidate fails to submit the project report on or before the specified date given by controller of examinations office, candidate is deemed to have failed in the Project Work and shall re-enroll for the same in a subsequent semester.

If a candidate fails in the respective viva-voce examinations he/she has to resubmit the Project Report within 30 days from the date of declaration of the results. For this purpose, the same Internal and External examiner shall evaluate the resubmitted report.

12.3.5 Copy of the approved project report after the successful completion of *viva-voce* examinations shall be kept in the KAHE library.

13. PASSING REQUIREMENTS

13.1 Passing minimum: There is a passing minimum for CIA and it is 20 marks out of 40 marks. The passing minimum in ESE is 30 marks out of 60 marks. The overall passing in each course is 50 out of 100 marks (Sum of the marks in CIA and ESE examination).

13.2 If a candidate fails to secure a pass in a particular course (either CIA or ESE or Both) as per clause 13.1, it is mandatory that the candidate has to register and reappear for the examination in that course during the subsequent semester when examination is conducted for the same till a pass is secured both in CIA and ESE (vide Clause 2.1).

13.3 Candidate failed in CIA will be permitted to improve CIA marks in the subsequent semesters by writing tests and by submitting Assignments.

13.4 CIA marks (if it is pass) obtained by the candidate in the first appearance shall be retained by the Office of the Controller of Examinations and considered valid for all subsequent attempts till the candidate secures a pass in ESE

13.5 Candidate who is absent in ESE in a Course / Practical / Project Work after having enrolled for the same shall be considered to have **failed** in that examination.

14. IMPROVEMENT OF MARKS IN THE COURSES ALREADY PASSED

Candidates desirous of improving the marks secured in a passed course in their first attempt shall reappear once (**only in ESE**) in the subsequent semester. **The improved marks shall be considered for classification but not for ranking.** If there is no improvement there shall be no change in the marks awarded earlier.

15. AWARD OF LETTER GRADES

All assessments of a course will be done on absolute marks basis. However, for the purpose of reporting the performance of a candidate, letter grades, each carrying certain number of points, will be awarded as per the range of total marks (out of 100) obtained by the candidate in each course as detailed below:

Letter grade	Marks Range	Grade Point	Description
O	91 - 100	10	OUTSTANDING
A+	81- 90	9	EXCELLENT
A	71-80	8	VERY GOOD
B+	66- 70	7	GOOD
B	61 – 65	6	ABOVE AVERAGE
C	55 - 60	5	AVERAGE
D	50 - 54	4	PASS
RA	<50	-	REAPPEARANCE
AAA	-	-	ABSENT

16. GRADE SHEET

After the declaration of the results, Grade Sheets will be issued to each student which will contain the following details:

- The list of courses enrolled during the semester and the grade scored.
- The Grade Point Average (**GPA**) for the semester and
- The Cumulative Grade Point Average (**CGPA**) of all courses enrolled from first semester onwards.
- Remark on Extension Activities (only in the 6th Semester Grade Sheet)

GPA of a Semester and CGPA of a programme will be calculated as follows.

GPA of a Semester

$$= \frac{\text{sum of the product of the GP by the corresponding credits of the courses offered in that semester}}{\text{sum of the credits of the courses of that semester}}$$

$$\text{i.e. GPA of a Semester} = \frac{\sum_i C_i G P_i}{\sum_i C_i}$$

CGPA of the entire programme

$$= \frac{\text{sum of the product of the GPs by the corresponding credits of the courses offered for the entire programme}}{\text{sum of the credits of the courses of the entire programme}}$$

i.e. **CGPA** of the entire programme =
$$\frac{\sum_n \sum_i C_{ni} GP_{ni}}{\sum_n \sum_i C_{ni}}$$

where,

C_i is the credit fixed for the course 'i' in any semester

GP_i is the grade point obtained for the course 'i' in any semester

'n' refers to the Semester in which such courses are credited.

Note: RA grade will be excluded for calculating **GPA** and **CGPA**.

17. REVALUATION

A candidate can apply for revaluation and retotalling of his / her semester examination answer script (**theory courses only**), within 2 weeks from the declaration of results, on payment of a prescribed fee. For the same, the prescribed application has to be sent to the Controller of Examinations through the HoD. **A candidate can apply for revaluation of answer scripts not exceeding 5 courses at a time.** The Controller of Examination will arrange for the revaluation and the results will be intimated to the candidate through the concerned HoD. Revaluation is not permitted for supplementary theory courses.

18. TRANSPARENCY AND GRIEVANCE COMMITTEE

Revaluation and Retotalling is allowed on representation (clause 17). Student may get the Xerox copy of the answer script on payment of prescribed fee, if he / she wishes. The student may represent the grievance, if any, to the Grievance Committee, which consists of Dean of the Faculty, (if Dean is HoD, the Dean of another Faculty nominated by the KAHE), HoD of the Department concerned, the faculty of the course and Dean from other discipline nominated by the KAHE and the CoE. If the Committee feels that the grievance is genuine, the script may be sent for external valuation; the marks awarded by the External examiner will be final. The student has to pay the prescribed fee for the same.

19. ELIGIBILITY FOR THE AWARD OF THE DEGREE

A student shall be declared to be eligible for the conferment of the Degree if he / she has

- Successfully completed all the components prescribed under Parts I to Part IV in the CBCS pattern to earn the minimum required credits as specified in the curriculum corresponding to his/ her programme within the stipulated period vide class 2.1.
- No disciplinary action is pending against him / her.
- The award of the degree must be approved by the Board of Management.

20. CLASSIFICATION OF THE DEGREE AWARDED

20.1 Candidate who qualifies for the award of the Degree (vide clause 19) having passed the examination in all the courses in his / her first appearance, within the specified minimum number of semesters and securing a **CGPA not less than 8** shall be declared to have passed the examination in **First Class with Distinction**.

20.2 Candidate who qualifies for the award of the Degree (vide clause 19) having passed the examination in all the courses within the specified maximum number of semesters (vide

clause 2.1), securing a **CGPA not less than 6.5** shall be declared to have passed the examination in **First Class**.

20.3 All other candidates (not covered in clauses 20.1 and 20.2) who qualify for the award of the degree (vide Clause 19) shall be declared to have passed the examination in **Second Class**.

21. PROVISION FOR WITHDRAWAL FROM END-SEMESTER EXAMINATION

21.1 Candidate, may for valid reasons and on prior application, be granted permission to withdraw from appearing for the examination of any one course or consecutive examinations of more than one course in a semester examination.

21.2 Such withdrawal shall be permitted only once during the entire period of study of the degree programme.

21.3 Withdrawal of application is valid only if it is made within 10 days prior to the commencement of the examination in that course or courses and recommended by the HoD / Dean concerned and approved by the Registrar.

21.3.1 Notwithstanding the requirement of mandatory TEN days' notice, applications for withdrawal for special cases under extraordinary conditions will be considered on the merit of the case.

21.4 Withdrawal shall not be construed as an appearance for the eligibility of a candidate for First Class with Distinction. This provision is not applicable to those who seek withdrawal during IV semester.

21.5 Withdrawal from the End semester examination is **NOT** applicable to arrears courses of previous semesters.

21.6 The candidate shall reappear for the withdrawn courses during the examination conducted in the subsequent semester.

22. PROVISION FOR AUTHORISED BREAK OF STUDY

22.1 **Break of Study shall be granted only once for valid reasons for a maximum of one year during the entire period of study of the degree programme.** However, in extraordinary situation the candidate may apply for additional break of study not exceeding another one year by paying prescribed fee for break of study. If a candidate intends to temporarily discontinue the programme in the middle of the semester for valid reasons, and to rejoin the programme in a subsequent year, permission may be granted based on the merits of the case provided he / she applies to the Registrar, but not later than the last date for registering for the end semester examination of the semester in question, through the Head of the Department stating the reasons therefore and the probable date of rejoining the programme.

22.2 The candidate thus permitted to rejoin the Programme after the break shall be governed by the Curriculum and Regulations in force at the time of rejoining. Such candidates may have to do additional courses as per the Regulations in force at that period of time.

22.3 The authorized break of study (for a maximum of one year) will not be counted for the duration specified for passing all the courses for the purpose of classification. (Vide Clause

- 20). However, additional break of study granted will be counted for the purpose of classification.
- 22.4 The total period for completion of the Programme reckoned from, the commencement of the first semester to which the candidate was admitted shall not exceed the maximum period specified in clause 2.1 irrespective of the period of break of study (vide clause 23.3) in order that he/she may be eligible for the award of the degree.
- 22.5 If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted 'Break of Study' or 'Withdrawal' (Clause 22 and 23) is not applicable for this case.

23. RANKING

A candidate who qualifies for the UG Degree programme passing all the Examinations in the first attempt, within the minimum period prescribed for the programme of study from Semester I through Semester VI to the programme shall be eligible for ranking. Such ranking will be confined to 10% of the total number of candidates qualified in that particular programme of study subject to a maximum of 10 ranks.

24. SUPPLEMENTARY EXAMINATION

Supplementary Examination will be conducted only for the final semester students within ten days from the date of publication of results for students who have failed in one theory course only. Such students shall apply with prescribed fee to the Controller of Examinations within the stipulated time.

25. DISCIPLINE

- 25.1. Every student is required to observe disciplined and decorous behavior both inside and outside the campus and not to indulge in any activity which will tend to bring down the prestige of the KAHE. The erring students will be referred to the disciplinary committee constituted by the KAHE, to enquire into acts of indiscipline and recommend the KAHE about the disciplinary action to be taken.
- 25.2. If a student indulges in malpractice in any of the KAHE / Internal Examination, he / she shall be liable for punitive action as prescribed by the KAHE from time to time.

26. REVISION OF REGULATION AND CURRICULUM

The KAHE may from time to time revise, amend or change the Regulations, Scheme of Examinations and syllabi if found necessary.

PROGRAM OUTCOMES [PO]

- Graduates will have solid foundation in bookkeeping, accounting, computers and professional fundamentals required to record the business transaction ability.
- Graduates will apply technological skills in accounting, taxation by creating and applying the appropriate software and software tools for business management.
- Graduates will obtain the ability to analyze and develop programs for system-based applications which will help in solving complex business problems to make effective decisions.
- Graduates will exhibit critical thinking skills in understanding the real-time business issues and advocate solutions.
- Graduates will acquire and demonstrate the interpersonal and communication skills to convey and negotiate ideas for achieving the common goals.
- Graduates will attain and exhibit skills to work as team to take effective decisions in achieving the common goals.
- Graduates will demonstrate the leadership skills to initiate, lead and deliver the best performance together with the team members.

PROGRAM SPECIFIC OUTCOMES (PSO)

- Graduates will apply a lifelong learning gained through knowledge and skills in continuous adaption of new technologies and the changes in environment factors pertaining to accounting, IT, and finance.
- Graduates will demonstrate legal, ethical compliance (including IT norms) and socially sustainable code of conduct in both personal and professional decision making process.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Graduates will acquire knowledge in accounting, taxation, finance, management concepts and computer applications and apply it in business to become qualified professionals.
- II. Graduates will possess the professional skills, computer skills and competence in field related to accounting and commerce which will enable them to perform effectively in higher studies, KPO/BPO field of IT sector and entrepreneurial ventures.
- III. Graduates will continuously improve accounting and computer skills required to develop a lifelong learning through IT enabled research and practice.
- IV. Graduates will demonstrate high standard of ethical conduct in application of computer in accounting and finance and become socially responsible citizens contributing to the sustainable growth of profession and the community.

Course Objectives:

1. To train students to acquire proficiency in English.
2. To explore different genres of literature and learning grammar.
3. To provide aesthetic pleasure through literature.
4. To inculcate moral values through literature.
5. To develop ethical values.
6. To give basic grammar knowledge.

Course Outcome:

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT I PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT II POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT III SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNITIV DRAMA

1. The Merchant of Venice- Act 4-Scence 1
2. The Death Trap- Saki

UNIT V GRAMMAR AND COMPOSITION

Grammar : 1. Tenses

2. Articles
3. Auxiliaries (Primary and Modal)
4. Tag Questions

Composition:

1. Reading to Comprehend
2. Letter Writing
3. Resume Writing
4. General Essay

SUGGESTED READINGS:

1. Reminisce, Published by the Department of English, Karpagam University.
2. Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

COURSE OBJECTIVES:**To make the students**

1. To learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts and inventory valuation.
3. To understand and apply the techniques for preparing accounts in different business organizations like consignment, joint venture and Non – trading concern.
4. To know the accounting procedure for branches and also to ascertain the financial position of each branch separately.
5. To learn and apply the accounting procedures for partnership firm.
6. To introduce problems of financial accounting such as measuring and reporting issues related to assets and liabilities and preparing the financial statements.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Prepare the final accounts and compute inventory valuation.
3. Recognize the accounting process of financial statement and critically think in preparing accounts, rectification of errors, Consignment and Joint Venture.
4. Acquire knowledge on accounting for branches and also to ascertain the financial position of each branch separately.
5. To apply appropriate judgment derived from knowledge of accounting theory to prepare and validate the accuracy of financial statements.
6. Use information to support business processes and practices, such as problem analysis and decision making.

UNIT I ACCOUNTING INFORMATION SYSTEM

- i. Accounting as an information system, the users of financial accounting information and their needs. Qualitative characteristics of accounting, information. Functions, advantages and limitations of accounting. Branches of accounting. Bases of accounting; cash basis and accrual basis.
- ii. The nature of financial accounting principles – Basic concepts and conventions: entity, money measurement, going concern, cost, realization, accruals, periodicity, consistency, prudence (conservatism), materiality and full disclosures.
- iii. Financial accounting standards: Concept, benefits, procedure for issuing accounting standards in India. Salient features of First-Time Adoption of Indian Accounting Standard (Ind-AS) 101. International Financial Reporting Standards (IFRS): - Need and procedures

UNIT II ACCOUNTING PROCESS & FINAL ACCOUNTS

Accounting Process :

From recording of a business transaction to preparation of trial balance including adjustments

Business Income :

- i. Measurement of business income-Net income: the accounting period, the continuity doctrine and matching concept. Objectives of measurement.
- ii. Revenue recognition: Recognition of expenses.
- iii. The nature of depreciation. The accounting concept of depreciation. Factors in the measurement of depreciation. Methods of computing depreciation: straight line method and diminishing balance method; Disposal of depreciable assets-change of method.
- iv. Inventories: Meaning. Significance of inventory valuation. Inventory Record Systems: periodic and perpetual. Methods: FIFO, LIFO and Weighted Average. Salient features of Indian Accounting Standard (IND-AS)

Final Accounts :

Capital and revenue expenditures and receipts: general introduction only. Preparation of financial statements of non-corporate business entities.

UNIT III ACCOUNTING FOR HIRE-PURCHASE AND INSTALLMENT SYSTEMS, CONSIGNMENT, AND JOINT VENTURE

Accounting for Hire-Purchase and installment system: Transactions, Journal entries and ledger accounts including Default and Repossession.

Accounting for Joint Venture-Consignment: Features, Accounting treatment in the books of the consignor and consignee. **Joint Venture:** Accounting procedures: Joint Bank Account, Records Maintained by Coventurer of (a) all transactions (b) only his own transactions. (Memorandum joint venture account).

UNIT IV ACCOUNTING FOR INLAND BRANCHES

Concept of dependent branches; accounting aspects; debtors system, stock and debtors system, branch final accounts system and whole sale basis system. Independent branches: concept accounting treatment: important adjustment entries and preparation of consolidated profit and loss account and balance sheet.

UNIT V ACCOUNTING FOR PARTNERSHIP:

Valuation of Goodwill – Calculation of Profit Sharing Ratio – Admission - Retirement

Note: Distribution of marks - 20% theory and 80% problems

18CCU102	INTRODUCTION TO INFORMATION TECHNOLOGY	4H	Semester – I – 4C
-----------------	---	-----------	------------------------------

Instruction Hours / week L: 4 T: 0 P: 0

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES :**To make the students**

1. To understand the Concept of the computer system and Operating Systems.
2. To know the MS-word features and its application
3. To be familiar with MS-Excel function and its application
4. To be aware of the MS-Power point and its usage.
5. To understand the usage of MS-Access and its applications.
6. To help companies improve business processes, achieve cost efficiencies, drive revenue growth and maintain a competitive advantage in the marketplace.

COURSE OUTCOMES :**Learners should be able to**

1. Prepare documents and reports for the organization.
2. Prepare datasheet and apply the built-in functions for analyzing the data to support decision making.
3. Utilize visual aids and tools to present the data
4. Design the presentations for the business meetings
5. Store, retrieve data and make decisions based on the information.
6. To improve the way in which we live, to make our lives easier by reducing paperwork

UNIT1INTRODUCTION TO COMPUTERS

Definition, characteristics and limitations of computers - Components of Computer System - Elements of Computers – Hardware - Software – Input and Output – Storage devices. Operating system: Operating Systems – Meaning, Definition, Functions and Types of Operating Systems.

MS Word – Working with Documents – Opening and Saving files, Document Editing – Deleting, Cut, Copy, Paste, Undo, Redo, Find, Search and Replace, Formatting Documents

– Setting Font Styles, Font Selection- style, size, colour etc. Type face – Bold, Italic, Underline, Case settings, Highlighting, Special Symbols, Paragraph style, Alignments, Indents, Line Space, Margins, Bullets & Numbering. Setting Page style – Formatting Page, Page tab, Margins, Layout settings, Paper tray, Border and Shading, Columns, Header &Footer, Setting Footnotes & End Notes – Tables- Table creation – Insertion, deletion, Merging, Splitting, Sorting and Formula,

Drawing – Inserting Clip Arts, Pictures/Files etc., Tools – Spell Checks. Grammar Check, Mail Merge, Templates.

UNIT IIMS EXCEL

Working with Spreadsheets – Opening, Saving files, Setting Margins, Converting files to different formats. Entering and deleting data – Entering data, Cut, Copy Paste, Undo, Redo, Highlighting values, Find, Search & Replace, Inserting Data, Insert cells, Columns, Rows & Sheets, Symbols, Clipart. Formatting Spreadsheets – Formatting-Alignment, Font, Border & Shading, Hiding/Locking Cells, Inserting Header and Footer, changing Sheet Name, Modifying Row height and Column width, Formatting and Style, Sheet background, Colouretc Working with sheets – Sorting, Filtering. Creating Charts – Bar Chart, Pie Chart, Line Chart. Printing.

UNIT IIIExcel Functions

Date and Time Functions – Date, Time, Now, Today, Hour, Minute, Second, Day, Month, Year, Weekday, Mathematics, Statistics, Days. Mathematical Functions – Sum, Product, Power, SQRT, Subtotal. Statistical Functions – Count, Countif, Count blank, Average, Median, Mode, Standard deviation, Coefficient of Variation, Trend, Maximum, Minimum, Large, Small.

UNIT IV MS POWER POINT

Introduction to presentation – Opening new presentation, Different presentation templates, Setting backgrounds, Selecting presentation layouts. Creating a presentation – Setting Presentation style, Adding text to the Presentation.

Formatting a Presentation – Adding style, Colour, gradient fills, Adding Header & Footer, Slide Background, Slide layout, Adding Graphics to the presentation – Inserting pictures, movies, tables into presentation, Drawing pictures using Draw. Adding effects to the Presentation – Setting Animation & transition effect, Printing Handouts, Generating Standalone Presentation viewer.

UNIT V MS ACCESS

Introduction, Planning a Database, Starting Access, Creating a New Database, Creating Tables, Working with Forms, Creating queries, Finding information in Databases, Creating Reports, Types of Reports. Internet and World Wide Web: Introduction to Internet – Internet access – Internet Addressing – Introduction and use of Email – Working of E-mail – Email names and address – Working in Blogs

SUGGESTED READINGS:

1. V. Rajaraman, 2018, *Introduction to Information Technology*, PHI Learning private Ltd, Delhi, 3rd Edition.
2. Pradeep K.Sinha, Priti Sinha, 2016, *Information Technology: Theory and Practice*, Paperback-Import
3. Wayne L. Winston, (2017), *Microsoft Excel 2016 - Data Analysis and Business Modeling*, Prentice Hall India Learning Private Limited, New Delhi
4. FaitheWempen (2016), *Microsoft Office 2016 at Work for Dummies*, Wiley India, New Delhi
5. Dinesh Maidasani(2015), *Learning Computer Fundamentals, MS Office and Internet & Web Technology*, 3rd Edition, Laxmi Publications, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the types of communication and barriers of communication.
2. To acquire knowledge on the different business correspondence used in organization
3. To be aware of the different types of reports prepared for the organization.
4. To understand the importance of vocabulary in business communication.
5. To be aware of the use of technology and the oral presentation techniques used in communication.
6. To develop and deliver effective presentations

COURSE OUTCOMES:**Learners should be able to**

1. Communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Prepare business reports for organization needs.
4. Use appropriate technology for business communication.
5. Draft the resume and develop skills to face the interview.
6. Expertise that the learner will get from a learning activity

UNIT I COMMUNICATION AND ITS BARRIERS

Nature of Communication: Process of Communication, Types of Communication (Verbal and Non-Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers.

UNIT II BUSINESS CORRESPONDENCE

Letter Writing, presentation, inviting quotations, sending quotations, placing orders, Inviting tenders, Sales letters, claim and adjustment letters and social correspondence, Memorandum, Inter-office Memo, Notices, Agenda, Minutes. Application Letters – Preparation of Resume

UNIT III REPORT WRITING

Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports

UNIT IV VOCABULARY AND LISTENING

Vocabulary: Words often confused, Words often misspelt, Common errors in English. Introduction to phonetics, need and use of it, Word stress and Sentence stress- Contrastive stress in sentences to highlight different words- Intonation- Rising and Falling tone, falling -rising tone- Word Power – Vocabulary – Jargon – rate of speech, pitch, tone – Clarity of voice.

The Importance of Listening in the Workplace: Introduction, what is listening? Barriers to Listening, Strategies for Effective Listening, Listening in a Business Context.

UNIT V USE OF TECHNOLOGY AND INTERVIEW

Appropriate use of technology, EMAIL, WEB PAGE communication, Voice and wireless communication

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech.

SUGGESTED READINGS:

1. Bovee, and Thill (2017), Business Communication Today, 13th Edition, Pearson Education, New Delhi
2. Raymond Lesikar, Marie Flatley, Kathryn Rentz, Neerja Pande (2017), Business Communication: Making Connections in a Digital World, 11th edition, McGraw Hill Education, New Delhi
3. Herta Murphy, Herbert Hildebrandt and Jane Thomas (2017), Effective Business Communication, 7th edition, McGraw Hill Education, New Delhi

18CCU111**INTRODUCTION TO INFORMATION
TECHNOLOGY (PRACTICAL)****Semester – I****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To know the MS-word features and its application
2. To be familiar with MS-Excel function and its application
3. To be familiar with MS-Office application in preparing balance sheet.
4. To be aware of the MS-Powerpoint and its usage.
5. To understand the usage of MS-Access and its applications.
6. To provide education in the use of Information and Communication Technology or ICT. To encourage higher-level thinking and creativity through ICT.

COURSE OUTCOMES:**Learners should be able to**

1. Prepare documents and reports for the organization.
2. Prepare datasheet and apply the built-in functions for analyzing the data to support decision making.
3. Utilize visual aids and tools to present the data
4. Design the presentations for the business meetings
5. Store, retrieve data and make decisions based on the information.
6. Keep information safe and make it easier to provide service delivery.

MS WORD

1. Type Chairman's Speech / Auditors report/ Minutes/ agenda and perform the following operations Bold, Underline, Font Size, Font Style, Background Color, text Color, Line Spacing, Spell Check, Alignment, Header and Footer, inserting page numbers, Find and replace.
2. Prepare an invitation for the College Function using Text boxes and Clip Arts
3. Design an invoice and Account Sales by using drawing tool bar, clip art, word art, symbols, borders and shading.
4. Prepare a class time table and perform the following operations
Insert table, data entry, alignment of rows and columns, inserting and deleting and change of table format.
5. Prepare a shareholders' meeting letter (notice) for 10 members using mail merge operation.
6. Prepare bio data by using wizard/ templates.

MS EXCEL

1. Prepare a mark list of your class (minimum 5 subjects) and perform the following operations
Data entry, total, average, result and ranking by using arithmetical, logical functions and sorting
2. Prepare final accounts (Trading Profit and Loss account and Balance Sheet) by using Mathematical formula
3. Draw different types of charts (Line, Pie, Bar) to illustrate year wise performance of sales, purchase, profit of a company by using chart wizard.
4. Prepare a statement of Bank's customer account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions
5. Prepare a product life cycle, which should contain the following stages Introduction, growth, maturity, saturation and decline
6. Prepare Financial performance of a Company using Average, Median, Mode, Standard Deviation, Coefficient of Variation

MS POWERPOINT

1. Design Presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, price, special offer etc, and Add voice if, possible to explain the features of the product. The presentation should work in manual mode.
2. Design presentation slides for organisation details for five levels of hierarchy of a company using organisation chart
3. Design slides for the headline news of a popular TV channel. The presentation should contain the following transactions – Top down, bottom up, Zoom in and Zoom out – The presentation should work in custom mode.
4. Design presentation slides about an organisation and perform frame movement by inserting clip arts to illustrate running of an image automatically
5. Design presentation slides for the seminar, lecture presentation using animation effect and perform the following operations: Creations of different slides, changing background color, font color, using word art.

MS ACCESS

1. Prepare a payroll for employee database of an organisation with the following details
Employee id, employee name, date of birth, department, designation, date of appointment, basic pay, dearness allowance, , House Rent allowance and other deductions if any. Perform queries for different categories
2. Create mailing labels for student database which should include atleast three table, must have atleast 2 fields with the following details :Roll no, name, course, year, college name, university, address, phone number
3. Gather price quantity and other descriptions for five products and enter in the access table and create an invoice in the form of design view.
4. Create forms for simple table ASSETS

5. Create report for the PRODUCT database.

Course Objectives:

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To acquire Grammar.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

Course Outcome:

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT - I : PROSE

1. I Have a Dream - Martin Luther King, Jr.
2. 'First human' discovered in Ethiopia - Pallab Ghosh
3. The First Case- M.K. Gandhi

UNIT - II : POEM

1. L'Allegro- John Milton
2. God Is a Medicine Cabinet - Cynthia Atkins
3. A Prayer for my daughter - W.B. Yeats

UNIT - III : SHORT STORIES

1. The Tell Tale Heart - Edgar Allan Poe
2. Sparrows- K. Ahmad Abbas
3. The Little Match-Seller - Hans Christian Andersen

UNIT - IV: DRAMA

1. Tempest- Act 2-Scene 2
2. The Referee- W.H. Andrews and Geoffrey Dearmer

UNIT - V GRAMMAR AND COMPOSITION

- Grammar : 1. Voice
2. Reported Speech
 3. Interrogatives (Yes or No, 'Wh' questions)
 4. Word Class

Composition:

1. Writing Minutes and Preparing Agenda

2. Note Taking
3. Charts and Pictorial Writing.
4. Report Writing

SUGGESTED READINGS:

1. Twilight, Published by the Department of English, Karpagam Academy of Higher Education.
2. Murphy Raymond, 1998 Essential English Grammar, Cambridge University Press.

COURSE OBJECTIVES:

To make the students

1. To know the essential elements of contract and also the Indian Contract Act 1872.
2. To learn the fundamental regulation about the sale of goods act, 1930.
3. To impart basic knowledge of Partnership Law and Indian Partnership Act 1932.
4. To understand about the Limited Liability Partnership Act, 2008
5. To enhance knowledge in the Negotiable Instruments Act 1881.
6. To apply concepts, principles and theories to understand simple business laws.

COURSE OUTCOMES:

Learners should be able to

1. Identify the basic legal principles behind contractual agreements.
2. Understand the relevance of business law in economic and social context.
3. Acquire problem solving techniques and will be able to present coherent, concise legal argument in partnership for achieving common goals.
4. Exhibit attributes in understanding various negotiable instruments, its features and utilization in real-time.
5. Obtain the capacity to do lifelong learning in modifications and revision done in the legal environment of business.
6. Basic and broad knowledge in business laws in management.

UNIT I THE INDIAN CONTRACT ACT, 1872

General Principles of Contract-Contract – Meaning, Characteristics and Kinds- Essentials of a Valid Contract - Offer and Acceptance, Consideration, Contractual Capacity, Free Consent, Legality of Objects- Void Agreements- Discharge of a Contract – Modes of Discharge, Breach and Remedies against Breach of Contract- Contingent contracts- Quasi – Contracts.

UNIT II THE INDIAN CONTRACT ACT, 1872

Specific Contracts - Contract of Indemnity and Guarantee- Contract of Bailment- Contract of Agency-**The Sale of Goods Act, 1930** - Contract of sale, Meaning and Difference Between Sale and Agreement to Sale - Conditions and Warranties- Transfer of Ownership in Goods including Sale by a Non-owner- Performance of Contract of sale- Unpaid Seller – Meaning, Rights of an Unpaid Seller against the Goods and the Buyer.

UNIT III THE PARTNERSHIP ACT, 1932

Nature and Characteristics of Partnership- Registration of a Partnership Firms- Types of Partners- Rights and Duties of Partners- Implied Authority of a Partner- Incoming and outgoing Partners- Mode of Dissolution of Partnership.

UNIT IV THE LIMITED LIABILITY PARTNERSHIP ACT, 2008

Salient Features of LLP- Differences Between LLP and Partnership, LLP and Company- LLP Agreement - Partners and Designated Partners- Incorporation Document- Incorporation by Registration- Partners and their Relationship.

UNITV THE NEGOTIABLE INSTRUMENTS ACT 1881

Meaning, Characteristics, and Types of Negotiable Instruments: Promissory Note, Bill of Exchange, Cheque-Holder and Holder in Due Course, Privileges of Holder in Due Course. Negotiation - Types of Endorsements- Crossing of Cheque - Bouncing of Cheque

**BUSINESS MATHEMATICS AND
STATISTICS****18CCU202****Semester – II****8H – 6C**

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES :**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To apply the concept of index numbers and trend analysis in business decisions.

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Analyze problems in economics, business, and accounting to determine appropriate methods for solving them using business math concepts and applications.

UNIT I MATRICES & BASIC MATHEMATICS OF FINANCE

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through adjoint; Applications of Matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest; Compounding and discounting of a sum using different types of rates

UNIT II DIFFERENTIAL CALCULUS

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

UNIT III UNI-VARIATE ANALYSIS

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and

percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

UNIT-IV BI-VARIATE ANALYSIS

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients

UNIT V TIME-BASED DATA: INDEX NUMBERS AND TIME-SERIES ANALYSIS

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

SUGGESTED READINGS:

1. Sreyashi Ghosh and Sujata Sinha (2018), Business Mathematics and Statistics, 1st edition, Oxford University Press; New Delhi.
2. Asim Kumar Manna (2018), Business Mathematics and Statistics, 1st edition, McGraw Hill Education, New Delhi.
3. S.P. Gupta and P.K. Gupta (2013), Business Statistics and Business Mathematics, S Chand Publishing, New Delhi.
4. Mariappan (2015), Business Mathematics, 1st edition, Pearson Education, New Delhi.
5. J.K.Sharma, (2014) Business statistics, 4th edition, Vikas Publishing House, New Delhi

COURSE OBJECTIVES :**To make the students**

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To help students focus on what is important in the environment around us.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation.
6. Knowledge, skills, and attitudes that the students will gain through the course

UNIT I ENVIRONMENT AND ECOSYSTEM

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

UNIT III BIODIVERSITY AND ITS CONSERVATION

Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management:

Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

SUGGESTED READINGS :

11. Mishra D.D. (2010), Fundamental Concepts in Environmental Studies, S Chand Publishing, New Delhi

Course Objectives:

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop knowledge about business communication.
4. To develop knowledge about business writing.
5. To acquire knowledge on communication for different purpose.
6. To get knowledge to communicate in day to affairs.

Course Outcome:

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students will have honed the skills of communication which is needed for business purpose.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

SUGGESTED READINGS:

Learning to Learn: Study Skills in English Cambridge, 2015
 Advanced Skills; Simon Harenas – CUP. 2015
 Business Results, Woodward, OUP. 2015
 Function in English. Jonathan Middlemiss et al, OUP

COURSE OBJECTIVES:**To make the students**

1. To understand the accounting process for Share capital and debenture and its application
2. To prepare final accounts for corporates
3. To understand the accounting standard and its application in inter-holding companies
4. To solve problems relating to Holding Company Accounts, Liquidation of Companies and various other Accounts
5. To understand and apply accounting process for Banking industry.
6. To learn decision thinking and problem skills.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and apply the accounting process related corporate accounting
2. Prepare final accounts for corporate entity.
3. Understand the accounting standard and apply the same for corporate entity and amalgamation.
4. Understand the difference of banking balance sheet and non-banking balance sheet
5. Enhance the problem-solving skills, analytical skills and communication skills in the accounting context.
6. Develop the knowledge of business and management principles.

Unit I Accounting for Share Capital and Debentures: Issue, Forfeiture and Reissue of Forfeited Shares - Concept & Process of Book Building - Issue of Rights and Bonus Shares - Buyback of Shares - Redemption of Preference Shares Issue and Redemption of Debentures

Unit II Final Accounts: Preparation of Profit and Loss Account and Balance Sheet of Corporate Entities – Excluding Calculation of Managerial Remuneration - Disposal of Company Profits- Valuation of Goodwill and Valuation of Shares - Concepts and Calculation: Simple Problem only

Unit III Amalgamation of Companies: Concepts and Accounting Treatment as per Accounting Standard: 14 (ICAI) (excluding inter- company holdings). Internal Reconstruction -Concepts and Accounting Treatment (excluding scheme of reconstruction)

Unit IV Accounts of Holding Companies/Parent Companies :Preparation of Consolidated Balance Sheet with one Subsidiary Company - Relevant Provisions of Accounting Standard: 21 (ICAI).

Unit V Accounts of Banking Companies: Difference Between Balance sheet of Banking and Non-banking Companies - Prudential Norms - Asset Structure of a Commercial Bank - Non-Performing Assets (NPA). Cash Flow Statement - Concept of Funds - Preparation of Cash Flow Statement as per Indian Accounting Standard (Ind- AS): 7.

SUGGESTED READINGS :

COURSE OBJECTIVES:**To make the students**

1. To expose the fundamentals of Database Management Systems, relational model and familiarize with ER diagrams.
2. To expose to SQL.
3. To understand the fundamentals of Transaction Processing and Query Processing.
4. To familiarize with the different types of databases.
5. To understand the Security Issues in Databases.
6. To understand the objectives of data and information management

COURSE OUTCOMES:**Learners should be able to**

1. Design Databases for applications and apply learning in lifelong practice.
2. Use the Relational model, ER diagrams.
3. Apply concurrency control and recovery mechanisms for practical problems.
4. Design the Query Processor and Transaction Processor.
5. Apply security concepts to databases
6. Critically formulate a query for analysing the data and communicate in oral and written form.

UNIT I INTRODUCTION TO DBMS

File Systems Organization – Sequential, Pointer, Indexed, Direct – Purpose of Database System- Database System Terminologies- Database characteristics- Data models – Types of data models – Components of DBMS- Relational Algebra. LOGICAL DATABASE DESIGN: Relational DBMS – Codd's Rule – Entity- Relationship model – Extended ER Normalization – Functional Dependencies, Anomaly- 1NF to 5NF- Domain Key Normal Form – Denormalization

UNIT II SQL & QUERY OPTIMIZATION

SQL Standards – Data types – Database Objects- DDL-DML-DCL-TCL-Embedded SQL-Static Vs Dynamic SQL – QUERY OPTIMIZATION: Query Processing and Optimization – Heuristics and Cost Estimates in Query Optimization.

UNIT III TRANSACTION PROCESSING AND CONCURRENCY CONTROL

Introduction-Properties of Transaction- Serializability- Concurrency Control – Locking Mechanisms- Two Phase Commit Protocol-Dead lock.

UNIT IV TRENDS IN DATABASE TECHNOLOGY

Overview of Physical Storage Media – Magnetic Disks – RAID – Tertiary storage – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Introduction to Distributed Databases- Client server technology- Multidimensional and Parallel databases- Spatial and multimedia databases- Mobile and web databases- Data Warehouse-Mining- Data marts.

UNIT V ADVANCED TOPICS

DATABASE SECURITY: Data Classification-Threats and risks – Database access Control – Types of Privileges –Cryptography- Statistical Databases- Distributed Databases-Architecture-Transaction Processing-Data Warehousing and Mining-Classification-Association rules-Clustering-Information Retrieval- Relevance ranking-Crawling and Indexing the Web- Object Oriented Databases-XML Databases.

18CCU303A

AUDITING AND CORPORATE GOVERNANCE

Semester – III

4H – 3C

Instruction Hours / week:

L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. To learn the audit techniques, corporate governance and CSR practices.
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance and CSR.
6. To understand the underlying theories of Corporate Governance

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. Recall the audit techniques, corporate governance and CSR practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance and CSR practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance and CSR.
6. Demonstrate an ability to write and debate about aspects of business ethics and corporate governance.

UNIT I INTRODUCTION

Definition-Nature-Scope and Objectives of Independent Financial Audit : Basic Principles Governing an Audit, Concept of Auditor's Independence - Error and Fraud- Classification of Audit -Standards on Auditing (SA) : Concept and Purpose - Audit procedures and techniques - Audit Evidence : Concept, Need, Procedures to obtain Audit Evidence

UNIT II AUDIT RISK AND INTERNAL CONTROL SYSTEM

Audit Risk : Concept and Types, Relationship with audit materiality - Professional Skepticism.

Internal Control : Definition, Objectives, Evaluation, Internal Control Check List, Internal Control Questionnaire and COSO's Internal Control Framework - Internal Check : Definition, Objectives and General Principles on Internal Check for selected transactions - Internal Audit : Definition, Objectives, Regulatory Requirement, Use of Internal Auditor's Work by Statutory Auditor

UNIT III VOUCHING, VERIFICATION AND VALUATION

Vouching :Meaning, Objectives - Difference with Routine Checking – Factors to be Considered during Vouching of Different items

Verification and Valuation: Concept, objectives, Importance, Difference with Vouching, Difference between Verification and Valuation, Verification and Valuation of Different Items.

UNIT IV AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

Audit of Companies: Qualification, Disqualification, Appointment, Reappointment and Rotation, Casual Vacancy, Removal and Resignation, Ceiling, Remuneration, Rights, Duties and Liabilities of Company Auditor - Audit Committee - Branch Audit and Joint Audit - Divisible Profit and Dividend (Final, Interim and Unclaimed/Unpaid): Provision of the Act and Legal Decisions and Auditor's Responsibility

Audit report and certificate: Definition – Distinction between Report and Certificate- Different Types of Report Contents of Audit Report (As per Companies Act and Standards on Auditing) True and Fair View – Concept Materiality – Concept and Relevance

Special areas of Audit: Cost Audit- Concepts, objectives, Relevant Provisions of Companies Act Management Audit – Concepts, Objectives, Advantages Tax Audit – Concepts, Objectives, Legal Provisions Social Audit – Propriety Audit – Performance Audit – Environment Audit (Concepts only)

UNIT V CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

Conceptual framework of Corporate Governance: Theories & Models, Broad Committees; Corporate Governance Reforms. Common Governance Problems Noticed in various Corporate Failures. Codes & Standards on Corporate Governance, Clause 49 and Listing Agreement, Green Governance

Concept of CSR, Corporate Philanthropy, Strategic Planning and Corporate Social Responsibility; Relationship of CSR with Corporate Sustainability; CSR and Business Ethics, CSR and Corporate Governance; CSR provisions under the Companies Act 2013; CSR Committee; CSR Models, Codes, and Standards on CSR, Global Reporting Initiatives, ISO 26000

SUGGESTED READINGS:

1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.

4. Ashok Sharma (2019), Auditing and Corporate Governance, VK Global Publications Pvt. Ltd., New Delhi.
5. Sharma, J.P., (2016), Corporate Governance, Business Ethics, and CSR, 2nd edition, Ane Books Pvt Ltd, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand Tally, its features and its importance in supporting accounting activity.
2. To communicate orally and in written form the Features of Tally in capturing accounting procedures.
3. To gain lifelong knowledge of Tally features and integration of accounting and computer for effective decision making.
4. To be familiar with the incorporation of GST standards into accounting and computerised accounting process.
5. To impart knowledge regarding concepts of Financial Accounting Tally
6. To support all day-to-day processes from recording invoices to generating various MIS reports.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the knowledge of Tally, its features and its importance.
2. Communicate orally and in written form the Features of Tally in capturing accounting procedures.
3. Gain lifelong knowledge of Tally features and integration of accounting and computer for effective decision making.
4. Familiarize on the incorporation of GST standards into accounting and computerised accounting process.
5. Practice of managements accounting and generate required reports for managerial decision making
6. Understanding the significance and utilization of job arrange preparing and job costing.

UNIT I User Interface and Company Management

Introduction to Tally ERP9, Gateway of Tally and User Interface, Masters – Ledgers, Understanding Ledgers , Masters – Groups, Understanding Groups , Masters – Bill wise Debtors and Creditors Ledgers, Payment Voucher - Understanding Default Vouchers

Day Book - Understanding Day Book Reports , Altering and Deleting Transactions, Pre-Allocation of Bills, Receipt Voucher - Understanding Receipt Vouchers, Contra Vouchers, Cheque Printing, CTS Cheque Printing System, Debit and Credit Notes, Debit Note Returns, Bank Reconciliation, Understanding BRS Process

UNIT II Inventory

Masters : Inventory : Understanding Inventory - Integrating Accounts and Inventory, Manual Stock Valuation without Inventory,

Billing Features, Purchase Order Processing, Sales Order Processing, Stock Transfers, Understanding Stock Transfers, Manufacturing Vouchers, Batch Wise Details, Re-Order Level

UNIT III TDS, Payroll, Finalization process

Multi Language, Export, Import, Backup and Restore, Tax Deducted at Source (TDS), Payroll Accounting

Finalization Process - Depreciation Entries - Creating General Reserves - Provision for Taxation - Bad Debt Reserves - Partnership Firm - Transferring Profits - Outstanding Expenses and Accrued Income - Changing Financial Year, Voucher Types and Class, Point of Sales, Scenarios and Optional Vouchers

UNIT IV GST

Goods and Services Tax (GST)- About Goods and Services Tax (GST) - Activating Tally in GST - Setting Up GST (Company Level, Ledger Level or Inventory Level, GST Taxes & Invoices- Understanding SGST, CGST & IGST.

Purchase Voucher with GST : Updating GST Number for Suppliers

Sales Voucher with GST : Updating GST Number for Suppliers

UNIT V Budgets and Reporting

Budgets and Controls, Budget Masters and Configurations, Cost Centres and Cost Categories, Understanding Cost Centres, Understanding Profit, Customer and Supplier Balance Checking- Customer and Supplier Bill Wise Checking- Overdue Payables and Receivables - Outstanding Reports and Printing - Confirmation of Accounts - Negative Ledgers Report

Purchase and Sales Reporting, Stock Analysis and Reports, Cash and Bank Reports, Search, Filter and Sorting, Financial Reports

Data Security, Tally Audit, Tally Synchronization, Multi-Currency, Printing Reports

SUGGESTED READINGS:

**DATABASE MANAGEMENT SYSTEM
(PRACTICAL)****Semester – III
4H – 2C**

Instruction Hours / week: L: 0 T: 0 P: 4

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To know the DML and its application
2. To be familiar with Queries using Transaction commands
3. To be aware of constraints function and perform clause.
4. To utilize the date and character function and its application.
5. To Write the PL/SQL Program.
6. To Understand database concepts and structures and query language.

COURSE OUTCOMES:**Learners should be able to**

1. Create Table DML command and perform logical operations using the Oracle as IT platform
 2. Design Query using Transaction command
 3. Develop programme using various operations
 4. Design query using character, date and joins function.
 5. To critically analyse the requirement and Write a PL/SQL Programme.
 6. Prepare the written report.
-
1. Create an employee table using DML commands and perform logical operations.
 2. Create a student table using DML commands and perform logical operations.
 3. Perform the queries using transaction commands.
 4. Write a program for inventory with constraints and perform the following clause.
 - i) Select Clause
 - ii) Where Clause
 - iii) Order by clause
 5. Write a program for student database and perform the following operations
 - i) Arithmetic Operation
 - ii) Group Function
 6. Perform queries by using character and date functions.
 7. Perform a query for Joins.
 8. Write a PL/SQL program for Employee Payroll.
 9. Write a PL/SQL program for Student Database and Calculate Total, Average, Result.

SUGGESTED READINGS:

1. Rajiv Chopra (2016), “Database Management Systems (DBMS)”, 5TH Edition, S.Chand, New Delhi.
2. Nilesh Shah, (2015), “*Database Systems Using Oracle*”, 2nd Edition, Pearson Education, New Delhi.
3. Raghu Ramakrishnan, Johannes Gehrke, (2014), “*Database Management Systems*”, 3rd Edition, McGraw Hill Education (India) Edition, New Delhi.
4. Abraham Silberschatz, Henry F. Korth and S. Sudharshan (2011), “*Database System Concepts*”, Sixth Edition, Tata Mc Graw Hill.
5. G.K.Gupta, (2011), “*Database Management Systems*”, Tata Mc Graw Hill, New Delhi.

18CCU312A**AUDITING AND CORPORATE GOVERNANCE
(PRACTICAL)****Semester – III****2H – 1C****Instruction Hours / week: L: 0 T: 0 P: 2****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand and analyse the Auditing standards and standards for the audit evidence
2. To classify and apply vouching, verification and valuation technique to appropriate situation
3. To analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. To communicate orally and in written form about the findings and solution.
5. To Work in teams and exhibit leadership skills and practice the learnings of auditing and corporate governance lifelong.
6. To demonstrate an ability to write and debate about aspects of business ethics and corporate governance

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and analyse the Auditing standards and standards for the audit evidence.
2. Classify and apply vouching, verification and valuation technique to appropriate situation
3. Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. Communicate orally and in written form about the findings and solution.
5. Work in teams and exhibit leadership skills and practice the learnings of auditing and corporate governance lifelong.
6. Understand key of expertise such as Internal **Audit**, Compliance, and Information.

UNIT 1: INTRODUCTION

1. Analyse the importance of Standards on Auditing (SA) :SA 200 SA 210, SA 230, SA 240, SA 300, SA 520, SA 530, SA 550, SA 580 and SA 610
2. Analyse the importance of Audit Evidence : SA 500 - 509

UNIT – II Audit Risk and Internal Control System

3. Audit Risk :Analyse SA 320 and 330
4. Analyse the COSO's Internal Control Framework for selected industry of your choice.

UNIT III VOUCHING, VERIFICATION AND VALUATION

5. How to Vouch/Verify/Value
- a. Goods sent out on Sale or Return Basis
 - b. Borrowing from Banks.
 - c. Goods sent on consignment
 - d. Foreign travel expenses
 - e. Receipt of capital subsidy
 - f. Provision for income tax
 - g. payment of taxes
 - h. Advertisement Expenses
 - i. Sale of Scrap

UNIT IV :AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

6. Case Study on Auditors in on Satyam fraud
7. Analyse the provisions amended to the appoint of auditor and audit in Companies Act.

UNIT V :CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

8. Any Case study on Corporate Governance to be analysed from below list
9. Any Case study on Corporate Governance to be analysed from below list

Maxwell Communication (UK), Enron (USA), WorldCom (USA), Satyam Computer Services Limited (all need to be more emphasized); BCCI (UK), Anderson Worldwide (USA), Vivendi (France), Harshad Mehta and Kingfisher Airlines Scam (all to be covered in brief); Common Governance Problems noticed in various corporate failures; Codes and Standards on Corporate Governance: Cadbury, OECD, Oxley Act; Initiatives in India: CII, SEBI, Clause 49 of Listing Agreement, Kumar Mangalam Committee, Naresh Chandra Committee, Narayan Murthy Committee, LODR.

10. Analyse CSR initiative of any Indian company

SUGGESTED READINGS:

1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
3. Dr. T R Sharma, Dr. Gourav Sankalp (2018), Auditing and Corporate Governance, Sathiya Bhawan Publications, Agra
4. Ashok Sharma (2019), Auditing and Corporate Governance, VK Global Publications Pvt. Ltd., New Delhi.

18CCU312B**COMPUTERISED ACCOUNTING SYSTEM
(PRACTICAL)****Semester – III****4H – 2C****Instruction Hours / week: L: 0 T: 0 P: 4****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand the accounts heads, vouching, inventory valuations, TDS and Pay roll process available in the accounting software
2. To classify the items under items heads
3. To Generate the financial Reports, TDS and pay roll reports and evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerised system as a lifelong learning.
6. To apply the knowledge of quantitative tools & techniques in the interpretation of data for managerial decision – making

COURSE OUTCOMES:**Learners should be able to**

1. Familiarize on the accounts heads, vouching, inventory valuations, TDS and Pay roll process available in the accounting software
 2. Classify the items under items heads
 3. Generate the financial Reports, TDS and pay roll reports and evaluate the output.
 4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
 5. Utilization of computerised system as a lifelong learning.
 6. Enables the auditor to perform an audit or track changes that affect the integrity of a transaction
-
1. Create a Company and Ledgers in Tally.
 2. Create a Accounting voucher with example in tally.
 3. Create different types of GST Invoices in Tally.
 4. Create Debit/Credit Notes, Memorandum & Post Dated Vouchers in Tally
 5. Create Stock Group, Stock Items and Unit of Measurement in Tally.
 6. Create an Inventory and Manufacturing Vouchers.
 7. Prepare Balance Sheet, Profit/Loss Account, Stock Summary and Ratio Analysis in Tally
 8. Create a payroll in tally with suitable example.
 9. Do the following exercise with the example that given below

Create a company in Tally by your name.

Create 3 stock items named milk, roti and mobile. Opening balances of these 3 stock items would be milk – 10 liters, roti – 20 pieces and mobile – 5 numbers.

Now, create sales ledgers – one for 28% GST rate and one for 5% GST rate. Also, create purchase ledgers in the same way each of 28% GST and 5% GST.

Create 1 sundry debtor outside your state and 1 sundry debtor inside your state. Similarly, create 1 sundry creditor outside your state and 1 sundry creditor inside your state.

Now, create GST Taxation ledgers for CGST, SGST and IGST for input as well as output taxation of GST. Totally, there will be 6 GST taxation ledgers.

Now, create a purchase entry in which you will purchase 5 liters of milk at 5% GST rate for Rs50 per liter, 5 pieces of roti for Rs10 per piece and 3 numbers of mobile for Rs25,000 per mobile.

GST rate for roti and mobile is 28%. Purchase this from inside your state. Also, fill in the E-Way bill details.

Now, create a sales entry. Sell all the milk at Rs.55 per liter with the same rate of GST as it was purchased. Sell 20 pieces of roti at Rs.20 per piece and 1 mobile phone at Rs. 50,000 per mobile at the same rates of GST as it was purchased. This sale will be outside the state. Also, fill in the E-Way bill details.

Now, check the profit and loss account and see what is the total value of sales for 5% GST.

Go to Stock Summary and see what is the gross profit on sales of milk under the FIFO and LIFO methodology of stock valuations.

Check the Ratio Analysis and see what is the current ratio and quick ratio.

SUGGESTED READINGS:

18ENU401**ENGLISH - IV****Semester – IV****8H – 6C**

Instruction Hours / week: L: 4 T: 0 P: 4

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

Course Objectives:

1. To train students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Practice the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Refine communication competency through LSRW skills.

UNIT I INTEGRATED SKILLS

Development of speaking- Nature, Process, and Importance of Communication, Types of Communication (Verbal and Non-Verbal), Different forms of Communication, Barriers of Communication, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, and Organizational Barriers, listening and grammar skills.

UNIT II: ADVANCED READING SKILLS

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: ADVANCED WRITING SKILLS

Business Correspondence – Inviting Quotations, Sending Quotations, Placing Orders, Inviting Tender, Memorandum, Inter-Office, Memo, Notices, Agenda, Minutes, Resume Writing, and Report Writing.

UNIT IV: BUSINESS LANGUAGE AND PRESENTATION

Importance of Business Language, Vocabulary Words often Confused, Words often Misspelt, Common Errors in English, Oral Presentation – Plan, PowerPoint Presentation and Visual Aids.

UNIT V: TECHNOLOGY AND COMMUNICATION

Language of Newspapers, magazines, Internet, TV and radio – their role to develop listening, reading and discussion skills, E-mail writing – Video Conferencing- Strategic importance of e-communication.

SUGGESTED READINGS:

18CCU401**RESEARCH METHODOLOGY****Semester – IV****6H – 5C****Instruction Hours / week: L: 6 T: 0 P: 0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. To Critically formulate the research design and sampling design suitable for the problem.
4. To communicate orally and written form the research problem, research design, sampling techniques.
5. To design a report to communicate the findings and suggestion to make business decision.
6. To understand the nature of problem to be studied and identifying the related area of knowledge.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
2. Analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. Critically formulate the research design and sampling design suitable for the problem.
4. Communicate orally and written for the research problem, research design, sampling techniques.
5. Design a report to communicate the findings and suggestion to make business decision.
6. Demonstrate the ability to choose methods appropriate to research aims and objectives

UNIT I RESEARCH AND RESEARCH PROCESS

Meaning of research; Scope of Research in Business; Purpose of Research; Types of Research, Problem identification, Review of Literature, Concept of theory - deductive and inductive theory - Concept, Construct, Definition, Variables - Research Process

UNIT II RESEARCH DESIGN AND SAMPLING DESIGN

Research Design: Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design.

Data Sources – Primary and Secondary Data.

Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non-Response, Characteristics of a good sample. Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Non Probability Sampling – Convenience, Quota, Judgmental, snowball sampling.

UNIT III MEASUREMENT AND SCALING

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio.

Concept of Scaling, Ratings and Ranking Scale, Thurstone, Likert and Semantic Differential scaling, Paired Comparison.

Preparing questionnaire – Quality of a good questionnaire.

UNIT IV HYPOTHESIS TESTING

Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing –Tests concerning means and proportions; ANOVA, Chi-square test and other Nonparametric tests, correlation and Regression

UNIT V REPORT PREPARATION

Meaning, types and layout of research report; Steps in report writing; Citations, Bibliography and Annexure in report.

Note: Distribution of marks - 90% theory and 10% problems

SUGGESTED READINGS:

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.
2. Uma Sekaran, Roger Bougie (2018), Research Methods for Business: A Skill-Building Approach, 7th edition, Wiley, New Delhi.

18CCU402

COST ACCOUNTING

Semester – IV

8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. To learn the tools and techniques to calculate cost and solve the problems.
3. To select the best methods of costing and apply critically based on the situation
4. To communicate orally and in written form the cost accounting concepts, methods and book keeping procedure for cost accounting.
5. To gain a lifelong learning for applying the cost concepts in analyzing the business problems.
6. To assist management in decision-making.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. Apply tools and techniques to calculate cost and solve the problems.
3. Select the best methods of costing by critically analyzing and apply the same to appropriate situation
4. Communicate orally and in written the cost concepts
5. Gain the lifelong learning of cost concepts and apply in the business environment.
6. Correctly analyze the cost of both the process and operations.

UNIT 1: Introduction

Meaning, objectives and advantages of cost accounting; Difference between cost accounting and financial accounting; Cost concepts and classifications; Elements of cost; Installation of a costing system; Role of a cost accountant in an organisation

UNIT 2: Elements of Cost: Material and Labour

Materials: Material/inventory control techniques. Accounting and control of purchases, storage and issue of materials. Methods of pricing of materials issues — FIFO, LIFO, Simple Average, Weighted Average, Replacement, Standard Cost. Treatment of Material Losses

Labour: Accounting and Control of labour cost. Time keeping and time booking. Concept and treatment of idle time, over time, labour turnover and fringe benefits. Methods of wage payment and the Incentive schemes- Halsey, Rowan, Taylor's Differential piece wage.

UNIT 3: Elements of Cost: Overheads

Classification, allocation, apportionment and absorption of overheads; Under- and over-absorption; Capacity Levels and Costs; Treatments of certain items in costing like interest on capital, packing expenses, bad debts, research and development expenses; Activity based cost allocation.

UNIT 4: Methods of Costing

UNIT costing, Job costing, Contract costing, Process costing (process losses, valuation of work in progress, joint and by-products), Service costing (only transport).

UNIT 5: Book Keeping in Cost Accounting

Integral and non-integral systems; Reconciliation of cost and financial accounts

Note: Distribution of marks - 20% theory and 80% problems

SUGGESTED READINGS:

1. Sp Jain, K I Narang, Simmi Agrawal, (2016), Cost Accounting Principles and Practice, 25th edition, Kalyani Publishers, New Delhi.
2. M.N Arora, (2013) Cost Accounting – Principles and Practice, 12th Edition, Vikas Publishing, New Delhi.

18CCU403A**FINANCIAL ANALYSIS AND REPORTING****Semester – IV****4H – 3C****Instruction Hours / week: L: 4 T: 0 P: 0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong practice.
6. To analyse the performance of a company design appropriate business policies

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Understand the overall health of an organization as well as to evaluate financial performance and business value
6. Demonstrate knowledge of management accounting concepts and techniques

UNIT I : FINANCIAL REPORTING

Accounting Standards, Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

Overview of International Accounting Standards (IAS)/International Financial Reporting Standards (IFRS)- Interpretations by International Financial Reporting Interpretation Committee (IFRIC), Significant difference vis-a-vis IAS and IFRS.

Corporate Financial Reporting – Issues and problems with special reference to published financial statements

UNIT II FINANCIAL STATEMENTS - AN INTRODUCTION

Traditional Assumptions of the Accounting Model :Business Entity -Going Concern or Continuity - Time Period - Monetary Unit - Historical Cost - Conservatism - Realization - Matching - Consistency - Full Disclosure - Materiality - Industry Practices - Transaction Approach - Cash Basis - Accrual Basis

The Financial Statements :Balance Sheet (Statement of Financial Position) - Statement of Stockholders' Equity (Reconciliation of Stockholders' Equity Accounts) - Income Statement (Statement of Earnings) - Statement of Cash Flows (Statement of Inflows and Outflows of Cash)

Auditor's Opinion :Auditor's Report on the Firm's Internal Controls - Report of Management on Internal Control over Financial Reporting

Basic Elements of the Balance Sheet :Assets - Liabilities - Stockholders' Equity - Quasi-Reorganization - Accumulated Other Comprehensive Income - Equity-Oriented Deferred Compensation - Employee Stock Ownership Plans (ESOPs) - Treasury Stock - Stockholders' Equity in Unincorporated Firms

Basic Elements of the Income Statement :Net Sales (Revenues) • Cost of Goods Sold (Cost of Sales) • Other Operating Revenue • Operating Expenses • Other Income or Expense

UNIT III FINANCIAL ANALYSIS – 1

Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis

Ratio Analysis - Liquidity of Short-Term Assets

Current Assets, Current Liabilities, and the Operating Cycle

Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities

Current Assets Compared with Current Liabilities

Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) -Cash Ratio

Income Statement Consideration when Determining Long-Term

Debt-Paying Ability- Times Interest Earned

Balance Sheet Consideration when Determining Long-Term

Debt-Paying Ability

Debt Ratio - Debt/Equity Ratio

UNIT IV FINANCIAL ANALYSIS - 2

Profitability Measures

Net Profit Margin - Total Asset Turnover - Return on Assets - DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts - Operating Income Margin - Operating Asset Turnover - Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - The Relationship Between Profitability Ratios - Gross Profit Margin For the Investors

Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, Dividend Yield

Book Value per Share

Basic Elements of the Statement of Cash Flows

Financial Ratios and the Statement of Cash Flows

Operating Cash Flow/Current Maturities of Long-Term Debt and Current Notes - Payable - Operating Cash Flow/Total Debt - Operating Cash Flow per Share - Operating Cash Flow/Cash Dividends

UNIT V THE USERS OF FINANCIAL STATEMENTS

Financial Ratios as Perceived by Commercial Loan Departments :Most Significant Ratios and Their Primary Measure • Ratios Appearing Most Frequently in Loan Agreements.

Financial Ratios as Perceived by Corporate Controllers :Most Significant Ratios and Their Primary Measure • Key Financial Ratios Included as Corporate Objectives
Financial Ratios as Perceived by Certified Public Accountants
Financial Ratios as Perceived by Chartered Financial Analysts
Financial Ratios Used in Annual Reports

Note: Distribution of marks - 40% theory and 60% problems

SUGGESTED READINGS:

18CCU403B**HTML PROGRAMMING****Semester – IV****2H – 2C****Instruction Hours / week: L: 2 T: 0 P: 0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand the concept of HTML
2. To familiarize on the HTML CSS.
3. To comprehend on the JAVASCRIPTS operators and functions
4. To understand the application of HTML Forms
5. To familiarize on the creation of HTML image Maps.
6. To create personal and/or business websites following current professional and/or industry standards.

COURSE OUTCOMES:**Learners should be able to**

1. Familiarize on the HTML sample documents and Its platform and apply the learning for lifelong.
2. Use the HTML CSS Files Operators, arrays and functions
3. Understand usage of HTML forms and Create HTML image maps
4. Critically analyse the need and create the HTML functions required for the situation.
5. Write the program and present orally and in written form.
6. Use critical thinking skills to design and create websites.

UNIT I: INTRODUCTION TO HTML

Basics – Sample HTML document - Elements – Attributes – Headings – Paragraphs – Styles – Formatting – Quotations – Comments – Colors.

UNIT II : HTML CSS

Format of a CSS file – Usage of CSS Files – Links – Images – Tables – Lists – Blocks – Classes – HTML ID – Frames.

UNIT III : JAVASCRIPT:

Introduction - Operators – Arithmetic Operators – Precedence of Operators – Relational Operators – Control Structures – Assignment Operators – Increment and Decrement Operators – For loops – Switch – Do While – Break – Continues – Arrays – Functions .

UNIT 4: HTML FORMS

Form Elements – Input Type – Text Area – Button – List box- Check Box - Input Attributes.

UNIT 5: HTML IMAGE MAPS

Creating and using image maps. HTML Graphics – Canvas – SVG. HTML Media – Video – Audio – Plug-ins.

RESEARCH METHODOLOGY (PRACTICAL)

18CCU411
Semester – IV
2H – 1C

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data, analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. To Critically evaluate the appropriate scales and measurement to be used for capturing data.
4. To Communicate in written form and prepare report to support decision making.
5. To Work in team and exhibit leadership skills.
6. To give the work plan of research.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
 2. Analyse the research problem and design the instruments to capture data, analyse the same using appropriate statistical techniques, and apply the learning lifelong.
 3. Critically evaluate the appropriate scales and measurement to be used for capturing data.
 4. Communicate in written form and prepare report to support decision making.
 5. Work in team and exhibit leadership skills.
 6. Provides training in choosing methods materials
-
1. Select a problem or issue. Collect 5-10 articles related to issues from reviewed journals available.
 2. Analyse a case to understand the theory of deductive and inductive reasoning.
 3. Analyse a case for the selection of appropriate research design
 4. Analyse a case for the selection of appropriate sampling design
 5. Provide a list of variables and request to classify them as nominal/ordinal/interval/ratio
 6. Ask student to prepare a questionnaire for understanding the perception towards the usage of library among students/ Reading habits among youngsters/ environmental protection Ask students to perform analysis and hypothesis testing for the collected data
 7. Ask students to prepare a technical report for the research undertaken (Minimum 30 pages)
 8. Ask students to write the bibliography in MLA/CPA format for reference made.

Note :6 – 8 (Team of 2-3 students)**SUGGESTED READINGS:**

FINANCIAL ANALYSIS AND REPORTING (PRACTICAL)

Semester – IV
2H – 1C

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong.
6. To identify good practices in IFRS

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Utilize the knowledge of financial statement analysis for lifelong.
6. Define bookkeeping and accounting and its general purposes.

1. To select a Company – Reason for selecting the company as investor

Download the financial statements

Perform the following financial analysis and interpret

2. Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis
3. Ratio Analysis - Liquidity of Short-Term Assets
Current Assets, Current Liabilities, and the Operating Cycle
Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities
Current Assets Compared with Current Liabilities
Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) - Cash Ratio
4. Debt-Paying Ability- Times Interest Earned
5. Debt Ratio - Debt/Equity Ratio
6. Net Profit Margin - Total Asset Turnover - Return on Assets – Operating Income Margin - Operating Asset Turnover

7. Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - Gross Profit Margin
8. DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts
9. For the Investors :Earnings per Common Share, Price/Earnings Ratio, Dividend Payout,- Book Value per Share

SUGGESTED READINGS:

HTML PROGRAMMING (PRACTICAL)

 Semester – IV
4H – 2C

Instruction Hours / week: L:0 T:0 P:4

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To create HTML document
2. To familiarize to formatting and linking in the HTML document
3. To comprehend on creating webpage with multiple frames
4. To understand the application of HTML tags
5. To familiarize on the creation of forms.
6. To write a brief, error-free HTML code

COURSE OUTCOMES:

Learners should be able to

1. Create HTML document
2. To format and create links in HTML document
3. Create Webpage with multiple frames
4. Use various types of list, images and tags to create HTML Document and apply the learning for lifelong.
5. Create forms using various input types.
6. Critically analyse the need and create the HTML functions required for the situation.

1. Create a HTML Document with the following tags: Formatting, Heading, Paragraph, line break, horizontal rule.
2. Create a HTML document with various types of list and images.
3. Create a HTML document with internal and external linking.
4. Create a marksheet of students with following attributes: reg no, name, address details using HTML Table tags.
5. Create a webpage using multiple frames.
6. Create a form using various input types like: text box, buttons, check box, list.
7. Create a website for an international company using HTML tags with at least 5 link pages.
8. Create an application for your college admission using HTML Forms.
9. Create a financial statement for a company using HTML Table tags.
10. Create invitation for board of directors to conduct annual general meeting using HTML Tags.

COMPANY LAW

Semester – V

8H – 6C

Instruction Hours / week L: 8 T: 0 P: 0

Marks: Internal: External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of laws related to constitution of company, finance structure, management team.
2. To comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. To analyse few real time cases relevant to company laws
4. To communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. To be familiar with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. Corporate Law has been specifically designed to provide not only an overview but also an in-depth knowledge about incorporation, raising capital by companies, borrowings and investments by companies, foreign direct investment in Indian companies, corporate restructuring, corporate insolvency and other related important issues.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of laws related to constitution of company, finance structure, management team.
2. Comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. Analyse few real time cases relevant to company laws
4. Communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. Familiarize with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. Learning about raising of capital by companies in compliance with SEBI regulations

UNIT 1: INTRODUCTION AND INCORPORATION AND ITS CONSEQUENCES

Administration of Company Law [including National Company Law Tribunal (NCLT), National Company Law Appellate Tribunal (NCLAT), Special Courts]; Characteristics of a company; lifting of corporate veil; types of companies including one-person company, small company and dormant company; association not for profit; illegal association; formation of company, on-line filing of documents, promoters, their legal position, pre-incorporation contract; on-line registration of a company, Memorandum of Association & Articles of Association and their Alteration, Doctrine of Ultra-Vires, Constructive Notice, Indoor Management, Alter Ego

UNIT 2: FINANCIAL STRUCTURE OF COMPANIES

Concept of Capital and Financing of Companies– Sources of Capital; Classes and Types of Shares; Equity Shares with Differential Rights; Issue of Shares at Par, Premium and Discount; Forfeiture and Surrender of Shares; Bonus Issues; Rights Issues; Issue of Sweat Equity Shares; Employees Stock Option Scheme; Private Placement; preference shares and other forms of securities, Alteration of Share Capital– Reduction of Capital; Buy–Back of Shares

Prospectus– Definition; Abridged Prospectus; Red–Herring Prospectus; Shelf Prospectus; Information Memorandum; Contents, Registration; Misrepresentations and Penalties

Debt Capital – Debentures, Debenture Stock, Bonds; Recent Trends and Dynamics of Corporate, Debt Financing; Debenture Trust Deed and Trustees; Conversion of and Redemption of Debentures Securing of Debts: Charges ; Creation, Modification and Satisfaction of Charges
Allotment and Certificates – General Principles and Statutory Provisions related to Allotment; Minimum Subscription; Irregular Allotment; Procedure of Issue of Share Certificates and Warrants

UNIT III: MANAGEMENT:

Classification of directors, women directors, independent director, small shareholder's director; Disqualifications, director identity number (DIN); Appointment; Legal positions, powers and duties; removal of directors; Key managerial personnel, managing director, manager; Meetings of shareholders and board; Types of meeting, convening and conduct of meetings, postal ballot, meeting through video conferencing, e-voting; Committees of Board of Directors - Audit Committee, Nomination and Remuneration Committee, Stakeholders Relationship Committee, Corporate Social Responsibility Committee.

UNIT IV: ACCOUNTS, AUDIT AND DIVIDENDS

Books of Accounts : Financial Statements.

Auditors – Appointment, Resignation and Removal; Qualification and Disqualification; Rights, Duties and Liabilities, Audit and Auditor's Report, Cost Audit and Special Audit

Profit and Ascertainment of Divisible Profits, Declaration and Payment of Dividend, Treatment of Unpaid and Unclaimed Dividend, Transfer of Unpaid and Unclaimed Dividend to Investor Education and Protection Fund, Board's Report and Disclosures Contents and Annexure to Board's Report, Directors' Responsibility Statement – Preparation and Disclosures, Compliance Certificate – Need and Objective; Issue and Signing by Practising Company Secretary, Corporate Governance Report

UNIT V: WINDING UP

Concept and modes of Winding Up. Insider-Trading, Whistle-Blowing – Insider-Trading; meaning and legal provisions; Whistleblowing: Concept and Mechanism.

SUGGESTED READINGS:

1. Milind Kasodekar;Shilpa Dixit;Amogh Diwan (2019), Companies Law Procedures with Compliances and Checklists, 4th Edition, Bloomsbury Professional India, New Delhi.
2. Dr. G.K. Kapoor & Sanjay Dhamija (2017), Company Law and Practice - A Comprehensive Text Book on Companies Act 2013, 22nd Edition, Taxmann Publication, New Delhi.
3. Dr. G.K. Kapoor(2018), Company Law and Practice - A Comprehensive Text Book on Companies Act 2013, 23rd edition, Taxmann Publication, New Delhi.
4. M.C Bhandari (2018), Guide to Company Law Procedures, 24th Edition ,LexisNexis, New Delhi
5. Sangeet Kedia (2018), Company Law, Pooja Law Publishing Company, New Delhi.
6. The Institute of Company Secretaries of India (2018), Company Law, M P Printer

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
2. To analyse the alternatives using appropriate tools and techniques.
3. To solve the problems and take decisions based on the result.
4. To communicate orally and in written form the concepts and solutions.
5. To analyse cases in a team and exhibit leadership skills.
6. To study the role of finance in a Value Based Entrepreneurial Management Framework through identification of Market Opportunity, Competitive Position, and the Composition and Terms of Financing, and to gain understanding of how these elements interact to create value for the founders and investors in a venture.

COURSE OUTCOMES:**Learners should be able To**

1. Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
2. Analyse the alternatives using appropriate tools and techniques.
3. Solve the problems and take decisions based on the result.
4. Communicate orally and in written form the concepts and solutions.
5. Analyse cases in a team and exhibit leadership skills.
6. Relate capital investment decisions and financial policies to business valuations.

UNIT I : FINANCIAL MANAGEMENT AND SOURCES OF FINANCE :

Evolution, Scope and Functions of Finance Managers-Introduction; Scope of Finance; Financial Management System; Finance Functions ; Role of a Finance Manager – Treasurer and Controller, Financial Decisions, Agency Conflict and Agency cost.

Objectives of a Firm – Introduction; Profit Maximization; Shareholders' Wealth Maximization (SWM)

Sources of Finance - Introduction; Short-term Finance; Long-term Funds

Asset-Based Financing – Introduction; Lease Financing and Hire Purchase Financing.

UNIT II : TIME VALUE OF MONEY AND CAPITAL BUDGETING DECISIONS :

Time Value of Money - Introduction; Concept of Time Value of Money; Compounding Method ; Discounting Method (Problems)

Capital Budgeting Decisions- Introduction; Capital Budgeting, Capital Rationing

Capital budgeting techniques : Discounted and Non Discounted : NPV, Profitability index (Benefit Cost Ratio), Pay back Period, IRR ; (Problems)

UNIT III CAPITAL STRUCTURE THEORIES AND COST OF CAPITAL :

Capital Structure, Capital structure determinants, NI Approach, NOI approach, Traditional Approach, Relevance of Capital Structure Theories ; Irrelevance of Capital Structure

Cost of Capital; Components of Cost of capital: Cost of Debt; Cost of Preference Capital; Cost of Equity Capital, Approaches to Derive Cost of Equity; Weighted Average Cost of Capital and Weighted Marginal Cost of Capital (Problems)

UNIT IV LEVERAGE AND DIVIDEND POLICY

Financial and Operating Leverage – Introduction; Meaning of Financial Leverage, operating Leverage.

Financial and Operating Leverages, EBIT-EPS Analysis, Indifference point. (Problems)

Dividend Policy – Introduction; Types of dividend, Factors influencing the dividend policy; Financing and Dividend Decision; Dividend Relevance: Walter's Model

UNIT V : WORKING CAPITAL MANAGEMENT, CASH MANAGEMENT, RECEIVABLE MANAGEMENT AND INVENTORY MANAGEMENT.

Introduction; Concepts of Working Capital; Working capital Policies, Operating Cycle, (Problems) Estimation of working capital (Problems).

Management of Cash – Introduction ; Motives for Holding Cash; Facets of Cash Management; Cash Planning; Cash Forecasting and Budgeting; Determining the Optimum Cash Balance ; Investing Surplus Cash in Marketable Securities

Receivables Management :Credit Policy: Nature and Goals ;Collection Procedures

Inventory Management : Nature of Inventory, EOQ, Reorder level.

Note: Distribution of marks - 60% theory and 40% problems

SUGGESTED READINGS:

1. Pandey. I.M. (2016). *Financial Management*, 11th edition, Vikas Publishing House, New Delhi.
2. Khan, M.K. and Jain, P.K.(2017). *Financial Management*, 7th edition, McGraw Hill, New Delhi
3. Chandra, P. (2017). *Financial Management Theory and Practice*, 9th edition, McGraw Hill, New Delhi:

7. Lawrence J. Gitman , Chad J. Zutter, (2017). *Principles of Managerial Finance*, 13th edition, Pearson Education, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behavior, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. Use relevant information for decision making, both for pricing and operational decisions;

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behavior, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Help to do standard variation analysis through standard costs

UNIT I :INTRODUCTION

Meaning, Objectives, Nature and Scope of management accounting, Difference between cost accounting and management accounting, Cost control and Cost reduction, Cost management

UNIT II :FINANCIAL STATEMENT ANALYSIS

Horizontal and Vertical Analysis.

Ratio Analysis: Meaning, Advantages, Limitations, Classifications of ratios

Fund Flow Statement: Meaning, Uses, Limitations, Sources and uses of funds

Cash Flow Statement: Meaning, Uses, Limitations, Sources and uses of cash, AS3 Standard format.

UNIT III : STANDARD COSTING

Standard Costing : Standard Costing and Variance Analysis: Meaning of standard cost and standard costing, advantages, limitations and applications. Variance Analysis – material, labour, overheads and sales variances. Disposition of Variances, Control Ratios.

UNIT IV :MARGINAL COSTING AND DECISION MAKING

Absorption versus Variable Costing: Distinctive features and income determination. Cost-Volume Profit Analysis, Profit / Volume ratio. Break-even analysis-algebraic and graphic methods. Angle of incidence, margin of safety, Key factor, determination of cost indifference point.

Decision Making : Steps in Decision Making Process, Concept of Relevant Costs and Benefits, Various short term decision making situations – profitable product mix, Acceptance or Rejection of special/ export offers, Make or buy, Addition or Elimination of a product line, sell or process further, operate or shut down. Pricing Decisions: Major factors influencing pricing decisions, various methods of pricing

UNIT V: BUDGETARY CONTROL AND CONTEMPORARY ISSUES :

Budgeting and Budgetary Control: Concept of budget, budgeting and budgetary control, objectives, merits, and limitations. Budget administration. Functional budgets. Fixed and flexible budgets. Zero base budgeting. Programme and performance budgeting.

Contemporary Issues : Responsibility Accounting: Concept, Significance, Different Responsibility Centres, Divisional Performance Measurement: Financial and Non-Financial measures. Transfer Pricing

Note: Distribution of marks - 30% theory and 70% problems

18CCU502B**ADVANCED ACCOUNTING****Semester – V****8H – 6C****Instruction Hours / week: L: 6 T: 2 P: 0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the accounting for advanced issues in partnership, BFSI sector and special transaction.
2. To comprehend on the working of accounting standards
3. To solve the problems and take decisions based on the result.
4. To learn the accounting for advanced corporate issues that could be applied lifelong.
5. To communicate orally and in written form the concepts and solutions.
6. To provide a foundation for accounting students in areas not covered or only briefly covered in previous accounting classes and to further refine the ability of the students to analyze data, make and properly support financial proposals, and to apply fundamental accounting principles to new situations.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the accounting for advanced issues in partnership, BFSI sector and special transaction.
2. Comprehend on the working of accounting standards
3. Solve the problems and take decisions based on the result.
4. Understand the accounting for advanced corporate issues that could be applied lifelong.
5. Communicate orally and in written form the concepts and solutions.
6. Students will learn relevant financial accounting career skills, applying both quantitative and qualitative knowledge to their future careers in business.

UNIT I FINANCIAL STATEMENTS

Conceptual Framework for Preparation and Presentation of Financial Statements : Introduction- scope, users and their information needs.

The objective of financial statements : financial position, performance and cash flows, notes and supplementary schedules, Underlying assumptions : accrual basis, going concern, consistency, Qualitative characteristics of financial statements, The elements of financial statements, Recognition of the elements of financial statements, Concepts of capital and capital maintenance

UNIT II ACCOUNTING STANDARDS

Working knowledge of:

AS 4 : Contingencies and Events occurring after the Balance Sheet Date
AS 5 : Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies
AS 11 : The Effects of Changes in Foreign Exchange Rates (Revised 2003)
AS 12 : Accounting for Government Grants
AS 16 : Borrowing Costs
AS 19 : Leases
AS 20 : Earnings Per Share
AS 26 : Intangible Assets
AS 29 : Provisions, Contingent Liabilities and Contingent Assets.

UNIT III ADVANCED ISSUES IN PARTNERSHIP ACCOUNTS

Dissolution of partnership firms including piecemeal distribution of assets; Amalgamation of partnership firms; Conversion into a company and Sale to a company.

UNIT IV COMPANY ACCOUNTS

- Accounting for employee stock option plan, Buy back of securities, Equity shares with differential rights, Underwriting of shares and debentures, Redemption of debentures
- Advanced problems for business acquisition, Amalgamation and reconstruction (excluding problems of amalgamation of inter-company holding)
- Accounting involved in liquidation of companies, Statement of Affairs (including deficiency/surplus accounts) and Liquidator's statement of account of the winding up.
- Financial Statements of Banking, Financial Services and Insurance (BFSI), Insurance, Non-Banking Financial Companies, Mutual funds and regulatory requirements thereof.
- Valuation of goodwill

UNIT V ACCOUNTING FOR SPECIAL TRANSACTIONS

Departmental and branch accounts including foreign branches

Consolidated Financial Statements

Concept of consolidation and simple problems on Consolidated Financial Statements with single subsidiary (excluding problems involving acquisition of Interest in Subsidiary at Different Dates; Different Reporting Dates; Disposal of a Subsidiary and Foreign Subsidiaries)

Note: Distribution of marks - 30% theory and 70% problems

18CCU503A OBJECT ORIENTED PROGRAMMING WITH C++		Semester – V
Instruction Hours / week: L: 2 T: 0 P: 0		2H – 2C
Marks: Internal: 40 External: 60		Total: 100
		End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of OOPS with C++
2. To familiarize on the classes, objects, pointers.
3. To comprehend on the working with the files.
4. To critically analyse and write appropriate programme with use of classes, objects and pointers.
5. To develop programming based on the need.
6. To create new type of objects to model elements from the problem space

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of OOPS with C++ and apply the learning for lifelong.
2. Familiarize on the classes, objects, pointers
3. Critically analyse the need and develop the program in OOPS with C++ required for the situation.
4. Write the program and present orally and in written form.
5. Be familiar with the application of the Unified Modeling Language (UML) towards analysis and design.
6. Write the simple C++ programs using the variables, operators, control structures, functions and I/O objects cin and cout

Unit I: Principles of Object-Oriented Programming:

Basic Concepts of Object Oriented-Programming – Benefits of OOP – Object-Oriented Languages – Applications of OOP. Beginning with C++: What is C++ – A simple C++ Program – Structure of C++ Program. Tokens, Expressions and Control Structures: Reference Variables – Scope Resolution Operator – Member Dereferencing Operators – Memory Management Operators – Type Cast Operator. Functions in C++.

Unit II: Classes and Objects:

Introduction – Specifying a Class – Defining Member Functions – Making an outside Function Inline – Nesting Of Member Functions – Private Member Functions – Array within a Class – Memory Allocation for Objects – Static Data Members – Static Member Functions – Arrays Of Objects – Objects as Function Arguments – Friendly Functions. Constructors and Destructors: Introduction – Constructors – Parameterized Constructors – Multiple Constructors in a class – Constructors with Default Arguments – Dynamic Initialization of Objects – Destructors.

Unit III: Operator Overloading and Type Conversions:

Introduction – Defining Operator Overloading – Overloading Binary Operators – Rules for Overloading Operators. Inheritance-Extending Classes: Introduction – Defining Derived Classes – Single Inheritance – Multilevel Inheritance – Multiple Inheritance – Hierarchical Inheritance – Hybrid Inheritance – virtual base classes.

Unit IV:Pointers, Virtual Functions and Polymorphism:

Introduction – Pointers – Pointers to Objects – this Pointer – Pointers to Derived Classes – Virtual Functions. Templates:Introduction – Class Templates – Class Templates with Multiple Parameters – Function Templates – Function Templates with Multiple Parameters.

Unit V:Working with Files:

Introduction – Classes for File Stream Operations – Opening and Closing a File – Detecting End-of-File– Error Handling during File operations. Exception Handling: Introduction – Basics of Exception Handling – Exception Handling Mechanism – Throwing Mechanism – Catching Mechanism – Rethrowing an Exception – Specifying Exceptions. Introduction to the Standard Template Library:Introduction – Components of STL – Containers – Algorithms – Iterators. Manipulating Strings: Introduction – Creating (String) Objects – Manipulating String Objects.

SUGGESTED READINGS:

1. E Balagurusamy (2017), “Object Oriented Programming with C++”, 7th edition, McGraw Hill, New Delhi.
2. YashavantKanetkar, (2018), Understanding Pointers In C & C++ 5th revised edition, BPB Publications
3. Bjarne Stroustrup (2014), Programming: Principles and Practice Using C++, 2nd edition, Addison Wesley.
4. Herbert Schildt (2017), C++: The Complete Reference, 4th Edition, 4th edition, McGraw Hill, New Delhi.

18CCU503B

INVESTMENT MANAGEMENT

Semester – V

4H

3C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of investing and mechanics for formulating investment decisions.
2. to undertake a rigorous study of the theory and empirical evidence relevant to institutional portfolio management.
3. To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
4. To apply the investing concepts and skills lifelong.
5. To explore and assess mutual funds, international security markets, and investments in real estate with a view toward broadening the investment perspective.
6. To test portfolio management and capital market theories through risk and return analysis from the perspective of the portfolio manager.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. Apply the investing concepts and skills lifelong.
4. Analyze and evaluate equity securities through examination of economic activity, industry analysis financial statement analysis and individual firm valuation.
5. Debate issues in efficient markets considering technical analysis and efficient markets and anomalies.
6. Analyze and explain fixed-income and leveraged securities including bond valuation, duration and reinvestment concepts, and convertible securities and warrants.

UNIT I : The Investment and Investment Avenues

Concepts of investment – Sources of investment information- Investment Instruments. Investment cycle.

UNIT II: Risk and Return and Valuation of Securities

Concept of total risk, factors contributing to total risk : default risk, interest rate risk, market risk, management risk, purchasing power risk, systematic and unsystematic risk, Risk & risk aversion. Capital allocation between risky & risk free assets-Utility analysis

Bond Valuation, Preference Share Valuation and Share Valuation: Dividend discount models- no growth, constant growth (Problems)

UNIT III Fundamental Analysis, Technical Analysis and Market Efficiency

EIC framework; Economic analysis: Leading lagging & coincident macro-economic indicators, Expected direction of movement of stock prices with macroeconomic variables in the Indian context; Industry analysis: stages of life cycle, Porter's five forces model, SWOT analysis, financial analysis of an industry; Company analysis. Technical Analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, Trends: resistance, support, consolidation, momentum- Charts: line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, Indicators: moving averages

Efficient Market Hypothesis; Concept of efficiency: Random walk, Three forms of EMH

UNIT IV :Portfolio Management and portfolio Theory

Portfolio Management – Portfolio creating process - Portfolio Analysis: portfolio risk and return, Markowitz portfolio model: risk and return for 2 and 3 asset portfolios, concept of efficient frontier and optimum portfolio

Portfolio Theory : Capital asset pricing model – Arbitrage pricing theory – assumptions, significances and limitations of each theory

UNIT V:Mutual Funds, Portfolio Evaluation and Portfolio Revision

Mutual Funds : Introduction, calculation of Net Asset Value(NAV) of a Fund, classification of mutual fund schemes by structure and objective, advantages and disadvantages of investing through mutual funds.

Performance Evaluation using Sharpe's Treynor's and Jensen's measures.

Meaning – needs – Sharpe's performance measures – Treynor's Performance Index – Jensen's Performance Index – their significance and limitations – Portfolio revision (Problems)

Note: Distribution of marks - 80% theory and 20% problems

SUGGESTED READINGS:

BUSINESS ECONOMICS

Semester – V

6H – 5C

Instruction Hours / week L: 6 T:0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of micro and macroeconomic factors and its application in business.
2. To communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. To apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. To apply business analysis to the “firm” under different market conditions;
5. To apply economic models to examine current economic scenario and evaluate policy options for addressing economic issues.
6. To gain understanding of some Macroeconomic concepts to improve their ability to understand the business climate;

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of micro and macroeconomic factors and its application in business.
2. Communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. Apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. Able to analyse the profitability of the firm, economy of operation, determination of price under various market situations with good grasp on the effect of trade cycles in business.
5. Gain knowledge on Monetary theory, measures by RBI in controlling interest rate and emerging concepts like Bit Coin.
6. Gain knowledge of elementary accounting concepts used for preparing balance sheet and interpretation of balance sheet

UNIT I BUSINESS ECONOMICS; DEMAND AND SUPPLY:

Introduction - Meaning, nature and scope of Business

Economics, Significance in decision making.

Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply – Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II PRODUCTION, COST AND REVENUE FUNCTION:

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors – Short & Long run – Total Product – Marginal Product – Average Product – Production Function – Law of Returns – Law of Returns to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs – Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves – Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III MARKET COMPETITION:

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly Market – Features

UNIT IV : MACRO ECONOMIC FACTORS :

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer Payments – National Income Aggregates– Private Income – Personal Income – Personal Disposable Income – National Disposable Income – Measurement of National Income – Production Method – Income Method – Expenditure Method

Phases of Business Cycle – Causes of cyclical movements – Price Movements: Inflation, Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.

UNIT V : MONETARY POLICY :

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy – Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget Preparation – Deficit Budget.

Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP – Disequilibrium in BOP.

Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of Interest.

Note: Distribution of marks - 80% theory and 20% problems

SUGGESTED READINGS:

BCOM (CA)

2018-2019

18CCU504B

**MANAGEMENT AND ORGANIZATION
BEHAVIOUR**

Semester – V

6H – 5C

Instruction Hours / week: L: 6 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of management, Behaviour as individual, group and organization.
2. To inculcate the ability to apply multifunctional approach to organizational objective.
3. To explain the nature and purpose of a SWOT analysis and conduct a strategic analysis of a business.
4. To describe characteristics of an organizational culture, discuss espoused values and values in action
5. To provide the student with the tools to understand and evaluate individual, group and organizational processes.
6. To gain an appreciation of the relevance of the study of organizational behaviour to the practice of human resource management.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of management, Behaviour as individual, group and organization.
2. Analyze individual and group behaviour, and understand the implications of organizational behaviour on the process of management.
3. Identify different motivational theories and evaluate motivational strategies used in a variety of organizational settings.
4. Evaluate the appropriateness of various leadership styles and conflict management strategies used in organizations.
5. Describe and assess the basic design elements of organizational structure and evaluate their impact on employees.
6. Explain how organizational change and culture affect working relationships within organizations.

UNIT I SCHOOL OF MANAGEMENT THOUGHTS AND FORMS OF ORGANIZATION :

Definition of Management –managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Management by Objectives (MBO) – Management by Exception (MBE) - Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Special forms of ownership : Franchising - Licensing - Leasing - Corporate Expansion : mergers and acquisitions - Diversification, forward and backward integration - Joint ventures, Strategic alliance

UNIT II MANAGEMENT FUNCTIONS :

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process - Organizing – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

UNIT III ORGANIZATIONAL BEHAVIOR AND PERSONALITY:

Importance of organizational Behaviour – OB Model - Attitudes – Components – Attitude and Behaviour – Job attitudes – Values – importance – Terminal and Instrumental values – Generational Values – Personality and values.

Personality – Types – Factors influencing personality – Theories – Perceptions – Importance – Factors influencing perception – Judging others, perception and individual decision making

UNIT IV LEARNING AND LEADERSHIP THEORIES :

Learning - Concept and Theories of Learning, Reinforcement, Motivation – Importance – Theories: Need, Content and Process Theories – Application.

Leadership – Theories – Trait and Contingency theories – Power and politics – Bases of power – Causes and consequences of political behavior

UNIT V GROUP, TEAMS, CONFLICT AND ORGANIZATIONAL CHANGE

Groups and Teams - Definition, Difference between Groups and teams - Stages of Group Development - Group Cohesiveness - Types of teams

Conflict: Concept, Sources - Types, Stages of conflict - Management of conflict,

Organizational Change: Concept, Resistance to change, Managing resistance to change, Implementing Change – Kurt Lewin Theory of Change

BCOM (CA)	2018-2019
18CCU511A	OBJECT ORIENTED PROGRAMMING WITH C++ (PRACTICAL)
Instruction Hours / week: L: 0 T: 0 P: 4	Marks: Internal: 40 External: 60 Total: 100
	End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To understand the concept of OOPS with C++
2. To familiarize on the classes, objects, pointers.
3. To comprehend on the working with the files.
4. To critically analyse and write appropriate programme with use of classes, objects and pointers.
5. To develop programming based on the need.
6. To create new type of objects to model elements from the problem space

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of OOPS with C++ and apply the learning for lifelong.
 2. Familiarize on the classes, objects, pointers
 3. Critically analyse the need and develop the program in OOPS with C++ required for the situation.
 4. Write the program and present orally and in written form.
 5. Be familiar with the application of the Unified Modeling Language (UML) towards analysis and design.
 6. Write the simple C++ programs using the variables, operators, control structures, functions and I/O objects cin and cout
-
1. Program to read a set of numbers using arrays from the standard input device and to sort them in ascending order.
 2. Program to perform overload Functions add(), sub() and multiply() that handle different data types.
 3. Program to find the area of Circle, Rectangle and Square by using Inline Functions.
 4. Program to implement Call by reference.
 5. Program to demonstrate Employee details using classes and array of objects.
 6. Program to display the student details using Constructor and Destructor.
 7. Program using Single Inheritance.
 8. Program for Payroll processing using Multiple Inheritance.
 9. Program using virtual functions and pointers.
 10. Program to illustrate the concept of Templates.
 11. Program to illustrate the concept of Friend Function.
 12. Program to implement Stack Operation.
 13. Program to implement Queue Operations.
 14. Program to implement Binary Search.
 15. Program to implement Bubble Sort.

SUGGESTED READINGS:

1. E Balagurusamy (2017), “Object Oriented Programming with C++”, 7th edition, McGraw Hill, New Delhi.
2. Yashavant Kanetkar, (2018), Understanding Pointers In C & C++ 5th revised edition, BPB Publications
3. Bjarne Stroustrup (2014), Programming: Principles and Practice Using C++, 2nd edition, Addison Wesley.
4. Herbert Schildt (2017), C++: The Complete Reference, 4th Edition, 4th edition, McGraw Hill, New Delhi.
5. Mike McGrath (2017), C++ Programming In Easy Steps, 5th edition, BPB Publications; New Delhi.

**INVESTMENT MANAGEMENT
(PRACTICAL)****Semester – V
2H – 1C****18CCU511B****Instruction Hours / week L: 0 T: 0 P: 2****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the Concept of investing and mechanics for formulating investment decisions.
2. to undertake a rigorous study of the theory and empirical evidence relevant to institutional portfolio management.
3. To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
4. To apply the investing concepts and skills lifelong.
5. To explore and assess mutual funds, international security markets, and investments in real estate with a view toward broadening the investment perspective.
6. To test portfolio management and capital market theories through risk and return analysis from the perspective of the portfolio manager.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
 2. Communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
 3. Apply the investing concepts and skills lifelong.
 4. Analyze and evaluate equity securities through examination of economic activity, industry analysis financial statement analysis and individual firm valuation.
 5. Debate issues in efficient markets considering technical analysis and efficient markets and anomalies.
 6. Analyze and explain fixed-income and leveraged securities including bond valuation, duration and reinvestment concepts, and convertible securities and warrants.
-
1. Select a client and perform an investor profiling.
 2. List of investment avenues available for Indian Investor.
 3. Select one industry, Two companies in that industry and Calculate Beta for a selected stocks using Excel. Select the best stock based on risk and return.
 4. Kindly review the budget and economic condition of India and comment what factors to be considered to suggest India as an investment hub.

5. Please review the technical analysis indicator in NSE website and comment on the entry exit timing considering the one year timing.
6. Perform the industry analysis using SWOT analysis to suggest which industry is best to invest. (Refer ibef website)
7. Select two Mutual fund scheme and analyse the NAV return using Excel and suggest the best based on performance index.

18CCU512A		BUSINESS ECONOMICS (PRACTICAL)	Semester – V 2H – 1C
Instruction Hours / week: L: 0 T: 0 P:2		Marks: Internal: 40 External: 60	Total: 100
End Semester Exam: 3 Hours			

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of micro and macroeconomic factors and its application in business.
2. To communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. To apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. To apply business analysis to the “firm” under different market conditions;
5. To apply economic models to examine current economic scenario and evaluate policy options for addressing economic issues.
6. To gain understanding of some Macroeconomic concepts to improve their ability to understand the business climate;

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of micro and macroeconomic factors and its application in business.
 2. Communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
 3. Apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
 4. Able to analyse the profitability of the firm, economy of operation, determination of price under various market situations with good grasp on the effect of trade cycles in business.
 5. Gain knowledge on Monetary theory, measures by RBI in controlling interest rate and emerging concepts like Bit Coin.
 6. Gain knowledge of elementary accounting concepts used for preparing balance sheet and interpretation of balance sheet
1. Select a product and study on the impact of demand and supply on price of the product in the market
 2. Analyse the Case Study on Producer’s Behaviour and Supply:
 3. Analyse the Case Study on Cost and Revenue Function: Cost of Production
 4. Analyse the Case Study on Price Determination

5. Analyse the Case Study on Product Differentiation
6. Select the Macro Economic Factors and analyse the performance of Inflation / National Income (five years data. Analyse using graphs and interpret)
7. Analyse the **Case study on Business Cycle**
8. Select the Macro Economic Factors and analyse the performance of BOP / interest rate / current account. Capital account
9. Analyse and review the Indian budget of last two years
10. Write a review report on the Economic survey report of the current year.

18CCU601A**TAXATION****Semester – VI****6H****5C****Instruction Hours / week: L: 4 T: 2 P: 0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws, indirect taxes emphasizing GST and customs law.
2. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
3. To comprehend on the assessment of the GST.
4. To communicate orally and in written form the income tax, GST and customs law and computations of IT.
5. To be familiar with the laws pertaining to the Income Tax, GST, Customs law and apply it lifelong.
6. Students will learn to analyse and evaluate the effect of an indirect tax on consumers, producers and the government.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws, indirect taxes emphasizing GST and customs law.
2. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
3. Comprehend on the assessment of the GST
4. Communicate orally and in written form the income tax, GST and customs law and computations of IT.
5. Understand with the laws pertaining to the Income Tax and apply it lifelong.
6. Understand the basic principles underlying the Indirect Taxation Statutes (with reference to Central Excise Act, Customs Act, Service Tax, Value Added Tax, Central Sales Tax)

UNIT I : Income Tax Act

Definition – Income – Agricultural Income – Assessee– Previous year – Assessment year – Residential Status – Scope of Total Income – Capital and Revenue - Receipts and Expenditure – Exempted Incomes.

UNIT II : Computation of Income

Computation of Income from Salaries and Income from House Property. Computation of Profits and Gains of Business or Profession – Calculation of Capital Gain.

UNIT III : Computation of Income form other Sources

Computation of Income from Other Sources – Set-off and carry Forward of Losses - Deduction from Gross Total Income (80C, 80E and 80G only) – Assessment of Individuals. Income Tax Authorities – Procedure for Assessment – PAN Card- Tax Deducted at Source (TDS)– Residents and to Non – Residents – Tax collected at Source. Practical Applications of E-Filing.

UNIT IV :Indirect Taxes

Introduction - Features - Objectives of Taxation- Types of taxes- Direct and Indirect taxes - Indirect Tax structure-Merits and Demerits of Indirect Taxes- Recent Developments in Indirect Taxes- Goods and Services Tax Act 2016 - Introduction – Features – Benefits of GST Act. Goods and Service Tax - Important Definitions - Taxable Persons – Time of Supply of Goods and Services – Administrative set up – Classes of officers under Central and State goods and services Tax Act - Appointment of Officers – Powers of officers – Levy and collection of GST – Powers to grant exemption fromtax - Registration – Procedure for registration under Schedule III – Special provisions relating to casual taxable person and non-resident taxable person – Amendment of registration – Cancellation of registration – Revocation of cancellation of registration.

UNIT V : Assessment and Customs Duty

Assessment of GST- Self-Assessment – Provisional Assessment – Scrutiny of Returns

Assessment of Non-filers of Returns – Assessment of Unregistered Persons – Assessment in certain Special Cases – Tax Invoice – Credit and Debit Notes – Payment of Tax – Tax Deducted at Source – Electronic Commerce – Definitions - Collection of Tax atSource. Customs Act 1962 – Important Definitions – Basics – Importance of Customs Duty – Constitutional authority for levy of Customs Duty – Types of Customs Duty – Prohibition of Importation and Exportation of goods – Valuation of Goods for Customs Duty – Transaction Value – Assessable Value – Computation of Assessable Value and Customs Duty.

Note: Distribution of marks - 60% theory and 40% problems

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of internet and World wide web.
2. To familiarize on the PHP, DHTML, MySQL and Javascript usage and apply the learning lifelong.
3. To design the web page using the PHP, DHTML, MySQL and Javascript
4. To Critically analyse the requirement and create the webpage required for the situation.
5. To Write the program and present orally and in written form.
6. Learn techniques of responsive web design, including media queries.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of internet and World wide web.
2. Familiarize on the PHP, DHTML, MySQL and Javascript usage and apply the learning lifelong.
3. Design the web page using the PHP, DHTML, MySQL and Javascript
4. Critically analyse the requirement and create the webpage required for the situation.
5. Write the program and present orally and in written form.
6. Students will develop and understanding of information design and usability as it applies to interactive media projects.

Unit 1: Introduction to Internet: Network of Network, Gateway, History of Internet, Connecting Internet, Types of Connections, Web Browser, Internet Addressing, Layers of Internet, Internet Service Providers, Protocols used in Internet. **Hosting:** Introduction, Need for hosting, DNS Server, Domain Name, Types of Hosting.

World Wide Web: Introduction to world wide Web, Web Pages and Contents, Web Clients, Web Servers, Web Applications, **Websites** – Home Pages: Web Site Development ; How to Builds Web Sites? , Web Content Authoring, Web Graphics Design, Web Programming, Webserver Administration, Protocols, Search Engines & Search Engines, Plug-ins, FTP Applications

Unit 2: Cascading Style Sheets (CSS): Properties Table: Using the style Attribute, Creating Classes and IDs, Generating External Style Sheets, Typography, Consistency, Types of styles,

Specifying class within HTML document, Style placement: Inline style, Span & div tags, header styles, Text and font attributes: Font Vs CSS, changing fonts, text attributes, Advance CSS properties: Backgrounds, Box properties and Positioning.

DHTML: DHTML Overview & Definitions, Dynamic Images, Image Rollovers, Slide Shows, Dueling DOMs, The Document Object Model, The Navigator 4.x DOM, The Internet Explorer DOM, Dealing with DOM Differences, Creating the Core DHTML Library, The Custom Object Technique, Adding Methods to a Custom Object, Adding Secondary Methods and Properties & Active Element Object, Moving Elements on the Page, Moving in Geometric Shapes

Unit 3: PHP Programming: Introduction to PHP, History of web programming; how PHP fits into the web environment, PHP Installation and configuration, Hello World"; syntax, Variables, operators, flow control structures, More language basics; using GET and POST input, working with HTML forms; built-in and user-defined functions; variable scope; using the PHP manual, getting help, Input validation, string manipulation and regular expression functions; date and time functions. Code re-use, require(), include(), and the include_path; file system functions and file input and output; file uploads; error handling and logging; sending mail, HTTP headers and output control functions; HTTP cookies; maintaining state with HTTP sessions; writing simple web clients.

Unit 4: MySQL: Introducing MySQL; database design concepts; the Structured Query, Language (SQL); communicating with a MySQL backend via the PHP, MySQL API, More MySQL database access; graphic manipulation with the GD library, Introduction to Objection Oriented Programming; Using PEAR packages, More PEAR packages; more OOP; the Smarty template engine, Parsing XML; PHP 5-specific features

Unit 5: Fundamental JavaScript Directives:

Introduction to JavaScript: Operators, Control Statements, Implementing Functions: Defining Functions, Calling Functions, Passing Arguments, Local vs. Global Variables, Using the Return Statement, Nested Functions; JavaScript Objects: The JavaScript Object Model and Hierarchy, JavaScript Object Properties, Object Methods, New Keyword, This Keyword, Creating New Object Instances Using Constructor Functions, String, Date and Array Objects.

In-Line JavaScript, Linking Web Pages to External JavaScript Files, JavaScript Using <script> Tags and Attributes, Utilizing the <head> Tags <noscript> Tags; Implementing Arrays: Why array need in Scripting, Creating Arrays, Reading and Writing to an Array, Array Methods and Properties; The delete Keyword: Introduction to Server-Side JavaScript, Purpose of Server-Side JavaScript, Interactive Graphics; Event Handling: Event-Driven Programming Model, How JavaScript Handles Events, Handling Link Events, Handling Window Events, Handling Image Events, Handling Form Events, Setting Event Handlers In-Line or Referencing

3. Gupta A.K. (2010), Management Information System, S.Chand, New Delhi.
4. D.P. Goyal (2014), Management Information Systems: Managerial Perspectives, 4th edition Vikas Publication, New Delhi.
5. Jawadekar (2017) Management Information Systems: A Global Digital Enterprise Perspective, 5th edition, McGraw Hill, New Delhi.

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills
7. To utilize the IT application for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilize the IT application for analysis and preparation of report.

The students should select a problem in Accounting, Finance, Marketing, Human Resource Management, international business or any other areas.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

PROGRAM OUTCOMES [PO]

- a. Graduates will have a knowledge in bookkeeping, accounting, compliance abiding norms of financial services industry.
- b. Graduates will apply the IT skills in accounting, taxation and finance career for effective decision making.
- c. Graduates will obtain ability to analyze and solve the complex business problems with professional expertise and accuracy using quantitative and qualitative tools and techniques for effective decision making.
- d. Graduates will exhibit critical thinking skills to understand the accuracy in financial reporting, real-time business issues and advocate suitable solutions.
- e. Graduates will acquire and demonstrate the interpersonal and communication skills to convey the audited findings and negotiate for the conformity of the results got through in-depth analysis.
- f. Graduates will attain and exhibit skills to work as team to take effective decisions in achieving the common goals.
- g. Graduates will demonstrate the leadership skills to initiate, lead and deliver the best performance together with the team members.

PROGRAM SPECIFIC OUTCOMES (PSO)

- h. Graduates will apply a lifelong learning in research and practice gained through knowledge and skills in continuous adaption of the changes in environment factors pertaining to accounting, auditing, and finance.
- i. Graduates will demonstrate legal, ethical compliance and socially sustainable code of conduct in both personal and professional decision-making process.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Graduates will gain knowledge of accounting, taxation, auditing, finance and management to perform effectively in professional courses like CA, CMA,CS, ICWA and other courses.
- II. Graduates will obtain and demonstrate skills pertaining to professional courses to perform effectively in studies, jobs and entrepreneurial ventures.
- III. Graduates will develop a life-long learning by applying the gained knowledge and skills in Professional practice and research.
- IV. Graduates will demonstrate high standard of ethical conduct and become socially responsible citizens contributing to the sustainable growth of profession and the community.

COURSE OUTCOMES**Learners should be able to**

1. Complete introduction to 'History of Tamil Literature', which is an optional subject in competitive examinations such as Indian Citizenship.
2. Access to literature with a research-oriented approach to inscriptional, manuscript, and archaeological research.
3. 'Scientific Tamil', the field of development of Tamil; Development of multi-pronged research thinking on 'Internet Tamil'.
4. Having creative self-improvement and creativity development for employment.
5. An attitude of seeking literature in support of social and biological values.
6. Skill development for translation-based employment.

அலகு – I : இக்காலஇலக்கியம்:

கல்வி: மகாகவிபாரதியார் – சுயசரிதை - ஆங்கிலக்கல்வி.

இன்றையநிலை: கவிமணிதேசியவிநாயகம் -

ஒற்றுமையே உயிர்நிலை

: கவிஞர் அப்துல் ரகுமான் - காலவழு

மனிதநேயம்: கவிஞர் சிற்பிபாலசுப்பிரமணியன் – மலையாளக்

காற்றுகவிஞர்தாமரை – மழைக்குறிப்பு

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல்மீட்டியமழை

பெண்ணியம் : கவிஞர் சுகந்திசுப்பிரமணியம் – புதையுண்ட

வாழ்க்கை கவிஞர் வைரமுத்து – அம்மா

வாழ்க்கை : கவிஞர் தருமுசிவராம் – வாழ்வுப்பாடல்

இயற்கை : பாவேந்தர்பாரதிதாசன் – அழகின் சிரிப்பு –

வான்.

அலகு – II :அறஇலக்கியம்:

கொன்றைவேந்தன்: 1 - 50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் -20

குறள்கள்

பழமொழிநானூறு: 5 பாடல்கள்

வேதநாயகம்பிள்ளைநீதிநூல்: 74 -78 பாடல்கள்

பெருவாயின்முள்ளியார்ஆசாரக்கோவை: 5

பாடல்கள்

அலகு - III :சிறிலக்கியம்:

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர்முகுனப்பிள்ளைத்தமிழ்: 2 பாடல்கள்

குற்றாலக்குறவஞ்சி: 5 பாடல்கள்

முக்கூடற்பள்ளு : 5 பாடல்கள்

கலிங்கத்துப்பரணி: போர்பாடியது- 9 பாடல்கள்

அலகு – IV :கட்டுரை:

1. உயர்தனிச்செம்மொழி- பரிதிமாற்கலைஞர்
2. கட்டிடக்கலை- அ.இராசமாணிக்கனார்
3. வாழ்க்கை-இளவழகனார்
4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்
5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V :மொழிப்பயிற்சி:

1. படைப்பிலக்கியப்பயிற்சிகள் (கதை, கவிதை, கட்டுரை, உரைநடை)
2. மொழிபெயர்ப்பு
3. எழுத்து, சொல், பொருள்இலக்கணப்பயிற்சிகள்

பாடநூல்:

கற்பகச்சோலை –

தமிழ்ஏடு.கற்பகம்பல்கலைக்கழகத்தமிழ்த்துறைவெளியீடு.

COURSE OBJECTIVES:**To make the students**

1. To train students to acquire proficiency in English.
2. To explore different genres of literature and learning grammar.
3. To provide aesthetic pleasure through literature.
4. To inculcate moral values through literature.
5. To develop ethical values.
6. To give basic grammar knowledge.

COURSE OUTCOME:**Learners should be able to**

1. Develop the knowledge of interpersonal skills.
2. Establish and maintain social relationships.
3. Genres of literature will give moral values of life.
4. Develop communication skills in business environment
5. Communication skills will get developed.
6. Develop to have language competence.

UNIT I PROSE

1. Morals in the Indian Context - Francis Nicholas Chelliah
2. How Comic Books help us to relive our Childhood - Benoit Peeters
3. Let's Do What India Needs From Us -Dr.A.P.J. Abdul Kalam

UNIT II POEM

1. The Stolen Boat - William Wordsworth
2. Telephone Conversation- Wole Soyinka
3. A River - A.K. Ramanujan

UNIT III SHORT STORIES

1. Rapunzel - Brothers Grimm
2. The Ant and The Grasshopper- W. Somerset Maugham
3. The Nightingale and the Rose - Oscar Wilde.

UNIT IV DRAMA

1. The Merchant of Venice- Act 4-Scene 1
2. The Death Trap- Saki

UNIT V GRAMMAR AND COMPOSITION

GRAMMAR : 1. Tenses

2. Articles

3. Auxiliaries (Primary and Modal)

4. Tag Questions

Composition:

1. Reading to Comprehend

2. Letter Writing
3. Resume Writing
4. General Essay

SUGGESTED READINGS:

1. Reminisce, Published by the Department of English, Karpagam University.
2. Hewings Martin, 1999 Advanced English Grammar, Cambridge University Press.

FINANCIAL ACCOUNTING

Semester – I
8H – 6C

Instruction Hours / week: L: 6 T: 2 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To make the students learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts and inventory valuation.
3. To understand and apply the techniques for preparing accounts in different business organizations like consignment, joint venture and Non – trading concern.
4. To know the accounting procedure for branches and also to ascertain the financial position of each branch separately.
5. To learn the concepts and accounting procedures for partnership firm.
6. To apply the accounting procedures in practical.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Prepare the final accounts and compute inventory valuation.
3. Recognize the accounting process of financial statement and critically think in preparing accounts, rectification of errors, Consignment and Joint Venture.
4. Acquire knowledge on accounting for branches and also to ascertain the financial position of each branch separately.
5. Apply appropriate judgment derived from knowledge of accounting theory.
6. Apply the accounting procedures for partnership firm.

UNIT I Accounting Information System:

- i. Accounting as an information system, the users of financial accounting information and their needs. Qualitative characteristics of accounting, information. Functions, advantages and limitations of accounting. Branches of accounting. Bases of accounting; cash basis and accrual basis.
- ii. The nature of financial accounting principles – Basic concepts and conventions: entity, money measurement, going concern, cost, realization, accruals, periodicity, consistency, prudence (conservatism), materiality and full disclosures.
- iii. Financial accounting standards: Concept, benefits, procedure for issuing accounting standards in India. Salient features of First-Time Adoption of Indian Accounting Standard (Ind-AS) 101. International Financial Reporting Standards (IFRS): - Need and procedures

UNIT- II Accounting Process & Final Accounts**Accounting Process:**

From recording of a business transaction to preparation of trial balance including adjustments

Business Income :

- i. Measurement of business income-Net income: the accounting period, the continuity doctrine and matching concept. Objectives of measurement.
- ii. Revenue recognition: Recognition of expenses.

- iii. The nature of depreciation. The accounting concept of depreciation. Factors in the measurement of depreciation. Methods of computing depreciation: straight line method and diminishing balance method; Disposal of depreciable assets-change of method.
- iv. Inventories: Meaning. Significance of inventory valuation. Inventory Record Systems: periodic and perpetual. Methods: FIFO, LIFO and Weighted Average. Salient features of Indian Accounting Standard (IND-AS)

Final Accounts :

Capital and revenue expenditures and receipts: general introduction only. Preparation of financial statements of non-corporate business entities

UNITIII Accounting for Hire-Purchase and Installment Systems, Consignment, and Joint Venture

Accounting for Hire-Purchase and installment system: Transactions, Journal entries and ledger accounts including Default and Repossession.

Accounting for Joint Venture-Consignment: Features, Accounting treatment in the books of the consignor and consignee. **Joint Venture:** Accounting procedures: Joint Bank Account, Records Maintained by Coventurer of (a) all transactions (b) only his own transactions. (Memorandum joint venture account).

UNIT IV Accounting for Inland Branches

Concept of dependent branches; accounting aspects; debtors system, stock and debtors system, branch final accounts system and whole sale basis system. Independent branches: concept accounting treatment: important adjustment entries and preparation of consolidated profit and loss account and balance sheet.

UNIT V Accounting for Partnership:

Valuation of Goodwill – Calculation of Profit Sharing Ratio – Admission – Retirement

Note: Distribution of marks - 20% theory and 80% problems

SUGGESTED READINGS :

1. S. N. Maheshwari , Suneel K Maheshwari (2018) *Financial Accounting*, 6th Edition, Vikas Publishing House, NewDelhi
2. Shukla,M.C. Grewal T.S. Gupta. S.C. (2016) , *Advanced Accounts*. Vol.-I., 19th Edition, S. Chand & Co., New Delhi.
3. Dr S N Maheshwari & Dr Suneel K Maheshwari (2018), *Problems and Solutions in Advanced Accountancy* . 6th edition, Vikas Publishing House, New Delhi
4. Deepak Sehgal. (2016) , *Financial Accounting*.1st edition, VikasPublishing House, New Delhi,
5. CA & Dr.P C Tulsian & CA Bharat Tulsian (2016) *Financial Accounting*, 2nd Edition,Chand Publishing. New Delhi

COURSE OBJECTIVES:**To make the students**

1. To know the essential elements of contract and also the Indian Contract Act 1872.
2. To learn the fundamental regulation about the sale of goods act, 1930.
3. To impart basic knowledge of Partnership Law and Indian Partnership Act 1932.
4. To understand about the Limited Liability Partnership Act, 2008
5. To enhance knowledge in the Negotiable Instruments Act 1881.
6. To familiarize with the concepts in Indian Contract Act.

COURSE OUTCOMES:**Learners should be able to**

1. Identify the basic legal principles behind contractual agreements.
2. Understand the relevance of business law in economic and social context.
3. Acquire problem solving techniques and will be able to present coherent, concise legal argument in partnership for achieving common goals.
4. Exhibit attributes in understanding various negotiable instruments, its features and utilization in real-time.
5. Obtain the capacity to do lifelong learning in modifications and revision done in the legal environment of business.
6. Prepare various agreements related to contract

UNIT I The Indian Contract Act, 1872

General Principles of Contract - Contract – Meaning, Characteristics and Kinds- Essentials of a Valid Contract - Offer and Acceptance, Consideration, Contractual Capacity, Free Consent, Legality of Objects- Void Agreements- Discharge of a Contract – Modes of Discharge, Breach and Remedies against Breach of Contract- Contingent contracts- Quasi – Contracts.

UNIT II The Indian Contract Act, 1872

Specific Contracts - Contract of Indemnity and Guarantee- Contract of Bailment- Contract of Agency-**The Sale of Goods Act, 1930** - Contract of sale, Meaning and Difference Between Sale and Agreement to Sale - Conditions and Warranties- Transfer of Ownership in Goods including Sale by a Non-owner- Performance of Contract of sale- Unpaid Seller – Meaning, Rights of an Unpaid Seller against the Goods and the Buyer.

UNIT III The Partnership Act, 1932

Nature and Characteristics of Partnership- Registration of a Partnership Firms- Types of Partners- Rights and Duties of Partners- Implied Authority of a Partner- Incoming and outgoing Partners- Mode of Dissolution of Partnership.

UNIT IV The Limited Liability Partnership Act, 2008

Salient Features of LLP- Differences Between LLP and Partnership, LLP and Company- LLP Agreement - Partners and Designated Partners- Incorporation Document- Incorporation by Registration- Partners and their Relationship.

UNIT V The Negotiable Instruments Act 1881

Meaning, Characteristics, and Types of Negotiable Instruments: Promissory Note, Bill of Exchange, Cheque-Holder and Holder in Due Course, Privileges of Holder in Due Course. Negotiation - Types of Endorsements- Crossing of Cheque - Bouncing of Cheque

SUGGESTED READINGS :

COURSE OBJECTIVES:**To make the students**

1. To understand the types of communication and barriers of communication.
2. To acquire knowledge on the different business correspondence used in organization
3. To be aware of the different types of reports prepared for the organization.
4. To understand the importance of vocabulary in business communication.
5. To be aware of the use of technology and the oral presentation techniques used in communication.
6. To use updated technology for various types of communication globally.

COURSE OUTCOMES:**Learners should be able to**

1. Communicate effectively with the optimal mix of verbal and nonverbal communication mitigating the barriers.
2. Draft business correspondence for the organization requirement.
3. Prepare business reports for organization needs.
4. Fluency in business communication terminology.
5. Draft the resume and develop skills to face the interview
6. Use appropriate technology for business communication.

UNIT I Communication and its barriers

Nature of Communication: Process of Communication, Types of Communication (Verbal and Non-Verbal), Importance of Communication, Different forms of Communication; Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers.

UNIT II Business Correspondence

Letter Writing, presentation, inviting quotations, sending quotations, placing orders, inviting tenders, Sales letters, claim and adjustment letters and social correspondence, Memorandum, Inter-office Memo, Notices, Agenda, Minutes. [Application Letters – Preparation of Resume](#)

UNIT III Report Writing

Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports

UNIT IV Vocabulary and Listening

Vocabulary: Words often confused, Words often misspelt, Common errors in English. Introduction to phonetics, need and use of it, Word stress and Sentence stress- Contrastive stress in sentences to highlight different words- Intonation- Rising and Falling tone, falling -rising tone- Word Power – Vocabulary – Jargon – rate of speech, pitch, tone – Clarity of voice.

The Importance of Listening in the Workplace: Introduction, what is listening? Barriers to Listening, Strategies for Effective Listening, Listening in a Business Context.

UNIT V Use of Technology and Interview:

Appropriate use of technology, EMAIL, WEB PAGE communication, Voice and wireless communication

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

Interview: Meaning – Objectives and Techniques of various types of interviews – public speech – Characteristics of a good Speech.

SUGGESTED READINGS:

1. Bovee, and Thill (2017), Business Communication Today, 13th Edition, Pearson Education, New Delhi
2. Raymond Lesikar, Marie Flatley, Kathryn Rentz, Neerja Pande (2017), Business Communication: Making Connections in a Digital World, 11th edition, McGraw Hill Education, New Delhi
3. Herta Murphy, Herbert Hildebrandt and Jane Thomas (2017), Effective Business Communication, 7th edition, McGraw Hill Education, New Delhi
4. Asha Kaul (2015), Effective Business Communication, 2nd edition, Prentice Hall India Learning Private Limited, New Delhi.
5. Rajendra Pal, J.S. Korlhalli, (2014), Essentials of Business Communication, 1st edition, S Chand Publishing, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To enable the learners to acquire English language skills.
2. To familiarize them with English literature.
3. To acquire Grammar.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

COURSE OUTCOME:**Learners should be able to**

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT I PROSE

1. I Have a Dream - Martin Luther King, Jr.
2. 'First human' discovered in Ethiopia - Pallab Ghosh
3. The First Case- M.K. Gandhi

UNIT II POEM

1. L'Allegro - John Milton
2. God Is a Medicine Cabinet - Cynthia Atkins
3. A Prayer for my daughter - W.B. Yeats

UNIT III SHORT STORIES

1. The Tell Tale Heart - Edgar Allan Poe
2. Sparrows- K. Ahmad Abbas
3. The Little Match-Seller - Hans Christian Andersen

UNIT IV DRAMA

1. Tempest- Act 2-Scene 2
2. The Referee- W.H. Andrews and Geoffrey Dearmer

UNIT - V GRAMMAR AND COMPOSITION**Grammar** 1. Voice

2. Reported Speech
3. Interrogatives (Yes or No, 'Wh' questions)
4. Word Class

Composition:

1. Writing Minutes and Preparing Agenda

2. Note Taking
3. Charts and Pictorial Writing.
4. Report Writing

SUGGESTED READINGS:

1. Twilight, Published by the Department of English, Karpagam Academy of Higher Education.
2. Murphy Raymond, 1998 Essential English Grammar, Cambridge University Press.

COURSE OBJECTIVES:**To make the students**

1. To understand the accounting process for Share capital and debenture and its application
2. To understand the accounting standard and its application in inter-holding companies
3. To know the procedures for amalgamation.
4. To solve problems relating to Holding Company Accounts, Liquidation of Companies and various other Accounts
5. To understand and apply accounting process for Banking industry.
6. To prepare final accounts for corporates

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and apply the accounting process related corporate accounting
2. Enhance the facts on issue and redemption of share capitals
3. Prepare final accounts for corporate entity.
4. Understand the accounting standard and apply the same for corporate entity and amalgamation.
5. Understand the difference of banking balance sheet and non-banking balance sheet
6. Enhance the problem-solving skills and analytical skills in the accounting context.

UNIT I Accounting for Share Capital and Debentures

Issue, Forfeiture and Reissue of Forfeited Shares - Concept & Process of Book Building - Issue of Rights and Bonus Shares - Buyback of Shares - Redemption of Preference Shares Issue and Redemption of Debentures

UNIT II Final Accounts

Preparation of Profit and Loss Account and Balance Sheet of Corporate Entities – Excluding Calculation of Managerial Remuneration - Disposal of Company Profits- Valuation of Goodwill and Valuation of Shares - Concepts and Calculation: Simple Problem only

UNIT III Amalgamation of Companies

Concepts and Accounting Treatment as per Accounting Standard: 14 (ICAI) (excluding inter- company holdings). Internal Reconstruction -Concepts and Accounting Treatment (excluding scheme of reconstruction)

UNIT IV Accounts of Holding Companies/Parent Companies

UNIT V Accounts of Banking Companies

Difference Between Balance sheet of Banking and Non-banking Companies - Prudential Norms - Asset Structure of a Commercial Bank - Non-Performing Assets (NPA). Cash Flow Statement - Concept of Funds - Preparation of Cash Flow Statement as per Indian Accounting Standard (Ind- AS): 7.

Note: Distribution of marks - 20% theory and 80% problems

SUGGESTED READINGS :

1. Reddy & Moorthy (2013), “*Corporate Accounting*” Margham Publications, Chennai
2. M.C. Shukla, T.S. Grewal, and S.C. Gupta (2016) *Advanced Accounts*. Vol.-II. – 19th Edition S. Chand & Co., New Delhi.
3. Dr S N Maheshwari, CA Sharad K Maheshwari & Dr Suneel K Maheshwari (2018) *Corporate Accounting*.- 6th Edition Vikas Publishing , New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. To overcome on issues in the construction of index numbers

UNIT I Matrices & Basic Mathematics of Finance

Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through ad joint; Applications of Matrices to solution of simple business and economic problems- Simple and compound interest Rates of interest; Compounding and discounting of a sum using different types of rates

UNIT II Differential Calculus

Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

UNIT III Uni-variate Analysis

Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

UNIT IV Bi-variate Analysis

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and

UNIT V Time-based Data: Index Numbers and Time-Series Analysis

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares

SUGGESTED READINGS :

1. Sreyashi Ghosh and Sujata Sinha (2018), Business Mathematics and Statistics, 1st edition, Oxford University Press; New Delhi.
2. Asim Kumar Manna (2018), Business Mathematics and Statistics, 1st edition, McGraw Hill Education, New Delhi.
3. S.P. Gupta and P.K. Gupta (2013), Business Statistics and Business Mathematics, S Chand Publishing, New Delhi.
4. Mariappan (2015), Business Mathematics, 1st edition, Pearson Education, New Delhi.
5. J.K.Sharma, (2014) Business statistics, 4th edition, Vikas Publishing House, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To be aware on environmental legislation.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
6. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners

UNIT I Environment and Ecosystem

Environment Definition, scope and importance, components, Ecosystem Definition, Concept, Scope, importance, Structure and functions of ecosystem. Energy flow, Ecological succession Food chains and food webs. Classification of ecosystem.

UNIT II Natural Resources - Renewable and Non-renewable Resources:

Natural resources and associated problems. Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources: Use and over-utilization, exploitation. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Ill-effects of fireworks.

UNIT III Biodiversity and Its Conservation:

Introduction, definition: genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT IV Environmental Pollution :

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards, Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in

prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

UNIT V Social Issues and the Environment:

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public awareness. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health.

COURSE OBJECTIVES:**To make the students**

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop knowledge about business communication.
4. To develop knowledge about business writing.
5. To acquire knowledge on communication for different purpose.
6. To get knowledge to communicate in day to affairs.

COURSE OUTCOME:**Learners should be able to**

1. Students learnt the basics and purposes of listening skill.
2. Students will know the importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively
6. Students will able to handle their day to day affairs well with their knowledge of language skills.

UNIT I: Listening

Listening and its types, Basic Listening Lessons, Critical Listening Lessons, Advanced Listening Lessons, and Note Taking

UNIT II: Speaking

Basics of speaking, Regular English, Business English, Interview English, and Travel English

UNIT III: Reading

Reading and its purposes, Types of Reading, Reading Techniques, Reading Comprehension, Note Making

UNIT IV: Writing

Writing defined, Types of Writing, Components of Writing, Writing Contexts, Language and Style with accordance to the contexts

UNIT V: Vocabulary Enrichment

Synonyms, Antonyms, Homonyms, Phrasal Verbs, Idioms and Phrases, One Word Substitutes, and Affixes

SUGGESTED READINGS:

1. Learning to Learn: Study Skills in English Cambridge, 2015
2. Advanced Skills; Simon Harenas – CUP. 2015
3. Business Results, Woodward, OUP. 2015
4. Function in English. Jonathan Middlemiss et al, OUP

COURSE OBJECTIVES:**To make the students**

1. To Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. To learn the tools and techniques to calculate cost and solve the problems.
3. To select the best methods of costing and apply critically based on the situation
4. To communicate orally and in written form the cost accounting concepts, methods and book keeping procedure for cost accounting.
5. To gain a lifelong learning for applying the cost concepts in analyzing the business problems.
6. To know the reconciliation of the cost and financial accounting.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the cost concepts, types of costing methods and book keeping for cost accounting
2. Apply tools and techniques to calculate cost and solve the problems.
3. Select the best methods of costing by critically analyzing and apply the same to appropriate situation
4. Communicate orally and in written the cost concepts
5. Gain the lifelong learning of cost concepts and apply in the business environment.
6. Reconcile Cost and Financial Accounting.

UNIT 1: Introduction

Meaning, objectives and advantages of cost accounting; Difference between cost accounting and financial accounting; Cost concepts and classifications; Elements of cost; Installation of a costing system; Role of a cost accountant in an organisation

UNIT 2: Elements of Cost: Material and Labour

Materials: Material/inventory control techniques. Accounting and control of purchases, storage and issue of materials. Methods of pricing of materials issues — FIFO, LIFO, Simple Average, Weighted Average, Replacement, Standard Cost. Treatment of Material Losses Labour: Accounting and Control of labour cost. Time keeping and time booking. Concept and treatment of idle time, over time, labour turnover and fringe benefits. Methods of wage payment and the Incentive schemes- Halsey, Rowan, Taylor's Differential piece wage.

UNIT 3: Elements of Cost: Overheads

Classification, allocation, apportionment and absorption of overheads; Under- and over-absorption; Capacity Levels and Costs; Treatments of certain items in costing like interest on capital, packing expenses, bad debts, research and development expenses; Activity based cost allocation.

UNIT 4: Methods of Costing

UNIT costing, Job costing, Contract costing, Process costing (process losses, valuation of work in progress, joint and by-products), Service costing (only transport).

UNIT 5: Book Keeping in Cost Accounting

Integral and non-integral systems; Reconciliation of cost and financial accounts

Note: Distribution of marks - 20% theory and 80% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To learn the tools and techniques to compute the tax for the various income heads.
3. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
4. To communicate orally and in written form the income tax concepts and computations.
5. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.
6. To prepare a statement of income for a person.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee.
4. Communicate orally and in written the Income tax computation under various income heads and deductions.
5. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.
6. Prepare a statement of income for a person.

UNIT I BASIC CONCEPTS

An Overview of Income Tax Act, 1961 : Background, Important definitions- Income - Agricultural Income - Assessee - Previous year - Assessment year, Residential Status, Basis of Charge, Scope of Total Income, **Tax Rates in accordance with the applicable Finance Act for the relevant assessment year.**

UNIT II COMPUTATION OF INCOME UNDER THE HEAD OF SALARY AND COMPUTATION OF INCOME UNDER THE HEAD OF HOUSE PROPERTY

Salary – Coverage, Employer and Employee Relationship, Allowances, Monetary and Non-Monetary Perquisites – Valuation and Taxability, Profits in lieu of Salary, Deductions against Salary, Incomes exempt from Tax and not includible in 'Salary', Deduction to be made from salary in respect of Provident Fund under the provisions of the Provident Fund and Miscellaneous Provisions of Act 1952 and tax treatment of employers' contribution to Provident Fund, **Tax Deducted at Source on Salary Income and Compliances.**

Computation of Income under the head of House Property : Chargeability, Owner of house property, Determination of Annual Value, Deduction from Net Annual Value, Treatment of

Unrealized Rent, Arrears of Rent, Exemptions, Computation of Income from a let out House Property, Self-Occupied Property.

UNIT III COMPUTATION OF INCOME – PROFITS AND GAINS FROM BUSINESS AND PROFESSION :

Profits and Gains from Business and Profession: Business and Profession – An overview, Chargeability, Profits and Losses of Speculation Business, Deductions Allowable, Expenses Disallowed, Deemed Profits u/s 41, Maintenance of Accounts, Tax Audit, Presumptive Base Taxation.

Chargeability, Capital Gains, Capital Assets & Transfer, Types of Capital Gains, Mode of Computation of Capital Gains, Exemptions and Deduction, **Special Provision – Slump Sale, Compulsory Acquisition, Fair Market Value, Reference to valuation officer.**

UNIT IV COMPUTATION OF INCOME FROM OTHER SOURCES :

Taxation of Dividend u/s 2(22)(a) to (e), Provisions relating to Gifts, Deductions, Other Miscellaneous Provisions.

Exemptions/Deduction, Clubbing provisions, Set Off and/or Carry Forward of Losses, Rebate and Relief : Income's not included in Total Income, Tax holidays, Clubbing of Income, Aggregation of Income, Set off and/or Carry forward of losses, Deductions (General and Specific), Rebates and Reliefs.

UNIT V COMPUTATION OF TOTAL INCOME AND TAX LIABILITY

TDS/TCS, Returns, Refund & Recovery : Tax Deduction at Source 'TDS' & Tax Collection at Source 'TCS', Advance Tax & Self-Assessment Tax 'SAT', Returns, Signatures, E-Filing, Interest for default in furnishing return of Income, Collection, Recovery of Tax, & Refunds, Assessment, Appeals, Revisions, Settlement of Cases, Penalties etc., Assessment, Appeals & Revisions, Settlement of Cases, Penalties, Offences & Prosecution.

Tax Planning & Tax Management : Tax Planning, Tax Management and Tax avoidance through legitimate tax provisions, Various Avenues.

International Taxation – An Overview : Double Taxation Avoidance Agreement 'DTAA', Residency Issues, Tax Heaven, Controlled Foreign Corporation (CFC), Concept of Permanent Establishment, Business Connection, General Anti Avoidance Rules 'GAAR', Advance Ruling – Practical Aspect, Transfer Pricing –An Overview.

Note: Distribution of marks - 30% theory and 70% problems

BCOM (PA)	2018-2019
18PAU303A	AUDITING AND CORPORATE GOVERNANCE
	Semester – III
	4H – 3C
Instruction Hours / week: L: 4 T: 0 P: 0	Marks: Internal: 40 External: 60 Total: 100
	End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. To learn the audit techniques, corporate governance and CSR practices.
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance and CSR.
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the Concept of auditing, corporate governance and Corporate social responsibility (CSR)
2. Recall audit techniques, corporate governance and CSR practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance and CSR practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance and CSR concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance and CSR.
6. Reminiscence with statistics on global reporting.

UNIT I INTRODUCTION

Definition-Nature-Scope and Objectives of Independent Financial Audit : Basic Principles Governing an Audit, Concept of Auditor's Independence - Error and Fraud- Classification of Audit -Standards on Auditing (SA) : Concept and Purpose - Audit procedures and techniques - Audit Evidence : Concept, Need, Procedures to obtain Audit Evidence

UNIT II AUDIT RISK AND INTERNAL CONTROL SYSTEM

Audit Risk : Concept and Types, Relationship with audit materiality - Professional Skepticism.

Internal Control : Definition, Objectives, Evaluation, Internal Control Check List, Internal Control Questionnaire and COSO's Internal Control Framework - Internal Check : Definition, Objectives and General Principles on Internal Check for selected transactions - Internal Audit : Definition, Objectives, Regulatory Requirement, Use of Internal Auditor's Work by Statutory Auditor

UNIT III VOUCHING, VERIFICATION AND VALUATION

Vouching :Meaning, Objectives - Difference with Routine Checking – Factors to be Considered during Vouching of Different items

UNIT IV AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

Audit of Companies: Qualification, Disqualification, Appointment, Reappointment and Rotation, Casual Vacancy, Removal and Resignation, Ceiling, Remuneration, Rights, Duties and Liabilities of Company Auditor - Audit Committee - Branch Audit and Joint Audit - Divisible Profit and Dividend (Final, Interim and Unclaimed/Unpaid): Provision of the Act and Legal Decisions and Auditor's Responsibility

Audit report and certificate: Definition – Distinction between Report and Certificate- Different Types of Report Contents of Audit Report (As per Companies Act and Standards on Auditing) True and Fair View – Concept Materiality – Concept and Relevance

Special areas of Audit: Cost Audit- Concepts, objectives, Relevant Provisions of Companies Act Management Audit – Concepts, Objectives, Advantages Tax Audit – Concepts, Objectives, Legal Provisions Social Audit – Propriety Audit – Performance Audit – Environment Audit (Concepts only)

UNIT V CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

Conceptual framework of Corporate Governance: Theories & Models, Broad Committees; Corporate Governance Reforms. Common Governance Problems Noticed in various Corporate Failures. Codes & Standards on Corporate Governance, Clause 49 and Listing Agreement, Green Governance

Concept of CSR, Corporate Philanthropy, Strategic Planning and Corporate Social Responsibility; Relationship of CSR with Corporate Sustainability; CSR and Business Ethics, CSR and Corporate Governance; CSR provisions under the Companies Act 2013; CSR Committee; CSR Models, Codes, and Standards on CSR, Global Reporting Initiatives, ISO 26000

SUGGESTED READINGS:

1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
3. Dr. T R Sharma, Dr. Gourav Sankalp (2018), Auditing and Corporate Governance, Sathiya Bhawan Publications, Agra
4. Ashok Sharma (2019), Auditing and Corporate Governance, VK Global Publications Pvt. Ltd., New Delhi.
5. Sharma, J.P., (2016), Corporate Governance, Business Ethics, and CSR, 2nd edition, Ane Books Pvt Ltd, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand Tally and its importance in supporting accounting activity.
2. To communicate orally and in written form the Features of Tally in capturing accounting procedures.
3. To gain lifelong knowledge of Tally features.
4. To be familiar with the incorporation of GST standards into accounting and computerized accounting process.
5. To Know the integration of accounting and computer for effective decision making.
6. To apply the tally concepts in organizations.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the knowledge of Tally and its importance.
2. Communicate orally and in written form the Features of Tally in capturing accounting procedures.
3. Gain lifelong knowledge of Tally features.
4. Familiarize on the incorporation of GST standards into accounting and computerized accounting process.
5. Integrate accounting concepts and computer for effective decision making.
6. Practical application of tally concepts in organizations.

UNIT I User Interface and Company Management

Introduction to Tally ERP9, Gateway of Tally and User Interface, Masters – Ledgers, Understanding Ledgers , Masters – Groups, Understanding Groups , Masters – Billwise Debtors and Creditors Ledgers, Payment Voucher - Understanding Default Vouchers

Day Book - Understanding Day Book Reports , Altering and Deleting Transactions, Pre-Allocation of Bills, Receipt Voucher - Understanding Receipt Vouchers, Contra Vouchers, Cheque Printing, CTS Cheque Printing System, Debit and Credit Notes, Debit Note Returns, Bank Reconciliation, Understanding BRS Process.

UNIT II Inventory

Masters : Inventory : Understanding Inventory - Integrating Accounts and Inventory, Manual Stock Valuation without Inventory,

Billing Features, Purchase Order Processing, Sales Order Processing, Stock Transfers, Understanding Stock Transfers, Manufacturing Vouchers, Batch Wise Details, Re-Order Level

UNIT III TDS, Payroll, Finalization process

Multi Language, Export, Import, Backup and Restore, Tax Deducted at Source (TDS), Payroll Accounting

Finalization Process - Depreciation Entries - Creating General Reserves - Provision for Taxation - Bad Debt Reserves - Partnership Firm - Transferring Profits - Outstanding Expenses and Accrued Income - Changing Financial Year, Voucher Types and Class, Point of Sales, Scenarios and Optional Vouchers

UNIT IV GST

Goods and Services Tax (GST)- About Goods and Services Tax (GST) - Activating Tally in GST - Setting Up GST (Company Level, Ledger Level or Inventory Level, GST Taxes & Invoices- Understanding SGST, CGST & IGST.

Purchase Voucher with GST : Updating GST Number for Suppliers

Sales Voucher with GST : Updating GST Number for Suppliers

UNIT VBudgets and Reporting

Budgets and Controls, Budget Masters and Configurations, Cost Centres and Cost Categories, Understanding Cost Centres, Understanding Profit, Customer and Supplier Balance Checking- Customer and Supplier Bill Wise Checking- Overdue Payables and Receivables - Outstanding Reports and Printing - Confirmation of Accounts - Negative Ledgers Report

Purchase and Sales Reporting, Stock Analysis and Reports, Cash and Bank Reports, Search, Filter and Sorting, Financial Reports

Data Security, Tally Audit, Tally Synchronization, Multi-Currency, Printing Reports

SUGGESTED READINGS:

1. Tally education, (2018), Official Guide to Financial Accounting Using Tally. ERP 9 with GST (Release 6.4), 4th revised and updated edition, BPB Publications; New Delhi
2. Asok K. Nadhani (2018), Tally ERP Training Guide – 4th edition, BPB Publications; New Delhi
3. Sajee Kurian, (2017) Learning Tally ERP 9 with GST, 1st edition, Blessings Inc, Mumbai.
4. Ajay Maheshwari and Shubham Maheshwari(2017), Implementing GST in Tally.ERP 9, 1st edition, Tally E-Learning.
5. Shraddha Singh, Navneet Mehra (2014), Tally ERP 9 (Power of Simplicity): Software for Business and Accounts, V&S Publishers, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To understand and Analyse the Auditing standards and standards for the audit evidence
2. To classify and apply vouching, verification and valuation technique to appropriate situation
3. To Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. To communicate orally and in written form about the findings and solution.
5. To Work in teams and exhibit leadership skills and practice the learnings of auditing and corporate governance lifelong.
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend and Analyse the Auditing standards and standards for the audit evidence.
2. Classify and apply vouching, verification and valuation technique to appropriate situation
3. Analyse and critically evaluate the case study and justify or prescribe a solution suitable.
4. Communicate orally and in written form about the findings and solution.
5. Work in teams and exhibit leadership skills and practice the learnings of auditing and corporate governance lifelong.
6. Reminiscence with statistics on global reporting.

UNIT 1: INTRODUCTION

1. Analyse the importance of Standards on Auditing (SA) : SA 200 SA 210, SA 230, SA 240, SA 300, SA 520, SA 530, SA 550, SA 580 and SA 610
2. Analyse the importance of Audit Evidence : SA 500 - 509

UNIT – II Audit Risk and Internal Control System

3. Audit Risk : Analyse SA 320 and 330
4. Analyse the COSO's Internal Control Framework for selected industry of your choice.

UNIT III VOUCHING, VERIFICATION AND VALUATION

5. How to Vouch/Verify/Value
 - a. Goods sent out on Sale or Return Basis
 - b. Borrowing from Banks.
 - c. Goods sent on consignment
 - d. Foreign travel expenses
 - e. Receipt of capital subsidy
 - f. Provision for income tax
 - g. payment of taxes
 - h. Advertisement Expenses
 - i. Sale of Scrap

UNIT IV :AUDIT OF COMPANIES AND SPECIAL AREAS OF AUDIT

6. Case Study on Auditors in on Satyam fraud
7. Analyse the provisions amended to the appoint of auditor and audit in Companies Act.

UNIT V: CORPORATE GOVERNANCE AND CORPORATE SOCIAL RESPONSIBILITIES

8. Any Case study on Corporate Governance to be analysed from below list
9. Any Case study on Corporate Governance to be analysed from below list

Maxwell Communication (UK), Enron (USA), WorldCom (USA), Satyam Computer Services Limited (all need to be more emphasized); BCCI (UK), Anderson Worldwide (USA), Vivendi (France), Harshad Mehta and Kingfisher Airlines Scam (all to be covered in brief); Common Governance Problems noticed in various corporate failures; Codes and Standards on Corporate Governance: Cadbury, OECD, Oxley Act; Initiatives in India: CII, SEBI, Clause 49 of Listing Agreement, Kumar Mangalam Committee, Naresh Chandra Committee, Narayan Murthy Committee, LODR.

10. Analyse CSR initiative of any Indian company

SUGGESTED READINGS

1. Arun jha (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.
2. Anil Kumar, Lovleen Gupta, Jyotsna Rajan Arora (2019), Auditing and Corporate Governance, 2nd edition, Taxmann Publication, New Delhi.

COMPUTERISED ACCOUNTING SYSTEM (PRACTICAL)

Semester – III

18PAU311B

4H – 2C

Instruction Hours / week L:0 T:0 P:4

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the accounts heads, vouching, inventory valuations, TDS and Pay roll process available in the accounting software
2. To classify the items under items heads
3. To Generate the financial Reports, TDS and pay roll reports and evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. To apply the tally concepts in organizations.

COURSE OUTCOMES:**Learners should be able to**

1. Familiarize on the account's heads, vouching, inventory valuations, TDS and Pay roll process available in the accounting software
2. Classify the items under items heads
3. Generate the financial Reports, TDS and pay roll reports and evaluate the output.
4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerised system as a lifelong learning.
6. Practical application of tally concepts in organizations.

1. Create a Company and Ledgers in Tally.
2. Create a Accounting voucher with example in tally.
3. Create different types of GST Invoices in Tally.
4. Create Debit/Credit Notes, Memorandum & Post Dated Vouchers in Tally
5. Create Stock Group, Stock Items and Unit of Measurement in Tally.
6. Create an Inventory and Manufacturing Vouchers.
7. Prepare Balance Sheet, Profit/Loss Account, Stock Summary and Ratio Analysis in Tally
8. Create a payroll in tally with suitable example.
9. Do the following exercise with the example that given below

Create a company in Tally by your name.

Create 3 stock items named milk, roti and mobile. Opening balances of these 3 stock items would be milk – 10 liters, roti – 20 pieces and mobile – 5 numbers.

Now, create sales ledgers – one for 28% GST rate and one for 5% GST rate. Also, create purchase ledgers in the same way each of 28% GST and 5% GST.

Create 1 sundry debtor outside your state and 1 sundry debtor inside your state. Similarly, create 1 sundry creditor outside your state and 1 sundry creditor inside your state.

Now, create GST Taxation ledgers for CGST, SGST and IGST for input as well as output taxation of GST. Totally, there will be 6 GST taxation ledgers.

Now, create a purchase entry in which you will purchase 5 liters of milk at 5% GST rate for Rs50 per liter, 5 pieces of roti for Rs10 per piece and 3 numbers of mobile for Rs25,000 per mobile.

GST rate for roti and mobile is 28%. Purchase this from inside your state. Also, fill in the E-Way bill details.

Now, create a sales entry. Sell all the milk at Rs.55 per liter with the same rate of GST as it was purchased. Sell 20 pieces of roti at Rs.20 per piece and 1 mobile phone at Rs. 50,000 per mobile at the same rates of GST as it was purchased. This sale will be outside the state. Also, fill in the E-Way bill details.

Now, check the profit and loss account and see what is the total value of sales for 5% GST.

Go to Stock Summary and see what is the gross profit on sales of milk under the FIFO and LIFO methodology of stock valuations.

Check the Ratio Analysis and see what is the current ratio and quick ratio.

SUGGESTED READINGS:

18ENU401	ENGLISH – IV	Semester – IV
		8H – 6C
Instruction Hours / week: L: 4 T: 0 P: 4	Marks: Internal: 40 External: 60	Total: 100
End Semester Exam: 3 Hours		

COURSE OBJECTIVES:**To make the students**

1. To train students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

COURSE OUTCOME:**Learners should be able to**

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Practice the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Refine communication competency through LSRW skills.

UNIT I INTEGRATED SKILLS

Development of speaking- Nature, Process, and Importance of Communication, Types of Communication (Verbal and Non-Verbal), Different forms of Communication, Barriers of Communication, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, and Organizational Barriers, listening and grammar skills.

UNIT II: ADVANCED READING SKILLS

Outcomes include improved reading speed, increased reading fluency and increased vocabulary.

UNIT III: ADVANCED WRITING SKILLS

Business Correspondence – Inviting Quotations, Sending Quotations, Placing Orders, Inviting Tender, Memorandum, Inter-Office, Memo, Notices, Agenda, Minutes, Resume Writing, and Report Writing.

UNIT IV: BUSINESS LANGUAGE AND PRESENTATION

Importance of Business Language, Vocabulary Words often Confused, Words often Misspelt, Common Errors in English, Oral Presentation – Plan, PowerPoint Presentation and Visual Aids.

UNIT V: TECHNOLOGY AND COMMUNICATION

Language of Newspapers, magazines, Internet, TV and radio – their role to develop listening, reading and discussion skills, E-mail writing – Video Conferencing- Strategic importance of e-communication.

SUGGESTED READINGS:

1. In Business; CUP
2. Oxford Handbook of Writing: St. Martins Handbook of Writing
3. Sound Business, Julian Treasure OUP

18PAU401**RESEARCH METHODOLOGY****Semester – IV****6H – 5C****Instruction Hours / week: L:6 T:0 P:0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data and analyses the same using appropriate statistical techniques and apply the learning lifelong.
3. To Critically formulate the research design and sampling design suitable for the problem.
4. To communicate orally and written form the research problem, research design, sampling techniques.
5. To design a report to communicate the findings.
6. To give suggestion to make business decision.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
2. Analyse the research problem and design the blue print to capture data and analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. Critically formulate the research design and sampling design suitable for the problem.
4. Communicate orally and written for the research problem, research design, sampling techniques.
5. Design a report to communicate the findings.
6. Provide suggestion to make business decision

UNIT I RESEARCH AND RESEARCH PROCESS

Meaning of research; Scope of Research in Business; Purpose of Research; Types of Research, Problem identification, Review of Literature, Concept of theory - deductive and inductive theory - Concept, Construct, Definition, Variables - Research Process

UNIT II RESEARCH DESIGN AND SAMPLING DESIGN

Research Design: Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design.

Data Sources – Primary and Secondary Data.

Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non-Response, Characteristics of a good sample. Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Non Probability Sampling – Convenience, Quota, Judgmental, snowball sampling.

UNIT III MEASUREMENT AND SCALING

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio.

Concept of Scaling, Ratings and Ranking Scale, Thurstone, Likert and Semantic Differential scaling, Paired Comparison.

Preparing questionnaire – Quality of a good questionnaire.

UNIT IV HYPOTHESIS TESTING

Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing –Tests concerning means and proportions; ANOVA, Chi-square test and other Nonparametric tests, correlation and Regression

UNIT V REPORT PREPARATION

Meaning, types and layout of research report; Steps in report writing; Citations, Bibliography and Annexure in report.

Note: Distribution of marks - 90% theory and 10% problems

SUGGESTED READINGS:

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.

4. Zikmund William G. et.al (2016), Business Research Methods, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), Research Methods for Business Students, 7th edition, Pearson Education, New Delhi.

18PAU402

INDIRECT TAXATION

Semester – IV

6H – 5C

Instruction Hours / week: L: 6 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. To learn and compute the GST liabilities.
3. To know how to register GST.
4. To apply the GST provisions.
5. To communicate orally and in written form the indirect taxations concepts and provisions.
6. To be familiar with the standards and laws pertaining to the GST and customs and utilize for lifelong practical application.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing's, CGST/IGST/SGST/UTGST and customs law.
2. Comprehend and compute GST liabilities.
3. Know the procedure to register GST and apply GST provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining GST and customs and utilize for lifelong practical application.
6. Application of GST provisions for business concerns.

UNIT I CONCEPT OF INDIRECT TAXES

Concept of Indirect Taxes at a glance : Background; Constitutional powers of taxation; Indirect taxes in India – An overview; Pre-GST tax structure and deficiencies; Administration of Indirect Taxation in India; Existing tax structure.

UNIT II BASICS OF GOODS AND SERVICES TAX 'GST'

Basics concept and overview of GST; Constitutional Framework of GST; GST Model – CGST / IGST / SGST / UTGST; Taxable Event; Concept of supply including composite and mixed supply; Levy and collection of CGST and IGST; Composition scheme & Reverse Charge; Exemptions under GST.

UNIT III CONCEPT OF TIME, VALUE & PLACE OF TAXABLE SUPPLY:

Basic concepts of Time and Value of Taxable Supply; Basics concept of Place of Taxable Supply. Input Tax Credit & Computation of GST Liability- Overview.

UNIT IV PROCEDURAL COMPLIANCE UNDER GST :

Registration; Tax Invoice, Debit & Credit Note, Account and Record, Electronic way Bill; Return, Payment of Tax, Refund Procedures; Audit.

Basic overview on Integrated Goods and Service Tax (IGST), Union Territory Goods and Service tax (UTGST), and GST Compensation to States.

UNIT V OVERVIEW OF CUSTOMS ACT :

Overview of Customs Law; Levy and collection of customs duties; Types of Custom duties; Classification and valuation of import and export goods; Exemption; Officers of customs; Administration of Customs Law; Import and Export Procedures; Transportation, and Warehousing; Duty Drawback; Demand and Recovery; Confiscation of Goods and Conveyances; Refund.

Note: Distribution of marks - 30% theory and 70% problems

SUGGESTED READINGS :

1. V S Datey, Indirect taxes Law and Practice (2019), 42nd Edition, Taxmann Publication, New Delhi.
2. Dr. H.C. Mehrotra, Prof. V.P. Agarwal (2017), Indirect Taxes, 18th Revised Edition, Sahitya Bhawan Publications, New Delhi.
3. Dr Girish Ahuja , Dr Ravi Gupta (2018), Practical Approach to Direct and Indirect Taxes: Containing Income Tax and GST, 37th edition, Wolters Kluwer India Private Limited, New Delhi.

5. The Institute of Cost Accountants of India (2018), Indirect Taxation, Directorate of Studies/ <https://icmai.in/TaxationPortal/GST/index.php>

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong practice.
6. To prepare Cash flow and fund flow statements.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the users of the financial statements for the decision making.
2. Understand and apply tools and techniques to analyse the financial statement analysis.
3. Critically evaluate the results of the tools applied, interpret the result.
4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. Preparation of statement of cash and fund flow.

UNIT I : FINANCIAL REPORTING

Accounting Standards, Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

Overview of International Accounting Standards (IAS)/International Financial Reporting Standards (IFRS)- Interpretations by International Financial Reporting Interpretation Committee (IFRIC), Significant difference vis-a-vis IAS and IFRS.

Corporate Financial Reporting – Issues and problems with special reference to published financial statements

UNIT II FINANCIAL STATEMENTS - AN INTRODUCTION

Traditional Assumptions of the Accounting Model : Business Entity - Going Concern or Continuity - Time Period - Monetary Unit - Historical Cost - Conservatism - Realization - Matching - Consistency - Full Disclosure - Materiality - Industry Practices - Transaction Approach - Cash Basis - Accrual Basis

The Financial Statements : Balance Sheet (Statement of Financial Position) - Statement of Stockholders' Equity (Reconciliation of Stockholders' Equity Accounts) - Income Statement (Statement of Earnings) - Statement of Cash Flows (Statement of Inflows and Outflows of Cash)

Auditor's Opinion : Auditor's Report on the Firm's Internal Controls - Report of Management on Internal Control over Financial Reporting

Basic Elements of the Balance Sheet : Assets - Liabilities - Stockholders' Equity - Quasi-Reorganization - Accumulated Other Comprehensive Income - Equity-Oriented Deferred Compensation - Employee Stock Ownership Plans (ESOPs) - Treasury Stock - Stockholders' Equity in Unincorporated Firms

Basic Elements of the Income Statement : Net Sales (Revenues) • Cost of Goods Sold (Cost of Sales) • Other Operating Revenue • Operating Expenses • Other Income or Expense

UNIT III FINANCIAL ANALYSIS – 1

Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis

Ratio Analysis - Liquidity of Short-Term Assets

Current Assets, Current Liabilities, and the Operating Cycle

Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities

Current Assets Compared with Current Liabilities

Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) - Cash Ratio

Income Statement Consideration when Determining Long-Term

Debt-Paying Ability- Times Interest Earned

Balance Sheet Consideration when Determining Long-Term

Debt-Paying Ability

Debt Ratio - Debt/Equity Ratio

UNIT IV FINANCIAL ANALYSIS - 2

Profitability Measures

Net Profit Margin - Total Asset Turnover - Return on Assets - DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts - Operating Income Margin - Operating Asset Turnover - Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - The Relationship Between Profitability Ratios - Gross Profit Margin For the Investors

Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, Dividend Yield

Book Value per Share

Basic Elements of the Statement of Cash Flows

Financial Ratios and the Statement of Cash Flows

Operating Cash Flow/Current Maturities of Long-Term Debt and Current Notes - Payable - Operating Cash Flow/Total Debt - Operating Cash Flow per Share - Operating Cash Flow/Cash Dividends

UNIT V THE USERS OF FINANCIAL STATEMENTS

Financial Ratios as Perceived by Commercial Loan Departments : Most Significant Ratios and Their Primary Measure • Ratios Appearing Most Frequently in Loan Agreements.

Financial Ratios as Perceived by Corporate Controllers : Most Significant Ratios and Their Primary Measure • Key Financial Ratios Included as Corporate Objectives

Financial Ratios as Perceived by Certified Public Accountants

Financial Ratios as Perceived by Chartered Financial Analysts

Financial Ratios Used in Annual Reports

Note: Distribution of marks - 40% theory and 60% problems

COURSE OBJECTIVES:**To make the students**

1. To know the uses of spreadsheet for business.
2. To Understand the features of Spreadsheet applications and functions.
3. To comprehend and apply computer tools and inbuilt functions on raw data.
4. To communicate orally and in written form the features of spreadsheet applications and functions.
5. To utilize the expertise of the Excel features and functions as a lifelong practice.
6. To learn shortcut methods in spreadsheet.

COURSE OUTCOMES:**Learners should be able to**

1. Utilize application of spreadsheet for business reporting purpose.
2. Understand the features of Spreadsheet applications and functions.
3. Comprehend and apply computer tools and inbuilt functions on raw data.
4. Communicate orally and in written form the features of spreadsheet applications and functions.
5. Utilize the expertise of the Excel features and functions as a lifelong practice.
6. Use shortcut methods in spreadsheet

UNIT I GETTING STARTED WITH EXCEL

Opening Excel, Creating and Opening Workbook- Saving and Sharing Workbook , Cell Basics - Understanding Cells, Cell Contents, Find and Replace, Formatting Cells - Font Formatting, Text Alignment, Cell Borders and fill colors, Cell styles, Formatting text and numbers, Modifying Columns, Rows and Cells - Inserting, Deleting, Moving, and Hiding rows and columns -Wrapping text and merging Cells

Printing Workbooks - Choosing a print area, Fitting and scaling content

Finalising and Protecting Workbooks

UNIT II FORMULAS AND FUNCTIONS

Formulas and Functions - Simple Formulas, Complex Formulas, Functions (Statistical, financial, Text, Data and Time)

UNIT III DATA ANALYSIS

Auto filter and Advanced filter, Creating and using outlines, Conditional formatting, Sparklines Collating data from several worksheets

Working with Data - Freezing Panes and view options, Sorting Data, Filtering Data

Working with charts - Understanding Charts, Chart Layout and style, Other chart options

UNIT IV ADVANCED FUNCTIONS

AutoSum, IF Function, VLookup Function and Hlook up, What if Analysis – solver, Name Ranges, Charts and filter data using Slicers, Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.

UNIT V PIVOT TABLE AND VBA

Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function

VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

RESEARCH METHODOLOGY (PRACTICAL)

Semester – IV
2H – 1C

18PAU411

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of research, Research Process, research design, sampling techniques, hypothesis writing and report writing.
2. To analyse the research problem and design the blue print to capture data, analyse the same using appropriate statistical techniques and apply the learning lifelong.
3. To Critically evaluate the appropriate scales and measurement to be used for capturing data.
4. To Communicate in written form and prepare report to support decision making.
5. To Work in team and exhibit leadership skills
6. To analysis the problems relating to business

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the meaning of research, theory of induction, deduction, research process, research design, sampling techniques, hypothesis writing and report writing
 2. Analyse the research problem and design the instruments to capture data, analyse the same using appropriate statistical techniques, and apply the learning lifelong.
 3. Critically evaluate the appropriate scales and measurement to be used for capturing data.
 4. Communicate in written form and prepare report to support decision making.
 5. Work in team and exhibit leadership skills
 6. Problem solving and make better decisions.
-
1. Select a problem or issue. Collect 5-10 articles related to issues from reviewed journals available.
 2. Analyse a case to understand the theory of deductive and inductive reasoning.
 3. Analyse a case for the selection of appropriate research design
 4. Analyse a case for the selection of appropriate sampling design
 5. Provide a list of variables and request to classify them as nominal/ordinal/interval/ratio
 6. Ask student to prepare a questionnaire for understanding the perception towards the usage of library among students/ Reading habits among youngsters/ environmental protection Ask students to perform analysis and hypothesis testing for the collected data
 7. Ask students to prepare a technical report for the research undertaken (Minimum 30 pages)
 8. Ask students to write the bibliography in MLA/CPA format for reference made.

Note : 6 – 8 (Team of 2-3 students)**SUGGESTED READINGS:**

1. C.R. Kothari , Gaurav Garg (2018), Research Methodology, Fourth Edition, New Age International Publishers, New Delhi.
2. Uma Sekaran, Roger Bougie (2018), Research Methods for Business: A Skill-Building Approach, 7th edition, Wiley, New Delhi.

4. Zikmund William G. et.al (2016), Business Research Methods, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), Research Methods for Business Students, 7th edition, Pearson Education, New Delhi.

INDIRECT TAXATION (PRACTICAL)

Semester – IV
2H – 1C

18PAU412

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. To know how to register GST.
3. To apply the GST provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the GST and customs and apply the knowledge lifelong.
6. To learn and compute the GST liabilities.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
 2. Know the procedure to register GST and apply GST provisions to business situations.
 3. Communicate orally and in written form the indirect taxations concepts and provisions.
 4. Familiar with the standards and laws pertaining GST and customs and apply the knowledge lifelong.
 5. Application of GST provisions for business concerns.
 6. Comprehend and compute GST liabilities.
-
1. Provision of GST, the provisions related to levy of UTGST.
 2. Whether the following transactions will be considered as supply or not under GST laws (provisions) a) An individual buys a car for personal use and after a year sells it to a car dealer. b) A dealer of air-conditioners permanently transfers an air conditioner from his stock in trade, for personal use at his residence. c) Provision of service or goods by a club or association or society to its members.
 3. Whether GST would be payable in following independent cases (provisions) : a) A Company Secretary makes payment of LLP Registration fees of Rs. 3,000/- on behalf of their clients and charges the client his professional fee of Rs. 15,000/- along with expenses of Rs. 3,000/- incurred in form of payment to Registrar of Companies. b) A company provides Subsidized Meal facility to employees. It pays Rs. 70/- per plate to the caterer and deducts Rs. 10/- per plate from the employee's salary. c) A pharmaceutical company supplies free samples to doctors. d) Raghunath Temple Charitable trust, registered under section 10(23C)(v) of the Income-tax Act gives on rent a community hall, located within temple premises, to public for organizing a Diwali Mela. Rent charged is Rs. 9,500. e) Northstar Trucking Ltd. has given on hire 11 trucks to Jaggi Transporters of Mumbai (a goods transport agency) for transporting goods in various parts of the country. The hiring charges for the trucks are Rs. 10,200 per truck per day.
 4. Procedure for GST Registration and Filing of GST Returns
 5. Procedure of furnishing details of outward supplies and of revision for rectification of errors and omissions as per CGST Act, 2017.

6. XYZ Education Advisory promotes the courses of foreign universities among prospective students. It has tied up with various Universities all over the world. These Universities have engaged them for promotional and marketing activities for promotion of the courses taught by them and making the prospective students aware about the course fee and other associated costs, market intelligence about the latest educational trend in the territory and ensuring payment of the requisite fees to the Universities if the prospective students decide upon pursuing any course promoted by the Applicant. XYZ Education Advisory receives consideration in the form of commission from the foreign University for these services rendered to prospective students. It wants to know whether the service provided to the Universities abroad would be considered “export” within the meaning of Section 2(6) of the Integrated Goods and Services Act, 2017, and, therefore, a zero-rated supply under the CGST Act 2017?
7. IGST Model - “export of goods” and “export of services”. How are exports be treated under GST? Siddharth Transports Ltd., is running a regular tourist bus service, carrying passengers and goods from Coimbatore, Tamil Nadu to Trivandrum, Kerala, with effect from 1st August, 2017 and is charging IGST on transportation services under forward charge mechanism. Discuss whether on Inter-state movement of tourist buses from one depot to another of Siddharth Transports Ltd. would be leviable to IGST.
8. Prescribed offences under CGST/SGST Act
9. Provisions for Anti-Profiteering measure and National Anti-Profiteering Authority (NAA).
10. The applicability of GST Rates for hotels and restaurants.
11. Bharghav Pesticides Ltd., a domestic company, intends to start a business in Kolkata, involving supply of certain goods, mostly meant for foreign buyers in China. There is some difficulty in the classification of the goods. Can the company seek advance ruling from the Authority for Advance Ruling formed under CGST Act, 2017 in respect of the issue of classification of goods? Can the company also seek ruling on issues involving place of supply?
12. Who is a ‘casual taxable person’ under the GST? Mr. A of Ludhiana is participating in Hitex Furniture Expo in Haryana where he has no fixed place of business and exhibiting his products. During the expo, the said products will be sold to the people attending and intending to purchase such products. In such scenario, Mr. A required to obtain registration in the state of Haryana? If yes, how?
13. Basic documents to be filed along with bill of entry

FINANCIAL ANALYSIS AND REPORTING (PRACTICAL)

Semester – IV

18PAU413A

2H – 1C

Instruction Hours / week: L: 0 T:0 P:2

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
2. To understand and apply tools and techniques to analyse the financial statement analysis.
3. To critically evaluate the results of the tools applied, interpret the result.
4. To communicate orally and in written form the financial statement analysis, and results interpretation of the results.
5. To utilize the knowledge of financial statement analysis for lifelong.
6. To prepare Cash flow and fund flow statements.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the Concept of Financial reporting standards, difference between IFRS and IAS and the elements and users of the financial statements for the decision making.
 2. Understand and apply tools and techniques to analyse the financial statement analysis.
 3. Critically evaluate the results of the tools applied, interpret the result.
 4. Communicate orally and in written form the financial statement analysis, and results interpretation of the results.
 5. Utilize the knowledge of financial statement analysis for lifelong.
 6. Preparation of statement of cash and fund flow.
-
1. To select a Company – Reason for selecting the company as investor
Download the financial statements
Perform the following financial analysis and interpret
 2. Common-Size Analysis (Vertical and Horizontal), Year-to-Year Change Analysis
 3. Ratio Analysis - Liquidity of Short-Term Assets
Current Assets, Current Liabilities, and the Operating Cycle
Cash - Marketable Securities - Receivables - Inventories - Prepayments - Other Current Assets - Current Liabilities
Current Assets Compared with Current Liabilities
Working Capital - Current Ratio - Acid-Test Ratio (Quick Ratio) - Cash Ratio
 4. Debt-Paying Ability- Times Interest Earned
 5. Debt Ratio - Debt/Equity Ratio
 6. Net Profit Margin - Total Asset Turnover - Return on Assets – Operating Income Margin - Operating Asset Turnover
 7. Return on Operating Assets - Sales to Fixed Assets - Return on Investment (ROI) - Return on Total Equity - Return on Common Equity - Gross Profit Margin
 8. DuPont Return on Assets - Interpretation Through DuPont Analysis - Variation in Computation of DuPont Ratios Considering Only Operating Accounts
 9. For the Investors : Earnings per Common Share, Price/Earnings Ratio, Dividend Payout, - Book Value per Share

COURSE OBJECTIVES:**To make the students**

1. To Create and format the data in excel sheet
2. To utilize all the inbuilt, functions and formulas and analyse the data.
3. To critically analyse the data using the what-if, solver and pivot functions.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
6. To learn shortcut methods in spreadsheet.

COURSE OUTCOMES:**Learners should be able to**

1. Create and format the data in excel sheet
 2. Utilize all the inbuilt, functions and formulas and analyse the data.
 3. Critically analyse the data using the what-if, solver and pivot functions.
 4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
 5. Apply the practice of utilization of spreadsheets lifelong learning for data analysis and decision making.
 6. Use shortcut methods in spreadsheet
- Creating an excel sheet and performing all formatting tools and protecting and printing the file.
 - Performing statistical functions, Performing financial functions, Performing date and text function
 - Filtering the data, Conditional formatting
 - Collating data from several worksheets
 - Charts, Chart Layout and style, Other chart options
 - IF Function,
 - VLookup Function and Hlook up,
 - What if Analysis – solver,
 - Name Ranges,
 - Charts and filter data using Slicers,
 - Excel dashboards – planning a dashboard, adding tables and charts in dashboard, adding dynamic content in dash board.

- Pivot Table - Advance value field setting, Array functions and formulas, Array with lookup function
- VBA – Recording a VBA, variables in VBA, if and select statements, message box and input box functions, Looping in VBA, Mail functions in VBA, Merge worksheets using VBA, Split worksheets using VBA functions.

COMPANY LAW

Semester – V
8H – 6C

Instruction Hours / week: L: 8 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of laws related to constitution of company, finance structure, management team.
2. To comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. To analyse few real time cases relevant to company laws
4. To communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. To be familiar with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. To know the online registration and online filing process of documents.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of laws related to constitution of company, finance structure, management team.
2. Comprehend on the laws pertaining to the need of audit, accounts, dividend and winding up of the company.
3. Analyse few real time cases relevant to company laws
4. Communicate orally and in written form and analyse cases in a team and exhibit leadership skills.
5. Familiarize with the standards and laws pertaining to the corporate and utilize for lifelong practical application.
6. Online registration and online filing process of documents.

UNIT 1: INTRODUCTION AND INCORPORATION AND ITS CONSEQUENCES

Administration of Company Law [including National Company Law Tribunal (NCLT), National Company Law Appellate Tribunal (NCLAT), Special Courts]; Characteristics of a company; lifting of corporate veil; types of companies including one-person company, small company and dormant company; association not for profit; illegal association; formation of company, on-line filing of documents, promoters, their legal position, pre-incorporation contract; on-line registration of a company, Memorandum of Association & Articles of Association and their Alteration, Doctrine of Ultra-Vires, Constructive Notice, Indoor Management, Alter Ego

UNIT 2: FINANCIAL STRUCTURE OF COMPANIES

Concept of Capital and Financing of Companies– Sources of Capital; Classes and Types of Shares; Equity Shares with Differential Rights; Issue of Shares at Par, Premium and Discount; Forfeiture and Surrender of Shares; Bonus Issues; Rights Issues; Issue of Sweat Equity Shares; Employees Stock Option Scheme; Private Placement; preference shares and other forms of securities, Alteration of Share Capital– Reduction of Capital; Buy–Back of Shares

Prospectus– Definition; Abridged Prospectus; Red–Herring Prospectus; Shelf Prospectus; Information Memorandum; Contents, Registration; Misrepresentations and Penalties

Debt Capital – Debentures, Debenture Stock, Bonds; Recent Trends and Dynamics of Corporate, Debt Financing; Debenture Trust Deed and Trustees; Conversion of and Redemption of Debentures Securing of Debts: Charges ; Creation, Modification and Satisfaction of Charges

Allotment and Certificates – General Principles and Statutory Provisions related to Allotment;

Minimum Subscription; Irregular Allotment; Procedure of Issue of Share Certificates and Warrants

UNIT III: MANAGEMENT:

Classification of directors, women directors, independent director, small shareholder's director; Disqualifications, director identity number (DIN); Appointment; Legal positions, powers and duties; removal of directors; Key managerial personnel, managing director, manager; Meetings of shareholders and board; Types of meeting, convening and conduct of meetings, postal ballot, meeting through video conferencing, e-voting; Committees of Board of Directors - Audit Committee, Nomination and Remuneration Committee, Stakeholders Relationship Committee, Corporate Social Responsibility Committee.

UNIT IV: ACCOUNTS, AUDIT AND DIVIDENDS

Books of Accounts : Financial Statements.

Auditors – Appointment, Resignation and Removal; Qualification and Disqualification; Rights, Duties and Liabilities, Audit and Auditor's Report, Cost Audit and Special Audit

Profit and Ascertainment of Divisible Profits, Declaration and Payment of Dividend, Treatment of Unpaid and Unclaimed Dividend, Transfer of Unpaid and Unclaimed Dividend to Investor Education and Protection Fund, Board's Report and Disclosures Contents and Annexure to Board's Report, Directors' Responsibility Statement – Preparation and Disclosures, Compliance Certificate – Need and Objective; Issue and Signing by Practising Company Secretary, Corporate Governance Report

UNIT V: WINDING UP

Concept and modes of Winding Up. Insider-Trading, Whistle-Blowing – Insider-Trading; meaning and legal provisions; Whistleblowing: Concept and Mechanism.

SUGGESTED READINGS

		8H – 6C
Instruction Hours / week: L: 6 T: 2 P: 0	Marks: Internal: 40 External: 60	Total: 100
		End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
2. To analyse the alternatives using appropriate tools and techniques.
3. To solve the problems and take decisions based on the result.
4. To communicate orally and in written form the concepts and solutions.
5. To analyse cases in a team and exhibit leadership skills.
6. To plan and manage the cash flows.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of financial management, objective of financial management, the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
2. Analyse the alternatives using appropriate tools and techniques.
3. Solve the problems and take decisions based on the result.
4. Communicate orally and in written form the concepts and solutions.
5. Analyse cases in a team and exhibit leadership skills.
6. Plan and Manage the cash flows in companies.

UNIT I : FINANCIAL MANAGEMENT AND SOURCES OF FINANCE :

Evolution, Scope and Functions of Finance Managers- Introduction; Scope of Finance; Financial Management System; Finance Functions ; Role of a Finance Manager – Treasurer and Controller, Financial Decisions, Agency Conflict and Agency cost.

Objectives of a Firm – Introduction; Profit Maximization; Shareholders' Wealth Maximization (SWM)

Sources of Finance - Introduction; Short-term Finance; Long-term Funds
Asset-Based Financing – Introduction; Lease Financing and Hire Purchase Financing.

UNIT II : TIME VALUE OF MONEY AND CAPITAL BUDGETING DECISIONS :

Time Value of Money - Introduction; Concept of Time Value of Money; Compounding Method ; Discounting Method (Problems)

Capital Budgeting Decisions- Introduction; Capital Budgeting, Capital Rationing

Capital budgeting techniques : Discounted and Non Discounted : NPV, Profitability index (Benefit Cost Ratio), Pay back Period, IRR ; (Problems)

UNIT III CAPITAL STRUCTURE THEORIES AND COST OF CAPITAL :

Capital Structure, Capital structure determinants, NI Approach, NOI approach, Traditional Approach, **Relevance of Capital Structure Theories ; Irrelevance of Capital Structure**

Cost of Capital; Components of Cost of capital: Cost of Debt; Cost of Preference Capital; Cost of Equity Capital, Approaches to Derive Cost of Equity; Weighted Average Cost of Capital and Weighted Marginal Cost of Capital (Problems)

UNIT IV LEVERAGE AND DIVIDEND POLICY

Financial and Operating Leverage – Introduction; Meaning of Financial Leverage, operating Leverage.

Financial and Operating Leverages, EBIT-EPS Analysis, Indifference point. (Problems)

Dividend Policy – Introduction; Types of dividend, Factors influencing the dividend policy; Financing and Dividend Decision; Dividend Relevance: Walter's Model

UNIT V : WORKING CAPITAL MANAGEMENT, CASH MANAGEMENT, RECEIVABLE MANAGEMENT AND INVENTORY MANAGEMENT.

Introduction; Concepts of Working Capital; Working capital Policies, Operating Cycle, (Problems) Estimation of working capital (Problems).

Management of Cash – Introduction ; Motives for Holding Cash; Facets of Cash Management; Cash Planning; Cash Forecasting and Budgeting; Determining the Optimum Cash Balance ; **Investing Surplus Cash in Marketable Securities**

Receivables Management : **Credit Policy: Nature and Goals ;Collection Procedures**

Inventory Management : Nature of Inventory, **EOQ, Reorder level.**

Note: Distribution of marks - 60% theory and 40% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To analysis the financial statement of a company.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Making decisions based on the financial statement analysis.

UNIT I :INTRODUCTION

Meaning, Objectives, Nature and Scope of management accounting, Difference between cost accounting and management accounting, Cost control and Cost reduction, Cost management

UNIT II :FINANCIAL STATEMENT ANALYSIS

Horizontal and Vertical Analysis.

Ratio Analysis: Meaning, Advantages, Limitations, Classifications of ratios

Fund Flow Statement: Meaning, Uses, Limitations, Sources and uses of funds

Cash Flow Statement: Meaning, Uses, Limitations, Sources and uses of cash, AS3 Standard format.

UNIT III : STANDARD COSTING

Standard Costing: Standard Costing and Variance Analysis: Meaning of standard cost and standard costing, advantages, limitations and applications. Variance Analysis – material, labour, overheads and sales variances. Disposition of Variances, Control Ratios.

UNIT IV :MARGINAL COSTING AND DECISION MAKING

Absorption versus Variable Costing: Distinctive features and income determination. Cost-Volume Profit Analysis, Profit / Volume ratio. Break-even analysis-algebraic and graphic methods. Angle of incidence, margin of safety, Key factor, determination of cost indifference point.

Decision Making : Steps in Decision Making Process, Concept of Relevant Costs and Benefits, Various short term decision making situations – profitable product mix, Acceptance or Rejection of special/ export offers, Make or buy, Addition or Elimination of a product line, sell or process further, operate or shut down. Pricing Decisions: Major factors influencing pricing decisions, various methods of pricing

UNIT V: BUDGETARY CONTROL AND CONTEMPORARY ISSUES :

Budgeting and Budgetary Control: Concept of budget, budgeting and budgetary control, objectives, merits, and limitations. Budget administration. Functional budgets. Fixed and flexible budgets. Zero base budgeting. Programme and performance budgeting.

Contemporary Issues : Responsibility Accounting: Concept, Significance, Different Responsibility Centers, Divisional Performance Measurement: Financial and Non-Financial measures. Transfer Pricing

Note: Distribution of marks - 30% theory and 70% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To analyse the business case studies and try to apply the theoretical learning into lifelong practice.
5. To Critically evaluate the appropriate alternatives and draw a solution.
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Analyse the business case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I : INTRODUCTION TO MARKETING MANAGEMENT:

Introduction: Market and Marketing, the Exchange Process, Core Concepts of Marketing - Market and Marketing, the Exchange Process, Core Concepts of Marketing, Exchange concept, Production concept, Product concept, Sales/selling concept, Modern marketing concept, Societal marketing concept, Impact of marketing concepts and its applicability, Functions of Marketing, Importance of Marketing, Marketing Orientations.

Environmental Scanning: Analysing the Organization's Micro Environment, Company's Macro Environment, Differences between Micro and Macro Environment, Techniques of Environment Scanning,

UNIT II - THE MARKET PROCESS AND SEGMENTATION

The marketing process: Introduction, Marketing Mix-The Traditional 4Ps, The Modern Components of the Mix- The Additional 3Ps, Developing an Effective Marketing Mix, Marketing Planning, Marketing Implementation and Control,

Segmentation : Concept of Market Segmentation, Benefits of Market Segmentation, Requisites of Effective Market Segmentation, The Process of Market Segmentation, Bases for Segmenting Consumer Markets, Targeting (T), Market Positioning (P)

UNIT III :PRODUCT MANAGEMENT

Decisions, Development and Lifecycle Strategies: Introduction, Levels of Products, Classification of Products, Product Hierarchy, Product Line Strategies, Product Mix Strategies, Packaging and Labelling, New Product Development, Product Life Cycle (PLC)

Brand and Branding Strategy: Introduction, Brand and Branding, Advantages and disadvantages of branding, Brand Equity, Brand Positioning, Brand Name Selection, Brand Sponsorship, Brand Development

UNIT IV : PRICING AND DISTRIBUTION MANAGEMENT

Pricing : Introduction, Factors Affecting Price Decisions, Cost Based Pricing, Value Based and Competition Based Pricing, Product Mix Pricing Strategies, Adjusting the Price of the Product, Initiating and Responding to the Price Changes.

Distribution Management: Introduction, Need for Marketing Channels, Decisions Involved in Setting up the Channel, Channel Management Strategies, Introduction to Logistics Management, Introduction to Retailing, Wholesaling,

UNIT V - PROMOTION MANAGEMENT AND RECENT DEVELOPMENTS IN MARKETING

Nature and importance of promotion; Communication process; Types of promotion: advertising, personal selling, public relations & sales promotion, and their distinctive characteristics; Promotion mix and factors affecting promotion mix decisions;

Recent developments in marketing: Social Marketing, online marketing, direct marketing, services marketing, green marketing, Rural marketing; Consumerism

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of investing and mechanics for formulating investment decisions.
2. To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. To apply the investing concepts and skills lifelong.
4. To analyse the EIC framework make decisions based on investing in different avenues.
5. To Critically evaluate the risk return parameters and select the best alternative.
6. To Communicate in written form and prepare report

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. Apply the investing concepts and skills lifelong.
4. Analyse the EIC framework make decisions based on investing in different avenues.
5. Critically evaluate the risk return parameters and select the best alternative.
6. Communicate in written form and prepare report

UNIT I : The Investment and Investment Avenues

Concepts of investment – Sources of investment information- Investment Instruments. Investment cycle.

UNIT II: Risk and Return and Valuation of Securities

Concept of total risk, factors contributing to total risk : default risk, interest rate risk, market risk, management risk, purchasing power risk, systematic and unsystematic risk,.

Risk & risk aversion. Capital allocation between risky & risk free assets-Utility analysis

Bond Valuation, Preference Share Valuation and Share Valuation: Dividend discount models- no growth, constant growth (Problems)

UNIT III Fundamental Analysis, Technical Analysis and Market Efficiency

EIC framework; Economic analysis: Leading lagging & coincident macro-economic indicators, Expected direction of movement of stock prices with macroeconomic variables in the Indian context; Industry analysis: stages of life cycle, Porter's five forces model, SWOT analysis, financial analysis of an industry; Company analysis. Technical Analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, Trends: resistance, support, consolidation, momentum- Charts:

line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, Indicators: moving averages

Efficient Market Hypothesis; Concept of efficiency: Random walk, Three forms of EMH

UNIT IV :Portfolio Management and portfolio Theory

Portfolio Management – Portfolio creating process - Portfolio Analysis: portfolio risk and return, Markowitz portfolio model: risk and return for 2 and 3 asset portfolios, concept of efficient frontier and optimum portfolio

Portfolio Theory : Capital asset pricing model – Arbitrage pricing theory – assumptions, significances and limitations of each theory

UNIT V:Mutual Funds, Portfolio Evaluation and Portfolio Revision

Mutual Funds: Introduction, calculation of Net Asset Value(NAV) of a Fund, classification of mutual fund schemes by structure and objective, advantages and disadvantages of investing through mutual funds.

Performance Evaluation using Sharpe's Treynor's and Jensen's measures.

Meaning – needs – Sharpe's performance measures – Treynor's Performance Index – Jensen's Performance Index – their significance and limitations – Portfolio revision (Problems)

Note: Distribution of marks - 80% theory and 20% problems

SUGGESTED READINGS :

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of micro and macroeconomic factors and its application in business.
2. To communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. To apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. To analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. To Critically evaluate the appropriate alternatives and draw a solution
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of micro and macroeconomic factors and its application in business.
2. Communicate orally and in written form Concept of micro and macroeconomic factors and its application in business.
3. Apply the micro and macroeconomic factors that is applied for the lifelong decision related to individual and business.
4. Analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I BUSINESS ECONOMICS; DEMAND AND SUPPLY:

Introduction - Meaning, nature and scope of Business

Economics, Significance in decision making.

Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply – Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II PRODUCTION, COST AND REVENUE FUNCTION:

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors – Short & Long run – Total Product – Marginal Product – Average Product – Production Function – Law of Returns – Law of Returns to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs – Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves – Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III MARKET COMPETITION:

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly Market – Features

UNIT IV : MACRO ECONOMIC FACTORS :

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer Payments – National Income Aggregates– Private Income – Personal Income – Personal Disposable Income – National Disposable Income – Measurement of National Income – Production Method – Income Method – Expenditure Method

Phases of Business Cycle – Causes of cyclical movements – Price Movements: Inflation, Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.

UNIT V : MONETARY POLICY :

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy – Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget Preparation – Deficit Budget.

Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP – Disequilibrium in BOP.

Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of Interest.

Note: Distribution of marks - 80% theory and 20% problems

BANKING LAW AND PRACTICE

Semester – V

6H – 5C

Instruction Hours / week: L: 6 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of banking operations, functions, risk associated with and law pertaining to banking functions,
2. To comprehend on the Indian banking system, its regulatory body and key macro indicators related to banks that affect the economy.
3. To communicate orally and in written form the understanding of banking operations, functions, risk associated with and law pertaining to banking functions
4. To apply the learning of the bank functions and operations lifelong.
5. To comprehend and apply the laws related to banking.
6. To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of banking operations, functions, risk associated with and law pertaining to banking functions,
2. Comprehend on the Indian banking system, its regulatory body and key macro indicators related to banks that affect the economy.
3. Communicate orally and in written form the understanding of banking operations, functions, risk associated with and law pertaining to banking functions
4. Apply the learning of the bank functions and operations lifelong.
5. Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
6. Comprehend and apply the laws related to banking.

UNIT I: Overview of Indian Banking System :

Indian Banking System – Evolution; Structure of Banks in India; Commercial Banks; Co-operative Banking System; Development Banks; NBFCs.

Regulatory Framework of Banks : Constitution, Objectives, Functions & powers of RBI; Tools of Monetary Control; Role of RBI; Govt. as a Regulator of Banks; Regulation of Interest Rate; Regulation of Payment Systems; Internet Banking Guidelines; Regulation of Money Market Instruments; Reserve Funds; Maintenance of CRR, SLR; Assets in India. COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of insurance, insurance products and services and the regulatory environment guiding the insurance function.
2. To comprehend on the risk mitigation concepts and usage of insurance products to mitigate risk and insurance contract in Indian market.
3. To communicate orally and in written form the understanding of insurance operations, functions, risk associated with and law pertaining to insurance functioning in India.
4. To apply the learning of the insurance procedures, products, services and operations lifelong.
5. To comprehend on the insurance industry, its regulatory body, insurance laws that supports the mitigation of risk in India.
6. To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of insurance, insurance products and services and the regulatory environment guiding the insurance function.
2. Comprehend on the risk mitigation concepts and usage of insurance products to mitigate risk and insurance contract in Indian market.
3. Communicate orally and in written form the understanding of insurance operations, functions, risk associated with and law pertaining to insurance functioning in India.
4. Apply the learning of the insurance procedures, products, services and operations lifelong.
5. Comprehend on the insurance industry, its regulatory body, insurance laws that supports the mitigation of risk in India.
6. Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.

UNIT I Understanding and Managing Risk :

Risk Management - Perils - Nature – Risk Analysis – Planning – Control - Mechanism for Transfer of risk Insurance and Reinsurance

General Principles and Concepts of Insurance

Insurable Interest - Indemnity - Uberrimae fidei - Proximate Cause - Subrogation and Contribution - Differentiation Insurance and Guarantee - Insurance and Wager - Disclosure – Moral Hazards

UNIT II Insurance Contract and Indian Market Conditions :

Nature of Insurance Contract - Features of Insurance Contract - Types of Insurance - Concept of Intermediaries – Market Players and their Roles - Agents, Brokers, Surveyors & Loss Assessors, Health Third Party Administrators, Certification of Insurance Professionals, Training Organizations.

UNIT III Regulatory Environment

Regulatory Environment – Specific Legislations

Regulation of Insurance Business, Insurance Act, Insurance Regulatory and Development Act, Powers and Functions of IRDA, Relevant Regulations and Guidelines issued by IRDA, Licensing,

Audit & Supervision, Investments, Amalgamation and Transfer, Grievance Redressal, Rural and Social Sector obligations, Micro Insurance, Financial inclusion, Product Approval.

Regulatory Environment - General

Other Relevant Legislation (Motor Vehicles Act, Marine Insurance Act, Employees State Insurance Act etc.), Consumer Protection, Courts, Tribunals, Insurance Ombudsmen, Arbitration.

International Regulatory Framework

International Association of Insurance Supervisors – Future Trends

UNIT IV Life Insurance - Practices, Procedures

Application of Principles in Life Insurance Contract -- Representation - Assignment and Nomination - Title and Claims - Tax Law Implications - Concept of Trusts in Life Policy - Stamp Duties - Role and Function of Life Insurance Companies.

Life Insurance & Pension Products

Life Insurance Products – Proposals, Policy and documentation

UNIT V General Insurance - Practices and Procedures – Focus Underwriting

Application of Principles in General Insurance Contracts – Structure of the Policy – Insurance Documentation – Underwriting and Rating - Disclosure - Terms and Conditions.

Claims Procedures – Underinsurance - Condition of Average - Recovery – Salvage.

Property Insurance (Fire and Engineering) • Marine Insurance (Hull and Cargo) • Motor Insurance • Business Interruption • Liability Insurance (Public, Products, Professional, Directors & Officers etc.) • Personal Lines (Health, Accident, Travel, Residential Premises etc.) • Rural and Agricultural • Micro-Insurance • Other Miscellaneous lines (Burglary, Bankers' Risks, Fidelity etc.)

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
2. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. To Critically evaluate the appropriate alternatives available as entrepreneur and draw a solution.
5. To Work in team and exhibit leadership skills
6. To analyse the case studies and try to apply the theoretical learning into lifelong practice

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of entrepreneurship, entities of business, creating ideas, mobilizing funds and support from government.
2. Communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. Apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. Analyse the case studies and try to apply the theoretical learning into lifelong practice.
5. Critically evaluate the appropriate alternatives available as entrepreneur and draw a solution.
6. Work in team and exhibit leadership skills

UNIT I INTRODUCTION

Meaning, scope and importance of Entrepreneurship - Evolution of entrepreneurial thought - Entrepreneurship as a career option - Functions of Entrepreneurs - Entrepreneurial Characteristics and Skills - Entrepreneur vs. Manager - Creativity & Creative Process - Types of Entrepreneurs (Clarence Danhoff's Classification) - Intrapreneurship – Concept and Types (Hans Schollhammer's Classification) - Entrepreneurship in different contexts: technopreneurship, cultural entrepreneurship, international entrepreneurship, netpreneurship, ecopreneurship, and social entrepreneurship

UNIT II TYPES OF BUSINESS ENTITIES

Micro, Small and Medium Enterprises. Concept of business groups and role of business houses and family business in India. Values, business philosophy and behavioural orientations of important family business in India. Managerial roles and functions in a small business. Entrepreneur as the manager of his business

UNIT III PUBLIC AND PRIVATE SYSTEM OF STIMULATION, SUPPORT AND SUSTAINABILITY OF ENTREPRENEURSHIP

Public and private system of stimulation, support and sustainability of entrepreneurship. Requirement, availability and access to finance, marketing assistance, technology, and industrial accommodation, Role of industries/entrepreneur's associations and self-help groups. The concept, role and functions of business incubators, angel investors, venture capital and private equity funds

UNIT IV SOURCES OF BUSINESS IDEAS AND FEASIBILITY STUDIES

Sources of business ideas and tests of feasibility. Significance of writing the business plan/ project proposal. Contents of business plan/ project proposal. Designing business processes, location, layout, operation, planning & control; preparation of project report. Project submission/ presentation and appraisal thereof by external agencies, such as financial/non-financial institutions.

UNIT V MOBILIZING RESOURCES FOR START-UP

Mobilizing resources for start-up. Accommodation and utilities. Preliminary contracts with the vendors, suppliers, bankers, principal customers; Contract management: Basic start-up problems. Funding opportunities for start-ups.

Marketing and organisational plans-an overview. Nature of planning in small business. Organisational structure suitable for small business. Financial: preparation of budgets, integrated ratio analysis, assessing business risks (leverage analysis). Marketing: product planning & development, creating and protecting market niche, sales promotion, advertising and product costing and pricing policies. HR issues in small business.

18PAU612B	PERSONAL SELLING AND SALESMANSHIP (PRACTICAL)	Semester – VI 2H – 1C
------------------	--	----------------------------------

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:

To make the students

1. To understand the concept of the understanding of personal selling, theories of personal selling, motives of buying, selling process, sales planning and control.
2. To analyse the case studies, understand the selling process and apply the theoretical learning into lifelong practice.
3. To Critically evaluate the appropriate alternatives techniques for closing deal and select the best technique suiting the situation.
4. To Communicate in oral and written form and prepare report
5. To Work in team and exhibit leadership skills
6. To apply the understanding of personal selling, theories of personal selling, motives of buying, selling process, sales planning and controlling lifelong practice

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of the understanding of personal selling, theories of personal selling, motives of buying, selling process, sales planning and control.
2. Analyse the case studies, understand the selling process and try to apply the theoretical learning into lifelong practice.
3. Critically evaluate the appropriate alternatives techniques for closing deal and select the best technique suiting the situation.
4. Communicate in oral and written form and prepare report
5. Work in team and exhibit leadership skills
6. Apply the understanding of personal selling, theories of personal selling, motives of buying, selling process, sales planning and controlling lifelong practice

1. Identify the Career opportunities in selling
2. Write a review for the Book “you can Sell” by Shiv Khara.
3. Role play on selling a particular product and completing the deal. (Prepare the understanding of the negotiation process)
4. Analysing the case study on AIDAS Model of Selling and its application
5. Analysing the case study on Problem Solving Approach /Right Set of Circumstances Theory / Modern Sales Approaches.
6. Procedure for forecasting sales and decisions to be taken by the result.
7. Procedure for identifying the buying motive of the customer.
8. Procedure to approach, negotiate and close the deal. (Enumerate on each technique to close the deal)
9. Procedure to follow up and Dealing customer concerns and complaints.
10. Analyse the case study on the motivation theories and its importance in selling process.
11. Select a product and exhibit a stall during the trade fair and make your sales deal. Write a report on the reason for selecting the product, the cost of purchase, the sales made in rupees plus the profit made.

SUGGESTED READINGS:

1. Neeru Kapoor (2018), Personal Selling and Salesmanship, Pinnacle Learning
2. Richard R. Still, Edward W. Cundiff, Norman A. P. Govoni, Sandeep Puri, (2017), Sales and Distribution Management, 6th edition, Pearson Education, New Delhi.
3. Mark W. Johnston, Greg W. Marshall (2008), Sales Force Management, 9th edition, McGraw Hill, New Delhi.
4. Spiro, Rich, and Stanton (2007), Management of the Sales force, 12th edition, McGraw Hill.
5. Ralph R. Roberts (2011), Advanced Selling For Dummies, Wiley Publishing Inc.

18PAU613A	INFORMATION SYSTEMS CONTROL AND AUDIT(PRACTICAL)	Semester – VI 2H – 1C
Instruction Hours / week: L: 0 T: 0 P: 2	Marks: Internal: 40 External: 60	Total: 100
End Semester Exam: 3 Hours		

COURSE OBJECTIVES:

To make the students

1. To understand the concept of the understanding of personal selling, theories of personal selling, motives of buying, selling process, sales planning and control.
2. To analyse the case studies, understand the selling process and apply the theoretical learning into lifelong practice.
3. To apply the understanding of the usage of latest developed information system in auditing as a lifelong practice.
4. To Critically evaluate the appropriate alternatives techniques for closing deal and select the best technique suiting the situation.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of the understanding of personal selling, theories of personal selling, motives of buying, selling process, sales planning and control.
2. Analyse the case studies, understand the selling process and try to apply the theoretical learning into lifelong practice.
3. Apply the understanding of the usage of latest developed information system in auditing as a lifelong practice.
4. Critically evaluate the appropriate alternatives techniques for closing deal and select the best technique suiting the situation.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills

1. Auditors role in SLDC
2. Procedure for the audit of information system
3. Understanding of the GOBIT 5 Business Framework
4. Disaster Recovery Procedural (DRP) Plan – Audit of the DRP
5. Digital signature and its need in auditing
6. Cyber forensic and cyber fraud investigation and laws pertaining to the same in an organisation perspective and role of auditor on the same.
7. Analyse a real case study on the Green computing
8. Analyse real case on Mobile computing and Cloud computing audit by auditors.
9. Visit an auditor and understand the need for the information audit and control and role of auditor in IS audit.

SUGGESTED READING

1. R Chandrasekhar (2015), First Lessons in Information Systems Control and Audit, 12th edition, Snow White Publication Pvt Ltd.
2. Fca V Venkataraman And Ca N Sankara Narayana Pillai (2016), Internal Auditing & Information Systems Auditing- Comprehensive Guide for Digital Era, CCH INDIA

7. Sandra Senft (Author), Frederick Gallegos (Author), Aleksandrs Davis (2012), Information Technology Control and Audit 4th edition, SHROFF

STRATEGIC MANAGEMENT (PRACTICAL)

Semester – VI

18PAU613B

2H – 1C

Instruction Hours / week: L: 0 T: 0 P: 2

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. To critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. To understand the application of the latest concepts like Scrum framework , Agile methodology and design thinking
4. To communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
5. To apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
6. To Work in teams and exhibit leadership skills.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. Critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. Understand the application of the latest concepts like Scrum framework , Agile methodology and design thinking
4. Communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
5. Apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
6. Work in teams and exhibit leadership skills.

Select a company

1. Download the mission and Vision Statement and Evaluate the mission statement to analyse if it captures all the nine elements of the mission statement.
2. Environmental scanning
 - i. Industry analysis – Porter’s approach. Porter’s competitive strategies - Dynamics of internal environment (REFER IBEF website)
 - ii. SWOT analysis
 - iii. Identify the Core competence of the company
3. Understand the **scrum** framework and its application in the organization
4. Analyse the real time case on mergers and acquisition strategy and its impact on company performance

5. Analyse the real time case on joint venture strategy and its impact on company performance
6. Analyse the application of 7S model and its implication.
7. Analyse a real case to analyse the usage of Design Thinking and Agile Methodology for Innovation
8. Procedure for evaluation the strategy of a company.
9. Identify the indicators that could be used from the economy and company to formulate the strategy

SUGGESTED READINGS :

1. Azhar Kazmi , Adela Kazmi (2015), Strategic management, 4th edition, McGraw Hill, New Delhi
2. Charles W.L. Hill , Gareth R. Jones, (2012), Strategic Management: An Integrated Approach, 9th edition, Cengage, New Delhi.

18PAU691	PROJECT	Semester – VI 8H – 6C
Instruction Hours / week: L:8 T: 0 P: 0	Marks: Internal: 40 External: 60	Total: 100
End Semester Exam: 3 Hours		

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills
7. To utilise the IT applications for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilise the IT applications for analysis and preparation of report.

The students should select a problem in Accounting, Finance, Marketing or any other arears related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives
- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibiliography (APA format)

KARPAGAM ACADEMY OF HIGHER EDUCATION,
(Deemed to be University)
(Established Under Section 3 of UGC Act 1956)
MASTER OF COMMERCE (Computer Applications)
M.Com.
(For the Students admitted during the year 2018 – 2019 Batch onwards)

Scheme of Examination

Course Code	Name of the Course	Objectives and Outcomes		Instruction Hours / Week			Credits	Maximum Marks		
		PEOs	Pos	L	T	P		CIA	ESE	Total
								40	60	100
Semester 1										
18CMP101	Corporate Finance	I,II	a,e,	4	-	-	4	40	60	100
18CMP102	Managerial Economics	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP103	Operations Research	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP104	Advanced Corporate Accounting	I,II, IV	a,e,b,g,h ,i	4	-	-	4	40	60	100
18CMP105A	Financial Markets and Institutions	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP105B	Marketing Management	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP105C	Human Resource Development	I,II	a,e,	4	-	-	4	40	60	100
18CMP106	Organizational Behavior	I,II	a,e,	-	-	4	2	40	60	100
18CMP111	Computer Application in Business (Practical)	I, II, III	a,e,c,d,f	-	-	4	2	40	60	100

Semester III										
18CMP301	Management Accounting	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP302	Business Research Methods and Techniques	III	c,d,f	4	-	-	4	40	60	100
18CMP303	Indirect Taxation	III	c,d,f	4	-	-	4	40	60	100
18CMP304	Business Environment	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP305A	International Financial Management	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP305B	Consumer Behavior	IV	b,g,h,i	4	-	-	4	40	60	100
18CMP305C	Labour Legislation	I, II, III	a,e,c,d,f	4	-	-	4	40	60	100
18CMP306	Financial Services	I, II, III	a,e,c,d,f	-	-	4	2	40	60	100
18CMP311	SPSS (Practical)	I, II, III	a,e,c,d,f	-	-	4	2	40	60	100
	Journal Paper Analysis and Presentation	III	c,d,f	2			-	-	-	-
				22	0	8	24	280	420	700
Semester IV										
18CMP401	Corporate Administration and Secretarial Practice	IV	b,g,h,i	4	0	0	4	40	60	100
18CMP402	Entrepreneurship and Small Business Management	IV	b,g,h,i	3	0	0	3	40	60	100
18CMP491	Project and Viva Voce	III	c,d,f	0	0	23	8	80	120	200
				7	0	23	15	160	240	400
							87	1000	1500	2500

PROGRAMME OUTCOMES (PO)

- a) Postgraduates will develop an understanding of various commerce functions such as finance, accounting, financial analysis, project evaluation, cost accounting.
- b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning.
- c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.
- d) Postgraduates will develop an ability to effectively communicate both orally and in written forms.
- e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.
- f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.
- g) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- h) Postgraduates will apply the lifelong learning and exhibit high level of commitment to identify a timely opportunity and use business innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.
- i) Postgraduates will acquire managerial positions or take up entrepreneurial ventures by applying the skills and knowledge gained.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance
- II. Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.
- III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.
- IV. Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

Program Educational Objectives	Program Outcomes								
	a	b	c	d	e	f	g	h	i
Postgraduates will gain advanced knowledge in the domain of commerce, management and finance	✓				✓				
Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.	✓				✓				
Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.			✓	✓		✓			
Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.		✓					✓	✓	✓

18CMP101	CORPORATE FINANCE	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of corporate finance and its importance in managing a business
2. To understand the nature, importance, structure of corporate finance related areas.
3. To impart knowledge regarding source of finance for a business.
4. To develop a conceptual framework of finance function
5. To acquaint the participants with the tools, techniques
6. To know the process of financial management in the realm of financial decision making.

COURSE OUTCOMES:

Learners should be able to

1. Understand the role of a financial manager and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time
3. Apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Compute the cost of capital and financial leverage to estimate the optimal capital structure
5. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions.

Unit – I

Scope and Functions of Finance – Role of Financial Manager – Goals of Financial Management – Functions of Controller and Treasurers in India

Unit – II

Cost of Capital – Significance – Concepts of Cost of Capital – Cost of Debt Capital, Preference Capital, Equity Capital and Retained Earnings – Weighted Average Cost of Capital

Unit – III

Capital Structure – Concept – Capital Structure Theories – Net Income Theory, Net Operating Income Theory – MM's Proportion on Capital Structure – Determinants of Optimal Capital Structure – Financial and Operating Leverage

Unit – IV

Capital Budgeting Decisions – Investment Evaluation Criteria – Payback Method – ARR – NPV Method – IRR – Profitability Index – Risk Analysis in Capital Budgeting – Nature of Risk – Conventional and Statistical Technique to handle risk

Unit –V

Management of Working Capital – Determinants of Working Capital – Management of Accounts Receivable, Inventory and Cash – Financing of Working Capital – Dividend Theories – Walter’s Model – Gordon’s Model – MM’s Hypothesis – Dividend Policy – Determinants of Dividend Policy.

Note: Theory :80 Marks and Problems : 20 Marks

SUGGESTED READINGS

Text Book

1. **Pandey, I.M. (2014).** *Financial Management*. New Delhi, Vikas Publishing House Private Limited.

References

1. **Prasana Chandra (2012).** *Financial Management – Theory and Practice*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.
2. **Khan, M.Y., and Jain, P.K. (2014).** *Financial Management*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.

COURSE OBJECTIVES:**To make the students**

1. To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem solving skills.

COURSE OUTCOMES:**Learners should be able to**

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run
5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit - I

Nature, Objectives and Scope of Managerial Economics – Role and Responsibilities of Managerial Economist – Circular Flow of Economic Activity – Nature of the Firm – Economic Profit – Profits in the Market System

Unit – II

Demand Theory and Analysis – Supply Theory and Analysis

Unit – III

Production Theory – Cost Theory – Cost Concept – Cost Output Relationship – Break Even Analysis

Unit – IV

Perfect Competition, Monopoly, Monopolistic Competition, Oligopoly, Duopoly, Bilateral Monopoly – Monopsony.

Unit – V

Pricing Decision – Pricing of Goods and Services – Pricing and Employment of Inputs – Pricing in Public Sector – Risk and Decision Making – Input – Output Analysis

SUGGESTED READINGS

Text Book

1. **Varshney and Maheswari (2014).** *Managerial Economics*. New Delhi, Sultan Chand and Sons.

References

1. **Heynes, Mole and Paul (2007).** *Managerial Economics*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.
2. **Joel Dean (2011).** *Managerial Economics*. Jaipur, Mangal Deep Publications.
3. **Sumitra Pal (2011).** *Managerial Economics*. New Delhi, Macmillan
4. India Limited.

COURSE OBJECTIVES:

Course Objectives

This course enables the students

1. To provide essential knowledge on Linear programming
2. To offer practical exposure to transportation and assignment problems
3. To gain the knowledge on Assignment and Queuing Theory Problems
4. To train students on Inventory Control
5. To help to facilitate the learning of network analysis
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

Course Outcomes

On successful completion of this course, the students will be able to

1. Students may gather relevant knowledge for minimizing Operation Cost
2. Students are equipped to cut total cost and able to minimize time required for completing assigned task
3. Students could learn to maintain optimal level of inventory
4. Understand various mathematical applications in industries.
5. Decision making for real time environment.
6. course concentrates on Linear programming, transportation model, Queuing theory and Inventory

Unit – I

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

Unit - II

Transportation Model: Introduction – Mathematical Formulation – Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model - Unbalanced Transportation Problems and Maximization case in Transportation Problem- Traveling Sales Man Problem.

Unit- III

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method – Unbalanced Assignment Problem- Maximization Case in

Assignment Problem - Travelling Salesman Problem. Queuing Theory : Introduction – Characteristics of Queuing System. Problems in $(M/M/1):(\infty/\text{FIFO})$ and $(M/M/1):(N/\text{FIFO})$ models

Unit - IV

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models – Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage -Price Break

Unit - V

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path- PERT –Time Estimates in PERT- Probability of Meeting scheduled date of Completion of Projects

18CMP104	ADVANCED CORPORATE ACCOUNTING	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the Redemption of Preference shares, Mergers& Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. To Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. To comprehend on recent developments and accounting standards
4. To enable the students to have working knowledge in corporate and special accounts.
5. To enable the students to have working knowledge in corporate and special accounts.
6. To provide knowledge on the importance of Human Resources Accounting

COURSE OUTCOMES :

Learners should be able to

1. Understand the Redemption of Preference shares, Mergers & Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. Comprehend on recent developments and accounting standards
4. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the discipline of accounting.
5. course includes preparation of final accounts, Amalgamation, Absorption and Reconstruction, Holding Company, Insurance and Banking Company Accounts, Inflation and Human Resource Accounting

Unit – I

Preparation of Company Final Accounts – Treatment and Provisions for Income Tax – Divisible Profit – Bonus Shares – Calculation of Managerial Remuneration

Unit –II

Amalgamation, Absorption and Reconstruction of Companies (Advanced Problems in Amalgamation, Absorption and Reconstruction of Companies including adjustment regarding elimination of Unrealized Profit, Inter Company Owings and Inter-Company Holdings)

Unit – III

Holding Company Accounts – Capital Profit – Revenue Profit – Minority Interest
– Cost of Control – Preparation of Consolidated Balance Sheet

Unit – IV

Insurance Company Accounts – Life and General Insurance Accounts – Preparation of Revenue Accounts and Balance Sheet (Under the New Format) - Banking Company Accounts – Rebate on Bills Discounted – Classification of Advances and Investments – Preparation of Profit and Loss Account and Balance Sheet (Under the New Format)

Unit – V

Inflation Accounting – Human Resource Accounting –International Accounting Standards (Theory Only) – International Financial Reporting Standards.

Note: Theory 20%; Problems 80%

18CMP105A	FINANCIAL MARKETS AND INSTITUTIONS	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. To understand the regulatory bodies governing the functioning of financial markets and financial institution
3. To analyze the structure of financial markets and its functions
4. To provide knowledge on Financial System of India and
5. To provide knowledge on Financial System of India and to familiarize the structure of financial markets
6. To familiarize the structure of financial markets

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. Understand the regulatory bodies governing the functioning of financial markets and financial institution
3. Obtain the capacity to do lifelong learning on financial markets, instruments, financial institution and its applications.
4. To communicate orally and in written format about the financial markets and institutions
5. The course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions
6. Course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions

Unit – I

Financial Concept: Financial Assets, Intermediaries, Financial Markets, Financial Rate of Return, Financial Instruments. Financial Markets Classification – Development of Financial System in India, Legislative Support – Weakness of Indian Financial System

Unit - II

Money Market – Definition – Money Market Vs Capital Market- Objectives – Importance of Money Market – Composition of Money Market – Participants – Commercial Bill Market – Types of Bills – Importance of Bill Market –Discount Market – Acceptance Market – Bill Market Scheme – Treasury Bill Market – Types of Treasury

Bills –Importance – Commercial Paper – Certificate of Deposit – REPO – Structure of Indian Money Market –Recent Developments in Money Markets.

Unit – III

Capital Market – Meaning – Stock Exchange – Distinction between New Issue Market and Stock Exchange – Relationship between New Issues Market and Stock Exchange – Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

Unit - IV

Depository System : Definition and Meaning – Objectives – Interacting Institutions – Depository Process – Trading in a Depository System – Depository System in India – Depository Participants – Benefits – NSDL – Central Depository Services (India) Ltd. – Drawbacks – Remedial Measures - Derivatives

Unit - V

RBI – Commercial Banks – Public and Private – Co-operative Banks - LIC – IDBI – IFCI – ICICI – NHB – SFCs – DIC – TIIC. SEBI – Objectives – Functions of SEBI - Guidelines for Investor Protection

MARKETING MANAGEMENT

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

Unit-I

Definition of Marketing and Marketing Management – Object and Importance of Marketing – Evolution of Concept of Marketing – Recent Development in Marketing Concept – Marketing Functions – Approaches to the Study of Marketing – Market Segmentation – Basis – Criteria – Benefits.

Unit-II

Product Policy: Product Planning and Development – Product Life Cycle – Product Line and Product Mix Strategies. Branding: Features – Types – Functions. Packaging: Features – Types – Advantages – Brand Name and Trademark.

Unit-III

Pricing: Definition - Objectives of Pricing Decisions - Factors influencing Pricing Decisions – Methods of Setting Prices – Cost – Demand and Competition – Pricing Policies and Strategies.

Unit-IV

Sales Promotion: Meaning and Definition – Objectives and Importance of Sales Promotion – Personal Selling – Steps in Personal Selling - Advertising – Meaning – Objectives – Functions and Importance – Kinds of Media – Direct Marketing – Multi-level Marketing. Distribution Channels: Types of Channels – Factors affecting Choice of Distribution.

Unit-V

Marketing of Services – E-Marketing – Marketing Ethics – Consumerism – Meaning – Evolution – Types of Exploitation – Consumer Rights – Laws Protecting the Consumer Interest – Consumer Protection Acts – Consumer Courts - Retail Marketing – Methods – Problems – Retail Marketing in India – Customer Relationship Management

18CMP105C	HUMAN RESOURCE DEVELOPMENT	Semester – I			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSE OUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit – I

Introduction to Human Resource Development: Concept and evolution; Relationship between human resource management and human resource development; HRD mechanisms, processes and outcomes; HRD matrix; HRD interventions; Roles and competencies of HRD professionals

Unit –II

HRD Process: Assessing HRD needs; Designing and developing effective HRD programs; Implementing HRD programs; Evaluating HRD programs.

Unit – III

Learning and HRD: Maximizing learning; Individual differences in learning process; Learning strategies and styles; Principles of learning; Learning and motivation; HRD culture and climate.

Unit – IV

HRD Activities and Applications: HRD for Workers; HRD mechanisms for workers; Role of trade unions; Employee training and development- Process, methods, and types; Coaching, counselling and performance management; Career management and development; Organization development.

Unit – V

HRD in Organisations, Trends and Practices: Select cases for HRD Practices in Government organisations, defence, police, private sectors and public sectors units; HRD audit; Balanced scorecard; People capability maturity model; Integrating HRD with technology; Employer branding and other recent trends; Future of HRD.

COURSE OBJECTIVES:**To make the students**

1. To understand the basic concepts of organizational behavior.
2. To analyze the individual behavior traits required for performing as individual or group.
3. To obtain the knowledge and skills of perceiving, motivating using different learning styles.
4. To understand how to perform in group and team and how to manage the power, politics and conflict.
5. To recognize the importance of organizational culture and organizational change.
6. The course comprise of Organizational behavior, Personality, Attitude, Stress and Organizational Conflict

COURSE OUTCOMES:**Learners should be able to:**

1. Analyze behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization by applying personality, motivation and learning theories.
3. Manage team and resolve conflict arising between the members.
4. Explain how organizational changes held in the company and culture affect working relationships within organizations.
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit – I

Organizational Behaviour – Nature – Disciplines contributing to Organizational Behavior – Role of Organizational Behavior – Foundations of Organizational Behavior – Implications of Hawthorne Experiments

Unit – II

Individual Difference – Nature – Causes – Models of Man – Perception – Perceptual Process – Perceptual Selectivity – Distortion in Perception – Personality – Determinants of Personality

Unit – III

Attitude – Concepts – Theories of Attitude Formation – Factors in Attitude Formations – Attitude Change. Stress – Causes of Stress – Effects of Stress – Stress Coping Strategies – Individual and Organizational

Unit – IV

Group Dynamics – Concepts and Features of Group – Types of Groups – Formal and Informal Groups – Causes of Informal Organizations – Types of Industrial Organization – Effects of Informal Organization – Group Cohesiveness

Unit – V

Organizational Conflicts – Functional and Dysfunctional Aspects of Conflicts – Role Conflicts – Interpersonal Conflict – Conflict Management

18CMP111	PRACTICAL 1 - COMPUTER APPLICATION IN BUSINESS	Semester – I			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES:

To make the students

1. To prepare template to present the financial data for supporting analysis.
2. To use advanced formula in financial calculations
3. To use visualization tools to represent the financial data graphically
4. To forecast the financial data using the in build tools
5. To Understand and apply Sensitivity analysis on models like Goal Seek , Scenarios; for financial decision-making
6. To insert the slides with animation effects.

COURSE OUTCOMES:

Learners should be able to

1. Apply advanced formulas to lay data in readiness for financial analysis
2. Use advanced techniques for financial report visualizations
3. Leverage on various methodologies of summarizing financial data
4. Understand and apply Sensitivity (“What-if”) analysis models like Goal Seek , Scenarios; Excel models for financial decision-making
5. Exhibit communication skills to communicate the output derived from the program.
6. Course includes practical on paragraph formatting, usage of Excel functions, Automation of Presentation, creation of database and report generation.

I - MS WORD

1. Prepare an research article related to the specialization using Bold, Underline, Font Size, style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an inter collegiate invitation for the college function using Text boxes and clip parts, Word Art, Symbols, Borders and Shading.
3. Prepare an end semester mark statement through template and perform the following operations: Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of table Format.
4. Prepare a Convocation letter for the passed out students for 10 members using mail merge operation.
5. Prepare a resume for attending interview using alignment and formatting.

II - MS EXCEL

1. Prepare a cost sheet and perform the following operations: Data Entry, Total, by using arithmetic function.
2. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a steel manufacturing company by using chart wizard.
3. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
4. Prepare a Product Life Cycle which should contain the following stages: Introduction, Growth, Maturity, Saturation, decline of a product.
5. Prepare an income tax filling return as per the income tax department format.
6. Carry out result analysis of your department by employing statistical and mathematical functions.
7. Calculate Electricity statement by making use IF statement.

III - MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design Presentation slides for Organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design presentation slides about an illustrate story and perform frame movement by interesting clip arts to illustrate running of an image automatically.
4. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

IV - MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details: Employee id, Employee name, Date of Birth, Department and Designation,

Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.

2. Create mailing labels for student database which should include at least three table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table. Perform query for calculation total and create an invoice in form design view.
4. Create report for the Product database.

COURSE OBJECTIVES:**To make the students**

1. To Explain the core concepts of costing, costing types and its importance in managing a business
2. To develop a conceptual framework of costing and to acquaint the participants with the tools, techniques
3. To know the process of cost reduction and control in the realm of decision making.
4. To familiarizes students with the various concepts and elements of cost
5. To Create cost consciousness among the students
6. To provide the students knowledge about use of costing data for Planning, Control and decision making

COURSEOUTCOMES:**Learners should be able to**

1. Explain the core concepts of costing, costing types and its importance in managing a business
2. Develop a conceptual framework of costing and to acquaint the participants with the tools, techniques and process cost reduction and control in the realm of decision making
3. Compute using different costing methods.
4. Demonstrate capabilities of teamwork, problem-solving and critical thinking
5. Communication skills related to finance decisions.
6. course include Material Cost, Labour Cost, Overheads, Process Costing, Activity Based Costing and Target Costing

Unit – I

Cost Accounting – Meaning and Objectives – Importance – Limitations – Limitations of Financial Accounting – Differences between Cost Accounting and Financial Accounting, Cost Accounting and Management Accounting – Methods of Costing – Elements of Cost – Preparation of Cost Sheet – Tender – Quotations – Reconciliation of Cost and Financial Accounting

Unit – II

Material Control – Objectives – Levels of Inventory – EOQ – Methods of Inventory Control – Methods of Valuing Material Issues – Control over Wages – Scrap and Spoilage - Labour - Labour Cost Control – Importance – Systems of Wage Payment – Incentives – Idle Time – Control Over Idle Time – Labour Turnover

Unit – III

Overheads – Classification of Overheads – Allocation, Apportionment and Absorption of Overheads – Methods of Absorption of Overheads

Unit – IV

Process Costing – Features – General Principles – Comparison between Job Costing and Process Costing – Process Losses – Normal Loss – Abnormal Loss – Abnormal Gains – Inter Process Profit – Equivalent Production – Procedure for Evaluation – Joint Product and by Product

Unit-V

Activity Based Costing: Meaning and Methodology of Activity Based Costing (ABC Analysis)-Merits, Demerits and Suitability of Activity Based Costing- Implementation of Activity Based Costing- Draw Back of Conventional Costing - Target costing: Meaning-Characteristics-Principles-Implementation of Target Costing- Installation of Target Costing-Target Costing Vs. Traditional Costing- Life Cycle Costing-Meaning-Definition-Applications of LCC -Importance-Process of LCC

COURSE OBJECTIVES :

To make the students

1. To understand the concept of retailing, retailing strategy and the trends of retailing in India
2. To obtain the knowledge on the retail location and importance of choosing the retail location.
3. To gain knowledge on the retail formats and importance of choosing the retail formats.
4. To know the process of retail pricing and merchandising.
5. To recognize the importance of advertising and technology usage in retailing.
6. To develop an understanding of the retail strategy and planning process

LEARNING OUTCOMES :

Learners should be able to

1. Comprehend on the retailing concept, retailing strategy and the trends of retailing in India.
2. Select the appropriate location for the setting up of retail store.
3. Evaluate the importance of the various retail formats
4. Formulate pricing strategies, apply the concept of merchandising and assess the different advertising and technology options suitable for the success of the retail operations.
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Course includes Overview of Retailing, Retail location and layout, Merchandizing, Communication, Advertisement and Sales Promotion.

Unit – I

An overview of Retailing - Types of stores - Product Retailing vs. Service Retailing - Non store Retailing - Retail strategy - Achieving competitive advantage and positioning Retailing environment - Legal, Social, Economic, Technological, issues - Trends in the Indian Retailing Industry

Unit – II

Retail store location and layout - Country/Region analysis - Trade area analysis - Site evaluation and selection - Store design and layout - Comprehensive store planning - Exterior design and layout - Interior store design and layout - Interior design elements

Unit – III

Planning merchandise needs and merchandise budgets - Methods for determining inventory evaluation - Assortment planning, buying and vendor relations - Merchandise pricing - Price strategies - Psychological pricing - Mark-up and markdown strategies.

Unit – IV

Communicating with the retail customer - Retail promotion mix-Advertising - Sales promotion - Publicity - Retail selling process - Retail database- In-store customer service.

Unit – V

Globalization and changing retail formats – Online retailing - International Retailing – Opportunities and Challenges - Market entry formulas - New customized formats (customized stores, portable stores, merchandise depots, retail theater, service malls, customer-made stores, interactive kiosk 'shopping arcades')

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To help students to understand different heads of income
3. To learn the tools and techniques to compute the tax for the various income heads.
4. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
5. To communicate orally and in written form the income tax concepts and computations.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Provide the students knowledge about Tax planning
4. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
5. Communicate orally and in written the Income tax computation under various income heads and deductions.
6. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.

Unit- I

Income Tax Act 1961- Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

Unit - II

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

Unit - III

Capital Gains – Capital Gain –Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

Unit - IV

Deduction out of Gross Total Income - Computation of Total Income-
Assessment of Individual.

Unit - V

Tax Planning – Advance payment of tax –Tax Deducted at Source - ETDS
Software - Returns to be submitted by various assesses-Different Types of Tax Planning
– Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

18CMP204	INSURANCE AND RISK MANAGEMENT	Semester – II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To create awareness among students on various insurance policies and the procedures followed on availing policies
5. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
6. To create awareness among students on various insurance policies and the procedures followed on availing policies

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. course consists of types of risks, risk management, Life and General Insurance
6. Create awareness among students on various insurance policies and the procedures followed on availing policies

Unit – I

Introduction to Risk Management : The Concept of Risk – Risk Vs Uncertainty – Types of Risks: Market Risk, Credit Risk, Operational Risk, Interest Risk, Business Risk, Systematic Risk – Classifying Pure Risks – Methods of Handling Pure Risks – Risk Management Process – Risk Financing Techniques – Risk Management Objectives – Risk Management Information System (RMIS) – Risk Control

Unit - II

Risk Management by Individuals: Factors affecting individual demands for insurance – Risk Management by Corporations – Corporate Risk Management Process – Types of Risk Managing Firms

Unit – III

Growth and Development of Indian Insurance Industry – Regulations of Insurance Business and the Emerging Scenario – Introduction to Life and General Insurance – Life Insurance: Features of Life Insurance – Essentials of Life Insurance Contract – Kinds of Insurance Policies – Premium Determination – Life Policy Conditions

Unit –IV

Fire Insurance – Fire Insurance Contracts – Fire Insurance Coverage – Policies for Stocks – Rate Fixation in Fire Insurance – Settlement of Claims – Marine Insurance: Marine Insurance Contract – Types of Marine Insurance – Marine Cargo Losses and Frauds – Settlement of Claims

Unit – V

Miscellaneous Insurance: Motor Insurance – Employer's Liability Insurance – Personal Accident and Sickness Insurance – Aviation Insurance – Burglary Insurance – Fidelity Guarantee Insurance – Engineering Insurance – Cattle Insurance – Crop Insurance

18CMP206	HUMAN RESOURCE MANAGEMENT	Semester – II			
		L	T	P	C
		4	-	-	4

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSE OUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit -I

Evolution of HRM: Role of Human Resource in Management - Human Resource Philosophy- Organization of HR Departments- Line and Staff functions- HR Planning – factors affecting HR Planning. Changing Environments of HRM- Strategic Human Resource Management- Using HRM to attain Competitive Advantage- Trends in HRM- Qualities and Role of HR Managers.

Unit - II

Job analysis and Design: Job evaluation- Computerized Job Evaluation. Recruitment and Selection Process: Employment Planning and Forecasting- Building

Employee Commitment: Promotion from within- Sources. Developing and Using Application Forms. IT and Recruiting on the Internet - Employee Testing and Selection process.

Unit - III

Orientation and Training: Orienting the employees, The Training Process, Need Analyses, Training Techniques, Special Purpose Training, Training via the Internet. Performance Appraisal- Traditional and Modern Techniques of Performance Appraisal- 360° Feedback

Unit - IV

Establishing pay plans: Basics of Compensation- Factors determining Pay Rate- Current Trends in Compensation - Pricing Managerial and Professional Jobs- Pay for Performance and Financial Incentives - Benefits and Services-Promotion – Rewards and Punishment.

Unit - V

Auditing and HR functions: Future of HRM function – International HRM. Industrial Relation and Collective Bargaining - Discipline Administration- Grievances Handling - Managing Dismissals and Separation-Trade Union activities and Workers Participation in Management

1. **Rao, V.S.P. (2010).** *Human Resource Management* Text and Cases. New Delhi, Excel Books.

References

1. **Milkovich, Boudreau (1997).** *Human Resource Management*. New Delhi, Irwin Book Team.
2. **Beardwell Holden (2003).** *Human Resource Management*. Guargon, Macmillan India.

COURSE OBJECTIVES:

To make the students

1. To understand the accounts heads, vouching, inventory valuations, available in the accounting software
2. To classify the items under items heads
3. To Generate the financial Reports evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. To develop practical skills for maintain the book of accounts.

COURSE OUTCOMES:

Learners should be able to

1. Familiarize on the account's heads, vouching, inventory valuations available in the accounting software
2. Classify the items under items heads
3. Generate the financial Reports, evaluate the output.
4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. Course covers Company Creation, Ledger, Voucher, Trading and Profit and Loss Account, Balance Sheet, Inventory Valuation and Ratio Analysis

Creating a Company

1. Create a Company with all relevant details including VAT options

Creating Ledger

2. Create the ledgers under appropriate predefined groups

Cash a/c	Computer sales a/c
Buildings a/c	Machinery a/c
Furniture a/c	Commission received a/c
Printer purchase a/c	Commission paid a/c
Rent received a/c	Salary a/c
Rent paid a/c	Indian bank a/c
Wages a/c	Sales returns a/c
Capital a/c	Depreciation a/c
Purchase returns a/c	John & Co. a/c (purchased goods from this company)
Ram agency a/c (sold goods to this company)	

Create vouchers

3. Create vouchers and view Profit and loss a/c and Balance sheet for the following:

Hindustan Ltd. started the business on 01-04-2011

1 Apr. Contributed capital by cash Rs 2, 00,000

1 Apr. Cash deposited in Indian bank Rs 50,000
 2 Apr. Credit purchases from Krishna traders Rs. 20000 invoice no 12
 3 Apr. Credit purchases from PRAVIN traders Rs 20,000 invoice no 12
 4 Apr. Credit purchase from KRISHNA traders Rs 20000 invoice no 14
 5 Apr. Credit purchase from PRAVIN traders Rs 20,000 invoice no 44
 6 Apr. Returned goods to KRISHNA traders Rs 5000 invoice no 12
 7 Apr. Returned goods to PRAVIN traders Rs 5000 invoice no 44
 8 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 1
 9 Apr. Credit sales to KUMAR & Co Rs 50,000 inv no 2
 10 Apr. Cash sales Rs 20,000 inv no 3
 11 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 2
 12 Apr. Credit sales to RAVI & Co Rs 50000 inv no 5
 14 Apr. Goods returned by RAVI & Co Rs 5000 inv no 1
 14 Apr. Goods returned by KUMAR & Co Rs 5000 inv no 1
 15 Apr. Payment made by cheque to Krishna Traders Rs 30,000 ch no 505580
 16 Apr. Payment made by cheque to Pravin Traders Rs 30,000 ch no 505592
 17 Apr. Received cheque from: Ravi & Co and Kumar & Co 75,000 each.

Payments made by cash

3 Apr. Paid to petty cash by cash Rs.1000
 4 Apr. Furniture purchased Rs.20000
 5 Apr. Salaries paid Rs. 10000
 6 Apr. Rent Rs.4000
 7 Apr. Electricity charges Rs.3000
 8 Apr. Telephone charges Rs.3500
 9 Apr. Cash purchases Rs.5000

Payments made by petty cash

10 Apr. Conveyance Rs.150
 11 Apr. Postage Rs.100
 12 Apr. Stationeries Rs.200
 14 Apr. Staff welfare Rs.100
 14 Apr. Stationeries purchased from Sriram & Co 1500 on credit
 15 Apr. Depreciation on furniture 10%

4. Emerald & Co., started a business of home appliances from 1-4-2011

01-04 received cash for capital 5, 00,000
 07-04 credit purchases from LG Limited invoice no 123
 Oven 100nos at Rs 800,Mixes 100nos at Rs 1000,DVD player 100nos at Rs 1500,
 Fridge 100nos at Rs 2000
 10-04 Credit Sales to AMN invoice no 1:
 Oven 70nos at Rs 1000,Mixes 70nos at Rs 1500,DVD player 70nos at Rs 2000
 Fridge 70nos at Rs 2500+TNGST 4% ON TOTAL SALES
 10-04 Cash Sales invoice no 2:
 Oven 10nos at Rs 1000,Mixes 10nos at Rs 1500,DVD player 10nos at Rs 2000,
 Fridge 10nos at Rs 2500+TNGST 4% ON TOTAL SALES CASH discount 5%

15-4 Paid cheque to LG limited Rs 2,00,000
 15-4 Received cheque from AMN&co Rs 3,00,000

5. Payment made by cash

Paid to petty cash Rs 2000, Furniture Rs 15000, Salaries Rs 10000
 Wages Rs 7000, Carriage inward Rs 1500.

25-04 Payment made by petty cash

Conveyance Rs 200, Postage Rs 150, Stationeries Rs 150, Staff Welfare Rs 200

30-04 Journal depreciate 10% on furniture:

Prepare Trading Profit and Loss Account and Balance sheet.

6. From the Balances of Ms. Kavitha, Prepare Trading A/C, Profit And Loss A/C and Balance Sheet for The Year Ending

Stock - 9,300	Misc. income - 200
Repairs - 310	Purchases - 15,450
Machinery - 12,670	Purchase return - 440
Furniture - 1430	Sales return - 120
Office expenses - 750	Sundry creditors - 12,370
Trading expenses - 310	Advertisement - 500
Land & Building - 15,400	Cash in hand - 160
Bank charges - 50	Cash at bank - 5,870
Capital - 24,500	Sales - 20,560
Loan - 5,000	Sundry expenses - 150
Closing stock - 7,580	Insurance - 500
	Traveling expenses - 200

INVENTORY VALUATION

7. From the Information given below create unit of measurement, stock groups and stock items

Find the stock summary:

Stock groups: 1. Magazine 2. Baby drinks 3. Cool drinks 4. daily news paper 5. Hot drinks
 6. Stationeries 7. Vegetables

Stock items:

Item	Qty	Rate	Units
Boost	25	80	nos
Sports star	20	15	nos
Potato	260	30	kgs
Star dust	20	25	nos
The Hindu	50	3.25	nos
Tomato	150	15	kgs
Fanta	10	25	lit
Dinamalar	40	2.50	nos

Coco	55	120	nos
Horlicks	60	70	nos
India today	10	10	nos
Lactogin	10	100	nos

MAINTAIN BILLWISE DETAILS

8. Create bill wise details from the following

1. Ravi commenced business with a capital of Rs 2,00,000
2. Purchased goods from Kumar & Co Rs.15, 000 Paid in three installments within 5 days gap
3. Purchased goods for cash Rs.8000
4. Sold goods to Ratna & co Rs. 20,000 amount to be paid in two installment
5. Sold goods for cash for Rs .5000
6. Received cash from Ratna & co Rs. 75000
7. Paid to Kumar & co Rs. 7500
8. Sold goods for cash Rs.5000

CONSOLIDATION OF ACCOUNTS

9. Bharath Agencies, A Wholesaler Gives The Following Information:

Opening balances:

Capital: 20, 00,000 cash at bank: 10, 00,000

Cash in hand: 5, 00,000 furniture: 5, 00,000

Bharath agencies are dealing in stationeries. The selling prices are as follows;

Pen Rs 35 per dozen, pencil Rs. 30 per dozen, Ink pens Rs 140 per dozen

The following transactions take on a particular date:

- 1.purchased 100 dozens of pens from Ravana bros. @ Rs.25 per dozen for cash
- 2.purchased 200 dozens of pencils from Gughan bros.@ Rs.21.50 per dozen for credit less discount of Rs 100
- 3.sold 10 dozens of pens to Dharma bros. For cash
- 4.sold 10 dozens of pens to Bema bros for credit
- 5.sold 50 dozens of pencils to Arjuna bros.
- 6.purchased from Ravana bros 50 dozens of ink pens @ Rs.120 and by cheque.

Prepare following statements using Ex-accounting packages:

Stores ledger, Trading account, Income statement, Balance sheet, Account summary

Ignore dates

FOREIGN GAINS/LOSS

10. Calculate

01.01.2005 Purchased goods from U.K supplier 1000 £

02.01.2005 Sold goods to U.S buyer 1500

03.01.2005 Cash received from U.S buyer 1500

(Selling rate rs.46/\$)

04.02.2005 Paid cash to U.K supplier 1000

(Selling rate Rs 53/ £)

Dollar \$:

Std rate - 1\$ - 43 Rs

Sales rate - 1\$ - 44 Rs

Buying rate - 1\$ - 42 Rs

Pound £:

Std rate - 1 £ - 51 Rs

Sales rate - 1 £ - 50 Rs

Buying rate - 1 £ - 52 Rs

11. MEMO VOUCHER

An advance amount paid Rs 1500 given to sales executive for traveling. The actual expenses for traveling expenses for the sales is Rs 500

12. CHEQUE PRINTING

Print a cheque:

Company name on cheque: Wipro India Ltd.: name of the bank Indusind bank.

Width 168, height 76, starting location 116, distance from top 23.

13. RATIO ANALYSIS

Enter the following details comment upon the short-term solvency position of the company:

Working capital Rs 20560492

Cash 14500

Bank 18500

Debtors 518260

Creditors 429337

Sales 515252

Purchases 433310

Stock 125982

Net profit ...?

14. INTEREST CALCULATIONS

Cash deposited in Scotia bank Rs 1,00,000

Sold goods to Ganesh Rs 25,000

31-12- cash deposited at Scotia bank Rs 50,000

Sold goods to Ganesh 50,000

Interest parameters rate 14% per 365 days year

15. Calculate Interest

Cash deposited in SBI 1, 00,000 Rs

1-12 purchased goods from suppliers Rs 20,000

Deposited in SBI Rs.50, 000

Purchased goods from suppliers Rs 40,000

Interest parameters rate 16% per 365 days year

16. Display the interest calculations for the period 1-4-2011 to 31-12-2011

Opening balance

Ram & Co Rs 25,000

Krishna traders Rs 20,000

Interest parameters rate 12% per 365 days year

Interest parameters rate 12% and 16% for sundry creditors per 365 days year

Purchased goods from Krishna for 25,000(credit period 45 days)

Sold goods to Ram for Rs. 50,000(credit period 30 days)

Paid to Krishna the amount plus interest

Received from Ram plus interest

17. Create stock items, stock groups, sales categories, godowns, units of measure.

Stock	Category	Group	Godown	Unit of measure	Std cost	Sell Price	Op. Qty	Total Value
Inter Celeron	Processor	Celeron	Mumbai	Nos.	15000	20000	2	30000
Intel Premium III	Processor		Chennai	Nos	20000	25000	3	60000
Tally Silver	Accounting	Tally	Chennai	Nos	20000	22500	5	100000
Tally gold	Accounting	Tally	Chennai	Nos	42000	45000	5	210000
								400000

18. Using the above exercise create various vouchers including VAT calculation for the following

Date Transactions	Transcation
09/4/2006	Intel Pentium III (3 Nos) @ 25,000 delivered to Vijay & CO, from Madras Go down.
10/4/2006	10 Nos of Intel Celeron @ 15000 per unit received from Jayaram and Co, and sent to Madras Go down.
12/4/2006	2Nos of Intel Premium III received from Vijay & CO, as it was not in a working position.
14/4/2006	2Nos of Intel Celeron returned to Jayaram & Co from Madras Go down.
14/4/2006	Physical Stock verification shows Shortage of 1 No Intel Pentium III.

19. Create the following Inventory vouchers with data from any cost accounting book.

- a. Purchase order
- b. sales order
- c. Rejection out
- d. Rejection in
- e. Stock journal
- f. Delivery note
- g. Receipt note
- h. Physical stock

20. In addition to the above mentioned lab exercises work out a problem from any advanced accountancy book with a minimum of 20 transactions and generate the tally reports in full.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To provide the students knowledge about budgetary control.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. course incorporates Financial Statement Analysis, Ratio Analysis, Fund Flow and Cash Flow Analysis, Budgeting and Marginal Costing

Unit – I

Management Accounting – Meaning – Definition – Objectives and Scope – Relationship between Management Accounting and Financial Accounting – Management Accounting and Cost Accounting

Unit – II

Financial Statement Analysis – Types of Financial Statement Analysis - Ratio Analysis – Meaning – Uses – Limitations – Classification of Ratios – Computation of Ratios from Financial Statements

Unit – III

Fund Flow Analysis – Cash Flow Analysis – Working Capital Statements – Funds from Operations

Unit – IV

Budgetary Control – Flexible Budget – Sales Budget – Cash Budget – Production Budget – Purchase Budget

Unit – V

Marginal Costing – Break Even Analysis – Applications of Marginal Costing Techniques – Determination of Sales Mix – Key factor – Make or Buy Decision (Simple Problems Only)

Note: Theory -20% Problems - 80%

2. **Khan, P.K. and Jain (2009).** *Management Accounting*. New Delhi, Tata Mc Graw Hill Publishing Company Limited.

COURSE OBJECTIVES:

To make the students

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. To identify appropriate sources of information and methods of data collection for solving a business issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :

Learners should be able to

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit-I

Introduction to Research: Meaning – Purpose – Types of Research – Significance – Qualities of a good research – Steps in Research - Identification, Selection and Formulation of Research Problem. Research Design: Components of Research Design – Methods of Research Design.

Unit-II

Sampling Design: Census and Sample Survey – Characteristics of a Good Sample Plan – Steps in Sampling – Types of Sampling – Advantages and Limitations of Sampling. Data Collection: Primary Data - Meaning – Significance – Methods of Collecting Data: Observation – Interview Schedule – Questionnaire. Secondary Data – Meaning - Sources of Secondary Data – Precautions while using Secondary Data.

Unit-III

Scaling Techniques: Meaning of Scale–Measurement of Scale – Important Scaling Techniques - Processing of Data - Editing – Purpose – Analysis and Interpretation of Data: Meaning – Need for Interpretation – Techniques of Interpretation.- Report Writing: Types of Research Reports – Layout of the Report – Steps in Writing the Report – Contents of Research Reports

Unit-IV

Hypothesis: Characteristics of a good Hypothesis – Formulation of Hypothesis – Procedure for Testing of Hypothesis – T test, F test and Chi Square Test, Analysis of Variance - Business Forecasting – Exponential Smoothing

Unit-V

Descriptive Statistics - Measures of Central Tendency: - Mean, Median and Mode - Standard deviation – Karl Pearson Correlation – Spearman Rank Correlation - Regression Models – Inferential Statistics – Multivariate Analysis - Factor Analysis – Kruskal Wallis Test

Note:

The question paper shall cover 80% theory and 20% problems

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST/CGST/IGST/SGST/UTGST and customs law.
2. To learn and compute the GST liabilities.
3. To know how to register GST and apply the GST provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the GST and customs and utilize for lifelong practical application.
6. To demonstrate custom duties in India

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. Comprehend and compute GST liabilities.
3. Know the procedure to register GST and apply GST provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining GST and customs and utilize for lifelong practical application.
6. Know the concept of input tax credit mechanism

Unit-I

Introduction to Indirect Tax: Meaning – Features-Types- Objectives – Principles- Cannon of Taxation – Tax system in India- Pros and Cons of Indirect tax- Contribution to government Revenues- Development of Indirect Taxation.

Unit-II

Customs Law: Basic Concepts of Customs Law- Different types of Customs Duty- Abatement of duty in damaged or deteriorated goods- Valuation –Customs procedure- Exemptions- Customs Duty drawback- Duty Free Zones- Offense and Penalties.

Unit-III

Introduction to Goods and Services Tax (GST): Meaning of GST – Basic Concepts – Features of GST- Benefits of GST- GST working Mechanism – GST rate and taxes on GST – Goods and Service Tax Network (GSTN) – Constitutional Framework of GST – Model GST Law – Chargeability for GST – Composition Scheme.

Unit-IV

Supply: Meaning and Scope- Types of Supply – Time of Supply – Provision relating to time of Supply – Place of supply – Provision relating to place of supply – Valuation mechanism – Input tax credit mechanism – Payment mechanism – Registration under GST-Rules

Unit-V

Registration under GST: Return Filing- Rules- Refund Provision in GST – E – commerce- operators- TDS/TCS- Small scale exemption.

	Semester – III			
	L	T	P	C
18CMP305A INTERNATIONAL FINANCIAL MANAGEMENT	4	-	-	4

Course Objectives

To make the students

1. To make the students understand principles of financial management
2. To enable the students to take investment decisions.
3. To help the students to make financial decisions.
4. To provide the students with the basic knowledge of Dividend decisions.
5. To impart knowledge of working capital and cash management.
6. To provide knowledge on Foreign exchange and its significance in a developing economy

Course Outcomes

Learners should be able to

1. Students will be familiarized with basic concepts of financial management.
2. Students will know the technicalities of making investment decisions.
3. Students will be capable of making financing decisions.
4. Students will be familiarized with concepts of dividend decisions.
5. Students will be capable of making working capitalization and cash management.
6. course includes Balance of Payment, International Monetary System, Foreign Exchange Market, Foreign Exchange Risk and International Financial Market Instruments

Unit - I

IFM- Nature and Scope, IFM and Domestic Financial Management- Balance of payments - Significance- Preparation of BOP Statement - Link between BOP and the Economy.

Unit - II

International Monetary System - Gold Standard - IMF and World Bank Exchange Rate Mechanism - Factors influencing Exchange Rate - Purchasing Power Parity and Interest Rate Parity Theorems.

Unit - III

Foreign Exchange Market Transactions Spot, Forward, Futures, Options and Swaps - Arbitrage and Speculation in Foreign Exchange Market.- Exchange Arithmetic, Spread, Premium and Discount. – Currency Derivatives and Swaps

Unit - IV

Foreign Exchange Exposure - Managing Transaction, Translation and Operating Exposure - Techniques for covering the Foreign Exchange Risk - Internal and External Techniques of Risk.

Unit -V

International Financial Market Instruments - International Equities - ADR and GDR - Foreign Bond and Euro-bond - Short-term and Medium-term instruments.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. To offer knowledge on managing industrial relations and the processes, regulations and the authorities regarding industrial relations.
6. To enable students acquire knowledge on fundamental objects and principles of individual laws; understand the significant provisions of the various Acts applicable to Labour Legislation.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. The course encompass Labour Problems, Trade unionism, Industrial Disputes, Management and Personnel Administration and Grievances
6. Course includes Factories Act, Workmen Compensation Act, Wages Act, Gratuity Act, Bonus Act and Industrial Dispute Act

Unit – I

Factories Act 1948 – Definition – Registration of Factories – Health – Safety and Welfare Measures – Provisions relating to Hazardous Process – Working Hours – Holidays – Employment of Young Persons – Women – Annual Leave with Wages – Provision relating to Penalties and its Procedure and Appeal

Unit – II

Workmen Compensation Act 1923 – Definition – Employer's Liability for Compensation – Arising out of and in the course of employment – Amount of Compensation – Notice and Claims – Obligations and Rights of Employers.

Unit – III

Payment of Wages Act 1936 – Application of the Act – Definitions – Rules for Payment of Wages – Deductions from Wages – Enforcement of the Act. Minimum Wages Act 1948 – Object of the Act – Definitions – Fixation and Revision of Wages – Procedure – Advisory Board and Central Advisory Board – Safeguards in Payment of Minimum Wages – Enforcement of the Act – Offences and Penalties

Payment of Gratuity Act 1972 – Definitions – Payment of Gratuity – Forfeiture of Gratuity – Nomination – Determination and Recovery of the amount of Gratuity – Obligations and Rights of Employers and Employees

Unit – IV

Payment of Bonus Act 1965 – Definition – Eligibility – Disqualification – Determination of Bonus – Computation of Gross Profit – Determination of Available Surplus – Allocable Surplus – Amount of Bonus – Payment of Bonus linked with Production or Productivity

Unit - V

Industrial Dispute Act, 1947 – Definition – Types of Disputes – Grievance Settlement Authorities – Procedure for Settlement of Industrial Disputes – Works Committee – Conciliation Officer – Court of Enquiry – Labour Court – Industrial Tribunal – National Tribunal – Award and Settlement – Strikes and Lockouts – Prohibition of Strikes and Lockouts – Illegal Strikes and Lockouts – Layoff and Retrenchment – Closure

SUGGESTED READINGS

Text Book

1. **Kapoor, N.D.** *Hand Book on Industrial Law*. New Delhi, Sultan Chand and Sons.

2. **Das, S.K. and Gupta.** *Commercial Law and Industrial Law*. New Delhi, Sterling Publishers Private Limited.
3. **Davar, R.** *Mercantile Law including Industrial Law*. Progressive Corporation

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept financial services its impact on economy
2. To categorise financial services as fund based and fees based services
3. To understand the application of the fee and fund based services in economic development.
4. To communicate orally and in written form the understanding of financial services concepts and application.
5. To expose the students to the contemporary theory and practice of Indian Financial Services Sector
6. To familiarize the students with various types of Financial Services and their role in Social Change.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept financial services its impact on economy
2. Categorise financial services as fund based and fees based services
3. Understand the application of the fee and fund based services in economic development.
4. Communicate orally and in written form the understanding of financial services concepts and application.
5. comprise of Financial Instruments, Merchant Banking, Hire Purchase, Leasing, Venture Capital, Factoring, Mutual Funds and Credit Rating
6. Know the various types of Financial Services and their role in Social Change.

Unit – I

Financial Services – Meaning – Classification – Scope – Fund Based Activities – Non Fund Based Activities – Modern Activities – Sources of Revenue – Causes for Financial Innovation – New Financial Products and Services – Innovative Financial Instruments – Challenges facing the Financial Service Sector. Merchant Banking – Definition – Origin – Merchant Banking in India- Merchant Banks and Commercial Banks – Services of Merchant Banks- Qualities required of Merchant Bankers – Problems – Scope of Merchant Banking in India

Unit – II

Hire Purchase – Meaning – Features – Legal Position – Hire Purchase and Credit Sale – Hire Purchase and Instalment Sale – Hire Purchase and Leasing – Origin and Development – Banks and Hire Purchase Business – Bank Credit for Hire Purchase.

Leasing – Definition – Steps in Leasing Transactions – Types of Lease – Advantages and Disadvantage of Lease – Problems of Leasing

Unit – III

Venture Capital – Concept – Meaning – Features – Scope of Venture Capital – Importance – Method of Venture Financing – Suggestion for the Growth of Venture Capital – Factoring – Meaning – Functions – Types – Factoring Vs Discounting – Benefits of Factoring

Unit – IV

Mutual Funds – Types – Importance – Selection of a Fund – Securitization – Stages of Securitization – Benefits – Derivatives – Kinds – Forward, Future, Options and Swaps.

Unit – V

Credit Rating – Definition and Meaning – Functions of Credit Rating – Origin – Credit Rating in India – Benefits of Credit Rating – Credit Rating Agencies in India: CRISIL, ICRA, CARE- Limitations of Rating – Future of Credit Rating in India

Text Book

1. **Gordon, E and Natarajan, K. (2014).** *Financial Markets and Services*. Mumbai, Himalaya Publishing House.

References

1. **Khan M.Y. (2013).** *Financial Services*. New Delhi, Tata McGraw Hill Company Limited.
2. **Dharmaraj (2010).** *Financial Services*. New Delhi, S. Chand and Sons Limited.
3. **Tripathy Nalini Prava (2007).** *Financial Services*. New Delhi, Prentice Hall of India.

COURSE OBJECTIVES:**To make the students**

1. To understand the Importance of SPSS and the features for entering the data according to the variable type.
2. To understand and apply the descriptive analytical tools
3. To know the univariate tools and its application
4. To comprehend the application of Bivariate analysis
5. To understand and compute the multivariate analysis using the package
6. To understand the correlation analysis

COURSEOUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

Workout the following statistics:

1. Descriptive Statistics
2. Chi-square
3. Independent Sample 't' Test
4. Paired 't' Test
5. Analysis of Variance (ANOVA)
6. Karl Pearson Correlation
7. Spearman Rank Correlation
8. Regression
9. Factor Analysis
10. Kolmogorov and Smirnov test
11. Mann Whitney U Test
12. Wilcoxon Test

- 13. Friedman Rank Test
- 14. Kruskal Wallis H-Test
- 15. Garrett Ranking

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of auditing, corporate governance
2. To learn the audit techniques, corporate governance
3. To apply the best auditing process as lifelong practice,
4. To communicate orally and in written form the auditing concept and techniques, Corporate governance
5. To be familiar with the standards and laws pertaining to the auditing, Corporate Governance
6. To know the information related to global reporting initiatives.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of auditing, corporate governance
2. Recall audit techniques, corporate governance practices.
3. Apply lifelong the key learning of best auditing process, Corporate governance practices
4. Communicate orally and in written form the auditing concept and techniques, Corporate governance concepts and practices in business.
5. Familiar with the standards and laws pertaining to the auditing, Corporate Governance.
6. Reminiscence with statistics on global reporting.

Unit – I

Company Administration – Hierarchy – Share Holders – Membership – Termination – Rights and Duties – Board of Directors – Qualification – Appointment – Powers – Duties – Other Managerial Personnel

Unit – II

Company Secretary – Meaning – Types – Qualities – Appointment – Dismissal – Power – Rights – Duties and Liabilities – Role of a Secretary in the Administration of a Company

Unit – III

Meeting – Law Governing Meetings – Requisites of a Valid Meeting – Chairman of a Meeting – Appointment – Duties – Powers – Notice – Agenda – Minutes – Quorum – Motion – Resolution – Methods of Voting

Unit – IV

Kinds of Company Meetings – Board of Directors Meeting – Share holder Meeting – Statutory Meeting – Annual General Meeting – Extraordinary General Meeting – Duties of a Company Secretary relating to the Meetings

Unit – V

Drafting of Correspondence relating to the Meetings – Drafting of Notices – Agenda and Minutes of the Meetings of Shareholders and Directors – Drafting of Chairman's Speech – Annual Report and Auditors Report

SUGGESTED READINGS

18CMP402	ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT	Semester – IV			
		L	T	P	C
		3	-	-	3

COURSE OBJECTIVES:

1. To make the students
2. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
4. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
5. To initiate the required skills for entrepreneurial development.
6. To help students understand the process of establishing and developing an enterprise

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of entrepreneurship, entities of business, creating ideas, mobilizing funds and support from government.
2. Communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. Apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. course include Entrepreneur and Entrepreneurship, Market and Technical Analysis, Diversification, Sub-contracting, Incentives and Subsidies
5. Initiate the required skills for entrepreneurial development.
6. Understand the process of establishing and developing an enterprise

Unit – I

Small Business Enterprise - Small Business framework - Concept and Definition- Nature and Characteristics - Relationship between Small and Large Business - Scope and Types of Small Business - Rationale and Objectives - Small Business as seed bed of Entrepreneurship

Unit –II

Entrepreneurship - Entrepreneur and Entrepreneurship Concept - Distinction between Entrepreneur and Manager - Entrepreneurial Competency - Functions - Types (including women and rural).

Unit – III

Establishing a Small Enterprise - Learning the important steps for starting a Business - Project Identification and Selecting the Product - Generation and Screening the Project Ideas - Market Analysis - Technical Analysis, Financial Analysis (up to cost of production) Project Formulation - Assessment of Project Feasibility - Preparation of Project Report - Dealing with basic startup problems.

Unit –IV

Growth Strategy - Growth strategy for Small Business - Need for Growth - Types of Growth Strategy - Expansion - Diversification-Sub contracting.

Unit-V

Institutional Support - Sources of Finance - Financial Support to Small Business- Various Incentives and Subsidies - Central and State Government Schemes

COURSE OBJECTIVES:**To make the students**

1. To identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills

The students should select a problem in Accounting, Finance, Marketing or any other areas related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives
- Research Methodology

- Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

PROGRAMME OUTCOMES (PO)

- a) Postgraduates will develop an understanding of various commerce functions such as finance, accounting, financial analysis, project evaluation, cost accounting and gain expertise in computer application.
- b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning with the support of computer applications.
- c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.
- d) Postgraduates will develop an ability to effectively communicate both orally and in written forms.
- e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.
- f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.
- g) Postgraduates will evaluate the implications of uncertainty in global perspective and cross cultural issues that affect the functioning of the system or business.
- h) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- i) Postgraduates will acquire ability to employ management knowledge and skills in their career advancement and personal enrichment
- j) Postgraduates will acquire ability to utilize the programming skills or the latest computer application for developing a new software or usage of the existing tool in the decision-making process.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance
- II. Postgraduates will understand the system functioning and develop the capability of modeling, designing, implementing and verifying a computing system to meet specified requirements while considering real-world constraints.
- III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path
- IV. Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

COURSE OBJECTIVES:**To make the students**

1. To obtain fundamental knowledge on economic concepts and tools that has direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem-solving skills.

COURSE OUTCOMES:**Learners should be able to**

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run and Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
5. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Understand and exhibit the Market Competition and Price structures

UNIT I Managerial Economics: Law of Demand and Supply

Introduction - Meaning, nature and scope of Managerial Economics, Significance in decision making. Consumer's Behaviour and Demand: Meaning of Consumer's Equilibrium – Utility approach – Law of Equi-Marginal utility – Consumers Surplus – Concept of Demand – Types of Demand – Determinants – Law of Demand – Exceptions to Law of Demand – Change in Demand – Elasticity of Demand – Types – Measurement of Price elasticity of demand. Concept of Supply

– Determinants of Supply – Law of Supply – Change in Supply – Elasticity of Supply – Types.

UNIT II Production, Cost and Revenue

Function

Producer's Behaviour and Supply: Basic concepts in production – Firm – Fixed & Variable Factors

– Short & Long run – Total Product – Marginal Product – Average Product – Production Function

– Law of Returns – Law of Return to Scale – Economies and Diseconomies of Scale – Producer's Equilibrium

Cost and Revenue Function: Cost of Production – Opportunity cost – Fixed and Variable Costs –

Total Cost Curves – Average Cost Curves – Marginal Cost – Long run and Short run Cost Curves

– Total Revenue – Average Revenue – Marginal Revenue – Break Even Point Analysis.

UNIT III Market Competition and Price structures

Main forms of Market – Basis of Classification – Perfect Competition – Features – Short Run and Long

Run Equilibrium – Price Determination – Monopoly Market – Features – Short Run and Long

Run Equilibrium – Price Discrimination – Degrees of Price Discrimination. Oligopoly

Market Competition – Features – Price Leadership – Price Rigidity – Cartel – Collusive and Non-

Collusive oligopoly – Oligopsony – Features – Monopolistic Competition – Features – Product

Differentiation – Selling Cost – Short Run and Long Run Equilibrium – Monopsony – Duopoly

Market – Features

UNIT IV Macro Economic Indicators

Difference between Normal Residents and Non-Residents – Domestic territory – Gross and Net

Concepts of Income and Product – market price and Factor Cost – Factor Payments and Transfer

Payments – National Income Aggregates – Private Income – Personal Income – Personal

Disposable Income – National Disposable Income – Measurement of National Income –

Production Method – Income Method – Expenditure Method

Phases of Business Cycle – Causes of cyclical movements – Price Movements: Inflation,

Deflation, and Deflation – Types of Inflation – Effects of Inflation – Control of Inflation.

UNIT V Monetary Policy

Objectives of Monetary Policy – Types of Monetary Policy – Instruments of monetary policy –

Objectives of Fiscal Policy – Types of Fiscal Policy – Instruments of Fiscal Policy – Budget

Preparation – Deficit Budget.

Balance of Trade and Balance of Payments – Current Account and Capital Account of BOP –

Disequilibrium in BOP.

Meaning and Functions of Money – Demand and Supply of Money – Measurement of Money

supply – Commercial Banks – Central Bank – Functions – Process of Credit Creation and Money

Supply – High Powered Money – Money multiplier – Money and Interest Rate – Theories of

Interest.

COURSE OBJECTIVES:**To make the students**

1. To understand the international standards, its features and difference from the Indian Accounting standards.
2. To understand the concept of holding company and prepare the accounting for Group companies.
3. To gain a rigorous understanding of corporate restructuring and preparing accounting for corporate restructuring and liquidation.
4. To obtain understanding of voyage accounting and preparing voyage accounts.
5. To understand the Human resources accounting and price level changes.
6. To know the process of financial management in the realm of financial decision making.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the international Reporting standards and its importance
2. Prepare the accounts for holding company.
3. Formulate accounts for corporate restructuring, liquidation and prepare the Voyage accounts
4. Understand the importance of Human Resource Accounting and Price level changes.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to financial decisions.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to financial decisions.

UNIT I International Financial Reporting Standards (IFRS)

Introduction – Meaning – Scope – An Overview of the International Financial Reporting Standards – IFRS 1 to 13 – Role of IASB – Arguments for Global Convergence – Required disclosure as per IFRS – Achievements of IASB and Obstacles in Convergence – Difference between IFRS and Indian Accounting Standards – USGAAP.

UNIT II Accounting for Group companies:

Holding Companies – Definition – Accounts Consolidation – Preparation of Consolidated Balance Sheet – Minority Interest – Pre-acquisition or Capital Profits – Cost of Control or Goodwill – Intercompany Balance – Unrealised Inter-company profits – Revaluation of assets and liabilities – Bonus Shares – Treatment of Dividend.

UNIT III Accounting for Corporate Restructuring

Internal –External – Merger and acquisition – Accounting for liquidation of companies – Preparation of Statement of Affairs – Deficiency/Surplus Account - Liquidator's Final Statement of Account – Receiver's Statement of Accounts.

UNIT IV Voyage Accounts

Meaning of important terms – Voyage in Progress – Farm Accounts – Characteristics – Advantages and Disadvantages – Final Accounts of Farms

UNIT V Human Resources Accounting (HRA) and Accounting for Price level Changes

HRA - Objectives – Methods of valuation Advantages and Disadvantages.

Accounting for Price Level Changes – CPP – CCA and Hybrid.

Note: Theory 60%; Problems 40%

SUGGESTED READINGS:

1. Dr S N Maheshwari, CA Sharad K Maheshwari & Dr Suneel K Maheshwari (2018), Advanced Accountancy Volume-II, 11th edition, S.Chand Publishing, NewDelhi.
2. CA Kamal Garg (2017), Practical Guide To Ind AS & IFRS, Bharat's, NewDelhi.
3. Srinivas Ganesh & Pramod A.V. (2016), Advanced Corporate Accounting, Vikas Publications, NewDelhi.
4. Ma Arulanandam K Raman (2014), Advanced Accountancy, 6th Edition, Himalaya Publishing House, NewDelhi.
5. Jagadish R. Raiyani (2012), International Financial Reporting Standards (IFRS) & Indian Accounting Practices, 1st Edition, New Century Publications, NewDelhi
6. Amarjit Chopra and Sanjeev Kumar Singhal (2018), An Insights Into Indian Accounting Standards (2 Volumes): Road Map, Analysis and Guidance for Implementation to Ind AS Converged with IFRS, 2nd edition, Wolters Kluwer India Private Limited, NewDelhi

COURSE OBJECTIVES:**To make the students**

1. To understand the importance of operation research and to gain knowledge on Linear programming
2. To gain the knowledge of transportation models and its application.
3. To obtain knowledge on Assignment and Queueing Theory concepts and its application in optimization of resources.
4. To understand Inventory control mechanism and its importance in cost minimization.
5. To understand the network analysis and its application in project management.
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

COURSE OUTCOMES:**Learners should be able to**

1. Understand the principles and techniques of Operations Research and their applications in decision-making.
2. Formulate linear programming (LP) models and understand the cost minimization and profit maximization concepts.
3. Apply mathematical methods for large-scale transportation, assignment models and inventory models.
4. Realize and apply mathematical techniques in getting the best possible solution to a problem involving limited resources.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills.
6. course concentrates on Linear programming, transportation model, Queueing theory and Inventory

UNIT I Operations Research and Linear Programming

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

UNIT II Transportation Model

Transportation Model: Introduction – Mathematical Formulation – Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model - Unbalanced Transportation Problems and Maximization case in Transportation Problem.

UNIT III Assignment Problem and Queueing Theory

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method – Unbalanced Assignment Problem- Maximization Case in Assignment Problem - Travelling Salesman Problem.

Queueing Theory : Introduction – Characteristics of Queueing System. Problems in

(M/M/1):(□/FIFO) and (M/M/1):(N/FIFO) models

UNIT IV Inventory Control

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models : Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage - Price Break

UNIT V Networking Problem

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path : PERT – Time Estimates in PERT - Probability of Meeting scheduled date of Completion of Projects

SUGGESTED READINGS :

1. Frederick S. Hillier, Gerald J. Lieberman, Bodhibrata Nag, Preetam Basu (2017), *Introduction to Operations Research*, 10th edition, McGraw Hill Education, New Delhi.
2. J.K. Sharma (2017). *Operations Research - Theory and Applications.*, 6th edition, Laxmi Publications, New Delhi.
3. G. Srinivasan (2017), *Operations Research: Principles and Applications*, PHI, New Delhi
4. Taha (2014), *Operations Research: An Introduction*, 9th edition, Pearson education, New Delhi.
5. PK Gupta, D.S Hira (1976), *Operations Research*, S Chand Publishing, New Delhi.

18CCP104	RELATIONAL DATABASE MANAGEMENT SYSTEM	Semester – I
InstructionHours/week: L: 4 T: 0 P: 0	Marks: Internal: 40 External: 60	Total: 100
End Semester Exam: 3 Hours		

COURSE OBJECTIVES:**To make the students**

1. To understand and explain the fundamental concepts of a relational databasesystem.
2. To gain in depth knowledge entities, entity relations and functional dependenciesfeatures and itapplications.
3. To obtain knowledge on objects functionalities and itsapplication.
4. To gain knowledge PL usage and itsapplications.
5. To understand the concept of normalisation ofdatabase
6. To gain knowledge SQL usage and itsapplications.

COURSEOUTCOMES:**Learners should be able to**

1. Gain a good understanding of the architecture and functioning of database management systems as well as associated tools and techniques, principles of data modeling using entity relationshipanddevelopagoooddatabasesdesignandnormalizationtechniquestonormalizea database.
2. Translate written business requirements into conceptual entity-relationship datamodels.
3. Convert conceptual data models into relational database schemas using the SQL Data Definition Language(DDL).
4. Understand the use of structured query language and its syntax, transactions, database recovery and techniques for queryoptimization.
5. Apply normalisation technique to normalise thedatabase
6. Understand data manipulation language

UNIT I Understanding Database Fundamentals

What is data, information, database, RDBMS. – Database environments – origin of database – database elements – design concepts – what makes a good database?- Database Models : flat file – hierarchical model – network model – relational model – object oriented model – object relational model. Relational database: characteristics – concepts – language (SQL).

UNIT II Entities and Entity Relationships and Functional Dependencies

Entities – relationships: one to one, one to many, many to many, recursive, mandatory, and optional – Transformationoftheentityindesign–accessingthedata–avoidingpoorrelationshipconstructs. ER Diagram: how ERD is used – typical ERD symbols – cardinalities – sampleERD.

Functional Dependencies: Introduction – definition – keys – inference axioms – redundant functional dependencies – membership algorithm. Closures, cover and equivalence of functional dependencies: closure of a set F - closure of a set of attributes – closure algorithm – Non-Redundant cover algorithm.

UNIT III Objects

Table – view – index – sequence – synonyms. Data types. Constraints – primary key, unique, not null, default, check, referential integrity constraints – table level – column level – naming constraints. E.F. Codd's rules. Data Definition Language: create objects, CTAS – alter objects, add and drop columns and constraints; changing field size – drop objects – truncate table. Data Manipulation Language: Insert, insert...as–update–delete–selectwithwhere,groupby,order by, having clauses- Simple sub queries-Operators: arithmetic – relational – boolean – exists, like, in, all, not - assignment – concatenation – date addition, subtraction. Set operators: intersect – minus – union – union all-Aggregate functions. Data Control language: grant, revoke – simple privileges. Simple flashback queries: droptable

UNIT IV Overview of PL/SQL

Declaration section – executable command section: conditional logic, loops, CASE statements – exception handling section: predefined and user defined exceptions. Triggers: definition – types : rowlevel,statement level,beforeandafter,insteadof–syntax –enablinganddisablingtriggers-replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes-selectforupdate–types:implicit,explicit.Procedures,Functions,andPackages:Localandglobal – Proceduresvsfunctions–storedprocedures,functions–createproceduresyntax-createfunction syntax – package header – package body – calling procedures, functions, package members. Replacing and dropping procedures, functions,packages.

UNIT V Overview of Normalization

Advantages-disadvantages.Normalforms:firstnormalform–secondnormalform–thirdnormal form – boyce- codd normal form – Introduction to fourth, fifth and sixth normal forms – denormalization.

SUGGESTED READINGS :

1. Riktesh Srivastava (2014), Relational Database Management System, 1st edition, New Age International Private Limited, NewDelhi.
2. Benjamin Nevarez (2014), Microsoft SQL Server 2014 Query Tuning & Optimization, McGraw-Hill Education, NewDelhi.
3. Ramon A. Mata-Toledo and Pauline K. Cushman. 2001. Schaum's Outline of Fundamentals of Relational Databases, 1st Edition, Tata McGraw-Hill, NewDelhi.
4. Michael J. Hernandez (2013), Database Design for Mere Mortals: A Hands - on Guide to Relational Database Design, 3rd edition, Pearson Addison-Wesley Professional, New Delhi.
5. Keith Gordon (2017), Modelling Business Information: Entity relationship and class modelling for Business Analysts, BCS, The Chartered Institute for IT,London.

COURSE OBJECTIVES:**To make the students**

1. To understand the Structure of financial system and the regulatory body governing the financial system.
2. To obtain the knowledge about the functionality of money and the instruments of money markets.
3. To gain knowledge about the functionality of capital market and the instruments of capital market.
4. To comprehend the knowledge about the derivative market instruments and its role in managing risk.
5. To understand the developments banks in India and its role in Indian Financial system.
6. To understand the operational and promotional activities of development banks

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Financial system, its functions and the importance of regulatory bodies and their framework.
2. Familiarize on the money market, its operations and money market instruments and its importance to the economy.
3. Explain the capital market, its operations and portray the importance of capital market instruments in mobilizing the funds by the corporates.
4. Realize the importance of derivative market, its instruments in mitigating the risk and know the importance of development banks and its contribution to Indian economy growth.
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Realize the operational and promotional activities of development banks

UNIT I Financial system

Introduction - Nature and role of financial system, Financial system and financial markets, financial sector reforms.

Regulatory and Promotional Institutions - The Reserve Bank of India and The Securities and Exchange Board of India

UNIT II Money Market

Money Market – Definition – Money Market Vs Capital Market- Objectives – Importance of Money Market – Composition of Money Market – Participants – Commercial Bill Market – Types of Bills – Importance of Bill Market – Discount Market – Acceptance Market – Bill Market Scheme – Treasury Bill Market – Types of Treasury Bills – Importance – Commercial Paper – Certificate

of Deposit – REPO – Structure of Indian Money Market –Recent Developments in Money Markets.

UNIT III Capital Market

Capital Market – Meaning – Primary market and secondary market - Distinction between New Issue Market and Stock Exchange – Relationship between New Issues Market and Stock Exchange

– Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

Secondary Market – Stock exchanges – Role of stock exchanges – Players in the stock market - Equity and Debt Market - Online trading- Surveillance.

OTCEI Market and its operations

UNIT IV Derivative Market

Derivatives – Definition – Types – Forward Contracts – Futures Contracts – Options – Swaps – Differences between Cash and Future Markets – Types of Traders – OTC and Exchange Traded Securities – Types of Settlement – Uses and Advantages of Derivatives – Risks in Derivatives.

UNIT V Development Banks

Concept - objectives and functions of development banks - operational and promotional activities of development banks - IFCI, ICICI, IDBI, SIDBI - state development banks - state financial corporations.

Non-banking financial institutions : Evolution, control by RBI and SEBI.

SUGGESTED READINGS:

1. Bhole L.M., Jitendra (2017), Financial Institutions and Markets – Structure Growth and Innovation, 6th Edition, Tata McGraw Hill, New Delhi.
2. Gurusamy S (2015), Financial Markets & Institutions, 4th edition, Vijay Nicole Imprints Pvt Ltd, New Delhi.
3. Gordon and Natarajan (2015). Financial Markets and Institutions. 3rd edition, Himalaya Publishing House, New Delhi,
4. Bharati V. Pathak (2018), Indian Financial System : Markets, Institutions and Services, 5th edition, Pearson education, New Delhi
5. MY Khan (2017), Indian Financial System, 10th edition, McGraw Hill Education, New Delhi.

COURSE OBJECTIVES :**To make the students**

1. To understand the basic concepts of organizational behavior.
2. To analyze the individual behavior traits required for performing as individual or group.
3. To obtain the knowledge and skills of perceiving, motivating using different learning styles.
4. To understand how to perform in group and team and how to manage the power, politics and conflict.
5. To recognize the importance of organizational culture and organizational change.
6. To understand how to Managing Organizational Change

COURSE OUTCOMES:**Learners should be able to**

1. Analyse behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization by applying personality, motivation and learning theories.
3. Manage team and resolve conflict arising between the members.
4. Explain how organizational change and culture affect working relationships within organizations.
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Realize the Managing Organizational Change

UNIT I Introduction to Organization Behavior

Meaning and Definition of OB - nature – goals – elements – Fundamental concepts – approaches to the study of Organizational Behaviour. Historical development of Organizational Behaviour- Model of Organizational Behaviour- Challenges and opportunities for OB – Responding to Globalization - Managing work force diversity-Improving Customer Service-Coping with “Temporariness”-Helping Employees Balance Work-Life Conflicts-Improving Ethical Behaviour- Meaning of stress – stress levels - sources of stress – consequences of stress – stress management techniques

UNIT II Individual Behaviour and Personality

Factors Influencing Individual Behaviour - Environmental Factors - Personal Factors- Organizational Systems and Resources – Psychological-Meaning and Definition of personality – determinants of personality – personality traits-Authoritarianism- Locus of Control- Machiavellianism-IntroversionandExtroversion-AchievementOrientation-Self-Esteem-Risk-taking- Self-Monitoring. Theories of Personality - Type Theory - Trait Theory-Psychoanalytic Theory - Social Learning Theory - The shaping of Personality - Freudian Stages -Neo-Freudian Stages - Cognitive Stages - Personality Job –fittheory.

UNIT III Individual Dynamics

Perception-Meaning and Definition-Perceptual Process–factors influencing perception-The link betweenperceptionandIndividualDecisionMaking–perceptualbiases/errors–honingperceptual skills-Meaning of Learning–Theories of learning-Classical Conditioning- Operant Conditioning- and Social Learning. Principles of learning-Meaning of Motivation–Theories of motivation (Content theories: Maslow’s- Herzberg’s-Alderfer’s and McClelland’s theories) Processtheories: Equity theory of Stacy Adam’s and Vrooms Expectancytheory.

UNIT IV Group Dynamics

Meaning and definition of a Group-Classification of Groups-formal groups – informal groups – command group – task group – interest group – friendship group-Stages of group development. Group properties: roles – Norms – Status- Size and Cohesiveness-Group behaviour: required and emergent behaviour-Group Decision Making – group versus the individual – strengths and weaknesses of group decision making-Groupthink and Group shift-Group decision making techniques-Group effectiveness-Meaning and Definition of Conflict – The conflict process- Functional and Dysfunctional conflict – Levels of Conflict – Intra-individual conflict – Interpersonal conflict – inter group conflict-Conflict Resolution Strategies-Negotiation – Bargaining Strategies-The Negotiation process-Issues in Negotiation.

UNIT V Organizational Dynamics

Organizational culture-Definition – Strong versus weak cultures – culture versus formalization- Culture’s functions- Culture as a Liability-Creating and Sustaining Culture-Creating an Ethical Organizational Culture-Creating a Customer-Responsive Culture-Spirituality and Organizational

Culture- Organizational change-Meaning of Change–forces for change-Managing planned

change-Resistance to change – overcoming resistance to change-Approaches to Managing Organizational Change

SUGGESTED READINGS:

1. Fred Luthans. (2017). *Organizational Behavior: An Evidence - Based Approach*, 12th edition, McGraw Hill Education, New Delhi.
2. Steven Mcshane and Mary Ann Von Glinow (2017), *Organizational Behavior*, 6th edition, McGraw Hill Education, New Delhi
3. Robbins, S. P., and Judge, T.A. (2016). *Organizational Behaviour*. (16th edition). New Delhi: Prentice Hall of India.
4. Laurie J. Mullins (2016), *Management and Organisational behaviour*, 10th edition, Pearson Education, New Delhi
5. Robbins, S.P., and Judge, T.A. (2016). *Essentials of Organizational Behavior*. 13th edition, Pearson Education.

COURSE OBJECTIVES :**To make the students**

1. To understand the concept of retailing, retailing strategy and the trends of retailing in India
2. To obtain the knowledge on the retail location and importance of choosing the retail location.
3. To gain knowledge on the retail formats and importance of choosing the retail formats.
4. To know the process of retail pricing and merchandising.
5. To recognize the importance of advertising and technology usage in retailing.
6. To understand the retail audit

LEARNING OUTCOMES :**Learners should be able to**

1. Comprehend on the retailing concept, retailing strategy and the trends of retailing in India.
2. Select the appropriate location for the setting up of retail store.
3. Evaluate the importance of the various retail formats
4. Formulate pricing strategies, apply the concept of merchandising and assess the different advertising and technology options suitable for the success of the retail operations.
5. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.
6. Apply the e-retailing

UNIT I Retailing and Trends in Retailing

An overview of Retailing - Types of stores - Product Retailing vs. Service Retailing - Non store Retailing - Retail strategy - Achieving competitive advantage and positioning Retailing environment - Legal, Social, Economic, Technological, issues - Retailing in India, role, relevance and trends, significance of retail industry, new role of retailers, channels of retailing, role of franchising in retail, retail environment, FDI in retail, Government of India's Policy implications on Retail.

UNIT II Retail Store and Location

Retail store location and layout - Country/Region analysis - Trade area analysis - Site evaluation and selection - Store design and layout - Comprehensive store planning - Exterior design and layout - Interior store design and layout - Interior design elements

UNIT III Retailing Formats

Concepts of shopping, process, behaviour, demographics, psychographics, attitudes, behaviour based segmentations and shopping patterns in India. Retail Service Quality aspects - Globalization and changing retail formats – Online retailing - International Retailing – Opportunities and Challenges - Market entry formulas - New customized formats (customized stores, portable stores,

merchandise depots, retail theater, service malls, customer-made stores, interactive kiosk 'shopping arcades')

UNIT IV Retail pricing and merchandising:

pricing strategies (EDLP), GMROI, buying functions (OTB), selection of vendors and building partnerships, category management, Visual merchandising, retail communication, POP in retail and branding- Planning merchandise needs and merchandise budgets - Methods for determining inventory evaluation - Assortment planning, buying and vendor relations

UNIT V Advertising and Technology in Retailing

Retail Advertising and Promotions, Atmospherics, Elements of retail image, store choices and building store loyalty

Retail technology and automations, retail audit, retail transactions, web applications, RFID, data security, retail technology, inventory shrinkages and e-tailing

SUGGESTED READINGS :

1. Gibson (2017), Retail Management, 5th edition, Pearson education, NewDelhi.
2. Michael Levy , Barton Weitz , Ajay Pandit (2017), Retailing Management, 8th edition, McGraw Hill Education, NewDelhi.
3. Swapna Pradhan (2017). Retail Management : Text and Cases, 5th edition, McGraw Hill Education, NewDelhi
4. Barry Berman, Joel R Evans ,Patrali Chatterjee, Ritu Srivastava (2017),Retail Management, 13th edition, Pearson education, NewDelhi.
5. Bajaj , Tuli, Srivastava (2016), Retail Management, 3rd edition, Oxford University Press, NewDelhi

COURSE OBJECTIVES:**To make the students**

1. To familiarise on the features of databasetechnologies.
2. To impart the knowledge of the features used in creation oftables
3. To obtain knowledge on objects functionalities and itsapplication.
4. To gain knowledge PL programming and itsapplications.
5. To Understand the use of structured query language and its syntax, transactions, database recovery and techniques for queryoptimization.
6. To gain knowledge SQL programming and itsapplications.

COURSEOUTCOMES:**Learners should be able to**

1. Understand, appreciate and effectively explain the underlying concepts ofdatabase technologies
2. Design and implement a database schema for a givenproblem-domain
3. Populate and query a database using SQL DML/DDLcommands
4. Programme using PL including features like stored procedures, storedfunctions, cursors,packages.
5. Exhibit communication skills to communicate the output derived from theprogram.
6. Programme using SQL including features like stored procedures, storedfunctions, cursors,packages.

Create a table, “Customer” with the following fields:

Field	Data type	Sample Values
Cust name	Varchar2	Karpagam, Ananya
gender	Char	F orM
DOB	Date	
type	Varchar2	Credit orCash
address	Varchar2	
city	Varchar2	
last purchased	Date	

- a) Insert records into thetable.
- b) List all malecustomers.
- c) List all female customers who live inCoimbatore.
- d) List all customers who bought things today forcredit.

1. Create a parent table, “Suppliers” with the following fields:

Field	Data type	Constraints	Sample Values
Sup code	Varchar2	Primary Key	A001, S001, A002
Name	Varchar2	Not null	Ananya, Shakthi, Ananth
gender	Char	Check (F / M)	F,M
type	Varchar2	Check (Credit / Cash)	Credit,Cash
address	Varchar2		
city	Varchar2		
Mobile	Number	unique	

Child table :Supply_items

Field	Data type	Constraints	Sample Values
Sup_code	Varchar2	Reference Key	
Item_Name	Varchar2	Not null	
Price	Number	Check (>=5 and <=250)	
Deliver_within	Number		1, 2, 3, ...

- Insert records into both the table.
 - List the suppliers name and city, who supply “Icecreams”
 - List the total number of different items along with the suppliers name.
 - List the suppliers name, who supply Biscuits within one day.
 - List all the female suppliers who supply for credit but do not supply Pepsi.
2. Create the tables, Item (item_code, name, sell_price, qty_at_hand) and sales(item_code, s_date, qty_sold) with the required constraints.
- Change the name of the item from “System” to “ComputerSystem”.
 - Delete all the sales records if the item name is “Mouse”.
 - Insert a new attribute “Tax” to Salestable.
 - Fill the Tax field with the following value: 4% of selling price * sold quantity.
 - Delete the records from both the table, if the item have not been sold for the past 20 days.
3. Create a table, “Vehicle” with the following fields:

Field	Sample Values
V_code	B001, S001, C002, Auto, ...
V_Name	Bike, Scooter, Car, Auto
Type	Only 2, 3, or 4. (Wheelers)
Company	
On_road_price	
Colour	Only Red, black, yellow or silver
Date_purchased	
Model	

- Insert the records. For V_code use sequence.
- Create a view on vehicle table, but only for silver colour four wheelers.
- Delete the vehicles whichever purchased before one year from the view.
- Select the records from the view, which have the on road rate between 3 and 7.5

- lakhs.
- Drop the view
 - Select all the silver colour cars. (observe the difference between view and a table)
4. Create the following tables:
- “Library_Books” with the following fields: Book_Acc_No (primary key), ISBN, Title, Author, Publication, Year_Pub (≤ 2008), Edition, Copies (minimum 1), Specification (CSC, Phy, Che, Eng, Fus, Bus, ...)
 - “Student” with the following fields: (primary key), Name, Gender (F / M), Course, (CSC, Phy, Che, Eng, Fus, Bus, ...), Year (I, II, III)
 - “Lend_Books” with the following fields: Book_Acc_No (Foreign key), Reg_no (Foreign key), Date_issued, Date_return. (Note: Book_Acc_No and Reg_no, both together provide uniqueness)
- Insert records in all the tables created.
 - Write a trigger, to reduce the number of copies in the Library_Books table, whenever a book is lent to a student.
 - List the books information, which is issued before Jan 1st, 2008, along with the student information who borrowed them.
5. Create the following tables:
- Parent table : “Department” with the following fields: Dept_code (primary key), Dept_name, Head
 - “Employee” : Fields – emp_code, dcode (foreign key), emp_name, basic_pay, experience, net_pay. [Note: primary key – emp_code, dcode, net_pay – default value is 0]
 - “Salary” (child table of Employee) : Fields – emp_id, dcode, Da, hra, cca, ia, ma, pf.
 - “Loan” (child table of Employee) : Fields – emp_id, dcode, house, vehicle, medical.
- Insert records into Department and Employee tables.
 - Update net pay by calling a stored function.
 - Create a stored procedure to get the input for Loan table and enter the data as a record into it.
 - Create a stored function, to calculate the DA, HRA, CCA, IA, MA and the Net pay of the employees. Enter the data as records into Salary table and update the net pay field in the Employee table.

Calculation:

DA	103 % of Basic Pay
HRA	25 % of Basic Pay
CCA	1 % of Basic Pay
IA	1.1 % of Basic Pay
MA	8 % of Basic Pay
PF	12 % of Basic Pay
Net Pay	BP + DA + HRA + CCA + IA + MA – PF – Loan if any.

- Create a package including the above created procedure and function.

6. Create a table “Mobile”, with the following fields: code (alphanumeric field),mobile_name, model, company, amount,warranty
 - a) Generate the code automatically through a stored function. Code is alphanumericfield. (Sample values : NOK001, SON001, SAM001,NOK002,...)
 - b) List all mobiles details, whose company name start with“S”.
 - c) Create another tale “Nokia” from the Mobile table using CTAS concept,which includes only Nokiamobiles.
 - d) Insert more records into Nokiatable.
 - e) Select all the records from both the tale individually, to observe the linkbetween these twotables.
 - f) Select all the records from the Nokia table, which are not in Mobiletable.
 - g) Display the information about the second highest price Sonymobile.
 - h) List the number of mobiles and the average price of each mobilecompany.
 - i) List the mobiles information in company’s alphabeticalorder.
 - j) List the mobile names and models, which have the palindrome modelnumbers.
7. Create tale Department and Student with relevant fields and constraints. ad enter therecords. Create one more table :“Result”.
 - a) Write a stored procedure using cursor, to get the input for Result table and enter intoit.
 - b) Create another stored procedure to display the information about the students,their department and result in a reportformat.
8. Create a table “Medicine” which includes the fields, medicine_name, manufactured_date, expiry_date, qty_ml, sell_price, purchase_price, company, quantity. Create another tale “Purchase”, which has same structure as “medicine”. Add one more column pur_date in this table.
 - a) While inserting records into Purchase tale, check the expiry date. If the purchased medicine is expired, using exception handling clause, insert the medicine information into“Expired”table. Otherwise,ifthemedicineisnewlypurchased,insertanewrecord, or update the existing record’s quantity field in the Medicinetable.
 - b) Ifthequantitypurchasediszeroornegative,raiseonemoreexception,todisplayanerror message, and do not enter or update therecords.
10. Create following tables with appropriate constraints.
 1. Write SQL statement for followingqueries.
 - a) Age ofemployees.
 - b) Employees whose take home salary is in the range Rs10,000 and15,000
 - c) Employees whose has put 10 years ofservice.
 - d) Employees working under the department headRAGURAMAN
 - e) Senior and youngest employee in eachdepartment.
 - f) Employees who retires after oneyear.
 2. Writecursors
 - a) To raise the basic salaries by 25percent
 - b) To retain male employee in the existing employee table and to move female employees to a newtable
 3. Create followingviews
 - a) For male employees of age more than 45years.
 - b) For operator with the CHECKOPTION.
 - c) For Female employees working under the department headRAJARAMAN.

- d) For male employees with the CHECKOPTION.
4. Create a trigger which fires when onetries
 - a) To update records in employee table onSundays.
 - b) To insert records in salary table with basic>30000
5. Generate a pay slip where 40 percent, 20 percent and 15 percent of basic is given as HRA, TA and DA for theemployees
11. Create following tables with appropriateconstraints.
 1. Take a stock report and list of books incirculation.
 2. Write SQL statements for followingqueries.
 - a) Authors of C and C++books.
 - b) List of books issued for UGstudent
 - c) Title of books in computer sciencedepartment.
 - d) Titles of book by the author'DIETEL'.
 - e) Publishers of C and C++ books.
 - f) Number of book issued to eachstudent
 - g) Publisher details of CommerceDepartment
12. Write a cursor
 - a) To move books costing more than Rs.1500 into a separate table, Referencetable.
 - b) To move damaged books into a separate table damagedtable.
13. Write a recursive program for finding the factorial of a givennumber.
14. Write a recursive program for finding the first n Fibonaccinumber.
15. Write a PL/SQL program for multiplication tables 3, 4, 5 and6.
16. Write a recursive program for finding the reverse of a givennumber.
17. Write SQL queries to illustrate the string functions a mathematicalfunctions.
18. Write a program for finding the reverse of a givenstring.

COURSE OBJECTIVES:**To make the students**

1. To understand the accounts heads available to create a company in the accounting software
2. To know the mechanics of creating the vouchers and ledgers,
3. To be aware of the inventory valuations methods available in the software,
4. To understand various financial statements that are built in the software,
5. To be aware of financial analysis tools available in the software
6. To prepare the various types of reports

COURSE OUTCOMES:**Learners should be able to**

1. Understand the different accounting heads and its importance
2. Create vouchers and ledgers by understanding the reason for posting under different heads
3. Calculate valuation of assets using the software
4. Prepare the financial statements and analyse the financial statement using the option of ratio analysis
5. Exhibit communication skills to communicate the output derived from the program.
6. Preparing the various types of reports

Creating a Company

1. Create a Company with all relevant details including VAT options

Creating Ledger

2. Create the ledgers under appropriate predefined groups

Cash a/c	Computer sales a/c
Buildings a/c	Machinery a/c
Furniture a/c	Commission received a/c
Printer purchase a/c	Commission paid a/c
Rent received a/c	Salary a/c
Rent paid a/c	Indian bank a/c
Wages a/c	Sales returns a/c
Capital a/c	Depreciation a/c
Purchase returns a/c	John & Co. a/c (purchased goods from this company)
Ram agency a/c (sold goods to this company)	

Create vouchers

3. Create vouchers and view Profit and loss a/c and Balance sheet for the following:

Hindustan Ltd. started the business on 01-04-2011

1 Apr. Contributed capital by cash Rs 2,00,000

1 Apr. Cash deposited in Indian bank Rs 50,000

2 Apr. Credit purchases from Krishna traders Rs. 20,000 invoice no 12

3 Apr. Credit purchases from PRAVIN traders Rs 20,000 invoice no 12
 4 Apr. Credit purchase from KRISHNA traders Rs 20000 invoice no 14
 5 Apr. Credit purchase from PRAVIN traders Rs 20,000 invoice no 44
 6 Apr. Returned goods to KRISHNA traders Rs 5000 invoice no 12
 7 Apr. Returned goods to PRAVIN traders Rs 5000 invoice no 44
 8 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 1
 9 Apr. Credit sales to KUMAR & Co Rs 50,000 inv no 2
 10 Apr. Cash sales Rs 20,000 inv no 3
 11 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 2
 12 Apr. Credit sales to RAVI & Co Rs 50000 inv no 5
 14 Apr. Goods returned by RAVI & Co Rs 5000 inv no 1
 14 Apr. Goods returned by KUMAR & Co Rs 5000 inv no 1
 15 Apr. Payment made by cheque to Krishna Traders Rs 30,000 ch no 505580
 16 Apr. Payment made by cheque to Pravin Traders Rs 30,000 ch no 505592
 17 Apr. Received cheque from: Ravi & Co and Kumar & Co 75,000 each.

Payments made by cash

3 Apr. Paid to petty cash by cash Rs. 1000
 4 Apr. Furniture purchased Rs. 20000
 5 Apr. Salaries paid Rs. 10000
 6 Apr. Rent Rs. 4000
 7 Apr. Electricity charges Rs. 3000
 8 Apr. Telephone charges Rs. 3500
 9 Apr. Cash purchases Rs. 5000

Payments made by petty cash

10 Apr. Conveyance Rs. 150
 11 Apr. Postage Rs. 100
 12 Apr. Stationeries Rs. 200
 14 Apr. Staff welfare Rs. 100
 14 Apr. Stationeries purchased from Sriram & Co 1500 on credit
 15 Apr. Depreciation on furniture 10%

4. Emerald & Co., started a business of home appliances from 1-4-2011

01-04 received cash for capital 5, 00,000
 07-04 credit purchases from LG Limited invoice no 123
 Oven 100nos at Rs 800, Mixes 100nos at Rs 1000, DVD player 100nos at Rs 1500,
 Fridge 100nos at Rs 2000
 10-04 Credit Sales to AMN invoice no 1:
 Oven 70nos at Rs 1000, Mixes 70nos at Rs 1500, DVD player 70nos at Rs 2000
 Fridge 70nos at Rs 2500+TNGST 4% ON TOTAL SALES
 10-04 Cash Sales invoice no 2:
 Oven 10nos at Rs 1000, Mixes 10nos at Rs 1500, DVD player 10nos at Rs 2000,
 Fridge 10nos at Rs 2500+TNGST 4% ON TOTAL SALES CASH discount 5%
 15-4 Paid cheque to LG limited Rs 2,00,000
 15-4 Received cheque from AMN & co Rs 3,00,000

5. Payment made by cash

Paid to petty cash Rs 2000, Furniture Rs 15000, Salaries Rs 10000

Wages Rs 7000, Carriage inward Rs 1500.

25-04 Payment made by petty cash

Conveyance Rs 200, Postage Rs 150, Stationeries Rs 150, Staff Welfare Rs 200

30-04 Journal depreciate 10% on furniture:

Prepare Trading Profit and Loss Account and Balance sheet.

6. From the Balances of Ms. Kavitha, Prepare Trading A/C, Profit And Loss A/C and Balance Sheet for The Year Ending

Stock - 9,300	Misc. income - 200
Repairs – 310	Purchases - 15,450
Machinery - 12,670	Purchase return - 440
Furniture - 1430	Sales return - 120
Office expenses - 750	Sundry creditors -
Trading expenses -	12,370
310	Advertisement - 500
Land & Building -	Cash in hand – 160
15,400	Cash at bank - 5,870
Bank charges - 50	Sales - 20,560
Capital - 24,500	Sundry expenses -
Loan - 5,000	150
Closing stock - 7,580	Insurance – 500
	Traveling expenses -
	200

INVENTORY VALUATION

7. From the Information given below create UNIT of measurement, stock groups and stock items

Find the stock summary:

Stock groups: 1. Magazine 2. Baby drinks 3. Cool drinks 4. daily news paper 5. Hot drinks

6. Stationeries 7. Vegetables

Stock items:

Item	Qty	Rate	Units
Boost	25	80	nos
Sports star	20	15	nos
Potato	260	30	kgs
Star dust	20	25	nos
The Hindu	50	3.25	nos
Tomato	150	15	kgs
Fanta	10	25	lit
Dinamalar	40	2.50	nos
Coco	55	120	nos
Horlicks	60	70	nos
India today	10	10	nos
Lactogin	10	100	nos

MAINTAIN BILLWISE DETAILS

8. Create bill wise details from the following

1. Ravi commenced business with a capital of Rs 2,00,000
2. Purchased goods from Kumar & Co Rs.15, 000 Paid in three installments within 5 days gap
3. Purchased goods for cash Rs.8000
4. Sold goods to Ratna & co Rs. 20,000 amount to be paid in two installments
5. Sold goods for cash for Rs.5000
6. Received cash from Ratna & co Rs.75000
7. Paid to Kumar & co Rs.7500
8. Sold goods for cash Rs.5000

CONSOLIDATION OF ACCOUNTS

9. Bharath Agencies, A Wholesaler Gives The Following Information:

Opening balances:

Capital: 20, 00,000 cash at bank: 10,00,000

Cash in hand: 5, 00,000 furniture: 5,00,000

Bharath agencies are dealing in stationeries. The selling prices are as follows;

Pen Rs 35 per dozen, pencil Rs. 30 per dozen, Ink pens Rs 140 per dozen

The following transactions take on a particular date:

1. purchased 100 dozens of pens from Ravana bros. @ Rs.25 per dozen for cash
2. purchased 200 dozens of pencils from Gughan bros. @ Rs.21.50 per dozen for credit less discount of Rs 100
3. sold 10 dozens of pens to Dharma bros. For cash
4. sold 10 dozens of pens to Bema bros for credit
5. sold 50 dozens of pencils to Arjuna bros.
6. purchased from Ravana bros 50 dozens of ink pens @ Rs.120 and by cheque.

Prepare following statements using Ex-accounting packages:

Stores ledger, Trading account, Income statement, Balance sheet, Account summary Ignore dates

FOREIGN GAINS/LOSS

10. Calculate

01.01.2005 Purchased goods from U.K supplier 1000 £

02.01.2005 Sold goods to U.S buyer 1500

03.01.2005 Cash received from U.S buyer 1500

(Selling rate rs.46/\$)

04.02.2005 Paid cash to U.K supplier 1000

(Selling rate Rs 53/ £)

Dollar\$:

Std rate - 1\$ - 43 Rs

Sales rate - 1\$ - 44 Rs

Buying rate - 1\$ - 42Rs

Pound£:

Std rate - 1 £ - 51 Rs

Sales rate - 1 £ - 50 Rs

Buying rate - 1 £ - 52 Rs

11. MEMOVOUCHER

An advance amount paid Rs 1500 given to sales executive for traveling. The actual expenses for traveling expenses for the sales is Rs 500

12. CHEQUE PRINTING

Print a cheque:

Company name on cheque: Wipro India Ltd.: name of the bank Indusind bank.

Width 168, height 76, starting location 116, distance from top 23.

13. RATIOANALYSIS

Enter the following details comment upon the short-term solvency position of the company:

Working capital Rs20560492

Cash14500

Bank18500

Debtors 518260

Creditors 429337

Sales 515252

Purchases 433310

Stock 125982

Net profit ...?

14. INTEREST CALCULATIONS

Cash deposited in Scotia bank Rs1,00,000

Sold goods to Ganesh Rs 25,000

31-12- cash deposited at Scotia bank Rs 50,000

Sold goods to Ganesh 50,000

Interest parameters rate 14% per 365 days year

15. CalculateInterest

Cash deposited in SBI 1, 00,000Rs

1-12 purchased goods from suppliers Rs 20,000

Deposited in SBI Rs.50, 000

Purchased goods from suppliers Rs 40,000

Interest parameters rate 16% per 365 days year

16. Display the interest calculations for the period 1-4-2011 to31-12-2011

Opening balance

Ram & Co Rs 25,000

Krishna traders Rs 20,000

Interest parameters rate 12% per 365 days year

Interest parameters rate 12% and 16% for sundry creditors per 365 days year

Purchased goods from Krishna for 25,000(credit period 45 days)

Sold goods to Ram for Rs. 50,000(credit period 30 days)

Paid to Krishna the amount plus interest

Received from Ram plus interest

17. Create stock items, stock groups, sales categories, godowns, units of measure.

Stock	Category	Group	Godown	UNIT of measure	Std cost	Sell Price	Op. Qty	Total Value
Inter Celeron	Processor	Celeron	Mumbai	Nos.	15000	20000	2	30000
Intel Premium III	Processor		Chennai	Nos	20000	25000	3	60000
Tally Silver	Accounting	Tally	Chennai	Nos	20000	22500	5	100000
Tally gold	Accounting	Tally	Chennai	Nos	42000	45000	5	210000
								400000

18. Using the above exercise create various vouchers including VAT calculation for the following

Date Transactions	Transaction
09/4/2006	Intel Pentium III (3 Nos) @ 25,000 delivered to Vijay & CO, from Madras Go down.
10/4/2006	10 Nos of Intel Celeron @ 15000 per UNIT received from Jayaram and Co, and sent to Madras Go down.
12/4/2006	2Nos of Intel Premium III received from Vijay & CO, as it was not in a working position.
14/4/2006	2Nos of Intel Celeron returned to Jayaram & Co from Madras Go down.
14/4/2006	Physical Stock verification shows Shortage of 1 No Intel Pentium III.

19. Create the following Inventory vouchers with data from any cost accounting book.

- Purchase order
- Sales order
- Rejection out
- Rejection in
- Stock journal
- Delivery note
- Receipt note
- Physical stock

20. In addition to the above-mentioned lab exercises work out a problem from any advanced accountancy book with a minimum of 20 transactions and generate the tally reports in full.

COURSE OBJECTIVES:**To make the students**

1. To understand the financial management concept and its importance and its applications in business, their relationship with the business environment and the role and functions of chief financial officer.
2. To know the concept of time value of money and the rationale for using the time value of money concept in capital budgeting techniques for evaluations of business proposals.
3. To recognize the availability of different source of capital and computation of cost of capital.
4. To recognize the importance of financial leverage, dividend policies and capital structure theories and its application in business.
5. To comprehend on the importance working capital, its determination and application.
6. To understand the nature, importance, structure of corporate finance related areas.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the role of a financial manager, and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time and apply the concept to Evaluate the business proposal applying capital budgeting techniques
3. Compute the cost of capital and financial leverage to estimate the optimal capital structure.
4. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to financial decisions.
6. Apply the concept to Evaluate the business proposal applying capital budgeting techniques

UNIT I Finance Function and Sources of Finance

Meaning, nature and scope of finance goal – profit vs. wealth maximization; Finance decisions – investment, financing and dividend decisions. Role of finance manager – Treasurer Vs. Controller. Agency conflict and agency cost. Indian financial System

Long Term Sources of Finance: Equity, Debentures, Preference Shares, Long term loan, Private equity, Venture capital and Angel investor.

Short term Sources of Finance : Short term loan, commercial paper, certificate of deposits, commercial paper, bill of exchange, factoring.

UNIT II Time value of Money and Capital Budgeting

Time value of money : Present value, future value, Annuity, Annuity Due, Perpetuity, Amortization schedule

Principles of capital budgeting – method of investment analysis – payback, APR, NPV, IRR discounted cash flow – risk and return decision – profitability index

UNIT III Capital Structure and Cost of Capital

Capital Structure: forms – importance – optimal capital structure – theories – Factors determining capital structure – changes in capital structure – capital gearing

Cost of Capital: Cost of capital – meaning – significance – classification of cost – determination – problems – computation of cost of specific sources of finance (cost of Debt, Equity & Preference shares, Retained earnings) – Computation of weighted average cost of capital, Marginal cost of capital.

UNIT IV Leverage and Dividend Policy

Leverages: Meaning – Types – Financial Leverage – Operational Leverage – Composite – Working Capital Leverage.

Dividend: Approaches – determinants – types of dividend policy – effects and objects of bonus issue – Dividend theories and Models - Walter's Model, Gordon's Model and MM approach

UNIT V Working Capital Management

Meaning - concept – kinds – importance of adequate working capital - determinants of working
Karpagam Academy of Higher Education (Deemed to be University), Coimbatore – 641 021

capital.- working capital policy- estimation of working capital – operating cycle/ cash conversion cycle

Cash Management :optimal cash, cash budget

Inventory Management :EOQ, Reorder level

Receivables Management : Credit policy, receivables matrix.

Note: Theory : 60 Marks and Problems : 40 Marks

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of Data Warehouse and its significance
2. To gain the knowledge of hardware and operational design of data warehouses
3. To obtain the knowledge of planning the requirements for data warehousing.
4. To understand the types of the data mining techniques and its application
5. To comprehend on the concept of knowledge discovery process and its application
6. To understand Knowledge discover in Database

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basic principles, concepts and applications of data warehousing and data mining,
2. Comprehend the importance of Processing raw data to make it suitable for various data mining algorithms.
3. Visualize the techniques of clustering, classification, association finding, feature selection and its importance in analysing the real-world data.
4. Understand the Conceptual, Logical, and Physical design of Data Warehouses OLAP applications and OLAP deployment
5. Exhibit the communication skills to convey the thoughts and ideas of case analysis to the individuals and group.
6. Exhibit the Knowledge discover in Database

UNIT I Data warehousing

Meaning and Significance – Data Warehouse Architecture: System Process – Process architecture – Design – Database scheme – Partitioning strategy – Aggregations – Data mart – Meta data – Systems and data Warehouse process managers.

UNIT II Hardware and Operational design of data warehouses

Hardware and Operational design of data warehouses – Hardware architecture – Physical layout – Security – Backup and Recovery – Service level agreement – Operating the data warehouse.

UNIT III Data warehouse Planning

Tuning and Testing – Capacity planning – Testing the data warehouses – Data warehouse features.

UNIT IV Data mining

Introduction – Information and production factor – Data mining Vs Query tools – Data mining in marketing – Self learning computer systems – concept learning.

UNIT V Knowledge discovery process

Data selection – Cleaning – Enrichment – Coding – Preliminary analysis of the data set using traditional query tools – Visualization techniques – OLAP tools – Decision trees – Association rules – Neural networks – Genetic Algorithms KDD (Knowledge discover in Database) environment.

COURSE OBJECTIVES:**To make the students**

1. To understand the basic principles underlying the provisions of direct tax laws and to develop a broad understanding of the tax laws and accepted tax practices.
2. To recognize the income from property and profession and mode of assessing the same in income tax.
3. To obtain the importance of capital gain in computation of Income tax.
4. To understand the different deductions available under the income tax.
5. To gain the exposure on practical aspects of tax planning as an important managerial decision-making process.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Distinguish sources of income
2. Distinguish between deductible and non-deductible expenses
3. Apply the tax code provisions and calculate tax for natural and legal persons
4. Comprehend and apply the practical aspects of tax planning
5. Exposure to real life situations involving taxation and to equip them with techniques for taking tax-sensitive decisions.
6. Familiar with the laws pertaining to the Income Tax and its application lifelong.

UNIT I Income Tax Act 1961

Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

UNIT II Income from Property and Profession

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

UNIT III Capital Gains

Capital Gain – Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

UNIT IV Deduction out of Gross Total Income

Computation of Total Income- Assessment of Individual.

UNIT V Tax Planning

Advance payment of tax –Tax Deducted at Source - ETDS Software - Returns to be submitted by various assesses-Different Types of Tax Planning – Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

COURSE OBJECTIVES:**To make the students**

1. To understand of fundamental programming constructs and concepts
2. To comprehend on the object-oriented programming concepts of Class and Object
3. To gain knowledge on the packages and interface and its applications.
4. To obtain the application of Multi thread models in programming
5. To know about the applet class and its application
6. To know about the Creating an executable applet

COURSE OUTCOMES:**Learners should be able to**

1. Obtain programming skills in the Java programming language,
2. Gain knowledge of object-oriented paradigm in the Java programming language
3. Know about the usage of the Java programming language for various programming technologies
4. Understand to usage tools to design webpage using the java programming and realize the usage of standard and third-party Java's API's when writing applications.
5. Exhibit the communication skills to convey the output of the programme.
6. Gain knowledge of Creating an executable applet

UNIT I An overview of Java

Object oriented programming – Java features – Java environment - Data types, variables and arrays. Operators- Expressions - Control Statements: Branching statements – Iteration statements – Jump statements – Sample java program.

UNIT II Classes

Objects – Methods – Constructors – This keyword – finalize () method – Overloading methods – Returning objects – Recursion – Static – Final – Nested inner classes – Command line arguments – Inheritance.

UNIT III Packages and Interfaces:

Packages – Access protection – Importing packages – Interfaces – Exception handling: Fundamentals – Exception types – Try and catch – Multiple catch – Nested try – throw – throws – finally – Build in exception.

UNIT IV Multithread programming

Thread model – Life cycle of thread – Creating thread – Multiple threads – Thread priorities – Synchronization – Inter thread Communication – Suspending, Resuming and Stopping threads – I/O Applets, and other topics.

UNIT V The Applet Class

Basics – Building applet code – Applet life cycle – Creating an executable applet – Designing a webpage–Runningtheapplet–Gettinginputfromtheuser–Graphicsprogramming:Thegraphic class – Lines and rectangles – Circles and ellipses – Using control loops in applets – Drawing bar charts.

COURSE OBJECTIVES:**To make the students**

1. To understand of investment concepts and investment avenues available
2. To calculate the intrinsic value of securities and understand risk-return relationship
3. To know about the fundamental analysis
4. To know about the technical analysis and its application.
5. To comprehend the investment theory and its relevance in the current context.
6. To recognize different performance measures and evaluate the performance of the portfolio.

COURSE OUTCOMES:**Learners should be able to**

1. Choose the appropriate investment avenues based on the individual risk return profile
2. Calculate the intrinsic value and evaluate the performance based on risk-return
3. Select the security based on the fundamental and technical analytical tools
4. Evaluate the performance of the portfolio using the different measures
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to investment decisions.
6. Demonstrate capabilities of diversification risk

UNIT I Investment Basics

Concepts of investment – Sources of investment information – Investment Instruments – Investment cycle

UNIT II Valuation of securities and Analysis of Risk and Return

Bond and fixed income instruments valuation – valuation of equity and preference shares.

Analysis of risk and Return

Concept of total risk, factors contributing to total risk : default risk, interest rate risk, market risk, management risk, purchasing power risk, systematic and unsystematic risk, Risk and risk aversion. Capital allocation between risky and risk-free assets – Utility analysis.

UNIT III Fundamental and Technical Analysis**Fundamental Analysis**

Concept of intrinsic value. Objectives and beliefs of fundamental analysts. Economy-Industry-Company framework, Economic analysis and forecasting.

Technical analysis: Points and figures chart, bar chart, RSA, RSI, Moving average analysis, MACD, Japanese Candlesticks.

UNIT IV Portfolio Theory

Market mechanism, testable hypothesis about market efficiency, implications of efficiency market hypothesis for security analysis and portfolio management. Asset pricing theories, CAPM and

Arbitrage pricing theories.

Modern portfolio theory – Asset allocation decision, Markowitz diversification model, selecting an optimal portfolio – Sharpe single index model. Process of portfolio management – International Diversification.

UNIT V Performance Evaluation

Sharpe, Treynor and Jensen's measure. Portfolio revision – Active and passive strategies and formula plans in portfolio revision Problems.

Note: This Paper consisting of 80% Theory and 20% Problem.

COURSE OBJECTIVES:**To make the students**

1. To know the investment banking concepts, the regulatory framework and intermediaries involved.
2. To understand the issue management concepts, process and recent developments
3. To recognize the different types of financial services and importance of depositories in the functioning of the financial market operations.
4. To comprehend the concepts of venture capital, securitization, credit rating and microfinance and its importance in the financial system.
5. To obtain the difference between hire purchase and leasing and the importance of factoring in supporting the functioning of the financial system
6. To know the Merchant Banking concepts

COURSE OUTCOMES:**Learners should be able to**

1. Understand the investment banking operations and regulatory framework guiding the functioning of the intermediaries.
2. Compute the NAV, hire purchase and leasing installments and make decisions.
3. Recognize the issue management process and depositories operations in facilitating the efficient functioning of the financial markets.
4. Assess the role of financial services operations in supporting the financing and investing options of individuals and corporates.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to investment decisions.
6. Demonstrate capabilities of issue management

UNIT I Investment Banking and Intermediaries

Investment Banking in India, Recent Developments and Challenges ahead, Institutional structure and Functions of Investment Banking.

Merchant Banking – Definition – Origin – Merchant Banking in India- Merchant Banks and Commercial Banks – Services of Merchant Banks- Qualities required of Merchant Bankers – Problems – Scope of Merchant Banking in India

SEBI guidelines for Merchant Bankers, Registration, obligations and responsibilities of Lead Managers, Regulations regarding Continuance of association of lead manager with an issue

UNIT II Issue Management

Public Issue: underwriting - classification of companies, eligibility, issue pricing, promoter's contribution, minimum public offer, prospectus, allotment, preferential allotment, private placement, Book Building process, designing and pricing, Green Shoe Option; Right Issue: Post issue work & obligations, Investor protection, Broker, sub broker and underwriters

UNIT III Financial Services and Depositories

Financial Services: Meaning, Classification - Fund Based Activities – Non-Fund Based Activities.

Depository System: Objectives, activities, interacting systems, role of depositories and their services, Advantages of depository system, NSDL and CDSL. The process of clearing and settlement through Depositories, Depository Participants. Regulations relating to Depositories- SEBI(DepositoriesandParticipants)Regulations1996-Registrationofdepositoryandparticipant- Rights and Obligations of depositories andParticipants.

UNIT IV Venture capital, Securitization, credit rating and Microfinance

Venture Capital : Concept, Meaning, Features, Scope of Venture Capital, Importance , Method of Venture Financing.

Securitization of debt: Meaning, Features, Special Purpose Vehicle, Benefits of Securitization, Issues in Securitization.

Credit Rating : Need for rating, IP grading, Debt rating, Process , Credit Rating Agencies

Microfinance: NGOs and SHGs, Microfinance delivery mechanisms, Future of micro finance.

Mutual Fund :AMFI, Types, Fact sheet, NAV Calculation.

UNIT V Factoring, Hire purchase and Leasing

Factoring: Origin, Types, Factoring mechanism, advantages, factoring charges, International factoring, Factoring in India.

Forfeiting: Origin, characteristics, benefits, difference between factoring and forfeiting, growth of forfeiting in India.

HirePurchase:Meaning,Features,LegalPosition,HirePurchaseandCreditSale,HirePurchase and Installment Scale, Problems of Hirepurchase

Leasing : Definition, Steps in Leasing Transactions, Types of Lease – Advantages and Disadvantage of Lease, Problems of Leasing

Note : 90% theory and 10% Problems

5. Siddaiah (2011), Financial Services, 1stEdition, Pearson Education, NewDelhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the consumer behaviour concepts, dimensions used in consumer behaviour research.
2. To recognize the Internal Influencing factors that affect the Consumer Behaviour
3. To identify the external Influencing factors that affect the Consumer Behaviour
4. To conceptualize on the consumer decision making process.
5. To know the application consumer behaviour concepts to access the changing behavior of the customers.
6. To appreciate the personal and environmental factors that influence consumer decisions. To understand the strategic implications of consumer influences, and marketing decisions

COURSE OUTCOMES:**Learners should be able to**

1. Understand the importance of Culture, Subculture, Social Class, Reference Groups and Family Influences in Consumer Behaviour.
2. Explore, analyse and compare the core theories of consumer behaviour and its application in both consumer and organizational markets
3. Appraise models of Consumer Behaviour and determine their relevance to particular marketing situations
4. Critique the theoretical perspectives associated with consumer decision making, including recognising cognitive biases and heuristics
5. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to investment decisions.
6. Demonstrate capabilities of External Influences on Consumer Behaviour

UNIT I Introduction to Consumer Behaviour and Consumer Research

Introduction to Consumer Behaviour, Dimensions of Consumer Behaviour, Consumer Research, Consumer Behaviour and Marketing Strategy

UNIT II Internal Influences on Consumer Behaviour: Motivation and Consumer Learning, Memory and Involvement:

Motivation and Involvement : Consumer Motivation: Introduction, Needs and Goals, motivational Conflict, Defense Mechanisms, Motive Arousal, Motivational Theories, Maslow's hierarchy of needs, Motivation Research

Consumer Learning, Memory and Involvement: Introduction, Components of Learning, Behavioural Theory, Cognitive Learning Theory, Memory System, Memory Process, Concept of Involvement, Dimensions of Involvement, Involvement and Types of Consumer Behaviour, Cognitive Response Model, Elaboration Likelihood Model, Social Judgment Theory, Brand Loyalty and Brand Equity

Personality, Self-Image, and Life Style: Consumer Personality: Introduction, Self-concept, personality Theories, Brand Personality, emotions

Consumer Perception : Introduction, Sensation (Exposure to Stimuli), Perceptual Selection, Perceptual Organisation, Factors that Distort Individual Perception, Price Perceptions, Perceived Product and Service Quality, Consumer Risk Perceptions

Consumer Attitude Formation and Change : Introduction, Functions of Attitude, Attitude Models, Factors that Inhibit Relationship between Beliefs, Feelings and Behaviour, Learning Attitudes, Changing Attitudes, Attitude Change Strategies

Communication and Consumer Behaviour : Consumer Behaviour and Marketing Communications: Introduction, Marketing Communication Flow, Communications Process, Interpersonal Communication, Persuasive Communications, source, message, message appeals, communication feedback

UNIT IV External Influences on Consumer Behaviour

The Influences of Culture on Consumer Behaviour : Cultural Influences on Consumer Behaviour: Introduction, Characteristics of Culture, Values, Sub-cultures, Cross-cultural Influences, Cultural Differences in Non-verbal Communications

Subcultures and Consumer Behaviour : Social Class and Group Influences on Consumer Behaviour: Introduction, nature of Social Class, Social Class Categories, Money and Other Status Symbols, Source of Group Influences, Types of Reference Groups, Nature of Reference Groups, reference Group Influences, Applications of Reference Group Influences, Conformity to Group Norms and Behaviour, Family Life Cycle Stages, nature of Family Purchases and Decision-making, Husband-wife Influences, Parent-child Influences, Consumer Socialization of Children, word-of-Mouth Communications within Groups, opinion Leadership

Diffusion of Innovation: Introduction, Types of Innovation, Diffusion Process, Factors Affecting the Diffusion of Innovation, The Adoption Process, Time Factor in Diffusion Process, Culture, Communication and Diffusion

UNIT V Consumer Decision Making

Situational Influence on Consumer's Decision and the Decision Models: Introduction, Nature of Situational Influence, Situational Variables, Types of Consumer Decisions, Nicosia Model of Consumer Decision-making (Conflict Model), Howard-Sheth Model (also called Machine Model), Engel, Blackwell, Miniard Model (also called Open System)

Consumer Decision-making Process– Problem Recognition, Information Search and Evaluation of Alternatives: Introduction, Problem Recognition, Information Search, Evaluation of Alternatives, Outlet Selection, Purchase and Post Purchase Behaviour, Introduction, Outlet Selection and Purchase, Post Purchase Behaviour

Organizational Buying Behaviour : Introduction, Organizational Buyer Characteristics, Purchase and Demand Patterns, Factors Influencing Organizational Buyer Behaviour, organizational Buyer Decision Process, Organizational Buying Roles

SUGGESTED READINGS:

1. Schiffman L G, Kanuk LL, Ramesh Kumar S, (2015), Consumer Behaviour, 11th edition, Pearson Education, New Delhi.
2. Hawkins, Motherbaugh, Mookerjee (2017), Consumer Behaviour-Building Marketing Strategy, 12th edition, McGraw Hill education, New Delhi.
3. David Loudon, Albert Della Bitta (2017), *Consumer Behavior: Concepts and Applications*. 4th edition McGraw Hill Education, New Delhi.
4. Michael R. Solomon, (2015), Consumer Behaviour-Buying Having and Being, 11th edition, Pearson Education, New Delhi
5. Roger D. Blackwell, Paul W. Miniard, James F. Engel (2017), Consumer Behavior, 10th edition, Cengage India Private Limited; New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand and write programs the JAVA programming language
2. To Use standard and third-party Java's API's when writing applications.
3. To test a Java application of medium complexity, consisting of multiple classes.
4. To understand Java-based software code of medium-to-high complexity by applying it
5. To Understand the basic approaches to the design of software applications.
6. To understand the perform string operations

COURSE OUTCOMES:**Learners should be able to**

1. Implement Object Oriented Programming Concepts
2. Use and create packages and interfaces in a Java program
3. Use graphical user interface in Java programs and handle security implementations in Java
4. Create Applets; Implement exception handling in Java; implement Multithreading and use Input/output Streams
5. Exhibit the multiplication tables by multithreading
6. Exhibit communication skills to communicate the output derived from the program

EXERCISES

1. Write a program to find the sum of series $1+X+X^2+X^3+\dots$
2. Write a program to find prime or not.
3. Write a program to find average of five numbers.
4. Define a class for employee with name and data of appointment create employee objects and sort them as per their date of appointment.
5. Write a program to find factorial of number using recursion.
6. Write a program to find simple interest getting values from keyboard.
7. Write a program to find maximum of Numbers.
8. Write a program to find maximum and sum of an array.
9. Write a program to perform string operations.
10. Write a program to accept more strings and arrange them in alphabetical order.
11. Write a program to create a window and draw cross lines.
12. Write a program to create an applet and draw the shape.
13. Write a program to create a window with a background color and display the message.
14. Write a program for multiplication tables by multithreading.
15. Write a program to create an exception for mark out of bounds. If mark is greater than 100 throw an exception.

SUGGESTED READINGS :

1. Balagurusamy (2017), Programming with Java, 5th edition, McGraw Hill Education, New Delhi.
2. Yashavant Kanetkar (2017), Let us JAVA - 3rd Edition, BPB Publication, New Delhi.
3. Herbert Schildt (2017), Java - A Beginner's Guide, 7th edition, McGraw Hill Education, New Delhi.
4. Barry A. Burd (2017), Beginning Programming with Java for Dummies, 5th edition, Wiley, New Delhi.
5. Joshua Bloch (2016), Effective Java 2nd Edition, Pearson education, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To prepare template to present the financial data for supporting analysis.
2. To use advanced formula in financial calculations
3. To use visualization tools to represent the financial data graphically
4. To forecast the financial data using the inbuilt tools
5. To Understand and apply Sensitivity analysis on models like Goal Seek.
6. To Understand the Scenarios; for financial decision making

COURSE OUTCOMES:**Learners should be able to**

1. Apply advanced formulas to lay data in readiness for financial analysis
2. Use advanced techniques for financial report visualizations
3. Leverage on various methodologies of summarizing financial data
4. Understand and apply Sensitivity (“What-if”) analysis models like Goal Seek.
5. Exhibit Scenarios; Excel models for financial decision making
6. Exhibit communication skills to communicate the output derived from the program.

EXERCISES

Corporate Financial Statements-Organizing and creating spreadsheets; entering and formatting data values; entering expressions for calculating values; linking worksheets; splitting screens to facilitate working between several worksheets

Analysis of Financial Statements - Using logical IF statements; using conditional formatting to call attention to conditions that need correcting; pasting an Excel document into a Word document

Forecasting Annual Revenues - Creating, validating, and using linear, quadratic, cubic, and exponential regression models to fit the trends of historical data; creating various types of charts (e.g., scatter diagrams, forecast charts, error patterns, and downside risk curves); estimating the accuracy of forecasts; expressing forecast accuracy in terms of confidence limits and downside risk curves.

Forecasting Financial Statements - Using forecasts of revenues to forecast financial statements; using Excel's Scenario Manager to do sensitivity analysis

Forecasting Seasonal Revenues - Creating a seasonally-adjusted forecasting model by joining seasonal adjustments to an annual trend line or a moving average trend line; using error feedback to correct a model so that the average error is zero; using period values to update annual forecasts and revise the model

Time Value of Money - Using Excel's financial functions for calculating the present value of a future amount, the future value of a present amount, the net present value of a series of cash flows, periodic payments for mortgages and loans, etc.; linking an Excel worksheet to a Word document.

Cash Budgeting - Organizing a spreadsheet into modules for different parts of a company and linking results; using a one-variable input table for sensitivity analysis to evaluate alternate operating tactics.

Cost of Capital - Calculating the weighted average cost of capital (WACC); using Excel's Goal Seek and Solver tools to find the value of an independent variable (e.g., return on equity) to satisfy a related goal (e.g., a specified WACC); evaluating the WACC for different amounts of capital raised and creating charts to display the results.

Profit, Break Even, and Leverage - Calculating profits from a firm's cash flows; using Excel's Solver tool to determine the sales volume needed to break even; evaluating a firm's operating, financial, and combined leverages

Capital Budgeting: - Organizing spreadsheets to move from sales revenues to after-tax cash flows; using Excel's financial functions to calculate depreciation schedules; calculating financial measures of success, such as net present value and internal rate of return; using nested IF statements to determine the discounted years to break even; creating two-variable input tables for sensitivity analysis; using Excel's Solver tool to determine changes that must be made to achieve specified goals, such as a specified net present value or discounted years to break even.

Applications of Capital Budgeting - Creating spreadsheets that evaluate the financial payments from various types of capital investments; using one- and two-variable input tables to analyze the sensitivity of financial payoffs to changes in conditions

Capital Budgeting: Risk Analysis with Scenarios - Using Excel's Scenario Manager to analyze the effects of various combinations of conditions (e.g., best-on-best, most probable, and worst-on-worst) on future payoffs.

Capital Budgeting: Risk Analysis with Monte Carlo Simulation - Using Excel's tools for Monte Carlo simulation; using Excel's random number generator to generate random numbers that follow different probability distributions (e.g., uniform, normal, and triangular distributions) and use the results.

Valuation of Common Stocks - Determining the value of shares of common stocks from their expected future cash flows and an investor's expected rate of return; performing sensitivity and risk analysis related to the value of stocks.

Valuation of Bonds - Determining the value of bonds from their fixed future cash flows and an investor's expected rate of return; performing sensitivity and risk analysis related to the value of bonds; evaluate the effect of call date on a bond's value.

SUGGESTED READINGS:

2. John Walkenbach (2015), Microsoft Excel 2016 Bible: The Comprehensive Tutorial Resource, Wiley India, New Delhi.
3. Manohar Hansa Lysander (2016), Data Analysis and Business Modelling Using Microsoft Excel, PHI, New Delhi.
4. K. Scott Proctor (2010), Building Financial Models with Microsoft Excel: A Guide for Business Professionals, 2nd edition, Wiley, New Delhi.
5. Chandan Sengupta (2011), Financial Analysis and Modeling using Excel and VBA, 2nd edition, Wiley, New Delhi.

COURSE OBJECTIVES:

To make the students

1. To understand the concept of software engineering, software requirements and software project management.
2. To apply the concept in software project management.
3. To understand and apply the metrics to successfully plan and implement the software project.
4. To communicate orally and in written form the application of the understanding of software engineering.
5. To communicate orally and in written form the application of the understanding of software requirements
6. To communicate orally and in written form the application of the understanding of software project management.

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of software engineering, software requirements and software project management.
2. Apply the concept in software project management.
3. Understand and apply the metrics to successfully plan and implement the software project.
4. Communicate orally and in written form the application of the understanding of software engineering,
5. Communicate orally and in written form the application of the understanding of software requirements
6. Communicate orally and in written form the application of the understanding of software project management.

UNIT–I Fundamentals of Software Engineering and Process models :

Definition, Software characteristics and Application. Software myths, Software engineering- A layered technology and SDLC. Software process models: Linear sequential model, prototyping model, RAD Model. Evolutionary process models: Incremental process models and Spiral model. Component based ,4GT. Maturity Models: CMM, CMMI, PCMM, PSP, TSP, Process patterns, process assessment. Unified process: SEI CMM and ISO 9001. PSP and Six Sigma. Clean room technique.

UNIT–II : Managing Software Projects & Design Engineering:

The management spectrum, software quality, measurement and metrics. Software project

estimation, decomposition techniques. Empirical estimation models(COCOMO), the Make & Buy Decision. System models: Context Models, Behavioral models, Data models, Object models. Design process, Design quality and design model. Fundamental issues in software design: Goodness of design, cohesions, coupling. Function-oriented design and object – oriented concepts. Architectural styles and patterns, Architectural Design: Unified Modeling Language (UML), User interface design. Risk Analysis and management.

UNIT–III : S/W Requirements, S/W Metrics & Testing Strategies:

S/W Requirements : Functional and non-functional requirements, User requirements, System requirements.SRA& SRS. S/W Metrics: Process Metrics, Project Metrics & Product Metrics. Testing Strategies : A strategic approach to software testing, Testing fundamentals, Test Case Design. Types Of Testing: Black-Box Testing, White-Box Testing, Validation testing, System testing, the art of Debugging. Code walkthrough and reviews. Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance.

UNIT-IV Testing Plan and Maintenance:

Snooping for information, Coping with complexity through teaming, Testing plan focus areas, Testing for recoverability, Planning for troubles, Preparing for the tests: Software Reuse, Developing good test programs , Data corruption, Tools, Test Execution ,Testing with a virtual computer, Simulation and Prototypes, Managing the Test, Customer's role in testing, Software maintenance issues and techniques. Software reuse. Client-Server software development.

UNIT–V Software Reengineering and Project Management:

Software Reengineering, Reverse Engineering & Forward Engineering, Life Cycle Phases and Process artifacts, Restructuring. Model based software architectures, Software process and Iteration workflows, Major and Minor milestones, Periodic status assessments, Process Planning, Project Control and process instrumentation: Seven core metrics, management indicators, quality indicators, life-cycle expectations, CCPDS-R Case Study and Future Software Project Management Practices

SUGGESTED READINGS:

18CCP302	BUSINESS RESEARCH METHODS AND TECHNIQUES	Semester – III 4H – 4C
-----------------	---	---

Instruction Hours / week L: 3 T: 1 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. To identify appropriate sources of information and methods of data collection for solving a business issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :**Learners should be able to**

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue.
4. Decide the appropriate measurement scale for designing the instrument for data collection.
5. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
6. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.

UNIT I Introduction to Research:

Meaning of research; Types of research- Exploratory research, Conclusive research; The process of research; Research applications in social and business sciences; Features of a Good research study. Defining the Research problem; Management Decision Problem vs Management Research Problem; Problem identification process; Components of the research problem; Formulating the research hypothesis- Types of Research hypothesis; Writing a research proposal- Contents of a research proposal and types of research proposals.

UNIT II Research Design and Sampling Design

Meaning of Research Designs; Nature and Classification of Research Designs; Exploratory Research Designs: Secondary Resource analysis, Case study Method, Expert opinion survey, focus group discussions; Descriptive Research Designs: Cross-sectional studies and Longitudinal studies; Experimental Designs, Errors affecting Research Design.

Sampling concepts- Sample vs Census, Sampling vs Non-Sampling error; Sampling Design- Probability and Non Probability Sampling design; Determination of Sample size- Sample size for estimating population mean, Determination of sample size for estimating the population proportion.

UNIT III Sources of Data collection and instrument designing

Primary and Secondary Data: Classification of Data; Secondary Data: Uses, Advantages, Disadvantages, Types and sources; Primary Data Collection: Observation method, Focus Group Discussion, Personal Interview method. Attitude Measurement and Scaling: Types of Measurement Scales; Attitude; Classification of Scales: Single item vs Multiple Item scale, Comparative vs Non-Comparative scales, Measurement Error, Criteria for Good Measurement. Questionnaire Design: Questionnaire method; Types of Questionnaires; Process of Questionnaire Designing; Advantages and Disadvantages of Questionnaire Method. Data Processing: Data Editing- Field Editing, Centralized in house editing; Coding- Coding Closed ended structured Questions, Coding open ended structured Questions; Classification and Tabulation of Data.

UNIT IV Univariate and Bivariate Analysis of Data:

Descriptive vs Inferential Analysis, Descriptive Analysis of Univariate data- Analysis of Nominal scale data with only one possible response, Analysis of Nominal scale data with multiple category responses, Analysis of Ordinal Scaled Questions, Measures of Central Tendency, Measures of Dispersion; Descriptive Analysis of Bivariate data. Testing of Hypotheses: Concepts in Testing of Hypothesis – Steps in testing of hypothesis, Test Statistic for testing hypothesis about population mean; Tests concerning Means- the case of single population; Tests for Difference between two population means; Tests concerning population proportion- the case of single population; Tests for difference between two population proportions. Chi-square Analysis: Chi square test for the Goodness of Fit; Chi square test for the independence of variables; Chi square test for the equality of more than two population proportions. Analysis of Variance: Completely randomized design in a one-way ANOVA; Randomized block design in two way ANOVA; Factorial design. Multivariate Analysis : Factor Analysis, Discriminate analysis, Cluster analysis

UNIT V Research Report Writing and Ethical code for research

Types of research reports – Brief reports and Detailed reports; Report writing: Structure of the research report- Preliminary section, Main report, Interpretations of Results and Suggested Recommendations; Report writing: Formulation rules for writing the report: Guidelines for presenting tabular data, Guidelines for visual Representations. Ethics in Research: Meaning of Research Ethics; Clients Ethical code; Researchers Ethical code; Ethical Codes related to respondents; Responsibility of ethics in research

Note: Theory 90% Problems 10%

Chapter 4 – Theory will be covered here and practically applied using SPSS Practical

SUGGESTED READINGS:

1. Uma Sekaran, Roger Bougie (2018), *Research Methods for Business: A Skill-Building Approach*, 7th edition, Wiley, New Delhi.
2. C.R. Kothari, Gaurav Garg (2018), *Research Methodology*, Fourth Edition, New Age International Publishers, New Delhi.
3. Donald Cooper and Pamela Schindler (2017), *Business Research Methods*, 11th edition, McGraw Hill education, New Delhi.
4. Zikmund William G. et.al (2016), *Business Research Methods*, Cengage India, New Delhi.
5. Mark N.K. Saunders, Philip Lewis, Adrian Thornhill (2015), *Research Methods for Business Students*, 7th edition, Pearson Education, New Delhi.

INDIRECT TAXATION**18CCP303****Semester – III****4H – 4C****Instruction Hours / week: L: 3 T: 1 P: 0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the Concept of indirect taxes emphasizing GST/CGST/IGST/SGST/UTGST and customs law.
2. To learn and compute the GST liabilities.
3. To know how to register GST and apply the GST provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the GST and customs and utilize for lifelong practical application.
6. To demonstrate custom duties in India

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing GST, CGST/IGST/SGST/UTGST and customs law.
2. Comprehend and compute GST liabilities.
3. Know the procedure to register GST and apply GST provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining GST and customs and utilize for lifelong practical application.
6. Know the concept of input tax credit mechanism

UNIT I CONCEPT OF INDIRECT TAXES

Concept of Indirect Taxes at a glance : Background; Constitutional powers of taxation; Indirect taxes in India – An overview; Pre-GST tax structure and deficiencies; Administration of Indirect Taxation in India; Existing tax structure.

UNIT II BASICS OF GOODS AND SERVICES TAX ‘GST’

Basics concept and overview of GST; Constitutional Framework of GST; GST Model – CGST / IGST / SGST / UTGST; Taxable Event; Concept of supply including composite and mixed supply; Levy and collection of CGST and IGST; Composition scheme & Reverse Charge; Exemptions under GST.

UNIT III CONCEPT OF TIME, VALUE & PLACE OF TAXABLE SUPPLY :

Basic concepts of Time and Value of Taxable Supply; Basics concept of Place of Taxable Supply. Input Tax Credit & Computation of GST Liability- Overview.

UNIT IV PROCEDURAL COMPLIANCE UNDER GST :

Registration; Tax Invoice, Debit & Credit Note, Account and Record, Electronic way Bill; Return, Payment of Tax, Refund Procedures; Audit.

Basic overview on Integrated Goods and Service Tax (IGST), Union Territory Goods and Service tax (UTGST), and GST Compensation to States.

UNIT V OVERVIEW OF CUSTOMS ACT :

Overview of Customs Law; Levy and collection of customs duties; Types of Custom duties; Classification and valuation of import and export goods; Exemption; Officers of customs; Administration of Customs Law; Import and Export Procedures; Transportation, and Warehousing; Duty Drawback; Demand and Recovery; Confiscation of Goods and Conveyances; Refund.

Note: Distribution of marks - 30% theory and 70% problems

SUGGESTED READINGS :

1. V S Datey, Indirect taxes Law and Practice (2019), 42nd Edition, Taxmann Publication, New Delhi.
2. Dr. H.C. Mehrotra, Prof. V.P. Agarwal (2017), Indirect Taxes, 18th Revised Edition, Sahitya Bhawan Publications, New Delhi.
3. Dr Girish Ahuja , Dr Ravi Gupta (2018), Practical Approach to Direct and Indirect Taxes: Containing Income Tax and GST, 37th edition, Wolters Kluwer India Private Limited, New Delhi.

18CCP304	VB.NET	Semester – III
		4H – 4C
Instruction Hours / week: L: 4 T: 0 P: 0	Marks: Internal: 40 External: 60	Total: 100
		End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Visual Basics.Net and its application.
2. To learn tools and utilize the tools of Visual Basic.net to design programmes.
3. To communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. To understand the Visual Basic Language and Loops
5. To understand the Object-Oriented Programming
6. To understand the Data Access with ADO.NET

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Visual Basics.Net and its application.
2. Learn tools and utilize the tools of Visual Basic.net to design programmes.
3. Communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. Know the Visual Basic Language and Loops
5. Know the Object-Oriented Programming
6. Exhibit the Menus and Dialog-Boxes

UNIT I Essential Visual Basic.Net:

The .NET Framework and the Common Language Runtime - Building VB.NET Applications - The Visual Basic Integrated Development Environment. The Visual Basic Language: Conditionals: Visual Basic Statements - Statement Syntax - The Option and Imports Statements - Declaring Constants - Declaring variables - Data Types - Making Decisions with If...Else Statements - Using Select Case - Making Selections with Switch and Choose.

UNIT II The Visual Basic Language and Loops:

Looping Statements - Do Loop -For Loop - For Each...Next Loop - While Loop – With Statement. Procedures, Scopes and Exception Handling: Sub Procedures and Functions - Understanding Scope - Handling Exception. Windows Forms:MsgBox Function -MessageBox.Show Method -Input Box Function - Buttons - Checkboxes - Radio Buttons - Panels - Group Boxes.

UNIT III Object-Oriented Programming:

Classes and Objects - Fields, Properties, Methods and Events - Class vs. Object Members - Abstraction, Encapsulation, Inheritance and Polymorphism - Overloading, Overriding and Shadowing - Constructors and Destructors. Object-Oriented Inheritance: Access Modifiers- Inheritance Modifiers - Creating Interfaces - Polymorphism - Early and Late Binding.

UNIT IV Data Access with ADO.NET:

Accessing Data with the Server Explorer - Accessing Data with Data Adaptors and Datasets - Working with ADO.NET - Overview of ADO.NET Objects Immediate Solutions: Basic SQL - the Server Explorer - Creating a New Data Connection. Binding Controls to Databases: Binding Data to Controls - Navigating in Datasets. Creating Windows Services and Deploying Applications: Deploying Applications.

UNIT V Menus and Dialog-Boxes:

Introduction to Files - Dialog-Boxes. Working with Files: Introduction-Classification - Handling Files and Folders using Functions - Handling Files and Folders Using Classes - Directory Class - File Class - File Processing Using Functions.

SUGGESTED READINGS :

18CCP305A	MERGERS, ACQUISITIONS AND CORPORATE RESTRUCTURING	Semester – III
		4H – 4C

Instruction Hours / week: L: 4 T: 0 P: 0

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept mergers, Demergers, LBO, MBO, JV its valuation and accounting.
2. To compute, analyze and evaluate the corporate restructuring decisions and its impact on company..
3. To understand the concept of Corporate Restructuring.
4. To understand the Amalgamation
5. To understand the concept of Joint Ventures
6. To understand the concept of Takeovers

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept mergers, Demergers, LBO, MBO, JV its valuation and accounting.
2. Compute, analyse and evaluate the corporate restructuring decisions and its impact on company.
3. Know the Legal and Regulatory Framework of M & A and Post Merger Integration
4. Know the concept of Amalgamation
5. Know the concept Joint Ventures and Takeovers
6. Exhibit the concept of Corporate Restructuring

UNIT I Introduction to Merger and Acquisition:

Meaning of mergers and acquisitions (M & A), motives behind the M & A, advantages and disadvantages of M & A, types of mergers and steps for a successful merger.

Strategic Evaluation of M & A Opportunities- selection approaches and criteria, modalities of fixing the acquisition price, key steps in the strategic planning of a merger, feasibility analysis in respect of cash and stock deals, describes fair value: institutional criteria and special features of acquisition of sick companies.

UNIT II M & A Activity and Demerger Activity :

Merger process right from planning the merger till implementation, five-stage model, methods of financial mergers and capital budgeting decision

Synergy and Value Creation in Mergers - synergy and its different types, role of industry life cycle, value creation in synergy, theoretical factors that would affect M & A activity

Corporate Restructuring- meaning of corporate restructuring, need for corporate restructuring, methods of corporate restructuring.

International M & A –Introduction of international M & A activity, the opportunities and threats, role of M & A in international trade growth, the external advantages in differential products, impact of

government policies and political and economic stability on international M&A decisions, recommendation for effective cross-border M & A.

Demergers- Meaning of demerger, characteristics of demerger, structure of demerger, and tax implication of demergers

UNIT III LBO, MBO, JV and Take overs.

LBOs, MBOs, MLPs and ESOPs - meaning of LBO, MBO, MLP , ESOP, governance and mode of purchase in LBO, key motives behind an MBO, structure of MBO, types of MLP and ESOP, regulations that govern ESOPs.

Joint Ventures - Meaning of joint ventures, characteristics of a joint venture, states the rationale for joint ventures, role of joint ventures in business strategy, defines joint venture and complex learning, tax aspects of joint ventures, international joint ventures, reasons for failure of joint ventures, and joint venture vis-à-vis anti-trust policy

Takeover Defences - types of takeovers, techniques of bidding for a takeover, defences against takeover bids, regulations and amendments, and guidelines for takeovers

UNIT IV Valuation and accounting

Valuation - valuation approaches, basis of valuation, different methods of valuation, valuation of synergy, corporate control and LBO

Accounting for Amalgamation –Meaning of amalgamation, types of amalgamation, methods of accounting for amalgamation, meaning of consideration, treatment of goodwill, reserves and other profits

UNIT V Legal and Regulatory Framework of M & A and Post Merger Integration :

Provisions of the Companies Act, 1956 relating to M & A, buyback of shares, provisions of SEBI act, 1992 and 1997, provisions relevant to M & A activity in the Income Tax Act, and Foreign Exchange Management Act.

Post-Merger Integration - integration planning, factors in post-merger integration model, post-merger integration model, strategic interdependence and autonomy, political and cultural aspects in integration, cultural profiling and assessment of cultural compatibility, HRM issues, and problems in integration and five rules of integration process

SUGGESTED READINGS:

2. Prasad G. Godbole(2013), Mergers Acquisitions and Corporate Restructuring, 2nd edition, Vikas Publishing House, New Delhi.
3. Chandrashekar Krishnamurti (Editor), Vishwanath S R(2018), Mergers Acquisitions and Corporate Restructuring – Texts and Cases, 2nd edition, SAGE Publications Pvt. Ltd, New Delhi.
4. Patrick A. Gaughan(2019), Mergers Acquisitions and Corporate Restructuring, 7th edition, Wiley New Delhi.
5. Sheeba Kapil (Author), Kanwal N. Kapil (2018), Mergers and Acquisitions: Strategy, Valuation, Leveraged Buyouts and Financing, 2nd edition, Wiley, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the valuation concepts, valuation techniques and its application in valuing the assets.
2. To compute, analyse and evaluate the value of the assets applying the appropriate techniques.
3. To communicate orally and in written form the understanding of valuation concepts.
4. To communicate orally and in written form the understanding of valuation techniques.
5. To understanding of application in valuing the assets.
6. To understand the Capital Asset Pricing Models

COURSE OUTCOMES:**Learners should be able to**

1. Understand the valuation concepts, valuation techniques and its application in valuing the assets.
2. Compute, analyze and evaluate the value of the assets applying the appropriate techniques.
3. Communicate orally and in written form the understanding of valuation concepts, valuation techniques and its application in valuing the assets.
4. Know the Valuation of Goodwill Patents and Copyrights
5. Know the Valuation of Fixed Assets
6. Valuation of Financial Options

UNIT I Introduction of Valuation Techniques.

Review of main accounting concepts. Definition of Free Cash Flow. Discounted Cash Flow Model. Annuities and Perpetuities. - Calculating the Discount Rate: The CAPM. Calculating and unlevering/re-levering beta. Fama-French 3 factor model

UNIT II Valuing a Company using DCF.

No friction Model without Taxes and Bankruptcy Costs. WACC with Taxes and Bankruptcy costs. Forecasting FFCF. Valuing a Company using the WACC model.

Valuing a Company with the DCF method. Sensitivity analysis (scenario analysis, break-even, and simulation) Valuing a Company with the APV method and the Capital Cash Flow Method; Equivalence with WACC

UNIT III : Valuing a company with comparable and multiples

Selecting comparable companies; DCF valuation

Other Valuation Models: Cost Approach, Flow to Equity, EVA. Equity Control Premiums & Liquidity Discounts.

Valuing LBOs and M&A transactions, earnings accretion and dilution in M&A transactions. Valuing Financial Institutions

UNIT IV :Valuation of other Assets :

Forms of Intellectual Property and Methods of Valuation - Valuation of Fixed Assets - Valuation of Inventories - Valuation of Investments - Valuation of Shares - Valuation of Intangibles – Human Resource Accounting - Valuation of Goodwill Patents and Copyrights - Valuation of Brands - Valuation of Real Estate - Valuation of Liabilities

UNIT V : Financial Options

Descriptions and Payoff diagrams; applications and analogies to enterprise valuation and the valuation of debt and equity claims; start Black-Scholes and Binomial pricing models -Valuation of Financial Options - Black-Scholes and Binomial pricing models; Introduction (brief) to Real Options;

SUGGESTED READINGS:

1. Pitabas Mohanty (2015), Business Valuation (Text & Cases) ,Taxmann, New Delhi.

5. Aswath Damodaran(2012), Investment Valuation: Tools and Techniques for Determining the Value of any Asset, 3rd edition, Wiley, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To understand the concept of budgetary control and contemporary issues

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Realize the preparation of Budget

UNIT I: INTRODUCTION

Meaning, Objectives, Nature and Scope of management accounting, Difference between cost accounting and management accounting, Cost control and Cost reduction, Cost management

UNIT II :FINANCIAL STATEMENT ANALYSIS

Horizontal and Vertical Analysis.

Ratio Analysis: Meaning, Advantages, Limitations, Classifications of ratios

Fund Flow Statement: Meaning, Uses, Limitations, Sources and uses of funds

Cash Flow Statement: Meaning, Uses, Limitations, Sources and uses of cash, AS3 Standard format.

UNIT III : STANDARD COSTING

Standard Costing : Standard Costing and Variance Analysis: Meaning of standard cost and standard costing, advantages, limitations and applications. Variance Analysis – material, labour, overheads and sales variances. Disposition of Variances, Control Ratios.

UNIT IV :MARGINAL COSTING AND DECISION MAKING

Absorption versus Variable Costing: Distinctive features and income determination. Cost-Volume Profit Analysis, Profit / Volume ratio. Break-even analysis-algebraic and graphic methods. Angle of incidence, margin of safety, Key factor, determination of cost

indifference point.

Decision Making : Steps in Decision Making Process, Concept of Relevant Costs and Benefits, Various short term decision making situations – profitable product mix, Acceptance or Rejection of special/ export offers, Make or buy, Addition or Elimination of a product line, sell or process further, operate or shut down. Pricing Decisions: Major factors influencing pricing decisions, various methods of pricing

UNIT V: BUDGETARY CONTROL AND CONTEMPORARY ISSUES:

Budgeting and Budgetary Control: Concept of budget, budgeting and budgetary control, objectives, merits, and limitations. Budget administration. Functional budgets. Fixed and flexible budgets. Zero base budgeting. Programme and performance budgeting.

Contemporary Issues : Responsibility Accounting: Concept, Significance, Different Responsibility Centres, Divisional Performance Measurement: Financial and Non-Financial measures. Transfer Pricing

Note: Distribution of marks - 30% theory and 70% problems

SUGGESTED READINGS:

COURSE OBJECTIVES:**To make the students**

1. To understand use of classes, objects and create programmes by applying it
2. To understand and write programs VB.Net
3. To Understand the basic approaches to the design of software applications
4. To understand the date and time handling functions
5. To understand the Program using classes and objects
6. To understand the concept of database connectivity

COURSE OUTCOMES:**Learners should be able to**

1. Implement Object Oriented Programming Concepts
2. Use and create packages and interfaces in a VB.Net
3. Use graphical user interface
4. Exhibit communication skills to communicate the output derived from the program.
5. Understand the date and time handling functions
6. Exhibit to develop an application to create inventory management system
1. Create a Program for a various font application.
2. Develop a Program for employee details with salary calculation using MDI.
3. Develop a Program for simple calculator.
4. Create a Program using date and time handling functions.
5. Develop a Program using classes and objects.
6. Develop a Program for create and reading text file.
7. Develop a Program for to implement a binary search using collection class.
8. Develop an application to create, save, update, delete and search employee profile in employee database system (with database connectivity).
9. Develop an application to create inventory management system (with database connectivity).
10. Develop an application to create student mark entry system (with database connectivity).

SUGGESTED READINGS :

1. Jeremy Shapiro (2017), Visual Basic(R).Net: The Complete Reference, 1st edition, Mc Graw Hill, New Delhi.
2. Imar Spaanjaars (2014), Beginning ASP.NET 4.5.1 in C# and VB, Wiley, New Delhi.

4. Yashavant P. Kanetkar, Asang Dani (2000), Test Your Vb.Net Skills: Language Elements Part 1, BPB Publications, New Delhi.
5. Jason N. Gaylord, Christian Wenz, Pranav Rastogy, Todd Miranda (2013), Professional ASP.NET 4.5 in C# and VB (WROX), Wiley, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the Importance of SPSS and the features for entering the data according to the variable type.
2. To understand and apply the descriptive analytical tools
3. To know the univariate tools and its application
4. To comprehend the application of Bivariate analysis
5. To understand and compute the multivariate analysis using the package.
6. To understand the correlation analysis

COURSE OUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Perform the correlation analysis
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

UNIT I Overview and Data Entry

SPSS – Meaning – Scope- Limitation- Data view- Variable view- Data entry procedures- Data editing- Missing

UNIT II Descriptive Statistics

Descriptive statistics – Frequencies Distribution – Diagram – Graphs, Mean, Median, Mode, Skewness – Kurtosis – Standard Deviation.

UNIT III Non parametric and parametric test

Cross tabulation, Chi square, t test, independent sample t test, paired t test.

UNIT IV Analysis of Variance, Bivariate Analysis

ANOVA – One way, Two Way ANOVA, Correlation – Rank correlation – Regression – charts.

UNIT V Multivariate analysis

Factor Analysis, Cluster Analysis and Discriminate analysis.

Use the inbuilt case studies in SPSS for applying the statistical test.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Digital marketing and digital marketing tools.
2. To learn tools and utilize the tools of digital marketing
3. To understand the linkage of digital marketing and analytics
4. To understand the Online Marketing Tools
5. To learn the Online Reputation Management
6. To communicate orally and in written form the Concept of Digital marketing

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Digital marketing and digital marketing tools.
2. Learn tools and utilize the tools of digital marketing
3. Understand the linkage of digital marketing and analytics
4. Exhibit the concept of Online Reputation Management
5. Understand the Online Marketing Tools
6. Communicate orally and in written form the Concept of Digital marketing and digital marketing tools

Unit I Introduction of the digital marketing

Digital vs. Real Marketing - Digital Marketing Channel, Creating initial digital marketing plan - Content management - SWOT analysis - Target group analysis

What is Digital Marketing? Benefits of Digital Marketing. Digital marketing platforms and strategies. Comparing digital with traditional marketing. Issues arise when Digital Marketing goes wrong. Role of Digital Marketing in developing brands, drive sales, encourage product and service development and innovation, aid recruitment and training.

Unit II Website

What is website? What is domain name? Types of domains. Register a domain name. Webhosting concepts. Types of websites – HTML, CSS and Java Script. Popular CMS.

Website designing with WordPress: What is WordPress? Benefits of using WP. Admin interface basics. Theme settings and customization. Content management in WP. Categories, tags and posts. Pages and subpages. Custom content types. Adding a menu to the website. Plugins and widgets. Using Plugins in site. Adding widgets to the website. Best plugins in WP.

UNIT III Online Marketing Tools

Creating a Facebook page • Visual identity of a Facebook page • Types of publications
Facebook Ads • Creating Facebook Ads • Ads Visibility

Business opportunities and Instagram options • Optimization of Instagram profiles • Integrating Instagram with a

Web Site and other social networks • Keeping up with posts

Business tools on LinkedIn • Creating campaigns on LinkedIn • Analyzing visitation on LinkedIn

Creating business accounts on YouTube • YouTube Advertising • YouTube Analytics

E-mail marketing • E-mail marketing plan • E-mail marketing campaign analysis • Keeping up with conversions
Digital Marketing Budgeting - resource planning - cost estimating - cost budgeting - cost control

Google AdWords- creating accounts • Google AdWords- types

Introduction to Search Engine Optimization: How the search engine works? SEO Optimization • Writing the SEO content

Mobile marketing: Growth in mobile industry. Benefits of mobile marketing and its goals. Creating a mobile website. App creation strategy.

Video marketing: Importance of video marketing. Create a video campaign. Location targeting and bidding strategies. Measuring the results of campaign. Best practices of video ads.

Unit IV Online Reputation Management:

What is ORM and why we need ORM? Examples of ORM. Areas to analyze in ORM. Generate aORM report. Things to do in ORM – Monitor search results, complaint sites, reviews, sites and blogs, and social media.

Unit V Merging digital marketing and data analytics.

Analytics and its importance for business. Key performance metrics in analytics. Audience reports. Traffic reports. Behavior reports. Conversion tracking.

ENTREPRENEURIAL DEVELOPMENT**Semester – IV****18CCP402****4H – 4C****Instruction Hours / week: L:4 T:0 P:0****Marks: Internal: 40****External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
2. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. To initiate the required skills for entrepreneurial development.
5. To help students understand the process of establishing and developing an enterprise
6. To make the students Small Business as seed bed of Entrepreneurship

COURSE OUTCOMES:**Learners should be able to**

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

UNIT I INTRODUCTION

Meaning, scope and importance of Entrepreneurship - Evolution of entrepreneurial thought - Entrepreneurship as a career option - Functions of Entrepreneurs - Entrepreneurial Characteristics and Skills - Entrepreneur vs. Manager - Creativity & Creative Process - Types of Entrepreneurs (Clarence Danhoff's Classification) - Intrapreneurship – Concept and Types (Hans Schollhammer's Classification) - Entrepreneurship in different contexts: technopreneurship, cultural entrepreneurship, international entrepreneurship, netpreneurship, ecopreneurship, and social entrepreneurship.

UNIT II TYPES OF BUSINESS ENTITIES

Micro, Small and Medium Enterprises. Concept of business groups and role of business houses and family business in India. Values, business philosophy and behavioural orientations of important family business in India. Managerial roles and functions in a small business. Entrepreneur as the manager of his

business

UNIT III PUBLIC AND PRIVATE SYSTEM OF STIMULATION, SUPPORT AND SUSTAINABILITY OF ENTREPRENEURSHIP

Public and private system of stimulation, support and sustainability of entrepreneurship. Requirement, availability and access to finance, marketing assistance, technology, and industrial accommodation, Role of industries/entrepreneur's associations and self-help groups. The concept, role and functions of business incubators, angel investors, venture capital and private equity funds.

UNIT IV SOURCES OF BUSINESS IDEAS AND FEASIBILITY STUDIES

Sources of business ideas and tests of feasibility. Significance of writing the business plan/ project proposal. Contents of business plan/ project proposal. Designing business processes, location, layout, operation, planning & control; preparation of project report. Project submission/ presentation and appraisal thereof by external agencies, such as financial/non-financial institutions.

UNIT V MOBILIZING RESOURCES FOR START-UP

Mobilizing resources for start-up. Accommodation and utilities. Preliminary contracts with the vendors, suppliers, bankers, principal customers; Contract management: Basic start-up problems. Funding opportunities for start-ups.

Marketing and organisational plans-an overview. Nature of planning in small business. Organisational structure suitable for small business. Financial: preparation of budgets, integrated ratio analysis, assessing business risks (leverage analysis). Marketing: product planning & development, creating and protecting market niche, sales promotion, advertising and product costing and pricing policies. HR issues in small business.

**DIGITAL MARKETING
(Practical)**

Semester – IV

4H – 2C

Instruction Hours / week: L:0 T: 0 P : 4

Marks: Internal: 40

External: 60

Total: 100

End Semester Exam: 3 Hours

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Digital marketing and digital marketing tools.
2. To learn tools and utilize the tools of digital marketing
3. To understand the linkage of digital marketing and analytics
4. To understand the Online Marketing Tools
5. To learn the Online Reputation Management
6. To communicate orally and in written form the Concept of Digital marketing

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Digital marketing and digital marketing tools.
2. Learn tools and utilize the tools of digital marketing
3. Understand the linkage of digital marketing and analytics
4. Exhibit the concept of Online Reputation Management
5. Understand the Online Marketing Tools
6. Communicate orally and in written form the Concept of Digital marketing and digital marketing tools

1. Design a web page using a word press
2. Design an add in Instagram to market a product / Service
3. Design a facebook page for marketing a product / service
4. Upload a you tube video on marketing a social cause
5. Design a web page for marketing a social cause (Energy conservation / water conservation)
6. Design a facebook page for creating awareness on global warming
7. Design a webpage using Word press plugins and widgets to market Indian culture / Heritage
8. Perform a GOOGLE ADWORD search on “COMMERCE” / “DIGITAL” or any key word
And write your finding.
9. Procedure for the search engine optimization and its application
10. Twitter and Linked in as a tool to support digital marketing – Write your views and understanding.

SUGGESTED READINGS:

1. Ryan, D. (2014). Understanding Digital Marketing: Marketing Strategies for Engaging the Digital Generation, Kogan Page Limited.
2. Puneet Singh Bhatia(2017), Fundamentals of Digital Marketing, Pearson Education, New Delhi.

PROJECT**18CCP491****Semester – IV****16H – 8C****Instruction Hours / week L:0 T:0 P:16****Marks: Internal: 40 External: 60****Total: 100****End Semester Exam: 3 Hours****COURSE OBJECTIVES:****To make the students**

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills
7. To utilise the IT applications for analysis and preparation of report

COURSE OUTCOMES:**Learners should be able to**

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilise the IT application for analysis and preparation of report.

The students should select a problem in Accounting, Finance, Marketing or any other areas related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives
- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2018 - 2019)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 18LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி- I, தமிழ் முதல் பருவம் 18LSU101 :
 தமிழ் முதல் தாள் 4-H,4-C
 (இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
 (For I-UG Science Degree Classes)

அலகு – I : இக்கால இலக்கியம்: (10 மணிநேரம்)

கல்வி : மகாகவி பாரதியார் – சுயசரிதை - ஆங்கிலக் கல்வி.

இன்றைய நிலை : கவிமணி தேசிக விநாயகம்பிள்ளை – ஒற்றுமையே உயிர்நிலை.

மனிதநேயம் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் – மலையாளக் காற்று.

சூழலியல் : கவிஞர் வைதீஸ்வரன் - விரல் மீட்டிய மழை.

பெண்ணியம் : கவிஞர் சுகந்தி சுப்பிரமணியம் – புதையுண்ட வாழ்க்கை.

அலகு – II : அற இலக்கியம்: (8 மணிநேரம்)

கொன்றை வேந்தன்: 1-50 பாடல்கள்

திருக்குறள்: பண்புடைமை, வினைத்திட்டம் – 20 குறள்கள்

பழமொழி நானூறு: 5 பாடல்கள்

அலகு - III : சிற்றிலக்கியம்: (8 மணிநேரம்)

மூவருலா: 1-26 கண்ணிகள்

திருச்செந்தூர் முருகன் பிள்ளைத்தமிழ்: 2 பாடல்கள்

கலிங்கத்துப் பரணி: போர்பாடியது - 9 பாடல்கள்

அலகு – IV : கட்டுரை: (8 மணிநேரம்)

1. உயர்தனிச் செம்மொழி - பரிதிமாற்கலைஞர்

2. கட்டிடக்கலை - அ. இராசமாணிக்கனார்

3. வாழ்க்கை - இளவழகனார்

4. ஆளுமைத்திறன் அறிவோம் - ஸ்ரீகண்ணன்

5. மணற்கேணி - நெ.து.சுந்தரவடிவேலு

அலகு- V : மொழிப்பயிற்சி:**(6 மணிநேரம்)**

1. பொருத்தமான தமிழ்ச் சொற்களைப் பயன்படுத்துதல்
2. செய்யுள் பொருளுணர் திறன்
3. மொழிபெயர்ப்புப் பயிற்சிகள்
4. கடிதங்கள் மற்றும் விண்ணப்பங்கள் எழுதுதல்

பாட நூல்: கற்பகச்சோலை – தமிழ் ஏடு.

கற்பகம் உயர்கல்வி கலைக்கழகத் தமிழ்த்துறை வெளியீடு.

18CAU101	PROGRAMMING FUNDAMENTALS USING C / C++	Semester – I
		5H – 5C

Instruction Hours / week: L: 5 T: 0 P: 0 Marks: Internal : 40 External : 60 Total: 100
End Semester Exam : 3 Hours

Course Objectives

Enable the student

- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions, pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.
- To learn the characteristics of an object-oriented programming language: data abstraction and information hiding, inheritance, and dynamic binding of the messages to the methods.
- Use the basic object-oriented design principles in computer problem solving.

Course Outcomes (COs)

Upon successful completion of the course, the student will be able to:

1. Obtain the knowledge about the number systems this will be very useful for bitwise operations.
2. Develop programs using the basic elements like control statements, Arrays and Strings .
3. understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
6. Understand the uses of preprocessors and various header file directives.

Unit I - INTRODUCTION TO C AND C++

History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C++.

Data Types, Variables, Constants, Operators and Basic I/O:

Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar etc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h etc).

Expressions, Conditional Statements and Iterative Statements:

Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

Unit II - FUNCTIONS AND ARRAYS

Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

Creating and Using One Dimensional Arrays (Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays.

Unit III - DERIVED DATA TYPES (STRUCTURES AND UNIONS)

Understanding utility of structures and unions, Declaring, initializing and using simple structures and unions, Manipulating individual members of structures and unions, Array of Structures, Individual data members as structures, Passing and returning structures from functions, Structure with union as members, Union with structures as members

Pointers and References in C++:

Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, using references as function arguments and function return values

Unit IV - MEMORY ALLOCATION IN C++

Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.

File I/O, Preprocessor Directives:

Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros.

Unit V - USING CLASSES IN C++

Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables & Functions, Objects as parameters, Specifying the Protected and Private Access, Copy Constructors, Overview of Template classes and their use.

Overview of Function Overloading and Operator Overloading:
