6. K. P. C. Volhardt and N. E. Schore., (2014), 5th Edition, Organic Chemistry: Structure and Function, W.H. Freeman,.
7. P C Jain & Monica Jain., (2015), Engineering Chemistry, Dhanpat Rai Publishing Company,.

Course Objectives

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of sodium carbonate and sodium hydrogen carbonate, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of rate constant of a reaction
- To carried out different types of titrations for estimation of concerned in materials
- To determine the partition coefficient of a substance between two immiscible liquids.

Course Outcomes

1. The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering. The students will learn to:
2. Estimate rate constants of reactions from concentration of reactants/products as a function of time
3. Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc
4. Determine the partition coefficient of a substance between two immiscible liquids.
5. Acquaint the students with the determination of acid value of an oil
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results

Choice of 10 experiments from the following:

1. Determination of surface tension and viscosity
2. Determination of Sodium Carbonate and Sodium Hydrogen Carbonate in a mixture using volumetric titration
3. Determination of Ca / Mg using complexometric titration
4. Thin layer chromatography
5. Determination of chloride content of water
6. Determination of the rate constant of a reaction
7. Conductometry - Determination of cell constant and conductance of solutions
8. pH Metry – Determination of Acid /Base
9. Potentiometry - determination of redox potentials and emfs
10. Saponification/acid value of an oil
11. Determination of the partition coefficient of a substance between two immiscible liquids
12. Adsorption of acetic acid by charcoal
13. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

(i) Theory**Course Objectives**

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.
- To understand the working of Power Converters and components of low-voltage electrical installations.
- To understand the star and delta connections in AC circuits
- To arrive and analyse the energy consumption calculations and PF improvement
- To understand the RLC circuit combinations and its resonance

Course Outcomes

1. To understand and analyse basic electric and magnetic circuits.
2. Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
3. Attributing the electrical machines and transformer.
4. Evaluate the various digital circuits in real time applications.
5. Analysis various semiconductor devices in real time applications.
6. Reproduce the Measuring Instruments and Electrical Installation.

UNIT I - DC Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT II - AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III - Electrical Machines

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque-speed characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

UNIT IV - Transformers And Power Converters

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections. Overviews of DC-DC buck and boost converters, duty ratio control. Introduction to Single-phase and three-phase voltage source inverters.

UNIT V - Electrical Installations

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, RCCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

SUGGESTED READINGS

1. D. P. Kothari and I. J. Nagrath.,(2010), Basic Electrical Engineering, Tata McGrawHill
2. D. C. Kulshreshtha.,(2009),Basic Electrical EngineeringMcGraw Hill
3. L. S. Bobrow.,((2011)),Fundamentals of Electrical Engineering, Oxford UniversityPress
4. E. Hughes.,((2010)), Electrical and Electronics, TechnologyPearson
5. V. D. Toro.,(1989),Electrical Engineering Fundamentals, prentice HallIndia

(i) Laboratory

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.
- To observe the speed control experiments in DC motor
- To acquire the knowledge of energy consumption measurements in single phase system
- To observe and analyse the electrical parameters in R load
- To experiment the basic laws in voltage and current

Course Outcomes

At the end of this course, students will demonstrate the ability

1. To understand and analyze basic electric and magnetic circuits.
2. Getting basic practical knowledge about the Electric circuits.
3. Getting knowledge about the testing of Electrical Machines and Transformers.
4. To observe the speed control experiments in DC moto
5. To study the working principles of electrical machines and power converters.
6. Gathered knowledg of commercial system energy calculations

List of Experiments

1. Experimental verification of electrical circuit problems using Ohms law and Kirchoff'slaw.
2. Measurement of electrical quantities – voltage, current, power & power factor in Rload.
3. Speed control of DC shuntmotor
4. Draw the equivalent circuit of single phase Transformer by conducting OC &SCTest.
5. Measurement of energy using single phase energymeter.

SUGGESTED READING

1. D. P. Kothari and I. J. Nagrath.,(2010), “Basic Electrical Engineering”, Tata McGrawHill.
2. D. C. Kulshreshtha.,(2009), “Basic Electrical Engineering”, McGrawHill.
3. L. S. Bobrow.,(2011), “Fundamentals of Electrical Engineering”, Oxford UniversityPress.
4. E. Hughes.,(2010), “Electrical and Electronics Technology”, Pearson.
5. V. D. Toro.,(1989), “Electrical Engineering Fundamentals”, Prentice HallIndia.

COURSE OBJECTIVES

- To understand the importance graphics in engineering
- To learn basic engineering drawing formats
- To develop the graphical skills for communication of concepts, ideas and design of engineering products through technical drawings.
- To learn to take data and transform it into graphic drawings.
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Know and understand the conventions and the method of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skill in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.

UNITI INTRODUCTION

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Conic sections including the Ellipse, Parabola and Hyperbola (eccentricity method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales

UNITII ORTHOGRAPHICPROJECTIONS

Principles of Orthographic Projections- Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNITIII PROJECTION OF POINTS, LINES AND PLANESURFACES

Projections of Points and lines located in the first quadrant inclined to both planes - Determination of true lengths and true inclinations; Projection of polygonal surface and circular lamina inclined to both referenceplanes

UNITIV PROJECTION OFSOLIDS

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

UNIT V ISOMETRIC PROJECTIONS & COMPUTER GRAPHICS

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple solids, truncated prisms, pyramids, cylinders and cones; Conversion of Isometric Views to Orthographic Views and Vice-versa

Overview of Computer Graphics, listing the computer technologies that impact on graphical communication, demonstrating knowledge of the theory of CAD software, Introduction to 3D modeling packages

SUGGESTED READINGS

1. Venugopal K and Prabhu Raja V., (2010), Engineering Graphics, New Age International Publishers,.
2. C M Agrawal and Basant Agrawal., (2012), Engineering Graphics, Tata McGraw Hill, New Delhi,.
3. James D. Bethune., (2016), Engineering Graphics with AutoCAD (2015), Pearson Education,.
4. Narayana, K.L. & P Kannaiah., (2008), Text book on Engineering Drawing, Scitech Publishers,.
5. Bureau of Indian Standards, Engineering Drawing Practices for Schools and Colleges SP 46., (2003), BIS, New Delhi, (2003).

7. Bhatt N.D., Panchal V.M. & Ingle P.R, (2014), Engineering Drawing, Charotar Publishing House,.

Course Objectives:

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To acquaint the student with the concepts of vector calculus needed for problems in all engineering disciplines.
- To enable the students to apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their study as a functions of a complex variables.
- To develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, in application areas such as fluid dynamics and flow of the electric current etc.
- To make the student understand the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.
- To make the student to solve various Engineering problems.

Course Outcomes:

After successfully completing the course, the student will have a good understanding of the following topics

1. To apply the Eigen values and eigenvectors, diagonalization of a matrix, nature and they will also be able to use matrix algebra techniques for practical applications.
2. To find grad, div and curl in Cartesian and other simple coordinate systems, and establish identities connecting these quantities, to evaluate line, surface and volume integrals in simple coordinate systems and to use Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
3. To find the Analytic functions using the Cauchy Riemann equations and they will learn mapping properties of elementary functions and mapping properties of some special transcendental functions. They will understand relations between conformal mappings and quadratic differentials and how geometric structures are changing under conformal mappings.
4. To evaluate complex integrals using the Cauchy's integral formula and the Residue theorem and to appreciate how complex methods can be used to prove some important theoretical results.
5. To apply Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.
6. In applying the concept of Matrices, Vector calculus, Analytic functions, Complex integration and Laplace transforms in their respective fields.

UNIT I - MATRICES

Eigen values and Eigenvectors of a real matrix, Characteristic equation, Properties of eigenvalues and eigenvectors, Cayley-Hamilton theorem, Diagonalization of matrices, Reduction of a quadratic form to canonical form by orthogonal transformation, Nature of quadratic forms. Simple Problems using Scilab.

UNIT II -VECTOR CALCULUS

Gradient and directional derivative, Divergence and Curl, Irrotational and Solenoidal vector fields, Line integral over a plane curve, Surface integral, Area of a curved surface, Volume integral, Green's, Gauss divergence and Stoke's theorems, Verification and application in evaluating line, surface and volume integrals.

UNIT III - ANALYTIC FUNCTION

Analytic functions, Necessary and sufficient conditions for analyticity, Properties, Harmonic conjugates, Construction of analytic function, Conformal mapping, Mapping by Functions $w = z+c$, cz , $1/z$, z^2 , Bilinear transformation.

UNIT IV- COMPLEX INTEGRATION

Line integral, Cauchy's integral theorem, Cauchy's integral formula, Taylor's and Laurent's series, Singularities, Residues, Residue theorem, Application of residue theorem for evaluation of real integrals, Use of circular contour and semicircular contour with no pole on real axis.

UNIT V - LAPLACE TRANSFORMS

Existence conditions, Transforms of elementary functions, Transform of unit step function and unit impulse function, Basic properties, Shifting theorems, Transforms of derivatives and integrals, Initial and final value theorems, Inverse transforms, Convolution theorem, Transform of periodic functions, Application to solution of linear ordinary differential equations with constant coefficients.

SUGGESTED READINGS

Theory**Course Objectives**

- To inculcate the basics of properties of matter and its applications.
- To study the basics of laser and optical fiber with appropriate applications.
- To disseminate the fundamentals of thermal physics and their applications.
- To introduce the concepts of quantum mechanics for diverse applications.
- To impart the basic knowledge of crystal and its various crystal structures.
- To develop the idea of quantum mechanics through applications.

Course Outcomes

Upon completion of this course, the students will be able to

1. Identify the elastic nature of materials.
2. Infer the characteristics of laser for various engineering applications.
3. Extend the knowledge on optical fiber for communication purposes.
4. Illustrate the thermal properties of materials through various methods.
5. Develop the idea of quantum mechanics through applications.
6. Identify the different atomic arrangements of crystals and its defects.

UNIT I – PROPERTIES OF MATTER

Elasticity –Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation)-factors affecting elastic modulus and tensile strength–Poisson’s ratio- Torsional pendulum- bending of beams – bending moment – uniform and non-uniform bending – I-shaped girders - stress due to bending in beams.

UNIT II – LASER AND FIBER OPTICS

Introduction – emission and absorption process- Einstein’s coefficients derivation. Types of LASER – CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram).

UNIT III – THERMAL PHYSICS

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints – bimetallic strips - thermal conduction, convection and radiation – heat conduction in solids – thermal conductivity – Forbe’s and Lee’s disc method: theory and experiment – conduction through compound media (series and parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar waterheaters.

UNIT IV – QUANTUM PHYSICS

Introduction to quantum theory – Black body radiation – dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- physical significance of wave function, scanning electron microscope.

UNIT V – CRYSTAL PHYSICS

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances – Coordination number and packing factor for SC, BCC, FCC, HCP – crystal Imperfections: point defects, line defects

SUGGESTED READINGS

1. Bhattacharya D.K. & Poonam T., (2015), Engineering Physics, Oxford University Press.
2. Gaur R.K. and Gupta S.L., (2012), Engineering Physics, Dhanpat Rai Publications
3. Pandey .B.K. & Chaturvedi .S., (2012), Engineering Physics, Cengage Learning India
4. Halliday.D., Resnick R. & Walker. J., (2015), Principles of Physics, Wiley
5. Serway R.A and Jewett J.W., (2010), Physics for Scientists and Engineers with Modern Physics, Thomson Brooks/Cole Publishing Co
6. Tipler P.A. and Mosca G.P., (2007), Physics for Scientists and Engineers with Modern Physics, W.H. Freeman

Laboratory

Course Objective:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To develop the skills for understanding basic electric circuits.

Course Outcomes:

1. The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
2. Prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. Present experimental data in various appropriate forms like tabulation, and plots.
4. Analyze, Interpret and Summarize experimental results.
5. Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Torsional pendulum – Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending – Determination of young's modulus
3. Uniform bending – Determination of young's modulus
4. Lee's disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermo e.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge – Determination of thickness of a thin sheet/wire
8. Optical fibre –Determination of Numerical Aperture and acceptance angle
9. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10. Determination of Band gap of a semiconductor.
11. Spectrometer- Determination of wavelength using grating.
12. Viscosity of liquids-Determination of co-efficient of viscosity of a liquid by Poiseuille's flow

Course Objectives

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To improve the student's communication skill at interview level.

Course Outcomes

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Gain confidence in using English language in real life situations.
4. Improve word power: lexical, grammatical and communication competence.
5. To guide the students to write business letters and other forms of technical writing.
6. To enable students to prepare for oral communication in formal contexts.

Unit: I – Basic Writing Skills

Sentence Structures – Use of phrases and clauses in sentences – Importance of proper punctuation – Creating coherence- Organizing principles of paragraphs in documents – Techniques for writing precisely

Unit: II – Vocabulary Building

The concept of Word Formation – Root words from foreign languages and their use in English – Acquaintance, with prefixes and suffixes from foreign languages in English to form derivatives. – Synonyms, antonyms, and standard abbreviations.

Unit: III – Grammar and Usage

Subject-verb agreement – Noun-pronoun agreement – Misplaced modifiers – Articles – Prepositions – Redundancies – Clichés

Unit: IV – Listening and Reading Skills

Note taking- viewing model interviews – listening to informal conversations – improving listening / reading comprehension – reading model prose / poems – reading exercise

Unit: V. – Writing Practices

Comprehension – Précis Writing – Essay Writing Listening Comprehension – Common Everyday Situations: Conversations and Dialogues – Communication at Workplace – Interviews – Formal Presentations

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

SUGGESTED READINGS

2. Sanjay Kumar and PushpLata., (2011), Communication Skills ,Oxford UniversityPress.
3. Liz Hamp – Lyons and Ben Heasly., (2006), Study Writing, Cambridge UniversityPress.
4. F.T. Wood., (2007), Remedial English Grammar, Macmillan,
5. Michael Swan., (1995),Practical English Usage,OUP.,

(i) Theory**Course Objectives**

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure
- Acquire and analyse the roots of equations
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in “C” language

Course Outcomes

The course will enable the students

1. To formulate simple algorithms for arithmetic and logical problems
2. To translate the algorithms to programs (in C language)
3. To test and execute the programs and correct syntax and logical errors
4. To implement conditional branching, iteration and recursion
5. To decompose a problem into functions and synthesize a complete program using divide and conquer approach
6. To use arrays, pointers and structures to formulate algorithms and programs
7. To apply programming to solve matrix addition and multiplication problems and searching and sorting problems
8. To apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

Unit I – Introduction to Programming, Arithmetic expressions and precedence

Introduction to Programming-Flowchart / pseudocode, compilation, Variables including data types, Arithmetic expressions and precedence.

Unit II – Conditional Branching and Loops

Conditional Branching – Loops Writing and evaluation of conditionals and consequent branching, Iteration and loops.

Unit III – Arrays and Basic Algorithms

Arrays 1-D, 2-D, Character arrays and Strings **Basic Algorithms:** Searching, Basic Sorting Algorithms, Finding roots of equations, idea of time complexity.

Unit IV – Function and Recursion

Functions (including using built in libraries), Recursion with example programs such as Quick sort, Ackerman function etc.

Unit V - Structure, Pointers and File Handling

Pointers, Structures including self-referential structures e.g., linked list, notional introduction, File handling in C.

SUGGESTED READINGS

1. E. Balagurusamy.,(2017), Computing Fundamentals and C Programming, 5th Edition, TMHEducation
2. E. Balaguruswamy., (2017), Programming in ANSI C, 7th Edition, TataMcGraw-Hill,
3. Byron Gottfried., (2017), Schaum's Outline of Programming with C, 3rd Edition, McGraw-Hill
4. Brian W. Kernighan and Dennis M. Ritchie.,(2015), The C Programming Language, 2nd Edition, Prentice Hall ofIndia

(ii) Laboratory

Course Objectives

- To provide an awareness to Computing and C Programming
- To know the correct and efficient ways of solving problems
- To learn to develop algorithm for simple problemsolving
 - To know different errors in programming
 - To acquire knowledge in array and strings programming
- To get more knowledge in branches and structures

Laboratory Outcomes:

1. To formulate the algorithms for simple problems
2. To translate given algorithms to a working and correct program
3. To be able to correct syntax errors as reported by the compilers
4. To be able to identify and correct logical errors encountered at runtime
5. To be able to write iterative as well as recursive programs
6. To be able to represent data in arrays, strings and structures and manipulate them through a program
7. To be able to declare pointers of different types and use the mind defining self-referential structures.
8. To be able to create, read and write to and from simple text files.

List of Experiments

Tutorial 1: Problem solving using computers:

Lab 1: Familiarization with programming environment

Tutorial 2: Variable types and type conversions:

Lab 2: Simple computational problems using arithmetic expressions

Tutorial 3: Branching and logical expressions:

Lab 3: Problems involving if-then-else structures

Tutorial 4: Loops, while and for loops:

Lab 4: Iterative problems e.g., sum of series

Tutorial 5: 1D Arrays: searching, sorting:

Lab 5: 1D Array manipulation

Tutorial 6: 2D arrays and Strings, memory structure:

Lab 6: Matrix problems, String operations

Tutorial 7: Functions, call by value:

Lab 7: Simple functions

Tutorial 8 & 9: Numerical methods (Root finding, numerical differentiation, numerical integration):

Lab 8 and 9: Numerical methods problems

Tutorial 10: Recursion, structure of recursive calls:

Lab 10: Recursive functions

Tutorial 11: Pointers, structures and dynamic memory allocation

Lab 11: Pointers and structures

Tutorial 12: File handling:

Lab 12: Fileoperations

18BTBT205

Biochemistry
(Theory & Lab.)Semester-II
7H-6C

Instruction Hours/week: L:3T:1P:3

Marks: Internal:40 External:60 Total:100

End Semester Exam:3Hours

(i) Theory

Course Objectives

- To understand the fundamental concepts of biochemistry
- To illustrate the structure and properties of important biomolecules
- To understand the structural and metabolic aspects of amino acids and nucleic acids.
- To understand the major reactions in living cells and metabolism of biomolecules.
- To summarize the biosynthesis of biomolecules
- To explain the consequences of metabolic disorders.

Course Outcomes

1. Explain the basic biochemical concepts, structure, types and properties of carbohydrates.
2. Recall the structure and properties of lipids, proteins and nucleic acids.
3. Summarize the basics of bioenergetics and glucose metabolism.
4. Understand the knowledge on structural and metabolic aspects of amino acids and nucleic acids.
5. Outline the pathway by which lipids are being biosynthesized and metabolized.
6. Understand how diseases are correlated with metabolic disorders.

UNIT I - INTRODUCTION TO BIOMOLECULES - CARBOHYDRATES

Basic principles of organic chemistry, role of carbon, types of functional groups, chemical nature of water, pH and biological buffers, biomolecules. Structure and properties of Carbohydrates (mono, di, oligo & polysaccharides) Proteoglycans, glucosaminoglycans.mutarotation, glycosidic bond, reactions of monosaccharides, reducing sugars.Starch, glycogen, cellulose and chitin. Proteoglycans, glycosaminoglycans, hyaluronic acid, chondroitinsulfate.

UNIT II - STRUCTURE AND PROPERTIES OF OTHER BIOMOLECULES

Structure and properties of important biomolecules: Lipids: fatty acids, glycerol, saponification, iodination, hydrogenation, phospholipids, glycolipids, sphingolipids, cholesterol, steroids, prostaglandins.

Protein: Amino Acids, Peptides, Proteins, structures, hierarchy of organization primary, secondary, tertiary and quaternary structures, glycoproteins, lipoproteins. Steps in sequencing polypeptide.Chemical synthesis of peptides.

Nucleic acids: purines, pyrimidines, nucleoside, nucleotide, RNA, DNA-Watson-Crick structure of DNA.

UNIT III - BIOENERGETICS AND CARBOHYDRATE METABOLISM

Metabolism - Energy relationship between the catabolic and anabolic pathways, Five major reactions in living cells, Ping-Pong mechanism of nucleoside diphosphate kinase. Major pathways of glucose utilization: glycolysis, gluconeogenesis. Pentose phosphate pathway; TCA cycle: Reactions and regulations, genetic disorders affecting carbohydrate metabolism.

UNIT IV - METABOLISM OF AMINOACIDS AND NUCLEIC ACIDS

Biosynthesis of amino acids from acetyl CoA, Biosynthesis of essential amino acids (Met, Thr, Lys, Ile, Val, Leu, Phe, Trp, Tyr). Glucose-alanine cycle, Urea cycle. Pathways of degradation of aromatic, glucogenic and ketogenic amino acids. Inborn errors of amino acid metabolism. Biosynthesis of nucleotides, *de novo* and salvage pathways for purines and pyrimidines, regulatory mechanisms; catabolism of purine & pyrimidine; Metabolic disorders associated with nucleic acid metabolism.

UNIT V - METABOLISM OF LIPIDS

Digestion, mobilization, and transport of fats, fatty acid entry into mitochondria via the acyl-carnitine / carnitine transporter. Biosynthesis of fatty acid, Triclylglycerol and cholesterol. The β -oxidation pathway. Oxidation of monounsaturated and polyunsaturated fatty acid. Genetic defects in fatty Acyl-CoA dehydrogenases causing serious diseases.

(ii) Laboratory

Course Objectives

- To explain the principles behind the qualitative estimation of biomolecules such as carbohydrates, amino acid, protein and lipid.
- To analyze the oil properties.
- To carry out the oleic acid separation.
- To carry out the preparation of casein from milk

Course Outcomes

- Distinguish the properties of biomolecules such as carbohydrates, amino acids, proteins and lipid through qualitative analysis.
- Interpret the properties of oil
- Demonstrate the separation of oleic acid.
- Perform the preparation of casein from milk.

LABORATORY COMPONENT

1. Qualitative tests for carbohydrates – distinguishing reducing from non-reducing sugars and keto from aldoses.
2. Quantitative method for amino acid estimation using ninhydrin – distinguishing amino from imino acid.
3. Quantification of proteins (Lowry's and Bradford's method)
4. Quantification of lipids (Zak's method)
5. Analysis of oil (Acid number, Saponification number and iodine value)
6. Separation of Oleic acid
7. Preparation of Casein from Milk

Mathematics -III

Semester-III

(Transforms and Partial Differential Equation)

4H-4C

Instruction Hours/week: L:3T:1P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3 Hours

Course Objectives

- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.
- To make the student to solve various Engineering problems.

Course Outcomes

Upon successful completion of the course, students should be able to:

1. Understand how to solve the given standard partial differential equations.
2. Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
3. Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
4. Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
5. Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.
6. The learners can equip themselves in the transform techniques and solve partial differential equations

UNIT-I PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations – Singular integrals - Solutions of standard types of first order partial differential equations - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non homogeneous types.

UNIT-II FOURIER SERIES

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis.

UNIT-III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heatconduction.

UNIT-IV FOURIERTRANSFORMS

Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT-V Z - TRANSFORMS AND DIFFERENCEEQUATIONS

Z-transforms - Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

8. Wylie, R.C. and Barrett, L.C.,(2012), Advanced Engineering Mathematics ,Tata McGraw Hill Education Pvt. Ltd, 6th Edition, NewDelhi.

Course Objectives

- To explain the cell structure of Prokaryotes and Eukaryotes
- To understand how cells undergo mitosis
- To outline the views on transport across the cell membranes.
- To explain the signaling process involved in the cell.
- To illustrate the function of mitochondria and chloroplast.
- To recall the importance of cell signaling process to understand diseases.

Course Outcomes

1. Summarize the structure and function of cell components
2. Understand the role of the cytoskeletal proteins and link it with cell cycle.
3. Illustrate the transport process across the cell membrane.
4. Outline the basic ideas on signaling process through the receptors.
5. Explain the electron transfer in mitochondria.
6. Relate the importance of cell signaling process to understand diseases.

UNIT-I CELL STRUCTURE AND CELL ORGANELLES

History of cell biology, comparison of eukaryotic and prokaryotic cells, membrane organisation, theories, components; Structure of prokaryotic cells - cilia, flagella, cell wall; Structure of eukaryotic cell organelles: cytoplasm, endoplasmic reticulum, mitochondria, chloroplast, peroxisomes, nucleus, Microscopic techniques for viewing cell organelles.

UNIT-II CYTOSKELETAL PROTEINS & CELL DIVISION

Cytoskeletal proteins - Types, contractile proteins - actin & myosin, cell adhesion proteins; extracellular matrix; Types of cell division: mitosis & meiosis, Cell cycle and molecules that control cell cycle

UNIT-III TRANSPORT ACROSS CELL MEMBRANES

Passive & active transport, permeases, sodium potassium pump, Ca_2^+ ATPase pumps, lysosomal and vacuolar membrane ATP dependent proton pumps, co-transport symport, antiport, active group translocation; endocytosis and exocytosis; Entry of viruses and toxins into cells.

UNIT-IV RECEPTORS AND CELL SIGNALLING

Cytosolic, nuclear and membrane bound receptors, examples of receptors, identify cation and purification of cell surface receptors, secondary messengers, autocrine, paracrine and endocrine modes of action

UNIT- V FUNCTION OF MITOCHONDRIA AND CHLOROPLAST

Chloroplast: photosynthetic stages and light-absorbing pigments, Mitochondria: Electron transport chain, Reduction Potentials of Electron Carriers, Electron transfer from reduced cytochrome c to O₂, ATP synthesis.

SUGGESTED READINGS:

4. De Robertis. E.D.P. and De Robertis E.M.F. (2005). Cell and Molecular biology. B.I publications PvtLtd.

Course Objectives

- To illustrate the basic concepts of microbiology and different microbial identification techniques.
- To explain the structure and multiplication of microorganism.
- To interpret the microbial growth and its metabolism.
- To outline the mechanism for the control of microorganisms.
- To infer the application of microorganism in industries.
- To explain the role of microorganisms in bioremediation.

Course Outcomes

1. Outline the history of microbiology and microbial staining techniques.
2. Discuss the microbial structural organization and multiplication.
3. Infer the basic requirements for microbial growth towards the biosynthesis of important molecules.
4. Discuss the controlling mechanism of microorganisms.
5. Illustrate the production of various metabolites and its applications.
6. Explain the role of microorganisms in bioremediation.

UNIT- I INTRODUCTION

History of microbiology, classification and nomenclature of microorganism, Microbes in soil, air and water, microscopic examination, light and electron microscopy, different staining techniques - gram staining, acid fast, capsular staining, flagellar staining and fungalstaining.

UNIT-II MICROBES-STRUCTURE AND MULTIPLICATION

Structural organization and multiplication - bacteria, viruses, algae, fungi, actinomycetes, mycoplasma, cyanobacteria and bacteriophage.

UNIT- III MICROBIAL NUTRITION, GROWTH AND METABOLISM

Cultivation, Nutritional requirements and different media – bacterial culture; aerobic and anaerobic; growth curve, preservation methods; bioenergetics, utilization of energy, biosynthesis of importantmolecules.

UNIT – IV CONTROL OF MICROORGANISMS

Physical and chemical control of microorganisms, host-microbe interactions, antibacterial, anti-fungal, anti-viral agents, mode of action, resistance to antibiotics, clinically important microorganisms.

UNIT – V INDUSTRIAL AND ENVIRONMENTAL MICROBIOLOGY

Primary metabolites; secondary metabolites and their applications-preservation of food; biogas; bioremediation; leaching of ores by microorganisms; microorganisms and pollution control.

SUGGESTED READINGS:

2. Pelczar. M. J. Chan. E.C.S. and Kreig N.R. (2015). Microbiology. 5th Edition. Tata McGraw-Hill Education.
3. Willey. J.M., Sherwood. L.M. and Woolverton C.J. (2011). Prescott's Microbiology, 8th Edition, McGraw-Hill International
4. Kolwzan. B., Adamiak. W., Grabas K. and Pawelczyk. A. (2006). Introduction to Environmental Microbiology, ebook.

Course Objectives

- To understand the basic laws and concepts of chemical calculations.
- To explain the first and second laws of thermodynamics.
- To explain the overall material balances of chemical reactions and its basic calculations.
- To discuss the fluid flow mechanics and its concepts.
- To understand the fluid transportation.
- To understand the basic principles of chemical calculations and measurements.

Course Outcomes

1. Outline the basic chemical calculations and the basic laws governing it.
2. Illustrate basic laws of thermodynamics.
3. Infer the overall material balances of chemical reactions and its basic calculations.
4. Outline the application of fluid flow mechanics in chemical engineering.
5. Discuss the fluid flow and its measurements.
6. Understand the basic principles of chemical calculations and measurements.

UNIT I - BASIC CHEMICAL CALCULATIONS

SI units, stoichiometry, basic chemical calculations: mole, atomic mass and molar mass, equivalent mass, conversion of mass fraction to mole fraction, molarity, normality, density, specific gravity. Ideal gas law- Ideal mixtures and solutions – Dalton's law of additive volumes, Henry's law, Raoult's law, Concepts of Simpson's rule and their applications to different systems.

UNIT II - FIRST AND SECOND LAWS OF THERMODYNAMICS

Entropy, Enthalpy, Free energy, Energy balances, sensible heat, latent heat, vapour pressure, steady and unsteady state calculations.

UNIT III - MATERIAL BALANCES

Overall and component balances, material balances without and with chemical reactions, degrees of freedom, steady and unsteady state, unit operations, recycle and bypass humidity calculations.

UNIT IV - FLUID MECHANICS

Fluids; fluid statics and applications in chemical engineering; fluid flow; laminar; Turbulent pressure drops; compressible fluid flow concepts; multiphase flow concepts.

UNIT V - TRANSPORTATION OF FLUIDS

Pumps- Types, Working principle, Characteristics, Suction and Cavitation; Measurements of flowing fluids; Fluidization and flow through Packed Bed Column

SUGGESTED READINGS:

1. Bhatt. B.I. and Vora. S.M. (2004). Stoichiometry. 4th Edition. Tata McGraw-Hill Education.
2. McCabe. W., Smith. J., and Harriott. P. (2004). Unit Operations of Chemical Engineering. 7th Edition. Tata McGraw Hill Education.

(i) Theory**Course Objectives**

- To explain the basic concepts of wave properties and radiation sources.
- To discuss the instrumentation and application of various molecular spectroscopy.
- To understand the concept and instrumentation of magnetic resonance spectroscopy and mass spectroscopy.
- To categorize the different separation methods for product purification.
- To outline the thermal analysis techniques and its applications.
- To understand the instrumentation and applications of different thermal analysis techniques.

Course Outcomes

1. Infer the various sources and properties of electromagnetic radiation.
2. Discuss the theory of molecular absorption spectroscopy.
3. Relate the theory, instrumentation and applications of various molecular spectroscopies.
4. Interpret the theory and instrumentation of magnetic resonance and mass spectroscopy.
5. Identify the various chromatographic and electrophoresis techniques for purification.
6. Explain the instrumentation and applications of different thermal analysis techniques.

UNIT I - INTRODUCTION TO SPECTROMETRY

Properties of electromagnetic radiation- wave properties – components of optical instruments – Sources of radiation – wavelength selectors – sample containers – radiation transducers – Signal process and read outs – signal to noise ratio - sources of noise – Enhancement of signal to noise - types of optical instruments – Principle of Fourier Transform optical Measurements.

UNIT II - MOLECULAR SPECTROSCOPY

Molecular absorption spectrometry –Transmittance and Absorbance – Beer's law – Theory - Instrumentation - Applications - Fluorescence and Phosphorescence spectrometry- Theory, Instrumentation – Applications – Infrared absorption spectrometry – theory - instrumentation – Applications – Interpretation of data- Raman spectroscopy – Theory - Instrumentation – applications-Interpretation of data- Circular dichroism spectroscopy- Theory - Instrumentation – applications-Circular Nucleic acids and Proteins-Use of spectroscopy in biological and clinical analysis.

UNIT III - MAGNETIC RESONANCE SPECTROSCOPY AND MASS SPECTROMETRY

Theory of NMR – environmental effects on NMR spectra – chemical shift- NMR spectrometers – applications of ^1H and ^{13}C NMR- Molecular mass spectra – ion sources – Mass spectrometer. Applications of molecular mass - Electron paramagnetic resonance- g values – instrumentation, application.

UNIT IV - SEPARATION METHODS

Chromatography – Band broadening and optimization of column performance- Liquid chromatography – Partition chromatography - Adsorption chromatography – Ion exchange chromatography -size exclusion chromatography - Affinity chromatography- Gas chromatography& HPLC- - principles - applications Capillary electrophoresis – Applications.

UNIT V - THERMAL METHODS

Different thermal analysis techniques.Differential scanning calorimetry - instrumentation & application.Differential thermal analysis - instrumentation & application, DTA curve.Thermogravimetry – instrumentation & application, TG curve.

ii) Laboratory

Course Objectives

- To understand the basic principle of analytical techniques
- To discuss the instrumental techniques used in chemical and biochemical research labs.
- To explain the fundamentals of spectroscopy operations.
- To carry out qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
- To carry out different spectroscopic techniques.
- To carry out different chromatographic techniques.

Course Outcomes

1. Explain the basic principle of analytical techniques
2. Discuss the instrumental techniques used in chemical and biochemical research labs.
3. Explain the fundamentals of spectroscopy operations.
4. Perform the qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
5. Demonstrate the different spectroscopic techniques.
6. Demonstrate the different chromatographic techniques.

LABORATORY COMPONENT

1. Precision and validity in an experiment using absorption spectroscopy and validating Lambert-Beer's law using KMnO_4
2. Determination of analytical wavelength for KMnO_4
3. Determination of iron concentration using 1,10-phenanthroline.
4. Finding the pK_a of 4-nitrophenol using absorption spectroscopy.
5. UV spectra of nucleic acids and proteins.

6. Estimation of Sulphate by nephelometry.
7. Determination of R_f value using TLC.

SUGGESTED READINGS:

1. Willard. H.H., Merritt. L.L., Dean. J.A. and Settle F.A. (2004). Instrumental Methods of Analysis. 7th Edition. CBS Publishers.
2. Skoog D.A., Holler. J.F. and Crouch. S.R. (2018). Principles Instrumental Analysis. 7th Edition. Cengage Learning.

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To understand the stages of mitosis and different types of blood cells.
- To understand the chloroplast isolation from leaves.
- To demonstrate the culturing, growth and control of micro organisms.
- To understand about the chemicals that controls the bacterial growth.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
2. Interpret the various staining techniques to identify the cell.
3. Outline the stages of mitosis.
4. Understand the growth of the organism and the parameters that influences their stability to grow.
5. Understand the knowledge about the chemicals that controls the bacterial growth.
6. Recall the growth curve and the control of microorganisms.

LIST OF EXPERIMENTS**Laboratory Safety and Aseptic Techniques**

1. Identification of given plant, animal and bacterial cells and their components by microscopy.
2. Staining Techniques: (i) Leishmann staining (ii) Giemsa staining.
3. Staining for different stages of mitosis in *Allium cepa* (Onion).
4. Identification of different types of blood cells
5. Isolation of chloroplasts from spinach leaves.
6. Trypan Blue Assay
7. Culturing of microorganisms – in broth and in plates (spread plate, pour plate, streak plate)
8. Gram staining Techniques & Motility Test
9. Chemical Control of Microorganisms & Antibiotic Sensitivity Assay
10. Bacterial Growth Curve and Effect of different parameters on bacterial growth (temperature/aeration/pH)

SUGGESTED READINGS

4. Aneja. K.R. (2001). Experiments in Microbiology, Plant Pathology, Tissue Culture and Mushroom Production Technology. New Age International (P) Limited Publishers, New Delhi.

Course Objectives

- To explain about Indian constitution.
- To understand the central and state government functionalities in India.
- To discuss about Indian society.
- To describe the functions of the Indian government.
- To explain the rules of the Indian constitution.
- To understand the different culture among the people

Course outcomes:

1. Define the laws of Indian constitution.
2. Understand the central and state government functionalities in India.
3. Discuss about Indian society.
4. Describe the functions of the Indian government.
5. Tell about the rules of the Indian constitution.
6. Understand and appreciate different culture among the people.

UNIT I -INTRODUCTION

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

UNIT II - STRUCTURE AND FUNCTION OF CENTRAL GOVERNMENT

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III - STRUCTURE AND FUNCTION OF STATE GOVERNMENT

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV - CONSTITUTION FUNCTIONS

Indian Federal System – Center – State Relations – President's Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V - INDIAN SOCIETY

Society : Nature, Meaning and definition; Indian Social Structure; Caste, Religion, Language in India; Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

18BTBT352	Synthesis of Organic molecules	Semester-III 1H-0C
-----------	--------------------------------	-----------------------

Instruction Hours/week: L:0T:0P:1

Marks: Internal:100 External:0Total:100

End Semester Exam:3 Hours

Course Objectives

- To carry out the synthesis of Aspirin.
- To carry out the synthesis of p-nitroacetanilide.
- To carry out the preparation of Acetanilide from Aniline.
- To carry out the extraction of Lycopene
- To carry out the preparation of alpha D-glucopyranose pentaacetate.
- To carry out the preparation of 1,2:5,6- dicyclohexylidene- alpha-Dglucofuranose.

Course Outcomes

- Demonstrate the synthesis of organic molecules
- Demonstrate the synthesis of p-nitroacetanilide.
- Demonstrate the preparation of Acetanilide from Aniline.
- Demonstrate the extraction of Lycopene
- Demonstrate the preparation of alpha D-glucopyranose pentaacetate.
- Demonstrate the preparation of 1,2:5,6- dicyclohexylidene- alpha-Dglucofuranose.

1. Synthesis of Aspirin.
2. Synthesis of p-nitroacetanilide.
3. Preparation of Acetanilide from Aniline.
4. Extraction of Lycopene
5. Preparation of alpha D-glucopyranose pentaacetate.
6. Preparation of 1,2:5,6- dicyclohexylidene- alpha-Dglucofuranose.

Course Objectives

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.
- To make the student to solve various Engineering problems.

Course Outcomes

Upon successful completion of the course, students will be able to:

1. Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
2. Understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
3. Apply the concept of testing of hypothesis for small and large samples in real life problems.
4. Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
5. Have the notion of sampling distributions and statistical techniques used in engineering and management problems.
6. To expose statistical methods designed to contribute to the process of making the judgements.

UNIT I PROBABILITY AND RANDOM VARIABLES

Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

UNIT II TWO - DIMENSIONAL RANDOM VARIABLES

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTING OF HYPOTHESIS

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chisquare and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit.

UNIT IV DESIGN OF EXPERIMENTS

One way and Two way classifications - Completely randomized design – Randomized block design – Latin square design - 2 2 factorial design.

UNIT V STATISTICAL QUALITY CONTROL

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits - Acceptance sampling.

6. Spiegel. M.R., Schiller. J. and Srinivasan, R.A., (2004), Schaum's Outline of Theory and Problems of Probability and Statistics, Tata McGraw Hill Edition.

\

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To infer the basic knowledge on agitation and its flow pattern in different systems.
- To explain the concept of filtration and its industrial application.
- To understand the different modes of heat transfer and its transfer through different dimensional surfaces.
- To discuss the types of convectional heat transfer and its application.
- To explain the different types and designing parameters of heat exchangers and evaporators.
- To explain the basics of design, equipmentation and calculations of evaporators and heat exchangers.

Course Outcomes

1. Interpret the properties of mixing and agitation in different flow systems.
2. Outline the basic principle of filtration and its application in different filtration methods.
3. Discuss the modes of heat transfer.
4. Illustrate the mechanism of heat transfer through different dimensional surfaces.
5. Infer the basics of convectional heat transfer in different surfaces.
6. Appraise the basics of design, equipmentation and calculations of evaporators and heat exchangers.

UNIT I - MIXING AND AGITATION

Units and dimension, Agitation: purpose, equipments, flow pattern, dimensional analysis; power; agitation of liquids; gas-liquid systems; gas-solid suspensions; agitator scale up.

UNIT II - FILTRATION

Filtration-types, filter media, selection of medium, filter aids-filter theory, constant pressure filtration, constant volume batch filtration; continuous filtration; industrial filters; settling and sedimentation; centrifugation.

UNIT III - MECHANISM OF HEAT TRANSFER

Modes of heat transfer, principles of conduction, Fourier's Law of heat conduction, thermal conductivity, steady state conduction, combined resistances, heat flow through a cylinder and sphere, unsteady state conduction, heat transfer from extended surfaces.

UNIT IV - CONVECTION HEAT TRANSFER

Dimensional analysis, forced and natural convection, convection in flow over surfaces - pipes boiling and condensation.

UNIT V - HEAT EXCHANGERS

Heat exchanger- types, Equipments; overall heat transfer coefficients; design; **LMTD**, NTU concept; Evaporators; single and multiple effects; mass and enthalpy balances.

SUGGESTED READINGS:

1. McCabe W.L., Smith. J.C. and Harriot P.I. (2004). Unit Operations in Chemical Engineering. 7th Edition. McGraw-Hill Inc.
2. Geankoplis C.J. (2016). Transport Processes and separation process principles (Includes unit operations). 4th Edition, Pearson.

Course Objectives

- To explain the thermodynamic properties of fluids and its calculations.
- To discuss the basic concepts of solution properties.
- To illustrate the phase equilibria concepts for various systems.
- To outline the equilibrium criteria for various chemical reactions.
- To infer the knowledge on general thermodynamic processes.
- To explain the working principles and the process involved in the refrigeration and Liquefaction system.

Course Outcomes

1. Discuss the various properties of the fluids and its calculations.
2. Explain the concept of solution thermodynamics and composition models.
3. Analyze the criteria of phase equilibria for different component system.
4. Apply the concept of chemical reaction equilibria and equilibrium conversion.
5. Analyze the thermodynamic flow process.
6. Illustrate the working principles and the process involved in the refrigeration and Liquefaction system.

UNIT-I THERMODYNAMIC PROPERTIES OF FLUIDS

Volumetric properties of fluids exhibiting non ideal behavior; residual properties; estimation of thermodynamic properties - equations of state; Actual property exchanges - Calculations; Maxwell's relations and applications.

UNIT- II SOLUTION THERMODYNAMICS

Partial molar properties; concepts of chemical potential and fugacity; ideal and non-ideal solutions; concepts and applications of excess properties of mixtures; activity coefficient; composition models; Gibbs Duhem equation.

UNIT- III PHASE EQUILIBRIA

Criteria - phase equilibria; V-L-E calculations for binary and multi component systems; liquid-liquid equilibria and solid-solid equilibria.

UNIT- IV CHEMICAL REACTION EQUILIBRIA

Equilibrium criteria - homogeneous chemical reactions; evaluation of equilibrium constant; effect of temperature and pressure on equilibrium constant; calculation of equilibrium conversion and yields for single and multiple reactions.

UNIT- V THERMODYNAMIC ANALYSIS OF PROCESSES

Thermodynamics of flow processes, Concept of lost work; entropy generation; power cycle (rankine, regenerative, reheat); liquefaction and refrigeration

SUGGESTED READINGS:

4. Stockar. U.V., Luuk A.M. and Wielen V.D. (2013). Biothermodynamics: The Role of Thermodynamics in Biochemical Engineering. EPFL Press.

Course Objectives

- To explain the basic idea on scope of biotechnology and its commercial production in modern biotechnology.
- To analyse the modern biotechnological processing techniques for the production of commercial bioproducts.
- To discuss the process of primary metabolite production in different industries.
- To discuss the process of secondary metabolite production.
- To explain the basic procedures for production of bioproducts.
- To illustrate the various methods for the production of recombinant products.

Course Outcomes

1. Outline the scope of biotechnology and its commercial potential.
2. Interpret the modern biotechnological processing techniques for the production of commercial bioproducts.
3. Illustrate the production methods of primary metabolites.
4. Illustrate the production methods of secondary metabolites.
5. Infer the knowledge on commercial enzyme and bioproduct production.
6. Explain the production of various commercially available products using recombinant technology.

UNIT I- INTRODUCTION TO INDUSTRIAL BIOPROCESS

Biotechnology: Scope and importance, Commercial potential of Biotechnology in India. Traditional and modern biotechnology. Products relating to modern biotechnology, industrially important organisms, fermentation processes – modes of operation.

UNIT II - PRODUCTION OF PRIMARY METABOLITES

Production of commercially important organic acids - citric acid, lactic acid, acetic acid, amino acids - glutamic acid, phenylalanine, aspartic acid, alcohols - ethanol, butanol.

UNIT III- PRODUCTION OF SECONDARY METABOLITES

Secondary metabolites: antibiotics: beta-lactams (penicillin, cephalosporin), aminoglycosides (streptomycin) macrolides (erythromycin), vitamins (B12) and steroids (progesterone).

UNIT IV- PRODUCTION OF ENZYMES AND OTHER BIOPRODUCTS

Production of industrial enzymes - proteases, amylases, lipases, cellulases etc., Production of biopesticides, biofertilizers, biopreservatives (Nisin), cheese, biopolymers (xanthan gum, PHB), single cell protein.

UNIT V-PRODUCTION OF RECOMBINANT DNA PRODUCTS

Production of recombinant proteins - therapeutic and diagnostic applications, production of vaccines (hepatitis B vaccine), hormones (insulin). Production of monoclonal antibodies-commercial scale, products of plant (human growth hormone) and animal cell culture (interferons).

SUGGESTED READINGS:

2. Reed G. (2004). Prescott & Dunn's Industrial Microbiology. 4th Edition. CBS Publishers & Distributors.
3. Dubey. R.C. (2014). Text book of Biotechnology. 5th Edition. S Chand Publishers.
4. Cruger. W. (2017). Crueger's Biotechnology: A Textbook of Industrial Microbiology. 3rd Edition. Medtech.

Course Objectives

- To outline the classical genetics concepts of eukaryotes and prokaryotes.
- To explain the structure of nucleic acids and DNA replication.
- To understand the molecular process of transcription.
- To understand the basic machinery of translation and its mechanisms.
- To understand the regulation of gene expression and various types of mutation
- To discuss the different types of mutation and DNA repair mechanisms

Course outcomes

1. Discuss the concepts related to eukaryotic and prokaryotic genetics.
2. Identify the structure of nucleic acids, DNA replication and chromosome organization.
3. Illustrate the prokaryotic and eukaryotic transcription, and its post transcriptional modifications.
4. Outline the concept of genetic code, translation process and post translational modifications.
5. Interpret the process of regulation of gene expression and its importance.
6. Identify the different types of mutation and DNA repair mechanisms.

UNIT I - CLASSICAL GENETICS

Eukaryotic genetics - Mendelian genetics, linkage, crossing over, classical experiments – Hershey and Chase, Avery McLeod & McCarty. Prokaryotic genetics - Bacterial conjugation, transduction and transformation.

UNIT II - STRUCTURE OF NUCLEIC ACIDS AND DNA REPLICATION

Conformation of DNA, Types of RNA, Replication in prokaryotes, D-loop and rolling circle mode of replication, replication of linear viral DNA. Organisation of eukaryotic chromosome – cot value, replication of telomeres in eukaryotes

UNIT III - TRANSCRIPTION

Conformation of RNA- Prokaryotic and Eukaryotic transcription, RNA polymerase, Transcription signals, transcription factors, Features of promoters and enhancers, ribozymes. Post transcriptional

modification – 5' capping, adenylation, splicing, processing of rRNA and tRNA, RNA editing.

UNIT IV - TRANSLATION

Genetic code, Salient features - Wobble hypothesis, basic machinery of translation and its mechanism, codon usage, Post translational modifications, protein targeting.

UNIT V - REGULATION OF GENE EXPRESSION

Regulation of genes – replication, transcription & translation factors, Lac operon, ara operon and trp operon, phage life cycle, Mutation – transition, transversion, artificial & natural mutation, suppressor mutation and repair of DNA.

SUGGESTED READINGS:

1. David. F. (2008). Molecular Biology. Narosa Publication.
2. Benjamin. L. (2004). Gene VIII. Pearson Education.
3. Watson. J.D., Baker Bell, Gann, Levine and Losick. (2004). Molecular Biology of the Gene. Pearson Education.
4. Weaver. R.F. (2005). Molecular Biology. Mc Graw Hill.

Course Objectives

- To educate the ways and means of the environment.
- To give a comprehensive insight into natural resources.
- To understand the concept of ecosystem and biodiversity.
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- To apply systems concepts and methodologies in their core fields.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
7. Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.

Unit I – INTRODUCTION - ENVIRONMENTAL STUDIES & ECOSYSTEMS

Environment Definition, Scope and importance; Ecosystem, Structure and functions of ecosystem. Energy flow, Food chains and food webs, Ecological succession. Classification of ecosystem. Forest ecosystem, Grassland Ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

Unit II - NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources - Renewable and Non – Renewable resources. Land resources and land use change, Land degradation, soil erosion and desertification. Forest resources -Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations. Water resources- Use and over-exploitation of surface and ground water, floods, droughts, conflicts over water. Use of alternate energy sources, growing energy needs, case studies. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

Unit III - BIODIVERSITY AND ITS CONSERVATION

Levels of biological diversity - genetic, species and ecosystem diversity. Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value. Bio-geographical classification of India. Biodiversity patterns (global, National and local levels). Hot-spots of biodiversity. India as a mega-diversity nation. Endangered and endemic species of India. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV - ENVIRONMENTAL POLLUTION

Definition, causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Noise pollution. Nuclear hazards and human health risks. Solid waste management and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Case studies.

Unit V - SOCIAL ISSUES AND THE ENVIRONMENT

Concept of sustainability and sustainable development. Water conservation - Rain water harvesting, watershed management. Climate change, global warming, ozone layer depletion, acid rain and its impacts on human communities and agriculture. Environment Laws (Environment Protection Act, Air Act, Water Act, Wildlife Protection Act, Forest Conservation Act). International agreements (Montreal and Kyoto protocols). Resettlement and rehabilitation of project affected persons. Disaster management (floods, earthquake, cyclones and landslides). Environmental Movements (Chipko, Silent valley, Bishnois of Rajasthan). Environmental ethics: Role of Indian and other religions and cultures in environmental conservation. Environmental communication and public awareness, case studies (e.g., CNG vehicles in Delhi). Human population growth: Impacts on environment, human health and welfare.

Instruction Hours/week: L:0T:0P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- To understand chemical engineering principles and its operations.
- To understand the concept of pressure drops in pipes
- To understand the concept of pressure drops in different reactors.
- To understand the concept of filtration and heat transfer.
- To explain the different separation techniques.
- To understand the process involved in leaching

Course outcomes

Students undergoing this course will be able to

1. Outline the chemical engineering principles and operations.
2. Calculate the flow measurements and pressure drop in pipes and different reactors.
3. Analyze the process of filtration and heat transfer.
4. Perform the distillation and extraction.
5. Demonstrate the process involved in adsorption equilibrium.
6. Demonstrate the process involved in leaching

LIST OF EXPERIMENTS

1. Flow measurement in pipes
2. Pressure drop in pipes.
3. Pressure drop across Fluidized bed.
4. Pressure drop across packed column
5. Continuous rotary filtration
6. Heat exchanger
7. Simple and steam distillation
8. Liquid-liquid equilibria in extraction
9. Adsorption equilibrium
10. Leaching

SUGGESTED READINGS:

1. Geankoplis. C.J. (2007). Transport Processes and Unit Operations. Prentice Hall of India.
2. McCabe W.L., Smith. J.C. and Harriot P.I. (2004). Unit Operations in Chemical Engineering. 7th Edition. McGraw-Hill Inc.

3. Coulson. M. and Richardson. J.F. (2004). Coulson and Richardsons Chemical Engineering. (Vol. 2). ButterworthHeineman.

Course Objective

- To understand the manufacturing of industrially important bioproducts from different natural source.
- To carry out the production of ethanol from molasses and grapes
- To carry out the production of Biofertilizers
- To carry out the production of Single cell protein (Spirulina)
- To carry out the mushroom cultivation
- To carry out the production of jam from mixed fruits

Course Outcome

- Demonstrate the production of commercially valuable bioproducts from different natural source.
 - Demonstrate the production of ethanol from molasses and grapes
 - Demonstrate the production of Biofertilizers
 - Demonstrate the production of Single cell protein (Spirulina)
 - Demonstrate the mushroom cultivation
 - Demonstrate the production of jam from mixed fruits
1. Production of ethanol from molasses and grapes
 2. Production of Biofertilizers
 3. Production of Single cell protein (Spirulina)
 4. Mushroom cultivation
 5. Production of jam from mixed fruits

Course Objectives

- To understand the process of fermentation and basic fermentor configuration.
- To explain the medium requirements and media optimization methods for fermentation process.
- To explain the different sterilization methods and its kinetics and design.
- To discuss and solve the problems related to metabolic stoichiometry and energetics.
- To understand the modes of operations and various kinetic models for product formation.
- To analyze the different kinetic models for microbial growth and product formation.

Course outcomes

1. Discuss the general process of fermentation and fermentor configuration.
2. Analyze the medium requirements and medium formulations for fermentation process.
3. Outline the thermal death kinetics and different sterilization methods.
4. Solve problems related to stoichiometry of cell growth and energetic.
5. Illustrate the various modes of operation in fermentation process.
6. Analyze the different kinetic models for microbial growth and product formation.

UNIT I - OVERVIEW OF FERMENTATION PROCESSES

Overview of fermentation industry, general requirements of fermentation processes, basic configuration of Fermentor and ancillaries, monitoring and controlling – fermentation parameters processes.

UNIT II - RAW MATERIALS AND MEDIA DESIGN

Criteria for good medium, medium requirements for fermentation processes, carbon, nitrogen, minerals, vitamins and other complex nutrients, oxygen requirements, medium formulation of optimal growth and product formation, examples of simple and complex media, design of various commercial media for industrial fermentations – medium optimization methods.

UNIT III - STERILIZATION KINETICS

Thermal death kinetics of microorganisms, batch and continuous heat sterilization of liquid media, filter sterilization of liquid media, air sterilization and design of sterilization equipment - batch and continuous.

UNIT IV - METABOLIC STOICHIOMETRY AND ENERGETICS

Stoichiometry of cell growth and product formation, elemental balances, degrees of reduction of substrate and biomass, available electron balances, yield coefficients of biomass and product formation, maintenance coefficients energetic analysis of microbial growth and product formation, oxygen consumption and heat evolution in aerobic cultures, thermodynamic efficiency of growth.

UNIT V - KINETICS OF MICROBIAL GROWTH AND PRODUCT FORMATION

Modes of operation - batch, fed batch and continuous cultivation. Simple unstructured kinetic models for microbial growth, Monod model, growth of filamentous organisms, product formation kinetics - leudeking-piret models, substrate and product inhibition on cell growth and product formation.

SUGGESTED READINGS:

1. Bailey and Ollis. (2015). Biochemical Engineering Fundamentals, 2nd Edition, McGraw-Hill.
2. Shuler and Kargi. (2017). Bioprocess Engineering Basic concepts. 2nd Edition, Pearson.
3. Pauline M. Doran. (2015). Bioprocess Engineering principles. 2nd Edition. Elsevier.
4. Harvey W. Blanch and Douglas. S. Clark. (2012). Biochemical Engineering. 2nd Edition. Marcel Dekker.
5. Stanbury P.F., Hall S.J. and Whitaker. A. (2017). Principles of Fermentation technology. 3rd Edition. Elsevier.

Course Objectives

- To understand the basic concepts in rDNA technology.
- To explain the importance of recombinant molecules in rDNA technology.
- To understand the gene libraries construction and to perform blottings.
- To outline the concepts involved in gene library construction and differentiate between different gene libraries.
- To explain about the different types of PCR, the main concept in genetic engineering.
- To understand the vast applications of rDNA technology in diverse fields.

Course Outcomes

1. Discuss the knowledge on the basics of rDNA technology.
2. Outline the usage of recombinant molecules in research and development.
3. Understand gene libraries construction and to perform blottings.
4. Interpret the in-depth knowledge acquired to perform PCR reactions and their types.
5. Infer the importance of DNA sequencing methods.
6. Summarize the concept of rDNA technology and its importance in cloning, gene therapy and relate its applications.

UNIT I - BASICS OF RECOMBINANT DNA TECHNOLOGY

Role of genes within cells, genetic elements that control gene expression, Isolation and separation of genomic and plasmid DNA; restriction and modifying enzymes, safety guidelines of recombinant DNA research.

UNIT II - CREATION OF RECOMBINANT MOLECULES

Restriction mapping, design of linkers and adaptors, gene editing. Characteristics of plasmid and phage vectors, prokaryotic and eukaryotic expression vectors. Insect, Yeast and Mammalian vectors.

UNIT III - CONSTRUCTION OF LIBRARIES

Construction of cDNA and genomic libraries. Screening of libraries with DNA probes and with antisera. Cloning : Characterization of recombinant clones by southern, Northern, western and PCR analysis, factors affecting foreign gene expression, over expression and purification of recombinant proteins.

UNIT IV –THEORIES OF rDNA TECHNIQUES

Polymerase chain reaction: Inverse PCR, Nested PCR, Taqman assay, RT - PCR, RACE PCR, RAPD, RFLP, site directed mutagenesis (Kunkel's Method), nucleic acid sequencing- Sangers method, Maxam Gilbert sequencing and automated sequencing method.

UNIT V –APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY

Applications of recombinant DNA Technology: Cloning in plants, Ti plasmid, Methods of producing transgenic animals and their applications, gene silencing, genetherapy.

SUGGESTED READINGS:

1. Primrose. S.B. and Twyman. R.M. (2006). Principles of Gene Manipulation and Genomics. 7th Edition. Blackwell Publishers.
2. Ansel. F.M., Brent. R., Kingston. R.E. and Moore D.D. (2003). Current Protocols in Molecular Biology. Greene Publishing Associates.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To understand the foundation and advanced information on biopharmaceutical aspects in relation to drug development.
- To understand the basics of pharmacokinetics.
- To discuss the drug manufacturing, process and its application.
- To explain the manufacture of solid dosage forms of drugs.
- To understand the manufacture process of liquid orals and topical.
- To discuss the legal steps involved in progressing a new drug to market.

Course Outcomes

1. Illustrate the different pharmaceutical parameters for the current and future biotechnology related products on the market.
2. Outline the concepts of Pharmacokinetics.
3. Infer the basic knowledge on drug process, manufacturing methods and its application.
4. Discuss about the solid dosage forms of drug manufacturing.
5. Explain the manufacturing process of liquid orals and topical.
6. Interpret the legal steps involved in progressing a new drug to market.

UNIT-I INTRODUCTION

History of pharmacy, pharmacopeia - Types, monograph- development, types of various dosage forms, economics and regulatory aspects.

UNIT-II BASICS OF PHARMACOKINETICS

Mechanism of drug action; physico-chemical properties and principles of drug metabolism; pharmacokinetics.

UNIT- III MANUFACTURE OF DRUGS, PROCESS AND APPLICATIONS

Drug development process- Types of reaction process – Fermentation, organic synthesis, extraction, special requirements for bulk drug manufacture- QC instrumentation, Analysis.

UNIT- IV MANUFACTURE OF SOLID DOSAGE FORMS

Compressed tablets; dry and wet granulation; slugging or direct compression; tablet presses; coating of tablets; capsule preparation, Biology based dosage forms

UNIT- V MANUFACTURE OF LIQUID ORALS AND TOPICALS

Oral liquids – vegetable drugs – topical applications; preservation of drugs; analytical methods and other tests used in drug manufacture; packing techniques; quality management; GMP.

5. Augusburge.L.L.andHoang.S.W.(2008).Pharmaceuticaldosageforms:Tablets.3rd Edition Volume 3. Manufacture and process control, Informa health care.

Course Objectives

- To explain the fundamentals of cancer biology
- To understand the principles of carcinogenesis
- To explain the principles of molecular cell biology
- To explain the principles of cancer metastasis
- To outline the different types of cancer therapy.
- To understand the molecular tools for cancer diagnosis.

Course Outcomes

At the end of the course students will be able to

1. Understand the fundamentals of cancer biology
2. Interpret the mechanism of carcinogenesis
3. Outline the principles of molecular cell biology
4. Understand the significance of cancer metastasis
5. Summarize the different types of cancer therapy
6. Recall the molecular tools of cancer diagnosis

UNIT I - FUNDAMENTALS OF CANCER BIOLOGY

Epidemiology of cancer: environmental factors: tobacco, alcohol, diet, occupational exposure, hormones. Regulation of cell cycle, modulation of cell cycle in cancer. Different forms of cancers. Specific type of cancer hepato cellular, melanoma, breast, lung cancer. Genetic basis of cancer- DNA repair. mutations that cause changes in signal molecules, signal switches.

UNIT II - PRINCIPLES OF CARCINOGENESIS

Theory of carcinogenesis, Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x- ray radiation-mechanisms of radiation carcinogenesis.

UNIT III - PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER

Signal amplification: Current models of signal amplification– Phosphorylation of protein kinases; regulation of protein kinases: serine threonine kinase, TNF receptor families, tumor suppressor genes, Oncogenes, identification of oncogenes, detection of oncogenes. Oncogenes/proto oncogene activity. Growth factors related to transformation. Telomerases.

UNIT IV - PRINCIPLES OF CANCER METASTASIS

Clinical significances of invasion, heterogeneity of metastatic phenotype, metastatic cascade, basement membrane disruption, three step theory of invasion, proteinases and tumour cell invasion.

UNIT V - CANCER THERAPY

Cancer screening and early detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer. Advances in cancer detection. Different forms of therapy, chemotherapy, radiation therapy, immunotherapy, molecular therapy, use of signal targets towards therapy of cancer; Genetherapy.

SUGGESTED READINGS:

4. Ian F. Tannock. (2013). The Basic Science of Oncology McGraw Hill Professional,

Course Objectives

- To understand the basics of operating systems and biological databases.
- To understand the basics on available tools and databases for performing research in bioinformatics.
- To explain the dynamic programming approach and methods of pair wise alignment.
- To explain the various methods for the construction of phylogenetic trees.
- To understand the machine learning techniques and protein structure analysis.
- To understand the basics of PERL programming and its functions.

Course Outcomes

1. Illustrate the basics of operating systems and biological databases.
2. Outline the various biological databases and database management system models.
3. Discuss the different algorithms for the sequence analysis.
4. Construct the phylogenetic trees using various methods and protein prediction methods.
5. Outline the machine learning techniques and various techniques for protein structure analysis.
6. Explain the basics of PERL programming and its operations and functions.

UNIT-I INTRODUCTION

Introduction to Operating systems, Linux commands, File transfer protocols ftp and telnet, Introduction to Bioinformatics and Computational Biology, Biological sequences, Biological databases, Genome specific databases, Data file formats, Data life cycle, Database management system models, Basics of Structured Query Language (SQL).

UNIT II SEQUENCE ANALYSIS

Sequence Analysis, Pair wise alignment, Dynamic programming algorithms for computing edit distance, string similarity, shotgun DNA sequencing, end space free alignment. Multiple sequence alignment, Algorithms for Multiple sequence alignment, Generating motifs and profiles, Local and Global alignment, Needleman and Wunsch algorithm, Smith Waterman algorithm, BLAST, PSIBLAST and PHIBLAST algorithms.

UNIT III PHYLOGENETIC METHODS

Introduction to phylogenetics, Distance based trees UPGMA trees, Molecular clock theory, Ultrametric trees, Parsimonious trees, Neighbour joining trees, trees based on morphological traits, Bootstrapping. Protein Secondary structure and tertiary structure prediction methods, Homology modeling, abinitio approaches, Threading, Critical Assessment of Structure Prediction, Structural genomics.

UNIT IV PROTEIN STRUCTURE ANALYSIS

Machine learning techniques: Artificial Neural Networks in protein secondary structure prediction, Hidden Markov Models for gene finding, Decision trees, Support Vector Machines. Introduction to Systems Biology and Synthetic Biology, Microarray analysis, DNA computing, Bioinformatics approaches for drug discovery, Applications of informatics techniques in genomics and proteomics: Assembling the genome, STS content mapping for clone contigs, Functional annotation, Peptide mass fingerprinting.

UNIT V PERL PROGRAMMING

Basics of PERL programming for Bioinformatics: Data types: scalars and collections, operators, Program control flow constructs, Library Functions: String specific functions, User defined functions, File handling.

ii) Laboratory

Course Objectives

- To explain the sequence retrieving techniques from biological databases.
- To explain how to utilize the tools such as BLAST, FASTA, CLUSTAL, OMEGA, EMBOSS, PHYLIP etc.
- To illustrate the basics of pattern matching by pairwise and multiple sequence alignment.
- To understand the 3D structure of protein.
- To explain the molecular visualization tools and impart knowledge on ExPASy Server.
- To understand the basics of Perl programming

Course Outcomes

1. Outline the techniques to retrieve sequences from different biological databases.
2. Discuss the pattern matching by pairwise and multiple sequence alignment
3. Construct phylogenetic tree by using distance based and character based methods
4. Predict and validate 3D structure of protein
5. Predict the protein parameters using ExPASy proteomic tools.
6. Understand the programming using PERL language.

LABORATORY COMPONENT

1. Introduction to UNIX basic commands and UNIX Filters
2. Biological Databases- Sequence Databases, Structure Databases, Specialized Databases; Data Retrieval tools and methods; Database file formats.
3. Pairwise alignment & Multiple sequence alignment- Dotplot analysis - Clustal OMEGA, ClustalX, ClustalW, T-Coffee
4. Database similarity searching using Heuristic methods- BLAST, FASTA
5. Construction of phylogenetic tree - Maximum Parsimony & Maximum Likelihood method - NJ, UPGMA method - PHYLIP program
6. Protein sequence analysis - ExPASy proteomic tools
7. Molecular visualization tools – Pymol, Chimera, DS visualizer, and Swiss PDB Viewer.
8. Perl Programming and applications to Bioinformatics.

SUGGESTED READINGS:

1. Bosu and Simminder Kaur Thukral. (2017). Bioinformatics Databases, Tools and Algorithms, Oxford University Press.
2. Mani. K. and Vijayaraj N. (2004). Bioinformatics, a Practical Approach. Aparna Publications.

Course Objectives

- To outline and evaluate the methods for isolation and purification of DNA from plant and animalsamples.
- To explain the protocol to run the agarose gel electrophoresis sampleanalysis.
- To demonstrate the DNA ligation techniques for transformation and screening ofrDNA.
- To understand the methods involved in optimization protocol for recombinant protein expression.
- To explain the importance of high throughput screening, SDS PAGE andPCR.
- To compile the overall structure of rDNA technology and implement its techniques in research anddevelopment.

Course Outcomes

1. Carry out agarose gel electrophoresis and isolation of DNA samplesindividually.
2. Develop the knowledge of techniques involved in DNA isolation andpurification.
3. Perform the restriction enzyme digestion and ligation of DNAsamples.
4. Produce recombinant DNA and implement blue white screening techniques to screen them.
5. Develop methods to produce recombinant proteins and understand their applications and perform SDS PAGE and PCRreactions.
6. Summarize the overall structure of rDNA technology and implement its techniques in research anddevelopment.

LABORATORY COMPONENT

1. Agarose gelelectrophoresis
2. Isolation of plasmid & chromosomal DNA from bacterial cell
3. Isolation of plant cell genomic DNA from plantsource
4. Isolation of genomic DNA from animal cell
5. Purification of DNA from agarosegel
6. Restriction enzyme digestion andligation
7. Competent cells preparation (CaCl₂method)
8. Transformation and screening forrecombinants
9. Blue and white selection forrecombinants
10. Optimization of inducer concentration and time of induction for recombinant protein expression.
11. SDS PAGE
12. PCR

SUGGESTED READINGS:

1. Chaitanya. K.V. (2013). Cell and Molecular Biology, A Lab Manual. Prentice Hall India Learning Private Limited.
2. Vennison. S.J. (2009). Laboratory Manual for Genetic Engineering. Prentice Hall India Learning Private Limited.

Course Objective

- To explain the basic concepts of natural product isolations.
- To explain the principles of chromatography.
- To discuss the applications of modern NMR.
- To understand the extraction process.
- To demonstrate the extraction and isolation of caffeine from tea leaves.
- To understand the concept of separation of bioactive compounds.

Course Outcome

- Outline the general concepts of bioproduct isolation from various natural sources.
- Elaborate the principles of chromatography.
- Summarize the applications of modern NMR.
- Outline the extraction process.
- Carry out the experiments related to extraction and isolation of caffeine from Tea Leaves.
- Discuss the concept of separation of bioactive compounds.

UNIT-I GENERAL CONCEPT OF NATURAL PRODUCT ISOLATION

Natural Product Isolation, Extraction of Plant Secondary Metabolites, Biochemical analysis of secondary metabolites, Selecting General Separation Conditions, Principles of Chromatography, An Introduction to Planar Chromatography, Applications of Liquid Chromatography, Isolation of Natural Products by Low-Pressure Column Chromatography, Crystallization in Final Stages of Purification, Determination of the Nature of the Compound, Applications of Modern NMR Techniques in the Structural Elucidation, Identification and Characterization

UNIT-II LABORATORY- EXTRACTION AND ISOLATION OF CAFFEINE FROM TEA LEAVES

General background and overview of the experiment, Caffeine extraction: Solid-liquid Extraction, Overview of the extraction process, Purification, Isolation of caffeine from tea leaves

SUGGESTED READINGS:

1. Satyajit D. Sarker, Zahid Latif and Alexander I. Gray. (2005). Methods in biotechnology, Natural products isolation. Springer.
2. Corrado Tringali. (2011). Bioactive Compounds from Natural Sources. CRCpress.

3. Mayo. D.W., Pike. R.M. and Butcher. S.S. (1986). Microscale Organic Laboratory. John Wiley & Sons.
4. Hill.R.andBarbaro.J.(2005).ExperimentsinOrganicChemistry.3rd Edition,Contemporary Publishing Company.

Course Objectives

- To understand the basics of molecular diffusion and mass transfer concepts.
- To explain the gas absorption and its related concepts.
- To explain the various vapour liquid operations and its concepts.
- To understand the HETP, HTU and NTU concepts.
- To outline the extraction and leaching principles.
- To outline the Solid Fluid operations.

Course Outcomes

1. Discuss the molecular diffusions and mass transfer operation in different system.
2. Outline the absorption principles and its concepts for gas liquid operations.
3. Infer the basic concept of equilibria and distillation concepts in vapour liquid operations.
4. Understand the HETP, HTU and NTU concepts.
5. Interpret the equilibria of different systems in extraction and leaching operations.
6. Outline the concepts of adsorption and drying in solid – fluid operations.

UNIT-I DIFFUSION AND MASS TRANSFER

Molecular diffusion in fluids and solids; Inter phase Mass Transfer; Mass Transfer coefficients; Analogies in Transport Phenomenon.

UNIT-II GAS LIQUID OPERATIONS

Principles of gas absorption; Single and Multi component absorption; Absorption with chemical reaction; Design principles of absorbers; Industrial absorbers; HTU, NTU concepts.

UNIT-III VAPOUR LIQUID OPERATIONS

V-L Equilibria; Simple, Steam and Flash Distillation; Continuous distillation; McCabe- Thiele & Ponchon-Savarit Principles; Industrial distillation equipments, HETP, HTU and NTU concepts.

UNIT-IV EXTRACTION OPERATIONS

L-L equilibria, Staged and continuous extraction, Solid-liquid equilibria, Leaching principles.

UNIT-V SOLID FLUID OPERATIONS

Adsorption equilibria – Batch and fixed bed adsorption; Drying-Mechanism-Drying curves -Time of Drying; Batch and continuous dryers.

SUGGESTED READINGS:

1. Trebal R.E. (2012). Mass-Transfer Operations. 3rd Edition, McGraw Hill Education (India) Edition.
2. Geankoplis.C.J.(2016).Transport processes and Separation process principle.4th Edition, Prentice Hall.
3. Coulson. J.M. and Richardson J.F. (2012). Chemical Engineering Volume I & II. 6th Edition, Elsevier.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course objectives:**

- To understand the basic knowledge of cells and organs of Immune system.
- To explain the different cellular responses and its functions.
- To understand the basic views on monoclonal antibodies and antigen- antibody interactions.
- To outline the Immune responses to various disease and different immunologic reactions in Human body.
- To explain the organ transplantation and tumor immunology.
- To outline the basics of autoimmunity.

Course outcomes:

1. Discuss the cells and components of immune system.
2. Explain the basics of B, T cells, genes and generation of antibody and its functions.
3. Infer the basic views on monoclonal antibodies and antigen- antibody interactions.
4. Discuss the concept of immunity and various immunological responses to infections.
5. Discuss the basics of Transplantation and tumor therapies.
6. To illustrate the current trends in treatment of auto immune disease.

UNIT-I INTRODUCTION

Cells of immune system, innate and acquired immunity, primary and secondary lymphoid organs, Components of immune system: antibodies, antigens, haptens, adjuvants, types of immune responses, theory of clonal selection.

UNIT-II CELLULAR RESPONSES

Development, maturation, activation and differentiation of T-cells and B-cells: TCR, antibodies, structure and functions; antibodies: genes and generation of diversity; antigen-antibody reactions; monoclonal antibodies: principles and applications; antigen presenting cells; major histocompatibility complex; antigen processing and presentation; regulation of T-cell and B-cell responses.

UNIT-III INFECTION AND IMMUNITY

Injury and inflammation; immune responses to infections: immunity to viruses, bacteria, fungi and parasites, cytokines, complement, immunosuppression, tolerance, allergy and hypersensitivity, resistance and immunization: Vaccines.

UNIT-IV TRANSPLANTATION AND TUMOR IMMUNOLOGY

Transplantation: genetics of transplantation, laws of transplantation, problems in transplantation: Basis of Graft rejection, specificity and memory of graft rejection; Role of cell mediated response in graft rejection, Transplantation antigens, Mechanisms involved in Graft rejections, tumor immunology-immune therapy.

UNIT-V AUTOIMMUNITY

Autoimmunity, Auto immune diseases and diagnosis, proposed mechanisms for induction of Autoimmunity, Treatment of Autoimmune diseases; current therapies, monoclonal antibody and diagnosis, treatment.

SUGGESTED READINGS:

1. Roitt I. Male and Brostoff. (2012). Immunology. 8th Edition. Mosby publications.
2. Judy Owen, Jenni Punt and Sharon Stranford. (2013). Kuby Immunology. 7th Edition. W. H. Freeman.
3. David W. Mount. (2004). Bioinformatics: Sequence and Genome Analysis. 2nd Edition. Cold Spring Harbor Laboratory Press, U.S.
4. Chakravarty. A.K.. (2006). Immunology and Immunotechnology. 1st Edition. Oxford University Press.

Course Objectives

- To understand the basic concepts of fermentation processes.
- To apply the knowledge about the design of bioreactors
- To explain the scale up of bioreactors.
- To illustrate the bioprocess simulation and modeling
- To explain the immobilized enzyme kinetics and its significance.
- To discuss the commercial production of bioproducts.

Course outcomes

1. Understand the fermentation processes.
2. Interpret the design of bioreactors
3. Describe the scale up of bioreactors.
4. Infer the different types of bioprocess simulation and modeling
5. Examine the immobilized enzyme kinetics and its significance.
6. Outline the commercial production of bioproducts.

UNIT-I ANALYSIS OF STR

Analysis of STR: Stirred tank reactor - non-ideality, RTD and stability analysis, tanks in series and dispersion models – application to design of continuous STR.

UNIT-II ANALYSIS OF OTHER CONFIGURATIONS

Analysis of other configurations: Packed bed reactor, airlift reactor, fluidized bed reactor bubble column reactors – non- ideality, RTD and stabilityanalysis.

UNIT-III BIOREACTOR SCALE – UP

Bioreactor scale-up: Regime analysis of bioreactor processes, oxygen mass transfer in bioreactors - microbial oxygen demands; methods for the determination of mass transfer coefficients; mass transfer correlations. Scale up criteria for bioreactors based on oxygen transfer, power consumption and impeller tip speed.

UNIT-IV MODELLING AND SIMULATION OF BIOPROCESSES

Modelling and simulation of bioprocesses: Study of structured models for analysis of various bioprocess – compartmental models, models of cellular energetics and metabolism, single cell models, plasmid replication and plasmid stability model. Dynamic simulation of batch, fed batch, steady and transient culture metabolism.

UNIT-V BIOREACTOR CONSIDERATION IN ENZYME SYSTEMS

Bioreactor consideration in enzyme systems: Analysis of film and pore diffusion effects on kinetics of immobilized enzyme reactions; formulation of dimensionless groups and calculation of effectiveness factors. Design of immobilized enzyme reactors – packed bed, fluidized bed and membrane reactors.

SUGGESTED READINGS:

1. Bailey J.E. and Ollis D.F. (2015). Biochemical Engineering Fundamentals. 2nd Edition. TataMcGraw-Hill.
2. Shuler and Kargi. (2017). Bioprocess Engineering Basic concepts. 2nd Edition. Pearson.
3. Pauline M. Doran. (2015). Bioprocess Engineering principles. 2nd Edition. Elsevier.
4. Blanch H.W. and Clark D.S. (2012). Biochemical Engineering. 2nd Edition. Marcel Dekker.
5. Stanbury P.F., Hall. S.J. and Whitaker. A. (2017). Principles of Fermentation technology. 3rd Edition. Elsevier.

Course Objectives

- To understand the knowledge on enzyme mechanism of action.
- To explain the production & purification of enzymes.
- To explain about the kinetics of single substrate enzyme action
- To understand the kinetics of multi substrate enzyme action
- To illustrate on immobilization and applications.
- To understand the features of enzyme biosensors and its application.

Course Outcomes

1. Discuss the overview of enzyme mechanism of action.
2. Outline the knowledge on extraction, purification and characterization of enzymes.
3. Understand the kinetics of multisubstrate enzyme action.
4. Interpret the various enzyme immobilization techniques and its application in bioreactor.
5. Summarize the basics of enzyme engineering.
6. Explain the features of enzyme biosensors and its application.

UNIT-I INTRODUCTION TO ENZYMES

Chemical nature, apoenzyme, coenzyme, cofactor, prosthetic group. Nomenclature – IUB system of classification - Six main classes with examples. Mechanisms of enzyme-action; Specificity, type of enzyme specificity, Active site, Models of enzyme action – Lock and key, induced fit, transition state theory. metal ion catalysis, proximity & orientation. metal-activated enzyme and metalloenzyme.

UNIT- II EXTRACTION, PURIFICATION AND CHARACTERIZATION OF ENZYMES

Production and purification of crude enzyme extracts from plant, animal and microbial sources; methods of characterization of enzymes; development of enzymatic assays.

UNIT-III KINETICS OF MULTISUBSTRATE-ENZYME ACTION

Kinetics of Single substrate reaction – estimation of Michaelis- Menten parameters and Multisubstrate reactions mechanisms; Turnover number; types of inhibition Allosteric regulation of enzymes, Monod - Changeux - Wyman model, pH and temperature effect on enzymes & deactivation kinetics

UNIT- IV ENZYME IMMOBILIZATION

Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, applications, advantages and disadvantages. applications. Immobilised enzyme bioreactors.

UNIT- V ENZYME ENGINEERING AND BIOSENSORS

Chemical and genetic methods, Property alteration, Prediction of enzyme structure, design and construction of novel enzymes; Enzyme Biosensor – Classification, Design, Application - industry, healthcare, food and environment.

SUGGESTED READINGS:

1. Palmer. T. (2007). Enzymes. Affiliated East West Press PvtLtd.
2. Wiseman. (1995). Enzyme Biotechnology. Ellis Horwood Publishers.
3. Chaplin and Bucke. (1990). Enzyme technology. Cambridge UniversityPress.
4. Price and Stevens. (2002). Fundamentals of Enzymology. Oxford UniversityPress.
5. Blanch. H.W. and Clark. D.S. (1996). Biochemical engineering. Marcel DekkerInc.
6. Bailey J.E. and Ollis D.F. (1986). Biochemical Engineering Fundamentals. McGrawHill.
7. Pye E.K. and Wingard L.B. (1974). Enzyme Engineering II. PlenumPress.

Course Objectives

- To discuss the handling techniques of animals and immunization.
- To understand the isolation and identification of cells and blood group.
- To explain the methods for the detection of antigen-antibody.
- To outline the techniques for antigen identification.
- To understand the techniques of T-cell rosetting.
- To understand the techniques of Western blotting.

Course Outcomes:

1. Infer the basic handling techniques for animal studies.
2. Outline the basics of isolation and identification of cells and blood group.
3. Illustrate the Immuno electrophoresis and Immuno diffusion for determination of antibody.
4. Understand the knowledge about ELISA and western blotting for identification of various diseases.
5. Explain the identification of typhoid antigens by Widal test.
6. Discuss principles of T-cell rosetting.

LIST OF EXPERIMENTS

1. Handling of animals, immunization and raising antisera
2. Identification of cells in a blood smear
3. Identification of blood group
4. Immunodiffusion
5. Immunoelectrophoresis
6. Testing for typhoid antigens by Widal test
7. Enzyme Linked Immuno Sorbent Assay (ELISA)
8. Isolation of peripheral blood mononuclear cells
9. Identification of T cells by T-cell rosetting using sheep RBC.
10. Western blotting

Course Objectives

- To understand the concept of thermal death kinetics.
- To understand the concept of batch sterilization.
- To predict the design for media components using Plackett Burman and RSM.
- To perform the batch cultivation and practice k_{La} estimation methods.
- To understand the procedure to calculate the residence time distribution.
- To demonstrate enzyme kinetics and enzyme immobilization techniques.

Course Outcomes

1. Evaluate the thermal death kinetics.
2. Perform the batch sterilization batch cultivation.
3. Identify and perform media optimization using Plackett Burman and RSM.
4. Demonstrate the different k_{La} estimation methods.
5. Perform the experiment on residence time distribution.
6. Interpret enzyme kinetics and enzyme immobilization techniques.

LIST OF EXPERIMENTS

1. Thermal death kinetics
2. Batch sterilization design
3. Media designing using Plackett Burman and RSM
4. Batch cultivation
5. Estimation of k_{La} – dynamic gassing method
6. Estimation of k_{La} – sulphite oxidation method
7. Estimation of k_{La} – power correlation method
8. Residence time distribution
9. Enzyme kinetics – Michaelis Menten parameters.
10. Enzyme immobilization.

SUGGESTED READINGS:

1. Lydersen. B.K. (2010). Bioprocess Engineering: Systems, Equipment and Facilities. Wiley India Pvt Ltd.
2. Shukla. A.N. (2013). Laboratory Bioprocess Technology. Discovery Publishing House.

Course Objectives:

- To equip the students for effective technical presentation
- To improve body language and posture for effective public speaking.

Course Outcomes:

1. To get familiarize in the teaching presentation skills.
2. To gain confidence in the teaching process.

During the seminar session, each student is expected to prepare and present a topic on biotechnology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present seminars. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in presentation skills and facing the interviews.

18BTBT701**Professional Ethics, Principles of Management and
Entrepreneurship development****3H-3C****Instruction Hours/week: L:3T:1P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives:**

- To create an awareness on Engineering Ethics
- To incorporate Moral and Social Values and Loyalty
- To appreciate the rights of other
- To motivate the leadership skills
- To train to become an entrepreneur
- To learn the management skills

Course Outcomes:

1. Explain the engineering ethics
2. Outline the Moral and Social Values and Loyalty
3. Justify the rights of other
4. Illustrate the values of leadership skills
5. Assess the skills of entrepreneur
6. Discuss the management skills

UNIT I ENGINEERING ETHICS

Senses of 'Engineering Ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies,

Policies and Planning Premises– Forecasting – Decision-making – Formal and informal organization – OrganizationChart

UNITIV DIRECTING ANDCONTROLLING

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control –Reporting

UNITV ENTREPRENEURSHIP ANDMOTIVATION

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need,Objectives.

SUGGESTED READINGS

1. Harold Kooritz and Heinz Weihrich. (2010). Essentials of Management. Tata McGraw Hill, NewDelhi.
2. Khanka S.S. (2006). Entrepreneurial Development. S.Chand and Co. Ltd., NewDelhi.
3. Mike Martin and Roland Schinzinger. (2005). Ethics in Engineering. McGraw–Hill,NewYork.

Course Objectives:

- To understand the importance of downstream processing and various cell disruption techniques.
- To discuss the various cell disruption techniques for product release.
- To explain the physical methods of separation.
- To understand the methods for the isolation of products.
- To understand the methods for the purification of the bioproducts.
- To explain the various methods for final product formulation and finishing operations.

Course Outcomes:

1. Outline the principles involved in downstream processing and characteristics of biomolecules.
2. Discuss the various cell disruption techniques for product release.
3. Illustrate the different physical methods of separation of bioproducts.
4. Relate and apply the methods available for the isolation of products.
5. Discuss the techniques used for the product purification.
6. Outline the principles for the final product formulation and finishing operations.

UNIT-I DOWNSTREAMPROCESSING

Introduction to downstream processing principles characteristics of biomolecules and bioprocesses. Cell disruption for product release—mechanical, enzymatic and chemical methods. Pretreatment and stabilization of bio-products.

UNIT-II PHYSICAL METHODS OFSEPARATION

Unit operations for solid-liquid separation-filtration and centrifugation, flocculation and sedimentation

UNIT-III ISOLATION OFPRODUCTS

Adsorption, liquid-liquid extraction, aqueous two-phase extraction, membrane separation, ultrafiltration and reverse osmosis, dialysis, precipitation of proteins by different methods.

UNIT-IV PRODUCT PURIFICATION

Chromatography—principles, instruments and practice, adsorption, reverse phase, ion-exchange, size exclusion, hydrophobic interaction, bio-affinity and pseudoaffinity chromatographic techniques.

UNIT-V FINAL PRODUCT FORMULATION AND FINISHING OPERATIONS

Crystallization: principles, batch crystallizers, process crystallization of proteins; Drying: Principles, heat and mass transfers, dryers description, batch and continuous dryers, freeze and spray dry ersin final product formulation.

SUGGESTED READINGS:

1. Belter P.A., Cussler E.L. and Wei-Houhu. (1988). Bioseparations - Downstream Processing For Biotechnology. Wiley Interscience Pub.
2. Jenkins R.O. (1992). Product Recovery In Bioprocess Technology - Biotechnology By Open Learning Series, Butterworth-Heineman.
3. Janson J.C. and Ryden L. (1989). Protein Purification - Principles, High Resolution Methods and Applications. VCH PubPress.
4. Roger G. Harrison, Paul Todd, Scott R. Rudge and Demetr P. Petrides. (2003). Bioseparation Science and Engineering, Oxford University Press.

Course Objectives

- To understand the concept of purification by different precipitation process.
- To demonstrate the various methods of extraction process.
- To perform the final product finishing operations.
- To perform the process of centrifugation for cell fractionation
- To practice the fractionation of cells and dialysis process.
- To design and select the appropriate techniques for the purification of a bioproduct.

Course Outcomes

1. Perform the various methods of precipitation for the protein purification.
2. Practice and evaluate the extraction of various products from the given sample.
3. Demonstrate the finishing operations such as crystallization and drying.
4. Execute the process of centrifugation for cell fractionation.
5. Inspect the purification of given sample through dialysis.
6. Design and develop appropriate techniques for the purification of given enzyme.

LIST OF EXPERIMENTS

1. Protein Purification by isoelectric point precipitation.
2. Ammonium Sulphate precipitation.
3. Liquid–Liquid extraction.
4. Solid–Liquid extraction.
5. Crystallization.
6. Cell fractionation using centrifuge.
7. Drying of solid by heat source.
8. Dialysis
9. Purification of α -Amylase from *Bacillus*

SUGGESTED READINGS:

1. Michael S. Verrall. (1996). Downstream Processing of Natural Products: A Practical Handbook, Wiley.

The students will be directed to do a project work which will be the Phase I if their main project work that will be performed in the eighth semester during. Their projects will be evaluated for forty percentages in Continuous Internal Assessment and sixty percentages in End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student after the completion of the project work.

The students will be performing their main project work as a continuation of the Phase I project completed in the seventh semester. Their projects will be evaluated for a total of three hundred marks, out of which one twenty marks will be for Continuous Internal Assessment and one hundred and eighty marks for End Semester Examination.

End Semester Examination evaluation will be based on the report submitted and presentation of his/her work by the student to a panel of evaluators after the completion of the projectwork.

PROFESSIONAL ELECTIVES

SEMESTER V

B.Tech Biotechnology

2018-2019

18BTBT5E01

ENVIRONMENTAL BIOTECHNOLOGY

Semester- V

3H-3C

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

- To explain basic knowledge on soil microbes and its characteristics.
- To demonstrate the effects of xenobiotic compounds.
- To discuss various methods for industrial waste water management.
- To explain the effects of various industrial wastes and to infer basic concepts for its management.
- To outline the natural and engineered bio-treatment methods to remediate the pollutants.
- To discuss the different environmental issues using biotechnology.

Course Outcomes

1. Summarize the characteristics of soil microbes and its interactions.
2. Evaluate the different xenobiotics present and methods to degrade them.
3. Describe the industrial waste management systems.
4. List the opportunities in waste treatment industries and its management.
5. Recognize natural and engineered biotreatment methods to remediate pollutants.
6. Identify and list different environmental issues and its remedy.

UNIT I –INTRODUCTION

Microbial flora of soil, growth and ecological adaptations of soil microorganisms, interactions among soil microorganisms, biogeochemical role of soil microorganisms.

UNIT II –DEGRADATION OF XENOBIOTIC COMPOUNDS

Aromatics - benzene, pentachlorophenol, Polyaromatic hydrocarbons (PAHs) naphthalene, Polychlorinated biphenyls (PCBs) hexachloro biphenyl, Pesticides - DDT and Surfactants–LAS

UNIT III –INDUSTRIAL WASTE WATER MANAGEMENT

Wastewater characteristics – physical, chemical and biological, Biological processes - unit operations, aerobic treatment processes, activated sludge process–characteristics of activated sludge and process configuration, anaerobic treatment by methanogenesis

UNIT IV –TREATMENT OF INDUSTRIAL WASTE

Dairy, Paper & Pulp, Textile, leather, hospital and pharmaceutical industrial waste management, e-waste-radioactive and nuclear power waste management.

UNIT V –DEVELOPMENTS PERTAINING TO ENVIRONMENTAL BIOTECHNOLOGY

Solid waste management, Role of biosensors in Environmental monitoring, Heavy metal pollution and their control strategies, Prevention of environmental damage with respect to nitrogen fixation, Bioremediation, Production of bioelectricity from microbial fuel cell (MFC), Improvement of water quality by denitrification, Role of biotechnology on agricultural chemical use

SUGGESTED READINGS:

1. Rittmann. B. E. and Mccarty. L. P. (2001). Environmental Biotechnology: Principle and Applications. McGrawHill.
2. Mecalfe and Eddy. (1991). Waste water engineering: Treatment Disposal Reuse. McGrawHill.
3. Connell.D.W. (2005). Basic concepts of Environmental chemistry. Lewis publishers.
4. Scragg. A. H. (2005). Environmental Biotechnology. Oxford University press.
5. Prescott. M., Harley. J. P. and Klein. D. A. (2008). Microbiology. Boston. McGraw-Hill Higher Education.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To illustrate the origin of developmental biology.
- To explain the basic ideas on specifications of germ layers.
- To list the various functions of vertebrates development by its differentiation.
- To discuss the basic theory of morphogenesis and organogenesis.
- To understand embryogenesis and its functions.
- To discuss the different stages of developmental biology.

Course Outcomes

1. Summarize about the cell commitment and differentiation in developmental biology.
2. Determine the postulation of germ cells and patterning of vertebrate body plan.
3. Express the functions of cell differentiation in vertebrate development.
4. Explain the conceptuation behind morphogenesis and organogenesis.
5. Describe the various functions and stages in embryogenesis.
6. Summarize and predict the different stages of developmental biology.

UNIT I –INTRODUCTION

Origins of developmental biology; Concepts in development – Developmental signals in cell division differentiation; Role of gene expression in development; Identifying developmental genes, Cell commitment & differentiation; Determination & induction of cell fate, Concept of morphogen & positional information; Model vertebrate organisms: Mouse, Zebrafish, Model invertebrate organisms: *D. melanogaster*, *C. elegans*, Model plant: *A. thaliana*.

UNIT II– GERM CELLS AND PATTERNING THE VERTEBRATE BODY PLAN

Genotypic & phenotypic sex-determination in mammals, *D. melanogaster* and *C. elegans*, Structure & Formation of germ cells, Fertilization; axes & germ layers; Setting up the body axes; the origin & specification of the germ layers.

UNIT III– DEVELOPMENT OF VERTEBRATES

Development of the *Drosophila*, Nematodes & Cellular Slime Molds: Body Plan; Specification of body axes & role of maternal genes; Polarization of body axes during oogenesis; Patterning, Segmentation & role of pair-rule genes; cell differentiation and aggregation.

UNIT IV– MORPHOGENESIS AND ORGANOGENESIS

Morphogenesis; Kinds of cleavage & blastulation; Types of tissue movement in gastrulation; Gastrulation in amphibians & mammals; Neural tube formation & neural crest migration; Cell Differentiation & Organogenesis; Models of cell differentiation; Insect imaginal disc & wing development; metamorphosis.

UNIT V– EMBRYOGENESIS

Plant development; Pattern development in early embryogenesis of angiosperms; floral development.

SUGGESTED READINGS:

1. Gilbert. S. F. (2013). Developmental Biology. Sinauer Associates.
2. Arumugam. A. (1995). Developmental Biology. Saras Publications.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain the various properties and concepts in stereochemistry.
- To classify the steady state kinetics.
- To understand the basic notion on stereochemistry on enzyme reaction.
- To differentiate and organize the distinct enzyme structure and mechanism.
- To explain the basic theory of protein folding.
- To understand the problems related to reactions involving enzymes.

Course Outcomes

1. Compare and contrast different properties of organic chemistry.
2. Synthesize the different kinetics involved.
3. Prioritize diverse properties of stereochemistry on enzyme reaction.
4. Construct and design the enzyme structure and mechanism.
5. Apply the knowledge on protein folding.
6. Examine and solve the problems related to reactions involving enzymes.

UNIT-I CONCEPTS IN ORGANIC CHEMISTRY

Stereochemistry: optical activity, chiral center – enantiomers - *R*, *S* notation, stereo selective and stereospecific reactions- *Z* and *E* isomers, *Re*, *Si* faces, conformational analysis, ethane, n-butane mechanisms of SN_1 SN_2 reactions, E_1E_2 reactions, ester formation and hydrolysis, reaction rates, hammond's postulate, h/d effects, catalysis: general acid – base and covalent catalysis.

UNIT-II ENZYME KINETICS AND INHIBITION

Steady state kinetics, derivation and significance of Michaelis Menten equation, Line weaver-Burke Plot, single and double displacement reactions, co-operativity - oxygen binding by haemoglobin. Inhibition – reversible and irreversible – competitive, non-competitive, uncompetitive inhibition (characteristics and examples).

UNIT-III STEREOCHEMISTRY OF ENZYMATIC REACTIONS

Stereospecific enzymatic reactions - fumarase catalysed reactions - NAD dependent oxidation and reduction reactions - stereochemistry of nucleophilic reactions - chiral methyl group, chiral phosphate.

UNIT-IV ENZYME STRUCTURE AND MECHANISM

Dehydrogenases (alcohol dehydrogenase) - proteases (serine protease), lysozyme, Ribonucleases, Ribozymes.

UNIT-V PROTEIN FOLDING KINETICS AND FOLDING PATHWAYS

Kinetics of protein folding: basic methods, two state kinetics, multistate kinetics, transition states in protein folding, $^1\text{H}/^2\text{H}$ exchange methods, folding of peptides, CI2 folding, molecular chaperones.

SUGGESTED READINGS:

1. Fersht A. R. (1999). Structure and Mechanism in Protein Science: A Guide to Enzyme Catalysis and Protein Folding. W H Freeman.
2. Morrison R. T. and Boyd R. N. (1999). Organic Chemistry. Prentice hall of India Pvt.Ltd.
3. Eliel. E. L. and Samuel H. W. (1994). Stereochemistry of Organic compounds. Wiley.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain the variations of renewable and nonrenewable energy and its usage.
- To classify the different sources for the production of biomass and bioenergy.
- To record the basic notion on assorted properties of fuels.
- To design the bioenergy production through agricultural wastes.
- To differentiate and organize the distinct agricultural wastes used for bioenergy production.
- To understand the basic theory of bioprocess principles.

Course Outcomes

1. Compare and contrast energy use as renewable and non-renewable energy.
2. Synthesize the biomass for renewable energy production.
3. Prioritize diverse properties of fuels.
4. Construct and design the bioenergy production through agricultural wastes.
5. Apply the knowledge on downstream processing for bioenergy production.
6. Examine and solve the problems related to bioenergy production.

UNIT I– OVERVIEW OF ENERGY USE

Fossil fuels - past, present & future, Remedies & alternatives for fossil fuels, Today's energy use, Fossil fuels and environmental impact, Renewable energy source and devices, Solar Energy, wind energy and hydro energy.

UNIT II– BIOMASS AND BIO-ENERGY

Biomass potential - terrestrial, aquatic and marine - collection- storage and utilization, Dedicated bioenergy crops, Woody biomass, Liquid biofuels, Synthetic fuels from the biomass, biomass to biofuel conversion, Alcohol production - cellulose degradation.

UNIT III– PROPERTIES OF FUELS

Fuel properties - alcohol, biogas, producer gas, vegetable oil. Combustion - air requirement – Octane and Cetane numbers. Analysis of products of combustion. Fuel blending - fuel efficiency in dual fuel operation, Biogas and producer gas engines.

UNIT IV– AGRICULTURAL BIOMASS

Bioenergy from wastes, agricultural wastes and byproducts - sources and availability, utilisation pattern - as fuel, Biochemical conversion of organic wastes, anaerobic digesters, methane production - sludge treatment - suitability of wastes as fuel.

UNIT V– DOWNSTREAM PROCESSING

Introduction to downstream processing principles, characteristics of biomolecules and bioprocesses. Cell disruption for product release – mechanical, enzymatic and chemical methods, filtration, centrifugation, chromatography, esterification, pyrolysis.

SUGGESTED READINGS:

2. Chahal. D. S. (1992). Food, Feed and Fuel from Biomass. South Asia Books.
3. Chakraverty. A. (1993). Biotechnology and other alternate technologies for utilisation of biomass. Oxford & IBH Publishing Co.
4. Klass. D. L. and George. E. H. (1982). Fuels from Biomass and wastes. Technomic Publishing Company.
5. Chavla. O. P. (1986). Advances in Biogas Technology. ICAR Pub.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3 Hours****Course Objectives**

- To define the basic view of infectious diseases in host microbe interactions.
- To illustrate the diverse host defense mechanism and pathogenic strategies.
- To propose an opinion on molecular pathogenesis.
- To explain the characterization techniques for host pathogen interactions.
- To understand the basic concept on modern approaches to control pathogens.
- To explain the diverse pathogens and its controlling measures.

Course Outcomes

1. Identify different views on host microbe interactions.
2. Differentiate various host defense mechanisms.
3. Illustrate the concept behind molecular pathogenesis.
4. Evaluating and characterizing host pathogen interactions.
5. Analyze and categorize the best approach to control pathogens.
6. Explain the diverse pathogens and its controlling measures.

UNIT I-HOST-MICROBE INTERACTIONS

Normal Flora-Protective role-dynamic nature, Principles of Infectious diseases-pathogenicity-pathogen types and modes of entry, causes of infectious disease- Koch's postulates molecular postulates-mechanisms of pathogenesis. Epidemiology - principles.

UNIT II- HOST-DEFENSE AGAINST PATHOGENS AND PATHOGENIC STRATEGIES

Defense: skin, mucosa, cilia, secretions, physical movements, limitation of free iron, antimicrobial compounds, mechanism of killing by humoral and cellular defense mechanisms, complements, inflammation process, general disease symptoms.

UNIT III- MOLECULAR PATHOGENESIS

Virulence factors - gene regulation in virulence of pathogens - labile & stable toxins; Vibrio Cholerae - Cholera toxin -E.coli pathogens: - ETEC – EPEC - EHEC - EIEC Hemolytic Uremic Syndrome - Shigella toxin - Plasmodium Life cycle- Antimalarials based on transport processes - Influenza virus - action of amantidine, Molecular pathogenesis of Mycobacterium tuberculosis.

UNIT IV– EXPERIMENTAL STUDIES ON HOST-PATHOGEN INTERACTIONS

Virulence assays: adherence, invasion, cytopathic, cytotoxic effects. Criteria & tests in identifying virulence factors, attenuated mutants, molecular characterization of virulence factors, signal transduction & host responses.

UNIT V– MODERN APPROACHES TO CONTROL PATHOGENS

Classical approaches based on serotyping. Modern diagnosis based on highly conserved virulence factors, immuno & DNA-based techniques. New therapeutic strategies based on recent findings on molecular pathogenesis of a variety of pathogens, Vaccines - DNA, subunit and cocktail vaccines

SUGGESTED READINGS:

5. Anderson. D. G., Salm. S. and Allen. D. (2018). Microbiology: A Human Perspective, 9th Edition. McGraw Hill.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3Hours****Course Objectives**

- To understand the basic knowledge on cell structure and function.
- To explain the different parts and functions of cardiac and nervous system.
- To explain the various functions of respiratory and musculo skeletal systems.
- To discuss about the organization of GI systems.
- To describe the anatomy and physiology of eye, ear and endocrine system.
- To discuss the problems in human system and can give solutions for its extension.

Course Outcomes

1. Summarize the basics of cell structure and function.
2. Locate different parts and functions of cardiac and nervous system.
3. Explain the various functions of respiratory and musculo skeletal system problems.
4. Predict the different solutions for various problems in GI systems.
5. Relate the various issues of eye, ear and endocrine system.
6. Measure and judge the problems in human system and can give solutions for its extension.

UNIT-I CELL

Structure of Cell – Organelles and description – Function of each component of the cell – Membrane potential – Action Potential – Generation and Conduction – Electrical Stimulation. Blood Cell – Composition – Origin of RBC – Blood Groups – Estimation of RBC, WBC and Platelet.

UNIT-II CARDIAC AND NERVOUS SYSTEM

Heart, Major blood vessels – Cardiac Cycle – ECG – Blood Pressure – Feedback Control for Blood Pressure – Nervous Control of Heart - Cardiac output – Coronary and Peripheral Circulation – Structure and function of Nervous tissue – Neuron - Synapse - Reflexes -Receptors -Brain - Brainstem -Spinal cord – Reflex action – Velocity of Conduction of Nerve Impulses - Electro Encephalograph – Autonomic Nervous System.

UNIT-III RESPIRATORY SYSTEM AND MUSCULO SKELETAL SYSTEM

Physiological aspects of respiration – Trachea and lungs - Exchange of gases – Regulation of Respiration - Disturbance of respiration function - Pulmonary function test - Muscles - tissue - types - structure of skeletal muscle - types of muscle and joints.

UNIT-IV DIGESTIVE AND EXCRETORY SYSTEM

Organisation of GI System, Digestion and absorption – Movements of GI tract – Intestine - Liver - Pancreas - Structure of Nephron – Mechanism of Urine formation – Urine Reflex – Skin and Sweat Gland – Temperature regulation.

UNIT-V EYE, EAR, ENDOCRINE GLANDS

Optics of Eye – Retina – Photochemistry of Vision – Accommodation - Neurophysiology of vision – EOG. Physiology of internal ear – Mechanism of Hearing – Auditory Pathway, Hearing Tests - Endocrine glands.

SUGGESTED READINGS:

SEMESTER VI

B.Tech Biotechnology

2018-2019

Semester-VI
3H-3C

18BTBT6E01 RECOMBINANT ENZYME AND THERAPEUTIC AGENTS PRODUCTION

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours

COURSE OBJECTIVES:

- To explain the concepts involved in biopharmaceutical industries.
- To illustrate the functions of DNA, RNA and protein synthesis in enzyme production.
- To organize the need for enzyme production and types of enzymes.
- To outline the importance of recombinant enzymes or proteins in therapeutics.
- To explain how monoclonal antibodies plays a major role in research.
- To discuss the production and purification of enzymes and metabolites at an industrial scale.

COURSE OUTCOMES:

1. List basics about pharma industrial processes.
2. Examine about DNA, RNA and protein synthesis.
3. Explain the clone methods of commercially important genes.
4. Discuss the commercially important recombinant proteins.
5. Conceptualize on enzyme and enzyme reactions will be the key step in to proceed towards various concepts in biotechnology.
6. Express views on Processing, Production and Purification of enzymes and metabolites at an industrial scale will be helpful to work technologically.

UNIT I INTRODUCTION TO BIOPHARMACEUTICAL INDUSTRIES

Major top ten Biotech industries in India and their products.State-of the art facilities available in these industries.Guidelines and basic principles of current good manufacturing practices.

UNIT II PRODUCTION SYSTEMS

Microbial systems, cell line culture systems, plant, animal systems – parameters, regulations

UNIT III PRODUCTION OF ENZYMES AND METABOLITES

Production of Proteases, Cellulas, Lipase, Amylase, Glucose isomerase, Pectinase, Peroxidase

Production of primary metabolites– organic acids (Citric acid, Lactic acid), aminoacids (Glutamic

acid, Lysine), alcohols (ethanol, butanol). Production of secondary metabolites – amino acids (Glutamic acid, Lysine), antibiotics (Penicillin, streptomycin), Vitamins (Vitamin B₁₂, Riboflavin).

UNIT IV RECOMBINANT PROTEIN THERAPEUTICS

Function and their applications: Insulin, Interferon alpha, Interferon gamma, Interleukin-2, Gm-CSF, G-CSF, Hepatitis B vaccine, Erythropoietin, Strptokinase, EGF, Chymotrypsin, Modification of proteins to increase their life. Monoclonal antibodies as therapeutics: antibodies, hybridoma technology, FDA approved therapeutic antibodies, humanization. Methods for production of vaccines.

UNIT V APPLICATION OF ENZYMES

Enzymes in organic synthesis – Enzymes as biosensors – Enzymes for food, pharmaceutical, tannery, textile, paper and pulp industries – Enzyme for environmental applications- Enzymes for analytical and diagnostic applications – Enzymes for molecular biology research.

SUGGESTED READINGS:

1. Brown. T. A. (2010). Gene cloning and DNA analysis: An introduction. 6th Edition. Wiley Blackwell.
2. Winnacker. E. L. (2006). From Genes to Clones: Introduction to Gene Technology. Wiley Blackwell.
3. Copeland. R. A. (2012). Enzymes- A Practical Introduction to Structure, Mechanism and data analyses. 2nd Edition. Wiley–VCH.
4. Palmer. T. and Bonner. P. (2007). Enzymes Biochemistry, Biotechnology, Clinical chemistry- 2nd edition. WoodHead Publishing.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To understand the variations of stoichiometry and kinetics of biochemical operations.
- To classify the different activities of microbes in waste water treatment.
- To record the basic notion on design and evaluation of growth process.
- To differentiate and organize the distinct methods for modeling reactors..
- To explain the basic applications of bioreactors.
- To discuss the problems related to biochemical operations in different industries.

Course Outcomes

1. Compare and contrast fundamentals and properties of biochemical operations.
2. Demonstrate various waste water treatment activities through biological methods.
3. Prioritize design and evaluation of growth process in bioreactors.
4. Construct and design the methods for modeling bioreactors.
5. Apply the knowledge on applications of modeling bioreactors.
6. Examine and solve the problems related to biochemical operations in different industries.

UNIT I BIOCHEMICAL OPERATIONS

Classification of Biochemical operations, fundamentals of biochemical operations, Stoichiometry and Kinetics of Biochemical Operations.

UNIT II REACTORS IN WASTE WATER TREATMENT

Theory, modeling of ideal suspended Growth Reactors, Modeling Suspended Growth Systems. Aerobic Growth of Heterotrophs in a single Continuous Stirred Tank, Reactor Receiving Soluble Substrate, Multiple Microbial Activities in a Single Continuous Stirred Tank Reactor, Multiple Microbial Activities in Complex Systems, Techniques for Evaluating Kinetics and Stoichiometric parameters.

UNIT III PROCESSES IN WASTE WATER TREATMENT

Applications: Suspended Growth Reactors, Design and Evaluation of Suspended Growth Processes, Activated Sludge, Biological Nutrient Removal, Aerobic – digestion, Anaerobic Processes, Lagoons.

UNIT IV MODELING OF REACTORS

Theory: Modeling of Ideal Attached Growth Reactors, Bio- film Modeling. Aerobic Growth of Biomass in Packed Towers, Aerobic Growth of Heterotrophs in Rotating Disc Reactors, Fluidized Bed Biological Reactors.

UNIT V APPLICATIONS OF BIOREACTORS

Attached Growth Reactors, Trickling Filter, Rotating Biological Contactor, Submerged Attached Growth Bioreactors, Future Challenges, Fate and Effects of Xenobiotic Organic Chemicals.

SUGGESTED READINGS:

1. Henze. M. (2008). Biological Wastewater Treatment: Principles, Modelling and Design. IWA Publishing
2. Graty. C. P. L., Daigger. G. T. and Lim H. C. (2011). Biological Wastewater Treatment. CRC Press.
3. Mizahi. A. (1989). Biological Waste Treatment. John Wiley SonsInc

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3 Hours****Course Objectives**

- To explain the variations of requirements and directives of GMP.
- To classify the key personnel for GMP.
- To record the basic notion on production area.
- To differentiate and organize the distinct documentation types and its manufacturing.
- To discuss the basic theory of Quality Control and various testing methods.
- To analyse the problems related to manufacturing flaws.

Course Outcomes

1. Compare and contrast requirements for GMP.
2. Summarize the upgraded personnel for maintain GMP.
3. Prioritize diverse properties production area and equipment.
4. Construct and design the correct documentation.
5. Apply the knowledge on quality control department.
6. Examine and solve the problems related to manufacturing flaws.

UNIT I FOOD AND ENERGY

Constituents of Food- Water : importance, water in food, activity and shelf life of food; Carbohydrates: functional properties of sugars and polysaccharides in food; Lipids: uses, physical and chemical properties; Proteins and amino acids: physical and chemical properties, distribution, functions and functional properties; Vitamins and Minerals: Dietary sources; Nutritive value of foods, food as a source of energy, food health and disease.

UNIT II FOOD MICROBIOLOGY

Types of micro-organism normally associated with food -mold, yeast, and bacteria. Micro-organisms in natural food products. Biochemical changes caused by micro-organisms. Food poisoning and microbial toxin. Spoilage of vegetables, fruit, meat, poultry, beverages and other food products. Food safety.

UNIT III FERMENTATION PRODUCTS

Enzymes in foods and food industry, Nature and type of starters, Role of starters in Fermented foods, Fermentation of Milk products-Fermented soy and peanut milk , Idli, Fermented fish products, Pickles, Fermented Olives ; Production of distilled beverage alcohol ,wine, brandy, and beer. Mycoprotein production.

UNIT IV FOOD ADDITIVES

Chemical and physical methods of food analysis for determination of food composition; Pigments in food, food flavours, food additives and toxicants. Natural sweeteners and artificial sweeteners - role in controlling diseases.

UNIT V FOOD PROCESSING & PRESERVATION

Basic principles, unit operations Involved in the food processing methods; Objectives, importance and functions of quality control. Principles involved in the use of sterilization, pasteurization and blanching, thermal death curves of micro organisms, canning, frozen storage characteristics of foods, microbial activity at low temperatures, factors affecting quality of foods in frozen storage; irradiation preservation of foods.

SUGGESTED READINGS:

2. Frazier. W. C. (2017). Food Microbiology. Tata MC Graw hill.
3. Belitz. H. D., Grosch. W. and Schieberle. P. (2009). Food Chemistry. Springer Science & Business Medi
4. Sivashankar. B. (2002). Food processing and preservation. Prentice – Hall of India Pvt.Ltd. NewDelhi.

18BTBT6E04	GOOD MANUFACTURING PRACTICE	Semester-VI 3H-3C
------------	-----------------------------	----------------------

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3Hours

Course Objectives

- To explain the variations of requirements and directives of GMP.
- To classify the key personnel for GMP.
- To record the basic notion on production area.
- To differentiate and organize the distinct documentation types and its manufacturing.
- To discuss the basic theory of Quality Control and various testing methods.
- To analyse the problems related to manufacturing flaws.

Course Outcomes

1. Compare and contrast requirements for GMP.
2. Summarize the upgraded personnel for maintain GMP.
3. Prioritize diverse properties production area and equipment.
4. Construct and design the correct documentation.
5. Apply the knowledge on quality control department.
6. Examine and solve the problems related to manufacturing flaws.

UNIT I– INTRODUCTION

Basic requirements of good manufacturing products, importance of GMP, directives of GMP, principle and overview of the pharmaceutical quality system, principles and approaches in medical devices, principle and approaches in human cell tissue products, principle and approaches in biological products.

UNIT II– PERSONNEL

Key personnel, background and duties of the qualified person, duties of the head of the production department, duties of the head of quality department, person releasing the batch, consultants, personnel training and hygiene.

UNIT III– PREMISES AND EQUIPMENT

Premises, production area, storage area, quality control areas, ancillary areas, equipment.

UNIT IV– DOCUMENTATION

Generation and control of documents, types of documents and specifications, manufacturing formula and processing instruction, packaging instructions, procedures and records.

UNIT V– PRODUCTION AND QUALITY CONTROL

General principles, prevention of cross contamination in production, guidelines for starting materials, processing operations, packaging materials and operations, guidelines for finished products, Quality control – principles, main tasks of QC department, technical transfer of testing methods, transfer protocol.

SUGGESTED READINGS:

1. Oechslein. C., Maas and Peither. (2015). GMP Fundamentals – A Step-by-Step Guide for Good Manufacturing Practice. 1st edition. AG GMP Publishing.
2. Bunn. G. P. (2018). Good Manufacturing Practices for Pharmaceuticals. Seventh Edition. CRC Press.
3. Tobin. E. (2015). A Guide to Good Manufacturing Practices (GMP). 1st edition. Validation resources.org.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain basic knowledge on nanotechnology.
- To demonstrate the structural and functional principles of bionanotechnology.
- To discuss various methods for microfluidic components.
- To explain the effects of various protein and DNA based nanostructures.
- To outline the basic concepts of nanoparticles in cancer therapy.
- To identify the different nanoparticles using different controlling measures.

Course Outcomes

1. Summarize the characteristics different nanoparticles.
2. Evaluate the different structural and functional principles of biotechnology.
3. Explain the microfluidic devices.
4. Discuss the protein and DNA based nanostructures.
5. Recognize cancer curingnanoparticles.
6. Identify and list different nanoparticles for different controlling measures.

UNIT-I INTRODUCTION TONANOTECHNOLOGY

Background and definition of nanotechnology, chemical bonds in nanotechnology – Scales at the bio-nano interface – Basic capabilities of nanobiotechnology and nanomedicine – Biological tradition and mechanical tradition biotechnology – Applications of Nanotechnology in biotechnology.

UNIT-II STRUCTURAL AND FUNCTIONAL PRINCIPLES OF BIONANOTECHNOLOGY

Biomolecular structure and stability – Protein folding – Self-assembly – Self-organization – Molecular recognition – Information driven nanoassembly – Energetics –Chemical transformation – Biomaterials – Biomolecular motors – Traffic across membranes – Biomolecular sensing – Self-replication – Machine-phasebionanotechnology.

UNIT-III MICROFLUIDICS

Concepts and advantages of microfluidic devices – Materials and methods for the manufacture of microfluidic component – Fluidic structures – Surface modifications – Lab-on-a-chip for biochemical analysis

UNIT-IV PROTEIN AND DNA BASED NANOSTRUCTURES

S-Layers – Engineered nanopores – Microbial nanoparticle production – DNA-Protein nanostructures – Biomimetic fabrication of DNA based metallic nanowires and networks –DNA-Gold nanoparticle conjugates – Nanoparticles as non-viral transfection agents

UNIT-V NANOPARTICLES IN CANCER THERAPY

Magnetic nano and microparticles for embolotherapy - hyperthermic therapy - delivery of chemotherapeutic drugs-brachytherapy, Thermoresponsive liposomes for hyperthermic chemotherapy assemblies and ultrasound activation.

SUGGESTED READINGS:

5. Freitas. R. A. (2004). Nanomedicine. Landes Biosciences.
6. Kohler. M. and Fritzsche. W. (2004). Nanotechnology-An Introduction to Nanostructuring Techniques. Wiley VCH.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To illustrate about the biosafety in biotechnology.
- To explain basic knowledge on Intellectual property rights.
- To rephrase different views on policies of IPR.
- To solve the IPR issues and Bioethics.
- To list and examine about the case studies of copyright and patents.
- To understand the basics of IPR and ethical issues in biotechnology.

Course Outcomes

1. Classify the different techniques involved in biosafety in biotechnology based industries.
2. Manage and organize the knowledge about the intellectual property rights.
3. Label an idea about the policies of IPR.
4. Relate about the IPR issues and bioethics.
5. Diagnose about the case studies on patents.
6. Summarize the basics of IPR and ethical issues in biotechnology.

UNIT I BIOSAFETY

Biosafety – Biotechnology development in India, Safety issues concerning biotechnological products, governing biosafety, Cartagena protocol on biosafety, Conservation of Biodiversity.

UNIT II INTELLECTUAL PROPERTY RIGHTS

Introduction - Invention and Creativity - Intellectual Property (IP) - Importance - Protection of IPR - Basic types of property (i. Movable Property ii. Immovable Property and iii. Intellectual Property). IP - Patents - Copyrights and related rights - Trade Marks and rights arising from Trademark registration - Definitions - Industrial Designs and Integrated circuits - Protection of Geographical Indications at national and International levels - Application Procedures.

UNIT III IPR –POLICIES

International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities -History - General Agreement on Trade and Tariff (GATT). Indian Position Vs WTO

and Strategies - Indian IPR legislations - commitments to WTO-Patent Ordinance and the Bill - Draft of a national Intellectual Property Policy - Present against unfair competition.

UNITIV CASE STUDIES

Case Studies on - Patents (Basmati rice, curcumin, Neem, etc.) - Copyright and related rights - Trade Marks - Industrial design and Integrated circuits - Geographic indications - Protection against unfair competition.

UNITV IPR ISSUES &BIOETHICS

Trade Secrets, Copy Rights, Farmer's Rights, Plant Breeder's rights; Traditional knowledge and their commercial exploitation and protection. Bioethics – Disease prevention Vs right to privacy,

SUGGESTED READINGS:

2. Brody. B. A. and Engelhardt. H. T. (2007). Bioethics: Readings and Cases. Prentice John-Wiley and Sons.
3. Joshi. R. (2006). Biosafety and Bioethics. Isha Books, New Delhi
4. Subbaram. N. R. (1998). Handbook of Indian Patent Law and Practice. S. Viswanathan Printers and Publishers Pvt. Ltd.
5. Singh. K. (2015). Intellectual property rights on Biotechnology. BCIL.
6. Sasson. A. (1988). Biotechnologies and Development. UNESCO Publications,

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To illustrate the scope and importance of crude drugs.
- To understand the basic ideas on cultivation and utilization of medicinal and aromatic plants.
- To list the various functions of plant tissue culture as a source.
- To label the basic theory of methods of drug evaluation.
- To develop a picture about applications of phytochemicals in industry and healthcare.
- To discuss the different stages of developments in using phytochemicals and medicinal plants.

Course Outcomes

1. Summarize about the importance of crude drugs in different medicinal system.
2. Determine the modern cultivation techniques through plants.
3. Express the functions of plant tissue culturing.
4. Be aware of the conceptualization behind various methods for drug evaluation.
5. Describe the various functions and application of phytochemicals in different industries.
6. Summarize and predict the different stages of developments in using phytochemicals and medicinal plants.

UNIT-I CRUDE DRUGS

Crude Drugs – Scope & Importance, Classification (Taxonomical, Morphological Chemical, Pharmacological); Cultivation, Collection & processing of Crude Drugs. Indian System of medicine: Ayurveda, Siddha and Unani and its significance

UNIT-II MEDICINAL & AROMATIC PLANTS

Cultivation and Utilization of Medicinal & Aromatic Plants in India. Genetics as applied to Medicinal herbs. Modern Biotechnological tools and its influence in Medical and Aromatic plant cultivation.

UNIT-III TISSUE CULTURE OF MEDICINAL PLANTS

Plant Tissue Culture as source of medicines, Secondary metabolite production in plants; Plant Tissue Culture for enhancing secondary metabolite production (Withania somnifera, Rauwolfia serpentina, Catharanthus roseus, Andrographis paniculata, Dioscorea sp.); Anticancer, Anti-inflammatory, Antidiabetic, Analgesic drugs, Biogenesis of Phytopharmaceuticals.

UNIT-IV ANALYSIS OF PHYTOCHEMICALS

Methods of Drug evaluation (Morphological, Microscopic, Physical & Chemical). Preliminary screening, Assay of Drugs – Biological evaluation / assays, Microbiological methods. Types of

Karpagam Academy of Higher Education (Deemed to be University), Coimbatore – 641 021

Phytochemicals: Glycosides - extraction methods (Aloe); Volatile Oils - extraction methods (Clove); Alkaloids - extraction methods (Cinchona); Flavonoids extraction methods, Resins- extraction methods; Lectins.

UNT-V APPLICATIONS OF PHYTOCHEMICALS

Application of phytochemicals in industry and healthcare; Biocides, Biofungicides, Biopesticides, Nutraceuticals and their significance.

SUGGESTED READINGS:

1. Kokate. C. K., Purohit. A. P. and Gokhale. S. B. (1996). Pharmacognosy. NiraliPrakasan.
2. Dewick. P. M. (2009). Natural Products in medicine: A Biosynthetic approach. Wiley.
3. Hornok. L. (1992). Cultivation & Processing of Medicinal Plants. Wiley & Sons.
4. Trease and Evans. (1989). Pharmacognosy. Harcourt Brace & Company.

Course Objectives

- To explain about the object oriented and procedural programming.
- To predict about the multi-thread programming in Java.
- To interpret knowledge on java applets and database connection.
- To demonstrate a sound knowledge on scripting in python.
- To describe about a brief knowledge on python classes.
- To understand the concept of biopython.

Course Outcomes

1. Predict the object oriented and procedural programming.
2. List exposure on multi-thread programming in java.
3. Judge usefulness on java applets and database connection.
4. Develop and manage the python scripting.
5. Organize practicing skills in python classes.
6. Develop knowledge in biopython.

UNIT I INTRODUCTION TO JAVA

Introduction to Object Oriented Programming and Procedural Programming, Java, JAVA - Keywords, Constants, Variables, Operators, Expressions, Decision Making, Branching and Looping, Classes – Objects – Methods, Arrays, Strings and Vectors.

UNIT II MULTI-THREAD PROGRAMMING

Java Interfaces - Multiple Inheritance, Packages, Multithreading , Exception handling – Event handling, Managing Inputs/Output Files in Java

UNIT III JAVA APPLETS AND DATABASE CONNECTION

Graphics - Applet basics – passing parameters to applets – applet display methods – drawing lines, ovals, rectangles and polygons – Threads and Animation, Java and Database connection

UNIT IV INTRODUCTION TO PYTHON

Introduction to Python Expressions, tuples, lists, dictionaries, and sets, Functions - Modules – Files, Control Statements-Loops-Iterations, Pattern Matching- Fixed length and Variable length matching

UNIT V PYTHON CLASSES AND BIOPYTHON

Python Classes-Objects-Methods, Inheritance, Biopython – Introduction- Biopython Components – Alphabet, Seq, MutableSeq, SeqRecord, Align, ClustalW, SeqIO, AlignIO, Blast, PDB

SUGGESTED READINGS:

2. Balagurusamy. E. (2012). Programming with Java: A Primer. Tata McGraw-Hill Education.
3. Model. M. L. (2009). Bioinformatics Programming Using Python- Practical Programming for Biological Data. O'ReillyMedia
4. Bassi. S. (2009). Python for Bioinformatics. CRCPress.
5. Zelle. J. (2010). Python Programming: An Introduction to Computer Science. Franklin Beddle and AssociatesInc.

Course Objectives

- To explain descriptive views of fire and explosion.
- To illustrate Differentiating relief systems in various explosions.
- To discriminate various hazards and toxicity.
- To evaluate various spills and leakage of liquids.
- To interpret different situations of explosions and toxicity through case studies.
- To discuss the different global and local explosive issues.

Course Outcomes

1. Elaborate the concept of fire and explosion.
2. Learn and evaluate relief systems in various explosions.
3. Explain the hazards and toxicity in various situations.
4. Discuss the various spills and leakage preventive measures.
5. Identify basic views in different situations of explosions and toxicity.
6. Make up perspective techniques and create data on different global and local explosive issues.

UNIT I FIRE AND EXPLOSION

Introduction-Industrial processes and hazards potential, mechanical electrical, thermal and process hazards.Safety and hazards regulations, Industrial hygiene. Factories Act, 1948 and Environment (Protection) Act, 1986 and rules thereof.Shock wave propagation, vapour cloud and boiling liquid expanding vapours explosion (VCE and BLEVE), mechanical and chemical explosion, multiphase reactions, transport effects and global rates.

UNIT II RELIEF SYSTEMS

Preventive and protective management from fires and explosion-inerting, static electricity passivation, ventilation, and sprinkling, proofing, relief systems – relief valves, flares, scrubbers.

UNIT III TOXICOLOGY

Hazards identification-toxicity, fire, static electricity, noise and dust concentration; Material safety data sheet, hazards indices- Dow and Mond indices, hazard operability (HAZOP) and hazard analysis (HAZAN).

UNIT IV LEAKS AND LEAKAGES

Spill and leakage of liquids, vapors, gases and their mixture from storage tanks and equipment; Estimation of leakage/spill rate through hole, pipes and vessel burst; Isothermal and adiabatic flows of gases, spillage and leakage of flashing liquids, pool evaporation and boiling; Release of toxics and dispersion. Naturally buoyant and dense gas dispersion models; Effects of momentum and buoyancy; Mitigation measures for leaks and releases.

UNIT V CASE STUDIES

Flixborough, Bhopal, Texas, ONGC offshore, HPCL Vizag and Jaipur IOC oil-storage depot incident; Oil, natural gas, chlorine and ammonia storage and transportation hazards.

SUGGESTED READINGS:

1. Crowl. D. A. and Louvar. J. F. (2011). Chemical Process Safety Fundamentals with Applications. Prentice Hall.
2. Mannan. S. (2005). Lee's Loss Prevention in the Process Industries. Butterworth-Heinemann.

Course Objectives

- To illustrate the genetic material and its biological significance in organization.
- To explain the basic ideas on structure and function on genetic material.
- To list the various functions of Nitrogen fixation.
- To label the basic theory of genes involved in the pathogenesis.
- To develop a picture about applications of plant biotechnology.
- To discuss the different stages of developments in gene analysis and its recombination.

Course Outcomes

1. Summarize about the importance of genetic material and its uses.
2. Determine the structure and function of the genetic material.
3. Express the functions of fixing nitrogen to soil through microbes.
4. Be aware of the conceptualization behind various genes involved in pathogenesis.
5. Describe the various functions and application of plant biotechnology through tissue culture.
6. Summarize and predict the different stages of developments in gene analysis and its recombination.

UNIT-I ORGANIZATION OF GENETIC MATERIAL

Genetic material of plant cells – nucleosome structure and its biological significance; junk and repeat sequences; outline of transcription and translation.

UNIT-II CHLOROPLAST & MITOCHONDRIA

Structure, function and genetic material; RUBISCO synthesis and assembly, coordination, regulation and transport of proteins. Mitochondria: Genome, cytoplasmic male sterility and import of proteins.

UNIT-III NITROGEN FIXATION

Nitrogen fixation Process - Nitrogenase activity, nod genes, nif genes, bacteroids- Applications.

UNIT-IV AGROBACTERIUM & VIRAL VECTORS

Pathogenesis, crown gall disease, genes involved in the pathogenesis, Ti plasmid – t-DNA, importance in genetic engineering. Viral Vectors: Gemini virus, cauliflower mosaic virus, viral vectors and its benefits.

UNT-V APPLICATION OF PLANT BIOTECHNOLOGY

Outline of plant tissue culture, transgenic plants, herbicide and pest resistant plants, Drought/salinity/cold tolerant plants, molecular pharming, therapeutic products.

SUGGESTED READINGS:

1. Gamburg. O. L. and Philips. G. C. (1995). Plant Tissue & Organ Culture fundamental Methods. Narosa Publications.
2. Singh. B. D. (1998). Text book of biotechnology. Kalyani publishers.
3. Heldt. H. W. (1997). Plant Biochemistry & Molecular Biology. Oxford University Press.
4. Ignacimuthu. S. (1996). Applied Plant Biotechnology. Tata McGraw Hill Publishers.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain descriptive statistics and ANOVA
- To illustrate Differentiating algorithm and regression analysis
- To discriminate various validation approaches to data.
- To evaluate various data by regression methods.
- To interpret clustering and mining techniques.
- To create data for analytics by various methods.

Course Outcomes

1. Elaborate the concept of Data analytics.
2. Learn Statistics and evaluate ANOVA.
3. Explain the Machine learning and various validation approaches.
4. Discuss the various regression methods and classification
5. Identify basic views in clustering and mining techniques.
6. Make up perspective analytics and create data analytics through various approaches.

UNIT I INTRODUCTION

Descriptive Statistics, Probability Distributions, Inferential Statistics through hypothesis tests, Regression, ANOVA (Analysis of Variance)

UNIT II MACHINE LEARNING: INTRODUCTION AND CONCEPTS

Differentiating algorithmic and model based frameworks, Regression : Ordinary Least Squares, Ridge Regression, Lasso Regression, K Nearest Neighbours Regression & Classification

UNIT III SUPERVISED LEARNING WITH REGRESSION AND CLASSIFICATION

Bias-Variance Dichotomy, Model Validation Approaches, Logistic Regression, Linear Discriminant Analysis, Quadratic Discriminant Analysis, Regression and Classification Trees Support Vector Machines.

UNIT IV UNSUPERVISED LEARNING AND CHALLENGES FOR BIG DATA ANALYTICS

Clustering, Associative Rule Mining, Challenges for big data analytics

UNIT V PRESCRIPTIVE ANALYTICS

Creating data for analytics through designed experiments, Active learning, Reinforcement learning

SUGGESTED READINGS:

2. James. G., Witten. D., Hastie. T. and Tibshirani. R. (2013). An Introduction to Statistical Learning with Applications in R. Springer.
3. Montgomery. D. C. and Runger. G.C. (2003). Applied Statistics and Probability for Engineers. 6th Edition. John Wiley & Sons, Inc.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain basic knowledge on biotech industries in various field.
- To demonstrate the various lab construction through new ventures.
- To construct various parameters of research and development in production of bio based products.
- To explain the case studies of different industries and their strategic planning.
- To outline the basic concepts of IPR and ethics in biotechnology.
- To discuss the different techniques for entrepreneurship in biotechnology.

Course Outcomes

1. Summarize the characteristics of different biotechindustries.
2. Evaluate the different lab construction through newventures.
3. List the various parameters of research and developmental techniques.
4. Explain the opportunities to know different industrial strategic plans.
5. Recognize basic concepts of IPR and ethics in biobased product production.
6. Identify and list different techniques for entrepreneurship in biotechnology.

UNITI OVERVIEW OF BIOTECHNOLOGYINDUSTRIES

Scope - Biotechnology Industries in India and Abroad - Fundamentals of Biotechnology for biobusiness - Trends and keg issues in Biotechnology and devices industries - Technology basis in industry segment, emerging technologies and technical convergencesissues.

UNITII NEW VENTURE CREATION –ENTREPRENEURSHIP

Plant tissue culture lab construction – Equipment, glassware and chemical requirements - techniques in culturing of plants. Export of tissue cultured plants to aboard – Vermi technology – Mushroom cultivation - single cell protein - Biofertilizer technology - production - Commercialization of R&D- Fermentation technology: Bakery, Dairyproducts.

UNITIII PRODUCT DEVELOPMENT

Beer, wine and ethanol production using different sources– Enzyme: production, purification and characterization - Organic acids (Citric, lactic) production - Antibiotic production - Biogastechnology

- Azolla cultivation - Product development and project management, transition from R&D to business units. Institute– industry interaction and partnership/ alliances

UNITIV BIOBUSINESS PLANS

Healthcare, the Biomedical Sciences, agriculture and Agrobiotechnology. Transfer and business planning - Bank loan and finance strategy – Budget plan – licensing and Branding Concerns and Opportunities, Policy and regulatory Concerns and Opportunities Financial assistance for R&D projects and entrepreneurship. Corporate partners marketing – Model project: Case studies of different industries and their strategic planning.

UNITV INTELLECTUAL PROPERTY, BIOETHICS AND LEGALISSUES

Intellectual property rights in Biotech, Patent laws - Bioethics and current legal issues - Marketing and public perceptions in product development – Genetically modified products and organisms (Transgenic products) - Technology licensing and branding concerns.

SUGGESTED READINGS:

1. Oliver. R. (1999). The coming Biotech age: The business of Biomaterials. McGraw Hill Publications New York.
2. Karthikeyan. S. and Ruf. A. (2009). Biobusiness. MJP Publications Chennai, India.

SEMESTER VII

B.Tech Biotechnology

2018-2019

18BTBT7E01

PROTEIN ENGINEERING

Semester-VII

3H-3C

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3 Hours

Course Objectives

- To identify the basic structural principles of protein.
- To classify the different techniques of mutagenesis in bioimprinting.
- To record the basic notion on enzyme engineering and protein purification.
- To differentiate and organize the distinct metagenomics and ecosystem biology.
- To explain the basic theory of protein engineering in industries.
- To examine the problems related to engineering enzymes.

Course Outcomes

1. Compare and contrast structural and functional properties of proteins.
2. Summarize the diverse techniques of mutagenesis.
3. Prioritize diverse methods for protein purification.
4. Construct and design the techniques of metagenomics and ecosystem biology.
5. Apply the knowledge on applications of protein engineering in industries.
6. Examine and solve the problems related to engineering enzymes.

UNIT- I BASIC STRUCTURAL PRINCIPLES OF PROTEINS

Amino Acids properties (size, solubility, charge, pKa), Kyte-Doolittle (Hydropathy) Index; Peptides as building blocks of proteins; Torsional (dihedral) angles, Ramachandran Plot; Secondary Structures of proteins; Loops – Types and Functions; Biosynthesis and chemical synthesis of Peptides. Lesk, Richardson and Topology Schematics

UNIT- II TECHNIQUES OF MUTAGENESIS

Rational Design, Non rational design, Mutagenesis library construction- Chemical, Staggered Extension, Random Elongation, Random priming, Error prone PCR, Impact of structure analysis and prediction- structure and modeling, role of biocomputing, denova design, Effect of protein conformation and bioimprinting.

UNIT- III ENGINEERING ENZYMES

Engineering stability (*Bacillus subtilis* natural protease, *Pseudomonas* isoamylase, carbamylase from *Agrobacterium radiobacter*), specificity and features to ease protein purification, Engineering

antibodies- Engineering signal molecules (hormones/ receptors), Engineering protein to facilitate recovery. Affinity purification(Strep-Tag).

UNIT- IV METAGENOMICS

Metagenomics and ecosystems Biology- conceptual framework, tools and methods- Analyses of metagenomics, Single gene approach, Targeted partial metagenome sequencing, Analyses of metatranscriptome- Limitation in analysing the metatranscriptome- 17s rRNA sequencing and metatranscriptomepyrosequencing, metaproteome-molecular methods to study complex microbial communities, metabolomics- metabolome of an ecosystem and metagenomics. Metabolomics for natural product perception

UNIT-V PROTEIN ENGINEERING IN INDUSTRIES

Protein engineering for industrial enzymology, Biosensor- chemically engineered electronic protein, genetically fused protein, Gene engineering for molecular networking and protein assembly; molecular bioscreening in oncology- mechanism based drug discovery. Protein engineering in vaccine development.

SUGGESTED READINGS:

1. Alberghina. L. (2005). Protein Engineering in Industrial Biotechnology. Harwood Academic publications.
2. Moody. P. C. E. and Wilkinson. A. J. (1990). Protein Engineering. IRL Press, Oxford.
3. Nelson. K. E. (2010). Metagenomics of Human Body. Springer.
4. Creighton. T. E. (2013). Proteins, Structure and Molecular properties. Freeman W. H & Company.
5. Branden. C. and Tooze. J. (1999). Introduction to Protein Structure. Garland Publications

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To present basic knowledge about the various cloning vectors and its features.
- To demonstrate the various techniques and enzymes involved in cloning.
- To explain and practice diverse concepts on expression vectors for cloning.
- To practice the basic views on preparation of genomic and cDNA library.
- To identify and organize differeing views on applications of gene cloning in rDNA research.
- To compile the basic concepts of rDNA technology.

Course outcomes

1. Compose about basic concepts about the features of cloning vectors.
2. Assemble different techniques and enzymes involved in cloning.
3. Classify about expression vectors for cloning.
4. List the techniques in preparation of genomic and cDNA library.
5. Propose knowledge on applications for rDNA research.
6. Summarize concepts of rDNA technology.

UNITI CLONING VECTORS

Ideal features of cloning vectors – plasmids and bacteriophages – cloning vectors for E.coli ; pBR322, pUC vectors, M13 and other plasmid vectors – Cosmids, Phagemids – vectors for Bacillus, Streptomyces Restriction mapping and analysis

UNITII ENZYMES AND TECHNIQUES FOR CLONING

DNA modifying enzymes – ligases – Nucleic acid probe preparation; Radioactive and nonradioactive labels – Hybridization techniques – PCR; different types and applications – DNA sequencing – DNA fingerprinting – RFLP, RAPD – chromosome walking.

UNITIII EXPRESSION VECTORS

Expression vectors in prokaryotes – Expression vectors in Eukaryotes-Yeast cloning vectors – selectable markers for eukaryotes – SV40, Papilloma, Retrovirus, Baculoviral vectors – mammalian cell expression system – Gene transfer techniques – Agrobacterial plasmids – Ti plasmid and viral vectors – cloning in plants.

UNITIV GENOMIC AND cDNA LIBRARY

Different strategies for in vitro and in vivo cloning – Preparation of rDNA, Preparation of cDNA and genomic DNA libraries – screening procedures – linkers, adapters, homopolymer tailing and TA cloning – gene transfer technologies – Mutagenesis – site directed mutagenesis – application.

UNITV APPLICATION OF GENE CLONING

Fusion protein- down-stream processing of recombinant proteins Applications in medicine – Gene therapy- Diagnostics, pathogenesis, recombinant vaccines –humanized antibodies and their applications genetically modified food – bioremediation with recombinant micro organisms– forensic science – genetic diversity – Agriculture, crop improvement – production of biosensors, enzymes – safety guidelines in rDNA research – containment and disposal.

18BTBT7E03

MOLECULAR DIAGNOSTICS

Semester-VII
3H-3C

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3Hours

Course Objectives

- To discuss about the history of molecular diagnostics.
- To model the traditional disease diagnosis methods.
- To record the basic notion on disorders and its origin.
- To explain the instrumentation on molecular diagnosis.
- To elaborate the hybridization techniques in diagnosis.
- To determine the exact method for different molecular diagnostics.

Course Outcomes

1. Appraise the process and origin of molecular diagnosis.
2. Formulate and compose diverse traditional disease diagnosis methods.
3. Prioritize diverse disorders and its origin.
4. Analyze and choose the instrumentation for molecular diagnostics.
5. Apply the hybridization techniques for diagnostics.
6. Deduct and determine the exact method for different molecular diagnostics.

UNIT I– INTRODUCTION AND HISTORY OF DIAGNOSTICS

Diseases- infectious, physiological and metabolic errors, genetic basis of diseases, inherited diseases. Infection – mode of transmission in infections, factors predisposing to microbial pathogenicity, types of infectious diseases- bacterial, viral, fungal, protozoans and other parasites. Philosophy and general approach to clinical specimens, Sample collection method of collection, transport and processing of samples, Interpretation of results, Normal microbial flora of the human body, Host - Parasite relationships.

UNIT II– TRADITIONAL DISEASE DIAGNOSIS METHODS AND TOOLS:

Diagnosis of infection caused by Streptococcus, Coliforms, Salmonella, Shigella, Vibrio, and Mycobacterium., Diagnosis of fungal infections. Major fungal diseases: Dermatophytoses, Candidiosis and Aspergillosis. Diagnosis of DNA and RNA viruses- Pox viruses, Adenoviruses, Rhabdo Viruses, Hepatitis Viruses and Retroviruses. Diagnosis of Protozoan diseases: Amoebiasis, Malaria, Trypanosomiasis, Leishmaniasis. Study of helminthic diseases- Fasciola hepatica and Ascaris lumbricoides. Filariasis and Schistosomiasis.

UNIT III– MAJOR METABOLIC DISORDERS AND ITS CAUSES:

Traditional methods for the diagnosis of metabolic errors. Disease due to genetic disorders - Identifying human disease genes. Cancer- different types of cancers, genetics of cancer- oncogenes, tumour suppressor genes. Methods available for the diagnosis of genetic diseases and metabolic disorders. Genetic disorders- Sickle cell anemia, Duchenne muscular Dystrophy, Retinoblastoma, Cystic Fibrosis and Sex – linked inherited disorders.

UNIT IV– MOLECULAR DIAGNOSIS:

Nucleic acid amplification methods and types of PCR: Reverse Transcriptase-PCR, Real-Time PCR, Inverse PCR, Multiplex PCR, Nested PCR, Alu-PCR, Hot-start, In situ PCR, Long-PCR, PCR-ELISA, Arbitrarily primed PCR, Ligase Chain Reaction. Proteins and Amino acids, Qualitative and quantitative techniques: Protein stability, denaturation; amino acid sequence analysis

UNIT V– HYBRIDIZATION TECHNIQUES AND DNA SEQUENCING METHODS IN MOLECULAR DIAGNOSIS:

Southern, Northern, in-situ (including FISH), microarrays – types and applications; Protein extraction and analysis (including PAGE and its variations); Western Blot Automated DNA sequencing- Principles, Methods and Instrumentation- Advances in DNA sequencing- New Generation sequencing Methods, Pyrosequencing, · Microarrays- Personalised Medicine- Pharmacogenomics (ADMET)

SUGGESTED READINGS:

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To illustrate the rate equation with different parameters.
- To explain the basic ideas on first order reaction in reactor design.
- To list the various functions of Non Ideal flow of fluidized bed.
- To label the basic theory of rate equation systems in heterogenous reactions.
- To develop a picture about rate controlling mechanism in solid catalyzed reaction.
- To understand the various biochemical reactions.

Course Outcomes

1. Summarize about the rate equation.
2. Determine the first order reaction in reactor design.
3. Express the functions of non ideal flow of fluidized bed.
4. Be aware of the conceptualization behind various rate equations in heterogenous systems.
5. Describe the various rate controlling mechanism in solid catalyzed reaction.
6. Summarize and predict the various reactions.

UNIT-I KINETICS OF HOMOGENEOUS REACTIONS

Concentration and temperature dependent term of rate equation – searching for mechanism– predictability of reaction rate from theory; Interpretation of batch reactor data – constant volume and variable volume batch reactors – temperature and reaction rate - development of rate equations for different homogeneous reactions (up to second order reactions both reversible and irreversible reactions).

UNIT-II REACTOR DESIGN

Ideal batch reactors–steady state MFR & PFR – holding time for flow systems; Design for single reactions- performance equations for single reactors ; multiple reactor systems – PFR in series/ parallel – equal size and different size Mixed reactors in series; reactors of different types in series. Design for Multiple reactions (first order reactions only)

UNIT-III NON IDEAL FLOW

RTD of fluid in vessel – relationship between F, C & E curve – conversion from tracer information; non- ideal flow models–Dispersion model and Tanks in series Model; Multi parameter models– models for fluidized beds.

UNIT-IV DESIGN FOR HETEROGENEOUS SYSTEMS

Rate equations – contacting patterns for two phase systems; fluid particle reactions – unreacted core model for spherical particles of unchanging size – rate of reaction for shrinking spherical particles – determination of rate controlling step – application to design; reactions steps; resistances and rate equations; Fluid–Fluid reactions – rate equations.

UNIT-V SOLID CATALYSED REACTIONS

Rate equation – rate controlling mechanisms – experimental methods for finding rates – product distribution in multiple reactions–application of design; Deactivating catalysts–mechanism–rate equation.

SUGGESTED READINGS:

1. Levenspiel. O. (1999). Chemical Reaction Engineering. John Wiley.
2. Fogler. H. S. (2002). Elements of Chemical Reaction Engineering. Prentice Hall India.
3. Missen. R.W., Mims. C.A. and Saville. B. A. (1999). Introduction to Chemical Reaction Engineering and Kinetics. John Wiley.

Course Objectives

- To explain basic knowledge on antigen structure and preparation.
- To discuss the structural and functional principles of antibodies and immunodiagnosis.
- To construct various parameters of B cells and T cells.
- To explain the effects of preparation and storage of tissues in immunopathology.
- To outline the basic concepts of preparations of vaccine in molecular immunology.
- To discuss the different techniques for antigen and antibody synthesis.

Course Outcomes

1. Summarize the characteristics of different methods of antigen production.
2. Evaluate the different structural and functional principles of antibodies and immunodiagnosis.
3. List the various parameters of B cells and T cells.
4. Explain the preparation and storage of antibodies and immunodiagnosis.
5. Recognize basic concepts of vaccine preparation in molecular immunology.
6. Identify and list different techniques for antigen and antibody synthesis.

UNIT I ANTIGENS

Types of antigens, their structure, factors affecting antigenicity, preparation of antigens for raising antibodies, handling of animals, adjuvants and their mode of action.

UNIT II ANTIBODIES & IMMUNODIAGNOSIS

Monoclonal and polyclonal antibodies – their production and characterization, Western blot analysis, Immunoelectrophoresis, SDS-PAGE - purification and synthesis of antigens, ELISA – principle and applications, radioimmunoassay (RIA) - principles and applications, nonisotopic methods of detection of antigens-enhanced chemiluminescence assay.

UNIT III ASSESSMENT OF CELL MEDIATED IMMUNITY

Identification of lymphocytes and their subsets in blood. T cell activation parameters, estimation of cytokines, macrophage activation, macrophage microbicidal assays, in-vitro experimentation – application of the above technology to understand the pathogenesis of infectious diseases.

UNITIV IMMUNOPATHOLOGY

Preparation of storage of tissues, identification of various cell types and antigens in tissues, isolation and characterization of cell types from inflammatory sites and infected tissues, functional studies on isolated cells, immune cytochemistry – immuno fluorescense, immune enzymatic and immuno ferritin techniques, immuno electron microscopy.

UNIT V MOLECULAR IMMUNOLOGY

Preparation of vaccines, application of recombinant DNA technology for the study of the immune system, production of anti idiotypic antibodies, catalytic antibodies, application of PCR technology to produce antibodies and other immunological reagents, immuno therapy with genetically engineered antibodies – Tetramer, recombinant vaccines.

SUGGESTED READINGS:

1. Talwar. G.P. and Gupta. S. K. (2006). A hand book of practical and clinical immunology (Vol 1 & 2), 2nd edition. CBS Publications.
2. Weir. D.M. (1990). Practical Immunology. Blackwell Scientific Publications Oxford.
3. Austin. J. M. and Wood. K. J. (1993). Principle of cellular and molecular immunology. Oxford university.

Course Objectives

- To define the basic view of tissue culture techniques.
- To illustrate the breeding of farm animals.
- To propose an opinion on transgenic animal technology.
- To explain the characterization techniques for bacterial and viral diseases in animals.
- To justify the basic concept on recombinant cytokines.
- To discuss the diverse techniques on animal cell culturing and its mechanism.

Course Outcomes

1. Identify the different views on tissue culturing.
2. Differentiate various breeding farm animals.
3. Illustrate the concept behind transgenic animal technology.
4. Evaluate the bacterial and viral diseases that attack animals.
5. Analyze and categorize the best approach on recombinant cytokines.
6. Discuss the diverse techniques on animal cell culturing and its mechanism.

UNIT-I ANIMAL CELL CULTURE

Introduction to basic tissue culture techniques, equipments and instruments in ATC - chemically defined and serum free media - animal cell cultures - maintenance and preservation – various types of cultures; suspension cultures - continuous flow cultures - immobilized cultures – somatic cell fusion - organ cultures.

UNIT-II MICROMANIPULATION OF EMBRYOS

Breeding of farm animals to biopharming - equipments - enrichment of x and y bearing sperms from semen samples - artificial insemination - germ cell manipulations – In vitro fertilization - embryo transfer - micromanipulation technology and breeding of farm animals.

UNIT-III TRANSGENIC ANIMALS

Concepts of transgenic animal technology; strategies for the production of transgenic and knock out animals – significance in biotechnology - stem cell cultures and induced pluripotent stem cells in the production of transgenic animals.

UNIT-IV ANIMAL DISEASES AND THEIR DIAGNOSIS

Bacterial and viral diseases in animals - monoclonal antibodies – diagnosis - molecular diagnostic techniques; PCR - in-situ hybridization - northern - southern blotting - RFLP.

UNT-V THERAPY OF ANIMAL DISEASES

Recombinant cytokines – therapeutic applications of monoclonal antibody, vaccines - DNA, sub unit, cocktail vaccines - gene therapy for animal diseases

SUGGESTED READINGS:

2. Ranga. M. M. (2002). Animal Biotechnology. Agrobios India Ltd.
3. Ramadass. P., Meera and Rani. S. (1997). Text Book of Animal Biotechnology. Akshara Printers.

SEMESTER VIII

B.Tech Biotechnology

2018-2019

18BTBT8E01	AGRICULTURE BIOTECHNOLOGY	Semester-VIII 3H-3C
------------	---------------------------	------------------------

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3Hours

Course Objectives

- To describe the micropropagation and tissue engineering in plants.
- To explain the mechanism and regulation of agricultural biotechnology.
- To discuss the basic notion on solving environmental issues through phytoremediation.
- To differentiate and organize the distinct case studies with bioremediation.
- To explain the basic theory of molecular farming.
- To understand the various applications in agricultural biotechnology.

Course Outcomes

1. Distinguish various techniques in improving agriculture through biotechnology.
2. Compare different mechanisms and regulations in recent agricultural biotechnology.
3. Solve many environmental issues using biotechnology techniques with plant as origin.
4. Construct and design the bioremediation for different issues.
5. Apply the knowledge on molecular farming.
6. Explain the various applications in agricultural biotechnology.

UNIT I– INTRODUCTION

Introduction to Agricultural biotechnology. Crop improvement hybridization and plant breeding techniques. Micropropagation and plant tissue culture technique and its application in agriculture. Somatic hybridization, haploid production and cryopreservation. Study of biopesticides used in agriculture (neem as example). integrated pest management.

UNIT II– MECHANISM AND REGULATION

Mechanism of biological nitrogen fixation process.study of NIF, NOD and HUP genes in nitrogen fixation process. Production of biofertilizers and applications of rhizobium, azotobacter, azolla and mycorrhiza.Use of plant growth regulators in agriculture and horticulture.

UNIT III– ENVIRONMENTAL STUDIES

Introduction to Environmental studies Ecosystem and ecological pyramids Treatment of municipal water & industrial effluents Environmental pollution

UNIT IV– CASE STUDIES ON AGRICULTURAL BIOTECHNOLOGY

Biodegradation & Bioremediation Environmental Impact Assessment Case studies of Environmental pollutions.

UNIT V– MOLECULAR FARMING

Farming of carbohydrates (e.g.starch, polyfructans) Metabolic engineering of Lipids (e.g. Bioplastics) Molecular farming of proteins (e.g.oleosin system:hirudinand insulin production). Medically related proteins (e.g.custom made antibodies, Edible vaccines).

SUGGESTED READINGS:

4. Singh. A., Srivastava. A. K., Shukla. S. K. and Singh. A. (2018). Agricultural Biotechnology, 1st Edition. Scientific International Pvt.Ltd.

Course Objectives

- To explain basic knowledge on definition and scope of stem cells.
- To demonstrate the structural and functional principles of in vitro fertilization.
- To discuss the various identification and cell differentiation of somatic stem cells.
- To explain the effects of stem cell in drug discovery and tissue engineering.
- To outline the basic concepts of cellular therapy and gene therapy of stem cells.
- To compile the application of stem cells.

Course Outcomes

1. Summarize the characteristics stem cells.
2. Evaluate the different structural and functional parameters of invitro fertilization.
3. List the properties of adult stem cells in differentiation.
4. Explain the uses of stem cells in drug discovery and tissue engineering.
5. Recognize various stem cell therapies.
6. Summarize the application of stem cells.

UNIT I - STEM CELLS AND CELLULAR PEDIGREES

Scope of stem cells – definition of stem cells – concepts of stem cells – differentiation, maturation , proliferation , pluripotency, self – maintenance and self – renewal – problems in measuring stem cells – preservation protocols.

UNIT II - EMBRYONIC STEM CELLS

In vitro fertilization –culturing of embryos-isolation of human embryonic stem cells – blastocyst – inner cell mass – growing ES cells in lab – laboratory tests to identify ES cells – stimulation ES cells for differentiation – properties of ES cells.

UNIT III - ADULT STEM CELLS

Somatic stem cells – test for identification of adult stem cells – adult stem cell differentiation – trans differentiation – plasticity – different types of adult stem cells – IPS and cancer stem cells.

UNIT IV - STEM CELL IN DRUG DISCOVERY AND TISSUE ENGINEERING

Target identification – Manipulating differentiation pathways – stem cell therapy Vs cell protection - stem cell in cellular assays for screening – stem cell based drug discovery, drug screening and toxicology, stem cell markers

UNIT V - POTENTIAL USES OF STEM CELLS

Cellular therapies – vaccines – gene therapy – immunotherapy – tissue engineering – blood and bone marrow – Fc cells.

SUGGESTED READINGS

1. Potten. C. S. (1997). Stem cells.Elsevier.
2. Kursad and Turksen. (2012). Adult and Embryonic Stem cells, 2nd edition. HumanaPress.
3. Lanza. R. P. (2013). Essentials of stem cell biology, 3rd edition. AcademicPress.
4. Svendensen. C. and Ebert. A. D. (2008). Encyclopedia of stem cell research vol 1 & 2. Sage pub

Course Objectives

- To explain the various cell types and their advances in tissue engineering.
- To demonstrate the various biomaterials for tissue engineering.
- To explain and practice diverse concepts on tissue engineering and tissue creation.
- To discuss the techniques in tissue typing.
- To practice the basic views on gene therapy.
- To identify and organize differing views on advances on tissue engineering.

Course outcomes

1. Compose about basic concepts in tissue engineering
2. Assemble different biomaterials for tissue engineering
3. Classify about methods for Tissue Engineering.
4. List the techniques in tissue typing
5. Explain the principles of gene therapy
6. Summarize the concepts of tissue engineering in different fields.

UNIT I BIOLOGICAL STUDY OF DIFFERENT CELL TYPES

Cell line, Establishment of cell lines, Different cell types: Endothelial cell, Fibroblast cells, Epithelial cell, Myoblast cells, chromaffin cell, Smooth muscle cells & plasma cell.

UNIT II BIOMATERIALS FOR TISSUE ENGINEERING

Biomaterials: Degradable polymeric scaffolds, Acellular Bio-Matrices, Biological derived polymers in tissue engineering: Natural BD Polymers & Synthetic BD polymers, Cell seeding of scaffolds, Cell source: Allogenic cells, Autologous cells & stem cells. Bioreactors used in tissue engineering: Gail Naughton's Bioreactor, Pulsatile Bioreactor.

UNIT III TISSUE ENGINEERING AND CONCEPTS OF TISSUE CREATION

Concepts of Tissue Creation: Sources, Stem Cells, Cells from Tissues, Culture Methods for Tissue Engineering, Maturation of Tissue Construct- Tissue Constructs, Cell therapies, Organ Modules, Cosmetic Measures.

UNIT IV PRINCIPLES AND PRACTICE OF GENE THERAPY

Introduction to gene therapy, Requirements of gene therapy, Genetic defects, Target cells for gene therapy, process of gene therapy, Factors responsible for gene therapy for making effective treatment of genetic disease, Recent developments in gene therapy research, ethical considerations of gene therapy.

UNIT V ADVANCES IN TISSUE ENGINEERING

Development of artificial tissues; Transplantation biology: Tissue typing, Techniques of tissue typing, Minor histocompatibility antigens, Immuno-suppression, Side effects of immuno-suppression.

SUGGESTED READINGS:

1. Bhojwani. S. S. and Razdan. M. K. (1996). Plant Tissue Culture (Theory and Practice). Elsevier
2. Ranga. M. M. (2010). Animal Biotechnology. Agrobios
3. Watson. J. D. and Gilman. M. (1992). Recombinant DNA. Scientific American Books.

Course Objectives

- To explain descriptive properties of seawater.
- To illustrate differentiating marine organisms and their industrial applications.
- To discriminate various pollution controlling marine organisms.
- To evaluate various marine toxins used in pharmaceutical industries.
- To interpret recombinations in marine aquaculture.
- To understand the usage of marine organism for different situations.

Course Outcomes

1. Discuss the basic knowledge on biogeochemical cycles.
2. Organize and manage marine organism in different industries.
3. Organize and manage pollution controlling measures through marine organisms.
4. Perceive the basics on combining marine toxins in pharma industries.
5. Compile different proteins of marine organism to develop a new variety.
6. Explain how to use marine organism for different situations.

UNIT I INTRODUCTION TO MARINE ENVIRONMENT

World oceans and seas – ocean currents – physical and chemical properties of sea water – abiotic and biotic factors of the sea – ecological divisions of the sea – history of marine biology – biogeochemical cycles – food chain and food web.

UNIT II MARINE ORGANISMS AND THEIR INDUSTRIAL APPLICATIONS

Phytoplanktons – zooplanktons – nektons – benthos – marine mammals – marine algae – mangroves – coral reefs – algal products, fuels from algae, algal cell culture

UNIT III MARINE ENVIRONMENTAL BIOTECHNOLOGY

Marine pollution – biological indicators (marine micro , algae) – biodegradation & bioremediation – marine fouling and corrosion.

UNIT IV MARINE PHARMACOLOGY

Medicinal compounds from marine flora and fauna – marine toxins , anti cancer agents, antiviral and antimicrobial agents. Marine Toxins

UNIT V AQUACULTURE TECHNOLOGY

Importance of coastal aquaculture – marine fishery resources – common fishing crafts and gears – Aqua farm design and construction, transgenic fish.

SUGGESTED READINGS:

1. Fingerman. M. and Nagabhushanam. R. (2003). Recent advances in marine biotechnology volume 8. CRC Press
2. Fingerman. M. and Nagabhushanam. R. (1999). Recent advances in marine biotechnology volume 2. Science publishers
3. Becker. E. W. (1994). Microalgae: Biotechnology and Microbiology. Cambridge University Press
4. Lee. J. S. and Newman. M. E. (1996). Aquaculture: An Introduction. Interstate Publishers, Incorporated

Course Objectives

- To explain basic knowledge on genome organization of prokaryotes and eukaryotes.
- To discuss the effects of cytogenetic mapping.
- To construct various methods for gene finding and annotations in functional genomics.
- To explain the effects of various protein level estimation in proteomics
- To understand the different protein analysis techniques.
- To outline the post translational modification and other protein interactions.

Course Outcomes

1. Summarize the characteristics of genomic organization of prokaryotes and eukaryotes.
2. Evaluate the different physical mapping techniques.
3. Discuss the gene findings in functional genomics.
4. Explain the protein estimation through different techniques.
5. Recognize different protein analysis techniques.
6. Identify and list different protein interactions.

UNIT I - OVERVIEW OF GENOMES OF BACTERIA, ARCHAE AND EUKARYOTA

Genome organization of prokaryotes and eukaryotes, gene structure of bacteria, archaeobacterial and eukaryotes, Human genome project, Introduction of functional and comparative genomics.

UNIT II - PHYSICAL MAPPING TECHNIQUES

Cytogenetic mapping, radiation hybrid mapping, Fish, STS mapping, SNP mapping optical mapping, Top down and bottom up approach, linking and jumping of clones, gap closure, pooling strategies, genome sequencing.

UNIT III - FUNCTIONAL GENOMICS

Gene finding; annotation; ORF and functional prediction; Subtractive DNA library screening; differential display and representational difference analysis; SAGE.

UNIT IV - TECHNIQUES IN PROTEOMICS

Protein level estimation; Edman protein microsequencing; protein cleavage; 2 D gel electrophoresis; metabolic labeling; detection of proteins on SDS gels. Mass spectrometry- principles of MALDI-TOF; Tandem MS-MS; Peptide mass fingerprinting.

UNIT V - PROTEIN PROFILING

Post translational modification; protein-protein interactions; glycoprotein analysis; phosphor protein analysis.

SUGGESTED READINGS

1. Cantor and Smith. (1999). Genomics. John Wiley & Sons.
2. Pennington and Dunn. (2001). Proteomics. BIOS Scientific Publishers.
3. Brown. T. A. (2018). Genomes, 4th edition. Bios Scientific Publishers Ltd
4. Livesey. H. (2000). Functional Genomics. Oxford University press.

Course Objectives

- To describe the fundamentals of protein and Nucleic acid structure.
- To illustrate principle and mechanism of X-Ray Crystallography and NMR.
- To explain how to solve phase problems.
- To assess the students to the various methods of secondary structure prediction strategies.
- To classify and compare the protein 3D structures.
- To discuss the protein structures using different techniques.

Course Outcomes

1. Outline fundamentals of protein and Nucleic acid structure.
2. Summarize the principle and mechanism of xray crystallography and NMR.
3. Solve phase related problems.
4. Explain the secondary structure prediction.
5. Differentiate and distinguish various 3D structures of protein.
6. Interpret and categorize the protein structures on different techniques.

UNIT I MACROMOLECULES

DNA and RNA: types of base pairing – Watson-Crick and Hoogsteen; types of double helices A, B, Z and their geometrical as well as structural features; structural and geometrical parameters of each form and their comparison; various types of interactions of DNA with proteins, small molecules. RNA secondary and tertiary structures, t-RNA tertiary structure.

Proteins: Principles of protein structure; anatomy of proteins – Hierarchical organization of protein structure – Primary, Secondary, Super secondary, Tertiary and Quaternary structure; Ramachandran Map.

UNIT II XRAY CRYSTALLOGRAPHY

Electromagnetic radiation, X-rays, principles, Bragg's Law, Types of solids: Crystal and amorphous, solids, Crystal Systems: Seven crystal system, Bravais Lattices, Space group, Symmetry. Crystallization Techniques: Small and Protein Molecules.

UNITIII PHASE PROBLEM

What is phase problem, How to solve the phase problem, Patterson function, Direct methods, Isomorphism replacement method, heavy atom method. Nuclear Magnetic Resonance: Chemical Shift, Coupling constant, spin-spin relaxation, spin-lattice relaxation, COSY, NOESY and NOE.

UNITIV STRUCTURE PREDICTION STRATEGIES

Secondary structure prediction: Algorithms viz. Chou Fasman, GOR methods; analysis of results and measuring the accuracy of predictions using Q3, Segment overlap, Mathew's correlation coefficient Identification/assignment of secondary structural elements from the knowledge of 3-D structure of macromolecule using DSSP and STRIDE methods

UNITV CLASSIFICATION AND COMPARISON OF PROTEIN 3DSTRUCTURES

Purpose of 3-D structure comparison and concepts; Algorithms such as FSSP, CE, VAST and DALI, Fold Classes. Databases of structure-based classification: CATH and SCOP. Structures of oligomeric proteins and study of interaction interfaces.

SUGGESTED READINGS:

1. Leach. A. R. (2008). Molecular Modeling Principles and Applications, 3rd edition. Wiley.
2. Schulz. G. E. (2009). Principles of Protein Structure. Springer.
3. Nelson. D. L. and Cox. M. M. (2012). Principles of Biochemistry. W. H. Freeman.

Course Objectives

- To explain descriptive views of clinical practices and its scope.
- To illustrate Differentiating ethical theories and foundations of clinical trials.
- To discuss various evolution and regulation of clinical research.
- To evaluate various designing protocols and amendments of clinical research.
- To interpret different biostatistics and data management.
- To create data on different clinical research.

Course Outcomes

1. Elaborate the concept of scope and types of clinical research.
2. Evaluate the ethical theories of clinical research.
3. Discuss the history and regulation of clinical research.
4. Explain the various protocol developments in clinical research.
5. Identify basic views in different situations of biostatistics in clinical trials.
6. Make up perspective techniques and create data on different clinical research.

UNIT I INTRODUCTION TO CLINICAL RESEARCH

Definition, Types and Scope of Clinical Research, Good Clinical Practices - Introduction to study designs and clinical trials - Careers in Clinical Research.

UNIT II ETHICS IN CLINICAL RESEARCH

Ethical Theories and Foundations, Ethics Review Committee, Ethics and Historically derived principles - Nuremberg Code, Declaration of Helsinki, Belmont Report, Equipoise, Informed consent, Integrity & Misconduct.

UNIT III REGULATIONS IN CLINICAL RESEARCH

Evolution and History of Regulations in Clinical Research, Patents US Regulatory Structure, IND, NDA, ANDA, Post Drug Approval Activities, PMS, FDA Audits and Inspections EU Regulatory Affairs, EMEA Organization and Function, INDIAN Regulatory system, Schedule Y- Rules and Regulations, Description of trial phases (Phase 0, Phase I, II, III, and IV), Trial contexts (types of trials: pharma, devices, etc.), Trial examples.

UNIT IV CLINICAL RESEARCH METHODOLOGY AND MANAGEMENT

Designing of Protocol, CRF, e-CRF, IB, ICF, SOP; Study Protocol -Introduction, background, Objectives Eligibility, Design, Randomization - Intervention details, assessments and data collection, case report forms –Violations -. Amendments. Study/ Trial Design- Phase I designs - Dose-finding designs. Phase II designs - Pilot studies, Single arm, Historical control designs. Phase III designs - Factorial designs, Crossover designs, Multicenter studies, Pilot studies. Phase IV designs- Preparation of a successful clinical study, Study management, Project management Documentation, Monitoring, Audits and Inspections, Pharmacovigilance training in clinical research budgeting in clinical research, Supplies and vendor management.

UNIT V BIOSTATISTICS AND DATA MANAGEMENT

Introduction to Power and Sample Size- Hypothesis testing, P-values, confidence intervals, General power/sample size, estimating effect size, Matching sample size calculations to endpoints. Importance of statistics in clinical research Statistical considerations at the design, analysis and reporting stage Data management - Data collection, Paper or electronic, Parsimony, Data validation, SAE reconciliation, query management Software considerations. Data Monitoring, Trial Conduct - Data quality assurance, Data delinquency, Data Monitoring, d. Trial Conduct, Occurrence and control of variation and bias.

SUGGESTED READINGS:

1. Friedman. M., Furberg. C. and Demets D. L. (2015). Fundamentals of clinical trials. Springer.
2. Machin. D. and Fayers. P. (2010). Randomized Clinical Trials: Design Practice and Reporting. Wiley-Blackwell
3. Piantadosi. S. (2017). Clinical Trials: A Methodologic Perspective. John Wiley and sons.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain about basics of system biology,
- To discuss about microarray technology
- To compare and conclude developmental system biology.
- To explain the basic mechanisms of expression networks.
- To explain the use of various networks in system biology.
- To formulate knowledge in experimental system biology.

Course Outcomes

1. Outline the basis of system biology.
2. Relate the microarray and its allied technology
3. Illustrate the concept of developmental system biology.
4. List the basic mechanisms of expression networks.
5. Experiment with the mechanisms associated with experimental system biology.
6. Describe the application of system biology

UNITI INTRODUCTION

Introduction to systems biology, biological networks, protein interaction networks- computational prediction of protein interactions, network topology analysis; bus-star-ring networks.

UNITII MICROARRAYTECHNOLOGY

Microarray data analysis - Microarray analysis platforms - Introduction to Concepts and principles of Microarray technology - Application of Microarrays in Life Sciences.Different Markup languages used in systems biology.Introduction to NGS technology.

UNITIII DEVELOPMENTAL SYSTEMS BIOLOGY

Building an Organism Starting From a Single Cell -Quorum Sensing – Programmed Population Control by Cell-Cell Communication and Regulated Killing- Drosophila Development. Establishment

of Developmental Precision and Proportions in the Early *Drosophila* embryo.

UNIT IV GENE EXPRESSION NETWORKS

Gene regulation at a single cell level- Transcription Networks -basic concepts -coherent Feed Forward Loop (FFL) and delay gate -The incoherent FFL -Temporal order, Signaling networks and neuron circuits -Aspects of multi-stability in gene networks.

UNIT V EXPERIMENTAL SYSTEM BIOLOGY

Building an Organism Starting From a Single Cell -Quorum Sensing – Programmed Population Control by Cell-Cell Communication and Regulated Killing- *Drosophila* Development.

SUGGESTED READINGS:

3. Causton. H., Quackenbush. J. and Brazma. A. (2008). Microarray Data Analysis: Gene Expression Data Analysis. A Beginner's Guide, 1st edition. Wiley-Blackwell.
4. DiStefano. J. (2015). Dynamic Systems Biology Modeling and Simulation, 1st edition. Academic Press.

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain the structure and function of genomes
- To understand the technologies developed for genomics, functional genomics and NGS.
- To originate and predict the big data analytics as the next wave for businesses looking for competitive advantage
- To explain about the financial value of big data analytics
- To predict and propose the various tools and practices for working with big data
- To identify and make use of how big data analytics can leverage into a key component

Course Outcomes

1. Compile the fundamental concepts of Genome informatics and NGS.
2. Perceive and prioritize the fundamentals of various big data analytics techniques.
3. Summarize the big data platform and explore the big data analytics techniques business applications.
4. Analyse health care data using appropriate analytical techniques.
5. Appraise how to mine the data
6. Organize the techniques adopted to analyse health care data.

UNIT – I INTRODUCTION TO GENOME INFORMATICS

Microarray analysis definition, types of microarray, microarray analysis life cycle (sample preparation and labeling, hybridization, washing and image acquisition), microarray data analysis, tools, databases and software for microarray data analysis. Past, present and feature of sequencing technology. Platform overview: Illumina, Pacific Biosciences. Comparison of NGS Systems: Recent scientific breakthroughs using NGS technology. Major biological databases and its classification, sequence database - NCBI, GenBank, EMBL, DDBJ. NGS Database: SRA, DRA, ENA. File/Data formats overview: FASTA, FASTQ, FNA, CSFASTA, GFF, SAM and BAM. Genome alignment and analysis tools- BWA (Burrows-Wheeler Aligner), SAMtools, GATK (The Genome Analysis Toolkit), IGV (Integrative Genomics Viewer), HISAT, StringTie, Cuffcompare, Velvet, Oases, Trinity. Advantage and disadvantage of NGS Technology.

UNIT - II WHOLE GENOME / EXOME / TARGETED RESEQUENCING ANALYTICS

Introduction to genome Re-Sequencing, Indexing the reference genome, Sequence Alignment Tools and its Parameters, Alignment quality Assessment, Exome Enrichment Analysis, Target /Non-Target Enrichment Analysis, Statistical Analysis and genome Visualization, Introduction to Variation Analysis, Variation analysis to identify SNV / MNV / SV, dbSNP Annotation / Variation Effect Prediction, Variation Frequency Analysis, Exome Copy Number Variation Analysis, Data Visualization, Function & Structure based Comparative Genome Analysis.

UNIT III INTRODUCTION TO BIGDATA

Analytics – Nuances of big data – Value – Issues – Case for Big data – Big data options Team challenge – Big data sources – Acquisition – Nuts and Bolts of Big data. Features of Big Data - Security, Compliance, auditing and protection - Evolution of Big data – Best Practices for Big data Analytics - Big data characteristics - Volume, Veracity, Velocity, Variety – Data Appliance and Integration tools – Greenplum – Informatica

UNIT IV PREDICTIVE ANALYTICS AND VISUALIZATION

Predictive Analytics – Supervised – Unsupervised learning – Neural networks – Kohonen models – Normal – Deviations from normal patterns – Normal behaviours – Expert options – Variable entry - Mining Frequent itemsets - Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent itemsets in a stream – Clustering Techniques – Hierarchical – K- Means – Clustering high dimensional data Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications:

UNIT V APPLICATIONS

Applications and Practical Systems for Healthcare– Data Analytics for Pervasive Health- Fraud Detection in Healthcare- Data Analytics for Pharmaceutical Discoveries- Clinical Decision Support Systems- Computer-Assisted Medical Image Analysis Systems- Mobile Imaging and Analytics for Biomedical Data.

SUGGESTED READINGS:

6. Han. J. and Kamber. M. (2008). Data Mining Concepts and Techniques. 2nd Edition. Elsevier

Instruction Hours/week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To explain the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/ international policies with a futuristic vision along with socio-economic impact and issues
- To discuss ICT applications in medicine with an introduction to health informatics.
- To demonstrate the theories and practices adopted in Hospital Information Systems in the light of medical standards, medical data formats.
- To understand the recent trends in Hospital Information Systems.
- To distinguish and utilize basic impression on health informatics.
- To explain data mining in health care systems.

Course Outcomes

1. Comprehend and appreciate the significance and role of this course in the present contemporary world
2. Discuss about health informatics and different ICT applications in medicine.
3. Explain the function of Hospital Information Systems
4. Analyze medical standards
5. Decide and determine medical data formats and recent trends in hospital information system.
6. Originate and plan data acquisition for healthcare.

UNITI MEDICAL INFORMATICS

Introduction – Medical Informatics – Bioinformatics – Health Informatics - Structure of Medical Informatics –Functional capabilities of Hospital Information System - On-line services and Off – line services - History taking by computer, Dialogue with the computer

UNITII MEDICAL STANDARDS

Evolution of Medical Standards – IEEE 11073 - HL7 – DICOM – IRMA - LOINC – HIPPA – Electronics Patient Records –Healthcare Standard Organizations – JCAHO (Join Commission on Accreditation of Healthcare Organization) - JCIA (Joint Commission International Accreditation) - Evidence Based Medicine - Bioethics.

UNITIII MEDICAL DATA STORAGE AND AUTOMATION

Plug-in Data Acquisition and Control Boards – Data Acquisition using Serial Interface - Medical Data formats – Signal, Image and Video Formats – Medical Databases - Automation in clinical laboratories - Intelligent Laboratory Information System - PACS , Datamining.

UNITIV HEALTHINFORMATICS

Bioinformatics Databases, Bio-information technologies, Semantic web and Bioinformatics, Genome projects, Clinical informatics, Nursing informatics, Public health informatics, Education and Training

UNITV RECENT TRENDS IN MEDICALINFORMATICS

Medical Expert Systems, Virtual reality applications in medicine, Virtual Environment - Surgical simulation - Radiation therapy and planning – Telemedicine – virtual Hospitals - Smart Medical Homes – Personalized e-health services – Biometrics - GRID and Cloud Computing in Medicine.

SUGGESTED READINGS:

1. R.D.Lele, (2005) Computers in medicine progress in medical informatics I: Tata McGraw Hill Publishing computers Ltd, New Delhi.

MOLECULAR MODELING

Semester-VIII
3H-3C

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3Hours

Course Objectives

- To define the basic view of concept of molecular modelling.
- To demonstrate the computational quantum mechanics through different methods.
- To explain the general features of molecular mechanics.
- To discuss the molecular dynamics simulation methods.
- To outline the basic concept on cheminformatics molecular modeling.
- To explain the diverse techniques on molecular modeling.

Course Outcomes

1. Identify different views on global and local energy minima through molecular modeling.
2. Differentiate various calculations on molecular properties.
3. Illustrate the concept behind molecular mechanics through derivative methods.
4. Evaluate and characterize molecules simulation through dynamics methods.
5. Analyze and categorize the structure based drug design for targets.
6. Explain the diverse techniques on molecular modeling.

UNIT-I MOLECULARMODELLING

Introduction to concept of molecular modeling, molecular structure and internal energy, applications of molecular graphics, coordinate systems, potential energy surfaces, discussion of local and global energyminima

UNIT-II QUANTUMMECHANICS

Introduction to the computational quantum mechanics; one electron atom, ply electronic atoms and molecules, Hartree Fock equations; calculating molecular properties using ab initio and semi empirical methods.

UNIT-III MOLECULARMECHANICS

Molecular mechanics; general features of molecular mechanics force field, bond stretching, angle bending, torsional terms, non – bonded interactions; force field parameterization and transferability; effective pair potential, energy minimization; derivative and non – derivative methods, applications of energy minimization.

UNIT-IV MOLECULARDYNAMCS

Molecular dynamics simulation methods; molecular dynamics using simple models, molecular dynamics with continuous potential, setting up and running a molecular dynamic simulation, constraint dynamics; Monte Carlo simulation; Monte Carlo simulation ofmolecules.

UNT-V MODELLING AND DRUGDESIGN

Introduction to cheminformatics, Macromolecular modeling, design of ligands for known macro molecular target sites, Drug- receptor interaction, classical SAR /QSAR studies and their implications to the 3 D modeler, 2-D and 3-D database searching, pharmacophore identification and novel drug design, molecular docking, Structure-based drug design for all classes of targets.

SUGGESTED READINGS:

1. Leach. A. (2001). Molecular modeling: Principles and application. PrenticeHall.
2. Cohen. N. C. (1996). Guide book on molecular modeling in drug design. AcademicPress.
3. Yvonne, Martin. C. and Willett. P. (1998). Designing bioactive molecules: threedimensional techniques and applications. Washington, DC. American chemical society.
4. Schlecht. M. F. (1998). Molecular modeling on the PC. Wiley - Blakwell;Har.

Course Objectives

- To explain the human nervous system,
- To demonstrate about neuro physiology
- To manage and diagnose about neuro pharmacology.
- To categorize the mechanism of neurological behaviour.
- To interpret basic impression about the disorders associated with nervous system.
- To discuss the applications of neurobiology

Course Outcomes

1. Outline the basis of central and peripheral nervous system and describe the structure of neurons and supporting cells.
2. Demonstrate the mechanism of action potential conduction and working of voltage dependent channels.
3. Illustrate the concept of synaptic transmission and mechanism of action of neurotransmitters.
4. List the basic mechanisms of sensations and skeletal muscle contraction.
5. Enumerate the mechanisms associated with motivation behaviours.
6. Describe the various disorders of nervous system

UNIT I - NEUROANATOMY

Overview of central and peripheral nervous system, Neurons and its structure, types and functions, Glial cells and types, synapses: types and functions, myelination, Blood Brain barrier, Neural Development; Cerebrospinal fluid – origin and composition, Spinal cord and its functions.

UNIT II - NEUROPHYSIOLOGY

Resting and action potential, mechanism of action potential conduction, voltage dependent channels: sodium and potassium channels, electrical transmission; information representation and coding by neurons.

UNITIII- NEUROPHARMACOLOGY

Synapse formation, synaptic transmission, neurotransmitters and their mechanism of action: acetyl choline, serotonin and dopamine, fast and slow transmission; hypothalamic control of neuronal function.

UNITIV- APPLIED NEUROBIOLOGY

Basic mechanisms of sensations: touch, pain, smell, taste, neurological mechanisms of vision and audition, skeletal muscle contraction

UNITV- BEHAVIOURAL SCIENCE

Basic mechanisms associated with motivation, regulation of feeding, sleep, hearing and memory, Disorders associated with nervous system: Parkinson's disease, Alzheimer's disease, Schizophrenia, Anxiety and mood disorders: depression, Agoraphobia.

OPEN ELECTIVES

SOLID WASTE MANAGEMENT**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives:**

- To make the students conversant with basics of Solid waste and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand the chemical principles in the projects undertaken in field of engineering and technology

Course Outcome:

1. Outline the basic principles of Solid waste and separation of wastes (K)
2. Identify the concepts of treatment of solid wastes(S)
3. Identify the methods of wastes disposals.(S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

GREEN CHEMISTRY**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES:**

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basics information on catalysis.
- To apply the concepts of green catalysts in the synthesis

COURSE OUTCOMES:

1. Outline the basic principles of green chemistry (K)
2. Examine the different atom efficient process and synthesis elaborately (S)
3. Apply the concepts combustion of green technology (S)
4. Identify and apply the concepts of renewable energy(S)
5. Apply the concepts of green catalysts in the synthesis (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air.Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

APPLIED ELECTROCHEMISTRY**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Objectives:**

- To make the students conversant with the information on electrochemical material.
- To make the student acquire sound knowledge of conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principles of solar cells and its applications
- To understand the chemical principles in the projects undertaken in field of engineering.

Course Outcomes:

1. Outline the basic principles of chemistry in electrochemical material (K)
2. Examine the properties of conducting polymers(S)
3. Apply the concepts of electrochemistry in storage devices.(S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI METAL FINISHING

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electrowinning.

UNITII CONDUCTING POLYMERS ANDELECTROCHEMICALS

lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNITIII BATTERIES AND POWERSOURCES-I

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics

TOTAL :45

Suggested Readings:

INDUSTRIAL CHEMISTRY**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives:**

- To make the students conversant with cement and lime and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts explosives.
- To acquaint the students with the basics of agriculture chemicals.
- To understand the chemical principles in the projects undertaken in field of engineering.

Course Outcomes:

1. Outline the basic chemistry of cement and lime (K)
2. Examine the uses of abrasives and refractories (S)
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens(S)
5. Identify the usage of the agriculture chemicals(S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME

Manufacture of Portland cement – setting and hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydrauliclime.

UNIT II ABRASIVES AND REFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

TECHNICAL WRITING**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES:**

- Develop abilities to write technically and expressively,
- Recognize writing as a constructive, meaningful process,
- Practice using reading strategies for effective writing.
- Design effective technical documents for both print and digital media
- Identify the qualities of good technical writing
- To improve the ability of writing.

COURSE OUTCOMES:

Students undergoing this course are able to

1. Construct simple sentences, correct common grammatical errors in written English.
2. Develop confidence in English language by imbibing lexical and syntax rules.
3. Enrich their reading ability for effective writing.
4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT- I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer's block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT- 2 PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT- 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT – 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT– 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

GEOPHYSICS**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objective:**

- To inculcate the basics of brief history of Earth sciences
- To divulge knowledge on the basics of structure of earth and earth's gravitational field.
- To disseminate the fundamentals of magnetic field and thermal distribution of earth
- To introduce the concepts of seismology and seismic waves.
- To impart the basic knowledge of oceans
- To understand the basics and properties of sea water.

Course Outcome:

Upon completion of this course, the students will be able to

1. Gain knowledge on the basics of history of Earth sciences.
2. Acquire knowledge on concepts of structure of earth and earth's gravitational field.
3. Have adequate knowledge on the concepts of magnetic field and thermal distribution of earth
4. Obtain knowledge on the basics of seismic waves.
5. Understand the basics of oceans and properties of sea water.
6. Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I ORIGIN OF EARTH

A brief history of the development of Earth Sciences . An overview of Geophysical methods and their essential features, Problems of inversion and non-uniqueness in Geophysics, Origin & evolution of Solar system, Earth and Moon structure, Kepler's law of planetary motion, A review of the Earth's structure and composition

UNIT II STRUCTURE OF EARTH

Chemical composition of Earth, Rheological behavior of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, Major features of the Earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sun spot, solar flares, geomagnetic storms, sea-floor spreading, Paleomagnetism and its uses, Thermal history of the Earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle

UNIT IV SEISMOLOGY

Earthquake seismology, Earthquakes and its classifications, Global seismicity and tectonics, Earth's internal structure derived from seismology, Earthquake mechanism and Anderson's theory of faulting, Continental drift and plate tectonics: its essential features, present day plate motions, Triple junctions, oceanic ridges, Benioff zones, arcs, hot spots, Mantle Plume, Mountain building, origin of Himalaya, Geodynamics of Indian subcontinent.

UNIT V OCEANS

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, Circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, Laws of seas, Coastal zone management

Total: 45

ENGINEERING ACOUSTICS**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES:**

- To disseminate the fundamentals of acoustic waves.
- To inculcate the characteristics of radiation and reception of acoustic waves.
- To divulge knowledge on the basics of pipe resonators and filters.
- To introduce the features of architectural acoustics.
- To impart the basic knowledge of transducers and receivers.
- To apply the knowledge inputs of the course for engineering applications.

COURSE OUTCOME:

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics..
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence – method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones –

detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNITIV ARCHITECTURAL ACOUSTICS

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNITV TRANSDUCTION

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser –microphone – moving coil electro dynamics microphone piezoelectric microphone – calibration of receivers

Total: 45

Suggested Readings:

1. Lawrence E. Kinsler, Austin R. Frey, Fundamentals of Acoustics, John Wiley & Sons, 4th edition 2000.
2. F. Alton Everest & Ken Pohlmann, Master Handbook of Acoustics, McGraw Hill Professional, 6th edition 2014.

4. www.acoustics-engineering.com
5. www.nptel.ac.in
6. www.ocw.mit.edu

INDUSTRIAL MATHEMATICS – I**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****OBJECTIVES:**

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP,
- To learn the techniques to solve transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis
- Analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To formulate and solve problems as networks.

INTENDED OUTCOMES:

1. To define and formulate linear programming problems and appreciate their limitations.
2. To solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
3. To be able to build and solve Transportation Models, Assignment Models,
4. To construct linear integer programming models and discuss the solution techniques.
5. To formulate and solve problems as networks and graphs.
6. To be able to solve problems in different environments and develop critical thinking

UNIT I LINEAR PROGRAMMING PROBLEM

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method.

UNIT II TRANSPORTATION PROBLEM

Transportation Model, finding initial basic feasible solutions, moving towards optimality, Degeneracy.

UNIT III ASSIGNMENT PROBLEM

Solution of an Assignment problem, Multiple Solution, Hungarian Algorithm, Maximization in Assignment Model, Impossible Assignment.

UNIT IV INTEGER PROGRAMMING

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT V NETWORK ANALYSIS

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

Total : 45

Suggested Readings:

1. Hamdy Taha. A., Operations Research, Prentice – Hall of India Private Limited, New Delhi. 2013.

INDUSTRIAL MATHEMATICS – II**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****OBJECTIVES:**

- To kindle analytical skills for solving engineering problems
- To impart the knowledge about inventory models
- To learn replacement models and simulation models
- To provide techniques for effective methods to solve nonlinear programming and decision making.
- To analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To solve problems using non integer programming.

INTENDED OUTCOMES:

The students will

1. To be able to solve simple models in Inventory problems and Replacement problems.
2. To understand different queuing situations and find the optimal solutions using models for different situations.
3. Simulate different real life probabilistic situations using Monte Carlo simulation technique.
4. To be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
5. Convert and solve the practical situations into replacement models.
6. To understand how to model and solve problems using non integer programming.

UNIT– I INVENTORY MODELS

Economic order quantity models-techniques in inventory management-ABC analysis.

UNIT– II NON LINEAR PROGRAMMING

Khunchuker conditions with non-negative constraints- Quadratic programming- Wolfe's modified simplex method.

UNIT– III SIMULATION MODELS

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT-IV DECISION MODELS

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

UNIT-V REPLACEMENT MODELS

Models based on models that gradually deteriorate with time-whose maintenance cost increase with time-Replacement of items that fail suddenly and completely.

FUZZY MATHEMATICS**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES:**

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To understand the concept of fuzziness involved in various systems.

COURSE OUTCOME:

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, t-conorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference –
Compositional rule of Inference - Efficiency of Inference - Hierarchical

Total : 45

2. Zimmermann H.J. Fuzzy Set Theory and its Applications, Kluwer Academic publishers, USA.2001.
3. Michal Baczynski and BalasubramaniamJayaram, Fuzzy Implications, Springer-Verlag publishers,Heidelberg,2008
4. Kevin M Passino and Stephen Yurkovich, Fuzzy Control, Addison Wesley Longman publishers,USA,1998.

MATHEMATICAL PHYSICS**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES:**

- To know the fundamentals of Tensors.
- To know the series solutions to differential equations.
- To introduce the concepts of special functions.
- To study about Calculus of variations and integral equations
- Be familiar with the main mathematical methods used in physics.
- To learn different ways of solving second order differential equations.

COURSE OUTCOME:

1. Students will demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
2. Learn about special type of matrices that are relevant in physics and then learn about tensors.
3. Get introduced to Special functions like Bessel, Legendre , Hermite and Laguerre functions and their recurrence relations
4. Learn different ways of solving second order differential equations and familiarized with singular points and Frobenius method.
5. Students will master in calculus of variations and linear integral equations.
6. The students will have the knowledge on Mathematical Physics and that knowledge will be used by them in different engineering and technology applications.

UNIT I TENSORS

Definition of tensor - rank, symmetric tensors, contraction, quotient rule - tensors with zero components, tensor equations, metric tensors and their determinants - pseudo tensors

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series Solution : Classification of singularities of an ordinary differential equation - Series solution-Method of Frobenius - indicial equation - examples

UNIT III SPECIAL FUNCTIONS

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre , Hermite and Laguerre functions – Generating Function

UNIT IV CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler’s equation – Functional dependant on first and higher order derivatives – Functional dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric Problems – Direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green’s function – solution of aintegral equation – integral equations of the convolution type – Abel’s integral equations – integro–differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

LINEAR ALGEBRA**Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****COURSE OBJECTIVES:**

- To introduce the basic concepts of vectorspace
- To know the fundamentals of linearAlgebra
- To solve system of linear equations
- To study about the lineartransformations
- To introduce the concepts of inner productspaces
- To apply the basic concepts in their respective fields

COURSE OUTCOMES:

The student will be able to

1. To explain the fundamental concepts of advanced algebra and their role inmodern mathematics and appliedcontexts.
2. To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
3. To apply the fundamental concepts in their respective engineeringfields
4. To visualize linear transformations as matrix form
5. To recognize the underlying theory of vector spaces over a field and innerproduct spaces over real or complexnumbers
6. To articulate the importance of Linear Algebra and its applications in branchesof Mathematics

UNITI VECTOR SPACES

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNITII EIGEN VALUES AND EIGENVECTORS

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNITIII SYSTEM OF LINEAREQUATIONS

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors -Diagonalization

UNIT V INNER PRODUCT SPACES

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

Total : 45

Suggested Readings:

2. Anton and Rorres, Elementary Linear Algebra, Applications version, Wiley India Edition, NewDelhi,2012.
3. Jim Defranza, Daniel Gagliardi, Introduction to Linear Algebra with Application, Tata McGraw-Hill, NewDelhi.2008.
4. wolfram.com
5. www.sosmath.com
6. www.nptel.ac.in
7. www.mathworld.

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts & techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNITI Introduction (9)

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

$$\text{UNITII} \quad \text{HTML} \quad (9)$$

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief.CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL (9)

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object-string, array, Boolean, reg-ex. Function, Errors,

Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Serverprogramming (9)

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V InternetTelephony (9)

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

TEXT BOOKS:

1. Paul Deitel, Harvey Deitel and Abby Deitel, “Internet and World Wide Web-How to Program”, 5th Edition,2011.
2. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi,2013.

REFERENCES:

1. Rahul Banerjee, Internetworking Technologies, An Engineering Perspective, PHI Learning, Delhi,2011.
2. Robert W. Sebesta, “Programming the World Wide Web”, Pearson Education,2016

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I Introduction (9)

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash (9)

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation-Working with the Timeline and Tween-based Animation–Understanding Layers - Action script.

UNIT III 3D Animation & its Concepts (9)

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption (9)

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

TEXT BOOK:

1. Computer Graphics, Multimedia and Animation-Malay K. Pakhira, PHI Learning PVT Ltd, 2010

REFERENCES:

1. Principles of Multimedia – Ranjan Parekh, 2007, TMH. (Unit I, UnitV)
2. Multimedia Technologies – Ashok Banerji, Ananda Mohan Ghosh – McGraw Hill Publication.
3. Encyclopedia of Multimedia and Animations-Pankaj Dhaka, AnmolPublications-2011

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction**(9)**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices**(9)**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNITIII PCHardwareOverview

(9)

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNITIV Installation andPreventiveMaintenance

(9)

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNITV Troubleshooting

(9)

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROMProblems.

Total Hours: 45

TEXT BOOK:

1. B. Govindarajalu, “IBM PC Clones Hardware, Troubleshooting and Maintenance”, 2/E, TMH, 2002.

REFERENCES:

1. Peter Abel, Niyaz Nizamuddin, “IMB PC Assembly Language and Programming”, Pearson Education, 2007
2. Scott Mueller, “Repairing PC's”, PHI, 1992

COURSE OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop Java programs using OOP principles
- Develop Java programs with the concepts inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA (9)

Object oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism. – Objects and classes in Java – defining classes – methods - access specifiers – static members – constructors – finalize method

UNIT II PACKAGES (9)

Arrays – Strings - Packages – Java-Doc comments – Inheritance – class hierarchy – polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS (9)

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING (9)

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to Swing – Model-View-Controller design pattern – buttons – layout management – Swing Components – exception handling – exception hierarchy – throwing and catching exceptions.

UNIT V MOTIVATION FOR GENERIC PROGRAMMING (9)

Motivation for generic programming – generic classes – generic methods – generic code and virtual machine – inheritance and generics – reflection and generics - Multi-threaded programming – interrupting threads – thread states – thread properties – thread synchronization – Executors – synchronizers.

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Suggested Readings

1. Iqbal Hussein Electric and Hybrid Vehicles: Design Fundamentals CRC Press – 2nd edition 2010.
2. Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay, Ali Emadi Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design Standardsmedia – 2nd edition 2009.
3. James Larminie, John Lowry Electric Vehicle Technology Wiley – 2nd edition 2012

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice-lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

Suggested Readings

1. Murphy W.R. and G.Mckay Butter worth Energy Management Heinemann Publications 2007.
2. John.C. Andreas Energy Efficient Electric Motors Marcel Dekker Inc Ltd – 3rd edition 2005.
3. W.C.Turner Steve Doty Energy Management Handbook Lulu Enterprises, Inc. - 8th Edition Volume II 2013.

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students know about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

Suggested Readings

1. JR Hackworth and F.D Hackworth – Jr Programmable Logic Controllers – Programming Method and Applications Pearson 2006
2. John Webb and Ronald A Reiss Programmable Logic Controllers – Principle and Applications Fifth edition, PHI 2004
3. W.Bolton Programmable Logic controller Elsevier Newnes Publications, 5th Edition 2009

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

Suggested Readings

1. Rai.G.D Non-conventional sources of energy Khanna publishers 2011
2. Khan.B.H Non-Conventional Energy Resources The McGraw Hills, Second edition 2009
3. Rao.S. & Parulekar Energy Technology Khanna publishers, Eleventh Reprint 2013
4. Godfrey Boyl Renewable Energy: Power sustainable future Oxford University Press, Third edition 2012.
5. John W Twidell and Anthony D Weir Renewable Energy Resources Taylor and Francis – 3rd edition 2015.

LIST OF OPEN ELECTIVES OFFERED BY
ELECTRONICS AND COMMUNICATION ENGINEERING TO OTHER
DEPARTMENTS

B.E Electronics and Communication Engineering

2018-2019

Semester-___

18BEECOE01

Real Time Embedded Systems

3H-3C

Instruction Hours/week: L: 3 T:1P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3Hours

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems- embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks-Real Time Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion– Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management–Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

Introduction-µ C/OS-II Features-Goals ofµ C/OS-II-Hardware and Software Architecture– Kernel Structures: Tasks–Task States–Task Scheduling–IdleTask–Statistics Task–Interrupts

Under μ C/OS-II –Clock Tick– μ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–StackChecking–Task’sPriority–SuspendingTask– resumingTask.TimeManagement: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB waitList.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box– Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue– Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks–Creating Partition–Obtaining a Memory Block–Returning a Memory Block. Getting Startedwith μ C/OS-II–Installing μ C/OS-II–Porting μ C/OS-II: Development Tools–Directories and Files– Testing a Port -IAR Workbench with μ C/OS-II– μ C/OS- II Porting on a 8051CPU– Implementation of Multitasking-Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help of μ C/OS-II.

SUGGESTED READINGS

1. Floyd JeanJ. Labrosse Micro C/OS–II The Real Time Kernel CMPBOOKS2009
2. David Seal ARM Architecture Reference Manual.Addison-Wesley2008
3. Steve Furbe, ARM System-on-Chip Architecture, Addison-Wesley Professional, California2000.
4. K.V.K.K.Prasad Embedded Real-Time Systems: Concepts, Design & Programming Dream Tech Press 2005.
5. Sriram V Iyer, Pankaj Gupta Embedded Real Time Systems Programming Tata Mc Graw Hill2004

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT-I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT-II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM-Components of a Remote Control.

UNIT-III OPTICAL RECORDING AND REPRODUCTION

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal–Video Disc–Video disc formats- recording systems–Playback Systems.

UNIT-IV TELECOMMUNICATIONS SYSTEMS

Telephone services-telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNIT-V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and

software; Components of air conditioning and refrigeration systems.

SUGGESTED READINGS

1. S.P. Bali Consumer Electronics Pearson Education 2007
2. J.S.Chitode Consumer Electronics Technical Publications 2007
3. Philip Hoff, Philip Herbert Hoff Consumer Electronics for Engineers Cambridge University Press 1998

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT-I INTRODUCTION TO NEURAL NETWORKS

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT-II LEARNING PROCESS

Error– correction learning– memory based learning- hebbian learning-competitive learning-Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT-III PERCEPTION

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm- Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT-IV ATTRACT OR NEURAL NETWORK AND ART

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain- Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT-V SELF ORGANIZATION

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

SUGGESTED READINGS

5. Wasserman P.D Neural Computing Theory & Practice Van Nostrand Reinhold 1989.
6. Freeman J.A, S. K. S. Neural networks, algorithms, applications, and programming techniques Addison Wesley 2005.

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy fiction and de fuzzy fiction procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT-I BASICS OF FUZZY LOGIC

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT-II THEORY OF APPROXIMATE REASONING

Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT-III FUZZY KNOWLEDGE BASED CONTROLLERS

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy fiction and de fuzzy fiction procedures–Design of Fuzzy Logic Controller

UNIT-IV ADAPTIVE FUZZY CONTROL

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT-V FUZZY BASED SYSTEMS

Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical Applications-Introduction to ANFIS.

18BEECOE05**Principles of Modern Communication System****3H-3C****Instruction Hours/week: L:3T:0 P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3 Hours****Course Objectives**

- To provide students with an overview of communication systems
- To provide an overview on mobile communication
- To make students to have a better understanding on satellite and radar communication
- To understand the basic communication techniques which in turn are used as the building blocks of the larger and more complex communication systems.
- To acquire the basic engineering understanding to the modern communication systems and; the relevant theory and technique.
- Design simple systems for landing and navigation.

Course Outcomes

At the end of the course the students will be able to

- Understand past, present and future trends in mobile communication.
- Gain knowledge about mobile cellular communication
- Understand various standards in use for wireless communication and its application.
- Demonstrate some basic application of GPS.
- Gain knowledge about RADAR working and its applications
- Demonstrate how a simple radar system works and its applications.

UNIT I THE EVOLUTION OF ELECTRONIC COMMUNICATION

From smoke signals to smart phones - History of communications: Theoretical Foundations, Development & Applications - Frequencies for communication - Frequency regulations - Overview of communication transmitter and receiver.

UNIT II MOBILE CELLULAR COMMUNICATIONS

Evolution to cellular networks – Cellular systems generations and standards: 1G, 2G, 3G, 4G - Cellular network components - Components of a mobile phone - setting up a call process - Making a call process - Receiving a call process - Spectrum allocation: Policies and strategies, Role of TRAI.

UNIT III WIRELESS COMMUNICATION

Introduction - Bluetooth - Infrared communication - IEEE Wireless LANs (Wi-Fi) - IEEE 802.16 (WiMAX) - Future mobile and wireless networks: Introduction to 5G- device to device communication-IoT.

UNIT IV SATELLITE COMMUNICATION

History of Satellite communication, Basics of Satellites, Types of Satellites, Capacity Allocation - Launch Vehicles and Orbits: Introduction to launching vehicles, Important Orbits, working of rocket, Three Pioneers of Rocketry - Basics of Global Positioning System (GPS) - Applications of GPS.

UNIT V RADAR & NAVIGATION

Introduction, Radar Block diagram and Operation, Radar Frequencies, Applications of Radar. Navigation Systems: Introduction & methods of navigation, Instrument Landing System, Microwave landing system- Modern Navigation systems.

SUGGESTED READINGS

18BEAE0E01	AUTOMOBILE ENGINEERING	3H-3C
Instruction Hours/Week: L:3T:0P:0		Marks: Internal:40External:60Total:100
		End Semester Exam:3Hours

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Explain the function and working of components in transmission and drive lines.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND AUXILIARY SYSTEMS

Classification of engines – construction and working of four-stroke spark ignition (SI) engine and compression ignition (CI) engine – construction and working of two-stroke SI and CI engine – firing order – carburettor – fuel injection systems – battery – dynamo – alternator – starting motor – lighting system – ignition system.

UNIT II TRANSMISSION SYSTEMS

Requirements of transmission system – flywheel – clutch – types of clutch – construction of single and multi-plate clutches – need, types and construction of transmission gear box – universal joint – propeller shaft – need, types and construction of differential – four wheel drive.

UNIT III STEERING AND SUSPENSION SYSTEMS

Principle of steering – steering linkages – types of steering gear box – power steering – suspension systems – need and types – independent suspension – coil spring, leaf spring, torsion bar and air suspension – shock absorbers.

UNIT IV WHEELS AND BRAKES

Wheels and tyres – construction – types and specifications – tyre wear and causes – brakes – need – braking distance – types – mechanical, hydraulic and pneumatic brakes – power brake – parking brake – redundant braking system.

UNIT V CURRENT AND FUTURE TRENDS

Anti-lock Braking System (ABS) – brake assist – Electronic Brakeforce Distribution (EBD) – airbags – automatic high-beam control – backup cameras – defogger – electric vehicles – hybrid vehicles – autonomous vehicles – vehicle-to-vehicle communication – vehicle tracking – alternative fuels.

Suggested Readings:

1. Kirpal Singh, *Automobile Engineering Volume 1*, Standard Publishers, New Delhi, 2018.
2. Sethi H M, *Automobile Technology*, Tata McGraw-Hill, New Delhi, 2003.
3. William H Crouse and Donald L Anglin, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2006.
4. Srinivasan S, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2003.
5. Ganesan V, *Internal Combustion Engines*, McGraw-Hill Education, New Delhi, 2012.

Course Objectives:

- To impart technical knowledge on construction and working of the power train and drive train of two and three wheeler vehicles.
- To familiarise with maintenance procedures of the engine and subsystems of two and three wheelers.
- To impart knowledge on types of transmission systems
- To impart knowledge on types of steering and suspension systems
- To impart knowledge on types of wheels, tyres and brakes for two and three wheelers
- To make the students conversant on servicing of two and three wheelers.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

History of two and three wheelers – classification and layouts of two wheelers – classification and layouts of three wheelers – main frame for two wheelers and types – main frame for three wheelers and types.

UNIT II INTERNAL COMBUSTION ENGINES

Classification of engines – selection criteria of engine for two and three wheelers – design considerations for two and three wheeler engines – construction and working of two-stroke and four-stroke engines – fuel feed system – lubricating system – cooling system – scavenging system – cranking system – kick start and auto-start mechanisms.

UNIT III TRANSMISSION, STEERING AND SUSPENSION SYSTEMS

Clutch – single plate, multiple plate and centrifugal clutches – primary reduction – gear box – gear shifting mechanisms – automatic transmission – final drive and differential for three wheelers – steering geometry – steering column construction – steering system for three wheelers – front and rear suspension systems – spring and shock absorber assembly.

UNIT IV WHEELS, TYRES AND BRAKES

Spoked wheels, pressed steel wheels and alloy wheel – tyre construction – tyre with tube and tubeless tyre – theory of brake action – drum and disc brakes – brake links layout for front and rear wheels – mechanical and hydraulic brake control systems – anti-lock braking system.

UNIT V TWO AND THREE WHEELERS CASE STUDY

Case study of mopeds, scooters, motor cycles, sports bikes, auto rickshaws, pickup vans, delivery vans and trailers – servicing – factors affecting fuel economy and emission.

Suggested Readings:

1. Dhruv U Panchal, *Two and Three Wheeler Technology*, PHI Learning, New Delhi, 2015.
2. Ramalingam K K, *Two Wheelers and Three Wheelers: Theory, Operation and Maintenance*, Scitech Publications, Chennai, 2017.
3. Irving P E, *Motorcycle Engineering*, Veloce Enterprises, USA, 2017.
4. Dennis Bailey and Keith Gates, *Bike Repair and Maintenance for Dummies*, John Wiley & Sons, USA, 2009.

D

18BEAE03

VEHICLE MAINTENANCE

3H-3C

Instruction Hours/Week: L:3T:0P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3Hours

Course Objectives:

- To understand the need for vehicle maintenance and its importance.
- To familiarise the maintenance procedure for various components of an automobile.
- To familiarize the students to understand servicing of transmission and driveline components.
- To make the students conversant on the procedure for steering and suspension
- To make the students conversant on the procedure for wheel and brake maintenance.
- To Study and acquire knowledge on the fault diagnosis in the electrical and air conditioner systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Need for maintenance – preventive and breakdown maintenance – requirements of maintenance – preparation of check lists – inspection schedule – maintenance of records, log sheets and other forms – safety precautions in maintenance – workshop layout, tools and equipment.

UNIT II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE

General engine service – dismantling of engine components – engine repair – service of basic engine parts, cooling and lubricating system, fuel system, intake and exhaust system – engine tune-up.

UNIT III TRANSMISSION AND DRIVELINE MAINTENANCE

General checks, adjustment and service of clutch – dismantling, identifying, checking and reassembling transmission, transaxle – road testing – removing and replacing propeller shaft – servicing of cross and yoke joint, and constant velocity joint – rear axle service points – removing axle shaft and bearings – servicing differential assemblies – fault diagnosis.

UNIT IV STEERING, SUSPENSION, WHEEL AND BRAKE MAINTENANCE

Inspection, maintenance and service of steering linkage, steering column, rack and pinion steering, recirculating ball steering, worm type steering, power steering system – inspection, maintenance and service of MacPherson strut, coil spring, leaf spring, shock absorbers – wheel alignment and balance – removing and fitting of tyres – tyre wear and tyre rotation – inspection, maintenance and service of hydraulic brake, drum brake, disc brake,

parking brake – bleeding of brakes.

UNIT V ELECTRICAL AND AIR CONDITIONER MAINTENANCE

Maintenance of batteries, starting system, charging system and body electrical – fault diagnosis using scan tools – maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator – replacement of hoses – leak detection – air conditioner charging – fault diagnosis – vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

Suggested Readings:

1. Tim Gilles, *Automotive Service: Inspection, Maintenance, Repair*, Cengage Learning, USA, 2015.
2. Philip Knott and Adam Roylance, *An Introductory Guide to Motor Vehicle Maintenance: Light Vehicles*, EMS Publishing, UK, 2010.
3. James D Halderman and Curt Ward, *Advanced Engine Performance Diagnosis*, Pearson, USA, 2016.
4. Ed May and Les Simpson, *Automotive Mechanics Volume 1*, McGraw-Hill Australia, 2006.
5. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, USA, 2017.
6. Service manuals of various OEMs.

Instruction Hours/Week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives:**

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles – stratified charged / lean burn engines – hydrogen engines – battery vehicles – electric propulsion with cables – magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Adaptive cruise control – intelligent speed adaptation – lane departure warning systems – traction control systems – driver drowsiness detection system – collision avoidance systems – hill descent control – anti spin regulation – parking assistance systems – night-vision systems – pedestrian detection.

UNIT III SUSPENSION, BRAKES AND SAFETY

Interconnected air and liquid suspensions – hydrostatic suspension system – hydragas suspension – closed loop suspension – indirect floating calliper disc brake – self energising disc brake – anti-skid braking system – retarders – regenerative braking – auto emergency braking – crumple zone – safety cage – airbags – seat belts – headrests.

UNITIV EMISSION AND NOISE POLLUTION CONTROL

Engine emissions – types of catalytic converters – open loop and closed loop operation to the oxidizing catalytic converter – evaporative emission – internal and external noise – identification of noise sources – noise control techniques – adaptive noise control.

UNITV VEHICLE TELEMATICS

Building blocks of vehicle telematics system – Global Positioning System (GPS) and Geographic Information System (GIS) for vehicle tracking – automotive navigation system – road recognition system – wireless vehicle safety communications – Usage Based Insurance (UBI).

Suggested Readings:

1. Ljubo Vlacic, Michael Parent and Fumio Harashima, *Intelligent Vehicle Technologies*, Butterworth-Heinemann, UK, 2001.
2. Ronald K Jurgen, *Navigation and Intelligent Transportation Systems*, SAE International, USA, 1998.
3. Heinz Heisler, *Advanced Vehicle Technology*, Butterworth-Heinemann, UK, 2002.

5. William B Ribbens, *Understanding Automotive Electronics*, Butterworth-Heinemann, UK, 2017.
6. *Bosch Automotive Handbook*, Robert Bosch, Germany, 2018.

Instruction Hours/Week: L:3T:0P:0**Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives:**

- To impart knowledge on the personnel management, selection process, training methods and motor vehicle act.
- To plan the vehicle routes, scheduling of vehicles and fare structure.
- To design the vehicle maintenance systems.
- To Study and acquire knowledge on fare structure and analyse the methods of fare collection
- To introduce the concepts of vehicle parts, supply management and data processing
- To Study and acquire knowledge on electronically controlled vehicle maintenance system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the knowledge of personnel management and analyse the selection process and training methods.
- Apply the motor vehicle act in terms of registration and describe the various vehicles and conduct the test of competence to drive.
- Construct a fare structure and analyse the methods of fare collection.
- Analyse the vehicle parts, supply management and data processing.
- Describe the scheduled and unscheduled maintenance
- Demonstrate an electronically controlled vehicle maintenance system and analyse the work schedule.

UNIT I INTRODUCTION

Personnel management – objectives and functions of personnel management – psychology, sociology and their relevance to an organization – selection process: job description, employment tests, interviewing, introduction to training objectives, methods of training, training procedure and psychological tests.

UNIT II MOTOR VEHICLE ACT

Schedules and sections of the motor vehicle act – traffic signs, fitness certificate, registration requirements, permit, insurance and constructional regulations – description of vehicle: goods carrier, tankers, tippers, delivery vans, recovery vans, power wagons and fire fighting vehicles – spread over, running time, test of competence to drive.

UNIT III SCHEDULING AND FARE STRUCTURE

Route planning – scheduling of transport vehicles – preparation of timetable – preparation of vehicle and crew schedule – principal features of operating costs for transport vehicles – fare

structure and method of drawing up of a fare table – methods of farecollection.

UNIT IV VEHICLE PARTS, SUPPLY MANAGEMENT AND BUDGET

Cost of inventory – balancing inventory cost against downtime – parts control – bin tag systems – time management – time record keeping – budget activity and capital expenditures – classification of vehicle expenses – fleet management and data processing – data processing systems – computer controlling of fleet activity.

UNIT V MAINTENANCE

Scheduled and unscheduled maintenance – preventive maintenance – evaluation of Preventive Maintenance Inspection (PMI) programme – work scheduling – overtime – breakdown analysis – control of repair backlogs – cost of options – electronically controlled vehicle maintenance system.

Suggested Readings:

1. Robert P Currie, Michelle B Currie and George M Keen, *Fleet Management*, Wandering Brothers Publishing, USA, 2006.
2. John Dolce, *Fleet Management*, McGraw-Hill, 1884.
3. SCC Editorial, *Motor Vehicles Act, 1888*, Eastern Book Company, New Delhi, 2018.
4. Rex W Faulks, *Bus and Coach Operation*, Butterworth-Heinemann, UK, 1887.
5. John E Dolce, *Analytical Fleet Maintenance Management*, SAE International, USA, 2009.

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING**9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES**9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS**9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS**9**

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL**9**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy

and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TOTAL HRS : 45

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Sub cooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled waterplant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TOTAL HRS : 45

TEXT BOOKS

1. E.R.Ambrose, “Heat Pumps and Electric Heating”, John and Wiley and Sons, Inc., New York,2002.
2. Handbook for Building Engineers in Metric systems, NBC, New Delhi,2005.

REFERENCES

1. Philips Lighting in Architectural Design, McGraw-Hill, New York,2000.
2. A.F.C. Sherratt, “Air-conditioning and Energy Conservation”, The Architectural Press, London,2005.
3. National BuildingCode.

COURSE OBJECTIVES

1. To learn various distress and damages to concrete and masonry structures
2. To know the influence of corrosion in durability of structures
3. To understand the importance of maintenance of structures
4. To study the various types and properties of repair materials
5. To learn various techniques involved in demolition of structures
6. To Assessing damage of structures and various repair techniques

COURSE OUTCOME

By the end of this course students will have the capability/knowledge of

1. Various distress and damages to concrete and masonry structures
2. Durability of structures and corrosion mechanism
3. The importance of maintenance of structures, types and properties of repair materials etc
4. Assessing damage of structures and various repair techniques
5. Modern technique and equipment being adopted for the demolition of structures
6. Influence of corrosion in durability of structures

UNIT– I INTRODUCTION**9**

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors.

UNIT– II DURABILITY OF STRUCTURES**9**

Corrosion mechanism – diagnosis- causes and effects - cover thickness and cracking, measurements for corrosion - methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT-III MAINTENANCE AND REPAIR STRATEGIES**9**

Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration - testing techniques.

UNIT-IV MATERIALS FOR REPAIR**9**

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fibre reinforced concrete. eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete.

UNIT-V TECHNIQUES FOR REPAIR AND REPAIR OF STRUCTURES 9

Non-destructive Testing Techniques, Corrosion protection techniques , Guniting and Shotcrete Epoxy injection, Mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure Engineered demolition techniques for dilapidated structures - case studies

COURSE OBJECTIVES

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings
5. to produce designs using a combination of 2D and 3D software.
6. Get a Detailed study of an engineering artifact

COURSE OUTCOME

The students will be able to

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Get a Detailed study of an engineering artifact
6. Planning and designing of structures

UNIT 1: INTRODUCTION; Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co- ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards. **9**

UNIT 2: SYMBOLS AND SIGN CONVENTIONS: Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards **9**

UNIT 3: MASONRY BONDS: English Bond and Flemish Bond – Corner wall and Cross walls - One brick wall and one and half brick wall **9**

UNIT 4: BUILDING DRAWING: Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing

of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity

9

UNIT 5: PICTORIAL VIEW: Principles of isometrics and perspective drawing. Perspective view of building.

9

List of Drawing Experiments:

1. Buildings with load bearing walls including details of doors and windows.
2. Single storey RCC building
3. Multistorey RCC building

COURSES OFFERED TO OTHER DEPARTMENTS

18BEMEOE01

COMPUTER AIDED DESIGN

3 H – 3 C

Instruction hours / week L : 3 T : 0 P: 0

Marks: Internal : 40 External : 60 Total:100

End Semester Exam :3Hours

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcome

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNITI OVERVIEW OF CAD SYSTEMS

Conventional and computer aided design processes-advantages and disadvantages.Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations.Networking of CAD systems.

UNITII INTERACTIVE COMPUTER GRAPHICS AND GRAPHICSTRANSFORMATIONS

Generative, cognitive and image processing graphics.Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNITIII GEOMETRIC MODELING

Wireframe, surface, NURBS and solid modeling-applications and advantages.Creating primitive solids, sweeping solids, Boolean operations.Extracting entities from a solid.Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical SolidModeling(ASM)

UNITIV PARAMETRIC DESIGN AND OBJECTREPRESENTATION

Types of co-ordinate systems.Parametric design - definition and advantages.Parametric representation of analytic and synthetic curves.Parametric representation of surfaces and solids - manipulations.

UNITV PRODUCT DESIGN ANDDEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation.Mass property calculations.

SUGGESTED READINGS

1. Vera B Anand, Computer Graphics and Geometric Modeling for Engineers,1st edition, John Wiley & Sons, New York,2000
2. Radhakrishnan P and Subramanyan S, CAD/CAM/CIM, 2nd edition, New Age International Pvt. Ltd,2008
3. Ibrahim Zeid, CAD/CAM Theory and Practice,2nd edition, McGraw Hill Inc., New York,2009

4. Barry Hawhes, The CAD/CAM Process, 1st edition, Pitman Publishing, London, 2007 (digital)
5. William M Newman and Robert Sproul, Principles of Interactive Computer Graphics, 1st edition, McGraw Hill Inc., New York, 2001
6. Sadhu Singh, Computer-Aided Design and Manufacturing, 1st edition, Khanna Publishers, New Delhi, 1998

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I CONCEPTS

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety.

UNIT II TECHNIQUES

Incident Recall Technique (IRT), disaster control, Job Safety Analysis (JSA), safety survey, safety inspection, safety sampling, Safety Audit.

UNIT III ACCIDENT INVESTIGATION AND REPORTING

Concept of an accident, reportable and non reportable accidents, unsafe act and condition – principles of accident prevention, Supervisory role- Role of safety committee – Accident causation models - Cost of accident. Overall accident investigation process - Response to accidents, India reporting requirement, Planning document, Planning matrix, Investigators Kit, functions of investigator, four types of evidences, Records of accidents, accident reports

UNIT IV SAFETY PERFORMANCE MONITORING

Reactive and proactive monitoring techniques - Permanent total disabilities, permanent partial disabilities, temporary total disabilities - Calculation of accident indices, frequency rate, severity rate, frequency severity incidence, incident rate, accident rate, safety “t” score, safety activity rate – problems.

UNIT V SAFETY EDUCATION AND TRAINING

Importance of training-identification of training needs-training methods – programme, seminars, conferences,

competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

SUGGESTED READINGS

1. Accident Prevention Manual for Industrial Operations, 3rd edition, N.S.C. Chicago,2010(digital).
2. Heinrich H.W. “Industrial Accident Prevention”, 2nd edition, Tata McGraw-Hill Company, New York, 1941.
3. Krishnan N.V, Safety Management in Industry, 1st edition, Jaico Publishing House, Bombay,1997.
4. John R Ridley, Safety at Work,3rd edition,Elsevier,2014
5. Roland P. Blake ,Industrial Safety, 2ndedition,Prentice Hall, Inc., New Jersey,1973
6. L M Deshmukh, Industrial safety management,1stedition, TATA McGraw Hill,2005

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcome

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non-Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometries in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous

media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Airstripping

SUGGESTED READINGS

1. Geankoplis, C. J, Transport Processes and Separation Processes Principles, 4thedition, Prentice Hall,2013
2. R. Byron Bird, Warren E. Stewart, Edwin N. Lightfoot, Transport Phenomena, 1st edition, John Wiley & Sons, 2007.
3. Edwin N. Lightfoot, Transport phenomena and living systems: biomedical aspects of momentum and mass transport, 1st edition, Wiley, 1973, 2007(digital)

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcome

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-

SUGGESTED READINGS

1. Duane Knudson, Fundamentals of Biomechanics, 1st edition, Springer Science+ Business Media, LLC, 2013
2. C. Ross Ethier Craig A. Simmons, Introductory Biomechanics, 1st edition, Cambridge University Press, 2008

COURSE OBJECTIVE:

- To provide students with a general awareness on the importance of energy
- To provide awareness about conservation, its impact on society, various energy sources, energy conversion processes, energy management, energy audit and energy conservation measures.
- To introduce the energy and water management principles related to process Chemical plants.
- To introduce various forms of energy and its forms.
- To introduce the growth, need and necessity of the consumption energy.

COURSE OUTCOMES:

After completion of the course, students are able to

- Plan to optimize energy using systems and procedures to meet energy demand
- Describe the movement of substances in the entire globe
- Examine the relationship between energy systems and society
- Use optimization techniques for conservation of energy in chemical industries
- Evaluate the production rate and analyze the cost from economic balance for energy consumption.
- Understand the concepts of conservation of the resources available.

PLANNING FOR ENERGY NEEDS

Forecasting techniques; energy demand; magnitude and pattern; input and output analysis; energy modelling and optimal mix of energy sources.

(9)

ENERGY AND ENVIRONMENT

Energy; various forms; energy storage; structural properties of environment; bio-geo-chemical cycles; society, environment population and technology.

(9)

ENERGY AND SOCIETY

Energy and evolution; growth and change; patterns of consumption in developing and advanced countries; commercial generation of power requirements and benefit.

(9)

MANAGEMENT OF ENERGY CONSERVATION IN CHEMICAL INDUSTRIES

Chemical industries; classification; conservation in unit operations such as separation; cooling tower; drying; conservation applied to refineries, petrochemical, fertilisers, cement, pulp and paper, food and chlor-alkali industries; conservation using optimization techniques.

(9)

ECONOMIC BALANCE IN ENERGY CONSUMPTION

Cost analysis; capacity; production rate; system rate; system cost analysis; corporate models; production analysis and production using fuel inventories; input-output analysis; economics; tariffs

(9)

SUGGESTED READINGS

- Jerrold H Kertz, Energy Conservation and Utilization, Allyn and BacurInc,1976.
- Gemand M Gramlay, Energy, Macmillion publishing Co, Newyork,1975
- Krentz J. H., Energy Conservation and Utilization, Allyn and Bacur Inc.,1976.
- Gramlay G. M., Energy, Macmillan Publishing Co., New York,1975.
- Rused C. K., Elements of Energy Conservation, McGraw-Hill Book Co.,1985

COURSE OBJECTIVES:

- To introduce the concepts of fertilizers and manures.
- Justify the need for synthetic fertilizer.
- To understand the process and flow in manufacture of fertilizers.
- To analyze how the nitrogenous fertilizers are useful for the agriculture purpose.
- To categories the storage and handling of the fertilizers.

COURSE OUTCOMES:

After completion of the course, students are able to

- Illustrate chemical, organic fertilizers and nutrients
- Develop the flow chart for manufacture of nitrogenous fertilizers
- Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
- Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
- Illustrate the quality and pollution standards permissible in fertilizer industry.
- Application of fertilizers based on various characteristics

INTRODUCTION

Chemical Fertilizers and Organic Manures - Types of chemical Fertilizers.Secondary nutrients, micronutrients. (9)

NITROGEN FERTILIZERS

Nitrogenous Fertilizers - Methods of production of Ammonia and Urea. Nitric acid, Ammonium sulphate, Ammonium Nitrate, Calcium Ammonium Nitrate, Ammonium Chloride - Their methods of production, characteristics, storage and handling specifications. (9)

PHOSPHATIC FERTILIZERS

Raw materials, phosphate rock, Sulphur pyrites -Process for the production of Sulphuric and Phosphoric acids. Ground phosphate rock, bone meal.Single Super Phosphate, Triple Super phosphate -Methods of production, characteristics and specifications. (9)

POTASSIC FERTILIZERS

Potassium chloride, Potassium sulphate, Potassium schoenite - Methods of production, specification, characteristics.Complex Fertilizers, NPK Fertilizers, Mono ammonium phosphate, Diammonium phosphate, Nitro phosphate Methods of production. (9)

FERTILIZERS IMPACTS AND STANDARDS

Fluid fertilizers. Controlled Release of fertilizers. Solid, Liquid and Gaseous pollution from ammonia urea and NPK fertilizer industries and standards laid down for them. Fertilizer production in India.

- Menon M.G., Fertilizer Industry - Introductory Survey, Higginbothams, Madras, 1973

COURSE OBJECTIVES:

- To impart knowledge on composition treatment and effective disposal of industrial effluents.
- To understand the basic characteristics of wastewater.
- Understanding the kinetics of biological system.
- Understand the design and working principle of various treatment methods.
- Understand magnitude and influence of hazardous content

COURSE OUTCOMES:

After completion of the course, students are able to

- Examine the constituents of waste water and its effects.
- Separate the contaminants from the effluent for treatability.
- Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
- Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
- Develop process flow diagram for water reuse and sludge disposal.
- Perform efficient treatment on industrial waste water.

INTRODUCTION TO WASTE WATER ENGINEERING

Waste Water Engineering - Overview, inorganic non-metallic constituents and metallic constituents, physical and biological Characteristics. (7)

UNIT OPERATIONS AND UNIT PROCESS

Screening, Flow Equalization, Mixing, Flocculation, Grit removal, Sedimentation, Coagulation, Precipitation, Oxidation and Neutralization (11)

FUNDAMENTALS OF BIOLOGICAL TREATMENT

Introduction, Microbial growth kinetics, types of biological process for wastewater treatment - aerobic and anaerobic oxidation, Biological Nitrification and De-nitrification, biological phosphorous removal, activated sludge process (with design Considerations), trickling filters and lagoons. (9)

WASTE WATER TREATMENT IN SPECIFIC INDUSTRIES

Dairy, Sugar, Pulp and Paper, Textile and Pharmaceutical Industries. (9)

WATER REUSE

Wastewater reclamation technologies and reuse, Solid processing flow diagrams, sludge and scum pumping, grinding, screening, degritting, blending, anaerobic digestion, composting, conditioning, dewatering and incineration. (9)

SUGGESTED READINGS

- Metcalf Eddy, Wastewater Engineering -Treatment and Reuse, Fourth Edition, TataMcGraw Hill, New Delhi,2002.
- Mark J. Hammer, Water and Wastewater Technology, Seventh Edition, Prentice Hall ofIndia Pvt Limited, New Delhi,2012.
- James M. Montgomery, Water Treatment Principles and Design, First Edition, A Wiley Interscience publication, New York,1985

COURSE OBJECTIVES:

- Provides an overview of municipal solid waste (MSW), industrial waste and hazardous waste management, including design and economic analysis
- In planning and engineering principles needed to address the growing and increasingly intricate problem of controlling and processing the refuse (solid waste) created by urban societies.
- To understand the landfilling, composting and incineration from engineering, social, and regulatory perspectives
- To understand about the physical, chemical, and biological treatment of hazardous waste.
- To analyze and understand the situations dealing with real world settings are covered through worked examples and field trips to solid waste management facilities.

COURSE OUTCOMES:

- After successful completion of the course, student will be able to
- Outline the salient features of solid waste management and handling.
- Deduce the source reduction, recycling and reuse techniques of solid waste.
- Analyze the collection systems and method of transfer of solid waste.
- Describe the processing techniques for solid and hazardous waste.
- Select the suitable methods for disposal of solid and hazardous waste.
- Interpret the legislation for management, handling and disposal of solid and hazardous waste.

CHARACTERISTICS AND SOURCE REDUCTION OF SOLID WASTE

Definition, sources, and types of solid waste - Composition, physical, chemical and biological properties of solid wastes - Per capita generation rates - Sampling and characterization of solid waste - Source reduction of wastes - Waste exchange - Recycling and reuses - Salient features of Indian legislations on management and handling of municipal solid wastes.

(9)

COLLECTION AND TRANSPORT OF SOLID WASTE

Estimation of solid waste and factors affecting generation rates - On-site handling, storage, and processing - Collection services: municipal and commercial - Industrial services - Collection systems: Hauled-container system (HCS) and stationary container system (SCS) - Vehicle and labour assessment - Assessment of collection route - Transfer and transport - Transfer station location - Means and methods of transfer.

(9)

PROCESSING AND DISPOSAL OF SOLID WASTE

Objective of processing - material separation and processing technologies - biological, chemical and thermal conversion technologies - disposal in Landfills: site selection methods and operations, leachate and gas generations and movement and control of gas and leachate techniques - Composting: aerobic and anaerobic - Resource and energy recovery schemes.

(9)

HAZARDOUS WASTE CHARACTERIZATION AND MANAGEMENT

Definitions and Identifications of hazardous waste - Origin and characterization of hazardous solid waste- Typical hazardous wastes in MSW - Hazardous waste management: minimization, collection, storage, handling, transport, and disposal - design of hazardous waste landfills - TCLP tests - National and International legislation for hazardous waste management – Atomic Energy Regulatory Board -International Atomic Energy Agency - Department of Atomic Energy - Nuclear Power Corporation -Nuclear power plants in India.

(9)

NUCLEAR WASTE AND e-WASTE

Sources - classification - effects of nuclear waste- initial treatment of nuclear waste vitrification, ion exchange, synroc – long term management - above ground disposal, geological disposal, ocean dumping, transmutation, space disposal - reuse of waste - nuclear safety and waste regulation - case study on nuclear disaster - source of e-waste - material composition of e-waste - recycling and recovery - integrated approaches to e-waste recycling - socio economic factors - treatment option -disposal option - e-waste legislation.

18BTFTOE01**PROCESSING OF FOOD MATERIALS****3H-3C****Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives:**

- Explain the milling, extraction and manufacture of tremendous products from cereals, pulses and oilseeds
- Summarize the production and processing methods of fruits and vegetables
- Discuss the chemical composition, processing, production, spoilage and quality of milk and milk products
- Outline the overall processes involved in the production of meat, poultry and fish products
- Review the production and processing methods of plantation and spice products

Course Outcomes:

1. Discuss the various processing technologies involved in cereal, pulses and oilseed technology
2. Demonstrate the major operations applied in fruits and vegetable processing
3. Illustrate the techniques involved in the processing of dairy products
4. Infer the production of different types of milk
5. List the overall processing of meat, poultry and fish processing
6. Outline the processing of spices and plantation products

Unit I - CEREAL, PULSES AND OIL SEED TECHNOLOGY

Rice milling, Pulse milling, Wheat milling - Oil extraction - Methods of manufacture of Bread - different processes of manufacture - types of breads - buns, biscuits, cakes and cookies - Pasta products - Tortilla - Method of manufacture.

Unit II - FRUITS AND VEGETABLE PROCESSING

Production of Fruits and vegetables in India, Cause for heavy losses, preservation treatments - Basics of Canning, Minimal processing and Hurdle technology as applied to Vegetable and Fruit processing, Processing of fruit juices, Dehydration, Aseptic processing.

Unit III - DAIRY PROCESSING

Basic dairy terminology, composition, General tests at reception, Dairy Processing - Method of manufacture of Standardized, toned and double toned milk, milk powder - Equipments - Pasteurizers, homogenizers and pumps - Method of manufacture of dairy products - Icecream, Cheese, Paneer, Yoghurt - Pasteurization and microorganisms involved in spoilage of milk.

Unit IV - MEAT, POULTRY AND FISH PROCESSING

Meat composition from different sources, Definitions and measurements, Carcass Processing, Meat Products, Processing of Poultry Products, Fish and other Marine Products Processing .

Unit V - PLANTATION PRODUCT TECHNOLOGY

Processing of Tea, Coffee and Cocoa - Outline of the methods of manufacture of - green tea, black tea, instant tea, Instant coffee, Cocoa and Chocolate. Outline of the methods of processing of Pepper, cardamom, ginger, vanilla and turmeric

Instruction Hours/week: L:3T:0P:0 Marks: Internal:40External:60Total:100**End Semester Exam:3Hours****Course objectives**

- Explain the basic concepts of food and nutrition
- Define the overall classification, function, and source of carbohydrates, lipids and proteins
- Discuss the overall aspects of vitamins
- Outline the role of health and nutritional importance of micro and macrominerals
- Summarize the recent trends in nutrition

Course outcomes

1. Discuss the basics in the area of nutritional assessment in health and disease
2. Categorize the recommended dietary allowances for different age groups
3. Express the classifications, functions and sources of carbohydrates, lipids and proteins
4. List the various attributes of fat and water soluble vitamins
5. Report the role, bioavailability, sources and deficiency diseases of macro and micro minerals
6. Recognize the diets and concepts of foods suggested for nutritional, chronic and acute disorders

UNIT I - HUMAN NUTRITION

Historical perspective of nutrient requirements – Assessment of nutritional status - recommended dietary allowances of macronutrients for all age groups - Assessment of protein quality – Malnutrition and related disorders – Balanced Diet. Factors influencing dietary intake: Food habits, food fads and fallacies, their influence on health and wellbeing.

UNIT II - BIOMOLECULES

Carbohydrates- Definition, classification, Functions, Sources of Carbohydrates, Deficiency. Lipids – Definition, classification, function, sources, Refined & Hydrogenated fats process. Proteins – Definitions, Classification, Function, Amino Acids, Sources of Proteins.

UNIT III - VITAMINS

Physiological role, bio-availability, requirements, sources and deficiency of Fat Soluble Vitamins: Vitamin A, Vitamin D, E & K. Water soluble vitamins: Vitamin C, Thiamine, Riboflavin, Niacin, Pantothenic acid, Biotin, Folic acid, Vitamin B12, Vitamin B6.

UNIT IV - MINERALS

Physiological role, bio-availability, requirements, sources and deficiency of Macro minerals: Calcium, Phosphorus Magnesium, Sodium, Potassium chloride. Micro minerals: Iron, Zinc, copper, selenium, chromium, iodine, manganese, Molybdenum and fluoride.

UNIT V - RECENT TRENDS IN NUTRITION

Principles of dietary management in gout, rheumatism, AIDS/HIV - Cancer-risk factors,

symptoms, dietary management, role of food in prevention of Cancer. Role of functional foods, health foods and novel foods, organically grown foods, recent concepts in human nutrition like nutrigenomics, nutraceuticals etc.

SUGGESTED READINGS

18BTFTOE03**Ready to Eat Foods****3H-3C****Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- Outline the current status of snack foodIndustry
- Describe the production, processing and marketing trends of potato and tortillachips
- Outline the overall processing ofpopcorn
- Explain the production and processing of fruits involved in snack foodpreparation
- Summarize the sensory analysis methods and packaging techniques of snackfoods

Course Outcomes (COs)

1. Review the overall aspects of snack foodindustry
2. Develop ready to eat foods from potato and maizeflour
3. Demonstrate the various unit operations involved in the production of potato and tortillachips
4. Illustrate the overall aspects of popcornproduction
5. List the production, processing and manufacturing of fruit basedsnacks
6. Recognize the sensory analysis and packaging methods of snackfoods

UNIT I SNACK FOOD INDUSTRY

Introduction-History-Past innovations- Outline of snack food industry- Nutrition-Total Quality Management of Technology-Domestic Snack Food Market-Global Market-Snack Food Association Future Considerations

UNIT II POTATO AND TORTILLA CHIPS PROCESSING

Potato Production- Potato snack Ingredients- Potato Analysis and Composition-Potato chip manufacturing process-Unit Operations-Other value added products from Potato.

Tortilla chips - Raw Materials- Processing steps-Equipment involved-Reconstitution of Dry Maize Flour-Unit operations.

UNIT III POPCORN PROCESSING

Introduction- Raw popcorn selection and preparation-Popping Methods-Home preparation of Popcorn-Equipments-Industrial manufacturing process- Flavorings and Applicators-Popcorn Packaging- Relative Nutrition- Marketing.

UNIT IV FRUIT BASED SNACKS

Introduction-production and processing of fruit crops – fruit purees – fruit powders – canned fruit snacks – alcoholic preservation of fruit snacks – fruit candies – fruit bars – exotic fruits.

UNIT V SENSORY EVALUATION AND PACKAGING

Introduction- Analytical methods-Sensory methods- Sensory Aspect of Processing- Quality properties of Snack Foods and Packaging Materials-Automated Bag- Pouch Packaging- Cartoning Case Packing-Current Issues in Snack Foods Packaging

SUGGESTED READING

1. Lusas, E. W and Rooney, L. W. Snack Foods Processing. CRC Press, 1st Edition 2001.
2. Panda, H. The Complete Technology Book on Snack Foods, National Institute of Industrial Research, Delhi. 2nd Edition 2013.
3. Sergio O Serna-Saldivar, Industrial Manufacture of Snack Foods, Kennedys Books Ltd. 2008.

18BTFTOE04

Agricultural Waste and Byproducts Utilization

3H-3C

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40External:60Total:100

End Semester Exam:3Hours

Course Objectives

- Categorize the types of agriculturalwastes
- Outline the production and utilization ofbiomass
- Explain the various parameters considered to be important in the designing of biogasunits
- Review the various methods employed in the production of alcohol from the byproducts of agriculturalwastes
- Summarize the overall aspects involved in the production of paperboards and particleboards from agriculturalwastes

Course Outcomes

1. List and group the types of agriculturalwastes
2. Develop a number of value added products from agriculturewastes
3. Discuss the techniques and production involved in the utilization ofbiomass
4. Assess the various parameters considered to be important in the designing of biogasunits
5. Illustrate the various methods employed in the production of alcohol from the byproducts of agriculturalwastes
6. Choose the appropriate materials to produce paperboards and particle boards from agricultural wastes

UNIT 1-TYPES OF AGRICULTURAL WASTES

Introduction and Background Agricultural Waste, Crop Waste, Agricultural Residues (annual crops), Technical terms, rice by-products utilization-rice bran and germ, rice bran oil, economic products from agriculture waste/by-products.

UNIT 2-BIOMASS PRODUCTION AND UTILIZATION

Biomass Gasifier, Technology used for the utilization of agricultural wastes: Biomass Gasifier, Nimbkar Agricultural Research Institute (NARI) Gasifier, Rice-Husk Based Gasifier, Heat and Steam from Sugarcane Leaf and Bagasse.

UNIT 3-BIOGAS DESIGN AND PRODUCTION

Biogas: Definition, composition, history of biogas, Production of biogas; types of biogas plant (floating drum type and fixed dome type) and their components (inlet, outlet, stirrer, slanting pipe, digester, gas holder and gas outer pipe), Selection and Design of biogas plant.

UNIT 4-PRODUCTION OF ALCOHOL FROM WASTE MATERIALS

Production of Alcohol from waste materials: Introduction, Production methods, Cellulolysis (biological approach): Pretreatment, Cellulolytic processes (Chemical and Enzymatic hydrolysis), Microbial fermentation, Gasification process (thermochemical approach).

UNIT 5-PRODUCTION OF PAPER BOARDS AND PARTICLE BOARDS FROM AGRICULTURAL WASTE

Production and testing of Paperboards and Particleboards from Agricultural Waste: Introduction, History, Terminology and classification, Raw materials, Production steps- Pulping, Classifications of pulp, Bleaching, Plies, Coating, Grades.

SUGGESTED READINGS

5. Wulfinghoff DR. Energy Efficiency Manual. Energy Institute Press.2000.

OBJECTIVES

The goal of this course is for students

- To understand the basics of Robotics, Kinematics.
- To understand the basics of Inverse Kinematics.
- To explore various kinematic motion planning solutions for various Robotic configurations.
- To study the trajectory planning for robot.
- To understand the task level programming
- To explore various applications of Robots in Medicine

OUTCOMES

Upon completion of this course, students will be able to:

- Explain various kinds robotics techniques, vision, planning and applications.
- Outline the basic concept of robotics
- Identify and discuss the Robot Vision
- Describe about manipulators and kinematics.
- Demonstrate Task level programming
- Discuss the applications of robotic systems in medical field.

UNIT I INTRODUCTION

Introduction Automation and Robots, Classification, Application, Specification, Notations, Direct Kinematics Dot and cross products, Coordinate frames, Rotations, Homogeneous coordinates Link coordination arm equation – Five-axis robot, Four-axis robot, Six-axis robot

UNIT II KINEMATICS

Inverse Kinematics – General properties of solutions tool configuration, Five axis robots, Three-Four axis, Six axis Robot, Workspace analysis and trajectory planning work envelope and examples, workspace fixtures, Pick and place operations, Continuous path motion, Interpolated motion, Straight-line motion.

UNIT III ROBOT VISION

Robot Vision Image representation, Template matching, Polyhedral objects, Shape analysis, Segmentation – Thresholding, region labeling, Shrink operators, Swell operators, Euler numbers, Perspective transformation, Structured illumination, Camera calibration.

UNIT IV PLANNING

Task Planning Task level programming, Uncertainty, Configuration, Space, Gross motion, Planning, Grasp Planning, Fine-motion planning, Simulation of planar motion, Source and Goal scenes, Task Planner simulation.

UNIT V APPLICATIONS

Applications in Biomedical Engineering – Bio Engineering Biologically Inspired Robots, Neural Engineering, Application in Rehabilitation – Interactive Therapy, Bionic Arm, Clinical and Surgical – Gynecology, Orthopaedics, Neurosurgery

TEXT BOOKS:

S.NO.	Author(s)Name	Title of the book	Publisher	Year of publication
1	Robert Schilling	Fundamentals of Robotics- Analysis and controll	Prentice Hall	2003
2	J.J.Craig	Introduction to Robotics	Pearson Education	2005

REFERENCES:

5	K. S. Fu, R. C. Gonzales and C. S. G. Lee	Robotics	McGraw Hill	2008

OBJECTIVES:

The goal of this course is for students

- To impart the fundamental aspects, principles of virtual reality technology.
- To gain knowledge about applications of virtual reality.
- To introduce the relevance of this course to the existing technology through demonstrations and applications.
- To understand virtual reality, augmented reality and using them to build Biomedical engineering applications
- To know the intricacies of these platform to develop PDA applications with better optimality
- To choose Virtual Reality application areas

INTENDED OUTCOMES:

Upon completion of this course, students will be able to:

- Understand the basic concepts of Virtual reality
- Infer the importance of virtual reality
- Comprehend the significance Virtual reality in present scenario
- Analyse VR on the mobile and VR on the web.
- Design of various modeling concepts.
- Develop the Virtual Reality applications in different areas

UNIT I INTRODUCTION

The three I's of virtual reality-commercial VR technology and the five classic components of a VR system- Input Devices:(Trackers, Navigation, and Gesture Interfaces):Three-dimensional position trackers, navigation and manipulation-interfaces and gesture interfaces-Output Devices: Graphics displays-sound displays &haptic feedback..

UNIT II VR DEVELOPMENT PROCESS

Geometric modeling - kinematics modeling- physical modeling - behaviour modeling - model Management.

UNIT III CONTENT CREATION CONSIDERATIONS FOR VR

Methodology and terminology-user performance studies-VR health and safety issues-Usability of virtual reality system- cyber sickness -side effects of exposures to virtual reality environment

UNIT IV VR ON THE WEB & VR ON THE MOBILE

JS-pros and cons-building blocks (WebVR, WebGL, Three.js, device orientation events)-frameworks (A-frame, React VR)-Google VR for Android-Scripts, mobile device configuration, building to android-cameras and interaction-teleporting-spatial audio-Assessing human parameters-device development and drivers-Design Haptics

UNIT V**APPLICATIONS**

Medical applications-military applications-roboticsapplications- AdvancedReal time Trackingother applications- games, movies, simulations, therapy.

OBJECTIVES

The goal of this course is for students:

- To discuss the overview of artificial organs & transplants
- To extend the principles of implant design with a case study
- To explain the implant design parameters and solution in use
- To simplify about various blood interfacing implants
- To know the biocompatibility of artificial organs
- To learn about the implantable medical devices

OUTCOMES

Upon completion of this course, students will be able to:

- Explain the implant design parameters and solution in use
- Analyze about various blood interfacing implants
- Evaluate response of biomaterials in living system
- Perceive knowledge about artificial organs & transplants
- Demonstrate different types of soft tissue replacement and hard tissue replacement
- Assess biocompatibility of artificial organs

UNIT I ARTIFICIAL ORGANS & TRANSPLANTS

ARTIFICIAL ORGANS:-Introduction, outlook for organ replacements, design consideration, evaluation process.

TRANSPLANTS:-Overview, Immunological considerations, Blood transfusions, individual organs – kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN

Principles of implant design, Clinical problems requiring implants for solution, Permanent versus absorbable devices, the missing organ and its replacement, Tissue engineering, scaffolds, cells and regulators criteria for materials selection, Case study of organ regeneration.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION

Biocompatibility, local and systemic effects of implants, Design specifications for tissue bonding and modulus matching, Degradation of devices, natural and synthetic polymers, corrosion, wear and tear, Implants for Bone, Devices for nerve regeneration.

UNIT IV BLOOD INTERFACING IMPLANTS

Neural and neuromuscular implants, heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, artificial kidney- dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

Gastrointestinal system, Dentistry, Maxillofacial and craniofacial replacement, Soft tissue repair, replacement and augmentation, recent advancement and future directions.

18BTBTOE01

BIOREACTOR DESIGN

3H-3C

Instruction Hours/week: L:3T:0P:0

Marks: Internal:40External:60Total:100
End Semester Exam:3 Hours**Course Objectives:**

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for Bioprocess Engineering.
- Elaborate the principle of heat transfer in bioreactor.
- Construct the equipments used in mass transfer operations.
- Categorize the equipments used in separation process.

UNIT I –INTRODUCTION TO BIOPROCESS ENGINEERING

Introduction – Biotechnology and Bioprocess Engineering- Biologists and Engineers Differ in their approach to research-How Biologists and Engineers work Together- Bioprocesses: Regulatory constraints.

UNIT II - REACTOR DESIGN

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III - HEAT TRANSFER EQUIPMENTS

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV - MASS TRANSFER EQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V - SEPARATION EQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotary drum drier and Swenson –walker crystallizer.

18BTBTOE02**FOOD PROCESSING AND PRESERVATION****3H-3C****Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100****End Semester Exam:3Hours****Course Objectives**

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I - SCOPE AND IMPORTANCE OF FOOD PROCESSING

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II - PROCESSING METHODS

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning-additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing-Concepts and equipment used.

UNIT III - FOOD CONVERSION OPERATIONS

Size reduction – Fibrous foods, dry foods and liquid theory and foods – equipments - membrane separation- filtration- equipment and application.

UNIT IV - FOOD PRESERVATION BY COOLING

Refrigeration, Freezing-Theory, freezing time calculation, methods freezing of freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V - PRESERVATION METHODS FOR FRUITS AND VEGETABLES

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

18BTBTOE03

BASIC BIOINFORMATICS

3H-3C

Instruction Hours/week: L:3T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I - OVERVIEW OF BIOINFORMATICS

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II - RETRIEVAL OF BIOLOGICAL DATA

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III - PHYLOGENETICS

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV - STRUCTURAL BIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V - MICROARRAY DATA ANALYSIS

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

18BTBTOE04**FUNDAMENTALS OF NANOBIO TECHNOLOGY****3H-3C****Instruction Hours/week: L:3T:0P:0****Marks: Internal:40External:60Total:100
End Semester Exam:3 Hours****Course Objectives**

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I - INTRODUCTION

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II - NANO PARTICLES

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III – MEDICAL NANOTECHNOLOGY

Nanomedicine, Nanobiosensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV - NANOBIO TECHNOLOGY

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nano carbon tubules. Nanosurgical devices.

UNIT V - ETHICAL ISSUES IN NANOTECHNOLOGY

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

SUGGESTED READINGS:

FACULTY OF ENGINEERING
DEGREE OF BACHELOR OF TECHNOLOGY IN
CHEMICAL ENGINEERING
DEPARTMENT OF CHEMICAL ENGINEERING
(REGULAR PROGRAMME)
CURRICULUM AND SYLLABI
(2018 – 2019)

KARPAGAM ACADEMY OF HIGHER EDUCATION

Faculty of Engineering

Department of Chemical Engineering

(Deemed University Established Under Section 3 of UGC Act 1856)

Pollachi Main Road, Eachanari Post, Coimbatore- 641 021, India.

		Semester-I
18BTCE101	Mathematics-I	4H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives:

1. Understanding the concept of elementary, linear and orthogonal transformations. Reduction of a given matrix to echelon and normal forms. Defining rank of a matrix and solve system of linear equations by different methods.
2. Determining the eigen values and eigen vectors. Reduction to diagonal and quadratic form. Deduce reduction formulae and discuss tracing of curves and applications. Understanding the concept of scalar and vector point function, Determining vector identities.
3. Gradient, divergence and curl of a vector point function and related identities which plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.
4. To acquaint the student with mathematical tools needed in evaluating line, surface and volume integrals using Green's theorems and their verification.
5. To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems and also to acquaint the student with Fourier series techniques in solving heat flow problems used in various situations
6. To analyze engineering problems and evaluate

Course outcomes:

After successfully completing the course, the student will have a good understanding of the following topics and their applications:

1. In rank, consistency and its inverse in Engineering fields.
2. Eigen values and eigenvectors, diagonalization of a matrix, Symmetric matrices and the students will be able to use matrix algebra techniques for practical applications.
3. To recognize scalar and vector functions. Evaluate Gradient, Divergence and Curl of a point function depending upon its nature, identifying Solenoidal and Irrotational Vector fields and to use vector identities connecting these quantities in problem solving.
4. To Calculate and establish identities connecting line, surface and volume integrals in simple coordinate systems and to Use Greens theorem to simplify calculations of integrals and prove simple results.
5. To solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
6. To analyse and evaluate the basic concepts of mathematics like matrix operations, vectors, Fourier series etc in their specific fields

Unit I - Linear Algebra

Matrices, Vectors: Addition and Scalar Multiplication, Matrix Multiplication, Linear Systems of Equations, Gauss Elimination, Linear Independence. Rank of a Matrix. Vector Space, Solutions of Linear Systems: Existence, Uniqueness, Determinants, Cramer's Rule, Inverse of a Matrix. Gauss-Jordan Elimination. Simple problems using Scilab.

Unit II - Linear Algebra

Eigenvalues, Eigenvectors, Applications of Eigenvalue Problems, Symmetric, Skew-Symmetric, and Orthogonal Matrices

Unit III - Vector Differential Calculus

Vectors in 2-Space and 3-Space, Inner Product (Dot Product), Vector Product (Cross Product), Vector and Scalar Functions and Fields, Derivatives, Curves, Arc Length. Curvature, Gradient of a Scalar Field, Directional Derivative, Divergence of a Vector Field, Curl of a Vector Field.

Unit IV - Vector Integral Calculus

Line Integrals, Path Independence of Line Integrals, Green's Theorem in the Plane, Surface Integrals.

Unit V - Fourier Series

Dirichlet's conditions, General Fourier series, Odd and even functions, Half range sine series, Half range cosine series, Parseval's identity, Harmonic Analysis.

SUGGESTED READINGS

6. Ramana B.V,(2010), Higher Engineering Mathematics, 11th Reprint, Tata McGraw Hill New Delhi.

(i) Theory Course Objective:

1. The aim of this course is to understand the basic concepts and also how to apply the concepts in practical life where which will be used.
2. To introduce basic concepts of optics, electricity, magnetism, quantum physics and its applications.
3. To prepare the students to understand the fundamental concepts of physics and also about its applications.
4. The students should develop the innovative concepts and research oriented
5. program.
6. To enhance the fundamental knowledge in basic physics and various branches of engineering and technology.

Course Outcomes

Upon completion of this course, the students will be able to

1. Knowledge of Bragg's Law, interference, diffraction and its applications.
2. Understand the principles of lasers, types of lasers and its applications and also gain the knowledge of fiber optics.
3. Remember the basic concepts of electromagnetism, maxwell equations polarization, etc.
4. Gain the knowledge of dielectrics & magnetic properties of materials.
5. Analyze about the some of the basic laws and concepts of quantum mechanics, uncertainty principle and scanning electron microscope.
6. Have adequate knowledge on the basic concepts of physics and its applications.

UNIT I –INTERFERENCE AND DIFFRACTION

Introduction to interference and example; Michelson interferometer- Applications, Air wedge - concept of diffraction, Fraunhofer and Fresnel diffraction, Fraunhofer diffraction at single slit, double slit, and multiple slits; diffraction grating, characteristics of diffraction grating and its applications.

UNIT II - LASER & FIBER OPTICS

Introduction to interaction of radiation with matter, Einstein coefficients - principles and working of laser: population inversion, pumping, various modes, threshold population inversion, types of laser: CO₂ laser, semiconductor laser, application of lasers.

Introduction, optical fibre as a dielectric wave guide: total internal reflection, numerical aperture and various fiber parameters, losses associated with optical fibres, step and graded index fibers, application of optical fibers.

UNIT III - ELECTROMAGNETISM & POLARISATION

Laws of electrostatics (Coulomb's law, Gauss law – Applications), electric current and the continuity equation, laws of magnetism (Biot-Savart's law, Ampere's circuital Applications), Faraday's laws, Maxwell's equations.

Introduction, polarisation by reflection, polarisation by double refraction, scattering of light, circular and elliptical polarisation, optical activity.

UNIT IV - DIELECTRICS & MAGNETIC PROPERTIES OF MATERIALS

Permittivity and dielectric constant, polar and non-polar dielectrics, internal fields in a solid, Clausius-Mossotti equation, applications of dielectrics. Magnetisation, permeability and susceptibility, classification of magnetic materials, ferromagnetism, magnetic domains, domain theory and hysteresis, applications.

UNIT V - QUANTUM MECHANICS

Introduction to quantum theory, merits of quantum theory – Black body radiation, Laws - dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – Schrödinger's wave equation – time dependent and time independent equations – physical significance of wave function - particle in one dimensional box – degenerate and non-degenerate states, scanning electron microscope.

SUGGESTED READINGS

1. Bhattacharya D.K. & Poonam T., (2015), Engineering Physics, Oxford University Press
2. Gaur R.K. and Gupta S.L, (2012), Engineering Physics, Dhanpat Rai Publications
3. Pandey .B.K. & Chaturvedi .S, (2012), Engineering Physics, Cengage Learning India.
4. Halliday.D., Resnick R. & Walker. J, (2015), Principles of Physics, Wiley.
5. Serway R.A and Jewett J.W., (2010), Physics for Scientists and Engineers with Modern Physics, Thomson Brooks/Cole Publishing Co.
6. Tipler P.A. and Mosca G.P, (2007)., Physics for Scientists and Engineers with Modern Physics, W.H. Freeman.

(ii) Laboratory

Course objective:

1. To learn the basic concepts in physics relevant to different branches of Engineering and Technology.
2. To study the concept of semiconductor and conductivity.
3. To learn the properties of materials.
4. To develop basic laboratory skills and demonstrating the application of physical principles.
5. To prepare for the lab experiment and perform individually a wide spectrum of experiments.
6. To present experimental data in various appropriate forms like tabulation, and plots.

Course Outcome:

1. Familiarize the properties of material and basic concepts in physics.
2. List the fundamentals of Bragg's Law, interference, diffraction and its applications.
3. Understand the principles of lasers, types of lasers and its applications and also gain the knowledge of fiber optics.
4. Integrate the basic concepts of electromagnetism, Maxwell equations Polarization, etc.
5. List the knowledge of dielectrics & magnetic properties of materials.
6. Analyze about the some of the basic laws and concepts of quantum mechanics, uncertainty principle and scanning electron microscope.

LIST OF EXPERIMENTS – PHYSICS

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending - Determination of young's modulus
3. Uniform bending – Determination of young's modulus
4. Lee's disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermo e.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge - Determination of thickness of a thin sheet/wire
8. Optical fibre -Determination of Numerical Aperture and acceptance angle
9. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10. Determination of Band gap of a semiconductor.
11. Spectrometer- Determination of wavelength using grating.
12. Viscosity of liquids-Determination of co-efficient of viscosity of a liquid by Poiseuille's flow

B.Tech Chemical Engineering		2018-2019
18BTCE103	English	Semester-I 4H-3C
Instruction Hours/week: L:2T:0P:2		Marks: Internal:40External:60Total:100

End Semester Exam:3 Hours

Course Objectives

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
2. To help students acquire their ability to speak effectively in real life situations.
3. To inculcate the habit of reading and to develop their effective reading skills.
4. To ensure that students use dictionary to improve their active and passive vocabulary.
5. To enable students to improve their lexical, grammatical and communicative competence.
6. To help students to improve their active and passive vocabulary and enable them to write letters and reports effectively in formal and business situations

Course Outcomes

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Gain confidence in using English language in real life situations.
4. Improve word power: lexical, grammatical and communication competence.
5. To guide the students to write business letters and other forms of technical writing.
6. To enable students to prepare for oral communication in formal contexts.

Unit I -Basic Writing Skills

Sentence Structures - Use of phrases and clauses in sentences - Importance of proper punctuation
- Creating coherence- Organizing principles of paragraphs in documents - Techniques for writing precisely

Unit II - Vocabulary Building

The concept of Word Formation - Root words from foreign languages and their use in English - Acquaintance, with prefixes and suffixes from foreign languages in English to form derivatives. - Synonyms, antonyms, and standard abbreviations.

Unit III - Grammar and Usage

Subject-verb agreement - Noun-pronoun agreement - Misplaced modifiers – Articles – Prepositions – Redundancies - Clichés

Unit IV - Listening and Reading Skills

Note taking- viewing model interviews – listening to informal conversations – improving listening / reading comprehension – reading model prose / poems – reading exercise.

Unit V.-Writing Practices

Comprehension - Précis Writing - Essay Writing Listening Comprehension - Common Everyday Situations: Conversations and Dialogues - Communication at Workplace – Interviews - Formal Presentations.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

SUGGESTED READINGS

18BTCE104Chemistry –I**4H-4C****Instruction Hours/week: L:3 T:1 P:0****Marks: Internal:40****External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

1. To understand the terminologies of quantum theory of chemical systems.
2. To study about various chemical bonding
3. To understand the stereochemistry of molecules.
4. To understand the thermodynamic functions.
5. To comprehend the basic organic chemistry and to synthesis simple
6. To learn about properties, characteristics and applications of different molecules based upon chemical bonding and structure

Course Outcomes

1. Appreciate quantum theory of chemical systems.
2. Appreciate aliphatic chemistry
3. Describe the concepts of stereochemistry
4. Write simple mechanisms
5. To synthesis of organic molecules
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I - Introduction to quantum theory for chemical systems:

Schrodinger equation, Applications to Hydrogen atom, Atomic orbitals, many electron atoms

UNIT II - Chemical bonding in molecules:

MO theory, Structure, bonding and energy levels of bonding and shapes of many atom molecules, Coordination Chemistry, Electronic spectra and magnetic properties of complexes with relevance to bio-inorganic chemistry, organometallic chemistry

UNIT III - Introduction to Stereochemistry:

Stereodescriptors – R, S, E, Z. Enantiomers and Diastereomers. Racemates and their resolution. Conformations of cyclic and acyclic systems.

UNIT IV - Reactivity of organic molecules:

Factors influencing acidity, basicity, and nucleophilicity of molecules, kinetic vs. thermodynamic control of reactions

UNIT V - Strategies for synthesis of organic compounds:

Reactive intermediates substitution, elimination, rearrangement, kinetic and thermodynamic aspects, role of solvents

18BTCE111 Engineering Graphics 5H-3C**Instruction Hours/week: L:1 T:0 P:4****Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours****Course objectives**

1. To aid visualization of engineering objects and communicating the same to other professionals.
2. To design simple assemblies involving theory of constraints, generation of assembly views from part drawings, animation of assemblies.
3. Increase ability to communicate with people
4. Learn to sketch and take field dimensions.
5. Learn to take data and transform it into graphic drawings.
6. Learn basic Auto Cad skills.

Course Outcomes

1. Understand the concept of projection and acquire visualization skills, projection of points
2. Able to draw the basic views related to projections of Lines, Planes
3. To know and understand the conventions and the method of engineering drawing.
4. Interpret engineering drawings using fundamental technical mathematics
5. Construct basic and intermediate geometry.
6. To improve their visualization skills so that they can apply these skill in developing

UNIT I - INTRODUCTION

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Scales – Plain, Diagonal and Vernier Scales

UNIT II - ORTHOGRAPHIC PROJECTIONS

Principles of Orthographic Projections-Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT III - ISOMETRIC PROJECTIONS

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple solids, truncated prisms, pyramids, cylinders and cones; Developing visualization skills through free hand sketching of Conversion of Orthographic Views to Isometric Views

UNIT IV - SECTION OF SOLIDS AND ASSEMBLY DRAWINGS

Sectioning of Prism, Cylinder, Pyramid, and Cone in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.

Making free hand sketches of typical subassemblies like flange coupling, stuffing box, journal bearings, rolling element bearings, keyed joints, cotter joints, C clamp.

UNIT V - COMPUTER GRAPHICS & ENGINEERING ANIMATION

Overview of Computer Graphics, listing the computer technologies that impact on graphical communication, demonstrating knowledge of the theory of CAD software, Introduction to 3D modeling packages

Engineering animation including motion curves, coordinating multiple moving parts under joint-constraints and the notion and impact of lighting and camera, compositing and physics engines (gravity, dynamics, fluid animation)

SUGGESTED READINGS

1. Venugopal K and Prabhu Raja V, (2010), Engineering Graphics, New Age International Publishers,
2. C M Agrawal and Basant Agrawal, (2012), Engineering Graphics, Tata McGraw Hill, New Delhi,
3. James D. Bethune, (2016), Engineering Graphics with AutoCAD (2015), Pearson Education,.
4. Narayana, K.L. & P Kannaiah, (2008), Text book on Engineering Drawing, Scitech Publishers,
5. Bureau of Indian Standards, (2003), Engineering Drawing Practices for Schools and Colleges SP 46, BIS, New Delhi,.
6. Shah, M.B. & Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education,
7. Bhatt N.D., Panchal V.M. & Ingle P.R, (2014), Engineering Drawing, Charotar Publishing House,.

Course Objectives:

1. Some standard functions and some of the properties of the Fourier transform.
2. To evaluate first order differential equations including separable, homogeneous, exact and linear equations.
3. To evaluate second order differential equations including Euler Cauchy's, Non-homogeneous, and method of variation of parameters.
4. To solving differential equation of certain type and Power series solutions of Legendrepolynomials, Bessel functions of the first kind and their properties.
5. Study Partial Differential equations in gravitation, electromagnetism, perfect fluids, elasticity, heat transfer and quantum mechanics.
6. To nurture and nourish strong communication and interpersonal skills for working in a team with high moral and ethical values

Course Outcomes

1. To be able to solve equations using Laplace and Fourier transform.
2. To solve first order differential equations utilizing the standard techniques for separable, exact, linear, Bernoulli cases.
3. To evaluate second order ordinary differential equations in various methods.
4. To apply various techniques in solving differential equations and to understand the method of finding the series solution of Bessel's and Legendre's differential equations.
5. Better understanding in problems related to heat condition, communication systems, electro optics and electromagnetic theory using the techniques will be learnt in this course.
6. The Learners can equip themselves in the transform techniques and solve ODEs and PDEs.

Unit I - Transforms

Laplace Transforms: Transforms of elementary functions, Basic properties, Transforms of derivatives and integrals, Initial and final value theorems. Inverse Laplace transforms, Convolution theorem. Fourier Transforms: Fourier integral theorem (Statement Only), Fourier transform pair, Sine and Cosine transforms, Properties, Transforms of simple functions, Convolution theorem, Parseval's identity .

Unit II - First-Order ODEs

Basic Concepts, Solutions of Separable ODEs, Exact ODEs, Linear ODEs, Solving ODEs by Laplace Transforms

Unit III - Second-Order Linear ODEs

Homogeneous Linear ODEs of Second Order, Euler-Cauchy Equations, Wronskian, Nonhomogeneous ODEs, Solution by Variation of Parameters

Unit IV - Series Solutions of ODEs, Special Functions

Power Series Method, Legendre's Equation, Legendre Polynomials, Bessel's Equation, Bessel Functions.

Unit V - Partial Differential Equations

Classification of second order quasi linear partial differential equations, Solutions of one dimensional wave equation, One dimensional heat equation, Steady state solution of two-dimensional heat equation (Insulated edges excluded), Fourier series solutions in Cartesian coordinates.

Suggested Readings:

5. Erwin kreyszig, (2006), Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons.
6. Ramana B.V, (2010)Higher Engineering Mathematics, Tata McGraw Hill

B.Tech Chemical Engineering

		Semester-II
18BTCE202	Chemistry-II	4H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours		

Course Objective

1. To understand the basic chemical reactions.
2. To understand the mechanism of chemical reactions.
3. To understand the mechanism of lubricants.
4. To study about the nature of oils and fat.
5. To understand about the dye pigments.
6. general familiarity with the following areas in chemistry: analytical, biochemistry, inorganic, organic and physical.

Course Outcomes

1. To apply the various unit process
2. Extend the principles of reaction mechanisms
3. To apply the knowledge on chemical reactions
4. To prepare soaps
5. To analyses the effect of pigments
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I - UNIT PROCESSES

Nitration, Sulphonation, Halogenation, Esterification, Amination, Saponification and Hydrogenation – Role of the above unit processes in such industries as petroleum, drugs, pharmaceuticals and organic synthesis.

UNIT II - REACTION MECHANISMS

Free radical, substitutions, electrophilic, addition, aromatic electrophilic substitutions, nucleophilic additions, condensation reactions, nucleophilic substitutions in aliphatic and aromatic compounds, cyclo-additions, rearrangements-Beckmann and Fries rearrangement reactions.

UNIT III - OILS, FATS, SOAPS & LUBRICANTS

Chemical constitution, Chemical analysis of oils and fats – acid, saponification and iodine values, Definitions, determinations and significance. Definition, mechanism of lubrication, preparation of petrolubes, desirable characteristics – viscosity, viscosity index, carbon residue, oxidation stability, flash and fire points, cloud and pour points, aniline point. Semisolid lubricant – greases, preparation of sodium, lithium, calcium and axle greases and uses, consistency test and drop point test. Solid lubricants – graphite and molybdenum disulphide.

UNIT IV - CHEMICALS AND AUXILIARIES

Preparation, properties and uses of bleaching powder, sodium hypochlorite, hydrogen peroxide, chlorine dioxide. Estimation of available chlorine in hypochlorite bleach liquor. Determination of strength of hydrogen peroxide.

UNIT V - COLORANTS

Theory of color and constitution: chromophore and auxochrome, classification of dyes based on application. Chemistry and synthesis of azo dye (Methyl red, Methyl orange and Congo red).

SUGGESTED READINGS

- 8 Trotman E. R (1994), Dyeing and Chemical Technology of Textile Fibres, B.I Publishing Pvt. Ltd, New Delhi

**(i) Theory
Course Objectives**

1. To impart the basic knowledge about the Electric circuits.
2. To understand the concept of Electro Mechanical Energy Conversion and Transformers.
3. To understand the working of Semiconductor devices and Measuring Instruments.
4. To impart the basic knowledge of Digital Circuits.
5. Develop the basic concepts of network analysis, which is the pre-requisite for all the electrical engineering subjects.
6. Solve different complex circuits using various network reduction techniques such as Source transformation, Network theorems etc.

Course Outcomes

At the end of this course, students will demonstrate the ability

1. To understand and analyze basic electric and magnetic circuits.
2. To study the working principles of transformer and Measuring Instruments.
3. To understand the basic concepts of Digital Circuits.
4. Investigate the methods to improve power factor in power system networks.
5. Design resonant circuits which are used in wireless transmission and communication networks.
6. Understand 3-phase ac circuits for designing and analysis of power system networks.

UNIT I - DC Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT II - AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III - Electro Mechanical Energy Conversion And Transformer

Energy in magnetic system –singly and multiply excited magnetic field systems-mmF of distributed windings – Winding Inductances-, magnetic fields in rotating machines –Field energy and co energy-force and torque equations. BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency.

UNIT IV- Semiconductor Devices And Two Port Networks

Bipolar Junction Transistor – Characteristics Introduction to operational Amplifier –Model– Applications. Two-Port Parameters: Relationship of Two-Port Variables, Short-Circuit Admittance parameters, The Open-circuit Impedance Parameters, Transmission parameters.

UNIT V- Measuring Instruments And Digital Electronics

Principle, construction, and operation of moving coil and moving iron meters-Measurement of Power. Number systems – binary codes - logic gates - Boolean algebra, laws & theorems

SUGGESTED READINGS

1. D. P. Kothari and I. J. Nagrath,(2010) Basic Electrical Engineering, Tata McGraw Hill,
2. D. C. Kulshreshtha,(2009) Basic Electrical Engineering, McGraw Hill
3. L. S. Bobrow,(2011) Fundamentals of Electrical Engineering, Oxford University Press,
4. E. Hughes(2010) , Electrical and Electronics Technology, Pearson,
5. V. D. Toro,(1989) Electrical Engineering Fundamentals, Prentice Hall India, 1989

Course Objective

1. To introduce basic concepts of thermodynamics and laws of thermodynamics.
2. To understand the principles and application of first and second law of thermodynamics.
3. This course aims to provide a good platform to mechanical engineering students to understand, model and appreciate concept of dynamics involved in thermal energy transformation.
4. To prepare them to carry out experimental investigation and analysis at later stages of graduation.
5. This course aims to provide a good platform to mechanical engineering students to understand, model.
6. To appreciate concept of dynamics involved in thermal energy transformation in power plants

Course Outcomes

On completion of the course the students are expected to

1. Understand the fundamental concepts of thermodynamics.
2. Apply mass and energy balances for open systems.
3. Evaluate the properties of non-ideal gases.
4. Solve problems involving liquefaction, refrigeration and different power cycles.
5. To apply the knowledge of mathematics, science and engineering fundamentals to the solution of mechanical power generation in thermal power plant using pure substance as working substance and low temperature applications.
6. To understand and hence to carryout gravimetric and volumetric analysis in order to find other thermodynamic properties of mixtures.

UNIT I - INTRODUCTION

Introduction- scope and Limitations of thermodynamics; Definitions and Fundamental Concepts; Dimensions and Units; Temperature, Pressure, Work, Energy, Force, Heat- Equilibrium state and the Phase Rule; Temperature and Zeroth Law of Thermodynamics; Heat Reservoirs and Heat Engines.

UNIT II - FIRST LAW AND OTHER BASIC CONCEPTS

Joule's experiment; Internal Energy; First Law; State functions; Equilibrium; Phase Rule, Reversible process; Constant P, V, T processes; Mass and Energy Balances for Open systems.

UNIT III - PVT BEHAVIOUR AND HEAT EFFECTS

PVT behavior; description of materials – Ideal gas law, van der Waals, virial and cubic equations of state; Reduced conditions & corresponding states theories; correlations in description of material properties and behavior- Heat effects-latent heat, sensible heat, standard heats of formation, reaction and combustion.

UNIT IV - SECOND LAW OF THERMODYNAMICS

Statements of the second law; Heat engines, Carnot's theorem; Thermodynamic Temperature Scales; Entropy; Entropy changes of an ideal gas; Mathematical statement of the second law; Entropy

balance for open systems; Calculation of ideal work; Lost work; Thermodynamic property of fluids, Maxwell relations; Two-phase systems; graphs and tables of thermodynamic properties.

UNIT V - APPLICATIONS OF THERMODYNAMICS

Flow processes; Refrigeration-Carnot cycle, Vapor-compression cycle, Absorption Refrigeration; Liquefaction processes; Steam-Power plant-Rankine cycle; Internal Combustion Engines-Otto cycle, Diesel cycle, Jet Engines.

SUGGESTED READINGS

6. Prentice Hall India(2012)
7. Pradeep Ahuja,(2009), Chemical Engineering Thermodynamics, PHI Learning Ltd
8. Gopinath Halder, (2009),Introduction to Chemical Engineering Thermodynamics, PHI Learning Ltd

Theory**Course Objectives**

1. Identify and understand the working of key components of a computer program.
2. Identify and understand the various kinds of keywords and different data types of C programming
3. Understand, analyze and implement software development tools like algorithm,
4. Pseudo codes and programming structure
5. Study, analyze and understand logical structure of a computer program, and different construct to develop a program in “C” language
6. students to the field of programming using C language. The students will be able to enhance their analyzing and problem-solving skills and use the same for writing programs in C

Course Outcomes

The course will enable the students

1. To formulate simple algorithms for arithmetic and logical problems
2. To translate the algorithms to programs (in C language)
3. To test and execute the programs and correct syntax and logical errors
4. To implement conditional branching, iteration and recursion
5. To decompose a problem into functions and synthesize a complete program using divide and conquer approach
6. To use arrays, pointers and structures to formulate algorithms and programs

Unit I – Introduction to Programming, Arithmetic expressions and precedence

Introduction to Programming-Flowchart / pseudocode, compilation, Variables including data types, Arithmetic expressions and precedence.

Unit II – Conditional Branching and Loops

Conditional Branching – Loops Writing and evaluation of conditionals and consequent branching, Iteration and loops.

Unit III – Arrays and Basic Algorithms

Arrays 1-D, 2-D, Character arrays and Strings **Basic Algorithms:** Searching, Basic Sorting Algorithms, Finding roots of equations, idea of time complexity.

Unit IV – Function and Recursion

Functions (including using built in libraries), Recursion with example programs such as Quick sort, Ackerman function etc.

Unit V - Structure, Pointers and File Handling

Pointers, Structures including self-referential structures e.g., linked list, notional introduction, File handling in C.

SUGGESTED READINGS

1. E. Balagurusamy,(2017) Computing Fundamentals and C Programming, 5th Edition, TMH Education
2. E. Balaguruswamy (2017), Programming in ANSI C, 7th Edition, Tata McGraw-Hill,
3. Byron Gottfried (2017), Schaum's Outline of Programming with C, 3rd Edition, McGraw-Hill
4. Brian W. Kernighan and Dennis M. Ritchie,(2015) The C Programming Language, 2nd Edition, Prentice Hall of India

Course Objectives

- 1.To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- 2.The student will understand the importance of the Periodic Table of the Elements, how it came to be, and its role in organizing chemical information.
- 3.The student will understand the interdisciplinary nature of chemistry and to integrate knowledge of mathematics, physics and other disciplines to a wide variety of chemical problems.
- 4.The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.
- 5.The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.
- 6.The student will develop the ability to effectively communicate scientific information and research results in written and oral formats

Course Outcomes:

1. List steps for identifying simple organic compounds
2. Use different analytical instruments
3. Identify reaction rate parameters
4. Analyze the need, design and perform a set of experiments.
5. Identify the structure of unknown/new compounds with the help of spectroscopy.
6. Differentiate hard and soft water, solve the related numerical problems on water purification and its significance in industry and daily life.

About 10 experiments to illustrate the concepts learnt in Chemistry-I, Chemistry-II (No. of lab.Hours 3 per experiment).

Suitable number of experiments from the following categories:

1. Identification of an organic compounds through group detection, physical constants (m.p and b.p)
2. Synthesis of organic compounds involving reactions such as hydrogenation, oxidation, esterification, etc.
3. Use of analytical instruments for characterization and identification of compounds
4. Measurements of kinetics of simple reactions

Semester-III		
18BTCE301	HEAT POWER ENGINEERING	4H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives

1. To apply the thermodynamic concepts into various thermal application like IC engines, Steam Turbines, Compressors and Refrigeration and Air conditioning systems
2. Describe sources of energy and types of power plants.
3. Analyze different types of steam cycles and estimate efficiencies in a steam power plant.
4. Define the performance characteristics and components of such power plants
5. Describe different types of fuels used in power plants and estimate their heating values
6. To integrate the concepts, laws and methodologies from the first course in thermodynamics into analysis of cyclic processes

Course Outcomes

On Completion of the course students will be able to

1. Determine the efficiency and output of a modern Rankine cycle steam power plant from given data, including superheat, reheat, regeneration, and irreversibility's
2. Calculate the heat rate, fan power consumption, flame temperature and combustion air requirements of conventional steam generators (boilers)
3. Calculate the performance of gas turbines with reheat and regeneration, and discuss the performance of combined cycle power plants
4. Calculate the performance of I.C Engine with different efficiency and discuss the all other performance parameters of I.C Engine
5. Analyse performance of various refrigeration cycles and air conditioning systems
6. Describe construction, working of various types of reciprocating and rotary Compressors with performance calculations of positive displacement compressor

UNIT I GAS POWER CYCLES AND IC ENGINE**9**

Otto, Diesel, Dual, Brayton cycles – Calculation of mean effective pressure and air standard efficiency – actual and theoretical PV and TS diagrams of two stroke and four stroke engines–valve timing diagram and port timing diagram – calculation of engine performance, heat balance sheet, retardation – Morse test.

UNIT II BOILER AND STEAM POWER CYCLES 9

Generation of steam, Boiler–Classification, fire tube boiler, water tube boiler, comparison, boiler mountings and accessories, performance of steam boilers – dryness fraction, properties of steam, T– S diagram, Mollier diagram, steam tables, Rankine Cycle – incomplete evaporation – superheated steam –modified cycle.

UNIT III STEAM NOZZLES AND STEAM TURBINES 9

Steam nozzles – flow through steam nozzles, effect of friction, critical pressure ratio, and super saturated flow

– Steam turbines impulse and reaction turbine, compounding, velocity diagram, condition for maximum efficiency – multi stage turbines - governing of turbines.

UNIT IV AIR COMPRESSORS

9

Classifications of compressors – Reciprocating air compressor – performance characteristics, effect of clearance volume, free air delivery and displacement, intercooler, after cooler – Rotary compressor – vane type, centrifugal and axial, flow performance characteristics.

UNIT V REFRIGERATION AND AIR CONDITIONING

9

Fundamentals of refrigeration – COP – Vapour compression refrigeration system – cycle, p–h chart, Vapour absorption system – comparison, properties of refrigerants. Fundamentals of air conditioning system, cycle, controls, air handling and distribution, simple cooling and heat load estimation

**TOTAL 45
PERIODS**

(Permitted to use standard thermodynamic table, Mollier diagram, Psychometric chart and Refrigeration property table in the examination)

SUGGESTED READINGS

1. Rajput.R.K ,Thermal Engineering,SisthEdition,LaxmiPublications,New Delhi,2010
2. Arora.C.P,Refrigeration and Air Conditioning,Tata McGraw – Hill , New Delhi,2010
3. Kothandaraman.C.P and Domkundwar A.V, A Course in thermal engineering ,Fifth Edition,Dhanpat Raj and sons,Delhi,2006
4. Ganesan.V ,Internal combustion Engines, Tata McGraw – Hill , New Delhi,2008
5. Yunus A Cengel, Thermodynamics an Engineering approach, Tata McGraw – Hill , New Delhi,2010

Course Objectives:

1. The objective of this course is to introduce the mechanics of fluids (fluid statics and fluid dynamics), relevant to Chemical Engineering operations.
2. The course will introduce students to forces on fluids, hydrostatic forces on submerged bodies, Eulerian and Lagrangian descriptions of flow, flow visualization, integral analysis involving mass and momentum balances, Bernoulli equation, flow through pipes and ducts, flow measurement and instruments, flow transportation - pumps, blowers and compressors, conservation of mass, linear and angular momentum in differential form, Navier-Stokes equation.
3. To introduce and explain fundamentals of Fluid Mechanics, which is used in the applications of Aerodynamics, Hydraulics, Marine Engineering, Gas dynamics etc.
4. To give fundamental knowledge of fluid, its properties and behavior under various conditions of internal and external flows.
5. To develop understanding about hydrostatic law, principle of buoyancy and stability of a floating body and application of mass, momentum and energy equation in fluid flow.
6. To imbibe basic laws and equations used for analysis of static and dynamic fluids

Course Outcome

1. Ability to apply the basic concepts of fluid mechanics and to solve dimensional analysis problems.
2. Ability to solve problems related to mass, momentum and energy balances in fluid flow.
3. Ability to demonstrate the applications of flow statics, fluid flow phenomena.
4. Ability to design fluid flow reactors and solve problems on fluid flow measurements.
5. Ability to estimate the pump efficiency, head developed and pressure drop.
6. State the Newton's law of viscosity and Explain the mechanics of fluids at rest and in motion by observing the fluid phenomena.

UNIT – IBASIC CONCEPTS (12)

Definition of a fluid – Shear stress in a moving fluid – difference between liquids and gases – Compressible and incompressible fluids – Newtonian and non Newtonian fluids - continuum concept of a fluid - properties of fluids - viscosity - compressibility - bulk modulus. Dimensional analysis and its applications in fluid flow. Statics of fluid systems- pressure - variation of pressure vertically in a fluid under gravity -General equation for the variation of pressure due to gravity in a static fluid - manometers: U-tube, differential and inclined manometers.

UNIT – II FLUID DYNAMICS**(12)**

Fluid flow - basic concepts - Reynolds experiment - laminar and turbulent flows - nature of turbulence. Basic concepts of Boundary layer. Equation of continuity and its applications - momentum equations - Euler's equation of motion - Bernoulli's theorem and its applications

UNIT – III INCOMPRESSIBLE FLUID FLOW (12)

Flow in conduits - Shear stress distribution in a cylindrical tube - Friction factor - Fanning's equation - Applications - Laminar flow in pipes - Hagen Poiseuille equation - Velocity distribution for laminar and turbulent flows - Losses due to sudden expansion and sudden contraction - Losses in pipe fittings.

UNIT – IV FLUIDISED AND PACKED BEDS (12)

Flow through packed beds - Ergun equation and Kozeny - Carman equation. Equation

for one dimensional motion - Fluidisation - Mechanism of fluidisation - Types of fluidization - Pressure drop in fluidized beds - Minimum fluidisation velocity.

UNIT – V HYDRAULIC PUMPS AND PIPE FITTINGS (12)

Pipes, Fittings and valves - Pumps, Fans, Compressors and Blowers - Positive displacement pumps - Centrifugal pumps - NPSH and cavitation - Pump calculations - Constant and variable head flow meters.

TOTAL: 60

SUGGESTED READINGS

2. Douglas. J.F., Gasiorek. J.M., Swaffield. J.A., FLUID MECHANICS, Sixth Edition, 2011.
3. Hughes. F., John A Brighton and Nicholas Winowich, Schaum's Outline of Fluid Dynamics, Third Edition 2009.
4. Ranauld. V. Giles, Cheng Liu and Jack Evett, Schaum's outline of Fluid Mechanics and Hydraulics, Fourth Edition 2010.
5. Sulzer Pumps Ltd, Centrifugal pump Handbook, Third edition, Winterthur, Switzerland, 2010

End Semester Exam:3 Hours

Course Objective

The anticipated knowledge, skills and/or attitude to be developed by the student are:

1. Perform basic engineering calculations
2. Perform mass balance calculations on existing processes (involving single and multiple units).
3. Use basic, applied chemistry/ thermodynamics in material balance calculations.
4. The measurement of gaseous mixtures, solution and gas-liquid mixtures compositions of will be understood and applied in the process calculation of the chemical industry.
5. 3The physical properties and their behavior with the process conditions will be understood and their application in the process calculations will be learned.
6. To understand and apply the basics of calculations related to material and energy flow in the processes

Course Outcome

After completion of the course, students are able to

1. .Apply the principles of dimensional homogeneity to convert one form of unit to other equivalent forms in CGS, FPS. MKS and SI unit systems and apply fundamental gas laws to solve ideal gas problems.
2. Calculate the composition of a mixture in terms of mole fractions from a given composition expressed in terms of mass fractions or vice versa.
3. Compute the concentration, degree of saturation and dew point of vapor -gas mixture at the given temperature and pressure using humidity chart.
4. Formulate steady state material balance for the unit operations such as distillation, evaporation, mixing, extraction, drying and crystallization processes with recycle, by-pass and purge.
5. Practice the combined steady state material and Energy balance for simple processes like distillation, evaporation and combustion.
6. Students will be able to define, calculate, and estimate fluid density, flow rate, chemical composition variables (mass and mole fractions, concentrations), fluid pressure, and temperature.

UNIT – I MASS RELATIONS AND IDEAL GASES**(12)**

Units and dimensions: Basic and derived units - Different ways of expressing units and quantities, Conversion of units. Properties of pure substances - Ideal gas laws. Mole fractions and partial pressures - Application of Dalton's and Amagat's law.

UNIT – II HUMIDITY AND SATURATION**(12)**

Definition of dry, wet bulb temperature - relative and percentage saturation, Dew point - humid heat, adiabatic saturation curve - Humidity Charts. Solubility and Crystallization - Recovery of crystals from solutions by crystallization - Calculations based on material balance. Henry's laws. Concept of Vapour pressure, Raoult's law and its applications, vapour pressure plots and effect of temperature on vapour pressure.

UNIT – III MATERIAL BALANCE WITH CHEMICAL REACTIONS (12)

Concept of limiting and excess reactants, Concepts of tie elements, recycle, by-pass and purge. Batch, stagewise and continuous operations.

UNIT – IV MATERIAL BALANCE WITHOUT CHEMICAL REACTIONS (12)

Material balance in systems without chemical reactions, Material balance in systems with Recycle, Bypass and Purge.

UNIT – V ENERGY BALANCE (12)

Definition of Heat capacity and Specific heat, Heat capacity of gases as a function of temperature, Mean heat capacity, heat capacity of mixture of gases. Heat capacities of solids and liquids - Kopp's rule and Trouton's rule. Standard heat of reaction, formation and combustion, Hess's law of heat summation and its application to determine heat of reaction, heat of neutralization, integral heat of solution, heat of mixing. Effect of pressure and temperature on heat of reaction. Theoretical and actual flame temperature in combustion calculations.

Semester-III		
18BTCE304	MECHANICAL OPERATIONS	3H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total :100

End Semester Exam:3 Hours**Course Objective**

1. To impart the basic concepts of mechanical operations
2. To develop an understanding of size analysis, size reduction, and solid handling
3. Understand mechanical separation methods such as filtration, sedimentation, transportation of solids etc and associated equipment used for achieving these methods
4. The students are exposed to basic theory, calculations, and machinery involved in various solid handling operations
5. Identify the important physical mechanisms occurring in processes involving particles
6. Discuss unit operation and its role in Chemical industries, characteristics of particulate solids, Principles of size reduction, particle dynamics and separation of particles• formulate and solve mathematical descriptions of such processes

COURSE OUTCOMES

1. Calculate the Particle size, shape and surface area by both differential, cumulative analysis and compute the power requirement for particle size reduction screen effectiveness by sieve analysis.
2. Compute the pressure due to storage of particles and formulate the method of transportation and fine particle recovery.
3. Estimate the power required by mixers using power number and Reynolds number
4. Determine the terminal settling velocity, settling time and calculate the thickener area
5. Calculate the pressure drop in filters, filter medium resistance and cake resistance
6. Classify and suggest different type of separation processes required for the feed material.

UNIT – I PROPERTIES OF PARTICULATE SOLID AND SIZE REDUCTION (12)

Forces employed for size reduction of solids. Types of crushers, grinders and disintegrators for coarse, intermediate, fine and ultrafine grinding. Cutting machines. Size reduction operation - Power requirements - Laws of comminution. Open and closed circuit grinding. Industrial applications of size reduction equipments. Shape factor of particulate solids. Standard sieves and sieve scales. Differential and cumulative analysis - Plotting of sieve analysis data. Specific surface area determination - Calculation of particle size from sieve analysis data. Industrial screening equipments. Screen effectiveness.

UNIT – II TRANSPORTATION, STORAGE AND RECOVERY OF FINE PARTICLE (12)

Mechanical and pneumatic conveying equipments.Storage of solids - Angle of repose and angle of internal friction.Pressures in bins - Janssen equation. Gas cleaning methods - Cyclone separators, Bag filters, Scrubbers and electrostatic precipitators. Dense Media Separation (DMS), Flotation process -Separation by Magnetic and Impingement methods.

UNIT – III MIXING AND AGITATION (12)

Types of Mixers and mixing equipments for liquids, pastes, rubber and plastic materials and for dry powders.Power consumption in mixers.Criteria for mixing of Solids - Mixing Index - Scale up of agitator design.

UNIT – IV SIZE SEPARATION BY SETTLING AND SEDIMENTATION METHODS (12)

Drag on spherical and non-spherical particles, Terminal settling velocity under laminar and turbulent conditions (Stokes' law and Newton's law). Size separation by settling methods - Free settling and Hindered settling. Equipments - Settling chambers, classifiers, jigging and Tabling. Theory of Sedimentation. Types of Thickeners – Batch and Continuous. Applications of batch sedimentation tests for design of continuous thickeners.

UNIT – V FILTRATION AND CENTRIFUGAL SEPARATION (12)

Batch and continuous filtration equipments. Theories of filtration and washing. Compressibility of filter cakes. Filter media and Filter aids. Industrial filtration practice. Centrifugal filtration, Centrifugal settling, Centrifugal sedimentation and centrifugal clarification.

18BTCE305	Semester-III THERMODYNAMICS -II	3H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100
		End Semester Exam:3 Hours

Course Objectives

1. To introduce the concepts of fugacity, activity coefficient, vapour-liquid equilibrium and reaction equilibrium. Introduction to molecular thermodynamics.
2. Purpose of this course is that students gain the knowledge and ability to apply 1st and 2nd laws of thermodynamics to power, refrigeration and air conditioning cycles, and chemical reactions
3. To develop the student's ability to apply the principles of thermodynamics to the optimal design of the basic energy conversion systems: power generation, refrigeration, air-conditioning, and combustion
4. To develop the student's ability to use thermodynamic relations and the property tables and charts for the analysis of energy conversion systems in the course of their operation.
5. To develop the student's ability to apply the first and the second laws of thermodynamics to the optimization of the basic energy conversion systems.
6. To provide the students with some knowledge and analysis skills associated with the principles of operation and applications of the main energy conversion systems

Course outcomes

Students will able to

1. Ability to apply fundamental concepts of thermodynamics to engineering applications.
2. Ability of application of thermodynamics to phase equilibria and reaction equilibria.
3. Applies thermodynamics to conversion devices.
4. Applied to design the chemical engineering equipments in processes.
5. Capability to determine thermodynamic efficiency of various energy related processes.
6. Ability to estimate thermodynamic properties of substances in gas and liquid states

UNIT -I: REVIEW OF BASICS**(12)**

Review of first and second law of thermodynamics -Vapor-liquid equilibrium -phase rule - simple models for VLE -VLE by modified Raoult's law -VLE from K-value correlations -Flash calculations.

UNIT- II: SOLUTION THERMODYNAMICS**(12)**

Fundamental property relationships- free energy and chemical potential -partial properties- definition of fugacity and fugacity coefficient of pure species and species in solution- the ideal solution and excess properties.

UNIT – III : PROPERTIES OF SOLUTIONS**(12)**

Liquid phase properties from VLE, Models for excess Gibbs energy, heat effects and property change on mixing ,UNIFAC and UNIQUAC models.

UNIT – IV : LIQUID-LIQUID EQUILIBRIA

(12)

Vapor-Liquid-Liquid Equilibria; Solid-Liquid Equilibria; Solid-Gas Equilibria. Chemical reaction equilibria: equilibrium criterion, equilibrium constant, evaluation of equilibrium constant at different temperatures, equilibrium conversion of single reactions, multireaction equilibria.

UNIT – V: MOLECULAR THERMODYNAMICS

(12)

Introduction to molecular/statistical thermodynamics

Total: **60 Hours**

SUGGESTED READINGS

3. Y.V.C.Rao, “Chemical Engineering Thermodynamics”, University Press, Hyderabad, 1997.

B.Tech Chemical Engineering	2018-2019
18BTCE311	SEMESTER - III ENGINEERING WORKSHOP
	4H-3C
Instruction Hours/week: L:1 T:0 P:3	Marks: Internal:40 External:60 Total:100
	End Semester Exam:3 Hours

Course Objective

1. To provide exposure to the students with hands on experience on various basic engineering practices in civil, Mechanical, Electrical and Electronics Engineering
2. The Engineering Workshop Practice for engineers is a training lab course spread over entire semester.
3. The modules include training on different trades like Fitting, Carpentry, Black smithy etc... which makes the students to learn how various joints are made using wood and other metal pieces.
4. To study the basics of workshop engineering practice
5. To identify the hand tools and instruments and acquire measuring skills.
6. To acquire practical skills by performing the experiments in different shops of workshop

Course Outcomes:

- 1 To provides the knowledge of core technical subjects for making and working of any type of project.
- 2 Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.
- 3 Understand modern manufacturing operations, including their capabilities, limitations, and how to design economically.
- 4 Gain insight into how designers influence manufacturing schedule and cost, and cost of different components.
- 5 Learn how to analyze products and be able to improve their manufacturability and make the cost effectively.
- 6 The students will be able to assess the working conditions of any machining process and thus calculating the actual forces involved

PART – A (CIVIL & MECHANICAL)

- | | |
|--|----------|
| 1. WELDING | 6 |
| i. Preparation of arc welding of butt joints, lap joints and tee joints. | |
| 2. BASIC MACHINING | 6 |
| i. Simple Turning and Taper turning | |
| ii. Drilling and Tapping | |
| 3. SHEET METAL WORK | 6 |
| i. Model making – Trays, funnels, etc. | |
| 4. DEMONSTRATION ON | 4 |
| i. Smithy operations | |
| ii. Foundry operations | |
| iii. Plumbing Works | |
| iv. Carpentry Works | |

PART –B (ELECTRICAL & ELECTRONICS)

5. ELECTRICAL ENGINEERING	10
<ul style="list-style-type: none"> i. Study of electrical symbols and electrical equipments. ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring. iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter. iv. Measurement of electrical quantities – voltage, current, power & power factor in R load. v. Measurement of energy using single phase energy meter. 	
6. ELECTRONICS ENGINEERING	13
<ul style="list-style-type: none"> i. Study of Electronic components– Resistor (color coding), capacitors and inductors. ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB. iii. Study of logic gates AND, OR, NOT, NOR and NAND. iv. Study of HWR and FWR. 	
TOTAL	45

//

Course Objectives

- 1 Basic Concepts of Heat Transfer
- 2 Design and Rating of Heat exchangers with and Without Phase Change
- 3 Design and Rating of Compact Heat Exchangers
- 4 Basic Principles of Heat Transfer
- 5 Fourier Law and First thermodynamic law o Heat transfer with conduction, convection and radiation.
- 6 Analytical solutions of Heat transfer problems ,Numerical solutions of Heat Transfer problems and Steady state and transient problems of Heat Transfer

Course Outcome

- 1 Understands the concepts of heat transfer.
- 2 Understands mechanisms of conduction, convection and radiation.
- 3 Able to understand heat transfer in parallel & counter current flow.
- 4 Analyzes the performance of heat exchange equipments& evaporators.
- 5 Able to understand effect of heat transfer in boiling and evaporators.
- 6 To study components subjected to thermal loading.

UNIT – I CONDUCTION(12) Importance of heat transfer in Chemical Engineering operations - Modes of heat

transfer - Fourier's law of heat conduction - one dimensional steady state heat conduction equation for flat plate, hollow cylinder, - Heat conduction through a series of resistances-effect of temperature on thermal conductivity; Combined Conduction- Convection Heat transfer, Critical radius of insulation, Heat transfer in extended surfaces

UNIT –II CONVECTION (12)

Concepts of heat transfer by convection - Natural and forced convection, Dimensional analysis in heat transfer, Correlations for the calculation of heat transfer coefficients, heat transfer coefficient for flow through a pipe, flow through a non circular conduit, Concepts of thermal boundary layer, Von karman Integral & energy Equation for flow past flat plate, Heat transfer by natural convection.

UNIT –III HEAT EXCHANGERS (12)

Parallel and counter flow heat exchangers - Log mean temperature difference - Single pass and multipass heat exchangers; plate heat exchangers; use of correction factor charts; heat exchangers effectiveness; number of transfer unit - Chart for different configurations - Fouling factors - Design of various types of heat exchangers and condensers.

UNIT – IV CONDENSATION AND BOILING (12)

Heat transfer to fluids with phase change - heat transfer from condensing vapours, drop wise and film wise condensation, Nusselt equation for vertical and horizontal tubes, condensation of superheated vapours, effect of non-condensable gases on rate of condensation. Heat transfer to boiling liquids - mechanism of boiling, nucleate boiling and film boiling.

UNIT – V EVAPORATION AND RADIATION (12)

Theory of evaporation - single effect and multiple effect evaporation - Types of Evaporators -Design calculation for single and multiple effect evaporation. Radiation heat transfer - Emissive power, Black body radiation, Emissivity, Stefan - Boltzman law, Planck's law, radiation between surfaces.

SUGGESTED READINGS

18BTCE402	Semester-IV MASS TRANSFER - I	3H-3C
Instruction Hours/week: L:3 T:0 P:0		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours		

Course Objective

- 1 The purpose of this course is to introduce the undergraduate students with the most important separation equipments in the process industry, and provide proper understanding of unit operations.
- 2 To learn basic knowledge of mass transfer operation and its application.
- 3 To learn basic knowledge of mass transfer equipments.
- 4 To design mass transfer equipments.
- 5 To understand the basic concepts of mass transfer.
- 6 this module is to bring in the concept of mass transfer, which is mass in transit as a result of species concentration difference in a mixture

Course Outcome

- 1 Students will able to learn about the diffusional mass transfer
- 2 Students will able to understand interphase and different analogies of mass transfer
- 3 Student will be able to understand the mechanism of crystallization and absorption.
- 4 Student will be able to understand operation of drying
- 5 Design and operation of the equipments can be understood.
- 6 To study recent developments in mass transfer operation.

UNIT – I DIFFUSION IN FLUIDS (12)

Molecular diffusion and eddy diffusion. Steady state molecular diffusion in fluids at rest and in laminar flow. Molecular diffusion in gases, steady state diffusion of gas A through non- diffusing gas B, steady state equivocal counter diffusion. Effective diffusivity, steady state diffusion in multicomponent mixtures. Measurement of diffusivity Molecular diffusion in liquids.

UNIT – II INTERPHASE MASS TRANSFER (12)

Mass transfer coefficients, F and K type mass transfer coefficients, Relation between mass transfer coefficients, Film theory, Penetration theory, Danckwerts surface renewal theory. Two film theory. Wetted wall towers. Equilibrium stage modelling: equilibrium curve and operating line .Analogy between momentum, heat and mass transfer.

UNIT – III ABSORPTION (12)

Equilibrium solubility of gases in liquids. Choice of solvents for absorption. Single component absorption. Operating and equilibrium lines for absorber and stripper. Minimum liquid - gas ratio for absorption. Countercurrent multistage operation, one component transferred continuous contact equipment, absorption of one component in packed tower, overall coefficients, Concept of NTU and HTU - graphical, analytical methods and overall height of transfer units. Hydrodynamic consideration. Tower packings and packed tower.

UNIT – IV DISTILLATION (12)

Vapour - Liquid - Equilibrium (VLE). Ideal solutions and Raoult's law, non-ideal solutions and Henry's law, relative volatility, azeotropes - minimum and maximum boiling. Flash distillation, differential distillation - Rayleigh's equation, steam distillation.

UNIT – V EQUIPMENT FOR CONTINUOUS DISTILLATION (12)

Plate columns, packed columns. Determination of number of theoretical plates using McCabe - Thiele and Ponchon - Savarit methods. Location of feed plate. Reflux ratio - minimum reflux, optimum reflux, total reflux. Plate efficiency - overall and Murphree efficiencies. Azeotropic and extractive distillations.

Semester-IV		
18BTCE403	CHEMICAL PROCESS INDUSTRIES	3H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours		

Course Objective

1. To Study process technologies of various organic and inorganic process industries
2. Introduce the basic information and the systematic diagrams of Unit operations involved in chemical industries.
3. Familiarize the concepts of design, operation details and schematic of industrial equipment.
4. Ascertain the right separation technology for easy separation of chemical components
5. fundamental knowledge of all Unit operation and Unit Process required for synthesis of production process. It covers production process of various industries like Industrial gases, Industrial carbon, Marine Chemicals, Nuclear Industries, Chlor – alkali industries, Electrolytic and Electrochemical Industries, Fertilizers, Glass – Chemistry
6. the students of Chemical Engg for industrial point of view production processes

Course Outcome

After completion of the course, students are able to

1. Identifies the contemporary technologies in water treatment and label the process economics in salt and sulphur based industries.
2. Desing the production methodology of oil industries and analyse the efficiency of the products.
3. Analyze and formulate the chemical processes and economics involved in the carbohydrate industries.
4. Describe the flow sheets of manufacture process of pulp based, leather industries and engineering problems faced in the industries.
5. Evaluate the surface coating & cement industry processes to justify their appropriate production techniques and their handling processes.
6. Students to get knowledge on metallurgy learn the topics “The Fuel and Industrial Gases”enabled

UNIT – I NITROGEN, PHOSPHOROUS AND SULPHUR BASED INDUSTRIES (9)

Nitrogen, Ammonium nitrate, Ammonium sulphate and Urea. Phosphorus, Phosphoric acid, Ammonium phosphates, Sodium phosphates, Nitrophosphate& Phosphate esters. Mixed fertilizers (NPK Mixtures). Manufacture of Sulphur and Sulphuric acid. Materials for handling, storage and transportation.

UNIT – II OIL AND ALLIED INDUSTRIES (9)

Vegetable oil extraction methods. Refining of vegetable oils. Hydrogenation of Oils. Soaps and Candle. Detergents and Glycerine. Materials for handling, storage and transportation.

UNIT – III CARBOHYDRATES AND FERMENTATION INDUSTRIES (9)

Manufacture of Starch, Dextrin, Glucose and sucrose and manufacture of Ethyl alcohol, Acetic acid, Citric acid, Oxalic acid and Antibiotics (Penicillin). Materials for handling, storage and transportation

UNIT – IV PULP AND LEATHER INDUSTRIES (9)

Production of Pulp. Conversion to paper. Production of Viscose, Acetate and

Cuprammoniumrayons and Cellulose acetate. Production of Dimethyl sulphite and Dimethyl sulfoxide from wood liquor. Manufacture of leather from hides and skins. Manufacture of Glue and Gelatin. Materials for handling, storage and transportation.

UNIT – V SURFACE COATING, CEMENT AND GLASS INDUSTRIES (9)

Constituents of paints & varnishes and their functions. Paint mixing process. Manufacture of pigments such as White lead, Zinc oxide and Titanium dioxide. Cements: Introduction, types of cements, properties and applications. Manufacture of Portland cement. Beneficiation & Production of Hydrated lime. Raw materials for Glass Industries. Production of glass by tank furnace - shaping and forming of articles from glass.

18BTCE404	SEMESTER -IV MATERIAL TECHNOLOGY	3H-3C
-----------	-------------------------------------	-------

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours**Course Objective**

- 1 To impart knowledge on the structure, properties, treatment, testing and applications of metals and non-metallic materials so as to identify and select suitable materials for various engineering applications.
- 2 Selecting their career in core and emerging areas of Materials Engineering and allied industries.
- 3 Make them achieve timely progress towards higher degree in Materials, Engineering and related fields.
- 4 To solve challenging industrial problems and serve effectively in globally competitive industrial environments with leadership skills.
- 5 To describe the different types of bonding in solids, and the physical ramifications of these differences.
- 6 To describe and demonstrate diffraction, including interpretation of basic x-ray data. Give an introduction to metals, ceramics, polymers, and electronic materials in the context of a molecular level understanding of bonding.

Course Outcomes

On completion of the course the students will be able to

- 1 Comprehend the criterion for selection of materials for chemical process industries.
- 2 Outline the properties and applications of smart materials and nano and bio materials
- 3 Apply the knowledge about various materials used in chemical process industries
- 4 Select materials for high temperature and Sour service and gain knowledge of modern engineering materials.
- 5 Be able to qualitatively derive a material's Young's modulus from a potential energy curve
- 6 Be able to describe a polymer's elastic behavior above and below the glass transition.

UNIT I NATURE OF MATERIALS

9

Selection process of engineering materials (General aspects), Chemical and physical properties of materials, chemical structure, Micro and macrostructure, corrosion resistance, chemical Reactivity. Mechanical properties, stress, strain, strength, hardness, malleability, ductility, elasticity, plasticity, toughness, thermal stability. Types of deformation: Plastic, viscous; plastic deformation of single crystal, poly crystalline metals, slip, twinning, dislocations, viscoelasticity, creeps in metals, amorphous materials.

UNIT II METALLURGY

9

Extractive Metallurgy: Hydro, pyro and electro metallurgy, refining of metals. Powder Metallurgy: methods of production of metal powder, mixing of metal powders, compaction of powders -applications. Extraction process of Iron: manufacture of pig iron, blast furnace operations, chemistry of reactions. Manufacture of cast iron, varieties of cast iron, effect of impurities.

Production of steel ,Bessemerprocess,open-hearth process ,L D methods. Classification of steel, effect of impurities.Heattreatment process: annealing, hardening, tempering, normalizing and gas carburizing. Fe-Carbon phase diagram.

UNIT III COMPOSITES AND ADHESIVES

9

Polymer composites: Introduction, Types of composites, particle reinforced, fiber reinforced, structural composites, examples. Matrix materials, reinforcement materials-, Kevlar, Polyamides,Fibers, glass, carbon fibers, ceramics and metals. Technical applications.

UNIT IVBIOMATERIALS

9

Classification of bio-materials (based on tissue response) ,Comparison of properties of some common biomaterials , Metallic implant materials (stainless steel, cobalt- based and titanium-based alloys) , Polymeric implant materials (Polyamides, polypropylene, Acrylic resins and Hydro gels) ,Tissue replacement implants , Soft and hard tissue replacements ,Skin implants, Tissue engineering, Biomaterials for organ replacement (Bone substitutes), Biosensor.

UNIT V MODERN ENGINEERING MATERIALS

9

Smart materials , Shape memory alloys, Electrostatics, Irreversible Marten sites, Domain Walls, Nature of Shape Memory, Shape Memory Alloy Materials, Ferromagnetic Shape Memory Alloys, Relation to Shape Memory Alloys, Actuator and Sensor Materials Chromic materials (Thermo, Photo and Electro) ,Rheological fluids , Metallic glasses.

5. Agarwal.C.V, Chemistry of Engineering materials, IV Edition, Tata McCraw Hill, 1997
6. William F.Smith, Foundation of materials science and Engineering , II Edition ,Tata McCraw Hill,1998

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. At the end of this course the student will be able to analyse the financial management, stock exchanges.
2. To enable students to understand and interpret the basic financial statements, to comprehend the basics in managing finance and to know pricing mechanism
3. Acquire knowledge of economics to facilitate the process of economic decision making
4. Acquire knowledge on basic financial management aspects
5. Develop the skills to analyze financial statements
6. Acquire knowledge of economics to facilitate the process of economic decision making

Course Outcomes

1. To know the fundamentals of cost analysis and economics.
2. To learn about the basics of economics and cost analysis related to engineering so as to take economically sound decisions.
3. To make the students to understand capital market, break-even point analysis and depreciation
4. Understand the principles of Engineering Economics.
5. Able to prepare and interpret financial statements, perform Profit analysis.
6. Able to manage the working capital. Understand the logic behind the capital budgeting.

UNIT I FUNDAMENTALS OF ENGINEERING ECONOMICS**9**

Introduction to Engineering Economics – Definition and Scope – Significance of Engineering Economics- Demand and supply analysis-Definition – Law of Demand – Elasticity of Demand – Demand Forecasting. Supply – Law of supply – Elasticity of Supply.

UNIT II FINANCIAL MANAGEMENT**9**

Objectives and functions of financial management – financial statements, working capital management– factors influencing working capital requirements – estimation of working capital. Capital budgeting - Need for Capital Budgeting – Project Appraisal Methods - Payback Period – ARR – Time Value of Money.

UNIT III CAPITAL MARKET**9**

Stock Exchanges – Functions – Listing of Companies – Role of SEBI – Capital Market Reforms. Money and banking - Money – Functions –Inflation and deflation – Commercial Bank and its functions – Central bank and its functions.

UNIT IV NEW ECONOMIC ENVIRONMENT**9**

National Income – concepts – methods of calculating national income - Economic systems, economic Liberalization –Privatization – Globalization. An overview of International Trade – World Trade Organization – Intellectual Property Rights.

UNIT V COST ANALYSIS AND BREAK EVEN ANALYSIS**9**

Cost analysis - Basic cost concepts – FC, VC, TC, MC – Cost output in the short and long run. Depreciation - meaning – Causes – Methods of computing Depreciation (simple problems in Straight Line Method, Written Down Value Method). Meaning – Break Even Analysis - Managerial uses of BEA.

SUGGESTED READINGS

2. Varshney R. L., and K.L Maheshwari Managerial Economics Sultan Chand &
3. Sons, New Delhi 2001.
4. M.L.Jhingan Principles of Economics Konark Publications 2010.
5. Prasanna Chandra Fundamentals of Financial Management Tata McGraw Hill, New Delhi. 2007

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- 1 To give a comprehensive insight into natural resources.
- 2 To understand the concept of ecosystem and biodiversity.
- 3 To educate the ways and means of the environment.
- 4 To protect the environment from various types of pollution.
- 5 To impart some fundamental knowledge on human welfare measures.
- 6 To give students an understanding of how science and the scientific method work to address environmental problems

Course Outcome

1. Recognize the importance of natural resources
2. Associate themselves with the various ecosystems
3. Describe the importance of biodiversity
4. Identify and minimize the difference pollutions
5. Prioritize and analyses the social issues
6. Integrate the environmental principles in the projects undertaken in field of engineering and technology

UNIT I - Introduction To Environmental Studies And Natural Resources (9)

Definition, Scope and Importance – Need for public awareness –Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II - Ecosystem (9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem).

UNIT III - Biodiversity (9)

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity.

Bio geographical classification of India, Importance of biodiversity-Value of biodiversity -
Karpagam Academy of Higher Education (Deemed to be University), Coimbatore-641021

Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India
– Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV - Environmental Pollution

(9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V - Social Issues and Environment

(9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights-Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

SEMESTER - IV**18BTCE411 Numerical Methods in Chemical Engineering****2H-3C****Instruction Hours/week: L:2 T:0 P:2****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- 1 The objective of this course is to familiarize the students with statistical techniques.
- 2 It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline.
- 3 To introduce students to numerical methods used to solve engineering problems, in particular chemical engineering problems, using numerical methods and computer programming.
- 4 Fundamentals of numerical methods/algorithms to solve systems of different mathematical equations (e.g. linear/ non-linear algebraic equations, ordinary /partial differential equations), will be introduced.
- 5 The course would enable students to write their own computer programs using programming languages like C and commercial software like Matlab.
- 6 To develop skills in properly defining and setting up chemical engineering problems and learning numerical methods that can be used to solve these problems

Course Outcomes

The students will learn:

1. To solve chemical engineering problems involving Linear and non-linear equations.
2. Hands-on experience will be provided to apply these computer programs to solve problems in different areas of chemical engineering e.g. fluid flow, heat and mass transfer, chemical reaction engineering etc.
3. To acquire skills in handling situations involving linear/ non-linear algebraic equations, ordinary /partial differential equations
4. To solving actual chemical engineering problems through computer programming and coding.
5. To solve ordinary and partial differential equations using programming languages like C and software's like MATLAB.
6. Student will understand procedure oriented MATLAB concepts. Student will be capable of writing C and MATLAB programs efficiently.

UNIT-I INTRODUCTION**(9)**

Approximation and Concept of Error & Error Analysis .Linear Algebraic Equations: Methods like Gauss elimination, LU decomposition and matrix inversion, Gauss-Siedel method, Chemical engineering problems involving solution of linear algebraic equations . **UNIT-II ROOT FINDING METHODS FOR SOLUTION ON NON-LINEAR ALGEBRAIC**

EQUATIONS**(9)**

Bisection, NewtonRaphson and Secant methods, Chemical engineering problems involving solution of non-linear equations . Interpolation and Approximation, Newton's polynomials and

Lagrange polynomials, spline interpolation, linear regression, polynomial regression, least square regression .

UNIT-III ORDINARY DIFFERENTIAL EQUATIONS (9)

Euler method, Runge-Kutta method, Adaptive Runge-Kutta method, Initial and boundary value problems, Chemical engineering problems involving single, and a system of ODEs.

UNIT-IV NUMERICAL INTEGRATION (9)

Trapezoidal rule, Simpson's rule, integration with unequal segments, quadrature methods, Chemical engineering problems involving numerical differentiation and integration. Introduction to Partial Differential Equations: Characterization of PDEs, Laplace equation, Heat conduction/diffusion equations, explicit, implicit, Crank-Nicholson method

Practical description [No. of turns (2 hrs)]

1. Introduction to use of computers for numerical calculations (1 practical turn)
2. Solution of linear algebraic equations using Gauss elimination, Gauss-Siedel etc. (2 practical turns)
3. Solution of a non-linear equations using bracketing and Newton-Raphson method (2 practical turns)
4. Interpolation and Approximation(2 practical turns)
5. Numerical integration(2 practical turns)
6. Euler method (1 practical turn)
7. Runge-Kutta methods for ODEs (2 practical turns)
8. Solution of system of ODEs using simple methods (1 practical turn)
9. Solution of simple PDEs (2 practical turns)

5. Press, W. H. et al., "Numerical Recipes in C: The Art of Scientific Computing, 3rd Edition, Cambridge University Press, 2007.

Course Outcome

1. Ability to operate all the fluid flow measuring devices and able to calculate their coefficients.
2. Ability to operate different fluid flow machineries and able to test their performance characteristics.
3. Plan efficient laboratory experiments to collect relevant data while minimizing error
4. Design and conduct experiments in the laboratory
5. Compare experimentally measured results with literature data and quantify the sources of error that contribute to differences between measured data and literature data
6. Prepare high quality written reports and oral presentations to summarize a project in a professional and informative manner.

Course Objective

1. Apply the concepts of mechanical operations in physical separation processes.
2. Perform the size reduction process using various mechanical operation equipments.
3. Estimate the performance characteristic parameters for solid-fluid and solid-solid separation equipments.
4. Conduct experiments to solve complex engineering problems effectively as an individual or team work.
5. Perform as a leader with good ethical principles to meet societal needs in the field of chemical engineering.
6. Demonstrate skills in safe operation of laboratory equipment

EXPERIMENTS

- [1] Venturimeter and Orifice Meter
- [2] Helical Coil and Spiral Coil
- [3] Pipe Friction and Expansion Losses

Semester-V		
18BTCE501	CHEMICAL REACTION ENGINEERING - I	3H-4C
Instruction Hours/week: L:3 T:1 P:0		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours		

Course Objective

1. To impart knowledge on different types of chemical reactors, the design of chemical reactors under isothermal and non-isothermal conditions
2. To provide experience for students to solve open-ended reaction engineering problems in teams.
3. To provide practice with computer software and simulation relating to chemical reaction engineering
4. To provide practice at developing critical and creative thinking skills related to reaction engineering.
5. To provide experience for students to solve open-ended reaction engineering problems in teams.
6. To provide practice with computer software and simulation relating to chemical reaction engineering

Course Outcomes

On completion of the course the students will be able to

1. Gain knowledge on the selection of the reactor for the reaction and its design
2. Apply the principles of reaction kinetics and formulate rate equations and analyze the batch reactor data
3. Understand the ideal reactor concepts and to develop the performance equation to workout conversion and space time
4. Perform RTD analysis in non-ideal flow reactors and calculation of conversion
5. Analyze multiple reactions carried out both isothermally and non-isothermally in flow, batch and semi batch reactors to determine selectivity and yield.
6. Determine the reaction order and specific reaction rate from experimental data.

UNIT I RATE EQUATIONS**12**

Rate equation, elementary, non-elementary reactions, theories of reaction rate and Prediction; Design equation for constant and variable volume batch reactors, analysis of experimental kinetics data, integral and differential analysis

UNIT II DESIGN OF REACTORS**12**

Design of continuous reactors - stirred tank and tubular flow reactor, recycle reactors, combination of reactors, size comparison of reactors.

UNIT III DESIGN OF REACTORS FOR MULTIPLE REACTIONS**12**

Design of reactors for multiple reactions - consecutive, parallel and mixed reactions - factors affecting choice, optimum yield and conversion, selectivity, reactivity and yield

UNIT IV NON-ISOTHERMAL REACTOR SYSTEM

12

Non-isothermal homogeneous reactor systems, adiabatic reactors, rates of heat exchanges for different reactors, design for constant rate input and constant heat transfer coefficient, operation of batch and continuous reactors, optimum temperature progression

UNIT V NON IDEAL FLOW REACTORS

12

The residence time distribution as a factor of performance; residence time functions and relationship between them in reactor; basic models for non-ideal flow; conversion in non-ideal reactors

TOTAL: 60

SUGGESTED READINGS

1. Levenspiel O, Chemical Reaction Engineering, Wiley Eastern Ltd, II Edition, 2000
2. Smith, J.M, Chemical Engineering Kinetics, McGraw Hill, III Edition, 1981
3. Fogler, H.S, Elements of Chemical Reaction Engineering, Prentice Hall of India Ltd, III Edition, 2000
4. Froment, G.F & K.B. Bischoff, Chemical Reactor Analysis and design, John Wiley and sons, 1979
5. Smith, J.M, VanNess, H.C., & Abbot M.C, Introduction to Chemical Engineering Thermodynamics, McGraw Hill, VII Edition, 2004

Course Objective

1. To provide introduction to physical and thermodynamic principles of mass transfer with an emphasis on how these principles affect the design of equipment and result in specific requirements for quality and capacity
2. To impart the basic concepts of mass transfer in distillation, extraction, leaching operations;
3. To give details about method of conducting mass transfer operation, concepts of driving force, operating line; designing of stages for operations like absorption, distillation, extraction, leaching. Also it helps in process design and study of equipment for above mentioned operations
4. To deploy students for hand-on experiments relevant to the principles studied in the Mass Transfer Operations theory;
5. To enable them to estimate diffusivity coefficients and mass transfer coefficients;
6. To make them well versed to find out the equilibrium data for various systems;

Course Outcome

1. Determine the number of stages and recovery efficiency for solid-liquid and liquid-liquid separation processes.
2. Calculate the quantity of adsorbent required for stage-wise operations and illustrate the types of adsorption, adsorption isotherms and ion-exchange process.
3. Determine the properties of air-water system using psychrometric chart and review the operational features of cooling towers.
4. Analyse the applications of dryers and calculate the time of drying from rate of drying curve
5. Compute the yield of crystals and select the crystallizer by revising the working features.
6. Execute proper material balance for different operations in chemical or pharmaceutical industry. Solve the engineering problems of drying, adsorption, evaporation, crystallization operations etc

UNIT – I EXTRACTION**(12)**

Application of liquid-liquid extraction, Liquid-liquid equilibria, general features of triangular co-ordinate systems, Choice of solvent for extraction, Number of stages, Minimum solvent rate, Solid-liquid extraction, Typical industrial applications, Factors affecting leaching – agitation, particle size, temperature and solvent properties, Leaching by percolation moving bed leaching and shank's system, Operation of stage wise and differential contact extractors.

UNIT – II ADSORPTION AND ION EXCHANGE**(12)**

Types of adsorption - physical adsorption and chemical adsorption, factors influencing adsorption, nature of adsorbents, Industrial adsorbents, Freundlich adsorption isotherm and its application, Adsorption operation - single stage, crosscurrent and countercurrent operations, Recovery of solvent vapours, Principles of ion exchange - techniques and applications - equilibria rate of ion exchange.

UNIT – III HUMIDIFICATION**(12)**

Humidification operation of air-water system, Psychrometric chart, Methods of humidification and dehumidification, Lewis relation, Theory and principles of cooling towers, Types of cooling towers.

UNIT –IV DRYING**(12)**

Theory and mechanism of drying. Batch drying, drying tests, drying curve, time of drying. Mechanism of moisture movement, drying rate during constant rate period, unsaturated surface drying, drying with internal diffusion. Continuous drying operations and equipment. Classification of dryers. Application of dryers in process industries

UNIT –V CRYSTALLIZATION**(12)**

Factors governing nucleation and crystal growth, theory of crystallization. Batch and continuous crystallizers. Performance and applications of industrial crystallizers.

Semester-V		
18BTCE504	Professional Ethics in Engineering	3H-3C

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

1. To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.
2. Instill the moral values that ought to guide their profession.
3. Resolve the moral issues in the profession.
4. Infer moral judgment concerning the profession.
5. Correlate the concepts in addressing the ethical dilemmas.
6. Judge a global issue by presenting an optimum solution.

Course Outcomes (COs)

Upon completion of the course, the student should be

1. Able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.
2. Distinguish between ethical and non-ethical situations.
3. Practice moral judgment in conditions of dilemma.
4. Relate the code of ethics to social experimentation.
5. Develop concepts based on moral issues and enquiry.
6. Resolve moral responsibilities in complications

UNIT I HUMAN VALUES**10**

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS**9**

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION**9**

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS

9

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES

8

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

SUGGESTED READINGS:

1. Mike W. Martin and Roland Schinzinger, “Ethics in Engineering”, Tata McGraw Hill, New Delhi, 2003.
2. Govindarajan M, Natarajan S, Senthil Kumar V. S, “Engineering Ethics”, Prentice Hall of India, New Delhi, 2004.
3. Charles B. Fleddermann, “Engineering Ethics”, Pearson Prentice Hall, New Jersey, 2004.
4. Charles E. Harris, Michael S. Pritchard and Michael J. Rabins, “Engineering Ethics – Concepts and Cases”, Cengage Learning, 2009.
5. John R Boatright, “Ethics and the Conduct of Business”, Pearson Education, New Delhi, 2003
6. Edmund G Seebauer and Robert L Barry, “Fundamentals of Ethics for Scientists and Engineers”, Oxford University Press, Oxford, 2001.

Course Objective

1. To make the students understand physical systems in chemical Engineering and to develop their mathematical models and solutions for these models.
2. The students will also learn to use the commercial process simulators
3. able to carry out and manage the key design, managerial and decision-making processes.
4. Management and design is inherently complex and a systematic, yet flexible, agile and interdisciplinary approach is required to manage and improve complex systems
5. the manufacturing system and factory level, based on global best-practice methodologies, industry lecturers, and incorporates case studies and projects, to apply these methodologies and become proficient at them
6. Present fundamental laws in developing model equations.

Course Outcome

After completion of the course, students are able to

1. Apply first principles and constitutive laws to develop ordinary or partial differential equations by incorporating valid assumptions for both macroscopic and microscopic systems.
2. Derive phenomenological models for simple and variable flow hydraulic tanks, enclosed mixing vessel with reaction, steam jacketed mixing vessel and Continuous flow boiling systems.
3. Develop the mathematical model for simple flow systems and Homogeneous and Heterogeneous reaction kinetics.
4. Formulate distributed parameter model for various stage operations like binary distillation, multi stage counter current extraction and distributed systems like heat exchanger, tubular reactors and membrane separation unit.
5. Apply numerical methods to solve modeled equations using simulation tool Matlab/simulink.
6. students will be able to: learnt the basic concepts of Simulation and mathematical models applicable in Chemical Engineering

UNIT – I INTRODUCTION**(12)**

Uses of Mathematical Models - Principles of formulation. Fundamental laws: Continuity equations, Energy equation, Equations of motion, Transport equations, Equations of State, Equilibrium and Chemical Kinetics. Simple Examples.

UNIT – II BASIC MODELING**(12)**

Simple Hydraulic Tank, Variable flow hydraulic tank, Enclosed tank, Adiabatic compression in gas space, Mixing vessel, Mixing with reaction, Reversible reaction, Steam jacketed vessel, Continuous - Flow boiling system.

UNIT – III FLUID FLOW AND REACTION KINETICS**(12)**

Gas flow systems - Example: Three-Volume gas flow system, Hydraulic transients - between two reservoirs, pumping system. Reaction Kinetics: General modelling scheme, Liquid phase CSTR - Radical kinetics - Elementary reduction of Radical Mechanism- Rate limiting steps, Heterogeneous kinetics - Example: Autoclave.

UNIT – IV STAGED OPERATIONS AND DISTRIBUTED SYSTEMS**(12)**

Staged Operations: Counter current extraction, Distillation columns - Binary distillation.
Distributed systems: Counter current Heat Exchanger, Membrane Separation
Process, and Tubular Reactor and Evaporators

UNIT – V SIMULATION**(12)**

MATLAB/Simulink - Introduction, Basic components, Operational Blocks, Simple Examples -
Three CSTR's in series, Gravity flow tank, Batch Reactor, Digital Simulation: Numerical Methods
- Newton Raphson, False Position methods of convergence, Numerical integration - Euler, Runge
Kutta fourth-order methods. Simple Examples: Three CSTR's in series, Non isothermal CSTR,
Binary distillation column, Batch reactor. **SUGGESTED READINGS**

Semester-V		
18BTCE511	UNIT OPERATIONS LABORATORY- II	4H-2C
Instruction Hours/week: L:0 T:0 P:4		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours		

Course Objective:

1. Understanding of the how these learning objectives are realized in the course through a variety of student assessments
2. To enable the students to develop a sound working knowledge on different types of heat transfer equipment
3. Define the fundamental concepts to students in the area of heat transfer and its applications.
4. Recognize the practical significance of various parameters those are involved in different modes of heat transfer.
5. To train the students to develop sound working knowledge on different types of mass transfer equipment
6. These experiments will demonstrate the operation and the design of unit operations that incorporate heat and mass transfer phenomena.

Course Outcome

1. After completion of the course, students are able to
2. To collect quality raw data from any heat transfer operation and to compare observed with predicted performance.
3. To apply the concepts of heat transfer, fluid dynamics and thermodynamics to the design and operation of heat transfer experiments.
4. To determine the heat transfer co-efficient and effectiveness of heat exchangers from experimentally observed data.
5. Conduct experiments to solve complex engineering problems effectively as an individual or team work.
6. Perform as a leader with good ethical principles to meet societal needs in the field of chemical engineering.

EXPERIMENTS

- [1] Heat transfer studies in metal bar apparatus
- [2] Heat transfer studies in Agitated vessel
- [3] Heat transfer studies in Fluidized bed dryer
- [4] Natural convection Heat transfer
- [5] Heat transfer in pool boiling and Nucleate boiling
- [6] Studies in plate fin Heat Exchanger
- [7] Studies in shell and Tube Heat Exchanger
- [8] Heat transfer studies in Stefan –Boltzmann apparatus

- [9] Studies in Spiral type Heat Exchanger
- [10] Studies in Packed bed Heat Exchanger
- [11] Film wise and dropwise condensation
- [12] Measurement of Diffusion coefficient
- [13] Determination of HETP in Randompacking
- [14] Wetted wall column
- [15] Ternary Liquid-liquid Equilibrium
- [16] Counter current & crosscurrent leaching
- [17] Extraction in packed and plate columns
- [18] Steam distillation
- [19] Simple distillation
- [20] Vapour- Liquid Equilibrium
- [21] Drying rate measurements

Course Objective

1. To enable the students to learn the gas-solid catalytic and non-catalytic reactors and gas-liquid reactors
2. To understand the effect of non-ideal flow on reactor performance and to design reactors for heterogeneous reaction systems.
3. Reaction stoichiometry balancing equation, determining number of moles of reactants and products
4. Reaction rates Relative rates of reaction based on stoichiometry □ Reaction orders and rate constants, units of rate constants
5. Rates for reversible reactions, Definition of conversion, Mole balances for batch, CSTR and PFR (PBR) reactors
6. Balances for semi-batch reactors with and without product removal □ Combining mole balances, rate equations and stoichiometry □ Working in terms of concentrations, conversions or molar flow rates

Course Outcomes

On completion of the course the students will be able to

1. Ability to distinguish between various RTD curves and predict the conversion from a non - ideal reactor using tracer information
2. Develop rate laws for heterogeneous reactions
3. Design of tower for gas liquid operations with and without chemical reaction
4. Design of reactors for non-catalytic and catalytic reactions
5. Understand the ideal reactor concepts and heterogeneous reactors.
6. Understand the basics of catalysis and industrial catalytic reactors such as gas-solid reactors

UNIT I CATALYSTS**12**

Nature of catalysts, surface area and pore-volume distribution, catalyst preparation.

UNIT II HETEROGENEOUS REACTORS**12**

Rate equations for heterogeneous reactions, adsorption isotherms, rates of adsorption and desorption, surface reaction analysis of rate equation and rate controlling steps.

UNIT III GAS-SOLID CATALYTIC REACTORS**12**

Diffusion within catalyst particle, effective thermal conductivity, mass and heat transfer within catalyst pellets, effectiveness factor, Thiele Modulus, fixed bed reactors.

UNIT IV GAS-SOLID NON-CATALYTIC REACTORS**12**

Models for explaining kinetics; volume and surface models; controlling resistances and rate

Controlling steps; time for complete conversion for single and mixed sizes, fluidized and static Reactors.

UNIT V GAS-LIQUID REACTORS

12

Absorption combined with chemical reactions; mass transfer coefficients and kinetic constants; Application of film, penetration and surface renewal theories; Hatta number and enhancement factor for first order reaction, tower reactor design.

3. Smith .J.M. , Chemical Engineering Kinetics , III Edition , McGraw
– Hill , New York, 1981
4. Froment G.F and K.B. Bischoff , Chemical Reaction Analysis and Design, John Wiley and sons, 1979

Semester-VI		
18BTCE602	PROCESS ECONOMICS	3H-3C
Instruction Hours/week: L:3 T:3 P:0		Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours		

Course Objective

1. Prepare engineering students to analyze cost/revenue data and carry out make economic analyses in the decision-making process to justify or reject alternatives/projects on an economic basis
2. To make fundamentally strong base for decision making skills by applying the concepts of economics.
3. Educate the students on how to systematically evaluate the various cost elements of a typical manufactured product, an engineering project or service, with a view to determining the price offer.
4. prepare engineering students to analyze profit/revenue data and carry out make economic analysis in the decision making process to justify or reject alternatives/projects.
5. Students will be able to identify and explain economic concepts and theories related to the behavior of economic agents, markets, industry and firm structures, legal institutions, social norms, and government policies.
6. Students will be able to integrate theoretical knowledge with quantitative and qualitative evidence in order to explain past economic events and to formulate predictions on future ones.

Course Outcome

After completion of the course, students are able to

1. Practice various depreciation methods and its uses in industries for the recovery of plant cost
2. Assess the various financial ratios by taking the real time data's of the industries and comment the stability of the financial statements
3. Specify the economic balance in batch, cyclic and continuous operations and study the optimum conditions of operating variables.
4. Outline the various management principles and organization types practiced in the organizations
5. Discuss the production planning control methods in industries and also role of control charts in production for the quality control.
6. fundamentals and innovation to solve the problems related to energy, food, environment, healthcare

UNIT – I INTEREST AND PLANT COST**(10)**

Time value of money - equivalence, Depreciation, Depletion, estimation of capital cost, Capital requirement for complete plant, cost indices, capital recovery and its real time problems.

UNIT – II PROJECT PROFITABILITY AND FINANCIAL RATIOS**(10)**

Estimation of project profitability, Investment alternatives, income statement and financial ratios, balance sheet preparation-case studies and problems.

UNIT – III ECONOMIC BALANCE IN EQUIPMENTS**(9)**

Essentials of economic balance, economic balance in batch operations, cyclic operations, economic balance for insulation, evaporation, heat transfer equipments and its applications.

UNIT – IV PRINCIPLES OF MANAGEMENT**(8)**

Principles of management, planning, organizing, staffing, coordinating, directing, controlling and communicating. Types of organizations, Management information systems(MIS).

UNIT – V PRODUCTION PLANNING CONTROL**(8)**

Work measurement techniques, motion study, principles of time study, elements of production control, forecasting, planning, routing, scheduling, dispatching, inventory and control, role of control charts in production and quality control.

TOTAL : 45**SUGGESTED READINGS**

Semester-VI		
18BTCE603	PROCESS CONTROL	3H-3C
Instruction Hours/week: L: 3 T:3 P:0		Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours		

Course Objective

1. To gain the knowledge of different process instruments
2. To understand dynamic modeling of a physical process using first principles,
3. To convert the model to a form amenable to solution and analysis,
4. To design various control schemes and to apply the control system in various Processes.
5. to the advanced control methods used in industries and research.
6. to take up such challenges in his profession

Course Outcome

After completion of the course, students are able to

1. Apply conservation principles in order to model the dynamics of simple process systems to develop first, second and multi capacity transfer functions.
2. Analyze closed loop stability systems by applying transient responses and also to test the stability of the control system by Root Locus methods. Draw the bode diagram for the stability of process for the frequency response processes.
3. Discuss P, PI, PD, PID controller actions and its transfer functions. practice block diagram development for closed loop systems by applying transient responses to find the process error.
4. Devise a control strategies for the control of mass and heat transfer equipment using advanced controllers.
5. Discuss digital process controllers and the hardware components of its direct digital controllers
6. fundamentals and innovation to solve the problems related to energy, food, environment, healthcare

UNIT – I OPEN LOOP SYSTEMS (14)

Laplace Transforms - Standard functions, Open loop systems, first order systems and their transient response for standard input functions, first order systems in series, linearization and its application in process control, second order systems and their dynamics.

UNIT – II CLOSED LOOP SYSTEMS (14)

Closed loop control systems, development of block diagram for feed-back control systems, servo and regulatory problems, transfer function for controllers and final control element, principles of pneumatic and electronic controllers, transportation lag, transient response of closed-loop control systems, Routh-Hurwitz and root-locus stability of a control system.

UNIT – III FREQUENCY RESPONSE (12)

Introduction to frequency response of closed-loop systems, control system design by frequency response techniques, Bode diagram, Principle of Nyquist diagram, stability criterion, tuning of controller settings.

UNIT – IV ADVANCED CONTROL SYSTEMS (10)

Introduction to advanced control systems, cascade control, feed forward control, feed back controller model predictive control, Adaptive controller and Ratio controller and its industrial application

UNIT – V DIGITAL CONTROLLERS**(10)**

Introduction to Computer control loops, Digital computer, computer process Interface, digital to analog and analog to digital converters, sampling continuous signal, Hardware components of a DDC loop, supervisory controller, DCS and PLC.

TOTAL : 60 HOURS**SUGGESTED READINGS**

1. Coughanowr D., Steven Leblanc, Process Systems Analysis and Control, Third Edition, McGraw Hill, New York, 2009.
2. Vyas R. P, Process Control and Instrumentation, Eighth Edition, Denett& Co, Nagpur, India, 2016.
3. Stephanopoulos G., Chemical Process Control: An Introduction to Theory and Practice, Sixth Edition, Prentice Hall of India Pvt.Ltd, New Delhi, 1998.
4. Dale E. Seborg, Duncan A. Mellichamp, Thomas F. Edgar, Francis J. Doyle, III, Process Dynamics and Control, Third Edition, John Wiley and sons, New York, 2010.

Course Objectives

1. To enable the students to study the evolution of Management, to study the functions and principles of management and to learn the application of the principles in an organization.
2. The students will learn the rights and responsibilities.
3. Infer moral judgment concerning the profession.
4. Correlate the concepts in addressing the ethical dilemmas.
5. Judge a global issue by presenting an optimum solution.
6. To make the students realize the significance of ethics in professional environment.

Course Outcomes

Upon completion of the course

1. Students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have some basic knowledge on international aspect of management.
2. Recognize the role of a manager and how it relates to the organization's mission.
3. Define management, its four basic functions and skills and know critical management theories and philosophies and how to apply them
4. Recognize the concept of social responsiveness and its benefits. Explain the relationship between strategic, tactical, and operational plans.
5. Identify the stages of team development and the skills a team must acquire to become effective. • Recognize the part communication plays in the management function.
6. Define change management and explain where it fits in the management function and the concept of continuous change and its impact on change management.

UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS**9**

Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations, system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company- public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.

UNIT II PLANNING**9**

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.

UNIT III ORGANISING**9**

Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning,

Recruitment, selection, Training and Development, Performance Management , Career planning and management.

UNIT IV DIRECTING

9

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication – communication and IT.

UNIT V CONTROLLING

9

System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

SUGGESTED READINGS

1. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, 6th Edition, Pearson Education, 2004.
2. Stephen P. Robbins & Mary Coulter, “Management”, Prentice Hall (India)PvtLtd., 10th Edition, 2009.
3. Harold Koontz & Heinz Weihrich, “Essentials of Management”, Tata McGraw Hill, 1998.
4. Robert Kreitner& Mamata Mohapatra, “Management”, Biztantra, 2008.
5. Stephen A. Robbins & David A. Decenzo& Mary Coulter, “Fundamentals of Management”,7 th Edition, Pearson Education, 2011.
6. Tripathy PC & Reddy PN, “Principles of Management”, Tata Mcgraw Hill, 1999

Objective

1. To learn analytical experimental methods using sophisticated instruments and interpretation of experimental data
2. To learn about reaction kinetics for single, multiple, isothermal, non-isothermal reactions and reactor design procedures
3. To learn chemical engineering principles and their practical applications in the areas of mass transfer, reaction engineering and particle mechanics.
4. prediction of kinetics and modeling of kinetics data
5. familiarize with suitable measurement techniques and devices to measure concentration and temperature learn to employ various methods to determine the kinetics of reactions. quantify the effect of non-ideality of flow in chemical reactors.
6. calculate the effects of mass transfer on chemical reactions, predict errors in experimentation and compare experimental data with models

Course Outcome

After completion of the course, students are able to

1. Collect and analyze experimental data for steady state and unsteady state reactors using statistical principles, and compare results to theoretical principles.
2. Collect and analyze kinetic data to determine order, activation energy, frequency factor and rate constant in rate equation.
3. Collect RTD data from steady state reactors and analyze the deviation of real reactor from ideal reactors.
4. Conduct experiments to solve complex engineering problems effectively as an individual or team work.
5. Perform as a leader with good ethical principles to meet societal needs in the field of chemical engineering.
6. Produce a bar graph with correct scale, labels and bars State 4 ways to increase the rate of a chemical Describe the effect of particle size on the rate of a chemical reaction

EXPERIMENTS

- [1] Kinetic Studies in Batch Reactor-I
- [2] Kinetic Studies in Batch Reactor-II
- [3] Performance Characteristics of Semi-Batch Reactor-I
- [4] Performance Characteristics of Semi-Batch Reactor-II
- [5] Performance Characteristics of Mixed Flow Reactor
- [6] Performance Characteristics of Plug Flow Reactor

- [7] Adiabatic Reactor
- [8] Residence Time Distribution Studies in Plug Flow Reactor
- [9] Residence Time Distribution Studies in Mixed Flow Reactor
- [10] Performance Characteristics of Tubular Reactor
- [11] Performance Studies of Mixed Flow Reactor in Series
- [12] Determination of Activation Energy

Course Objective

To enable the students to understand

1. Different types of fluids, their flow characteristics and different mathematical models applied to actual situations
2. Mechanism of fluids in motion under different conditions.
3. Understand theory and basic principles of momentum.
4. Heat and mass transport and Understand theory of velocity distribution for various systems.
5. Understand Macroscopic balances for isothermal systems
6. Understand theory of thermal conductivity energy transport and diffusivity and mechanism of mass transport for homogeneous and heterogeneous systems

COURSE OUTCOMES

On completion of the course the students will be able to

1. Apply the shell momentum balances and velocity distribution in laminar flow and understand equation of continuity and motion
2. Establish the shell energy balances and temperature distributions in solids and apply the equations of change to solve heat transfer problems
3. Determine the shell mass balance and concentration distributions in systems involving diffusion and reactions
4. Analyze the analogy between the transports processes of heat, momentum and mass transfer
5. Analyze the problems involving steady state and unsteady state heat conduction in simple geometries and obtain numerical solutions for the problems.
6. Develop microscopic and macroscopic energy balances for steady and unsteady transfer processes ,Apply the individual and overall mass transfer coefficient in multi-phase systems for design applications

UNIT I FUNDAMENTALS OF TRANSPORT PHENOMENA AND VELOCITY DISTRIBUTION IN LAMINAR FLOW**9**

Importance of transport phenomena: analogous nature of transport process, basic concepts, conservation laws. Phenomenological laws of transport properties Newtonian and Non-Newtonian fluids, Rheological models, Theories of transport properties of gases and liquids, effects of pressure and temperature. Shell Momentum Balances and Boundary conditions- Flow of a Falling Film- Flow Through a Circular Tube- Flow through an Annulus- Flow of Two Adjacent Immiscible Fluids- Creeping Flow around a Sphere.

UNIT II EQUATION OF CHANGE FOR ISOTHERMAL PROCESS**9**

The Equations of Change in Terms of the Substantial Derivative-The Equation of Continuity-The Equation of Motion- Use of the Equations of Change to Solve Flow Problems- Dimensional Analysis of the Equations of Change.

UNIT III VELOCITY DISTRIBUTION IN TURBULENT FLOW**9**

Comparisons of Laminar and Turbulent Flows- Time-Smoothed Equations of Change for incompressible Fluids- The Time-Smoothed Velocity Profile near a Wall- Empirical Expressions for the Turbulent Momentum Flux- interphase transport in isothermal system- Definition of Friction

Factors- Friction Factors for Flow in Tubes- Friction Factors for Flow around Spheres - Friction Factors for Packed Columns-Ergun equation.

UNIT IV SHELL ENERGY BALANCES AND TEMPERATURE

DISTRIBUTIONS IN SOLIDS AND LAMINAR FLOW

9

Shell Energy Balances; Boundary Conditions-Heat Conduction with an Electrical Heat Source-Heat Conduction with a Nuclear Heat Source- Heat Conduction with a Viscous Heat Source- Heat Conduction through Composite Walls- Heat Conduction in a Cooling Fin- Forced Convection-Free Convection-Use of equations of change to setup steady state heat transfer problems.

UNIT V CONCENTRATION DISTRIBUTIONS IN SOLIDS AND LAMINAR FLOW 9

Shell Mass Balances; Boundary Conditions- Diffusion through a Stagnant Gas Film- Diffusion with a Heterogeneous Chemical Reaction- Diffusion with a Homogeneous Chemical Reaction-Diffusion into a Falling Liquid Film (Gas Absorption)- Diffusion into a Falling Liquid Film (Solid Dissolution)- Diffusion and Chemical Reaction inside a Porous Catalyst- Diffusion in a Three-Component Gas System- equations for change for Multi Component Systems- The Equations of Continuity for a Multicomponent Mixture.

SUGGESTED READINGS

- [1] Byron R. Bird, Warren E. Stewart, Transport Phenomena, John Wiley & Sons, New York, 2002
- [2] Sissom L. E., & Pitts D. R., Elements of Transport Phenomena, McGraw Hill, 1972
- [3] Brodkey R. S. and Hershey H. C., Transport Phenomena – A unified Approach, McGraw Hill, 1983
- [4] Welty J. R., Wicks C. E., Wilson R. E., Fundamentals of momentum, heat and mass transfer, John Wiley & Sons, 2007

Course Objective

1. To impart computational techniques for chemical engineering calculations
2. To impart the fundamental knowledge on using various analytical tools like ANSYS, FLUENT, etc., for Engineering Simulation.
3. To know various fields of engineering where these tools can be effectively used to improve the output of a product.
4. To impart knowledge on how these tools are used in Industries by solving some real time problems using these tools..
5. students will then be exposed to the applications of MATLAB to signal analysis and system design
6. To introduce MATLAB and use it as a computation and visualization tool in the study of Signals & Systems and Probability theory & Stochastic process.

Course Outcomes

The current rapid development of these combinatorial methods promises solutions to more complex problems, including the creation of new biosynthetic pathways.

1. Computational methods are also developing quickly
2. The approaches will allow us to generate the efficient, effective catalysts needed by the pharmaceutical, food and chemicals industries and should open up new opportunities for producing energy and chemicals from renewable resources.
3. Use of these tools for any engineering and real time applications
4. Acquire knowledge on utilizing these tools for a better project in their curriculum as well as they will be prepared to handle industry problems with confidence when it matters to use these tools in their employment.
5. Analyze the techno-economic feasibility of chemical manufacturing facility.
6. Develop experimental skills, work in team and develop interpersonal skills.

LIST OF EXPERIMENTS**Writing Programs and Sub Programs using C/C++ and MATLAB/SCILAB for Solving**

1. Jacobi Methods, Cramer's Rule- "Multiple Effect Evaporator and Similar Problems."
2. "Phase Equilibrium Problems, Equation of State Determination of Bubble and Dew Poin't Differential Distillation- Minimum Reflux Ratio Calculations.
3. "Mass Transfer Problems- Rayleigh's Equation", NTU in Absorption, Determination of Drying time from batch drying data- Determination of reactor size.
4. "Milne's Method, Laplace Equation, Predictor-Corrector Methods". "Heat conduction problems and chemical reaction" Engineering problems

COMPUTER AIDED DESIGN

Design, Rating and Simulation of Chemical Engineering Equipment Using Aspen Plus / Chemcad Software: Mixer, Flow splitter; Flash column; pipe line and pipe pressure drop; Pump; Single and multistage compressors; Heat Exchangers; Distillation Columns; Reactors etc.

COMPUTER AIDED SIMULATION

Simulation Exercises Using Aspen Plus / Chemcad: Physical property estimations; Simulation of a flow sheet: Mass and Energy balances; Handling user specifications on output streams.

1. Introduction to HYSYS Software, HYSYS User Interface, Defining the Simulation Basis, Selecting a Unit Set, Adding a Stream, Flash Calculations
2. Adding Utilities, The Stream Property Value, Flash Calculations of a Ethanol-Water Mixture, Gas Plant Example
3. Optimization in HYSYS, Set and Adjust Logic Operations, Flash Calculation, PFD
4. Preparation, Sizing of Columns, Oil Manager / Characterization, Pipe Sizing and Pressure Drop in HYSYS, Simulation of live Project

TOTAL 45

Course Objective

1. To determine experimentally the methods of controlling the processes including measurements using process simulation techniques.
2. To provide adequate knowledge in time response of systems and steady state error analysis
3. To provide sound foundation in the mathematical, scientific and engineering fundamentals to formulate, solve and analyze problems related to Instrumentation and Control Engineering.
4. To prepare graduates for employment in core / IT industries who are socially responsible and integrated with professional and ethical skills.
5. To prepare graduates to involve in research, higher studies and / or to become entrepreneurs in the long run.
6. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problem

COURSE OUTCOME

1. Students would have knowledge on the development and use of right type of control dynamics for process control under different operative conditions.
2. analyses Instrumentation amplifier, active filters, regulated power supply, V/I and I/V converters
3. Examine the signal conditioning circuit for Thermocouple, strain gauge and RTD
4. analyze Control valve, orifice plate and rotameter.
5. Inspect PID controller
6. Summarize P & ID for industrial process and Illustrate Programmable Logic Controller for digital logic gates

LIST OF EXPERIMENTS

- Single capacity liquid level process
- Time constant of a thermocouple
- Calibration of resistance thermometer
- Response of a dial thermometer
- Two capacity liquid level process without interaction
- Two capacity liquid level process with interaction
- Heat transfer dynamics of stirred tank
- Computer controlled level process analyser
- Computer controlled flow process analyser
- Computer controlled pressure process analyser
- Computer controlled temperature process analyser
- Computer controlled heat exchanger system
- Triangle simulator trainer.

PROFESSIONAL CORE ELECTIVES

Instruction Hours/week: L:1 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

1. Differentiate between the way unaerated and aerated lagoons function, Distinguish between suspended growth and fixed-growth systems,
2. List and describe different methods of utilizing activated sludge to stabilize wastewater
3. Describe three methods of thickening. List factors that affect drying-bed operation. Describe methods for disposing of digested or dewatered sludge.
4. To apply knowledge of mathematics, physics, chemistry, and microbiology to solve and analyze engineering problems related to water and wastewater collection, transport, quality and treatment.
5. To use the fundamental principles of mass balance, chemical kinetics and equilibrium to design water or wastewater reactors to achieve a desirable treatment goal
6. The course emphasizes on Design considerations of various unit operations and processes of Water treatment facilities.

Course Outcome

1. The students would have learnt the physical/chemical/biological characteristics and evaluation
2. Technique for sewage, they would understand the theory, engineering application, and design
3. Technique for the wastewater treatment unit process
4. Explain the function of a precipitant List chemical agents commonly used as disinfectants.
Identify factors affecting disinfection.
5. Describe methods for applying chlorine to wastewater
6. Explain the inter-relationship between water quality parameters and plant sizing, hydraulics and layout. Able to design intake structures.

UNIT I – INTRODUCTION

Introduction: water cycle, water storage, water quality; water conservation in homes; water conservation in the work place

(9)**UNIT II – WATER MANAGEMENT**

Water management-water quality, controlling use and quality of water, water flow measurement, water quality control, testing water salinity

(9)**UNIT III – WATER AUDIT**

Preserving water quality, minimizing evaporation, water sanitation, Water audits

(9)

UNIT IV – WASTE WATER TREATMENT

water conservation in agriculture; Waste water in Industry- Home and Agriculture–Various wastewater treatment processes – Optimization – Benefits and costs – Microbial and sanitation water treatment – Biofilm formation and removal (9)

UNIT V- WATER CONSERVATION

Water conservation in process industry; water conservation in construction industry; water conservation in service industry. (9)

TOTAL: 45 HOURS

B.Tech Chemical Engineering	18-19
18BTCEPE- Sustainability Engineering	3H-3C

Instruction Hours/week: L:1 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objective:

1. To have an increased awareness among students on issues in areas of sustainability
2. To understand the role of Engineering and Technology with sustainable development
3. To know the methods, tools, and incentives for sustainable product-service system development
4. To establish a clear understanding of the role and impact of various aspects of engineering and engineering decisions on environmental, societal, and economic problems.
5. Ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
6. An ability to apply knowledge of mathematics, science, and engineering

Course Outcomes:

The student will be

1. Able to understand the different types of environmental pollution problems and their sustainable solutions
2. Able to work in the area of sustainability for research and education
3. Having a broader perspective in thinking for sustainable practices by utilizing the engineering
4. knowledge and principles gained from this course
5. Apply the knowledge of mathematics, natural science, engineering fundamentals, and environmental engineering specialisation to the solution of complex environmental engineering problems
6. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex environmental engineering activities with an understanding of the limitations.

UNIT-I-INTRODUCTION TO SUSTAINABILITY (9)

Introduction to the idea of sustainability and its relevance; Environment-related legislation;

UNIT-II-POLLUTION AND ENVIRONMENTAL CHALLENGES (9)

Air and water pollution; solid waste management; Local and global environmental challenges; climate change;

UNIT-III- SUSTAINABILITY TOOLS (9)

Tools used to ensure sustainability in engineering activities (environmental management systems and environmental impact assessment)

UNIT-IV-SUSTAINABLE HABITATS (9)

Green buildings; green chemistry; sustainable cities

(9)

UNIT-V-FACTORS AFFECTING SUSTAINABILITY

Sustainable transportation; sustainable sources of energy, Economic and social factors affecting sustainability.

18BTCEPE- Interfacial Engineering	3H-3C

Instruction Hours/week: L:1 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objectives:

1. The course aims to impart fundamental knowledge of the interfaces to the students and explain their applications.
2. Based on the basic principles of thermodynamics, fluid mechanics, mass transfer and reaction engineering, this course covers some frontiers of chemical engineering.
3. Create awareness amongst students about the social/industrial demands and role of chemical engineer in the society
4. Incorporate a culture of research and Innovation by providing students with latest facilities
5. Provide a platform to the students to interact with leading teachers, scientists and industry practitioners
6. Multi-faceted development of students through co-curricular and extra-curricular activities, participation in various events

Course outcomes

Students will be able to

1. Understand Occurrence of interfaces in science and engineering and their industrial applications.
2. Calculate the equilibrium and dynamic contact angles
3. Understand the Adsorption of surfactants
4. Understand Interfacial tension gradient and Marangoni effect
5. Understand the characterization, preparation and applications of emulsion
6. who can cater to the needs of chemical industry, research organizations and academic institutes

UNIT-1- INTRODUCTION TO INTERFACIAL ENGINEERING

Introduction; colloid interactions and flocculation, Capillary phenomena, (9 hours)

UNIT-2- INTERFACIAL REACTIONS

Amphiphilic systems-surface activity, micellization (9 hours)

UNIT-3-ADSORPTION AT FLUID-FLUID AND FLUID-SOLID INTERFACES

Adsorption and film formation; flotation (9 hours)

UNIT-4-INTERFACIAL RHEOLOGY AND TRANSPORT PROCESSES

Rheology of dispersions; (9 hours)

UNIT-5-EMULSIONS

Emulsification; microemulsions (9 hours)

Total: 45 Hours

5. Baszkin, A. and Norde, W., Physical Chemistry of Biological Interfaces, Marcel Dekker, New York, 2000.

Course Objectives

1. The goal of this course is to provide an insight into the fundamentals of Nanoscience and nanotechnology.
2. The course provides basics of nanomaterial, quantum mechanics and statistical mechanics
3. To foundational knowledge of the Nanoscience and related fields.
4. To make the students acquire an understanding the Nanoscience and Applications
5. To help them understand in broad outline of Nanoscience and Nanotechnology.
6. will be able to understand the basic principles of molecular machines and overview over the mechanical like motions of molecules created by special design concepts

Course outcomes

Students will be able to

1. Acquire the knowledge of basic sciences required to understand the fundamentals of Nanomaterial
2. Acquire the knowledge of electronic, optical and magnetic properties of nanomaterial
3. Get familiarize with the basic concepts of Statistical and Quantum mechanics
4. Learn about the background on Nanoscience
5. Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment
6. Apply their learned knowledge to develop Nanomaterial's

UNIT-1- PHYSICAL PROPERTIES OF NANOSTRUCTURED MATERIALS (9)

Introduction; surface effects and physical properties of nanomaterials

UNIT-2- ELECTRO MAGNETIC PROPERTIES (9)

Electrical, magnetic and optical properties

UNIT-3- NANOSTRUCTURED MATERIALS CHARACTERIZATION TECHNIQUES (9)

Nano scale measurement and characterization

UNIT-4- SYNTHESIS OF NANOMATERIALS (9)

Design and synthesis of nanomaterials

UNIT-5- NANOTECHNOLOGY–APPLICATIONS (9)

Nano scale devices for various applications (photovoltaic, medical diagnostics, electronics)

Total: 45 Hours

Course objective

1. This course is designed to improve the ability to design heat exchangers, condensers, and packed columns. The fundamental principles of rate-based mass transfer are discussed.
2. Apply the scientific method in the resolution of advanced separation processes in the field of chemical engineering
3. Understanding of the theory concepts of the equipment, applications and the effects which the advanced separation processes produce on the quality of the products and its environmental impact.
4. Be able to evaluate current problems, applying the scientific method to solve practical problems
5. Propose and select the mathematical models describing the results, which allow to predict and simulate them
6. Ability to analyses in a critical way some of the current problems which have not yet been resolved in the field of chemical Engineering

Course Outcomes

The students will be able to:

1. Apply modern separation techniques in various applications
2. Analyze and design novel membranes for intended application
3. Analyze and design pervaporation, chromatography and dialysis-based separation processes
4. Understand advanced separation processes and their selection.
5. Understand principles and processes of adsorption, membrane separation.
6. Design an absorber or membrane unit to achieve a specified separation.

UNIT – I PROCESS OF MEMBRANE SEPARATION (9)

Definition of the membrane-Nature and structure of membranes-driving force –transport mechanism- classification of separation processes with membranes –permeate flow-polarization of the concentration – applications - membrane based separation processes

UNIT – II SEPARATION PROCESS (9)

External field induced membrane separation processes for colloidal particles; gas separation; surfactant based separation processes; centrifugal separation processes.

UNIT – III ION – EXCHANGE (9)

Ion exchange and chromatographic separation processes -analogies and differences between the adsorption processes. Applications in the industry. Ion exchange resins: capacity of the resin. Balance between phases. Calculation in extractions of ion exchange by stages and differentials.

(9)

UNIT - IV EXTRACTION OF SUPER CRITICAL FLUIDS

Supercritical fluid extraction- Definition and characteristics of the supercritical fluids. Physical-chemical properties of the supercritical fluids. Extraction with supercritical fluids: advantages and disadvantages. Liquid-fluid and solid-fluid balance. Applications

UNIT – V HYBRID PROCESS

(9)

Definition of the hybrid process. Ways of operation. Hybrid process with membranes: reactors with membranes, distillation with per vaporation and other applications. Hybrid processes with modified absorbers. Other hybrid processes. Study of the viability of the process.

TOTAL :45 Hours

SUGGESTED READINGS

1. Lacey, R.E. and S.Loeb - "Industrial Processing with Membranes ", Wiley -Inter Science, New York, 1972.
2. King, C.J. " Separation Processes ", Tata McGraw - Hill Publishing Co., Ltd., 1982.
3. Schoew, H.M. - " New Chemical Engineering Separation Techniques ", Interscience Publishers, 1972.
4. Ronald W.Roussel - "Handbook of Separation Process Technology ", John Wiley, New York, 1987.
5. Kestory, R.E. - " Synthetic polymeric membranes ", Wiley, New York, 1987.
6. Osadar, Varid Nakagawa I - " Membrane Science and Technology ", Marcel Dekkar (1992)

Course Objective

By the end of the course, you should be able to do the following:

1. Understand and describe the manufacture (using both traditional and non-traditional synthesis schemes) of commercially important polymers using concepts from chemical kinetics and equilibrium thermodynamics.
2. Present a basic understanding of the structure of polymer chains in solution (including, molecular weight, molecular weight distribution, chain conformation) and methods to characterize polymers in solution.
3. Describe polymer phase behavior using basic Flory-Huggins theory of polymer solutions/melts.
4. To study basic processing methods coating applications related to of the thermoplastics
5. To make aware of basics and developments in biopolymers dendrimers LCP etc.
6. Created a huge opportunity for the plastics professionals in production, quality control, product and mold design, processing machinery manufacturing, marketing etc

COURSE OUTCOME

1. Students will be able to understand the relationships between polymer molecular weight, molecular weight distribution, and the properties of polymeric materials.
2. Students will demonstrate an ability to distinguish different polymerization reactions and their mechanisms/kinetics, and learn how actual polymerization is performed in the laboratory. Students will also be able to analyze polymerization data and predict the conversion and molecular weight, which will lead to critical thinking about how to improve the setup for better polymerization.
3. Students will be able to determine polymer molecular weights and molecular weight distributions from different types of experiments. Students will learn about polymer solvent interaction and the effect of the solvents on the dimensions of the polymers in solution.
4. Students will improve and expand their skills in performing and analyzing the thermal and mechanical properties of polymers, and demonstrate an ability to predict how the molecular weight will affect these properties.
5. Students will be able to describe the viscoelastic behavior of polymers with respect to their chemical structures and molecular weights, and to construct a corresponding master curve from the experimental data, which can be used to predict the material response at different temperatures, times, and/or frequencies.
6. isolate the key design features of a product which relate directly to the material(s) used in its construction

UNIT – I CHEMISTRY OF HIGH POLYMERS**(9)**

Monomers, functionality, degree of polymerizations, classification of polymers, glass transition, melting transition, criteria for rubberiness, polymerization methods: addition and condensation; their kinetics, metallocene polymers and other newer techniques of polymerization, copolymerization, monomer reactivity ratios and its significance, kinetics, different copolymers, random, alternating, azeotropic copolymerization, block and graft copolymers, techniques for copolymerization-bulk, solution, suspension, emulsion.

UNIT – II POLYMER CHARACTERIZATION

(9)

Solubility and swelling, concept of average molecular weight, determination of number average, weight average, viscosity average and Z-average molecular weights, polymer crystallinity, analysis of polymers using IR, XRD, thermal (DSC, DMTA, TGA), microscopic (optical and electronic) techniques.

UNIT – III SYNTHESIS AND PROPERTIES

(9)

Synthesis and properties: Commodity and general purpose thermoplastics: PE, PP, PS, PVC, Polyesters, Acrylic, PU polymers. Engineering Plastics: Nylon, PC, PBT, PSU, PPO, ABS, Fluoropolymers Thermosetting polymers: PF, MF, UF, Epoxy, Unsaturated polyester, Alkyds. Natural and synthetic rubbers: Recovery of NR hydrocarbon from latex, SBR, Nitrile, CR, CSM, EPDM, IIR, BR, Silicone, TPE.

UNIT – IV POLYMER RHEOLOGY

(9)

Flow of Newtonian and non-Newtonian fluids, different flow equations, dependence of shear modulus on temperature, molecular/segmental deformations at different zones and transitions. Measurements of rheological parameters by capillary rotating, parallel plate, cone-plate rheometer. viscoelasticity-creep and stress relaxations, mechanical models, control of rheological characteristics through compounding, rubber curing in parallel plate viscometer, ODR and MDR. Polymer processing: Compression molding, transfer molding, injection molding, blow molding, reaction injection molding, extrusion, pultrusion, calendaring, rotational molding, thermoforming, rubber processing in two-roll mill, internal mixer.

UNIT – V POLYMER TESTING

(9)

Polymer testing: Mechanical-static and dynamic tensile, flexural, compressive, abrasion, endurance, fatigue, hardness, tear, resilience, impact, toughness. Conductivity-thermal and electrical, dielectric constant, dissipation factor, power factor, electric resistance, surface resistivity, volume resistivity, swelling, ageing resistance, environmental stress cracking resistance. Polymer Technology: Polymer compounding-need and significance, different compounding ingredients for rubber and plastics, crosslinking and vulcanization, vulcanization kinetics

TOTAL :45 Hours

SUGGESTED READINGS

1. P.C. Painter and M.M. Coleman, “Fundamentals of Polymer Science” ,2nd edition,2009
2. Technomic Publishing, Co.: Lancaster, PA, 1997 P.C. Painter and M.M. Coleman, “Essentials of Polymer Science& Engineering”, 1st edition]
3. Materials for Renewable and Sustainable Energy(Springer)2011
4. R.J. Young and P.A. Lovell, “Introduction to Polymers”, Chapman & Hall: London, 2011
5. P.J. Flory, “Principles of Polymer Chemistry”, Cornell University Press: Ithaca, 1967

Course Objective

1. This course explains the concepts and strategies related to environmental management, sustainable development and various environmental systems like pollution and its control
2. Understanding of basic concepts of air pollution. Study of air pollution episodes.
3. Reasoning of the entire episode, identification of the parameters, conditions, mechanisms.
4. Study of sampling types and methods for ambient air and stack.
5. Study of macro and micro meteorology for understanding the dispersion of pollutants.
6. Simple and complex modeling for point source, line source and area source.

Course Outcome

1. Students are able to understand the meaning of environmental management. Students are also able to understand the importance of environmental management, pollution control in development of society and country.
2. Identify sources, types, and control equipment's for industrial air pollution.
3. Identify sources of water pollution, general water treatment, wastewater treatment and issues pertaining water quality degradation
4. Understand reasons for land degradation, soil quality loss, and identify essential nutrients for productivity.
5. Define reclamation process with specification for on mining area reclamation, grassland reclamation and wetland reclamation
6. Skill to assess and develop physical/chemical/biological treatment techniques for the control of hazardous wastes.

UNIT – I POLLUTION CONTROL STANDARDS**(9)**

Introduction (types of pollution, water standards for potable and agricultural streams, air standards);

UNIT – II AIR POLLUTION AND ITS CONTROL**(9)**

Air pollution - air pollutants and interaction products, preventive and control measures;

UNIT – III WATER POLLUTION AND ITS CONTROL**(9)**

Water pollution-waste water sampling and analysis, primary, secondary and tertiary treatment methods;

UNIT – IV SOLID WASTE MANAGEMENT**(9)**

Solid waste management- collection, storage and transport, processing and transformation, incineration, composting and sanitary land filling;

UNIT – V POLLUTION CONTROL IN INDUSTRY

(9)

Pollution control in chemical process industry. Control measures in paint industry, peterochemical industry, pharmaceutical industry and dye industry;

TOTAL: 45 Hours

SUGGESTED READINGS

1. Energy and the Environment by Robert A. Ristinen and Jack J.Kraushaav ,2011
2. Energy Ecology and the Environment by Richard Wilson and William J.Jones,2013
3. Diaz, L.F., G.M. Savage, L.L. Eggerth, and C.G. Golueke, Composting and Recycling Municipal Solid Waste, Lewis Publishers, Ann Arbor, Michigan, USA, 1993.
4. George Tchobanoglous; Integrated Solid Waste management ,McGraw-Hill Publishers,1993

Instruction Hours/week: L:1 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

1. Understand the various forms of conventional energy resources.
2. Learn the present energy scenario and the need for energy conservation
3. Explain the concept of various forms of renewable energy
4. Outline division aspects and utilization of renewable energy sources for both domestics and industrial application
5. Current energy scenario of India and world
6. Analyse the environmental aspects of renewable energy resources.

COURSE OUTCOME

Upon completion of the course, the student will be able to

1. Describe the environmental aspects of non-conventional energy resources. In Comparison with various conventional energy systems, their prospects and limitations.
2. Know the need of renewable energy resources, historical and latest developments.
3. Describe the use of solar energy and the various components used in the energy production with respect to applications like - heating, cooling, desalination, power generation, drying, cooking etc.
4. Appreciate the need of Wind Energy and the various components used in energy generation and know the classifications.
5. Understand the concept of Biomass energy resources and their classification, types of biogas Plants- applications
6. Compare Solar, Wind and bio energy systems, their prospects, Advantages and limitations.
7. Acquire the knowledge of fuel cells, wave power, tidal power and geothermal principles and applications.

UNIT-I INTRODUCTION TO RENEWABLE ENERGY**(9)**

Introduction world energy status, current energy scenario in India, environmental aspects of energy utilization, energy and sustainable development

UNIT-2 SOLAR ENERGY**(9)**

Solar energy basic concepts, flat plate and concentrating collectors, solar desalination, solar pumping, solar photo voltaic conversion, solar cells

UNIT-3 WIND ENERGY**(9)**

Wind energy, availability, wind power plants, wind energy conversion systems, site characteristics, and types of wind turbines

UNIT-4 BIO ENERGY

(9)

Energy from biomass (biomass resources, biomass conversion technologies - direct combustion, pyrolysis, gasification, anaerobic digestion, bio-ethanol and biodiesel production)

UNIT-5 HYDRO AND THERMAL ENERGY

(9)

Other Renewable Sources Tidal energy; geothermal energy; hydroelectric.

TOTAL: 45 Hours

SUGGESTED READINGS

1. Renewable Energy by Godfrey Boyle ,2011
2. Renewable Energy Resources by John Twidell and Tony Weir.,**2013**
3. Schaeffer, John. 2007. Real Goods Solar Living Sourcebook: The Complete Guide to Renewable Energy Technologies and Sustainable Living (30th anniversary edition).
4. Solar Engineering and Thermal Processes, J. A. Duffie and W.A. Beckman, 2nd Edition John Wiley and sons.,2010
5. Solar Energy, G. N. Tiwari, Narosa Publishing House,1996
6. Wind Energy Comes of Age by Paul Gipe, John Wiley & Sons Inc,2003

Course Objective

1. Introduction to optimization techniques using both linear and non-linear programming.
2. The focus of the course is on convex optimization though some techniques will be covered for non-convex function optimization too.
3. After an adequate introduction to linear algebra and probability theory, students will learn to frame engineering minima maxima problems in the framework of optimization problems.
4. Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems.
5. Learn classical optimization techniques and numerical methods of optimization.
6. Know the basics of different evolutionary algorithms.
7. Explain Integer programming techniques and apply different

Course Outcome

By the end of the course, students should be able to:

1. Learn efficient computational procedures to solve optimization problems.
2. Cast engineering minima/maxima problems into optimization framework.
3. Explain the fundamental knowledge of Linear Programming and Dynamic Programming problems.
4. Use classical optimization techniques and numerical methods of optimization.
5. Describe the basics of different evolutionary algorithms.
6. Enumerate fundamentals of Integer programming technique and apply different techniques to solve various optimization problems arising from engineering areas.

UNIT – I MATHEMATICAL PRELIMINARIES**(12)**

Linear algebra and matrices -Vector space, eigen analysis- Elements of probability theory- Elementary multivariable calculus

UNIT – II LINEAR PROGRAMMING**(12)**

Simplex method- Introduction to linear programming model - Duality- Karmarkar's method

UNIT – III UNCONSTRAINED OPTIMIZATION**(8)**

Conjugate direction and quasi-Newton methods- Gradient-based methods - One-dimensional search methods

UNIT – IV CONSTRAINED OPTIMIZATION

(6)

Lagrange theorem - FONC, SONC, and SOSC conditions

UNIT – V PROJECTION METHODS

(7)

KKT conditions - Non-linear constrained optimization models -Non-linear problems

TOTAL: 45 Hours

SUGGESTED READINGS

1. An introduction to Optimization by Edwin P K Chong, Stainslaw Zak,2013
2. Nonlinear Programming by Dimitri Bertseka,2011

LIST OF OPEN ELECTIVES

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To make the students conversant with the basics of solid wastes and its classification.
- 2 To make the student acquire sound knowledge of different treatments of solid wastes.
- 3 To acquaint the student with concepts of waste disposals.
- 4 To develop an understanding of the basic concepts of hazardous waste management.
- 5 To acquaint the students with the basics of energy generation from waste materials.
- 6 Identify the methods of wastes disposals.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Outline the basic principles of solid waste and separation of wastes.
- 2 Identify the concepts of treatment of solid wastes.
- 3 Identify the methods of wastes disposals.
- 4 Examine the level of hazardousness and its management.
- 5 Examine the possible of energy production using waste materials.
- 6 Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I SOLID WASTE**

Definitions – sources, types, compositions, properties of solid waste – municipal solid waste – physical, chemical and biological property – collection – transfer stations – waste minimization and recycling of municipal waste.

UNIT II WASTE TREATMENT

Size reduction – aerobic composting – incineration – batch type and continuous flow type, medical/pharmaceutical waste incineration – environmental impacts – measures of mitigate environmental effects due to Incineration.

UNIT III WASTE DISPOSAL

Sanitary landfill method of solid waste disposal – landfill classification, types, methods and siting consideration – layout and preliminary design of landfills – composition, characteristics generation, movement and control of landfill leachate and gases – environmental monitoring system for landfill gases, waste landfill remediation.

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition and identification of hazardous waste – sources and nature of hazardous waste – impact on environment – hazardous waste control – minimization and recycling – assessment of hazardous waste sites – disposal of hazardous waste, underground storage tanks construction, installation and closure, remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion technologies – pyrolysis systems, combustion systems, gasification systems, environment control systems, energy recovery systems. Biological and chemical conversion technologies – aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

Suggested Readings:

2. Naomi B. Klinghoffer and Marco J. Castaldi, *Waste to Energy Conversion Technology*, Woodhead Publishing Ltd., Cambridge, UK, 2013.
3. Frank Kreith and George Tchobanoglous, *Handbook of Solid Waste Management*, McGraw-Hill Publishing Ltd., New York, 2002.
4. Kanti L. Shah, *Basics of Solid and Hazardous Waste Management Technology*, Prentice Hall (P) Ltd., New Delhi, 1999.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To make the students conversant about green chemistry.
- 2 To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- 3 To acquaint the student with concepts of green technology.
- 4 To develop an understanding of the basic concepts of renewable energy resources.
- 5 To acquaint the students with the basics information on catalysis.
- 6 Apply the concepts combustion of green technology.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Outline the basic principles of green chemistry.
- 2 Examine the different atom efficient process and synthesis elaborately.
- 3 Apply the concepts combustion of green technology.
- 4 Identify and apply the concepts of renewable energy.
- 5 Apply the concepts of green catalysts in the synthesis.
- 6 Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorosolvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY

Biotechnology and its applications in environmental protection – bioinformatics – bio remediation, biological purification of contaminated air. Green chemistry for clean technology – significance of green chemistry – basic components of green chemistry, industrial applications of green chemistry, green fuels – e-green propellants and biocatalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

Suggested Readings:

1. Sanjay K. Sharma and AckmezMudhoo, *Green Chemistry for Environmental Sustainability*, CRC Press, London, 2010.
2. Ahluwalia V. K. and M.Kidwai, *New Trends in Green Chemistry*, Anamaya Publishers, New Delhi, 2007.

4. Mukesh Doble, Ken Rollinsand Anil Kumar, *Green Chemistry and Engineering*, Academic Press, Elsevier, New Delhi, 2007.
5. Desai K. R., *Green Chemistry*, Himalaya Publishing House, Mumbai, 2005.
6. Matlack A. S., *Introduction to Green Chemistry*, Marcel Dekker, New York, 2001.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To make the students conversant with the information on electrochemical material.
- 2 To make the student acquire sound knowledge of conducting polymers.
- 3 To acquaint the student with concepts of energy storage devices.
- 4 To develop energy storage devices.
- 5 Apply the concepts of electrochemistry in storage devices.
- 6 Identify the concepts of storage devices and their applications.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Outline the basic principles of chemistry in electrochemical material.
- 2 Examine the properties of conducting polymers.
- 3 Apply the concepts of electrochemistry in storage devices.
- 4 Identify the concepts of storage devices and their applications.
- 5 Apply suitable materials for the manufacturing of storage devices.
- 6 Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I METAL FINISHING**

Fundamental principles, surface preparation – electroplating of copper, nickel, chromium, zinc and precious metals (gold and silver) – electroplating for electronic industry – alloy plating, brass plating – electroless plating of nickel – anodizing – electroforming – electrowinning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS

Electropolymerisation – anodic and cathodic polymerization – effect of reaction parameters on the course of the reaction – electrochemical preparation of conducting polymers – poly acetylene – electrolytic production of perchlorates and manganese dioxide – electro organic chemicals – constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES - I

Principles of energy conservation – electrochemical energy conservation – thermodynamic reversibility, Gibbs equation. EMF – battery terminology, energy and power density – properties of anodes, cathodes, electrolytes and separators – types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES - II

Primary batteries –dry Leclanche cells, alkaline primary batteries, lithium batteries – construction, characteristics, problems associated with system – secondary batteries – lead acid, nickel cadmium – fuel cells – introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells – preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics – amorphous silicon solar cells –PhotoElectrochemicalCells(PEC) for conversion of light energy to electrical energy – PEC cells based on Cd/Se and Ga/As characteristics.

Suggested Readings:

1. Cynthia G. Zoski, *Handbook of Electrochemistry*, Academic Press, Elsevier, UK, 2007.
2. D.Pletcher and F.C.Walsh, *Industrial Electrochemistry*, Chapman and Hall, London, 1990.
3. M. Barak, *Electrochemical Power Sources*, Peter Peregrinius Ltd., Steverage, UK, 1997.
4. Bruno Scrosati, *Applications of Electroactive Polymers*, Chapman & Hall, London, 1993.
5. K.L. Chopra and I. Kaur, *Thin Film Devices and their Application*, Plenum Press, New York, 1983.
6. M.M.Baizer, *Organic Electrochemistry*, Dekker Inc., New York, 1983.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To make the students conversant with cement and lime and its uses.
- 2 To make the student acquire sound knowledge of abrasives and refractories.
- 3 To acquaint the student with concepts of inorganic chemicals.
- 4 To develop an understanding of the basic concepts of explosives.
- 5 To acquaint the students with the basics of agriculture chemicals.
- 6 Identify the usage of inorganic chemicals.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Outline the basic chemistry of cement and lime.
- 2 Examine the uses of abrasives and refractories.
- 3 Identify the usage of inorganic chemicals.
- 4 Identify the concepts of explosives and smoke screens.
- 5 Identify the usage of agriculture chemicals.
- 6 Integrate the chemical principles in the projects undertaken in the field of engineering and technology.

Course Contents:**UNIT I CEMENT AND LIME**

Manufacture of Portland cement – setting and hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement
Lime – raw materials – manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and TNT. – industrial explosives – nitro-glycerine and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

Suggested Readings:

1. Harikrishan, *Industrial Chemistry*, Goel Publishing House, Meerut, 2014.
2. B.K. Sharma, *Industrial Chemistry*, Goel Publishing House, Meerut, 2000.
3. B.N.Chakrabarty, *Industrial Chemistry*, Oxford and IBH Publishing Co., New Delhi, 1998.
4. James A. Kent, *Handbook of Industrial Chemistry*, Van Nostrand Reinhold, New York, 1992.
5. R.N. Sherve, *Chemical Process Industries*, McGraw-Hill, Kugakuisha Ltd., Tokyo, 1984.
6. S.D. Shukla and G.N. Pandey, *A Textbook of Chemical Technology*, Vikas Publishing House (P) Ltd., New Delhi, 1979.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To develop abilities to write technically and expressively.
- 2 To recognise writing as a constructive and meaningful process.
- 3 To practice using reading strategies for effective writing.
- 4 To design effective technical documents for both print and digital media.
- 5 To identify the qualities of good technical writing.
- 6 Identify the usage of inorganic chemicals.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Create simple sentences and correct common grammatical errors in written English.
- 2 Use their reading ability for effective writing.
- 3 Restate to minimize word, sentence and paragraph length without sacrificing clarity or substance.
- 4 Discuss the basic technical writing concepts and terms such as audience analysis, jargon, format, visuals, and presentation.
- 5 Demonstrate the basic components of definitions, descriptions, process explanations and other common forms of technical writing.
- 6 Organize the structure of thesis and articles

Course Contents:**UNIT I BASICS OF WRITING**

Introduction to technical writing – importance of writing – characteristics of writing – audience recognition/analysis – appropriateness of language – conciseness and flow – bias-free and plain writing – impersonal and formal language – techniques of technical writing – overcoming writer's block – prioritizing for effective writing – avoiding plagiarism.

UNIT II PARAGRAPHS AND ESSAYS

Expressing ideas – paragraph construction – cohesion and coherence – adequate development – kinds of paragraphs – writing drafts – paragraph length and pattern – types of essays – characteristics of essays – salient point of sentence constructions.

UNIT III LETTERS, MEMOS AND EMAIL

Formal written correspondence – types of messages – business letters – structure of letters – language in letters – tense in letters – cover letters – resumes – curriculum vitae – memos – emails – email etiquette – effectiveness and purpose.

UNIT IV THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to effective précis writing – guidelines – technical proposals – types of proposals – characteristics – body of the proposals – style and appearance – evaluation of proposals – proof reading – book/film review – travelogue – dialogue writing.

UNIT V REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles – objectives of reports – characteristics of reports – structure of reports – types of reports – writing an article – writing research articles – essential features of dissertation – organizing the structure of thesis and articles – writing technical description.

Suggested Readings:

1. V.N. Arora and Lakshmi Chandra, *Improve Your Writing*, Oxford University Press, New Delhi, 2014.
2. David Morley, *The Cambridge Introduction to Creative Writing*, Cambridge University Press, New Delhi, 2010.
3. Graham King, *Collins Improve Your Writing Skills*, HarperCollins Publishers, UK, 2009.
4. Phyllis Creme and Mary R. Lea, *Writing at University: A Guide for Students*, Oxford University Press, New Delhi, 2003.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To inculcate the basics of the brief history of earth sciences.
- 2 To divulge knowledge on the basics of the structure of earth and earth's gravitational field.
- 3 To disseminate the fundamentals of the magnetic field and thermal distribution of earth.
- 4 To introduce the concepts of seismology and seismic waves.
- 5 To impart the basic knowledge of oceans.
- 6 Discuss the concepts of the structure of earth and earth's gravitational field.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain basics of the history of earth sciences.
- 2 Discuss the concepts of the structure of earth and earth's gravitational field.
- 3 Describe the concepts of the magnetic field and thermal distribution of earth.
- 4 Explain the basics of seismic waves.
- 5 Discuss the basics of oceans and the properties of seawater.
- 6 Apply the knowledge gained from this course to solve the relevant problems in the engineering stream.

Course Contents:**UNIT I ORIGIN OF EARTH**

A brief history of the development of earth sciences. An overview of geophysical methods and their essential features, problems of inversion and non-uniqueness in geophysics, origin and evolution of solar system, earth and moon structure, Kepler's law of planetary motion, a review of the earth's structure and composition.

UNIT II STRUCTURE OF EARTH

Chemical composition of earth, rheological behaviour of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, major features of the earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy.

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sunspot, solar flares, geomagnetic storms, sea-floor spreading, paleomagnetism and its uses, thermal history of the earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle.

UNIT IV SEISMOLOGY

Earthquake seismology, earthquakes and its classifications, global seismicity and tectonics, earth's internal structure derived from seismology, earthquake mechanism and Anderson's theory of faulting, continental drift and plate tectonics: Its essential features, present day plate motions, triple junctions, oceanic ridges, Benioff zones, arcs, hot spots, mantle plume, mountain building, origin of Himalaya, geodynamics of Indian subcontinent.

UNIT V OCEANS

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, laws of seas, coastal zone management.

Suggested Readings:

1. B.F. Howell, *Introduction to Geophysics*, McGraw-Hill, 2007.
2. W. Lowrie, *Fundamentals of Geophysics*, Cambridge University Press, 2007.
3. J.A. Jacobs and R.D. Russel, *Physics and Geology*, McGraw-Hill, 2002.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To disseminate the fundamentals of acoustic waves.
- 2 To inculcate the characteristics of radiation and reception of acoustic waves.
- 3 To divulge knowledge on the basics of pipe resonators and filters.
- 4 To introduce the features of architectural acoustics.
- 5 To impart the basic knowledge of transducers and receivers.
- 6 Explain the basic ideas of pipe resonators and filters.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Develop the idea of the fundamentals of acoustic waves.
- 2 Apply the concepts of radiation and reception of acoustic waves.
- 3 Explain the basic ideas of pipe resonators and filters.
- 4 Illustrate the basics of architectural acoustics.
- 5 Illustrate the transducers and receivers and its applications in various electronic devices.
- 6 Apply the knowledge inputs of the course for engineering applications.

Course Contents:**UNIT I INTRODUCTION**

Acoustics waves – linear wave equation – sound in fluids – harmonic plane waves – acoustics intensity – specific acoustic impedance – spherical waves – decibel scales. Reflection and transmission: Transmission from one fluid to another normal and oblique incidence – method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – acoustic reciprocity – continuous line source radiation impedance – fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient.

UNIT III PIPES RESONATORS AND FILTERS

Resonance in pipes – standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator – acoustic impedance – reflection and transmission of waves in pipe – acoustic filters – low pass, high pass and band pass. Noise, signal detection, hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS

Sound in enclosure – a simple model for the growth of sound in a room – reverberation time – Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.

Environmental acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loudspeaker– horn loudspeaker, receivers – condenser – microphone – moving coil electro-dynamics microphone piezoelectric microphone – calibration of receivers.

Suggested Readings:

1. Lawrence E. Kinsler, Austin R. Frey, Alan B. Coppens and James V. Sanders, *Fundamentals of Acoustics*, John Wiley & Sons, 1999.
2. F. Alton Everest and Ken C. Pohlmann, *Master Handbook of Acoustics*, McGraw-Hill Professional, 2014.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To develop analytical skills for solving engineering problems.
- 2 To teach the students the basic concepts of LPP.
- 3 To learn the techniques to solve transportation and assignment problems.
- 4 To make the students study the integer programming and network analysis.
- 5 To analyse the results and propose recommendations to the decision-making processes in management engineering.
- 6 Formulate and solve transportation models and assignment models.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Define and formulate linear programming problems and appreciate their limitations.
- 2 Solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
- 3 Formulate and solve transportation models and assignment models.
- 4 Construct linear integer programming models and discuss the solution techniques.
- 5 Formulate and solve problems as networks and graphs.
- 6 Apply PERT and CPM

Course Contents:**UNIT I LINEAR PROGRAMMING PROBLEM**

Formulation of LPP –graphical method –simplex method – artificial variable technique and two-phase simplex method. Duality –dual and simplex method – dual simplex method.

UNIT II TRANSPORTATION PROBLEM

Transportation model, finding initial basic feasible solutions, moving towards optimality, degeneracy.

UNIT III ASSIGNMENT PROBLEM

Solution of an assignment problem, multiple solution, Hungarian algorithm, maximization in assignment model, impossible assignment.

UNIT IV INTEGER PROGRAMMING

Integer programming problem – Gomory's fractional cut method – branch bound method.

UNIT V NETWORK ANALYSIS

PERT and CPM – network diagram – probability of achieving completion date – crash time – cost analysis.

Suggested Readings:

1. Hamdy Taha. A., *Operations Research*, Prentice-Hall of India Pvt. Ltd., New Delhi, 2013.
2. Kanti Swarup, P. K. Gupta and Man Mohan, *Operations Research*, Sultan Chand & Sons, New Delhi, 2010.
3. Natarajan A.M., Balasubramani P. and Thamilarasi A, *Operations Research*, Pearson Education, New Delhi, 2005.

4. Srinivasan G, *Operations Research: Principles and Applications*, PHI Pvt. Ltd., New Delhi, 2007.
5. Wayne L. Winston, *Operations Research: Applications and Algorithms*, Cengage Learning India Pvt. Ltd., New Delhi, 2004.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To kindle analytical skills for solving engineering problems.
- 2 To impart the knowledge about inventory models.
- 3 To learn replacement models and simulation models.
- 4 To provide techniques for effective methods to solve nonlinear programming and decision making.
- 5 To analyse the results and propose recommendations to the decision-making processes in management engineering.
- 6 Discuss the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Solve simple models in inventory problems and replacement problems.
- 2 Explain different queuing situations and find optimal solutions using models for different situations.
- 3 Simulate different real-life probabilistic situations using Monte Carlo simulation technique.
- 4 Discuss the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
- 5 Convert and solve practical situations into replacement models.
- 6 Model and solve problems using non-integer programming.

Course Contents:**UNIT I INVENTORY MODELS**

Economic order quantity models – techniques in inventory management – ABC analysis.

UNIT II NON-LINEAR PROGRAMMING

Khun-Tucker conditions with non-negative constraints –quadratic programming – Wolf's modified simplex method.

UNIT III SIMULATION MODELS

Elements of simulation model – Monte Carlo technique – applications. Queuing model: Problems involving (M/M/1): (∞ \FIFO), (M/M/c): (∞ \FIFO) models.

UNIT IV DECISION MODELS

Decision analysis – decision making environment – decisions under uncertainty – decision under risk – decision – tree analysis.

UNIT V REPLACEMENT MODELS

Models based on models that gradually deteriorate with time – whose maintenance cost increase with time – replacement of items that fail suddenly and completely.

Suggested Readings:

1. Hamdy Taha. A., *Operations Research*, Prentice-Hall of India Pvt. Ltd., New Delhi, 2013.
2. Kanti Swarup, P. K. Gupta and Man Mohan, *Operations Research*, Sultan Chand & Sons, New Delhi, 2010.
3. Natarajan A.M., Balasubramani P. and Thamilarasi A, *Operations Research*, Pearson Education, New Delhi, 2005.
4. Srinivasan G, *Operations Research: Principles and Applications*, PHI Pvt. Ltd., New Delhi, 2007.
5. Wayne L. Winston, *Operations Research: Applications and Algorithms*, Cengage Learning India Pvt. Ltd., New Delhi, 2004.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To understand basic knowledge of fuzzy sets and fuzzy logic.
- 2 To apply the basic knowledge of fuzzy operations.
- 3 To know the basic definitions of fuzzy relations.
- 4 To apply basic fuzzy inference and approximate reasoning.
- 5 To know the applications of fuzzy technology.
- 6 Describe the methods of fuzzy logic.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the main subject of fuzzy sets.
- 2 Discuss the concept of fuzziness involved in various systems and fuzzy set theory.
- 3 Describe the methods of fuzzy logic.
- 4 Comprehend the concepts of fuzzy relations.
- 5 Analyse the application of fuzzy logic control to real-time systems.
- 6 Understand the fuzzy relational inference

Course Contents:**UNIT I FUZZY SETS**

Basics – classical sets vs. fuzzy sets – need for fuzzy sets – definition and mathematical representations – level sets – fuzzy functions – Zadeh's extension principle.

UNIT II OPERATIONS ON FUZZY SETS

Operations on $[0,1]$ – Fuzzy negation, triangular norms, t-conorms, fuzzy implications, aggregation operations, fuzzy functional equations.

UNIT III FUZZY RELATIONS

Fuzzy binary and n-ary relations – composition of fuzzy relations – fuzzy equivalence relations – fuzzy compatibility relations – fuzzy relational equations.

UNIT IV FUZZY MEASURES

Possibility theory – fuzzy measures – evidence theory – necessity and belief measures – probability measures vs. possibility measures.

UNIT V FUZZY INFERENCE

Approximate reasoning fuzzy decision making – fuzzy relational inference – compositional rule of inference – efficiency of inference – hierarchical.

Suggested Readings:

1. George J Klir and Bo Yuan, *Fuzzy Sets and Fuzzy Logic: Theory and Applications*, Prentice Hall of India, New Delhi, 2003.
2. Zimmermann H.J., *Fuzzy Set Theory and its Applications*, Kluwer Academic Publishers, USA, 2001.
3. MichałBaczyński and Balasubramaniam Jayaram, *Fuzzy Implications*, Springer-Verlag Publishers, Heidelberg, 2008.

4. Kevin M Passino and Stephen Yurkovich, *Fuzzy Control*, Addison Wesley Longman Publishers, USA, 1998.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To know the fundamentals of tensors.
- 2 To know the series solutions to differential equations.
- 3 To introduce the concepts of special functions.
- 4 To study about calculus of variations and integral equations.
- 5 To familiar with the main mathematical methods used in physics.
- 6 Discuss the special type of matrices that are relevant in physics and tensors.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
- 2 Discuss the special type of matrices that are relevant in physics and tensors.
- 3 Explain special functions like Bessel, Legendre, Hermite and Laguerre functions and their recurrence relations.
- 4 Compare different ways of solving second order differential equations.
- 5 Use calculus of variations and linear integral equations.
- 6 Solution of Fredholm equations with separable kernels.

Course Contents:**UNIT I TENSORS**

Definition of tensor –rank, symmetric tensors, contraction, quotient rule –tensors with zero components, tensor equations, metric tensors and their determinants –pseudo tensors.

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series solution: Classification of singularities of an ordinary differential equation –series solution – method of Frobenius – indicial equation – examples.

UNIT III SPECIAL FUNCTIONS

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre, Hermite and Laguerre functions – Generating Function.

UNIT IV CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green's function – solution of integral equation – integral equations of the convolution type – Abel's integral equations – integro-differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

Suggested Readings:

1. Grewal B.S., *Higher Engineering Mathematics*, Khanna Publishers, New Delhi, 2013.
2. Murray R Spiegel, Seymour Lipschutz and Dennis Spellman, *Vector Analysis*, Tata McGraw-Hill Education Pvt. Ltd., New Delhi, 2010
3. Stephenson, G. and Radmore, P.M., *Advanced Mathematical Methods for Engineering and Science Students*, Cambridge University Press India Pvt. Ltd., New Delhi, 1990.
4. Larry C. Andrews, *Special Functions of Mathematics for Engineers*, Oxford Science Publishers, New Delhi, 1997.

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- 1 To introduce the basic concepts of vector space.
- 2 To know the fundamentals of linear algebra.
- 3 To solve the system of linear equations.
- 4 To study the linear transformations.
- 5 To introduce the concepts of inner product spaces.
- 6 Express linear transformations as a matrix form.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- 2 Apply the fundamental concepts in their respective engineering fields.
- 3 Express linear transformations as a matrix form.
- 4 Explain the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers.
- 5 Discuss the importance of linear algebra
- 6 Discuss the applications of linear algebra in branches of mathematics.

Course Contents:**UNIT I VECTOR SPACES**

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space.

UNIT II EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors –diagonalization – power method – QR decomposition.

UNIT III SYSTEM OF LINEAR EQUATIONS

Direct methods, Gauss elimination method, Gauss-Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear transformations – the null space and range – isomorphisms – matrix representation of linear transformations – similarity–Eigen values and Eigenvectors–diagonalization.

UNIT V INNER PRODUCT SPACES

The dot product on \mathbb{R}^n and inner product spaces – orthonormal bases – orthogonal complements – Application: Least squares approximation – diagonalization of symmetric M – Application: Quadratic forms.

Suggested Readings:

1. KreyszigE, *Advanced Engineering Mathematics*, John Wiley & Sons, New Delhi, 2014.
2. Shahnaz Bathul, *Special Functions and Complex Variables*, PHI Publications, New Delhi, 2009.
3. Anton and Rorres, *Elementary Linear Algebra: Applications*, Wiley India, New Delhi.2012.

4. Jim Defranza, Daniel Gagliardi, *Introduction to Linear Algebra with Application*, Tata McGraw-Hill, New Delhi, 2008.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To introduce the Java programming language and explore its current strengths and weaknesses.
- 2 To study the way that object-oriented concepts are implemented in the Java programming language.
- 3 To write working Java code to demonstrate the use of applets for client side programming.
- 4 Discuss the way that exceptions are detected and handled in the Java programming language.
- 5 Create Java code that demonstrates multiple threads of execution.
- 6 Describe internet telephony

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the basic and advanced concepts and techniques of Java.
- 2 Design an application based upon the concepts of Java and advance Java.
- 3 Discuss the way that exceptions are detected and handled in the Java programming language.
- 4 Create Java code that demonstrates multiple threads of execution.
- 5 Describe internet telephony
- 6 Explain multimedia applications

Course Contents:**UNIT I INTRODUCTION**

Introduction –network of networks, intranet, extranet and internet. World wide web – domain and subdomain, address resolution, DNS, telnet, FTP, HTTP. TCP/IP –features, segment, three-way handshaking, flow control, error control, congestion control, IP datagram, IPv4 and IPv6. IP subnetting and addressing – classful and classless addressing, subnetting.

UNIT II HTML

Introduction, editors, elements, attributes, heading, paragraph. Formatting, link, head, table, list, block, layout, CSS. Form, iframe, colors, colorname, colorvalue. Image maps– map, area, attributes of image area– Extensible Markup Language (XML)–introduction, tree, syntax, elements, attributes, validation, viewing. XHTML in brief. CGI scripts – introduction – environment variable, GET and POST methods.

UNIT III PERL

Introduction, variable, condition, loop, array, implementing data structure, hash, string, regular expression, file handling, I/O handling –JavaScript – basics, statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, boolean, regex. Function, errors, validation. Cookies–definition of cookies, create and store a cookie with example. Java applets – container class, components, applet life cycle, update method, applications.

UNIT IV CLIENT-SERVER PROGRAMMING

Client-server programming in Java – Java socket, Java RMI. Threats –malicious code – viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks–network security techniques – password and authentication– VPN, IP security, security in electronic transaction, Secure

Socket Layer (SSL), Secure Shell (SSH). Firewall–introduction, packet filtering, stateful, application layer, proxy.

UNIT V INTERNET TELEPHONY

Introduction, VoIP–multimedia applications – multimedia over IP: RSVP, RTP, RTCP and RTSP–streaming media, codec and plugins, IPTV–search engine and web crawler – definition, metadata, web crawler, indexing, page rank, overview of SEO.

Suggested Readings:

1. Paul Deitel, Harvey Deitel and Abby Deitel, *Internet and World Wide Web: How to Program*, Pearson, 2011.
2. N.P. Gopalan and J. Akilandeswari, *Web Technology: A Developer's Perspective*, PHI Learning, Delhi, 2013.
3. Rahul Banerjee, *Internetworking Technologies: An Engineering Perspective*, PHI Learning, Delhi, 2011.
4. Robert W. Sebesta, *Programming the World Wide Web*, Pearson Education, 2016.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To study the graphics techniques and algorithms.
- 2 To study the multimedia concepts and various I/O technologies.
- 3 Explain the various latest interactive multimedia devices, the basic concepts about images and image formats.
- 4 Explain the data compression techniques, image compression techniques like JPEG
- 5 Explain the video compression techniques like MPEG, and the basic concepts about animation
- 6 Create an interactive multimedia presentation by using multimedia devices

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Discuss the fundamental concepts of computer animation and multimedia.
- 2 Explain the various latest interactive multimedia devices, the basic concepts about images and image formats.
- 3 Explain the data compression techniques, image compression techniques like JPEG
- 4 Explain the video compression techniques like MPEG, and the basic concepts about animation
- 5 Create an interactive multimedia presentation by using multimedia devices
- 6 Identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

Course Contents:**UNIT I INTRODUCTION**

What is mean by animation – why we need animation – history of animation– uses of animation – types of animation – principles of animation – some techniques of animation – animation on the web – 3D animation – special effects – creating animation.

UNIT II CREATING ANIMATION IN FLASH

Introduction to flash animation – introduction to flash – working with the timeline and frame-based animation – working with the timeline and tween-based animation – understanding layers – action script.

UNIT III 3D ANIMATION AND ITS CONCEPTS

Types of 3D animation– skeleton and kinetic 3D animation– texturing and lighting of 3D animation – 3D camera tracking – applications and software of 3D animation.

UNIT IV MOTION CAPTION

Formats – methods – usages – expression – motion capture softwares – script animation usage– different language of script animation among the software.

UNIT V CONCEPT DEVELOPMENT

Story developing – audio and video – colour model – device independent colour model – gamma and gamma correction – production budgets – 3D animated movies.

Suggested Readings:

1. Malay K. Pakhira, *Computer Graphics, Multimedia and Animation*, PHI Learning Pvt. Ltd., 2010.
2. Ranjan Parekh, *Principles of Multimedia*, Tata McGraw-Hill, 2007.
3. Ashok Banerji and Ananda Mohan Ghosh, *Multimedia Technologies*, McGraw-Hill Publication, 2009.
4. Pankaj Dhaka, *Encyclopedia of Multimedia and Animations*, Anmol Publications, 2011.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To assemble/setup and upgrade personal computer systems.
- 2 To perform installation, configuration, and upgrading of microcomputer hardware and software.
- 3 To install/connect associated peripherals.
- 4 Define the terms that are directly related to processors such as caching, multi-threading, dual-core technology, multi-processing, and pipelining.
- 5 Explain the PC memories such as RAM and ROM devices.
- 6 Discuss about motherboards and the various technologies connected to mainboards such as chipsets, buses, and various BIOS types.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Identify the main components of the PC.
- 2 Use the skills to troubleshoot various power-related problems.
- 3 Define the terms that are directly related to processors such as caching, multi-threading, dual-core technology, multi-processing, and pipelining.
- 4 Explain the PC memories such as RAM and ROM devices.
- 5 Discuss about motherboards and the various technologies connected to mainboards such as chipsets, buses, and various BIOS types.
- 6 Prepare a HDD for storing data; install Windows OS and various programs.

Course Contents:**UNIT I INTRODUCTION**

Introduction – computer organization – number systems and codes – memory – ALU – CU – instruction prefetch – interrupts – I/O techniques – device controllers – error detection techniques – microprocessor – personal computer concepts – advanced system concepts – microcomputer concepts – OS – multitasking and multiprogramming – virtual memory – cache memory – modern PC and user.

UNIT II PERIPHERAL DEVICES

Introduction – keyboard – CRT display monitor – printer – magnetic storage devices – FDD – HDD – special types of disk drives – mouse and trackball – modem – faxmodem – CD ROM drive – scanner – digital camera – DVD – special peripherals.

UNIT III PC HARDWARE OVERVIEW

Introduction – hardware BIOS DOS interaction – the pc family – pc hardware – inside the system box – motherboard logic – memory space – peripheral interfaces and controllers – keyboard interface – CRT display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE

Introduction – system configuration – pre-installation planning – installation practice – routine checks – PC assembling and integration – BIOS setup – engineering versions and compatibility – preventive maintenance – DOS – virus – data recovery.

UNIT V TROUBLESHOOTING

Introduction – computer faults – nature of faults – types of faults – diagnostic programs and tools – microprocessor and firmware – programmable LSI's – bus faults – faults elimination process – systematic troubleshooting – symptoms observation and analysis – fault diagnosis – fault rectification – troubleshooting levels – FDD, HDD, CD-ROM problems.

Suggested Readings:

1. B. Govindarajalu, *IBM PC Clones Hardware, Troubleshooting and Maintenance*, Tata McGraw-Hill, 2002.
2. Peter Abel and Niyaz Nizamuddin, *IBM PC Assembly Language and Programming*, Pearson Education, 2007.
3. Scott Mueller, *Upgrading and Repairing PCs*, Pearson Education, 2016.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- 2 To understand the fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- 3 Demonstrate the concepts of polymorphism and inheritance.
- 4 List the important topics and explain the principles of software development.
- 5 Create a computer program to solve specified problems.
- 6 Use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Identify classes, objects, members of a class and relationships among them needed for a specific problem.
- 2 Demonstrate the concepts of polymorphism and inheritance.
- 3 List the important topics and explain the principles of software development.
- 4 Create a computer program to solve specified problems.
- 5 Use the Java SDK environment to create, debug and run simple Java programs.
- 6 Describe the basics of event handling

Course Contents:**UNIT I INTRODUCTION TO JAVA**

Object oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism – objects and classes in Java – defining classes – methods – access specifiers – static members – constructors – finalise method.

UNIT II PACKAGES

Arrays – strings – packages – Javadoc comments – inheritance – class hierarchy – polymorphism – dynamic binding – final keyword – abstract classes.

UNIT III I/O STREAMS

The object class – reflection – interfaces – object cloning – inner classes – proxies – I/O streams – graphics programming – frame – components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to swing – model-view-controller design pattern – buttons – layout management – swing components – exception handling – exception hierarchy – throwing and catching exceptions.

UNIT V MOTIVATION FOR GENERIC PROGRAMMING

Motivation for generic programming – generic classes – generic methods – generic code and virtual machine – inheritance and generics – reflection and generics – multi-threaded programming – interrupting threads – thread states – thread properties – thread synchronization – executors – synchronizers.

Suggested Readings:

1. Cay S. Horstmann and Gary Cornell, *Core Java: Volume I - Fundamentals*, Sun Microsystems Press, 2008.
2. K. Arnold and J. Gosling, *The Java Programming Language*, Pearson Education, 2009.
3. Timothy Budd, *Understanding Object-Oriented Programming with Java*, Pearson Education 2002.
4. C. Thomas Wu, *An introduction to Object-Oriented Programming with Java*, Tata McGraw-Hill Publishing Company Ltd., 2008.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To understand the basic concepts of an electric hybrid vehicle.
- 2 To gain knowledge about the electric propulsion unit.
- 3 To understand and gain knowledge about various energy storage devices.
- 4 Evaluate the different energy management strategies.
- 5 Describe the concept of different energy storage devices.
- 6 Analyse the different motor drives used in hybrid electric vehicles.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the concept of hybrid electric vehicles.
- 2 Discuss the concept of hybrid electric drive-trains.
- 3 Evaluate the different energy management strategies.
- 4 Describe the concept of different energy storage devices.
- 5 Analyse the different motor drives used in hybrid electric vehicles.
- 6 Discuss the fuel cell based energy storage and its analysis

Course Contents:**UNIT I INTRODUCTION**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, configuration and control of DC motor drives, configuration and control of induction motor drives, configuration and control of permanent magnet motor drives, configuration and control of switch reluctance motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

Introduction to energy storage requirements in hybrid and electric vehicles, battery based energy storage and its analysis, fuel cell based energy storage and its analysis, super capacitor based energy storage and its analysis, flywheel based energy storage and its analysis, hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Suggested Readings:

1. Iqbal Hussein, *Electric and Hybrid Vehicles: Design Fundamentals*, CRC Press, 2010.

2. Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay and Ali Emadi, *Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design*, Standardsmedia, 2009.
3. James Larminie and John Lowry, *Electric Vehicle Technology Explained*, Wiley, 2012.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To gain knowledge about energy management.
- 2 To understand the basic concepts in economic analysis in energy management.
- 3 To understand the basic principles of an energy audit.
- 4 Discuss the basic concept of energy audit and types.
- 5 Analyse the different energy efficient motors.
- 6 Describe the concept of energy conservation.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the concept of energy management.
- 2 Analyse the different methods for economic analysis.
- 3 Discuss the basic concept of energy audit and types.
- 4 Analyse the different energy efficient motors.
- 5 Describe the concept of energy conservation.
- 6 Analyse the different methods to improve power factor.

Course Contents:**UNIT I ENERGY MANAGEMENT**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –energy auditor and energy manager – eligibility, qualification and functions – questionnaire and checklist for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

Economics analysis – depreciation methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis – calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, energy conservation schemes – energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

Electric motors: factors affecting efficiency – energy efficient motors – constructional details, characteristics – voltage variation –over motoring – motor energy audit.

Energy conservation: importance – energy saving measures in DG set – fans and blowers pumps – air conditioning system – energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

Power factor – methods of improvement, location of capacitors, p.f. with nonlinear loads, effect of harmonics on p.f. – p.f.motor controllers –energy efficient lighting system design and practice – lighting control– measuring instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

Suggested Readings:

1. Murphy W.R. and G. Mckay, *Energy Management*, Butterworth-Heinemann, 2007.
2. John C. Andreas, *Energy Efficient Electric Motors*, Marcel Dekker Inc. Ltd., 2005.
3. Wayne C. Turner and Steve Doty, *Energy Management Handbook Volume II*, Lulu Enterprises Inc., 2013.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To understand the basic principles of PLC systems.
- 2 To gain knowledge about data handling functions.
- 3 To understand the principles of PID.
- 4 Interpret relay ladder diagrams.
- 5 Examine the issues related to using PLCs for batch processes and sequential control.
- 6 Describe programmable controller networking and supervisory control.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Examine the typical PLC hardware structure.
- 2 Interpret relay ladder diagrams.
- 3 Examine the issues related to using PLCs for batch processes and sequential control.
- 4 Describe programmable controller networking and supervisory control.
- 5 Design logic circuits to perform industrial control functions of medium complexity.
- 6 Demonstrate the correct operation of logic circuits by programming them into the programmable logic controller.

Course Contents:**UNIT I INTRODUCTION**

PLC Basics: PLC system, I/O modules and interfacing, CPU processor, programming equipment, programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING

PLC Programming: Input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples. Ladder diagrams for process control: Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS

PLC Registers: Characteristics of registers, module addressing, holding registers, input registers, output registers. PLC Functions: Timer functions and industrial applications, counters, counter function, industrial applications, architecture functions, number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

Data Handling Functions: SKIP, master control, relay, jump, move, FIFO, FAL, ONS, CLR and sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of twoaxes and threeaxis robots with PLC, matrix functions.

UNIT V PID PRINCIPLES

Analog PLC Operation: Analog modules and systems, analog signal processing, multi-bit data processing, analog output application examples, PID principles, position indicator with PID control, PID modules, PID tuning, PID functions.

Suggested Readings:

1. John R. Hackworth and Frederick D. Hackworth, Jr., *Programmable Logic Controllers: Programming Method and Applications*, Pearson, 2006.
2. John W. Webb and Ronald A. Reis, *Programmable Logic Controllers: Principle and Applications*, Pearson, 2003.
3. W. Bolton, *Programmable Logic Controller*, Elsevier Newnes Publications, 2009.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To gain knowledge about environmental aspects of energy utilization.
- 2 To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- 3 To understand the basic principles of the fuel cell and geothermal power plants.
- 4 To gain knowledge about the hydro energy.
- 5 Explain the need of wind energy and the various components used in energy generation.
- 6 Discuss the need of hydro energy and the various types of hydro energy.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the need of renewable energy resources, historical and latest developments.
- 2 Describe the use of solar energy and the various components used in the energy production with respect to applications.
- 3 Explain the need of wind energy and the various components used in energy generation.
- 4 Discuss the need of hydro energy and the various types of hydro energy.
- 5 Analyse the different energy sources for energy production.
- 6 Explain the need of ocean thermal power plants

Course Contents:**UNIT I INTRODUCTION**

Energy scenario –different types of renewable energy sources – environmental aspects of energy utilization – energy conservation and energy efficiency – needs and advantages, Energy Conservation Act, 2003.

UNIT II SOLAR ENERGY

Introduction to solar energy: Solar radiation, availability, measurement and estimation– solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

Introduction – basic principles of wind energy conversion – components of wind energy conversion system – site selection consideration – basic types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – interconnected systems.

UNIT IV HYDRO ENERGY

Hydropower, classification of hydropower, turbine selection, ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

Bioenergy and types – fuel cell, geothermal power plants; Magneto-Hydro-Dynamic (MHD) energy conversion.

Suggested Readings:

1. G.D. Rai, *Non-conventional Energy Sources*, Khanna Publishers, 2011.
2. B H Khan, *Non-Conventional Energy Resources*, Tata McGraw-Hill Education, 2009.
3. S. Rao and B.B. Parulekar, *Energy Technology: Non Conventional, Renewable and Conventional*, Khanna Publishers, 2013.
4. Godfrey Boyl, *Renewable Energy: Power for a Sustainable Future*, Oxford University Press, 2012.
5. John W. Twidell and Anthony D. Weir, *Renewable Energy Resources*, Taylor and Francis, 2015.

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- 1 To introduce the embedded systems, its hardware and software.
- 2 To introduce devices and buses used for embedded networking.
- 3 To study about task management.
- 4 To learn about semaphore management and message passing.
- 5 To study about memory management.
- 6 Discuss about task management.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Discuss about embedded systems architecture.
- 2 Explain embedded system, its hardware and software.
- 3 Discuss about task management.
- 4 Express semaphore management and message passing.
- 5 Describe about memory management.
- 6 Implement the multitasking

Course Contents:**UNIT I INTRODUCTION TO EMBEDDED SYSTEM**

Introduction –embedded systems description, definition, design considerations and requirements – overview of embedded system architecture (CISC and RISC) – categories of embedded systems – embedded processor selection and tradeoffs – embedded design life cycle – product specifications – hardware/software partitioning – iterations and implementation – hardware software integration – product testing techniques–ARM7.

UNIT II OPERATING SYSTEM OVERVIEW

Introduction–advantageanddisadvantageofusingRTOS–multitasking–tasks – realtimekernels – scheduler – non-preemptive kernels – preemptive kernels – reentrancy – reentrantfunctions– round robin scheduling – task priorities – static priorities– mutual exclusion–deadlock – intertask communication– message mailboxes–message queues – interrupts – taskmanagement–memory management – time management–clock ticks.

UNIT III TASK MANAGEMENT

Introduction – μ C/OS-II features – goals of μ C/OS-II – hardware and software architecture– Kernelstructures: Tasks–task states–task scheduling–idle task–statistics task–interrupts under μ C/OS-II– clock tick – μ C/OS-II initialization. Task management: Creating tasks–task stacks–stackchecking– task'spriority–suspendingtask–resumingtask. Timemanagement: Delaying atask–resuming a delayed task–system time. Event control blocks – placing a task in the ECB wait list–removing a task from an ECB wait list.

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore management: Semaphore management overview– signalling a semaphore. Message mailbox management: Creating a mailbox –deleting mailbox–waiting for a message box–sending message to a mailbox – status of mailbox. Message queue management: Creating message queue– deleting a message queue–waiting for a message queue–sending message to a queue– flushing a queue.

UNIT V MEMORY MANAGEMENT

Memory management: Memory control blocks–creating partition – obtaining a memory block–returning a memory block. Getting started with μ C/OS-II–installing μ C/OS-II–Porting μ C/OS-II:Development tools–directories and files– testing a port – IAR workbench with μ C/OS-II – μ C/OS-II porting on a 8051CPU– implementation of multitasking – implementation of scheduling and rescheduling –analyse the multichannel ADC with help of μ C/OS-II.

Suggested Readings:

1. JeanJ. Labrosse, *Micro C/OS-II The Real Time Kernel*, CMPBooks, 2009.
2. David Seal, *ARM Architecture Reference Manual*, Addison-Wesley, 2008.
3. Steve Furbe, *ARM System-on-Chip Architecture*, Addison-Wesley Professional, California, 2000.
4. K. V. K. K. Prasad, *Embedded / Real-Time Systems: Concepts, Design & Programming Black Book*, Dreamtech Press, 2005.
5. Sriram V Iyer and Pankaj Gupta, *Embedded Realtime Systems Programming*, Tata McGraw-Hill, 2004.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To study about various speakers and microphone.
- 2 To learn the fundamental of television systems and standards.
- 3 To learn the process of audio recording and reproduction.
- 4 To study the various telephone networks.
- 5 To discuss about the working of home appliances.
- 6 Demonstrate the working of various optical recording systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the working of various types of loud speakers.
- 2 Describe various types of picture tubes.
- 3 Demonstrate the working of various optical recording systems.
- 4 Distinguish various standards for colour TV system.
- 5 Discuss various telecommunication networks.
- 6 Demonstrate the working of various home appliances.

Course Contents:**UNIT I LOUDSPEAKERS AND MICROPHONES**

Dynamic loudspeaker, electrostatic loudspeaker, permanent magnet loudspeaker, woofers and tweeters – microphone characteristics, carbon microphones, dynamic microphones and wireless microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV – luminance and chrominance signal; monochrome and colour picture tubes –colour TV systems–NTSC, PAL, SECAM–components of a remote control.

UNIT III OPTICAL RECORDING AND REPRODUCTION

Audio disc– processing of the audio signal–readout from the disc –reconstruction of the audio signal–video disc–video disc formats – recording systems–playback systems.

UNIT IV TELECOMMUNICATION SYSTEMS

Telephone services – telephone networks–switching system principles–PAPX switching–circuit, packet and message switching, LAN, MAN and WAN, integrated services digital network. Wireless local loop. VHF/UHF radio systems, limited range cordless phones; cellular modems.

UNIT V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

Suggested Readings:

1. S.P. Bali, *Consumer Electronics*, Pearson Education, 2005.
2. J. S. Chitode, *Consumer Electronics*, Technical Publications, 2007.
3. Philip Hoff, *Consumer Electronics for Engineers*, Cambridge University Press, 1998.

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- 1 To introduce the basic concepts of neural networks and their applications in various domain.
- 2 To educate how to use soft computing to solve real-world problems.
- 3 To have a solid understanding of the basic neural network.
- 4 Apply perception concept in design.
- 5 Design using ART phenomena.
- 6 Describe SOM concepts.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the basic concepts of neural networks and its applications in various domains.
- 2 Discuss about learning process in neural networks.
- 3 Apply perception concept in design.
- 4 Design using ART phenomena.
- 5 Describe SOM concepts.
- 6 Use soft computing to solve real-world problems.

Course Contents:**UNIT I INTRODUCTION TO NEURAL NETWORKS**

Introduction – biological neurons and their artificial models – learning, adaptation and neural network's learning rules – types of neural networks – single layer, multiple layer – feed forward, feedback networks.

UNIT II LEARNING PROCESS

Error– correction learning– memory based learning –Hebbian learning – competitive learning – Boltzmann learning – supervised and unsupervised learning – adaptation – statistical learning theory.

UNIT III PERCEPTION

Single layer perception – adaptive filtering – unconstrained optimization – least-mean square algorithm – learning curve – annealing technique – perception convergence theorem – relationship between perception and Baye's classifier – back propagation algorithm.

UNIT IV ATTRACT OR NEURAL NETWORK AND ART

Hopfield model – BAM model– BAM stability – adaptive BAM – Lyapunov function – effect of gain – Hopfield design – application to TSP problem – ART – layer 1 – layer 2 – orienting subsystem – ART algorithm – ARTMAP.

UNIT V SELF ORGANIZATION

Self-organizing map – SOM algorithm – properties of the feature map – LVQ – hierarchical vector quantization. Applications of self-organizing maps: The neural phonetic type writer learning ballistic arm movements.

Suggested Readings:

1. Simon Haykin and Simon S. Haykin, *Neural Networks and Learning Machines*, Prentice Hall, 2009.
2. Satish Kumar, *Neural Networks: A Classroom Approach*, McGraw-Hill Education, 2012.

3. Rajasekaran S. and Vijayalakshmi Pai G. A., *Neural Networks, Fuzzy Logic and Genetic Algorithm: Synthesis and Applications*, PHI Learning Pvt. Ltd. 2003.
4. Laurene V. Fausett, *Fundamentals of Neural Networks: Architectures, Algorithms and Applications*, Pearson, 1994.
5. Philip D. Wasserman, *Neural Computing: Theory and Practice*, Van Nostrand Reinhold, 1989.
6. James A. Freeman and David M. Skapura, *Neural Networks: Algorithms, Applications, and Programming Techniques*, Addison-Wesley, 2005.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To introduce the basic concepts of fuzzy logic and their applications in various domain.
- 2 To educate how to use fuzzy computation to solve real-world problems.
- 3 To have a solid understanding of basic fuzzy models.
- 4 Describe the theory of reasoning.
- 5 Develop fuzzy controllers.
- 6 Discuss the concepts of adaptive fuzzy control.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the basic concepts of fuzzy logic and its applications in various domains.
- 2 Describe the theory of reasoning.
- 3 Develop fuzzy controllers.
- 4 Discuss the concepts of adaptive fuzzy control.
- 5 Use fuzzy computation to solve real-world problems.
- 6 Design fuzzy based model for any application.

Course Contents:**UNIT I BASICS OF FUZZY LOGIC**

Fuzzy sets, properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle.

UNIT II THEORY OF APPROXIMATE REASONING

Linguistic variables, fuzzy proportions, fuzzy if-then statements, inference rules, compositional rule of inference – fuzzy models.

UNIT III FUZZY KNOWLEDGE BASED CONTROLLERS

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures–design of fuzzy logic controller.

UNIT IV ADAPTIVE FUZZY CONTROL

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS

Simple applications of FKBC – washing machines – traffic regulations – lift control – fuzzy in medical applications – introduction to ANFIS.

Suggested Readings:

1. Dimiter Driankov, Hans Hellendoorn and Michael Reinfrank, *An Introduction to Fuzzy Control*, Springer-Verlag Berlin Heidelberg, 1996.
2. George J. Klir and Tina A. Folger, *Fuzzy Sets, Uncertainty and Information*, Prentice Hall, 1988.
3. Timothy J. Ross, *Fuzzy Logic with Engineering Applications*, John Wiley & Sons, 2010.
4. George J. Klir and Bo Yuan, *Fuzzy Sets and Fuzzy Logic: Theory and Applications*, Prentice Hall, 1995.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To provide students with an overview of communication systems.
- 2 To provide an overview on mobile communication.
- 3 To make students to have a better understanding on satellite and radar communication.
- 4 Explain the working of mobile cellular communication.
- 5 Describe various standards in use for wireless communication and its application.
- 6 Demonstrate some basic application of GPS.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Discuss the past, present and future trends in mobile communication.
- 2 Explain the working of mobile cellular communication.
- 3 Describe various standards in use for wireless communication and its application.
- 4 Demonstrate some basic application of GPS.
- 5 Explain the working of radar and its applications.
- 6 Describe the modern navigation systems

Course Contents:**UNIT I THE EVOLUTION OF ELECTRONIC COMMUNICATION**

From smoke signals to smart phones – history of communications: theoretical foundations, development and applications – frequencies for communication – frequency regulations – overview of communication transmitter and receiver.

UNIT II MOBILE CELLULAR COMMUNICATIONS

Evolution to cellular networks – cellular systems generations and standards: 1G, 2G, 3G, 4G – cellular network components – components of a mobile phone – setting up a call process – making a call process – receiving a call process – spectrum allocation: policies and strategies, role of TRAI.

UNIT III WIRELESS COMMUNICATION

Introduction –Bluetooth– infrared communication – IEEE wireless LANs (Wi-Fi) – IEEE 802.16 (WiMaX) –future mobile and wireless networks: introduction to 5G – device to device communication – IoT.

UNIT IV SATELLITE COMMUNICATION

History of satellite communication, basics of satellites, types of satellites, capacity allocation – launch vehicles and orbits: introduction to launching vehicles, important orbits, working of rocket, three pioneers of rocketry – basics of Global Positioning System (GPS) –applications of GPS.

UNIT V RADAR AND NAVIGATION

Introduction, radar block diagram and operation, radar frequencies, applications of radar. Navigation systems: introduction and methods of navigation, instrument landing system, microwave landing system – modern navigation systems.

Suggested Readings:

1. Simon Haykin and Michael Moher, *Communication Systems*, John Wiley & Sons, 2009.
2. B.P. Lathi, Zhi Ding and Hari Mohan Gupta, *Modern Digital and Analog Communication Systems*, Oxford University Press, 2017.
3. Theodore S. Rappaport, *Wireless Communications: Principles and Practice*, Prentice Hall, 2002.
4. Vijay K. Garg, *Wireless Communications and Networking*, Morgan Kaufmann, 2007.
5. Timothy Pratt, Charles W. Bostian and Jeremy E. Allnutt, *Satellite Communications*, John Wiley & Sons, 2002.
6. Merrill I Skolnik, *Introduction to Radar Systems*, Tata McGraw-Hill, 2001.
7. Myron Kayton and Walter R. Fried, *Avionics Navigation Systems*, John Wiley & Sons, 1997.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To examine the role and tasks of basic housing policies and building bye-laws.
- 2 To understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors.
- 3 To analyse the innovative construction methods and materials.
- 4 To analyse city management strategies and strengthen the urban governance through a problem solving approach.
- 5 Use housing programmes and schemes.
- 6 Plan and design housing projects.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the importance of basic housing policies and building bye-laws.
- 2 Use housing programmes and schemes.
- 3 Plan and design housing projects.
- 4 Examine innovative construction methods
- 5 Examine innovative construction materials.
- 6 Describe housing finance and loan approval procedures.

Course Contents:**UNIT I INTRODUCTION TO HOUSING**

Definition of basic terms – house, home, household, apartments, multi-storeyed buildings, special buildings, objectives and strategies of national housing policies, principle of sustainable housing, housing laws at state level, bye-laws at urban and rural local bodies – levels – development control regulations, institutions for housing at national, state and local levels.

UNIT II HOUSING PROGRAMMES

Basic concepts, contents and standards for housing programmes – sites and services, neighbourhoods, open development plots, apartments, rental housing, co-operative housing, slum housing programmes, role of public, private and non-government organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS

Formulation of housing projects – site analysis, layout design, design of housing units (design problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

New constructions techniques – cost effective modern construction materials, building centers – concept, functions and performance evaluation.

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

Appraisal of housing projects – housing finance, cost recovery – cash flow analysis, subsidy and cross subsidy, pricing of housing units, rents, recovery pattern (problems).

Suggested Readings:

1. Meera Mehta and Dinesh Mehta, *Metropolitan Housing Markets*, Sage Publications Pvt. Ltd., New Delhi, 2002.

2. Francis Cherunilam and Odeyar D Heggade, *Housing in India*, Himalaya Publishing House, Bombay, 2001.
3. *Development Control Rules for Chennai Metropolitan Area*, CMA, Chennai, 2002.
4. *National Experiences with Shelter Delivery for the Poorest Groups*, UNCHS (Habitat), Nairobi, 2000.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To provide knowledge on machineries involved in building construction.
- 2 To impart knowledge on electrical systems in buildings.
- 3 To understand the principles of illumination and design.
- 4 To learn the refrigeration principles and its applications.
- 5 To study the importance of fire safety and its installation techniques.
- 6 Use the principles of illumination and design.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the machineries involved in building construction.
- 2 Discuss the electrical system and its selection criteria.
- 3 Use the principles of illumination and design.
- 4 Illustrate the principle of refrigeration.
- 5 Explain the importance of fire safety and its installation techniques.
- 6 Apply fire safety installation techniques.

Course Contents:**UNIT I MACHINERIES**

Hot water boilers – lifts and escalators – special features required for physically handicapped and elderly – conveyors – vibrators – concrete mixers – DC/AC motors – generators – laboratory services – gas, water, air and electricity.

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS

Basics of electricity – single/three phase supply – protective devices in electrical installations – earthing for safety – types of earthing – ISI specifications – types of wires, wiring systems and their choice – planning electrical wiring for building – main and distribution boards – transformers and switch gears – layout of substations.

UNIT III PRINCIPLES OF ILLUMINATION AND DESIGN

Visual tasks – factors affecting visual tasks – modern theory of light and colour – synthesis of light – additive and subtractive synthesis of colour – luminous flux – candela – solid angle illumination – utilization factor – depreciation factor – MSCP – MHCP – classification of lighting – artificial light sources – spectral energy distribution – luminous efficiency – colour temperature – colour rendering. Design of modern lighting – lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES AND APPLICATIONS

Thermodynamics – heat – temperature, measurement transfer – change of state – sensible heat – latent heat of fusion, evaporation, sublimation – saturation temperature – superheated vapour – subcooled liquid – pressure temperature relationship for liquids – refrigerants – vapour compression cycle – compressors – evaporators – refrigerant control devices – electric motors – starters – air handling units – cooling towers – window type and packaged air-conditioners – chilled water plant – fan coil systems – water piping – cooling load – air conditioning systems for different types of buildings – protection against fire to be caused by AC systems.

UNIT V FIRE SAFETY INSTALLATION

Causes of fire in buildings – safety regulations – NBC – planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and AC systems. Special features required for physically handicapped and elderly in building types – heat and smoke detectors – fire alarm system, snorkel ladder – fire lighting pump and water storage – dry and wet risers – automatic sprinklers.

Suggested Readings:

1. E.R.Ambrose, *Heat Pumps and Electric Heating*, John and Wiley and Sons Inc., New York, 2002.
2. *Handbook for Building Engineers in Metric Systems*, NBC, New Delhi, 2005.
3. Derek Phillips, *Lighting in Architectural Design*, McGraw-Hill, New York, 2000.
4. A.F.C. Sherratt, *Air-Conditioning and Energy Conservation*, The Architectural Press, London, 2005.
5. National Building Code.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To learn various distress and damages to concrete and masonry structures.
- 2 To know the influence of corrosion in durability of structures.
- 3 To understand the importance of maintenance of structures.
- 4 To study the various types and properties of repair materials.
- 5 To learn various techniques involved in demolition of structures.
- 6 Describe the importance of maintenance of structures, types and properties of repair materials.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the various distress and damages to concrete and masonry structures.
- 2 Discuss the durability of structures and corrosion mechanism.
- 3 Describe the importance of maintenance of structures, types and properties of repair materials.
- 4 Assess the damage of structures.
- 5 Apply various repair techniques
- 6 Explain the modern techniques and equipment adopted for the demolition of structures.

Course Contents:**UNIT I INTRODUCTION**

Quality assurance for concrete construction as-built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, design and construction errors.

UNIT II DURABILITY OF STRUCTURES

Corrosion mechanism – diagnosis – causes and effects – cover thickness and cracking, measurements for corrosion – methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT III MAINTENANCE AND REPAIR STRATEGIES

Definitions: maintenance, repair and rehabilitation, facets of maintenance, importance of maintenance, preventive measures on various aspects, inspection, assessment procedure for evaluating a damaged structure, causes of deterioration, testing techniques.

UNIT IV MATERIALS FOR REPAIR

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, fibre reinforced concrete, eliminators and polymers coating for rebars during repair, foamed concrete, mortar and dry pack, vacuum concrete.

UNIT V TECHNIQUES FOR REPAIR AND REPAIR OF STRUCTURES

Non-destructive testing techniques, corrosion protection techniques, guniting and shotcrete epoxy injection, mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, deflection, cracking, chemical disruption, weathering wear, fire, leakage, marine exposure. Engineered demolition techniques for dilapidated structures – case studies.

Suggested Readings:

1. R.T.Allen and S.C.Edwards, *Repair of Concrete Structures*, Blakie and Sons, UK, 2011.
2. Dr. B.Vidivelli, *Rehabilitation of Concrete Structures*, Standard Publishers, Chennai, 2011.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To impart knowledge on parametric design and the conventions of formal engineering drawing.
- 2 To produce and interpret 2D and 3D drawings.
- 3 To communicate a design idea/concept graphically/visually.
- 4 To provide knowledge on masonry bonds.
- 5 To understand perspective view of buildings.
- 6 Illustrate a design idea/concept graphically/visually.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Explain the parametric design and the conventions of formal engineering drawing.
- 2 Create and interpret 2D drawings.
- 3 Create and interpret 3D drawings.
- 4 Illustrate a design idea/concept graphically/visually.
- 5 Discuss the various types of masonry bonds.
- 6 Create perspective view of a building.

Course Contents:**UNIT I INTRODUCTION**

Introduction to concept of drawings, interpretation of typical drawings, planning drawings to show information concisely and comprehensively; optimal layout of drawings and scales; introduction to computer aided drawing, co-ordinate systems, reference planes. Commands: initial settings, drawing aids, drawing basic entities, modify commands, layers, text and dimensioning, blocks. Drawing presentation norms and standards.

UNIT II SYMBOLS AND SIGN CONVENTIONS

Materials, architectural, structural, electrical and plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards.

UNIT III MASONRY BONDS

English bond and Flemish bond – corner wall and cross walls – one brick wall and one and half brick wall.

UNIT IV BUILDING DRAWING

Terms, elements of planning building drawing, methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings and fixtures, finishes. Use of notes to improve clarity.

UNIT V PICTORIAL VIEW

Principles of isometrics and perspective drawing. Perspective view of building.

List of Drawing Experiments:

1. Buildings with load bearing walls including details of doors and windows.
2. Single storey RCC building.
3. Multi-storey RCC building.

Suggested Readings:

1. Subhash C Sharma and Gurucharan Singh, *Civil Engineering Drawing*, Standard Publishers, 2005.
2. Ajeet Singh, *Working with AutoCAD 2000 with Updates on AutoCAD 2000i*, Tata McGraw-Hill Company Ltd., New Delhi, 2002.
3. Sham Tickoo, *AutoCAD 2009 for Engineers and Designers*, Pearson Education, 2009.
4. Venugopal K, *Engineering Drawing and Graphics + AutoCAD*, New Age International Pvt. Ltd., 2007.
5. Balagopal T.S. Prabhu, *Building Drawing and Detailing*, Spades Publishing, Calicut, 1987.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To provide an overview of how computers are being used in mechanical component design.
- 2 To study the various computer graphics concepts.
- 3 To get basic knowledge of geometric modelling.
- 4 To study the basics of parametric design and object representation.
- 5 To get basic knowledge in product design and development.
- 6 Explain the process involved in graphic transformations.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Give an overview of the CAD systems and its importance.
- 2 Explain the ideas and principles behind the computer graphics.
- 3 Explain the process involved in graphic transformations.
- 4 Understand the operations involved in geometric modelling.
- 5 Describe the concepts of parametric design.
- 6 Understand the basics of product design and development.

Course Contents:**UNIT I OVERVIEW OF CAD SYSTEMS**

Conventional and computer aided design processes–advantages and disadvantages. Subsystems of CAD – CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives – display transformation in Two- and Three-dimensional graphics concepts, graphical input technique, geometric transformations, visual realism, computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELLING

Wireframe, surface, NURBS and solid modelling –applications and advantages. Creating primitive solids, sweeping solids, Boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modelling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION

Types of coordinate systems. Parametric design – definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids – manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT

Automated 2D drafting – basics, mechanical assembly – bill of materials generation. Mass property calculations.

Suggested Readings:

1. Vera B Anand, *Computer Graphics and Geometric Modeling for Engineers*, John Wiley & Sons, New York, 2000.

2. Radhakrishnan P and Subramanyan S, *CAD/CAM/CIM*, New Age International Pvt. Ltd., 2008.
3. Ibrahim Zeid, *CAD/CAM Theory and Practice*, McGraw-Hill Inc., New York, 2009.
4. Barry Hawhes, *The CAD/CAM Process*, Pitman Publishing, London, 2007.
5. William M Newman and Robert Sproul, *Principles of Interactive Computer Graphics*, McGraw-Hill Inc., New York, 2001.
6. Sadhu Singh, *Computer-Aided Design and Manufacturing*, Khanna Publishers, New Delhi, 1998.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To provide in-depth knowledge on industrial safety.
- 2 Understand the various safety techniques involved in the industrial sector.
- 3 Record and investigate the accident zone and prepare reports related to it.
- 4 Conduct basic safety inspections using strategies that they have developed.
- 5 Identify and demonstrate the working of safety monitoring.
- 6 Train about education and training based on safety.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Understand the need and awareness of safety concepts.
- 2 Understand the various safety techniques involved in the industrial sector.
- 3 Record and investigate the accident zone and prepare reports related to it.
- 4 Conduct basic safety inspections using strategies that they have developed.
- 5 Identify and demonstrate the working of safety monitoring.
- 6 Train about education and training based on safety.

Course Contents:**UNIT I CONCEPTS**

Evolution of modern safety concept –safety policy – safety organization – line and staff functions for safety – safety committee – budgeting for safety.

UNIT II TECHNIQUES

Incident Recall Technique (IRT), disaster control, Job Safety Analysis (JSA), safety survey, safety inspection, safety sampling, safety audit.

UNIT III ACCIDENT INVESTIGATION AND REPORTING

Concept of an accident, reportable and non-reportable accidents, unsafe act and condition – principles of accident prevention, supervisory role – role of safety committee – accident causation models – cost of accident. Overall accident investigation process –response to accidents, India reporting requirement, planning document, planning matrix, investigators kit, functions of investigator, four types of evidence, records of accidents, accident reports.

UNIT IV SAFETY PERFORMANCE MONITORING

Reactive and proactive monitoring techniques –permanent total disabilities, permanent partial disabilities, temporary total disabilities – calculation of accident indices, frequency rate, severity rate, frequency severity incidence, incident rate, accident rate, safety “t” score, safety activity rate – problems.

UNIT V SAFETY EDUCATION AND TRAINING

Importance of training – identification of training needs – training methods – programme, seminars, conferences, competitions – method of promoting safe practice – motivation – communication – role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – domestic safety and training.

Suggested Readings:

1. *Accident Prevention Manual for Industrial Operations*, N.S.C. Chicago, 2010.
2. Heinrich H.W., *Industrial Accident Prevention*, Tata McGraw-Hill Company, New York, 1941.
3. Krishnan N.V, *Safety Management in Industry*, Jaico Publishing House, Bombay, 1997.
4. John R Ridley, *Safety at Work*, Elsevier, 2014.
5. Roland P. Blake, *Industrial Safety*, Prentice Hall, New Jersey, 1973.
6. L M Deshmukh, *Industrial Safety Management*, Tata McGraw-Hill, 2005.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To provide the basics of transport phenomena and its applications.
- 2 To provide the knowledge over the properties of the systems and unit systems used.
- 3 To understand the basics and mathematics involved in momentum transport.
- 4 To provide the basics and applications of energy transport.
- 5 To give basics and principles involved in the mass transport phenomena.
- 6 Understand the basic concepts involved in momentum transport.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Understand the basic concepts of transport phenomena.
- 2 Understand the essentiality of properties of a system and unit systems used.
- 3 Understand the basic concepts involved in momentum transport.
- 4 Apply the mathematics involved in fluid flow problems.
- 5 Explain the various energy transport phenomena.
- 6 Understand the basics of mass transport phenomena.

Course Contents:**UNIT I INTRODUCTION AND BASIC CONCEPTS**

General overview of transport phenomena including various applications, transport of momentum, heat and mass, transport mechanism, level of transport, driving forces, molecular transport (diffusion), convective transport (microscopic).

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, gas laws, laws of conservation, energy and heat units.

UNIT III MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, force, unit and dimensions, pressure in fluid, head of fluid, molecular transport for momentum, heat and mass transfer, viscosity of fluids, Newton's law, momentum transfer, Newtonian and non-Newtonian fluids, fluid flow and Reynolds number, overall mass balance, control volume and continuity equation, overall energy balance, Bernoulli's equation, overall momentum balance, drag coefficient, Stokes law, flow in packed beds, flow in fluidized bed.

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, conduction heat transfer through flat slab/wall and through hollow cylinder, conduction through solids in series, forced convection heat transfer inside pipes, heat transfer outside various geometrics in forced convection, general discussion on natural convection heat transfer, heat exchangers, general discussion on radiation heat transfer.

UNIT V MASS TRANSPORT

Basic concepts in mass transport, some application examples, modes of mass transfer, molecular diffusion– Fick's law, analogy between mass, heat and momentum transfer, dispersion, hydraulic or Darcy's flow in porous media, chemical kinetics and activation energy, film theory, convective mass transfer, liquid-solid mass transfer, liquid-liquid mass transport, gas-liquid mass transfer, aeration and oxygen transport, air stripping.

Suggested Readings:

1. Geankoplis, C. J., *Transport Processes and Separation Processes Principles*, Prentice Hall, 2013.
2. R. Byron Bird, Warren E. Stewart and Edwin N. Lightfoot, *Transport Phenomena*, John Wiley & Sons, 2007.
3. Edwin N. Lightfoot, *Transport Phenomena and Living Systems: Biomedical Aspects of Momentum and Mass Transport*, Wiley, 2007.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 Biomechanics provides key information on the most effective and safest movement patterns, equipment, and relevant exercises to improve human movement.
- 2 Present the nine fundamentals of biomechanics and its need.
- 3 Explain the nine principles used for the application of biomechanics.
- 4 Describe the human anatomy.
- 5 Explain the need for biomechanics in muscle actions.
- 6 Understand the basics of the mechanics involved in the musculoskeletal system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Understand the basics and importance of biomechanics.
- 2 Present the nine fundamentals of biomechanics and its need.
- 3 Explain the nine principles used for the application of biomechanics.
- 4 Describe the human anatomy.
- 5 Explain the need for biomechanics in muscle actions.
- 6 Understand the basics of the mechanics involved in the musculoskeletal system.

Course Contents:**UNIT I INTRODUCTION**

Biomechanics –improving performance – applications – preventing and treating injury – qualitative and quantitative analysis – scholarly societies – computer searches – biomechanical knowledge versus information – kinds of sources – evaluating sources.

UNIT II KEY MECHANICAL CONCEPTS

Mechanics –basic units – nine fundamentals of biomechanics – principles and laws – nine principles for application of biomechanics.

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (whole-body) modelling – position and direction terminology – terminology for common movements – skeletal anatomy – major joints – major muscle groups – anthropometric data.

UNIT IV ANATOMICAL DESCRIPTION

Key anatomical concepts – directional terms – joint motions – muscle actions – active and passive tension of muscle – limitations of functional anatomical analysis – mechanical method of muscle action analysis – the need for biomechanics to understand muscle actions – sports medicine and rehabilitation applications.

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

Tissue loads – response of tissues to forces – biomechanics of the passive muscle-tendon unit – biomechanics of bone – biomechanics of ligaments – three mechanical characteristics of muscle– Stretch-Shortening Cycle (SSC) –force-time principle – neuromuscular control.

Suggested Readings:

1. Duane Knudson, *Fundamentals of Biomechanics*, Springer US, 2013.
2. C. Ross Ethier and Craig A. Simmons, *Introductory Biomechanics: From Cells to Organisms*, Cambridge University Press, 2008.

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- 1 To teach the basic concepts and fundamental aspects of industrial and domestic thermal systems' design.
- 2 To prepare the students for the positions of energy management in energy intensive industries.
- 3 Examine the relationship between energy systems and society.
- 4 Use optimization techniques for conservation of energy in chemical industries.
- 5 Understand economic balance in energy
- 6 Evaluate the production rate and analyze the cost from economic balance for energy consumption.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Plan to optimize energy using systems and procedures to meet energy demand.
- 2 Describe the movement of substances in the entire globe.
- 3 Examine the relationship between energy systems and society.
- 4 Use optimization techniques for conservation of energy in chemical industries.
- 5 Understand economic balance in energy
- 6 Evaluate the production rate and analyze the cost from economic balance for energy consumption.

Course Contents:**UNIT I PLANNING FOR ENERGY NEEDS**

Forecasting techniques; energy demand; magnitude and pattern; input and output analysis; energy modelling and optimal mix of energy sources.

UNIT II ENERGY AND ENVIRONMENT

Energy; various forms; energy storage; structural properties of environment; bio-geo-chemical cycles; society, environment population and technology.

UNIT III ENERGY AND SOCIETY

Energy and evolution; growth and change; patterns of consumption in developing and advanced countries; commercial generation of power requirements and benefit.

UNIT IV MANAGEMENT OF ENERGY CONSERVATION IN CHEMICAL INDUSTRIES

Chemical industries; classification; conservation in unit operations such as separation; cooling tower; drying; conservation applied to refineries, petrochemical, fertilisers, cement, pulp and paper, food and chlor-alkali industries; conservation using optimization techniques.

UNIT V ECONOMIC BALANCE IN ENERGY CONSUMPTION

Cost analysis; capacity; production rate; system rate; system cost analysis; corporate models; production analysis and production using fuel inventories; input-output analysis; economics; tariffs.

Suggested Readings:

1. Jerrold H Kertz, *Energy Conservation and Utilization*, Allyn and Bacur Inc., 1976.
2. Gemand M Gramlay, *Energy*, Macmillan Publishing Co., New York, 1975.
3. Krentz J. H., *Energy Conservation and Utilization*, Allyn and Bacur Inc., 1976.

4. Gramlay G. M., *Energy*, Macmillan Publishing Co., New York, 1975.
5. Rused C. K., *Elements of Energy Conservation*, McGraw-Hill Book Co., 1985.

18BTCEO02	FERTILIZER TECHNOLOGY	3H-3C
------------------	------------------------------	--------------

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- 1 To enable the students to learn the fertilizer manufacturing including new or modified fertilizer products and new techniques.
- 2 Develop the flow chart for manufacture of nitrogenous fertilizers.
- 3 Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
- 4 Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
- 5 Understand the fertilizers impacts and standards
- 6 Illustrate the quality and pollution standards permissible in fertilizer industry.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Illustrate chemical, organic fertilizers and nutrients.
- 2 Develop the flow chart for manufacture of nitrogenous fertilizers.
- 3 Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
- 4 Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
- 5 Understand the fertilizers impacts and standards
- 6 Illustrate the quality and pollution standards permissible in fertilizer industry.

Course Contents:

UNIT I INTRODUCTION

Chemical fertilizers and organic manures – types of chemical fertilizers. Secondary nutrients, micro nutrients.

UNIT II NITROGEN FERTILIZERS

Nitrogenous fertilizers – methods of production of ammonia and urea. Nitric acid, ammonium sulphate, ammonium nitrate, calcium ammonium nitrate, ammonium chloride – their methods of production, characteristics, storage and handling specifications.

UNIT III PHOSPHATIC FERTILIZERS

Raw materials, phosphate rock, sulphur pyrites – process for the production of sulphuric and phosphoric acids. Ground phosphaterock, bone meal. Single super phosphate, triple super phosphate – methods of production, characteristics and specifications.

UNIT IV POTASSIC FERTILIZERS

Potassium chloride, potassium sulphate, potassium schoenite – methods of production, specification, characteristics. Complex fertilizers, NPK fertilizers, mono ammonium phosphate, diammonium phosphate, nitro phosphate methods of production.

UNIT V FERTILIZERS IMPACTS AND STANDARDS

Fluid fertilizers. Controlled release of fertilizers. solid, liquid and gaseous pollution from ammonia urea and NPK fertilizer industries and standards laid down for them. Fertilizer production in India.

Suggested Readings:

1. Gopala Rao M. and Marshall Sittig, *Dryden's Outlines of Chemical Technology*, WEP East-West Press, New Delhi, 2010.
2. George T. Austin, *Shreve's Chemical Process Industries*, McGraw Hill Professional, 2012.
3. Vincent Sauchelli, *The Chemistry and Technology of Fertilizers*, Reinhold Pub. Corp., 1960.
4. Editorial Committee, *FAI Seminar on Fertilizer in India in the Seventies (Proceedings)*, The Fertilizer Association of India, New Delhi, 1973.
5. Editorial Committee, *Seminar on Recent Advances in Fertilizer Technology*, The Fertilizer Association of India, New Delhi, 1972.
6. Sauchelli V., *Manual on Fertilizer Manufacture*, Industry Publication Inc., New Jersey, 1963.
7. Chari, K.S., *CHEMTECH - II - Chapter on Fertilizers*, Chemical Engineering Education Development Centre, IIT Madras, 1977.
8. Menon M.G., *Fertilizer Industry - Introductory Survey*, Higginbothams, Madras, 1973.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To introduce students to the principles of wastewater and solid waste treatment and management.
- 2 To impart knowledge on fundamental concepts in water and wastewater treatment technologies, hazardous solid waste disposal and management issues related to sludge treatment and disposal.
- 3 Separate the contaminants from the effluent for treatability.
- 4 Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
- 5 Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
- 6 Apply wastewater reclamation technologies

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Examine the constituents of waste water and its effects.
- 2 Separate the contaminants from the effluent for treatability.
- 3 Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
- 4 Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
- 5 Apply wastewater reclamation technologies
- 6 Develop process flow diagram for water reuse and sludge disposal.

Course Contents:**UNIT I INTRODUCTION TO WASTE WATER ENGINEERING**

Waste water engineering –overview, inorganic non-metallic constituents and metallic constituents, physical and biological characteristics.

UNIT II UNIT OPERATIONS AND UNIT PROCESS

Screening, flow equalization, mixing, flocculation, grit removal, sedimentation, coagulation, precipitation, oxidation and neutralization.

UNIT III FUNDAMENTALS OF BIOLOGICAL TREATMENT

Introduction, microbial growth kinetics, types of biological process for wastewater treatment –aerobic and anaerobic oxidation, biological nitrification and de-nitrification, biological phosphorous removal, activated sludge process (with design considerations), trickling filters and lagoons.

UNIT IV WASTE WATER TREATMENT IN SPECIFIC INDUSTRIES

Dairy, sugar, pulp and paper, textile and pharmaceutical industries.

UNIT V WATER REUSE

Wastewater reclamation technologies and reuse, solid processing flow diagrams, sludge and scum pumping, grinding, screening, degritting, blending, anaerobic digestion, composting, conditioning, dewatering and incineration.

Suggested Readings:

1. Metcalf Eddy, *Wastewater Engineering - Treatment and Reuse*, Tata McGraw Hill, New Delhi, 2002.
2. Mark J. Hammer, *Water and Wastewater Technology*, Prentice Hall of India Pvt. Ltd., New Delhi, 2012.
3. James M. Montgomery, *Water Treatment Principles and Design*, A Wiley Interscience Publication, New York, 1985.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To provide an understanding of solid and hazardous waste engineering principles and management issues.
- 2 To provide students with the necessary background and knowledge pertaining to the engineering design of solid and hazardous waste facilities.
- 3 Deduce the source reduction, recycling and reuse techniques of solid waste.
- 4 Analyze the collection systems and method of transfer of solid waste.
- 5 Describe the processing techniques for solid and hazardous waste.
- 6 Select the suitable methods for disposal of solid and hazardous waste.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Outline the salient features of solid waste management and handling.
- 2 Deduce the source reduction, recycling and reuse techniques of solid waste.
- 3 Analyze the collection systems and method of transfer of solid waste.
- 4 Describe the processing techniques for solid and hazardous waste.
- 5 Select the suitable methods for disposal of solid and hazardous waste.
- 6 Interpret the legislation for management, handling and disposal of solid and hazardous waste.

Course Contents:**UNIT I CHARACTERISTICS AND SOURCE REDUCTION OF SOLID WASTE**

Definition, sources, and types of solid waste –composition, physical, chemical and biological properties of solid wastes –percapita generation rates –sampling and characterization of solid waste –source reduction of wastes – waste exchange –recyclingand reuses –salient features of Indian legislations on management and handling of municipal solid wastes.

UNIT II COLLECTION AND TRANSPORT OF SOLID WASTE

Estimation of solid waste and factors affecting generation rates – on-site handling, storage, and processing – collection services:municipal and commercial – industrial services –collection systems: Hauled-Container System (HCS) and Stationary ContainerSystem (SCS) –vehicle and labour assessment –assessment of collection route – transfer and transport –transfer stationlocation – means and methods of transfer.

UNIT III PROCESSING AND DISPOSAL OF SOLID WASTE

Objective of processing – material separation and processing technologies – biological, chemical and thermal conversiontechnologies – disposal in landfills: site selection methods and operations, leachate and gas generations and movement andcontrol of gas and leachate techniques –composting: aerobic and anaerobic – resource and energy recovery schemes.

UNIT IV HAZARDOUS WASTE CHARACTERIZATION AND MANAGEMENT

Definitions and identifications of hazardous waste – origin and characterization of hazardous solid waste – typical hazardouswastes in MSW – hazardous waste management: minimization, collection, storage, handling, transport, and disposal – design ofhazardous waste landfills – TCLP tests – national and international legislation for hazardous waste management – AtomicEnergy Regulatory Board – International Atomic Energy Agency – Department of Atomic Energy – Nuclear Power Corporation – nuclear power plants in India.

UNIT V NUCLEAR WASTE AND e-WASTE

Sources – classification – effects of nuclear waste – initial treatment of nuclear waste – vitrification, ion exchange, synroc – longterm management – above ground disposal, geological disposal, ocean dumping, transmutation, space disposal – reuse of waste – nuclear safety and waste regulation – case study on nuclear disaster – source of e-waste – material composition of e-waste – recycling and recovery – integrated approaches to e-waste recycling – socio economic factors – treatment option – disposal option – e-waste legislation.

Suggested Readings:

1. Tchobanoglous, G., *Integrated Solid Waste Management*, McGraw-Hill Publication, New York, 1993.
2. Ronald E. Hester and Roy M. Harrison, *Electronic Waste Management*, Royal Society of Chemistry, 2009.
3. Peavy, S.H., Rowe, R.D. and Tchobanoglous, G., *Environmental Engineering*, McGraw-Hill Inter Edition, 1985.
4. 2. Charles, A.W., *Hazardous Waste Management*, McGraw-Hill Publication, 2002.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To impart basic knowledge in bioprocess engineering.
- 2 To design the bioreactors for various operations.
- 3 To understand the principle and working of heat transfer equipments.
- 4 To extend the knowledge in principle of heat transfer inside a bioreactor.
- 5 To construct the equipments used in mass transfer operations.
- 6 To learn the equipments used in the separation process.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Summarise the basic concepts in biotechnology
- Summarise the basic concepts in bioprocess engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for bioprocess engineering.
- Construct the equipments used in mass transfer operations.
- Categorise the equipments used in separation process.

Course Contents:**UNIT I INTRODUCTION TO BIOPROCESS ENGINEERING**

Introduction – biotechnology and bioprocess engineering – biologists and engineers differ in their approach to research – how biologists and engineers work together – bioprocesses: regulatory constraints.

UNIT II REACTOR DESIGN

Design of airlift fermentor, bubble column reactor and continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS

Design of shell and tube heat exchanger, double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber.

UNIT V SEPARATION EQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotary drum drier and Swenson Walker crystallizer.

Suggested Readings:

1. James Edwin Bailey and David F. Ollis, *Biochemical Engineering Fundamentals*, McGraw-Hill Education (India), 2015.
2. Don W. Green and Robert H. Perry, *Perry's Chemical Engineers' Handbook*, McGraw-Hill, 2008.
3. Pauline. M. Doran, *Bioprocess Engineering Principles*, Academic Press, 2015.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To learn the scope and importance of food processing.
- 2 To impart basic knowledge in different food processing methods carried out in the food tech companies.
- 3 To extend the brief knowledge in food conservation operations.
- 4 To study the methods of food preservation by cooling.
- 5 To familiarise the students on the concepts of preservation methods for fruits.
- 6 To create a deeper understanding of preservation methods for vegetables.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Describe the scope and importance of food processing.
- 2 Outline the various processing methods for foods.
- 3 Extend the knowledge in food conservation operations.
- 4 Describe the methods of food preservation by cooling.
- 5 Summarise the preservation methods for fruits.
- 6 Demonstrate the preservation methods for vegetables.

Course Contents:**UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING**

Properties of food – physical, thermal, mechanical, sensory. Raw material preparation – cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS

Heating – blanching and pasteurization. Freezing – dehydration – canning – additives – fermentation – extrusion cooking – hydrostatic pressure cooking – dielectric heating – microwave processing and aseptic processing – infrared radiation processing – concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS

Size reduction – fibrous foods, dry foods and liquid theory and foods – equipments – membrane separation – filtration – equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING

Refrigeration, freezing – theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES

Pre-processing operations – preservation by reduction of water content: drying/dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar – heat preservation – food irradiation – combined preservation techniques.

Suggested Readings:

1. R. Paul Singh and Dennis R. Heldman, *Introduction to Food Engineering*, Academic Press, 2014.

2. P.Fellows, *Food Processing Technology Principles and Practice*, Woodhead Publishing Ltd., 2017.
3. Mircea EnachescuDauthy, *Food and Vegetable Processing*, FAO Agricultural Services Bulletin, 1995.
4. M.A.Rao, SyedS.H.Rizvi and Ashim K. Datta, *Engineering Properties of Foods*, CRC Press, 2014.
5. B. Sivasankar, *Food Processing and Preservation*, PHI Learning Pvt. Ltd., 2002.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To understand the available tools and databases for performing research in bioinformatics.
- 2 To expose students to sequence alignment tool in bioinformatics.
- 3 To construct the phylogenetic trees for evolution.
- 4 To get familiar with the 3D structure of protein and classification.
- 5 To acquire basic knowledge in protein secondary structure prediction.
- 6 To extend the brief knowledge in microarray data analysis.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Summarise the basic concepts and importance of bioinformatics in various sectors.
- 2 Demonstrate the sequence alignment tool in bioinformatics.
- 3 Construct the phylogenetic trees for evolution.
- 4 Analyse the three-dimensional protein structure and classification using various tools.
- 5 Illustrate the protein secondary structure prediction by comparative modelling.
- 6 Extend the knowledge in microarray technology and applications of bioinformatics in various sectors.

Course Contents:**UNIT I OVERVIEW OF BIOINFORMATICS**

The scope of bioinformatics; bioinformatics and the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA and proteins; determination of protein structure; gene and protein expression data; protein interaction data. Databases – contents, structure and annotation; file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA

Data retrieval with Entrez and DBGET/LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA and BLAST; sequence filters; iterative database searches and PSI-BLAST. Multiple-sequence alignment, gene and protein families: multiple-sequence alignment and family relationships; protein families and pattern databases; protein domain families.

UNIT III PHYLOGENETICS

Phylogenetics, cladistics and ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools and resources.

UNIT IV STRUCTURAL BIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure and function; obtaining, viewing and analysing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH and SCOP; introduction to protein structure prediction; structure prediction by comparative modelling; secondary structure prediction; advanced protein structure prediction and prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS

Microarray data, analysis methods; microarray data, tools and resources; sequence sampling and SAGE. Bioinformatics in pharmaceutical industry: informatics and drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading and installation; database management.

Suggested Readings:

1. Dan E Krane and Michael L Raymer, *Fundamental Concepts of Bioinformatics*, Pearson Education, 2004.
2. Andreas D Baxevanis and B.F. Franchis Ouellette, *Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins*, Wiley-Interscience, 2004.
3. David W. Mount, *Bioinformatics: Sequence and Genome Analysis*, Cold Spring Harbor Laboratory Press, 2004.
4. Jonathan Pevsner, *Bioinformatics and Functional Genomics*, Wiley-Blackwell, 2015.
5. Michael J Koernberg, *Microarray Data Analysis: Methods and Applications*, Humana Press, 2016.

Instruction Hours/Week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 hours

Course Objectives:

- 1 To impart the skills in the field of nanobiotechnology and its applications.
- 2 To acquire knowledge in the nanoparticles and its significance in various fields.
- 3 To extend the knowledge in types and application of nanoparticles in sensors.
- 4 To define the concepts of biomaterials through the molecular self assembly.
- 5 To equip students with clinical applications of nanodevices.
- 6 To describe a deeper understanding of the socio-economic issues in nanobiotechnology.
- 7 **Course Outcomes:**

Upon successful completion of the course, the students should be able to:

- 1 Develop skills in the field of nanobiotechnology and its applications.
- 2 Summarise the nanoparticles and its significance in various fields.
- 3 Extend the knowledge in types and application of nanoparticles in sensors.
- 4 Define the concepts of biomaterials through the molecular self assembly.
- 5 Outline the clinical applications of nanodevices.
- 6 Describe the socio-economic issues in nanobiotechnology.

Course Contents:**UNIT I INTRODUCTION**

Introduction, scope and overview, length scales, importance of nanoscale and technology, history of nanotechnology, future of nanotechnology: nanotechnology revolution, silicon based technology, benefits and challenges in molecular manufacturing: the molecular assembler concept, controversies and confusions, understanding advanced capabilities, nanotechnology in different fields: nanobiotechnology, materials, medicine, dental care.

UNIT II NANOPARTICLES

Introduction, types of nanoparticles, techniques to synthesise nanoparticles, characterization of nanoparticles, applications, toxic effects of nanomaterials, significance of nanoparticles nanofabrications– MEMS/NEMS, atomic force microscopy, self assembled monolayers/dip-pen nanolithography, soft lithography, PDMS molding, nanoparticles, nanowires and nanotubes.

UNIT III MEDICAL NANOTECHNOLOGY

Nanomedicine, nanobiosensor and nanofluidics. nanocrystals in biological detection, electrochemical DNA sensors and integrated nanoliter systems. Nano-biodevices and systems. Fabrication of novel biomaterials through molecular self assembly – small scale systems for in vivo drug delivery – future nanomachine.

UNIT IV NANOBIO TECHNOLOGY

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors –applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nano carbontubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY

Introduction, socioeconomic challenges, ethical issues in nanotechnology: with especial reference to nanomedicine, nanomedicine applied in nonmedical contexts, social issues relating to nanomedicine. Social and ethical issues, economic impacts, other issues, nanotechnology and future socio-economic challenges.

Suggested Readings:

1. Niemeyer, C.M. and Mirkin, C.A., *Nanobiotechnology: Concepts, Applications and Perspectives*, Wiley-VCH, 2005.
2. Goodsell, D.S., *Bionanotechnology*, John Wiley and Sons, Inc., 2004.
3. Shoseyov, O. and Levy, I., *Nanobiotechnology: Bioinspired Devices and Materials of the Future*, Humana Press, 2008.
4. Bhushan, B., *Springer Handbook of Nanotechnology*, Springer-Verlag Berlin Heidelberg, 2017.
5. Robert A. Freitas Jr., *Nanomedicine*, Landes Biosciences, 2006.
6. Kohler, M. and Fritzsche, W., *Nanotechnology: An Introduction to Nanostructuring Techniques*, Wiley-VCH, 2008.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To explain the milling, extraction and manufacture of tremendous products from cereals, pulses and oil seeds.
- 2 To summarise the production and processing methods of fruits and vegetables.
- 3 To discuss the chemical composition, processing, production, spoilage and quality of milk and milk products.
- 4 To outline the overall processes involved in the production of meat, poultry and fish products.
- 5 To review the production and processing methods of plantation and spice products.
- 6 Illustrate the techniques involved in the processing of dairy products.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Discuss the various processing technologies involved in cereal, pulses and oilseed technology.
- 2 Demonstrate the major operations applied in fruits and vegetable processing.
- 3 Illustrate the techniques involved in the processing of dairy products.
- 4 Infer the production of different types of milk.
- 5 List the overall processing of meat, poultry and fish processing.
- 6 Outline the processing of spices and plantation products.

Course Contents:**UNIT I CEREAL, PULSES AND OIL SEEDS TECHNOLOGY**

Rice milling, pulse milling, wheat milling – oil extraction – methods of manufacture of bread – different processes of manufacture – types of breads – buns, biscuits, cakes and cookies – pasta products – tortilla – method of manufacture.

UNIT II FRUITS AND VEGETABLE PROCESSING

Production of fruits and vegetables in India, cause for heavy losses, preservation treatments – basics of canning, minimal processing and hurdle technology as applied to vegetable and fruit processing, processing of fruit juices, dehydration, aseptic processing.

UNIT III DAIRY PROCESSING

Basic dairy terminology, composition, general tests at reception, dairy processing – method of manufacture of standardized, toned and double toned milk, milk powder – equipments – pasteurizers, homogenizers and pumps – method of manufacture of dairy products – ice-cream, cheese, paneer, yoghurt – pasteurization and microorganisms involved in spoilage of milk.

UNIT IV MEAT, POULTRY AND FISH PROCESSING

Meat composition from different sources, definitions and measurements, carcass processing, meat products, processing of poultry products, fish and other marine products processing.

UNIT V PLANTATION PRODUCT TECHNOLOGY

Processing of tea, coffee and cocoa – outline of the methods of manufacture of green tea, black tea, instant tea, instant coffee, cocoa and chocolate. Outline of the methods of processing of pepper, cardamom, ginger, vanilla and turmeric.

Suggested Readings:

1. Srivastava R.P. and Kumar S., *Fruit and Vegetable Preservation: Principles and Practices*, International Book Distributing Co., Lucknow, 2010.
2. Chakraverty A., Mujumdar A.S., Raghavan G.S.V. and Ramaswamy H.S., *Postharvest Technology: Cereals, Fruits, Vegetables, Tea, and Spices*, Marcel Dekker Press, USA, 2003.
3. Sukumar De, *Outlines of Dairy Technology*, Oxford University Press, New Delhi, 2016.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To explain the basic concepts of food and nutrition.
- 2 To define the overall classification, function, and source of carbohydrates, lipids and proteins.
- 3 To discuss the overall aspects of vitamins.
- 4 To outline the role of health and nutritional importance of micro and macro minerals.
- 5 To summarise the recent trends in nutrition.
- 6 List the various attributes of fat and water soluble vitamins.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Discuss the basics in the area of nutritional assessment in health and disease.
- 2 Categorise the recommended dietary allowances for different age groups.
- 3 Express the classifications, functions and sources of carbohydrates, lipids and proteins.
- 4 List the various attributes of fat and water soluble vitamins.
- 5 Report the role, bioavailability, sources and deficiency diseases of macro and micro minerals.
- 6 Recognise the diets and concepts of foods suggested for nutritional, chronic and acute disorders.

Course Contents:**UNIT I HUMAN NUTRITION**

Historical perspective of nutrient requirements – assessment of nutritional status – recommended dietary allowances of macronutrients for all age groups – assessment of protein quality – malnutrition and related disorders– balanced diet. Factors influencing dietary intake: Food habits, food fads and fallacies, their influence on health and wellbeing.

UNIT II BIOMOLECULES

Carbohydrates –definition, classification, functions, sources of carbohydrates, deficiency. Lipids – definition, classification, function, sources, refined and hydrogenated fats process. Proteins – definitions, classification, function, amino acids, sources of proteins.

UNIT III VITAMINS

Physiological role, bio-availability, requirements, sources and deficiency of fat soluble vitamins: Vitamin A, D, E and K. Water soluble vitamins: Vitamin C, thiamine, riboflavin, niacin, pantothenic acid, biotin, folic acid, vitamin B12, vitamin B6.

UNIT IV MINERALS

Physiological role, bio-availability, requirements, sources and deficiency of macro minerals: Calcium, phosphorus magnesium, sodium, potassium chloride. Micro minerals: Iron, zinc, copper, selenium, chromium, iodine, manganese, molybdenum and fluoride.

UNIT V RECENT TRENDS IN NUTRITION

Principles of dietary management in gout, rheumatism, AIDS/HIV –cancer – risk factors, symptoms, dietary management, role of food in prevention of cancer. Role of functional foods, health foods and novel foods, organically grown foods, recent concepts in human nutrition like nutrigenomics, nutraceuticals, etc.

Suggested Readings:

1. Gordon M. Wardlaw, *Perspectives in Nutrition*, WCB McGraw-Hill Publishers, Boston, 2013.
2. Shubhangini A. Joshi, *Nutrition and Dietetics*, Tata McGraw- Hill Publishing Company Ltd., New Delhi, 2016.
3. Srilakshmi. B., *Nutrition Science*, New Age International Pvt. Ltd., Publishers, 2017.
4. Ronald Ross Watson, *Functional Foods and Nutraceuticals in Cancer Prevention*, Wiley-Blackwell, 2003.
5. Sunetra Roday, *Food Science and Nutrition*, Oxford Higher Education/Oxford University Press, 2018.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To outline the current status of snack food industry.
- 2 To describe the production, processing and marketing trends of potato and tortilla chips.
- 3 To outline the overall processing of popcorn.
- 4 To explain the production and processing of fruits involved in snack food preparation.
- 5 To summarise the sensory analysis methods and packaging techniques of snack foods.
- 6 Demonstrate the various unit operations involved in the production of potato and tortilla chips.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 Review the overall aspects of snack food industry.
- 2 Develop ready to eat foods from potato and maize flour.
- 3 Demonstrate the various unit operations involved in the production of potato and tortilla chips.
- 4 Illustrate the overall aspects of popcorn production.
- 5 List the production, processing and manufacturing of fruit based snacks.
- 6 Recognise the sensory analysis and packaging methods of snack foods.

Course Contents:**UNIT I SNACK FOOD INDUSTRY**

Introduction – history – past innovations – outline of snack food industry – nutrition – total quality management of technology – domestic snack food market – global market – snack food association future considerations.

UNIT II POTATO AND TORTILLA CHIPS PROCESSING

Potato production – potato snack ingredients – potato analysis and composition – potato chip manufacturing process – unit operations – other value added products from potato.

Tortilla chips –raw materials – processing steps – equipment involved – reconstitution of dry maize flour – unit operations.

UNIT III POPCORN PROCESSING

Introduction –raw popcorn selection and preparation – popping methods – home preparation of popcorn – equipments – industrial manufacturing process – flavourings and applicators – popcorn packaging – relative nutrition – marketing.

UNIT IV FRUIT BASED SNACKS

Introduction – production and processing of fruit crops – fruit purees – fruit powders – canned fruit snacks – alcoholic preservation of fruit snacks – fruit candies – fruit bars – exotic fruits.

UNIT V SENSORY EVALUATION AND PACKAGING

Introduction – analytical methods – sensory methods – sensory aspect of processing – quality properties of snack foods and packaging materials – automated bag – pouch packaging – cartoning case packing – current issues in snack foods packaging.

Suggested Readings:

1. Lusas, E. W. and Rooney, L. W., *Snack Foods Processing*, CRC Press, 2001.

2. Panda, H., *The Complete Technology Book on Snack Foods*, National Institute of Industrial Research, Delhi, 2013.
3. Sergio O. Serna-Saldivar, *Industrial Manufacture of Snack Foods*, Kennedys Books Ltd., 2008.

Instruction Hours/Week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 hours****Course Objectives:**

- 1 To categorise the types of agricultural wastes.
- 2 To outline the production and utilization of biomass.
- 3 To explain the various parameters considered to be important in the designing of biogas units.
- 4 To review the various methods employed in the production of alcohol from the by-products of agricultural wastes.
- 5 To summarise the overall aspects involved in the production of paperboards and particleboards from agricultural wastes.
- 6 Assess the various parameters considered to be important in the designing of biogas units.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- 1 List and group the types of agricultural wastes.
- 2 Develop a number of value added products from agriculture wastes.
- 3 Discuss the techniques and production involved in the utilization of biomass.
- 4 Assess the various parameters considered to be important in the designing of biogas units.
- 5 Illustrate the various methods employed in the production of alcohol from the by-products of agricultural wastes.
- 6 Choose the appropriate materials to produce paperboards and particle boards from agricultural wastes.

Course Contents:**UNIT I TYPES OF AGRICULTURAL WASTES**

Introduction and background, agricultural waste, crop waste, agricultural residues (annual crops), technical terms, rice by-products utilization-rice bran and germ, rice bran oil, economic products from agriculture waste/by-products.

UNIT II BIOMASS PRODUCTION AND UTILIZATION

Biomass gasifier, technology used for the utilization of agricultural wastes: biomass gasifier, Nimbkar Agricultural Research Institute (NARI) gasifier, rice-husk based gasifier, heat and steam from sugarcane leaf and bagasse.

UNIT III BIOGAS DESIGN AND PRODUCTION

Biogas: Definition, composition, history of biogas, production of biogas, types of biogas plant (floating drum type and fixed dome type) and their components (inlet, outlet, stirrer, slanting pipe, digester, gas holder and gas outlet pipe), selection and design of biogas plant.

UNIT IV PRODUCTION OF ALCOHOL FROM WASTE MATERIALS

Production of alcohol from waste materials: Introduction, production methods, cellulolysis (biological approach): Pretreatment, cellulolytic processes (chemical and enzymatic hydrolysis), microbial fermentation, gasification process (thermochemical approach).

UNIT V PRODUCTION OF PAPERBOARDS AND PARTICLEBOARDS FROM AGRICULTURAL WASTE

Production and testing of paperboards and particleboards from agricultural waste: Introduction, history, terminology and classification, raw materials, production steps- pulping, classifications of pulp, bleaching, plies, coating, grades.

Suggested Readings:

1. K M Sahay and K K Singh, *Unit Operations of Agricultural Processing*, Vikas Publishing House Pvt. Ltd., Noida, 2013.
2. Beggs C., *Energy Management and Conservation*, Butterworth-Heinemann, 2009.
3. Chaturvedi P., *Energy Management: Challenges for the Next Millennium*, Concept Publishing Co., 2001.
4. Fardo S W, Patrick D R, Richardson R E and Fardo B W, *Energy Conservation Guidebook*, The Fairmont Press, 2014.
5. Wulfinghoff D R, *Energy Efficiency Manual*, Energy Institute Press, 2000.

Course Objectives

- 1 To impart the knowledge on constructional details and principle of operation of various automobile components.
- 2 To learn the function and working of various components in transmission and drive lines.
- 3 To study the concept and working of steering and suspension systems in an automobile.
- 4 To give the knowledge on wheels, tyres and brakes of automobiles.
- 5 To provide the information on current and future trends in automobiles.
- 6 To study the ignition of engine system

Course Outcomes

Upon successful completion of the course, the students should be able to

- 1 Demonstrate the operating principles and constructional details of various automobile components.
- 2 Explain the function and working of components in transmission and drive lines.
- 3 Identify and explain the types of steering system and suspension system.
- 4 Classify and describe the types of wheels, tyres and brakes of automobiles.
- 5 Discuss the current and future trends in the automobiles.
- 6 Gather the knowledge of the ignition of engine system

UNIT I ENGINE AND AUXILIARY SYSTEMS

Classification of engines – construction and working of four-stroke spark ignition (SI) engine and compression ignition (CI) engine – construction and working of two-stroke SI and CI engine – firing order – carburettor – fuel injection systems – battery – dynamo – alternator – starting motor – lighting system – ignition system.

UNIT II TRANSMISSION SYSTEMS

Requirements of transmission system – flywheel – clutch – types of clutch – construction of single and multi-plate clutches – need, types and construction of transmission gear box – universal joint – propeller shaft – need, types and construction of differential – four wheel drive.

UNIT III STEERING AND SUSPENSION SYSTEMS

Principle of steering – steering linkages – types of steering gear box – power steering – suspension systems – need and types – independent suspension – coil spring, leaf spring, torsion bar and air suspension – shock absorbers.

UNIT IV WHEELS AND BRAKES

Wheels and tyres – construction – types and specifications – tyre wear and causes – brakes – need – braking distance – types – mechanical, hydraulic and pneumatic brakes – power brake – parking brake – redundant braking system.

UNIT V CURRENT AND FUTURE TRENDS

Anti-lock Braking System (ABS) – brake assist – Electronic Brakeforce Distribution (EBD) – airbags – automatic high-beam control – backup cameras – defogger – electric vehicles – hybrid vehicles – autonomous vehicles – vehicle-to-vehicle communication – vehicle tracking – alternative fuels.

Suggested Readings:

1. Kirpal Singh, Automobile Engineering Volume 1, Standard Publishers, New Delhi, 2018.
2. Sethi H M, Automobile Technology, Tata McGraw-Hill, New Delhi, 2003.
3. William H Crouse and Donald L Anglin, Automotive Mechanics, Tata McGraw-Hill, New Delhi, 2006.
4. Srinivasan S, Automotive Mechanics, Tata McGraw-Hill, New Delhi, 2003.
5. Ganesan V, Internal Combustion Engines, McGraw-Hill Education, New Delhi, 2012.

Course Objectives

- To impart the technical knowledge on construction and working of power train and drive train of two and three wheeler vehicles.
- To familiarize with the maintenance procedures of engine and subsystems of two and three wheelers.
- To study the types of transmission, steering and suspension systems.
- To study the types of wheels, tyres and brakes for two and three wheelers.
- To study the cranking system in IC engines
- To study anti braking system of engines

Course Outcomes

Upon successful completion of the course, the students should be able to

- 1 Construct the frames of two and three wheelers of different layouts.
- 2 Demonstrate the constructional details and principle of operation of various engine components.
- 3 Identify and explain the types of transmission, steering and suspension systems.
- 4 Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- 5 Explain the servicing of two and three wheelers.
- 6 Get knowledge of practical things in cranking system

UNIT I INTRODUCTION

History of two and three wheelers – classification and layouts of two wheelers – classification and layouts of three wheelers – main frame for two wheelers and types – main frame for three wheelers and types.

UNIT II INTERNAL COMBUSTION ENGINES

Classification of engines – selection criteria of engine for two and three wheelers – design considerations for two and three wheeler engines – construction and working of two-stroke and four-stroke engines – fuel feed system – lubricating system – cooling system – scavenging system – cranking system – kick start and auto-start mechanisms.

UNIT III TRANSMISSION, STEERING AND SUSPENSION SYSTEMS

Clutch – single plate, multiple plate and centrifugal clutches – primary reduction – gear box – gear shifting mechanisms – automatic transmission – final drive and differential for three wheelers – steering geometry – steering column construction – steering system for three wheelers – front and rear suspension systems – spring and shock absorber assembly.

UNIT IV WHEELS, TYRES AND BRAKES

Spoked wheels, pressed steel wheels and alloy wheel – tyre construction – tyre with tube and tubeless tyre – theory of brake action – drum and disc brakes – brake links layout for front and rear wheels – mechanical and hydraulic brake control systems – anti-lock braking system.

UNIT V TWO AND THREE WHEELERS CASE STUDY

Case study of mopeds, scooters, motor cycles, sports bikes, auto rickshaws, pickup vans, delivery vans and trailers – servicing – factors affecting fuel economy and emission.

Suggested Readings

1. Dhruv U Panchal, Two and Three Wheeler Technology, PHI Learning, New Delhi, 2015.
2. Ramalingam K K, Two Wheelers and Three Wheelers: Theory, Operation and Maintenance, Scitech Publications, Chennai, 2017.
3. Irving P E, Motorcycle Engineering, Veloce Enterprises, USA, 2017.
4. Dennis Bailey and Keith Gates, Bike Repair and Maintenance for Dummies, John Wiley & Sons, USA, 2009.

Course Objectives

- 1 To understand the need for vehicle maintenance and its importance.
- 2 To familiarize the maintenance procedure for various components of an automobile.
- 3 To study the servicing of transmission and driveline components.
- 4 To study the procedure for steering, suspension, wheel and brake maintenance.
- 5 To study the fault diagnosis in the electrical and air conditioner systems.
- 6 To study the various services of brakings

Course Outcomes

Upon successful completion of the course, the students should be able to

- 1 Describe and differentiate the types of maintenance.
- 2 List the procedure for dismantling, servicing and assembling of engine components.
- 3 Demonstrate the servicing of transmission and driveline components.
- 4 Discuss the procedure for steering, suspension, wheel and brake maintenance.
- 5 Explain the fault diagnosis in the electrical and air conditioner systems.
- 6 To acquire the knowledge of tune-up of vehicle system

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Need for maintenance – preventive and breakdown maintenance – requirements of maintenance – preparation of check lists – inspection schedule – maintenance of records, log sheets and other forms – safety precautions in maintenance – workshop layout, tools and equipment.

UNIT II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE

General engine service – dismantling of engine components – engine repair – service of basic engine parts, cooling and lubricating system, fuel system, intake and exhaust system – engine tune-up.

UNIT III TRANSMISSION AND DRIVELINE MAINTENANCE

General checks, adjustment and service of clutch – dismantling, identifying, checking and reassembling transmission, transaxle – road testing – removing and replacing propeller shaft – servicing of cross and yoke joint, and constant velocity joint – rear axle service points – removing axle shaft and bearings – servicing differential assemblies – fault diagnosis.

UNIT IV STEERING, SUSPENSION, WHEEL AND BRAKE MAINTENANCE

Inspection, maintenance and service of steering linkage, steering column, rack and pinion steering, recirculating ball steering, worm type steering, power steering system – inspection, maintenance and service of MacPherson strut, coil spring, leaf spring, shock absorbers – wheel alignment and balance – removing and fitting of tyres – tyre wear and tyre rotation – inspection, maintenance and service of hydraulic brake, drum brake, disc brake, parking brake – bleeding of brakes.

UNIT V ELECTRICAL AND AIR CONDITIONER MAINTENANCE

Maintenance of batteries, starting system, charging system and body electrical – fault diagnosis using scan tools – maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator – replacement of hoses – leak detection – air conditioner charging – fault diagnosis – vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

Suggested Readings

1. Tim Gilles, Automotive Service: Inspection, Maintenance, Repair, Cengage Learning, USA, 2015.
2. Philip Knott and Adam Roylance, An Introductory Guide to Motor Vehicle Maintenance: Light Vehicles, EMS Publishing, UK, 2010.
3. James D Halderman and Curt Ward, Advanced Engine Performance Diagnosis, Pearson, USA, 2016.
4. Ed May and Les Simpson, Automotive Mechanics Volume 1, McGraw-Hill Australia, 2006.
5. James E Duffy, Modern Automotive Technology, Goodheart-Willcox, USA, 2017.
6. Service manuals of various OEMs.

Course Objectives

- 1 To impart the knowledge on trends in vehicle power plants.
- 2 To learn about the various advanced driver assistance systems.
- 3 To study the working of advanced suspension and braking systems in an automobile.
- 4 To give the information about motor vehicle emission and noise pollution control.
- 5 To provide the knowledge of vehicle telematics.
- 6 To study about pedestrian detections

Course Outcomes

Upon successful completion of the course, the students should be able to

- 1 Distinguish and describe the various modern vehicle power plant systems.
- 2 List and explain the various driver assistant mechanisms.
- 3 Identify and explain the working of advanced suspension and braking systems.
- 4 Apply the knowledge of motor vehicle emission and noise pollution control.
- 5 Describe the vehicle telematics and its applications.
- 6 Getting knowledge of safety of vehicles securities

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles – stratified charged / lean burn engines – hydrogen engines – battery vehicles – electric propulsion with cables – magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Adaptive cruise control – intelligent speed adaptation – lane departure warning systems – traction control systems – driver drowsiness detection system – collision avoidance systems – hill descent control – anti spin regulation – parking assistance systems – night-vision systems – pedestrian detection.

UNIT III SUSPENSION, BRAKES AND SAFETY

Interconnected air and liquid suspensions – hydrostatic suspension system – hydraulic gas suspension – closed loop suspension – indirect floating calliper disc brake – self energising disc brake – anti-skid braking system – retarders – regenerative braking – auto emergency braking – crumple zone – safety cage – airbags – seat belts – head rests.

UNIT IV EMISSION AND NOISE POLLUTION CONTROL

Engine emissions – types of catalytic converters – open loop and closed loop operation to the oxidizing catalytic converter – evaporative emission – internal and external noise – identification of noise sources – noise control techniques – adaptive noise control.

UNIT V VEHICLE TELEMATICS

Building blocks of vehicle telematics system – Global Positioning System (GPS) and Geographic Information System (GIS) for vehicle tracking – automotive navigation system – road recognition system – wireless vehicle safety communications – Usage Based Insurance (UBI).

Suggested Readings

1. LjuboVlacic, Michael Parent and Fumio Harashima, Intelligent Vehicle Technologies, Butterworth-Heinemann, UK, 2001.

2. Ronald K Jurgen, Navigation and Intelligent Transportation Systems, SAE International, USA, 1998.
3. Heinz Heisler, Advanced Vehicle Technology, Butterworth-Heinemann, UK, 2002.
4. James E Duffy, Modern Automotive Technology, Goodheart-Willcox, USA, 2017.
5. William B Ribbens, Understanding Automotive Electronics, Butterworth-Heinemann, UK, 2017.
6. Bosch Automotive Handbook, Robert Bosch, Germany, 2018.

Course Objectives

- 1 To impart the knowledge on personnel management, selection process, training methods and motor vehicle act.
- 2 To plan the vehicle routes, scheduling of vehicles and fare structure.
- 3 To study the motor vehicle act in terms of registration and describe the various vehicles and conduct the test of competence to drive.
- 4 To study the buildup of fare structure and analyze the methods of fare collection.
- 5 Analyze the vehicle parts, supply management and data processing.
- 6 To design the vehicle maintenance systems.

Course Outcomes

Upon successful completion of the course, the students should be able to

- 1 Apply the knowledge of personnel management and analyze the selection process and training methods.
- 2 Apply the motor vehicle act in terms of registration and describe the various vehicles and conduct the test of competence to drive.
- 3 Construct a fare structure and analyze the methods of fare collection.
- 4 Analyze the vehicle parts, supply management and data processing.
- 5 Demonstrate an electronically controlled vehicle maintenance system and analyze the work scheduling.
- 6 Gaining knowledge in test of competence

UNIT I INTRODUCTION

Personnel management – objectives and functions of personnel management – psychology, sociology and their relevance to an organization – selection process: job description, employment tests, interviewing, introduction to training objectives, methods of training, training procedure and psychological tests.

UNIT II MOTOR VEHICLE ACT

Schedules and sections of the motor vehicle act – traffic signs, fitness certificate, registration requirements, permit, insurance and constructional regulations – description of vehicle: goods carrier, tankers, tippers, delivery vans, recovery vans, power wagons and fire fighting vehicles – spread over, running time, test of competence to drive.

UNIT III SCHEDULING AND FARE STRUCTURE

Route planning – scheduling of transport vehicles – preparation of timetable – preparation of vehicle and crew schedule – principal features of operating costs for transport vehicles – fare structure and method of drawing up of a fare table – methods of fare collection.

UNIT IV VEHICLE PARTS, SUPPLY MANAGEMENT AND BUDGET

Cost of inventory – balancing inventory cost against downtime – parts control – bin tag systems – time management – time record keeping – budget activity and capital expenditures – classification of vehicle expenses – fleet management and data processing – data processing systems – computer controlling of fleet activity.

UNIT V MAINTENANCE

Scheduled and unscheduled maintenance – preventive maintenance – evaluation of Preventive Maintenance Inspection (PMI) programme – work scheduling – overtime – breakdown analysis – control of repair backlogs – cost of options – electronically controlled vehicle maintenance system.

Suggested Readings

1. Robert P Currie, Michelle B Currie and George M Keen, Fleet Management, Wandering Brothers Publishing, USA, 2006.
2. John Dolce, Fleet Management, McGraw-Hill, 1984.
3. SCC Editorial, Motor Vehicles Act, 1988, Eastern Book Company, New Delhi, 2019.
4. Rex W Faulks, Bus and Coach Operation, Butterworth-Heinemann, UK, 1987.
5. John E Dolce, Analytical Fleet Maintenance Management, SAE International, USA, 2009.

Course Objectives

The goal of this course is for students

- 1 To understand the basics of Robotics, Kinematics.
- 2 To understand the basics of Inverse Kinematics.
- 3 To explore various kinematic motion planning solutions for various Robotic configurations.
- 4 To study the trajectory planning for robot.
- 5 To understand the task level programming
- 6 To explore various applications of Robots in Medicine

Course Outcome

Upon completion of this course, students will be able to:

- 1 Explain various kinds robotics techniques, vision, planning and applications.
- 2 Outline the basic concept of robotics
- 3 Identify and discuss the Robot Vision
- 4 Describe about manipulators and kinematics.
- 5 Demonstrate Task level programming
- 6 Discuss the applications of robotic systems in medical field.

UNIT I INTRODUCTION

Introduction Automation and Robots, Classification, Application, Specification, Notations, Direct Kinematics Dot and cross products, Coordinate frames, Rotations, Homogeneous coordinates Link coordination arm equation – Five-axis robot, Four-axis robot, Six-axis robot

UNIT II KINEMATICS

Inverse Kinematics – General properties of solutions tool configuration, Five axis robots, Three-Four axis, Six axis Robot, Workspace analysis and trajectory planning work envelope and examples, workspace fixtures, Pick and place operations, Continuous path motion, Interpolated motion, Straight-line motion.

UNIT III ROBOT VISION

Robot Vision Image representation, Template matching, Polyhedral objects, Shape analysis, Segmentation – Thresholding, region labeling, Shrink operators, Swell operators, Euler numbers, Perspective transformation, Structured illumination, Camera calibration.

UNIT IV PLANNING

Task Planning Task level programming, Uncertainty, Configuration, Space, Gross motion, Planning, Grasp Planning, Fine-motion planning, Simulation of planar motion, Source and Goal scenes, Task Planner simulation.

UNIT V APPLICATIONS

Applications in Biomedical Engineering – Bio Engineering Biologically Inspired Robots, Neural Engineering, Application in Rehabilitation – Interactive Therapy, Bionic Arm, Clinical and Surgical – Gynecology, Orthopedics, Neurosurgery

Suggested Readings

1. Robert Schilling Fundamentals of Robotics-Analysis and control Prentice Hall 2003
2. J.J.Craig Introduction to Robotics Pearson Education 2005
3. Staugaard, Andrew C Robotics and Artificial Intelligence: An Introduction to Applied Machine Learning Prentice Hall Of India 1987
4. Grover, Wiess, Nagel, Oderey Industrial Robotics: Technology, Programming and Applications McGraw Hill 1986.
5. Wolfram Stadler Analytical Robotics and Mechatronics McGraw Hill, 1995
6. Saeed B. Niku, Introduction to Robotics: Analysis, Systems, Applications Prentice Hall 2001
7. K. S. Fu, R. C. Gonzales and C. S. G. Lee Robotics McGraw Hill 2008

Course Objectives

The goal of this course is for students:

- 1 To introduce the relevance of this course to the existing technology through demonstrations, case studies and applications with a futuristic vision along with socio-economic impact and issues
- 2 To understand virtual reality, augmented reality and using them to build Biomedical engineering applications
- 3 To study the importance of virtual reality is getting optimized results
- 4 To study the importance of VR reality and safety issues
- 5 To study about the devices for trackers and interfaces
- 6 To know the intricacies of these platform to develop PDA applications with better optimality.

Course Outcomes

Upon completion of this course, students will be able to:

- 1 Applications of virtual reality are military and robotics.
- 2 Importance of virtual reality is getting optimized results
- 3 To know about importance of VR reality and safety issues
- 4 To know the application in games, movies etc
- 5 Gather knowledge practically about the devices for trackers and interfaces
- 6 Acquire practical knowledge about the VR on the web and mobile

UNIT I INTRODUCTION

The three I's of virtual reality-commercial VR technology and the five classic components of a VR system - Input Devices: (Trackers, Navigation, and Gesture Interfaces): Three-dimensional position trackers, navigation and manipulation-interfaces and gesture interfaces-Output Devices: Graphics displays-sound displays & haptic feedback..

UNIT II VR DEVELOPMENT PROCESS

Geometric modeling - kinematics modeling- physical modeling - behaviour modeling - model Management.

UNIT III CONTENT CREATION CONSIDERATIONS FOR VR

Methodology and terminology-user performance studies-VR health and safety issues-Usability of virtual reality system- cyber sickness -side effects of exposures to virtual reality environment

UNIT IV VR ON THE WEB & VR ON THE MOBILE

JS-pros and cons-building blocks (WebVR, WebGL, Three.js, device orientation events)-frameworks (A-frame, React VR)-Google VR for Android-Scripts, mobile device configuration, building to android-cameras and interaction-teleporting-spatial audio-Assessing human parameters-device development and drivers-Design Haptics

UNIT V APPLICATIONS

Medical applications-military applications-robotics applications- Advanced Real time Tracking other applications- games, movies, simulations, therapy.

Suggested Readings

5. Robert Scoble& Shel Israel The Fourth Transformation: How Augmented Reality & Artificial Intelligence Will Change Everything, Patrick Brewster Press 2016
6. Tony Parisi, Learning Virtual Reality: Developing Immersive Experiences and Applications for Desktop, Web, and Mobile O'Reilly Media; 1 edition 2015
7. Tony Parisi Programming 3D Applications with HTML5 and WebGL: 3D Animation and Visualization for Web Pages O'Reilly Media; 1 edition 2014
8. Jos Dirksen Learning Three.js: The JavaScript 3D Library for WebGL Packt Publishing - ebooks Account; 2nd Revised ed. Edition 2015

Course Objectives

The goal of this course is for students:

- 1 To discuss the overview of artificial organs & transplants
- 2 To extend the principles of implant design with a case study
- 3 To explain the implant design parameters and solution in use
- 4 To simplify about various blood interfacing implants
- 5 To know the biocompatibility of artificial organs
- 6 To learn about the implantable medical devices

Course Outcomes

Upon completion of this course, students will be able to:

- 1 Explain the implant design parameters and solution in use
- 2 Analyze about various blood interfacing implants
- 3 Evaluate response of biomaterials in living system
- 4 Perceive knowledge about artificial organs & transplants
- 5 Demonstrate different types of soft tissue replacement and hard tissue placement
- 6 Assess biocompatibility of artificial organs

UNIT I ARTIFICIAL ORGANS & TRANSPLANTS

ARTIFICIAL ORGANS:-Introduction, outlook for organ replacements, design consideration, evaluation process. TRANSPLANTS:-Overview, Immunological considerations, Blood transfusions, individual organs – kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN

Principles of implant design, Clinical problems requiring implants for solution, Permanent versus absorbable devices, the missing organ and its replacement, Tissue engineering, scaffolds, cells and regulators criteria for materials selection, Case study of organ regeneration.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION

Biocompatibility, local and systemic effects of implants, Design specifications for tissue bonding and modulus matching, Degradation of devices, natural and synthetic polymers, corrosion, wear and tear, Implants for Bone, Devices for nerve regeneration.

UNIT IV BLOOD INTERFACING IMPLANTS

Neural and neuromuscular implants, heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, artificial kidney- dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

Gastrointestinal system, Dentistry, Maxillofacial and craniofacial replacement, Soft tissue repair, replacement and augmentation, recent advancement and future directions.

CURRICULUM & SYLLABI (2018 -2019)

KARPAGAM ACADEMY OF HIGHER EDUCATION
(Established Under Section 3 of UGC Act 1956) COIMBATORE
641 021 INDIA

Course Objectives

- The goal of this course is for students to gain proficiency in calculus computations. In calculus, we use three main tools for analyzing and describing the behavior of functions: limits, derivatives and integrals.
- The goal of this course is for students to gain proficiency in calculus computations. In calculus, we use three main tools for analyzing and describing the behavior of functions: limits, derivatives and vector calculus.
- To develop the knowledge in integral calculus.
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage.
- To make the student acquire sound knowledge of techniques in solving ordinary differential equations that model engineering problems.
- To make the student to solve various Engineering problems.

Course Outcomes

1. To understand of the ideas of limits and continuity and ability to calculate with them and apply them.
2. To apply various techniques in solving Partial Differential Equations
3. To Fluency in integration using standard methods, including the ability to find an appropriate method for a given integral.
4. To apply integration to compute multiple integrals, area, volume, integrals in polar and Cartesian coordinates, in addition change of order and vector integration.
5. To understand the ideas of differential equations and facility in solving simple standard examples.
6. To improve facilities in algebraic manipulation.

UNIT I - DIFFERENTIAL CALCULUS

Representation of functions, New functions from old functions, Limit of a function, Limits at infinity, Continuity, Derivatives, Differentiation rules, Polar coordinate system, Differentiation in polar coordinates, Maxima and Minima of functions of one variable.

UNIT II - FUNCTIONS OF SEVERAL VARIABLES

Partial derivatives, Homogeneous functions and Euler's theorem, Total derivative, Differentiation of implicit functions, Change of variables, Jacobians, Partial differentiation of implicit functions, Taylor's series for functions of two variables, Errors and approximations, Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers.

UNIT III - INTEGRAL CALCULUS

Definite and Indefinite integrals, Substitution rule, Techniques of Integration, Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions, Improper integrals.

UNIT IV - MULTIPLE INTEGRALS

Double integrals, Change of order of integration, Double integrals in polar coordinates, Area enclosed by plane curves, Triple integrals, Volume of solids, Change of variables in double and triple integrals.

UNIT V - DIFFERENTIAL EQUATIONS

Method of variation of parameters, Method of undetermined coefficients, Homogenous equation of Euler's and Legendre's type, System of simultaneous linear differential equations with constant coefficients.

(i) Concepts in chemistry for engineering

3 1 0 4

Course Objective

- To understand the terminologies of atomic and molecular structure
- To study the basics of Periodic properties, Intermolecular forces
- To study about spectroscopic technique
- To understand the thermodynamic functions
- To comprehend the basic organic chemistry and to synthesis simple drug.
- To integrate the chemical principles in the projects undertaken in field of engineering and technology

Course Outcomes

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
3. Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
4. Rationalise bulk properties and processes using thermodynamic considerations.
5. List major chemical reactions that are used in the synthesis of molecules.
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNIT I - Atomic and molecular structure

Schrodinger equation. Particle in box solutions and their applications. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Pi-molecular orbitals of butadiene and benzene and aromaticity. Introduction to Crystal field theory.

UNIT II - Periodic properties, Intermolecular forces and potential energy surfaces

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers. Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H₂F and HCN and trajectories on these surfaces.

UNIT III - Spectroscopic techniques and applications

Spectroscopy (Principles and Instrumentation only). Electronicspectroscopy. Vibrational and rotational spectroscopy. Applications. Surface characterization techniques. Diffraction and scattering. Fluorescence and its applications in medicine.

UNIT IV - Use of free energy in chemical equilibria

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria. Use of free energy considerations in metallurgy through Ellingham diagrams.

UNIT V - Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule.

SUGGESTED READINGS

1. B. H. Mahan, (2010), University chemistry, Pearson Education.
2. M. J. Sienko and R. A. Plane, Chemistry: Principles and Applications.
3. C. N. Banwell, (1994), Fundamentals of Molecular Spectroscopy, McGraw-Hill.
4. B. L. Tembe, Kamaluddin and M. S. Krishnan, Engineering Chemistry (NPTEL Web-book)
5. P. W. Atkins, (2009), Physical Chemistry, Oxford University Press.
6. K. P. C. Volhardt and N. E. Schore, (2014), 5th Edition, Organic Chemistry: Structure and Function, W.H. Freeman.
7. P C Jain & Monica Jain, (2015), Engineering Chemistry, Dhanpat Rai Publishing Company.

(ii) Chemistry Laboratory

Course Objectives

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of sodium carbonate and sodium hydrogen carbonate, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of rate constant of a reaction
- To carried out different types of titrations for estimation of concerned in materials

Course Outcomes

1. The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering. The students will learn to:
2. Estimate rate constants of reactions from concentration of reactants/products as a function of time
3. Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc
4. Determine the partition coefficient of a substance between two immiscible liquids.
5. Acquaint the students with the determination of acid value of an oil
6. Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results

CHOICE OF 10 EXPERIMENTS FROM THE FOLLOWING

1. Determination of surface tension and viscosity
2. Determination of Sodium Carbonate and Sodium Hydrogen Carbonate in a mixture using volumetric titration
3. Determination of Ca / Mg using complexometric titration
4. Thin layer chromatography
5. Determination of chloride content of water
6. Determination of the rate constant of a reaction
7. Conductometry - Determination of cell constant and conductance of solutions
8. pH Metry – Determination of Acid / Base
9. Potentiometry - determination of redox potentials and emfs

10. Saponification/acid value of an oil
11. Determination of the partition coefficient of a substance between two immiscible liquids
12. Adsorption of acetic acid by charcoal
13. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

18BTFT103

BASIC ELECTRICAL ENGINEERING
(Theory & Lab.)

6H-5C

Instruction Hours/week: L:3 T:1 P:2

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

(i) Theory**Course Objectives**

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.
- To understand the working of Power Converters and components of low-voltage electrical installations.
- To understand the star and delta connections in AC circuits
- To arrive and analyse the energy consumption calculations and PF improvement
- To understand the RLC circuit combinations and its resonance

Course Outcomes

At the end of this course, students will be able to

1. To understand and analyse basic electric and magnetic circuits.
2. Attributing the electric circuits with DC and AC excitation by applying various circuit laws.
3. Attributing the electrical machines and transformer.
4. Evaluate the various digital circuits in real time applications.
5. Analysis various semiconductor devices in real time applications.
6. Reproduce the Measuring Instruments and Electrical Installation.

UNIT I - DC Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

UNIT II - AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III - Electrical Machines

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque-speed

characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

UNIT IV - Transformers And Power Converters

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections. Overviews of DC-DC buck and boost converters, duty ratio control. Introduction to Single-phase and three-phase voltage source inverters.

UNIT V - Electrical Installations

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, RCCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

SUGGESTED READINGS

1. D. P. Kothari and I. J. Nagrath, (2010), Basic Electrical Engineering, Tata McGraw Hill.
2. D. C. Kulshreshtha, (2009), Basic Electrical Engineering, McGraw Hill.
3. L. S. Bobrow, (2011), Fundamentals of Electrical Engineering, Oxford University Press.
4. E. Hughes, (2010), Electrical and Electronics Technology, Pearson.
5. V. D. Toro, (1989), Electrical Engineering Fundamentals, Prentice Hall India,.

(ii) Laboratory

Course Objective

- To impart the basic knowledge about the Electric circuits.
- To understand the working of Electrical Machines and Transformers.
- To observe the speed control experiments in DC motor
- To acquire the knowledge of energy consumption measurements in single phase system
- To observe and analyse the electrical parameters in R load
- To experiment the basic laws in voltage and current

Course Outcomes (Cos)

At the end of this course, students will demonstrate the ability

1. To understand and analyze basic electric and magnetic circuits.
2. Getting basic practical knowledge about the Electric circuits.
3. Getting knowledge about the testing of Electrical Machines and Transformers.
4. To observe the speed control experiments in DC moto
5. To study the working principles of electrical machines and power converters.
6. Gathered knowledg of commercial system energy calculations

LIST OF EXPERIMENTS

1. Experimental verification of electrical circuit problems using Ohms law and Kirchoff's law.
2. Measurement of electrical quantities – voltage, current, power & power factor in R load.
3. Speed control of DC shunt motor
4. Draw the equivalent circuit of single phase Transformer by conducting OC &SC Test.
5. Measurement of energy using single phase energy mete

SUGGESTED READING

1. D. P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 2010.
2. D. C. Kulshreshtha, "Basic Electrical Engineering", McGraw Hill, 2009.
3. L. S. Bobrow, "Fundamentals of Electrical Engineering", Oxford University Press, 2011.
4. E. Hughes, "Electrical and Electronics Technology", Pearson, 2010.
5. V. D. Toro, "Electrical Engineering Fundamentals", Prentice Hall India, 1989

COURSE OBJECTIVES

- To understand the importance graphics in engineering
- To learn basic engineering drawing formats
- To develop the graphical skills for communication of concepts, ideas and design of engineering products through technical drawings.
- To learn to take data and transform it into graphic drawings.
- To prepare the students to communicate effectively and to use the techniques, skills, and modern engineering tools necessary for engineering practice
- To understand the theory of projection.

COURSE OUTCOMES

Upon completion of this course the students will be able to:

- Know and understand the conventions and the method of engineering drawing.
- Interpret engineering drawings using fundamental technical mathematics.
- Construct basic and intermediate geometry.
- Improve their visualization skills so that they can apply these skill in developing new products.
- Improve their technical communication skill in the form of communicative drawings.
- Comprehend the theory of projection.

UNIT I - INTRODUCTION

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Conic sections including the Ellipse, Parabola and Hyperbola (eccentricity method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales

UNIT II - ORTHOGRAPHIC PROJECTIONS

Principles of Orthographic Projections- Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT III - PROJECTION OF POINTS, LINES AND PLANE SURFACES

Projections of Points and lines located in the first quadrant inclined to both planes - Determination of true lengths and true inclinations; Projection of polygonal surface and circular lamina

inclined to both reference planes

UNIT IV - PROJECTION OF SOLIDS

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

UNIT V - ISOMETRIC PROJECTIONS & COMPUTER GRAPHICS

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple solids, truncated prisms, pyramids, cylinders and cones; Conversion of Isometric Views to Orthographic Views and Vice-versa

Overview of Computer Graphics, listing the computer technologies that impact on graphical communication, demonstrating knowledge of the theory of CAD software, Introduction to 3D modeling packages

SUGGESTED READINGS

7. Bhatt N.D., Panchal V.M. & Ingle P.R, (2014), Engineering Drawing, Charotar Publishing House.

Course Objectives:

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To acquaint the student with the concepts of vector calculus needed for problems in all engineering disciplines.
- To enable the students to apply the knowledge of Mathematics in various Engineering fields by making them to identify the functions in engineering problems as analytic function and their study as a functions of a complex variables.
- To develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, in application areas such as fluid dynamics and flow of the electric current etc.
- To make the student understand the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.
- To apply the Matrices , Vector calculus, Analytic functions, Complex integration and Laplace transforms in their respective fields.

Course Outcomes:

After successfully completing the course, the student will have a good understanding of the following topics

1. To apply the Eigen values and eigenvectors, diagonalization of a matrix, nature and they will also be able to use matrix algebra techniques for practical applications.
2. To find grad, div and curl in Cartesian and other simple coordinate systems, and establish identities connecting these quantities, to evaluate line, surface and volume integrals in simple coordinate systems and to use Gauss, Stokes and Greens theorems to simplify calculations of integrals and prove simple results.
3. To find the Analytic functions using the Cauchy Riemann equations and they will learn mapping properties of elementary functions and mapping properties of some special transcendental functions. They will understand relations between conformal mappings and quadratic differentials and how geometric structures are changing under conformal mappings.
4. To evaluate complex integrals using the Cauchy's integral formula and the Residue theorem and to appreciate how complex methods can be used to prove some important theoretical results.
5. To apply Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.
6. In applying the concept of Matrices , Vector calculus, Analytic functions, Complex integration and Laplace transforms in their respective fields.

UNIT I - MATRICES

Eigen values and Eigenvectors of a real matrix, Characteristic equation, Properties of eigen values and eigenvectors, Cayley-Hamilton theorem, Diagonalization of matrices , Reduction of a quadratic form to canonical form by orthogonal transformation, Nature of quadratic forms. Simple Problems using Scilab.

UNIT II - VECTOR CALCULUS

Gradient and directional derivative, Divergence and Curl, Irrotational and Solenoidal vector fields, Line integral over a plane curve, Surface integral, Area of a curved surface, Volume integral, Green's, Gauss divergence and Stoke's theorems, Verification and application in evaluating line, surface and volume integrals.

UNIT III - ANALYTIC FUNCTION

Analytic functions, Necessary and sufficient conditions for analyticity, Properties, Harmonic conjugates, Construction of analytic function, Conformal mapping, Mapping by Functions $w = z + c$, cz , $1/z$, z^2 , Bilinear transformation.

UNIT IV - COMPLEX INTEGRATION

Line integral, Cauchy's integral theorem, Cauchy's integral formula, Taylor's and Laurent's series, Singularities, Residues, Residue theorem, Application of residue theorem for evaluation of real integrals, Use of circular contour and semicircular contour with no pole on real axis.

UNIT V - LAPLACE TRANSFORMS

Existence conditions, Transforms of elementary functions, Transform of unit step function and unit impulse function, Basic properties, Shifting theorems, Transforms of derivatives and integrals, Initial and final value theorems, Inverse transforms, Convolution theorem , Transform of periodic functions, Application to solution of linear ordinary differential equations with constant coefficients.

SUGGESTED READINGS

1. Hemamalini. P.T, (2014&2017), Engineering Mathematics, McGraw Hill Education (India) Private Limited, New Delhi.
2. Erwin kreyszig, (2014), Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons.
3. B.S. Grewal, (2014), Higher Engineering Mathematics, 43rd Edition, Khanna Publishers.
4. Ramana B.V, (2010), Higher Engineering Mathematics, Tata McGraw Hill.

7. Bali N., Goyal M. and Watkins C, (2009), Advanced Engineering Mathematics, 7th Edition, Firewall Media (An imprint of Lakshmi Publications Pvt., Ltd).
8. O'Neil, P.V, (2007), Advanced Engineering Mathematics, Cengage Learning India Pvt., Ltd.

(i) Theory**Course Objectives**

- To inculcate the basics of properties of matter and its applications.
- To study the basics of laser and optical fiber with appropriate applications.
- To disseminate the fundamentals of thermal physics and their applications.
- To introduce the concepts of quantum mechanics for diverse applications.
- To impart the basic knowledge of crystal and its various crystal structures.
- To understand the applications of basic concepts involved in physics and utilize them in their respective fields.

Course Outcomes

Upon completion of this course, the students will be able to

1. Identify the elastic nature of materials.
2. Infer the characteristics of laser for various engineering applications.
3. Extend the knowledge on optical fiber for communication purposes.
4. Illustrate the thermal properties of materials through various methods.
5. Develop the idea of quantum mechanics through applications.
6. Identify the different atomic arrangements of crystals and its defects.

UNIT I - PROPERTIES OF MATTER

Elasticity –Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation)-factors affecting elastic modulus and tensile strength–Poisson’s ratio- Torsional pendulum- bending of beams - bending moment – uniform and non-uniform bending - I-shaped girders - stress due to bending in beams.

UNIT II - ACOUSTICS AND ULTRASONICS

Classification of sound - loudness and intensity - standard intensity and intensity level - decibel - reverberation - reverberation time - derivation of Sabine’s formula - factors affecting acoustics of buildings : focussing, interference, echo, Echelon effect, resonance - noise and their remedies. Ultrasonics: production - magnetostriction and piezoelectric methods - industrial applications – Non-destructive testing- pulse echo system through transmission and reflection modes – scan displays.

UNIT III - THERMAL PHYSICS

Thermal expansion - thermal stress - expansion joints - bimetallic strips – thermal conductivity - conduction in solids - Forbes' and Lees' disc methods - Rectilinear flow of heat through a rod - flow of heat through a compound material - radial flow of heat through a spherical shell – Laws of blackbody radiation: Kirchhoff's law, Stefan's law, Wien's law, Rayleigh-Jeans law- Thermodynamics – laws of thermodynamics- concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT IV - APPLIED OPTICS

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER - CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle – derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram).

UNIT V - SOLID STATE PHYSICS

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - Coordination number and packing factor for SC, BCC, FCC, HCP – crystal Imperfections: point defects, line defects, Surface defects.

SUGGESTED READINGS

1. Gaur R.K. and Gupta S.L, (2003), Engineering Physics, Dhanpat Rai Publications.
2. Palanisamy P.K, (2006), Engineering Physics, Scitech Publications (P) Ltd.
3. Arumugam M, (2000), Engineering Physics, Anuradha Publications.
4. Sankar B.N., Pillai.S.O, (2007), Engineering Physics, New Age International.
5. Rajendran.V, (2009), Engineering Physics, Tata McGraw-Hill.

(ii) Laboratory

Course Objective:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.

Course Outcomes:

1. The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
2. Prepare for the lab experiment and perform individually a wide spectrum of experiments.
3. Present experimental data in various appropriate forms like tabulation, and plots.
4. Analyze, Interpret and Summarize experimental results.
5. Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
6. Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending - Determination of young's modulus
3. Uniform bending – Determination of young's modulus
4. Lee's disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermoe.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge - Determination of thickness of a thin sheet/wire
8. Optical fibre -Determination of Numerical Aperture and acceptance angle
9. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10. Determination of Band gap of a semiconductor.
11. Spectrometer- Determination of wavelength using grating.
12. Viscosity of liquids-Determination of co-efficient of viscosity of a liquid by Poiseuille's flow

Course Objectives

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence.
- To encourage student to apply the basics skills of communication in formal context and in everyday life.

Course Outcomes

Students undergoing this course will be able to

1. Use English language for communication: verbal & non –verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Gain confidence in using English language in real life situations.
4. Improve word power: lexical, grammatical and communication competence.
5. To guide the students to write business letters and other forms of technical writing.
6. To enable students to prepare for oral communication in formal contexts.

UNIT I - BASIC WRITING SKILLS

Sentence Structures - Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents - Techniques for writing precisely

UNIT II - VOCABULARY BUILDING

The concept of Word Formation - Root words from foreign languages and their use in English - Acquaintance, with prefixes and suffixes from foreign languages in English to form derivatives. - Synonyms, antonyms, and standard abbreviations.

UNIT III - GRAMMAR AND USAGE

Subject-verb agreement - Noun-pronoun agreement - Misplaced modifiers – Articles – Prepositions – Redundancies - Clichés

UNIT IV - LISTENING AND READING SKILLS

Note taking- viewing model interviews – listening to informal conversations – improving listening / reading comprehension – reading model prose / poems – reading exercise

UNIT V.-WRITING PRACTICES

Comprehension - Précis Writing - Essay Writing, Listening Comprehension - Common Everyday Situations: Conversations and Dialogues - Communication at Workplace – Interviews - Formal Presentations

SUGGESTED READINGS

1. Sangeeta Sharma , Meenakshi Raman, (2015), Technical Communication: Principles And Practice, 2nd Edition, OUP, New Delhi.
2. Sanjay Kumar and PushpLata, (2011), Communication Skills ,Oxford University Press.
3. Liz Hamp - Lyons and Ben Heasley, (2006), Study Writing, Cambridge University Press,.
4. F.T. Wood., (2007), Remedial English Grammar, Macmillan.
5. Michael Swan, (1995), Practical English Usage, OUP.

(i) Theory Course Objectives

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure
- Study, analyze and understand the logical structure of a computer program, and different construct to develop a program in “C” language
- Understand the applications of programming language.

Course Outcomes

The course will enable the students

1. To formulate simple algorithms for arithmetic and logical problems
2. To translate the algorithms to programs (in C language)
3. To test and execute the programs and correct syntax and logical errors
4. To implement conditional branching, iteration and recursion
5. To decompose a problem into functions and synthesize a complete program using divide and conquer approach
6. To use arrays, pointers and structures to formulate algorithms and programs
7. To apply programming to solve matrix addition and multiplication problems and searching and sorting problems
8. To apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

Unit I – Introduction to Programming, Arithmetic expressions and precedence

Introduction to Programming-Flowchart / pseudocode, compilation, Variables including data types, Arithmetic expressions and precedence.

Unit II – Conditional Branching and Loops

Conditional Branching – Loops writing and evaluation of conditionals and consequent branching, Iteration and loops.

Unit III – Arrays and Basic Algorithms

Arrays 1-D, 2-D, Character arrays and Strings **Basic Algorithms:** Searching, Basic Sorting Algorithms, Finding roots of equations, idea of time complexity.

Unit IV – Function and Recursion

Functions (including using built-in libraries), Recursion with example programs such as Quick sort, Ackerman function etc.

Unit V - Structure, Pointers and File Handling

Pointers, Structures including self-referential structures e.g., linked list, notional introduction, File handling in C.

SUGGESTED READINGS

1. E. Balagurusamy, (2017) Computing Fundamentals and C Programming, 5th Edition, TMH Education
2. E. Balaguruswamy (2017), Programming in ANSI C, 7th Edition, Tata McGraw-Hill,
3. Byron Gottfried (2017), Schaum's Outline of Programming with C, 3rd Edition, McGraw-Hill
4. Brian W. Kernighan and Dennis M. Ritchie, (2015) The C Programming Language, 2nd Edition, Prentice Hall of India

(ii) Laboratory

Course Objectives

- To provide an awareness to Computing and C Programming
- To know the correct and efficient ways of solving problems
- To learn to develop algorithm for simple problem solving
- To analyze loops, vector operations
- To learn pointers and structures and file handling
- To learn arrays, strings and structures and manipulate them through a program

Course outcomes

1. To formulate the algorithms for simple problems
2. To translate given algorithms to a working and correct program
3. To be able to correct syntax errors as reported by the compilers
4. To be able to identify and correct logical errors encountered at run time
5. To be able to write iterative as well as recursive programs
6. To be able to represent data in arrays, strings and structures and manipulate them through a program
7. To be able to declare pointers of different types and use the mind defining self- referential structures.
8. To be able to create, read and write to and from simple text files.

LIST OF EXPERIMENTS

Tutorial 1: Problem solving using computers:

Lab 1: Familiarization with programming environment Tutorial 2: Variable types and type conversions:

Lab 2: Simple computational problems using arithmetic expressions Tutorial 3: Branching and logical expressions:

Lab 3: Problems involving if-then-else structures Tutorial 4: Loops, while and for loops:

Lab 4: Iterative problems e.g., sum of series Tutorial 5: 1D Arrays: searching, sorting:

Lab 5: 1D Array manipulation

Tutorial 6: 2D arrays and Strings, memory structure:

Lab 6: Matrix problems, String operations Tutorial 7: Functions, call by value:

Lab 7: Simple functions

Tutorial 8 & 9: Numerical methods (Root finding, numerical differentiation, numerical integration):

Lab 8 and 9: Numerical methods problems

Tutorial 10: Recursion, structure of recursive calls:

Lab 10: Recursive functions

Tutorial 11: Pointers, structures and dynamic memory allocation Lab 11: Pointers and structures

Tutorial 12: File handling: Lab 12: File operations

(i) Theory Course Objectives

- Outline the properties of biomolecules and its reactions involved.
- State the functional role of food components and their interaction in food products in terms of colour, flavour, texture and nutrient composition
- Practice the effective use of food composition tables and databases.
- Infer the physical and chemical properties of foods
- Analyze the food proteins, carbohydrates and lipid composition
- Analyze the food labelling and food composition databases.

Course Outcomes

1. Describe the various classifications, properties, applications and analysis of carbohydrates.
2. Summarize the conformations, properties and functional role of proteins.
3. Explain the classification, chemistry, sources and applications of lipids.
4. Illustrate the structure, types, stability and degradation of important biomolecules.
5. Evaluate the natural and synthetic food colourants, flavors, aromas and other antinutritional components.
6. Demonstrate the use of food composition tables and databases.

UNIT I - CARBOHYDRATES

Simple Sugars: mono and disaccharides, Hygroscopicity & solubility, optical rotation, mutarotation; sensory properties-sweetness index, caramelization, Maillard reaction; Glucose syrup, high fructose corn syrup, Dextrose Equivalent, Degree of polymerisation; Sugar alcohols; Oligosaccharides: structure, nomenclature, occurrence, uses in foods. Polysaccharides: Starch- amylose and amylopectin- properties, thickening & gelatinization, modified starches, resistant starch, Dextrins and dextrans, Starch hydrolysates – Maltodextrins and dextrins; Pectins, gums & seaweeds- gel formation & viscosity. Fiber Cellulose & hemicellulose; Food sources, functional role and uses in foods.

UNIT II - PROTEINS

Review of protein structure & conformation; Chemical and Physical properties of Proteins. Reactions of proteins in food systems: Dissociation, optical activity, solubility, hydration, swelling, foam formation & stabilization, gel formation, emulsifying effect, thickening & binding, amino acids in Maillard reaction, denaturation; Food enzymes ;texturized proteins; Food sources, functional role and uses in foods, Determination of proteins in food.

UNIT III - LIPIDS

Review of structure, composition & nomenclature of fats. Non-glyceride components in fats& oils; Properties of fats & oils: crystal formation, polymorphism, melting points, plasticity, isomerisation, unsaturation; Modification of fats: hydrogenation- cis and trans isomers, interesterification, acetylation, winterization; Hydrolytic rancidity & oxidative rancidity; radiolysis Shortening power of fats, tenderization, emulsification, frying - smoke point, autooxidation, polymerization; Fat replacements; Food sources, functional role and uses in foods.

UNIT IV

A. WATER

Structure of water molecule, Chemical and physical properties of water, Types of water: free, bound & entrapped water, water activity. Drinking water, mineral water, water hardness, water quality for food processing

B. MINERALS & VITAMINS

Mineral & vitamin content of foods- Food and Pharmaceutical grades; stability & degradation foods.

C. COLOUR, FLAVOUR & AROMA COMPONENTS

Naturally occurring colours, acids, other flavor & aroma components present in herbs, spices, coffee, tea, cocoa, fruits, vegetables & fermented products; Synthetic colours and Naturally similar /artificial flavours, Threshold values, off flavours & food taints.

D. OTHER COMPONENTS

Naturally occurring toxic substances (trypsin inhibitors, phytins, tannins, oxalates, goitrogen, toxic amino acids, glucosinolates, aflatoxins), protease inhibitors, bioactive components: phytates, polyphenols, saponins, phytoestrogens etc.

UNIT V - FOOD GROUPS & COMPOSITION

Food groups, proximate composition, methods of evaluation & labelling - food composition tables, food composition databases: USDA Database, UK Database.

(ii) Laboratory Course objectives

- Examine the quality specifications of food components
- Analyze the various functional properties of food substances
- Inspect the chemical and thermal properties of food components
- Experiment the analysis of proteins and lipids
- Analyze rancidity property of fatty acids
- Demonstrate browning effects in food

Course outcomes

1. Test the levels of gluten and peroxide content in the given food sample.
2. Investigate the various properties of oils.
3. Experiment the functional properties of proteins, lipids and carbohydrates.
4. Measure the viscosities of the given food sample.
5. Theorize the effect of heat on proteins.
6. Evaluate the enzymatic browning of foods..

LAB COMPONENTS

1. Estimation of Viscosity of foods
2. Properties of solutions- sugar & salt
3. Preparation of emulsions
4. Foaming properties of proteins
5. Solubility, specific gravity and Refractive index of oils
6. Oxidative rancidity of fats
7. Effect of heat on proteins
8. Iso-electric precipitation of casein, Effect of rennin on milk proteins
9. Gelling properties of starch
10. Study of gluten formation
11. Enzymatic Browning in foods

SUGGESTED READINGS

1. Belitz, H.-D., Grosch, W., and Schieberle, P. (2004). Food Chemistry. 3rd Edition. Springer - Verlag.
2. Meyer., and Hoagland, L. (1987). Food Chemistry. CBS Publishers.
3. DeMan., and John, M. (1999). Principles of Food Chemistry. 3rd Edition. Springer.
4. Chopra, H.K., and Panesar, P.S. (2010). Food Chemistry. Narosa Publications.
5. Vaclavik, V. A., and Christian E. W. (2003). Essentials of Food Science. 2nd Edition, Kluwer Academic. Springer.
6. Weaver, C.M., and Daniel, J.R. (2005). The Food Chemistry Laboratory – A Manual for Experimental Foods. Dietetics & Food Scientists. 2nd Edition. CRC Press.

Course objectives

- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

Course outcomes

Upon successful completion of the course, students should be able to:

1. Understand how to solve the given standard partial differential equations.
2. Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
3. Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
4. Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
5. Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.
6. The learners can equip themselves in the transform techniques and solve partial differential equations

UNIT I-PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations – Singular integrals - Solutions of standard types of first order partial differential equations - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non homogeneous types.

UNIT II-FOURIER SERIES

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis.

UNIT III-APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction.

UNIT-IV FOURIER TRANSFORMS

Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V- Z - TRANSFORMS AND DIFFERENCE EQUATIONS

Z-transforms - Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Outline the concepts of fluid mechanics.
- Discuss the pressure variations in fluids and measurement devices.
- State the fluid statics on variable surface conditions.
- Practice the equations of motion and kinetics of fluid flow.
- Analyze the flow of fluids in various geometries of pipes.
- Summarize the application of fluid mechanics in formulating the food beverages

Course Outcomes

1. Recognize the various properties of fluids.
2. Assess the pressure differences in fluids.
3. Apply the different devices to measure the pressure of fluids.
4. Calculate the forces acting on bodies submerged in different positions in liquids.
5. Perform the basic design calculations for fluid flow in pipes
6. Identify the behavior of flow of fluids in pipes.

UNIT I -PROPERTIES OF FLUIDS

Introduction- units and Dimensions – Properties of fluids-Density – Specific weight - Specific Volume- Specific gravity- Viscosity-Thermodynamic properties-Compressibility and Bulk modulus-Surface tension and capillarity -vapor pressure and cavitations.

UNIT II-PRESSURE AND ITS MEASUREMENT

Fluid pressure at a point- Pascal's law- Pressure variation in a fluid at rest-Absolute, Gauge, Atmospheric and vacuum pressures- Measurement of pressure Simple manometers-Differential manometers.

UNIT III- FLUID STATICS

Hydro static forces on surfaces- Total pressure and center of pressure- Vertical plane surface submerged in liquid- Horizontal plane surface submerged in liquid- Inclined plane surface submerged in liquid- curved surface submerged in liquid.

UNIT IV- BASIC CONCEPTS OF FLUID FLOW AND MEASUREMENT

Kinematics of flow-Types of fluid flow-Rate of flow-continuity equation- continuity equation in three dimensions- velocity and acceleration velocity potential function and stream function-

Dynamics of Fluid flow- Equations of motion- Euler's equation of motion- Bernoulli's equation- Practical applications of Bernoulli's equation – Venturimeter- Orifice meter Pitot tube.

UNIT V- FLOW THROUGH PIPES

Reynolds Experiment- Laminar and turbulent flow- Loss of energy in pipes- Loss of energy due to friction- Minor energy Losses-Hydraulic gradient and Total Energy line- Flow through pipes in series- Equivalent pipe-Flow through parallel pipes- Flow through branched pipes-Power transmission through pipes- Water hammer in pipes.

SUGGESTED READINGS

1. Bansal,R.K. (2011). Fluid Mechanics and Hydraulic Machines. 9th Edition. Laxmi Publications, New Delhi.
2. Modi, P.N., and Seth, S.M. (2007). A Text book of Fluid Mechanics and Hydraulic Machines. Standard Book House. New Delhi.
3. Som, S.R., and Biswas, (2007). Introduction to Fluid Mechanics and Fluid Machines. 2nd Edition. Tata McGraw Hill.

Course Objectives

- Understand the basic concepts and factors affecting the growth of microorganisms.
- Define the preservation of foods using temperature as a parameter.
- State the role of drying, additives and radiation in the food preservation..
- Investigate the microorganisms associated with the food fermentation processes.
- Explain food borne illness and sanitation in food industries.
- Develop knowledge on the role of microbiological parameters in the food processing industry.

Course Outcomes

1. Recognize the general concepts and factors affecting the growth of microorganisms.
2. Apply the different temperature range as a control agent for food preservation.
3. Employ the methods include drying, additives and radiation to prevent microbial spoilage.
4. Use microbial cultures for preparing various fermented food products.
5. Evaluate the pathogenesis of food borne pathogens and food poisoning.
6. Assess the bacteriology of water and sanitation measures in food industries

UNIT I FOOD AND MICROORGANISMS

General concepts about molds, bacteria and yeasts. Factors affecting growth of microorganisms – pH, water activity, oxidation – reduction potential, nutrient content, inhibitory substances and biological structure – combined effects of factors affecting growth.

UNIT II MICROBIOLOGY OF PRESERVATION – HIGH AND LOW TEMPERATURES

Heat resistance of microorganisms and their spores, Determination of heat resistance Effect of high temperature on microbes – TDT, D value, Z value, 12D concept, F value. Pasteurization and canning Growth of microorganisms at low temperatures, temperatures employed in low temperature storage, Freezing – preparation, freezing and changes occur in foods, response of microorganisms to freezing,

UNIT III MICROBIOLOGY OF PRESERVATION – DRYING, ADDITIVES AND RADIATION

Drying – Methods, factors in the control of drying, treatments before and after drying, microbiology of dried foods and specific dried foods, IMF. Additives – Antimicrobial preservatives,

antibiotics and developed preservatives. Radiation – Ultraviolet radiation, factors influencing, ionizing radiations - effect on microorganisms and foods, Microwave processing.

UNIT IV FOOD FERMENTATION

General principles of culture maintenance and preparation – Bacterial, Yeast and mold cultures. Manufacture, spoilage and defects of Bread, malt beverages – beer and related beverages, wines, distilled liquors, vinegar, fermented vegetables – sauerkraut and pickles, fermented dairy products – yogurt, kefir, kumiss, probiotics and prebiotics cheese, oriental fermented foods – soy sauce, tempeh, miso, ang-khak, idli, natto, soybean cheese, Minchin, fermented fish, preserved eggs, and poi.

UNIT V FOOD BORNE ILLNESS AND SANITATION

Food borne diseases – Clostridium, E.coli, Listeria, Bacillus, Mycotoxins – Aflatoxin, Patulin and ochratoxin, seafood toxicants – shellfish poisoning, ciguatera, scombroid fish poisoning, poisoning by chemicals, Bacteriology of water supplies – Sewage and waste treatment and disposal – Microbiology of the food product - Good Manufacturing Practices (GMP) – Hazard Analysis and Critical Control Points (HACCP).

SUGGESTED READINGS

1. Adams, M.R., and Moss, M.O. (2008). Food Microbiology. 3rd Edition. RSC Publishing.
2. Frazier, W.C., and Dennis, C.W. (2014). Food Microbiology. 5th Edition. Springer. The McGraw-Hill Companies.
3. Jay, J.M. (2005). Modern Food Microbiology. 4th Edition. CBS Publishers and Distributors Pvt. Ltd.

Course Objectives

- Assess the basic units, dimensions and basic related functions involved in food process engineering.
- State the various law governing the gases and vapors
- Calculate the material balance and law of conservation of energy.
- Analyze problems in Energy balance in heat exchangers.
- Define the types, properties and agitation processes in fluids
- Understand the various applications of process calculation utilized for food industry.

Course Outcomes

1. To enumerate the units and dimensions of various physical quantities.
2. To express the laws and theory of gases and vapors.
3. To calculate the material balance in food processing units.
4. To validate the energy balance involved in food processing operations.
5. Describe the types and properties of fluid flow.
6. Demonstrate the processes of agitation in fluids

UNIT I - UNIT AND DIMENSIONS

Fundamental -derived units. Definitions of some basic physical quantities – Force, momentum, pressure, work and energy, power, heat and enthalpy. Dimensional analysis. Mole – atomical molar mass. Moisture content.-water activity.

UNIT II-GASES AND VAPORS

Behavior of Gases – Kinetic Theory of gases – Perfect Gas – Gas laws – Ideal gas laws – Real gas- Van der Waal's equation -pure component vapour pressure- partial pressure Dalton's law. Pure component volume-Amagat's law, Boyles law, Charles law, Raoult's law. Psychrometry- Humidity, Relative Humidity, Saturation Humidity, Wet and Dry Bulb Temperature- Dew Point – Psychrometric Chart Readings.

UNIT III-MATERIAL BALANCE

Law of Conservation of mass- Process flow diagram-system boundaries -overall mass balance – component mass balance –basis and tie material- Continuous vs. Batch-Recycle and by pass-unsteady state -mass balance problems on concentration, dehydration, evaporation, crystallization, mixing – solvent extraction –multi stage process.

UNIT IV-ENERGY BALANCE

Heat capacity – gases – solids – liquids -Latent heat – sensible heat -energy balance for a closed system and open system -total energy balances. Energy balance problems in heat exchangers –Drying.

UNIT V-FLUID MECHANICS AND AGITATION OF FLOW THROUGH PACKINGS

Fluid – properties – compressible, incompressible fluids, Newtonian and Non Newtonian Fluids, Fluid statics for compressible & incompressible. Agitation – power requirement, Flow in packed columns, flow in fluidization columns, settling phenomena, Flow measurement, pumping of liquids and gases – equipments.

SUGGESTED READINGS

1. Toledo, T.R. (2007). Fundamentals of Food Process Engineering. 3rd Edition. CBS publications, New Delhi.
2. Smith, P.G. (2011). Introduction to Food Process Engineering. 2nd Edition. Springer.
3. Singh, R.P. and Heldman, R.D. (2004). Introduction to Food Engineering. Academic Press – Elsevier India Private Ltd. New Delhi.
4. Bahttt., and Thakore, S.B. (2004). Stoichiometry. 5th Edition. Mc Graw-Hill. New York.

Course Objectives

- State the fundamentals and calculations involved in zeroth law of thermodynamics.
- Discuss the applications of first law of thermodynamics.
- Illustrate the knowledge on second law of thermodynamics and entropy
- Describe thermodynamic properties of pure substances, its phase change processes and to study the working principle of steam boilers.
- Explain the working principle of carnot, vapor compression, vapor absorption and air refrigeration systems.
- Analyze the applications of thermodynamic properties in the food processing.

Course Outcomes

1. Understand the laws, concepts and principles of thermodynamics.
2. Apply first law of thermodynamics to closed and open systems.
3. Solve problems related to cycles and cyclic devices using second law of thermodynamics.
4. Calculate the thermodynamic properties of pure substances and phase change processes
5. Discuss the classification, working and accessories of steam boilers
6. Understand the working of carnot, vapour compression, vapor absorption and air refrigeration systems.

UNIT I - BASIC CONCEPTS AND FIRST LAW

Thermodynamics, Terminologies, systems – classification – properties and state of a system. Thermodynamic process, cycle and equilibrium. Zeroth law of thermodynamics. Law of conservation of energy. Heat – specific heat – thermal capacity and water equivalent. Mechanical equivalent of heat, work – power - universal gas constant. Internal energy, enthalpy and molar specific heat of a gas. First law of thermodynamics – Limitations of first law of thermodynamics

UNIT II - APPLICATION OF FIRST LAW OF THERMODYNAMICS TO NON-FLOW AND FLOW PROCESSES

Work done during a non-flow process - Work done for constant volume, constant pressure, constant temperature, adiabatic and polytropic process. Application of first law of thermodynamics to a steady flow system - boiler, condenser, evaporator, nozzle, turbine, rotary and reciprocating compressor.

UNIT III - SECOND LAW OF THERMODYNAMICS

Kelvin planck and Clausius statements. Heat engine, heat pump and refrigeration. Relation between heat and entropy – Importance and units of entropy – Clausius inequality - available and unavailable heat energy.

UNIT IV - STEAM PROPERTIES AND BOILERS

Formation of steam at a constant pressure – Temperature vs total heat during steam formation. Wet, dry saturated and super heated steam – Dryness fraction of wet steam – Enthalpy and specific volume of steam – uses of steam tables. Boilers: Classification of steam boilers, Vertical and Cross tube Cradley boiler, Cochran, Lancashire, Locomotive and Babcock-Wilcox boilers. Boiler mountings and accessories.

UNIT V - REFRIGERATION SYSTEMS AND COMPONENTS

Principles of refrigeration, choice of refrigerants, components of refrigeration cycle. Types of refrigeration: Carnot refrigeration, vapor compression cycle, air refrigeration cycle, absorption refrigeration cycle.

SUGGESTED READINGS

1. Narayanan, K.V. (2013). A Text book of chemical engineering thermodynamics. 2nd Edition. PHI Learning Private Limited.
2. Rajput, R.K. (2009). Engineering Thermodynamics. 3rd Edition. Laxmi Publication. New Delhi.
3. Nag, P.K. (2017). Engineering Thermodynamics. 6th Edition. McGraw Hill Education (India) Private Limited.

Course Objectives

- Explain the digestion, absorption and metabolic pathways of carbohydrates
- Describe the digestion, absorption, synthesis and metabolic pathways of fatty acids, proteins, and amino acids
- Outline the important aspects of food relating to nutrition
- Summarize the diets suitable for managing specific nutritional disorders
- Categorize the nutrients for different age groups, and sports people
- Understand the role of biomolecules in dietary management.

Course Outcomes

1. Discuss the digestion, absorption and metabolic pathways of carbohydrates.
2. Understand the digestion absorption synthesis and metabolism of amino acids and proteins.
3. Infer the digestion absorption synthesis and metabolism of fatty acids.
4. Understand the basic principles and overall concepts of food relating to nutrition.
5. List the diets suitable for managing nutrition related disorder.
6. Outline the nutritional requirements for different age groups, sports, pregnancy.

UNIT I –METABOLISM OF CARBOHYDRATES

Carbohydrate – Digestion and absorption, Glycolysis (EMP) pathway, CORI's cycle, Energy yield from glycolysis, TCA cycle – Energetics, HMP or PP pathway, Gluconeogenesis, Glycogenolysis, Glycogenesis

UNIT II-METABOLISM OF FATTY ACIDS AND PROTEINS

Fatty acids – Digestion and absorption, Synthesis of TAG's, Metabolism of adipose tissue – fatty liver and lipotropic factors, Cholesterol – biosynthesis and metabolism

Proteins – Digestion and absorption, General metabolism of amino acids – transdeamination, transamination and oxidative deamination, Urea cycle, Metabolism of serine, cysteine, valine, leucine, isoleucine, tryptophan

UNIT III-CONCEPTS OF FOOD AND NUTRITION

Food as a source of nutrients, Food intake and regulations, Food groups, Utilization of

nutrients and digestion process, calorific value of food, dietary need and recommended dietary allowances, Vegetarian diet – health, problems and advantages, Nutrition in phytochemicals and non-nutrient components, Malnutrition – PEM, Food fortification, Effect of processing on nutritive value of foods, vitamins and storage of nutrients, Food allergy, intolerance and sensitivity, Nutrigenomics

UNIT IV-NUTRITIONAL DISORDERS

Dietary management – Fever, overweight, under weight and obesity, burns, CVD, cancer, skin care, diabetes, inborn errors of metabolism

UNIT V-SPECIALIZED NUTRITION

Nutritional requirement for infants, preschool and school children, adolescence, geriatric, sports and fitness, adults, pregnancy and lactation

SUGGESTED READINGS

1. Nelson, D.L., and Cox, M.M. (2017). Lehninger Principles of Biochemistry. 7th Edition. W.H. Freeman Company.
2. Voet, D., Voet, J.G., and Pratt, C.W. (2016). Fundamentals of Biochemistry Life at the Molecular Level. 5th Edition. John Wiley and Sons.
3. Eastwood, M., (2003). Principles of Human Nutrition. 2nd Edition. Blackwell Publishing Company.
4. Roday, S. (2012). Food Science and Nutrition. 2nd Edition. Oxford Higher Education/ Oxford University Press.
5. Shubhangini, A.J. (2015). Nutrition and Dietetics. 4th Edition. McGraw Hill education.

Course Objectives

- Explain the working principle of microscopes and sterilization techniques.
- Outline the preparation of media for the cultivation of microorganisms.
- Identify the isolated strains using staining techniques and biochemical tests.
- Conduct staining techniques and practice various staining methods.
- Apply various biochemical test to identify micro organisms in contaminated food
- Experiment the production process of Wine.

Course Outcomes

1. Use aseptic technique to properly handle microorganisms to avoid contamination.
2. Apply the knowledge to handle microscopes to observe stained microorganisms.
3. Enumerate the microorganisms to check the quality characteristics of food.
4. Isolate the pure culture from mixed population found in contaminated foods.
5. Identify the microorganisms using staining techniques.
6. Assess the quality of water and milk.

LIST OF EXPERIMENTS

1. Microscopy
2. Sterilization techniques
3. Pure culture techniques
4. Staining methods
5. Demonstration of bacterial motility by hanging drop method
6. Microbiological examination of water quality by MPN method
7. Bacteriological testing of milk
8. Enumeration of microbes in spoiled food
9. Demonstration of amylase activity
10. Production of wine and estimation of alcohol content

Course Objectives

- Test the protein content present in the given food sample.
- Estimate the amount of carbohydrate in the food materials.
- Analyze the content of ash and ascorbic acid present in the given foods.
- Experiment the lipid extraction and measure the percent of cholesterol in the given sample.
- Practice the calculations based on measuring protein quality indices.
- Understand the application of estimation of biomolecules in food sample.

Course Outcomes

1. Examine the protein content of food samples using Lowry's and Biuret method
2. Perform the tests on quantifying carbohydrate content in the food samples.
3. Evaluate the amount of ascorbic acid in the given food materials.
4. Measure the ash content and sample preparation of the AAS analysis.
5. Determine the fat and cholesterol content in the food samples.
6. Assess the calculations on protein quality indices.

LIST OF EXPERIMENTS

1. Estimation of proteins by Lowry's method
2. Estimation of proteins by Biuret method
3. Estimation of amino acid by ninhydrin method
4. Estimation of total carbohydrate by anthrone method
5. Estimation of reducing sugar by dinitro-salicylic acid (DNS) method
6. Estimation of ascorbic acid content in the food
7. Estimation of ash content and preparation of sample for AAS analysis
8. Estimation of fat by Soxhlet method
9. Estimation of cholesterol by Zak's method
10. Calculation of protein quality indices using amino acid values of given sample

Course Objectives

- To know about Indian constitution.
- To know about central and state government functionalities in India.
- To know about Indian society.
- Understand structure and function of Central and State Government.
- Basic knowledge in Indian society, political party.
- Understand the Rights of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections

Course Outcomes

Upon completion of the course, students will be able to:

1. Understand the functions of the Indian government.
2. Understand and abide the rules of the Indian constitution.
3. Understand and appreciate different culture among the people.
4. Understand the Structure and Functions of Indian constitution
5. Understand the Assessment of Parliamentary System in India
6. Understand the Rights of Women, Children and Scheduled Castes and other Weaker Sections.

UNIT I - INTRODUCTION

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

UNIT II - STRUCTURE AND FUNCTION OF CENTRAL GOVERNMENT

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III - STRUCTURE AND FUNCTION OF STATE GOVERNMENT

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV - CONSTITUTION FUNCTIONS

Indian Federal System – Center – State Relations – President’s Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V- INDIAN SOCIETY

Society : Nature, Meaning and definition; Indian Social Structure; Caste, Religion, Language in India; Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

Course objectives

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control
- To understand statistical methods designed to contribute to the process of making the judgements.

Course outcomes

Upon successful completion of the course, students will be able to:

1. Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
2. Understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
3. Apply the concept of testing of hypothesis for small and large samples in real life problems.
4. Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
5. Have the notion of sampling distributions and statistical techniques used in engineering and management problems.
6. To expose statistical methods designed to contribute to the process of making the judgements.

UNIT I PROBABILITY AND RANDOM VARIABLES

Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

UNIT II TWO - DIMENSIONAL RANDOM VARIABLES

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and

linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTING OF HYPOTHESIS

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means - Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independence) - Goodness of fit.

UNIT IV DESIGN OF EXPERIMENTS

One way and Two way classifications - Completely randomized design – Randomized block design – Latin square design - 2² factorial design.

UNIT V STATISTICAL QUALITY CONTROL

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits - Acceptance sampling

Course Objectives

- Describe the physical properties of food materials
- Explain the rheology of food and use of viscometer and texture analyzer in food industry.
- Impart knowledge on thermal properties of food commodities
- Outline the aerodynamic and hydrodynamic properties of foods
- Define the electrical properties of food and its applications in food engineering.
- Develop knowledge on preparing the food based on the thermal, physical and functional properties.

Course Outcomes

1. Estimate the physical properties of food materials
2. Report the frictional properties and storage of agricultural crops
3. Compare and contrast the Newtonian and non-Newtonian fluids
4. Express the overall thermal properties of food materials
5. Measure the aero- and hydrodynamic characteristics and the application of frictional properties in grain handling, processing and conveying.
6. Demonstrate the dielectric and radiation heating properties of foods

UNIT I - PHYSICAL PROPERTIES OF FOODS

Methods of estimation of Shape, Size, volume, density, porosity and surface area, sphericity, roundness specific gravity. Frictional properties-coefficient of friction, Storage and flow pattern of agricultural crops.

UNIT II -RHEOLOGICAL PROPERTIES OF FOODS

Definition – classification – Newton’s law of viscosity – momentum-diffusivity-kinematic viscosity – viscous fluids – Newtonian and Non Newtonian fluids- Viscosity Measurements- Viscometers of different types and their applications-Texture measuring instruments-Hardness and brittleness of Food materials.

UNIT III - THERMAL PROPERTIES OF FOODS

Definitions of Heat capacity, specific heat, enthalpy, conductivity and diffusivity, surface heat transfer coefficient, Measurement of thermal properties like specific heat, enthalpy, conductivity and diffusivity, DTA, TGA, DSC.

UNIT IV - AERODYNAMIC AND HYDRODYNAMIC PROPERTIES OF FOODS

Drag and lift coefficient, terminal velocity and their application in the handling and separation of food materials. Water activity- measurement-vapor pressure method –freezing point depression method- Effect of temperature, and pressure on water activity-moisture sorption isotherms-models-Henderson, PET and GAB models.

UNIT V - ELECTRICAL PROPERTIES OF FOODS

Dielectric properties-dielectric constants, Dielectric measurements-Ionic Interaction-Dipolar rotation. Effect of moisture, temperature and pressure on dielectric properties. Microwave heating-Infrared and Ohmic heating, Irradiation

SUGGESTED READINGS

5. Rehman, S. (2009). Food Properties Hand book. 2nd Edition. CRC press inc. New York.

Course Objectives

- Define laws of heat conduction and theories of insulation.
- Evaluate the different modes of convection heat transfer.
- Assess the different modes of radiation heat transfer.
- State the types of heat exchanger and their applications in food industry.
- Summarize the diffusion mass transfer.
- Understand the applications of heat and mass transfer in food processing.

Course Outcomes

1. Express the Conduction mode of heat transfer in simple and composite systems
2. Evaluate heat transfer coefficients for natural convection.
3. Discuss the influence of radiation in food processing operations
4. Analyze heat exchanger performance by using the method of heat exchanger effectiveness
5. Analyze heat exchanger performance by using the method of log mean temperature difference.
6. Illustrate the basics of diffusion mass transfer and its application in food Processing.

UNIT I - HEAT TRANSFER – CONDUCTION

Modes of heat transfer – Conduction, Convection and Radiation. Fourier's Law of Heat conduction-Thermal Conductivity for gases, liquids and solids-Thermal diffusivity- Thermal resistance-Steady heat conduction in simple geometries: Plane wall, hollow cylinder and hollow sphere through solids in series -plane wall and multilayer cylinder. Heat conduction through materials in parallel. Theory of insulation, critical radius of insulation.

UNIT II - Heat Transfer – Convection

Convection heat transfer – forced and natural; Evaluation of convection heat transfer coefficient, Dimensionless numbers- Forced convection- Heat Transfer Coefficient for Laminar flow inside a tube - heat transfer coefficient for turbulent flow inside a pipe. – Heat Transfer outside various Geometries in Forced Convection – Flow parallel to flat plate - Natural convection from vertical planes and cylinders –boiling and condensation-mechanisms

UNIT III - Heat Transfer – Radiation

Basics of Radiation heat transfer- Types of surfaces – Kirchhoff's Law-radiation from

body and emissivity (Stephan Boltzmann Law) to a small object from surroundings – Planck's Distribution law- Wein's Displacement law- combined Radiation and Convection Heat Transfer.

UNIT IV - Heat Exchangers

Types-Overall Heat Transfer Coefficient-Shell and Tube 1-1, 1-2, 2-4 passes –Plate Heat Exchanger-tubular heat exchanger-Parallel Flow and Counter Flow- Cross flow Types- Scraped surface exchangers-Compact Heat exchanger- Heat exchanger Analysis-Log mean Temperature Difference

UNIT V - Mass Transfer

Mass transfer – introduction – Fick's law for molecular diffusion - molecular diffusion in gases equimolar counter diffusion in gases and diffusion of gas A through non diffusing or stagnant B - diffusion through a varying cross sectional area and diffusion coefficients for gases - molecular diffusion in liquids, biological solutions and gels. Concept of mass transfer coefficients, Interphase mass transfer and over all mass transfer coefficients in binary systems.

SUGGESTED READINGS

1. Rao, D.G. (2009). Fundamentals of Food Engineering. 1st Edition. PHI learning Pvt Ltd. New Delhi.
2. McCabe W.L., Smit, J.C., and Harriott, P. (2017). Unit Operations of Chemical Engineering. 7th Edition. McGraw-Hill International. New York.
3. Singh, R.P., and Heldman, D.G. (2013). Introduction to Food Engineering. 5th Edition. Academic press.

Course Objectives

- Instruct the sampling and proximate analysis of food substances
- Discuss the physical, chemical, quality standards and adulterants of lipids, protein and carbohydrate
- Summarize the different spectroscopic techniques involved in food analysis
- Explain the various chromatographic methods employed in analysis of foods
- Outline the techniques on electrophoresis, refractometry and polarimetry in food analysis
- Understand the methods of analysis for functional and special foods.

Course outcomes

1. Test the proximate composition of the given food sample
2. Determine the physical, chemical and quality standards of lipids, proteins and carbohydrates
3. Investigate the adulterants in the given food commodities
4. Examine the composition of foods using spectroscopic methods
5. Analyze the food materials using chromatographic techniques
6. Perform the tests on food substances using the principles of electrophoresis, refractometry and polarimetry

UNIT I - INTRODUCTION

Introduction, Food Regulations and Standards - Sampling methods - Sample preparation for analysis; Statistical evaluation of analytical data - Official Methods of Food Analysis. Moisture in foods - determination by different methods - ash content of foods, wet, dry ashing, microwave ashing methods; Significance of Sulphated Ash, water soluble ash and acid insoluble ash in foods; titratable Acidity in foods, determination of dietary fiber and crude fiber.

UNIT II - LIPIDS, PROTEIN AND CARBOHYDRATE ANALYSIS

Determination of Total fat in foods by different methods; Analysis of oils and fats for physical and chemical parameters, Quality standards, and adulterants; different methods of determination of protein and amino acids in foods; determination of total carbohydrates, starch, disaccharides and simple sugars in foods.

UNIT III - SPECTROSCOPIC TECHNIQUES

Basic Principles- Spectrophotometric analysis of food additives and food Components –IR Spectroscopy in online determination of components in foods; AAS and ICP-AES in mineral elements and toxic metals analysis; use of fluorimeter in vitamin assay- specific use of Tintometer in vanaspathi analysis.

UNIT IV - CHROMATOGRAPHIC TECHNIQUES

Basic Principles, detection of adulterants in foods by paper chromatography and thin layer chromatography, column chromatography for purification analysis; analysis of food additives, sugars, phytochemicals and aflatoxins, contaminants and other food components by HPLC, GC analysis of fatty acids, cis, trans Isomers - volatile oils, flavours and pesticides, contaminants and other volatile derivatives of food components; Significance MS detector in HPLC and GC.

UNIT V - ELECTROPHORESIS, REFRACTOMETRY AND POLARIMETRY

Basic Principles, application of electrophoresis in food analysis, refractive indices of oils and fats, total soluble solids in fruit juice and honey, specific rotation of sugars, estimation of simple sugars and disaccharides by polarimeter; Immunoassay techniques and its applications in foods.

SUGGESTED READINGS

2. Wood, R., Foster, L., Damant, A., and Pauline, K. (2004). Analytical Methods for Food Additives. 1st Edition. CRC Woodhead Publishing.
3. Pomeranz., Yeshajahu., and Meloan, E.C. (2004). Food Analysis: Theory and Practice. 3rd Edition, Springer.
4. Nollet., Leo, M.L. (2004). Handbook of Food Analysis. 2nd Edition, Vol. 1-3. Marcel Dekker.
5. Hurst., Jeffrey, W. (2008). Methods of Analysis for Functional Foods and Nutraceuticals. 2nd Edition. CRC Press.

Course Objectives

- Discuss the various types of equipments involved in drying and dehydration.
- State the operations involved in mechanical separations.
- Define the various attributes of evaporators in food processing.
- Assess the role of milling equipments in size reduction.
- Outline the agitation and types of impellers employed in mixing.
- Understand the applications of unit operations in designing equipments of food processing industry.

Course Outcomes

1. Explain the models involved in the moisture and its measurements.
2. Investigate the various dryers employed in drying of food.
3. Demonstrate the filtration, sedimentation and centrifugal separations.
4. Evaluate the heat transfer coefficients and economy of different types of evaporators.
5. Estimate the energy and power requirement for the different size reduction operations.
6. Design and develop the agitators and impellers for mixing operations.

UNIT I - DRYING AND DEHYDRATION

Moisture and its measurements - direct and indirect methods – Equilibrium moisture – methods of determination – EMC Models – Henderson, Kelvin, PET and GAB models – importance of EMC- water activity – psychrometry — Drying theory – Drying rate – Mechanical Drying – hot air dryers – Types- fixed -fluidized bed – LSU drier-Spray drier- Osmotic dryer - vacuum shelf dryer – freeze dryer.

UNIT II - MECHANICAL SEPARATION

Screening: Types, Equipments; Filtration: Filter media types and requirement – constant rate filtration – constant pressure filtration – filter cake resistance – filtration equipments – filter press – rotary drum filters – sedimentation – gravitational sedimentation – Stoke's law – sedimentation in cyclones. Centrifugal separations – rate of separation – centrifuge equipment.

UNIT III - EVAPORATION

Definition – liquid characteristics – Types of evaporators -single and multiple effect evaporators

- once through and circulation evaporators – Agitated film evaporators. Performance – evaporator capacity – boiling point elevation and Duhring's rule. Heat transfer coefficients – Evaporators economy – enthalpy balance of single effect evaporator – multiple effect evaporator – methods of feeding. Capacity and economy of multiple effect evaporator.

UNIT IV - SIZE REDUCTION

Principles of comminuting – characteristics of comminuted products – particle size distribution in comminuted products – energy and power requirements – Rittinger's, Kick's and Bond's law – Size reduction equipments – crushers – hammer mill – Ball mill-Colloidal mill-attrition mills.

UNIT V –MIXING AND FORMING

Mixing and forming characteristics of mixtures-measurements of mixing –particles mixing-rates of mixing, energy input in mixing, liquid mixing-power & Froude number-mixing equipment-liquid, powder and particles mixtures, dough and paste mixtures. Forming-Pie & biscuit formers- Bread and confectionery moulders.

SUGGESTED READINGS

1. Rao, D.G. (2009). Fundamentals of Food Engineering. PHI Learning Private Limited, New Delhi.
2. Geankoplis, C.J. (2018). Transport Processes and Separation Processes Principles. 5th Edition Prentice Hall India, New Delh.
3. McCabe, L.W., Smith, J.C. and Harriot, P. (2004). Unit Operations of Chemical Engineering. 7th Edition .McGraw Hill International Edition, Singapore.
4. Earle, R.L. (2003).Unit Operations in Food Processing. 2nd Edition. Pergamon Press. UK.

Course Objectives

- To understand and analyze the importance of environmental studies and ecosystem
- To give a comprehensive insight into natural resources.
- To understand the concept of ecosystem and biodiversity.
- To educate the ways and means of the environment.
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.

Course Outcome

1. Recognize the importance of natural resources
2. Associate themselves with the various ecosystems
3. Describe the importance of biodiversity
4. Identify and minimize the difference pollutions
5. Prioritize and analyses the social issues
6. Integrate the environmental principles in the projects undertaken in field of engineering and technology

Unit I – INTRODUCTION - ENVIRONMENTAL STUDIES & ECOSYSTEMS

Environment Definition, Scope and importance; Ecosystem, Structure and functions of ecosystem. Energy flow, Food chains and food webs, Ecological succession. Classification of ecosystem. Forest ecosystem, Grassland Ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

Unit II - NATURAL RESOURCES - RENEWABLE AND NON-RENEWABLE RESOURCES

Natural resources - Renewable and Non – Renewable resources. Land resources and land use change, Land degradation, soil erosion and desertification. Forest resources -Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations. Water resources- Use and over-exploitation of surface and ground water, floods,

droughts, conflicts over water. Use of alternate energy sources, growing energy needs, case studies. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

Unit III - BIODIVERSITY AND ITS CONSERVATION

Levels of biological diversity - genetic, species and ecosystem diversity. Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value. Biogeographical classification of India. Biodiversity patterns (global, National and local levels). Hot-spots of biodiversity. India as a mega-diversity nation. Endangered and endemic species of India. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Unit IV - ENVIRONMENTAL POLLUTION

Definition, causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Noise pollution. Nuclear hazards and human health risks. Solid waste management and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Case studies.

Unit V - SOCIAL ISSUES AND THE ENVIRONMENT

Concept of sustainability and sustainable development. Water conservation - Rain water harvesting, watershed management. Climate change, global warming, ozone layer depletion, acid rain and its impacts on human communities and agriculture. Environment Laws (Environment Protection Act, Air Act, Water Act, Wildlife Protection Act, Forest Conservation Act). International agreements (Montreal and Kyoto protocols). Resettlement and rehabilitation of project affected persons. Disaster management (floods, earthquake, cyclones and landslides). Environmental Movements (Chipko, Silent valley, Bishnois of Rajasthan). Environmental ethics: Role of Indian and other religions and cultures in environmental conservation. Environmental communication and public awareness, case studies (e.g., CNG vehicles in Delhi). Human population growth: Impacts on environment, human health and welfare.

11. Uberoi, N.K. 2005. Environmental Studies. Excel Books Publications, New Delhi.

Course Objectives

- Experiment the saponification and iodine value of lipids
- Estimate the reducing sugar, iodine content and iron content in the given food sample
- Determine the swelling ratio and extract release of meat
- Analyze the curcumin, gingerol, and fat content in the food commodities
- Discuss the nitrogen estimation by Kjeldhal nitrogen analyzer
- Analyze and detect the adulterants present in food.

Course Outcomes

1. Test the iodine content in iodized salt
2. Examine the saponification and iodine value of lipids
3. Analyze the fat, iron and reducing sugar in the given foods
4. Evaluate the swelling ratio and extract release of meat
5. Assess the curcumin and gingerol content in the spices
6. Calculate the nitrogen content by Kjeldhal analyzer

LIST OF EXPERIMENTS

1. Estimation of iodine value in lipids
2. Estimation of saponification value in lipids
3. Estimation of reducing sugars by Lane and Eynon's method
4. Estimation of Iodine content in iodized salt.
5. Estimation of total extractives in tea
6. Determine the swelling ratio and extract release
7. Estimation of fat in milk by Gerber's method
8. Estimation of curcumin in turmeric
9. Estimation of gingerol in ginger
10. Rapid detection of food adulterants
11. Demonstration of nitrogen estimation by Kjeldhal method

Course Objective

- Experiment the various flow measuring equipments involved in food industries.
- Determine the pressure drop at various columns
- Conduct experiment on heat exchanger and their applications in food industry.
- Evaluate the filtration efficiency using continuous rotary filtration
- Determine the heat transfer through composite wall
- Experiment the efficiency of filtration process.

Course Outcomes

1. Calculate the discharge coefficient of fluids at various conditions
2. Perform the experiment on flow of fluids
3. Assess the pressure drop across different columns
4. Demonstrate the heat transfer equipments and their performance.
5. Measure the efficiency of filtration process
6. Evaluate the heat transfer through composite wall

LIST OF EXPERIMENTS

1. Determination of coefficient of discharge of Venturi meter
2. Determination of coefficient of discharge of Orifice meter
3. Calibration of Rotameter
4. Determination of flow measurement and pressure drop in pipes
5. Pressure drop across packed column
6. Pressure drop across Fluidized bed columns
7. Heat transfer studies in a tubular heat exchanger (Parallel and counter flow)
8. Heat transfer studies in a plate heat exchanger (Parallel and counter flow)
9. Heat transfer studies of a shell and tube heat exchanger
10. Experiment on continuous rotary filtration
11. Heat transfer through composite wall

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Impart knowledge on principles of baking bread and cake
- Understand the steps involved in the production of biscuits and cookies
- Discuss the various types of sugar and flour based confectionary products
- Understand the working of equipments used in baking processes
- Outline the packaging materials and quality control systems applied in food industry
- Summarize the production standards and plant hygiene in baking and confectionary industry.

Course Outcomes (COs)

1. Discuss the rheology and chemistry of ingredients used in baking and confectionary
2. Outline the overall preparation process involved in the production of breads, cakes, biscuits and cookies
3. Assess the faults and remedies of baking processes
4. Understand the technique and methods involved in the various types of confectionary products
5. Illustrate the equipments employed for baking and confectionary
6. Choose the appropriate packaging materials and audit quality standards required for baking and confectionary

UNIT I BAKING PRINCIPLES AND BREAD & CAKE

Types of wheat, Dough rheology, Baking principles - Role of ingredients and its chemistry. Bread-Ingredients, additives - Varieties of bread. Methods of bread preparation – breads spoilage and remedies. Advantages and disadvantages of various methods of bread-making. cake- types of cakes - role of ingredients - cake mixing methods – Preparation. Fancy cakes and preparation–Bread, cake-faults and remedies.

UNIT II BISCUIT AND COOKIES

Biscuits and cookies - role of ingredients. Types of biscuit dough – Developed dough, soft dough, semi-sweet and enzyme modified dough - consistency of the dough and its importance. Production of biscuits and cookies. Selection and preparation of mould. Cookies classification - Quality control for biscuits and cookies. Faults and causes

UNIT III CONFECTIONERY PRODUCTS

Introduction - importance of sugar confectionery and flour confectionery. Ingredients used in confectionery. Role of chemical additives in confectionery. Cocoa products and its uses in confectionery. Types of confectionery products-chocolate boiled sweets, caramels toffees, fondants.

UNIT IV BAKERY EQUIPMENTS

Machineries for a bakery unit - Bulk handling of ingredients, Dough mixers, Dividers, rounding, sheeting, and laminating machines . Ovens and Slicers, Packaging materials and equipment.

UNIT V PACKAGING AND QUALITY CONTROL FOR BAKERY AND CONFECTIONERY PRODUCT

Packaging requirements and materials. Standards and regulations for bakery and confectionery products. Production standards and quality control - Good Manufacturing Practices (GMP) and other practices.

SUGGESTED READING

2. Clements, C. (2019).The Cook's Guide To Baking, Practical Handbook. South water.
3. Chakraverty, A. (2018). Post Harvest Technology of Cereals, Pulses and Oilseeds.3rd Edition. Oxford and IBH Publishing Co. Calcutta.

Course Objectives

- Impart knowledge on various concepts behind refrigeration of food
- Discuss the various aspects of cold storage
- Explain the overall attributes of air conditioning in food industries
- Describe food freezing and equipment involved..
- Illustrate the cold chain management in small and large scale refrigerators
- Understand the application of refrigeration and cold chain logistics in food industry.

Course Outcomes

1. Discuss refrigeration of food and its operational components.
2. Locate food refrigeration in plants, stores and logistics.
3. Recognize food freezing concepts and techniques.
4. Report food safety aspects of chilled foods and frozen foods.
5. Evaluate the cold storage and packaging of frozen perishable products.
6. Employ the cold chain management system in the food distribution sector.

UNIT I - PRINCIPLES OF REFRIGERATION

Refrigeration – Ton of refrigeration, refrigeration cycles, Vapour Compression and Vapour Absorption cycles, Refrigerants, characteristics of different refrigerants, net refrigerating effect - Components of a Refrigeration system: Compressor, condenser, Evaporator, Expansion valves piping and different controls.

UNIT II - COLD STORAGE

Insulation, properties of insulating materials, air diffusion equipment, Cold load estimation; prefabricated systems, walk-in-coolers, and Refrigerated container trucks: Freezer Storages, Freezer room Temperatures, Cooling towers: introduction, Construction and Working; Cold Storage practice, Stacking and handling of materials, Optimum temperatures of storage for different food materials.

UNIT III - AIR-CONDITIONING

Psychrometry, Psychrometric Processes, Simple Air Conditioning System –State and Mass Rate of Air. Evaporative, winter and All Year Air Conditioning Systems. Design Conditions. Load Calculation and Psychrometry of Air Conditioning Systems –Design of Air conditioning apparatus – Transmission and Distribution of Air. Selection of Air Conditioning Systems.

UNIT IV - FREEZING AND CHILLING OF FOODS

Freezing equipment, Freezing time, Freezing curve, Freezing rates, growth rate of ice crystals, crystal size and its effect of texture and quality of foods, Freezer types, Individual quick freezing. Cryogenic Freezing, Freezing practice as applied to different food sectors. Chilling equipment for liquid foods. Secondary refrigerants, Evaporative cooling and direct expansion techniques in chilling. Chilled food transport and retail cabinets - Basics of Chilled food microbiology, Packaging of Chilled foods.

UNIT V - COLD CHAIN MANAGEMENT

Supply chain system - Important Factors to consider- logistic supply- Protocols for Domestic, Sea and Air freight- Traceability and barcode – Product Temperature and Moisture monitoring- Refrigeration systems and Refrigerant types during field chilling, transportation via land, air and sea. Grocery stores and display cases, Home refrigerators - Cooling chain summary – Storage and packaging.

5. Dennis, C., and Stringer, M. (2008). Chilled Foods – A Comprehensive Guide Brown. 3rd Edition .Wood Head Publishing.

Course Objectives

- State the processing of major cereals like paddy, maize etc.
- Review the milling techniques of cereals and pulses.
- Outline the byproducts obtained during processing along with their uses.
- Understand the production of value added products from maize
- Impart knowledge on various aspects of milling of pulses
- Analyze the efficiency of milling yield of cereals and pulses.

Course Outcomes

1. Evaluate the basic composition and structural parts of food grains.
2. List the various methods used for drying of grains
3. Illustrate the techniques of rice, wheat and pulse milling
4. Prepare value added products from the byproducts obtained during milling
5. Assess the production, processing and preparation of value added products from maize
6. Demonstrate the equipments involved in the milling of pulses

UNIT I - PADDY PROCESSING

Structure and Composition of paddy – Cleaning of paddy - Pre Cleaners, -Paddy Parboiling Processes. Physico-chemical changes during parboiling – effect of parboiling on cooking qualities - Parboiling methods - Methods of grain drying- LSU, rotary, columnar, recirculatory dryers – Byproducts of paddy processing - Paddy husk and its uses as husk ash, activated carbon, furfural and other by products – Value added products - Flattened and Puffed Rice.

UNIT II - RICE MILLING

Rice milling flow chart - Modern RiceMilling equipments – paddy milling -Dehusking of paddy - Engelberg Huller, Under runner disc shellers, rubber roll sheller and Centrifugaldehusker- Paddy Separators – Satake and Schule Designs – Rice Polishers - Cone polishers and othertypes - Bran and Brokens separators - Rice mill yields and loss due to brokens at differentstages of milling – milling efficiency -Use of Rice Bran in Edible oil Industry.

UNIT III - WHEAT MILLING

Structure and composition of wheat – flow chart for wheat milling – milling process - equipments used in wheat milling – parboiling of wheat – bulgur wheat – products and byproducts of wheat.

UNIT IV - PROCESSING OF MAIZE/CORN

Structure and composition of maize – milling methods - Precleaning-cleaning equipment degermination and dehusking- Dry milling of maize – wet milling – flow chart- Products of milling – Flour – Semolina - Brewers' grits etc and their applications - Bran and Fibre separation - Gluten and Starch Separation - Equipment used - Starch conversion into other value added products – AcidHydrolysis, Enzyme Hydrolysis, Isomerization processes - Processing for Dextrose, MaltoDextrin and other products - Extraction and refining of Corn oil in brief.

UNIT V - MILLING OF PULSES

Structure and composition – need for pulse milling – Unit operations of pulse milling – domestic and commercial scale pulse milling methods – Dry and wet milling, CFTRI, CIAE, Jadavpur methods - Process flow chart – Pulse milling machineries - dehusking in Pulse Pearler - splitting of pulses in Pulse splitter - Mini dhal mill - working principle - advantages and disadvantages – pulse milling efficiency - Grinding of split pulses - pulse flour products - their applications and equipments used.

SUGGESTED READINGS

2. Chakraverty, A. (2018). Post Harvest Technology of Cereals, Pulses and Oilseeds. 3rd Edition Oxford and IBH Publishing Co, Calcutta.
3. Kulp, K., and Pante, P.J. (2000). Handbook of Cereal Science and Technology. 2nd edition. Mercel Dekker, USA.

Course Objectives

- Discuss the meat composition, structure, chemistry and microbial safety of meat
- Outline the various methods involved in the slaughtering and carcass processing of meat
- Summarize the variety of meat products, equipments employed and safety of meat processing plant
- Explain the overall processing of poultry meat and their products
- Review the processing of different marine based products.
- Summarize the quality standards in processing the meat, pou plant

Course Outcomes:

1. Enumerate the chemical composition, structure, color, flavor, and microbial safety of meat.
2. Outline the slaughtering, carcass processing methods and equipments used for processing meat.
3. Apply the technological ideas in preparation of various types of meat products and design of equipments used for processing meat.
4. Audit the HACCP and GMP of meat processing.
5. Evaluate the processing of poultry meat, meat products and egg products.
6. Assess the production, processing, spoilage, preservation and storage of marine products

UNIT I - CHEMISTRY AND MICROBIOLOGY OF MEAT

Meat composition from different sources; Definitions and measurements, Explanation of muscle structure and compositions and its modifiers, White and Red Meat, Description of animal fat and its modifiers, description of bone and its modifiers; Post mortem muscle chemistry, Meat colour, flavors of meat products, meat microbiology and safety.

UNIT II - SLAUGHTERING AND CARCASS PROCESSING

Modern abattoirs and some features, Ante mortem handling and welfare of animals, design of handling facilities, Hoisting rail and traveling pulley system and stunning methods, stunning pen, slaughtering equipment, Washing area, Sticking, bleeding, dressing, Beef/Sheep and Pig Dressing operations, Offal handling and inspection, Inedible by products: Carcass processing equipment, Operational factors affecting meat quality, effects of processing on meat tenderization; meat processing equipment, electrical gadgets and manual gadgets; Typical lay outs.

UNIT III - MEAT PRODUCTS

Canned meat, Frozen meat, Cooked and Refrigerated meat, Dried and preserved meat, Cured meat, Prepared meat products, Production methods for Intermediate moisture and dried meat products, Different kinds of sausages – Equipment used for all the process operations; Meat plant hygiene, Good manufacturing practice and HACCP.

UNIT IV - PROCESSING OF POULTRY PRODUCTS

Poultry industry in India, measuring the yields and quality characteristics of poultry products, microbiology of poultry meat, spoilage factors; Plant sanitation; Poultry meat processing operations in detail along with equipment used – De feathering, bleeding, Scalding etc.; Packaging of poultry products, refrigerated storage of poultry meat, by products – eggs, egg products, Whole egg powder, Egg yolk products, their manufacture, packaging and storage.

UNIT V - FISH AND OTHER MARINE PRODUCTS PROCESSING

Commercially important marine products from India, Basic biochemistry, spoilage factors of fish, field refrigeration and icing practice, merits and demerits, Use of dry ice and liquid nitrogen as preservation elements, use of Refrigerated Sea Water (RSW) for preservation, Changes during storage in RSW and CSW; Freeze preservation; freezing of prawn and shrimp, weighing, filling and glazing, Individual quick freezing - relative merits and demerits, Canning operations, Salting and drying of fish, pickling and preparation of fish protein concentrate and fish oil.

SUGGESTED READINGS

2. Guerrero, S., and Hui, Y.H. (2010). Handbook of Poultry Science Technology. 1st Edition Volume-1& 2. Wiley Publishing.
3. Balachandran, K.K. (2002). Post Harvest Technology of Fish and Fish Products. Daya Publishing House, New Delhi.

Course Objectives

- Describe the processing of fruits and vegetables by chemical methods.
- Outline the preservation of fruits and vegetables by drying and dehydration.
- Discuss the various unit operations and fermented processes involved in fruits and vegetables.
- Illustrate the canning and bottling operations in fruits and vegetables.
- State the set of parameters influencing the aseptic processing of fruit juices.
- Analyze the applications of the fruits and vegetables processing in food industry

Course Outcomes

1. Relate the nutritionally important fruits and vegetables.
2. Demonstrate the manufacture, preservation and packaging of jam, jelly, marmalade, pickles and preserves
3. Explain the different types of driers involved in the production of dehydrated fruit products.
4. Illustrate the minimal processing and fermentation methods of fruits and vegetables.
5. Enumerate the canning and bottling operations of fruits and vegetables.
6. Discuss the aseptic processing, packaging and storage of fruit juices.

UNIT I – PROCESSING BY CHEMICAL METHOD

Importance and scope of fruit and vegetables preservation. Nutritive value, nutraceutical properties – Definition and need for value addition. Methods of fruit and vegetable preservation - Processing using sugar – Preparation of jam, jelly, marmalade, squash, RTS, crush, nectar, cordial, fruit bar, preserves, candies and carbonated fruit beverages. Processing using salt – Brining - Preparation of pickles, chutney and sauces, ketchup. Machineries involved in processing of fruits and vegetables products.

UNIT II - PRESERVATION BY DRYING AND DEHYDRATION

Drying and dehydration -Types of driers - Solar, cabinet, fluidized bed drier, spouted bed drier, heat pump drier, vacuum drier and freeze drier. Preparation of product. Changes during drying and dehydration. Problems related to storage of dried and dehydrated products

UNIT III - MINIMAL PROCESSING AND FERMENTATION

Primary processing and pack house handling of fruits and vegetables; Peeling, slicing, cubing, cutting and other size reduction operations for fruits and vegetables, Minimal Processing of Fruits and Vegetables. Preservation by fermentation - wine, vinegar, cider and sauerkraut.

UNIT IV- CANNING AND BOTTLING

Canning - principles, types of cans– preparation of canned products - packing of canned products - spoilage of canned foods. Bottling of fruit and vegetable. Precautions in canning operations. General considerations in establishing a commercial fruit and vegetable cannery, machineries involved in canning and bottling unit.

UNIT V - ASEPTIC PROCESSING

Aseptic processing and Bulk packing of Fruit juice concentrates. Aseptic heat exchangers for sterilizing and concentrating the product. Aseptic fillers. Tetra pack for small quantities, Dole system and Scholle system for bulk storage in Bag and Boxes and Bag & Drums. Storage of Aseptically packed products.

SUGGESTED READINGS

Instruction Hours/week: L:0 T:0 P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

- Determine the optimized pH and temperature of amylase enzyme
- Estimate the time study and enzyme kinetics of the amylase enzyme
- Determine the optimized pH and temperature of Protease enzyme
- Estimate the time study and enzyme kinetics of the protease enzyme
- Demonstrate the enzyme immobilization method using various enzymes
- Understand the functional characteristics of the enzymes

Course Outcome

1. Recognize the various applications of enzymes in food processing
2. Infer the importance of each of the factors that affect enzyme activity
3. Apply the same to maximize enzyme action
4. Analyze when a problem arises and give a suitable and logical solution
5. Evaluate enzymes from different sources and select the right one depending on the type of food / condition
6. Evaluate and characterize the new sources of enzymes

List of experiments

1. Characterization of enzyme amylases – optimization of pH
2. Characterization of enzyme amylases – optimization of temperature
3. Characterization of enzyme amylases – varying enzyme
4. Characterization of enzyme amylases – time study / enzyme kinetics
5. Characterization of enzyme proteases – optimization of pH
6. Characterization of enzyme proteases – optimization of temperature
7. Characterization of enzyme proteases – varying enzyme
8. Characterization of enzyme proteases – time study / enzyme kinetics
9. Characterization of enzyme substrate ratio varying substrate
10. Studies on enzyme immobilization

Course Objective

- List the ingredients needed for preparations of food products.
- Calculate the quantity of ingredients for preparations of food products
- Prepare different types of flour based products
- Develop products from fruits and vegetables
- Perform cost analysis for the developed products
- Experiment the sensory analysis for the prepared value added product for consumer acceptance.

Course Outcome

1. Choose the appropriate ingredients for preparing food products
2. Measure and calculate the quantity of ingredients for preparations of food products.
3. Formulate the ingredients for preparing variety of flour based bakery products
4. Formulate the ingredients for preparing variety of fruit and vegetable based products
5. Analyze the cost of the developed products
6. Conduct sensory tests for the developed products

List of Experiments:

1. Preparation of RTS beverage
2. Preparation of squash
3. Preparation of nectar
4. Preparation of cordial
5. Preparation of Jam and marmalades
6. Preparation of ketchup and tomato sauce
7. Preparation of basic bread
8. Preparation of butter scotch cookies
9. Preparation of salt and sweet biscuits
10. Preparation of sponge, pound and angel cake

Instruction Hours/week: L:0 T:0 P:1**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course objective**

Develop number of value added products from the waste generated in the grain, oil, fruit and vegetable processing industries

Course Outcome

Design, formulate and produce the value added products from the industrial wastes of grain, oil, fruit and vegetable processing sectors

LIST OF ACTIVITIES

1. Waste utilization from fruits and vegetable processing sector
2. Waste utilization from oil processing industries
3. Waste utilization from grains processing industries

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External:60 Total:100**End Semester Exam:3 Hours****Course Objectives**

- Explain the basic concepts of food additives
- Outline the types, chemical properties, levels of addition and toxicity of acidulants
- Discuss the types, chemical properties, levels of addition and toxicity of humectants
- Outline the types, chemical properties, levels of addition and toxicity of fat substitutes and replacers
- Summarize the types, chemical properties, levels of addition and toxicity of sweeteners, chelating agents, antibrowning agents and nutritional additives
- Analyze the food additives for their quality standards and safety in foods.

Course Outcomes

1. Report the classification, safety levels and toxicity of food additives
2. List the properties, levels of addition and toxicity data of various food additives.
3. Illustrate the importance of additives in maintaining or improving food quality.
4. Understand the level of addition of preservatives within the permissible limits.
5. Apply the principles of food additives to study the toxicity
6. Identify and design newer products, with better quality using additives which are economical and safe.

UNIT I - INTRODUCTION

Food additives - definition and classification, food safety levels as per the specifications, safety evaluation of additives – determination of acute and chronic toxicity - NOEL, ADI, LD-50 value, PFA regulations, GRAS status.

UNIT II - ACIDULANTS

Types, chemical properties, levels of additions in individual products, toxicity data of Acidulants – Preservatives – Emulsifiers and gums – Antioxidants.

UNIT III - HUMECTANTS

Types, chemical properties, levels of additions in individual products, toxicity data of Dough conditioners - flour improvers – Humectants

UNIT IV –COLORANTS, FLAVORANTS, FAT SUBSTITUTES AND REPLACERS

Types, chemical properties, levels of additions in individual products, toxicity data of Colourants – Natural and artificial, Flavourants, Flavour enhancers, Fat substitutes and replacers.

UNIT V - NUTRITIONAL ADDITIVES

Types, chemical properties, levels of additions in individual products, toxicity data of Sweeteners – Natural and synthetic, Chelating agents, antibrowning agents, Nutritional additives.

SUGGESTED READINGS

1. Cheung, P.C.K., and Mehta, B.M. (2015). Handbook of Food Chemistry. 1st Edition Springer-Verlag Berlin Heidelberg.
2. Velisek, J. (2014). The Chemistry of Food. 1st Edition .Wiley-Blackwell Publishing.
3. Smith, J., and Shum, L.H. (2011). Food Additives Data Book. 2nd Edition Wiley-Blackwell Publishing.
4. Brannen, A.L., Davidson, P.M., Salminen, S., and Thorngate, J.H. (2002). Food additives. 2nd Edition, Revised and Expanded. Marcel Dekker Inc. USA.

Course Objectives

- State the functions, responsibilities and concepts of various food regulatory bodies
- Define the overall functions and responsibilities of food authority of India
- Describe the need, limitations and standards for labeling of various food products
- Outline the importance and implementation of HACCP in food industries
- Review the safety, regulations and guidelines of packing water
- Summarize the microbiological safety guidelines from the farm to fork

Course Outcomes

1. Express the functions, responsibilities and concepts of various food regulatory bodies
2. Report the overall functions and responsibilities of food authority of India
3. List the overall requirements needed for labeling of various food products
4. Understand the implement of HACCP system in the food industries
5. Assess the safety, regulations and guidelines of packing water
6. Review the US and EU guidelines and standards governing the food safety and quality

UNIT I - Food Regulations

World Trade order – Functioning and responsibilities of the WTO – Codex Alimentarius – History, operations of Codex alimentarius, Responsibilities – Codex standards and Maximum residue limits – Current Issues under consideration – SPS (Sanitary and phytosanitary measures) agreement. World Health Organisation – History and mandate – Operations and responsibilities – ICGFI – Functions and responsibilities. Concept of Six Sigma

UNIT II - Food Authority In India

Food safety and Standards Act – organizational chart – role of individual authority – principles to be followed – Provisions as to articles of food – imported items – Responsibilities of the food business operator – Liability of manufacturers, packers, wholesalers, distributors and sellers – Enforcement of the act – Licensing and registration of food business – Food safety officer and their powers – Analysis of food – regulations regarding labs involved in food analysis – Offences and penalties – Adjudication and food safety appellate tribunal – Laws relating to Food Processing Industries in India - FPO, MMPO, PFA, AGMARK, Essential Commodities Act, BIS.

UNIT III - Food Labeling

Need for labeling – Developing labeling standards at the world level –Limitations of labeling safety issues – Labeling regarding methods of processing – Irradiated products –Products derived from modern biotechnology – organic produce - Genetically modified foods – EU rules on nutritional labeling – US rules on nutritional labeling – Health claims – Approach of US and EU

UNIT IV - Microbiological Food Safety

Concept of HACCP – Assembling the team – Product description – Describing the product's intended use – Establishing a process flow diagram – on site confirmation - Listing potential hazards and control measures - Determination of critical points – decision tree for CCPs- Establishing monitoring procedures- establishing corrective actions – establishing verification Procedures

UNIT V - Safety Aspects of Water

Safety aspects of drinking water (microbiological and chemical)- the epidemiological triangle diseases caused by drinking of contaminated water , bottled water – setting of guideline values (microbiological and chemical) – risks and advantages of chlorination of water-Bottled water –origin of water- nutritional and physiological aspect – safety aspects – microbiological and chemical quality –Regulations for bottled water – EU, US and India

SUGGESTED READINGS

3. Fortin, N.D. (2016). Food Regulation. 2nd Edition .Wiley.
4. Shaw, I.C. (2018). Food Safety: The science of keeping food safe. 2nd Edition .Wiley- Blackwell Publishing..
5. Mariott, N.G., Schilling, M.W., and Gravani, R.B., (2018). Principles of Food Sanitation. 6th Edition.Springer.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:100 External:-Total:100****End Semester Exam:3 Hours****Course Objectives**

- Review the physico-chemical and functional properties of milk constituents.
- Explain the construction and working of dairy processing equipments
- Summarize the process involved in packaging and storage of milk.
- Outline the production of milk and milk based products.
- Study working principle and construction of equipments like spray drier, drum drier
- Develop the value added dairy products with the help of above technologies

Course Outcomes

1. Infer the physical, chemical and functional properties of milk.
2. Perform the qualitative tests on milk quality.
3. List the dairy processing equipments for specific applications.
4. Illustrate the processes involved in packaging and storage of milk.
5. Understand the processes involved in the production of various types of fermented milk products.
6. Prepare the different types of dehydrated milk products.

UNIT I - DAIRY CHEMISTRY AND MICROBIOLOGY

Introduction - Basic dairy terminology - milk as raw material – composition - nutritive value - Physico-chemical constituents of milk and its constituents – contaminants - microbiology of milk- milk collection - cooling and milk transport - milk reception -Quality control tests - applications of enzymes in dairy industry.

UNIT II - DAIRY PROCESSING AND EQUIPMENT'S

Milk processing equipment – filtration/clarification – Pasteurization – HTST – LTLT - UHT methods - storage tanks - Cream separating Centrifuges - Homogenization – theory - working principle of homogenizers – homogenization efficiency - cream separation – principles – gravity and centrifugal separation – centrifugal separator – parts – construction and working principle – separation efficiency.

UNIT III - BOTTLE, CAN WASHING AND FILLING EQUIPMENT'S

Plant piping – Pumps - Bottle washers- and cappers- can washers-types of can washers-care and maintenance-factors affecting washing operation – Fillers - types of fillers-pouch filling form fill seal machines - aseptic filling - cleaning and sanitization - CIP cleaning- types of CIP systems - Energy use

in Dairy plant - sources of energy - cost of energy - Control of energy losses and Energy conservation.

UNIT IV - MILK PRODUCT PROCESSING

Butter – method of manufacture – theory of churning - operation of butter churn – over run— batch and continuous methods of butter making. Ghee – methods of manufacture - Cheese – classification – cheddar and cottage cheese - equipment's – cheese vats and press-construction details. Ice cream - ingredients – preparation of ice cream mix - freezing – calculation of freezing point and refrigeration - batch and continuous freezers – Special milks - Quality aspects of dairy products.

UNIT V - FERMENTED AND DEHYDRATED DAIRY PRODUCTS

Fermented products – Yoghurt – Curd – cultured butter milk Bulgarian butter milk – Kefir – paneer - acidophilus milk etc. - Concept of Probiotics and prebiotic foods – Vacuum Evaporators - drying of milk - drum drier and spray drier - components - construction and working principles.

SUGGESTED READINGS

Instruction Hours/week: L:0 T:0 P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

- List the ingredients needed for preparations of food products.
- Calculate the quantity of ingredients for preparations of food products
- Prepare different types of milk based products
- Explain the production of milk powder using the spray drier
- Perform cost analysis of the developed products
- Experiment the sensory analysis for consumer acceptance of the prepared products

Course Outcome

1. Choose the appropriate ingredients for preparing food products
2. Measure and calculate the quantity of ingredients for preparations of food products.
3. Formulate the ingredients for preparing a variety of milk based products
4. Apply the principle of spray drying to develop value added products from milk
5. Analyze the cost of the developed products
6. Conduct sensory tests for the developed products

List of Experiments

1. Preparation of khoa, chana and paneer
2. Preparation of Gulab Jamun
3. Preparation of Rasagulla
4. Preparation of Sandesh and peda
5. Preparation of Kalakhand
6. Preparation of shrikand
7. Preparation of butter and ghee
8. Preparation of chikki
9. Preparation of milk beverage
10. Studies on preparation of milk powder using spray drier

Instruction Hours/week: L:0 T:0 P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Explain the Chemistry of the additives added to food
- State the importance of additives in maintaining or improving food quality
- Understand newer additives with improved safety standards.
- Investigate the properties of toxicity data of various food additives.
- Use food additives in food industries
- Experiment the presence and recommended level of additives in food products.

Course Outcomes

1. Report the classification, safety levels and toxicity of food additives
2. List the properties, levels of addition and toxicity data of various food additives.
3. Illustrate the importance of additives in maintaining or improving food quality.
4. Examine the Adulterants present in the solid and Liquid food.
5. Apply the principles of food additives to study the toxicity
6. List the different types of additives which are safe and economically benefit.

List of Experiments

1. Estimation of Sulphur-Di-Oxide
2. Estimation of Sodium Benzoate
3. Estimation of Sorbic Acid
4. Estimation of Butylated hydroxyl toluene
5. Estimation of Propyl Gallate
6. Determination of Saccharin
7. Estimation of capsacin
8. Estimation of salt in pickled products
9. Identification of adulterants in solid foods
10. Identification of adulterants in liquid foods

Course Objectives:

- To equip the students for effective technical presentation
- To improve body language and posture for effective public speaking.

Course Outcomes:

1. To get familiarize in the teaching presentation skills.
2. To gain confidence in the teaching process.

During the seminar session, each student is expected to prepare and present a topic on food technology and its allied sectors, for duration of about 8 to 10 minutes. In a week, one hour will be allotted to present seminars. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in presentation skills and facing the interviews.

18BTFT701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT 3H-3C**AND ENTREPRENEURSHIP DEVELOPMENT****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:100 External:-Total:100****End Semester Exam:3 Hours****Course Objectives:**

- Practice the students to create an awareness on Engineering Ethics
- Incorporate Moral and Social Values and Loyalty
- Appreciate the rights of other
- Motivate the leadership skills
- Train to become an entrepreneur
- Develop the management skills

Course Outcomes:

1. Explain the engineering ethics
2. Outline the Moral and Social Values and Loyalty
3. Justify the rights of other
4. Illustrate the values of leadership skills
5. Assess the skills of entrepreneur
6. Discuss the management skills

UNIT I ENGINEERING ETHICS

Senses of 'Engineering Ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT II FACTORS OF CHANGES

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT III HISTORICAL DEVELOPMENT, PLANNING, ORGANISING

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives –

Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart

UNIT IV DIRECTING AND CONTROLLING

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT V ENTREPRENEURSHIP AND MOTIVATION

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

SUGGESTED READINGS

1. Sharma, S. Entrepreneurship Development. PHI Learning Pvt. Ltd. 2016.
2. Charles E Harris and Michael J Rabins. Engineering Ethics – Concepts and Cases. Wadsworth Thompson, Cengage Learning. New Delhi, 2013.
3. Whitebeck C. Ethics in Engineering research and Practice. Cambridge University Press, 2nd Edition, 2011.
4. Harold Kooritz and Heinz Weihrich. Essentials of Management. Tata McGraw Hill, New Delhi, 2010.
5. Khanka S.S. Entrepreneurial Development. S. Chand and Co. Ltd., New Delhi, 2006.

Course Objectives

- State the different specifications and processes involved in the design and development of food processing plant
- Define the processes involved in layout design
- Evaluate the projects and cost estimation of designing food plant
- Outline the product cost and plant overheads
- Perform profitability analysis in food processing industry.
- Analyze the overall application in preparing the plant layout and economical calculations

Course Outcomes

1. Design and construct the well equipped food processing plant for effective processing
2. List the start – to – end facilities, infrastructure, utilities, investments along with the government regulations and specifications for plant layout
3. Evaluate and estimate the capital investments and methods of cost estimation of designing food plants
4. Assess the overall production cost, profitability and factors involved in the cost estimation of products manufactured
5. Analyze the problems involved in deciding the level of manufacture of a food product
6. Develop own industry or plan turn-key projects based on the request from customers

UNIT I - Food Process Design Development

Technical feasibility survey of Food Industry, process development, Food Process flow sheets – Hygienic food process design - equipment design and specifications – Computed-aided process design – Principles of spread-sheet aided process design (Basic concepts only).

UNIT II - Plant Layout

Marketability of the product, availability of technology, raw materials, equipments, human resources, land and utilities, site characteristics, waste disposal, Government regulations and other legal restrictions, community factors and other factors affecting investment and production costs. Plant Layout based on process and product. Richard Muther's Simple Systematic Plant Layout.

UNIT III - Project Evaluation and Cost Estimation

Capital investments – fixed capital investments including land, building, equipments and utilities, installation costs (including equipments, instrumentation, piping, electrical installation and other utilities), working capital investments. Methods of Cost estimation – Cost Indices.

UNIT IV - Product Cost and Plant Overheads

Manufacturing costs – Direct production costs(including raw materials, human resources, maintenance and repair, operating supplies, power and other utilities, royalties, etc.). – Process Profitability - Application to a Food Processing plant e.g. Tomato processing- Administration, safety and other auxiliary services, payroll overheads, warehouse and storage facilities etc. Depreciation, Amortization and methods of determining the same. Introduction to Food Safety Management System.

UNIT V - Profitability Analysis

Return on original investment, interest rate of return, accounting for uncertainty and variations and future developments. Cash flow diagram and its importance – Optimization techniques – Linear and Dynamics programming, Optimization strategies.

2. Rudd, D.F., and Watson, C.C. (2013). Strategy of Process Engineering. John Wiley & Sons Inc.
3. Maroulis, Z.B. and Saravacos, G.D. (2003). Food Process Design. Marcel Dekker Inc,.
4. Towler, G. and Sinnott, R.K. (2012). Chemical Engineering design principles, practice and Economics of Plant and Processe. 2nd Edition. Elsevier.

Course Objectives

- Describe the functions of packaging along with the influence of various factors on food.
- Explain various factors of different packaging materials include metallic cans and glass
- State the types, production and applications of paper, paperboards and polymers in food packaging
- Summarize the filling, sealing, labeling, barcodes and printing on packages along with the legislative requirements
- Outline the various types of innovative packaging technologies to improve the shelf life of the products
- Develop knowledge on packaging with modern technologies for tracking the quality standards of food

Course Outcomes

1. Discuss the need and functions of packaging as a solution to various factors affecting food.
2. Estimate the shelf life of food packed in different types of packaging materials
3. Explain different packaging materials, their manufacturing process and equipment involved.
4. Compile various closures and sealing mechanisms for different packaging materials.
5. Select different printing and labeling methods with legislative requirements.
6. Devise innovations in food packaging and their applications.

UNIT I - Introduction to Food Packaging

Functions of packaging, Effect of environmental factors - light, Oxygen, Moisture, Temperature, mechanical forces and biological factors on quality of food. Estimation of shelf life. General Approach, analysis of storage requirement, accelerated storage studies: Vacuum and Inert Gas Packaging: Tests on packaging materials, Mechanical strength (Tension, notch and tearing strengths), Gas and water vapour transmission rates.

UNIT II - Metal Cans As Packaging

Metallic can types - Tin cans and Aluminum cans. Specialty of Open top sanitary cans, Lacquers and their use, Three piece cans and Two piece cans, Aerosol Cans, Basics of Canning operations – Can Reformer, Flanger, Seaming, Can closures. Glass jars and Bottles in food packaging, Design features and applications, Sterilization of bottles.

UNIT III - Flexible Films Packaging

Formation of Films and pouches, Plastics used and their Specific applications - Polyethylene (LDPE and HDPE), Cellulose, Polypropylene (PP), Polyesters, Polyvinylidene Chloride (PVDC - Diofan, Ixan and Saran), Polyvinyl chloride, Copolymers their applications. Co-extruded films and Laminates. Rigid and Semi rigid plastic packaging – fabrication methods – Thermo forming, Blow moulding, Injection moulding, Extrusion – Retort pouch packaging. Laminated Paper board Cartons, Fibre Board and Corrugated Card Board packaging and their applications.

UNIT IV - Filling and Sealing Operations for Various Types of Packages

Closing and sealing of rigid plastic containers. Filling and sealing of Flexible plastic containers, Seal types-Bead seals, Lap Seals and Fin seals –Differences and advantages, Hot wire sealing, hot bar sealing and impulse sealing – differences and relative advantages, Form fill Seal equipment: Printing on packages, Bar codes, Nutrition labeling and legislative requirements. Filling and Sealing of pouches, pouch from fill seal machines.

UNIT V - Innovations in Food Packaging

Aseptic Packaging. Active packaging, Moisture control, CO₂ and Oxygen scavenging. Modified atmosphere packaging – principles, applications. Permeability of gases in packs. Antimicrobial Packaging, Edible packaging films and coating. Packaging for non-thermal food processing. Intelligent Packaging – Time-temperature indicators, RFID, Tamper evident packaging.

Instruction Hours/week: L:0 T:0 P:4**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Determine the quality of different types of packaging materials
- Determine the migration characteristics of the various packaging materials
- Investigate the water vapour transmission rate of packaging materials
- Develop skills related to basic tests on food packaging materials
- Infer the basics for operating the different types of packaging equipments
- Analyze the selection of suitable packaging material for specific foods based on the functional properties of the material

Course Outcomes

1. Test the quality of different types of packaging materials
2. Experiment the migration characteristics of the given packaging materials
3. Conduct test on water vapour transmission rate of packaging materials
4. Examine the water absorption capacity of paper and paperboards
5. Illustrate the working of different packaging equipments
6. Demonstrate packaging requirements and their selection for raw and processed foods

List of Experiments

1. Measurement of thickness of packaging materials
2. Measurement of basic weight and grammage of paper and paperboards
3. Measurement of water absorption of paper and paper boards (Cobb Test)
4. Identification of plastic films
5. Study of vacuum packaging machine, bottle filling machine and form-fill-seal machine
6. Determination of lacquer integrity test
7. Determination of seal integrity, ink adhesion
8. Measurement of grease resistance of papers
9. Determination of the migration characteristics of the given material – acid and alcohol as stimulant
10. Shelf-life testing of edible coated food materials
11. Determination of the water vapor Transmission rate of the given packaging material.

Instruction Hours/week: L:0 T:0 P:6**Marks: Internal:40 External:60 Total:100
End Semester Exam:3 Hours**

The students will be directed to do a project work which will be the Phase I if their main project work that will be performed in the eighth semester during. Their projects will be evaluated for forty percentages in Continuous Internal Assessment and sixty percentages in End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student after the completion of the project work.

Instruction Hours/week: L:0 T:0 P:24**Marks: Internal:120 External:180 Total:300****End Semester Exam:3 Hours**

The students will be performing their main project work as a continuation of the Phase I project completed in the seventh semester. Their projects will be evaluated for a total of three hundred marks, out of which one twenty marks will be for Continuous Internal Assessment and one hundred and eighty marks for End Semester Examination.

End Semester Examination evaluation will be based on the report submitted and presentation of his/her work by the student to a panel of evaluators after the completion of the project work.

PROFESSIONAL ELECTIVES

B.TECH FOOD TECHNOLOGY

2018-2019

18BTFT5E01

FOOD PRESERVATION PRINCIPLES

Semester-V

3H-3C

Instruction Hours/week: L:3 T:0 P:0

Marks: Internal:40 External:60 Total:100

End Semester Exam:3 Hours

Course Objective

- Understand the principle and different aspects of canning
- Explain the importance of water activity and temperature in food preservation.
- Understand the methods of fermentation, hurdle technology, minimal processing and non-thermal techniques in food preservation
- Discuss the ionizing radiation, role of preservatives and lactic acid bacteria in food preservation
- Outline the role of packaging materials in food preservation.
- Summarize the functional characteristics of various preservation techniques

Course Outcomes (COs)

1. Infer the principle and thermal process calculations involved in food canning operation.
2. Understand the significance of food preservation
3. Acquire knowledge on the principles of preservation techniques.
4. Carry out the preservation of foods by ionizing radiation.
5. Relate the different types of packaging and Packaging materials.
6. Discuss the various food preservatives and their techniques

UNIT I Introduction

Introduction to food preservation – objectives and techniques of food preservation canning: Preservation principle of canning of food items, thermal process time calculations for canned foods, spoilage in canned foods

UNIT II Water activity

Water activity of food and its significance in food preservation; dehydration and drying of food items; IMF; Low temperature preservation: cold storage, cold chain, freezing (including cryogenic freezing)

UNIT III Preservation by fermentation

Preservation by fermentation: curing and pickling; Hurdle technology, Non-thermal (e.g. high pressure processing) and minimal processing technologies

UNIT IV Ionizing radiation

Ionization radiation; Use of preservative in foods: chemical preservative, biopreservatives,

antibiotics, lactic acid bacteria

UNITV-FOOD PACKAGING

Basic packaging materials, types of packaging, packaging design, packaging for different types of foods, retort pouch packing, costs of packaging and recycling of materials

SUGGESTED READINGS

1. Subbulakshmi, G., and Udipi, A.S. (2006). Food Processing and Preservation. 1st Edition New Age Publications.
2. Hui, Y.H. (2015). Handbook of Vegetable Preservation and Processing. 2nd Edition. Marcel Dekker.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

- Understand the role of ingredients in beverages.
- Discuss the processes involved in the production of carbonated beverages
- Explain the overall processes, packaging techniques and water used in the production of non-carbonated beverages.
- Understand the complete processes employed in the production of alcoholic beverages.
- Discuss the sanitation, quality control and regulatory measures followed in beverage processing industries.
- Develop knowledge on preparation of value added beverages.

Course Outcome

1. Outline the ingredients employed in the beverage production
2. Illustrate the overall processes in the carbonated beverage production
3. Relate the processes and the type of water used in the production of non-carbonated beverages
4. Recommend the packaging materials suitable for the packing of non-carbonated beverages
5. Infer the steps and methodologies employed in the production of alcoholic beverages.
6. Summarize the sanitation, quality control and regulatory measures mandated in the beverage processing industries.

UNIT I Ingredients in Beverages

Beverage-definition--ingredients- water, quality evaluation and raw and processed water, bulk and intense sweeteners, water miscible and water dispersible flavouring agents, colours – natural and artificial, Micro and nano-emulsions of flavors and colors in beverages, preservatives, emulsifiers and stabilizers,

UNIT II Carbonated Beverages

Procedures- ingredients- preparation of Syrup making, carbonation of soft drinks. Carbonation equipments and machineries- -containers and closures. low-calorie and dry beverages; isotonic and sports drinks; Fruit based carbonated beverages, carbonated water

UNIT III Non-Carbonated Beverages

Beverages based on tea, coffee, cocoa, spices, plant extracts, herbs, nuts, dairy based beverages, RTS beverages, isotonic Beverages. Flash pasteurization, Canning and Aseptic Packaging of beverages.

bottled. Water; mineral water, natural spring water, flavored water.

UNIT IV Alcoholic Beverages

Alcoholic beverages- types, manufacture and quality evaluation; the role of yeast in beer and other alcoholic beverages, ale type beer, lager type beer, technology of brewing process, equipment's used for brewing and distillation, wine and related beverages, distilled spirits.

UNIT V Sanitation and Quality Control

Quality control, Filling-inspection and quality controls-sanitation and hygiene in beverage industry-Quality of water used in beverages threshold limits of ingredients. FSSAI, EFSA and FDA regulations

SUGGESTED READINGS

1. Jagan,L., Rao, M., and Ramalakshmi, K. (2011). Recent trend in Soft beverages. Woodhead Publishing India Pvt Ltd.
2. Boulton, Christopher., and Quain, D. (2008). Brewing yeast and fermentation. John Wiley & Sons.
3. Hui, Yiu, H. (2004). Handbook of food and beverage fermentation technology. Vol. 134. CRC Press.

Course Objectives

- Discuss the principles, applications and effect on foods of high pressure processing
- Understand the principle, types, effects and limitations of radiation processing of foods
- Explain the complete processes of osmotic dehydration of foods
- Demonstrate the ohmic heating and ultrasound processing of foods
- Summarize the application of pulsed light and hurdle technology in food processing
- Understand the overall application of non thermal treatments in food processing and preservation

Course Outcomes

1. Illustrate the overall processes involved in the high pressure processing of foods
2. Outline the multiple aspects of radiation processing of foods
3. Assess the principle, mechanism, applications and limitations of osmotic dehydration of foods
4. Infer the application of ultrasound in processing and preservation of food
5. Discuss the basics, electrical properties and treatment of foods using ohmic heating technology
6. Understand the overall processes of pulsed light and hurdle technology in food processing

UNIT I - HIGH PRESSURE PROCESSING OF FOODS

Principles – applications to food systems – effect on quality – textural, nutritional and Microbiological quality – factors affecting the quality – modelling of high pressure processes – High Pressure Freezing, Principles and Applications

UNIT II - RADIATION PROCESSING OF FOODS

Principle, Types of radiation sources. Biological effects of irradiation, Irradiation of Foods– Gamma Irradiation, X-Ray Irradiation, UV Irradiation–Combined treatments. Applications and Limitations.

UNIT III - OSMOTIC DEHYDRATION OF FOODS

Principle – Mechanism of osmotic dehydration – Effect of process parameters on mass transfer – Methods to increase the rate of mass transfer – Applications – Limitations of osmotic Dehydration – Management of osmotic solutions

UNIT IV - OHMIC AND ULTRASOUND PROCESSING OF FOODS

Principle of ultrasound – Fundamentals – Ultrasound as a processing and preservation aid – Effect on properties of foods Basics of ohmic heating – Electrical conductivity - generic configurations- treatment of products.

UNIT V - PULSED LIGHT AND HURDLE TECHNOLOGY

Basics of hurdle technology – Mechanism Application to foods - Newer Chemical and Biochemical hurdles- organic acids – Plant derived antimicrobials – Antimicrobial enzymes – bacteriocins – chitin / chitosan (only one representative example for each group of chemical and biochemical hurdle).

UNIT V-Pulsed Electric Field Processing Of Foods

Principles – Mechanism of action – PEF treatment systems – Main processing parameters – PEF Technology – Equipments – Mechanism of microbial and enzyme inactivation- safety aspects– Processing of liquid foods using PEF – Process models – Comparison of High pressure processing and PEF – Enzymatic Inactivation by PEF, Examples – Microbiological and chemical safety of PEF foods

3. Gustavo, V., Canovas, B., Maria, S., Tapia, M., Tapia, S., Cano, P.M. (2004). Novel Food Processing Technologies (Food Science and Technology Series),CRC Press.

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External:60 Total:100**End Semester Exam:3 Hours****Course Objectives**

- Understand the basics of various techniques available for the analysis of a food commodity
- Discuss the various spectroscopy techniques applied in the compositional analysis of foods
- Explain the principles and classification of chromatography techniques
- Understand the different types of separation techniques
- Explain the chemically sensitive semiconductor devices and rapid microbiological methods
- Develop the knowledge on working mechanism of instruments utilized for food analysis

Course Outcomes

1. Apply the instrumental techniques learnt towards the analysis of food materials
2. Illustrate the spectroscopic techniques in the analysis of foods
3. Outline the principles and classification of chromatography techniques
4. Infer the various types of separation techniques
5. Discuss the different types of chemically sensitive semiconductor devices
6. Understand the application of rapid microbiological methods

UNIT 1- Concepts and Methods of food analysis

Concepts of food analysis; Rules and regulations of food analysis Principles and methodology involved in analysis of foods: Rheological analysis, textural profile analysis of foods Methods of analysis: Proximate constituents: Total fat, crude fiber, protein, moisture, minerals analysis; adulterations.

UNIT II- Principles and methodology involved in analytical techniques

Spectroscopy, ultraviolet visible, infrared spectroscopy atomic absorption and emission, fluorescence mass spectroscopy Food compositional analysis and applications in the food industry.

UNIT III- Chromatography

Principle of chromatography, classifications, (Adsorption, column, partition, gel-filtration, affinity, ion-exchange, size-exclusion method) gas-liquid, high performance liquid chromatography; Ion chromatography and others

UNIT IV- Separation techniques

Dialysis, electrophoresis, sedimentation, ultra-filtration, ultracentrifugation, iso-electric focusing.

UNIT V-Chemically sensitive semiconductor devices and Rapid microbiological methods

Chemically sensitive semiconductor devices: Solid-state sensors for pH, acidity, amperometric, potentiometric and; Acoustic sensors

Rapid microbiological methods: Overview, Conductance/impedance techniques for microbial assay; chemosensors, biosensors, immunosensors

SUGGESTED READINGS

1. Nieisen, S.S. (2017). Food Analysis Laboratory Manual, 3rd Edition. Springer, NY, USA.
2. Otles, S. (2009). Handbook of Food Analysis Instruments. 1st Edition. CRC Press, Boca Raton, FL, USA.
3. Sun, W.D. (2018). Modern Techniques for Food Authentication. Elsevier Inc., Burlington, MA, USA.
4. Nieisen, S.S. (2017). Food Analysis, 5th Edition. Kluwer Academic, New York, USA.

Course Objectives

- Discuss the principles and cultivation techniques of tropical fruits
- Explain the overall aspects of papaya, sapota and guava cultivation
- Understand the techniques of lime, orange and jack fruit cultivation
- Discuss the overall scenario of fruit cultivation in arid zone areas
- Explain the techniques involved in the cultivation of typical arid zone fruits
- Understand the process of post harvest handling and economics of fruit cultivation

Course Outcome

1. Illustrate the principles and cultivation of tropical fruits
2. Outline the techniques employed in the cultivation of papaya, sapota and guava cultivation
3. Discuss the various techniques and methodologies involved in the production of lime, orange and jack fruit cultivation
4. Infer the multiple aspects of fruit cultivation in arid zone areas
5. Summarize the overall steps involved in the production of typical arid zone areas
6. Discuss the post harvest handling and economics of fruit cultivation

UNIT I-Principles and cultivation of tropical fruits

Mango and banana-Scope and importance of tropical fruits cultivation – overview: global, national and regional levels – area, production and export potential– horticultural zones of India and Tamil Nadu with emphasis on tropical fruits- GAP- organic production - composition and uses – origin and distribution – species and cultivars - climate and soil requirements - species and varieties - cropping systems propagation techniques - planting systems and planting density - after care – training and pruning – water management, macro and micronutrient management, weed management – special horticultural techniques - use of plant growth regulators - production constraints - physiological disorders – post harvest handling - economics of production.

UNIT II-Tropical fruits- Papaya, sapota and guava

Composition and uses – origin and distribution – species and cultivars – climate and soil requirements, cropping systems- varieties - propagation techniques – planting systems and planting density - after care – training and pruning - water management, macro and micronutrient management, weed management – GAP - organic production - special horticultural techniques – sex forms and

pollination - use of plant growth regulators - production constraints - physiological disorders - pre and post-harvest handling - economics of production.

UNIT-III-Tropical fruits

Acid lime, sweet orange and jack fruit: Composition and uses – origin and distribution – species and cultivars – climate and soil requirements, cropping systems- varieties - production constraints - propagation techniques - planting systems and planting density - after care – training and pruning - water management, macro and micronutrient management, weed management - GAP - organic production - special horticultural techniques - use of plant growth regulators - physiological disorders - pre and post-harvest handling – economics of production.

UNIT IV-Arid zone fruits

Aonla, ber, pomegranate and date palm: Dryland horticulture – importance and scope in India and Tamil Nadu- distribution of arid and semi-arid zones in India and Tamil Nadu; Composition and uses – origin and distribution – species and cultivars - climate and soil requirements – varieties - cropping systems and intercropping – crops suitable for dry land system – spacing and planting patterns for rainfed horticultural crops- in situ grafting and budding techniques – alternative land use systems – mulching - soil and moisture conservation methods – chemical application – anti- transpirants – management of nutrients, water, weeds and problem soils – training and pruning methods – physiology of flowering – regulation of cropping – top working and rejuvenation – use of plant growth regulators – post harvest handling – economics of production.

UNIT V-Arid zone fruits - custard apple, jamun, bael, wood apple and manila tamarind

Composition and uses – origin and distribution – species and cultivars – climate and soil requirements – varieties - cropping systems and intercropping – crops suitable for dry land system – spacing and planting patterns for rain fed horticultural crops- in situ grafting and budding techniques – alternative land use systems – mulching – soil and moisture conservation methods – chemical application – anti-transpirants – management of nutrients, water, weeds and problem soils – training and pruning methods – physiology of flowering – crop regulation – top working and rejuvenation – use of plant growth regulators – post harvest handling – economics of production.

2. Chattopadhyay, T. K. (2012). A Text Book of Pomology (Vol 1-3). Kalyani Publishers. New Delhi.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Discuss the principles and cultivation techniques of tropical vegetable crops
- Explain the overall aspects of production of solanaceous vegetables and bhendi
- Understand the techniques involved in the production of bulbous and cucurbitaceous vegetable crops
- Discuss the overall scenario of fabaceous vegetables and greens
- Explain the techniques involved in the production of tuber crops
- Develop knowledge on pre and post harvest handling of vegetable crops

Course Outcome

1. Illustrate the principles and cultivation of tropical vegetable crops
2. Outline the techniques employed in the production bhendi and solanaceous vegetable crops
3. Discuss the various techniques and methodologies involved in the production of bulbous and cucurbitaceous vegetable crops
4. Infer the multiple aspects of greens and fabaceous vegetable production
5. Summarize the overall steps involved in the production of tuber crops
6. Discuss the chemicals, growth regulators and various constraints of vegetable crop production

UNIT I-Overview of vegetable cultivation

Area, production, world scenario, industrial importance, exports potential of tropical vegetable crops – institutions involved in vegetable crops research. Classification of vegetable crops – Effect of climate, soil, water and nutrients on vegetable crop production and their management–cropping systems. Vegetable production in nutrition garden, kitchen garden, truck garden, market garden, roof garden, floating garden – types of vegetable farming and contract farming- rice fallow cultivation, river bed cultivation, rain fed cultivation, organic farming – GAP in vegetable production – export standards of vegetables.

UNIT II-Solanaceous vegetables and bhendi

Composition and uses – area and production- climate and soil requirements – season-varieties and hybrids – seed rate- nursery practices-containerized transplant production and transplanting – preparation of field-spacing-planting systems-planting- water and weed management-nutrient requirement-fertilization-nutrient deficiencies physiological disorders- use of chemicals and growth

regulators-cropping systems-constraints in production-harvest yield crops. Tomato, brinjal, chilli and bhendi.

UNIT III-Bulbous and Cucurbitaceous vegetable crops

Composition and uses area and production- climate and soil requirements – season - varieties and hybrids -seed rate – nursery practices – containerized transplant production and transplanting- preparation of field - spacing - planting systems - planting– water and weed management – nutrient requirement – fertigation - nutrient deficiencies – physiological disorders – sex expression - use of chemicals and growth regulators - cropping systems – constraints in production - harvest – yield. Onion, ash gourd, pumpkin, bitter gourd, snake gourd, ribbed gourd, bottle gourd, watermelon, musk melon, coccinia, cucumber and gherkin.

UNIT IV-Fabaceous vegetable crops and greens

Composition and uses- origin and distribution- area and production- climate and soil requirements – season - varieties and hybrids - seed rate – preparation of field - spacing - planting systems - planting – water and weed management – nutrient requirement – fertigation - nutrient deficiencies – physiological disorders- use of chemicals and growth regulators - cropping systems – constraints in production harvest – yield. Cluster beans, cowpea, lab-lab, moringa, chekurmanis, palak, basella and amaranth.

UNIT V-Tuber crops

Composition and uses- origin and distribution- area and production- climate and soil requirements – season - varieties and hybrids - seed rate –preparation of field - nursery practices and transplanting – spacing - planting systems - planting – water and weed management – nutrient requirement – fertigation - nutrient deficiencies – physiological disorders- use of chemicals and growth regulators - cropping systems – - constraints in production – virus elimination in cassava- harvest – yield. Cassava, sweet potato, colocasia, vegetable coleus, amorphophallus, edible dioscorea, and yam bean.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Understand the basics of radiation chemistry.
- Explain the nature and features of radiation chemistry of food components.
- Discuss the principles and functions of microwave in food processing.
- Explain the characteristics and functions of infra red radiation in food processing.
- Discuss the principles of radio frequency heating.
- Understand the application of radiation in food processing and preservation

Course Outcomes

1. Outline the features of electromagnetic radiation and its basic chemistry.
2. Interpret the various concepts related to radiation chemistry of food components.
3. Infer the basic knowledge of microwaves and its application in food processing.
4. Discuss the functions of infra red radiation in food processing.
5. Understand the principles of radio frequency heating.
6. Explain the basics of preservation through radiation and food processing.

UNIT I Basics of Radiation Chemistry

Electromagnetic energy, ionizing radiation, Concept of radiation, dielectric properties, ionization and excitation, Radiation chemistry basics - primary chemical effects and secondary effects on food, G value, irradiation parameters, instruments for measuring radiation, effect of food irradiation and potentialities for radiation processing of foods.

UNIT II Radiation Chemistry of Food Components

Basics-carbohydrates, proteins, lipids, vitamins etc. Radiation effect on contaminating microorganisms like bacteria, viruses, yeasts and molds - Dosages of radiation for various plant foods and animal foods-meat and poultry, fruits, vegetables, spices, dairy products; Radiation equipment, salient features; Packaging of irradiated foods and safety issues.

UNIT III Microwaves In Food Processing

Microwave heating, nature of energy, batch and continuous ovens, microwave generators, wave guides, brief description of oven construction, application of microwave radiation and safety measures.

UNIT IV Infra Red Radiation

Absorption and scattering characteristics of various food materials, Polarization characteristics of IR radiation, Propagation of IR radiation in food stuffs. IR generators, applications, Relative merits and demerits.

UNIT V Radio Frequency Heating Principles

RF heating equipment, Advantages of Radio frequency heating of foods - Ultra violet radiation and its effect on microorganisms in foods - UV treatment application and equipment.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Understand the chemistry and technology of coffee.
- Explain the chemistry and technology of tea.
- Outline the basic views on the chemistry and technology of cocoa and its products.
- Understand the views on chemistry of major spices and its technology.
- Explain the chemistry and technology of minor spices.
- Understand the processing of spices and to check their quality standards

Course Outcomes

1. Understand the chemistry and manufacturing of coffee.
2. Outline the views on tea production and its chemistry.
3. Infer the basic knowledge on manufacturing of cocoa products and its chemistry.
4. Outline the manufacturing of major spices and its chemistry.
5. Discuss the production of minor spices and chemistry behind its production.
6. Explain the various opportunities of plantation products and spice processing.

UNIT I - Chemistry and Technology of Coffee

Coffee – Occurrence – chemical constituents– harvesting – fermentation of coffee beans – changes taking place during fermentation – drying – roasting –Process flow sheet for the manufacture of coffee powder – Instant coffee, technology – Chicory chemistry - Quality grading of coffee.

UNIT II - Chemistry and Technology of Tea

Occurrence – chemistry of constituents – harvesting – types of tea – green, oolong and CTC – Chemistry and technology of CTC tea – Manufacturing process – Green tea manufacture – Instant tea manufacture – Grading of tea.

UNIT III - Chemistry and Technology of Cocoa and Cocoa Products

Occurrence – Chemistry of the cocoa bean – changes taking place during fermentation of cocoa bean – Processing of cocoa bean – cocoa powder – cocoa liquor manufacture Chocolates – Types – Chemistry and technology of chocolate manufacture – Quality control of chocolates.

UNIT IV - Chemistry and Technology Of Major Spices

Pepper, Cardamom, ginger, Chilli, mint, and turmeric – Oleoresins and essential oils – Method of manufacture – Chemistry of the volatiles –Enzymatic synthesis of flavor identicals - Quality control of major spices.

UNIT V - Chemistry and Technology Of Minor Spices

Cumin, Coriander, Cinnamon, fenugreek, Garlic, Clove Vanilla, Coconut, Areca nut, Oil palm and Cashew - Oleoresins and essential oils –Method of manufacture – Chemistry of the volatiles – Quality control of minor spices

2. Chakraverty, A., Mujumdar, A.S., Raghavan, G.S.V., and Ramaswamy, H.S. (2010). Handbook of post-harvest technology – cereals, fruits, vegetables, tea and spices. (Special Indian Reprint). Marcel Dekker Inc. New York.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective**

- Discuss the regulations and laws of sanitation practices as control measures in different food industry.
- Understand the basic view on allergens to sanitation relationship.
- Explain the application of cleaning compounds and sanitizers as control measures.
- Outline the basic view on sanitary design and construction for food processing.
- Outline the good laboratory practices and HACCP role in sanitation.
- Develop knowledge on personal hygiene and overall quality management in food industries.

Course Outcomes (COs)

1. Understand the basics of sanitation practices in food industry.
2. Infer the basic knowledge on sanitation and its allergens relationship.
3. Interpret the control measures by using cleaning compounds and sanitizers.
4. Outline the sanitary processing and its construction in food processing.
5. Understand the concepts of HACCP and safety laboratory practices.
6. Summarize the basics of sanitation in various food industry.

UNIT I-Sanitation and food industry

Sanitation, sanitation laws, regulations, and guidelines, establishment of sanitary Practices. Foodborne bioterrorism: Potential risks and protection measures for bioterrorism The Relationship of microorganisms to sanitation: Microbial growth in relation to spoilage and food borne out breaks and its control measures.

UNIT II Relationship of allergens to sanitation

Food allergens and its control measures Food contamination sources: Sources of contamination, contamination foods, protection against contamination Personal hygiene and sanitary food handling: Personal hygiene, employee hygiene, sanitary food handling, role of employee supervision, employee responsibility.

UNIT III Cleaning compounds and sanitizers

Classification, selection of cleaning compounds and sanitizers, handling and storage, precautions Pest and Rodent Control: Insect infestation, cockroaches, insect destruction, rodents, birds, use of pesticides, integrated pest management

UNIT IV Sanitary design and construction for food processing

Site selection, site preparation, building construction considerations, processing and design considerations, pest control design, Waste product handling: solid waste and liquid waste management

UNIT V Role of HACCP in sanitation

Good manufacturing practices, current good manufacturing practices; Standard operating procedures, good laboratory practices.

SUGGESTED READING

1. Cramer, M.M. (2013). Food Plant Sanitation: Design, Maintenance, and Good Manufacturing Practices. CRC Press. Boca Raton. FL.F USA.
2. Mitchell, R., and Gu, J.D. (2010). Environmental Microbiology. 2nd Edition. John Wiley & Sons, Inc. Hoboken. New Jersey. USA.

Course objectives

- Understand the basic principles of food safety.
- Explain the food quality control and labeling.
- Discuss about the hazard analysis in food industry.
- Understand the consequences of contaminants and additives in food.
- Explain the causes and control measures of food allergy.
- Develop the knowledge on food industrial safety features and its analysis

Course outcomes

1. Outline the basic concepts of food safety in food industry.
2. Interpret the measures of food quality control and labeling of food products.
3. Infer the basics of HACCP and its analysis in food industry.
4. Discuss the various sources and consequences of contaminants and additives in food.
5. Outline the basics of food allergy.
6. Summarize the food industrial safety features and its hazard analysis.

UNIT I-FOOD SAFETY

Principles of food safety - Historical developments - indicators of risk - risk analysis – risk management - causes of major failure - clothing and personal hygiene - source of contamination -test for food safety.

UNIT II-QUALITY CONTROL AND FOOD LABELING

Introduction to quality control - definition. Aspects of quality - Quality control tools. Quality control chart - Quality factors in food - Nutritional labeling - Specification - Rules and Regulations - need for food plant sanitation -- cleaning and cleaners - Water supply- Good Manufacturing Practice.

UNIT III-HAZARD ANALYSIS - HACCP

HACCP - History definition - preliminary task - principles - hazard analysis - record keeping - HACCP implementation and maintenance. General principle of microbial risk – assessment - hazard determination - HACCP worksheet. Critical Control Point - identification of critical points in the process - Methods by which obstacles can be overcome.

UNIT IV-METAL CONTAMINANTS AND ADDITIVES

Metal contaminants- Sources of health hazard of metallic contaminants - Assessment of food safety - General and acute toxicity - Mutagenicity and carcinogenicity. Additives (Intention - direct) - Preservatives - antioxidants, sweeteners, flavours, colours, vitamins, stabilizers - indirect additives - organic residues - inorganic residues and contaminants.

UNIT V-FOOD ALLERGY

Food allergy, food intolerance, contaminants of processed foods, solvent residue, contaminants of smoked foods. Cleaner production in food industry-fruit and vegetable processing, sea food processing, brewing and wine processing.

SUGGESTED READINGS

2. Kumar, D.A., Kumar R. A., Sharma. (2019). HACCP: Application and Its Challenges. I K International Publishing House Pvt. Ltd.
3. Flanagan. S. (2014). Handbook of Food Allergen Detection and Control. Woodhead Publishing.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Discuss about the structure and properties of grains and cereals
- Summarize milling process and equipments used for rice
- Extrapolate the process of milling and separation of wheat and corn
- Outline the steps involved in milling of pulses along with equipments
- Explain about the properties of oil seed and their extraction and refining techniques
- Understand the application of milling process to enhance the efficiency of the milling yield

Course Outcomes

1. Understand the importance of grains and cereals along with storage
2. Understand the byproducts obtained from rice milling and its wastes.
3. Acquire detailed knowledge of Wheat and corn milling and its waste utilization
4. Understand the techniques and processes involved in pulse milling
5. Learn about the extraction, separation and refining of oil seed milling.
6. Emphasize the various processing methods involved in converting raw material into quality food products

UNIT I - Grain Properties

Importance of grains and cereals - definitions, Grain structure, physicochemical properties of grains and its nutritional value. Storage of cereal grains in relation to maintaining grain quality – types of storage structures.

UNIT II - Rice Milling

Rice milling flow sheet. Explanation of steps in milling operations - Cleaning, Parboiling- Physio – chemical changes during Parboiling and effects of qualities of rice. Methods of Parboiling, Milling, Shellers, Paddy Separator, Whitener, Polisher, Grader, and modern rice mill. Byproducts from rice milling and waste utilization.

UNIT III - Wheat Milling

Wheat milling flow sheet. Explanation of steps in milling, Cleaning Principles of Parboiling of wheat- Methods of Parboiling, Sifters, De-stoners, Roller milling – Break rolls, and reduction rolls, Sifting and purifying, plan sifters. Bran separation. Efficiency of milling process. By products from wheat milling and waste utilization. Milling of Corn: Corn–types. Dry and wet milling of corn– flow sheet and explanation, Byproducts from corn milling, corn starch, corn syrup, corn flakes. Waste utilization.

UNIT IV Pulse Milling

Importance of legumes. Milling and processing of Legumes- Methods of milling of pulses. Processing methods- dehulling losses and effect of dehulling on nutritive value. Grading methods, cooking quality.

UNIT V Oil Seed Milling

Oil seed processing- natural sources of oil. Physio-chemical properties, mechanical extraction – Oil processing machinery, solvent extraction, factors influencing extraction, types of solvents. Refining of oil, hydrogenation, winterization, changes during storage. Oil seed flour concentrates and isolate.

SUGGESTED READINGS

1. Delcour, A.J., Hosney R.C. (2010). Principles of Cereal Science and Technology. 3rd Edition. Amer Assn of Cereal Chemists.
2. Khader, Vijaya., and Vimala, V. (2007). Grain Quality and Processing, Agrotech Publishing. Udaipur.
3. Sahay, K.M., and Singh, K.K. (2015). Unit operations of Agricultural Processing. 2nd Edition. Vikas Publishing House. New Delhi.

Course Objectives

- Discuss about the nutritional value and future roles of legumes and oil seeds.
- Know the importance of milling at different scale of operations
- Explain the methods of cooking, nutritional value and significance of dhal and soyabean
- List the equipments involved in oil seed milling processes.
- Discuss about the use of oil seeds meals in protein products and byproducts
- Develop value added products from legumes and oil seeds

Course Outcomes

1. Understand the composition, nutritional values and classification of oil seeds and legumes
2. Identify the problems affecting milling and develop new methods in different scale of operations
3. Understand the importance of dhal, soyabean and their byproducts
4. Gain Knowledge about the principles and working of oil seed milling equipments
5. Interpret the use of higher protein products and their byproducts
6. Understand and identify the specific processing technologies used for legumes and oil seeds and the various products derived from these materials.

UNIT I

Present status and future prospects of legumes and oilseeds; Morphology of legumes and oilseeds; Classification and types of legumes and oilseeds Chemical composition, nutritional value and anti-nutritional compounds in legumes and oilseeds; Methods of removal of anti- nutritional compounds

UNIT II

Pulse milling: Home scale, cottage scale and modern milling methods, machines, milling quality, milling efficiency Factors affecting milling quality and quantity; Problems in dhal milling Industry

UNIT III

Nutritional changes during soaking and sprouting of pulses; Cooking quality of dhal, methods, factors affecting cooking of dhal; Quick cooking dhal, instant dhal; Soybean milk processing and value addition; Fermented products of legumes

UNIT IV

Oil seed milling: Ghanis, hydraulic presses, expellers, solvent extraction methods, machines, Milling quality, milling efficiency, factors affecting milling quality and quantity; Problems in oil milling industry;

Refining of oils: Degumming, neutralization, bleaching, filtration, deodorization, winterization and their principles and process controls; Hydrogenation of oils; New technologies in oilseed processing;

UNIT V

Utilization of oil seed meals for different food uses: High protein products like protein concentrates and isolates; By-products of pulse and oil milling and their value addition.

SUGGESTED READING

2. Chakraverty, A. (2008). Post Harvest Technology of Cereals, Pulses and Oilseeds, 3rd Edition. Oxford and IBH Publishing Co. Pvt. Ltd. New Delhi.
3. Sahay, K.M., and Singh, K.K. (2015). Unit Operations of Agricultural Processing. 2nd Edition. Vikas Publishing House Pvt. Ltd. Noida.

Course Objectives

- Know the need and importance of dairy industry
- Examine the adulterations, authentication and quality evaluation of milk
- Discuss about the various types of milk and their properties along with manufacturing process
- Discuss about the importance, manufacturing, packaging and storage of fat rich dairy products
- Understand the importance of fermentation process in dairy industry
- Develop knowledge on preparation of value added dairy products based on the needs of the society

Course Outcomes (COs)

1. Understand the significance of milk and hygienic milk processing
2. Know about the testing, authentication and quality evaluation of milk
3. Impart the microbial culture in the fermented dairy products
4. Discuss the different methods for the manufacturing, packaging and storage of fat rich dairy products
5. Summarize the manufacturing, packaging and storage of fermented and indigenous milk products
6. Explain the techniques and technologies of testing and processing of milk into various milk products and by products.

UNIT I INTRODUCTION

Milk production and consumption- India and Worldwide - Status and scope of dairy industry in India- Fluid Milk - Definition of milk, composition, factors affecting composition of milk, types of milk and nutritive value of milk- Basis for pricing of milk-Good hygienic practice in milk processing: Principal hazards, cleaning and disinfection in a dairy industry, definitions, cleaning and disinfection agents and processes.

UNIT II QUALITY ANALYSIS AND EVALUATION

Testing the authenticity of milk and milk products: Detection of foreign fats, milk of other species, water, non-milk proteins. Methods of examination and Quality evaluation, Adulteration and its detection. Microbiology of milk: Milk as a substrate for bacteria, spoilage micro organisms, pathogenic micro organisms, sources of contamination, hygienic measures.

UNIT III TYPES OF MILK AND ITS PROPERTIES

Milk processing- Concentrated milk, condensed milk, evaporated milk, UHT processed milk, flavored, sterilized milk, dried milk, Soy milk, Imitation milk, whole and skimmed milk powder - Method of manufacture, packaging and storage, defects and their control. Instantization of milk and milk products, flow ability, dustiness, reconstituability, dispersability, wet ability, sink ability and appearance of milk powders. Judging and grading of milk and its products.

UNIT IV FAT RICH DAIRY PRODUCTS

Frozen dairy products- Ice-cream- Kulfi- manufacture, packing and storage. Fat rich dairy products - Cream, ghee and margarine- Method of manufacture, packaging and storage. Cheese byproducts- Casein and its derivatives- Whey powder, protein concentrates and isolate- utilization, Infant milk production

UNIT V FERMENTED AND INDIGENOUS MILK PRODUCTS

Fermented milk – principles- Processing- practices of manufacture, packaging- storage and marketing Fermented milk products- dahi, cultured butter milk, acidophilus milk, yoghurt, shrikhand and probiotic milk based products. Technology of Indigenous dairy products – Present status, method of manufacture of khoa, burfi, kalakand, gulabjamun, rosogolla, chhana, paneer,, lassi etc..

SUGGESTED READING

1. Tomar, S. (2012). An Introduction to Dairy Technology. Pragun Publication.
2. NIIR Board. (2013). Modern Technology of Milk Processing and Dairy Products.4th edition.NIIR Project Consultancy Services.

4. De, S. (2006). Outlines of Dairy Technology.23rdimpression. Oxford University Press. New Delhi.
5. Walstra, P., Wouters, J.T.M., Geuris, T.J. (2005). Dairy Technology. Taylor & Francis.

Course Objectives

- Explain the importance of nutrition and nutritive value of different foods in relation with health
- State and illustrate the terms, principles and steps involved in menu planning
- Explain the vital role of geriatric and therapeutic balanced diet in human life
- Understand the methods involved in the measurement and estimation of energy requirements in individuals.
- State the concepts of nutraceuticals designing and Anti-nutritional factors
- Formulate value added products from functional and special foods based on the needs.

Course Outcomes (COs)

1. Know the nutritional value of different food groups
2. Identify the nutritional requirements of infants, preschool going children and athletes
3. Learn the principles of menu planning process and understand and use the concept of food exchange lists.
4. Plan therapeutic diets for diseases like diabetes, and CHD
5. Understand the overall terms and methods applied in the measurement and estimation of energy.
6. Discuss the concepts of anti-nutritional, functional and special foods.

UNIT-I NUTRITION AND BALANCED DIET

Nutritive value and anti- nutritional factors present in cereals, pulses, oil seeds , fruits, vegetables, fish, meat and eggs- effect of processing on nutritive value of foods- Principles of Nutrition and Health-Food Preparation and Service: Principles and Methods

UNIT II- MENU PLANNING

Explanation of terms- Principles of planning menus- Steps involved in planning menus- Food guide pyramid- Infant Foods: Formulation of weaning foods, Protein energy malnutrition- Formulating diet for preschool going (2-5 years) children-Food Selection and Meal Planning for different age groups

UNIT III-BALANCED DIET

Diets during normal life cycle- Nutrition from infancy to adolescence- Nutritional requirements of different age groups- Geriatric nutrition- Nutrition for athletes- Therapeutic Diet:

Diet therapy and types of therapeutic diet- Diet for diabetic mellitus- Diet for cardio vascular disease- Diet for gastro intestinal disease.

UNIT IV-ENERGY REQUIREMENT

Definition- units of energy- Energy content of foods- Physiological fuel value- Measurement of energy expenditure- BMR- Thermic effect of food- SDA- Methods of measurement- Factorial methods of estimating energy requirement of individuals- Regulation of energy metabolism.

UNIT V- FUNCTIONAL AND SPECIAL FOODS

Concepts for functional foods design, prebiotics & probiotics- nutraceuticals- designer foods- Anti-Nutritional Factors in Foods: Trypsin inhibitors, Phytins, Tannins, Oxalates, Goitrogens, Aflatoxins, and Process induced toxins- Space foods-Army foods-Athlete foods-Packaged food supply in Flights.

2. Roday, S. (2012). Food Science and Nutrition. 2nd Edition. Oxford Higher Education/Oxford University Press.
3. Shubhangini, A.J. (2015). Nutrition and Dietetics. 4th Edition. McGraw Hill education.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective:**

- Emphasis the types of materials used in the food processing equipments.
- Discuss about the materials and designing of different storage vessel.
- Explain the importance of reaction vessel and their deskinning techniques.
- Explain the materials and designing of heat exchanger and evaporators.
- Discuss the importance of dryers in food processing industries.
- Develop knowledge on fabricating food process equipments.

Course Outcome:

1. Point out the materials suitable for the construction of equipments.
2. List out the vessels used for the food storage.
3. Categorize the different types reaction vessel used for different purposes.
4. Understand the importance of heat exchanger in the designing of food processing equipments.
5. Understand the significance of dryers in food processing.
6. Understand the basic for design and develop equipments used in food Processing operations.

Unit I - MATERIALS

Metals and non metals, design of pressure vessels – cylindrical shell –internal and external pressure -under continued loadings. Numerical problem and design of pressure vessel.

Unit II - STORAGE VESSELS

Design of storage vessels – Rectangular Tank without stiffeners –with stiffeners – shell design – Numerical problem and design.

Unit III - REACTION VESSELS

Design of Reaction vessels – materials -classification – jackets-Design of vessel shell with half coil – Design of vessel shell with jacket – Numerical problem and design.

Unit IV - HEAT EXCHANGERS

Design of Heat exchangers – types – materials – Design pressure and temperature- shell design – tubes – Numerical problem.-Design of Equipment. Evaporator: Materials of concentration – types – design-consideration – Design of agitators – power requirements – Design based on Torque – critical speed.

Unit V – DRYERS

Types - General considerations – Design of Tray dryer , Rotary Dryer – Material Balance , Thermal energy Requirements , electrical energy Requirements, Performance Indices

SUGGESTED READING

1. Maroulis, Z.B., and Saravacos, G.D. (2003). Food Process Design, Marcel Dekker Inc.
2. Joshi, M.V. (2016). Process Equipment Design. 5th Edition Macmillan India Ltd.
3. Coulson, J.M., and Richardson, J.F. (2017). Chemical Engineering. 7th Edition. Butterworth-Heinemann. Elsevier.

Instruction Hours/week: L:3 T:0 P:0 Marks: Internal:40 External:60 Total:100**End Semester Exam:3 Hours****Course Objective**

- Explain different food colors.
- Explain properties and application of food colors
- Describe different food flavors and its application
- Explain the applications of food colors and its emerging techniques
- Describe the Quality control techniques and regulations involved in colors and flavors
- Analyze the permissible limits of artificial colorants and flavorants

Course Outcomes (COs)

1. Discuss the synthetic and natural food colors
2. Outline the importance of food colors and their applications in different fields
3. List the various food flavors and their applications
4. Infer the applications of food coloring and its advancement
5. Outline the regulations involved in the safer use of colors and flavors in foods
6. Discuss the importance of food colorants and flavorants

UNIT-I FOOD COLOURS

Introduction – Natural and Synthetic food Colours – Class and description of food colours – Physical form of food colours – Stability, storage and solubility of food colours – Regulations and safety assessment – Labeling requirements for food containing colour additives – Adulteration and misbranding of colour additives in foods

UNIT-II PROPERTIES AND ANALYSIS OF FOOD COLOURS

Food colour stability, Importance of food colours for food products - Methods of analysis for food colour - Quality and safety assessment – Applications of natural and synthetic food colours

UNIT-III FOOD FLAVOURS

Introduction – Classification - flavor forms: water soluble liquid flavours – oil soluble liquid flavours, emulsion based flavours, dispersed flavours, spray dried flavours – commercial considerations -Flavor characteristics – Flavor compounds - Natural and artificial flavoring materials – Flavoring constituent of various foods like meat, fish, milk, vegetables, fruits, fats & oils, spices & herbs, cereals and pulses. Changes in flavouring components and characteristics during cooking/processing of various foods. Effects of storage, processing, transportation and environmental

conditions on flavour components/constituents.

UNIT-IV FOOD FLAVOR: APPLICATIONS AND RECENT DEVELOPMENT

Culinary and Meat Products, bakery products, snack foods, sugar based confectionary products, dairy products and soft drinks - Changes in food flavor due to processing – flavor release from foods – Factors that affect the flavour and control of flavour in processed foods. Recent developments in flavour research, processing and technology.

UNIT-V FOOD FLAVOR: QUALITY CONTROL

Flavouring and coating technologies for preservation and processing of foods. Natural flavor enhancers for food and beverage, Quality Control – analytical, sensory and adulteration testing. Measurement of flavour, particularly for wine, tea, coffee, species and condiments.

SUGGESTED READING

1. Andrew, J., Taylor, J.A., and Linforth, S.T. R. (2010). Food Flavour Technology, Blackwell Publishing Ltd.
2. Bhattacharya, S. (2015). Conventional and Advanced Food Processing Technologies. Wiley Publishers.

Course Objectives

- Understand the fundamentals of sensors and control concepts.
- Discuss the concepts of system analysis and control.
- Summarize the working of various sensors.
- Understand the mathematical model for a system
- Explain the basics in control schemes of particular system.
- Develop knowledge on utilization of process control parameters in food industries.

Course Outcomes

1. Represent the mathematical model of a system.
2. Determine the response of different order systems for various test inputs.
3. Analyze the stability of the system.
4. Apply the knowledge of various Measuring Instruments to design a simple Instrumentation system.
5. Derive the Mathematical Model of a physical system.
6. Analyze and decide suitable control schemes for a particular system.

UNIT - I Introduction to Process Control

System – steady state design – process control – process control block diagram –definition of a process, measurement, controller, and control element, loop – damped and cyclic response- feedback control – transient responses – laplace transform – transforms of simple functions – step function, exponential function, ramp function and sine function.

UNIT -II Control Systems

Open and closed loop systems, servo- mechanisms, hydraulic and pneumatic control systems, two-way control, proportional control, differential control and integral control. Control valve – Construction and working of pneumatically operated valve and spring – diaphragm Actuator.

UNIT- III Stability Analysis

Signal flow graph – Mason's Gain formula, Block diagram algebra. Stability – concept of stability, definition of stability in a linear system, stability criterion, characteristic equation, Routh test for stability

UNIT -IV Pressure and Temperature Sensors

Pressure measurement – Construction and working of capacitive pressure sensor, Inductive pressure sensor, strain gauge, pressure sensor, diaphragm, bourdon tube, differential pressure cell
Temperature sensors –Construction and working of RTD, Thermistors, Thermocouples, bimetallic strips.

UNIT - V Level sensor

Simple float systems, capacitive sensing element, radioactive methods (nucleonic level sensing) – ultrasonic level sensor. Measurement of density – U-type densitometer, Buoyancy meter
Measurement of composition – Electrical conductivity cell, non-dispersive photometers, pH meter, Gas chromatograph, Mass spectrometer.

SUGGESTED READINGS

1. Coulson, J.M. and Richardson, J.F. (2017). Chemical Engineering. 7th Edition. Butterworth-Heinemann. Elsevier.
2. Nagoorkani, A. (2012). Control Systems. 2nd Edition. RBA publications.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Discuss the basics of postharvest storage practices
- Outline the postharvest losses of different food grains
- Understand the proper separation and storage practices
- Discuss various constraints of milling and their economy
- Explain different methods used for material handling systems
- Summarize the application of post harvest techniques for enhancing the yield of the products.

Course Outcomes

1. Apply their knowledge of post harvest storage practices
2. Acquire knowledge on reduction of post harvest losses
3. Develop new methods for the storage of food grains
4. Analyze the different methods of milling and their economical importance
5. Interpret the methods of material handling systems
6. Extrapolate the post harvest technology practices

UNIT I Overview of Post-Harvest Technology

Concept and science, Introduction to different agricultural crops, their cropping pattern, production, harvesting and post-harvest losses, reasons for losses, importance of loss reduction, Post-Harvest Handling operations.

UNIT II Cleaning Sorting and Grading

Cleaning of grains, washing of fruits and vegetables, types of cleaners, screens, types of screens, rotary screens, vibrating screens, machinery for cleaning of fruits and vegetables (air cleaners, washers), cleaning efficiency, care and maintenance; Peeling Sorting, grading, methods of grading; Grading- Size grading, colour grading, specific gravity grading; screening, equipment for grading of fruits and vegetables, grading efficiency, care and maintenance

UNIT III Separation, Decorticating and Shelling

Magnetic separator, destoners, electrostatic separators, pneumatic separator Principles of working, design and constructional details, operating parameters, maintenance, etc. of various decorticators/dehullers/shellers, description of groundnut decorticators, maize shellers, etc.

UNIT IV Milling and Materials Handling

Milling, polishing, grinding, milling equipment, dehuskers, polishers (abrasion, friction, water jet), flour milling machines, pulse milling machines, grinders, cutting machines, oil expellers, machine efficiency and power requirement Introduction to different conveying equipment used for handling of grains, fruits and vegetables; Scope and importance of material handling devices

UNIT V Study of different Material Handling systems

Classification, principles of operation, conveyor system selection/design Belt conveyor: Principle, characteristics, design, relationship between belt speed and width, capacity, inclined belt conveyors, idler spacing, belt tension, drive tension, belt tripper Chain conveyor: Principle of operation, advantages, disadvantages, capacity and speed, conveying chain Screw conveyor: Principle of operation, capacity, power, troughs, loading and discharge, inclined and vertical screw conveyors Bucket elevator: Principle, classification, operation, advantages, disadvantages, capacity, speed, bucket pickup, bucket discharge, relationship between belt speed, pickup and bucket discharge, buckets types, power requirement Pneumatic conveying system: types, air/product separators; Gravity conveyor design considerations, capacity and power requirement.

SUGGESTED READINGS

1. Chakraverty, A., and Singh, P.R. (2014). Post Harvest Technology and Food Process Engineering. CRC Press. Boca Raton. FL. USA.
2. Sahay, K.M. and Singh, K.K. (2015). Unit Operations of Agricultural Processing. Vikas Publishing House Pvt. Ltd., Noida, UP.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Explain the moisture content estimation and gain knowledge on post harvest of food grains
- Summarize the proper practices of shelling, threshing, cleaning and drying
- Discuss the techniques and methodologies involved in rice and pulses processing and storage
- Understand the various traditional and recent storage practices
- Discuss the food waste management system and production of useful products
- Develop opportunity to understand the different processing techniques involved in various crop processing

Course Outcomes (COs)

1. Create awareness about the processing of major cereals like paddy, maize etc.
2. Discuss the practices of shelling, threshing, cleaning, grading and drying
3. Understand the different types of methods used for rice and pulse processing technology
4. Discuss the factors to be considered for proper storage of food grains.
5. Outline the sources and classification of various industrial waste materials.
6. Understand the concepts involved in the conversion of waste into value added products.

UNIT I Engineering Properties and Moisture Content

Post harvest losses in field crops – optimum stage of harvest, properties of grains – physical, thermal, electrical and aerodynamic properties, moisture content – measurement – direct and indirect methods– moisture meters, equilibrium moisture content – equilibrium relative humidity, relationship and isotherm models, methods of determination.

UNIT II Threshing, Shelling, Cleaning, Grading and Drying

Threshing – threshers, types, cleaning and grading – principles, types, efficiency of separation, performance index, shelling and decortication – principles, maize sheller, husker sheller, groundnut decorticator and castor sheller, psychrometry – properties of air – water vapour mixture, grain drying– principles, types, heat sources, performance of dryers.

UNIT III Rice and Pulses Processing

Rice processing – parboiling, drying, dehusking, polishing, modern rice mill machineries – construction details and adjustments, layout of modern rice mills, manufacture of beaten rice, expanded rice and puffed rice, traditional and improved methods, processes and equipments, material handling equipment – types, construction and working – pulse milling – wet and dry method.

UNIT IV Storage

Storage of food grains – factors affecting storage, traditional methods, types – bag and bulk storage, storage structure, storage losses – estimation, storage of grains in large bins, modified atmosphere storage of grains – facilities, construction, operation and maintenance

UNIT V Waste Utilization

Waste materials, sources and classification – crop residues, farm and industrial wastes and byproducts, utilization – production of paper and paperboards, particle board, fuel briquettes - production of fibre, activated carbon, furfural and adhesive from tamarind kernel powder.

SUGGESTED READINGS

1. Chakraverty, A. (2018). Post Harvest Technology of cereals, pulses and oilseeds. 3rd Edition. Oxford & IBH publishing & Co. Pvt. Ltd., New Delhi.
2. Sahay, K.M. and K.K. Singh. (2015). Unit operations in Agricultural Processing. 2nd Edition. Vikas Publishing House Pvt. Ltd., New Delhi.

Course Objectives

- Define the physical and chemical properties of fats and oils.
- Outline the different methods of extraction processes of oil.
- Explain the oil refining processes and associated steps.
- Summarize the various types of packaging materials and methods employed in the packaging of oil.
- Understand the suitable storage conditions of the different types of oil based on their functional properties
- State the industrial applications, quality regulations and standards mandated for oil processing industries.

Course Outcomes

1. Infer the functions, physical and chemical properties of fats and oils
2. Interpret the various methods applied to the extraction of oils
3. Classify the steps involved in the oil refining processes
4. Choose an appropriate packaging material for oil packing
5. Identify the suitable storage conditions for improving the shelf life of oils
6. Assess the applications, quality standards and regulations followed in the oil processing sectors.

UNIT I - Physical and Chemical Properties

Fats and oils – formation – functions of oil in human body - fatty acids – double bonds and their position in oil – Geneva type classification - sources of vegetable oils – production status-oil content – coconut , palm, peanut , rice bran, sesame, mustard and sunflower seeds oil – physical and chemical properties of fats and oils - chemical reactions of oil – hydrolysis –hydrogenation, oxidation and polymerization.

UNIT II - Extraction Methods

Oil extraction methods –mechanical expression – ghani , power ghani, rotary, hydraulic press, screw press, expellers, filter press - principle of operation and maintenance solvent extraction process – steps involved, batch and continuous-continuous solvent extraction process for rice bran, soy bean and sunflower-oil extraction process for groundnut and cotton seed-production of special oils – palm oil, virgin coconut oil – extraction process.

Unit III - REFINING OF OILS

Refining of oils – objectives – characterization - degumming – Zeneath process – deacidification process – continuous acid refining-bleaching of oil – continuous bleaching process – decolourising agents-deodorization process winterization processes-hydrogenation of oil –selectivity – catalyst –batch type hydrogenation – regeneration of Catalyst-Vanaspati, ghee and margarine – production process-partial sterilization, emulsification, chilling, kneading and rolling, incorporation of salt, colouring substances production of special fats – butter – types - production and storage.

UNIT IV - Packaging of Edible Oils

Packaging of edible oils – requirements – types – tinfoil, semi rigid, glass, Polyethylene Terephthalate, Poly Vinyl Chloride, flexible pouches – packaging for Vanaspati and ghee changes during storage of oil –rancidity – causes – atmospheric oxidation and enzyme action – free fatty acid – colour-non edible oils – castor oil, linseed oil, vegetable waxes – production and processing.

UNIT V - Industrial Applications and Quality Standards

Industrial applications of fats and oils – quality regulations - manufacture of soap, candle, paints and varnishes - ISI and Agmark standards – site selection for oil extraction plant- safety aspects- HACCP standards in oil industries.

SUGGESTED READINGS

1. Gunstone, F.D., (2008). Oils and Fats in Food Industry. Blackwell Publishing, United Kingdom.
2. Brien, R.D.O. (2008). Fats and oil. CRC Press.
3. Brech, .G.S. (2008). Hand book of Industrial oil and fat Products. CBS Publishers & Distributors. New Delhi.

Course Objectives

- Provide a basic understanding of Nanotechnology in food
- Impart knowledge on various synthesis and characterization techniques involved in Nanotechnology
- Explain the various concepts of Cryogenics in Food Processing
- Discuss the applications of Nanotechnology in the field of food technology
- Elaborate the use of cryogenics in food processing industries
- Understand the ethical issues of nanotechnology in food processing.

Course Outcomes (COs)

1. Understand the fundamentals of Nanotechnology and Cryogenics in the food processing industries
2. Interpret the use of nanomaterials and their nanostructures in food processing sector.
3. Understand the properties of nanomaterials and its synthesis.
4. Exemplify the cryogenic properties and cryogenic techniques in food preservation and storage.
5. Acquire knowledge about current trends and future aspects of Nanotechnology in food processing.
6. Elucidate the applications of Cryogenics in Food Industries.

UNIT I BASICS OF NANOTECHNOLOGY AND NANOSTRUCTURES IN FOOD

Background- Evolution of new technologies in the food sector- Public perception of nanotechnology food products-Properties of nanomaterials - Nanomaterials for food applications- Nano-sized food ingredients and additives in relation to digestion of food-Natural nanostructures in food-Naturally occurring food nano substances and nanostructure-Designing food nanostructures.

UNIT II NANOMATERIALS AND SYNTHESIS METHODS

Nanomaterials- Physical properties – mechanical and optical properties- Magnetic and size dependent properties of nanomaterials- Electrical conductivity and photoluminescence properties of nanomaterials- Method of nanomaterials synthesis-mechanical, gas phase and physical vapor deposition-Chemical Synthesis-Nanoparticle size determination by X-ray diffraction technique and dynamic light scattering method for colloidal nanoparticle- Manipulation of nanomaterials by

transmission electron microscopy (TEM) and scanning electron microscopy (SEM). Use of Infra red and magnetic resonance spectroscopy in nanoscience

UNIT III INTRODUCTION TO CRYOGENICS

Cryogenics and its applications- Properties of cryogenic fluids- Properties of materials at cryogenic temperature- Gas- Liquefaction and Refrigeration Systems- Gas Separation- Cryocoolers- Cryogenic Insulations- Vacuum Technology- Instrumentation in Cryogenics- Liquid storage and transfer systems- Cryostat design- Dilution Refrigerator and Adiabatic Demagnetization

UNIT IV APPLICATIONS OF NANOTECHNOLOGY IN FOOD PROCESSING

Nanotechnology in Food Preservation-Nanoemulsion - Nanodispersions -Nanocapsules - Association colloids - Nanocoatings. Nanostructure multilayer emulsions – Biopolymeric nanoparticles - Nano packaging – Nanoplastic – Nanocomposites – Active packaging – Intelligent packaging – Biodegradable Nano packaging - Nanofibers – Nanosensors. Ethical issues in nanotechnology – socio-economic issues – Benefits, challenges and future of nanotechnology.

UNIT V APPLICATIONS OF CRYOGENICS IN INDUSTRIES

Advances in Cryogenics- Vortex tube and applications- Pulse tube refrigerator- Cryogenic Engine for space vehicles- Cryogenic Applications- gas industry- cryogenic fluids- space research- Cryobiology- food processing- chemical processing- cryogenic power generation, medicine, analytical physics and chemistry

SUGGESTED READING

1. Chaudhry,Q., Castle, L., and Watkins, R. (2010). Text book on Nanotechnologies in food. RSC Nano science and Nano technology. Published by the Royal society of chemistry.
2. Hester,R.E., and Harrison, R.M. (2007). Nanotechnology, Consequences for Human Health and the Environment.

Course objectives

- Explain about the importance and applications of sensory analysis.
- Illustrate the methods and different types of test used for sensory analysis.
- Create a different knowledge on assessors and its role on sensory valuation.
- State the basic concepts of product development along with their success and failures .
- Outline the processes involved in product development.
- Understand the process of product launch and commercialization

Course outcomes

1. Relate the applications of sensory analysis.
2. Identify the methods used for various sensory evaluation.
3. Understand the assessors role in sensory test.
4. Understand the basic concepts of product development.
5. Explain the process of product development
6. Discuss the various strategies involved in the new product development process.

UNIT I Introduction to sensory analysis

Background and importance of Sensory Analysis, Definition of Sensory Analysis, Fields of Application of Sensory Analysis, Legislation on Sensory Analysis, Sensory perception and the organs of senses

UNIT II Methodology of sensory analysis

Preparation of trial, Location of test and tasting Rooms, Sensory evaluation techniques, Types of tests Differentiation sensory tests, Variables and scales, Descriptive sensory tests Affective sensory tests

UNIT III Assessors

Selection, training and monitoring, Assessors, Types of assessors, Factors influencing sensory evaluations, Features of assessors, Selection, training and monitoring of assessors: Recruitment, Selection, Training, Monitoring

UNIT IV Concepts

Concept of product development - product success and failure, factors for success, process of product development, managing for product's success. Innovation strategy - possibilities for innovation, building up strategy, product development programme.

UNIT V Product development process

The product development process - product strategy, product design and process development, product commercialization, product launch and evaluation.

SUGGESTED READINGS

**18BTFT7E04 MARKETING MANAGEMENT AND INTERNATIONAL
TRADE****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course objectives**

- Understand the concepts in marketing management and realize its scope.
- Explain the consumers buying behavior and information systems in marketing.
- Understand the marketing planning processes and classify the types of food consumption across the globe.
- Outline the concepts involved in international marketing and trading.
- Explain the major role of government in trading process.
- Analyze the applications of marketing management in trading of food products

Course outcomes

1. Discuss the concepts of marketing and market Structure.
2. Discuss the market segmentation and market resources.
3. Interpret the policies in marketing planning and advertisements.
4. Understand the overall concepts involved in international marketing and trade developments.
5. Discuss the role of export and import strategies and government roles in marketing.
6. Summarize the marketing principles, its structure and government policies in export and import tradings.

UNIT I-CONCEPTS OF MARKETING AND MARKET STRUCTURE

Concept of marketing, functions of marketing, Concepts of marketing management, scope of marketing management, Marketing management process, Concepts of marketing- mix, elements of marketing- mix, Concept of market structure, Marketing environment -Micro and macro environments

UNIT II- CONSUMERS BUYING BEHAVIOR

Consumers buying behaviour, consumerism, Marketing opportunities analysis: marketing research and marketing information systems, Market measurement- present and future demand, market forecasting, Market segmentation, targeting and positioning, Allocation and marketing resources

UNIT III-MARKETING PLANNING PROCESS AND ADVERTISING

Marketing planning process, Product policy and planning : product-mix, product line, product life Cycle, New product development process Product brand, packaging, services decisions, Marketing channel decisions. Retailing, wholesaling and distribution, Pricing decisions, Price determination and pricing policy of milk products in organized and unorganized sectors of dairy

industry, Promotion-mix decisions, Advertising, how advertising works, deciding advertising objectives, Advertising budget, Advertising message, media planning, personal selling, publicity, sales, promotion. World consumption of food: Patterns and types of food consumption across the globe

UNIT IV- INTERNATIONAL MARKETING AND TRADE

International marketing and international trade, salient features of international marketing
Composition & direction of Indian exports, international marketing environment, Deciding which & how to enter international market

UNIT V- EXPORTS AND ROLE OF GOVERNMENT AGENCIES IN TRADE

Exports- direct exports, indirect exports, Licensing, Joint ventures, Direct investment Export trends and prospects of food products in India Government institutions related to international food trade: APEDA, Tea Board, Spice Board, MOFPI, etc. WTO and world trade agreements related to food business

SUGGESTED READINGS

1. Kotler, P., Keller, K.L., Abraham Koshy, A., Jha, M. (2013). Marketing Management: A South Asian Perspective, 14th Edition. Pearson Education.
2. Daniels, J., Radebaugh, L., Brigham, Daniel Sullivan, D., (2015). International Business, 15th Edition. Pearson Education.
3. Aswathappa. (2008). International Business. Tata McGraw-Hill Education, New Delhi.

Course Objectives

- Understand the various concepts of food marketing system
- Explain the different constraints involved in the marketing research
- Discuss the innovations in food chains, quality and safety standards in the retail management.
- Explain the important key areas relating to supply chain management in food processing industries
- Understand the overall concepts of globalization and logistics
- Develop the knowledge on components utilized in supply chain management from farm to fork

Course Outcomes (COs)

1. Outline the important concepts and approaches of food marketing system
2. Illustrate the various attributes of marketing research
3. Assess the multivariate techniques involved in market research
4. Understand the innovations in food chains, quality and safety standards in the retail management.
5. Discuss the multiple strategies of supply chain management system in food industries
6. Infer the important concepts of globalization and logistics

UNIT I FOOD MARKETING

Food Marketing System- Process, Growth, Role and Economic importance - Basic marketing concepts and approaches - marketing functions - Market Structure, Conduct and Performance - organizational issues. Concept, Forms of food supply chain, Factors affecting the chain – Supply Chain Partnerships - Contracts, Strategic Alliances.

UNIT II MARKETING RESEARCH

Food Consumption and Marketing- Preferences, Demography, consumption and expenditure patterns. Analyzing agricultural and food sectors: Agricultural commodity sectors, Food Processing and Manufacturing - Location, structure and problems, Innovation. Wholesaling and Retailing in food - International Food Market & Agribusiness Marketing: Trends, International Competitiveness, Barrier to trade, Porter's framework, Risk management and futures market, Marketing and Market Research: Consumer behavior and market research, Survey analysis and multivariate techniques in market research

UNIT III RETAIL MANAGEMENT

Sourcing and procurement, Purchase management - Innovations in Food Chains, Quality Management, Private Food Quality and Safety Standards, Food safety and the supply chain.

UNIT IV SUPPLY CHAIN MANAGEMENT

Integrated Materials Management - Alternative Inventory models - Transportation - Network design - Supply Chains for Perishables. Warehouse Management - procedures, storage structures, cost of storage, insurance and issues. Information Technology and Supply Chain, Traceability, Identity, Preservation issues in the Food System - Retail supply chain management, Changes in Retail, Food Delivery.

UNIT V GLOBALIZATION

Supply chain strategy at the firm - Efficient Consumer Response - Measurement of consumer response - Experimental Economics Approach - Globalization and logistics: Addressing global competitiveness.

SUGGESTED READINGS

1. Chopra, S., Meindl, P. (2004). Supply Chain Management: Strategy, Planning, and Operation, 2nd Edition. Prentice Hall,.
2. Kotabe, M., and Helsen, K. (2001). Global Marketing. 2nd Edition. New York: Wiley.
3. Lyons, K. (2005). Brian Farrington Purchasing and Supply Chain Management. Prentice Hall.

Course objectives

- Discuss the historical reviews, teleology, models, classification and sources of nutraceuticals
- Explain the role of flavonoids and carotenoids as antioxidant agents
- Understand the metabolism, mechanism, sources and analysis of omega-3 fatty acids and CLA
- Summarize the health implications of lycopene, garlic, olive oil, nuts, prebiotics and probiotics
- Discuss the various aspects of herbs, stability testing, marketing strategies and regulatory issues in nutraceutical and functional foods
- Understand the marketing and social issues of food products value added with nutraceutical and functional foods

Course outcomes

1. Illustrate the historical, technological aspects and classification of nutraceuticals
2. Outline the significance of flavonoids and carotenoids as antioxidants
3. Assess the potential health benefits, sources, mechanism of action and metabolism of omega- 3 fatty acids and CLA
4. Infer the multiple aspects of consuming lycopene, garlic, olive oil, nuts, prebiotics and probiotics as a nutraceutical
5. Understand the role of herbs as a nutraceutical and conduct the accelerated shelf life testing of various nutraceuticals and functional foods
6. Assess the marketing strategies and regulatory issues in nutraceutical and functional food market

UNIT I-NUTRACEUTICALS: HISTORICAL, TECHNOLOGICAL ASPECTS AND CLASSIFICATIONS

Introduction – Historical Reviews - Teleology of nutraceuticals - Organization models for nutraceuticals – Classification of Nutraceuticals based on the sources– Animal, Plant and Microbial – Nutraceuticals in specific foods - Mechanism of Action - Chemical nature.

UNIT II- FLAVANOIDS AND CAROTENOIDS AS ANTIOXIDANTS

General background on phytochemicals as antioxidants - Flavonoids and Lipoprotein oxidation - Evidence for specific Antioxidant mechanisms of Flavonoids - Dietary carotenoid and carotenoid absorption - Approaches to measurement of absorption - Metabolism of Carotenoids – Carotenoids as anticancer agents.

UNIT III-OMEGA-3 FATTY ACIDS AND CLA

Introduction to Lipoprotein metabolism – PUFA and Cardiac Arrhythmias - Preventative role of n-3 fatty acids in cardiac arrhythmias -Mechanism of action on n-3 PUFA's - ω – 3 fish oils and their role in Glycemic control- ω –3 fatty acids and rheumatoid arthritis - Chemistry and Nomenclature of CLA – Analysis of CLA in food and biological samples – CLA in food products and biological samples –Biological actions and potential health benefits of CLA – Mechanisms of CLA action – Potential adverse effects of CLA

UNIT IV-LYCOPENE, GARLIC, OLIVE OIL, NUTS, PROBIOTICS AND PREBIOTICS

Lycopene overview – lycopene and disease - Garlic – Chemistry – Implication in Health - Olive oil – CHD – Cancer - Nuts – Nutrient components and Composition – Nut Consumption and CHD epidemiological evidence, Human nutritional studies on nut consumption and serum lipid changes, Mechanism of action- Probiotics- criteria – products on market – probiotic products – Microbiology of the gastrointestinal tract - Prebiotics – future for probiotics and prebiotics.

UNIT V-HERBS AS FUNCTIONAL FOODS, STABILITY, TESTING AND MARKETING ISSUES FOR NUTRACEUTICALS AND FUNCTIONAL FOODS

Herbal medicine – Herbs as ingredients in functional foods – actions of herbal and evidence of efficacy -Kinetic modelling of chemical reactions – Accelerated shelf life testing - Evolution of marketing environment for Functional foods and nutraceuticals - Regulatory background - Introduction to consumer marketing issues for nutraceuticals - Potential product positioning.

SUGGESTED READINGS

1. Shi., John., Shahidi, F., and Ho, C.T. (2007). Asian Functional Foods. CRC/Taylor & Francis.
2. Watson, Ross, R. (2007). Functional Foods and Nutraceuticals in Cancer Prevention. Blackwell Publishing.
3. Gibson, G.R., and Willams, C.M. (2011). Functional Foods: Concept to Product. 2nd Edition. Wood head Publishing.

Course Objectives

- Understand the role of biotechnology in various food processing applications
- Explain the production of metabolites, flavors, colors, protein rich foods and preservatives using biotechnological methodologies
- Discuss the various downstream processing techniques
- Explain the molecular diagnostic tools and methods applied to detect pathogens, pesticides and toxins in the raw materials and food.
- Summarize the application and classification of biosensors and discuss the social, ethical and safety aspects of GM foods
- Develop the knowledge on applications of biotechnological tools for food analysis

Course Outcomes

1. Outline the biotechnological applications in the various food processing sectors
2. Illustrate the production of various biotechnologically derived food products.
3. Understand the importance of downstream processing techniques in biotechnology and food processing
4. Infer the different types of molecular diagnostic tools, assays and methods in the detection of pathogens, pesticides and toxins in the raw materials and food
5. Understand the classification and applications of biosensors
6. Discuss the ethical, social, and safety aspects of production and consumption of GM foods

UNIT I-INTRODUCTION TO BIOTECHNOLOGY

Introduction -Biotechnology relating to the food industry – application of genetics to food production – Genetic Engineering Techniques- Recombinant DNA Techniques and Cloning Strategies - role of bio process engineering in biotechnology industry. Regulatory and Social aspects of biotechnology of foods. Biotechnological approaches to improve nutritional qualities and shelf life of fruits and vegetables, live stock, poultry and fish products.

UNIT II-PRODUCTION OF PRIMARY AND SECONDARY METABOLITES

Production of commercially important metabolites – citric acid, lactic acid, gluconic acid, amino acids, Flavoring agents, colouring agents and vitamins. New protein foods - SCP; mushroom; algal proteins. Natural bio-preservatives – Nisin, Lactacin.

UNIT III - DOWNSTREAM PROCESSING

Principle of downstream processing –stages in downstream processing- solid liquid separation flotation-flocculation-filtration-types-centrifugation-cell disruption-concentration- evaporation liquid - liquid extraction-membrane filtration precipitation-adsorption-purification by chromatography.

UNIT IV-MOLECULAR DIAGNOSTIC TOOLS

Rapid detection techniques for food borne pathogens and their toxins; In-vitro evaluation of bacterial toxins by immunological techniques like slide agglutination, tube agglutination, gel diffusion assay; Genetic based diagnostic systems - Polymerase Chain Reaction (PCR). Micro array diagnostic methods to detect pathogens, pesticides, and toxins in the raw materials and food.

UNIT V-BIOSENSORS AND GM FOODS – SOCIAL AND ETHICAL ISSUES

Biosensors: Introduction, classification and application in food industries Potential Impact of Biotechnology on Food Industries. GM foods and food security- Safety aspects and social acceptance - Ethical issues. GMOs- current guidelines for the production, release and movement of GMOs; labeling and traceability; trade related aspects

SUGGESTED READINGS

1. Bielecki, S., Polak J., and Bielecki, Tramper, S. (2000). Food Biotechnology. Elsevier Science Publishing Company. New Delhi.
2. Joshi, V.K. and Pandey, A. (1999). Biotechnology -Food Fermentation. Volume. I &II. Education Publishing. New Delhi.
3. Gutierre, Gustavo, F. (2003). Food Science and Food Biotechnology.CRC Press. New York.
4. Singh, B.D. (2014). Biotechnology - Expanding Horizons. Kalyani Publishers. New Delhi.
5. Watson, J.D.(2013).Molecular Biology of the Gene. 7th Edition. Benjamin Cummings. San Francisco.USA

Course objectives

- Understand the basics of amino acids, chemical reactions, interactions with EM radiations and elucidation of proteins
- Discuss the methods and techniques applied to determine the structure of protein
- Explain the principles, methods and technological constraints involved in protein engineering
- Understand the mechanism, structure, digestibility, functionality and application of animal and marine derived proteins
- List the composition, functional properties and applications of plant derived proteins
- Outline the applications of protein chemistry in preparation of protein based food products

Course outcomes

1. Illustrate the basics, chemistry, interactions with EM radiations and elucidation of amino acids and proteins
2. Outline the methods and tools involved in the structural determination of proteins
3. Understand the principles, methods and technological constraints involved in protein engineering
4. Discuss the overall scenario of derived proteins
5. Infer the molecular, functional, structural properties and applications of marine derived proteins
6. Summarize the composition, properties, functional properties and food applications of plant based proteins

UNIT I - BASICS OF AMINO ACIDS AND PROTEIN CHEMISTRY

Amino acids (the students should be thorough with three and single letter codes) and their molecular properties (size, solubility, charge, pKa), Chemical reactivity in relation to posttranslational modification (involving amino, carboxyl, hydroxyl, thiol, imidazole groups) and peptide synthesis. Covalent, Ionic, Hydrogen, Coordinate, hydrophobic and Vander walls interactions in protein structure. Interaction with electromagnetic radiation (radio, micro, infrared, visible, ultraviolet, X-ray) and elucidation of protein structure.

UNIT II - PROTEIN ARCHITECTURE

Primary structure: peptide mapping, peptide sequencing - automated Edman method & mass spec. High-throughput protein sequencing setup Secondary structure: Alpha, beta and loop structures and methods to determine (Basics only) Basics of Super-secondary structure: Alpha-turn-alpha, beta-turn-beta (hairpin), beta-sheets, alpha-beta-alpha, topology diagrams, up and down & TIM barrel

structures nucleotide binding folds, prediction of substrate binding sites Tertiary structure: Domains, folding, denaturation and renaturation, overview of methods to determine 3D structures, Quaternary structure: Modular nature, formation of complexes.

UNIT III - PROTEIN ENGINEERING

Advantages and purpose, overview of methods, underlying principles with specific examples: thermal stability T4-lysozyme, recombinant insulin to reduce aggregation and inactivation, *de novo* protein design.

UNIT IV - BASICS OF THE PROPERTIES OF FOOD PROTEINS – ANIMAL AND MARINE SOURCES CASEINS AND WHEY PROTEINS

Caseins – Heterogeneity and Molecular properties – caseins micelles – Mechanism of stabilization – Structure models – Structure of whey proteins and improvement of functionality Muscle proteins– Structure and functionality – Application of muscle proteins in foods Sea weed proteins – Protein content and functionality, digestibility of algal proteins – applications to food systems.

UNIT V - BASICS OF THE PROPERTIES OF FOOD PROTEINS – PLANT SOURCES

Composition, Properties and functional properties of soya, rapeseed, peanut. Leaf as a protein source – Basic and Food applications of rubisco.

SUGGESTED READINGS

1. Voet,D. Voet, J.G., and Pratt, C.W. (2016). Fundamentals of Biochemistry Life at the Molecular Level. 5th Edition. John Wiley and Sons.
2. Moody, P.C.E. and Wilkinson, A.J. (2009). Protein Engineering. IRL Press.Oxford.UK.

Course objectives

- Understand the principles and engineering aspects of drying
- Explain the principles, types and working of drum, rotary, foam mat and osmotic dehydration of foods
- Understand the overall aspects of spray drying of foods
- Discuss the principle, instrumentation and applications of fluidized, pneumatic, flash and freeze drying of food materials
- Explain the novel drying methods employed in food industries
- Analyze and compare the quality parameters of different drying technologies utilized for food.

Course outcomes

1. Outline the basic principles and various engineering aspects of drying techniques
2. Understand the types, principles and working of drum, rotary, foam mat and osmotic dehydration of foods
3. Illustrate the principle, working, instrumentation and application of spray drying
4. Understand the principle, instrumentation and applications of fluidized, pneumatic, flash and freeze drying of food materials
5. Infer the application and engineering aspects of special drying techniques
6. Explain the key scenario of dehydration of foods using novel dryers and cyclic pressures

UNIT I – PRINCIPLES OF DRYING

Principles of drying – Fundamentals of air-water mixtures – Psychrometric chart – Problems based on psychrometry – Drying curves – constant and falling rate period - Heat and mass transfer in dryers – with and without recirculation. Water content in foods and its determination - Cabinet drying – Vacuum drying.

UNIT II -DRUM DRYING, FOAM MAT DRYING AND OSMOTIC DEHYDRATION OF FOODS

Drum driers - Types of Drum Dryers - Principles of Operation of the Drum Dryer – Steam Consumption – Types of Feeding – Final product form. Foam Mat Drying- Principles- Equipments- Factors affecting Foam mat drying. Osmotic dehydration – Principles – Factors affecting osmosis- Equipment used. Rotary Dryer.

UNIT III -SPRAY DRYING OF FOODS

Fundamentals –Nozzles, Rotary atomizers and two fluid feeds- Interaction of droplets with air- Drying of droplets with soluble and insoluble solids – Microstructure of spray dried products – Reconstitution – Foam spray drying – Applications in the Food industry.

UNIT IV – FLUIDIZED BED, PNEUMATIC AND FREEZE DRYING

Fluidized bed drying – Introduction – Effect of operating parameters – conventional and modified fluidized bed dryer Fundamentals of freeze drying – Freezing – Primary drying stage – secondary drying stage -Changes during freeze drying – Condensation, defrosting – Industrial freeze driers. Pneumatic / Flash dryers - Basic Operation Principle and Applications of Flash Dryers - Design of Flash Dryers - Materials Dried in Flash Dryers.

UNIT V - NOVEL DRYING METHODS

Special drying techniques - contact-sorption drying - drying on inert particles – pulse combustion drying - drying with induction heating - novel dryers - dehydration of foods using cyclic pressure.

3. Mujumdar, A.S. (2014). Handbook of Industrial Drying. 4th Edition. CHIPS, India.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course objectives**

- Understand the benefits, nutritive value, and microorganisms associated with the fermentation processes
- Practice the preparation and culture maintenance of bacteria, yeast and mold
- Explain the production of different types of fermented products
- Discuss the production processes of fermented drinks and fermented vegetables
- Understand the production of yeast, enzymes, proteins, fats and HFCS
- Outline the application of food fermentation in improving the quality and shelf life of the foods

Course outcomes

1. List the overall benefits, nutritive value, and microorganisms involved in the fermentation processes
2. Prepare and maintain the cultures of bacteria, yeast and mold for fermentation processes
3. Develop the different types of fermented dairy products
4. Understand the processes involved in the production of fermented drinks
5. Illustrate the overall steps employed in the production of fermented vegetables
6. Outline the different set of processes followed in the production of yeast, enzymes, proteins, fats and HFCS

UNIT I - INTRODUCTION TO FERMENTATION

Definition - benefit of fermentation - nutritive value of fermented foods - microbial changes in fermented foods - micro organism - proteolytic, lipolytic and fermentative bacteria.

UNIT II - CULTURE MAINTENANCE

Preparation and Maintenance of Bacterial, Yeast and Mold cultures for food fermentations. Probiotics - Lactic acid bacteria-activities and health-promoting effects. Mushrooms: Cultivation and preservation.

UNIT III - FERMENTED PRODUCTS

Fermented Dairy Products: Cheeses, Curd and Yoghurt, Butter milk and the fermented milks. Spoilages and defects of fermented dairy products and their control. Fermented meat and fish products, Oriental fermented foods

UNIT IV - FERMENTED DRINKS

Fermentative Production of Beer, Wines, Cider and Vinegar, distilled spirits (eg. Rum, gin, whisky), Fermented Vegetables (Pickles).

UNIT V - MICROBIAL PROTEINS

Production of Baker's Yeast, Microbial Proteins (SCP) and fats, Food enzymes (eg. Amylases, protease, lipases, pectinases, rennin), HFCS(High Fructose Corn Syrup)

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Explain the basics principles, types and uses of extrusion cooking
- Understand the importance of pre-conditioning and de-volatilization of raw materials
- Discuss the constructional, operational and working of single and twin screw extruders
- Summarize the nutritional, functional and sensory properties of extruded food products
- Outline the unit operations involved in the extrusion processing
- Discuss the application of extrusion technology in the production and development of new product

Course outcomes

1. Outline the principles, types and uses of extrusion cooking
2. Illustrate the importance of pre-conditioning and de-volatilization of raw materials
3. Infer the constructional, operational and working of single and twin screw extruders
4. Assess the nutritional, functional and sensory properties of extruded food products
5. Understand the techniques of cold extrusion cooking
6. Apply the new extrusion technology concepts for the preparation of new products

UNIT I INTRODUCTION

Extrusion: definition, introduction to extruders and their principles, types of extruders.
Extruders in the food industry: History and uses of extruders in the food industry.

Unit II PRECONDITIONING

Pre-conditioning of raw materials used in extrusion process, Pre-conditioning operations and benefits of pre-conditioning and devolatilization. Interpreted-flight expanders - extruders, dry extruders.

Unit III SINGLE AND TWIN SCREW EXTRUDER

Single screw extruder: Constructional and operational characteristics, principle of working, net flow, factors affecting extrusion process, co-kneaders. Twin screw extruder: counter rotating and co-rotating twin screw extruder. Process characteristics of the twin screw extruder: feeding, screw design, screw speed, screw configurations, die design. Barrel temperature and heat transfer, adiabatic operation, heat transfer operations and energy balances. Problems associated with twin screw extruder.

Unit IV CHARACTERISTICS OF VARIOUS EXTRUDED FOOD PRODUCTS

Rheological properties, textural properties. Sensory characteristics and nutritional value. Chemical and nutritional changes in food during extrusion. Practical considerations in extrusion processing: pre-extrusion processes, cooker extruder profiling. Addition and subtraction of materials, shaping and forming at the die, post extrusion processes.

Unit V APPLICATION

Cold extrusion; extrusion cooking, New extrusion technology for confectionery product; Breakfast cereal products. Breakfast cereals: introduction, type of cooking - High shear cooking process, steam cookers, low shear, low pressure cookers and continuous steam pre-cooking, available brands. Traditional and extrusion methods, classification of breakfast cereals - flaked cereals, oven puffed cereals, gun puffed cereals, shredded products. Texturized vegetable protein: Definition, processing techniques, and foods. Snack food extrusion: Direct expanded (DX) and third generation (3G) Snacks: types, available brands, co- extruded snacks and indirect-expanded products

2. Guy, R. (2001). Extrusion Cooking, Technologies and Applications. Wood head Publishing Limited, Abington, Cambridge.
3. Maskan. (2011). Advances in Food Extrusion Technology. Special Indian Edition. Taylor & Francis.

Course objectives

- Explain the various pre-processing operations applied from field to industry for sugar manufacturing
- Understand the crushers, types, extraction methods, accumulators, theories of cane juice extraction
- Discuss the clarification methods and agents used in the clarification of cane juice
- Understand the filtration and evaporation processes and its types used in cane sugar industry
- Interpret the importance of unit operations followed in sugar industry
- Summarize the probabilities of by-product utilization and production of sugar from beet, palm and coconut.

Course outcomes

1. List the pre-processing stages of sugar production from field to industries
2. Discuss the crushers, types, extraction methods, accumulators, theories of cane juice extraction
3. Outline the different methods and clarifying agents used in the clarification of cane juice
4. Illustrate the various types of filtration and evaporation processes involved in sugar industries
5. Choose the important unit operations applied in the sugar processing sectors
6. Discuss the probabilities of by-product utilization and production of sugar from beet, palm and coconut

UNIT I – PRE PROCESSING OPERATIONS

Sugarcane - Constituents - Harvesting indices - Cane cutting - Manual, Mechanical - Transportation - loading - Unloading - Cane conveyor - Washing - Shredders – Types.

UNIT II – JUICE EXTRACTION

Crushing - Crushers - Types, Crushing efficiency - Extraction of juice - methods, Accumulators - types - Maceration - Theory of cane diffusivity - different diffuser - ring diffuser - weighing of juice.

UNIT III – CANE JUICE CLARIFICATION

Clarification - methods - clarifying agent - bleaching agent - Role of pH, non-sugars, colloids and gums in cane juice clarification. Liming of cane juice - CO₂ P₂O₅ and its importance

UNIT IV –FILTRATION AND EVAPORATION PROCESS IN CANE INDUSTRY

Filtration of mud - Filter types - filter press, rotary vacuum filter - Rapi - Floc process. Filter cake washing. Evaporation - Evaporation rate - types of evaporators used in cane sugar industry - Cleaning of evaporators - Entrainment separator - methods - Boiling in Vacuum pan - Footing magma - Masseccuite . A,B,C - Mother liquor, Molasses A,B,C Molasses exhaustibility

UNIT V –SUGAR PRODUCTION

Crystallization - Super saturation - Crystallizers type - batch and continuous. Centrifuge - types. Drying of sugar - conveyors for sugar - by-product from sugar mills - utilization.sugar production from beet, palm and coconut.

SUGGESTED READINGS

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****Course objectives**

- Understand the basics of food toxicology, types of hazard and allergic resources
- Explain the chemistry of food allergens and disorders along with metabolism
- Discuss the types of natural food toxicants, factors influencing, absorption and excretion of toxins
- Summarize the different methodologies of toxicant determination in food samples
- Discuss the probabilities of the formation of toxins during food processing
- Measure the food safety and risk assessments of toxins produced in food processing.

Course outcomes

1. Outline the basics of food toxicology, types of hazard, immune and allergic resources
2. Infer the chemistry of food allergens and food disorders associated with metabolism
3. Categorize the types, factors influencing, absorption and excretion of toxins
4. Understand the toxicant determination methodologies in food samples
5. Discuss the food safety and risk benefit indices of human exposure to toxicants
6. Aware of formation of toxins during food processing

UNIT I-INTRODUCTION

Definition and need for understanding food toxicology; Hazards - Microbiological, nutritional and environmental. Basics of immune resources - humoral and cell media resources. Allergen and mechanism of allergic resources.

UNIT II-FOOD ALLERGY AND SENSITIVITY

Chemistry of food allergens, celiac disease, food disorders associated with metabolism, lactose intolerance, and asthma

UNIT III-PRINCIPLES OF TOXICOLOGY

Natural food toxicants - toxicity of mushroom alkaloids, seafood, vegetables, fruits, pulses, and antinutritional compounds. Biological factors that influence toxicity, toxin absorption in the G.I.track, Industrial microflora, blood, brain barrier, storage and excretion of toxins

UNIT IV-DETERMINATION OF TOXICANTS IN FOOD SAMPLING

Quantitative and qualitative analysis of toxicants in foods; Biological determination of toxicants
Assessment of food safety – Risk assessment and risk benefit indices of human exposure,

acute toxicity, mutagen city and carcinogenicity, reproductive and developmental toxicity, neurotoxicity and behavioural effect, immunotoxicity.

UNIT V-TOXICANTS FORMED DURING FOOD PROCESSING

Intentional direct additives, preservatives, nitrate, nitrite, and N- nitroso compound flavor enhancers, food colours, indirect additives, residues and contaminants, heavy metals, other organic residues and packaging materials. Toxicity of heated and processed foods, food carcinogens and mutagens – Polycyclic aromatic hydrocarbons, N - nitrosamines, Acrylamide and their mode of action

SUGGESTED READINGS

1. William, H.I., and Winter, K C. (2001). Food Toxicology. CRC Press.
2. Alluwalia., and Vikas. (2007). Food Hygiene and Toxicology. Paragon International Publishers.
3. Shibamoto, yuki T., and Bjeldanzes, L.F. (2009). Introduction to Food Toxicology. 2nd Edition. Academic Press.

Course objectives

- Explain the types, characterization and need for treating food industrial wastes
- Discuss the impact of various food processing industrial wastes on environment
- Summarize the different technologies and processes employed in treating food industrial waste water
- Review the multiple aspects of solid waste management in food industries
- Understand the laws, acts, regulatory issues in international and national scenario of food industrial waste management
- Develop knowledge on processing techniques for preparation of reusable products from food waste.

Course outcomes

1. Understand the importance of treating waste generated from the food processing sectors
2. Categorize the types of wastes obtained from different food processing industries
3. Illustrate the principles of chemical and physical treatments employed in the managing waste water from food industries
4. Outline the principles of biological treatments applied in the treating of food industry waste water
5. Infer the overall scenario of solid waste management in food industries
6. Discuss the role of national and international agencies, implementation of laws and acts to prevent or minimize the pollution and its impact on environment

UNIT I –INTRODUCTION

Environmental problems – Pollution – soil, water and Air Pollution. Classification and characterization of waste from various food industries; Need for treating waste from various food industries

UNIT II –FOOD INDUSTRY WASTES AND ENVIRONMENTAL POLLUTION

Food Industries – Pollution due to Food Industry wastes - solid and liquid wastes – characteristics and impact on environmental quality. Wastes from fruit and vegetable processing, meat, fish, dairy waste, Coffee and sago processing industries – characteristics and effect on soil, water and air quality.

UNIT III -WASTEWATER MANAGEMENT IN FOOD INDUSTRIES

Principles of Physical treatment - Screening, Sedimentation, Filtration, back washing,

membrane separation. Principles of Chemical treatment- Coagulation, flocculation, Precipitation, flotation, Disinfection and fluoridation. Principles of biological treatment – aerobic process, activated sludge process, trickling filters, anaerobic digestion, UASB reactor.

UNIT IV –SOLID WASTE MANAGEMENT IN FOOD INDUSTRIES

Solid waste management techniques – Principles and practices, 3R concept, resource recovery. Composting – methods of composting , vermi-composting. Incineration, pyrolysis, Briquetting - value addition – SCP, enzymes, pectin and other products.

UNIT V-ENVIRONMENTAL PROTECTION AND POLLUTION CONTROL IN FOOD INDUSTRIES

International and national scenario on disposal of waste from food industries. Green chemistry – Principles and application in food Industries - CDM - Eco friendly products in food industry - Bio colorants - Eco friendly packaging - Eco labeling – Occupational and Bio safety in food industries .Global treaties, conventions – National and State Level Organizations – Environmental Laws and Acts.; Regulatory issues with food industry waste.

SUGGESTED READINGS

3. Wang, L.K., Hung, Y.T., Lo, H.H., and Yapijakis, C. (2006). Waste Treatment in the Food Processing Industry. CRC press. Taylor and Francis Group.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course objectives**

- Understand the basic concepts of total quality management and appreciate its importance in today's business environment.
- Explain the TQM principles related to customer and supplier issues
- Discuss the TQM tools, concepts, methodologies and applications in quality management
- Understand the concepts, functions and performance measures applied in managing quality
- Discuss the need for implantation of various ISO standards in achieving good quality
- Analyze importance and processing of quality standards in every sector of food processing industries

Course outcomes

1. Outline the need of implementing quality management systems in food processing sectors
2. Infer the quality statements related to customer and supplier issues
3. Assess the tools, concepts, methodologies and applications in improving the quality
4. Discuss the overall aspects of quality related functions, and concepts of quality management
5. Explain the reasons and methods used in bench marking processes
6. Illustrate the importance of implementing ISO standards in quality management

UNIT I-INTRODUCTION

Introduction - Need for quality - Evolution of quality - Definition of quality - Dimensions of product and service quality - Basic concepts of TQM – TQM Framework - Contributions of Quality Gurus – Barriers to TQM – Cost of Quality.

UNIT II-TQM PRINCIPLES

Quality statements - Customer focus –Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Continuous process improvement – PDCA cycle, 5s, Kaizen - Supplier partnership – Partnering, Supplier selection, Supplier Rating.

UNIT III-TQM TOOLS & TECHNIQUES I

The seven traditional tools of quality – New management tools – Six-sigma: Concepts, methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – FMEA – Stages, Types.

UNIT IV-TQM TOOLS & TECHNIQUES II

Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Performance measures - BPR.

UNIT V-QUALITY SYSTEMS

Need for ISO 9000- ISO 9000-2000 Quality System – Elements, Documentation, Quality auditing- QS 9000 – ISO 14000 – Concepts, Requirements and Benefits –Quality Council – Leadership, Employee involvement – Motivation, Empowerment, Team and Teamwork, Recognition and Reward.

5. Charantimath, P.M. (2011). Total quality management, 2nd Edition. Pearson Education.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course objectives**

- Explain the concepts, objectives, types and cycles in logistics
- Discuss the concepts, objectives and types of inventory management system and material handling in industries
- Understand the overall concepts and objectives in material storage system in industries
- Explain the complete stages of logistic packaging and transportation
- Discuss the various concepts, objectives, systems and phases in customer service and logistics outsourcing
- Understand the process flow of supply chain management in food processing industry.

Course outcomes

1. Outline the concepts, objectives, types and cycles in logistics management system
2. List the concepts, objectives, types and terminologies of inventory management system
3. Understand the concepts, objectives, principles, types and equipments employed in material handling
4. Infer the various concepts, objectives and principles in material storage system and store house operations in industries
5. Understand the order of stages in logistic packaging and transportation
6. Discuss the complete scenario of customer service and logistics outsourcing

UNIT I- Concept of Logistics

Concept of Logistics: Introduction, Objectives, Concept of Logistics, Objectives of logistics, Types of logistics, Concept of Logistics Management, Evolution of Logistics, Role of Logistics in an Economy, Difference between Logistics and Supply Chain Management, Logistics and Competitive Advantage, Logistics Mix, Logistics in Organised Retail in India Integrated Logistics: Introduction, Objectives, Concept of Integrated Logistics, Inventory flow, Information flow, Operational Objectives of Integrated Logistics, Barriers to Integration, Organisation structure, Measurement system, Inventory ownership, Information technology, Knowledge transfer capability, Logistical Performance Cycle, Logistics performance cycle, Manufacturing support performance cycle, Procurement performance cycle

UNIT II INVENTORY MANAGEMENT

Introduction, Objectives, Concept of Inventory, Types of Inventory, Concept of Inventory Management, Importance of inventory management, Objectives of inventory management, Different

Types of Inventory Costs, Inventory Performance Measures, Inventory turnover ratio (ITR), Framework of performance indicators, Inventory Planning Measures, Economic order quantity (EOQ), Reorder point, Safety stock, Supplier-managed inventory Material Handling: Introduction, Objectives, Concept of Material Handling, Objectives of material handling, Principles of material handling, Equipment Used for Material Handling, Points to be Considered While Handling Materials, Role of Material Handling in Logistics

UNIT III MATERIAL STORAGE SYSTEM

Introduction, Objectives, Concept of Material Storage System, Unit Load Storage, Storage principles, Storage design and its benefits, Storage Methods Storehouse Operations and Control: Introduction, Objectives, Storehouse Operations and its Objectives, Daily Activities of Stores, Organizing a Store, Store Location and Layout, Selecting appropriate storage system, Centralization, Decentralization and variety reduction of stores, Store Housekeeping, Stores Accounting

UNIT IV LOGISTICAL PACKAGING AND TRANSPORTATION

Logistical Packaging: Introduction, Objectives, Concept of Logistical Packaging, Design Consideration in Packaging, Types of Packaging Material, Packaging Costs Transportation: Introduction, Objectives, Transportation System, Transportation Infrastructure, Different Modes of Transportation, Freight Management, Factors Affecting Freight Cost, Transportation Network, Containerisation

UNIT V CUSTOMER SERVICE AND LOGISTICS OUTSOURCING

Customer Service: Key Element of Logistics: Introduction, Objectives, Concept of Customer Service, Attributes of customer service, Different phases of customer services, Customer Service for Competitiveness, Value- Added Logistical Service Logistics Outsourcing: Introduction, Objectives, Concept of Logistics Outsourcing, Catalyst for logistics outsourcing, Benefits of logistics outsourcing, Issues in logistics outsourcing, Third-Party Logistics, Fourth-Party Logistics, Selection of Logistics Service Provider, Logistics Service Contract, Outsourcing-Value Proposition Logistics Information System: Introduction, Objectives, Concept of Logistics Information System (LIS), Importance of LIS, Principles of designing LIS, Logistics Information Architecture, Application of Information Technology in Logistics and Supply Chain Management

SUGGESTED READINGS

SOLID WASTE MANAGEMENT**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

- To make the students conversant with basics of Solid waste and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste management.
- To acquaint the students with the basics of energy generation from waste materials.
- To understand the chemical principles in the projects undertaken in field of engineering and technology

Course Outcome:

1. Outline the basic principles of Solid waste and separation of wastes (K)
2. Identify the concepts of treatment of solid wastes(S)
3. Identify the methods of wastes disposals.(S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

GREEN CHEMISTRY**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basics information on catalysis.
- To apply the concepts of green catalysts in the synthesis

COURSE OUTCOMES:

1. Outline the basic principles of green chemistry (K)
2. Examine the different atom efficient process and synthesis elaborately (S)
3. Apply the concepts combustion of green technology (S)
4. Identify and apply the concepts of renewable energy(S)
5. Apply the concepts of green catalysts in the synthesis (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air.Green chemistry for clean technology-Significance of

green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

APPLIED ELECTROCHEMISTRY**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

- To make the students conversant with the information on electrochemical material.
- To make the student acquire sound knowledge of conducting polymers.
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principles of solar cells and its applications
- To understand the chemical principles in the projects undertaken in field of engineering.

Course Outcomes:

1. Outline the basic principles of chemistry in electrochemical material (K)
2. Examine the properties of conducting polymers(S)
3. Apply the concepts of electrochemistry in storage devices.(S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS

lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics

TOTAL :45

Suggested Readings:

INDUSTRIAL CHEMISTRY**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

- To make the students conversant with cement and lime and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts explosives.
- To acquaint the students with the basics of agriculture chemicals.
- To understand the chemical principles in the projects undertaken in field of engineering.

Course Outcomes:

1. Outline the basic chemistry of cement and lime (K)
2. Examine the uses of abrasives and refractories (S)
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens(S)
5. Identify the usage of the agriculture chemicals(S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME

Manufacture of Portland cement – setting of hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement
Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses.
Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage.

Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

TECHNICAL WRITING

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

- Develop abilities to write technically and expressively,
- Recognize writing as a constructive, meaningful process,
- Practice using reading strategies for effective writing.
- Design effective technical documents for both print and digital media
- Identify the qualities of good technical writing
- To improve the ability of writing.

COURSE OUTCOMES:

Students undergoing this course are able to

1. Construct simple sentences, correct common grammatical errors in written English.
2. Develop confidence in English language by imbibing lexical and syntax rules.
3. Enrich their reading ability for effective writing.
4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT – I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer's block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT – 2 PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT – 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT – 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT – 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

SUGGESTED READINGS:

GEOPHYSICS**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objective:**

- To inculcate the basics of brief history of Earth sciences
- To divulge knowledge on the basics of structure of earth and earth's gravitational field.
- To disseminate the fundamentals of magnetic field and thermal distribution of earth
- To introduce the concepts of seismology and seismic waves
- To impart the basic knowledge of oceans
- To understand the basics and properties of sea water.

Course Outcome:

1. Gain knowledge on the basics of history of Earth sciences.
2. Acquire knowledge on concepts of structure of earth and earth's gravitational field.
3. Have adequate knowledge on the concepts of magnetic field and thermal distribution of earth
4. Obtain knowledge on the basics of seismic waves.
5. Understand the basics of oceans and properties of sea water.
6. Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I ORIGIN OF EARTH

A brief history of the development of Earth Sciences . An overview of Geophysical methods and their essential features, Problems of inversion and non-uniqueness in Geophysics, Origin & evolution of Solar system, Earth and Moon structure,.Kepler's law of planetary motion, A review of the Earth's structure and composition

UNIT II STRUCTURE OF EARTH

Chemical composition of Earth, Rheological behavior of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, Major features of the Earth's gravitational field and relationship with

tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sun spot, solar flares, geomagnetic storms, sea-floor spreading, Paleomagnetism and its uses, Thermal history of the Earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle

UNIT IV SEISMOLOGY

Earthquake seismology, Earthquakes and its classifications, Global seismicity and tectonics, Earth's internal structure derived from seismology, Earthquake mechanism and Anderson's theory of faulting, Continental drift and plate tectonics: its essential features, present day plate motions, Triple junctions, oceanic ridges, Benioff zones, arcs, hot spots, Mantle Plume, Mountain building, origin of Himalaya, Geodynamics of Indian subcontinent.

UNIT V OCEANS

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, Circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, Laws of seas, Coastal zone management

Total: 45

ENGINEERING ACOUSTICS**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

- To disseminate the fundamentals of acoustic waves.
- To inculcate the characteristics of radiation and reception of acoustic waves.
- To divulge knowledge on the basics of pipe resonators and filters.
- To introduce the features of architectural acoustics.
- To impart the basic knowledge of transducers and receivers.
- To apply the knowledge inputs of the course for engineering applications.

COURSE OUTCOME:

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics..
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS

Sound in enclosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

Transducer as an electrical network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

Total: 45

INDUSTRIAL MATHEMATICS – I**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****OBJECTIVES:**

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP,
- To learn the techniques to solve transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis
- To analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To formulate and solve problems as networks.

INTENDED OUTCOMES:

- To define and formulate linear programming problems and appreciate their limitations.
- To solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
- To be able to build and solve Transportation Models, Assignment Models,
- To construct linear integer programming models and discuss the solution techniques.
- To formulate and solve problems as networks and graphs.
- To be able to solve problems in different environments and develop critical thinking

UNIT I LINEAR PROGRAMMING PROBLEM

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method .

UNIT II TRANSPORTATION PROBLEM

Transportation Model, finding initial basic feasible solutions, moving towards optimality, Degeneracy.

UNIT III ASSIGNMENT PROBLEM

Solution of an Assignment problem, Multiple Solution, Hungarian Algorithm, Maximization in Assignment Model, Impossible Assignment.

UNIT IV INTEGER PROGRAMMING

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT V NETWORK ANALYSIS

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

Total : 45

INDUSTRIAL MATHEMATICS – II**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****OBJECTIVES:**

- To kindle analytical skills for solving engineering problems
- To impact the knowledge about inventory models
- To learn replacement models and simulation models
- To provide techniques for effective methods to solve nonlinear programming and decision making.
- To analyze the results and propose recommendations to the decision-making processes in Management Engineering
- To solve problems using non integer programming.

INTENDED OUTCOMES:

The students will

1. To be able to solve simple models in Inventory problems and Replacement problems.
2. To understand different queuing situations and find the optimal solutions using models for different situations.
3. Simulate different real life probabilistic situations using Monte Carlo simulation technique.
4. To be able to understand the characteristics of different types of decision- making environments and the appropriate decision making approaches and tools to be used in each type.
5. **Convert** and **solve** the practical situations into replacement models.
6. To understand how to model and solve problems using non integer programming.

UNIT – I INVENTORY MODELS

Economic order quantity models-techniques in inventory management-ABC analysis.

UNIT – II NON LINEAR PROGRAMMING

Khun-tucker conditions with non-negative constraints- Quadratic programming- Wolf's modified simplex method.

UNIT – III SIMULATION MODELS

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT -IV DECISION MODELS

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

UNIT -V REPLACEMENT MODELS

Models based on models that gradually deteriorate with time-whose maintenance cost increase with time- Replacement of items that fail suddenly and completely.

FUZZY MATHEMATICS**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To understand the concept of fuzziness involved in various systems

COURSE OUTCOME:

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

Total : 45

Suggested Readings:

MATHEMATICAL PHYSICS**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

- To know the fundamentals of Tensors.
- To know the series solutions to differential equations.
- To introduce the concepts of special functions.
- To study about Calculus of variations and integral equations
- Be familiar with the main mathematical methods used in physics.
- To learn different ways of solving second order differential equations

COURSE OUTCOME:

1. Students will demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
2. Learn about special type of matrices that are relevant in physics and then learn about tensors.
3. Get introduced to Special functions like Bessel, Legendre , Hermite and Laguerre functions and their recurrence relations
4. Learn different ways of solving second order differential equations and familiarized with singular points and Frobenius method.
5. Students will master in calculus of variations and linear integral equations.
6. The students will have the knowledge on Mathematical Physics and that knowledge will be used by them in different engineering and technology applications.

UNIT I TENSORS

Definition of tensor - rank, symmetric tensors, contraction, quotient rule - tensors with zero components, tensor equations, metric tensors and their determinants - pseudo tensors

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series Solution : Classification of singularities of an ordinary differential equation - Series solution- Method of Frobenius - indicial equation - examples

UNIT III SPECIAL FUNCTIONS

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre ,Hermite and Laguerre functions – Generating Function

UNIT IV CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler’s equation – Functional dependant on first and higher order derivatives – Functional dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric Problems – Direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green’s function – solution of aintegral equation – integral equations of the convolution type – Abel’s integral equations –integro–differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

LINEAR ALGEBRA**Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****COURSE OBJECTIVES:**

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To apply the basic concepts in their respective fields

COURSE OUTCOMES:

The student will be able to

1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
2. To apply the fundamental concepts in their respective engineering fields
3. To visualize linear transformations as matrix form
4. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
5. To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors
- Diagonalization

UNIT V INNER PRODUCT SPACES

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

Total : 45

**18BEC SOE01
PROGRAMMING**

INTERNET

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts & techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client-side programming using Java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on Java applets and scripts

UNIT I Introduction

(9)

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML

(9)

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL

(9)

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming

(9)

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V Internet Telephony

(9)

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

TEXT BOOKS:

1. Paul Deitel, Harvey Deitel and Abby Deitel, “Internet and World Wide Web-How to Program”, 5th Edition, 2011.
2. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.

REFERENCES:

1. Rahul Banerjee, Internetworking Technologies, An Engineering Perspective, PHI Learning, Delhi, 2011.
2. Robert W. Sebesta, “Programming the World Wide Web”, Pearson Education, 2016

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I Introduction (9)

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation

– Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II Creating Animation in Flash (9)

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame- based Animation - Working with the Timeline and Tween-based Animation –

Understanding Layers

- Action script.

UNIT III 3D Animation & its Concepts (9)

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption (9)

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage

– Different Language of Script Animation Among the Software.

UNIT V Concept Development

(9)

Story Developing – Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

TEXT BOOK:

18BECSOE03	PC HARDWARE AND TROUBLE SHOOTING	L 3	T 0	P 0	C 3
------------	-------------------------------------	--------	--------	--------	--------

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction (9)

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices (9)

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview (9)

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance

(9)

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting

(9)

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

2. Scott Mueller, "Repairing PC's", PHI, 1992

COURSE OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads, generics classes and swings
- To explain the need for generic programming
- To design and build simple Graphical User Interfaces

3 0
0
3**COURSE OUTCOMES:**

Upon completion of the course, students will be able to:

- Develop Java programs using OOP principles
- Develop Java programs with the concepts of inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generics classes and swings
- Understand various aspects for motivation of generic programming
- Develop various interactive Java programs using OOP concepts of Java

UNIT I INTRODUCTION TO JAVA**(9)**

Object oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism.- Objects and classes in Java – defining classes – methods - access specifiers – static members – constructors – finalize method

UNIT II PACKAGES**(9)**

Arrays – Strings - Packages – Java-Doc comments -- Inheritance – class hierarchy – polymorphism – dynamic binding – final keyword – abstract classes

UNIT III I/O STREAMS**(9)**

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes.

UNIT IV EXCEPTION HANDLING**(9)**

Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to Swing – Model-View-Controller design pattern – buttons – layout

UNIT V MOTIVATION FOR GENERIC PROGRAMMING (9)

4. <http://www.freeprogrammingresources.com/visualcpp.html>

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION**9**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS**9**

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT**9**

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE**9**

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different

energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL: 45 HOURS

--	------------	-----------	--	--

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behaviour changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT 9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS 9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT 9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS 9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS 9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

TOTAL: 45 HOURS

TEXT BOOK

S . N o .	Author(s) Name	Title of the Book	Publisher	Year of Publicat ion
1	Murphy W. R. and G.Mckay Butter	Energy Management	Heinemann Publications	2007

REFERENCES

S . N o .	Author(s) Name	Title of the Book	Publisher	Year of Public ation
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	Lulu Enterprises, Inc. - 8th Edition Volume II	2013

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment
Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

9

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and

Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES

9

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEBSITE

<http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>, - Introduction to programmable Logic controller

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation –

generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY

9

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

9

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEBSITES

www.energycentral.com www.catelectricpowerinfo.com

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on applications of embedded system

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEM

Introduction- Embedded systems description, definition, design considerations & requirements- Overview of Embedded System Architecture (CISC and RISC)-Categories of Embedded Systems-embedded processor selection & tradeoffs- Embedded design life cycle -Product specifications- hardware / software partitioning- iterations and implementation- hardware software integration – product testing techniques–ARM7.

UNIT-II OPERATING SYSTEM OVERVIEW

Introduction–Advantage and Disadvantage of Using RTOS–Multitasking–Tasks-Real Time Kernels – Scheduler- Non-Preemptive Kernels – Preemptive Kernels – Reentrancy- Reentrant Functions– Round Robin Scheduling- Task Priorities- Static Priorities– Mutual Exclusion– Deadlock– Inter task Communication–Message Mailboxes–Message Queues- Interrupts- Task Management– Memory Management-Time Management–Clock Ticks.

UNIT-III TASK MANAGEMENT

Introduction- μ C/OS-II Features-Goals of μ C/OS-II-Hardware and Software Architecture–Kernel Structures: Tasks–Task States–Task Scheduling–Idle Task–Statistics Task–Interrupts Under μ C/OS-II –

Clock Tick- μ C/OS- II Initialization. Task Management: Creating Tasks–Task Stacks–StackChecking–Task’sPriority–SuspendingTask– resumingTask.TimeManagement: Delaying a Task–Resuming a Delayed Task–System Time. Event Control Blocks-Placing a Task in the ECB Wait List–Removing a Task from an ECB wait List.

UNIT-IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview– Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox –Deleting Mailbox–Waiting for a Message box–Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue–Deleting a Message Queue–Waiting for a Message Queue–Sending Message to a Queue– Flushing a Queue.

UNIT-V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks–Creating Partition–Obtaining a Memory Block–Returning a Memory Block. Getting Started with μ C/OS-II–Installing μ C/OS-II–Porting μ C/OS-II: Development Tools–Directories and Files– Testing a Port -IAR Workbench with μ C/OS-II– μ C/OS- II Porting on a 8051CPU– Implementation of Multitasking- Implementation of Scheduling and Rescheduling –Analyze the Multichannel ADC with help of μ C/OS-II.

SUGGESTED READINGS

1. Floyd JeanJ. Labrosse Micro C/OS–II The Real Time Kernel CMPBOOKS 2009
2. David Seal ARM Architecture Reference Manual.Addison-Wesley 2008
3. Steve Furbe, ARM System-on-Chip Architecture, Addison-Wesley Professional, California 2000.
4. K.V.K.K.Prasad Embedded Real-Time Systems: Concepts, Design & Programming Dream Tech Press 2005.
5. Sriram V Iyer, Pankaj Gupta Embedded Real Time Systems Programming Tata Mc Graw Hill 2004

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT-I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters – Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT-II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system–interlacing–composite video signal. Colour TV– Luminance and Chrominance signal; Monochrome and Colour Picture Tubes- Color TV systems– NTSC, PAL, SECAM- Components of a Remote Control.

UNIT-III OPTICAL RECORDING AND REPRODUCTION

Audio Disc– Processing of the Audio signal–readout from the Disc –Reconstruction of the audio signal– Video Disc–Video disc formats- recording systems–Playback Systems.

UNIT-IV TELECOMMUNICATION SYSTEMS

Telephone services–telephone networks–switching system principles–PAPX switching–Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local

Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems.

UNIT-V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software;

Components of air conditioning and refrigeration systems.

SUGGESTED READINGS

18BEECOE03**Neural Networks and its Applications****Semester-__****3H-3C Instruction****Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT-I INTRODUCTION TO NEURAL NETWORKS

Introduction-biological neurons and their artificial models-learning, adaptation and neural network's learning rules-types of neural networks-single layer, multiple layer-feed forward, feedback networks

UNIT-II LEARNING PROCESS

Error– correction learning– memory based learning- hebbian learning-competitive learning- Boltzmann learning-supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT-III PERCEPTION

Single layer Perception-Adaptive filtering-unconstrained Optimization-Least-mean square algorithm-Leaning Curve-Annealing Technique-perception convergence Theorem-Relationship between perception and Baye's Classifier-Back propagation algorithm

UNIT-IV ATTRACT OR NEURAL NETWORK AND ART

Hopfield model-BAM model -BAM Stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield Design-Application to TSP problem-ART-layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT-V SELF ORGANIZATION

Self-organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical Vector Quantization. Applications of self-organizing maps: The Neural Phonetic Type Writer Learning Ballistic Arm Movements.

SUGGESTED READINGS

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy inference and defuzzy inference procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT-I BASICS OF FUZZY LOGIC

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT-II THEORY OF APPROXIMATE REASONING

Linguistic variables, Fuzzy proportions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT-III FUZZY KNOWLEDGE BASED CONTROLLERS

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzy inference and defuzzy inference procedures–Design of Fuzzy Logic Controller

UNIT-IV ADAPTIVE FUZZY CONTROL

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Self organizing controller model based controller.

UNIT-V FUZZY BASED SYSTEMS

Simple applications of FKBC-washing machines-traffic regulations-lift control-fuzzy in medical

Applications-Introduction to ANFIS.

SUGGESTED READINGS

Course Objectives

- To provide students with an overview of communication systems
- To provide an overview on mobile communication
- To make students to have a better understanding on satellite and radar communication
- To understand the basic communication techniques which in turn are used as the building blocks of the larger and more complex communication systems.
- To acquire the basic engineering understanding to the modern communication systems and; the relevant theory and technique.
- Design simple systems for landing and navigation.

Course Outcomes

At the end of the course the students will be able to

- Understand past, present and future trends in mobile communication.
- Gain knowledge about mobile cellular communication
- Understand various standards in use for wireless communication and its application.
- Demonstrate some basic application of GPS.
- Gain knowledge about RADAR working and its applications
- Demonstrate how a simple radar system works and its applications.

UNIT I THE EVOLUTION OF ELECTRONIC COMMUNICATION

From smoke signals to smart phones - History of communications: Theoretical Foundations, Development & Applications - Frequencies for communication - Frequency regulations - Overview of communication transmitter and receiver.

UNIT II MOBILE CELLULAR COMMUNICATIONS

Evolution to cellular networks – Cellular systems generations and standards: 1G, 2G, 3G, 4G - Cellular network components - Components of a mobile phone - setting up a call process - Making a call process - Receiving a call process - Spectrum allocation: Policies and strategies, Role of TRAI.

UNIT III WIRELESS COMMUNICATION

Introduction - Bluetooth - Infrared communication - IEEE Wireless LANs (Wi-Fi) - IEEE 802.16 (WiMaX) - Future mobile and wireless networks: Introduction to 5G- device to device communication-IoT.

UNIT IV SATELLITE COMMUNICATION

History of Satellite communication, Basics of Satellites, Types of Satellites, Capacity Allocation - Launch Vehicles and Orbits: Introduction to launching vehicles, Important Orbits, working of rocket, Three Pioneers of Rocketry - Basics of Global Positioning System (GPS) - Applications of GPS.

UNIT V RADAR & NAVIGATION

Introduction, Radar Block diagram and Operation, Radar Frequencies, Applications of Radar. Navigation Systems: Introduction & methods of navigation, Instrument Landing System, Microwave landing system- Modern Navigation systems.

3C**AUTOMOBILE ENGINEERING**

3H-

Instruction Hours/Week: L:3 T:0 P:0

Marks: **Internal:40 External:60 Total:100**End Semester Exam:**3 Hours****Course Objectives:**

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Explain the function and working of components in transmission and drive lines.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND AUXILIARY SYSTEMS

Classification of engines – construction and working of four-stroke spark ignition (SI) engine and compression ignition (CI) engine – construction and working of two-stroke SI and CI engine – firing order

– carburettor – fuel injection systems – battery – dynamo – alternator – starting motor – lighting system – ignition system.

UNIT II TRANSMISSION SYSTEMS

Requirements of transmission system – flywheel – clutch – types of clutch – construction of single and multi-plate clutches – need, types and construction of transmission gear box – universal joint – propeller

shaft – need, types and construction of differential – four wheel drive.

UNIT III STEERING AND SUSPENSION SYSTEMS

Principle of steering – steering linkages – types of steering gear box – power steering – suspension systems

– need and types – independent suspension – coil spring, leaf spring, torsion bar and air suspension – shock absorbers.

UNIT IV WHEELS AND BRAKES

Wheels and tyres – construction – types and specifications – tyre wear and causes – brakes – need – braking distance – types – mechanical, hydraulic and pneumatic brakes – power brake – parking brake – redundant braking system.

UNIT V CURRENT AND FUTURE TRENDS

Anti-lock Braking System (ABS) – brake assist – Electronic Brakeforce Distribution (EBD) – airbags – automatic high-beam control – backup cameras – defogger – electric vehicles – hybrid vehicles – autonomous vehicles – vehicle-to-vehicle communication – vehicle tracking – alternative fuels.

Suggested Readings:

1. Kirpal Singh, *Automobile Engineering Volume I*, Standard Publishers, New Delhi, 2018.
2. Sethi H M, *Automobile Technology*, Tata McGraw-Hill, New Delhi, 2003.
3. William H Crouse and Donald L Anglin, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2006.
4. Srinivasan S, *Automotive Mechanics*, Tata McGraw-Hill, New Delhi, 2003.
5. Ganesan V, *Internal Combustion Engines*, McGraw-Hill Education, New Delhi, 2012.

18BEAE02
3C**TWO AND THREE WHEELER TECHNOLOGY**

3H-

Instruction Hours/Week: L:3 T:0 P:0

Marks: **Internal:40 External:60 Total:100**End Semester Exam:**3 Hours****Course Objectives:**

- To impart technical knowledge on construction and working of the power train and drive train of two and three wheeler vehicles.
- To familiarise with maintenance procedures of the engine and subsystems of two and three wheelers.
- To impart knowledge on types of transmission systems
- To impart knowledge on types of steering and suspension systems
- To impart knowledge on types of wheels, tyres and brakes for two and three wheelers
- To make the students conversant on servicing of two and three wheelers.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

History of two and three wheelers – classification and layouts of two wheelers – classification and layouts of three wheelers – main frame for two wheelers and types – main frame for three wheelers and types.

UNIT II INTERNAL COMBUSTION ENGINES

Classification of engines – selection criteria of engine for two and three wheelers – design considerations for two and three wheeler engines – construction and working of two-stroke and four-stroke engines – fuel feed system – lubricating system – cooling system – scavenging system – cranking system – kick start and auto-start mechanisms.

UNIT III TRANSMISSION, STEERING AND SUSPENSION SYSTEMS

Clutch – single plate, multiple plate and centrifugal clutches – primary reduction – gear box – gear shifting mechanisms – automatic transmission – final drive and differential for three wheelers – steering geometry – steering column construction – steering system for three wheelers – front and rear suspension systems – spring and shock absorber assembly.

UNIT IV WHEELS, TYRES AND BRAKES

Spoked wheels, pressed steel wheels and alloy wheel – tyre construction – tyre with tube and tubeless tyre

– theory of brake action – drum and disc brakes – brake links layout for front and rear wheels – mechanical and hydraulic brake control systems – anti-lock braking system.

UNIT V TWO AND THREE WHEELERS CASE STUDY

Case study of mopeds, scooters, motor cycles, sports bikes, auto rickshaws, pickup vans, delivery vans and trailers – servicing – factors affecting fuel economy and emission.

Suggested Readings:

1. Dhruv U Panchal, *Two and Three Wheeler Technology*, PHI Learning, New Delhi, 2015.
2. Ramalingam K K, *Two Wheelers and Three Wheelers: Theory, Operation and Maintenance*, Scitech Publications, Chennai, 2017.
3. Irving P E, *Motorcycle Engineering*, Veloce Enterprises, USA, 2017.
4. Dennis Bailey and Keith Gates, *Bike Repair and Maintenance for Dummies*, John Wiley & Sons, USA, 2009.

Course Objectives:

- To understand the need for vehicle maintenance and its importance.
- To familiarise the maintenance procedure for various components of an automobile.
- To familiarize the students to understand servicing of transmission and driveline components.
- To make the students conversant on the procedure for steering and suspension
- To make the students conversant on the procedure for wheel and brake maintenance.
- To Study and acquire knowledge on the fault diagnosis in the electrical and air conditioner systems.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Need for maintenance – preventive and breakdown maintenance – requirements of maintenance – preparation of check lists – inspection schedule – maintenance of records, log sheets and other forms – safety precautions in maintenance – workshop layout, tools and equipment.

UNIT II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE

General engine service – dismantling of engine components – engine repair – service of basic engine parts, cooling and lubricating system, fuel system, intake and exhaust system – engine tune-up.

UNIT III TRANSMISSION AND DRIVELINE MAINTENANCE

General checks, adjustment and service of clutch – dismantling, identifying, checking and reassembling transmission, transaxle – road testing – removing and replacing propeller shaft – servicing of cross and yoke joint, and constant velocity joint – rear axle service points – removing axle shaft and bearings –

servicing differential assemblies – fault diagnosis.

UNIT IV STEERING, SUSPENSION, WHEEL AND BRAKE MAINTENANCE

Inspection, maintenance and service of steering linkage, steering column, rack and pinion steering, recirculating ball steering, worm type steering, power steering system – inspection, maintenance and service of MacPherson strut, coil spring, leaf spring, shock absorbers – wheel alignment and balance – removing and fitting of tyres – tyre wear and tyre rotation – inspection, maintenance and service of hydraulic brake, drum brake, disc brake, parking brake – bleeding of brakes.

UNIT V ELECTRICAL AND AIR CONDITIONER MAINTENANCE

Maintenance of batteries, starting system, charging system and body electrical – fault diagnosis using scan tools – maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator – replacement of hoses – leak detection – air conditioner charging – fault diagnosis – vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

Suggested Readings:

1. Tim Gilles, *Automotive Service: Inspection, Maintenance, Repair*, Cengage Learning, USA, 2015.
2. Philip Knott and Adam Roylance, *An Introductory Guide to Motor Vehicle Maintenance: Light Vehicles*, EMS Publishing, UK, 2010.
3. James D Halderman and Curt Ward, *Advanced Engine Performance Diagnosis*, Pearson, USA, 2016.
4. Ed May and Les Simpson, *Automotive Mechanics Volume 1*, McGraw-Hill Australia, 2006.
5. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, USA, 2017.
6. Service manuals of various OEMs.

18BEAEOE04**MODERN VEHICLE TECHNOLOGY****3H-3C**

Instruction Hours/Week: L:3 T:0 P:0

Marks: **Internal:40 External:60 Total:100**End Semester Exam:**3 Hours****Course Objectives:**

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles – stratified charged / lean burn engines – hydrogen engines – battery vehicles – electric propulsion with cables – magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Adaptive cruise control – intelligent speed adaptation – lane departure warning systems – traction control systems – driver drowsiness detection system – collision avoidance systems – hill descent control – anti spin regulation – parking assistance systems – night-vision systems – pedestrian detection.

UNIT III SUSPENSION, BRAKES AND SAFETY

Interconnected air and liquid suspensions – hydroelastic suspension system – hydragas suspension – closed loop suspension – indirect floating calliper disc brake – self energising disc brake – anti-skid

braking system – retarders – regenerative braking – auto emergency braking – crumple zone – safety cage – airbags – seat belts – head rests.

UNIT IV EMISSION AND NOISE POLLUTION CONTROL

Engine emissions – types of catalytic converters – open loop and closed loop operation to the oxidizing catalytic converter – evaporative emission – internal and external noise – identification of noise sources – noise control techniques – adaptive noise control.

UNIT V VEHICLE TELEMATICS

Building blocks of vehicle telematics system – Global Positioning System (GPS) and Geographic Information System (GIS) for vehicle tracking – automotive navigation system – road recognition system – wireless vehicle safety communications – Usage Based Insurance (UBI). Suggested Readings:

1. Ljubo Vlacic, Michael Parent and Fumio Harashima, *Intelligent Vehicle Technologies*, Butterworth-Heinemann, UK, 2001.
2. Ronald K Jurgen, *Navigation and Intelligent Transportation Systems*, SAE International, USA, 1898.
3. Heinz Heisler, *Advanced Vehicle Technology*, Butterworth-Heinemann, UK, 2002.
4. James E Duffy, *Modern Automotive Technology*, Goodheart-Willcox, USA, 2017.
5. William B Ribbens, *Understanding Automotive Electronics*, Butterworth-Heinemann, UK, 2017.
6. *Bosch Automotive Handbook*, Robert Bosch, Germany, 2018.

18BEAEOE05
3C**FLEET MANAGEMENT**3H-

Instruction Hours/Week: L:3 T:0 P:0

Marks: **Internal:40 External:60 Total:100**End Semester Exam:**3 Hours****Course Objectives:**

- To impart knowledge on the personnel management, selection process, training methods and motor vehicle act.
- To plan the vehicle routes, scheduling of vehicles and fare structure.
- To design the vehicle maintenance systems.
- To Study and acquire knowledge on fare structure and analyse the methods of fare collection
- To introduce the concepts of vehicle parts, supply management and data processing
- To Study and acquire knowledge on electronically controlled vehicle maintenance system

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Apply the knowledge of personnel management and analyse the selection process and training methods.
- Apply the motor vehicle act in terms of registration and describe the various vehicles and conduct the test of competence to drive.
- Construct a fare structure and analyse the methods of fare collection.
- Analyse the vehicle parts, supply management and data processing.
- Describe the scheduled and unscheduled maintenance
- Demonstrate an electronically controlled vehicle maintenance system and analyse the work schedule.

UNIT I INTRODUCTION

Personnel management – objectives and functions of personnel management – psychology, sociology and their relevance to an organization – selection process: job description, employment tests, interviewing, introduction to training objectives, methods of training, training procedure and psychological tests.

UNIT II MOTOR VEHICLE ACT

Schedules and sections of the motor vehicle act – traffic signs, fitness certificate, registration requirements, permit, insurance and constructional regulations – description of vehicle: goods carrier,

tankers, tippers, delivery vans, recovery vans, power wagons and fire fighting vehicles – spread over, running time, test of competence to drive.

UNIT III SCHEDULING AND FARE STRUCTURE

Route planning – scheduling of transport vehicles – preparation of timetable – preparation of vehicle and crew schedule – principal features of operating costs for transport vehicles – fare structure and method of drawing up of a fare table – methods of fare collection.

UNIT IV VEHICLE PARTS, SUPPLY MANAGEMENT AND BUDGET

Cost of inventory – balancing inventory cost against downtime – parts control – bin tag systems – time management – time record keeping – budget activity and capital expenditures – classification of vehicle expenses – fleet management and data processing – data processing systems – computer controlling of fleet activity.

UNIT V MAINTENANCE

Scheduled and unscheduled maintenance – preventive maintenance – evaluation of Preventive Maintenance Inspection (PMI) programme – work scheduling – overtime – breakdown analysis – control of repair backlogs – cost of options – electronically controlled vehicle maintenance system.

Suggested Readings:

1. Robert P Currie, Michelle B Currie and George M Keen, *Fleet Management*, Wandering Brothers Publishing, USA, 2006.
2. John Dolce, *Fleet Management*, McGraw-Hill, 1884.
3. SCC Editorial, *Motor Vehicles Act, 1888*, Eastern Book Company, New Delhi, 2018.
4. Rex W Faulks, *Bus and Coach Operation*, Butterworth-Heinemann, UK, 1887.
5. John E Dolce, *Analytical Fleet Maintenance Management*, SAE International, USA, 2009.

COURSE OBJECTIVES

- To examine the role and tasks of basic housing policies and building bye laws
- Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
- Analyze the Innovative construction methods and Materials
- Analyze city management strategies and strengthen the urban governance through a problem solving approach
- To know the Importance of basic housing policies and building bye laws
- To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING**9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES**9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS**9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TOTAL HRS : 45

TEXT BOOKS

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 2002.
2. Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 2001.

REFERENCES

1. Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.
2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 2000.

COURSE OBJECTIVES

- Defining and identifying of eng. services systems in buildings.
- The role of eng. services systems in providing comfort and facilitating life of users of the building.
- The basic principles of asset management in a building & facilities maintenance environment
- Importance of Fire safety and its installation techniques
- To Know the principle of Refrigeration and application
- To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilization factor – Depreciation factor – MSCP – MHCP – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for

physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Sub cooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TOTAL HRS : 45

TEXT BOOKS

1. E.R.Ambrose, “Heat Pumps and Electric Heating”, John and Wiley and Sons, Inc., New York, 2002.
2. Handbook for Building Engineers in Metric systems, NBC, New Delhi, 2005.

REFERENCES

1. Philips Lighting in Architectural Design, McGraw-Hill, New York, 2000.
2. A.F.C. Sherratt, “Air-conditioning and Energy Conservation”, The Architectural Press, London, 2005.
3. National Building Code.

COURSE OBJECTIVES

- To learn various distress and damages to concrete and masonry structures
- To know the influence of corrosion in durability of structures
- To understand the importance of maintenance of structures
- To study the various types and properties of repair materials
- To learn various techniques involved in demolition of structures
- To Assessing damage of structures and various repair techniques

COURSE OUTCOME

By the end of this course students will have the capability/knowledge of

1. Various distress and damages to concrete and masonry structures
2. Durability of structures and corrosion mechanism
3. The importance of maintenance of structures, types and properties of repair materials etc
4. Assessing damage of structures and various repair techniques
5. Modern technique and equipment being adopted for the demolition of structures
6. Influence of corrosion in durability of structures

UNIT – I INTRODUCTION**9**

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking. Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors.

UNIT – II DURABILITY OF STRUCTURES**9**

Corrosion mechanism – diagnosis- causes and effects - cover thickness and cracking, measurements for corrosion - methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, cathodic protection.

UNIT - III MAINTENANCE AND REPAIR STRATEGIES**9**

Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration - testing techniques.

UNIT - IV MATERIALS FOR REPAIR**9**

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fibre reinforced concrete. eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete.

Non-destructive Testing Techniques, Corrosion protection techniques , Guniting and Shotcrete Epoxy injection, Mortar repair for cracks, shoring and underpinning. Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure Engineered demolition techniques for dilapidated structures - case studies

18BECE0E04 COMPUTER-AIDED CIVIL ENGINEERING DRAWING 3 0 0 3 100

COURSE OBJECTIVES

- Develop Parametric design and the conventions of formal engineering drawing
- Produce and interpret 2D & 3D drawings
- Communicate a design idea/concept graphically/visually
- Examine a design critically and with understanding of CAD - The student learn to interpret drawings
- Produce designs using a combination of 2D and 3D software.
- Get a Detailed study of an engineering artifact

COURSE OUTCOME

The students will be able to

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Get a Detailed study of an engineering artifact
6. Planning and designing of structures

UNIT 1: *INTRODUCTION*; Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co- ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards. 9

UNIT 2: *SYMBOLS AND SIGN CONVENTIONS*: Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards 9

UNIT 3: *MASONRY BONDS*: English Bond and Flemish Bond – Corner wall and Cross walls - One brick wall and one and half brick wall

UNIT 4: *BUILDING DRAWING*: Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity

9

UNIT 5: *PICTORIAL VIEW*: Principles of isometrics and perspective drawing. Perspective view of building.

9

List of Drawing Experiments:

1. Buildings with load bearing walls including details of doors and windows.
2. Single storey RCC building
3. Multistorey RCC building

Text/Reference Books:

1. Subhash C Sharma & Gurucharan Singh (2005), “ Civil Engineering Drawing” , Standard Publishers
2. Ajeet Singh (2002), “ Working with AUTOCAD 2000 with updates on AUTOCAD 2001”, Tata- Mc Graw-Hill Company Limited, New Delhi
3. Sham Tickoo Swapna D (2009), “ AUTOCAD for Engineers and Designers” , Pearson Education,
4. Venugopal (2007), “Engineering Drawing and Graphics + AUTOCAD”, New Age International Pvt. Ltd.,
5. Balagopal and Prabhu (1987), “ Building Drawing and Detailing”, Spades publishing KDR building, Calicut

Course Objective

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

Course Outcome

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD- CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, Boolean operations. Extracting entities from a solid. Filletting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

SUGGESTED READINGS

1. Vera B Anand, Computer Graphics and Geometric Modeling for Engineers, 1st edition, John Wiley & Sons, New York, 2000
2. Radhakrishnan P and Subramanyan S, CAD/CAM/CIM, 2nd edition, New Age International Pvt. Ltd, 2008
3. Ibrahim Zeid, CAD/CAM Theory and Practice, 2nd edition, McGraw Hill Inc., New York, 2009
4. Barry Hawhes, The CAD/CAM Process, 1st edition, Pitman Publishing, London, 2007(digital)
5. William M Newman and Robert Sproul, Principles of Interactive Computer Graphics, 1st edition, McGraw Hill Inc., New York, 2001
6. Sadhu Singh, Computer-Aided Design and Manufacturing, 1st edition, Khanna Publishers, New Delhi, 1998

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, other environment.

UNIT I CONCEPTS

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety.

UNIT II TECHNIQUES

Incident Recall Technique (IRT), disaster control, Job Safety Analysis (JSA), safety survey, safety inspection, safety sampling, Safety Audit.

UNIT III ACCIDENT INVESTIGATION AND REPORTING

Concept of an accident, reportable and non reportable accidents, unsafe act and condition – principles of accident prevention, Supervisory role- Role of safety committee – Accident causation models - Cost of accident. Overall accident investigation process - Response to accidents, India reporting requirement, Planning document, Planning matrix, Investigators Kit, functions of investigator, four types of evidences, Records of accidents, accident reports

UNIT IV SAFETY PERFORMANCE MONITORING

Reactive and proactive monitoring techniques - Permanent total disabilities, permanent partial disabilities, temporary total disabilities -Calculation of accident indices, frequency rate, severity rate, frequency severity incidence, incident rate, accident rate, safety “t” score, safety activity rate – problems.

UNIT V SAFETY EDUCATION AND TRAINING

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

SUGGESTED READINGS

1. Accident Prevention Manual for Industrial Operations, 3rd edition, N.S.C. Chicago, 2010(digital).
2. Heinrich H. W. “Industrial Accident Prevention”, 2nd edition, Tata McGraw-Hill Company, New York, 1941.
3. Krishnan N.V, Safety Management in Industry, 1st edition, Jaico Publishing House, Bombay, 1997.
4. John R Ridley, Safety at Work,3rd edition, Elsevier,2014
5. Roland P. Blake ,Industrial Safety, 2ndedition,Prentice Hall, Inc., New Jersey, 1973
6. L M Deshmukh, Industrial safety management,1stedition, TATA McGraw Hill, 2005

COURSE OBJECTIVE

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

COURSE OUTCOMES

Upon completion of this course, the students can be able to

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer

inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

SUGGESTED READINGS

1. Geankoplis, C. J, Transport Processes and Separation Processes Principles, 4th edition, Prentice Hall, 2013
2. R. Byron Bird, Warren E. Stewart, Edwin N. Lightfoot, Transport Phenomena, 1st edition, John Wiley & Sons, 2007.
3. Edwin N. Lightfoot, Transport phenomena and living systems: biomedical aspects of momentum and mass transport, 1st edition, Wiley, 1973, 2007 (digital)

COURSE OBJECTIVE

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES

Upon completion of this course, the students will be able to,

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

SUGGESTED READINGS

1. Duane Knudson, Fundamentals of Biomechanics, 1st edition, Springer Science+ Business Media, LLC, 2013
2. C. Ross Ethier Craig A. Simmons, Introductory Biomechanics, 1st edition, Cambridge University Press, 2008

COURSE OBJECTIVE:

- To provide students with a general awareness on the importance of energy
- To provide awareness about conservation, its impact on society, various energy sources, energy conversion processes, energy management, energy audit and energy conservation measures.
- To introduce the energy and water management principles related to process Chemical plants.
- To introduce various forms of energy and its forms.
- To introduce the growth, need and necessity of the consumption energy.

COURSE OUTCOMES:

After completion of the course, students are able to

- Plan to optimize energy using systems and procedures to meet energy demand
- Describe the movement of substances in the entire globe
- Examine the relationship between energy systems and society
- Use optimization techniques for conservation of energy in chemical industries
- Evaluate the production rate and analyze the cost from economic balance for energy consumption.
- Understand the concepts of conservation of the resources available.

PLANNING FOR ENERGY NEEDS

Forecasting techniques; energy demand; magnitude and pattern; input and output analysis; energy modelling and optimal mix of energy sources.

(9)

ENERGY AND ENVIRONMENT

Energy; various forms; energy storage; structural properties of environment; bio-geo-chemical cycles; society, environment population and technology.

(9)

ENERGY AND SOCIETY

Energy and evolution; growth and change; patterns of consumption in developing and advanced countries; commercial generation of power requirements and benefit.

(9)

MANAGEMENT OF ENERGY CONSERVATION IN CHEMICAL INDUSTRIES

Chemical industries; classification; conservation in unit operations such as separation; cooling tower; drying; conservation applied to refineries, petrochemical, fertilisers, cement, pulp and paper, food and chlor-alkali industries; conservation using optimization techniques.

(9)

ECONOMIC BALANCE IN ENERGY CONSUMPTION

Cost analysis; capacity; production rate; system rate; system cost analysis; corporate models; production analysis and production using fuel inventories; input-output analysis; economics; tariffs

(9)

TOTAL : 45

SUGGESTED READINGS

- Jerrold H Kertz, Energy Conservation and Utilization, Allyn and BacurInc, 1976.
- Gemand M Gramlay, Energy, Macmillan publishing Co, Newyork, 1975
- Krentz J. H., Energy Conservation and Utilization, Allyn and Bacur Inc., 1976.
- Gramlay G. M., Energy, Macmillan Publishing Co., New York, 1975.
- Rused C. K., Elements of Energy Conservation, McGraw-Hill Book Co., 1985

COURSE OBJECTIVES:

- To introduce the concepts of fertilizers and manures.
- Justify the need for synthetic fertilizer.
- To understand the process and flow in manufacture of fertilizers.
- To analyze how the nitrogenous fertilizers are useful for the agriculture purpose.
- To categories the storage and handling of the fertilizers.

COURSE OUTCOMES:

After completion of the course, students are able to

- Illustrate chemical, organic fertilizers and nutrients
- Develop the flow chart for manufacture of nitrogenous fertilizers
- Analyze the various processes and develop the flow chart for the manufacture of phosphatic fertilizers.
- Develop the flow chart for the manufacture of potassic fertilizer and analyze the unit operations involved in the process.
- Illustrate the quality and pollution standards permissible in fertilizer industry.
- Application of fertilizers based on various characteristics

INTRODUCTION

Chemical Fertilizers and Organic Manures - Types of chemical Fertilizers.Secondary nutrients, micro nutrients.

(9)

NITROGEN FERTILIZERS

Nitrogenous Fertilizers - Methods of production of Ammonia and Urea. Nitric acid, Ammonium sulphate, Ammonium Nitrate, Calcium Ammonium Nitrate, Ammonium Chloride - Their methods of production, characteristics, storage and handling specifications.

(9)

PHOSPHATIC FERTILIZERS

Raw materials, phosphate rock, Sulphur pyrites -Process for the production of Sulphuric and Phosphoric acids. Ground phosphate rock, bone meal. Single Super Phosphate, Triple Super phosphate -Methods of production, characteristics and specifications.

(9)

POTASSIC FERTILIZERS

Potassium chloride, Potassium sulphate, Potassium schoenite - Methods of production, specification, characteristics. Complex Fertilizers, NPK Fertilizers, Mono ammonium phosphate, Diammonium phosphate, Nitro phosphate Methods of production.

FERTILIZERS IMPACTS AND STANDARDS

Fluid fertilizers. Controlled Release of fertilizers. Solid, Liquid and Gaseous pollution from ammonia urea and NPK fertilizer industries and standards laid down for them. Fertilizer production in India.

- Menon M.G., Fertilizer Industry - Introductory Survey, Higginbothams, Madras, 1973

COURSE OBJECTIVES:

- To impart knowledge on composition treatment and effective disposal of industrial effluents.
- To understand the basic characteristics of wastewater.
- Understanding the kinetics of biological system.
- Understand the design and working principle of various treatment methods.
- Understand magnitude and influence of hazardous content

COURSE OUTCOMES:

After completion of the course, students are able to

- Examine the constituents of waste water and its effects.
- Separate the contaminants from the effluent for treatability.
- Determine the biomass yield and substrate utilization rate for biological treatment process and design of activated sludge process.
- Develop a flow sheet for the waste water treatment from dairy, sugar, pulp and paper, textile and pharmaceutical industries.
- Develop process flow diagram for water reuse and sludge disposal.
- Perform efficient treatment on industrial waste water.

INTRODUCTION TO WASTE WATER ENGINEERING

Waste Water Engineering - Overview, inorganic non-metallic constituents and metallic constituents, physical and biological Characteristics.

(7)

UNIT OPERATIONS AND UNIT PROCESS

Screening, Flow Equalization, Mixing, Flocculation, Grit removal, Sedimentation, Coagulation, Precipitation, Oxidation and Neutralization

(11)

FUNDAMENTALS OF BIOLOGICAL TREATMENT

Introduction, Microbial growth kinetics, types of biological process for wastewater treatment - aerobic and anaerobic oxidation, Biological Nitrification and De-nitrification, biological phosphorous removal, activated sludge process (with design Considerations), trickling filters and lagoons.

WASTE WATER TREATMENT IN SPECIFIC INDUSTRIES

Dairy, Sugar, Pulp and Paper, Textile and Pharmaceutical Industries.

WATER REUSE

Wastewater reclamation technologies and reuse, Solid processing flow diagrams, sludge and scum pumping, grinding, screening, degritting, blending, anaerobic digestion, composting, conditioning, dewatering and incineration.

(9)

TOTAL : 45

SUGGESTED READINGS

- Metcalf Eddy, Wastewater Engineering -Treatment and Reuse, Fourth Edition, Tata McGraw Hill, New Delhi, 2002.
- Mark J. Hammer, Water and Wastewater Technology, Seventh Edition, Prentice Hall of India Pvt Limited, New Delhi, 2012.
- James M. Montgomery, Water Treatment Principles and Design, First Edition, A Wiley Interscience publication, New York, 1985

COURSE OBJECTIVES:

- Provides an overview of municipal solid waste (MSW), industrial waste and hazardous waste management, including design and economic analysis
- In planning and engineering principles needed to address the growing and increasingly intricate problem of controlling and processing the refuse (solid waste) created by urban societies.
- To understand the landfilling, composting and incineration from engineering, social, and regulatory perspectives
- To understand about the physical, chemical, and biological treatment of hazardous waste.
- To analyze and understand the situations dealing with real world settings are covered through worked examples and field trips to solid waste management facilities.

COURSE OUTCOMES:

- After successful completion of the course, student will be able to
- Outline the salient features of solid waste management and handling.
- Deduce the source reduction, recycling and reuse techniques of solid waste.
- Analyze the collection systems and method of transfer of solid waste.
- Describe the processing techniques for solid and hazardous waste.
- Select the suitable methods for disposal of solid and hazardous waste.
- Interpret the legislation for management, handling and disposal of solid and hazardous waste.

CHARACTERISTICS AND SOURCE REDUCTION OF SOLID WASTE

Definition, sources, and types of solid waste - Composition, physical, chemical and biological properties of solid wastes - Per capita generation rates - Sampling and characterization of solid waste - Source reduction of wastes - Waste exchange - Recycling and reuses - Salient features of Indian legislations on management and handling of municipal solid wastes.

(9)

COLLECTION AND TRANSPORT OF SOLID WASTE

Estimation of solid waste and factors affecting generation rates - On-site handling, storage, and processing - Collection services: municipal and commercial - Industrial services - Collection systems: Hauled-container system (HCS) and stationary container system (SCS) - Vehicle and labour assessment - Assessment of collection route - Transfer and transport - Transfer station location - Means and methods of transfer.

(9)

PROCESSING AND DISPOSAL OF SOLID WASTE

Objective of processing - material separation and processing technologies - biological, chemical and thermal conversion technologies - disposal in Landfills: site selection methods and operations, leachate and gas generations and movement and control of gas and leachate techniques - Composting: aerobic and anaerobic - Resource and energy recovery schemes.

(9)

HAZARDOUS WASTE CHARACTERIZATION AND MANAGEMENT

Definitions and Identifications of hazardous waste - Origin and characterization of hazardous solid waste- Typical hazardouswastes in MSW - Hazardous waste management: minimization, collection, storage, handling, transport, and disposal - design ofhazardous waste landfills - TCLP tests - National and International legislation for hazardous waste management – AtomicEnergy Regulatory Board -International Atomic Energy Agency - Department of Atomic Energy - Nuclear Power Corporation -Nuclear power plants in India.

(9)

NUCLEAR WASTE AND e-WASTE

Sources - classification - effects of nuclear waste- initial treatment of nuclear waste vitrification, ion exchange, synroc – long term management - above ground disposal, geological disposal, ocean dumping, transmutation, space disposal - reuse of waste - nuclear safety and waste regulation - case study on nuclear disaster - source of e-waste - material composition of e-waste - recycling and recovery - integrated approaches to e-waste recycling

- socio economic factors - treatment option -disposal option - e-waste legislation.

(9)

- Ronald E. Hester, Roy M. Harrison "Electronic Waste Management", Royal Society of Chemistry, 2009.
- Peavy, SH, Rowe, RD and Tchobanoglous, G, "Environmental Engineering", McGraw-Hill Inter Edition, 1985.
- Charles, A.W., "Hazardous Waste Management", McGraw-Hill Publication, 2002

Course Objectives:

The goal of this course is for students

- To understand the basics of Robotics, Kinematics.
- To understand the basics of Inverse Kinematics.
- To explore various kinematic motion planning solutions for various Robotic configurations.
- To study the trajectory planning for robot.
- To understand the task level programming
- To explore various applications of Robots in Medicine

Course Outcomes

Upon completion of this course, students will be able to:

- Explain various kinds robotics techniques, vision, planning and applications.
- Outline the basic concept of robotics
- Identify and discuss the Robot Vision
- Describe about manipulators and kinematics.
- Demonstrate Task level programming
- Discuss the applications of robotic systems in medical field.

UNIT I INTRODUCTION

Introduction Automation and Robots, Classification, Application, Specification, Notations, Direct Kinematics Dot and cross products, Coordinate frames, Rotations, Homogeneous coordinates Link coordination arm equation – Five-axis robot, Four-axis robot, Six-axis robot

UNIT II KINEMATICS

Inverse Kinematics – General properties of solutions tool configuration, Five axis robots, Three-Four axis, Six axis Robot, Workspace analysis and trajectory planning work envelope and examples, workspace fixtures, Pick and place operations, Continuous path motion, Interpolated motion, Straight- line motion.

UNIT III ROBOT VISION

Robot Vision Image representation, Template matching, Polyhedral objects, Shape analysis, Segmentation – Thresholding, region labeling, Shrink operators, Swell operators, Euler numbers, Perspective transformation, Structured illumination, Camera calibration.

UNIT IV PLANNING

Task Planning Task level programming, Uncertainty, Configuration, Space, Gross motion, Planning,

Grasp Planning, Fine-motion planning, Simulation of planar motion, Source and Goal scenes, Task Planner simulation.

UNIT V APPLICATIONS

Applications in Biomedical Engineering – Bio Engineering Biologically Inspired Robots, Neural Engineering, Application in Rehabilitation – Interactive Therapy, Bionic Arm, Clinical and Surgical – Gynecology, Orthopaedics, Neurosurgery.

5	K. S. Fu, R. C. Gonzales and C. S. G. Lee	Robotics	McGraw Hill	2008

Courses Objectives:

The goal of this course is for students

- To impart the fundamental aspects, principles of virtual reality technology.
- To gain knowledge about applications of virtual reality.
- To introduce the relevance of this course to the existing technology through demonstrations and applications.
- To understand virtual reality, augmented reality and using them to build Biomedical engineering applications
- To know the intricacies of these platform to develop PDA applications with better optimality
- To choose Virtual Reality application areas

Intended Outcomes:

Upon completion of this course, students will be able to:

- Understand the basic concepts of Virtual reality
- Infer the importance of virtual reality
- Comprehend the significance Virtual reality in present scenario
- Analyse VR on the mobile and VR on the web.
- Design of various modeling concepts.
- Develop the Virtual Reality applications in different areas

UNIT I INTRODUCTION

The three I's of virtual reality-commercial VR technology and the five classic components of a VR system - Input Devices: (Trackers, Navigation, and Gesture Interfaces): Three-dimensional position trackers, navigation and manipulation-interfaces and gesture interfaces-Output Devices: Graphics displays-sound displays & haptic feedback..

UNIT II VR DEVELOPMENT PROCESS

Geometric modeling - kinematics modeling- physical modeling - behaviour modeling - model Management.

UNIT III CONTENT CREATION CONSIDERATIONS FOR VR

Methodology and terminology-user performance studies-VR health and safety issues-Usability of virtual reality system- cyber sickness -side effects of exposures to virtual reality environment

UNIT IV VR ON THE WEB & VR ON THE MOBILE

JS-pros and cons-building blocks (WebVR, WebGL, Three.js, device orientation events)- frameworks (A-frame, React VR)-Google VR for Android-Scripts, mobile device configuration, building to android-cameras and interaction-teleporting-spatial audio-Assessing human parameters-

device development and drivers-Design Haptics

UNIT V APPLICATIONS

Medical applications-military applications-robotics applications- Advanced Real time Tracking
other applications- games, movies, simulations, therapy.

Course Objectives

The goal of this course is for students:

- To discuss the overview of artificial organs & transplants
- To extend the principles of implant design with a case study
- To explain the implant design parameters and solution in use
- To simplify about various blood interfacing implants
- To know the biocompatibility of artificial organs
- To learn about the implantable medical devices

Course Outcomes

Upon completion of this course, students will be able to:

- Explain the implant design parameters and solution in use
- Analyze about various blood interfacing implants
- Evaluate response of biomaterials in living system
- Perceive knowledge about artificial organs & transplants
- Demonstrate different types of soft tissue replacement and hard tissue replacement
- Assess biocompatibility of artificial organs

UNIT I ARTIFICIAL ORGANS & TRANSPLANTS

ARTIFICIAL ORGANS:-Introduction, outlook for organ replacements, design consideration, evaluation process.

TRANSPLANTS:-Overview, Immunological considerations, Blood transfusions, individual organs – kidney, liver, heart and lung, bone marrow, cornea.

UNIT II PRINCIPLES OF IMPLANT DESIGN

Principles of implant design, Clinical problems requiring implants for solution, Permanent versus absorbable devices, the missing organ and its replacement, Tissue engineering, scaffolds, cells and regulators criteria for materials selection, Case study of organ regeneration.

UNIT III IMPLANT DESIGN PARAMETERS AND ITS SOLUTION

Biocompatibility, local and systemic effects of implants, Design specifications for tissue bonding and modulus matching, Degradation of devices, natural and synthetic polymers, corrosion, wear and tear, Implants for Bone, Devices for nerve regeneration.

UNIT IV BLOOD INTERFACING IMPLANTS

Neural and neuromuscular implants, heart valve implants, heart and lung assist devices, artificial heart, cardiac pacemakers, artificial kidney- dialysis membrane and artificial blood.

UNIT V IMPLANTABLE MEDICAL DEVICES AND ORGANS

Gastrointestinal system, Dentistry, Maxillofacial and craniofacial replacement, Soft tissue repair, replacement and augmentation, recent advancement and future directions.

Instruction Hours/week: L:3 T:0 P:0**Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for Bioprocess Engineering.
- Construct the equipments used in mass transfer operations.
- Categorize the equipments used in separation process.

UNIT I –INTRODUCTION TO BIOPROCESS ENGINEERING

Introduction – Biotechnology and Bioprocess Engineering- Biologists and Engineers Differ in their approach to research-How Biologists and Engineers work Together- Bioprocesses: Regulatory constraints.

UNIT II - REACTOR DESIGN

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III - HEAT TRANSFER EQUIPMENTS

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV - MASS TRANSFER EQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V - SEPARATION EQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotary drum drier and Swenson –walker crystallizer.

3. Pauline. M. Doran (2015). Bioprocess Engineering Principles Second Edition . Academic Press.

Course Objectives

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I - SCOPE AND IMPORTANCE OF FOOD PROCESSING

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II - PROCESSING METHODS

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning-additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing-Concepts and equipment used.

UNIT III - FOOD CONVERSION OPERATIONS

Size reduction – Fibrous foods, dry foods and liquid theory and foods – equipments - membrane separation- filtration- equipment and application.

UNIT IV - FOOD PRESERVATION BY COOLING

Refrigeration, Freezing-Theory, freezing time calculation, methods freezing of freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V - PRESERVATION METHODS FOR FRUITS AND VEGETABLES

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

SUGGESTED READINGS:

5. B. Sivasankar. (2002). Food processing and preservation.PHI learning Pvt.Ltd.

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I - OVERVIEW OF BIOINFORMATICS

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II - RETRIEVAL OF BIOLOGICAL DATA

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple- sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III - PHYLOGENETICS

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV - STRUCTURAL BIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V - MICROARRAY DATA ANALYSIS

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

Course Objectives

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To define the concepts of biomaterials through molecular self assembly.
- To equip students with clinical applications of nano devices.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Define the concepts of biomaterials through molecular self assembly.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I - INTRODUCTION

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II - NANO PARTICLES

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III – MEDICAL NANOTECHNOLOGY

Nanomedicine, Nanobiosensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV - NANOBIO TECHNOLOGY

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nano carbontubules. Nanosurgical devices.

UNIT V - ETHICAL ISSUES IN NANOTECHNOLOGY

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

6. Kohler, M. and Fritzsche, W. (2008). Nanotechnology – An Introduction to Nanostructuring Techniques. Wiley-VCH.

18BTFTOE01**PROCESSING OF FOOD MATERIALS****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives:**

- Explain the milling, extraction and manufacture of tremendous products from cereals, pulses and oil seeds
- Summarize the production and processing methods of fruits and vegetables
- Discuss the chemical composition, processing, production, spoilage and quality of milk and milk products
- Outline the overall processes involved in the production of meat, poultry and fish products
- Review the production and processing methods of plantation and spice products
- Develop knowledge on enhancing the skills of entrepreneurship by value addition of food products.

Course Outcomes:

1. Discuss the various processing technologies involved in cereal, pulses and oilseed technology
2. Demonstrate the major operations applied in fruits and vegetable processing
3. Illustrate the techniques involved in the processing of dairy products
4. Infer the production of different types of milk
5. List the overall processing of meat, poultry and fish processing
6. Outline the processing of spices and plantation products

Unit I - CEREAL, PULSES AND OIL SEEDS TECHNOLOGY

Rice milling, Pulse milling, Wheat milling - Oil extraction - Methods of manufacture of Bread - different processes of manufacture - types of breads - buns, biscuits, cakes and cookies - Pasta products
-Tortilla - Method of manufacture.

Unit II - FRUITS AND VEGETABLE PROCESSING

Production of Fruits and vegetables in India, Cause for heavy losses, preservation treatments - Basics of Canning, Minimal processing and Hurdle technology as applied to Vegetable and Fruit processing, Processing of fruit juices, Dehydration, Aseptic processing.

Unit III - DAIRY PROCESSING

Basic dairy terminology, composition, General tests at reception, Dairy Processing - Method of manufacture of Standardized, toned and double toned milk, milk powder - Equipments - Pasteurizers, homogenizers and pumps - Method of manufacture of dairy products - Icecream, Cheese, Paneer, Yoghurt - Pasteurization and microorganisms involved in spoilage of milk.

Unit IV - MEAT, POULTRY AND FISH PROCESSING

Meat composition from different sources, Definitions and measurements, Carcass Processing, Meat Products, Processing of Poultry Products, Fish and other Marine Products Processing .

Unit V - PLANTATION PRODUCT TECHNOLOGY

Processing of Tea, Coffee and Cocoa - Outline of the methods of manufacture of - green tea, black tea, instant tea, Instant coffee, Cocoa and Chocolate. Outline of the methods of processing of Pepper, cardamom, ginger, vanilla and turmeric

SUGGESTED READINGS

2. Chakraverty, A., Mujumdar, A.S., Raghavan, G.S.V., and Ramaswamy, H.S. (2003). Handbook of Post-harvest Technology. 1st Edition. Marcel Dekker Press. USA..
3. De,S. (2016). Outlines of Dairy Technology. 23rd impression. Oxford University Press. New Delhi.

18BTFTOE02**Nutrition and Dietetics****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course objectives**

- Explain the basic concepts of food and nutrition
- Define the overall classification, function, and source of carbohydrates, lipids and proteins
- Discuss the overall aspects of vitamins
- Outline the role of health and nutritional importance of micro and macro minerals
- Summarize the recent trends in nutrition
- Understand the role of biomolecules in dietary management for preventing several diseases.

Course outcomes

1. Discuss the basics in the area of nutritional assessment in health and disease
2. Categorize the recommended dietary allowances for different age groups
3. Express the classifications, functions and sources of carbohydrates, lipids and proteins
4. List the various attributes of fat and water soluble vitamins
5. Report the role, bioavailability, sources and deficiency diseases of macro and micro minerals
6. List the diets and concepts of foods suggested for nutritional, chronic and acute disorders

UNIT I - HUMAN NUTRITION

Historical perspective of nutrient requirements – Assessment of nutritional status - recommended dietary allowances of macronutrients for all age groups - Assessment of protein quality

– Malnutrition and related disorders – Balanced Diet. Factors influencing dietary intake: Food habits, food fads and fallacies, their influence on health and wellbeing.

UNIT II - BIOMOLECULES

Carbohydrates- Definition, classification, Functions, Sources of Carbohydrates, Deficiency. Lipids – Definition, classification, function, sources, Refined & Hydrogenated fats process. Proteins – Definitions, Classification, Function, Amino Acids, Sources of Proteins.

UNIT III - VITAMINS

Physiological role, bio-availability, requirements, sources and deficiency of Fat Soluble Vitamins: Vitamin A, Vitamin D, E & K. Water soluble vitamins: Vitamin C, Thiamine, Riboflavin, Niacin, Pantothenic acid, Biotin, Folic acid, Vitamin B12, Vitamin B6.

UNIT IV - MINERALS

~~Physiological role, bio-availability, requirements, sources and deficiency of Macro minerals:~~
Karpagam Academy of Higher Education (Deemed to be University), Coimbatore – 641 021

Calcium, Phosphorus Magnesium, Sodium, Potassium chloride. Micro minerals: Iron, Zinc, copper, selenium, chromium, iodine, manganese, Molybdenum and fluoride.

UNIT V - RECENT TRENDS IN NUTRITION

Principles of dietary management in gout, rheumatism, AIDS/HIV - Cancer-risk factors, symptoms, dietary management, role of food in prevention of Cancer. Role of functional foods, health foods and novel foods, organically grown foods, recent concepts in human nutrition like nutrigenomics, nutraceuticals etc.

SUGGESTED READINGS

1. Wardlaw, G M. (2013). Perspectives in Nutrition. 9th Edition. WCB McGraw-Hill Publishers. Boston.
2. Joshi,A.S. (2016). Nutrition and Dietetics. Tata Mc Grow- Hill publishing Company Ltd. New Delhi. 4th Edition. 2016.
3. Srilakshmi, B. (2017). Nutrition Science. 6th Edition. New Age International Pvt. Ltd Publishers..
4. Watson,R.B. (2003). Functional foods and Nutraceuticals in Cancer Prevention. Ed. Wiley – Blackwell.
5. Roday, S. (2018). Food Science and Nutrition. 3rd Edition. Oxford Higher Education/Oxford University Press.

18BTFTOE03**Ready to Eat Foods****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Outline the current status of snack food Industry
- Describe the production, processing and marketing trends of potato and tortilla chips
- Outline the overall processing of popcorn
- Explain the production and processing of fruits involved in snack food preparation
- Summarize the sensory analysis methods and packaging techniques of snack foods
- Develop knowledge on preparation process on Ready to Eat foods by understanding the unit operation and raw material utilized for it.

Course Outcomes (COs)

1. Review the overall aspects of snack food industry
2. Understand the Steps involved in the production of ready to eat foods from potato and maize flour
3. Discuss the various unit operations involved in the production of potato and tortilla chips
4. Illustrate the overall aspects of popcorn production
5. List the production, processing and manufacturing of fruit based snacks
6. Understand the technique of sensory analysis and packaging methods of snack foods

UNIT I SNACK FOOD INDUSTRY

Introduction-History-Past innovations- Outline of snack food industry- Nutrition-Total Quality Management of Technology-Domestic Snack Food Market-Global Market-Snack Food Association Future Considerations

UNIT II POTATO AND TORTILLA CHIPS PROCESSING

Potato Production- Potato snack Ingredients- Potato Analysis and Composition-Potato chip manufacturing process-Unit Operations-Other value added products from Potato.

Tortilla chips - Raw Materials- Processing steps-Equipment involved-Reconstitution of Dry Maize Flour-Unit operations.

UNIT III POPCORN PROCESSING

Introduction- Raw popcorn selection and preparation-Popping Methods-Home preparation of Popcorn-Equipments-Industrial manufacturing process- Flavorings and Applicators-Popcorn Packaging- Relative Nutrition- Marketing.

UNIT IV FRUIT BASED SNACKS

Introduction-production and processing of fruit crops – fruit purees – fruit powders – canned fruit snacks – alcoholic preservation of fruit snacks – fruit candies – fruit bars – exotic fruits.

UNIT V SENSORY EVALUATION AND PACKAGING

Introduction- Analytical methods-Sensory methods- Sensory Aspect of Processing- Quality properties of Snack Foods and Packaging Materials-Automated Bag- Pouch Packaging- Cartoning Case Packing-Current Issues in Snack Foods Packaging

SUGGESTED READING

1. Lusas, E. W and Rooney, L. W. (2001). Snack Foods Processing. 1st Edition. CRC Press.
2. Panda, H. (2013). The Complete Technology Book on Snack Foods. 2nd Edition. National Institute of Industrial Research. Delhi.
3. Saldivar, S.O.S. (2008). Industrial Manufacture of Snack Foods. Kennedys Books Ltd.

18BTFTOE04**Agricultural Waste and Byproducts Utilization****3H-3C****Instruction Hours/week: L:3 T:0 P:0****Marks: Internal:40 External:60 Total:100****End Semester Exam:3 Hours****Course Objectives**

- Categorize the types of agricultural wastes
- Outline the production and utilization of biomass
- Explain the various parameters considered to be important in the designing of biogas units
- Review the various methods employed in the production of alcohol from the byproducts of agricultural wastes
- Summarize the overall aspects involved in the production of paperboards and particleboards from agricultural wastes
- Develop the knowledge on preparing value added products utilizing agricultural wastes.

Course Outcomes

1. List and group the types of agricultural wastes
2. Discuss the technique and methods involved in conversion of agricultural waste into value added products.
3. Discuss the techniques and production involved in the utilization of biomass
4. Understand the various parameters considered to be important in the designing of biogas units
5. Illustrate the various methods employed in the production of alcohol from the byproducts of agricultural wastes
6. Choose the appropriate materials to produce paperboards and particle boards from agricultural wastes

UNIT 1-TYPES OF AGRICULTURAL WASTES

Introduction and Background Agricultural Waste, Crop Waste, Agricultural Residues (annual crops), Technical terms, rice by-products utilization-rice bran and germ, rice bran oil, economic products from agriculture waste/by-products.

UNIT 2-BIOMASS PRODUCTION AND UTILIZATION

Biomass Gasifier, Technology used for the utilization of agricultural wastes: Biomass Gasifier, Nimbkar Agricultural Research Institute (NARI) Gasifier, Rice-Husk Based Gasifier, Heat and Steam from Sugarcane Leaf and Bagasse.

UNIT 3-BIOGAS DESIGN AND PRODUCTION

Biogas: Definition, composition, history of biogas, Production of biogas; types of biogas plant (floating drum type and fixed dome type) and their components (inlet, outlet, stirrer, slanting pipe, digester, gas holder and gas outer pipe), Selection and Design of biogas plant.

UNIT 4-PRODUCTION OF ALCOHOL FROM WASTE MATERIALS

Production of Alcohol from waste materials: Introduction, Production methods, Cellulolysis (biological approach): Pretreatment, Cellulolytic processes (Chemical and Enzymatic hydrolysis), Microbial fermentation, Gasification process (thermochemical approach).

UNIT 5-PRODUCTION OF PAPERBOARDS AND PARTICLEBOARDS FROM AGRICULTURAL WASTE

Production and testing of Paperboards and Particleboards from Agricultural Waste: Introduction, History, Terminology and classification, Raw materials, Production steps- Pulping, Classifications of pulp, Bleaching, Plies, Coating, Grades.

SUGGESTED READINGS

FACULTY OF ARCHITECTURE

B.ARCH

BACHELOR OF ARCHITECTURE

[5 YEAR FULL TIME UNDER GRADUATE DEGREE PROGRAM]

RECOGNISED BY THE COUNCIL OF ARCHITECTURE, NEW DELHI

REGULATIONS, CURRICULUM AND SYLLABUS

2018 – 2019 Batch (New Syllabus)

CHOICE BASED CREDIT SYSTEM

(CBCS)

FACULTY OF ARCHITECTURE

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University Established Under Section 3 of UGC Act 1956)

Pollachi Main Road, Eachanari Post, Coimbatore – 641 021. INDIA

18ART101	THEORY OF ARCHITECTURE I									SEMESTER-I
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE

- To introduce architecture as a discipline and to sensitize the students to the various functional aspects of architecture
- To make them understand the meaning of Architecture and its visual aesthetic sense
- To introduce the students to the ordering elements, principles of architecture
- To gain Knowledge about the organization principles of Form and Space
- To gain Knowledge about the theoretical aspects of Design
- To gain knowledge and understand the vocabulary of the architectural language through the analysis of selected buildings.

COURSE OUTCOME:

1. Student will understand on the definition of architecture; elements of architectures of form.
2. Student will be exposed to the principles of architecture and applications of the same in buildings and spaces.
3. Student will understand the meaning of character and style of buildings with examples.
4. Student will understand on ideologies and philosophies of architectures of contemporary
5. Student will understand about the theoretical aspects of Architectural Design
6. Student will gain Knowledge in the Vocabulary of the Architectural Terms and language

UNIT- IINTRODUCTION TO DESIGN AND ARCHITECTURE

Definitions of Design, Architecture-context for architecture as satisfying human needs-functional, aesthetic findand psychological –architecture as a discipline-introducing the various functional aspects of architecture: site, structure, skin, services, use, circulation etc.

UNIT- IIORDERING ELEMENTS

Point, line, plane, form, shape, motif, pattern, light, color, texture – understanding the elements with respect to architecture- Detailed study of the visual and emotional effects of geometric forms and their derivatives: sphere, cube, pyramid, cylinder and cone

UNIT- IIIPRINCIPLES OF ARCHITECTURE

– Transformation of forms, Articulation of forms – mass-space/solid-void effects, articulation of edges, corners, surfaces -Proportion, scale, balance, rhythm, axis, symmetry, hierarchy, datum, unity, harmony, dominance with respect to architecture

UNIT- IVORGANISATION OF FORM AND SPACE

Spatial relationships: space within space, interlocking spaces, adjacent spaces, space linked by a common space -spatial organization: centralized, linear, radial, clustered, grid -form-space relationships-

UNIT- VCIRCULATION AND ORGANISATION

Circulation as organizing element: building approach, building entrance, configuration of the path, path space relationship, form of circulation space

SUGGESTED READINGS :

1. Francis D.K.Ching, Architecture-Form, Space and Order, Van Nostrand Reinhold Company, New York, 2007.
2. Simon Unwin, Analysing Architecture, Routledge, London, 2003.
3. Yatin Pandya, "Elements Of Space Making", Mapin Publishing Pvt. Ltd, 2014.
4. V.S.Pramar, Design Fundamentals in Architecture, Somaiya Publications Pvt. Ltd., NewDelhi, 1997-3rd edition.

18ART102	HISTORY OF ARCHITECTURE I									SEMESTER-I
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture from the prehistoric age
- To gain knowledge of the ancient civilization of the World
- To gain knowledge of the ancient civilization of Egypt
- To gain knowledge on the Social fabric, Relevance design principles
- To gain knowledge of the construction materials and methods
- To gain knowledge on the different architectural styles across the world

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An understanding of the diversity of architecture in the world
3. An understanding to appreciate particular culture, symbolic, spatial and material qualities
4. An understanding about architecture and cities as givers of meaning and continuity.
5. An Understanding about the Greek Style through examples
6. An Understanding about the Egyptian, Mayan and Chinese architecture styles

UNIT -I INTRODUCTION AND WEST ASIAN ARCHITECTURE

Relevance of History - Old Stone Age - the Middle Stone age – The New Stone Age - Development of Shelter. – catalhuyuk, Indus Civilization (Harappa and mohenjadero)-West Asia: Evolution of Sumerian and Persian cultures - Outline of architectural character – Ziggurat at Urnammu - Palace of Sargon, Khorsabad- Palace at Persepolis.

UNIT - II EGYPT

Egypt: Factors influencing Architecture - Outline of Architectural Character, Evolution of Pyramids – Great Pyramid of Cheops, Giza, , Architecture characteristics of Egyptian temples - Great temple of Ammon, Karnak, Temple of ramses, Abu Simbel.

UNIT - III MAYAN

Mayan: Outline of Architectural Character – City of Chichen Itza- El Castillo, Temple of Warriors, The Great Ballcourt – Tikal and Teotihuacan - Pyramid of the Sun, Pyramid of the Moon.

UNIT - IV CHINA

China: Outline of Architectural Character - Great Wall of China, Fogong Temple, Temple of Heaven, Forbidden City (Palace Museum)

UNIT- V GREEK

Outline of architectural character - Orders in architecture - Doric Ionic, Corinthian, Acropolis, Athens ; Parthenon, Erechthion, , Theatre Epidauros.

SUGGESTED READINGS :

1. Sir Banister Fletcher, A History of Architecture, CBS Publications (Indian Edition), 20th Edition 2002.
2. Spiro Kostof – A History of Architecture – Setting and Rituals, Oxford University Press, London, 1986.
3. Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010.
4. Leland M Roth; Understanding Architecture: Its elements, history and meaning; Westview press, 3rd revised edition; 2014.
5. S. Lloyd and H.W. Muller, Ancient Architecture: History of World Architecture – Series, Phaidon Press, London, 2004.
6. Gosta, E. Samdstrom, Man the Builder, McGraw Hill Book Company, New York, 1970.
7. Bussagh; Marco; Understanding Architecture; I.B.Tauris& co. Ltd; 2005.

18ART103	MATHEMATICS IN ARCHITECTURE									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To develop analytical skills needed for problem solving
- To develop creative thinking as well as an understanding of Geometry
- To develop the application of mathematical concepts in architecture.
- To develop the skill of Parametric architecture
- To develop the Skill of programming by Mathematical Approach
- To develop an understanding of platonic solids through physical model making

COURSE OUTCOME:

1. Student will be trained on the basis of the topics of Mathematics necessary for effective understanding of architecture subjects.
2. Students will understand the advanced level applications by using coordinate geometry
3. Students will understand the Statistical charts and variance for applications in architecture
4. Students will develop the skill and understating of Area & volume calculations for Applications in Architectural design
5. Students will understand the historical applications of mathematics and use of it in current context
6. Student would have an understanding of the basics of parametric design concept in architecture

UNIT- ICO-ORDINATE GEOMETRY

Points, vectors and coordinate systems – Vector Algebra – Points vs Vectors – Rotation about an arbitrary axis – Parametric, Implicit and Explicit Equations – Lines – Parametric equations of lines – Implicit equation of lines – Distance from a point to a line – Conic sections – Parametric equation of conics.

UNIT – IIBASIC STATISTICS

Arithmetic Mean, Median, Mode, Standard Deviation and Variance – Graphical display of data in statistics through charts and graphs such as bar charts, histograms etc

UNIT- IIIAREA AND VOLUME CALCULATIONS

Surface Area and Volume Calculations for simple 3D objects such as cube, cuboid, cylinder, cone, sphere, pyramid, prisms and their frustrums.

UNIT – IVGEOMETRY IN ARCHITECTURE

Ratio and Systems of proportion – definition and derivation of golden ratio – Fibonacci series. Geometry of Muqarnas. – Making models for understanding the dimensions .

UNIT- V PLATONIC SOLIDS

Geometry of Platonic Solids. (Concept and Application). Physical modeling of simple and complex geometric forms. - Making models for understanding the dimensions.

SUGGESTED READINGS :

1. Grewal B.S., “Higher Engineering Mathematics”, Khanna Publishers, New Delhi, 41st Edition, 2011.
2. Bali N., Goyal M. and Watkins C., “Advanced Engineering Mathematics”, Firewall Media (An imprint of Lakshmi Publications Pvt., Ltd.), New Delhi, 7th Edition, 2009.
3. Ramana B.V., “Higher Engineering Mathematics”, Tata McGraw Hill Co. Ltd., New Delhi, 11th Reprint, 2010.
4. Greenberg M.D., “Advanced Engineering Mathematics”, Pearson Education, New Delhi, 2nd Edition, 5th Reprint, 2009.
5. Gupta S.C and Kapoor V.K., “Fundamentals of Mathematical Statistics”, Sultan Chand & Sons, New Delhi, 9th Edition, 1996.

18ARP111	ART,MODEL MAKING AND PRESENTATION									SEMESTER-I	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week	L	1	T	0	P/S	4	Credits				3

COURSE OBJECTIVE:

- To introduce the vocabulary of art and the principles.
- To inform students about the various art forms through the ages within the cultural contexts.
- To develop presentation skills, visual expression and representation
- To Improve the imaginative thinking and creativity
- To develop the knowledge of Visualization by simple Two & Three-dimensional exercises
- To develop the art skill by hands on working with various mediums and materials.

COURSE OUTCOME:

1. Student will understand the vocabulary of art and form principles
2. Student will understand to appreciate the art forms and analyse and apply the concept in architecture
3. Student will gain mastery in sketching, visualizing and expression through manual drawing, sensitized to culture, craft and context.
4. Student will gain Skill Development in Handling Materials and in Making Products and models.
5. Student will gain knowledge about various mediums of presentation
6. Student will gain deep understanding about the art Appreciation and essence of the Aesthetic value

UNIT- I BASICS OF DRAWING

Introduction to Drawing through various period of History - Seeing (Observation / Proposition / Scale / Texture through study of still life and natural objects), Visualizing (Memory Drawing / Exploratory Drawing), Expressing (Qualities of Lines / Drawing tools and Quality of Expressions – Pen, Pencil, Charcoal, Marker) – Abstraction and communication (Sketching and Free hand perspective Drawing)

UNIT - II DRAWING FROM OBSERVATION

The processes of seeing, Imagining and Representing - Observations on Line and Shape - Observation on Tone and Texture - Observations on Form and Structure - Observations on Space and Depth - Sketching Exercises related to the contents specified above.

UNIT -III GRAPHIC DESIGN

Introduction to history of Graphic Design – Visual perception theory (Gestalts) – Principle of Compositions – Colour Theory – Type Design and Typography (Layouts / Format / Calligraphy) – Environmental Graphics (Signage / Logo / enhancing the built environment) – Exercises in environmental graphic design, color and composition

UNIT -IV PAINTING

Introduction to Art / Artists' / Movements and Styles before and after industrial revolution and its implication on design and architecture – Mediums, Techniques and Tools (Water colours / Posters / Acrylic / Inks / Brushes / Knives / Mixed Media) - Exercises using various techniques and mediums

UNIT - V CULTURE - CRAFT - TECHNOLOGY

Understanding Culture and Craft – Understanding Craft and Technology – Material exploration (Wood / Metal / Clay / Printing) - to be Explored as Workshop Modules - Print Making / Wood Carving / Clay Sculpting / Casting / Sheet Metal etc.,

SUGGESTED READINGS :

Webb, Frank, “The Artist guide to Composition”, David & Charles, U.K., 1994.

1. Ching Francis, “Drawing a Creative Process”, Van Nostrand Reinhold, New York, 1990.
2. Alan Swann, “Graphic Design School”, Harper Collins, 1991.
3. Envisioning Architecture – an analysis of drawing , Iain Fraser & Rod Henmi, 1991
4. Moivahuntly, “The artist drawing book”, David & Charles, U.K., 1994.

18ARS121	ARCHITECTURAL DESIGN- I									SEMESTER-I	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- To provide a comprehensive introduction to the discipline of Architectural Design Fundamentals
- To develop the skill in Visual Arts.
- To encourage creative thinking and design analysis by various Exercises
- To develop the dialogue & Communication visually & Verbally
- To develop the graphic thinking ability and provide a platform for graphical representation.
- To develop an understanding of the design process and develop aesthetic judgment.

COURSE OUTCOME:

1. Student will understand the qualities of different elements as well as their composite fusions.
2. Student will be able to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Student will develop these required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings
4. Student will be able to develop the confidence to communicate effectively by explaining their own design product
5. Student will develop the art of Design Communication through his expression
6. Student will understand with whole design process from the concept to the final product.

UNIT- I DESIGN DEFINITION:

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

UNIT - II BASIC ELEMENTS OF DESIGN

Introduction to Elements of design. -Properties, qualities, and characteristics of (i) line, (ii) direction, (iii) shape, (iv) size, (v) texture, (vi) space (vii) time and motion (viii) value and (vii) colour Exploration in mixed media & collage to convey a specific theme and meaning. Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

UNIT - III PRINCIPLES OF DESIGN:

The principles of design relationships/ Composition – Unity & Harmony, Balance, Scale & Proportion, Contrast and Emphasis, and Rhythm. -Exploration in mixed media & collage to convey specific theme and meaning.-Analytical Studies will be undertaken in two and three dimensions using various media.

UNIT- IV DESIGN EXERCISES AND MODEL:

Design thought process – Sketching various process designs- Subjective – Objective – principles of design – oriented design – design context – Shape grammar – Fluidity – Parametric – Biomimicry etc -evolution of design – model making

UNIT - V INTRODUCTION TO ARCHITECTURAL DESIGN:

Lecture introduction into the discipline of architecture, highlighting fundamentals that contribute to the complex totality that constitute a work of architecture: Placing Architecture (Site, Orientation, Climate, City and Landscape); History & Precedent; Materials & Construction; Representation and Realization

SUGGESTED READINGS :

1. Owen Cappleman & Michael Jack Jordon, Foundations in Architecture: An Annotated Anthology of Beginning Design Project, Van Nostrand Reinhold New York, 1993.
2. Charles Wallschlagger & Cynthia Busic-Snyder, Basic Visual Concepts and
3. Principles for Artists, Architects and Designers, McGraw Hill, New York 1992.
4. Ching, F.D.K., “Design Drawing”, Van Nostrand Reinhold, 1998

18ARS122	BUILDING MATERIALS AND CONSTRUCTION- I										SEMESTER-I
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To provide an understanding of the building materials
- To develop the knowledge of construction detailing.
- To develop basic knowledge of the various components of a built structure.
- To develop the knowledge of the Material properties
- To develop the Knowledge of the techniques in material usages
- To develop an understanding of the design execution methods

COURSE OUTCOME:

1. Students will learn about the properties of various building materials
2. Students will understand the properties of stone, brick and its usage through drawing
3. Student will be able to recognize the apt usage of materials through proper research
4. Students will be able to understand and submit drawing plates comprising of technical plan, elevation and section along with sketches and details.
5. Student will be able to understand the technical details and construction details of the subject
6. Students will gain knowledge in cost and availability by their field Survey and Site visits

UNIT- I SOIL AND STONE

Soils: Formation – grain size distribution – soil classification systems - earth -

Stone: Classification of rocks - Building stones - their uses – physical properties - brief study of tests for stone – deterioration - preservation of stone - various stone finishes - cutting and polishing of granites.

UNIT- II TRADITIONAL & RURAL MATERIALS

Mud as a building material - Soil stabilization, soil blocks - Cast- in-situ walls - flooring - roofing - plastering.

Bamboo, Casuarina, Coconut, palm, Hay, Coir, Jute – properties and uses. Types of foundations - walls - simple roof trusses floors for rural structures Lime – types - properties and uses – Manufacturing process – Mortar: functions – requirements - mixes. – Market study

UNIT- III BRICKS AND CLAY PRODUCTS – MATERIALS

Bricks - brief study on manufacture of bricks – properties and uses - suitability - types of bricks - uses in buildings, structural tiles, ceramics, terracotta – properties and uses.- market study

UNIT – IV BUILDING COMPONENTS

Functional requirements of a building and its components - Drawings of foundations, plinth, superstructure, roofing.

Openings: Doors, Windows and Ventilators.- Market Study- Typical Section of a building –

UNIT- V BUILDING MATERIALS

Introduction to basic building materials- Observation of work at site – mixture ratio – material standards – material sample collections form market – Market study – local materials – imported materials – assignments – Introduction to bill of quantities – small material volume- basic – calculations

SUGGESTED READINGS :

1. Arora S.P. and Bindra S.P., “Text book of Building Construction”, Dhanpat Rai & Sons, New Delhi, 2012.
2. KlansDukeeberg, Bambus – Bamboo, Karl Kramer Verlag Stuttgart Germany, 2000.
3. National Building Code Of India 2005- Part 6 Structural Design- Section 3 Timber and Bamboo.
4. Francis D.K. Ching, Building Construction Illustrated John Wiley & Sons 2000
5. Kumar, S.K., “Building Construction”, 19th Ed., Standard Publishers Distributors, 2001
6. Allen, E. and Iano, J., “Fundamentals of Building Construction: Materials and Methods”, Wiley, 2004
7. Mehta, M., Scarborough, W. and Armpriest, Diane, “Building Construction: Principles, Materials and Systems”, Pearson Prentice Hall, 2008
8. WB Mckay Building construction, Vol 1,2, Longman UK 1981.

18ARS123	ARCHITECTURAL GRAPHICS- I									SEMESTER-I
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To make them understand the nature of geometrical forms in terms of drawing plane and solid projections.
- To make them understand the representation of 2 dimensional and 3 Dimensional forms
- To make them understand the plans, sections, isometric and axonometric drawings of forms
- To develop the skill of doing perspectives
- To develop the Skill of technical Architectural Representation
- To develop the Skill of creating measure drawings

COURSE OUTCOME:

1. Student will be able to understand the 2 dimensional & the 3dimensional perspective of the objects
2. Student will be able to construct the 3d views and perspective drawings of the buildings.
3. Student will be able to draw the perspective drawings with sciography
4. Student will be able to do Architectural Rendering
5. Student will be able to do architectural detailed drawing for a smaller scale project.
6. Student will be able to do read and Do a technical Architectural Drawing

UNIT 1 GEOMETRICAL DRAWING – PLANE GEOMETRY -REPRESENTATION

Introduction to fundamentals of drawing/ drafting – Construction of Lines, Planes, form – grade of pencils and usage- Understanding the scale with units and dimensions – Construction of plane, object – Hollow and solid geometry – Development of surfaces and multifaceted forms – Understanding the graphical representations of arrows, lettering techniques, composition etc – Lineweights, Line type etc

UNIT- II GEOMETRICAL DRAWING – ORTHOGRAPHIC PROJECTION

Isometric, Axonometric, Oblique and multiview orthographic projections to scale of various forms- Simple and complex objects- straight, curvilinear etc – Sections, Elevations of solid geometry – hollow objects etc

UNIT- III PERSPECTIVE -SIMPLE & COMPLEX OBJECTS – SCIENTIFIC METHOD AND SHORT CUT METHOD

Introduction to perspective projections – One point perspective, Two point perspective, Three point perspective, - - Cone of Vision –scientific method and short cut method

UNIT- IV SCIOGRAPHY AND RENDERING

Introduction to Sciography – Plan sciography, elevation sciography, perspective sciography-Light source Shade and shadow of the object- Manual rendering techniques- color pencils- watercolor- poster color

UNIT- V MEASURED DRAWING OF FURNITURE/ OBJECT

Introduction to Furniture drawings- drafting and detailing of simple and complex components of the furniture

SUGGESTED READINGS :

1. Francis D. K. Ching; Design Drawing; John Wiley & Sons; 2010
2. Rerdow Yee; Architecture Drawing - A Visual Compendium of Types & Methods; John Wiley & Sons; 2012
3. John Montague; Basic Perspective Drawing - A Visual Approach; John Wiley & Sons; 5th edition 2010.
4. Mo Zell; The Architecture Drawing Course - Understand the principles & master the practices; Thames & Hudson; 2014
5. Tokyo Musashino Academy of Art - Introduction to Pencil Drawing, Graphic - Shaw Publishing Co. Ltd., Japan, 1991.
6. Francis D. K. Ching, Architectural Graphics, Van Nostrand Rein Hold Company, New York, 1964,2002
7. Griffin, A.W. and Brunicardi, V.A., “Introduction to Architectural Presentation Graphics”, Prentice Hall, 1998
8. Ciriello, M., “Architectural Design Graphics”, McGraw-Hill, 2002

18ART201	THEORY OF ARCHITECTURE II								SEMESTER-II	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To impart knowledge about the various design philosophies
- To create an understanding of the evolution of various design processes in architecture
- To learn to apply the process of architectural design.
- To learn to use design as a problem solving exercise
- To gain knowledge about various aspects in architectural design process
- To learn different styles of architecture

COURSE OUTCOME:

1. A thorough understanding on the architectural design process
2. An insight of the different tools used in the design process
3. An exposure to students on ideologies and philosophies of famous architects
4. Students will gain an understanding of different proportioning systems
5. Students will learn about the different aspects in site analysis
6. Students will learn representation methods of various site features

UNIT- I ARCHITECTURAL DESIGN PROCESS AND METHODOLOGY

Definition of design, understanding of design, purpose of design, nature of good design and evaluation of design, types of design classifications, role of designer, design in history. Context for architectural design problems, design process, stages in the design process, different considerations, different ideas of design methodology- Bubble diagrams- Proximity charts- Time Space activity analysis- analytical thinking

UNIT- II EVOLUTION OF DESIGN AND APPROACH

Evolution of design from history-architecture/Product – evidence – Pragmatic – Iconic- canonic – analogic – mathematical expressions -approach to architectural design

UNIT - III PROPORTIONING SYSTEMS

Mathematics in Architecture-Proportions of Architecture -Manufactured proportions – human proportions– Golden ratio- Ken system- modular- fibonacci-anthropometry-Recent geometric simulations- parametric etc

UNIT - IV ARCHITECTURAL DESIGN CONCEPTS, PHILOSOPHIES AND STRATEGIES

Concept – definition – ideologies -types- based on context such as biomimicry, shape grammar, fluidity, parametric– perspectives of various designers – critical evolution of concept – theoretical review -personal Philosophy and strategies of individual designers – Futuristic thinking- analysis and interpretation using the case of a building, architectural style, work(s) of the contemporary architects- Raj Rewal, Charles Correa, Santiago Calatrava, Zaha Hadid, Peter Eisenmann, Daniel Libeskind- etc

UNIT- V SITE ANALYSIS and CLIMATOLOGY

Site –Inventory – site features – on site – off site- climate analysis-Site Analysis and Process for design-Climate fundamentals-Sun movement- wind – daylighting-climate responsiveness architectural concepts

SUGGESTED READINGS :

1. Francis D.K.Ching, Architecture-Form, Space and Order, Van Nostrand Reinhold Company, New York, 2007.
2. Simon Unwin, Analysing Architecture, Routledge, London, 2003.
3. Yatin Pandya, "Elements Of Space Making", Mapin Publishing Pvt. Ltd, 2014.
4. V.S.Pramar, Design Fundamentals in Architecture, Somaiya Publications Pvt. Ltd., New Delhi, 1997 - 3rd edition.
5. Site Analysis – Edward T.White., 2004

18ART202	HISTORY OF ARCHITECTURE II									SEMESTER-II
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture in the chronology 400B.C to 800 A.D
- To understand the social Fabric, Relevance, Design Principles & Construction materials and Methods.
- To understand about the Roman Architecture
- To Gain knowledge in Romanesque Architecture
- To understand about evolution of Gothic Architecture
- To Gain knowledge in Italian Renaissance

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Roman architecture.
3. Student will understand about the spatial and stylistic qualities associated with Romanesque architecture.
4. Student will understand about the spatial and stylistic qualities associated with Italian Renaissance and Baroque architecture
5. Student will understand the Styles and Details of Gothic Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching & reading

UNIT -I ROMAN

Outline of architectural character: roman orders (Doric, ionic, Corinthian, Tuscan and composite)

Building Systems - Use of arches, vaults and columns

Building Typology: Religious Buildings – Temple (Pantheon); Civic Buildings – Baths (Thermae of Caraculla), Theatres (Colloiseum), Circus (Circus Maximus), Palace (Forum Romanum); Engineering works – Aqueducts, bridges

UNIT- II ROMANESQUE

Factors influencing architecture - Building Systems - Use of arches, vaults, columns, piers, buttresses and roofs.

Outline of architectural character of Italy, France and England - Examples: Pisa complex, Italy Abbay aux Hommes, Caen, Tower of London.

UNIT- III GOTHIC

Outline of Architectural character - evolution of vaulting and development of structural systems - Examples: Notre Dame, Paris - Westminster Abbey, Hampton Court Palace, London, Doges Palace, Venice, Milan Cathedral.

UNIT – IV ITALIAN RENAISSANCE

Renaissance – Introduction. Italian Renaissance - three phases – early Renaissance (Alberti - S. Andrea, Brunelleschi - Cathedral of Florence, Pazzi Chapel, Basilica San Lorenzo) , High Renaissance (Bramante - Santa Maria delle Grazie) , Late Renaissance (Michelangelo, Palladio -St. Peter'sBasilica, Villa Capra La Rotonda)

UNIT- V NORTHERN RENAISSANCE AND BAROQUE

Northern Renaissance – Introduction; Characteristics of English Renaissance – Works of Sir Christopher Wren, Inigo Jones.

Baroque – Features and Elements of Baroque - St Paul's Cathedral, Palace of Versailles., Winter Palace in Saint Petersburg.

SUGGESTED READINGS :

1. Sir Banister Fletcher, A History of Architecture, CBS Publications (Indian Edition), 20th Edition 2002.
2. Spiro Kostof – A History of Architecture – Setting and Rituals, Oxford University Press, London, 1986.
3. Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010.
4. Leland M Roth; Understanding Architecture: Its elements, history and meaning;
5. Westview press, 3rd revised edition; 2014.
6. S. Lloyd and H.W. Muller, Ancient Architecture: History of World Architecture –
7. Series, Phaidon Press, London, 2004.

18ART203	MECHANICS OF STRUCTURES - I									SEMESTER-II	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To gain understanding of basic structural form of any building
- To gain understanding of structural details of various materials and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the forces and structural systems
- To gain understanding about the Structural sections
- To gain understanding about material properties

COURSE OUTCOME:

1. Student will understand the concepts of action of forces on a body and should be able to apply the equilibrium concepts.
2. Student will understand the basic geometric properties and the behavior of materials under effect of forces
3. Student will understand the various structural components of the building and its usage for strength of the structure.
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Steel Structures in Architectural Design
6. Student will be able to relate various building structural components

UNIT- I INTRODUCTION TO STRUCTURES AND STRUCTURAL SYSTEMS

Overview of Structures - Concept of Structure in Architecture -Types of Structural Systems - Components of a Structure - Materials and their Structural Properties

UNIT - II FORCES AND STRUCTURAL SYSTEMS

Types of force systems - Resultant of parallel forces - principle of moments - principle of equilibrium - simple problems

UNIT - III ANALYSIS OF PLANE TRUSSES

Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered trusses by method of joints.

UNIT - IV PROPERTIES OF SECTION

Centroid- Moment of Inertia - Section modules - Radius of gyration - Theorem of perpendicular axis - Theorem of parallel axis

UNIT- V ELASTIC PROPERTIES OF SOLIDS

Stress strain diagram for mild steel, High tensile steel and concrete - Concept of axial and volumetric stresses and strains - Elastic constants - Relation between elastic constants - Application to problems.

Total: 45 hrs/ semester

SUGGESTED READINGS :

1. R.K.Bansal – A text book on Engineering Mechanics, Lakshmi Publications, Delhi, 2005.
2. R.K.Bansal – A textbook on Strength of Materials, Lakshmi Publications, Delhi 2007.
3. P.C.Punmia, Strength of Materials and Theory of Structures; Vol. I, LakshmiPublications, Delhi 1994.
4. S. Ramamrutham, Strength of Materials – Dhanpatrai& Sons, Delhi, 1990.
5. W.A.Nash, Strength of Materials – Schaums Series – McGraw Hill Book Company, 1989.
6. R.K. Rajput – Strength of Materials, S. Chand & Company Ltd. New Delhi 1996.

18ARP211	COMPUTER APPLICATION -I									SEMESTER-II
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week	L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce computer operation principles and explore image editing through a graphical composition.
- To impart training in computer aided 2D drafting and 3D modelling through projects.
- To enable the use of computer applications to develop a design from the initial stage to the final outcome
- To enable the rendering of a building so as to create a photo realistic image.
- To develop the skill of Digital Applications in Architecture
- To develop the skill of programming in Architecture

COURSE OUTCOME:

1. Student will be able to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering
2. Student will be able to draw measured drawings using the software
3. Student will be able to detail the building components using the software
4. Student will be able to produce accurate drawings faster using the software
5. Student will be able to give a rendered image of the Architectural Design by software
6. Student will be able to conceptualize, visualize and Produce digital drawings at ease

UNIT- ISIMPLE APPLICATIONS

Creating technical documents and reports, Cost estimates with simple calculations, Presentations with graphics. – Charts – tables- Statistics-estimations

UNIT – II SKETCHING TOOLS

Introduction to Sketch up models – Simple Buildings – Material Application– Vray rendering

UNIT – III COMPUTER AIDED DRAFTING

Introduction to 2D application – Plan ,section, elevation drawings,3D applications

UNIT – IV IMAGE EDITING AND ANIMATION

Introduction to image editing- color enhancement

UNIT- V ADVANCED PROGRAMMING

Simple Programming languages.

SUGGESTED READINGS :

1. Deke McClelland, 'Photoshop 7 Bible Professional Edition', Wiley John & Son INC, New York, 2000.
2. Aouad, 'Computer Aided Design guide for Architecture, Engineering and construction', Sponprocess, 2012.
3. Mohammed Saleh Uddin, 'Digital Architecture – 3D Computer Graphics from 50 top designers', 1999.
4. Scott Onstott, 'AutoCAD 2015 and AutoCAD LT 2015 Essentials', AutoDesk Official press, 2014.
5. Fiorello. J. A., 'CAD for Interiors beyond the basics', Wiley publications, 2011.
6. Ryan Duell and Tobias Hathorn, 'AutoDesk Revit Architecture 2015: No Experience Required', AutoDesk Official Press, 2014.

18ARS221	ARCHITECTURAL DESIGN - II									SEMESTER-II	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- Understanding a Simple Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver a Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

UNIT- I

Design Process: Basics: Drawing skills, Conventions, Abstraction and Expression; Application: Analysis, Exploration, Discovery and Verification; Communication: Process, Individual Design, Team Design, and Public Design. Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process.

UNIT - II

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

UNIT - III

Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas. Methods: Nature & Geometry as generators; Music and Mathematics as models; Precedent; Responses to Site; Generative Processes. Traditional Methods, New Methods, The Three Stage Process – Divergence, Transformation, Convergence; Choosing Design Strategies.

UNIT - IV

Horizontal movement - single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as : Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar;

UNIT- V

The problems involve simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as : Residence, petrol bunk, fire station, police station, Cottage for an elderly couple.

The basics of building anatomy from parapet to foundation and an overview of the different building materials shall be explained at the beginning of the design studio.

SUGGESTED READINGS :

1. Joseph De Chiara, Michael J Crosbie, Time Saver Standards for Building Types, McGraw Hill Education; 4th edition, 2014..
2. Joseph De Chiara, Julius Panero, Martin Zelnik, Time Saver Standards for Interior Design and Space Planning, McGraw Hill 2011.
3. Ernst Neuferts Architects Data, Blackwell 2012.
4. Ramsey et al, Architectural Graphic Standards, Wiley 2008.

18ARS222	BUILDING MATERIALS AND CONSTRUCTION- II									SEMESTER-II	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To provide an understanding of the construction materials
- To provide an understanding of the construction methods through construction detailing
- To develop basic knowledge of the various components of a built structure.
- Ability to understand by field study on all Topics
- Ability to understand materials like brick, clay and timber.
- Ability to gain Knowledge about the techniques of Timber Construction

COURSE OUTCOME:

1. Student will gain Knowledge of properties and construction methods of brick, clay products and timber products.
2. Student will be able to detail structural and nonstructural components of simple buildings using the above materials.
3. Student will understand to integrate knowledge of properties and construction methods of basic building materials in the design of simple projects.
4. Student will understand about the Timber construction techniques for doors and windows.
5. Student will be able to gain advanced knowledge about Timber Roof Constructions.
6. Student will understand the building construction techniques of the timber staircases.

UNIT- I BRICKS PRODUCTS - CONSTRUCTION

Structural members in brickwork – Brick piers, footings, Brick manufacture and process
Reinforced brick masonry - Arches - Lintels – Corbels - copings.

UNIT – II CLAY PRODUCTS CONSTRUCTION

Hollow clay blocks - for walls - partitions - roofs
Roofing - Flat Roofs - Terrace roofs - Sloping roofs

UNIT – III TIMBER CONSTRUCTION – DOOR, WINDOWS AND PANELLING

Fundamentals of timber- manufacture – uses – current developments – physical properties - Drawings of timber joinery for Windows, doors, ventilators, Timber partitions

UNIT – IV TIMBER CONSTRUCTION – STAIRCASE

Timber staircase and design

UNIT- V TIMBER CONSTRUCTION – TRUSS

Timber trusses - Lean to - close couple - Kingpost - Queen post - Trusses.

SUGGESTED READINGS :

1. Don A. Watson, 'Construction Materials and Processes', McGraw Hill, 1972.
2. W.B. McKay, 'Building Construction', Person India, Vol, 1 2013, Vol II, 2012.
3. S.C Rangwala 'Building Construction' Charotar Publishing House, India, 2016.
4. S.K.Sharma, 'A Text book of Building Construction', S. Chand & Co Ltd., New Delhi, 1998.
5. S.K. Duggal, 'Building Materials', New Age International Publishers, 2016.
6. R.J. S. Spence and D.J. Cook, 'Building Materials in Developing Countries', John Wiley and sons 1983.
7. S. C. Rangwala, 'Engineering Materials', Charotar Publishing House India, 2015.
8. Roy Chudley, Roger Greeno, 'Building Construction Handbook', Routledge, 2010.

18ARS223	ARCHITECTURAL GRAPHICS- II									SEMESTER-II	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To involve students in a number of exercises that will help them develop the skill of representation in advanced drawing techniques
- To make them understand the measured drawing method
- To make them understand to document buildings of architectural interest
- To understand and Develop the skill of measured drawing of Sections & Elevations
- To understand and develop the set of Architectural working drawings
- To develop them in making the working drawings for the Site Execution

COURSE OUTCOME:

1. Student will be able to construct and draw detailed architectural working drawings
2. Student will understand the 3d views and perspective drawings of the buildings.
3. Student will understand the detailed specifications of a small construction drawing
4. Student will learn to Collect the building data and document accordingly
5. Student will develop the skill of making aArchitectural Working Drawing
6. Student will develop the skill of reading a Interior working Drawing

UNIT- I ARCHITECTURAL DRAWING & REPRESENTATION

Introduction to Architectural drawings – composition of various drawings- list of drawings –simple plans , sections , elevations – dimension – scale drawings- details – representations – arrows – stairs – material hatches etc

UNIT- II ORTHOGRAPHIC PROJECTION – EXTERIOR AND INTERIOR SPACES

Isometric, Axonometric, Oblique and orthographic projections to scale of Exterior and interior spaces-multi level spaces in buildings –interior furniture etc. – shade and shadow

UNIT - III BUILDING PERSPECTIVE-MANUAL & DIGITAL RENDERING

Perspective of large spaces and buildings – One point perspective, Two point perspective, Three point perspective – scientific method, short cut method -pencil ,pen rendering ,stippling-Shade and shadow- Sciography of plan ,elevation, isometric, axonometric views-rendering of the building silhouette by manual and digital techniques.

UNIT- IV MEASURED DRAWING OF A BUILDING

Introduction to fundamentals of measured drawing, line value, lettering, drawing representation, methods and technique of measuring objects by measuring tape –photographs – aesthetic components and details

UNIT- V DETAILED DOCUMENTATION OF A BUILDING

Documentation of a complete building of a special interest in terms of history, building Construction- architectural excellence or technology – examples like Post office, Police Station, Public School

SUGGESTED READINGS :

1. Francis D. K. Ching; Design Drawing; John Wiley & Sons; 2010
2. Rerdow Yee; Architecture Drawing - A Visual Compendium of Types & Methods; John Wiley & Sons; 2012
3. John Montague; Basic Perspective Drawing - A Visual Approach; John Wiley & Sons; 5th edition 2010.
4. Mo Zell; The Architecture Drawing Course - Understand the principles & master the practices; Thames & Hudson; 2014

18ART301	HISTORY OF ARCHITECTURE - III									SEMESTER-III
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To Gain the understanding of the regional Architecture
- To understand the social Fabric, Relevance and Design Principles
- To understand various Construction materials and Methods used in different architectural styles
- To understand about the Dravidian Architecture
- To Gain knowledge in Buddhist Architecture
- To understand about evolution of Islamic & Mughal Architecture

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Dravidian architecture.
3. Student will understand about the spatial and stylistic qualities associated with Buddhist architecture.
4. Student will understand about the spatial and stylistic qualities associated with Islamic architecture
5. Student will understand the Styles and Details of Mughal Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching & reading

UNIT- I HINDU & INDO-ARYAN STYLES

Evolution of Hindu temple - Early shrines of the gupta and chalukyan periods - Tigawa temple, Ladh Khan and Durga temple, Aihol, Papanatha and Virupaksha temples, Pattadakal. - Indo-Aryan: Salient features of an Indo Aryan temple - Lingaraja Temple, Bhuvanewar- Sun temple, Konarak. Kunds and Vavs — Adalaj - Surya kund, Modhera.

UNIT - II DRAVIDIAN STYLE

Dravidian culture - Rock cut productions of Pallavas - Shore temple, Mahabalipuram- Dravidian Order - Brihadeeswara Temple, Tanjore - Evolution and form of gopuram - Complexity in temple plan due to complexity in Ritual - Meenakshi temple, Madurai.

UNIT - III BUDDHIST STYLE

Hinayana and Mahayana Buddhism - Interaction of Hellenic & Indian Ideas in Northern India - Architectural Production during Ashoka's rule - Ashokan Pillar, Saranath, Rock cut caves at Barabar, Sanchi Stupa. - Salient features of a Chaitya hall and Vihara, Rock cut architecture in the Western and Eastern ghats- Karli, Viharas at Nasik, Rani gumpah, Udaigiri. Takti Bahai, Gandhara.

UNIT - IV INTRODUCTION TO ISLAMIC ARCHITECTURE

History of Islam- Influences on Islamic Architecture - character of Islamic architecture with examples. sources of Islamic Architecture in India and influences on them - Brief history development of architectural style during the rule of the slave, Khilji, Tuqlaq Sayyid and Lodhi Dynasties - important examples for each period.

UNIT- V PROVINCIAL & MUGHAL STYLES

Development of the provincial styles in different regions - Punjab, Jaunpur, Bengal, Gujarat, Malwa, the Deccan (Bijapur, Golconda, Bidar and Gulbarga) - important examples for each style. - Development of the Mughal style under the different rulers - Babur, Shershah, Humayun, Akbar, Jahangir, Shahjahan, Aurangzeb- important examples - development of the Mughal garden - important examples.

SUGGESTED READINGS :

1. Percy Brown, 'Indian Architecture (Buddhist and Hindu Period)', Taraporevala and Sons, Bombay, 2014.
2. Percy Brown, 'Indian Architecture (Islamic Period)', Taraporevala and Sons, Bombay, 2014.
3. Christopher Tadgell, 'The History of Architecture in India - From the Dawn of Civilization to the End of the Raj', Phaidon, 2002.
4. Robert Hillenbrand, 'Islamic Architecture - Form, Function and Meaning', Columbia University Press, 2004
5. Romila Thapar, 'The Penguin History of Early India', Penguin, 2015.
6. Burton Stein, A History of India, John Wiley & Sons, 2010.
7. K.A. NilakantaSastri, 'A History of South India: From the Prehistoric Times to the Fall of Vijayanagar', Oxford University Press, 2007

18ART302	MECHANICS OF STRUCTURES- II									SEMESTER-III	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To gain understanding of structural concepts in architecture
- To gain understanding of structural details of various Forces and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the R.C.C structural elements
- To gain understanding about the Indeterminate Structures
- To gain understanding about the forces acting on structural elements

COURSE OUTCOME:

1. Student will understand the concepts of action of forces like bending moment and shear force
2. Student will understand the basic geometric properties and the behavior of beams under effect of stress
3. Student will understand the various structural components of the building like columns
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Indeterminate Structures in Architectural Design
6. Student will be able to relate various building structural components and their behavior

UNIT- I SHEAR FORCE AND BENDING MOMENT

Concept of shearing forces and Bending Moments - shear force and bending Moment diagrams for cantilever and simply supported beams subjected to point load, uniformly distributed loads and their combinations

UNIT- II STRESSES IN BEAMS

Theory of simple bending - bending stresses in beams, shear stresses in beams - examples on simple sections. Stress distribution diagrams.

UNIT- III DEFLECTION OF BEAMS

Slope and deflection at a section - Double Integration and Macaulay's method for simply supported and cantilever beams

UNIT - IV THEORY OF COLUMNS

Short and long columns - Euler's method and its limitations - Derivations of Euler's formula (for different end conditions) - Rankine's formula for columns, examples, effect of eccentric loading

UNIT- V INTRODUCTION TO INDETERMINATE STRUCTURES

Introduction – Determination of degree of statical indeterminacy for beams and frames – Concept of Analysis (No Problems)

SUGGESTED READINGS :

1. R.K. Bansal, 'A Text Book on Strength of Materials', Laxmi Publications, New Delhi, 2006
2. B.C. Punmia et al, 'SMTS-I, Strength of Materials', Laxmi Publications, 2015.
3. M.M. Ratwani & V.N. Vazirani, 'Analysis of Structures, Vol. 1', Khanna Publishers, Delhi, 2012.
4. Timoshenko, S.P. and D.H. Young, 'Elements of Strength of Materials', 5th edition, East West Press, 2011.
5. A.R. Jain and B.K. Jain, 'Theory and analysis of structures', Vol. 1, Nemchand and Bros, Roorkee, 1987.
6. R.K. Rajput, 'Strength of Materials', S.Chand, 2006.

18ARP311	COMPUTER APPLICATION- II									SEMESTER-III	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of three-dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

UNIT- I COMPUTER AIDED 3D MODELLING

Working in 3 Dimensions, Viewing 3D Objects, Basic Wireframe Models, Regions and 3D Faces, Extruding and Lofting, Revolved objects, Boolean operations ;

UNIT-II COMPUTER AIDED 3D RENDERING

Concept of shading; Rendering; Material mapping; Environment attributes, Project: Building Model.

UNIT-III INTRODUCTION TO BUILDING INTEGRATED MODELLING

New Features , Editing and Working with Families in a Project, Concepts, creating a shared Family, Project and System settings.

UNIT – IV BASIC MODELLING AND DOCUMENTATION

Creating the Basic Model, Adding Doors and Windows, Floors and Floor Openings, Roof and Ceiling,

UNIT- V RENDERING AND PRESENTATION

Applying Materials and textures, creating a perspective vies, rendering an Exterior view, rendering an Interior views, Creating and Recording Walkthroughs, creating 3D cutaways with Section Boxes
3 Dimensional Drafting ,detailing and rendering softwares

SUGGESTED READINGS :

1. Deke McClelland, 'Photoshop 7 Bible Professional Edition', Wiley John & Son INC, New York, 2000.
2. Aouad, 'Computer Aided Design guide for Architecture, Engineering and construction', Spon process, 2012.
3. Mohammed Saleh Uddin, 'Digital Architecture – 3D Computer Graphics from 50 top designers', 1999.
4. Scott Onstott, 'AutoCAD 2015 and AutoCAD LT 2015 Essentials', AutoDesk Official press, 2014.
5. Fiorello. J. A., 'CAD for Interiors beyond the basics', Wiley publications, 2011.
6. Ryan Duell and Tobias Hathorn, 'AutoDesk Revit Architecture 2015: No Experience Required', AutoDesk Official Press, 2014.

18ARP312	SURVEYING, LEVELLING &SITE PLANNING									SEMESTER-III
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week	L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To understand the principles of surveying, classification, types of surveys
- To understand the applications of surveying
- Know about techniques of surveying.
- Understand the concepts of levelling and its applications.
- Get exposed to total station surveying, GIS and GPS.
- To understand the site, its premises and various factors involved

COURSE OUTCOME:

1. Student will understand the various systems of Surveying
2. Student understand the concept of levelling and its applications on site for various types of buildings.
3. Student will understand about the larger survey context using the total station and GIS mapping
4. Student will understand about the Site Inventory and Site analysis
5. Student will learn about Hill survey and method of Contouring
6. Student will learn about the item planning principles, methods and its applications in architectural design.

UNIT 1 CHAIN SURVEY AND LEVELLING

Chain survey- principles- classification- instruments used, ranging, reciprocal ranging, Leveling , methods of leveling, booking and reduction of levels, longitudinal leveling, cross sectioning, errors in leveling, problems in leveling, contouring- plane table survey – radiation , Intersection, traversing and resection (experiment – 2nos)

UNIT- II THEODILITE SURVEY

To understand Theodolite survey, measurement of horizontal and vertical angles, problems tackled like centre line of building, setting out angles- Rise and fall method- Dumpy level etc.

UNIT- III CONTOURING

Characteristics of contours, direct and indirect methods of contouring

UNIT- IV TOTAL STATION

Total Station Survey- Different types - Introduction of GIS and GPS

UNIT- V SITE INVENTORY, SITE ANALYSIS AND SITE PLANNING

Importance of site analysis - factors involved in accessibility - site characteristics - land, contours, water shed, climate and topography, preparation of site analysis diagram

SUGGESTED READINGS :

1. Kevin Lynch, 'Site Planning', Third Edition, MIT Press, 1984.
2. Edward. T. White, 'Site Analysis', Archi Basic Press, 2014.
3. B.C.Punmia et al, 'Surveying Vol.I', Seventeenth Edition, Laxmi Publications, 2016..
4. Joseph De.Chiarra and Lee Coppleman, 'Urban Planning and Design Criteria', Van Nostrand Reinhold Co., 1982.
5. Strom Steven, 'Site Engineering for Landscape Architects', John Wiley & Sons, 2013.
6. P.B.Shahani, 'Text of Surveying Vol.I', Oxford and IBH Publishing Co, 1980
7. 'Development Control Rules', CMDA 2008.

18ARS321	ARCHITECTURAL DESIGN-III									SEMESTER-III	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver the Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

CONTENT

Single level planning in small scale, small span, horizontal movement and simple vertical movement, data collection, case studies, analysis and presentation of studies – Data collection with respect to design and detailing for physically handicapped persons - Concepts and presentation of design with scaled models -Examples: Residential buildings, Villas, Institutional buildings: banks, Nursery or Primary /Secondary schools, primary health center, school for children with learning disabilities, neighborhood market, Municipal office, Cafeteria, Multicuisine Restaurant etc.
Design Process to be approached stage wise through Architectural Programming

SUGGESTED READINGS :

1. Joseph De Chiara, Michael J Crosbie, 'Time Saver Standards for Building Types', McGraw Hill Professional, 2001.
2. Kevin Lynch, 'Site Planning', MIT Press, Cambridge, 1967.
3. Steen Eiler Rasmussen, 'Experiencing Architecture', MIT Press; 1959.
4. Kent C. Bloomer and Charles W. Moore, 'Body, Memory, and Architecture', Yale University Press, 1977.
5. Juhani Pallasmaa, 'The Eyes of the Skin - Architecture and the Senses', John Wiley: New York, 2005.
- Julius Panero, Martin Zelnik, 'Human Dimension and Interior Space', Whitney Library of Design, 1975.
6. Richard P. Dober, 'Campus Planning', Reinhold Book Corporation, 1963.
7. Sam F. Miller, 'Design Process: A Primer for Architectural and Interior Design', Van Nostrand Reinhold, 1995.
- Dudek M, 'Schools and Kindergartens', Birkhauser 2007

18ARS322	BUILDING MATERIALS AND CONSTRUCTION -III									SEMESTER-III	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To give an introduction to cement and concrete as materials for building construction.
- To help understand the principles, types, methods of construction
- To understand about applications of concrete
- To understand about structural and non-structural building components
- To understand and enable design and detail using concrete in buildings
- To understand about concrete staircase.

COURSE OUTCOME:

1. Student will learn about the concrete as a versatile material in different contexts.
2. Student will understand the concepts of concrete as a building construction material.
3. Student will be able to design and detail specific components in concrete in Architectural Design
4. Student will understand about concrete Footing, column by doing detailed drawings
5. Student will understand about concrete Slab, beams by doing detailed drawings
6. Student will understand about concrete Plinth, lintel, Sill by doing detailed drawings
7. Student will understand about concrete Staircase by doing detailed drawings

UNIT- I CONCRETE, ITS INGREDIENTS MANUFACTURE & PROPERTIES

Ingredients - suitability requirements for aggregates, grading of aggregates - role of water in concrete- reinforcement - admixtures - properties of concrete. Manufacture of concrete and concreting - mix proportioning - batching, mixing, transporting, placing, compaction, curing formwork - quality control - outline of tests for concrete - joints in concrete -concrete finishes.

UNIT- II SPECIAL CONCRETE AND CONCRETING METHODS

Lightweight, high density, fibre reinforced, polymer concrete - outline of manufacture properties and uses of the above - ready mixed concrete -guniting- cold weather and underwater concreting - current developments in concrete products and methods of concreting. FOUNDATIONS-Pile foundation, different types of piles, precast and cast insitu with reinforcement details for different types of grids, details of pile capping, jointing of precast piles and columns – Raft foundation

UNIT- III CONCRETE CONSTRUCTION

Introduction to framed structures. Concrete in foundations - types of footings - isolated, combined, continuous, strap. Concrete floors, walls and partitions, roof. Concrete lintels, arches, sunshades -Concrete slabs - types - concrete beams and columns.

UNIT- IV CONCRETE STAIRCASES

Factors involving staircase design - types of staircases like straightflight, doglegged, quarterturn, bifurcated, spiral helical, etc. - different support conditions like inclined slab, cranked slab, continuous, cantilever - foundations finishes for staircases - detailing out of handrails and balusters. Designing and detailing for physically handicapped.

UNIT- V D.P.C- WEATHERING COURSE – WATER PROOFING

Introduction to DPC – Damp Proof Course – Water Proofing – Details and techniques

SUGGESTED READINGS :

1. M.S.Shetty, 'Concrete Technology', S.Chand, 2005.
2. S.K. Duggal, 'Building Materials', New Age International Publishers, 2016.
3. B.C.Punmia et al, 'Building Construction', Laxmi Publications, 2016.
4. T.D Ahuja and G.S. Birdie, 'Fundamentals of Building Construction', Dhanpat Rai Publishing Company Pvt. Ltd., New Delhi, 1996
5. S.P Arora and S.P Bindra, 'A Text Book of Building Construction', Dhanpat Rai Publishing Company Pvt. Ltd, 2010.
6. Roy Chudley, Roger Greeno, 'Building Construction Handbook', Routledge, 2010.
7. S.N Sinha, 'Reinforced Concrete Design', Tata-McGraw Hill, New Delhi, 2002
8. R. Chudley et al, 'Construction Technology', Heinemann, 2011

18ARS323	BUILDING SERVICES - I									SEMESTER-III
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To get a Brief understanding about the list of Services involved in Building
- To understand the sequence and importance of the services in a Building during the planning
- To develop basic technical knowledge in water supply & Applications in Architecture
- To develop the technical knowledge in Electrical Supply & Applications in Architecture
- To develop sanitation, electrical, air conditioning, mechanical and firefighting systems.
- To develop basic technical knowledge in acoustics of a space

COURSE OUTCOME:

1. Student will understand about Building services and its integration in a building
2. Student will learn about water supply, sewage, drainage and waste systems in buildings.
3. Student will learn about the various electrical systems and applications in building
4. Student will understand about Heating, ventilation and air-conditioning systems in a building.
5. Student will learn about the Fire safety & Services in a building
6. Student will understand the importance of application of services in a building.

UNIT- I WATER CHARACTERISTICS AND QUALITY

Surface and ground water sources - quality/quantity - nature of impurities

UNIT- II FUNDAMENTALS OF SEWAGE TREATMENT AND SEWERAGE SYSTEMS

Environmental sanitation -Sanitation in buildings. Arrangement of sewerage systems in Housing, large factories, towns and cities - sewage pumping station - Rainwater harvesting and disposal

UNIT - III ELECTRICAL SYSTEMS AND ILLUMINATION

A) Basics of electricity - Single/Three phase supply - Protective devices in electrical installations - Earthing for safety - Types of earthing - ISI specifications.

b) Principles of illumination: Modern theory of light - Synthesis of light - Additive and subtractive synthesis of color - Luminous flux - Candela - Solid angle illumination - Utilization factor - depreciation factor - MSCP - MHCP - Laws of illumination.

UNIT - IV MECHANICAL SYSTEMS

a) Pumps – uses & types and their selection, installation and maintenance, Hot Water Boilers.

b) Basic refrigeration principles: Thermodynamics - Heat - Temperature, measurement transfer - Change of state - Sensible heat - Latent heat of fusion, evaporation, sublimation - Saturation temperature - Super-heated vapor - sub cooled liquid - pressure temperature relationship for liquids – Refrigerants

UNIT- V FUNDAMENTALS OF ACOUSTICS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies.

Types of noises, transmission of noise, transmission loss, noise control and sound insulation and remedial measures, determination of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

SUGGESTED READINGS ::

1. 'Manual of Water Supply and Treatment', second edition, CPHEEO, Ministry of works and housing, New Delhi, 1977.
2. AFE Wise, JA Swaffield Water, 'Sanitary & Waste Services in buildings', V Edition, Mitchell Publishing, Co. Ltd., 2002.
3. Punmia B.C., 'Waste Water Engineering', Laxmi Publications, 2009.
4. Arceivala S.J., 'Waste Water Treatment for Pollution Control', Tata McGraw Hill, 2008.
5. National Building Code - Bureau of Indian Standards. Indian Standard Code of Practice for Water Supply in Buildings, IS :2065 – 1983'
6. S.C.Rangwala, 'Water Supply and Sanitary Engineering', Charotar publishing house

18ART401	CLIMATE RESPONSIVE ARCHITECTURE									SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To study about climatic factors and its influence
- To understand about the of external and internal factors of Climate for a certain location
- To understand deeply about the Microclimatic influences in a building
- To understand about the Solar geometry and its impacts in a building
- To understand the Air movement & its principles and Applications for humanthermal comfort
- To understand about the Classification of climate and Design strategies recommendations for each climatic Zone

COURSE OUTCOME:

1. Student will understand the whole climatic scenario of the world
2. Student will learn about the Solar geometry, sun path its irradiation effects and control
3. Student will learn about heat transfer in buildings due to materials and design implications.
4. Student will understand about the Various ventilation principles and techniques for good ventilation
5. Student will understand hybrid design strategies and its design applications for different climatic zones
6. Student will develop the skill of doing a climatic design for any building with optimum recommendations.

UNIT 1 CLIMATE & MICROCLIMATE

Introduction of the earth formation,sun-Latitude , longitude, Altitude-Factors that determine climate -Climatic zones of the world,India –Climate classifications –characteristics-Thermal comfort-Mahony's tables,Psychrometricchart,Bioclimate chart and fanger point scale- Microclimate-Urban heat Island-Built forms – Natural and manmade features – vegetation

UNIT- II SOLAR GEOMETRY- HEAT TRANSFER-BUILDING ENVELOPE CONCEPTS

Movement of sun- Sun path diagram – Solictice-Overheated period–Solar shading–Shadow angles – Types of shading devices and materials,techniques- Transfer of heat through solids -Wall,roof,ground,glass,other materials– Definitions- Conductivity, Resistivity, Emmissivity,Absorbance– Surface resistance and air cavities– Air to air transmittance (U value) –Time lag and decrement factor – Material Properties-calculations

UNIT- III AIR MOVEMENT STRATEGIES –VENTILATION PRINCIPLES

The wind –wind patterns – Air currents around the building – Air movement through the buildings – Fenestration techniques– Thermally induced air currents – Stack effect, Venturi effect ,bernoullistheory,Finwalls,windtowers etc

UNIT- IV DESIGN STRATEGIES -PASSIVE,ACTIVEAND DAYLIGHTING

Heating:principles – Passive and Active solar-Direct gain systems - Glazed walls, Bay windows,sun space- Indirect gain systems-Trombe wall,SolarChimney,Roof pond, Roof radiation trap, Solarium etc.Cooling: General principles – Evaporative cooling, Nocturnal radiation cooling,induced ventilation, earth sheltering, Berming, Wind Towers, earth air tunnels, Curved Roofs & Air Vents, Insulation, Vary Thermal wall etc.-Daylighting concepts – Natural – Artificial – WWR – Light shelf etc

UNIT- V DESIGN RECOMMENDATIONS FOR CLIMATE & SUSTAINABILITY IN ARCHITECTURE

Design strategies recommended in warm humid, hot and dry,Moderate , composite and cold climates-Fundamentals of Sustainability- green buildings – rating sstems -Biomimicry -Case studies of buildings
-Excercises involving design strategies receommended

SUGGESTED READINGS :

1. MiliMajunder, Teri – Energy – Efficient Bldgs in India – Thomson Press , New Delhi – 2001
2. Arvind Krishnan & Others – Climate Responsive Architecture, Tata Mcgraw –Hill New Delhi 2001.
3. Heating,Cooling and Lighting – Norbert Lechner, October 2014
4. Charles. J. Kibert, ‘Sustainable Construction’ John Wiley and sons Inc, USA.2013.
5. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.2012
6. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India.
7. Sun wind and light- Mark Dekay , G. Z. Brown, Feb 2013

18ART402	CONTEMPORARY ARCHITECTURE I									SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To give exposure to the critiques of modern architecture.
- To understand about influence of new materials in modern architecture
- To study in detail the different postmodern directions in architecture
- To study about the influence of industrial revolution in Architecture
- To understand about the Modern era of Architecture
- To understand the evolution of Western Architecture

COURSE OUTCOME:

1. Student will understand the spread and varied later directions of modern architecture across the world.
2. Student will understand the architectural production from the 1960s as driven by large scale changes across the world.
3. Student will become familiar with contemporary forces and directions in architecture across the world.
4. Student will understand the basis of Architecture revolutions and its changes in every decade
5. Student will understand the Ideologies of various Architects & their Works
6. Student will impart this Knowledge in his Architectural Design

UNIT- IEVOLUTION OF MODERN ARCHITECTURE & INFLUENCE OF NEW MATERIALS

Reasons for the evolution of Modern Architecture, origins-Neo Classicism Industrial revolution and its impact – Emergence of new building typologies, New Materials and Technologies- steel, glass and concrete

UNIT- IIREVIEWING INDUSTRIALISATION

Arts & Crafts movement in Europe and America; Art nouveau, and the works of Horta, Guimard, Gaudi and Macintosh; Organic Architecture -Early works of F.L.Wright. Chicago school; Art deco Architecture in Europe and America.

UNIT- IIIEVOLUTION OF MODERNISM, POST MODERNISM AND CRITIQUE

Viennese secession, Adolph Loos and debates on ornamentation ; Futurism, Expressionism works of Mendelssohn & Taut, Cubism, Constructivism, De stijl and their influence on Architecture. Bauhaus school & Walter Gropius, Modernism and the International style, Brutalism, Writings of Venturi - Jane Jacobus - Aldo Rossi - Christopher Alexander.

UNIT – IVWESTERN ARCHITECTURE

Ideas and works of Richard Meier (Smith House, Connecticut and Getty Centre, Brent Wood, Los Angeles), Charles Moore (Architect's Own House at Orinda and Piazza d'Italia, New Orleans), Bernard Tschumi (Kyoto Railway Station Project and Parc de la Villette, Paris), Frank Gehry (AeroSpace Museum, Santa Monica and Guggenheim Museum, Bilbao), Norman Foster (Hong Kong Shanghai Bank and Renault Distribution Centre, Swindon, England),

UNIT- VMODERN ARCHITECTURE

Zaha Hadid (The Peak Club, Hong Kong and IBA Housing Block 2, West Berlin), Daniel Libeskind (Jewish Museum, Berlin and World Trade Centre, New York), Rem Koolhaas (Dance Theatre, The Hague and Netherlands Sports Museum), Santiago Calatrava (Lyon- Satolas Railway Station and Olympic Stadium at Athens), Renzo Piano (Pompidou Centre, Paris and Menil Museum, Houston) - Deconstructivist Theory – Parametric.

SUGGESTED READINGS :

1. Kenneth Frampton, 'Modern Architecture: A Critical History', Thames & Hudson, London, 2007.
2. William J. Curtis, 'Modern Architecture since 1900', Phaidon Press, 1996.
3. Diane Ghirardo , 'Architecture after Modernism', Thames & Hudson, London, 1990.
4. Elie G. Haddad, David Rifkind, 'A Critical History of Contemporary Architecture: 1960-2010', Routledge, 2016.
5. Bhatt and Scriver, 'Contemporary Indian Architecture- After the Masters', University of Washington Press, 1991
6. Bahga et al, 'Modern Architecture in India - Post Independence Perspective', Galgotia, 1993

18ART403	DESIGN OF STRUCTURES I									SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To get introduced to basic structural members in timber and steel.
- To give knowledge to design different timber components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet joints
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of welded joints
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To Understand the concept of Structural system of Steel & Timber

COURSE OUTCOME:

1. Student will understand about Various Timber sections
2. Student will understand about the design timber beams and columns by applying the code provisions.
3. Student will understand about the Steel Sections and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the code provisions.
6. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

UNIT- I TIMBER – BEAMS

Grading of Timber – Permissible Stresses – Design of timber beams – Madras terrace roof.

UNIT- II STEEL SECTIONS AND WELDED JOINTS

Properties of rolled steel sections, Types of welded joints – Advantages and disadvantages – Design of Fillet welds (Excluding eccentric connections).

UNIT- III TENSION MEMBERS

Introduction – Net sectional area – permissible stresses. Design of Axially loaded Tension member

UNIT- IV COMPRESSION MEMBERS

Introduction – various sections – built up section – Design of columns (excluding Lacing, Battening and other connections.)

UNIT- V STEEL BEAMS

Allowable stresses, General specifications, Design of laterally supported beams.

SUGGESTED READINGS :

1. M.R. Shiyekar, 'Limit State Design in Structural Steel', PHI Learning Private Limited, 2010.
2. N. Subramanian, 'Design of Steel Structures', Oxford Higher Education, 2008.
3. S.K. Duggal, 'Limit State Design of Steel Structures', McGraw Hill Education, Private Limited, 2010.
4. Dr. V. L. Shah & Prof. Veena Gore, 'Limit State Design of Steel Structures', Structures Publications, Pune, 2012.
5. S.S. Bhavikatti, 'Design of Steel Structures by Limit State Method as per IS800-2007', I.K. International Publishing House Pvt, Ltd, 2012.

18ARP411	COMPUTER APPLICATION -III									SEMESTER-IV
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week	L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of two-dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

CONTENT

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Animations and Walkthroughs
3. Simulating gravity, wind and other effects in the scene, distributed rendering
4. Application of videography in architecture
5. Basics of developing and hosting websites

REVIT, BIM, ECOTECT and related softwares

SUGGESTED READINGS :

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009
5. Deke McClelland, 'Photoshop 7 Bible Professional Edition', Wiley John & Son INC, New York, 2000.
6. Aouad, 'Computer Aided Design guide for Architecture, Engineering and construction', Spon process, 2012.
7. Mohammed Saleh Uddin, 'Digital Architecture – 3D Computer Graphics from 50 top designers', 1999.

18ARS421	ARCHITECTURAL DESIGN -IV									SEMESTER-IV	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To create understanding of human built environment as a holistic, living entity from macro to micro scales, and shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- Understanding the Design Programme and the Components of the Design Problem & Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media & Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings
- To enable a comprehensive study of rural settlement and architecture in order to understand them as exemplar of collective design that evolved through various parameters.

COURSE OUTCOME:

- Student will be able collect data, assimilate and integrate knowledge in a holistic manner.
- Student will learn about the Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
- Student will learn about traditional techniques and concepts of Architecture.
- Student will learn about the evolution and transformation of the rural settlements according to the time and cultural context.
- Student will understand the essence of rural planning
- Student will develop the skill of design process for the Rural settlements

CONTENT:

Rural settlements offer an opportunity to understand basic aspects of human built environment and what goes into its making/ influences it. The interrelationship between built form and society will be studied, understood and established, starting from either end as required. Study of specific modes of rural/vernacular/traditional architecture including their morphology, local materials and construction techniques, details, meaning, etc., will be done to give an insight into the particulars and universals of architecture.

Appropriate tools and processes can be used to aid the understanding. These include different methods of historical and socio-cultural study, oral history, discussions, information collection, surveys, maps, perceptual sketches, documentation through drawings, demographic study, assimilation and analysis.

Problems related to Rural Housing - Visits to selected village – based on Rural surveys on socio-economic, physical, housing and visual surveys, etc. to study existing conditions - analysis of survey data - preparation of report and presentation in a seminar - preparation of design brief solutions for housing and community facilities.

SUGGESTED READINGS :

1. Amos Rapoport, 'House, Form and Culture', Prentice Hall, 1969.
2. Bernard Rudofsky, 'Architecture without Architects', MoMA, 1964.
3. Rajendra Kumar Sharma, 'Rural Sociology', Atlantic, 2011.
4. Joseph De Chiara, Michael J Crosbie, 'Time Saver Standards for Building Types', McGraw Hill Professional 2001.
5. Ramachandran H, 'Village Clusters and Rural Development', Concept Publications, 1980.
6. Thorbeck D, 'Rural Design', Routledge, 2002.
7. Hassan Fathy, 'Architecture for the Poor', University of Chicago press, 1973.
8. R. C. Arora, 'Integrated Rural Development', S. Chand, 1979.

18ARS422	BUILDING MATERIALS AND CONSTRUCTION -IV							SEMESTER-IV	
Marks	Internal	80	External			120	Total	200	Exam Hours
Instruction Hours /week	L	2	T	0	P/S	5	Credits		
									6
									4

COURSE OBJECTIVE:

- To give an introduction to metals as material for building construction.
- To give knowledge about the principles, methods of construction and applications of metals for structural and non-structural building components.
- To provide familiarity with market forms of metals and finishes for them.
- To gain Knowledge about Steel floor & Steel Staircase
- To understand about Door, windows & partitions
- To provide familiarity with market forms of metals and finishes for them.

COURSE OUTCOME:

1. Knowledge of properties of ferrous and nonferrous metals as materials for buildings.
2. An understanding of possibilities of steel as an important building construction material.
3. Ability to design and detail structural and non-structural components of simple buildings using metals.
4. Ability to use metal innovatively in building projects.
5. Student will gain Knowledge about Steel Floors & Staircase
6. Student will understand about the details of Door, windows & Partitions by detailed Drawings.

UNIT- I FERROUS METALS

Brief study on manufacture, properties and uses of cast iron, wrought iron, pig iron and steel - anticorrosive measures for steel - mechanical and heat treatment of steel - market forms of steel - structural steel, stainless steel, steel alloys - properties and uses - current developments.

UNIT- II STEEL CONSTRUCTION

Structural steel sections - types of connections in steel - steel in foundations, columns and beams - different types of steel roof trusses including northlight truss - space frames - materials for roof covering. Steel staircases and handrails, balusters..

UNIT- III STEEL STAIRS, DOORS, WINDOWS

Steel doors and windows – safety doors, dock doors, cold storage doors, revolving doors - collapsible gates - rolling shutters. Steel in furniture and other interior uses

UNIT- IV NON FERROUS METALS

Aluminum and Aluminum Alloys - brief study on manufacture, properties and uses - Aluminum products - extrusions, foils, castings, sheets, etc. - brief study of other non-ferrous metals like copper, bronze brass, tin and lead, properties and uses - current developments.

UNIT- V CONSTRUCTION USING NON-FERROUS METALS

Aluminum doors - revolving, sliding, pivoted. Aluminum windows and ventilators - sliding, fixed, pivoted, top hung, bottom hung, louvered, fixed. Aluminum partitions, false ceiling, Aluminium roofing - northlight glazing bar. Use of other nonferrous metals like copper, bronze, brass, etc. in architectural construction.

SUGGESTED READINGS :

1. P.C Vargheese, 'Building Materials', Prentice Hall of India, 2015.
2. S.K. Duggal, 'Building Materials', New Age International Publishers, 2016.
3. B.C.Punmia et al, 'Building Construction', Laxmi Publications, 2016.
4. Roy Chudley, Roger Greeno, 'Building Construction Handbook', Routledge, 2010
5. Mark Lawson, Peter Trebilcock, 'Architectural Design in Steel', Taylor and Francis, 2004.
6. Terri Meyer Boake, 'Understanding Steel Design', Birkhauser, 2011.

18ARS423	BUILDING SERVICES -II									SEMESTER-IV	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To inform about the principles and laws of Water distribution systems in buildings.
- To inform about the principles and laws of sewerage systems in buildings.
- To inform about the principles and laws of plumbing systems
- To inform about the electrical layout for residential Building
- To understand about compressors, evaporators and refrigerant control devices
- To Inform about the integration of service with the Architectural Design

COURSE OUTCOME:

1. Student will gain Knowledge of design of Water distribution systems in buildings
2. Student will learn and understand about the sewerage systems in buildings.
3. Student will learn and understand about the plumbing systems
4. Student will understand the electrical layout for residential Building
5. Student will gain basic knowledge about compressors, evaporators and refrigerant control devices
6. Student will understand the Applications of building Services in advanced level by detailed Drawings

UNIT- I WATER DISTRIBUTION

Water supply systems – Domestic – Commercial – usages - Distribution systems in buildings - Types of pipes used - Laying, jointing, testing - prevention of water wastage and reuse of water - Internal water supply in buildings

UNIT- 2 SEWAGE AND SOLID WASTE MANAGEMENT

Arrangement of sewerage systems in buildings - sewage treatment plant- Solid waste Disposal: Collection, conveyance and disposal of town Solid waste

UNIT- 3 PLUMBING SYSTEMS

Materials and construction details of sewers and connections – plumbing fixtures - testing for water tightness - plumbing system for building types. – Toilets kitchen etc.

UNIT- IV ELECTRICAL SYSTEM AND LIGHTING DESIGN

Study of electrical layout for residential Building - Types of wires, wiring systems and their choice - Main and distribution boards - Electrical load calculation – Details - Classification of lighting - Artificial light sources - spectral energy distribution - luminous efficiency - colour temperature - colour rendering – lighting fixtures.

UNIT- V AIR CONDITIONING SYSTEM AND APPLICATION

Vapour compression cycle - compressors - evaporators - Refrigerant control devices - Air handling units - Cooling towers.

Window type and packaged air-conditioners - chilled water plant - fan coil systems - water piping - cooling load - Airconditioning systems for different types of buildings.

SUGGESTED READINGS :

1. Phillips, 'Lighting in Architectural Design', McGraw Hill. New York, 1964.
2. David Egan, Victor Olgyay 'Architectural Lighting', McGraw-Hill, 2001.
3. Gary Gordon, 'Interior Lighting for Designers', 5th Edition, John Wiley & Sons Inc., New York, 2015.
4. David Egan, 'Architectural Acoustics', J.Ross Publishing, 2007.
5. David Lee Smith, 'Environmental Issues for Architecture', Wiley, 2011.
6. National Building Code - Bureau of Indian Standards.
7. 'The Lighting Handbook', IES, 2011.
8. Descottes, Herve and Cecilia E. Ramos, 'Architectural Lighting: Designing with LightSpace', Princeton Architectural Press, Princeton, 2011

18ART501	CONTEMPORARY ARCHITECTURE-II									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To provide the student an in-depth knowledge of modern design philosophies in the evolution of innovative architectural forms and designs in the Indian context.
- To give an outline of architectural approaches across the world from late 20th century.
- To study in detail the different post-modern directions in architecture.
- To provide information about the Alternate Practice
- To understand about the evolution of Architectural design of pre – independence
- To understand the Recent trends in Architecture

COURSE OUTCOME:

1. Student will learn about the spread and varied later directions of modern architecture across the world.
2. Student will become familiar with contemporary forces and directions in architecture across the world and in India
3. Student will understand about the post-independence architecture in India contemporaneous with the rest of the world, along with its own particular influences.
4. Student will understand about the Post- independence revolution of design in India
5. Student will know about the Alternate practices
6. Student will gain knowledge in recent trends of Architecture & Design

UNIT- I ALTERNATIVE PRACTICE

Ideas and Works of Fathy - Baker - Ando -Soleri – Bawa – Buckminster fuller-Architects of Auroville .

UNIT - II PRE – INDEPENDENT ARCHITECTURE IN INDIA

Monumental buildings of Early colonial period – Examples – St.Pauls Cathedral, Calcutta& Bombay Townhall – Architectural character of Indo-Saracenic and Classical revival –University of Madras Senate House & Victoria Memorial hall, Calcutta – Later Colonial period – Contribution of Edwin Lutyens & Herbert Baker to the lay-out and Architecture of New Delhi – Rashtrapathi Bhavan & Parliament House.

UNIT - III POST-INDEPENDENT ARCHITECTURE IN INDIA

Post-Independence Architecture in India – Works of Corbusier in Chandigarh and Ahmedabad (Legislative Assembly Complex including High Court, Legislative assembly and Secretariat, Chandigarh and Mill Owners' Building, Ahmadabad) Louis Kahn's contributions – the IIM, Ahmedabad, Koenigsberger and the Bhubaneswar experiment.

UNIT - IV CONTEMPORARY INDIAN ARCHITECTS AND THEIR WORKS

Ideas and works of BV Doshi (Institute of Indology Ahmedabad, IIM-Bangalore and Gufa, Ahmedabad), Charles Correa (RamaKrishna House, Ahmedabad, KanchenJunga Apartments, Mumbai and MRF Headquarters, Chennai), Raj Rewal (Pragati Maidan, New Delhi and Asian Games Village, New Delhi), Achyut Kanvinde(IIT, Kanpur and Nehru Science Centre, Mumbai), Uttam Jain(Lecture Theatres, Jodhpur and Engineering College, Kota), Laurie Baker(Centre for Development Studies, Thiruvananthapuram and St. John Cathedral at Tiruvalla) and Anant Raje(IIFM, Bhopal and Management Development Centre, IIM-Ahmedabad)

UNIT- V RECENT TRENDS IN INDIAN ARCHITECTURE

Recent developments in architecture of India – works of Selected architects – Current architecture practice. Sanjay Mohe, Christopher benninger, Hafeez contractor, Chitra viswanath, Sanjaypuri etc

SUGGESTED READINGS :

1. Kenneth Frampton, 'Modern Architecture: A Critical History', Thames & Hudson, London, 2007.
2. William J. Curtis, 'Modern Architecture since 1900', Phaidon Press, 1996.
3. Diane Ghirardo , 'Architecture after Modernism', Thames & Hudson, London, 1990.
4. Elie G. Haddad, David Rifkind, 'A Critical History of Contemporary Architecture: 1960-2010', Routledge, 2016.
5. Bhatt and Scriver, 'Contemporary Indian Architecture- After the Masters', University of Washington Press, 1991
6. Bahga et al, 'Modern Architecture in India - Post Independence Perspective', Galgotia, 1993

18ART502	DESIGN OF STRUCTURES-II									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To introduce the material properties of reinforced cement concrete
- To enable students to carry out limit state method of design of flat slabs, beams, columns and foundation using BIS codes and hand books.
- To introduce the concepts in limit state design
- To enable use of limit state design for the analysis and design of columns.
- To enable the learning of design of structural elements like footings, retaining walls and masonry walls.
- To enable use of limit state design for design of staircases

COURSE OUTCOME:

1. Students will get introduced to the material properties of steel and concrete
2. An understanding of the different concepts in designing footings and columns and masonry walls using LSD methods.
3. An understanding of the concepts in limit state design
4. An understanding of how to use of limit state design for the analysis and design of columns
5. An understanding of design of structural elements like footings, retaining walls and masonry walls
6. An understanding of how to use limit state design for design of staircases

UNIT- I PROPERTIES OF STEEL AND CONCRETE

Structural properties of concrete - Grades and Strength of Concrete - durability - code provisions and design requirements of steel and concrete.-Introduction to prestressed concrete - methods

UNIT - II LIMIT STATE DESIGN - INTRODUCTION

Various limit stages - characteristic load and characteristic strength of materials - partial safety factor - stress-strain relationship of steel and concrete - safety and serviceability requirements.

UNIT - III LIMIT STATE DESIGN OF BEAMS & SLABS

Analysis and Design of rectangular sections for bending - singly and doubly reinforced. Design of one way and two way slabs using IS Code co-efficients for various edge conditions.

UNIT - IV LIMIT STATE DESIGN OF COLUMNS

Types of columns – Analysis and Design of Short Columns for Axial, Uniaxial and biaxial bending – Use of Design aids.

UNIT- V LIMIT STATE DESIGN OF STAIRCASE

Types of staircases - Design of doglegged staircase and other staircase.

SUGGESTED READINGS :

1. S.N. Sinha, "Reinforced Concrete Design", Tata McGraw Hill, 2002.
2. Shah H.J., 'Reinforced Concrete', Charotar, Vol. 1 2016, Vol.2 2014.
3. P.Dayaratnam, 'Design of Reinforced Concrete Structures', Oxford and IBH Publishing Co.,1983.
4. C. Sinha and S.K. Roy, 'Fundamentals of Reinforced Concrete', S.Chand & Co., New Delhi, 1983.
5. Dr. B.C. Punmia, 'Reinforced Concrete Structures' Vol, 1 & 2', Laxmi publication, Delhi, 2004.
6. IS 456 'Indian Standard, Plain and Reinforced Concrete, Code of Practice', Bureau of Indian Standards, 2000.
7. S.Unnikrishnan Pillai and Devados Menon, 'Reinforced Concrete Design', Tata Publishing Co. Ltd., New Delhi, 1999.

18ARP511	COMPUTER APPLICATION-IV								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week	L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To develop the advanced knowledge and skills in computer application related to building visualization and rendering
- To create simple multimedia presentations, brochures, videos as required in architectural practice.
- To develop the skills of two-dimensional rendering
- To develop the Skill related to building visualization
- To develop the skill of video presentations as required in architectural practice.
- To develop the skill and knowledge of the Building information Modelling

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualisation and rendering
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

CONTENT

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Animations and Walkthroughs
3. Simulation features of radiation, wind – Computational fluid dynamics, shadows, daylighting

Recommended softwares :

RHINO, GRASSHOPPER, VECTORWORKS,
 PLUGINS-LADYBUG, OPENSTUDIO, DAYSIM, RADIANCE, SEFAIRA
 ECOTECH, REVIT SIMULATIONS

SUGGESTED READINGS:

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009

18ARS521	ARCHITECTURAL DESIGN -V									SEMESTER-V	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Mixed-use Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

CONTENT

Small complexes - multi planning circulation analysis - massing problems involving building technology - Design and detailing for movement of physically handicapped and elderly persons within and around buildings. examples, shopping centre (Commercial) , Apartments (residential)Nursing home (institutional) home for aged. Construction and manipulation of three dimensional building data bases, Rendering 3D images. Presentation techniques, preparing scaled models using different materials.

Design Process to be approached stage wise through Architectural Programming. Site Planning fundamentals as relevant to small projects to be introduced in the design.

SUGGESTED READINGS :

1. Joseph De Chiara, Michael J Crosbie, 'Time Saver Standards for Building Types', McGraw Hill Professional, 2001.
2. Ernst Neuferts Architects Data', Blackwell ,2002.
3. Stephen A. Kliment, Editor 'Building Type Basics' Series, Wiley.
4. Wolfgang Preisner, Korydon H. Smith, 'Universal Design Handbook', 2nd Edition, McGraw-Hill, 2010.
5. Rem Koolhaas et al, 'Project on the City II: The Harvard Guide to Shopping', Taschen, 2001.
6. Peter Coleman, 'Shopping Environments: Evolution, Planning and Design', Routledge, 2006.
7. LMVRDV, 'FARMAX- Excursions on Density', 010 Publishers, 2006.
8. Jos Boys, 'Disability, Space, Architecture: A Reader', Routledge, 2017.
9. Emily Talen, 'Design for Diversity', Routledge, 2012.
10. Luis Alexandre Casanovas Blanco (Ed), 'After Belonging: Objects, Spaces, and Territories of the Ways We Stay in Transit', Lars Muller Publishers, 2016.
11. Manuel Gausa, 'Housing: New Alternatives, New Systems', Birkhäuser Basel 1999
12. Mark Hutter, 'Experiencing Cities (The Metropolis and Modern Life)', Routledge, 2015.

18ARS522	BUILDING MATERIALS AND CONSTRUCTION -V									SEMESTER-V	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To give an introduction to glass as a material in architectural construction
- To give an introduction about plastic
- To give an introduction about composite materials
- To understand about the design of timber furniture, paneling, partition etc.
- To give an introduction to cladding, flooring and painting in building construction.
- To provide familiarity with advanced building construction techniques (shell structures) and materials as well as design with them.

COURSE OUTCOME:

1. Student will learn about the Composition, manufacturing method, treatment, properties and uses of glass
2. Student will learn about Plastic building products
3. Student will learn about Timber floors, build in furniture, interior details
4. Student will gain Knowledge of glass, plastics, paints and finishes in building construction.
5. Student will become familiar with Secondary Building products – windows, doors, sky light domes
6. Student will gain knowledge about Smart Materials: Characteristics, classification, properties, energy behavior, intelligent environments.

UNIT I GLASS

Composition of glass - brief study on manufacture, treatment, properties and uses of glass - special types of glass, sheet glass, plate glass, safety glass, tint coated glass -Glass blocks - properties and applications in the building industry - current developments

UNIT II PLASTICS, COMPOSITE MATERIALS

Primary Plastic building products – walls, partitions and roofs – design and construction details
Secondary Building products – windows, doors, sky light domes – handrail - design and construction details

UNIT III TIMBER, ALLIED PRODUCTS

Timber floors , build in furnitures , interior details- wall paneling,false ceiling – partition

UNIT IV CLADDING, FALSE CEILING, FLOORING AND PAINTING

Stone, ACP, wood, Glass, curtain wall, Structural glazing,(reflected ceiling plan), Flooring and painting

UNIT V INTRODUCTION TO CURRENT DEVELOPMENTS IN BUILDING INDUSTRY

Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.
Recycled and ecological materials and energy saving materials: card board, earthsheltered structures, recycled plastics, recycled tyres, paper-crete
Exercises of the above through case studies and drawings

SUGGESTED READINGS :

1. S.K. Duggal, 'Building Materials', New Age International Publishers, 2016.
2. B.C. Punmia et al, 'Building Construction', Laxmi Publications, 2016.
3. S.P Arora and S.P Bindra, 'A Text Book of Building Construction', Dhanpat Rai Publishing Company Pvt. Ltd, 2010.
4. M.S. Shetty, 'Concrete Technology', S.Chand, 2005.
5. Arthur Lyons, 'Materials for Architects and Builders- An Introduction' Arnold, London, 1997.
6. Pamphlet and Manuals supplied or published by SERC, BMPTC, HUDCO and other research organisations.
7. Roy Chudley, Roger Greeno, 'Building Construction Handbook', Routledge, 2010
8. R.M. Davis, 'Plastics in Building Construction', Battersea College of Technology, Blackie, London, 1966
9. Ralph Monletta, 'Plastics in Architecture– A Guide to acrylic and Polycarbonate', Marcel Dekker Inc, New York, 1989
10. 'IS 7883. Code of Practice for the Use of Glass in Buildings ', Bureau of Indian Standards, 2013.
11. Gorenc, Tinyou, Syam, 'Steel Designer's Handbook', CBS Publishers and Distributors, New Delhi, Bangalore, 2005.

18ARET531	LANDSCAPE ARCHITECTURE									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To introduce the various aspects of outdoor design and site planning
- To teach them to enhance & improve the quality of built environment, functionally and aesthetically.
- To stress on the role of landscape design in sustainability, to provide an overview of ecological balance and impacts of human activities and the need for environmental protection and landscape conservation.
- To study the historical method of garden Design
- To understand the significance of urban landscape.
- To provide familiarity with the various elements of landscape architecture and the principle of landscape design.

COURSE OUTCOME:

1. Student will understand the role of landscape design with respect to macro scale of sustainability and ecology
2. Student will understand the micro scale of shaping of outdoor environments.
3. Student will gain Knowledge about the elements of landscape design and their scope.
4. Student will know about the Sensitivity towards evolution of different garden and landscape design across time and context.
5. Student will understand the historical method of landscape design
6. Student will understand the urban scale landscape design.
7. Student will be able to do landscape design with respect to site planning and different functional typologies of spaces

UNIT- I INTRODUCTION TO LANDSCAPE ARCHITECTURE AND DESIGN

Introduction to landscape architecture; role of landscape design in architecture; Introduction to site planning, site analysis & landscape design. Site selection criteria for landscape projects.

UNIT- II ELEMENTS IN LANDSCAPE DESIGN

Hard and soft landscape elements, Plant materials, classification, characteristics, use and application in landscape design; Water and Landform.

UNIT - III GARDEN DESIGN IN HISTORY

Landscape and garden design in history - French, English, Japanese, Renaissance and Moghul . Study of notable examples.

UNIT - IV URBAN LANDSCAPE

Significance of landscape in urban areas; road landscaping; waterfront development, landscaping of residential areas , Industrial landscaping .

UNIT- V LANDSCAPE DESIGN

Basic principles of planting design; Spatial development in landscape design; Detailed landscape design of any small project including paving and street furniture design

SUGGESTED READINGS :

1. Motloch, J.L., 'An Introduction to Landscape Design', US: John Wiley and Sons, 2001.
2. Michael Laurie, 'Introduction to Landscape Architecture', Elsevier, 1986.
3. Sauter D; 'Landscape Construction', Delmar Publishers; 2000.
4. Geoffrey And Susan Jellicoe, 'The Landscape of Man', Thames And Hudson, 1987
5. 'Time Saver Standards for Landscape Architecture', McGraw Hill, Inc, 1995.
6. Grant W Reid, 'From Concept to Form in Landscape Design', Van Nostrand Reinhold Company, 1993.
7. Albert J. Rutledge, 'Anatomy of a Park', McGraw-Hill Book Company, 1971.
8. Richard P. Dober, 'Campus Landscape', John Wiley and Sons; 2000.
9. Strom Steven, 'Site Engineering for Landscape Architects', John Wiley and Sons Inc., 2004.
10. Brian Hacket, 'Planting Design', Mc Graw Hill Inc, 1976.
11. T.K. Bose and Chowdhury, 'Tropical Garden Plants in Colour', Horticulture And Allied Publishers, Calcutta, 1991.
12. Rahoul B Singh, 'Gardens of Delight- Indian Gardens through the Ages', Lustre Press, Roli Books, 2008.

18ARET532	STRUCTURES IN ARCHITECTURE									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To outline the evolution of structural systems in the pre industrial era
- To outline the evolution of structural systems in the postindustrial era
- To introduce concepts of structural design through works of architects/ engineers.
- To learn about the contemporary structural concepts
- To create understanding about the relationship between architectural expression/ form and structure.
- To learn different structural expressions through case studies

COURSE OUTCOME:

1. Familiarity with concepts of structural design and its influence on the functional and aesthetic domains of architectural design relating to historic periods.
2. Students will gain knowledge about structural systems in pre and postindustrial era
3. Students will gain familiarity about structural concepts in contemporary period
4. Familiarity with the works of famous architects and engineers in the structural front
5. Gain knowledge on performing case studies on structurally relevant buildings
6. Understanding of architectural expression and its relation to form, structure and changing technology.

UNIT- I HISTORY OF STRUCTURAL DESIGN IN THE PRE INDUSTRIAL ERA

Development of monolithic and rock cut structures- trabeated construction-arcuate construction vaults
And flying buttresses- tents and master structures and bridges through ancient and medieval history.

UNIT- II HISTORY OF STRUCTURAL DESIGN IN THE POST INDUSTRIAL PERIOD

Post Industrial modular construction of large span and suspension structures in steel and concrete-projects of Pier Nuiji Nervi, Maillart, Candella, Buckminster Fuller and Eero Saarinen.

UNIT- III CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY

The select case studies could include KCR Terminal at Hung Hom, Hong Kong, B3 Offices in Stockley Park , Sainsbury Centre for Visual Art, Renault Centre and Swindon UK by Norman Foster and Stansted Airport Terminal, London, UK by Fosters/Arup British Pavilion EXPO 1992, Seville, Spain and Waterloo International Terminal by Nicholas Grimshaw

UNIT- IV CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY – II

The select case studies could include Inmos Microchip Factory, Centre Commercial St. Herbtain, PA Technology, Princeton and Fleetguard, Quimper UK by Richard Rogers Athens Olympic Stadium and Village, Bridges and Public Bus Stop in St. Gallen , Railway Station, Lyon, France and Stadelhofen Railway station, Zurich Schweiz by Santiago Calatrava Kansai International Airport, UNESCO Workshop, the Jean-Marie Tjibaou Cultural Center, Menil Museum, Thomson Optronics Factory, IBM Traveling Exhibition Pavilion, Columbus International Exposition, Genoa Italy and Lowara Officers, Montecchio Maggiore Italia by Reno Piano Building Workshop

UNIT- V SEMINAR

Seminar to present a study of architectural form and structural expression through select cases which will aid understanding of structural philosophy and analysis, building envelope and services and construction sequence.

SUGGESTED READINGS :

1. Shigeru Ban, McQuaid, Matilda, 'Engineering and Architecture: Building the Japan Pavilion', Phaidon Press Ltd, UK, 2008.
2. 'Cox Architects'(The Millennium Series), Images Publishing Group, 2001.
3. James B Harris, Kevin Li, 'Masted Structures in Architecture', Routledge,2012
4. Patrizio Bertelli et al, 'Herzog & De Meuron: Prada Aoyama Tokyo', Fondazione Prada, 2004
5. Christopher Beorkrem, 'Material Strategies in Digital Fabrication', Routledge, 2012
6. Angus J. Macdonald, Structure and Architecture, Architectural Press, 2001.
7. Thomas Herzog, 'Pneumatic Structures', Crosby Lockwood Staples, London

18ARET533	ACOUSTICS										SEMESTER-V
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To understand the science behind acoustical design
- To expose students to understand noise control, sound transmission
- To familiarize the students with various building and interior elements for Acoustics
- To familiarize the students with the basic principles of acoustic design
- To familiarize the student with the applications of Acoustical materials
- To familiarize the students with construction methods used in insulation

COURSE OUTCOME:

1. Student will understand the theoretical concepts of acoustics
2. Student will understand the theoretical ideas and concepts sound transmission and absorption
3. Student will be able to understand the basics of noise reduction and design applications of noise control
4. Student will be able to understand the construction methods for noise control
5. Student will understand about basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences
6. Student will understand about efficient insulation of fittings and gadgets, machine mounting and insulation of machinery

UNIT- I FUNDAMENTALS OF ACOUSTICS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies, human ear characteristics - Tone structure

UNIT- II SOUND TRANSMISSION AND ABSORPTION

Outdoor noise levels, acceptable indoor noise levels, sonometer, determinate of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

UNIT- III NOISE CONTROL AND SOUND ABSORPTION

Types of noises, transmission of noise, transmission loss, noise control and sound insulation, remedial measures and legislation.

UNIT- IV CONSTRUCTIONAL MEASURES

Walls/partitions, floors/ceilings, window/doors, insulating fittings and gadgets, machine mounting and insulation of machinery.

UNIT- V ACOUSTICS AND BUILDING DESIGN

Site selection, shape, volume, treatment for interior surfaces, basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences. Call Centers, Office building and sound reinforcement systems for building types.

SUGGESTED READINGS :

1. Dr.V.Narasimhan - An Introduction to Building Physics - Kabeer Printing Works, Chennai-5 - 1974.
2. D.J.Groomet - Noise, Building and People - Pergumon Press - 1977.
3. Thomas D.Northwood - Architectural Acoustics - Dowden, Hutchinson and Ross Inc. – 1977.
4. B.J.Smith, R.J.Peters, Stephanie Owen - Acoustics and Noise Control - Longman Group Ltd., - New York, USA 1982.
5. David Egan, 'Architectural Acoustics', J.Ross Publishing, 2007.
6. Harold Burris – Meyer and Lewis Good friend, Acoustics for Architects – Reinhold

18ARES534	PRODUCT DESIGN									SEMESTER-V	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	1	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To gain Knowledge about the various styles of furniture
- To gain knowledge about the manufacturing of various materials/ product
- To learn about visual codes & Symbols
- To understand the importance of Artefacts, murals and Artwork
- To learn about various products for the Physically challenged
- Understanding the methods and techniques involved in furniture and product design.

COURSE OUTCOME:

1. Student will gain knowledge about the various furniture and products
2. Student will understand the needs of the industry demand and product value
3. Student will gain knowledge in Composite materials and Products
4. Student will gain knowledge about Packaging design
5. Student will gain knowledge about the House hold items / products
6. Student will be able to do a Product design for the client

UNIT- I INTRODUCTION TO PRODUCT DESIGN

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

UNIT - II HUMAN FACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability. Information input and processing. Human control systems. Applied anthropometry – Human response to climate.

UNIT - III ASPECTS OF PRODUCT DESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays, Visual codes and symbols.

UNIT - IV PRODUCT DESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

UNIT- V DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery. Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc. Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc. Element design for the physically and mentally different people.

SUGGESTED READINGS :

1. Time Saver Standards for Interior Design
2. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGrawhill Co., USA, 1982.
3. Francis D.K.Ching, Interior Design Illustrated, VNR Publications, New York, 1987.
4. An invitation to Design, Helen Marie Evans.
4. Mark Garcia, 'The Diagrams of Architecture', Wiley 2010.
5. C. Thomas Mitchell, 'Redefining Designing: From Form to Experience', Van Nostrand Reinhold, 1992.
6. Jeremy Till et al, 'Spatial Agency: Other Ways of Doing Architecture', Routledge, 2011

18ARES535	BUILDING SERVICES FOR SPECIAL BUILDINGS									SEMESTER-V	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	1	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To impart advanced technical and practical knowledge in building services
- To gain knowledge of special services through preparation of service drawing and details.
- To understand about the water distribution for high rise structures
- To gain understanding about the Sewage & Drainage for high rise buildings
- To gain knowledge about the Sewage treatment plant
- To gain knowledge about Electrical installation for high rise buildings

COURSE OUTCOME:

1. Student will be able to understand and design high rise buildings with essential services
2. Student will gain knowledge in advanced services
3. Student will understand about Safety standards for special buildings
4. Student will gain knowledge about Fire safety service standards for all types of buildings
5. Student will gain knowledge in Building management systems
6. Student will gain Knowledge about the integration of services for Multi storied structures

UNIT- I WATER DISTRIBUTION FOR HIGH RISE / CAMPUS DEVELOPMENT

External water distribution layout- header pipe- U G sump – Puddle flange – water riser pipes – water calculation for campus – water meter – water irrigation – vision for landscaping- water management –

Internal water distribution layout – toilet details- plumbing – kitchen –and utilities – types of pipes and joints – fixtures and fittings – shaft details

UNIT - II SEWAGE AND DRAINAGE FOR HIGH RISE AND CAMPUS DEVELOPMENT

External sewage and drainage layout – Gully trap -Collection chamber – manholes – invert level – sewage treatment plant – grey water supply and calculation –saucer drain – rain water harvesting and terrace rain water piping system

Internal sewage systems – toilet details – Trap details – pipes and joints –vent pipes – plumbing system types- fixtures

UNIT -3 ELECTRICAL INSTALLATION FOR HIGH RISE AND CAMPUS DESIGN

Electrical panel details- basic SLD(single line diagram)-external cable layout – external lighting layout –false ceiling layout - internal lighting layout – internal raw and UPS power layout – cable tray and cable trunk layout - Vertical shaft details

UNIT -4 HEATING VENTILATION AND AIR CONDITIONING SYSTEMS IN HIGH RISE AND CAMPUS DESIGN

Different types of chillers and layout –external chiller piping system – AHU details – false ceiling layout – supply and return air diffuser details – ducting layout – Vertical shaft – VRV – VAV systems- Sound attenuator.

UNIT -5 FIRE FIGHTING AND BMS SYSTEMS IN HIGH RISE AND CAMPUS DESIGN

UG sump for Fire fighting- fire hydrant systems – external routing – internal hydrant systems – hose reel hydrant – foam hydrant -overhead tank – False ceiling layout -Fire detection – smoke detectors -Sprinklers -Glass break system - fire alarm system –Internal fire piping layout IBMS(Integrated Building Management Systems)- types of IBMS- Control room details – Internal Routing details – sensors – CCTV – access control – burglar control etc.Drawings : Integrated Service layout – Internal and External – cross section details

SUGGESTED READINGS :

1. William H. Severns and Julian R. Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D. Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD, New Delhi, 2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP: 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP: 7 – 1992

18ART601	BUILDING CODES AND REGULATIONS									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To develop understanding of the duties and liabilities of an architect
- To gain knowledge of bye-laws that relate to the building
- To understand about the environment in the Indian context.
- To Understand about legislation of corporation areas
- To understand about the Legislation of panchayat
- To understand about legislation of Industries

COURSE OUTCOME:

1. Student will be able to read and understand government related documents and incorporate it in practice
2. Student will be able to understand the building regulations and follow accordingly
3. Student will understand about the legislation of corporation areas
4. Student will understand about the legislation of panchayat
5. Student will understand about the legislation of Industries
6. Student will be able to design buildings as per the recent norms and standards

UNIT- I LEGISLATION - CORPORATION AREAS

Chennai Corporation Building Rules 1972, Development control Rules for Chennai Metropolitan Area 1990

UNIT- II LEGISLATION - PANCHAYATS

The Panchayat Building Rules 1942

UNIT - III LEGISLATION - INDUSTRIES AND FACTORIES

The Tamil Nadu Factory Rules 1950

UNIT - IV EMERGING AREAS OF IMPORTANCE

Role of urban Arts Commissions - need for special rules on architectural control and development

UNIT- V SPECIAL LEGISLATION

Environmental Acts and Laws - Special Rules governing Hill Area Development - coastal area development and management - Heritage Act of India - Consumer protection act and their relevant provisions- OTHER norms- HAKA, CRS norms, MOEF, FMB DRAWINGS- Approval drawings .

SUGGESTED READINGS :

1. Publications of COA, IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay nov 2016
2. D.C. Rules for Chennai Metropolitan Area- 2014
3. T.N.D.M. Building Rules, 2012
4. T.N.P. Building Rules 1942 and updated norms and regulations
5. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
6. The Tamil Nadu Hill Areas Special Building Rules – recent version
7. Heritage Act
8. Consumer Protection Act
9. Indian Easements Act

18ART602	PHYSICAL PLANNING									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To introduce the vocabulary, elements and classification of human settlements.
- To learn about the planning theories
- To give exposure to planning concepts at different scales of settlements.
- To understand about the planning aspects by means of Survey
- To gain understanding about the land use planning
- To give an understanding of planning addressing current issues.

COURSE OUTCOME:

1. Student will understand morphology of settlements and their generating forces and characteristics.
2. Student will understand the role of planning processes in making positive changes to settlements.
3. Student will gain knowledge and awareness of planning interventions with respect to the current world.
4. Student will gain understanding about the city evolution process due to planning
5. Student will gain Knowledge about existing settlements by Survey studies
6. Student will gain vast knowledge about Landsue patterns and planning theories

UNIT- I HUMAN SETTLEMENTS AND PLANNING THEORIES

Origins, evolution and growth of settlements. Relation between urban and rural settlements

Urbanisation, Industrialisation and urban growth, definitions and inter relationship. Trends in urbanization in India since Independence. Growth of metropolitan cities and their management.

UNIT - II PLANNING THEORIES

Enunciated by Ebenezer Howard, Patrick Geddes, Soria Y Mata, Doxiadis, Le-Corbusier, Clarence Stein, Clarence Arthur perry, Hilberseimer.

UNIT - III EVOLUTION OF CITY

Evolution of city and Components of a city - Central business district of a city, Special economic zone, coastal regulatory zone, fringe area.

UNIT - IV LANDUSE PLANNING

Land use classification for cities, analysis of land uses in Indian cities. Demography pattern, social & physical infrastructure, environmental and pollution, traffic and road network.

UNIT- V PLANNING TECHNIQUES

Study and analysis of existing settlements, methodology of conducting diagnostic surveys and studies, land use survey, socio economic survey, traffic surveys and presentation of data

SUGGESTED READINGS :

1. C.L.Doxiadis, Ekistics, 'An Introduction to the Science of Human Settlements', Hutchinson, London, 1968.
2. Thooyavan K R, 'Human Settlements- A Planning guide to Beginners', M.A.Publications, 2005.
3. Ministry of Urban affairs and Employment, Government of India, New Delhi, 'Urban Development Plans: Formulation and Implementation-Guidelines', 1996.
4. Andrew D Thomas, 'Housing and Urban Renewal', Harper Collins, 1986.
5. S. B. Golahit, 'Rural Development Programmes In India', Neha Publishers & Distributors, 2010.
6. 'CMDA Second Master Plan for Chennai Metropolitan Area 2026: Vision, Strategies and Action Plans (Vol.I, II &III)', Chennai, India, 2008.
7. V. Nath, 'Regional Development And Planning In India', Neha Publishers & Distributors, 2009.
8. Government of India, 'Report of the National Commission on Urbanisation', 1988.
9. Hansen N., 'Regional Policy and Regional Integration', Edward Elgar, UK, 1996.

18ARS621	ARCHITECTURAL DESIGN VI									SEMESTER-VI	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Campus Design.
6. Student will be able to Communicate effectively through the design ideas

CONTENT

Design of large structures - Multiuse multi span - non masonry building types involving buildings – Design and detailing for movement and use by physically handicapped people within and around building technology and services. Examples: college (Institutional) office buildings Resorts - etc. Preparation of working drawings using CAD for the design exercises.

Design Process to be approached stage wise through Architectural Programming. Advanced concepts of Site Planning as relevant to small and medium sized campuses to be introduced in the design.

SUGGESTED READINGS :

1. Kate Nesbitt, 'Theorizing a New Agenda for Architecture', Princeton Architectural Press, 1996.
2. Neil Leach, 'Rethinking Architecture', Routledge, 2000.
3. Harry Francis Mallgrave and David Goodman, 'An Introduction to Architectural Theory- 1968 to the Present', Wiley Blackwell, 2011.
4. Stephen A. Kliment, Editor 'Building Type Basics' Series, Wiley.
5. Mitchell WJ, 'Imagining MIT: Designing a campus for the 21st century', MIT Press, 2007.
6. Himanshu Burte, 'Space For Engagement', Seagull Books, 2008.
7. Mark Garcia, 'The Diagrams of Architecture', Wiley 2010.
8. Bjarke Ingels, 'Yes is More', Taschen, 2009.
9. Steven Holl, Juhani Pallasmaa, Alberto Pérez Gómez, 'Questions of perception: Phenomenology of Architecture', William Stout, 2

18ARS622	ARCHITECTURAL DETAILING AND WORKING DRAWING							SEMESTER-VI	
Marks	Internal	80	External			120	Total	200	Exam Hours
Instruction Hours /week	L	2	T	0	P/S	5	Credits		
									6
									4

COURSE OBJECTIVE:

- To enable students to appreciate the challenges in detailing for both the newly designed buildings as well as while carrying out additions and alterations to existing buildings.
- To enable students to understand the various Fittings, Furniture & Equipment (FFE) that are needed in buildings and their installation methods.
- To create architectural drawings for construction
- To understand the structural & services drawings
- To refer & integrate all the architectural and supporting working drawings
- To design, incorporate and detail architectural and interior components of the architectural design project

COURSE OUTCOME:

1. Student will gain understanding of all the aspects that go into the making of a building through study of drawings related to construction.
2. Student will gain the ability to resolve spatial concerns with technical aspects and services of a building.
3. Student will understand to design and detail components within a building.
4. Student will gain knowledge in interior detailing and planning
5. Student will gain knowledge in Interior furniture, fixtures as per the functionality
6. Student will gain understanding in the installation methods of cladding, integrated services by means of detailed drawings etc

CONTENT**DETAILING OF RESIDENTIAL BUILDING**

Detailing of a residence – Building marking drawing, Working Drawings- Plan, Section- Longitudinal, Transverse sections, chord sections, Door Window schedule, centre line column marking drawing, door and window joinery details – Flooring layout – toilet layout – Electrical layout and Plumbing layout – Terrace RWP details - Staircase details – Interior details - Detailing of built-in elements like kitchen counters, cupboards, cabinets, toilets, toilet fitting, Exercises of the above through case studies and drawings.

DETAILING OF COMMERCIAL BUILDINGS

A) Detailing of a commercial building – Building marking drawing, Working Drawings- Plan, Section- Longitudinal, Transverse sections, chord sections, Door Window schedule, centre line column marking drawing, door and window joinery details – Flooring layout – toilet layout – Electrical layout and Plumbing layout – Terrace RWP details - Staircase details – Interior details - Detailing of built-in elements like cabinets, toilets, toilet fitting, Structural Glazing, Staircase, Flooring. Exercises of the above through case studies and drawings.

B) Detailing of shop-fronts, office spaces for commercial buildings including detailing of crucial elements such as entrance porches, main doors, show-windows, enclosed and air-conditioned atrium spaces.

C) Detailing of façade and selected spaces for apartment buildings, hotels and hostels.

Exercises of the above through case studies and drawings.

SUGGESTED READINGS :

1. Joseph De Chiara, Michael Crosby, 'Time Saver Standards for Building Types', McGraw Hill Co, 2001.
2. Richardson Dietruck, 'Big Idea and Small Building', Thames and Hudson, 2002.
3. Edward D Mills, 'Planning–The Architect's Handbook, Butterworths, 1985.
4. Roy Chudley, Roger Greeno, 'Building Construction Handbook', Routledge, 2010.
5. Susan Dawson, 'Architect's Working Details -Volume 1-10', E- Map Construct, 2004.
6. Nelson L Burbank, 'House Carpentry Simplified', McGraw Hill, 1985.
7. David Sauter, 'Landscape Construction', Delmar Publishers, 2010.
8. Grant W. Reid, 'Landscape Graphics', Whitney Library of Design, 1987.
9. Francis. D. K. Ching, 'Building Construction Illustrated', John Wiley & Sons, 2011.

18ARS623	SUSTAINABLE ARCHITECTURE									SEMESTER-VI	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week	L	1	T	0	P/S	5	Credits				3

COURSE OBJECTIVE:

- To understand the concept of sustainability
- To understand the impacts of environment today and to follow the steps to sustainability
- To work towards sustainable development and to understand low impact construction practices,
- To understand the life cycle costs and alternative energy resources.
- To familiarize the students with the various rating systems for building practices with case studies.
- Through case studies to understand the concept of sustainable communities and the economic and social dimensions.

COURSE OUTCOME:

1. Student will understand about climate change and the need for the sustainable buildings
2. Student will understand the energy-based concepts and resource optimisation
3. Student will understand about the environmental impacts of today and Follow the Sustainable approach
4. Student will gain ability to design energy efficient buildings
5. Student will understand the green concepts and apply them in every aspect and approach towards sustainable architecture
6. Student will understand about the building simulation for energy analysis and for various design solutions

UNIT I INTRODUCTION TO SUSTAINABILITY

Concept of Sustainability – Carrying capacity, sustainable development– Ethics and Visions of sustainability. Eco system and food chain, natural cycles – Ecological foot print – Climate change and Sustainability-World population – Gdp – Carbon emissions–steps by the organisations etc

UNIT- II ENERGY ANALYSIS, ASSESSMENT AND AUDIT

Energy – resources availability – Renewable and non – renewable energy resources – Embodied energy – energy efficiency – cost savings – technologies – net zero energy – Zero waste – Integrated energy design –Low energy building design- Life cycle assessments and Energy Audits -related Case studies

UNIT- III GREEN MATERIALS AND SUSTAINABLE PRACTICES

Materials -Selection of materials Eco building materials and construction- Green materials – Biomimicry, Low impact construction, and recyclable products-Adaptive reuse and regeneration -related case studies

UNIT- IV GREEN BUILDING RATING SYSTEMS

Green building systems – Rating system –LEED-INDIA, GRIHA, etc., with related case studies

UNIT- V BUILDING PERFORMANCE ANALYSIS AND SIMULATION

Design Analysis and Simulation studies –Building performance analysis–Modelling tools and techniques – daylighting, shading, ventilation, insolation effects – Design Strategies – Passive, Active, Hybrid systems –Thermal comfort analysis – Percentage People dissatisfied (PPD)- PMV etc-Usage of simulation softwares are recommended

SUGGESTED READINGS :

1. Sustainable Architecture and Urbanism: Concepts, Technologies and examples by Gauzin- Muller(D) – Birkhauser 2002.
2. Sustainable Architecture : Low tech houses by Mostaedi (A) – Carles Broto 2002.
3. HOK guide book to sustainable design by Mender (S) & Odell (W) – John Wiley and sons 2000.
4. Environmental brief : Path ways for green design by Hyder(R) – Taylor and Francis 2007.
5. Green Architecture: Design for a sustainable future by Brenda and Vale (R) – Thames and Hudson 1996. .
6. Arvind Krishnan & Others – Climate Responsive Architecture, Tata Mcgraw –Hill New Delhi 2001.
7. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.
8. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India.
9. Heating, Cooling and Lighting – Norbert Lechner, October 2014

18ARET631	VERNACULAR ARCHITECTURE									SEMESTER-VI		
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours /week		L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To introduce the study of vernacular architecture as a process and not a product.
- To provide an overview of the various approaches and concepts to the study of vernacular architecture.
- To study the various vernacular architecture forms in the different regions of the country.
- To gain Knowledge about the methods & techniques of Vernacular Architecture
- To gain understanding about the climatic considerations & Design aspects of vernacular Architecture
- To gain understanding about socio- economic aspects of the vernacular & Traditional Architecture

COURSE OUTCOME:

1. Student will understand the Indian vernacular architecture as a process and to also provide an overview of various approaches and concepts towards its study.
2. Student will gain Knowledge of vernacular architectural forms in different regions.
3. Student will gain understanding of the impact of colonial rule on vernacular architecture in India
4. Student will understand about the climatic consideration & Design aspects
5. Student will understand the socio economic aspects existed in the various regions through the study of vernacular Architecture
6. Student will gain knowledge in the vernacular methods of construction and ways to incorporate in this modern architecture.

UNIT 1 INTRODUCTION TO VERNACULAR ARCHITECTURE

Definition and classification of Vernacular architecture – Vernacular architecture as a process – Survey and study of vernacular architecture: methodology- Cultural and contextual responsiveness of vernacular architecture: an overview

UNIT- II VERNACULAR APPROACHES AND CONCEPTS

Different approaches and concepts to the study of vernacular architecture: an over view – Aesthetic, Architectural and anthropological studies in detail

UNIT- III VERNACULAR ARCHITECTURE OF THE WESTERN NORTHERN REGION OF INDIA

Forms spatial planning, cultural aspects, symbolism, colour, art, materials of construction and construction technique of the vernacular architecture of the following: - Deserts of Kutch and Rajasthan; Havelis of Rajasthan - Rural and urban Gujarat; wooden mansions (havelis); Havelis of the Bohra Muslims - Geographical regions of Kashmir;

UNIT- IV VERNACULAR ARCHITECTURE OF SOUTH INDIA

Forms, spatial planning, cultural aspects, symbolism, art, colour, materials of construction and construction technique, proportioning systems, religious beliefs and practices in the vernacular architecture of the following - Kerala: Houses of the Nair & Namboothri community; Koothambalam, Padmanabhapuram palace.

- Tamil Nadu: Houses and palaces of the Chettinad region; Agraharams

UNIT- V WESTERN INFLUENCES ON VERNACULAR ARCHITECTURE OF INDIA

Colonial influences on the Tradition Goan house Evolution of the Bungalow from the traditional bangla, Victoria Villas – Planning principles and materials and methods of construction. Settlement pattern and house typologies in Pondicherry and Cochin.

SUGGESTED READINGS :

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997.
2. Amos Rapoport, House, Form & Culture, Prentice Hall Inc. 1969.
3. R W Brunskill: Handbook on Vernacular Architecture
4. V.S. Pramar, Haveli – Wooden Houses and Mansions of Gujarat, Mapin Publishing Pvt. Ltd., Ahmedabad, 1989.
- 5.. Kulbushanshan Jain and Minakshi Jain – Mud Architecture of the Indian Desert, Aadi Centre, Ahmedabad 1992.
6. G.H.R. Tillotsum – The tradition of Indian Architecture Continuity, Controversy – Change since 1850, Oxford University Press, Delhi, 1989.
7. Carmen Kagal, VISTARA – The Architecture of India, Pub: The Festival of India, 1986.
8. S. Muthiah and others: The Chettiar Heritage; Chettiar Heritage 2000
10. Weber. W & Yannas. S, 'Lessons from Vernacular Architecture', Routledge, 2014.

18ARET632	PROGRESSIVE ARCHITECTURE									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To understand and acquire knowledge in advanced architectural concepts and ideologies.
- To gain Knowledge about the future concepts of eminent architects
- To understand about the material usage in the current trend of architecture
- To gain knowledge about the Concept of biomimicry
- To understand about the adaptive reuse
- To gain understanding about energy integration and zero energy developments

COURSE OUTCOME:

1. Student will be able to understand and evolve futuristic design ideas and concepts
2. Student will be able to integrate various aspects of design thinking of future
3. Student will understand about the parametric design concepts and applications
4. Student will understand about the concept of Biomimicry
5. Student will gain knowledge about the Adaptive reuse
6. Student will gain knowledge about energy integration and zero energy development.

UNIT- I FUTURISTIC VISION

Future concepts as envisioned by Antonio Saint Elia, Frank Lloyd Wright, Corbusier.

UNIT – II FUTURISTIC TRENDS

Future trends being evolved by Marcos Novak, Neil Denari, Greg Lynn, Toyo Ito and others.

UNIT – III ARCHITECTURAL CONCEPTS AND IDEAS

Evolution of contemporary architectural concepts such as biomimicry, adaptive reuse, low cost development and urban regeneration.

UNIT – IV MATERIALS, TECHNOLOGY AND SYSTEMS

Futuristic building materials, building tectonics and systems of the future.

UNIT- V ENERGY INTEGRATION

“Zero energy” and “Energy +” buildings with emphasis on an integrated approach.

SUGGESTED READINGS :

1. Bell, J., “21st Century House”, Laurence King Publishing, 2006
2. Jodidio, P., “Building a New Milleneum”, Vol.1 Taschen, 2003
3. Jodidio, P., “Architecture Now”, Vol. 2, Taschen, 2004
4. TerrimeyerBuake, 'Architectural Design in Steel', SPON, 2004.
5. Peter Silver et al, 'Structural Engineering for Architects', Laurence King, 2013.
6. Gillian Hunt, 'Architecture in the Cyberspace II', John Wiley & Sons, 2001.

11. Marcos Novak, 'Invisible Architecture: An Installation for the Greek Pavilion', Venice Biennale, 2000
12. Ali Rahim, 'Contemporary Process in Architecture', John Wiley & Sons, 2000.
13. Ali Rahim (Ed), 'Contemporary Techniques in Architecture', Halsted Press, 2002. .

18ARES633	INTERIOR DESIGN								SEMESTER-VI	
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits		4

COURSE OBJECTIVE:

- To provide familiarity with the characteristics of interior spaces
- To gain knowledge in all types furniture across history.
- To introduce the profession of interior design and bring out its role.
- To inform about the various components of interior space and give an understanding of the design aspects involved in each
- To provide knowledge in Interior services
- To provide knowledge in interior specification & costing

COURSE OUTCOME:

1. Student will gain knowledge and understanding in Interior design
2. Student will understand the various elements in Interior Design
3. Student will gain knowledge in terms of Interior design lighting and accessories
4. Student will gain an overall exposure to the ways in which interior spaces can be enriched through the design of specific interior components.
5. Student will be able to do specification for an Interior Design layout
6. Student will be able to design a Interior project with all working drawings

UNIT- I INTRODUCTION TO INTERIOR DESIGN

Definition of interior design -design of interior spaces as related to typologies and functions, themes and concepts - Study of the history of interior design through the ages relating to historical context, design movements and ideas etc.

UNIT – II ELEMENTS OF INTERIOR DESIGN

Introduction to various elements in interiors like floors, ceilings, walls, staircases, openings, interior service elements, incidental elements etc. and various methods of their treatment involving use of materials and methods of construction in order to obtain certain specific functional, aesthetic and psychological effects - design projects.

UNIT- III INTERIOR DESIGN SERVICES - LIGHTING, ACCESSORIES, LANDSCAPE

Study of interior lighting - different types of lighting, their effects, types of lighting fixtures. Other elements of interiors like accessories used for enhancement of interiors - paintings, objects de art, Interior landscaping - elements like rocks, plants, water, flowers, fountains, paving, artefacts, etc. their physical properties, effects on spaces and design values.

UNIT – IV FURNITURE DESIGN

Study of relationship of furniture to spaces and human movements furniture design as related to human comfort, function, materials and methods of construction, changing trends and lifestyles, innovations and design ideas - study on furniture for specific types of interiors like office furniture, children's furniture, residential furnitures, display systems, etc. - projects on furniture design.

UNIT- V CASE STUDIES AND PROJECT

Study of Contemporary design in India and abroad with reference to interior design and decoration. Study of projects related to Residential Interiors, Commercial Interiors, Hospital Interiors etc. as regards to design scheme, functionalism, aesthetics, services integration, interior materials and details. Small scale interior projects such as Interior of an Office, Restaurant, Kids bedroom etc.

SUGGESTED READINGS ::

1. Francis D.K.Ching, 'Interior Design Illustrated', John Wiley & Sons, 2012.
2. Joseph DeChiara, Julius Panero, Martin Zelnik, 'Time Saver's Standards for Interior Design', McGraw-Hill Professional, 2001.
3. John F. Pile, 'Interior Design', Pearson Prentice Hall, 2007.
4. Aronson J, 'The Encyclopaedia of Furniture', Potter Style, 1965.
5. Pat Kirkham, Susan Weber, Editors, 'History of Design: Decorative Arts and Material Culture, 1400-2000', Yale University Press, 2013.
6. John F.Pile, Judith Gura, 'A History of Interior Design', Wiley, 2013.

18ARES634	DIGITAL ARCHITECTURE								SEMESTER-VI		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To develop the advanced knowledge and skills in Digital application
- To develop knowledge in building visualization
- To develop knowledge in digital rendering
- To develop knowledge in walk through Animations
- To get familiarized & create simple multimedia presentations & brochures
- To learn about the videos & Presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will learn about the Latest digital applications used in the architectural practice
2. Student will gain knowledge about parametric applications in design
3. Student will learn about the building visualization & Simulation
4. Student will learn about Advanced rendering techniques
5. Student will learn about animation and visualization techniques used in the architecture industry
6. Student will learn about the video presentations and realistic animations of buildings

CONTENT

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Advanced techniques in building information modeling
3. Advanced Animations and Walkthroughs
4. Advanced Simulating gravity, wind and other effects in the scene, distributed rendering
5. Advanced Building Performance Analysis on Building Model using softwares.

Example :Advanced level of animations -Auto desk Revit, 3ds Max, rhino, lumion, vector works, BIM, Ecotect, v-ray rendering techniques ,Grasshopper, Sketch up – Sefaira, Open studio and recent softwares

SUGGESTED READINGS :

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009s

18ART701	HOUSING								SEMESTER-VII		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P	0	Credits				2

COURSE OBJECTIVE:

- Understanding of the various issues involved in urban housing
- Understand the various issues of Rural housing
- Understand about the planning and design solutions for low income groups.
- Understanding about the housing Policies & Agencies involved
- Understanding about the housing design aspects in a Larger scale
- Understanding about the Socio-economic Aspects

COURSE OUTCOME:

1. Student will learn the various schemes and policies in Housing in India
2. Student will understand the importance of socio-economic aspects of the People and need for Housing
3. Student will learn about housing standards
4. Student will learn about the Housing design Process
5. Student will learn about government housing, private & cooperative housing
6. Student will be able to arrive at design ideas for large scale Housing Projects

UNIT- I INTRODUCTION TO HOUSING

Review of housing typology, Housing demand and supply – Calculation of future need.

Housing resources and options available in housing

UNIT - II HOUSING AGENCIES AND POLICIES

Housing Agencies and their contributions to housing development – HUDCO, State Housing Boards, Housing Co-operatives and Banks. Housing Policies in India and other countries.

UNIT - III SOCIO ECONOMIC ASPECTS

Social factors influencing Housing Design, affordability, economic factors and housing concepts – Slum – rehabilitation and resettlement schemes

UNIT - IV HOUSING STANDARDS

Different types of Housing standards – Methodology of formulating standards – Relevance of standards in Housing Development.

UNIT- V HOUSING DESIGN PROCESS

Different stages in project development – Layout design including utilities and common facilities – Housing design as a result of environmental aspects, development of technology and community interests. Case studies of Public Sector housing, Government housing, Private and Co-operative housing – their Advantages and disadvantages.

SUGGESTED READINGS :

1. Babur Mumtaz and Patweikly, Urban Housing Strategies, Pitman Publishing, London, 1976.
2. Geoffrey K. Payne, Low Income Housing in the Development World, John Wiley and Sons, Chichester, 1984.
3. John F.C. Turner, Housing by people, Marison Boyars, London, 1976.
4. Martin Evans, Housing, Climate and Ocmfort, Architectural Press, London, 1980.
5. Forbes Davidson and Geoff Payne, Urban Projects Manual, Liverpool University Press, Liverpool, 1983.
6. Christopher Alexander, 'A Pattern Language', Oxford University press, New York 1977.
7. Leuris S, 'Front to back: A Design Agenda for Urban Housing', Architectural Press, 2006.
8. S.K.Sharma, 'Mane A New Initiative in Public Housing', Housing & Urban Development Corporation, 1991.
9. 'Sustainable Building Design Manual: Vol 1 and 2', The Energy Research Institute, 2004.

18ART702	URBAN DESIGN									SEMESTER-VII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits				3

COURSE OBJECTIVE:

- To provide knowledge of design of urban spaces including renewal and development.
- To provide knowledge of public spaces
- To provide knowledge of organizing and articulation of spaces for residential, commercial, industrial and recreational areas
- To provide knowledge of Causes and consequences of urban blight and obsolescence
- To provide knowledge of methods of conducting surveys and analysis
- To provide knowledge of programs for urban redevelopment

COURSE OUTCOME:

1. Ability to gain knowledge in urban space planning
2. Ability to handle large scale urban renewal projects
3. Understanding of organizing and articulation of spaces for residential, commercial, industrial and recreational areas
4. Ability to analyse the Causes and consequences of urban blight and obsolescence
5. Ability to conduct surveys and analysis
6. Understanding of programs for urban redevelopment

UNIT- I INTRODUCTION TO URBAN DESIGN

Relationship between Architecture, Urban Design and Town Planning - Perception of city form and pattern – Townscape elements

UNIT- II ROLE OF PUBLIC SPACE IN URBAN AREAS

Introduction to public spaces. Evolution of public spaces. Comparative analysis of public spaces, their organization and articulation.

UNIT – III ORGANIZATION OF SPACE

Understanding, organizing and articulation of spaces for residential, commercial, industrial and recreational areas.

UNIT - IV URBAN RENEWAL

Causes and consequences of urban blight and obsolescence – slums and shanties – methods of conducting surveys, analysis and presentation of data, prevention of formation of slums and squatter settlements. Environmental and management issues.

UNIT- V URBAN REDEVELOPMENT

Objectives, surveys programs of urban redevelopment and public involvement and participation.

SUGGESTED READINGS :

1. A.E.J. Morris, 'History of Urban Form before the Industrial Revolution', Prentice Hall, 1996.
2. Edmund Bacon, 'Design of Cities', Penguin, 1976.
3. Gordon Cullen, 'The Concise Townscape', The Architectural Press, 1978.

7. Rithchie. A, 'Sustainable Urban Design: An Environmental Approach', Taylor & Francis, 2000.
8. Tridib Banerjee, Anastasia Loukaitou-Sideris, Editors, 'Companion to Urban Design', Routledge, 2014.
9. Malcolm Moor, 'Urban Design Futures', Routledge, 2006.
10. Geoffrey Broadbent, 'Emerging Concepts in Urban Space Design', Taylor & Francis, 2003.
11. Anuradha Mathu, 'Deccan Traverses', Rupa, 2006.

18ARS721	ARCHITECTURAL DESIGN - VII								SEMESTER-VII		
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Urban Design proposal
6. Student will be able to Communicate effectively through the design ideas.

CONTENT

Design of advanced and complex problems – URBAN LEVEL - comprising group multi storeyed structures and infrastructure - with regard to climatic conditions, orientation, services, circulation problems relating to large developments Design and detailing for movement and use by handicapped persons within and around building and campuses to be addressed – examples: campus design, urban centers, Housing for Senior citizens- Urban and regional planning etc

SUGGESTED READINGS :

1. Kate Nesbitt, 'Theorizing a New Agenda for Architecture', Princeton Architectural Press, 1996.
2. Neil Leach, 'Rethinking Architecture', Routledge, 2000.
3. Harry Francis Mallgrave and David Goodman, 'An Introduction to Architectural Theory- 1968 to the Present', Wiley Blackwell, 2011.
4. Stephen A. Kliment, Editor 'Building Type Basics' Series, Wiley.

18ARS722	ESTIMATION AND SPECIFICATION									SEMESTER-VII	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To provide the student adequate knowledge to write the specifications for a given item of work
- To gain knowledge in specification
- To gain Knowledge in Estimation of Civil Work
- To gain knowledge in estimation of Carpentry work
- To gain Knowledge in the estimation of Plumbing work
- To understand to work out the unit cost of individual items based on their specifications and arrive at the overall cost of the project.

COURSE OUTCOME:

1. Student will be able to understand and write specification for the given item of work
2. Student will gain knowledge & Understanding of Estimation of civil work
3. Student will gain knowledge about estimation of Carpentry work
4. Student will gain knowledge about estimation of plumbing work
5. Student will be able to do calculate the quantities on site with Field measurement book
6. Student will learn about various calculation of bill of quantities for Interiors

UNIT- I SPECIFICATION

Necessity of specification, importance of specification, - How to write specification, - Types of Specification, - Principles of Specification writing, - Important aspects of the design of specification – sources of information – Classification of Specification.

UNIT - II SPECIFICATION WRITING

Brief Specification for 1st class, 2nd class, 3rd class building. Detailed specification for earthwork excavation, plain cement concrete, Reinforced concrete, first class and second class brickwork, Damp proof course, ceramic tiles/marble flooring and dado work, woodwork for doors, windows frames and shutters, cement plastering, painting & weathering course in terrace.

UNIT - III ESTIMATION

Types & purpose, Approximate estimate of buildings – Bill of quality, - Requirement for preparing estimation, factors to be considered, - principles of measurement and billing, contingencies, Elementary billing and measurement of basic materials like brick, wood, concrete and unit of measurement for various items of work – abstract of an estimate.

UNIT - IV DETAILED ESTIMATE – PART-1

Deriving detailed quantity estimates for various items of work of a building. Like earthwork excavation, brick work, plain cement concrete, Reinforced cement concrete works, wood work, iron works,

UNIT- V DETAILED ESTIMATE – PART-2

.Deriving detailed estimate for items of work such as -plastering, painting, flooring, weathering course for a single storied building using centre line method and long and short wall method.

SUGGESTED READINGS :

1. Rangwala. S.C, 'Estimating, Costing and Valuation (Professional practice)', Charotar Publishing House,1984
2. M.Chakraborti, 'Estimating, Costing, Specification and Valuation in Civil Engineering, Chakraborti, 2010.
3. B.N. Dutta, 'Estimating and Costing' UBS Publishers and Distributors,2000.
4. S.SangaReddi and P.L.Meiyappan, 'Construction Management', Kumaran Publication, Coimbatore.
5. Gurcharan Singh and Jagdish Singh, 'Estimating Costing and Valuation', Standard Publishers Distributors, 2012.
6. 'I.S.1200-1968 Methods of Measurements of Buildings and Civil Engineering works'.
7. Latest schedule of rates of P.W.D.
8. Latest Data book of P.W.D.
9. PWD Standard Specifications. Govt Publicatio

18ARET731	ARCHITECTURAL CONSERVATION									SEMESTER-VII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To introduce the various issues and practices of Conservation
- To familiarize the students with the status of conservation in India
- To teach them about the various agencies involved in the field of conservation worldwide and their policies.
- To outline the status of conservation practice in the country
- To Know about the various guidelines for the preservation, conservation and restoration of buildings.
- To inform the students about the character and issues in our heritage towns through case studies.

COURSE OUTCOME:

1. Student will understand the importance of heritage, issues and practices of conservation through case studies.
2. Student will become familiar with historic materials and their properties, different technologies for investigating masonry, foundation and also traditional and modern repair methods
3. Student will gain knowledge about the government agencies involved in Conservation
4. Student will understand the methods of urban Conservation.
5. Student will gain knowledge about various methods of Conservation techniques and Design
6. Student will gain knowledge about various policies involved in Conservation and practice in India

UNIT 1 INTRODUCTION TO CONSERVATION

Conservation- Need, Debate and purpose.

Defining Conservation, Preservation and Adaptive reuse. Distinction between Architectural and Urban Conservation. International agencies like ICCROM , UNESCO and their role in Conservation

UNIT- II CONSERVATION IN INDIA

Museum conservation – monument conservation and the role of Archeological Survey of India – role of INTACH – Central and state government policies and legislations – inventories and

projects- select case studies of sites such as Hampi, Golconda, Mahabalipuram -craft Issues of conservation

UNIT- III CONSERVATION PRACTICE

Listing of monuments- documentation of historic structures- assessing architectural character – historic structure report- guidelines for preservation, rehabilitation and adaptive re-use of historic structures- Case studies of Palaces in Rajasthan, Chettinad and Swamimalai dwellings, seismic retrofit and disabled access/ services additions to historic buildings-heritage site management

UNIT- IV URBAN CONSERVATION

Over view of urban history of India and Tamil Nadu- understanding the character and issues of historic cities – select case studies of towns like Srirangaram, Kumbakonam and Kanchipuram - historic districts and heritage precincts.

UNIT- V CONSERVATION PLANNING

Conservation as a planning tool.- financial incentives and planning tools such as Transferable

Development Right(TDR)-urban conservation and heritage tourism-case studies of sites like for Cochin, Pondichery French town.- conservation project management

SUGGESTED READINGS :

1. Bernard Fielden, 'Conservation of Historic Buildings', Architectural Press, 2003.
2. Bernard Fielden, 'Guidelines for Conservation - A Technical Manual', INTACH, 1989.
3. MS Mathews, 'Conservation Engineering', Universitat Karlsruhe, 1998.
4. J. Kirk Irwin, 'Historic Preservation Handbook', McGraw Hill, 2003.
5. Donald Appleyard, 'The Conservation of European Cities', M.I.T. Press, Massachusetts, 1979.
6. Publications of INTACH
7. James M. Fitch, Historic Preservation: Curatorial Management of the Built World by University Press 1990

18ARET732	CONSTRUCTION TECHNOLOGY									SEMESTER-VII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To study the advancements in construction with concrete for large span structures.
- To familiarize the students with the various classifications in buildings
- To familiarize the students with the manufacture, storage and transportation of concrete.
- To inform the various equipment used in the construction industry
- To learn about the criteria for choice of equipment.
- To familiarize the students with an overview of construction management, planning and scheduling

COURSE OUTCOME:

1. Ability to understand the practice of construction technology
2. Ability to understand the construction systems for high rise buildings
3. Ability to understand the process of manufacture, storage and transportation of concrete
4. Ability to understand the various equipment used in the construction industry
5. Ability to understand the criteria for choice of equipment
6. Students will gain an overview of construction management, planning and scheduling

UNIT- I GENERAL BUILDING REQUIREMENTS

Classification of buildings - Sites and Services - Requirements of parts of buildings.

UNIT- II CONSTRUCTION SYSTEMS

Planning - Cast in situ construction (ready mixed pumped etc.) Reinforced concrete and prestressed concrete constructions precast concrete and pre- fabrication system - Modular coordination – Structural schemes.

UNIT- III CONSTRUCTION PRACTICE

Manufacture, storage, transportation and erection of precast component forms, moulds and scaffoldings in construction - safety in erection and dismantling of constructions.

UNIT- IV CONSTRUCTION EQUIPMENT

Uses of the following: Tractors, bulldozers, shovels draglins, cableways and belt conveyors, batching plants - Transit mixers and agitator trucks used for ready mix concrete pumps Gunite equipments - Air compressors - welding equipment - cranes and other lifting devices Choice of construction equipment for different types of works.

UNIT- V CONSTRUCTION MANAGEMENT

Overview of construction management topics including estimating, cost control, quality control, safety, productivity, value engineering, claims, and legal issues - planning and scheduling

SUGGESTED READINGS :

1. B.C. Punmia, 'Reinforced Concrete Structures, Vol. 1 & 2', Laxmi Publications, New Delhi, 1994.
2. N. Subramanian, 'Principles of Space Structures', Wheeler, 1998.
3. Thandavamoorthy T.S, 'Advanced Structures of Architecture', Eswar Press, 2008.
4. Council on Tall Buildings and Urban Habitat, 'Structural System for Tall Buildings', McGraw Hill, 1995.
5. Milo.S.Ketchum and Mark.A. Ketchum, 'Types and Forms of Shell Structures, 1997.
6. P. Dayaratnam, P.Sarah, 'Prestressed Concrete Structures', Medtech, 2017.
7. Wolfgang Schueller, 'High Rise Building Structures', John Wiley & Sons, 1976.
8. Frei Otto, 'Tensile Structures Volume 1 & 2' The MIT Press, 1973.
9. Bryan Stafford Smith, Alex Coull, 'Tall Building Structures - Analysis & Design', John Wiley, 1991.
10. Bandyopadhyay J.N, 'Thin Shell Structures: Classical and Modern Analysis', New Age International, 2007.
11. Ramaswamy G.S, 'Design and Construction of Concrete Shell Roofs', CBS, 2005.

18ARET733	DISASTER MANAGEMENT									SEMESTER-VII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To create awareness about natural disasters-factors
- To be aware of the disaster cause them-and to foster knowledge about strategies
- To learn about the methods of disaster prevention and management-
- To understand the fragile Eco-systems and factors that cause global climatic changes.
- Overview of major natural disasters-design & planning solutions for disaster mitigation-organizational
- To understand about the Disaster management aspects.

COURSE OUTCOME:

1. Student will be able to understand the cause and effects of natural disasters
2. Student will understand about climate change & disaster influences due to natural calamities
3. Student will learn to understand the prevention and design resistant structures
4. Student will understand the strategies to be implemented for disaster Mitigation.
5. Student will learn about Disaster management & recovery
6. Student will gain knowledge in design and Planning solutions of disaster proof structures

UNIT- I INTRODUCTION TO NATURAL HAZARDS

Understanding the effects of natural calamities such as floods, tropical cyclones, earthquakes, landslides, heat waves , droughts & Tsunami. Climate changes, global sea rise, coastal erosion, environmental degradation, large dams & earth tremors, roads buildings & landslides, urbanization & desertification, cyclone effects on coastal towns.

UNIT- IICASE STUDIES OF NATURAL DISASTERS IN INDIA

Earthquakes at Bhuj, Latur, etc., Cyclones in coastal Andhra pradesh& Orissa, Landslides in Nilgiris, Himachal etc, Floods in Bangladesh, and Droughts in Rajasthan & Tsunami in Tamil Nadu.

UNIT- IIISTRATEGIES FOR DISASTER PREVENTION & MITIGATION

Pre disaster, emergency, transition, and recovery. Disaster management plan, Natural crisis management committee [NMC], State crisis management group [SCMG].

UNIT - IVDESIGN & PLANNING SOLUTIONS

Design guidelines for disaster proof construction at appropriate situations.-Engineering, architectural, landscape & planning solutions for different types of calamities.- Norms, standards and practice procedures for shelter & settlement. Seismic repairs & retrofitting of damaged and undamaged buildings

UNIT – V SEMINAR

Seminar on case studies – disaster management – natural crisis management

SUGGESTED READINGS :

1. Earthquake Resistant Design for Built Environment. Compiled notes by Department of Architecture and Planning, IIT-Roorkee.December 2003.
2. Das P.K, A.R.Ramanathan, An Introduction to Seismic Safety in Architecture, 2007
3. Paul D.K. Singh, Yogendra, Short Term Training Course on Earthquake Resistant Design of Buildings, ADPC, IIT Roorkee& DMMC, Dehradun, 2002

- 5.F.C.Conly et.al - *Issue and problems in the prevention of disaster and housing* - A review of experiences from recent disasters - Appropriate reconstruction and training information centre, 1978
- 6.S.Ramani, *Disaster management - Advanced course on modern trends in housing* - SERC, Vol 2, Chennai, 1980

18ARET734	VAASTU AND PRINCIPLES OF TRADITIONAL INDIAN ARCHITECTURE									SEMESTER-VII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To introduce the principles of Vastu and Vaastu and relationship between building and site.
- To familiarize the students with the units of measurement in traditional architecture.
- To introduce concepts of orientation and Cosmo gram according to the Vaastu Purusha Mandala.
- To learn about the planning aspects of all residential, commercial & other buildings
- To study the detailing and design of various building components and their material and method of construction.
- To learn about the vasstu detailing

COURSE OUTCOME:

1. Student will be able to understand the principles of vastu and Vaastu
2. Student will understand the traditional site planning principles and its application in the present context.
3. Student will understand the relevance of vasstu and Architecture
4. Student will gain Knowledge in various material usage as per the principles of vasstu
5. Student will gain knowledge in Architectural design in accordance with vasstu
6. Student will learn about the landscape design as per Vaastu

UNIT -I INTRODUCTION TO VASTU AND VAASTHU

Vastu and Vaastu -its definition and classification -Relationship to earth.

Features of good building site -good building shapes -macro, micro, enclosed and material spaces -relationship between built space, living organism and universe -impact of built space on human psyche.

UNIT - II MEASUREMENT AND RESONANCE TO VIBRATION

Units of measurement -Tala system and Hasta system of measures -Theory of vibration -vibration as time, equation of time and space -Time space relationship and measurement of the same.

UNIT - III SITE PLANNING AND COSMOGRAM

Orientation of building, site, layout and settlement -positive and negative energies -importance of cardinal and ordinal directions -The celestial grid or mandala and its types. The Vaastu Purusha Mandala and its significance in creation of patterns, and lay-outs, Types of lay-outs. Simple design of residential buildings.

UNIT- IV COMPONENTS AND DETAILING

Building heights -Base and basement -wall and roof specifications -column and beam designs -Pitched roof and domical roofs -significance of pyramid.

UNIT- V MATERIALS AND CONSTRUCTION

Use of wood, stone, metal, brick and lime -marking technology, corbelling technology, jointing technology - foundations for heavy and light structures -Landscaping in and around buildings Aesthetics in Indian Architecture.

SUGGESTED READINGS :

1. Dr.V.GanapatiSthapati -:"Sthapatya Veda" Dakshina Publishing House, Chennai-41, India, 2001.
2. Stella Kramrisch -The Hindu Temple Vol.I Motilal Banarsidass Publishers Pvt. Ltd., Delhi -1991.
3. K.S.SubramanyaSastri -Maya Matam -Thanjavur Maharaja Sarjoji Saraswathi Mahal Library -Thanjavur -1966.
4. Dr.V.GanapatiSthapati -:"Sthapatya Veda" Dakshina Publishing House, Chennai-41, India, 2001 .
5. Bruno Dagens -Mayamatam, Vol.I& II IGNCA and Motilal Barmarsidars Publishers Pvt. Ltd., Delhi -1994.
6. Dr. V.GanapatiSthapati -Vastu Purusha Mandalam, Dakshina Publishing House, Chennai, 1998.
7. Ananda Kentish Coomaraswamy, Symbolism of Indian Architecture" – Historical Research Documentation Programme, Jaipur, 1983

18ARES735	ARCHITECTURAL JOURNALISM								SEMESTER-VII		
Marks	Internal	80	External				120	Total	200	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To introduce general skills necessary for the practice of professional journalism.
- To introduce the fundamentals of writing, explain different strategies and their criticism.
- To give good exposure to architectural journalism.
- To make them understand the importance of writing articles
- To introduce photojournalism, bring out importance/ contributions of photography
- To gain knowledge in modern photography techniques.

COURSE OUTCOME:

1. Student will gain the ability to critically think and analyse about the effects of architecture on society as well as the tools to enable recording of the same
2. Student will be able to express by means of effective communication, writing and video documentation
3. Student will learn about the composition of content in Architecture Journals
4. Student will learn about Photography and Photo Journalism
5. Student will be able to document , analyse and critic the work by means of interview and data collection
6. Student will develop the proficiency in Field program, interviews and Architectural Document writing

UNIT- I PHOTOGRAPHY & TECHNIQUES

Concept of color; concepts of lighting, distance, visual angle, frames; media; Types of camera, properties and priorities; Exposure, Aperture, Speed; Photographic films. Techniques of photography relevant to architecture.

UNIT – II JOURNALISM

Analysis of recent historical and contemporary examples of written and journalistic criticism of architecture, including selected writings by Indian and overseas critics; discursive techniques, analysis of major critical themes, thematic categories in architectural writing over the past three centuries.

UNIT – III ANALYSIS OF WORKS

Works of Indian and international writers and critics will be presented and discussed. Seminars on Indian architectural writers, journalists and critics

UNIT – IV FIELD PROGRAM

Exercise on integrating photography in architectural journalism.

UNIT- V DOCUMENTING AND REPORTING

Preparation of documentaries and reports in any media such as Video, Still images, Reports, presentations etc., and present as a Seminar.

SUGGESTED READINGS :

1. Edward Jay Friedlander and John Lee, 'Feature Writing for Newspapers and Magazines', 4th edition, Longman, 2000.
2. David Fuller & Patricia Waugh, eds., 'The Arts and Sciences of Criticism', Oxford: Oxford University Press, 1999.

9. Gerry Kopelow, 'Architectural Photography: The Professional Way', Princeton Architectural Press, 2007

18ARES736	GREEN BUILDINGS									SEMESTER-VII	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To develop and acquire knowledge about environment and ecosystems
- To understand about Energy usage & energy efficient technologies
- To learn about the use of natural materials and water conservation technique.
- To Understand about Water Efficiency & regeneration
- To understand about the Rating of current buildings
- To understand the Bio degradability materials & recycling

COURSE OUTCOME:

1. Student will understand the basic concept of sustainability in Architecture
2. Student will gain knowledge in passive and Hybrid design strategies for designing a green building
3. Student will understand the energy usage of various types of buildings
4. Student will learn about energy efficiency and ways to minimize the energy.
5. Student will learn about the environmental impacts and assessment
6. Student will gain knowledge about the green rating systems and codes in India

UNIT- I SUSTAINABILITY AND GREEN BUILDING

Understanding of food and energy cycle – Principles of sustainability – Natural ecosystem – Elements of green development – Introduction to green architecture – green building design – benefits – rating systems – LEED, GRIHA, codes -ECBC

UNIT- II SUSTAINABLE STRATEGIES AND DEVELOPMENT

Sustainable design concepts – strategies – Design principles – Active and passive techniques – land use patterns – site development – site selection – adaptive reuse – existing buildings up gradation

UNIT- III ENERGY – USAGE AND REGENERATION

Water – consumption – domestic usage – efficiency in usage – low flow plumbing fixtures – water appliances – rain water harvesting – reuse of gray water – energy efficiency – optimizing building envelopes configuration – renewable power- Towards net zero energy building - use of photovoltaic- automation for efficient usage – smart buildings

UNIT- IV BIO DEGRADABLE MATERIALS AND RECYCLING

Concept of embodied energy – performance and life cycles – building materials – selection of sustainable materials – recycling waste – collection and disposal – appropriate technologies – use in landscape.

UNIT- V ENVIRONMENTAL IMPACT ASSESMENT.

Environmental Impact Assessment – Internal frame works & Assessment Tools.

SUGGESTED READINGS :

1. Anna ray – Jone – Sustainable architecture in japan – The green buildings of Nikken seiki, Wiley – academy 2000
2. Architecture and the environment – bio climatic building design – David Lloyd (Laurence king publishers, London 1998)
3. Sustainable Architecture low tech houses – Charles Broto & Arian Mostedi Pub : Joseph Ma Minguet 2002.
4. Energy efficient buildings in India – Millimajundar. TER publication and ministry of non conventional energy sources, 2001
5. Ecology of the sky – Ivor Richards , The Image publishing groups , 2009

18ARP811	PRACTICAL TRAINING									SEMESTER-VIII		
Marks	Internal	400	External				600	Total	1000	Exam Hours		6
Instruction Hours /week		L	0	T	0	P/S	0	Credits				14

COURSE OBJECTIVE:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice
- To work from initiation of project, development of concepts into schematic drawings, approval process, presentations and release of working drawings
- To get involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process
- To coordinate with the various levels of workman/contractors etc for execution of the Project

COURSE OUTCOME:

1. Student will get and overall idea of the nuances of architectural practice.
2. Student will understand about the total process that takes place in an Architectural firm
3. Student will understand the Specifications of a project, time involved and the execution process
4. Student will gain knowledge in architectural working drawings
5. Student will gain experience of client meetings & site Execution
6. Student will gain the maturity of Architectural design, and the experience gained from internship will be helpful in the thesis project

CONTENT

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by eminent architects. The choice of the office shall be approved by the Training Committee of the Faculty of Architecture. The practical training, primarily involves learning in the office and on the site. The progress of training shall be assessed periodically by reports from the employers of trainees and by the Training Committee of the Faculty of Architecture.

The evaluation of the practical training will be based on the following features.

- Client meeting and interaction
- Site visits, verification and measurements
- Concept and scheme development
- Construction documents / drawings
- Training portfolio

18ART901	PROFESSIONAL PRACTICE -I									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week	L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To give an introduction to the architectural profession
- To know about the role of professional bodies and statutory bodies as well as ethics of the profession.
- To give familiarity with basic aspects of running an architectural practice.
- To know about the tenders & market Evaluations in Architectural practice
- To give exposure to the processes involved in taking up and completing an architectural project.
- To inform about legal aspects and legislations associated with the profession.

COURSE OUTCOME:

1. Student will gain knowledge of the role of professional and statutory bodies.
2. Student will become familiar with the process involved in an Architecture Project
3. Student will gain knowledge about the Scale of Services and Fees for an Architect
4. Student will understand the code of conduct and ethical values of the Profession
5. Student will understand about the Tender & Contract
6. Student will understand about the participation, award in an Architectural competition

UNIT -I ARCHITECT AND PROFESSION

Role of architect in society - relationship with client and contractor - code of conduct – management of an architect's office - elementary accountancy

UNIT- II ARCHITECT'S SERVICES AND SCALE OF FEES

Conditions of engagement of an architect - normal additional, special and partial services – scale of fees for various services - claiming of fees

UNIT - III ARCHITECTURAL COMPETITIONS

Open and closed competitions - appointment of assessors - duties of assessors - instructions to participants - rejection of entries - award of premium – guidelines prescribed by COA AND IIA for promotion and conduct of competition.

UNIT -IV LEGISLATION

Salient features of various acts such as Architects Act 1972-Chennai corporation building rules 1972-The panchayat building rules-Tamilnadu factory rules,Development control rules for Chennai metropolitan

UNIT- V EMERGING AREAS OF IMPORTANCE

Role of urban arts commission – need for special rules on architectural control and development

SUGGESTED READINGS :

1. Architects Act 1972,-Arbitration Act,196 – Factories Act,1948- person with disabilities act 1995
2. Publications of Council of Architecture
3. Roshan Namavati, 'Professional Practice', Lakhani Book Depot, Mumbai, 2016.
4. Ar. V.S. Apte, 'Architectural Practice and Procedure', Mrs. Padmaja Bhide, 2008.
5. Madhav Deobhakta, 'Architectural Practice in India', COA, 2007.
6. J.J.Scott, 'Architect's Practice', Butterworth, London 1985.
7. Development Regulations of Second Master Plan for Chennai Metropolitan Area-2026. (Second Master plan of CMA).
8. Chennai City Corporation Building Rules 1972 AND cmda- 2014
9. T.N.D.M. Buildings rules, 1972.
10. Consumer Protection Act, 1986.

18ART902	RESEARCH METHODS AND FIELD STUDIES							SEMESTER-IX	
Marks	Internal	40	External			60	Total	100	Exam Hours
Instruction Hours /week	L	3	T	0	P/S	0	Credits		3

COURSE OBJECTIVE:

- To learn the importance of and undertake research and field studies
- To understand the research applications in architectural design.
- To understand the different methods and the techniques as relevant to the design profession
- To understand the experimental research methods
- To apply research in evaluation and appraisal of architectural design projects.
- To understand about different survey methods

COURSE OUTCOME:

1. Student will understand the research methodology and research methods
2. Student will understand the various analytical methods
3. Student will understand the experimental methods of Research
4. Student will learn about the survey methods and documentation
5. Student will know to collect relevant data, compile and document
6. Student will be able to critically analyse the data and present it as a document

UNIT- I INTRODUCTION TO RESEARCH METHODOLOGY

Importance. Purpose and scope of research and field studies. Application in architecture in terms of design , technology, environment, economic and behavioral areas.

UNIT- II RESEARCH METHODS

Sequence and methods of research, Identification of problem, Hypothesis formulation objectives and methodology.

UNIT- III ANALYTICAL METHODS

Understanding and applying qualitative analytical interpretative correlation, quasi experimental, experimental, simulation and modeling techniques in Architectural design.

UNIT- IV SURVEY AND STUDY METHODS

Pilot studies field surveys and collection of samples – physical, Architectural, Environmental organizational, preparation and Analysis of Data sheets and Questionnaires.

UNIT- V DOCUMENTATION AND PRESENTATION

Preparation and analysis of data sheets and questionnaires. Arriving at conclusions from the research at field studies. Report writing and publications.

SUGGESTED READINGS ::

- 1.Knight. A and Ruddock L., “Advanced Research Methods in build Environment”, John Wiley & Sons 2008.
- 2.Groat L, and Wang D, “Architectural Research Methods”. John Wiley & Sons, 2002.
- 3.Gibbs J P “ Urban Research Methods”, (rev.ed) Von Nostrand 1988.
- 4.Kothari C R, Research Methodology – Methods and Techniques”, New Age International 2004.
- 5.Khanzode V V, “ Research Methodology – Techniques and Trends”, APH Publishing, 1995.

18ARS921	DISSERTATION									SEMESTER-IX
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture
- To develop perspectives on the same through reading, study, analysis and thought.
- To develop the skill of experimentation by their own course of study
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

COURSE OUTCOME:

1. Student will learn to research on a specific interested topic and collect appropriate data
2. Student will develop the skill of analytical approach towards the related topic
3. Student will be able to develop a coherent line of thought based on point of view,
4. Student will be able to do observation, analysis and study
5. Student will be able to prepare a dissertation report which is based on accepted norms of technical writing.
6. Student will become prepared for the larger thesis project.

CONTENT

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS :

18ARS922	ARCHITECTURAL DESIGN - VIII									SEMESTER-IX	
Marks	Internal	140	External				210	Total	350	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	10	Credits				7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Urban Design proposal
6. Student will be able to Communicate effectively through the design ideas.

CONTENT

Design of large scale township -Neighbourhood Planning -large structures - Multiuse multi span- Pavilions –transport hub– Design and detailing for movement and use by physically handicapped people within and around building technology and services. Examples: Large scale projects – neighbourhood, Integrated Township , IT park, Satellite town ,Sports complex,Apparelpark,SEZetc

Design Process to be approached stage wise through Architectural Programming. Advanced concepts of Site Planning as relevant to small and medium sized campuses to be introduced in the design.

SUGGESTED READINGS :

1. Jonathan Barnett, 'An Introduction to Urban Design', Harper and Row; 1982
2. Cavallo, R. et al, 'New Urban Configurations', IOS Press, 2014.
3. Henriette Steiner & Maximilian Sternberg, 'Phenomenologies of the City: Studies in the History and Philosophy of Architecture', Routledge 2015.

11. Jeremy Till et al, 'Spatial Agency: Other Ways of Doing Architecture', Routledge, 2011.

18ARET931	PROJECT MANAGEMENT									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To introduce different Project management techniques
- To learn about project control, updating & Monitoring
- To Know about network concepts, network elements and inter - relationships
- To know about PERT network
- To understand about the project Costing
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.

COURSE OUTCOME:

1. Student will understand a project from concept to commissioning.
2. Student will understand the feasibility study & facility programme, design, construction to commissioning.
3. Student will be able to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
4. Student will understand about the Project Costing
5. Student will understand about the various software of project management.
6. Student will gain understanding of principles of management, construction scheduling, scope definition and team roles

UNIT- I INTRODUCTION TO PROJECT MANAGEMENT

Introduction to project Management concepts - background of management, purpose, goal and objectives, characteristics of projects and different aspects of management. Traditional management system, Gantt's approach load chart, progress chart, bar chart merits and limitation. Schedule time, estimates units

UNIT- II PROJECT PROGRAMMING

Project programming, resources balancing, phasing of activities, programs, scheduling, project control, reviewing, updating and monitoring. Exposure to relevant software such as MS Project, Primavera, Introduction to modern management, concepts, uni-dimensional management techniques - Introduction to PERT and CPM introduction to network concepts, network elements and inter-relationships.

UNIT - III NETWORK TECHNIQUES

Network techniques, network logic - interrelationships, activity information, data sheets, development of network. CPM for management, CPM network analysis, identification of critical path float computation result sheets.

UNIT - IV PERT NETWORK

PERT Network, introduction to the theory of probability and statistics, probabilistic time estimation for the activities of PERT network

UNIT- V PROJECT COST

Introduction to two dimensional network analysis, activity cost information. Cost time relationship, crashed estimates for the activities, compression potential, cost slope, utility, data sheet, project direct cost and indirect cost. Crashed programmes, network compression least cost solution least time solution, optimum time solution. Network techniques, PERT/CPM, generating alternative strategies using computers

SUGGESTED READINGS :

1. Dr. B.C. Punmia and K.K. Khandelwal, 'Project Planning and Control with PERT and CPM', Laxmi Publications, 2018.
2. Elaine Marmel, 'Microsoft Project 2010 Bible', Wiley, 2010.
3. Sam Kubba, 'Green Construction Project Management and Cost Oversight', Elsevier, 2010.
4. Jerome D. Wiest and Ferdinand K. Levy, 'A Management Guide to PERT/CPM', Prentice Hall of India, 1982.
5. Bert Bielefeld, 'Basics Project Management Architecture', Birkhauser, 2013.

118ARET932	EARTH QUAKE RESISTANCE ARCHITECTURE									SEMESTER-IX		
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours /week		L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To understand the fundamentals of Earthquake and the basic terminology
- To familiarize the students with design codes and building configuration
- To understand the site planning and performance of ground & Buildings
- To understand the seismic design codes & configurations
- To understand the impacts in urban level due to earth quake and solution for mitigation
- To understand the various types of construction details to be adopted in a seismic prone area.

COURSE OUTCOME:

1. Student will be able to understand the formation and causes of earthquakes
2. Student will gain understanding of the factors to be considered in the design of buildings
3. Student will understand the services to resist earthquakes.
4. Student will become familiar with the Seismic Design Codes & configurations
5. Student will understand about designing earth quake resistant structures
6. Student will learn about urban level planning strategies for earth quake resistance

UNIT -I FUNDAMENTALS OF EARTHQUAKES

- a) Earths structure, seismic waves, plate tectonics theory, origin of continents, seismic zones in India.
- b) Predictability, intensity and measurement of earthquake
- c) Basic terms- fault line, focus, epicentre, focal depth etc.

UNIT- II SITE PLANNING, PERFORMANCE OF GROUND AND BUILDINGS

- a) Historical experience, site selection and development b) Earthquake effects on ground, soil rupture, liquefaction, landslides. c) Behaviour of various types of building structures, equipments, lifelines, collapse patterns d) Behaviour of non-structural elements like services, fixtures in earthquake-prone zones

UNIT- III SEISMIC DESIGN CODES AND BUILDING CONFIGURATION

- a) Seismic design code provisions – Introduction to Indian codes b) Building configuration- scale of building, size and horizontal and vertical plane, building proportions, symmetry of building- torsion, re-entrant corners, irregularities in buildings like short stories, short columns etc.

UNIT- IV VARIOUS TYPES OF CONSTRUCTION DETAILS

- a) Seismic design and detailing of non-engineered construction- masonry structures, wood structures, earthen structures.
- b) Seismic design and detailing of RC and steel buildings c) Design of non-structural elements- Architectural elements, water supply, drainage, electrical and mechanical components

UNIT- V URBAN PLANNING AND DESIGN

- a) Vulnerability of existing buildings, facilities planning, fires after earthquake, socioeconomic impact after earthquakes.
- b) Architectural design assignment- Institutional masonry building with horizontal spread and height restriction, multi-storeyed RC framed apartment or commercial building .

SUGGESTED READINGS :

1. Guidelines for earthquake resistant non-engineered construction, National Information centre of earthquake engineering (NICEE, IIT Kanpur, India)
2. C.V.R Murthy, Andrew Charlson. "Earthquake design concepts", NICEE, IIT Kanpur India.
3. Ian Davis (1987) Safe shelter within unsafe cities" Disaster vulnerability and rapid urbanisation, Open House International, UK
4. Socio-economic developmental record- Vol.12, No.1, Jan-Feb 2005
5. Learning from Practice- A review of Architectural design and construction experience after recent earthquakes- Joint USA-Italy workshop, Oct.18-23, 1992, Orvieto, Italy.

18ARET933	ADVANCED CONCRETE TECHNOLOGY									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To learn about the classification and specifications in concrete
- To learn about the Chemical composition and Testing of concrete
- To learn about the properties and durability of concrete
- To learn about the Principles and Methods of concrete mix design
- To learn about the Statistical quality control- sampling and acceptance criteria
- To learn the advanced level concrete technological applications.

COURSE OUTCOME:

1. An understanding of the classification and specifications in concrete
2. An understanding of special types of concrete and concreting methods
3. An understanding of the Chemical composition and Testing of concrete
4. An understanding of properties and durability of concrete
5. An understanding of Statistical quality control- sampling and acceptance criteria
6. An understanding of the advanced level concrete technological applications

UNIT 1 CONCRETE MAKING MATERIALS

Aggregates classification, IS Specifications, Properties, Grading, Methods of combining aggregates, specified gradings, Testing of aggregates. Cement, Grade of cement, Chemical composition, Testing of concrete, Hydration of cement, Structure of hydrated cement, special cements. Water Chemical admixtures, Mineral admixture.

UNIT 2 CONCRETE

Properties of fresh concrete, Hardened concrete, Strength, Elastic properties, Creep and shrinkage, Variability of concrete strength, durability of concrete.

UNIT- III MIX DESIGN

Principles of concrete mix design, Methods of concrete mix design, Testing of Concrete. Statistical quality control- sampling and acceptance criteria.

UNIT- IV SPECIAL CONCRETE

Light weight concrete, Fly ash concrete, Fibre reinforced concrete, Sulphur impregnated concrete, Polymer Concrete, Super plasticised concrete, Hyper plasticized concrete, Epoxy resins and screeds for rehabilitation - properties and applications - high performance concrete. High performance fiber reinforced concrete, self-compacting-concrete.

UNIT- V CONCRETING METHODS

Process of manufacturing of concrete, methods of transportation, placing and curing. Extreme weather concreting, special concreting methods. Vacuum dewatering - underwater concrete, special form work.

SUGGESTED READINGS :

1. Neville, A.M., Properties of Concrete, Prentice Hall, 1995, London.
2. Shetty M.S., Concrete Technology, S.Chand and Company Ltd. Delhi, 2003.
3. A.R.Santhakumar ;"Concrete Technology", Oxford University Press, 2007.
4. Rudhani G. Light Weight Concrete Academic Kiado, Publishing Home of Hungarian Academy of Sciences, 1963

18ARET934	REAL ESTATE MANAGEMENT									SEMESTER-IX		
Marks	Internal	40	External				60	Total	100	Exam Hours		3
Instruction Hours /week		L	2	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To give an overview of real estate development
- To understand about the market potential in the current scenario
- Stimulating an awareness of the issues involved in international real estate
- To learn about urban level policy & Decisions
- To learn about various differences in Real Estate market conditions all over the world
- To gain knowledge about the leverage that the real estate could provide in the overall development

COURSE OUTCOME:

1. Student will gain knowledge in the concepts of Real estate development
2. Student will understand about Property development
3. Student will learn about urban level policies in Real estate management
4. Student will learn about the corporate Real estate management
5. Student will gain knowledge in Project financing and development
6. Student will understand the Current scenario through case studies

UNIT-I REAL ESTATE DEVELOPMENT

Fundamentals of real estate development – concepts – techniques – recognizing institutional elements – issues encountered in various phases of development like the site evaluation and land procurement – lease hold and free hold property – development team assembly – market potential – demand estimation study – development scheme – construction and project management – Project marketing

UNIT- II DEVELOPMENT AND PROJECT FINANCING

Project feasibility – options – development financing – asset disposal and redevelopment options – analysis of development sites and case studies – integrated case study on specific development project – reviewing and analysis – problems and strategic issues

UNIT- III URBAN POLICY AND REAL ESTATE MARKET

Impact of government regulations and public policies on real estate markets – urban land use and location theories – Land use structures – community and neighborhood dynamics – degeneration and renewal in urban dynamics – private public participation- government policies – public and private housing and fiscal policy – Property taxation – local government finance

UNIT- IV CORPORATE REAL ESTATE MANAGEMENT

Strategic plans to align real estate needs with corporate business plans – performance measurement techniques – identify assets acquisition or disposal – methods for enhancing values through alternative – efficient source utilization or improving user satisfaction

UNIT – V FIELD SURVEY

Real estate value- market survey – case studies through field survey.

SUGGESTED READINGS :

1. Fillmore W Galaty, "Modern Real estate practice" (2002); Dearborn Trade Publishing, NewYork,U.S.A.
2. Gerald R Cortesi, "Mastering Real estate principles" (2001); Dearborn Trade Publishing, NewYork, U.S.A.
3. Mike .E. Miles, "Real estate development – Principles & Process 3rd edition, (2000); UrbanLand Institute, ULI – Washington DC
4. Richard B Peiser& Anne B. Frej, "Professional real estate development" – The ULI guide tothe business – (2003), Urban Land Institute U.S.A.
5. Tanya Davis, "Real estate developer's handbook", (2007), Atlantic pub company, Ocala, USA.
6. John Ratcliffe; "Urban Planning & Real estate development, (2004); Taylor & Francis pub. U.K.
7. David Falk; "The fundamentals of Real estate finance", (2005).USA
8. Valuation of Immovable properties" (Under Direct Taxes) edn(2002), Grish Chand Gupta,

18ARES935	INDUSTRIAL ARCHITECTURE									SEMESTER-IX	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week	L	2	T	0	P/S	5	Credits				4

COURSE OBJECTIVE:

- To introduce about Industrial design building and architecture
- To understand about the types of industrial space
- To understand about precast building types & practice
- To gain knowledge in on site & off-site prefabrication systems
- To gain deep understanding about the Modular - technologies
- To understand about the overall structural system of Industrial buildings

COURSE OUTCOME:

1. Student will understand the application of Industrial buildings
2. Student will gain understanding about the pre fabrication systems
3. Student will gain Knowledge in Industrial construction
4. Student will understand about the modular components & coordination of Industrial Buildings
5. Student will understand about the overall structural system of Industrial buildings
6. Student will be able to design large scale Industrial buildings

UNIT -I INTRODUCTION

Five year plans and thrust in housing – Issues in Urban Housing – use of modern building materials – application of modern technology – meaning of industrial building system.

UNIT -II APPLICATION OF INDUSTRIAL BUILDING SYSTEM

Feasibility of using industrial building system in Residential and Non-Residential buildings – manufacturing of building components – Technology requirements for industrial building system – use of Industrial building system as an option for disaster mitigation.

UNIT- III MODULAR CO-ORDINATION AND INDUSTRIALISED SYSTEM

Concept and definition of Modular dimensional discipline – Advantages and Limitations of modular principle – Components of residential buildings – precast elements.

UNIT- IV PRE-FABRICATION SYSTEM

Objective and necessity – Off site on site prefabrication elements and construction joints – architectural and technical limitations.

UNIT- V PROCEDURES AND ORGANISATION

Equipments used – manufacturing processes – transportation of components – assembly and finishing – Structural, social and economic issues related to industrial building system.

SUGGESTED READINGS :

1. Industrial Building and Modular Design Henrik Missen – C & CK, UK 1972.
2. Albert G.H.Dietz, Laurence Secotter – “Industrialized Building Systems for Housing” – MIT, special summer session, 1970 USA.
3. “Industrialized Building Construction” – Proceedings of National Seminar, Nov-17-18, 2000, Indian Concrete Institute, Mumbai.
4. “Innovative Construction Materials” – Proceedings of Seminar, Jan 20-21,2001, Veermata Jeejabai Technical Institute, Mumbai.

18ARES936	HIGH RISE BUILDINGS									SEMESTER-IX	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To understand the various types of multistoried buildings
- To understand the structural systems of High -rise buildings
- To understand deeply about the building service systems of high- rise buildings
- To deeply understand about the Structural Systems in High Rise Buildings
- To understand about the Safety Systems in high Rise buildings
- To understand about the Bye – laws & codes of design of high -rise buildings

COURSE OUTCOME:

1. Student will learn about the Design and planning aspects of High-rise structures
2. Student will gain knowledge about the National building Codes of high rise structures
3. Student will understand about the various development control regulations all over India
4. Student will gain knowledge about the Structural aspects of High-Rise buildings
5. Student will gain knowledge about various technical services involved in High rise buildings
6. Student will gain knowledge about functionality of the high-rise structures

UNIT 1 INTRODUCTION TO HIGH RISE STRUCTURES

Urban environment and physical planning considerations – architectural design considerations – space planning- building services – advanced service systems – automation – Bye laws and codes applicable – for every structure and service section

UNIT- II TALL BUILDING TYPES AND FLOOR SYSTEMS

Classification of tall buildings – types – shear frames, interacting systems – Tubular systems.
Composite steel floor systems, pre stressed and post tensioned concrete floor systems – examples

UNIT- III LATERAL LOAD RESISTING SYSTEMS

Braced frames – moment resisting frame systems – core and out trigger systems – benefits and drawbacks – tubular system – Hybrid systems – examples

UNIT- IV SERVICES FOR TALL BUILDINGS

Express elevators- Sky lobbies – service floor etc – Water supply system- skip stage plumbing – energy conservation methods – location and sizing of water tanks – wet risers, sumps , smoke detectors , alarms ,sprinkler systems – fire escape stairs – fire resistant doors – Fire resistant materials – fire fighting equipments.

SUGGESTED READINGS :

1. B.C. Punmia, 'Reinforced Concrete Structures, Vol. 1 & 2', Laxmi Publications, New Delhi, 1994.
2. N. Subramanian, 'Principles of Space Structures', Wheeler, 1998.
3. Thandavamoorthy T.S, 'Advanced Structures of Architecture', Eswar Press, 2008.
4. Council on Tall Buildings and Urban Habitat, 'Structural System for Tall Buildings', McGraw Hill, 1995.
5. Milo.S.Ketchum and Mark.A. Ketchum, 'Types and Forms of Shell Structures, 1997.
6. P. Dayaratnam, P.Sarah, 'Prestressed Concrete Structures', Medtech, 2017.
7. Wolfgang Schueller, 'High Rise Building Structures', John Wiley & Sons, 1976.
8. Frei Otto, 'Tensile Structures Volume 1 & 2' The MIT Press, 1973.
9. Bryan Stafford Smith, Alex Coull, 'Tall Building Structures - Analysis & Design', John Wiley, 1991.

18ART1001	PROFESSIONAL PRACTICE -II									SEMESTER-X	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To give an introduction to easements and its types
- To know about the role of tenders and the processes involved within
- To give familiarity with a contract and the conditions therein
- To give exposure to the Arbitration in disputes
- To inform about legal aspects like Environmental acts and laws
- To know about the consumer protection act and their relevant provisions

COURSE OUTCOME:

1. Student will gain knowledge of the easements and its types
2. Student will become familiar with the tenders and the processes involved within
3. Student will gain knowledge about acontract and the conditions therein
4. Student will understand the Arbitration in disputes
5. Student will understand about the legal aspects like Environmental acts and laws
6. Student will understand about the consumer protection act and their relevant provisions

UNIT- I EASEMENTS

Definition – types of easements- acquisition , extinction and protection of easements

UNIT - II TENDER

Definition – types of easements- acquisition , extinction and protection of easements

Calling for tenders - tender documents - open and closed tenders - item rate, lumpsum, labor and demolition tender - conditions of tender - submission of tender - scrutiny and recommendations

UNIT - III CONTRACT

Conditions of contract - Form of contract articles of agreement - Contractor's bill certification

UNIT - IV ARBITRATION

Arbitration in disputes - arbitration agreement - sole arbitration - umpire - excepted matters - award .

UNIT- V LEGISLATION

Environmental acts and laws- special rules governing Hill area development – coastal area development and management – Heritage act of India – consumer protection act and their relevant provision

SUGGESTED READINGS :

1. Architects Act 1972.
 2. Publications of Council of Architecture
 3. Roshan Namavati, 'Professional Practice', Lakhani Book Depot, Mumbai, 2016.
 4. Ar. V.S. Apte, 'Architectural Practice and Procedure', Mrs. Padmaja Bhide, 2008.
 5. Madhav Deobhakta, 'Architectural Practice in India', COA, 2007.
 6. J.J.Scott, 'Architect's Practice', Butterworth, London 1985.

18ARS1021	ARCHITECTURAL THESIS									SEMESTER-X	
Marks	Internal	400	External				600	Total	1000	Exam Hours	6
Instruction Hours /week		L	4	T	0	P/S	27	Credits			18

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme
- To develop the skill of Design in the context of a project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project
- To enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently
- To develop the career of Architecture by exhibiting the skill in thesis

COURSE OUTCOME:

1. Student will gain an overall understanding of an Architectural project
2. Student will be able to research, Analyse, synthesize and present his ideas
3. Student will apply his skills developed in the previous years in this Project
4. Student will gain the ability to handle major architectural project of a larger scale
5. Student will be able to design with all Socio, economic and Environmental aspects.
6. Student will become an expertise in his domain of architectural design

CONTENT

The main areas of study and analysis shall be Architecture, Urban design, Urban renewal and Human settlements, Environmental Design, Conservation, Landscape Design, Housing etc.. However, the specific thrust should be architectural design of built environment.

Research Methods as applicable to architectural studies is to be taught as part of Thesis.

METHOD OF SUBMISSION

The Thesis Project shall be submitted in the form of drawings, project report, physical/ digital models, presentations and walkthroughs.

SUGGESTED READINGS :

1. Linda Grant and David Wang, 'Architectural Research Methods', John Wiley & Sons, 2002.
2. Joseph De Chiara, Michael J Crosbie, 'Time Saver Standards for Building Types', McGrawHillProfessional, 2001.
3. Stephen A. Kliment, Editor 'Building Type Basics' Series, Wiley.
4. Igor Marjanović, Katerina RüediRay, Lesley NaaNorleLokko, 'The Portfolio - An Architecture Student's Handbook', Routledge, 2003.

18IDT101	THEORY OF INTERIORS									SEMESTER-I
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week	L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- Understanding various aspect such as form, scale, light, dimension, height, transitional elements etc affecting interior space.
- Understanding and applying design vocabulary such as Point ,Line, shape, color, texture, area, mass, volume etc.
- Understanding and applying design principles such as ratio, proportion, scale, balance, harmony, unity, variety, rhythm, emphasis.
- Understanding the process involved in design including analysis, synthesis and evaluation.
- Evaluating Design typology
- Understanding the usage of the elements of design in the projects in future.

COURSE OUTCOME:

1. A In depth understanding of the definition of Interior design.
2. Elements of Design and forms in design to be analyzed and used.
3. An exposure to the principles of Interiors and the application of the same in built environments
4. An understanding the meaning of character and style of the interiors in buildings with examples.
5. An exposure to the students on ideologies and philosophies of Interiors and its contemporary.
6. The students will be able to apply the theory into the design problems and be design ready.

UNIT – I INTERIOR SPACE

Space– definition; Interior space – spatial qualities, :form,, scale, outlook; structuring space with interior designelements;spatialform;spatialdimension–square,rectangle,curve linear spaces; height of space; spatial transitions – openings within wall planes, doorways, windows, stairways.

UNIT – II DESIGN VOCABULARY

Form–point, line, volume, shape, texture and color–in relation to light, pattern etc. and application of the same in designing interiors.

UNIT – III DESIGN PRINCIPLES

Ratio; proportions–goldensection;relationships;scale;Balance–symmetrical,radial,occult;harmony; Unity; variety; rhythm; emphasis.

UNIT- IV ANTHROPOMETRICS

Definition, theory of standard dimension based on human figures for activities, functions, circulation, furniture design, spatial requirements etc.

Study of Ergonomics

Design of Furniture for Living, Dining, Kitchen, Office etc.

UNIT – V DESIGN CONTROL

Design process – Analysis, synthesis, design evaluation; Design criteria–function and purpose, utility and economy, form and style; human factors-human dimensions, distance zones, activity relationships;

Fitting the space – plan arrangements, function, aesthetics

SUGGESTED READINGS

1. Francis. D. K. Ching, Interior design Illustrated, Van Nostrand Reinhold(1996)
2. John. F. Pile, Interior Design, Harry Abrams Inc.(1988)
3. Sam. F. Miller, Design process – a primer for Architectural and Interior Design, Van Nostrand Reinhold.(1995)
4. Gary Gordon, Interior lighting for designers, JohnWiley & Sons Inc.(2003)
5. Harold Linton, Colour in Architecture, Mc Graw Hill(1999)
6. Jonathan Poore, Interior Color By Design, Rock Port Publishers.(1994)
7. Sherrill Winton, Interior Design and Decoration, Prentice Hall.(1937)
8. Johanness Itten, The Art of Color, John Wiley and Son(1993)

18IDT102	HISTORY OF INTERIORS									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week	L	3	T	0	P/S	0	Credits				2

COURSE OBJECTIVE:

- To help the student understand the designs from Prehistoric Period to the Middle Ages.
- To know more on the Modern Movements in Interior design from the beginnings of 20th century.
- To allow students to learn from the rich heritage the elements of aesthetic design.
- To understand the construction techniques of the ancient times.
- To understand the skilled labor and the presence of the same in the olden days.
- To understand the same scene in the contemporary era and its challenges to execute the same finesse.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.
3. The individual will be exposed to the present to the ancient day's comparison in techniques..
4. To use the techniques of the ancient times and to overcome the challenges faced by the same.
5. To respect the wide heritage that can be offered with respect to the various Architecture eras.
6. An understanding of the influences of lifestyle and culture of the respective times

UNIT – I EARLY CLASSICAL PERIOD

Prehistoric Cave paintings–Primitive Designs – Interiors during Egyptian, Greek, Roman, Gothic, Early Christian and Renaissance Periods.

UNIT – II MIDDLE AGES

Interiors in Romanesque, Gothic, and renaissance periods

UNIT – III COLONIAL TO THE BEGINNING OF THE 20th CENTURY

Colonial, Victorian designs, Arts & Crafts movement, Art Nouveau, Eclecticism, Frank Lloyd Wright.

UNIT – IV BAUHAUS TO POST WAR MODERNISM

Walter Gropius/ Bauhaus, De Stijl, Mies Van Der Rohe, Le Corbusier, Art Deco, Postwar Modernism.

UNIT – V PROJECTS

Projects based on Historical Styles in Interiors & Assignments.

SUGGESTED READINGS

1. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London (1995)
2. Interior Design & Decoration, Sherril Whiton, Prentice Hall (1937)
3. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York (2012)
4. History of Architecture, Sir Banister Fletcher, CBS Publishers & distributors, New Delhi (1999)
5. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York (1991)

18IDP111	SPACE PLANNING AND ERGONOMICS									SEMESTER-I		
Marks	Internal	60	External				90	Total	150	Exam Hours		3
Instruction Hours/Week		L	2	T	0	P/S	2	Credits				3

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosure, various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand design with relation to a human being with respect to size, shape, and color.
- To understand a human bodies and its various movements and to accommodate the same into design standards.
- To understand spatial parameters with respect to the function and implications inflicted regarding the same.
- To introduce a self to design methodology..

COURSE OUTCOME:

1. The students understand the relationship of human being with its environment and implement the study into design.
2. The students are taught to be able to design spaces based on patterns of circulation, proximity and levels of privacy zones.
3. The students understand the different postures and positions with dimensions of the human body and will be able to recognize activities and relate the need of human measurements in the design principles.
4. To bring a relation with design principles and the human being using the design principle.
5. To be able to create a project in direct relation to this subject and hence be able to apply theoretical knowledge into practical construction
6. To introduce the student to visual analyses and hence be practically well equipped.

UNIT –I ANTHROPOMETRICS

Basic anthropometrics – average measurements of human body in different postures – its proportion and graphic representation, application in the design of simple household and furniture.

UNIT-II SPATIAL PARAMETERS

Role of mannequins in defining spatial parameter of design. Basic human functions and their implications for spatial planning. Minimum and optimum areas for various functions. Preparing user profile, bubble and circulation diagrams.

UNIT –III DESIGN METHDODOLOGY

Introduction to design methodology. Detailed study of spaces such as living, dining, bedrooms, kitchen, toilet etc. including the furniture layout, circulation, clearances, lighting and ventilation, etc. Case study of existing house and analysis of the spaces.

UNIT – IV VISUAL ANALYSIS

Visual analysis of designed spaces noted for comfort and spatial quality; analysis of solid and void relations, positive and negative spaces.

UNIT-V PROJECT

Integration of spaces and function in the design of bus shelter, milk booth, watchman's cabin, traffic police kiosk, flower stall, ATM center, etc.

Note: In the end exam, which is a viva-voce, the students have to present the entire semester's work for assessment.

SUGGESTED READINGS

1. Karlen Mark, Space planning Basics, Van Nostrand Reinhold, New York, 1992.
2. Joseph D Chiara, Julius Panero, & Martin Zelnick, Time Saver standards for Interior Design & space planning, 2nd edition, Mc-Graw Hill professional, 2001.
3. Francis.D. Ching & Corky Bingelli, Interior Design Illustrated, 2nd edition, Wiley publishers, 2004.
4. Julius Panero & Martin Zelnick, Human Dimension & Interior Space: A source book of Design Reference standards, Watson – Guptill, 1979.
5. Karlen Mark, Kate Ruggeri & Peter Hahn, Space Planning Basics, Wiley publishers, 2003.

18IDP112	ART AND CRAFT									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week	L	1	T	0	P/S	5	Credits				3

COURSE OBJECTIVE:

- To encourage a critical orientation to design thinking and action.
- To understand the word critical meaning that everything must be open to enquiry and alternative view point.
- By design thinking and action it means that the process if observation and study of natural and manmade objects and systems,
- Ideation, free exploration , and development of personal skills and attitudes.
- To bring a creative interactive movement of students that will mould the respective skill.
- Skill based learning with adept technology support for the same.

COURSE OUTCOME:

1. The students are exposed to various mediums, techniques and tools.
2. The students gain mastery in sketching, visualizing and expression through manual drawing.
3. Sensitized to culture, craft and context.
4. Skill Development in Handling Materials and in Making Products
5. To be updated to the art world and to hone a skill that precedes the student in an overall development.
6. To imbibe qualities of confidence and orator ship.

OUTLINE

Observation & study 1 – selection of two indoor objects /systems and observation of their natural occurrence, relationships with context form, structure color textures and mainly functions.

Observation & Study 1 – Sketching and visual representations in various media

Observation & Study 1 – 3 dimensional modeling in appropriate medium (clay, Paper, wire, Plastic, wax, etc.)

Observation & study 2 – selection of two outdoor objects /systems and observation of their natural occurrence, relationships with context form, structure color textures and mainly functions.

Observation & Study 2 – Sketching and visual representations in various media

Observation & Study 2 – 3 dimensional modeling in appropriate medium (clay, Paper, wire, Plastic, wax, etc.)

Material study 1 – selection of two materials used in everyday life (textiles earthenware terracotta, metals, stone, plastic, glass etc. and study its properties.

Material study 2 – sketching and visual representation of materials in various media like clay paper plaster wood wire wax photography.

Material study 3 – hands on making of object / joint/ structure with one of the materials studied.

SUGGESTED READINGS

1. Webb, Frank, "The Artist guide to Composition", David & Charles, U.K., 1994.
2. Ching Francis, "Drawing a Creative Process", Van Nostrand Reinhold, New York, 1990.
3. Alan Swann, "Graphic Design School", Harper Collins, 1991.
4. Envisioning Architecture – an analysis of drawing , Iain Fraser & Rod Henmi, 1991
5. Moivahuntly, "The artist drawing book", David & Charles, U.K., 1994.

18IDS121	BASIC INTERIOR DESIGN -I								SEMESTER-I	
Marks	Internal	160	External			240	Total	400	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	12	Credits		8

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the translation of the drawing from board to reality and unification of the spaces.
- To understand the basic concepts for the size of the project.
- Develop an eye for design thinking that will encourage students to explore their creative capacities.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.

UNIT I TO V

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

INTRODUCTION TO ELEMENTS OF DESIGN

Properties, qualities, and characteristics of (i) line, (ii) direction, (iii) shape, (iv) size, (v) texture, (vi) space (vii) time and motion (viii) value and (vii) color. Exercises involving the same

Exploration in mixed media & collage to convey a specific theme and meaning.

Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

The principles of design relationships/ Composition – Unity & Harmony, Balance, Scale & Proportion, Contrast and Emphasis, and Rhythm. Exercises involving the same.

Lecture introduction into the discipline of interior design and the transformation from basic design to interior design - Placing Interiors (Building, Site, Orientation, Climate, City and Landscape); History & Precedent; Materials & Construction; Representation and Realization.

SUGGESTED READINGS

1. The Fundamentals of Architecture (Fundamentals (Ava)) (Paperback) by Lorraine Farrelly (Author) 2007
2. Francis D.K. Ching - Architecture - Form Space and Order Van Nostrand Reinhold Co., 1998
3. Design Methods (Architecture) (Paperback), by John Chris Jones (Author). 1981
4. How Designers Think, Fourth Edition: The Design Process Demystified (Paperback) by Bryan Lawson. 2005

18IDS122	INTERIOR MATERIALS AND CONSTRUCTION - I									SEMESTER-I	
Marks	Internal	80	External				120	Total	200	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.

UNIT – I INTRODUCTION TO MATERIALS

Wood-Soft and hardwood, Plywood, laminated wood and particle boards–properties, manufacture & Uses.
 Synthetic Materials–Different types of Glass, their properties, manufacturing processes and uses. Plastics – injection molding & other manufacturing methods, etc.
 Fabrics – textile, Jute, leather etc. different types and their uses

UNIT – II BUILDING COMPONENTS

Drawings of the components of a building indicating

- Foundation –brick footing, stone footing & rcccolumn footing
- Concrete flooring, plinth beam & floor finish
- Superstructure- brickwork with sill, lintel, windows& sunshade
- Flat rcc roof with weathering course, parapet & coping.

UNIT – III TILED ROOFS

Drawings indicating various types of sloped & hipped roof Types of sloping roof –lean to & couple roof with Mangalore tiles, country tiles & pan tiles.

UNIT – IV STRUCTURALSYSTEMS

Structures–Components offload earring wall & rcc slab roof system-rcc beams, columns and framed structure

UNIT–V BASICSERVICES

Components of a toilet &bathroom – sanitary ware -w.c, wash basin, bidet, bathtub, Jacuzzi etcSanitary fittings – taps, mixers, shower units

SUGGESTED READINGS

6. R.J.S.Spencke and D.J.Cook, Building Materials in Developing Countries, John Wiley and Sons, 1983.
7. HUDCO - All you want to know about soil stabilized mud blocks, HUDCO Pub., New Delhi, 1989.
8. UNO - Use of bamboo and reeds in construction - UNO Publications. 1975

18IDS123	INTERIOR GRAPHICS- I								SEMESTER-I	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		3

COURSE OBJECTIVE:

- To help students to learn & understand the techniques of various methods of drawing
- To make them understand the use of colors & their effects in drawings.
- To understand various geometrical shapes.
- To be able to scale geometry and understand the sizes.
- To understand sciography and its representation.
- To be able to improve different lettering.

COURSE OUTCOME:

1. Ability to construct the 3d views and perspective drawings of the Interiors
2. Understanding of advanced documentation and measured drawing techniques.
3. Ability to express design in all dimensions
4. Ability to improve drawing skills.
5. To be able to understand the various measurements of the drawings.
6. To be able to express and exhibit drawings to the best understanding for professional practice

UNIT-I INTRODUCTION TO FREE HAND DRAWING

Basic exercises, Stilllife, Basic forms, effect to finest or present textures- Understanding of different types of perspective views using vanishing points, shading exercises etc.

UNIT – II SKETCHING

Outdoor sketching including Lawns, bushes, Water Bodies, Plants & trees in different media. Indoor sketching – furniture's, lights, corridor, lobby, class room etc.

UNIT – III MEASUREDDRAWING

Lettering- types, Scale, Measured drawing of furniture, Wall paneling, flooring pattern, ceiling pattern, Doors and windows.

UNIT – IV GEOMETRICAL DRAWING

Orthographic projections-Projection of lines, planesandsolids, section of primary solids such as pyramids, cones, cylinder, prism, sphere, cuboids, etc.

UNIT – V ISOMETRIC DRAWING

Isometric projection fall platonic solids such as cube, cuboid,hexagonal prism,pyramids,coneand sphere etc – isometric projection of singly and doubly curvesurfaces.

18IDT201	PSYCHOLOGY OF INTERIORS								SEMESTER-II	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits		2

COURSE OBJECTIVE:

- To create environments and spaces that encourage balance, achievement, positive interaction, and personal wealth for yourself and your clients.
- To exercise creativity and expertise and sculpt beautiful, and profoundly meaningful places and spaces.
- To create spaces that are psychologically pleasing and also understand the need to understand the requirements of the clients.
- To understand the hidden meanings behind the clients thoughts
- To understand psychology in various platforms like scale, color, volume and other such parameters.
- To understand the human behavior in various psychological settings.

COURSE OUTCOME:

1. Ability to construct, relate and understand the basic principles of psychological analysis on human mind.
2. To research and utilize techniques that is related to the social, economic and community behavior of human behind and to adapt the findings in utility and aesthetic designs.
3. To introduce the understanding of the research for the design process for the individual taste of every client in the professional practice.
4. Ability to understand spaces in relation to the color, scale , volume and other parametric of the design theory.
5. To develop the ability to understand the psych of the client in relation to his expectations and analyze possibilities of design application.
6. To have a successful design practice.

UNIT – I GESTALT PRINCIPLES

Perception of space through understanding associative aspects relating to space. Understanding cognitive theories and Gestalt principles of psychology related in the field of space making to develop an understanding of place making.

UNIT – II SPATIAL ELEMENTS

Relationship of spatial elements like floor, column, wall, window, door, stair, roof, light, color, textures to the psychology and perception of space.

UNIT – III MOVEMENT

Kinesthetic – Understanding perception while in movement and space organization around such a phenomena.

UNIT – IV SOCIAL PATTERNS

Analysis of human mind and his/her image of the world - social behavior patterns, traditional thinking and behavior and reflection of social world into physical environment.

UNIT – V HUMAN BEHAVIOUR

Human being and his behavior in various public and private areas – change of patterns in various cultures. Human behavior in a group. Activities and its relationship with grouping of people

Assignment: Space planning for public areas- restaurant, café, theatre lounge, waiting rooms, hotel foyer etc based on analysis of human behavior and perception of space.

SUGGESTED READINGS

2. Yi- Fu Tuan, Steven Hoelscher, Space and Place: The perspective of experience, University of Minnesota Press, 2001.
3. Setha. M. Low, Denise Lawrence – Zunigias, Anthropology of Space and place: Locating Culture, Wiley – Blackwell publishers, 2003.
4. Irwin Altman & Erwin. H. Zube, Public spaces and places, (Human Behavior and environment), Springer link, 1989.
5. Roger Downs, David Stea, Kenneth. E. Boulding, Image and environment, Transaction Publishers, 2005.

18IDT202	HISTORY OF INTERIORS – II								SEMESTER-II	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits		2

COURSE OBJECTIVE:

- To help the student understand the Modern movement in design in the later part of the 20th century.
- To make the students understand the traditional styles of decoration done in various states of India.
- To understand the global history and its applications in design.
- To appreciate technology of the ancient times and to relate adaptations in the current situation. To allow students to learn from the rich heritage the elements of aesthetic design.
- To understand the construction techniques of the ancient times.
- To understand the skilled labor and the presence of the same in the olden days.
- To understand the same scene in the contemporary era and its challenges to execute the same finesse.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.
3. The individual will be exposed to the present to the ancient day's comparison in techniques..
4. To use the techniques of the ancient times and to overcome the challenges faced by the same.
5. To respect the wide heritage that can be offered with respect to the various Architecture eras.
6. An understanding of the influences of lifestyle and culture of the respective times

UNIT – I RECENT DIRECTIONS

Design movements such as Late Modernism, High Technology, Post Modernism, and De-Constructivism and Minimalism

UNIT – II NON EUROPEAN TRADITIONS

Interiors in China, Japan & the Islamic World–Influences of Pre-Columbian American art & culture, African influences in interiors

UNIT – III SCANDINAVIAN TRADITIONS

Interior Design in Sweden, Finland, Norway. Contributions of Architects such as Alvar Alto, etc.

UNIT – IV INDIAN TRADITIONAL DESIGNS

Traditional Styles of design & decorations of homes & accessories across the states in India including Rajasthan, Gujarat, Andhra, Tamil Nadu, Madhya Pradesh etc.

UNIT – V PROJECTS

Assignments on recent directions & Non European traditions, Traditional designs of India.

SUGGESTED READINGS

1. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London 2005
2. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York 1976
3. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw-Hill, New York 2001.
4. Publication on Traditional Arts & Crafts of India, Ministry of Handicrafts Development, Government of India 2001
5. Interior Design, John F. Pile, Harry Abrams Inc

18IDP211	COMPUTER APPLICATIONS - I								SEMESTER-II	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.

UNIT I A UTOCAD TOOLS

Command programming – modifying commands, selection sets, Zoom, accurate inputs.

Introduction to Layers, Texts and Scale. Suggested Software - AutoCAD

UNIT II MODIFICATIONS

Command programming - transparent overlays, hatching utilities, assigned color and line types.

UNIT III INSERTS

Use of multiline, style, block, symbols and libraries.

UNIT IV PROJECT

Advance exercise in 2D drafting of various complex building drawings, incorporating Line types and Line types Styles.

UNIT V CUSTOMISZATION

XREFS, Tables, Modifying and creating Dimensions and customizing AutoCAD; Understanding concepts of Vport, concept of object linking, and editing session.

Suggested Software – AutoCAD

SUGGESTED READINGS

1. MS Office 2010 Product Guide by Microsoft
2. First Look Microsoft Office 2010, Katherine Murray, Microsoft
3. Sketch up 7 User Self help Tutorials and Video Tutorials
4. Cherly R. Shrock Beginning AUTOCAD. New Age International Publishers. New Delhi. 2006.
5. AutoCAD architectural users guide - Autodesk Inc., 1998.

18IDP212	MODEL MAKING								SEMESTER-II	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- Acquisition of hands on experience in model – building.
- To understand the suitability of different materials for different design requirements.
- To understand scale of a building and its structural challenges.
- To understand the relation of the building with its surrounding areas.
- To understand the nuances of design detailing in model making.
- The use of replicable materials to attain the best to real model.

COURSE OUTCOME:

1. To get hands on experience to handle model making materials.
2. To inculcate in students and understanding of ideas in 3d and physical models.
3. To understand the difference in executing blocks models and detailed models.
4. To understand scale in a building and its relation to a human user.
5. To be able to understand the properties of materials.
6. To understand various site and building levels.

UNIT – I INTRODUCTION TO MODEL MAKING

Introduction to concepts of model making and various materials used for model making

UNIT - II BLOCK MODLLING

Preparation of base for models using wood or boards. Introduction to block models of buildings (or 3D Compositions) involving the usage of various materials like Thermopolis, Soap/Wax, Boards, Clay etc.

UNIT - III DETAILED MODELLING

- Making detailed models which include the representation of various building elements like Walls, Columns, Steps, Windows/glazing, Sunshades, Handrails using materials like Mountboard, Snow- white board, acrylic sheets.
- Representing various your face finishes like brick/stone representation, stucco finish etc.
- Various site elements – Contour representation, Roads/Pavements, Trees/Shrubs, Lawn, Water bodies, Street furniture, Fencing etc.

UNIT - IV INTERIOR MODELS OF INTERIOR SPACES

Making models of the various interior spaces such as

- Residences
- Offices
- Retail Spaces
- Recreational Spaces

Scaled models of furniture.

UNIT – V CARPENTRY

Introducing the techniques of planning, chiseling & jointing in timber to learn the use of hand tools.

Exercise involving the design of simple furniture and making a model of the same.

SUGGESTED READINGS

1. BENN, The book of the House, Ernest Benn Limited, London 2007
2. Janssen, Constructional Drawings & Architectural models, Karl Kramer Verlag Stuttgart, 1973.
3. Harry W. Smith, The art of making furniture in miniature, E.P. Dutton Inc., New York, 1982

18IDS221	INTERIOR DESIGN - II								SEMESTER-II	
Marks	Internal	160	External			240	Total	400	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	12	Credits		8

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the basic concepts for the size of the project.
- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring, floor coverings, curtains, windows, doors and other elements of residential interiors.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.
7. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
8. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

UNIT I DESIGN PROCESS

Design Process: Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process. Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas.

UNIT II HORIZONTAL MOVEMENT

Horizontal movement- single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as: Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar.

UNIT III DESIGN PROBLEMS

Design problems involving simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as: Residence, petrol bunk, fire station, police station, Cottage for an elderly couple

UNIT IV ANTHROPOMETRY

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

13. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson 1951

18IDS222	INTERIOR MATERIALS AND CONSTRUCTION - II								SEMESTER-II	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	5	Credits		4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.

UNIT-IWALLS-TYPESOFMASONRY

Different types-Stonewalls-random rubble, coursed rubble, square rubble, polygonal rubble & Ashlar etc
Brick masonry-Types of bonds-single & double Flemish bond, header bond, stretcher bond, rattrap bond, ornamental bonding.

UNIT – II FLOORS

Floor coverings--softwood, hardwood-resilient flooring-linoleum, asphalt tile, vinyl, rubber, cork tiles-terrazzo, marble & granite- properties, uses & lying.
Floor tiles – ceramic glazed, mosaic and cementtiles-properties, uses and laying, and details for physically handicapped.

UNIT – III FALSE CEILING

Construction of various kinds of false ceiling such as thermacol, plaster of paris, gyp board, metal sheets, glass and wood. Construction of domes, vaults, & other special ceilings

UNIT-IVWALLPANELING

Paneling-Using wooden planks, laminated plywood, cork sheets, fiber glass wool & fabric for sound insulation and wall paneling for thermal insulation.

UNIT- V FINISHES

Paints- enamels, distempers, plastic emulsions, cement based paints- properties, uses and applications- painting on different surfaces –defects in painting, clear coatings & strains-varnishes, lacquer, shellac, wax polish & strains-properties, uses and applications. Special purpose paints-bituminous, luminous, fire Retardant and resisting paints- properties, uses and applications

18IDS223	INTERIOR GRAPHICS - II								SEMESTER-II	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To help students to learn & understand the techniques of various methods of drawing
- To make them understand the use of colors & their effects in drawings.
- To understand various geometrical shapes.
- To be able to scale geometry and understand the sizes.
- To understand sciography and its representation.
- To be able to improve different lettering.

COURSE OUTCOME:

1. Ability to construct the 3d views and perspective drawings of the Interiors
2. Understanding of advanced documentation and measured drawing techniques.
3. Ability to express design in all dimensions
4. Ability to improve drawing skills.
5. To be able to understand the various measurements of the drawings.
6. To be able to express and exhibit drawings to the best understanding for professional practice.

UNIT I - MEASURED DRAWING

Measured drawing of simple objects (like furniture, entrance gates, etc.) and building components (like columns, cornice, door, window, etc.). Detailed measured drawing/documentation of simple monument or building.

UNIT II - PERSPECTIVE

Perspective projection concepts, Types of Perspective views, Picture plane, vanishing points, station point, horizon, cone of vision, line of vision, etc. Perspective Projection of simple & complex geometrical forms. Two point perspective of simple objects, outdoor and indoor view of a building, etc. One point and three point perspective of interiors, Human Figures, Landscape elements and Vehicles in Perspective

UNIT III - SCIOGRAPHY

Principles of shades and shadows - Shadows of basic shapes and solids; Shadows of architectural elements, etc; Shadows of circular solids; Shadows of buildings, etc.

UNIT IV - RENDERING TECHNIQUES

Colour Pencils Rendering, Water Colour Rendering, Pen & Ink Rendering, Marker Rendering Techniques, Using Digital & Mixed Media Rendering Techniques, Free hand drawings

UNIT V - GRAPHICAL PRESENTATION

Visual representation of the design scheme – interior and exterior perspective views – shades and shadows – use of various rendering techniques.

SUGGESTED READINGS

1. Francis Ching, Architectural Graphics, Van Nostrand and Reinhold Company, New York, 1975.
2. Edward J.Muller,Jemes G. Fauselt, Philip A. Graw Architecture Drawing and Light Construction Prentice hall Publishers Columbus. 1999.
3. Ernest Norling, Perspective drawing, Walter Fostor Art Books, California, 1986.
4. Bernard Alkins - 147, Architectural Rendering, Walter Foster Art Books, 1986.
5. Learn to paint with Water Colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes. Author: Alwyn Cranshaw, Publisher: William Collins Sons & Co. Ltd., London, 1981.
6. Architectural Rendering, A Technique of Contemporary Presentation, Author: Albert O. Halse, Publisher, Mc Graw Hill Book Company, New York, 1972.
7. Elisabetta Drudi, Figure Drawing for Fashion Design, The Pepin Press Singapore. 2001.

18IDT301	FURNITURE DESIGN								SEMESTER-III	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits		2

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To understand different types of lighting and to use apt luminaries and fixture.
- To make different styles of furniture both in modular and in customized.

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have the ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To be able to make electrical drawings with apt representation and accommodating different types of lighting details.
6. To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics.

UNIT – I - TYPES OF FURNITURE

Furniture categories, exploration of the idea of furniture, role of furniture in interior design, Design approaches in furniture design.

Assignment: Measured drawing of a piece of furniture – plan, elevation and drawings on full scale

UNIT – II – STYLES OF FURNITURES.

Brief overview of the evolution of furniture from Ancient to present: Various stylistic transformations. Furniture designers and movements. Analysis of furniture in terms of human values, social conditions, technology and design criteria.

UNIT - III FUNCTION AND UTILITY

Functional and formal issues in design: study and evaluation of popular dictums such as “Form follows function”, “Form and function are one”, “God is in Details” etc.

Evaluation of visual design: study of Gestalt theory of design – law of enclosure, law of proximity, law of continuity etc.

Human factors, engineering and ergonomic considerations: principles of universal design and their application in furniture design.

UNIT – IV PROCESS OF MANUFACTURE

An introduction of various manufacturing processes most frequently adopted in furniture design such as Injection Molding, investment casting, sheet metal work, die casting, blow- molding, vacuum - forming etc.

UNIT – V EXERCISE

Seating Design: Different types of seating with a focus on the following –

- Functionality
- Aesthetics
- Style
- Human factors and ergonomics

The other component to be considered is the cost of the designed furniture piece.

Assignment: Design with wood, metal and combination of materials. Drawings, details and prototype making. Market survey of available products and economics of products.

UNIT – VI STORAGE

Storage systems: Functional analysis of storage systems and thereby deriving types of cabinets needed for interior spaces – kitchen cabinets, wardrobes closets, book cases, show cases , display systems etc.

Assignment: Exercise to design kitchen cabinets for a given kitchen.

UNIT –VII MODULAR

Modular approach to furniture design – various materials, combination of materials and its application – design parameters, ergonomics etc. Drawings and prototype. Survey of several modular systems available for different functions in the market. Exploration of wood, metal, glass, plastics, FRP as materials for system design. Cost criteria of furniture design. Assignments: Typology of furniture with respect to the different states in India.

Design for middle and lower middle income groups- elements of living units, education institutes, health facilities, street elements etc.

SUGGESTED READINGS

1. Joseph Aronson, The Encyclopedia of Furniture: Third Edition ,1961
2. Bradley Quinn, Mid-Century Modern: Interiors, Furniture, Design Details, Conran Octopus Interiors, 2006.
3. Jim Postell, Furniture Design, Wiley publishers, 2007.
4. Edward Lucie-Smith , Furniture: A Concise History (World of Art) , Thames and Hudson, 1985
5. Robbie. G. Blakemore, History of Interior Design and Furniture: From Ancient Egypt to Nineteenth-Century Europe, Wiley publishers, 2005.
6. John.F. Pile, Interior Design, 2nd edition, illustrated, H.N.Abrams, 1995.

18IDT302	INTERIOR SERVICES I - PLUMBING & WATER SUPPLY								SEMESTER-III	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits		2

COURSE OBJECTIVE:

- To understand hennaed and applications of water supply and sanitation in buildings with exposure to various fixtures and fittings,
- water supply and sanitary installations at work sites.
- To understand the practical course of water sanitation needs both outdoors and indoor.
- To arrive at various calculation of tanks and sumps to physically build it in the site.
- To understand the basic toilet design
- To understand the services piping in large scale projects.

COURSE OUTCOME:

1. Understanding of water supply, sewage, drainage and waste systems in buildings.
2. Ability to conceptually plan/ design the above for a given simple context.
3. Awareness of sustainable principles and best practices.
4. To be able to understand the need and execution of dry ad wet concepts in toilets.
5. To understand the differences and treatments for water, sewage and sullage disposal systems.
6. To understand the technical issues during the servicing of the pipes, and the importance of ducts in larger scale of buildings.
7. To understand various water sources and its uses.

UNIT I WATER SUPPLY IN BUILDINGS

Standard of portable water and methods of removal of impurities, Consumption order of water for domestic purposes, Service connection from mains, House-service design, tubewell, pumping of water, types of pumps, cisterns for storage

UNIT II BUILDING DRAINAGE

Layout, Principles of drainage, Trap type, materials and functions, Inspection chambers, Design of Septic tanks and soak pits, Ventilation of house drains

Anti-syphonage or vent pipes, one and two pipe systems

Sinks, bath tub, water closets, flushing cisterns, urinals, wash basins, bidet, shower panel etc.

UNIT III PLUMBING

- Common hand tools used for plumbing and their description and uses, Joints for various types of pipes, Sanitary fitting standards for public conveniences
- Different types of pipes and accessories for water supply, controlling fixtures like valves, taps, etc. Fittings and Choice of materials for piping: cast iron, steel, wrought iron, galvanized lead, copper, cement
- concrete and asbestos pipes, PVC pipes
- Sizes of pipes and taps for house drainage, testing drainage pipes for leakage-smoke test, water test etc, CI pipes for soil disposal and rain water drainage, Wrought iron, steel and brass pipes.
- Rainwater disposal drainage pipes spouts, sizes of rainwater pipes

UNIT IV SOLID WASTE DISPOSAL

Solid wastes collection and removal from buildings. On-site processing and disposal methods. Aerobic and anaerobic decomposition

UNIT V SERVICES STUDIO

Preparation of plumbing layout of a single storey building & working drawings of various fittings and fixtures of water supply and sanitary installations.

SUGGESTED READINGS

1. Charangith shah, Water supply and sanitary engineering, Galgotia Publishers 2002
2. AKamala&DLKanthRao, Environmental Engineering, Tata McGraw–Hill publishing Company Ltd 1993
3. Technical teachers Training Institute (Madras), Environmental Engineering, Tata McGraw – Hill publishing Company Limited 1988
4. Marrimuthu, Murugesan, Padmini, Balasubramanian, *Environmental Engineering*, Pratheeba publishers 1986
5. S.C. Renewal, Watersupply and sanitary engineering, Charotar publishing house

18IDP311	COMPUTER APPLICATIONS - II								SEMESTER-III	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	4	T	0	P/S	0	Credits		3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.

UNIT – I INTRODUCTION TO COMPUTER AIDED 2D DRAFTING

Understanding the use of drawing tools, object editing, drawing objects, filing and setting drawing units, scales, limits that size and dimensioning, lettering. Setting up of drawing of various simple objects with Complete text and dimensioning.

UNIT – II ADVANCE COMPUTER AIDED 2D DRAFTING 20

Advance command programming– Transparent overlays, hatching utilities, assigned color and line type, use of multi-line, style, block, symbol library, manipulation for accurate drawings, incorporating the above mentioned utilities.

UNIT – III PRODUCTIVITY TOOLS

Introduction to tools of productivity–Blocks, slide facilities, script files and attributes. Understanding concepts of View port, concept of object linking and editing session.

UNIT – IV INTRODUCTION TO 3D DRAFTING

Introduction to 3D Modeling techniques and construction planes, drawing objects, 3D surfaces, setting up elevation and thickness, and use of dynamic projections. Solid modeling with driving, primitive command and Boolean operations. Use of region modeling & solid modifiers.

SUGGESTED READINGS

1. V. Rajaraman, principles of Computer Programming –Prentice Hall of India 1983
2. Byron S. Gottfried, Theory and Problems of Programming with C. Schaum's outline series, McGraw 1980
Hill Publishing Co.
3. Auto CAD Reference Manual – Autodesk UNC, 1998
4. Sham Tickoo, Understanding Auto CAD– 14

18IDP312	WORKSHOP (WOOD, CANE& BAMBOO ENGINEERED WOOD, GLASS, STONE)								SEMESTER-III	
Marks	Internal	60	External			60	Total	150	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	6	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design.

COURSE OUTCOME:

1. Ability to understand and construct furniture to live size
2. understanding the scale of drawing to life size
3. To use tools related to wood glass and alternative substitution to wood.
4. To understand properties and usage of materials henceforth.
5. To understand modular furniture through engineered wood.
6. To understand the various capacities of hardware for the various materials.

To understand wood joints and its usage in various circumstances

UNIT – I: WOOD

Types of wood –natural and artificial and its properties

Engineered wood – plywood, MDF, HDF, Etc

Working with wood and wood products to understand material parameters. Wooden joinery and its strength.

Wood polishes and other finishes – color and surface quality. Laminates also should be treated as one of the wood finishes with lapping and other techniques

UNIT – II: SCALES

Making of elements of various scales in the built form such as interior space making elements, furniture forms, various products, Art & Artifacts by using wood.

UNIT – III: ALTERNATIVE MATERIALS

Introduction to cane, bamboo, working with bamboo/cane and their products to understand material parameters. Bamboo and cane joinery and its strength. Polishes and other finishes. Understanding the material and tools by making objects which allow students to explore the forms, surfaces, textures and patterns. Explore different joinery, support conditions, and woven surfaces.

UNIT – IV: GLASS

Working with glass and understand blowing techniques, hardware fixing, polishing, etching, sand blasting techniques of the glass material. Understanding of the properties and using the same in an exercise to create 3d model with glass. Also understanding the usage and fixing of glass in various interior models.

SUGGESTED READINGS

1. Carol Stangler, The crafts and art of Bamboo, Rev. updated edition, Lark books, 2009.
2. Dr Angelika Taschen, Bamboo style: Exteriors, Interiors, Details, illustrated edition, 2006.
3. Albert Jackson & David Day, The complete manual of wood working, knopf publishers, 1996.
4. Lonnie Bird, Jeff Jewitt, Thomas lie- Nielsen, Taunton's Complete Illustrated Guide to Woodworking, Taunton, 2005.
5. Peter Korn, Wood working Basics: Mastering the essentials of craftsmanship, Taunton , 2003.

18IDS321	INTERIOR DESIGN - III								SEMESTER-III	
Marks	Internal	160	External			240	Total	400	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	12	Credits		8

COURSE OBJECTIVE:

- To develop an understanding of various degrees of enclosures and various types of relationship between spaces.
- Understanding of the various effects that could be created by manipulating the enclosing elements such as walls, roof etc.
- To understand the design proximity and relation of spaces.
- To understand the basic concepts for the size of the project.
- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring, floor coverings, curtains, windows, doors and other elements of residential interiors.

COURSE OUTCOME:

1. An understanding of the qualities of different elements as well as their composite fusions.
2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
4. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
5. To be able to describe an understanding that is both in representation and verbally present the same.
6. To update and to introduce various other methodologies to enhance the skill set.
7. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
8. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

UNIT – I SHOPS

Planning for retail activity – anthropometrics – types of Shop layouts Modular units. Materials used in counters, shelves, worktops, their comparative study. Lighting & colour scheme – natural & artificial light.

UNIT – II COMMERCIAL SPACES

The art of selling-displays/products/marketing, design of display units, design of boutiques, showrooms. Concepts in modern day Retail interiors – materials & finishes – colour, texture & pattern.

UNIT – III SHOPPING MALLS

Product display – windows/internal displays/hierarchy of product display/power of visual communication/graphics Exhibition spaces – display for exhibition Lighting design for commercial spaces – task/display/atmospheric/focal lighting Coloring commercial spaces – coding/decoding/visual communication Design of commercial Environments such as Malls, Shopping Arcades Etc.

The list of suggested topics to be covered as design problems:

Single room residence, Doctor's clinic, kindergarten school, Architect's studio, Small cafeteria, Bank extension counter, Departmental store, local police station, local post office, products used by architects in the studio, products for children in kindergarten etc.

Note: At least two major exercises and two minor design/time problems should be given.

In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

SUGGESTED READINGS

1. Karlen Mark, Space planning Basics, Van Nostrand Reinhold, New York, 1992.
2. Joseph D Chiara, Julius Panero, & Martin Zelnick, Time Saver standards for Interior Design & space planning, 2nd edition, Mc-Graw Hill professional, 2001.
3. Francis.D. Ching & Corky Bingelli, Interior Design Illustrated, 2nd edition, Wiley publishers, 2004.
4. Julius Panero & Martin Zelnick, Human Dimension & Interior Space : A source book of Design Reference standards, Watson – Guptill, 1979.
5. Maureen Mitton, Interior Design Visual Presentation: A Guide to Graphics, Models, and Presentation Techniques. John Wiley and Sons, 2003
6. Mark.W. Lin, Drawing and Designing with Confidence: A step-by-step guide, Wiley and Sons, 199

18IDS322	ADVANCED MATERIALS AND APPLICATIONS								SEMESTER-III	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		4

COURSE OBJECTIVE:

- Understanding the basic components of the buildings that envelope a small buildings
- Understanding the different types in each element and different treatments for the same.
- Understanding function of each component of a building like foundation, walls, beams, column, and roofs.
- Understanding simple roof & floor finishes.
- To understand the primary basics of the loading in a structure and the distribution of the load
- To understand the composition and properties of the materials.
- To understand the various components of interior space as doors, windows, staircases.

COURSE OUTCOME:

1. Students learn Interior construction details using naturally occurring building materials.
2. Student are taught to judge the structure before making any structural changes required in renovation.
3. Working format with for materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
4. Students are to submit drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.
5. Students will be honing the skills of technical drawings and their representations.
6. Students will be able to use this material knowledge during construction and can find best materials suited for apt activities.
7. To inculcate in students and understanding of ideas in 3d and physical models.

UNIT- I DOORS

Types including, open able, sliding, folding pivoted Lodged and braced, paneled doors, glazed doors, Joinery details for doors.

UNIT – II PARTITIONS

Details of fixed, sliding and sliding and folding partitions with wood, steel and aluminum frames & panels in glass, particle board, MDF, gyp board and plywood.

Types according to profile– straight flight, doglegged, quarter turn, half turn, bifurcated, spiral& helical.

Types based on materials (timber, wood, steel, synthetic materials). Details of handrails & balusters.

Designing and detailing for physically handicapped

UNIT – III TIMBERWINDOWS

Types –Casement, fixed, horizontal sliding, vertical sliding, pivoted, and top hung types

Ventilators- top hung, bottom hung, pivoted, louvered, fixed types. Joinery details for windows, ventilators

UNIT – IV WINDOWS IN STEEL AND ALUMINIUM

Details of sliding and open able windows in aluminum and steel frames with glazed panels

UNIT – V STAIRCASE

Types according to profile– straight flight, doglegged, quarter turn, half turn, bifurcated, spiral& helical.

Types based on materials (timber, wood, steel, synthetic materials). Details of handrails & balusters.

Designing and detailing for physically handicapped

SUGGESTED READINGS

1. Dr. B.C Punmia, building
2. construction, Laxmi publications Pvt. Ltd., New Delhi, 1993.
3. M.S Shetty, concrete technology, S. Chand & co. Ltd ., New Delhi , 1986
4. S.C Renewal – engineering materials– Charotar publishing, Anand 1982
- 4 W.B McKay, building construction, VOL 1-4 , Longmans, u.k 1981
- 5 Laxmi publications Pvt. Ltd., New Delhi, 1993.

18IDS323	INTERIOR LANDSCAPE								SEMESTER-III	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	6	Credits		3

COURSE OBJECTIVE:

- To develop an understanding about the design of interior landscape
- To give special emphasis on the choice and care of plant materials used in the interior spaces.
- To study about the various landscaping elements and their application in interior spaces.
- To develop and understanding between outdoor and indoor landscape areas.]
- To have apt knowledge of the regional or vernacular plantation to use in particular regions and climates.
- To understand the various features using natural and manmade elements in landscape detailing.

COURSE OUTCOME:

1. Awareness of the role of landscape design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of landscape design and their scope.
3. Sensitivity towards evolution of different garden and landscape design across time and context.
4. An understanding of landscape design with respect to site planning and different functional typologies of spaces
5. To use landscape according to the region, climate location and other detail.
6. To understand and provide physical requirements for plants to keep it in the living condition and maintenance of the same.

UNIT – I INTERIOR LANDSCAPING

Definition, classification of plants, indoor plants and their functions, layout & components, Floriculture– Commercial, ornamental, Selection of plants & pest control.

UNIT – II PHYSICAL REQUIREMENTS OF PLANTS

Physical requirements of plants–light, temperature, water, planting medium, soil separator, weight of plants, acclimatization & maintenance.

Techniques to meet physical requirements.

UNIT – III INTERIOR LANDSCAPING ELEMENTS & PRINCIPLES

Various interior landscaping elements – water bodies- pools, fountains, cascades

Plants, rocks, artifacts, paving & lighting, Design guidelines-plant texture & color, plant height, plant spacing.

UNIT – IV ROOF AND DECK LANDSCAPE

Protection of the integrity of the roof and structure, provisions for drainage, light weight planting medium, irrigation, selection of materials, water proofing, provision for utilities and maintenance.

UNIT – V EXERCISE ON INTERIOR LANDSCAPE

- Courtyard design
- An outdoor room design
- Terrace garden

SUGGESTED READINGS

1. Time saver standards for landscape architecture. 2014
2. Planting design by Theodore D.Walker, VNR Publications New York. 1987
3. Landscaping Principles and Practices by Jack E.Ingels, Delmar Publishers. 1987

18IDT401	LIGHT AND COLOR									SEMESTER-IV
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	0	Credits		2

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To understand different types of lighting and to use apt luminaries and fixture.
- To make different styles of furniture both in modular and in customized.

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To be able to make electrical drawings with apt representation and accommodating different types of lighting details.
6. To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics

UNIT- I INTRODUCTION TO DAYLIGHTING

Nature light–Wave length, Photometric quantities–intensity, Flux, illumination and luminance, visual efficiency, sources of light, day light factor concept, design sky concept, day lighting requirements.

UNIT – II ARTIFICIAL LIGHTING

Electric lamps – incandescent, fluorescent, sodium vapor, mercury, halogen and neon. Different types of lights in interior and exterior – task lighting, special purpose lighting. Calculation of artificial lighting, Guidelines for lighting design, Glare in artificial lighting.

UNIT – III EFFECT OF COLOR IN LIGHTING

Colors, color schemes - Monochromatic, analogous, complementary color schemes, triadic and tetradic schemes, effects of color in different areas, color temperature, psychological effects of color in interiors, Factors affecting color, Prang theory – Color wheel, Munsell system and Oswald system.

UNIT - IV LUMINAIRES & FIXTURES

Definition, different luminaires for lighting, lighting control system- benefits & application, Impact of lighting, fixture types - free standing or portable, fixed, light fixture control. Lighting accessories- switches, sockets, fused connection units, lamp holders, ceiling roses etc.

UNIT - V CASE STUDY

Study of projects based on different lighting concepts used in interiors and exteriors.

SUGGESTED READINGS

1. The Art of living- Randall whitehead, 2003
2. Lighting design, sourcebook- Randall whitehead, 2002
3. Light right- M.K. Halpeth, T. Senthil kumar, G. Harikumar 2004
4. Concepts of lighting, Lighting design in Architecture- Torquil Barker 1997

18IDT402	INTERIOR SERVICES II – ELECTRICAL WIRING, LIGHTING AND AIR CONDITIONING								SEMESTER-IV		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To understand the need and application so air conditioning,
- To understand the need and aptness for areas that requires acoustics.
- To provide details of electrification and mechanical services in buildings with exposure to various systems, methods and fixtures.
- To be able to provide fire safety standards to buildings that are specified in the byelaws.
- To understand sound insulation methods and to be able to insulate rooms based of the decibel levels that will be required to be maintained.
- To understand the refrigeration process and to be able to execute the best system based on the function and need of the AC in buildings.

COURSE OUTCOME:

1. Understanding basic concepts of air-conditioning and to be able to produce suitable drawings for execution of the same in the building drawings.
2. To be able to calculate the load on air-condition and to be able to suggest the power and input required for the cooling system.
3. To produce suitable electrification and mechanical methods for the cooling system.
4. To understand the need of heating system and to understand the provision of the same and to understand the difference between the cooling and heating systems.
5. Ability to conceptually plan/ design the above for a given simple context.
6. Awareness of sustainable principles and best practices along with acoustics and detailing.

UNIT I BASICCONCEPTS ANDSYSTEM COMPONENTS IN AIR CONDITIONING

Vapour compression cycle – Compressors – Evaporators –Refrigerant control devices – Electric motors
– Air handling units – Cooling towers.

UNIT – II AIR-CONDITIONING SYSTEM AND APPLICATIONS

Window type and packaged air conditioners –Chilled water plants –Fan coiled systems–Water piping–Cooling load. - Air-conditioning systems for different types of buildings – Duct lay out etc.

UNIT III FIRE SAFETY

Mechanism of fire spread in building and prevention – Fire safety standards– Concepts in fire protection – Fire fighting installation and requirements- Heat sensitive detectors –Smoke detectors –Automatic water sprinkler system- Foam systems.

UNIT IV ACOUSTICS AND SOUND INSULATION

Room acoustics - resonance, reverberation, echo, and reverberation time, simple exercise using Sabine's formula.-Acoustical requirements of different types of building. – Sound absorption, absorption co-efficient and their measurements, Absorbing materials used and their choices, exercises involving reverberation time and absorption co-efficient. Sound insulation materials

UNIT VELECTRICAL SYSTEMS

Single/Three phase supply– Protective devices in electrical installation — ISI Specifications - Types of wires, Wiring systems and their choice –Planning electrical wiring for building interiors – Main and Distribution boards- Typical Electrical layout for interiors.

SUGGESTED READINGS

1. M.H.Lulla, Air conditioning 2003
2. V.K.Jain, Fire Safety in Buildings. 2012
3. Peter templeton & Saunders – Detailing for architectural acoustics –Architectural press, 1994
4. R.G.Hopkinson andJ.D.Kay, the Lighting of Buildings, Faber and Faber, London,1996

Note: Detailed acoustic design and lighting should be done for any one type of building.

18IDP411	COMPUTER APPLICATIONS - III									SEMESTER-IV	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours/Week		L	4	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of softwares.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM
- To help the student understand the technology of computer and its terminology.
- To enable the student to understand the applications of the software and graphic system.

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.
7. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering

UNIT – I

Starting Auto CAD: Introduction to the menu, starting drawings from scratch. Creating and using templates- starting drawings with setup wizards. Saving and closing a file.

Using co-ordinate systems – The UCS. Working with Cartesian and polar coordinate systems. Using displays with shortcuts.

UNIT – II

Setting up the drawing environment – setting the paper size, setting units, grid limits, drawing limits, snap controls. Use of paper space and model space.

Basic commands dealing with drawing properties: Layer control, change properties, line weight control, etc.

Inquiry methods: Using data base information for objects, calculating distance, angle, areas etc.

UNIT – III

Dimensioning commands and blocks: Dimensioning the objects in linear, angular fashions along with quick time dimensioning etc. Creating and working with blocks, creating symbols, use of blocks in creating a layout, of a residential area- one exercise to be done as lab assignment.

UNIT – IV

Orientation towards 3D: 2D to 3D conversion, perspective view, walk through the layout.

3D-Max: Understanding 3D, theory behind 3D modeling. Preparing for construction of 3D models.

Construction of 3D surface models- extrusion, wire frame, creation of a shell, elaborates surfaces.

UNIT –V

Solid modeling: concepts behind solid modeling, composite solids creation and modification, solids display and inquiry. Rendering and presentation. Printing and plotting.

SUGGESTED READINGS

1. Teyapoovan. T., Engineering Drawing with Auto CAD 2000. Vikas Pub House Pvt Ltd, New Delhi, 2000.
2. Parker, Daniel and Rice, Habert. Inside Auto CAD Daniel, 1987.
3. Geomura, Auto CAD, Release 2000.
4. Oscar Riera Ojed , Lucast Guerre, Hyper realistic Computer Generated Architectural Renderings . 1996
5. Giuliano Zampi Conway Lloyd Morgan, Virtual Architecture 1998

18IDP412	WORKSHOP								SEMESTER-IV	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	6	Credits		3

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design. To understand the basic methods of furniture making with focus on hands on methods regarding workshop practices in metal
- To understand the joineries and also understand the properties in these materials. This will help them add new elements into their design which could be their own personal ideas.

COURSE OUTCOME:

1. Ability to understand and construct furniture to live size
2. understanding the scale of drawing to life size
3. To use tools related to wood glass and alternative substitution to wood.
4. To understand properties and usage of materials henceforth.
5. To understand modular furniture through engineered wood.
6. To understand the various capacities of hardware for the various materials.
7. To understand wood joints and its usage in various circumstances.
8. Ability to understand and construct furniture to live size understanding the scale of drawing to life size
9. To use tools related to metal and alternative substitution to metal and combination of wood, glass and metal.

UNIT – I TO 5

Types of metals, properties of metals, definitions of terms with reference to properties and uses of metals, various methods of working with metals, fixing and joinery in metals, finishing and treatment of metals., finishes on metals. Standard specifications.

Metals in built form activity – horizontal, vertical and inclined surfaces – in interior environment elements-products and furniture forms- doors, windows, jalties, railing, stair etc. Metals and other materials – form and joinery.

Note: Learning should be by feel and working with metals to explore design.

SUGGESTED READINGS

1. John .F. Pile, Interior Design, Harry. N Abrams, Inc. New York . 1995.
2. Ron Fournier, Metal Fabricator's Handbook, Rev. Illustrated edition, HP Books, 1990.
3. Stanford Hohauser, Architectural and Interior models, Van Nostrand Reinhold, 1970.

18IDS421	INTERIOR DESIGN - IV								SEMESTER-IV	
Marks	Internal	160	External			240	Total	400	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	12	Credits		8

COURSE OBJECTIVE:

- Space planning process (block diagram, concept statement)
- Furniture
- Historic style
- Structural integration
- Material selection
- Color
- Rendering
- Design Process/methodology
- Creativity /originality
- Documenting space (sketch and photo documentation)
- Anthropometry and ergonomics
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
5. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
6. To be able to describe an understanding that is both in representation and verbally present the same.
7. To update and to introduce various other methodologies to enhance the skill set.
8. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
9. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The list of suggested topics to be covered as design problems:

- Thematic space making with Art and craft forms of our own culture in India – East, West, North, Central and so on.
- Design of living units of various geographical locations and culture by involving historical periods, styles and use of craft in its inherent quality and form – craft and living environment.
- Applications of art / craft at public level spaces- lounge (hotel), restaurant of specific ethnic characteristics.
- Response to today's situation of urban society – For a given building create contemporary homes of modern society – needs, realities, value system etc.

Note: At least two major exercises and two minor design/time problems should be given.

In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

SUGGESTED READINGS

18IDS422	FURNITURE CONSTRUCTION DETAILING & MODULAR / CUSTOM MADE								SEMESTER-IV		
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits			3

COURSE OBJECTIVE:

- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To understand the various types of furniture's from history to the current date.
- To produce designs that will suit the function, location and the ergonomics.
- To make different styles of furniture both in modular and in customized.
- During this semester students will focus on the craft of the Furniture -Maker, utilizing state of-the-industry procedures and equipment. Emphasis will be on wood and wooden products as a construction medium

COURSE OUTCOME:

1. Awareness of the role of light and color in design with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.
2. Knowledge about the elements of light and color
3. Sensitivity towards evolution of different color combination and realization of color in different lighting.
4. To have to ability to understand the furniture in plans sections and elevation and to have ergonomic detail compliance in every format
5. To introduce the idea of detailing in a micro concept of furniture design and to be able to produce products suitable for comfort, function and aesthetics.
6. Ability to construct the and understand the furniture design and detailing..
7. Understanding the anthropometry of the furniture and materials used to crate comfort and aesthetics.

UNIT – I INTRODUCTION TO WOOD

Wood as a building material: Identification, selection, application, types of wood, commercial Classification, nomenclature, structure Anatomy and Ultra structure, Conversion figure and natural defects, availability of wood products, wood based panels such as plywood ,MDF,HDF, Particle board , pre laminated boards etc.

UNIT – II THE BASICS OF FURNITURE CONSTRUCTION & TOOLS

Measurement and measurement systems, Furniture Construction: Drawers, Cadenza, dining chairs, sofa, settee, cots detail. Preparation for finishing, Furniture Materials Specifying timber, finishes etc . Detailed construction drawings & explaining construction and material finishes.

UNIT – III PLYWOOD CONSTRUCTION TECHNIQUES

Plywood as building material, Layout techniques and machining plans. Fabrication techniques - stapling, gluing.
Furniture Joinery - screw joinery, nail joinery, Mortise& tenon joints, Dovetail joints, Dowel joints, Edge joints.

UNIT – IV MODULAR KITCHENS

Modular kitchens, components basis of Construction involving, layouts, carcass, hardware selection, fixing details finishes and special types such as tall units, grain trolleys, and carousels fold outset.
A detailed project involving the design of a small kitchen using modular components.

UNIT – V FURNITURE MODEL MAKING

Preparation of block models of furniture using wood, boards, leather, fabric, thermacol, clay, soap/wax etc.

SUGGESTED READINGS

1. S. C. Renewal - Engineering materials – Charotar Publishing, Anand 1980
2. Francis D. K. Ching - Building Construction Illustrated, VNR, 1975,
3. Fevicol Furniture series
1. W.B.Mckay –Building construction Vol1 –Longmans, UK 1981
2. W.B.Mckay –Building construction Vol3 –Longmans, UK 1981

18IDS423	LIFESTYLE ACCESSORIES DESIGN								SEMESTER-IV	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	6	Credits		6

COURSE OBJECTIVE:

- To introduce students to all accessories that could be used in each and every space in design.
- To make students understand the need for aesthetics in design
- To use all above said materials in the most creative fashion that they could use.
- To help the student understand day lighting and technology of artificial lighting.
- To equip the student to understand and successfully apply lighting techniques with color effects.
- To be able to experiment new materials and to understand the properties of the materials.

COURSE OUTCOME:

1. Ability to decide the other factors of design which has no limitations and understand the importance of appropriate accessories to fill in the space as per design requirements.
2. Understanding the luxury element in interior design which leads to a picture perfect assimilation of items in design principles.
3. To understand the development and technology of the product and the procedure of manufacturing.
4. To be able to approach the design with the utmost importance to the function and the aesthetics to be incorporated.
5. To be able to physically make a product that faces all challenges laid for the execution and design of the same.
6. To be able to assess the working of the project and to be able to redesign with the errors o be minimized as much as possible.

UNIT –I ROLE

In sight of various products and lifestyle accessories in the interiors. Role of accessories in interiors. Integration of accessories in interior design. Design approaches in product and lifestyle accessories design with a focus on functionality, ergonomics, aesthetics, multiple usages etc.

UNIT – II DEVELOPMENT AND TECHNOLOGY

Stylistic development of decorative accessories from the past to present with insight into technological advances and the influences of social, economic and political factors on their

Design. Brief study of period room settings with the context of decorative accessories complementing the architecture and interior design.

UNIT – III MATERIALS AND PROCESS

Study of materials and processes adopted in accessories design. Basic understanding of construction principles, anthropometrics, principles of sizes and proportions, modeling, rapid prototyping, color, texture etc. with broad orientation to socio-cultural and historical context of the sector. Orientation to Indian as well as global context of interiors, trends and market.

UNIT – IV DESIGN APPROACH

Design approach with limited constraints inherent in accessory products. Evolving the strategy of design with integration of technical complexities and lifestyle influences. Development of the design of products and accessories to specific interiors and prevailing trends. Broad based approach towards innovative design and application to multi products and multi materials in manufacturing interior products and lifestyle accessories.

UNIT – V PROJECT

A detailed study involving all the design aspects of any of the following lifestyle accessories: luminaire design, glassware, lighting, textiles, mirrors, clocks, wall coverings etc.

SUGGESTED READINGS

1. Laura Slack, What is product Design? Roto Vision publishers, 2006
2. Treena Crochet and David Vleck, Designer's Guide to Decorative Accessories, Prentice Hall, 1st edition, 2008.
3. Michael Ashby, Kara Johnson, Materials and Design: The Art and Science of material selection in product design, Butter Worth Heinemann, 1st edition, 2002.
4. International Design Yearbook, 1995: Furniture, Lighting, Tableware, Textiles and Products, Books Nippan, 1996.
5. Karl. T. Ulrich, Steven D. Eppinger, Product Design and Development, McGraw-Hill Education Singapore; 4th edition, 2007

18IDT501	CONTEMPORARY INTERIORS									SEMESTER-V	
Marks	Internal	40	External			60	Total	100	Exam Hours		3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To help the student understand the designs from the industrial age to the present information age.
- To know more on the Modern Movements in Interior design from the beginnings of 20th century.
- To help students acquire knowledge of the current happenings and the classification of the importance of a particular information.
- To be understood and execute various styles like modernism, post modernism, contemporary, etc,
- To be able to understand the concepts of minimalism, and international design style.
- To be able to design a particular style of the interiors based on these understandings.

COURSE OUTCOME:

1. An awareness of the spread and varied later directions of modern interiors across the world.
2. An understanding of interior production from the 2060s as driven by large scale changes across the world.
3. Familiarity with contemporary forces and directions in interiors across the world.
4. To be fore thought and to be able to design for the future with an understanding of the recent history.
5. To be able to appreciate and be a critic to all works of famous architects under each movement.
6. To understand different regions and its interior design style to be able to regain global cultures understanding.

UNIT – I EARLY PIONEERS

Art nouveau, the post Industrial era works of Charles Renée Mackintosh, Antonio Gaudi, Gerrit Rietveld and their expressionist interior design.

UNIT – II BAUHAUS AND POST WAR MODERNISTS

Walter Gropius/ Bauhaus, De Stijl, Mies Van Der Rohe, Art Deco, Postwar Modernism.

UNIT – III MODERNISM

Interiors of LeCorbusier, Frank Lloyd Wright, Louis Khan, Kenzo Tange and Oscar Niemeyer

UNIT – IV INTERNATIONAL STYLE

The works of Alvar Alto, Phillip Johnson, Charles and Ray Eames, Eero Saarinen, Eero Aarnio, Arne Jacobsen.

UNIT – V POST MODERNISM AND MINIMALISM

Interiors of Zaha Hadid, Santiago Calatrava, Frank Gehry and Peter Eisenmann.

SUGGESTED READINGS

1. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London 2012
2. Interior Design & Decoration, Sherril Whiton, Prentice Hall 2006
3. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York 2004
4. History of Architecture, Sir Banister Fletcher, CBS Publishers & distributors, New Delhi 1996
5. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York. 2001

18IDT502	INTERIOR SERVICES III – ACOUSTICS AND CLIMATE RESPONSE								SEMESTER-V	
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits		2

COURSE OBJECTIVE:

- To understand the need and application so fair conditioning, acoustics, electrification and mechanical services in buildings with exposure to various systems, methods and fixtures.
- To understand human comfort and to be able to produce environments for human comfort.
- To be able to understand various seasons and climatic zones in the world.
- To be able to produce sustainable interiors to ensure the conservation of natural resources.
- To be able to use natural sources of energy in design and to produce the effects desired both climatically and aesthetically.
- To understand the solar energy and its various uses.

COURSE OUTCOME:

1. An understanding of heat balance in human beings.
2. An understanding of the effect of sun and wind in the inside of buildings.
3. An understanding of material effects inside the buildings.
4. Ability to design buildings with interiors with respect to climate.
5. To be able to modify small building elements to improve the condition of a particular climate.
6. To appreciate various methods suited for natural heating and cooling in building systems

UNIT – I ENVIRONMENTAL CONTROL

ENVIRONMENTAL CONTROL - Introduction – Climate and built form interaction. Global climatic factors, elements of climate, impact and issues of climatic balance in traditional and contemporary built environments, issues of ecological balance, implications of climatic forces in nature of spaces and forms. Patterns of organization and elements of built form at individual building.

UNIT – II THERMAL COMFORT

Thermal comfort and heat flow: Thermal comfort factors, physiological aspects. Body heat balance. Building climatologically site analysis, application of comfort diagrams.

UNIT-III SUSTAINABLE INTERIORS

Sustainable interiors – Meaning, methods, and types. Climatic influence and expression of the sustainable interiors. Basic calculations of thermal comfort and understanding of biodegradable materials.

UNIT –IV SUN AND DESIGN PROCESS

Sun and Design process – Solar charts, sun angles and shadow angles, orientation for sun, sun control, design of shading devices, radiation, glare.

UNIT-V SOLAR ENERGY

Solar energy and its technical applications. Climate and material choices, color and texture choices for interior spaces.

SUGGESTED READINGS

1. Koeinsberger, O.H. and others, Manual of Tropical Housing and Building. Orient Longman, Chennai, 2003.
2. Konya Allan, Design for Hot Climates.2013
3. Kukreja. C.P. Tropical Architecture. Tata McGraw Hill Pub. Co. Ltd. New Delhi, 1978.
4. Markus, T.A and Morris. E.N. Buildings. Climate and Energy, Pitman Pub Ltd., London, 1980.
5. Olgay and Olgay, Solar Control and Shading Devices. 1957

18IDP511	COMPUTER GRAPHICS								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	4	T	0	P/S	0	Credits		3

COURSE OBJECTIVE:

- To make them digitally strong in the design related software.
- To make them understand and realize beautiful presentations.
- Understand #D nuances related to this subject.
- To represent ideas using technology and to be update in the use of software.
- To introduce to basic features of Artificial intelligence
- To Use software that are related to to BIM
- To help the student understand the technology of computer and its terminology.
- To enable the student to understand the applications of the software and graphic system.

COURSE OUTCOME:

1. Ability to express using digital tools in the realm of visual composition, drafting.
2. Ability to express using digital tools 3D visualization and rendering
3. To be able to represent ideas digitally for client understanding.
4. To understand the design in 3d to ensure the elimination of design flaws when translated from 2 d
5. To understand BIM and its overall structure.
6. To induce digital drawing reading and performing capacity.
7. Ability to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering

UNIT I INTRODUCTION TO 3DS MAX

An overview of GUI, types of modeling, transforming objects, Compound objects, modifiers & modifier stack.

UNIT II MODELLING TECHNIQUES

Lathing, displacement, lofting, Boolean operations using standard and compound primitives, modeling with lofts, low polygon modeling and nurbs modeling.

UNIT III TEXTURES AND TEXTURE MAPPING

Using material editor, material browser, mapping textures

UNIT IV RENDERING

Lighting, cameras and render effects, environment mapping, fogs and atmospheres.

UNIT V PHOTOSHOP

Photoshop interface, creating and saving images, basic image editing, Photoshop tool box and tools, Using layers, special effects.

SUGGESTED READINGS

1. 3DS MAX 8 Bible – Kelly C. Murdock
2. Photoshop CS Bible – Deke McClelland
3. Adobe Photoshop 7.0 classroom in a book – Adobe creative team
4. 3DS MAX- Advanced 3D modeling and animation – C & M, CADD Centre

18IDP512	WORKING DRAWING AND DETAILS								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		3

COURSE OBJECTIVE:

- Reading of working drawing, their co-relation and cross-referencing in various technical projections.
- To produce detailed measured drawings in plans, elevations, sections, detailing etc.
- To understand the various parameters involved in the detail drawing and to be able to produce the same.
- To incorporate all service drawings with respect to fire and safety, water supply and plumbing, electrical, acoustics and any such that will be accounted for.
- To be able to detail out each part into sub parts and to be able to provide construction execution details of the same.
- To be able to produce circulation patterns in the plan and to be able to detail out the standards that are used in the design.

COURSE OUTCOME:

1. An understanding of all the aspects that go into the making of interiors through study of drawings related to construction.
2. Ability to resolve spatial concerns with technical aspects of a the interiors
3. Ability to design and detail components within a building interiors.
4. Ability to understand the structural components of the buildings and to be able to make changes only if necessary and hence impact studies to be carried out.
5. To understand designs in all parameters such as plans sections elevations and detailed drawings.
6. Joinery details to be detailed and produced as fit for construction.

UNIT – I WORKING DRAWINGS

Preparation of working drawings – Suitable scales of drawings, methods of giving dimensions and standards on plans, sections, elevations, details etc.

UNIT – II PLANS

Preparation of plans – Architectural plans, furniture layout floor plans with clearances, different level floor plans, and detailed floor plans of each room.

UNIT – III ELEVATIONS AND SECTIONS

Elevations and Sections – Detailed sectional elevations of all the walls in the interior with al the required dimensions and specifications.

UNIT - IV SERVICES

Details of all services – layouts for flooring, ceiling, electrical, plumbing, lighting, fire fighting etc., toilet details, kitchen details, staircase details, furniture details, Interior finishing details, material, color and texture details,

Fixture and fixing and joinery details.

UNIT – V SPECIFICATIONS WRITING

Specifications writing: Writing detailed clause by clause specifications for materials pre and post execution, tests, mode of measurements, manufacturer's details and specifications etc.

Manufacturer's specifications – Database of manufacturers specifications for the following materials based on surveys –

Glass, plywood and laminates, hardware, electrical, wiring, accessories, plumbing fitting and fixtures, flooring, cladding etc.,

Note: Students shall prepare at least two working drawing sets, one for a small residence and one for a large building.

SUGGESTED READINGS

1. Leibing. W. Ralph, Architectural Working Drawings, 4th edition, John Wiley and Sons, New York, 1999.
2. Macey. W. Frank, Specification in detail, 5th edition, Technical Press Ltd, London, 1955.
3. Shah, M.G.; and others, Building Drawing: An integrated approach to build environment, 3rd ed, Tata McGraw Hill Pub. Co. Ltd, New Delhi, 1996.
4. Fredd Stitt, Working Drawing Manual, McGraw-Hill Professional; 1st edition, 1998.
5. Kilmer, Working Drawings and Details for Interiors, John Wiley and Son 2009

18IDS521	INTERIOR DESIGN - V									SEMESTER-V	
Marks	Internal	160	External			240	Total	400	Exam Hours	3	
Instruction Hours/Week		L	0	T	0	P/S	12	Credits			8

COURSE OBJECTIVE:

- Space planning process (block diagram, concept statement)
- Furniture
- Historic style
- Structural integration
- Material selection
- Color
- Rendering
- Design Process/methodology
- Creativity /originality
- Documenting space (sketch and photo documentation)
- Anthropometry and ergonomics
- Graphic design (page layout and composition)
- Concepts sketching
- Application of design principles and elements
- Portfolio development
- To create understanding of human built environment as a holistic, living entity from macro to micro scales,
- shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and Interior design in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyze their nature and causes for them

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Ability to project future transformations and give possible/ appropriate ways to address issues, if any
5. Ability to collect, assimilate and integrate knowledge in a holistic manner.
6. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
7. Ability to observe and analyze changes in the above.
8. Development of required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
9. To analyze the pre data of the concepts and to introduce design solutions using a creative approach.
10. To be able to describe an understanding that is both in representation and verbally present the same.
11. To update and to introduce various other methodologies to enhance the skill set.
12. The students shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.

13. The students shall be learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

The primary focus should be on –

- Introduction to building codes
- Way finding, Signage and graphics
- Universal Design
- Accessible design
- Design Disabled
- Materials, furniture and finish selections
- Introduction to construction detailing
- Ergonomics and Human Factors
- Digital representation (3 D modeling)
- Space planning process
- Color
- Interior environmental control issues
- Rendering
- The list of suggested topics to be covered as design problems:
- Institutional spaces in urban, semi-urban and rural contexts with an aim to explore and understand transformation and adaptive re-use.
- Historic and abandoned sites provide scope for rejuvenation through multi dimensional programs covering functions like museums, cultural and resource centers, libraries, convention centers, exhibitions etc. that also aim in making a social contribution.
- Recreational spaces such as auditoriums, halls, cinema houses, stage design etc. Knowledge of audio visual communication, color and light interaction, sound control system, design of interior elements, products and furniture forms.

Design issues in addition to the primary focus for the above are statement of institution character through interior environment responses to site and context, integration of interior architectural

Elements to other interior elements, dialogue between the existing and the newly added insert, interpretation of institutional activities and their spatial correlation.

Note: At least two major exercises and two minor design/time problems should be given.
In the end exam, which is a viva-voce the students have to present the entire semester work for assessment.

18IDS524	ESTIMATION COSTING									SEMESTER-V	
Marks	Internal	60	External				90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To equip the students to prepare the Estimate in order to fore see the cost of the work
- To implement an interior design project & also to monitor / control project cost.
- To be able to make specification of the materials used and hence regulate the cost to keep it in the budget specified by the client.
- To understand various finishes and its rates to be executed as per the budget and the designers choice.
- To be able to provide a rough estimate and a detailed estimate as in need of the project.
- To be able to learn to control the cost and time with respect to the project.

COURSE OUTCOME:

1. Ability to understand and write specification for the construction projects
2. Ability to do estimate of building interiors with various quantities
3. To be update about the latest materials available in the market ad to be able to substitute materials to attain cost goals.
4. To understand the various methods of estimation that can be made and to be able to use the same during the execution of the project.
5. To have the knowledge of the budget limits of the client and hence will be able to make suitable suggestions to the client.
6. To be able to alter the specification and to adjust the final cost though the changes.

UNIT – I INTRODUCTION TO ESTIMATION

Estimation –definition, purpose, types of estimate, and procedure for estimating the cost of work in order to implement an interior design project or to make products related to interior design like furniture, Artifacts etc.

UNIT – II RATE ANALYSIS & ESTIMATION FORMAT

Rate Analysis – definition, method of preparation , quantity & labor estimate for wood work, steelwork, Aluminum work, glass & its rate for different , thickness & sections, finishing (enamelpaint, ducopaints, Melamine, DUcoats, Hand polishing, veneering and laminating) forwalls & ceilings. Electrical & plumbing products, wiring, ducting etc., and laying of tiles & wall paneling in the estimate format of the project.

UNIT – III DETAILED ESTIMATE

Detailed Estimate–data required factors to be considered, methodology of preparation, abstract of Estimate, contingencies, labor charges, bill of quantities, different methods of estimate for interior design works, methods of measurement of works.

UNIT – IV COSTING OFFIXTURES & FITTINGS

Cost of the following items : electrical fitting like , luminaries , fan , cables , switches , etc . , tiles in skirting & dado , cement plaster , joinery in wood , steel & aluminum , painting to walls – cement paint, oil paints, Distemper acrylic emulsion, enamel paint painting to joinery, varnishing, and French polishing plumbing. Equipments like piping , shower panels , cubicles , tubs , Jacuzzis , taps , motors , fountains , false ceiling of Aluminum panels , steel & wooden frame work , thermocol etc . wall paneling of ceramic tiles & other tiles of materials suitable for the same, partitions made of materials like aluminum wood, steel etc

UNIT – V INTRODUCTIONTO SPECIFICATION

Specification – Definition, purpose, procedure for writing specification forth purpose of calling tenders, types of specification. Specification for different item related to interior design project–wood work for Furniture window frames & pelmets, partition set also of materials like steel aluminum glass of various kind. Wall paneling & false ceiling of materials like aluminum, steel, wood, electrical, plumbing, air-conditioning & fire fighting equipments.

SUGGESTED READINGS

1. M. Chakraborti, .Estimation, Costing, Specification and Valuation in Civil engineering. 1992
2. Dutta, Estimating and Costing, S. Dutta and Co., Luck now 1983
1. S. C. Rang wala, Elements of Estimating and costing, Charoter publishing House,Anand, India, 1984.
2. The interior designers guide: to pricing, estimating budgeting. By Theo Susan 2000

18IDE531A	SIGNAGE AND GRAPHICS (ELECTIVE II)										SEMESTER-V		
Marks	Internal	60	External				90	Total	150	Exam Hours		3	
Instruction Hours/Week		L	1	T	0	P/S	5	Credits					3

COURSE OBJECTIVE:

- Knowledge about the various styles of signage manufactured in various materials is vital to an designer.
- Understanding the methods and techniques involved in signage and graphics.
- Understanding the signage location and using apt design and material is important.
- To understand the visibility factor and the importance of the signage.
- To be able to differentiate the various types of signage and to se it aptly in strategic locations.
- As a designer it is important to come up with unique and legible ideas for signage.

COURSE OUTCOME:

1. Ability to design products in signage using graphics.
2. Ability to understand the needs of the industry and give better products in design
3. Ability to experiment with different materials
4. Ability to provide proper lighting for the signage to be legible.
5. Ability to produce signage for large spaces and to be unique in design
6. To be able to understand the hardware system and to be integrated to the project in total

UNIT – I INTRODUCTION

Introduction – environmental graphic Design, way finding, Need, importance etc.

UNIT – II DEFINITION

Information content system – kinds of sign information, hierarchy of content, developing the sign information content, Navigation – message hierarchy and proximity, Other factors affecting sign information content, pictorial information content, signage master plans.

UNIT – III THE GRAPHIC SYSTEM

The Graphic system - Typography overview, choosing a typeface, typographic treatment, typographic considerations in signage for no sighted and low sighted people, symbols and arrows, other graphic elements, color, layout, overview of signage graphic process.

UNIT – IV THE HARDWARE SYSTEM

The hardware system – shape, connotations of form, sign mounting considerations, sign size considerations, sign lighting overview, sign materials overview, basic sign materials, electronic message displays, stock sign hardware systems, sign materials and codes, overview of coatings and finishes applied to signs.

UNIT – V SIGNAGE DESIGN

Signage Design – Eyelevel, light, Fonts, typographical systems and type area, pictograms, arrows, color – contrast, language, systems, tones, Coding, privacy and protection, Room identification.

UNIT – VI SIGNAGE PLANNING

Signage Planning – contract, obtaining information, preliminary design, design, construction, work plan and prototypes, tenders, specifications, on-site management, completion.

SUGGESTED READINGS

1. Joseph DeChiara, Julius Panero, and Martin Zelnik Time-Saver Standards for Interior Design and Space Planning, 2nd edition, Mc-Graw Hill Professional, 2001.
2. Andreas Uebele, Signage Systems and Information Graphics , Thames and Hudson, 2007
3. Craig Berger, Wayfinding: Designing and Implementing Graphic Navigational Systems, Rotovision, 2009.
4. Chris Calori, Signage and Wayfinding Design: A Complete Guide to Creating Environmental Graphic Design Systems, Wiley and sons, 2007.
5. David Gibson, The Wayfinding Handbook: Information Design for Public Places, Princeton Architectural Press; 1st edition, 2009.
6. Rayan Abdullah and Roger Hubner, Pictograms, Icons and Signs, Thames and Hudson, illustrated edition, 2006.

18IDES531B	PRODUCT DESIGN (ELECTIVE II)								SEMESTER-V	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		3

COURSE OBJECTIVE:

- Knowledge about the various styles of furniture manufactured in various materials is vital to a Designer.
- Understanding the methods and techniques involved in furniture and product design.
- To understand the importance of a digital product and then to create a digital product.
- The process involved in the design of a product to be understood.
- To understand the detailing of the furniture and its feasibility for production
- To understand mass production techniques and the production line formation of the same.

COURSE OUTCOME:

1. Ability to design products
2. Ability to understand the needs of the industry and give better product design.
3. To understand the need and to be able to justify the product to be designed.
4. To follow design procedure and to understand the process to make a product.
5. To understand various materials and to execute the best possible material for a particular design.
6. To create a digital product and to be able to display the product details of the same

UNIT – I INTRODUCTION

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

UNITY – II HUMANFACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability. Information input and processing. Human control systems. Applied anthropometry – Human response to Climate.

UNIT – III ASPECTSOFPRODUCTDESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays, Visual codes and symbols.

UNIT – IV PRODUCTDESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

UNIT V DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery.
 Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc.
 Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc.
 Element design for the physically and mentally different people.

SUGGESTED READINGS

1. Time Saver Standards for Interior Design 2001
2. Andrew Alpern, Handbook of Specialty Elements in Architecture, McGraw-Hill Co., USA, 1982.
3. Francis D.K.Ching, Interior Design Illustrated, VNR Publications, New York, 1987.
4. An invitation to Design, Helen Marie Evans. 2001

18IDES531C	SET DESIGN (ELECTIVE II)								SEMESTER-II	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	5	Credits		3

COURSE OBJECTIVE:

- Knowledge about the various styles of sets manufactured in various materials is vital to an designer for a foray into the film industry.
- Understanding the methods and techniques involved in set designs.
- To understand the defiance of temporary structures.
- To acquire knowledge of materials and construction techniques used in temporary structures.
- To understand the area and field specific for the film industry.
- To be able to design and imagine various backgrounds for the set design

COURSE OUTCOME:

1. Ability to design products and sets suitable to situations in concern
2. Ability to understand the needs of the industry and give better product in design
3. The student will be able to enter into the film industry in the foray of Design
4. The student will acquire knowledge various temporary structural methods.
5. To understand to set up stage and platforms for future
6. To understand history and security in the film industry and to be able to use the techniques already introduced
7. To understand theater sit up and the rolling screen design.

UNIT-I FILM AND SOCIETY

Examination of the twentieth-century culture and society through film. Critical analysis of cultural and social conflicts are portrayed and worked out in popular films, and examination of how motion pictures create a window into modern society. Film as cultural texts to better understand history and culture manifestations.

UNIT-I HISTORY AND THEATER FILM SET DESIGN

Investigation the production methods, dramatic theory and conventions, and scene design of various performance media since the popularization of the motion picture, and how it has influenced all entertainment design in the 20th and 21st centuries.

UNIT-III GRAPHIC DESIGN AND TYPOGRAPHY FOR EXHIBIT DESIGN

Principles of layout for creating effective visual signage and explore the unique problems, technique, theory, and approaches of signage in film, theatre, and other forms of mediated exhibition. Introduction to the design applications for building signage.

UNIT-IV SET DESIGN AND CONCEPT WRAP

Introduction to the basic concepts, through theory and practice, of scene design in theatre, film, and other fine arts and entertainment media. Students will learn how to analyze scripts for proper scenery, how to conceptualize designs that will translate into actual sets, and develop visual thinking within the creative process.

UNIT-V STAGE DESIGN

Stage design process from inception to performance, script analysis, visual arts analysis, research skills, and the application of principles and elements of design. Understanding stage setting through language, color, and architectural analysis.

SUGGESTED READINGS

1. Time saver standards for building types, DeChiara and Callender, Mc Graw hill company 2001
2. Neufert Architect's data, Bousmaha Baiche & Nicholas Walliman, Blackwell science ltd 2002

18IDP611	PRACTICAL TRAINING								SEMESTER-VI	
Marks	Internal	320	External			480	Total	800	Exam Hours	3
Instruction Hours/Week		L	0	T	0	P/S	0	Credits		16

COURSE OBJECTIVE:

- To introduce the challenges of interior design practice.
- To enable overall understanding of different stages in real life interior design projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific interior design practice –
 - initiation of project,
 - development of concepts into schematic drawings,
 - approval process,
 - presentations and working drawings,
 - involvement in office discussions and client meetings,
 - integrating structural and service concerns,
 - estimation and tendering processes,
 - site supervision and coordination in the construction process

COURSE OUTCOME:

1. An overall idea of the nuances of interior design practice.
2. An understanding about the total process that goes into the making of an interior in a building.
3. Maturity in using the experience gained from internship in the thesis project.
4. To have the ability to handle clients and translate the design requirements in to design projects.
5. To be able to experience hands on experience in the site during site visits and gain practical knowledge.
6. To be able to do professional detailing and to be able to produce drawings that are good for construction.

Every student must work in an interior designer's office as a full time trainee for a period of 20 calendar weeks (excluding viva – voce) from the date of commencement of training. The chief Interior Designer in the firm should have a minimum of 5 years of practical/ professional experience after his /her graduation.

The student should involve herself /himself in various aspects of work in an office like working drawings, presentation drawings, quantity estimation, site supervision etc.

Students should understand professional practice methods of various interior designers, design process from client contacts to production documents, tender documents, production drawings for various works, site supervision etc.

For various works. They should also know the Coordination of various agencies – client, members of design team, consultants, contractors, craftsmen and construction supervisors.

Detailed instructions regarding the training, the frequency of reporting to the department etc will be issued at the end of Seventh semester, which the student must strictly follow.

After completion of training, every student will have to submit a detailed report with a set of drawings on at least two projects in which he / she has worked during the twenty calendar weeks of the practical training period.

This report will be evaluated at viva – voce by a jury consisting of one external, one internal and head of the department or his nominee. After submission of the report the department at its convenience will arrange for the conduct of the viva – voce examination.

18IDS621	FIELD STUDY AND DOCUMENTATION										SEMESTER-VI		
Marks	Internal	60	External				90	Total	150	Exam Hours		3	
Instruction Hours/Week		L	0	T	0	P/S	6	Credits					3

The choice of the building shall be Contemporary, Heritage, Vernacular or even a settlement/small area in the city of training. This field study and documentation shall be submitted in the form of an architectural report with sketches, pictures and drawings and presented in the form of videos, presentation, slideshow etc covering the following aspects:

- History and Cultural Impact
- Style and Function
- Form and Spatial Studies
- Key Elements and Features
- Materials and Technology

18IDT701	PROFESSIONAL PRACTICE									SEMESTER-VII	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours/Week		L	3	T	0	P/S	0	Credits			2

COURSE OBJECTIVES:

- To develop understanding of the duties and liabilities of an Interior designer
- To obtain knowledge of bye-laws that relate to the building & the environment in the Indian context.
- To learn and understand the Professional ethics and practice.
- To understand the code of conduct for interior Designers.
- To understand and undertake duties of an interior designer.
- To enable students to be ready for the professional world as practicing interior designers.

COURSE OUTCOME:

1. Ability to understand the professional standards
2. Ability to understand the tender documents and contract
3. Ability to understand and abide the duties of an interior designer.
4. Ability to understand and execute the code of conduct for an interior designer.
5. Ability to tender for Government projects and be able to estimate the cost of the same.
6. Ability to conduct various valuation for interior projects.

UNIT – I ROLE OF INTERIOR DESIGNER

Role of Interior Designer in society: Interior Design Profession as compared to other professions. Difference between profession and business. IIID and other organizations related to interior design profession. Interior Designers approach to works, ways of getting works: types of works, works partly executed by other Interior Designers. : Various precautions to be taken before taking up the work, conditions of engagement between interior Designer and client: commencement of work.

UNIT – II PROFESSIONAL PRACTICE

Issues of professional practice: Professional behavior, Ethics, Types of clients, Contracts, Tenders, Arbitration etc. as defined in terms of Interior Design field and current day context. Career opportunities, styles of interior design practice, relationship between client and professional, type of fees, process of fees negotiations, billing methods, tax liabilities, contracts – types of contracts – item rate, labour, lump sum, cost plus percentage etc.

UNIT – III DUTIES

Interior Designer's duties: drawings to be prepared: Interior Designer's relation with other parties connected with works such as client, contractor, sub contractors, consultants and authorities.

UNIT – IV CODES OF CONDUCT

IIID Code of professional conduct: scale of charges: units and mode of measurements, clerk of work and his duties, inspection of work, certificate of payment to contractor, bill of quantities, schedule of rates, tenders, public, limited and negotiated tender documents and allied formalities. Preliminary knowledge of Consumer protection Act and other related acts on Interior Designers.

UNIT – V CODES OF CORRESPONDENCE

Types of offices for interior design practice: staff structure, filing of records, correspondence and drawings, maintenance of accounts, presentations in meetings, recording minutes of meeting.

Note: a report to be prepared by each student after visiting an interior designer's office.
Knowledge of role of consultants and coordination between different consultants on a big project.
Codes of fire safety, lighting, ventilation, electrical layout and barrier free environment

SUGGESTED READINGS

18IDT702	PROJECT MANAGEMENT										SEMESTER-VII		
Marks	Internal	40	External				60	Total	100	Exam Hours		3	
Instruction Hours/Week		L	3	T	0	P/S	0	Credits					2

COURSE OBJECTIVE:

- To introduce different management techniques suitable for planning and construction projects.
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.
- To understand the elements of network and be able to take the project completion analysis.
- To understand various methods for the analysis and hence arrive at the management procedures.
- To handle and calculate risk in delays and hence suggesting corrections to beat time lag in projects.
- To update project in the process and be able to control manpower management.

COURSE OUTCOME:

1. Ability to understand a project from concept to commissioning, feasibility study & facility programme, design, construction to commissioning.
2. Ability to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
3. An understanding of principles of management, construction scheduling, scope definition and team roles
4. To differentiate the management into time, labor, ad materials mainly apart from other contingencies.
5. To allocate various job works to different vendors and vendor management

To enable the smooth functioning of the project and to move towards completion in time

UNIT – I INTRODUCTION

Project planning and project scheduling and project controlling, Role of Decision in project management, Method of planning and programming, Human aspects of project management, work breakdown structure, Life cycle of a project, disadvantages of traditional management system

UNIT – II ELEMENTS OF NETWORK

Event, activity, dummy, network rules, graphical guidelines for network, numbering of events

UNIT – III CRITICAL PATH METHOD AND PERT ANALYSIS

CPM network analysis & PERT time estimates, time computation & network analysis

UNIT – IV PROJECT TIME REDUCTION AND OPTIMIZATION

Project cost, Indirect project cost, direct project cost, slope of the direct cost curve, total project cost and Optimum duration, contracting the network for cost optimization, steps in cost-time optimization

UNIT – V PROJECT UPDATING AND ALLOCATION

When to update? Data required for updating, steps in the process of updating

Resource usage profile: Histogram, Resource smoothing and Resource leveling, Computer applications in project management.

SUGGESTED READINGS

1. Dr. B.C.Punmia et al. Project planning and control with PERT and CPM, Laxmi Publications, 2002
2. 1.Jerome D. Wiest and Ferdinand K. Levy, A Management Guide to PERT, CPM, prentice Hall of India Pub, Ltd., New Delhi, 1982
3. 2.R.A.Burgess and G. White, Building production and project Management, The construction press, London, 1997

18IDP711	INTERIOR PHOTOGRAPHY AND JOURNALISM								SEMESTER-VII	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVES:

- To help the student understand the principles and technology of photography.
- To enable the student to understand the applications of photographs in interior
- To enable students to learn and understand the methods for blogging and vlogging
- To build the ability in students to create a website and be able to host it as well.
- To enable students to be updated and also to bring the interest of technology into the work.
- To ensure the student understands the various aspect od composition lighting , color
- And integration of all these aspects into one project.
- To understand and acquire knowledge in interior journalism, Documentation and analysis of works.

COURSE OUTCOME:

1. To develop a keen eye for compositions through photography.
2. To admire and capture the essence of aesthetics in Interior design projects.
3. To appreciate the various compositions in the nature and in natural elements.
4. To understand of the play in interiors through various interior lighting ideas.
5. To understand and apply color theory through color wheel and color psychology.
6. To be able to integrate all aspects of design in the process.
7. To develop a keen eye for compositions through photography.
8. To admire and capture the essence of aesthetics in Interior design projects.
9. To be able to deliver and write in adapt the design language to explain the nuances of the design through journalism.
10. To be able to choose the stream of interior journalism as an alternative career path in Interior Design

UNIT-1PHOTOGRAPHY & TECHNIQUES

Concept of color; concepts of lighting, distance, visual angle, frames; media; Types of camera, properties and priorities; Exposure, Aperture, Speed; Photographic films. Techniques of photography relevant to interior

UNIT-2 JOURNALISM

Analysis of recent historical and contemporary examples of written and journalistic criticism of interior, including selected writings by Indian and overseas critics; discursive techniques, analysis of major critical themes, thematic categories in interior writing over the past three centuries.

UNIT-3 ANALYSIS OF WORKS

Works of Indian and international writers and critics will be presented and discussed. Seminars on Indian interior design writers, journalists and critics

UNIT-4 FIELD PROGRAM

Exercise on integrating photography in interior journalism.

UNIT-5 DOCUMENTING AND REPORTING

Preparation of documentaries and reports in any media such as Video, Still images, Reports, presentations etc., and present as a Seminar.

18IDP712	ADVANCED WORKSHOP									SEMESTER-VII	
Marks	Internal	80	External				120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits			4

COURSE OBJECTIVE:

- To understand the basic methods of furniture making with focus on hands
- on methods regarding workshop practices in wood, metal, plastic, textiles etc.to understand the usage of various materials as required with its properties.
- To understand the usage of engineered wood against the solid wood.
- To understand the fixing details of multiple materials and its interaction with each other.
- To be introduced to alternate materials
- To relate the various capacities into creative pursuits of design.
- To understand and acquire knowledge in interior workshops for hands on experience in build and construct design processes.

COURSE OUTCOME:

1. Understanding the scale of drawing to life size
2. To use tools related to wood glass and alternative substitution to wood.
3. To understand properties and usage of materials henceforth.
4. To understand modular furniture through engineered wood.
5. To understand the various capacities of hardware for the various materials.
6. To understand wood joints and its usage in various circumstances.
7. To develop a keen eye for compositions through workshops.
8. To use all materials in coordination with other materials and create an understanding of multi material compositions.

UNIT – I DEVELOPMENT

Development of textile design in different cultures from primitive art to contemporary designs. Criteria of design of the elements and principles of textile design. Analysis of a motif, developing repeat as a basic unit of design in textile printing.

UNIT – II BLOCK PRINTING

Block printing – developing block, understanding the material used, colors, types and their mixing process, various color printing.

UNIT – III SCREEN PRINTING

Screen printing – design evolution for wall hangings, preparing screen and understanding the technique, printing on paper and printing on fabric.

SUGGESTED READINGS

18IDS721	INTERIOR DESIGN - VI									SEMESTER-VII	
Marks	Internal	160	External				240	Total	400	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	10	Credits			8

COURSE OBJECTIVE:

- To create understanding of human built environment as a holistic, living entity from macro to micro scales,
- shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and Interior design in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyze their nature and causes for them
- Understanding a Design Programme and the Components of the Design Problem.
- To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
- To enable an understanding of interior design as integrating diverse functional concerns in a building through analysis and innovation.

COURSE OUTCOME:

1. Ability to collect, assimilate and integrate knowledge in a holistic manner.
2. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment
3. Ability to observe and analyze changes in the above.
4. Ability to project future transformations and give possible/ appropriate ways to address issues, if any
5. Ability to collect, assimilate and integrate knowledge in a holistic manner.
6. Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment.
7. Understanding a Design Programme and the Components of the Design Problem.
8. To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
9. To enable an understanding of interior design as integrating diverse functional concerns in a building through analysis and innovation.
10. Ability to critically understand and address issue of resources.
11. Ability to balance diverse aspects/concerns of buildings by making informed choices and innovative design in the context of buildings with intense or complex programmes.
12. Ability to apply knowledge intensively in realms such as sustainable built environment, services

COURSE

- Interior Construction Detailing
- Way finding/signage and graphic identification
- Decorative Accessories
- Building Codes.
- Rendering (hand and computer generated).
- Custom designed furniture and cabinetry
- Specification Writing

- Cost estimating
- Selection of sustainable/green materials
- The list of suggested topics to be covered as design problems:
- Hospitality Design, Retail Design, Healthcare Design and Office systems
- Urban Interiors – Shopping malls, streets, Town squares, Fair grounds
- Interior Ports – air ports, Bus stops, Railway stations, boats/ports
- Exhibition displays – urban level and National level.
- Mobile units – buses, cars, railway coaches etc.

Note: One major design in detail and two minor design/time problems should be given.

18IDS722	INTEGRATED PROJECT WORK								SEMESTER-VII	
Marks	Internal	60	External			90	Total	150	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		3

COURSE OBJECTIVE:

- The student has to submit a project feasibility report on the project done in the design studio by integrating the knowledge and skills acquired from all the subjects studied till date.
- The student has to exhibit the capacities of an interior design in full ideology and should be ready for the professional challenges in future.
- The project understanding in totality will be expected from each student.
- It will help understand the importance of each subject in the previous years and its applications henceforth
- To understand the environmental impact assessment and to analyze the feasibility of the project in any given site.
- To check the feasibility of the project in the services.

COURSE OUTCOME:

1. Ability to integrate all the knowledge acquired so far and to exhibit the same through drawings and renderings.
2. Ability to integrate all aspects of the project to give a final report.
3. To be ready for large scale projects before the thesis.
4. To conduct research and to present the research with analysis of the feasibility of the project.
5. To understand the socio economic implication of the project in the given location.
6. To check the technical feasibility of the project with parameters such as soil, water and other natural elements.
7. To assess the building for seismic zone and hence design according to the reading and understanding.

The report may consist of the following -

- Environmental impact assessment of the project following the standards and specifications
- Socio-economic appraisal of the project and the design considering factors such as behavioral aspects, security considerations, costs for different user groups, aesthetic preferences etc.
- Technical feasibility – through execution and detailing of different spaces and elements of design, checking the feasibility of layout for service systems and specifications
- Costing of the project – bill of quantities, schedule of rates, specifications etc. economic viability and financial viability
- Space planning aspects/ issues – user activity spaces, access to physically challenged, fire safety, other services, green rating etc.

Note : The report has to be presented for internal assessment

18IDPE731A	INTERIOR WEBSITE AND BLOGGING								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		4

COURSE OBJECTIVES:

- To help the student understand the principles and technology of photography.
- To enable the student to understand the applications of photographs in interior
- To enable students to learn and understand the methods for blogging and vlogging
- To build the ability in students to create a website and be able to host it as well.
- To enable students to be updated and also to bring the interest of technology into the work.
- To ensure the student understands the various aspect of composition lighting , color
- And integration of all these aspects into one project.

COURSE OUTCOME:

- 1 To develop a keen eye for compositions through photography.
- 2 To admire and capture the essence of aesthetics in Interior design projects.
- 3 To appreciate the various compositions in the nature and in natural elements.
- 4 To understand of the play in interiors through various interior lighting ideas.
- 5 To understand and apply color theory through color wheel and color psychology.
- 6 To be able to integrate all aspects of design in the process.

UNIT – I PRINCIPLES OF COMPOSITION

Rule of thirds, perspective-worm's eye view, normal eye view, bird's eye view, one-point perspective, two-point perspective, three point perspective, exercises in composition

UNIT – II PRINCIPLES OF PHOTOGRAPHY

Technical definitions, understanding a camera, anatomy of a SLR camera, technical setting in a SLR camera, different types of lenses

UNIT – III PRINCIPLES OF INTERIOR LIGHTING

Technical definitions, lighting sources, types of lighting fixtures, types of lamps, calculating lighting levels, flash photography, types of flashes, controlling lighting levels with flash photography
Exercise in interior lighting photography with artificial light and black and white photos

UNIT – IV PRINCIPLES OF COLOUR

Color rendering in photographic medium, color rendering in photographs under different lighting condition, lighting colors and its effect on a photograph, color filters in a camera
Exercise on color photography of interiors

UNIT – V INTEGRATION

Project work/exercise in integrating all prior units

SUGGESTED READINGS

1. Point view- The art of architectural photography , E.Manny A Ballan, VNR 2010
2. Professional photography –photographing buildings, David Wilson, Rotovision 2001

18IDPE731B	MARKETING TECHNIQUES								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		1	0	T	0	P/S	6	Credits		4

COURSE OBJECTIVES:

- To understand the need of techniques to market the creative ideas of the studio.
- To understand various methods of marketing that can be applied during the client meetings.
- To understand and build a marketing strategy.
- To be able to understand the customers and hence provide design by understanding the psychology of the client.
- To understand the hierarchy of the management chain and to execute project with a strategy
- To understand the organizational capabilities and to understand the responsibility in a marketing position.

COURSE OUTCOME:

1. To be able to market and obtain techniques to sell the knowledge gained and
2. to be able to build the requirements of the clients through proper communication and understanding.
3. To be able to modulate and design a technology to market a service or a product
4. To understand the various tools that are used in marketing and to use the most suitable one in the presentation and execution.
5. To be sensitive to the customers needs and to be able to organize and delegate the process to the next team for the carry over.
6. To be able to understand the position in marketing and hence behavioral pattern to be regulated.

UNIT I WHAT IS MARKETING?

Introduction, definition, Organizational conditions and USP, Environmental factors, marketing concept – marketing strategy – marketing tactics, Planning, operation and Implementation.

UNIT II BUILDING A MARKETING STRATEGY 6

Competitive settings, marketing decisions in a competitive setting, formulating overall marketing strategy, factors in selecting marketing inputs, the three C's of a marketing strategy, Components of a product/market strategy, hierarchy of strategies, how to develop a product/market strategy, finding a suitable market strategy.

UNIT III UNDERSTANDING CUSTOMERS 6

How marketing influences society – economic aspects, buyers behavior, the environment, how society influences marketing – public opinion and political pressure, legislative action, pitfalls of neglecting customers, management mistakes, benefits of understanding customers, types of benefits, feature Vs benefits.

UNIT IV MANAGING VALUE 5

Components of perceived value, perceived value analysis, measuring perceived value, customer management, role of perceived value in competition, strategic themes, increasing perceived value.

UNIT V ORGANISATIONAL CAPABILITIES AND MARKETING POSITIONING 8

Analyzing competitors, capabilities and market strategies, types of capabilities, evaluating capabilities, competitive advantage and benefit advantage, macro trends, market segmentation, characteristics of market segment, determining a target market, role of segments and target market in marketing strategy, segment identification analysis, segments and decision making, market selection criteria, types of market segments, what is positioning, competitive advantage analysis, determining positioning, positioning and perceived value.

SUGGESTED READINGS

1. Marketing 101, Don Senton, Wiley. 2011
2. Fundamentals of Modern marketing, Edward w. cundiff, Richard R.Still, Norman A.P Goroni, PHI. 2001
3. Marketing Management, Phillip Kotter, PHI. 2015

18IDPE731C	CREATIVE ART AND CRAFT								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		4

COURSE OBJECTIVES

- Detailed study of the characteristics of Indian arts and crafts and its application in the interiors.
- To enable students to understand various art cultures in various cities of our country
- To appreciate art and craft based on the various eras in the history of art and craft.
- To bring different thinking levels of art like decoupage framing etc.
- To enable students to create products that is rich in art and the culture of the given state.
- To enable students to conceptualize interior design in various art forms.

COURSE OUTCOME

1. To be able to appreciate the various styles of Interior detailing through art and craft in the world over.
2. To understand the unconventional methods of practicing art in various states of our country.
3. To understand and learn from the history of art and craft
4. To create objects with respect the applications of knowledge gained.
5. To understand various styling of art and craft from various parts of the world.
6. To understand various art movements and its importance in the revolution of art and craft.

UNIT – I INTRODUCTION TO CREATIVE ARTS AND CRAFTS 5

Introduction to creative arts and crafts in India – its application in interior design – materials – Art movements through history – Traditional arts and crafts of India – Folk arts of India

UNIT – II TRADITIONAL ARTS AND CRAFTS OF INDIA 5

Traditional arts and crafts of various states of India including – Tamilnadu, Karnataka, Kerala, Andhra Pradesh, Goa, Rajasthan, Gujarat, Kutch, Uttarpradesh, West Bengal, Orissa, Bihar, Jammu and Kashmir, etc.

UNIT – III ART MOVEMENTS IN POST MODERN INDIA 6

Art Movements in Post Modern India and their influences in Interior design – Abstract Expressionism, Pop art, Minimal art, Conceptual art – Neo Expressionism – Computers in Arts.

UNIT – IV CREATIVE ART OBJECTS 7

Creating decorative art objects –picture framing, macramé, decoupage, wall hangers, ceramic painting, murals etc

UNIT – V PROJECTS 7

Assignment or projects on application of the Art in interior spaces such as – Reception, Lobby spaces, Theme Boutiques, Hotel, Restaurants, etc.

SUGGESTED READINGS

1. Francis D.K.Ching, Interior Design Illustrated VNR Publication, New York 1987
2. Edith Thomory, A History of fine arts in India and the west, Orient Longmann publishers Pvt Ltd, New Delhi. 2004
3. Publication on Traditional arts and crafts on india, Ministry of Handicrafts Development, Government of India. 2018
4. Johhanes Itten, The Art of colour, John Wiley and Sons, USA, 1973.

18IDPE731D	PRESENTATION TECHNIQUES								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		4

COURSE OBJECTIVES

- To equip the students with various tools of sketching and rendering
- To equip students to use pencils, pens, charcoal, ink brushes etc.
- To familiarize the students with some of the concepts of 3D modeling and the presentation techniques.
- To introduce to them various software for presentation for coloring and various other techniques.
- To enable students to be equipped for client meetings for presentation and detailing.
- To understand the color theory and to match appropriate color for appropriate sheets and building types.

COURSE OUTCOME.

1. To introduce the students the making of complete presentation and the essentials of presentation skills.
2. To build their drawing and sketching skill.
3. To encourage natural talent and to exhibit the same
4. To be confident in combinations in color and textures.
5. To render with pen and ink.
6. To render with any medium of colors for the presentation

UNIT- I COLORING STUDY

Introduction of colors, Usage of water colors, poster colors, pen & ink, rendering techniques, etc.

UNIT- II DRAWING AND SKETCHING INTERIOR ENVIRONMENTS

Drawing and sketching interior environments, one point interior perspective, two point interior perspective, refined linear perspective methods, two point plan projection method, and perspective traced from photographs.

UNIT- III RENDERING WITH PEN AND INK

Introduction to pen and ink rendering, materials, media and tools, rendering orthographic projection drawings, rendering perspective drawings.

UNIT- IV RENDERING WITH COLOUR PENCILS AND SKETCH PENS

Rendering of interior perspectives with colour pencils and sketch pens – stroke effects, smudge effects – use of schoeller and kent sheets – leather cartridge etc.

UNIT- V RENDERING WITH POSTER/WATER COLOURS

Use of kent/ cartridge sheets for poster colours and waterman/cartridge sheets for water colours – transparency effects in water colours – block effects in poster colours. TOTAL 30

SUGGESTED READINGS

1. Interior Design Visual Presentation 2nd and 3rd Edition-Maureen Mittom
2. Architects Sketching and Rendering techniques for designers and architects.- Stephen.A.Klimet
3. Architectural Rendering Techniques-A Color Reference-Mike.W.Lin
4. Color Drawing-Design drawing skills & techniques for architectsMichael.E.Doyle.
5. Color Vision-Leo Marvullo 6. Water Color-Hon graham Scholes

18IDPE731E	ADAPTIVE REUSE AND RECYCLING								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		4

COURSE OBJECTIVES

- To enable the student to understand the need for adaptive reuse of old heritage buildings and applications of using recycled materials.
- To enable students to understand the importance of the nature and its materials that can be recycled.
- To introduce adaptive reuse or up cycling of products and the challenges hence faced.
- To understand the Need for conservation.
-

COURSE OUTCOME

1. To expose the students to the basics of adaptive reuse and recycling
2. To understand the importance of heritage buildings and the treasures within the same that can be reused and recycles.
3. To be sensitive to the environment and to practice sustainable design through recycling and reuse.
4. To avoid materials that cannot be reused.
5. To use materials that have natural resources in abundance in the environment.
6. To conserve and recycle water as a basic survival commodity

UNIT- I NEED FOR ADAPTIVE REUSE

Cultural inheritance – heritage buildings and old structures – ascertaining the structural stability – estimation of the prolonged life of the building – strategies of adaptive reuse – investigation into material finishes etc.

UNIT- II NEED FOR RECYCLING OF MATERIALS

The logic behind recycling – recycling of steel, wood, glass etc - estimation of the quality of recycled timber – criteria for recycling of steel, glass etc.

UNIT- III CONCEPT OF SUSTAINABILITY

Earth summit declaration – definition of sustainability – economic, social and environmental issues – green rating of buildings – criteria for LEED rating.

UNIT- IV RECYCLING OF WASTE WATER

Sullage and sewage – techniques of water purification for sullage – treatment plant for sewage – techniques of biological and chemical purification.

UNIT- V NEED FOR CONSERVATION

Architectural conservation – conservation of heritage and important buildings – levels of intervention – structural, construction related, finishes etc. Revival of old building techniques and finishes.

SUGGESTED READINGS

1. Harimohan Pillai – Heritage conservation and cultural continuity – Saraswatham publishers, 2002
2. Sustainable building design manual – TERI publication, 2004.
3. Waste management and recycling – Compiled by C.T. Lakshmanan, SRM University.
4. Sandra F Mendler - The HOK Guide book for sustainable design – John Wiley and Sons, Canada, 2002.
5. Conservation guidelines for pondichery – DTCP, Pondichery – INTACH 2000.

18IDPE731F	TEXTILE DESIGN								SEMESTER-VII	
Marks	Internal	80	External			120	Total	200	Exam Hours	3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits		4

COURSE OBJECTIVES

- To gain knowledge and understanding of the functional and aesthetic requirements of textiles for a range of applications.
- To understand the textures and qualities of the fabrics involved
- To understand the various uses of textiles at various levels of window dressing, upholstery paneling and other interior holdings.
- To introduce the various possibilities of color in design through textile.
- To understand various handmade and machine made technologies involved in fabric design and printing.
- To introduce the natural printing methods and eco friendly approach in fabrics use in design.

COURSE OUTCOME

1. To familiarize the students of Interior Design on textile materials used in interior.
2. To introduce the ability to define fabric through texture and quality.
3. Ability to use fabrics in various aspect of design and not limit the ideas to just window furnishings and upholstery.
4. To understand fabric from its basic composition and hence use the right design for right climatic conditions.
5. Ability of the student to identify various crafts on fabric from India and its importance with its properties.
6. Ability to differentiate various color properties on fabrics and its appropriate usage.

UNIT- I- INTRODUCTION TO FABRICS

Fabric, yarn and fiber structure, Fabric structure- woven- warp, weft, selvedge ,knitted- course, non-woven, Fabric types and classification- woven, including plain, twill, satin, Jacquard, crepe and pile weaves, knitted- including single knit, double knit, tricot knit, pile knit, lace and net ,non-woven- including felts webs and films, identification and properties of fabrics, yarns and fibers.

UNIT- II -APPLICATION OF ELEMENTS AND PRINCIPLES

Application of elements and principles of design across a range of textiles. Describe and analyze elements and principles of design -furnishings, textile arts, non-apparel. Functional and aesthetic requirements and features of textile range.

UNIT- III COLOUR ON FABRICS

Fabric coloration and decoration- Principles of applying color to fabrics. Textile arts and crafts in interiors, traditional and modern materials and methods. Preparing samples on tie and die printing, batik printing, appliqué, macramé and braiding.

UNIT- IV- FURNISHINGS

Furnishings-classification, types of curtain, curtain construction, selection criteria relation to backgrounds in walls, floors and ceilings. Slip covers, cushion covers, bed linen and table linen Floor coverings -rugs and carpets, types selection, care and maintenance, installation of floor coverings 64 B.Des (Interior Design) 2010

UNIT- V -OTHER NATURAL MATERIALS

Jute or hessian – dyed jute fabric and its applications – various kinds of processed leather, its application in interior design.

SUGGESTED READINGS

1. Inside today's home, Faulkner, R. and Faulkner 1987, Rinehart Winston, New York
2. Interior Design & Decoration, Sherril Whiton, Prentice Hall
3. Introduction to home furnishings, Stepat, D.D, 1991, The macmillan company, New York.
4. The themes and Hudson manual of textile printing, Storey joyce, 1992, London
5. Colour in interior Design Jhon, F.P, 1997, Mc Graw H

18IDS821	DESIGN THESIS									SEMESTER-VIII	
Marks	Internal	320	External				480	Total	800	Exam Hours	3
Instruction Hours/Week		L	2	T	0	P/S	28	Credits			16

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme in the context of a design project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project or to enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently as a precursor to professional life.
- To encompass the capacities to handle large scale projects and to be able to choose the scale of the project based on the knowledge acquired.
- To be given a chance to research the area that is of the students choice and to analyze the data and to be able to produce sensible design parameters based on the analysis.
- To be introduced to the professional practice nuances with respect to the design field.

COURSE OUTCOME:

1. Skill, knowledge and expertise in the domain of interior design.
2. Ability to handle a major interior design project independently through all stages
3. To be able to scale project size based on the parameters asserted by the futuristic clients.
4. To be able to design in relationship to the surroundings and also have a pragmatic and vernacular approach to the design chosen.
5. To be able to handle complex design problems
6. To introduce them into the professional world of design and detailing

Each student is expected to prepare a design thesis based on the preliminary work undertaken in the Interior design studio under an approved guide.

Thesis should reflect the knowledge gained from all the courses undertaken by the student in all the previous semesters.

The particulars of the schedule, content, presentation, format etc is to be decided by the department from time to time and shall be strictly followed.

At the end of the semester each student is expected to submit all original drawings prepared as per the department specifications. Three copies of the report in the specified format should be submitted to the department after the approval of the respective guides.

The department shall schedule the viva voce at its convenience only after the receipt of the thesis by the student. The performance sheet submitted by the guide and thesis committee should be the basis for allowing the student to appear for the final viva voce.

The end exam is to be conducted by a jury comprising of an external examiner. One internal examiner and head of the department or his nominee.

18IDS831	DISSERTATION									SEMESTER-VIII	
Marks	Internal	80	External			120	Total	200	Exam Hours		3
Instruction Hours/Week		L	1	T	0	P/S	6	Credits			4

COURSE OBJECTIVE:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture
- To develop perspectives on the same through reading, study, analysis and thought.
- To develop the skill of experimentation by their own course of study
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

COURSE OUTCOME:

1. Student will learn to research on a specific interested topic and collect appropriate data
2. Student will develop the skill of analytical approach towards the related topic
3. Student will be able to develop a coherent line of thought based on point of view,
4. Student will be able to do observation, analysis and study
5. Student will be able to prepare a dissertation report which is based on accepted norms of technical writing.
6. Student will become prepared for the larger thesis project.

Dissertation/Special studies subjects will be the choice of the individual related to the thesis project chosen. This Study process should increase the value of design understanding. The dissertation topic must be a research based study to understand in depth the subject in consideration. The individual must use these dates obtained in their thesis and a report of the same must be produced by the student.

Note: The work will be periodically reviewed. The study has to be presented in the form of a report with illustrations and as a seminar for final assessment, along with the final product.

DETAILED SYLLABUS
M.ARCH (ADVANCE DESIGN)
2018-2019 BATCH

18MARS111	RESEARCH METHODOLOGY - I								SEMESTER-I		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To learn the importance of research methodology
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey
- To Develop the skill of preparation of report and Documentation

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I INTRODUCTION TO RESEARCH

Importance, Purpose and Scope of Research and Field Studies. Application in architecture in terms of design, technology, environment, economic and behavioral areas.

UNIT-II RESEARCH OBJECTIVES AND METHODOLOGY

Sequence and Methods of Research. Identification of Problem, Hypothesis Formulation, Objectives and Methodology.

UNIT-III APPLICATION OF RESEARCH

Understanding and Applying Qualitative, Analytical, Interpretative, Correlational, Quasi- Experimental, Experimental, Simulation and Modelling techniques in Architectural Design.

UNIT-IV FIELD STUDIES

Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, Organizational. Preparation and Analysis of Data Sheets and Questionnaires.

UNIT-V ANALYSIS, PREPARATION AND DOCUMENTATION

Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

- 1.Knight, A. and Ruddock., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
- 2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
- 3.Gibbs, J.P., " Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
- 4.Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.

18MARS112	DESIGN SYSTEMS									SEMESTER-I	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To understand various design systems
- To Understand the different civilizations in different parts of the world through study of their source,
- To Understand the origin, context, grammar, intent and application in architectural design.
- To Understand the Contemporary design process and relevant case studies
- To Understand & develop the skill of Design thinking as per the Current change in Architectural Style
- To understand the Concept of design Systems by various literature/case studies.

COURSE OUTCOME:

1. Student will be able to understand the various design systems in the Architecture era
2. Student will be able to understand the vernacular architecture and its importance
3. Student will Understand the contemporary design process
4. Student will develop the skill of Design thinking as per the Current situation
5. Student will develop the skill of presentation of his ideas by Seminar and presentation
6. Student will be able to envision the futuristic architecture

UNIT-I HISTORIC DESIGN SYSTEMS

Pragmatic, Iconic, Analogic and Canonic systems. Relationship between mathematics and architecture and hierarchies of geometry in design. Design systems through the middle ages to the renaissance period.

UNIT-II VERNACULAR DESIGN SYSTEMS

Vernacular architecture of the world and relevance of the climate in which they have evolved. Enduring nature of the vernacular in contemporary times, De-coding vernacular narratives regarding the cultures they represent.

UNIT-III CONTEMPORARY DESIGN SYSTEMS

Evolution of design systems since the modern period following industrial revolution to the advent of the digital age and representation of design.

UNIT-IV FUTURISTIC DESIGN SYSTEMS

Evolution of futuristic ideas since the 1960s in the field of design. Emerging areas of programming, expert systems and 3-D printing in design. New materials, technologies and bio mimicry oriented design evolutions of future.

UNIT – V SEMINAR

Seminar on all the design systems -vernacular architecture – futuristic ideas and discussions

SUGGESTED READINGS:

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997
2. Bernard Rudofsky, 'Architecture without Architects', MoMA, 1964.
3. Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981
4. Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010
5. Weber.W & Yannas.S, 'Lessons from Vernacular Architecture', Routledge, 2014.
6. Vernacular Architecture – contemporary traditions – Aiswarya Tipnis – TERI

18MARS113	DESIGN RESEARCH AND FIELD STUDIES								SEMESTER-I	
Marks	Internal	40	External			60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits		2

COURSE OBJECTIVE:

- To comprehend the importance of research in design
- To understand the methods of field survey/study in terms of context like sustainability, Housing etc
- To Understand the survey by analysis of results as the basis of research.
- To Develop the Art of data collection and Collection of Samples
- To Undertake field study of the core subject and learn from research-based publications
- To refer reputed journals/magazines and gain the skill & Importance of good presentation methods.

COURSE OUTCOME:

1. Student will be able to collect data and information as per the context
2. Student will understand the methods of Field Survey
3. Student will understand the method of collection and compilation of Data of Survey & Field Study
4. Student will be able to format all the data into types and to prepare and publish
5. Student will be able to critically find solutions with the analytical skills of research
6. Student will develop the Skill of Report Writing

UNIT-I DESIGN RESEARCH

Design as an area for research. Theorising on causal relationships and factors, the scientific method, behavioural methods. Approaches to the design, and research problem – need and importance of study.

UNIT-II FORMATION OF RESEARCH

Formation of design hypothesis and concepts, and their relevance. Understanding ideas of creativity in design. Behavioural basis for design and research.

UNIT-III DATA COLLECTION

Data - types, collection methods, comprehension. Literature study – previous publication, information sources - Areas of the research - frame work and methodology of study, outcome of the results. Field study – by means of survey/questionnaire – by equipment/instruments, etc. – Manual readings/reports. Compilation of data – organizing the collected data – analysis, inference, conclusions. Types of analytical methods.

UNIT-IV REPORT WRITING

Reports - authentication of sources. Document styles, formats – figures, charts, tables.

UNIT-V EDITING AND PUBLISHING

Publication of papers / articles in reputed magazines/journals. Preparing, editing and publishing reports, dossiers, documents, and portfolio of masters' course work, off/on-line dissemination of information in media - web, blogs, etc.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods" second edition, John Wiley & Sons. 2013.
3. Gibbs, J. P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
4. Booth, Wayne C., Gregroy G. Colomb, and Joseph M. Williams. 2008. The Craft of Research, 3rd edition. Chicago: University of Chicago Press.
5. Zeisel, J., "Inquiry by Design", Revised edition. New York: Norton, 2006.
6. Joo-Hwa Bay and Boon- Lay ong, "Tropical Sustainable Architecture", Elsevier Ltd, 2006.

18MARS114	ADVANCED DESIGN STUDIO-I								SEMESTER-I		
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	9	Credits			8

COURSE OBJECTIVE:

- To learn the importance of and undertake the design process at advanced level t
- To learn the design aspects and considerations in large scale projects
- To understand the Urban Reformation and Renewal systems through Design
- To Categorize the Physiological and Psychological aspects in advanced level of Design
- To understand the various design systems, guidelines and considerations as undertaken in the research and field studies and apply them in architectural design.
- To understand the future need for the city & design accordingly.

COURSE OUTCOME:

1. Student will be able to design complex structures with advanced level planning principles
2. Student will be able to understand the Urban Renewal and urban level design
3. Student will be able to Design large scale projects
4. Student will understand the Physiological and Psychological aspects in advanced level of Design
5. Student will be able to give a wholesome product of design in all aspects
6. Student can give futuristic proposals for the urban Architecture.

CONTENT:

Design of advanced and complex built environments having strong linkages with the urban scale and focusing on architectural, spatial, landscape, environmental, structure, services and technology features. Examples: Campus Design, Urban Centers, Mixed Use Development etc.

SUGGESTED READINGS:

1. Agkathidis, A., Hudert, M. and Schillig, G., "FormDefiningStrategies:ExperimentingArchitecturalDesign", Wasmuth International. 2007.
2. Ching, F.D.K., "Architecture: Form, Space and Order", 3rd ed., John Wiley & Sons. 2007.
3. Morgan, C.L., "Jean Nouvel - The Elements of Architecture", Thames and Hudson. 1998. Neufert, P., "Architects' Data", 3rd ed., Blackwell Science. 2000.

18MARS211	RESEARCH METHODOLOGY - II									SEMESTER-II	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week	L	1	T	0	P/S	2	Credits				2

COURSE OBJECTIVE:

- To learn the importance of research methodology
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey in focus area such as Sustainability, housing etc
- To Develop the skill of preparation of report and Documentation in the focus area

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

CONTENT:

Importance, Purpose and Scope of Research methodology specific to the focus area. Understanding and Applying Qualitative, Analytical, Interpretative, Correlational, Quasi- Experimental, Experimental, Simulation and Modelling techniques in the focus area of Architectural Design.

Focus area and specialization specific Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, and Organizational. Preparation and Analysis of Data Sheets and Questionnaires. Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
 2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
 3. Gibbs, J.P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
 4. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
 5. Khanzode, V.V., "Research Methodology -Techniques and Trends", APH Publishing. 1995.
- Books and Magazines/Journals specific to the focus area.

18MARS212	DOCUMENTATION AND PRESENTATION								SEMESTER-II		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To understand importance of data collection and documentation methods
- To develop the skill of reading the case studies and comparison with the own experiments
- To develop skills of formal learning through participation in seminars, workshops and conferences.
- To undertake research-based publications in reputed magazines /journals as outcomes of the courses.
- To make a Broad groundwork for dissertation/thesis.
- To formulate / frame the research-based topic for the Dissertation / Thesis

COURSE OUTCOME:

1. Student will be able to review the literature and analyse every aspect of the study
2. Student will understand the importance and method of Experimentation.
3. Student will be able to organize formal seminars
4. Student will be able to present with technical ideas and analysis
5. Student will be able to do paper presentation in journals, magazines and write review.
6. Student will be able to make a good frame work of his Dissertation / Thesis

UNIT-I DESIGN RESEARCH PROCESS

Importance of design and research processes to understand/identify issues and factors of significance.

UNIT-II LITERATURE REVIEW ANALYSIS

Literature review and sources of information; analysis of documents and data; scope and limitations of design and research. Documentation of differing data and information

UNIT-III PRESENTATION TECHNIQUES

Effective presentation techniques of oral / written material and information, for professionals in the design field.

UNIT-IV PRESENTATION AND SEMINAR

Paper Presentation - organizing & participating in technical seminars, exhibitions, workshops, conferences related to architecture & allied fields. Publication and dissemination of analysis/inferences from experiments/surveys.

UNIT-V PUBLICATION

Preparing and publication of technical papers /articles in reputed journals /magazines. Preparing, editing and publishing reports, dossiers, documents, magazines and portfolios of masters' course work. On/off-line dissemination of information in media - web, blogs, etc.; familiarity with information systems and current media/methods.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.

18MARS213	ADVANCED DESIGN STUDIO- II									SEMESTER-II	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	9	Credits			7

COURSE OBJECTIVE:

- To learn the importance of and undertake the design process at advanced level
- To learn the design aspects and considerations in large scale projects
- To understand the Urban Reformation and Renewal systems through Design
- To Categorize the Physiological and Psychological aspects in advanced level of Design
- To understand the various design systems, guidelines and considerations as undertaken in the research and field studies and apply them in architectural design.
- To understand the future need for the city & design accordingly

COURSE OUTCOME:

1. Student will be able to design complex structures with advanced level planning principles
2. Student will be able to understand & design as per the Sustainability aspects
3. Student will be able to Design large scale projects
4. Student will understand the Physiological and Psychological aspects in advanced level of Design
5. Student will be able to give a wholesome product of design in all aspects
6. Student can give futuristic proposals for the urban Architecture.

CONTENT:

Design of advanced and complex built environments having strong linkages with the urban scale and focusing on architectural, spatial, landscape, environmental, structure, services and technology features. Examples: Campus Design, Urban Centers, Mixed Use Development etc.

SUGGESTED READINGS:

1. Agkathidis, A., Hudert, M. and Schillig, G., "Form Defining Strategies: Experimenting Architectural Design", Wasmuth International. 2007.
 2. Ching, F.D.K., "Architecture: Form, Space and Order", 3rd ed., John Wiley & Sons. 2007.
 3. Morgan, C.L., "Jean Nouvel - The Elements of Architecture", Thames and Hudson. 1998.
 4. Neufert, P., "Architects' Data", 3rd ed., Blackwell Science. 2000.
- Any other books, documents and standards relevant to the focus area.

18MARS311	DISSERTATION-I									SEMESTER-III	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Wholesome Technical Study report based on Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture.

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
4. Wayne C Booth, Joseph M Williams, Gregory G. Colomb, 'The Craft of Research', 2nd Edition, University of Chicago Press, 2008.
5. Ranjith Kumar, 'Research Methodology- A Step by Step Guide for Beginners', Sage Publications, 2005.
6. John W Creswell, 'Research Design: Qualitative, Quantitative and Mixed Methods Approaches', Sage Publications, 2002.

18MARS411	DISSERTATION-II									SEMESTER-IV	
Marks	Internal	320	External				480	Total	800	Exam Hours	6
Instruction Hours /week		L	16	T	0	P/S	20	Credits			7

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Design report based on previous Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture by Design

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.

18MARESS1	INTRODUCTION TO SUSTAINABLE ARCHITECTURE	SEMESTER-I
------------------	---	-------------------

LIST OF ELECTIVES		
FOCUS AREA: SUSTAINABLE ARCHITECTURE		
Elective 1	Introduction to Sustainable Architecture	18MARESS1
Elective2	Building Performance Analysis	18MARESS2
Elective 3	Sustainable Design Strategies	18MARESS3
Elective 4	Sustainable Building Systems	18MARESS4
Elective 5	Sustainable Trends and Theories	18MARESS5
FOCUS AREA: HOUSING DESIGN		
Elective 1	Introduction to Housing Design	18MARESH1
Elective2	Housing Policies and Schemes	18MARESH2
Elective 3	Sustainable Housing	18MARESH3
Elective 4	Community Participation in Housing	18MARESH4
Elective 5	Special Types of Housing	18MARESH5

Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To orient towards the United nations Sustainable Development goals
- To Understand the environmental impact of building as well as to safeguard the environment
- To Understand the Sustainable Design principles in Architecture
- To Understand the Climatic impacts due to urbanization and ways for mitigation.
- To Understand & work for the health & well- being of the building and its occupants.
- To Understand the broad guideline of various green Building Systems

COURSE OUTCOME:

1. Student will understand the fundamentals of sustainable concepts and applications
2. Student will understand the Site planning principles and its applications
3. Student will understand the climate and its impacts in indoor thermal comfort
4. Student will understand the energy usage ratio and the effective steps of conservation and utilization of energy.
5. Student will understand the Green building Rating Systems in a Broader context
6. Student will understand the Effective methods to propose green buildings through Case Studies

UNIT-I INTRODUCTION TO SUSTAINABILITY

Sustainable Design Concepts and Strategies - Energy and Environment in Architecture, Green building systems, Energy efficiency. Relevant Literature/Case studies.

UNIT-II SUSTAINABLE DESIGN PRINCIPLES

Sustainable Design Principles - Site planning, Resources, Built form, Climate responsiveness, Energy usage, Occupant behaviour and comfort. Relevant Literature/Case studies.

UNIT-III CLIMATE AND BUILT ENVIRONMENT

Climate and Built Form - Overview of Passive techniques for Day lighting, Ventilation, Solar Control and Thermal Comfort. Modelling methods and simulation for assessing building performance. Relevant Literature/Case studies.

UNIT-IV ENERGY AND ITS IMPACTS

Zero Energy and Zero Waste - Methods to achieve zero energy and zero waste in buildings, life cycle assessments and energy audits, renewable energy technologies, integrated energy design. Relevant Literature/Case studies and codes such as ECBC.

UNIT-V GREEN BUILDING SYSTEMS

Green buildings systems - GRIHA, LEED, BREEAM, GREEN STAR. Comparative Studies and analysis, relevance to India.

SUGGESTED READINGS:

- 1.Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
- 2.Arvind Krishnan & Others - Climate Responsive Architecture, Tata Mcgraw -Hill New Delhi. 2001.
- 3.Ralph M. Lebens - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.
- 4.Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
- 5.N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006
- 6.GRIHA manuals, TERI press
- 7.Norbert Lechner, "Heating, Cooling, Lighting", John wiley and sons
8. Mark Dekay and G.Z. Brown, "Sun, Wind and Light- Architectural Design Strategies", John Wiley and Sons
9. Szokolay, Koenigsberger, "Manual of Tropical Housing and building" 2014

18MARESS2	BUILDING PERFORMANCE ANALYSIS									SEMESTER-II	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To Understand the principles of Sustainable building through Simulation process
- To learn the simulation techniques with digital applications, and to get quantifiable results by usage of various building simulation analysis software.
- To Understand the Effective methods of Daylighting through Simulation
- To Understand the Effective methods of Reduction of Solar Radiation through Simulation
- To Understand the effects of Indoor thermal comfort through Simulation.
- To Understand the Energy performance Index of a Building

COURSE OUTCOME:

1. Student will understand the effects of indoor comfort through software simulation and analysis
2. Student will be able to achieve a quantitative result of thermal analysis by software simulations
3. Student will be able to effectively use the modelling tools and techniques
4. Student will be able to design a building with good thermal comfort with optimum design solutions
5. Student will be able to give quantitative results of Daylighting and Ventilation of a building
6. Student will be able to give an energy performance index of a building.

UNIT-I BUILDING PERFORMANCE-DATA FILES

Building Performance Analysis - Design Optimization and Visualization using Building Information Modelling. - use of Epw file – TMY data extraction – IMD files

UNIT-II DAYLIGHTING, IRRADIATION AND WIND ANALYSIS

Building Performance Analysis - Daylighting, Shading and Ventilation.

UNIT-III ENERGY ANALYSIS

Building Performance Analysis - Whole building energy analysis.

UNIT-IV MODELLING TOOLS

Building Performance Analysis - Modelling Tools and Techniques.

UNIT-V SIMULATION TOOLS

Building Performance Analysis - Simulation Tools and Techniques.

Suggested software: ECOTECH, SKETCHUP – OPEN STUDIO, CLIMATE CONSULTANT, HEED, SBED, OPAQUE, OPTIVENT, ENERGY PLUS, DAYSIM -RADIANCE, COOLVENT, RHINO-GRASSHOPPER-LADY BUG, DIVA, DRAGONFLY, SEFAIRA, IES-VE and recent software.

SUGGESTED READINGS:

1. Autodesk Manuals for BIM tools such as CAD, REVIT, ECOTECH
2. Rhino tutorials
3. Sefaira tutorials
4. Climate consultant Tutorials
5. IES tutorials
6. Computational fluid Dynamics – Tutorials
7. Open Studio – Tutorials

18MARESS3	SUSTAINABLE DESIGN STRATEGIES									SEMESTER-II	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To understand the sustainable strategies and its principles in the design.
- To focus on passive means, reduction of active methods in building Function
- To gain a broad understanding of hybrid strategies and Mixed mode building
- To Understand in depth the green building Rating Systems all over India & Abroad
- To Understand the Design Aspects of Daylighting techniques for large scale projects
- To Understand the Design Aspects of heating & Ventilation techniques for large scale projects

COURSE OUTCOME:

1. Student will be able to apply the Sustainable design strategies in architecture, Design and environment
2. Student will be able to give design solutions of Thermal comfort for various climatic locations
3. Student will understand the application of Passive, Active and Hybrid Design strategies.
4. Student will become expertise in terms of green building aspects and applications.
5. Student will understand the in – depth Analysis of Daylighting
6. Student will understand the In- depth analysis of Ventilation technique.

UNIT-I DAYLIGHTING AND VENTILATION STRATEGIES

Sustainable Strategies - Day lighting and Ventilation.

UNIT-II SOLAR CONTROL AND SHADING STRATEGIES

Sustainable Strategies - Solar Control and Thermal Comfort.

UNIT-III STRATEGIES ASSESMENT BY SIMULATION

Sustainable Strategies - Modelling methods and simulation for assessing building performance.

UNIT-IV GREEN BUILDING SYSTEM APPLICATIONS

Sustainable Strategies - Green buildings systems such as GRJHA, LEED, BREEAM, and GREEN STAR.

UNIT-V CASE STUDY AND COMPARITIVE STUDIES

Sustainable Strategies - Comparative Studies of the different rating systems and their analysis with relevance to India.

SUGGESTED READINGS:

1. GRIHA, LEED, BREEAM and GREEN STAR manuals.
2. Mark deKay and G. Z. Brown, "Sun Wind and light – Architectural Design Strategies", John Wiley and sons, New York. 2013
3. Norbert Lechner, 'Heating, cooling and Lighting', 2011
4. Edward Allen, "How Buildings Work-The Natural Order of Architecture", Oxford University Press
5. Mili Majumder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
6. Arvind Krishnan & Others - Climate Responsive Architecture, Tata McGraw -Hill New Delhi. 2001.
7. Ralph M. Leach - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.

18MARESS4	SUSTAINABLE BUILDING SYSTEMS							SEMESTER-III		
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4

COURSE OBJECTIVE:

- To Understand the low Energy Building Concepts with case studies
- To Understand the Indoor Environmental Quality aspects through survey & Case studies
- To Gain understanding & knowledge about the green Materials
- To learn & provide a comfortable, healthy, and productive environment and landscape with minimal energy and better environmental impact.
- To Gain Understanding about the Smart technologies for the Energy management
- To Gain Understanding & Knowledge about the Energy & Cost Audit

COURSE OUTCOME:

1. Student will be able to gain knowledge and application of low energy building design
2. Student will understand the thermal quality standards and its importance in various countries
3. Student will understand the use of green materials and products for a sustainable future.
4. Student will be able to calculate the energy consumption features and the cost audits.
5. Student will be able to understand the integrated building management systems for a controlled environment.
6. Student will be able to understand the energy and cost audits

UNIT-I LOW ENERGY BUILDING

Sustainable Building - Low energy building design and operation. -types of energy – consumption-renewable/ non-renewable-Hybrid design strategies-

UNIT-II INDOOR ENVIRONMENTAL QUALITY

Indoor Environment - Quality and Standards, Indoor Air Quality-indoor thermal comfort- levels – activity analysis- carbon emissions etc

UNIT-III GREEN MATERIALS

Building Systems - Green Materials and green Products- Manufacture- reuse- reduce-recycled materials

UNIT-IV SMART TECHNOLOGIES

Building Systems – Smart Materials and systems- Integrated buildings- Energy saving – Automations

UNIT-V ENERGY AND COST AUDITS

Building Services - Energy and Cost audits.

SUGGESTED READINGS:

1. Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press , New Delhi. 2001.
 2. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
- N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006

18MARESS5	SUSTAINABLE TRENDS AND THEORIES								SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To Understand the various Sustainable Policies & mechanisms
- To Gain in-depth knowledge about vernacular & traditional practices
- To Gain knowledge about biomimicry and applications in building design
- To Gain Knowledge about Adaptive reuse & Urban regeneration
- To Understand about Resource Optimisation – Water Efficiency- Operational procedure
- To familiarize with the historic, contemporary and futuristic trends of sustainable building.

COURSE OUTCOME:

1. Student will be able to understand the policy level mechanisms and design process and product accordingly.
2. Student will understand the vernacular / traditional building types and its applications to the modern context by its systems and materials.
3. Student will understand to use the site in an optimum manner and know about the operational and maintenance practices.
4. Student will gain knowledge about biomimicry and its importance in sustainable design
5. Student will gain knowledge about futuristic design systems and new material applications.
6. Student will Understand about the Adaptive Reuse & urban Generation

UNIT-I POLICY AND REGULATORY MECHANISMS

Sustainable Design: Policies and regulatory mechanisms, Design practices

UNIT-II VERNACULAR AND TRADITIONAL PRACTICES

Sustainable Trends: Vernacular ways of sustainable building, Preservation of the regional and cultural identity, documentation and continuity of vernacular/traditional ways of building and detailing

UNIT-III RESOURCE OPTIMISATION

Sustainable Trends: Contemporary ideas and trends, Optimization Of site potential, Minimization of energy consumption, Protection and conservation of water resources, Use of environmentally friendly materials and products, Provision of a healthy and convenient indoor climate, Optimization of operational and maintenance practices

UNIT-IV DIGITAL APPLICATIONS AND FUTURISTIC APPROACH

Sustainable Trends: Futuristic thoughts and approaches, New materials and technologies, Application of digital technologies

UNIT-V ADAPTIVE REUSE AND URBAN REGENERATION

Sustainable Theories: Biomimicry, Adaptive Reuse, Urban regeneration

SUGGESTED READINGS:

- Eco-Tech : Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997
- Sustainable Architecture : Low tech houses by Mostaedi (A) – Carles Broto 2002
- Ecodesign : A manual for Ecological Design by Yeang(K) – Wiley Academy 2006
- O.H. Koenigsberger and others (2014), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India ,
- “Sun wind and light”- Mark Dekay , G. Z. Brown, Feb 2014

18MARESH1	INTRODUCTION TO HOUSING DESIGN								SEMESTER-I		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To Gain Knowledge about the Housing Typologies all over the world
- To Understand the principles of Community living & Neighbourhood
- To Understand the social, economic, environmental, and psychological implications of housing process and products.
- The goal is to familiarize with housing as a process and a product in the context of the individual, the family, and the community.
- To introduce various stakeholders involved in the housing scenario.
- To Understand about the Housing Finance

COURSE OUTCOME:

1. Student will be able to gain knowledge about housing typologies
2. Student will understand about the theories and concepts of community and Neighbourhood
3. Student will understand about the emerging trends in housing
4. Student will understand about the housing finance schemes and management
5. Student will understand the relation of housing and real estate management in the global and local scenario.
6. Student will Understand the Basis of Housing Demand all over the world

UNIT-I HOUSING TYPOLGY

Housing typologies - Identification of stakeholders, roles responsibilities of various stakeholders, classification of various typologies.

UNIT-II COMMUNITY AND NEIGHBOURHOOD

Community and neighborhood - Theories and concepts, Understanding the scale of housing.

UNIT-III CONTEMPORARY HOUSING

Architectural styles and preferences - Trends in contemporary housing types, greater role for the architect in housing.

UNIT-IV HOUSING FINANCE

Housing finance - Economic consideration and feasibility studies. Various housing financial institutions

UNIT-V HOUSING AND REAL ESTATE

Housing markets - Real estate scenario, Land availability & Acquisition, suburban and rural trends.

SUGGESTED READINGS:

1. Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006
2. Joseph DeChiara, Julius Panero. Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001
3. Robert E. Stevens, Philip K. Sherwood. How to prepare a feasibility study Prentice-Hall, 1982
4. Susan S. Fainstein, Scott Campbell, Readings in Planning Theory, Wiley, 2011

18MARESH2	HOUSING POLICIES AND SCHEMES								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To learn about the housing schemes and policies
- To learn about the Urban housing scenario
- To learn about the Rural housing scenario
- To explore about the stakeholders in the housing
- To gain knowledge about the Central government schemes
- To gain Knowledge about the State Government Schemes

COURSE OUTCOME:

1. Student will learn and gain knowledge the housing schemes and policies
2. Student will gain knowledge about the urban housing scenario
3. Student will gain knowledge about the rural housing scenario
4. Student will gain knowledge about the stakeholders in the housing
5. Student will gain knowledge about the systematic approach for the future housing demand.
6. Student will gain knowledge about the Schemes of Central & State government

UNIT-I HOUSING POLICY IN INDIA

Housing Policy in the India - Government policies on housing, Government Agencies in housing sector, Classification of housing Stock

UNIT-II CENTRAL GOVERNMENT SCHEMES

Central Government Schemes - Identification and review of schemes with housing component.

UNIT-III STATE GOVERNMENT SCHEMES

State government Schemes - Identification and review of schemes with housing component.

UNIT-IV URBAN HOUSING

Urban housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

UNIT-V RURAL HOUSING

Rural Housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

SUGGESTED READINGS:

- 1.National Urban Housing and habitat policy, 2007
- 2.<http://www.tnhb.gov.in/dept.aspx>
- 3.<http://mhupa.gov.in/policies/>
- 4.http://nhb.org.in/Urban_Housing/HousingjDolicies.php

18MARESH3	SUSTAINABLE HOUSING								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To Understand about the Site Analysis
- To gain Knowledge about Affordable housing
- To gain Knowledge about Resource Mapping
- To gain Knowledge about advanced level of Building services for housing
- To learn and understand the current interventions in housing sector and propose a sustainable approach towards the housing.
- To learn about High Performance Housing

COURSE OUTCOME:

1. Student will be able to understand the sustainable site planning with site inventory and analysis
2. Student will understand about Affordable housing techniques
3. Student will learn about cost effective techniques in housing.
4. Student will be able to understand the resource mapping
5. Student will be able to understand the advance level building services
6. Student will be able to understand & design high performance houses

UNIT-I SITE ANALYSIS

How Site and climate related issues affect the design parameters and decisions. -Site Inventory and Analysis- Location, Access- Circulation, Traffic, Climate, Sensory – Analysis

UNIT-II AFFORDABLE HOUSING

Exploring the social and economic choices, options and decision of housing, various technologies available.

UNIT-III RESOURCE MAPPING

Identifying the resources (construct techniques & technology, Manpower & Material) predominant in that area. Understanding the Availability and Cost implication of the resources.

UNIT-IV BUILDING SERVICES

An in depth understanding of building system, how houses work as a system.

UNIT- V HIGH PERFORMANCE HOUSING

Exploring the science and technology required to build high performance houses.

SUGGESTED READINGS:

1. Thomas Russ, Site Planning and Design Handbook, Second Edition, McGraw-Hill Education, 2009
2. Joseph De Chiara, Julius Panero Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001.
3. Clayton Bennett Greening Your Home: Sustainable options for every system in your house McGraw-Hill Professional 2008
4. Global Green USA, "Blueprint for Greening Affordable Housing" Island Press. 2007
5. Jessica Kellner Housing Reclaimed: Sustainable Homes for Next to Nothing New Society Publishers 2011

18MARESH4		COMMUNITY PARTICIPATION IN HOUSING							SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To gain knowledge about the Community participation in Housing
- To gain deep understanding about the Planning Aspects in Housing
- To gain knowledge about the planning process
- To Learn and determine the involvement end users in various stage of housing process across.
- To learn about the community participation for various typologies
- To learn about various best practices in community Housing Through Case studies

COURSE OUTCOME:

1. Student will be able to develop a model for both the end user and the service provider
2. Student will be able to involve in planning in design stages
3. Student will be able to understand the intricacies of Community participation in Housing
4. Student will be able to give design solution for the future community housing
5. Student will gain Knowledge about the best practices in Community housing
6. Student will know about various typologies of community housing

UNIT-I COMMUNITY PARTICIPATION PLANNING

Awareness and importance of Community participation, Planning and design stages - Zoning studies, spatial analysis, customs & cultural practices and user -based studies

UNIT-II PLANNING ASPECTS

People-based planning - Identifying & incorporating Aspiration, Needs & Affordability, incorporating special needs of the elderly and children, concept of better living. Degrees of customizations

UNIT-III PLANNING PROCESS

Familiarization with development and planning process of various agencies (Public, Private (Multifamily), Private (single family), Co-operative, NGO), view on community participation, organizational structure, Project and product brief, Identification of beneficiaries.

UNIT-IV COMMUNITY PARTICIPATION MODELS AND CASE STUDIES

Existing models of community participation across various typologies, best practices, Case studies.

UNIT-V TYPOLOGY

Developing models for community participation for various typologies and stages.

SUGGESTED READINGS:

- 1.Sylvia J.T. Jansen, Henny C.C.H. Coolen and Roland W. Goetgeluk, "The Measurement and Analysis of Housing Preference and Choice" Springer 2011
- 2.Andrew Beer, Debbie Faulkner, Chris Paris, Terry Clower - Housing transitions through the life course: Aspirations, needs and policy 2011
- 3.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
- 4.Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006
- 5.Juilenne Hanson, Decoding Homes and Houses Cambridge University Press 20

18MARESH5	SPECIAL TYPES OF HOUSING								SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To gain Knowledge about the Vernacular housing in Chettinad Region
- To Gain knowledge about the Vernacular housing in Hill region
- To understand the Various techniques involved in the vernacular construction
- To understand about Disaster prone areas and methodologies for housing in those regions
- To learn about the influences of social, economic and environmental factors in housing
- Exploring housing typologies which tends to lean more on a aspect more than the rest.

COURSE OUTCOME:

1. Student will learn and understand the Vernacular Architecture of various regions of world
2. Student will learn and understand the Vernacular Architecture of various regions of India
3. Student will learn and understand the Vernacular Architecture of various regions of Tamilnadu
4. Student will learn about design aspects and historical methods of construction which can be adopted for a particular context
5. Student will learn and understand the types of housing in disaster prone areas
6. Student will be able to Propose the housing trend for the Future

UNIT-I VERNACULAR- CHETTINAD REGION

Vernacular Architecture - Typology 1 - Chettinad region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-II VERNACULAR-HILL REGION

Vernacular Architecture - Typology 2 - Hill region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-III VERNACULAR – DESERT REGION

Vernacular Architecture - Typology 3 - Desert region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-IV HOUSING – DISASTER PRONE AREAS

Housing in Disaster prone areas - Classification of Disaster, Disaster Management Cycle, Housing interventions.

UNIT-V HOUSING – FUTURE CONCEPTS

Future concepts - Development trends, Product categories, material trends, People preferences

SUGGESTED READINGS:

1. Richard Hyde, Bioclimatic Housing: Innovative Designs for Warmer Climates, Earthscan
2. Willie Webber, Simos Yannas (ed.) Lessons from vernacular Architecture, Earthscan
3. Ilay Cooper, Traditional Buildings of India, Thames and Hudson, 1998
4. Monisha Bharadwaj, India Style, Bay Soma Publishing -2003

M. PLAN (TOWN AND COUNTRY PLANNING)

MASTER OF PLANNING

[2 YEAR FULL TIME POST GRADUATE DEGREE PROGRAM]

REGULATIONS

2018 – 2019 Batch (New Syllabus)

**CHOICE BASED CREDIT SYSTEM
(CBCS)**

FACULTY OF ARCHITECTURE

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN101	Planning Theory and Practice	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. This course is an introduction to the history and theories of the planning profession.
2. Selectively draw on the literature in planning theory and history to examine a series of questions fundamental to planning practice.
3. The discussions, exercises, and readings on these questions will highlight alternative approaches to planning practice,
4. The discussions, exercises, and readings on these questions will highlight the approaches of current issues in the field of planning.
5. To study the methods of collecting data base and base map preparation
6. To study about the different planning concepts and inclusive planning

UNIT I PLANNING PRINCIPLES AND PROCESS

9

Process of evolution of human settlement planning, **Basic elements of the city**, Principles in planning - the Rational-Comprehensive approach, the Incremental approach, the Transformative Incremental (TI) approach, **the Transactive approach**, the Communicative approach, **the Advocacy approach**, **the Equity approach**, **the Radical approach**, and the **Humanist approach**.

UNIT - 2 PLANNING THEORIES AND SYSTEM

10

Theories: **Concentric Zone Theory**, **Sector Theory**, **Multiple Nuclei Theory** and other relevant theories; Concepts: **Garden City Concept**; Planning system in India - Introduction to master plan, structure plan, detailed development plans, city corporate plan and smart plan - **Orthodoxies of planning**; **Goal formulation**, **objective**, **scope**, **limitations** **Sustainability and rationality in planning**. Comparison of planning systems in UK and USA.

UNIT - 3 PLANNING SURVEYS

8

Data requirement for planning: **questionnaire design**, **scale and application**, **sampling techniques**. Techniques of conducting surveys for socio – economic, land use, density, structural condition of buildings, height of building, land utilization, physical features of land and transport survey. Aerial photo and remote sensing techniques in planning - Standards for various urban functions.

UNIT - 4 ANALYTICAL TECHNIQUES

10

Delphi, trade off-game, simulation models, gravity analysis, and Lowry model - Threshold analysis and multivariate analysis - Techniques of delineation of planning areas and planning regions - Land use models.

UNIT 5 OPTIMIZATION TECHNIQUES

8

Optimization and economic analysis methods in project formulation and implementation, CPM, PERT, PBBS, Goal achievement matrix, Introduction to Cost-Benefit analysis. Research writing and article writing to be a part of Units I (Planning principle and Process) and II (Planning system).

TOTAL : 45 PERIODS

COURSE OUTCOME:

1. The above course introduces the history of spatial planning
2. the students will have the ability to understand various modes of planning.
3. They will earn the skill to apply basic analytical and optimizing techniques needed.
4. Methods of population forecast in settlement
5. Ability to plan project management
6. They learn about emerging trends in planning of cities and towns

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN102	Socio – Economic and Spatial aspects of Human Settlements and Planning	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To teach the students the social sciences inputs (Urban and Rural Sociology, Urban and Regional Economics and Urban and Human Geography)
2. analyzing human settlements evolution, growth & development and incorporating them while planning of human settlements at the rural, urban and regional levels.
3. To understand the socio cultural background of Indian communities
4. To learn about the socio economic problems and issues in india
5. Study about the economic growth in Indian settlements
6. To study about the different communities and sociological theories in community development

COURSE OUTCOME:

1. The course illustrates that the students think and analyze the spatial planning attributes from the social and economic perspective.
2. This subject facilitates graduates towards sensitize about society and environment.
3. Teaches the importance of socio cultural profile in building up communities
4. Earn knowledge in urban economics and its aspect
5. Types of societies and its significances in economic growth
6. They learn about sociological theories in the community development

UNIT I SOCIOLOGY CONCEPTS AND SOCIO-SPATIAL ASPECTS

10

Introduction to the sociological concepts of Marx, Talcot, Parsons, Weber, Durkheim, Riesman, Jacobs. Socio - spatial structures and Institutions related to urban and rural communities - Human and urban geography of urban areas – Human interaction and spatial form of cities- Ecological processes and socio-spatial structures in Indian Cities.

UNIT - 2 ECONOMIC BASE

8

Economic concepts and frameworks - Macro and micro economics - Agglomeration economics - Economics of scale - Multiplier effect-concepts and scope – Urban economics - intersection of geography and economics introducing the role of space into economic considerations- Economic base of cities and region - Understanding economic base and changing spatial structure of urban areas - role of public and private policies that impact the urban form, structure and economy.

UNIT - 3 SOCIO - ECONOMIC, AND GEOGRAPHIC CONCERN AND DEVELOPMENT

10

Geographical, sociological and economic aspects of rural and urban Development - Government, non-government and community participation in the local and regional area planning and development. Role of socio-cultural aspects on growth patterns of city and neighbourhood communities; Social planning and policy, and community participation;

UNIT - 4 URBAN LAND USE AND SETTLEMENTS ORGANIZATION

7

Land use determinants - Location dynamics of urban Land use - Spatial organization of urban settlement - Social and economic Impacts of urban growth and expansion. Economic growth and development, quality of life; Human development index; Economic principles in land use planning;

UNIT 5 URBAN STRUCTURE, URBANIZATION & IMPACTS ON LIVELIHOOD

10

City-region, urban sprawl, and urban fringe - Urbanization in the World and India at a glance - Urban development in Tamil Nadu and Chennai city with reference to settlements, population distribution, economic activities and governance. Sustainable livelihoods — vulnerabilities and social exclusion – agenda for the urban poor - livelihood strategies, resilience and transformability. Research writing and article writing to be a part of Units I (Socio-spatial aspects), II (Economic base), III (socio - economic, and geographic concern and development), IV (urban land use and settlements organization) and V (urban structure, urbanization & impacts on livelihood)

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN103	Traffic and Transportation Planning	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. Traffic and transportation planning is an integral part of spatial planning at any level. Therefore, it is proposed to give an overall framework of this course to the students of M. Plan programme in the first semester itself.
2. The objective of this course is to give an historical perspective of road development in India, salient features of road geometric and intersections, traffic surveys, planning aspects of different mass transportation systems and introductory part dealing with highway capacity.
3. To understand the different transport system and approaches in design
4. To understand basic principles and techniques in transport planning
5. To analyse, designing and forecasting for the future demand
6. To study about the transport planning process

COURSE OUTCOME:

1. In the urban transportation planning process, discuss its relationship to transportation facilities development, treat specific techniques of analysis and evaluation for urban transportation planning, and discusses possible means of achieving project and societal objectives.
2. Learn about urban transport and road safety planning
3. Survey techniques used to analyze the existing traffic conditions and plan for future demand
4. Integrated understanding of modes of transport and transport infrastructure planning
5. Understand the planning process involved in road network, infrastructure, and safety planning
6. They learn about the transport planning process

UNIT I TRANSPORT DEVELOPMENT IN INDIA

8

Economic, political and social significance of transport development –Transportation in cities - Development of rail, water and air transport policies and programmes in India- Scope and content of Nagpur, Bombay and Lucknow road development plans - Current trends in the road development sector in India.

UNIT - 2 URBAN TRANSPORTATION SYSTEM & TRIP GENERATION ANALYSIS:

10

Transport planning process, Problem definition, Solution generation, Solution analysis, Evaluation and choice, Implementation - Sequence of activities involved in transport analysis

UNIT - 3 MODE CHOICE MODELING AND TRIP DISTRIBUTION ANALYSIS:

10

Mode Choice Modeling: Influencing Factors, Earlier Modal Split Models, Trip-End Type Modal Split Model, Trip-Interchange Modal Split Model, Different modes – Capacities – Limitations – Planning aspects – Coordination – Para transit modes – Private transport.

UNIT - 4 TRIP DISTRIBUTION ANALYSIS AND ROUTE ASSIGNMENT

8

Trip Distribution Analysis: Presentation of Trip-Distribution Data, PA Matrix to OD Matrix, Basis of Trip Distribution, Gravity Model of Trip Distribution, Calibration of Gravity Model, Singly and Doubly Constrained, Gravity Models,

UNIT 5 TRANSPORT SURVEY AND HIGHWAY CAPACITY

9

Transportation Survey: Definition of Study Area Zoning Types of Movements, Types of Surveys Volume Count – Origin and Destination – Parking and Public Transport Surveys – Inventory of Transport facilities – Methods of Survey – Analysis – Inferences,

Concept of PCU and level of service – Capacity of uninterrupted flow conditions – Flow affecting capacity and level of service – Capacity of rural and urban roads. Research writing and article writing to be a part of Units I (Transport development in India) and IV (Mass transportation systems)

TOTAL :45 PERIODS

	Semester I	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPN121	Planning Studio I	3	0	10	8	160	240	400

COURSE OBJECTIVE:

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

The Planning project II intends to expose the students to

1. Development of communication skills – Map preparation, report writing and presentation skills
2. Understanding of various surveys relating to preparation of plans for urban and rural Settlements
3. Preparation of plans for micro-level units
 - a. Study at Village level - Structure of village, problems, current rural improvement programmes and structure of administration.
 - b. Study on Urban Land uses Land use Zones – Land use activities – Their functional and spatial characteristics – Issues related to functions, spaces and Infrastructure
 - c. Action planning - Planning at Residential Layout Level Review of literature, site analysis, and study of existing layouts - Design criteria's – Existing act and byelaws - Alternative designs - Finalization of designs, Cost of the projects and model.

TOTAL: 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE1A	Public Transport Planning	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To introduce students to Public Transport System including its performance and Economic Aspects.
2. To study Infrastructure required for Bus Stops, Terminals and Depots.
3. To study about the main factors that affects usage of public transport
4. To learn about the modern techniques, government policies and economical aspects in transport development
5. Understand advantages of sustainable and efficient modes of transport
6. To study about the different economic factors involved in public transport planning

COURSE OUTCOME:

1. Learn about the different principles of public transport design
2. The importance of public transport network planning
3. Earn ability in working out Project management for different modes of transport
4. Evaluate and critically analyze the existing pattern of public transport modes in India
5. Advanced systems in public network planning like Multi Modal transport system
6. Learn about the different infrastructure requirement in public transport planning

UNIT - 1 INTRODUCTION TO PUBLIC TRANSPORT SYSTEMS

36

Highway systems – Road type and classification, road patterns, Urban passenger transport system characteristics, public transport modes, genesis of public transport system, mass transit system, Para transit system, technological features, Demand for public transport, public transport demand and supply indicators, determinants of public transport supply and demand, public transport supply and demand characteristics in cities of various sizes and socio economic setting.

UNIT - 2 PUBLIC TRANSPORT PERFORMANCE AND ECONOMIC ASPECTS (Part 1)

24

Identification and Measurements of Highway Benefits, Physical and financial performance indicators for public transport, performance characteristics of various public transport modes including para-transit modes,

UNIT - 3 PUBLIC TRANSPORT PERFORMANCE AND ECONOMIC ASPECTS (Part 2)

24

Introduction to PPP - Concepts of BOO, BOT, BOOT, Public transport fare types and pricing criteria, costs, services; price elasticity of demand; subsidy issues; regulation, privatization impacts and integration issues on public transport performance; public transport financing;

UNIT - 4 PUBLIC TRANSPORT NETWORK PLANNING AND SCHEDULING

36

Public transport based city forms and structure, Transit Oriented Development (TOD); Impact of city density, size, activity concentration on public transport patronage. Form, type and density of bus route network, bus route network planning principles; Types of bus priority measures, merits and limitations.

UNIT - 5 BUS STOPS, TERMINALS AND DEPOT INFRASTRUCTURE

30

Bus stops – types and characteristics , planning guidelines, pedestrian –public transport interface ; Bus Terminals – types, assessment of facilities and land areas for terminals; interchange- concepts, function and planning guidelines; bus depot -concepts, function, activity and land requirements, planning guidelines. Research writing and article writing to be a part of Units I (introduction to public transport systems), II (public transport performance and economic aspects (part 1)), III (public transport performance and economic aspects (part 2)), IV (public transport network planning and scheduling) and V (bus stops, terminals and depot infrastructure)

TOTAL : 150 PERIODS

REFERENCE BOOKS:

- 1 White, P. Public Transport Planning, Management and Operation 1988 London, Hutchinson
2. Nash, C.A. The Economics of Public Transport London, Longman
3. Vuchic, V.R. Urban Public Transportation 1982
4. Chakraborty and Das, A Transport Planning and Highway Engineering 2003 PHI

	Semester I – Elective	Instruction Hrs			C	Marks		
		L	T	P		CIA	ESE	Total
18MPNE1B	Transport Economics	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To study Transport Demand and Supply, including Costing and Pricing of Services.
2. To study Principles of Economic Appraisal of Transport Projects.
3. To learn about the issues related to transport funding and public transport economy
4. Evaluate and criticize the current economic policy in transport development
5. To know about large transport project and its funding management
6. Imbibe knowledge on costing and pricing of transport services

COURSE OUTCOME:

1. Creative and innovative solutions for transport funding and operational system
2. Develop the software skills in data analysis
3. Interpret economic data required for the transport demand
4. Interpret transport and road pricing
5. They learn about transport regulation
6. Various methods of evaluation for ongoing transport development

UNIT - 1 TRANSPORT DEMAND AND SUPPLY

30

Concepts and Principles of Engineering Economics, Identification and Measurements of Highway Benefits, Movement, transport and location, transport and economic development; Demand for transport, factors influencing demand; elasticity of demand, measures of elasticity; supply of transport, elasticity of supply; demand forecasting.

UNIT - 2 COSTING AND PRICING OF TRANSPORT SERVICES (Part 1)

30

Fixed and variable cost, joint and common cost, cost allocation, user cost internal cost, external cost, economic cost;

UNIT - 3 COSTING AND PRICING OF TRANSPORT SERVICES (Part 2)

30

Principle of pricing, marginal cost pricing, price discrimination, operational objectives of pricing; revenues, transport subsidies, [Methods of Economic Analysis](#).

UNIT - 4 PRINCIPLES OF ECONOMIC APPRAISAL

30

Importance of infrastructure; basic principles of appraisal, benefit valuation, cost benefit analysis, multi criteria analysis.

[Methods of Economic Analysis](#), [Comparison of the Methods of Analysis](#)-, [Characteristics and Limitations of the Different](#).

UNIT - 5 REGULATION OF TRANSPORT

30

Theory of regulation, priorities in transport policies, regulatory reforms, coordination. Research writing and article writing to be a part of Units I (transport demand and supply), II (costing and pricing of transport services (part 1)), III (costing and pricing of transport services (part 2)), IV (principles of economic appraisal) and V (regulation of transport)

TOTAL : 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE1C	Disaster Management	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To generate interest in students to understand the causes and consequences of disasters
2. study its importance in planning and managing cities and towns towards mitigation and rehabilitation.
3. Provide the basic concepts and understandings of various disasters
4. To study about disaster resilient community design
5. Study and build skills for disaster response
6. To build disaster resilient communities and develop strategies for disaster management

COURSE OUTCOME:

1. The topics of the subjects attempt to sensitize the students about the ill effect of the disasters as well as the importance of preparedness.
2. It also inculcates the students that technology as well as community effects are important to mitigate disaster.
3. Mitigation measures related to environment and settlements
4. Learn about disaster resilient community design
5. Learn about the legal aspects and policies for disaster risk reduction
6. Creates disaster awareness in the future development

UNIT 1 DISASTER

15

Concepts and processes - Disaster cycle-myths and realities- Disaster-types, causes and consequences - Impacts of disasters on living things, properties, nature and community - Disaster- its importance towards multi-disciplinary perspective. **Types of Incident Management, Stage of Disaster management –Hazard and vulnerability introduction,**

UNIT - 2 NATURAL AND MAN-MADE DISASTERS

30

Types of natural Disasters- Seismic, Mass movement, Hydrological, Metrological disasters - its types, magnitude, intensity and its managements, - Disaster and man-made environment - Industrial pollution and health Hazards - Industrial pollution and natural resource damage - Social vulnerability and damage to people and property - Case studies related to natural disaster and man-made disasters at the national and international levels.

UNIT - 3 DISASTER POLICY AND RISK ANALYSIS

30

Disaster management policy, **Disaster management plan at national and state,** National and State Bodies for Disaster Management. Disaster management plan of developed nations.

UNIT - 4 DISASTER AND TECHNOLOGY

60

Disaster mitigations for Earthquake, flood and cyclone –Retrofitting, Technology, building materials, design considerations, - Prediction. Land use planning and regulations: Temporary settlements and communications, Role of Information, Education, Communication, and Training,

UNIT 5 DISASTER EDUCATION AND COMMUNITY BUILDING

15

Community awareness and action - Participatory management of community and disasters - NGO role and disaster preparedness and management, national and international perspectives – Government-roles and various levels in terms of proactive and reactive measures towards managing disasters - Gender perspectives-women, children, aged, physically disabled and disaster management. Research writing and article writing to be a part of Units I (disaster), II (natural and man-made disasters), III (disaster: physical planning and resource management), IV (disaster and technology) and V (disaster education and community building)

TOTAL: 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE1D	Real Estate And Housing Markets	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. This course applies the latest economic thinking and research to the task of analyzing real estate markets
2. Forecasting supply or demand for the future
3. Theories in housing markets and development
4. To gain knowledge on various real estate models for project formulation, implementation etc
5. Understand the land legislation and acquisition in real estate projects
6. Professional services, sale and marketing aspects of Housing and real estate

COURSE OUTCOME:

1. The outcome of this course is to provide students with a comprehensive understanding of major functional areas of real estate, including legal aspects, finance, economics, real estate practice and appraisal.
2. Economic concept of land, land pricing and acquisition
3. Urban reforms, acts and policies related to real estate markets
4. They learn about real estate development in public, private, partnership sectors
5. Tools and techniques used in land acquisition, land pooling and housing
6. Estimation and costing of real estate projects

UNIT I INTRODUCTION

15

Introduction to real estate - Definition, principles of real estate - Value concepts - Methods of valuation, **Factors affecting real estate market, role of govt. in real estate, statutory provisions, risk management**, Introduction to real property ownership - Leasing property and succession - Methods of sale/purchase and title search.

UNIT - 2 INVESTMENT AND LAWS

15

Real estate investment analysis and portfolio management - Foreign direct investment (FDI) - Role of NRIs and PIOs in the investment market - Marketing and brokerage - Introduction to various laws related to real estate – 17 Acts. **Principles for drafting agreements relating to real estate,**

UNIT - 3 REAL ESTATE PROJECT FORMULATION

15

Entrepreneur and Entrepreneurship, Real estate project formulation - Real estate development process - Asset management, property insurance, taxation and fiscal incentives - Government policies and industry organization - Public-private partnerships and joint ventures, **Direct Purchase Vs Joint Venture Models of Development**, rating, and risk assessment.

UNIT - 4 HOUSING MARKETS

30

Concepts and definitions, housing market, area, the purpose - Nature of housing market studies-factors affecting housing prices, housing market behavior - Estimation of housing need, housing demand and identification of housing stress - Factors affecting local housing market - Housing demand and supply market process - Housing search residential mobility and filtering causes and consequences - Policy influence on housing market - The formal and informal housing markets and their impact on urban poor, public - Co-operative and private sector housing market, process and supply institutional frame work.

UNIT 5 CASE STUDIES

75

Case studies of real estate development in public, private, partnership sectors - Real Estate as facilitator of development - Development of real estate as a tool for controlling land and property prices - Transaction and renting of real estate - Lease deeds/ sale deeds, sale documents, registration - Mortgage and pledging. Research writing and article writing to be a part of Units IV (housing markets) and V (case studies).

TOTAL: 150 PERIODS

	Semester I – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE1E	Materials, Technology and Infrastructure	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To expose the students to Traditional and Conventional Building Materials.
2. To study Cost Reducing and Environment friendly Technologies for Housing Projects.
3. Understand Elements of physical infrastructure and its implementation in urban and rural areas
4. To study about the new technologies in the field of infrastructure development
5. Study on Modern materials and construction technologies
6. To gain knowledge in Significance of Housing construction industry and its characteristics

COURSE OUTCOME:

1. To study various Technologies for Housing Development along with Physical Infrastructure.
2. Learn about alternate material and construction technique
3. Different components of physical planning and design of infrastructure
4. Emerging technologies and concepts in housing
5. Cost optimization techniques in Indian housing scenario
6. They learn about Role of BMTPC and other organizations in promotion of new and alternative technologies

UNIT - 1 INTRODUCTION TO MATERIALS AND TECHNOLOGY

15

Building materials traditional and conventional, low cost materials, significance of technology for housing development, conventional technologies and modern technologies, appropriate technology, technology for housing in the context of housing development in India and the third world. **Introduction to mechanization: Definition, advantages and limitations of mechanization.**

UNIT - 2 PREFABRICATION AND INDUSTRIALIZATION

15

Concept of prefabrication, industrialization and system building, **Types of prefabrication – site and plant prefabrication - Economy of prefabrication**, various open and closed systems, choice of various systems of building, concept of intelligent building;

UNIT - 3 CONSTRUCTION INDUSTRY

15

Organization of the construction industry in India-Significance of Housing construction industry, its characteristics and role of various factors involved; Small scale enterprises in the housing construction industry-building material manufacturers, sellers and small contractors. Significance of resources and manpower in housing construction, need for imparting in housing building, concept of Nrimithi Kendras. **Quality policy in construction industry.**

UNIT - 4 COST OPTIMIZATION

15

Cost reducing techniques, environmental friendly technologies, role of technology in housing projects formulation-cost time and other implications, Emerging technological perspectives for house construction, infrastructure and housing area planning.

UNIT - 5 ALTERNATIVE TECHNOLOGIES

90

Role and significance of Physical infrastructure in housing development, characteristics of various components of physical planning and design of infrastructure, appropriate technology for infrastructure development, rain-water harvesting, use of solar energy, wind energy and other appropriate technologies; **Current and future trends in Construction technologies**, Role of BMTPC and other organizations in promotion of new and alternative technologies. Research writing and article writing to be a part of Units I (introduction to materials and technology), II (prefabrication and industrialization), III (construction industry), IV (cost optimization) and V (alternative technologies)

TOTAL: 150 PERIODS

REFERENCE BOOKS:

1. BMTPC, GoI Brochures of Building Materials and Technology Promotion Council (BMTPC), Government of India BMTPC, New Delhi
2. BMTPC Directory of Indian Building Materials and Products 2009 BMTPC, New Delhi

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN201	City Planning	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. This course is planned to offer the students, the actual process of plan making at different levels i.e. city level and zonal levels and giving the case studies and their overview.
2. The other aspects which are proposed to be dealt in this course are the development control rule which gives the required legal support to the city plans and also contain elementary aspects of urban renewal.
3. Study the growth and evolution of cities with respect to their socio economic setup
4. Understand the context, location and linkage factors
5. To study the problems and issues of metropolitan cities
6. To study about the process of preparing Master plan

COURSE OUTCOME:

1. As an outcome of the above course the graduates will have the ability to conceptualize, analytically define, and treat mater plan, zonal plans and detailed development plan professionally
2. They would earn skills in preparing and reviewing the above plan.
3. Learn to prepare development plans for different scale of cities
4. Understand the city sprawl, and peri urban development
5. Urban development policies and programmes
6. They learn about Urban renewal and redevelopment

UNIT I INTRODUCTION

8

Urban - classification, Characteristics of Urban area, Impacts of urbanization – Global and India, Land utilization, Contemporary theories and concepts in city planning - Political influence and polarization of economic, socio-cultural and administrative activities.

UNIT - 2 MASTER PLAN

12

Plan making process, Delineation of planning area, assessment of developmental issues - Plan period and phasing - Process, Formulation of aim and objectives, Development proposals and land use planning, Delineation of zones, Resource mobilization, Implementation mechanism, Monitoring and review, Public participation - Deficiency of master plan.

UNIT - 3 ZONAL PLAN AND DEVELOPMENT CONTROL RULES

9

Concept, priority in the preparation - Plan making process (URDPFI) – Introduction, Site and background analysis, Conceptual framework, Proposals and development strategy, Assessment of developmental issues - Projection of requirements - Land use zones and sub classification - Permissible activities, appellant activities, and prohibited activities - Appeals, appellant authority, and unauthorized developments.

UNIT - 4 CASE STUDIES

6

Case studies on Eco cities, Healthy cities, Low carbon cities, resilient cities, Method of preparation, issues and proposals, and critical appraisal. Research writing and analytical writing

UNIT 5 URBAN RENEWAL

10

Urban renewal as a part of metropolitan plan - Techniques of identification of urban renewal areas - Conservation, rehabilitation and redevelopment - Management of urban renewal areas - Incentive zoning and transfer of development rights. JNNURM – Mission, eligibility, Finance, Implementation and targets, AMRUT– Mission, eligibility, Finance, Implementation and targets. Research writing and article writing to be a part of Units I (introduction), II (Master plan), III (zonal plan and development control rules), IV (case studies) and V (urban renewal)

TOTAL: 45 PERIODS

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN202	Regional Planning	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To make the students understand the concept of regional planning and make them skillful in applying various methods and techniques of regional planning.
2. To provide knowledge on different types of regions and its linkages
3. Understand the Paradigm shift in regions and planning
4. To study about different methods to analyse region and its growth
5. Scale, complexity and its impacts in different type of regions
6. Study about tools and techniques available for planning regions in india

LEARNING OUTCOME

1. The students will understand the need for Planning at various levels & especially the thrust and focus of regional planning.
2. The students will become familiar with the contents, approach and methodology of preparation of regional plans.
3. They will also learn important concepts & techniques in regional planning.
4. Expected to learn about the region and its dynamics
5. Impacts of globalization in the regions
6. They Learn about different case examples

UNIT I CONCEPT OF REGIONAL PLANNING

9

Concept - **Defining a region**- fluidity and **purpose**, and need for regional planning and regional development, Sustainable regional development and its components – Regionalization - Evolution of regional planning.

UNIT - 2 TECHNIQUES OF REGIONAL ANALYSIS

9

Input-output analysis - Shift and share analysis - Concentration and dispersal - Industrial location theory.

Socio-cultural context of a project, five entry points to social analysis of a project and how to do that, Use of social assessment methods: PRA, SARAR, etc,

UNIT - 3 GROWTH MODELS

9

Growth pole and growth center - Core periphery concept - Central place theory - Agricultural land use model - Models of industrialization and regional development - Resource allocation models.

UNIT - 4 REGIONAL DEVELOPMENT PATTERN

9

Regions in Indian Context: Resource Regions, Corridors as regions, National, subnational and State as a region, macro, meso and micro regions in India, Regional disparities - Resources in regional development - Multi-level planning - District planning - Special area development programmes and schemes - Rural development schemes.

UNIT 5 CASE STUDIES

9

Regional planning in India - Regional planning-National & International case studies. Research writing and analytical writing to be a part of Units I (Concept Of Regional Planning), II (Techniques Of Regional Analysis), III (Growth Models), IV (Regional Development Pattern), V (case studies) **Case Studies from India: NCR and Delhi Mega Region, Mumbai Mega Region.**

TOTAL: 45 PERIODS

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN203	Research Methodology	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To develop a research culture among the students and study, use and understand appropriate methods in formulating problems and conduct surveys, analyze data and prepare a research report.
2. To develop critical thinking and research ability and apply the knowledge gained
3. Develop the data collecting and primary survey skills to provide exposure in research methodology
4. Understand the research operations
5. Develop knowledge on deterministic and probabilistic models in survey data analysis
6. To study about methods of data collection

COURSE OUTCOME:

1. Students are able to learn various methods and techniques on how to study and understand the problems of the urban and rural society in relation with environment
2. development skills to manage field work, data analysis and report working.
3. Understand the theoretical and practical significance of research
4. Types of research in formulating a research plan
5. Interpret and infer data from statistical analysis
6. They gain knowledge in report writing

UNIT I RESEARCH AND PLANNING

8

Research- definitions, types, purposes and application - Research as a way of thinking - Research processes and planning processes - Commonalities and differences between research processes and planning processes - Research design- definition, types, features, and Ideal Research design - Planning projects Vs research projects. **Research methods vs Methodology, Types of research.**

UNIT - 2 SOURCES OF DATA

8

Data and information - Access to Information-nature, types and sources. - Census and sample surveys and case studies - Secondary data sources and its availability in terms of form, time and reliability - Organizations - Primary data-types, sources and generation -Secondary data and Literature studies - Literature survey and formulation of theoretical framework – Hypothesis-definition, formulation and relevance to research studies

UNIT - 3 METHODS OF DATA COLLECTION

10

Observation–participant and non-participant techniques of observation, Preparation for field observation of people, buildings, places and activities. Merits and Demerits of observation - Interview-structured and unstructured interviews, telephone interviews, rapport building, merit and demerits of Interview - Questionnaire-mailed questionnaire - Formation of questions, sequencing and constructing questions, merits and demerits – Schedule - Difference between questionnaire and schedule - Administration of field survey- pre requisites and preparations.

UNIT - 4 DATA ANALYSIS

10

Criteria for analysis–descriptive and comparative - Processing raw data-coding, tabulating and illustrative - Secondary data analysis and primary data analysis and making interface between the two, **Measures of Central Tendency and Dispersion, Time Series and Forecasting**, Draw conclusions and interpretation of the analysis - Link interpretation to policy, design and planning.

UNIT 5 REPORT WRITING

9

Structure and components of scientific reports -Types of report -Technical reports and thesis - Significance - Different steps in the preparation, Layout, structure and Language of typical reports, - **Presentation** of graphs, tables, maps and illustrations - Citation, referencing and Indexing - Format for preparing bibliography - Production of report.

	Semester II	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPN221	Planning Studio II	3	0	10	8	160	240	400

COURSE OBJECTIVE:

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

The Planning Studio II attempts to train students in **the preparation of development plan** conceived within the framework of the approved perspective plan of a medium town having a plan period of 5 or 10 years.

The students are focused to learn to review and prepare plan for a medium urban settlement such as **Development Plan / Master Plan / Structure Plan**. The components such as

- Physical characteristics,
- Natural resources,
- Demographic characteristics,
- Economic base, employment,
- Shelter,
- Transportation,
- Social and infrastructure facilities,
- Finance,
- Institutional set-up etc. are to be learned.

Depending on the selection criteria an urban settlement would be selected and the information regarding the components stated above would be collected both from the primary and secondary sources and analyzed. Stakeholders consultative meeting are also conducted during the field visit. A report / maps / charts are the media through which the case study is expected to be presented.

TOTAL: 180 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE2A	Rural and urban housing	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To study Urban and Rural Housing Policies and Programmes in India and the Developing World.
2. To introduce the basic premises for Policy Preparation and Content of various Housing Policies and Programmes.
3. To familiarize the students with the Real-World Issues and Evaluate Success and Failure of Policies and Programmes
4. Introduce different housing schemes for rural areas
5. Understand different models and theories in rural housing
6. To study about global housing scenario in rural and urban areas

COURSE OUTCOME:

1. The outcome of this course is to provide students with a comprehensive understanding of various housing policies in rural and urban housing scenario.
2. Understand norms and planning principles for rural communities
3. To learn about importance of community development and citizen participation
4. Impacts of large development in to the villages
5. Learn about the different construction techniques in rural housing
6. They learn about Various urban and rural housing programmes including the current JNNURM, RAY, Bharat Nirman, PURA, etc.

UNIT - 1 INTRODUCTION URBAN AND RURAL HOUSING POLICIES

15

Mutual dependence between urban and rural areas. Levels of living of rural people. Urban and Rural Housing Policies and its role in national development, objectives of policy in relation to settlement planning, basic components of housing policy and programmes formulation in urban and rural areas, housing policies in India and abroad, its impact and consequences on housing development,

UNIT - 2 HOUSING POLICIES

15

Housing policy and their focus in different developing and developed countries, their significance in provision of housing programmes for low-income groups, their formulation implementation and evaluation role of international and national funding agencies in housing programmes special housing programmes in different countries.

UNIT - 3 HOUSING IN RURAL

20

India Socio-economic profile of rural India and rural housing conditions-types of traditional building materials and construction methods, house types, rural housing norms, standards and design, access to infrastructure, rural health and sanitation, environmental improvement in villages, concept of integrated rural housing development, rural housing schemes, impact of large development projects and community development in rural areas, special needs for housing for tribal. **Planning principles for village and community norms.**

UNIT - 4 GLOBAL OVERVIEW

15

Review of urban and rural housing policies in various countries with particular focus on South East Asian countries **Rural energy issues, renewable and alternative resources of energy, ecological and environment considerations in rural development and village planning.**

UNIT 5 CASE STUDIES OF POLICIES AND PROGRAMMES

70

Various urban and rural housing programmes including the current JNNURM, RAY, Bharat Nirman, PURA, etc. Research writing and analytical writing to be a part of Units I (Introduction Urban And Rural Housing Policies), II (Housing Policies), III (Housing In Rural), IV (Global Overview), V (Case Studies Of Policies And Programmes)

TOTAL: 135 PERIODS

REFERENCES:

1. Government of India, National Urban Housing and Habitat Policy, 2007, Ministry of Housing and Urban Poverty Alleviation
2. Glaesar, Bernhard, Housing, Sustainable Development and Rural Poo,r 1995, Sage, New Delhi

4. Rao, P.S.N., Urban Governance and Management, 2005, Kanishka Pub. and IIPA, New Delhi

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE2B	Planning Legislation and Professional Practice	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To make the students aware and understand the relevance of constitution and legislation in relation to spatial planning.
2. The course also facilitates students to experience implications of the existing legislations relating to planning and its importance and shortcomings.
3. The students are exposed to problems and prospects of town planning in terms of professional practice.
4. To study the inclusion in planning and development process
5. To review policies, programmes and legislation in planning
6. To study about the acts and rules of governing bodies

COURSE OUTCOME:

1. Knowledge acquired in various Acts/Laws relating to spatial planning will enable the students to apply them in professional practice as well as apply in their day to day life.
2. Orientation towards the significance of planning rules and regulations would help students to deal urban and regional planning issues within framework of human rights and environmental protection.
3. They know about the role of state and central in planning
4. Learn about the legislations related to urban planning and development
5. Understand the basic concept of law and Indian constitution acts, regulations related to urban planning
6. Gain knowledge in Professional role responsibility and planning consultancy service

UNIT I CONCEPT OF PLANNING LEGISLATION

30

The concept of law, **legislation, ordinance, bill, Act Regulation and by-laws, concept of Eminent Domain and Police Powers**. Indian constitution, national goals - Rights of ownership and development of property - Statutory control as a positive tool in plan preparation and implementation - Evolution, scope and significance of planning legislation - History and survey of development of planning legislation in India.

UNIT - 2 ACTS AND RULES GOVERNING LOCAL BODIES

30

Panchayat Act, Municipality Act, Corporation Act, TNULB Act, Provisions in the above acts related to functions, powers, role and responsibilities of local bodies including elected representatives and officers – The 73rd and 74th CAA and their implications on planning and development - Local government finance, revenue, expenditure and resource mobilization.

UNIT - 3 ACTS RELATED TO PLANNING AND IMPLICATIONS OF LAWS AND LEGISLATION ON DEVELOPMENT

30

Review of Town and Country Planning Act of Tamil Nadu, Urban Development Act, Public Health Act, Slum Improvement Act, **State Housing Board Act, and National Rehabilitation and Resettlement Policy (2007) - Social Impact mitigation, National Environmental Policy (2006)**. Development management - Law relating to utilities and services - Implications of land ceiling, betterment levy and development charges - Concept of arbitration.

UNIT - 4 PROFESSIONAL PRACTICE

30

Professional role responsibility and planning consultancy service - Professional ethics-code of conduct and professional charge - Role of inter disciplinary group. Consultancy agreements, and contracts - Project proposals formulation - Changing professional practice in India and abroad.

UNIT 5 PROFESSIONAL INSTITUTIONS

15

Aim and objectives of professional institutions, Private and international town planning organizations - Institution buildings and setting up private practice and work, Career options and prospects – Case studies.

TOTAL: 135 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE2C	GIS Modeling in Urban and Regional Planning	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To train the candidate in building GIS models for urban and regional planning applications with hands on experience of spatial data, attribute data input and experiment with GIS analysis. Note: This is offered as a practical in the computer lab and does not involve setting of question paper as in theory paper.
2. Study the principles and applications of remote sensing
3. To study the sources of demographic data in GIS application
4. Study about automated mapping and facility management through GIS
5. Evolve ideas of land use suitability analysis
6. To study about the objectives and functions of GIS models in urban and regional planning

COURSE OUTCOME:

1. The outcome of this course is to provide students with a comprehensive understanding of the concepts, techniques, methods used by an urban planner to treat spatially cities by preparing urban land use models using GIS.
2. Learn about the data bases for different survey techniques
3. They learn about data tabulation and interpretation of data gathered
4. Automated maps and report generation using GIS mapping
5. They learn about Analytical planning Techniques and presentation
6. They learn about urban land use mapping

UNIT I INTRODUCTION

15

Definition, map and map analysis, automated cartography, history and development of GIS, Hardware requirement, system concepts, co-ordinate systems, standard GIS Packages. Classification of spatial and non-spatial data application of spatial data in urban and regional plans – objectives and functions of GIS models in urban and regional planning.

UNIT - 2 SPATIAL DATA INPUT

15

Defining the objectives of GIS planning problems. Identification of required spatial data layers – coding schemes – digitization of spatial data – editing spatial data usable for the given planning problem.

UNIT - 3 ATTRIBUTE DATA INPUT

15

Role of attribute data in defining geographic features – adding attribute data file – topology generation – Joining attribute data to its geographic features.

UNIT - 4 SPATIAL ANALYSIS USING GIS

15

Performing overlay functions – manipulating attribute data – GIS modeling, GIS data processing (Digitization , topology building and metadata creation), Data structures and modeling , GIS Analysis (Buffer , proximity and overlay)– map and report generation – case problems on regional analysis, impact assessment study, project formulation and land suitability analysis

UNIT 5 URBAN LAND USE MODELING

75

Need for model - Land suitability analysis, urban land use modeling, Change demand modeling, Transition potential modeling and land allocation modeling

TOTAL: 135 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE2D	Urban Development And Management	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To comprehend the various Facets of Urban Development and Management.
2. To understand the how decisions pertaining to Supply of Land and Built Environment are taken.
3. To understand socio economic/political and technological forces and their consequences in urban settlements
4. To study various approaches to urban development and management
5. To know about the different factors affect urban development
6. Study about land and real estate development and its impact on supply and demand

COURSE OUTCOME:

1. To study the Processes and Management of Urban Planning and Development.
2. Learn about Regulations and laws related to urban development and planning
3. Gain knowledge on Land economics and land related policies
4. Develop skills in research writing
5. They learn about development-based information system and urban reforms
6. They learn about Real estate development

UNIT I INTRODUCTION TO DEVELOPMENT MANAGEMENT 30

Concept, approaches, components, interfaces with national goals and political economic system. Land Economics, Land Policy and Land Markets

UNIT - 2 URBAN DEVELOPMENT MANAGEMENT 30

Strategies, Tools and Techniques; organizations involved.

UNIT - III LAND AND REAL ESTATE (PART 1) 30

Development Economic concepts of land, Land Pricing / valuation; Economic principles of land use; demand forecasting for land use: factors affecting land supply and demand; Land development methods, Supply Side Management- Property Rights, Land Development. Demand Side Management- Income elasticity of land, business cycles and its impact;

UNIT - 4 LAND AND REAL ESTATE (PART 2) 30

Real estate markets, type of property development and its impact on supply and demand, method of development, environmental considerations.

UNIT 5 INFORMATION SYSTEM AND URBAN REFORMS 15

Land Information System (LIS): Land records in rural areas (examples from Karnataka, Andhra, etc), transparency in land transaction, methods of publicizing land prices and land price monitoring. Spatial and Non - spatial information systems; Urban reforms and acts and policies.

Research writing and analytical writing to be a part of Units I (Introduction To Development Management), II (Urban Development Management), III (Land And Real Estate (Part 1)), IV (Land And Real Estate (Part 2)), V (Information System And Urban Reforms)

TOTAL: 135 PERIODS

	Semester II – Elective	Instruction Hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPNE2E	Inclusive urban planning	2	0	8	6	120	180	300

COURSE OBJECTIVE:

1. To study Significance of Inclusion in Planning and Development Process.
2. To study Policies, Programmes and Legislation for Participatory Planning.
3. To study about the informal sectors and contribute inclusive planning in their development
4. Understand about different communities and societies involved in different settlement structures
5. Introduce citizen participation in inclusive planning
6. To study about Different social groups and weaker sections

COURSE OUTCOME:

1. To study the various Forms, Arenas and Uses of Inclusion in the Processes of Urban and Regional Planning.
2. Learn about importance of citizen participation in developing inclusive communities
3. Different approaches in participatory planning and processes
4. Understand the equal opportunities in accesses infrastructure provision of all communities
5. Learn about the linkage's aspects in communities growth
6. They learn about informal settlements and their infrastructure accessibility

UNIT I UNDERSTANDING INCLUSIVE URBAN PLANNING

15

Inclusive Planning – Definitions, components and Needs, Unsustainable current planning practices,

UNIT - 2 STAKEHOLDERS PROFILE AND NEEDS, ACCESS TO SHELTER, SERVICES AND LIVELIHOODS (PART 1)

30

Identification and characteristics of Social Groups and Weaker Sections - Urban Poor, Informal Sector, Gender, Children, Elderly, Disabled, Displaced people, etc..

UNIT - 3 STAKEHOLDERS PROFILE AND NEEDS, ACCESS TO SHELTER, SERVICES AND LIVELIHOODS (PART 2)

30

Informal sector - growth, characteristics, functions, economic contributions, linkages with formal sector, impact on Urban Development. Slums - dimensions, causative factors, determinants.

UNIT - 4 PARTICIPATORY PLANNING & POLICIES, PROGRAMMES & LEGISLATION

30

Analyzing the Current Legal and Regulatory Environment w.r.t PP. Methods, role of stakeholders participation (including civil society organizations), etc.; Related Acts, Five year plans, policies and programmes at various levels.

UNIT 5 PLANNING INTERVENTIONS

30

Inclusive zoning, development and building regulations, Slum Improvement. Research writing and analytical writing to be a part of Units I (Understanding Inclusive Urban Planning), II (Stakeholders Profile And Needs, Access To Shelter, Services And Livelihoods (Part 1)), III (Stakeholders Profile And Needs, Access To Shelter, Services And Livelihoods (Part 2)), IV (Participatory Planning Process And Policies, Programmes And Legislation), V (Planning Interventions)

TOTAL : 135 PERIODS

REFERENCES

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN301	Environmental Planning	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. Environmental planning plays a vital role in balancing the needs of society by creating and carrying out programs, policies and regulations which consider the current and future impact of human development on the natural environment.
2. This course will expose you to conceptual tools for understanding the two principal avenues through which the natural and built environment are managed – the rule –making procedures of environmental policy and the future-imaging of environmental planning.
3. To study about the environmental issues such as open spaces, encroachments etc
4. To develop knowledge about sustainable environmental planning
5. To evaluate the existing policy framework and the environment
6. Study about different concepts and measures in environmental standards

COURSE OUTCOME:

1. The outcome of this course is to provide the students with professional knowledge, skills and techniques necessary to plan, manage and maintain a balanced, sustainable and productive environment.
2. They learn about different environmental impacts in India
3. Earn knowledge in developing sustainable urban planning and environment goals
4. Gain knowledge in global environmental initiatives
5. To Develop strategies for environmentally sustainable infrastructure development
6. They learn about Mitigation measures in environmental management plan

UNIT I DEVELOPMENT CONSEQUENCES ON ENVIRONMENT

9

Introduction to Environmental planning, aims, objectives and Implementation. Components of environment – Classification of environmental resources - Purpose and objectives in environmental protection, planning and management – Consequence of development over urban and rural settlements – Environmental concerns at local, regional and global levels.

UNIT - 2 ENVIRONMENTAL MANAGEMENT AND STANDARDS

6

Environment planning theories and their applications. Institutional and legal support in management of environment – Environmental policies, and protocols - Global environmental initiatives - Environmental Indicators - Concepts and measures in environmental standards

UNIT - 3 ENVIRONMENTAL IMPACT ASSESSMENT

9

Overview of environmental impact assessment practice in India - Types, conceptual approach and phases of EIA – Impact identification methodologies – Prediction and assessment of social, cultural and economic environments

UNIT - 4 ENVIRONMENTAL DECISION MAKING

9

Generation and evaluation of alternatives – Decision methods- **Multicriteria decision analysis** – Mitigation and environmental management plan, **Environmental protection international and national agencies and legislation, Environmental policies for various geographical regions.** Public participation in the process of environmental decision making process.

UNIT 5 ENVIRONMENTAL APPROACH IN PLANNING

12

Environmental concepts – Sustainability and environmental carrying capacity – Environmental strategies in land use, transportation, infrastructure planning and management - Legislative requirements, public awareness and community participation – Environmental management options. Urban and rural housing. **Economic measures of sustainable development.**

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN302	Project Formulation and Implementation	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. This course aims at examining techniques and procedures relevant for project planning and implementation in developing countries, including project identification, feasibility analysis, design and implementation monitoring.
2. It also considers how to evaluate economic and distributive effects of completed or ongoing infrastructure development projects.
3. Specific attention has been given to show how institutional setting and other practical influences affect the use of conventional analytical tools.
4. To study relationship between projects and planning at various levels
5. To study about Management, implementation and evaluation of projects
6. To understand organizational aspects in project management

COURSE OUTCOME:

1. Plan identifies projects and the success of plans depends on Implementation of identified projects.
2. In this context, students will develop knowledge on important aspects of project formulation, criteria for project appraisal and project management.
3. They learn about project monitoring
4. The resource management for project funding, operation and maintenance
5. Learn about preparing feasibility reports for project planning
6. Presentation skill development

UNIT I INTRODUCTION TO PROJECT FORMULATION

9

Introduction to project management, (Definition, Need / Benefits, Achieve business objective, Role of project manager, , Integrative approach, Process group). Overview of the project cycle – Planning process and project planning – Search for project ideas – Strategies in capital allocation - Key elements in project formulation – Methods and tools for project formulation – Project identification and selection.

UNIT - 2 PROJECT ANALYSIS

9

Preparation of feasibility reports, Capital cost estimation - Market and demand analysis – Technical analysis – Environmental analysis – Financial and economic analysis – Cash flow generation.

UNIT - 3 PROJECT APPRAISAL

10

Time and value of money – Investment criteria-internal rate of return, net present value, costbenefit analysis, and social cost benefit analysis – Project risk analysis – Appraisal of marketing strategy - Pricing and credit worthiness and management capabilities. Developing Project Plan (Evaluating and Constructing network, Schedule, Criticality, Gantt Charts, Techniques)

UNIT - 4 PROJECT FINANCING AND IMPLEMENTATION

9

Funding options for urban development projects - Tender procedure- Tamil Nadu transparency in tender rules - Organizational aspects in project management – Network techniques for project management.

UNIT 5 PROJECT MONITORING AND EVALUATION

8

Need and techniques for monitoring – Performance and process monitoring – Monitoring schedules. Research writing and article writing stating case studies.

TOTAL :45 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	Total
18MPN321	Planning Studio III	3	0	10	8	160	240	400

COURSE OBJECTIVE:

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

Elaboration of the principals and techniques adopted and learnt themes and planning projects.

Application of themes and techniques of planning in the preparation of development plans at regional, district, blocks, central village and village level, along with community action and participation plans. Review regional plan contents, methods and practices at local, national and international levels.

Studies and analysis would consist of survey, local renewable development, settlement distribution pattern, environmental protection, institutional and implementation framework. Conducting Stake holders meeting to assess the community needs becomes very important input for the preparation of development plans. Identification of projects programmes and schemes with funding sources.

TOTAL: 150 PERIODS

	Semester III	Instruction Hrs				MARKS		
		L	T	P	C	CIA	ESE	TOTAL
18MPN322	Dissertation	3	0	6	6	120	180	300

COURSE OBJECTIVE:

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Students to get opportunities to publish research paper, display exhibits, present papers in conferences and seminars.
6. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
7. Ability to understand ethical and professional responsibilities.

Dissertation is a formal report written systematically on a particular topic as related to town and country planning. This exercise is taken up as to widen and enrich the literature pertaining to a topic of research. It may focus upon cross section of literature of a topic of research. The material written systematically may be useful in fourth semester when the same topic with literature reviewed systematically be confined as a part of thesis. Also the outcome of literature review done during the dissertation could be helpful to formulate the Thesis during the IVth semester.

TOTAL: 105 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPNE3A	Environmental Design	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To understand Approach to Environmental Design as applicable to Built Environment and Landscape Development.
2. To study Urban Climatology and Effects of Climate Change on City Planning.
3. To study about the concepts of urban ecology and sustainable growth practice
4. Evaluate the influence of climate change in designing cities
5. Study of environmental theories and practice
6. To study about urban forest management

COURSE OUTCOME:

1. To study Evolution of Environmental Design, Theory and Practice.
2. Learn about different climatic based design and practices
3. Application of sustainable principles in reducing energy in urban infrastructure
4. Understand the different climate change and its mitigation measures
5. Gain knowledge on different concepts of urban ecology
6. They learn about Acoustics and climate change

UNIT – 1 EVOLUTION OF ENVIRONMENTAL DESIGN, THEORY AND PRACTICE 15

Design as a determinant of Environmental quality; evolution of Environmental design, theories and practice of design.

UNIT – 2 APPROACH OF ENVIRONMENTAL DESIGN AS APPLICABLE TO BUILT ENVIRONMENT

(Part 1) 30

Criteria of Urban Environmental design issues-pedestrian-vehicular conflict, City Centre Environment, Housing areas, dereliction, environmental upgradation programmes; built environment aesthetics of ensemble of buildings, techniques of study of building condition, conservation aspects of built-up areas. Environmental approaches to design and planning of rural settlements, use of alternate technology in design of human settlements.

UNIT – 3 APPROACH OF ENVIRONMENTAL DESIGN AS APPLICABLE TO LANDSCAPE

DEVELOPMENT (Part 2) 20

Landscape as an environmental asset, techniques of landscape assessment at different levels, use of landscape design for environmental improvement. **Green Spaces, bio-diversity conservation and conflicts**

UNIT – 4 URBAN CLIMATOLOGY, ACOUSTICS AND CLIMATE CHANGE 20

Urban climatology, effects of thermal pollution, factors causing heat sink effects, direct radiation, climatic effects on Urban areas, control techniques Urban acoustics:- source of noise, methods of control, design techniques.

UNIT – 5 URBAN CLIMATOLOGY, ACOUSTICS AND CLIMATE CHANGE II 20

Climate Change and City Planning, application of Energy code, Clean Development Mechanism. Research writing and analytical writing to be a part of Units I, II, III, IV, V

TOTAL : 105 PERIODS

REFERENCE BOOKS:

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPNE3B	Environmental Impact Assessment	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To study Assessment of Impacts on Resources.
2. To Assess the Role of Public Participation in EIA.
3. To impart knowledge on environmental impact assessment and environmental management
4. Evaluate the acts and policies related to environmental impact assessments
5. Introduce different applications for appropriate techniques in assessing impact data
6. to study about constitutional provisions and policy regulation

COURSE OUTCOME:

1. To study Role, Definition, Scope and Methods of EIA.
2. Carryout scope in environmental projects and social awareness
3. Gain knowledge on different methodologies for environmental impact prediction and assessment
4. Enhance writing skills on environment reports
5. Obtain knowledge on environment management plans
6. They learn about impacts on resources

UNIT – 1 ROLE, DEFINITION AND SCOPE OF EIA

10

Concept of Environment, Concept of EIA - Definition and need, evolution and objectives, tasks and scope. EIA: Origin and Development, Evolution of EIA in India: Constitutional Provisions and Policy Regulations. Role of EIA in the Planning and decision making process.

UNIT – 2 METHODS OF EIA

10

Methods of EIA; advantages and limitations. Screening and Scoping, Baseline Studies for EIA,

UNIT – 3 ASSESSMENT OF IMPACTS

10

Assessment of impacts on resources (Including air, water, flora and fauna); assessment of impacts on Land use. Assessment of social and health impacts. Assessment of development projects (including roads, industries, housing, townships etc.).

UNIT – 4 STRATEGIC ENVIRONMENTAL ASSESSMENT

15

Policy environmental assessment, Public Participation in EIA; definition and concepts, objectives, techniques, advantages and limitation, PRA techniques.

UNIT – 5 CASE STUDIES

60

Prepare, Review and analysis of an EIA for eco sensitive area. Research writing and article writing with case studies

TOTAL: 105 PERIODS

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPNE3C	Environmental legislation, evaluation and practices	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To familiarize students about various Acts related with Environment Protection.
2. To familiarize students about Ministry of Environment and Forest Guidelines, Notifications and Rules related with Environment Protection and Management.
3. Evaluate the different roles and responsibilities different institutions
4. To study the different regulations and bye laws related to environment legislation
5. To know about the importance of community participation in policy planning
6. To study about the planning legislation

COURSE OUTCOME:

1. Common rules and laws protecting environment
2. Legislative measures to address climate change and impacts
3. Roles and responsibilities of state and central government organization
4. To gain knowledge on land development controls
5. To formulate and contribute new rules to the planning legislative acts
6. They gain knowledge about planning legislation

Contents

UNIT 1 ENVIRONMENTAL LEGISLATION (Part 1)	20
Introduction to Law (Indian Constitution, Evolution of Environmental Laws in India). EP Act 1986., Air (Prevention and Control of pollution) Act., Water (Prevention and Control of pollution) Act,	
UNIT 2 ENVIRONMENTAL LEGISLATION (Part 2)	20
Environment Tribunal Act, Climate change Protocols and Conventions, MOEF Guidelines and Notifications, Appellate Authority Act, Other related Notifications	
UNIT 3 PLANNING LEGISLATION (Part 1)	20
Indian Forest Act., Wildlife Act	
UNIT 4 PLANNING LEGISLATION (Part 2)	20
Ancient Monuments and Archaeological Sites and Remains Act., Hazardous Waste Management and Handling Rules / Biomedical Rules / Solid Waste	
UNIT 5 RESEARCH WRITING AND CASE STUDIES	25
Case studies, Research writing and article writing for Units I, 2, 3, 4 and 5

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPNE3D	Web based applications to urban and regional planning	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. This course is designed based on advanced applications, and the candidates are expected to be through in INTERNET, Windows / NT OS, HTML etc.)
2. Students to gains insights and understanding of e- governance.
3. To teach the student the working and process followed in Governance.
4. To keep the students in touch with the recent updates in the industry.
5. To train the candidate in the use of web for urban and regional planning applications
6. To train them to build case based web development.

COURSE OUTCOME:

1. As an outcome of the above course the students will have the ability to independently develop web based solutions for the application of urban and regional planning.
2. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning and create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
5. Ability to review, comprehend and report technological developments in the profession of planning
6. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.

ROLE OF WEB BASED TECHNOLOGY IN PLANNING

70

Introduction to Web Applications, Web Applications Frameworks, Managing Data, Middleware, The User Interface
Information need and the role of web in planning – Public participation – Information transparency – Current trends.

INFORMATION DISSEMINATION THROUGH INTRA AND INTERNET

15

Knowledge sharing – e- Governance – Information kiosks – Digital planning

PLANNING INFORMATION ACROSS INTERNET

20

Web sites and information sources in urban and regional planning. .

	Semester III	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPNE3E	Planning for tourism	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To study Tourism and its Relevance in Urban Development.
2. To study Policies and Programmes of Tourism so as to ascertain parameters for Planning for Tourism Sector.
3. Evaluate the relationships between tourism and urban development
4. Basic awareness of the importance of tourism and its impact on urban development
5. To study about the Tourism policies at various levels
6. To study about impacts in the tourism development

COURSE OUTCOME:

1. To study the Role of Tourism in Urban and Regional Planning.
2. Scope and evolution of tourism development in India
3. Strategic action plans for tourism in India
4. Policies related to tourism development
5. Development of sustainable tourism measures
6. They learn about National level tourism policies and programs

UNIT I INTRODUCTION TO TOURISM

9

Introduction, the concept of tourism, New concept of tourism, Definitions, scope, nature, classification and tourism as an industry, tourism in developed and developing world.

UNIT - 2 TOURISM SECTOR – IMPACTS

9

Rationale for planning tourism, the tourism planning process, Levels of tourism planning Relationship between Tourism and Urban Development, Tourism multiplier and forecasting methods: capacity building and carrying capacity planning for tourism projects, tourism and cultural and social change: Socio-cultural problems, environmental degradation.

UNIT - 3 PLANNING FOR TOURISM (PART 1)

9

Evolution of tourism planning, Significance of tourism planning, Nature and scope of a tourism plan- key issues and stages, data requirements, surveys, role of key players / stake holders in tourism policy and planning, sustainable tourism development planning;

UNIT - 4 PLANNING FOR TOURISM (PART 2)

9

Introduction to sustainable tourism planning, planning for sustainable tourism development, Components of sustainable tourism planning, Stakeholders networking model for sustainable tourism development, Community planning and tourism; implementation and management, role of travel and tourism promoting agencies, monitoring the tourism development; Tourism marketing - concept, techniques and strategies.

UNIT 5 POLICIES AND PROGRAMMES

9

Introduction, Recommendations of the National Level Tourism Policies and Programs - Various Committees on Tourism. Research and journal article writing for Units I (Introduction To Tourism), II (Tourism Sector – Impacts), III (Planning For Tourism (Part 1)), IV (Planning For Tourism (Part 2)), V (Policies And Programmes)

TOTAL: 105 PERIODS

REFERENCES:

1. Charles R. Goeldner , J. R. Brent Ritchie, Tourism: Principles, Practices, Philosophies, 2009, John Wiley & Sons

	Semester IV	Instruction hrs				Marks		
		L	T	P	C	CIA	ESE	TOTAL
18MPN401	Urban Governance and institutional Management	3	0	0	3	40	60	100

COURSE OBJECTIVE:

1. To make students understand the governance systems of urban and rural local government with respect to the role, structure and functions of planning agencies.
2. To understand the organizational change and management principles and its application to planning and implementing organization in the context of urban and rural development management.
3. To study the role of government, private sector and third sector for governance of cities and regions
4. To study about the Role of states in urban and regional planning at national ,state and local levels
5. To study the decision making processes and organizations responsible for the planning, finance and delivery
6. To understand essential concepts in regional and metropolitan planning

COURSE OUTCOME:

1. Students are able to understand the government system and its governance processes.
2. The understanding from the lessons develops leadership qualities and motivational skills in turn build confidence in doing things.
3. Understand the role of participatory governance in urban development
4. Learn about Risks involved in urban development
5. Gain knowledge about e-governance
6. They learn about e governance and municipal finance

UNIT I INTRODUCTION: BASIC CONCEPT & LEGAL PROVISIONS

7

Introduction to Urbanization, Introduction to Urban Governance, Constitutional provisions, Legislative provisions,

UNIT - 2 URBAN AND METROPOLITAN PLANNING

10

Urban reform and managing change, Visioning for the city, Resolving conflicts in change management, Leadership and teambuilding.

UNIT - 3 GOVERNANCE TO E-GOVERNANCE

7

E-Governance-concepts, theories and practices - e-Governance indices-technology, legal, organizational and community related aspects of e-governance - Description to Institution and Institutional development - e-Governance efforts in India and abroad - e-Readiness indices and e-Governance

UNIT - 4 URBAN ISSUES AND RISK MANAGEMENT

12

Housing strategy for cities, Housing and urban poverty, Real estate regulation and development, Urban land management, Urban risk and disaster management, Managing urban environment.

UNIT 5 PARTICIPATORY GOVERNANCE AND URBAN DEVELOPMENT

9

Role of City Managers, Self Development for City Managers People's participation-theories, concepts and methods - Participatory governance-meaning, processes and methods - Role of people's participation in planning processes - People, NGO and civil society and urban development - Public relations-concepts types, methods and planning public relations - Best practices - national and international on participation, infrastructure and urban development. Research and analytical article writing for Units I (Urban Governance), II (Local Government Administration And Management), III (Governance To E-Governance), IV (Organization And Management), V (Participatory Governance And Urban Development)

		L	T	P	C	CIA	ESE	TOTAL
18MPN421	Thesis (Viva Voce)	4	0	28	18	320	480	800

COURSE OBJECTIVE:

1. Ability to gain knowledge in social and economical, legal and political, environmental and physical, governance and management aspects of planning
2. Ability to gain knowledge in concepts, and theories, methods and techniques and social realities
3. To improve communication skills.
4. Ability to formulate a framework for study.
5. To study and analysis the problem and suggest a suitable solution.
6. To understand various practices and standards followed in planning

COURSE OUTCOME:

1. Ability to present and communicate their ideas
2. To create livable human settlements in rural, urban and regional areas.
3. Students are also exposed to build confidence and capacity to work in academic, professional, corporate and voluntary sector work environment towards preparation, execution, implementation and monitoring of planning assignments.
4. Ability to review, comprehend and report technological developments in the profession of planning
5. Ability to gain advanced knowledge in Planning practices by being exposed to multi disciplinary learning environment.
6. Ability to understand ethical and professional responsibilities.

Students shall be required to undertake thesis work in the areas of relevance and concern in the urban and regional development process. The broad areas of study would include

1. Planning for region, urban development and renewal
2. Planning for infrastructure development
3. Urban governance, management and finance
4. Environmental and sustainable development
5. Housing, heritage conservation and tourism
6. Planning implications of Smart cities, Green cities, Digital Cities, Eco-Cities.
7. E-Governance and urban local governments and e-Participation of communities in city infrastructure planning and development
8. Any other emerging areas in the field of urban and regional planning

The thesis shall be submitted in the form of thesis report, presentation drawing sheets, slides and posters etc. Thesis work submission also includes all relevant information in a CD.

TOTAL: 405 PERIODS

FACULTY OF PHARMACY

HUMAN ANATOMY AND PHYSIOLOGY-I (Theory)**4H****4C**

Instruction hours/ week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- The subject provides the basic knowledge required to understand the various disciplines of pharmacy.
- To know various homeostatic mechanisms and their imbalances
- Students can Illustrate the body fluids coagulation, blood grouping, Rh factors and disorders of blood
- Knows about bones, Joints and their functions in the human body

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Illustrate the body fluids coagulation, blood grouping, Rh factors and disorders of blood.
5. Appreciate coordinated working pattern of different organs of each system.
6. Explain all the bones, Joints and their functions in the human body

Course Content:**UNIT-I****Introduction to human body:** Definition and scope of anatomy and physiology, levels of structural organization and body systems, basic life processes, homeostasis, basic anatomical terminology.**Cellular level of organization:** Structure and functions of cell, transport across cell membrane, cell division, cell junctions. General principles of cell communication, intracellular signaling pathway activation by extracellular signal molecule, Forms of intracellular signaling: a) Contact-dependent b) Paracrine c) Synaptic d) Endocrine.**Tissue level of organization:** Classification of tissues, structure, location and functions of epithelial, muscular and nervous and connective tissues.**UNIT- II****Integumentary system:** Structure and functions of skin.**Skeletal system:** Divisions of skeletal system, types of bone, salient features and function of bones of axial and appendicular skeletal system Organization of skeletal muscle, physiology of muscle contraction, neuromuscular junction.**Joints** - Structural and functional classification, type of joints movements and its articulation.

UNIT-III

Body fluids and blood: Body fluids, composition and functions of blood, hemopoiesis, formation of hemoglobin, anemia, mechanisms of coagulation, blood grouping, Rh factors, transfusion, its significance and disorders of blood, Reticuloendothelial system.

Lymphatic system: Lymphatic organs and tissues, lymphatic vessels, lymph circulation and functions of lymphatic system.

UNIT-IV

Peripheral nervous system: Classification of peripheral nervous system, Structure and functions of sympathetic and parasympathetic nervous system. Origin and functions of spinal and cranial nerves.

Special senses: Structure and functions of eye, ear, nose and tongue and their disorders.

UNIT-V

Cardio vascular system: Heart– anatomy of heart, blood circulation, blood vessels, structure and functions of artery, vein and capillaries, elements of conduction system of heart and heartbeat, its regulation by autonomic nervous system, cardiac output, cardiac cycle. Regulation of blood pressure, pulse, electro cardiogram and disorders of heart.

Suggested Readings:

1. Essentials of Medical Physiology by K.Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York.
3. Physiological basis of Medical Practice-Best and Taylor. Williams & Wilkins Co, Riverview, MIUSA.
4. Text book of Medical Physiology-Arthur C, Guyton and John E. Hall Miami, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
6. Textbook of Human Histology by Inderbir Singh, Jaypee brother's medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L.Ghai, Jaypee brother's medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K.Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

Reference Books (Latest Editions):

1. Physiological basis of Medical Practice-Best and Taylor. Williams & Wilkins Co, Riverview, MIUSA.
2. Text book of Medical Physiology-Arthur C, Guyton and John E. Hall. Miami, OH, U.S.A.
3. Human Physiology (vol 1 and 2) by Dr.C.C. Chatterjee, Academic Publishers Kolkata.

SEMESTER-I

HUMAN ANATOMY AND PHYSIOLOGY-I (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Practical physiology is complimentary to the theoretical discussions in physiology.
- Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings.
- To Identify epithelial, connective tissue, muscular, nervous tissues Microscopically and the axial, appendicular bones.
- Know about the bleeding time and clotting time.
- Know to Record the heart rate, pulse rate, blood pressure.
- Understand the WBC count and RBC count

Course Outcomes (CO's): On successful completion of the course the student will

1. Identify epithelial, connective tissue, muscular, nervous tissues Microscopically and the axial, appendicular bones.
2. Determine the bleeding time, clotting time.
3. Record the heart rate, pulse rate, blood pressure.
4. Demonstrate the WBC count and RBC count.
5. Identify the axial, appendicular bones.
6. Estimate the blood group and erythrocyte sedimentation rate.

Content:

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones
6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC)count
9. Determination of bleeding time
10. Determination of clottingtime
11. Estimation of hemoglobincontent
12. Determination of bloodgroup.
13. Determination of erythrocytesedimentationrate (ESR).
14. Determination of heart rate and pulserate.
15. Recording of blood pressure.

Suggested Readings:

1. Essentials of Medical Physiology by K.Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill livingstone, New York
3. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MIUSA
4. Text book of Medical Physiology-Arthur C. Guyton and John E. Hall. Miamisburg, OH, U.S.A
5. Principles of Anatomy and Physiology by Tortora and Grabowski. Palmetto, GA, U.S.A.
6. Text book of Human Histology by Inderbir Singh, Jaypee brother's medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L. Ghai, Jaypee brother's medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

Reference Books (Latest Editions):

1. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MIUSA
2. Text book of Medical Physiology-Arthur C. Guyton and John E. Hall. Miamisburg, OH, U.S.A.
3. Human Physiology (vol 1 and 2) by Dr. C.C. Chatterjee, Academic Publishers Kolkata

18BP102T

SEMESTER - I

PHARMACEUTICAL ANALYSIS (Theory)**4H 4C**

Instruction hours/week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs
- To Understand the basic concepts and Pharmacopeial standards of pharmaceutical analysis
- To Identify the errors in analysis
- To Understand the principles of volumetric analysis
- To Understand the principles of electrochemical analysis
- Know the applications of volumetric analysis.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the basic concepts and Pharmacopeial standards of pharmaceutical analysis
2. Identify the errors in analysis
3. Understand the principles of volumetric analysis
4. Understand the principles of electrochemical analysis
5. Applications of volumetric analysis.
6. Applications of electrochemical analysis.

Course Content:**UNIT-I**

(a)Pharmaceutical analysis: Definition and scope i) Different techniques of analysis ii) Methods of expressing concentration iii) Primary and secondary standards. iv)Preparation and standardization of various molar and normal solutions- oxalic acid sodium hydroxide, hydrochloric acid, sodiumthio sulphate, sulphuric acid, potassium permanganate and ceric ammonium sulphate.

(b)Errors: Sources of errors, types of errors, methods of minimizing errors, accuracy, precision and significant figures.

(c)Pharmacopoeia, Sources of impurities in medicinal agents, limit tests.

UNIT-II

Acid base titration: Theories of acid base indicators, classification of acid base titrations and theory involved in titrations of strong, weak, and very weak acid and bases, neutralization curves.

Nonaqueous titration: Solvents, acidimetry and alkalimetry titration and estimation of Sodium benzoate and Ephedrine HCl.

UNIT-III

Precipitation titrations: Mohr's method, Volhard's, Modified Volhard's, Fajans method, estimation of sodium chloride.

Complexometric titration: Classification, metal ion indicators, masking and demasking reagents, estimation of Magnesium sulphate, and calcium gluconate.

Gravimetry: Principle and steps involved in gravimetric analysis.

Purity of the precipitate: co-precipitation and postprecipitation, Estimation of barium sulphate. Basic Principles, methods and application of diazotisation titration.

UNIT-IV

Redox titrations: (a) Concepts of oxidation and reduction (b) Types of redox titrations (Principles and applications) Cerimetry, Iodimetry, Iodometry, Bromatometry, Dichrometry, Titration with potassium iodate.

UNIT-V

Electrochemical methods of analysis Conductometry: Introduction, Conductivity cell, Conductometric titrations, applications.

Potentiometry-Electrochemical cell, construction and working of reference (Standard hydrogen, silver chloride electrode and calomel electrode) and indicator electrodes (metal electrodes and glass electrode), methods to determine endpoint of potentiometric titration and applications.

Polarography - Principle, Ilkovic equation, construction and working of dropping mercury electrode and rotating platinum electrode, applications.

Suggested Readings:

1. A.H.Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahline Press of University of London.
2. A.I.Vogel, TextBook of Quantitative Inorganic analysis.
3. P.Gundu Rao, Inorganic Pharmaceutical Chemistry.
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry.
5. John H. Kennedy, Analytical chemistry principles.
6. Indian Pharmacopoeia.

18BP108P

SEMESTER – I

PHARMACEUTICAL ANALYSIS (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Analyze the limit test for samples.
- Understand how to Prepare the solutions for volumetric and electro-analytical methods.
- To Standardize the solutions by volumetric and electro-analytical methods.
- Know how to Perform the assay for chemical substances.
- To Standardize the titrant used for the assay.
- To Determine the strength of the solutions by electro-analytical methods.

Course Outcomes (CO's): On successful completion of the course the student will

1. Analyze the limit test for samples.
2. Prepare the solutions for volumetric and electro-analytical methods.
3. Standardize the solutions by volumetric and electro-analytical methods.
4. Perform the assay for chemical substances.
5. Standardize the titrant used for the assay.
6. Determine the strength of the solutions by electro-analytical methods.

Content:**I Limit Test of the following:**

- (1) Chloride.
- (2) Sulphate.
- (3) Iron.
- (4) Arsenic.

II Preparation and standardization of:

- (1) Sodium hydroxide.
- (2) Sulphuric acid.
- (3) Sodiumthio sulfate.
- (4) Potassium permanganate.
- (5) Cericammonium sulphate.

III Assay of the following compounds along with Standardization of Titrant:

- (1) Ammoniumchloride by acid basetitration.
- (2) Ferroussulphate by Cerimetry.
- (3) Coppersulphate by Iodometry.
- (4) Calciumgluconate by complexometry.
- (5) Hydrogenperoxide by Permanganometry.
- (6) Sodiumbenzoate by non-aqueoustitration.
- (7) SodiumChloride by precipitationtitration.

IV Determination of Normality by electro-analytical methods:

- (1) Conductometric titration of strong acid against strong base.
- (2) Conductometric titration of strong acid and weak acid against strong base.
- (3) Potentiometric titration of strong acid against strong base.

Suggested Readings:

1. A.H.Beckett & J.B.Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahline Press of University of London.
2. A.I.Vogel, Text Book of Quantitative Inorganic analysis.
3. P.GunduRao, Inorganic Pharmaceutical Chemistry.
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry.
5. John H.Kennedy, Analytical chemistry principles.
6. Indian Pharmacopoeia.

18BP103T

SEMESTER - I

PHARMACEUTICS (Theory)**4H 4C**

Instruction hours/week: L: 3 T: 1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the preparatory pharmacy with arts and science of preparing the different conventional dosage forms.
- Students can Understand the history of profession of pharmacy
- To know the basics of different dosage forms.
- To Understand the professional way of handling the prescription
- Students will know how to Prepare various conventional dosage forms
- Students will develop a clear idea about Pharmaceutical incompatibility and different pharmaceutical calculations in pharmacy.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the history of profession of pharmacy
2. Understand the basics of different dosage forms.
3. Understand the professional way of handling the prescription
4. Prepare various conventional dosage forms
5. Develop a clear idea about Pharmaceutical incompatibility and different pharmaceutical calculations in pharmacy.
6. Predict the instability problems in semi solid dosage forms

Course Content:**UNIT– I**

Historical background and development of profession of pharmacy: History of profession of Pharmacy in India in relation to Pharma cyeducation, industry and organization, Pharmacy as a career, Pharmacopoeias: Introduction to IP,BP, USP and Extra Pharmacopoeia.

Dosage forms: Introduction to dosage forms, classification and definitions.

Prescription: Definition, Parts of prescription, handling of Prescription and Errors in prescription.

Posology: Definition, Factors affecting posology. Pediatric dose calculations based on age, bodyweight and body surface area.

UNIT– II

Pharmaceutical calculations: Weights and measures – Imperial & Metric system, Calculations involving percentagesolutions,alligation,proofspirit and isotonic solutions based on freezing point and molecular weight.

Powders: Definition, classification, advantages and disadvantages, Simple & compound Powders–official preparations ,dusting powders ,effervescent, efflorescent and hygroscopic powders, eutectic mixtures. Geometric dilutions.

Liquid dosage forms: Advantages and disadvantage soft liquid dosage forms. Excipients used in formulation of liquid dosage forms.Solubility enhancement Techniques.

UNIT– III

Monophasic liquids: Definitions and preparations of Gargles, Mouthwashes, Throat Paint, Eardrops, Nasal drops, Enemas, Syrups, Elixirs, Liniments and Lotions.

Suspensions: Definition, advantages and disadvantages, classifications, Preparation of suspensions; Flocculated and Deflocculated suspension & stability problems and methods to overcome.

Emulsions: Definition, classification, emulsifying agent, test for the identification of type of Emulsion, Methods of preparation & stability problems and methods to overcome.

UNIT– IV

Suppositories: Definition, types, advantages and disadvantages, types of bases, methods of preparations. Displacement value & its calculations, evaluation of suppositories.

Pharmaceutical in compatibilities: Definition, classification, physical, chemical and therapeutic in compatibilities with examples.

UNIT– V

Semisolid dosage forms: Definitions, classification, mechanisms and factors influencing dermal penetration of drugs. Preparation of ointments, pastes, creams and gels. Excipients used in semi solid dosage forms. Evaluation of semi solid dosages forms.

Suggested Readings:

1. H.C. Anseletal, Pharmaceutical Dosage Form and Drug Delivery System, Lippincott Williams and Walkins, New Delhi.
2. Carter S.J., Cooper and Gunn's-Dispensing for Pharmaceutical Students, CBS publishers, New Delhi.
3. M.E. Aulton, Pharmaceutics, The Science & Dosage Form Design, Churchill Living stone, Edinburgh.
4. Indian pharmacopoeia.
5. British pharmacopoeia.
6. Lachmann Theory and Practice of Industrial Pharmacy, Lea & Febiger Publisher, The University of Michigan.
7. Alfonso R. Gennaro Remington on .The Science and Practice of Pharmacy, Lippincott Williams, New Delhi.
8. Carter S.J., Cooper and Gunn's. Tutorial Pharmacy, CBS Publications, New Delhi.
9. E.A.Rawlins, Bentley's Text Book of Pharmaceutics, English Language Book Society, Elsevier Health Sciences, USA.
10. Isaac Ghebre Sellassie: Pharmaceutical Pelletization Technology, Marcel Dekker, INC, New York.
11. Dilip M. Parikh: Handbook of Pharmaceutical Granulation Technology, Marcel Dekker, INC, New York.
12. Francoise Nieloud and Gilberte Marti-Mestres: Pharmaceutical Emulsions and Suspensions, Marcel Dekker, INC New York.

18BP109P

PHARMACEUTICS (Practical)

SEMESTER-I

4H**2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand the professional way of preparing a prescription
- To know various liquid dosage forms preparations.
- To Prepare various solid dosage forms
- To Perform quality control tests for various dosage forms
- To Acquire the knowledge of using equipment's in pharmaceutical industry

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the professional way of preparing a prescription
2. Prepare various liquid dosage forms
3. Prepare various solid dosage forms
4. Perform quality control tests for various dosage forms
5. Acquire the knowledge of using equipment's in pharmaceutical industry

1. SYRUPS

- a) Syrup IP'66
- b) Compound syrup of Ferrous Phosphate BPC'68

2. Elixirs

- a) Piperazine citrate elixir
- b) Paracetamol pediatric elixir

3. Linctus

- a) TerpinHydrateLinctusIP'66
- b) Iodine Throat Paint(Mandles Paint)

4. SOLUTIONS

- a) Strong solution of ammonium acetate
- b) Cresol with soap solution
- c) Lugol's solution

5. Suspensions

- a) Calamine lotion
- b) Magnesium Hydroxide mixture
- c) Aluminium Hydroxide gel

6. Emulsions

- a) Turpentine Liniment

b) Liquid paraffin emulsion

7. Powders and Granules

- a) ORS powder (WHO)
- b) Effervescent granules
- c) Dusting powder
- d) Divided powders

8. Suppositories

- a) Glycero gelatin suppository
- b) Cocoa butter suppository
- c) Zinc Oxide suppository

9. Semisolids

- a) Sulphur Ointment
- b) Non staining Iodine ointment with methyl salicylate
- c) Carbopal gel

10. Gargles and Mouth Washes

- a) Iodine gargle
- b) Chlorhexidine Mouthwash

Suggested Readings:

1. H.C.Anseetal., Pharmaceutical Dosage Form and Drug Delivery System, Lippincott William sand Walkins, New Delhi.
2. Carter S.J., Cooper and Gunn's-Dispensing for Pharmaceutical Students, CBS publishers, New Delhi.
3. M.E. Aulton, Pharmaceutics, The Science & Dosage Form Design, Churchill Livingstone, Edinburgh.
4. Indian pharmacopoeia.
5. British pharmacopoeia.
6. Lachmann. Theory and Practice of Industrial Pharmacy, Lea & Febiger Publisher, The University of Michigan.
7. AlfonsoR. Gennaro Remington. The Science and Practice of Pharmacy, Lippincott Williams, New Delhi.
8. Carter S.J., Cooper and Gunn's. Tutorial Pharmacy, CBS Publications, NewDelhi.
9. E.A.Rawlins, Bentley's Text Book of Pharmaceutics, English Language Book Society, Elsevier Health Sciences, USA.
- 10.Isaac Ghebre Sellassie: Pharmaceutical Pelletization Technology, Marcel Dekker, INC, New York.
11. DilipM.Parikh: Hand book of Pharmaceutical Granulation Technology, Marcel Dekker, INC, New York.
12. Francoise Nieloud and Gilberte Marti-Mestres: Pharmaceutical Emulsions and Suspensions, Marcel Dekker, INC, New York.

18BP104T

SEMESTER-I

PHARMACEUTICAL INORGANIC CHEMISTRY (Theory)**4H****4C**

Instruction hours/week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objective:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- To Understand the sources of impurities.
- Knowing the methods to determine the impurities
- Explain the medicinal and pharmaceutical importance of buffers, electrolytes and dental products
- Know about medicinal and pharmaceutical importance of gastrointestinal agents
- To Discuss the medicinal and pharmaceutical importance of expectorants, hematinics, emetics, antidotes and astringents.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the sources of impurities.
2. Explain the methods to determine the impurities in inorganic drugs and pharmaceuticals
3. Explain the medicinal and pharmaceutical importance of buffers, electrolytes and dental products
4. Describe the medicinal and pharmaceutical importance of gastrointestinal agents
5. Discuss the medicinal and pharmaceutical importance of expectorants, hematinics, emetics, antidotes and astringents.
6. Elaborate the medicinal and pharmaceutical importance of Radiopharmaceuticals.

Course Content:**UNIT - I**

Impurities in pharmaceutical substances: History of Pharmacopoeia, Sources and types of impurities, principle involved in the limit test for Chloride, Sulphate, Iron, Arsenic, Lead and Heavy metals, modified limit test for Chloride and Sulphate.

General methods of preparation: Assay for the compounds superscripted with **asterisk (*)**, **properties** and medicinal uses of inorganic compounds belonging to the following classes.

UNIT - II

Acids, Bases and Buffers: Buffer equations and buffer capacity in general, buffers in pharmaceutical systems, preparation, stability, buffered isotonic solutions, measurements of tonicity, calculations and methods of adjusting isotonic city.

Major extra and intracellular electrolytes: Functions of major physiological ions, Electrolytes used in the replacement therapy: Sodium chloride*, Potassium chloride, Calcium gluconate* and Oral Rehydration Salt (ORS), Physiological acid base balance.

Dental products: Dentifrices, role of fluoride in the treatment of dental caries, Desensitizing agents, Calcium carbonate, Sodium fluoride, and Zinc eugenolcement.

UNIT - III

Gastro intestinal agents Acidifiers: Ammonium chloride* and Dil. HCl

Antacid: Ideal properties of antacids, combinations of antacids, Sodium Bicarbonate*, Aluminum hydroxide gel, Magnesium hydroxide mixture

Cathartics: Magnesium sulphate, Sodium orthophosphate, Kaolin and Bentonite.

Antimicrobials: Mechanism, classification, Potassium permanganate, Boric acid, Hydrogen peroxide*, Chlorinated lime*, Iodine and its preparations.

UNIT - IV

Miscellaneous compounds Expectorants: Potassium iodide, Ammonium chloride*.

Emetics: Copper sulphate*, Sodium potassium tartarate.

Haematinics: Ferrous sulphate*, Ferrous gluconate.

Poison and Antidote: Sodiumthio sulphate*, Activated charcoal, Sodium nitrite333.

Astringents: Zinc Sulphate, Potash Alum.

UNIT - V

Radio Pharmaceuticals: Radio activity, Measurement of radioactivity, Properties of α, β, γ radiations, Half life, radio isotope sand study of radio isotopes - Sodium iodide I131, Storage conditions, precautions & pharmaceutical application of radio active substances.

Suggested Readings:

1. A.H.Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahlone Press of University of London, 4th edition.
2. A.I.Vogel, Text Book of Quantitative Inorganic analysis.
3. P.GunduRao, Inorganic Pharmaceutical Chemistry, 3rdEdition.
4. M.L Schroff, Inorganic Pharmaceutical Chemistry.
5. Bentley and Driver's Text book of Pharmaceutical Chemistry.
6. Anand & Chatwal, Inorganic Pharmaceutical Chemistry.
7. Indian Pharmacopoeia.

PHARMACEUTICAL INORGANIC CHEMISTRY (Practical)**4H****2C**

Instruction hours/week: L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Know how to Perform Limit test for ions
- To Perform Limit test for metals
- Know how to Identify inorganic pharmaceuticals
- To Test the inorganic sample for its purity.
- To determine the physical properties of inorganic pharmaceuticals.
- Understand inorganic pharmaceuticals preparation.

Course Outcomes (CO's): On successful completion of the course the student will

1. Perform Limit test for ions
2. Perform Limit test for metals
3. Identify inorganic pharmaceuticals
4. Test the inorganic sample for its purity.
5. Determine the physical properties of inorganic pharmaceuticals.
6. Prepare inorganic pharmaceuticals.

Course content:**I. Limit tests for following ions:**

- Limit test for Chlorides and Sulphates.
- Modified limit test for Chlorides and Sulphates.
- Limit test for Iron.
- Limit test for Heavy metals.
- Limit test for Lead.
- Limit test for Arsenic.

II Identification test:

- Magnesium hydroxide, Ferrous sulphate, Sodium bicarbonate, Calcium gluconate and Copper sulphate.

III Test for purity:

- Swelling power of Bentonite.
- Neutralizing capacity of aluminum hydroxide gel.
- Determination of potassium iodate and iodine in potassium Iodide.

IV Preparation of inorganic pharmaceuticals:

- Boric acid Potash alum Ferrous sulphate.

Suggested Reading:

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I&II, Stahlone Press of University of London, 4th edition.
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis.
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry, 3rd Edition.
4. M.L. Schroff, Inorganic Pharmaceutical Chemistry.
5. Bentley and Driver's Text book of Pharmaceutical Chemistry.
6. Anand & Chatwal, Inorganic Pharmaceutical Chemistry.
7. Indian Pharmacopoeia.

COMMUNICATION SKILLS (Theory)**2H****2C**

Instruction hours/week: L:2 T:0 P:0

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 2 Hours

Course Objectives:

- This course will prepare the young pharmacy student to interact effectively with doctors, nurses, dentists, physiotherapists and other health workers.
- At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.
- Students will develop interview skills
- Understand Leadership qualities and essentials
- They Develop presentation and group discussion skills

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the behavioral needs for a Pharmacist to function effectively in the areas of pharmaceutical operation
2. Communicate effectively (Verbal and Non-Verbal)
3. Effectively manage the team as a team player
4. Develop interview skills
5. Develop Leadership qualities and essentials
6. Develop presentation and group discussion skills

Course content:**UNIT– I**

Communication Skills: Introduction, Definition, The Importance of Communication The Communication Process – Source, Message, Encoding, Channel, Decoding Receiver, Feedback, Context.

Barriers to communication: Physiological Barriers, Physical Barriers, Cultural Barriers, Language Barriers, Gender Barriers, Interpersonal Barriers, Psychological Barriers, Emotional barriers.

Perspectives in Communication: Introduction, Visual Perception, Language, Other factors affecting our perspective-Past Experiences, Prejudices, Feelings, Environment

UNIT– II

Elements of Communication: Introduction, Face to Face Communication- Tone of Voice, Body Language (Non-verbal communication), Verbal Communication, Physical Communication.

Communication Styles: Introduction, The Communication Styles Matrix with example for each - Direct Communication Style, Spirited Communication Style, Systematic Communication Style, Considerate Communication Style.

UNIT– III

Basic Listening Skills: Introduction, Self-Awareness, Active Listening, Becoming an

Active Listener, Listening in Difficult Situations.

Effective Written Communication: Introduction, When and When Not to Use Written Communication-Complexity of the Topic, Amount of Discussion's Required, Shades of Meaning, Formal Communication.

Writing Effectively: Subject Lines, Put the Main Point First, Know Your Audience Organization of the Message.

UNIT– IV

Interview Skills: Purpose of an interview, Do's and Don'ts of an interview.

Giving Presentations: Dealing with Fears, Planning your Presentation, Structuring Your Presentation, Delivering Your Presentation, Techniques of Delivery.

UNIT– V

Group Discussion: Introduction, Communication skills in group discussion, Do's and Don'ts of group discussion

Suggested Readings:

1. Basic communication skills for Technology, Andreja.J.Rutherford, 2nd Edition, Pearson Education, 2011
2. Communication skills, SanjayKumar, Pushpalata, 1st Edition, Oxford Press, 2011
3. Organizational Behaviour, Stephen.P.Robbins, 1st Edition, Pearson, 2013
4. Brilliant-Communication skills, GillHasson, 1st Edition, Pearson Life, 2011
5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5th Edition, Pearson, 2013.
6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010
7. Communication skills for professionals, Konarnira, 2nd Edition, Newarrivals–PHI, 2011
8. Personality development and soft skills, Barun KMitra, 1st Edition, Oxford Press, 2011
9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning india pvt.ltd, 2011
10. Soft skills and professional communication, rancis Peters SJ, 1st Edition, McGraw Hill Education, 2011
11. Effective communication, John Adair, 4th Edition, Pan Mac Millan, 2009.
12. Bringing out the best in people, Aubrey Daniels, 2nd Edition, McGraw Hill, 1999.

COMMUNICATION SKILLS (Practical)**2H****1C**

Instruction hours/week: L:0 T:0 P:2

Marks: Internal: 10 External: 15 Total:25

External Semester Exam: 2 Hours

Course Objectives:

- Students can able to communicate effectively to meet the people, ask question and make friends
- To Understand the do's and don't's of effective communication.
- Know about Pronounce the sounds effectively.
- To Explain the figures of speech and direct/indirect speech.
- Know to Write effectively mails and other written communications.
- Will be able to Present a topic in a gathering.

Course Outcomes: On successful completion of the course the student will

1. Communicate effectively to meet the people, ask question and make friends
2. Understand the do's and don't's of effective communication.
3. Pronounce the sounds effectively.
4. Explain the figures of speech and direct/indirect speech.
5. Write effectively mails and other written communications.
6. Present a topic in a gathering.

Course Content**Basic communication covering the following topics:**

MeetingPeople

AskingQuestions

MakingFriends

Whatdidyoudo? Do'sand

Suggested Readings:

1. Basic communication skills for Technology, Andreja.J.Ruther Ford, 2nd Edition, Pearson Education, 2011.
2. Communication skills, SanjayKumar, Pushpalata, 1st Edition, OxfordPress, 2011.
3. Organizational Behaviour, Stephen.P.Robbins, 1st Edition, Pearson, 2013.
4. Brilliant-Communication skills, GillHasson, 1st Edition, Pearson Life, 2011.
5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5th Edition, Pearson, 2013.
6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010.
7. Communication skills for professionals, Konarnira, 2nd Edition, New arrivals–PHI, 2011.
8. Personality development and soft skills, Barun KMitra, 1st Edition, Oxford Press, 2011.
9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning india pvt.ltd, 2011.
10. Soft skills and professional communication, rancis Peters SJ, 1st Edition, McGraw Hill Education, 2011.
11. Effective communication, John Adair, 4th Edition, Pan Mac Millan, 2009.
12. Bringing out the best in people, Aubrey Daniels, 2nd Edition, McGraw Hill, 1999.

Instruction hours/week: L: 2 T:0 P: 0

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the components of living world, structure and functional system of plant and animal kingdom.
- To know the classification and salient features of five kingdoms of life and morphology of flowering plants.
- To understand the circulatory, digestive and respiratory systems.
- To know the Nervous, Excretory and reproductive systems.
- To Understand the photosynthesis and plant and mineral nutrition.
- Will be able to know the respiration, growth of plants

Course Outcomes: On successful completion of the course the student will

1. Explain the classification and salient features of five kingdoms of life and morphology of flowering plants.
2. Describe the circulatory, digestive and respiratory systems.
3. Discuss the Nervous, Excretory and reproductive systems.
4. Understand the photosynthesis and plant and mineral nutrition.
5. Discuss the respiration, growth of plants
6. Elaborate the cell and tissues of plant and animal.

UNIT-I

Livingworld: Definition and characters of living organisms. Diversity in the living world.

Binomial nomenclature. Five kingdoms of life and basis of classifications. Salient features of Monera, Protista, Fungi, Animalia and Plantae, Virus.

Morphology of Flowering plants: Morphology of different parts of flowering plants Root, stem, inflorescence, flower, leaf, fruit, seed. General Anatomy of Root, stem, leaf of monocotyledons & Dicotyledones.

UNIT-II

Body fluids and circulation:

- ☐ ☐ Composition of blood, blood groups, coagulation of blood
- ☐ ☐ Composition and functions of lymph
- ☐ ☐ Human circulatory system
- ☐ ☐ Structure of human heart and blood vessels
- ☐ ☐ Cardiac cycle, cardiac output and ECG

Digestion and Absorption:

- ☐ ☐ Human alimentary canal and digestive glands
- ☐ ☐ Role of digestive enzymes
- ☐ ☐ Digestion, absorption and assimilation of digested food

Breathing and respiration:

- ☐ ☐ Human respiratory system
- ☐ ☐ Mechanism of breathing and its regulation
- ☐ ☐ Exchange of gases, transport of gases and regulation of respiration
- ☐ ☐ Respiratory volumes

UNIT-III**Excretory products and their elimination:**

- ☐ ☐ Modes of excretion
- ☐ ☐ Human excretory system-structure and function
- ☐ ☐ Urine formation
- ☐ ☐ Renin angiotensin system

Neural control and coordination:

- ☐ ☐ Definition and classification of nervous system
- ☐ ☐ Structure of a neuron
- ☐ ☐ Generation and conduction of nerve impulse
- ☐ ☐ Structure of brain and spinal cord
- ☐ ☐ Functions of cerebrum, cerebellum, hypothalamus and medulla oblongata

Chemical coordination and regulation:

- ☐ ☐ Endocrine glands and their secretions
- ☐ ☐ Functions of hormones secreted by endocrine glands

Human reproduction:

- ☐ ☐ Parts of female reproductive system
- ☐ ☐ Parts of male reproductive system
- ☐ ☐ Spermatogenesis and Oogenesis
- ☐ ☐ Menstrual cycle

UNIT-IV**Plants and mineral nutrition:**

- ☐ ☐ Essential mineral, macro and micro nutrients
- ☐ ☐ Nitrogen metabolism, Nitrogen cycle, biological nitrogen fixation

Photosynthesis:

- ☐ ☐ Autotrophic nutrition, photosynthesis, Photosynthetic pigments, Factors affecting photosynthesis.

UNIT V

Plant respiration: Respiration, glycolysis, fermentation(anaerobic).

Plant growth and development:

- ☐ Phases and rate of plant growth, Condition of growth, Introduction to plant growth regulators.

Cell –The unit of life:

- ☐ ☐ Structure and functions of cell and cell organelles cell division.

Tissues:

- ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ Definition, types of tissues, location and functions.

Suggested Readings:

1. Text book of Biology by S.B. Gokhale.
2. A Text book of Biology by Dr.Thulajappa and Dr.Seetaram.
3. A Text book of Biology by B.V.Sreenivasa Naidu.
4. A Text book of Biology by Naidu and Murthy.
5. Botany for Degree students ByA.C.Dutta.
- 6.Outlines of Zoology by M.Ekambaranathaayyer and T.N. Ananthakrishnan.
7. Amanual for pharmaceutical biology practical by S.B. Gokhale and C.K.Kokate.

18BP112RBP

SEMESTER-I

REMEDIAL BIOLOGY (Practical)**2H 1C**

Instruction hours/week: L: 0 T:0 P: 2

Marks: Internal: 10 External: 15 Total:25

External Semester Exam: 2 Hours

Course Objectives :

- Students will be able to Understand the microscope, cutting sections, mount, stain and slide preparation.
- To know about cell and its organelles
- To understand the parts of plant and their modifications
- Able to know the system using software
- Able to Identify types of bones.
- To Determine blood group, blood pressure and tidal volume.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the microscope, cutting sections, mount, stain and slide preparation.
2. Study cell and its organelles
3. Study the parts of plant and their modifications
4. Study the system in from using software
5. Identify types of bones.
6. Determine blood group, blood pressure and tidal volume.

Course Content

1. Introduction to experiments in biology
 - a) Study of Microscope
 - b) Section cutting techniques
 - c) Mounting and staining
 - d) Permanent slide preparation
2. Study of cell and its inclusions
3. Study of Stem, Root, Leaf, seed, fruit, flower and their modifications
4. Detailed study of frog by using computer models
5. Microscopic study and identification of tissues pertinent to Stem, Root, Leaf, seed, fruit and flower
6. Identification of bones
7. Determination of blood group
8. Determination of blood pressure
9. Determination of tidal volume

Suggested readings:

1. Practical human anatomy and physiology by S.R.Kale and R.R.Kale.
2. A Manual of pharmaceutical biology practical by S.B.Gokhale, C.K.Kokate and S.P.Shriwastava.
3. Biology practical manual according to National core curriculum. Biology forum of Karnataka. Prof.M.J.H.Shafi

18BP106RMT

SEMESTER-I

REMEDIAL MATHEMATICS**2H****2C**

Instruction hours/week: L:2 T:0 P: 0

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 2 Hours

Course Objectives:

- This is an introductory course in mathematics.
- This subject deals with the introduction to Partial fraction, Logarithm, matrices and Determinant, Analytical geometry, Calculus, differential equation and Laplace transform.
- Able to Perform calculations using matrices and determinants.
- Able to Solve problems using differential and integral calculus.
- To Calculate the equation for straight line and coordinates.
- Students can able to apply differential equations and Laplace transformation for solving problems

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the partial fraction, logarithms, function and limits.
2. Perform calculations using matrices and determinants.
3. Solve problems using differential and integral calculus.
4. Calculate the equation for straight line and coordinates.
5. Apply differential equations and Laplace transformation for solving problems
6. Appreciate the important application of mathematics in Pharmacy

Content**UNIT- I****Partial fraction**

Introduction, Polynomial, Rational fractions, Proper and Improper fractions, Partial fraction, Resolving into Partial fraction, Application of Partial Fraction in Chemical Kinetics and Pharmacokinetics.

Logarithms

Introduction, Definition, Theorems/Properties of logarithms, Common logarithms, Characteristic and Mantissa, worked examples, application of logarithm to solve pharmaceutical problems.

Function:

Real Valued function, Classification of real valued functions,

Limits and continuity:

Introduction, Limit of a function, Definition of limit of a function (□-

□□□□

definition) $\lim_{n \rightarrow \infty} \frac{x^n - a^n}{n a^{n-1}}$, $\lim_{x \rightarrow a} \frac{\sin x - \sin a}{x - a}$, $\lim_{x \rightarrow 0} \frac{\sin x}{x}$

UNIT- II

Matrices and Determinant:

Introduction matrices, Types of matrices, Operation on matrices, Transpose of a matrix, Matrix Multiplication, Determinants, Properties of determinants, Product of determinants, Minors and co-Factors, Adjoint or adjugate of a square matrix, Singular and non-singular matrices, Inverse of a matrix, Solution of system of linear equations using matrix method, Cramer's rule, Characteristic equation and roots of a square matrix, Cayley Hamilton theorem, Application of Matrices in solving Pharmacokinetic equations.

UNIT- III

Calculus Differentiation:

Introductions, Derivative of a function, Derivative of a constant, Derivative of a product of a constant and a function, Derivative of the sum or difference of two functions, Derivative of the product of two functions (product formula), Derivative of the quotient of two functions (Quotient formula)–**Without Proof**, Derivative of x^n w.r.t. x , where n is any rational number, Derivative of e^x , Derivative of $\log_e x$, Derivative of a^x , Derivative of trigonometric functions from

first principles (**without Proof**), Successive Differentiation, Conditions maximum or a minimum at a point.

UNIT -IV

Analytical Geometry:

Introduction: Signs of the Coordinates, Distance formula.

Straight Line : Slope or gradient of a straight line, Conditions for Parallel is and perpendicularity of two lines, Slope of a line joining two points, Slope–intercept form of a straight line.

Integration:

Introduction, Definition, Standard formulae, Rules of integration, Method of substitution, Method of Partial fractions, Integration by parts, definite integrals, application.

UNIT -V

Differential Equations: Some basic definitions, Order and degree, Equations in separable form, Homogeneous equations, Linear Differential equations, Exact equations, **Application in solving Pharmacokinetic equations.**

Laplace Transform: Introduction, Definition, Properties of Laplace transform, Laplace Transforms of elementary functions, Inverse Laplace transforms, Laplace transform of derivatives, Application to solve Linear differential equations, **Application in solving Chemical kinetics and Pharmacokinetics equations.**

Suggested Readings:

1. Differential Calculus by Shanthi narayan.
2. Pharmaceutical Mathematics with application to Pharmacy by Panchaksharappa Gowda D.H.
3. Integral Calculus by Shanthinarayan.
4. Higher Engineering Mathematics by Dr.B.S.Grewal.

18BP201T

SEMESTER - II

HUMAN ANATOMY AND PHYSIOLOGY-II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- The subject provides the basic knowledge required to understand the various disciplines of pharmacy.
- To perform the hematological tests like blood cell counts, haemoglobin estimation, bleeding/clotting time etc and also record blood pressure, heart rate, pulse and respiratory volume.
- It also gives coordinated working pattern of different organs of each system
- Able to the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of human body.

Course Outcomes: On successful completion of the course the student will

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Perform the hematological tests like blood cell counts, haemoglobin estimation, bleeding/clotting time etc and also record blood pressure, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of human body.

Course Content:**UNIT - I**

Nervous system: Organization of nervous system, neuron, neuroglia, classification and properties of nerve fibre, electrophysiology, action potential, nerve impulse, receptors, synapse, neurotransmitters.

Central nervous system: Meninges, ventricles of brain and cerebrospinal fluid. Structure and functions of brain (cerebrum, brain stem, cerebellum), spinal cord (gross structure, functions of afferent and efferent nerve tracts, reflex activity)

UNIT - II

Digestive system: Anatomy of GI Tract with special reference to anatomy and functions of stomach, (Acid production in the stomach, regulation of acid production through parasympathetic nervous system, pepsin in role in protein digestion) small intestine and large intestine, anatomy and functions of salivary glands, pancreas and liver, movements of GIT, digestion and absorption of nutrients and disorders of GIT.

Energetics: Formation and role of ATP, Creatinine Phosphate and BMR.

UNIT - III

Respiratory system: Anatomy of respiratory system with special reference to anatomy of lungs, mechanism of respiration, regulation of respiration. Lung Volumes and capacities transport of respiratory gases, artificial respiration, and resuscitation methods.

Urinary system: Anatomy of urinary tract with special reference to anatomy of kidney and nephrons, functions of kidney and urinary tract, physiology of urine formation, micturition reflex and role of kidneys in acid base balance, role of RAS in kidney and disorders of kidney.

UNIT - IV

Endocrine system: Classification of hormones, mechanism of hormone action, structure and functions of pituitary gland, thyroid gland, parathyroid gland, adrenal gland, pancreas, pineal gland, thymus and their disorders.

UNIT - V

Reproductive system: Anatomy of male and female reproductive system, Functions of male and female reproductive system, sex hormones, physiology of menstruation, fertilization, spermatogenesis, oogenesis, pregnancy and parturition.

Introduction to genetics: Chromosomes, genes and DNA, protein synthesis, genetic pattern of inheritance.

Suggested Readings:

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York.
3. Physiological basis of Medical Practice-Best and Taylor. Williams & Wilkins Co, Baltimore, MIUSA.
4. Text book of Medical Physiology-Arthur C. Guyton and John. E. Hall. Miami, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
6. Text book of Human Histology by Inderbir Singh, Jaypee brothers medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L. Ghai, Jaypee brothers medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

18BP207P

SEMESTER - II

HUMAN ANATOMY AND PHYSIOLOGY (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Practical physiology is complimentary to the theoretical discussions in physiology.
- Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings.
- This is helpful for developing an insight on the subject.
- To Determine the tidal volume, vital capacity and total blood count by cell analyzer.
- Able to Record the body temperature, basal mass index.
- Will understand how to demonstrate positive and negative feedback mechanism.

Course Outcomes: On successful completion of the course the student will

1. Identify nervous system, endocrine system, digestive, respiratory with the help of specimens, charts and models.
2. Identify the cardiovascular systems, urinary and reproductive systems with the help of specimens, charts and models.
3. Demonstrate the function of olfactory nerve, visual acuity, reflex activity, and different types of taste
4. Determine the tidal volume, vital capacity and total blood count by cell analyzer.
5. Record the body temperature, basal mass index.
6. Demonstrate positive and negative feedback mechanism.

Course Content:

1. To study the Integumentary and special senses using specimen, models, etc.,
2. To study the nervous system using specimen, models, etc.,
3. To study the endocrine system using specimen, models, etc
4. To demonstrate the general neurological examination.
5. To demonstrate the function of olfactory nerve.
6. To examine the different types of taste.
7. To demonstrate the visual activity.
8. To demonstrate the reflex activity.
9. Recording of body temperature.

10. To demonstrate positive and negative feed back mechanism.
11. Determination of tidal volume and vital capacity.
12. Study of digestive, respiratory, cardio vascular systems, urinary and reproductive systems with the help of models, charts and specimens.
13. Recording of basal mass index.
14. Study of family planning devices and pregnancy diagnosis test.
15. Demonstration of total blood count by cell analyser.
16. Permanent slides of vital organs and gonads.

Suggested Readings:

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W.Wilson, Churchill Livingstone, New York.
3. Physiological basis of Medical Practice-Best and Taylor. Williams &Wilkins Co, Riverview,MIUSA.
4. Text book of Medical Physiology-Arthur C,Guyton and John. E.Hall. Miamisburg, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA,U.S.A.
6. Text book of Human Histology by Inderbir Singh, Jaypee brothers medical publishers, New Delhi.
7. Text book of Practical Physiology by C.L. Ghai, Jaypee brothers medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, NewDelhi.

18BP202T

SEMESTER - II

PHARMACEUTICAL ORGANIC CHEMISTRY–I (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with classification and nomenclature of simple organic compounds, structural isomerism, intermediates forming in reactions, important physical properties, reactions and methods of preparation of these compounds.
- The syllabus also emphasizes on mechanisms and orientation of reactions.
- Know how to schematize the reaction/reaction mechanism and name the reaction
- Able to explain the orientation of reactions.
- Understand the reactivity/stability of compounds.
- To Identify/confirm the organic compounds.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the classification and nomenclature of organic compounds, and the concepts of isomerism.
2. Write the structure, name and the type of isomerism of the organic compound.
3. Schematize the reaction/reaction mechanism and name the reaction
4. Explain the orientation of reactions.
5. Account for reactivity/stability of compounds.
6. Identify/confirm the organic compounds.

Course Content:

General methods of preparation and reactions of compound superscripted with asterisk (*) to be explained to emphasize on definition, types, classification, principles/ mechanisms, applications, examples and differences.

UNIT-I

Classification, nomenclature and isomerism: Classification of Organic Compounds Common and IUPAC systems of nomenclature of organic compounds. (up to 10 Carbons open chain and carbocyclic compounds) Structural isomerisms inorganic compounds.

UNIT-II

Alkanes*, Alkenes* and Conjugated dienes*: SP³ hybridization in alkanes, Halogenation of alkanes, uses of paraffins. Stabilities of alkenes, SP² hybridization in alkenes E1 and E2 reactions – kinetics, order of reactivity of alkyl halides, rearrangement of carbocations, Saytzeff's orientation and evidences. E1 versus E2 reactions, Factors affecting E1 and E2 reactions. Ozonolysis, electrophilic addition reactions of alkenes, Markownikoff's orientation, free radical addition reactions of alkenes, Anti

Markownikoff's orientation. Stability of conjugated dienes, Diel-Alder, electrophilic addition, free radical addition reactions of conjugated dienes, allylic arrangement.

UNIT-III

Alkyl halides: SN1 and SN2 reactions-kinetics, order of reactivity of alkyl halides, stereochemistry and rearrangement of carbocations. SN1 versus SN2 reactions, Factors affecting SN1 and SN2 reactions. Structure and uses of ethyl chloride, Chloroform, trichloroethylene, tetrachloroethylene, dichloromethane, tetrachloromethane and iodo form.

Alcohols*: Qualitative tests, Structure and uses of Ethyl alcohol, Methyl alcohol, chlorobutanol, Cetosteryl alcohol, Benzyl alcohol, Glycerol, Propylene glycol.

UNIT- IV

Carbonyl compounds*(Aldehydes and ketones): Nucleophilic addition, Electromeric effect, aldol condensation, Crossed Aldol condensation, Cannizzaro reaction, Crossed Cannizzaro reaction, Benzoin condensation, Perkin condensation, qualitative tests, Structure and uses of Formaldehyde, Paraldehyde, Acetone, Chloralhydrate, Hexamine, Benzaldehyde, Vanilin, Cinnamaldehyde.

UNIT-V

Carboxylic acids*: Acidity of carboxylic acids, effect of substituents on acidity, inductive effect and qualitative tests for carboxylic acids, amide and ester. Structure and Uses of Acetic acid, Lactic acid, Tartaric acid, Citric acid, Succinic acid. Oxalic acid, Salicylic acid, Benzoic acid, Benzyl benzoate, Dimethyl phthalate, Methylsalicylate and Acetylsalicylic acid.

Aliphatic amines*: Basicity, effect of substituent on Basicity. Qualitative test, Structure and uses of Ethanolamine, Ethylenediamine, Amphetamine.

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L.Finlar , Volume-I.
3. Text book of Organic Chemistry by B.S.Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

18BP208P

SEMESTER-II

PHARMACEUTICAL ORGANIC CHEMISTRY-I (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Students will be able to perform qualitative analysis of unknown organic compounds.
- Will be able to detect special elements in an organic sample.
- Understand how to Confirm unknown compounds by m.p./b.p.
- Will be able to Prepare derivatives of organic compounds.
- To know how to prepare the solid derivatives from organic compounds.
- Able to Construct molecular models.

Course Outcomes (CO's): On successful completion of the course the student will

1. Systematically perform qualitative analysis of unknown organic compounds.
2. Detect special elements in an organic sample.
3. Confirm unknown compounds by m.p./b.p.
4. Prepare derivatives of organic compounds.
5. Prepare the solid derivatives from organic compounds.
6. Construct molecular models.

Course Content:

1. Systematic qualitative analysis of unknown organic compounds like preliminary test:
Color, odour, aliphatic / aromatic compounds, saturation and unsaturation, etc.
2. Detection of elements like Nitrogen, Sulphur and Halogen by Lassaigne's test.
3. Solubility test.
4. Functional group test like Phenols, Amides/ Urea, Carbohydrates, Amines, Carboxylic acids, Aldehydes and Ketones, Alcohols, Esters, Aromatic and Halogenated Hydrocarbons, Nitro compounds and Anilides.
5. Melting point / Boiling point of organic compounds.
6. Identification of the unknown compound from the literature using melting point / boiling point.
7. Preparation of the derivatives and confirmation of the unknown compound by melting point / boiling point.
8. Minimum 5 unknown organic compounds to be analysed systematically.
 - i) Preparation of suitable solid derivatives from organic compounds.
 - ii) Construction of molecular models.

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L.Finar , Volume-I.
3. Text book of Organic Chemistry by B.S.Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampmanand Kriz.

18BP203T

SEMESTER-II

BIOCHEMISTRY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- Will be able to know bioenergetics and energy rich compounds.
- To know the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the types and importance of biomolecules
2. Explain the bioenergetics and energy rich compounds.
3. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
4. Elaborate the biological oxidation emphasizing electron transport chain and oxidative phosphorylation.
5. Describe the genetic organization of mammalian genome and functions of DNA in the synthesis of RNAs and proteins.
6. Discuss the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.

Course Content:**UNIT-I**

Biomolecule: Introduction, classification, chemical nature and biological role of carbohydrate, lipids, nucleic acids, amino acids and proteins.

Bioenergetic: Concept of free energy, endergonic and exergonic reaction, Relationship between free energy, enthalpy and entropy; Redox potential. Energy rich compounds; classification; biological significances of ATP and cyclic AMP.

UNIT-II

Carbohydrate metabolism: Glycolysis– Pathway, energetic and significance Citric acid cycle- Pathway, energetics and significance HMP shunt and its significance; Glucose-6-Phosphate dehydrogenase (G6PD) deficiency Glycogen metabolism Pathways and glycogen storage diseases (GSD) Gluconeogenesis- Pathway and its significance Hormonal regulation of blood glucose level and Diabetes mellitus Oxidative phosphorylation & its mechanism and substrate phosphorylation Inhibitors ETC and oxidative phosphorylation / Uncouplers level.

UNIT-III

Lipid metabolism: β - Oxidation of saturated fatty acid (Palmitic acid) Formation and utilization of ketone bodies; ketoacidosis De novo synthesis of fatty acids (Palmitic acid) Biological significance of cholesterol and conversion of cholesterol into bile acids, steroid hormones and vitamin D Disorders of lipid metabolism: Hypercholesterolemia, atherosclerosis, fatty liver and obesity.

Amino acid metabolism: General reactions of amino acid metabolism: Transamination, deamination & decarboxylation, urea cycle and its disorders Catabolism of phenylalanine and tyrosine and their metabolic Disorders (Phenylketonuria, Albinism, alcaptonuria, tyrosinemia) Synthesis and significance of biological substances; 5-HT, melatonin, dopamine, noradrenaline, adrenaline Catabolism of heme; hyperbilirubinemia and jaundice.

UNIT-IV

Nucleic acid metabolism and genetic information transfer: Biosynthesis of purine and pyrimidin nucleotides Catabolism of purine nucleotides and Hyperuricemia and Gout disease Organization of mammalian genome Structure of DNA and RNA and their functions DNA replication (semi conservative model) Transcription or RNA synthesis Genetic code, Translation or Protein synthesis and inhibitors.

UNIT-V

Introduction, properties, nomenclature and IUB classification of enzymes Enzyme kinetics (Michaelis-Menten plot, Lineweaver-Burke plot) Enzyme inhibitors with examples Regulation of enzymes: enzyme induction and repression, allosteric enzymes regulation Therapeutic and diagnostic applications of enzymes and isoenzymes Coenzymes–Structure and biochemical functions.

Suggested Readings

1. Principles of Biochemistry by Lehninger.
2. Harper's Biochemistry by Robert K. Murray, David K. Granner and Victor W. Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D. Satyanarayan and U. Chakrapani.
5. Text book of Biochemistry by Rama Rao.
6. Text book of Biochemistry by Deb.

7. Outlines of Biochemistry by Connand Stumpf.
8. Practical Biochemistry by R.C.Gupta and S.Bhargavan.
9. Introduction of Practical Biochemistry by David T.Plummer.(3rdEdition).
- 10.Practical Biochemistry for Medical students by Rajagopal and Ramakrishna.
- 11.Practical Biochemistry by Harold Varley.

18BP209P

SEMESTER - II

BIOCHEMISTRY (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To know the Qualitative analysis of the biomolecules.
- Will be able to Quantitatively analyze biochemical parameters and their importance in diagnosis of disease.
- To understand how to analyse the urine for abnormal constituents.
- Understand how to identify the biomolecules using chemical tests.
- To Determine the enzymatic activity.
- To Study the effect of physical parameters on the enzymatic activity.

Course Outcomes(CO's): On successful completion of the course the student will

1. Qualitatively analyze the biomolecules.
2. Quantitatively analyze biochemical parameters and their importance in diagnosis of disease.
3. Systematically analyse the urine for abnormal constituents.
4. Identify the biomolecules using chemical tests.
5. Determine the enzymatic activity.
6. Study the effect of physical parameters on the enzymatic activity.

Course Content:

1. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch).
2. Identification tests for Proteins (albumin and Casein).
3. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method).
4. Qualitative analysis of urine orab normal constituents.
5. Determination of blood creatinine.
6. Determination of blood sugar.
7. Determination of serum total cholesterol.
8. Preparation of buffer solution and measurement of PH.
9. Study of enzymatic hydrolysis of starch.
10. Determination of Salivary amylase activity.
11. Study the effect of Temperature on Salivary amylase activity.
12. Study the effect of substrate concentration on salivary amylase activity.

Suggested Readings:

1. Principles of Biochemistry by Lehninger.

2. Harper's Biochemistry by Robert K. Murry, Daryl K. Granner and Victor W. Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D. Satyanarayan and U. Chakrapani.
5. Text book of Biochemistry by Rama Rao.
6. Text book of Biochemistry by Deb.
7. Outlines of Biochemistry by Connand Stumpf.
8. Practical Biochemistry by R. C. Gupta and S. Bhargavan.
9. Introduction of Practical Biochemistry by David T. Plummer. (3rd Edition).
10. Practical Biochemistry for Medical students by Rajagopal and Ramakrishna.
11. Practical Biochemistry by Harold Varley.

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes.
- This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications
- Understanding of basic pathophysiological mechanisms
- Hence it will not only help to study the syllabus of pathology,
- To get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.
- To Understand the etiology and pathogenesis of diseases.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the description about the types of system and related disorders
2. Name the signs and symptoms of the diseases.
3. Mention the complications of the diseases.
4. Describe the mechanism of the diseases.
5. Understand the etiology and pathogenesis of diseases.
6. Discuss about the Sexually transmitted diseases.

Course content:

UNIT-I

Basic principles of Cell injury and Adaptation: Introduction, definitions, Homeostasis, Components and Types of Feedback systems, Causes of cellular injury, Pathogenesis (Cellmembranedamage, Mitochondrial damage, Ribo some damage, Nuclear damage), Morphology of cell injury–Adaptive changes (Atrophy, Hypertrophy, hyperplasia, Metaplasia, Dysplasia), Cell swelling, Intracellular accumulation, Calcification, Enzyme leakage and Cell Death Acidosis & Alkalosis, Electrolyte imbalance.

Basic mechanism involved in the process of inflammation and repair: Introduction, Clinical signs of inflammation, Different types of Inflammation, Mechanism of Inflammation – Alteration in vascular permeability and blood flow, migration of WBC's, Mediators of inflammation, Basic principles of wound healing in the skin, Pathophysiology of Atherosclerosis.

UNIT-II

Cardiovascular System: Hypertension, congestive heart failure, ischemic heart disease (angina, myocardial infarction, atherosclerosis and arteriosclerosis).

Respiratory system: Asthma, Chronic obstructive airways diseases.

Renal system: Acute and chronic renal failure.

UNIT-III

Haematological Diseases: Iron deficiency, megaloblastic anemia (VitB12 and folic acid), sickle cell anemia, thalassemia, hereditary acquired anemia, hemophilia.

Endocrine system: Diabetes, thyroid diseases, disorders of sex hormones.

Nervous system: Epilepsy, Parkinson's disease, stroke, psychiatric disorders: depression, schizophrenia and Alzheimer's disease.

Gastrointestinal system: Peptic Ulcer.

UNIT- IV

Inflammatory bowel diseases, jaundice, hepatitis (A, B, C, D, E, F) alcoholic liver disease.

Disease of bones and joints: Rheumatoid arthritis, osteoporosis and gout.

Principles of cancer: classification, etiology and pathogenesis of cancer.

Diseases of bones and joints: Rheumatoid Arthritis, Osteoporosis, Gout.

Principles of Cancer: Classification, etiology and pathogenesis of Cancer.

UNIT-V

Infectious diseases: Meningitis, Typhoid, Leprosy, Tuberculosis Urinary tract infections.

Sexually transmitted diseases: AIDS, Syphilis, Gonorrhea.

Suggested Readings:

1. Vinay Kumar, Abul K. Abbas, Jon C. Aster; Robbins & Cotran Pathologic Basis of Disease; South Asia edition; India; Elsevier; 2014.
2. Harsh Mohan; Text book of Pathology; 6th edition; India; Jaypee Publications; 2010.
3. Laurence B, Bruce C, Bjorn K.; Goodman & Gilman's The Pharmacological Basis Of Therapeutics; 12th edition; New York; McGraw-Hill; 2011.
4. Best, Charles Herbert 1899-1978; Taylor, Norman Burke 1885-1972; West, John B (John Burnard); Best and Taylor's Physiological basis of medical practice; 12th edition; United States;
5. William and Wilkins, Baltimore; 1991 [1990 printing].
6. Nicki R. Colledge, Brian R. Walker, Stuart H. Ralston; Davidson's Principles and Practice of Medicine; 21st edition; London; ELBS / Churchill Livingstone; 2010.

7. Guyton A, John. E Hall; Text book of Medical Physiology; 12th edition; WBS aunders Company; 2010.
8. Joseph DiPiro, Robert L. Talbert, Gary Yee, Barbara Wells, L. Michael Posey; Pharmacotherapy: A Pathophysiological Approach; 9th edition; London; McGraw-Hill Medical; 2014.
9. V. Kumar, R. S. Cotran and S. L. Robbins; Basic Pathology; 6th edition; Philadelphia; WBSaunders Company; 1997.
10. Roger Walker, Clive Edwards; Clinical Pharmacy and Therapeutics; 3rd edition; London; Churchill Living stone publication; 2003.

SEMESTER-II

COMPUTER APPLICATIONS IN PHARMACY (Theory)**3H****3C**

Instruction hours/week : L: 3 T:0 P:0

Marks: Internal: 25 External:50 Total:75

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the introduction Database, Database Management system, computer application in clinical studies and use of databases.
- To Describe the various types of application of computers in pharmacy
- To Understand the various types of databases
- Able to know the applications of databases in pharmacy
- To Understand the concept of bioinformatics and explain the data analysis in Preclinical development
- Able to elaborate the applications of bioinformatics in Vaccine Discovery

Course Outcomes: On successful completion of the course the student will

1. Describe the various types of application of computers in pharmacy
2. Understand the various types of databases
3. Discuss the applications of databases in pharmacy
2. Understand the concept of bioinformatics
3. Explain the data analysis in Preclinical development
4. Elaborate the applications of bioinformatics in Vaccine Discovery

Course content:**UNIT– I**

Number system: Binary number system, Decimal number system, Octal number system, Hexa decimal number systems, conversion decimal to binary, binary to decimal, octal to binary etc, binary addition, binary subtraction– One's complement, Two's complement method, binary multiplication, binary division

Concept of Information Systems and Software: Information gathering, requirement and feasibility analysis, data flow diagrams, process specifications, input/ output design, process life cycle, planning and managing the project

UNIT–II

Web technologies: Introduction to HTML, XML, CSS and Programming languages, introduction to web servers and Server Products Introduction to databases, MYSQL, MSACCESS, Pharmacy Drug database.

UNIT– III

Application of computers in Pharmacy: Drug information storage and retrieval, Pharmacokinetics, Mathematical model in Drug design, Hospital and Clinical Pharmacy, Electronic Prescribing and discharge (EP) systems, barcode medicine identification and

automated dispensing of drugs, mobile technology and adherence monitoring Diagnostic System, Lab-diagnostic System, Patient Monitoring System, Pharma Information System.

UNIT– IV

Bioinformatics: Introduction, Objective of Bioinformatics, Bioinformatics Databases, Concept of Bioinformatics, Impact of Bioinformatics in Vaccine Discovery

UNIT-V

Computers as data analysis in Preclinical development: Chromatographic data analysis (CDS), Laboratory Information management System (LIMS) and Text Information Management System (TIMS).

Suggested Readings:

1. Computer Application in Pharmacy– William E. Fassett– Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.
2. Computer Application in Pharmaceutical Research and Development– Sean Ekins– Wiley-Inter science, A John Wiley and Sons, INC., Publication, USA.
3. Bioinformatics (Concept, Skills and Applications)– S.C. Rastogi- CBS Publisher and Distributors, 4596/1-A, 11 Darya Gani, New Delhi – 110002 (INDIA).
4. Microsoft office Access -2003, Application Development Using VBA, SQL Server, DAP and Infopath– Cary N. Prague– Wiley Dream tech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi-110002.

COMPUTER APPLICATIONS IN PHARMACY (Practical) 2H 1C

Instruction hours/week : L: 0 T:0 P:2

Marks: Internal: 10 External:15 Total:25

External Semester Exam: 2 Hours

Course Outcomes: On successful completion of the course the student will

1. Describe the various types of application of computers in pharmacy
2. Understand the various types of databases
3. Information about online tools for drug interaction
4. Work in MS Office
5. Create database for patients
6. Know Drug information storage and retrieval using MS Access.

Course content:

1. Design a questionnaire using a word processing package to gather information about a particular disease.
2. Create a HTML web page to show personal information.
3. Retrieve the information of a drug and its adverse effects using online tools.
4. Creating mailing labels Using Label Wizard, generating label in MSWORD.
5. Create a data base in MS Access to store the patient information with the required fields Using access.
6. Design a form in MS Access to view, add, delete and modify the patient record in the database.
7. Generating report and printing the report from patient database.
8. Creating in voice table using– MS Access.
9. Drug information storage and retrieval using MS Access.
10. Creating and working with queries in MS Access.
11. Exporting Tables, Queries , Forms and Reports to web pages
12. Exporting Tables, Queries, Forms and Reports to XML pages

Suggested Readings

1. Computer Application in Pharmacy– William E. Fassett– Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.
2. Computer Application in Pharmaceutical Research and Development– Sean Ekins– Wiley-Inter science, A John Wiley and Sons, INC., Publication, USA.
3. Bioinformatics (Concept, Skills and Applications)– S.C. Rastogi- CBS Publisher and Distributors, 4596/1-A, 11 Darya Gani, New Delhi – 110002 (INDIA).
4. Microsoft office Access -2003, Application Development Using VBA, SQL Server, DAP and Infopath– Cary N. Prague– Wiley Dream tech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi-110002.

18BP206T

SEMESTER-II

ENVIRONMENTAL SCIENCES (Theory)**3H****3C**

Instruction hours/week : L: 3 T:0 P:0

Marks: Internal: 25 External:50 Total:75

External Semester Exam: 1 Hours

Course Objectives:

- Environmental Sciences is the scientific study of the environmental system and the status of its inherent or induced changes on organisms.
- It includes not only the study of physical and biological characters of the environment but also the social and cultural factors and the impact of man on environment.
- Able to Develop an attitude of concern for the environment.
- To Motivate learner to participate in environment protection and environment improvement.
- Understand the skills to help the concerned individuals in identifying and solving environmental problems.
- Able to Strive to attain harmony with Nature.

Course Outcomes (CO's): On successful completion of the course the student will

1. Create awareness about environmental problems among learners.
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate learner to participate in environment protection and environment improvement.
5. Acquire skills to help the concerned individuals in identifying and solving environmental problems.
6. Strive to attain harmony with Nature.

Course content:**UNIT-I**

The Multi disciplinary nature of environmental studies Natural Resources Renewable and non-renewable resources: Natural resources and associated problems a) Forest resources; b) Water resources; c) Mineral resources; d) Food resources ;e)Energy resources; f)Land resources: Role of an individual in conservation of natural resources.

UNIT-II**Ecosystems:**

- i) Concept of an ecosystem.
- ii) Structure and function of an ecosystem.

Introduction, types, characteristic features, structure and function of the ecosystems: Forest ecosystem; Grass land ecosystem; Desert ecosystem; Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

UNIT-III

Environmental Pollution: Air pollution; Water pollution; Soil pollution.

Suggested Readings:

1. Y.K. Sing, Environmental Science, New Age International Pvt, Publishers, Bangalore.
2. Agarwal, K.C.2001Environmental Biology, Nidi Publ.Ltd. Bikaner.
3. Bharucha Erach, The Biodiversity of India, Mapin Publishing Pvt. Ltd., Ahmedabad – 380013,India.
4. BrunnerR.C.,1989, Hazardous Waste Incineration, McGrawHillInc. 480p.
5. ClarkR.S., Marine Pollution, Clanderson PressOxford.
6. Cunningham, W.P. Cooper, T.H. Gorhani, E &Hepworth, M.T. 2001, Environmental Encyclopedia, Jaico Publ.House, Mumbai,1196p.
7. DeA.K., Environmental Chemistry,Wiley Eastern Ltd.
8. Down of Earth,Centre for Science and Environment.

SEMESTER III

18BP301T

SEMESTER-III

PHARMACEUTICAL ORGANIC CHEMISTRY –II (Theory) 4H 4C

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with general methods of preparation and reactions of some organic compounds.
- Reactivity of organic compounds are also studied here.
- The syllabus emphasizes on mechanisms and orientation of reactions.
- Chemistry of fats and oils are also included in the syllabus.
- Students can Emphasize the synthesis, reactions and uses of Polynuclear hydrocarbons and its derivatives.
- Students can able to explain the synthesis, reactions and stability of cycloalkanes.

Course Outcomes: On successful completion of the course the student will

1. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
2. Understand the acidic/basic properties, qualitative tests, structure and uses of Phenols, Aromatic amines, Aromatic acids and its derivatives.
3. Explain the effect of substituents on acidity and basicity of phenols, aromatic acids and aromatic amines.
4. Describe the Definition/difference, properties and analytical constants pertaining to Fats and Oils.
5. Emphasize the synthesis, reactions and uses of Polynuclear hydrocarbons and its derivatives.
6. Explain the synthesis, reactions and stability of cycloalkanes.

Course Content:

- General methods of preparation and reactions of compounds super scripted with asterisk (*) to be explained.
- To emphasize on definition, types, classification, principles/mechanisms, applications, examples and differences.

UNIT- I**Benzene and its derivatives:**

A. Analytical, synthetic and other evidences in the derivation of structure of benzene, Orbital picture, resonance in benzene, aromatic characters, Huckel's rule.

B. Reactions of benzene - nitration, sulphonation, halogenation- reactivity, Friedel crafts alkylation- reactivity, limitations, Friedel crafts acylation.

C. Substituent's, effect of substituent's on reactivity and orientation of mono substituted benzene compounds towards electro philic substitution reaction.

D. Structure and uses of DDT, Saccharin, BHC and Chloramine.

UNIT- II

Phenols* - Acidity of phenols, effect of substituents on acidity, qualitative tests, Structure and uses of phenol, cresols, resorcinol, naphthols.

Aromatic Amines* - Basicity of amines, effect of substituent's on basicity, and synthetic uses of aryl diazonium salts.

Aromatic Acids* –Acidity, effect of substituent's on acidity and important reactions of benzoic acid.

UNIT- III

Fats and Oils:

- a. Fatty acids – reactions.
- b. Hydrolysis, Hydrogenation, Saponification and Rancidity of oils, Drying oils.
- c. Analytical constants – Acid value, Saponification value, Ester value, Iodine value, Acetyl value, Reichert Meissl (RM) value – significance and principle involved in their determination.

UNIT- IV

Poly nuclear hydrocarbons:

- a. Synthesis, reactions.
- b. Structure and medicinal uses of Naphthalene, Phenanthrene, Anthracene, Diphenylmethane, Triphenylmethane and their derivatives.

UNIT- V

Cyclo alkanes*: Stabilities – Baeyer's strain theory, limitation of Baeyer's strain theory, Couls on and Moffitt's modification, Sachse Mohr's theory (Theory of strainless rings), reactions of cyclopropane and cyclobutane only.

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L. Finar , Volume-I.
3. Text book of Organic Chemistry b y B.S. Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

18BP305P

SEMESTER-III

PHARMACEUTICAL ORGANIC CHEMISTRY -II (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Students able to Demonstrate recrystallization and its applications.
- Students able to Demonstrate steam distillation and its applications.
- To Determine the qualitative parameters of oil.
- To Prepare few compounds using basic chemical reactions.
- Able to Synthesize organic compounds using named reactions.
- To Understand the use and application of synthesized organic compounds.

Course Outcomes(CO's): On successful completion of the course the student will

1. Demonstrate recrystallization and its applications.
2. Demonstrate steam distillation and its applications.
3. Determine the qualitative parameters of oil.
4. Prepare few compounds using basic chemical reactions.
5. Synthesize organic compounds using named reactions.
6. Understand the use and application of synthesized organic compounds.

I Experiments involving laboratory techniques:

- i) Recry stallization
- ii) Steam distillation

II Determination of following oil values (including standardization of reagents):

- i) Acid value
- ii) Saponification value
- iii) Iodine value

III Preparation of compounds:

- i) Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol /Aniline by acylation reaction.
- ii) 2,4,6-Tribromo aniline/Para bromo acetanilide from Aniline/Acetanilide by halogenation (Bromination) reaction.
- iii) 5-Nitro salicylic acid/Meta dinitro benzene from Salicylic acid / Nitro benzene by nitration reaction.
- iv) Benzoic acid from Benzyl chloride by oxidation reaction.

- v) Benzoic acid/ Salicylic acid from alkyl benzoate/ alkyl salicylate by hydrolysis reaction.
- vi) 1-Phenylazo-2-naphthol from Aniline by diazotization and coupling reactions.
- vii) Benzil from Benzoin by oxidation reaction.
- viii) Dibenzal acetone from Benzal dehyde by Claisen Schmidt reaction
- ix) Cinnamic acid from Benzal dehyde by Perkin reaction
- x) *p*-Iodo benzoic acid from *p*-amino benzoic acid

Suggested Readings:

1. Organic Chemistry by Morrison and Boyd.
2. Organic Chemistry by I.L. Finar , Volume-I.
3. Text book of Organic Chemistry by B.S. Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni.
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry.
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

18BP302T

SEMESTER-III

PHYSICAL PHARMACEUTICS-I (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To understand the physicochemical properties, and principles involved in dosage forms/formulations.
- To get a better insight into various areas of formulation research and development,
- To know stability studies of pharmaceutical dosage forms.
- To gain a clear idea about solubilisation and techniques for identifying the phenomenon.
- To understand complexation and protein binding and its effect in the formulation of new dosage forms.
- To Identify the importance of pH and buffers in pharmaceutical systems.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand various physicochemical properties of drug molecules in the design of dosage forms.
2. Know the principles of chemical kinetics & to use them for stability testing and determination of expiry date of formulations.
3. Develop a clear idea about solubilisation and techniques for identifying the phenomenon.
4. Discover the term complexation and protein binding and its effect in the formulation of new dosage forms.
5. Identify the importance of pH and buffers in pharmaceutical systems.
6. Achieve a better insight into various areas of formulation, research and development.

Course Content:**UNIT-I**

Solubility of drugs: Solubility expressions, mechanisms of solute solvent interactions, ideal solubility parameters, solvation & association, quantitative approach to the factors influencing solubility of drugs, diffusion principles in biological systems. Solubility of gas in liquids, solubility of liquids in liquids, (Binary solutions, ideal solutions) Raoult's law, real solutions. Partially miscible liquids, Critical solution temperature and applications. Distribution law, its limitations and applications.

UNIT-II

States of Matter and properties of matter: State of matter, changes in the state of matter, latent heats, vapor pressure, sublimation critical point, eutectic mixtures, gases, aerosols- inhalers, relative humidity, liquid complexes, liquid crystals, glassy states, solid- crystalline, amorphous & polymorphism.

Physicochemical properties of drug molecules: Refractive index, optical rotation, dielectric constant, dipole moment, dissociation constant, determinations and applications.

UNIT-III

Surface and interfacial phenomenon: Liquid interface, surface & interfacial tensions, surface free energy, measurement of surface & interfacial tensions, spreading coefficient, adsorption at liquid

interfaces, surface active agents, HLB Scale, solubilisation, detergency, adsorption at solid interface.

UNIT-IV

Complexation and protein binding: Introduction, Classification of Complexation, Applications, methods of analysis, protein binding, Complexation and drug action, crystalline structures of complexes and thermo dynamic treatment of stability constants.

UNIT-V

pH, buffers and Isotonic solutions: Sorensen's pH scale, pH determination (electrometric and calorimetric), applications of buffers, buffer equation, buffer capacity, buffers in pharmaceutical and biological systems, buffered isotonic solutions.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin.
2. Experimental Pharmaceutics by Eugene, Parott.
3. Tutorial Pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical Calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, MarcelDekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical Dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C and ManavalanR.
8. Laboratory Manual of Physical Pharmaceutics, C.V.S. Subramanyam, J. Thimma settee
9. Physical Pharmaceutics by C.V.S. Subramanyam
10. Test book of Physical Pharmacy, by Gaurav Jain & Roop K. Khar

18BP306P

SEMESTER-III

PHYSICAL PHARMACEUTICS – I (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand the physicochemical parameters of a drug.
- To Identify methods to enhance solubility of a new drug moiety
- To Know the importance of stability in pharmaceutical preparations.
- To build practical skills for new drug development process.
- To determine the physicochemical parameters for drug formulation.
- To determine the physical constants of a drug.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug.
 2. Identify methods to enhance solubility of a new drug moiety
 3. Discover the importance of stability in pharmaceutical preparations.
 4. Build practical skills for new drug development process.
 5. Determine the physicochemical parameters.
 6. Determine the physical constants of a drug.
-
1. Determination the solubility of drug at room temperature.
 2. Determination of pKa value by Half Neutralization/ Henderson Hassel balch equation.
 3. Determination of Partition co- efficient of benzoic acid in benzene and water.
 4. Determination of Partition co- efficient of Iodine in CCl₄ and water.
 5. Determination of % composition of NaCl in a solution using phenol-water system by CST method.
 6. Determination of surface tension of given liquids by drop count and drop weight method.
 7. Determination of HLB number of a surfactant by saponification method.
 8. Determination of Freundlich and Langmuir constants using activated char coal.
 9. Determination of critical micellar concentration of surfactants.
 10. Determination of stability constant and donor acceptor ratio of PABA-Caffeine complex by solubility method.
 11. Determination of stability constant and donor acceptor ratio of Cupric-Glycine complex by pH titration method.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin
2. Experimental Pharmaceutics by Eugene, Parott.
3. Tutorial Pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical Calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, MarcelDekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical Dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasam y C and ManavalanR.
8. Laboratory Manual of Physical Pharmaceutics, C.V.S. Subramanyam, J. Thimma settee
9. Physical Pharmaceutics by C.V.S. Subramanyam
10. Test book of Physical Pharmacy, by Gaurav Jain & Roop K. Khar

18BP303T

SEMESTER-III

PHARMACEUTICAL MICROBIOLOGY (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To study of all categories of microorganisms especially for the production of alcohol antibiotics, vaccines, vitamins enzymes etc.
- To understand methods of identification, cultivation and preservation of various microorganisms.
- To understand the importance and implementation of sterilization in pharmaceutical processing and Industry.
- To Learn sterility testing of pharmaceutical products.
- To Carry out microbiological standardization of Pharmaceuticals.
- To understand the cell culture technology and its applications in pharmaceutical industries.

Course Outcomes: On successful completion of the course the student will

1. Understand methods of identification, cultivation and preservation of various microorganisms.
2. To understand the importance and implementation of sterilization in pharmaceutical processing and Industry.
3. Learn sterility testing of pharmaceutical products.
4. Carry out microbiological standardization of Pharmaceuticals.
5. Understand the cell culture technology and its applications in pharmaceutical industries.
6. Develop knowledge on different types of microscopes in pharmaceutical industry.

Course content:**UNIT -I**

Introduction, history of microbiology, its branches, scope and its importance. Introduction to Prokaryotes and Eukaryotes Study of ultra-structure and morphological classification of bacteria, nutritional requirements, raw materials used for culture media and physical parameters for growth, growth curve, isolation and preservation methods for pure cultures, cultivation of anaerobes, quantitative measurement of bacterial growth (total & viable count). Study of different types of phase contrast microscopy, dark field microscopy and electron microscopy.

UNIT -II

Identification of bacteria using staining techniques (simple, Gram's & Acid fast staining) and biochemical tests (IMViC). Study of principle, procedure, merits, demerits and applications of physical, chemical gaseous, radiation and mechanical method of sterilization. Evaluation of the efficiency of sterilization methods. Equipments employed in large scale sterilization. Sterility indicators.

UNIT- III

Study of morphology, classification, reproduction/replication and cultivation of Fungi and Viruses. Classification and mode of action of disinfectants Factors influencing disinfection, antiseptics and their evaluation. For bacterio static and bactericidal actions Evaluation of bactericidal & Bacterio static.

Sterility testing of products (solids, liquids, ophthalmic and other sterile products) according to IP , BP and USP.

UNIT -IV

Designing of aseptic area, laminar flow equipments; study of different sources of contamination in an aseptic area and methods of prevention, clean area classification. Principles and methods of different microbiological assay. Methods for standardization of antibiotics, vitamins and amino acids. Assessment of a new antibiotic.

UNIT- V

Types of spoilage, factors affecting the microbial spoilage of pharmaceutical products, sources and types of microbial contaminants, assessment of microbial contamination and spoilage. Preservation of pharmaceutical products using antimicrobial agents, evaluation of microbial stability of formulations. Growth of animal cells in culture, general procedure for cell culture, Primary, established and transformed cell cultures. Application of cell cultures in pharmaceutical industry and research.

Suggested Readings:

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hilledn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdilletal: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. I.P., B.P., U.S.P.- latest editions.
10. Ananthnarayan : Text Book of Microbiology, Orient-Longman, Chennai
11. Edward: Fundamentals of Microbiology.
12. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi

18BP307P

SEMESTER-III

PHARMACEUTICAL MICROBIOLOGY (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To discuss about the instruments used in experimental microbiology
- To understand the sterilization methods followed in laboratory.
- To know the staining techniques used in microbiology.
- To carry out assay of different antibiotics
- To understand the mechanism of action of antibiotics.
- To perform different sterility tests and bacteriological analysis of water

Course Outcomes (CO's): On successful completion of the course the student will

1. Discuss about the instruments used in experimental microbiology
 2. Understand the sterilization methods followed in laboratory.
 3. Discover the staining techniques used in microbiology.
 4. Carry out assay of different antibiotics
 5. Understand the mechanism of action of antibiotics.
 6. Execute different sterility tests and bacteriological analysis of water
-
1. Introduction and study of different equipments and processing, e.g., B.O.D. incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, refrigerator, microscopes used in experimental microbiology.
 2. Sterilization of glassware, preparation and sterilization of media.
 3. Sub culturing of bacteria and fungus. Nutrient stabs and slants preparations.
 4. Staining methods- Simple, Grams staining and acid fast staining (Demonstration with practical).
 5. Isolation of pure culture of micro-organisms by multiple streak plate technique and other techniques.
 6. Microbiological assay of antibiotics by cup plate method and other methods.
 7. Motility determination by Hanging drop method.
 8. Sterility testing of pharmaceuticals.
 9. Bacteriological analysis of water.
 10. Biochemical test.

Suggester Readings:

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hilledn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. I.P., B.P., U.S.P.- latest editions.
10. Ananthnarayan : Text Book of Microbiology, Orient-Longman, Chennai.
11. Edward: Fundamentals of Microbiology.
12. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi.
13. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company.

18BP304 T

SEMESTER-III

PHARMACEUTICAL ENGINEERING (Theory)**4H****4C**

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the art and science of various unit operations used in pharmaceutical industry.
- To understand the material handling techniques.
- To perform various processes involved in pharmaceutical manufacturing process.
- To appreciate and comprehend significance of plant lay out design for optimum use of resources.
- To know the various preventive methods used for corrosion control in Pharmaceutical industries.
- To execute various tests to prevent environmental pollution.

Course Outcomes (CO's): On successful completion of the course the student will

1. Know various unit operations used in Pharmaceutical industries.
2. Understand the material handling techniques.
3. Perform various processes involved in pharmaceutical manufacturing process.
4. Appreciate and comprehend significance of plant lay out design for optimum use of resources.
5. Appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.
6. Execute various tests to prevent environmental pollution.

Course content:**UNIT-I****Flow of fluids:** Types of manometers, Reynolds number and its significance, Bernoulli's theorem and its applications, Energy losses, Orifice meter, Venturimeter, Pitot tube and Rotometer.**Size Reduction:** Objectives, Mechanisms & Laws governing size reduction, factors affecting size reduction, principles, construction, working, uses, merits and demerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & end runner mill.**Size Separation:** Objectives, applications & mechanism of size separation, official standards of powders, sieves, size separation Principles, construction, working, uses, merits and demerits of Sieve shaker, cyclone separator, Air separator, Bag filter & elutriation tank.**UNIT-II****Heat Transfer:** Objectives, applications & Heat transfer mechanisms. Fourier's law, Heat transfer by conduction, convection & radiation. Heat interchangers & heat exchangers.**Evaporation:** Objectives, applications and factors influencing evaporation, differences between evaporation and other heat process. principles, construction, working, uses, merits and demerits of Steam jacketed kettle, horizontal tube evaporator, climbing film evaporator, forced circulation evaporator, multiple effect evaporator & Economy of multiple effect evaporator.

Distillation: Basic Principles and methodology of simple distillation, flash distillation, fractional distillation, distillation under reduced pressure, steam distillation & molecular distillation.

UNIT- III

Drying: Objectives, applications & mechanism of drying process, measurements & applications of Equilibrium Moisture content, rate of drying curve. principles, construction, working, uses, merits and demerits of Tray dryer, drum dryer spray dryer, fluidized bed dryer, vacuum dryer, freeze dryer.

Mixing: Objectives, applications & factors affecting mixing, Difference between solid and liquid mixing, mechanism of solid mixing, liquids mixing and semisolids mixing. Principles, Construction, Working, uses, Merits and Demerits of Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer, planetary mixers, Propellers, Turbines, Paddles & Silvers on Emulsifier,

UNIT-IV

Filtration: Objectives, applications, Theories & Factors influencing filtration, filter aids, filter medias. Principle, Construction, Working, Uses, Merits and demerits of plate & frame filter, filter leaf, rotary drum filter, Meta filter & Cartridge filter, membrane filters and Seitz filter.

Centrifugation: Objectives, principle & applications of Centrifugation, principles, construction, working, uses, merits and demerits of Perforated basket centrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & super centrifuge.

UNIT- V

Materials of pharmaceutical plant construction, Corrosion and its prevention: Factors affecting during materials selected for Pharmaceutical plant construction, Theories of corrosion, types of corrosion and there prevention. Ferrous and nonferrous metals, inorganic and organic non metals, basic of material handling systems.

Suggeted Readings:

1. Introduction to chemical engineering – Walter L Badger & Julius Banchero, Latest edition.
2. Solid phase extraction, Principles, techniques and applications by Nigel J.K. Simpson- Latest edition.
3. Unit operation of chemical engineering – McCabe Smith, Latest edition.
4. Pharmaceutical engineering principles and practices – C.V.S Subrahmanyam et al., Latest edition.
5. Remington practice of pharmacy- Martin, Latest edition.
6. Theory and practice of industrial pharmacy b y Lachmann., Latest edition.
7. Physical pharmaceutics- C.V.S Subrahmanyam et al., Latest edition.
8. Cooper and Gunn's Tutorial pharmacy, S.J. Carter, Latest edition.

18BP308P

SEMESTER-III

PHARMACEUTICAL ENGINEERING (Practical)**4H****2C**

Instruction hours/week : L: 0 T:0 P:4

Marks: Internal: 15 External:35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand different methods like moisture content, drying curve.
- To Identify different techniques like filtration, size reduction, crystallization.
- To Know about distillation and steps to be followed in steam distillation.
- To Summarize different instruments handled for engineering operations.
- To Determine the physical constants for a formulation.
- To Demonstrate the various machines used in pharmaceutical industry.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand different methods like moisture content, drying curve.
 2. Identify different techniques like filtration, size reduction, crystallization.
 3. Know about distillation and steps to be followed in steam distillation.
 4. Summarize different instruments handled for engineering operations.
 5. Determine the physical constants for a formulation.
 6. Demonstrate the various machines used in pharmaceutical industry.
- I. Determination of radiation constant of brass, iron, unpainted and painted glass.
 - II. Steam distillation – To calculate the efficiency of steam distillation.
 - III. To determine the overall heat transfer coefficient by heat exchanger. IV. Construction of drying curves (for calcium carbonate and starch).
 - V. Determination of moisture content and loss on drying.
 - VI. Determination of humidity of air – i) From wet and dry bulb temperatures –use of Dew point method.
 - VII. Description of Construction working and application of Pharmaceutical Machinery such as rotary tablet machine, fluidized bed coater, fluid energy mill, de humidifier.
 - VIII. Size analysis by sieving – To evaluate size distribution of tablet granulations – Construction of various size frequency curves including arithmetic and logarithmic probability plots.
 - IX. Size reduction: To verify the laws of size reduction using ball mill and determining Kicks, Rittinger's, Bond's coefficients, power requirement and critical speed of Ball Mill.
 - X. Demonstration of colloid mill, planetary mixer, fluidized bed dryer, freeze dryer and such other

major equipment.

XI. Factors affecting Rate of Filtration and Evaporation (Surface area, Concentration and Thickness/ Viscosity.

XII. To study the effect of time on the Rate of Crystallization.

XIII. To calculate the uniformity Index for given sample by using Double Cone Blender.

Suggested Readings:

1. Introduction to chemical engineering – Walter L Badger & Julius Banchero, Latest edition.
2. Solid phase extraction, Principles, techniques and applications by Nigel J.K. Simpson- Latest edition.
3. Unit operation of chemical engineering – McCabe Smith, Latest edition.
4. Pharmaceutical engineering principles and practices – C.V.S Subrahmanyam et al., Latest edition.
5. Remington practice of pharmacy- Martin, Latest edition.
6. Theory and practice of industrial pharmacy by Lachmann., Latest edition.
7. Physical pharmaceutics- C.V.S Subrahmanyam et al., Latest edition.
8. Cooper and Gunn's Tutorial pharmacy, S.J. Carter, Latest edition.

SEMESTER -IV

18BP401T

SEMESTER-IV

PHARMACEUTICAL ORGANIC CHEMISTRY –III (Theory) 4H 4C

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal: 25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject imparts knowledge on stereo-chemical aspects of organic compounds and organic reactions, important named reactions, chemistry of important hetero cyclic compounds.
- It also emphasizes on medicinal and other uses of organic compounds.
- To understand the methods of preparation organic compounds.
- To understand the properties of organic compounds.
- To know the medicinal uses and other applications of organic compounds.
- To elaborate the reactions of synthetic importance.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the stereo chemical aspects of organic compounds and stereo chemical reactions.
2. Discuss heterocyclic compounds based on nomenclature, classification, synthesis and reactions.
3. Understand the methods of preparation organic compounds.
4. Understand the properties of organic compounds.
5. Know the medicinal uses and other applications of organic compounds.
6. Elaborate the reactions of synthetic importance.

Course Content:**Note: To emphasize on definition, types, mechanisms, examples, uses/applications:****UNIT-I**

Stereo isomerism: Optical isomerism – Optical activity, enantiomerism, diastereoisomerism, meso compounds elements of symmetry, chiral and achiral molecules DL system of nomenclature of optical isomers, sequence rules, RS system of nomenclature of optical isomers reactions of chiral molecules Racemic modification and resolution of racemic mixture. Asymmetric synthesis: partial and absolute.

UNIT-II

Geometrical isomerism: Nomenclature of geometrical isomers (Cis Trans, EZ, Synthesis Anti systems) methods of determination of configuration of geometrical isomers. Conformational isomerism in Ethane, n-Butane and Cyclohexane. Stereo isomerism in biphenyl compounds (Atropisomerism) and conditions for optical activity. Stereospecific and stereoselective reactions.

UNIT-III

Heterocyclic compounds: Nomenclature and classification Synthesis, reactions and medicinal uses of following compounds/ derivatives Pyrrole, Furan, and Thiophene relative aromaticity and reactivity of Pyrrole, Furan and Thiophene.

UNIT-IV

Synthesis, reactions and medicinal uses of following compounds/derivatives Pyrazole, Imidazole, Oxazole and Thiazole. Pyridine, Quinoline, Isoquinoline, Acridine and Indole. Basicity of pyridine. Synthesis and medicinal uses of Pyrimidine, Purine, azepines and their derivatives.

UNIT-V

Reactions of synthetic importance: Metal hydride reduction (NaBH_4 and LiAlH_4), Clemmensen reduction, Birch reduction, Wolff Kishner reduction. Oppenauer-oxidation and Dakin reaction. Beckmanns rearrangement and Schmidt rearrangement. Claisen-Schmidt condensation.

Suggested Readings:

1. Organic chemistry by I.L. Finar, Volume-I & II.
2. A text book of organic chemistry – Arun Bahl, B.S. Bahl.
3. Heterocyclic Chemistry by Raj K. Bansal.
4. Organic Chemistry by Morrison and Boyd.
5. Heterocyclic Chemistry by T.L. Gilchrist.

Instruction hours/week : L: 3 T:1 P:0

Marks: Internal:25 External:75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.
- Describe the Classification, therapeutic value and chemistry of cholinergic agonist and antagonist drugs.
- Brief the Classification, Synthesis, therapeutic value and Structural activity relationship of drugs acting on Central nervous system particularly sedatives, hypnotics, antipsychotics and anticonvulsants.
- Enlight the Classification, and chemical aspects including structural activity relationship of drugs acting on Central nervous system particularly general anesthetics and analgesics.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the drug metabolic pathways.
2. State the chemistry of drugs with respect to their biological activity.
3. Explain the Classification, Synthesis, therapeutic value and Structural activity relationship of adrenergic agonist and antagonist drugs.
4. Describe the Classification, therapeutic value and chemistry of cholinergic agonist and antagonist drugs.
5. Brief the Classification, Synthesis, therapeutic value and Structural activity relationship of drugs acting on Central nervous system particularly sedatives, hypnotics, antipsychotics and anticonvulsants.
6. Enlight the Classification, and chemical aspects including structural activity relationship of drugs acting on Central nervous system particularly general anesthetics and analgesics.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

UNIT- I**Introduction to Medicinal Chemistry:**

History and development of medicinal chemistry, Physicochemical properties in relation to biological action: Ionization, Solubility, Partition Coefficient, Hydrogen bonding, Protein binding, Chelation, Bioisosterism, Optical and Geometrical isomerism.

Drug metabolism: Drug metabolism principles- Phase I and Phase II. Factors affecting drug metabolism including stereo chemical aspects.

UNIT- II

Drugs acting on Autonomic Nervous System Adrenergic Neurotransmitters:

- i) Biosynthesis and catabolism of catecholamine.
- ii) Adrenergic receptors (Alpha & Beta) and their distribution.

Sympathomimetic agents: SAR of Sympathomimetic agents:

Direct acting: Nor-epinephrine, Epinephrine, Phenylephrine*, Dopamine, Methyldopa, Clonidine, Dobutamine, Isoproterenol, Terbutaline, Salbutamol*, Bitolterol, Naphazoline, Oxymetazoline and Xylometazoline.

1. Indirect acting agents: Hydroxylamphetamine, Pseudoephedrine, Propylhexedrine.
2. Agents with mixed mechanism: Ephedrine, Metaraminol.

Adrenergic Antagonists:

Alpha adrenergic blockers: Tolazoline*, Phentolamine, Phenoxybenzamine, Prazosin, Dihydroergotamine, Methysergide.

Beta adrenergic blockers: SAR of beta blockers, Propranolol*, Metibranolol, Atenolol, Betaxolol, Bisoprolol, Esmolol, Metoprolol, Labetolol, Carvedilol.

UNIT-III

Cholinergic neurotransmitters:

1. Biosynthesis and catabolism of acetylcholine.
2. Cholinergic receptors (Muscarinic & Nicotinic) and their distribution.

Para sympathomimetic agents:

SAR of Parasympathomimetic agents:

Direct acting agents: Acetylcholine, Carbachol*, Bethanechol, Methacholine, Pilocarpine.

Indirect acting/ Cholinesterase inhibitors (Reversible & Irreversible):

Physostigmine, Neostigmine*, Pyridostigmine, Edrophonium chloride, Tacrine hydrochloride, Ambenonium chloride, Isoflurophate, Echothiophate iodide, Parathion, Malathion.

Cholinesterase reactivator: Pralidoxime chloride.

Cholinergic Blocking agents: SAR of cholinolytic agents:

Solanaceous alkaloids and analogues: Atropine sulphate, Hyoscyamine sulphate, Scopolamine hydrobromide, Homatropine hydrobromide, Ipratropium bromide*.

Synthetic cholinergic blocking agents: Tropicamide, Cyclopentolate hydrochloride, Clidinium bromide, Dicyclomine hydrochloride*, Glycopyrrolate, Methantheline bromide, Propantheline bromide, Benztropine mesylate, Orphenadrine citrate, Biperidine hydrochloride, Procyclidine hydrochloride*, Tridihexethyl chloride, Isopropamide iodide, Ethopropazine hydrochloride.

UNIT- IV

Drugs acting on Central Nervous System:

A. Sedatives and Hypnotics:

Benzodiazepines: SAR of Benzodiazepines, Chlordiazepoxide, Diazepam*, Oxazepam, Chlorazepate, Lorazepam, Alprazolam, Zolpidem.

Barbiturates: SAR of barbiturates, Barbitol*, Phenobarbital, Mephobarbital, Amobarbital, Butobarbital, Pentobarbital, Secobarbital.

Miscellaneous: Amides & imides: Glutethimide. Alcohol & their carbamate derivatives: Meprobamate, Ethchlorvynol. Aldehyde & their derivatives: Triclofos sodium, Paraldehyde.

B. Antipsychotics:

Phenothiazines: SAR of Phenothiazines - Promazine hydrochloride, Chlorpromazine hydrochloride*, Triflupromazine, Thioridazine hydrochloride, Piperacetazine hydrochloride, Prochlorperazine maleate, Trifluoperazine hydrochloride.

Ring Analogues of Phenothiazines: Chlorprothixene, Thiothixene, Loxapine succinate, Clozapine.

Fluoro buterophenones: Haloperidol, Droperidol, Risperidone.

Beta amino ketones: Molindone hydrochloride.

Benzamides: Sulpieride.

C. Anticonvulsants: SAR of Anticonvulsants, mechanism of anticonvulsant action.

Barbiturates: Phenobarbitone, Methobarbital. **Hydantoins:** Phenytoin*, Mephentoin, Ethotoin **Oxazolidine diones:** Trimethadione, Paramethadione **Succinimides:** Phensuximide, Methsuximide, Ethosuximide.

Urea and monoacylureas: Phenacemide, Carbamazepine.

Benzodiazepines: Clonazepam

Miscellaneous: Primidone, Valproic acid, Gabapentin, Felbamate

UNIT – V

Drugs acting on Central Nervous System General anesthetics:

Inhalation anesthetics: Halothane*, Methoxyflurane, Enflurane, Sevoflurane, Isoflurane, Desflurane.

Ultra short acting barbiturates: Methohexital sodium*, Thiamylal sodium, Thiopental sodium.

Dissociative anesthetics: Ketamine hydrochloride.*

Narcotic and non-narcotic analgesics:

Morphine and related drugs: SAR of Morphine analogues, Morphine sulphate, Codeine, Meperidine hydrochloride, Anileridine hydrochloride, Diphenoxylate hydrochloride, Loperamide hydrochloride, Fentanyl citrate*, Methadone hydrochloride*, Propoxyphene hydrochloride, Pentazocine, Levorphanol tartarate.

Narcotic antagonists: Nalorphine hydrochloride, Levallorphan tartarate, Naloxone hydrochloride.

Anti-inflammatory agents: Sodium salicylate, Aspirin, Mefenamic acid*, Meclofenamate, Indomethacin, Sulindac, Tolmetin, Zomepirac, Diclofenac, Ketorolac, Ibuprofen*, Naproxen, Piroxicam, Phenacetin, Acetaminophen, Antipyrine, Phenylbutazone.

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicher, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

Instruction hours/ week : L:0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Synthesize few drugs and their intermediates.
- Synthesize drug intermediates.
- Synthesize some basic nucleus of drug candidates.
- Estimate the purity of drugs.
- Estimate the quantity of drugs present in tablet.
- Determine the partition coefficient of the drugs.

Course Outcomes (CO's): On successful completion of the course the student will

1. Synthesize few drugs and their intermediates.
2. Synthesize drug intermediates.
3. Synthesize some basic nucleus of drug candidates.
4. Estimate the purity of drugs.
5. Estimate the quantity of drugs present in tablet.
6. Determine the partition coefficient of the drugs.

Preparation of drugs/ intermediates:

- 1,3-pyrazole
- 1,3-oxazole
- Benzimidazole
- Benztriazole
- 2,3-diphenylquinoxaline
- Benzocaine
- Phenytoin
- Phenothiazine
- Barbiturate

Assay of drugs:

- Chlorpromazine
- Phenobarbitone
- Atropine
- Ibuprofen
- Aspirin
- Furosemide

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicher, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

18BP403T

SEMESTER-IV

PHYSICAL PHARMACEUTICS-II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.
- To demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms.
- To understand the stability enhancement techniques in pharmaceutical industry.
- To discover the importance of accelerated stability testing in new drug formulation.
- To achieve a better insight into various areas of formulation, research and development.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand various physicochemical properties of drug molecules in the designing the dosage forms.
2. Demonstrate the principles of chemical kinetics & to use them for stability testing and determination of expiry date of formulations.
3. Demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms.
4. Understand the stability enhancement techniques in pharmaceutical industry.
5. Discover the importance of accelerated stability testing in new drug formulation.
6. Achieve a better insight into various areas of formulation, research and development.

Course Content:**UNIT-I**

Colloidal dispersions: Classification of dispersed systems & their general characteristics, size & shapes of colloidal particles, classification of colloids & comparative account of their general properties. Optical, kinetic & electrical properties. Effect of electrolytes, coacervation, peptization & protective action.

UNIT-II

Rheology: Newtonian systems, law of flow, kinematic viscosity, effect of temperature, non-Newtonian systems, pseudoplastic, dilatant, plastic, thixotropy, thixotropy in formulation, determination of viscosity, capillary, falling Sphere, rotational viscometers.

Deformation of solids: Plastic and elastic deformation, Heckel equation, Stress, Strain, Elastic Modulus.

UNIT-III

Coarse dispersion: Suspension, interfacial properties of suspended particles, settling in suspensions, formulation of flocculated and deflocculated suspensions. Emulsions and theories of emulsification, microemulsion and multiple emulsions; Stability of emulsions, preservation of emulsions, rheological properties of emulsions and emulsion formulation by HLB method.

UNIT-IV

Micromeretics: Particle size and distribution, mean particle size, number and weight distribution, particle number, methods for determining particle size by different methods, counting and separation method, particle shape, specific surface, methods for determining surface area, permeability, adsorption, derived properties of powders, porosity, packing arrangement, densities, bulkiness & flow properties.

UNIT-V

Drug stability: Reaction kinetics: zero, pseudo-zero, first & second order, units of basic rate constants, determination of reaction order. Physical and chemical factors influencing the chemical degradation of pharmaceutical product: temperature, solvent, ionic strength, dielectric constant, specific & general acid base catalysis, Simple numerical problems. Stabilization of medicinal agents against common reactions like hydrolysis & oxidation. Accelerated stability testing in expiration dating of pharmaceutical dosage forms. Photolytic degradation and its prevention.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin, Sixth edition.
2. Experimental pharmaceutics by Eugene, Parott.
3. Tutorial pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, Marcel Dekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C, and Manavalan R.

18BP407P

SEMESTER-IV

PHYSICAL PHARMACEUTICS- II (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total: 50

External Semester Exam: 4 Hours

Course Objectives:

- To Understand the Preformulation parameters to be carried out in a new drug.
- To Discover different reaction rates.
- To Interpret the values from accelerated stability studies.
- To Build practical skills for new drug development process.
- To Demonstrate the sedimentation rate of various drug products.
- To Express the evaluation methods used in rheology.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understand the Preformulation parameters to be carried out in a new drug.
 2. Discover different reaction rates.
 3. Interpret the values from accelerated stability studies.
 4. Build practical skills for new drug development process.
 5. Demonstrate the sedimentation rate of various drug products.
 6. Express the evaluation methods used in rheology.
-
1. Determination of particle size, particle size distribution using sieving method.
 2. Determination of particle size, particle size distribution using Microscopic method.
 3. Determination of bulk density, true density and porosity.
 4. Determine the angle of repose and influence of lubricant on angle of repose.
 5. Determination of viscosity of liquid using Ostwald's viscometer.
 6. Determination sedimentation volume with effect of different suspending agent.
 7. Determination sedimentation volume with effect of different concentration of single suspending agent.
 8. Determination of viscosity of semisolid by using Brookfield viscometer.
 9. Determination of reaction rate constant first order.
 10. Determination of reaction rate constant second order.
 11. Accelerated stability studies.

Suggested Readings:

1. Physical Pharmacy by Alfred Martin, Sixth edition.
2. Experimental pharmaceutics by Eugene, Parott.
3. Tutorial pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, Marcel Dekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C, and Manavalan R.

18BP404T

SEMESTER-IV

PHARMACOLOGY-I (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the information about the drugs like, mechanism of action, physiological and biochemical effects (pharmacodynamics) as well as absorption, distribution, metabolism and excretion (pharmacokinetics) along with the adverse effects, clinical uses, interactions, doses, contraindications and routes of administration of different classes of drugs.
- To Illustrate the Adverse drug reactions, Drug interactions, Pharmacovigilance and Drug discovery cycle.
- To demonstrate the Organization, function of ANS, classification of neurotransmitters and the drugs acting on it.
- To summarize the Pharmacology of drugs acting on various CNS diseases.
- To describe the Local anesthetic agents and the drugs used in myasthenia gravis, glaucoma.

Course Outcomes: On successful completion of the course the student will

1. Explain the basics of pharmacology such as scope, historical landmarks of, drugs concept, Agonists, antagonists, spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy and various pharmacokinetic parameters.
2. Defend the Pharmacodynamics, Principles, various types of receptors and mechanisms of drugs on it, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action.
3. Illustrate the Adverse drug reactions, Drug interactions, Pharmacovigilance and Drug discovery cycle.
4. Demonstrate the Organization, function of ANS, classification of neurotransmitters and the drugs acting on it.
5. Summarize the Pharmacology of drugs acting on various CNS diseases.
6. Describe the Local anesthetic agents and the drugs used in myasthenia gravis, glaucoma.

Course Content:**UNIT-I****1. General Pharmacology:**

a. Introduction to Pharmacology- Definition, historical landmarks and scope of pharmacology, nature and source of drugs, essential drugs concept and routes of drug administration, Agonists, antagonists(competitive and non competitive), spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy.

b. Pharmacokinetics- Membrane transport, absorption, distribution, metabolism and excretion of drugs. Enzyme induction, enzyme inhibition, kinetics of elimination.

UNIT-II

General Pharmacology

- a. Pharmacodynamics- Principles and mechanisms of drug action. Receptor theories and classification of receptors, regulation of receptors. drug receptors interactions signal transduction mechanisms, G-protein–coupled receptors, ion channel receptor, transmembrane enzyme linked receptors, transmembrane JAK-STAT binding receptor and receptors that regulate transcription factors, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action.
- b. Adverse drug reactions.
- c. Drug interactions (pharmacokinetic and pharmacodynamic)
- d. Drug discovery and clinical evaluation of new drugs -Drug discovery phase, preclinical evaluation phase, clinical trial phase, phases of clinical trials and pharmacovigilance.

UNIT-III**2. Pharmacology of drugs acting on peripheral nervous system:**

- a. Organization and function of ANS.
- b. Neurohumoral transmission, co-transmission and classification of neurotransmitters.
- c. Parasympathomimetics, Parasympatholytics, Sympathomimetics, sympatholytics.
- d. Neuromuscular blocking agents and skeletal muscle relaxants (peripheral). e. Local anesthetic agents.
- f. Drugs used in myasthenia gravis and glaucoma.

UNIT-IV**3. Pharmacology of drugs acting on central nervous system:**

- a. Neuro humoral transmission in the C.N.S.special emphasis on importance of various neurotransmitters like with GABA, Glutamate, Glycine, serotonin, dopamine.
- b. General anesthetics and pre-anesthetics.
- c. Sedatives, hypnotics and centrally acting muscle relaxants. d. Anti-epileptics
- e. Alcohols and disulfiram.

UNIT-V**3. Pharmacology of drugs acting on central nervous system:**

- a. Psychopharmacological agents: Antipsychotics, antidepressants, anti-anxiety agents, anti-manics and hallucinogens.

- b. Drugs used in Parkinson's disease and Alzheimer's disease. c. CNS stimulants and nootropics.
- d. Opioid analgesics and antagonists.
- e. Drug addiction, drug abuse, tolerance and dependence.

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology,. Churchill Livingstone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig& Robert,
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
- 10.Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan.

18BP408P

SEMESTER-IV

PHARMACOLOGY-I (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To understand the instruments used in experimental pharmacology.
- To maintain the laboratory animals as per CPCSEA guidelines.
- To demonstrate the Blood withdrawal, serum and plasma separation, anesthetics.
- To administer the drugs in different routes.
- To explain the euthanasia used for animal studies.
- To screen the drugs with the use of various pharmacological instruments.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the instruments used in experimental pharmacology.
 2. Maintain the laboratory animals as per CPCSEA guidelines.
 3. Demonstrate the Blood withdrawal, serum and plasma separation, anesthetics.
 4. Administer the drugs in different routes.
 5. Explain the euthanasia used for animal studies.
 6. Screen the drugs with the use of various pharmacological instruments.
-
1. Introduction to experimental pharmacology.
 2. Commonly used instruments in experimental pharmacology.
 3. Study of common laboratory animals.
 4. Maintenance of laboratory animals as per CPCSEA guidelines.
 5. Common laboratory techniques. Blood withdrawal, serum and plasma separation, anesthetics and euthanasia used for animal studies.
 6. Study of different routes of drugs administration in mice/rats.
 7. Study of effect of hepatic microsomal enzyme inducers on the phenobarbitone sleeping time in mice.
 8. Effect of drugs on ciliary motility of frog oesophagus.
 9. Effect of drugs on rabbit eye.
 10. Effects of skeletal muscle relaxants using rota-rod apparatus.
 11. Effect of drugs on locomotor activity using actophotometer.
 12. Anticonvulsant effect of drugs by MES and PTZ method.

13. Study of stereotypic and anti-catatonic activity of drugs on rats/mice.
14. Study of anxiolytic activity of drugs using rats/mice.
15. Study of local anesthetics by different methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill.
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert.
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
10. Kulkarni SK. Hand book of experimental pharmacology. Vallabh Prakashan.

18BP405T

SEMESTER-IV

PHARMACOGNOSY AND PHYTOCHEMISTRY I (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To explain the classification of crude drugs, Quality control of Drugs of Natural Origin, Quantitative microscopy of crude drugs.
- To elaborate the techniques in the cultivation and production of crude drugs.
- To demonstrate the plant tissue culture.
- To understand the traditional system of medicine.
- To explain the Plant Products Primary metabolites Proteins, Enzymes, Lipids, Marine drugs.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the history, scope and development of Pharmacognosy.
2. Explain the classification of crude drugs, Quality control of Drugs of Natural Origin, Quantitative microscopy of crude drugs.
3. Elaborate the techniques in the cultivation and production of crude drugs.
4. Demonstrate the plant tissue culture.
5. Understand the traditional system of medicine.
6. Explain the Plant Products Primary metabolites Proteins, Enzymes, Lipids, Marine drugs.

Course Content:**UNIT-I****Introduction to Pharmacognosy:**

- (a) Definition, history, scope and development of Pharmacognosy.
- (b) Sources of Drugs – Plants, Animals, Marine & Tissue culture.
- (c) Organized drugs, unorganized drugs (dried latex, dried juices, dried extracts, gums and mucilage's, oleoresins and oleo- gum -resins).

Classification of drugs: Alphabetical, morphological, taxonomical, chemical, pharmacological, chemo and sero taxonomical classification of drugs.

Quality control of Drugs of Natural Origin: Adulteration of drugs of natural origin. Evaluation by organoleptic, microscopic, physical, chemical and biological methods and properties. Quantitative microscopy of crude drugs including lycopodium spore method, leaf constants, camera lucida and diagrams of microscopic objects to scale with camera lucida.

UNIT-II

Cultivation, Collection, Processing and storage of drugs of natural origin: Cultivation and Collection of drugs of natural origin Factors influencing cultivation of medicinal plants. Plant hormones and their applications. Polyploidy, mutation and hybridization with reference to medicinal plants.

UNIT-III

Plant tissue culture: Historical development of plant tissue culture, types of cultures, Nutritional requirements, growth and their maintenance. Applications of plant tissue culture in pharmacognosy. Edible vaccines.

UNIT- IV

Pharmacognosy in various systems of medicine: Role of Pharmacognosy in allopathy and traditional systems of medicine namely, Ayurveda, Unani, Siddha, Homeopathy and Chinese systems of medicine.

Introduction to secondary metabolites: Definition, classification, properties and test for identification of Alkaloids, Glycosides, Flavonoids, Tannins, Volatile oil and Resins.

UNIT- V

Study of biological source, chemical nature and uses of drugs of natural origin containing following drugs

Plant Products:

Fibers - Cotton, Jute, Hemp.

Hallucinogens, Teratogens, Natural allergens.

Primary metabolites: General introduction, detailed study with respect to chemistry, sources, preparation, evaluation, preservation, storage, therapeutic used and commercial utility as pharmaceutical Aids and/or Medicines for the following Primary metabolites:

Carbohydrates: Acacia, Agar, Tragacanth, Honey.

Proteins and Enzymes : Gelatin, casein, proteolytic enzymes (Papain, bromelain, serratiopeptidase, urokinase, streptokinase, pepsin).

Lipids (Waxes, fats, fixed oils) : Castor oil, Chaulmoogra oil, Wool Fat, Bees Wax.

Marine Drugs: Novel medicinal agents from marine sources.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.
2. Tyler, V.E., Brady, L.R. and Robbers, J.E., Pharmacognosy, 9th Edn., Lea and Febiger, Philadelphia, 1988.
3. Text Book of Pharmacognosy by T.E. Wallis

4. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
5. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
6. Herbal drug industry by R.D. Choudhary (1996), Ist Edn, Eastern Publisher, New Delhi.
7. Essentials of Pharmacognosy, Dr.SH.Ansari, IInd edition, Birla publications, New Delhi, 2007
8. Practical Pharmacognosy: C.K. Kokate, Purohit, Gokhlae.
9. Anatomy of Crude Drugs by M.A. Iyengar.

18BP409P

SEMESTER-IV

PHARMACOGNOSY AND PHYTOCHEMISTRY I (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- Analyze the crude drugs by chemical tests.
- Determine the stomatal number and index and vein islet number, vein islet termination and palisade ratio.
- Determine the starch grains, calcium oxalate crystals by eye piece micrometer.
- Perform the Fiber length and width starch grains by Lycopodium spore method.
- Analyze the purity of crude drugs by ash value and extractive value.
- Determine the moisture content, swelling index and foaming index.

Course Outcomes(CO's): On successful completion of the course the student will

1. Analyze the crude drugs by chemical tests.
 2. Determine the stomatal number and index and vein islet number, vein islet termination and palisade ratio.
 3. Determine the starch grains, calcium oxalate crystals by eye piece micrometer.
 4. Perform the Fiber length and width starch grains by Lycopodium spore method.
 5. Analyze the purity of crude drugs by ash value and extractive value.
 6. Determine the moisture content, swelling index and foaming index.
-
1. Analysis of crude drugs by chemical tests: (i) Tragacanth (ii) Acacia (iii) Agar (iv) Gelatin (v) starch (vi) Honey (vii) Castor oil.
 2. Determination of stomatal number and index.
 3. Determination of vein islet number, vein islet termination and paliside ratio.
 4. Determination of size of starch grains, calcium oxalate crystals by eye piece micrometer.
 5. Determination of Fiber length and width.
 6. Determination of number of starch grains by Lycopodium spore method.
 7. Determination of Ash value.
 8. Determination of Extractive values of crude drugs.
 9. Determination of moisture content of crude drugs.
 10. Determination of swelling index and foaming.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.

2. Tyler, V.E., Brady, L.R. and Robbers, J.E., Pharmacognosy, 9th Edn., Lea and Febiger, Philadelphia, 1988.
3. Text Book of Pharmacognosy by T.E. Wallis
4. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
5. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
6. Herbal drug industry by R.D. Choudhary (1996), Ist Edn, Eastern Publisher, New Delhi.
7. Essentials of Pharmacognosy, Dr.SH.Ansari, IInd edition, Birla publications, New Delhi, 2007
8. Practical Pharmacognosy: C.K. Kokate, Purohit, Gokhlae.
9. Anatomy of Crude Drugs by M.A. Iyengar.

SEMESTER V

18BP501T

SEMESTER – V

MEDICINAL CHEMISTRY – II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.
- To Understand the drug metabolic pathways, adverse effect and therapeutic value of drugs.
- To Know the Structural Activity Relationship of different class of drugs.
- To study the chemical synthesis of selected drugs.

Course Outcomes(CO's): On successful completion of the course the student will

1. Illustrate the classification of drugs.
2. Explain the mechanism of action of drugs.
3. Understand the chemistry of drugs with respect to their pharmacological activity.
4. Understand the drug metabolic pathways, adverse effect and therapeutic value of drugs.
5. Know the Structural Activity Relationship of different class of drugs.
6. Study the chemical synthesis of selected drugs.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

UNIT- I

Antihistaminic agents: Histamine, receptors and their distribution in the human body

H1-antagonists: Diphenhydramine hydrochloride*, Dimenhydrinate, Doxylamines succinate, Clemastine fumarate, Diphenylpyraline hydrochloride, Tripelenamine hydrochloride, Chlorcyclizine hydrochloride, Meclizine hydrochloride, Buclizine hydrochloride, Chlorpheniramine maleate, Triprolidine hydrochloride*, Phenidamine tartarate, Promethazine hydrochloride*, Trimeprazine tartrate, Cyproheptadine hydrochloride, Azatidine maleate, Astemizole, Loratadine, Cetirizine, Levocetrazine Cromolyn sodiu

H2-antagonists: Cimetidine*, Famotidine, Ranitidin.

Gastric Proton pump inhibitors: Omeprazole, Lansoprazole, Rabeprazole, Pantoprazole

Anti-neo plastic agents:

Alkylating agents: Mecllorethamine*, Cyclophosphamide, Melphalan, Chlorambucil, Busulfan, Thiotepa

Antimetabolites: Mercaptopurine*, Thioguanine, Fluorouracil, Floxuridine, Cytarabine, Methotrexate*, Azathioprine

Antibiotics: Dactinomycin, Daunorubicin, Doxorubicin, Bleomycin

Plant products: Etoposide, Vinblastin sulphate, Vincristin sulphate

Miscellaneous: Cisplatin, Mitotane.

UNIT – II

Anti-anginal:

Vasodilators: Amyl nitrite, Nitroglycerin*, Pentaerythritol tetranitrate, Isosorbide dinitrate*, Dipyridamole.

Calcium channel blockers: Verapamil, Bepridil hydrochloride, Diltiazem hydrochloride, Nifedipine, Amlodipine, Felodipine, Nicardipine, Nimodipine.

Diuretics: Carbonic anhydrase inhibitors: Acetazolamide*, Methazolamide, Dichlorphenamide. Thiazides: Chlorthiazide*, Hydrochlorothiazide, Hydroflumethiazide, Cyclothiazide, Loop diuretics: Furosemide*, Bumetanide, Ethacrynic acid. Potassium sparing Diuretics: Spironolactone, Triamterene, Amiloride. Osmotic Diuretics: Mannitol.

Anti-hypertensive Agents: Timolol, Captopril, Lisinopril, Enalapril, Benazepril hydrochloride, Quinapril hydrochloride, Methyldopa hydrochloride, * Clonidine hydrochloride, Guanethidine monosulphate, Guanabenz acetate, Sodium nitroprusside, Diazoxide, Minoxidil, Reserpine, Hydralazine hydrochloride.

UNIT- III

Anti-arrhythmic Drugs: Quinidine Sulphate, Procainamide hydrochloride, Disopyramide phosphate*, Phenytoin sodium, Lidocaine hydrochloride, Tocainide hydrochloride, Mexiletine hydrochloride, Lorcinide hydrochloride, Amiodarone, Sotalol.

Anti-hyperlipidemic agents: Clofibrate, Lovastatin, Cholestamine and Cholestipol

Coagulant & Anticoagulants: Menadione, Acetomenadione, Warfarin*, Anisindione, clopidogrel

Drugs used in Congestive Heart Failure: Digoxin, Digitoxin, Nesiritide, Bosentan, Tezosentan.

UNIT- IV

Drugs acting on Endocrine system: Nomenclature, Stereochemistry and metabolism of steroids

Sex hormones: Testosterone, Nandrolone, Progestones, Oestriol, Oestradiol, Oestrone, Diethyl stilbestrol.

Drugs for erectile dysfunction: Sildenafil, Tadalafil.

Oral contraceptives: Mifepristone, Norgestrel, Levonorgestrel

Corticosteroids: Cortisone, Hydrocortisone, Prednisolone, Betamethasone, Dexamethasone

Thyroid and antithyroid drugs: L-Thyroxine, L-Thyronine, Propylthiouracil, Methimazole.

UNIT – V

Antidiabetic agents: Insulin and its preparations

Sulfonyl ureas: Tolbutamide*, Chlorpropamide, Glipizide, Glimepiride. Biguanides: Metformin.

Thiazolidinediones: Pioglitazone, Rosiglitazone. Meglitinides: Repaglinide, Nateglinide.

Glucosidase inhibitors: Acarbose, Voglibose.

Local Anesthetics: SAR of Local anesthetics

Benzoic Acid derivatives: Cocaine, Hexylcaine, Mepylcaine, Cyclomethycaine, Piperocaine.

Amino Benzoic acid derivatives: Benzocaine*, Butamben, Procaine*, Butacaine, Propoxycaine, Tetracaine, Benoxinate.

Lidocaine/Anilide derivatives: Lignocaine, Mepivacaine, Prilocaine, Etidocaine.

Miscellaneous: Phenacaine, Dipreron, Dibucaine.*

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1 to 5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

18BP502T

SEMESTER V

INDUSTRIAL PHARMACY-I (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- To discover various formulation considerations in development of pharmaceutical dosage forms like tablets, capsules, etc.
- To Understand the quality control tests for the dosage forms.
- To know parenterals, stringent procedures in the preparation and its evaluation.
- To Understand clearly about packaging and cosmetic preparations.
- To Interpret the various pharmaceutical additives to be included in all dosage forms.

Course Outcomes(CO's): On successful completion of the course the student will

1. Acquire knowledge about the various pharmaceutical dosage forms and their manufacturing techniques.
2. Discover various formulation considerations in development of pharmaceutical dosage forms like tablets, capsules, etc.
3. Understand the quality control tests for the dosage forms.
4. Detail on parenterals, stringent procedures in the preparation and its evaluation.
5. Understand clearly about packaging and cosmetic preparations.
6. Interpret the various pharmaceutical additives to be included in all dosage forms.

Course content:**UNIT-I**

Preformulation Studies: Introduction to preformulation, goals and objectives, study of physicochemical characteristics of drug substances.

a. Physical properties: Physical form (crystal & amorphous), particle size, shape, flow properties, solubility profile (pKa, pH, partition coefficient), polymorphism

b. Chemical Properties: Hydrolysis, oxidation, reduction, racemisation, polymerization

BCS classification of drugs & its significant

Application of preformulation considerations in the development of solid, liquid oral and parenteral dosage forms and its impact on stability of dosage forms.

UNIT-II

Tablets:

- a. Introduction, ideal characteristics of tablets, classification of tablets. Excipients, Formulation of tablets, granulation methods, compression and processing problems. Equipments and tablet tooling.
- b. Tablet coating: Types of coating, coating materials, formulation of coating composition, methods of coating, equipment employed and defects in coating.
- c. Quality control tests: In process and finished product tests

Liquid orals: Formulation and manufacturing consideration of syrups and elixirs suspensions and emulsions; Filling and packaging; evaluation of liquid orals official in pharmacopoeia

UNIT-III**Capsules:**

- a. **Hard gelatin capsules:** Introduction, Production of hard gelatin capsule shells. size of capsules, Filling, finishing and special techniques of formulation of hard gelatin capsules, manufacturing defects. In process and final product quality control tests for capsules.
- b. **Soft gelatin capsules:** Nature of shell and capsule content, size of capsules, importance of base adsorption and minim/gram factors, production, in process and final product quality control tests. Packing, storage and stability testing of soft gelatin capsules and their applications.

Pellets: Introduction, formulation requirements, pelletization process, equipments for manufacture of pellets

UNIT-IV**Parenteral Products:**

- a. Definition, types, advantages and limitations. Preformulation factors and essential requirements, vehicles, additives, importance of isotonicity.
- b. Production procedure, production facilities and controls, aseptic processing
- c. Formulation of injections, sterile powders, large volume parenterals and lyophilized products.
- d. Containers and closures selection, filling and sealing of ampoules, vials and infusion fluids. Quality control tests of parenteral products.

Ophthalmic Preparations: Introduction, formulation considerations; formulation of eye drops, eye ointments and eye lotions; methods of preparation; labeling, containers; evaluation of ophthalmic preparations

UNIT-V

Cosmetics: Formulation and preparation of the following cosmetic preparations: lipsticks, shampoos, cold cream and vanishing cream, tooth pastes, hair dyes and sunscreens.

Pharmaceutical Aerosols: Definition, propellants, containers, valves, types of aerosol systems; formulation and manufacture of aerosols; Evaluation of aerosols; Quality control and stability studies.

Packaging Materials Science: Materials used for packaging of pharmaceutical products, factors influencing choice of containers, legal and official requirements for containers, stability aspects of packaging materials, quality control tests.

Suggested Readings:

1. Pharmaceutical dosage forms - Tablets, volume 1 -3 by H.A. Liberman, Leon Lachman & J.B. Schwartz.
2. Pharmaceutical dosage form - Parenteral medication vol- 1&2 by Liberman & Lachman.
3. Pharmaceutical dosage form disperse system VOL-1 by Liberman & Lachman.
4. Modern Pharmaceutics by Gilbert S. Banker & C.T. Rhodes, 3rd Edition.
5. Remington: The Science and Practice of Pharmacy, 20th edition Pharmaceutical Science (RPS).
6. Theory and Practice of Industrial Pharmacy by Liberman & Lachman.
7. Pharmaceutics- The science of dosage form design by M.E. Aulton, Churchill Livingstone, Latest edition.
8. Introduction to Pharmaceutical Dosage Forms by H. C. Ansel, Lea & Febiger, Philadelphia, 5th edition, 2005.
9. Drug stability - Principles and practice by Cartensen & C.J. Rhodes, 3rd Edition, Marcel Dekker Series, Vol 107.

18BP506P

SEMESTER V

INDUSTRIAL PHARMACY-I (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To manufacture tablets.
- To understand the strict formulation considerations in parenteral and ophthalmic manufacturing.
- To demonstrate the evaluations of different packaging materials in pharmaceutical industry.
- To achieve skills in making a pharmaceutical product.
- To demonstrate the manufacturing of capsules.
- To exploit the formulation of various cosmetics.

Course Outcomes (CO's): On successful completion of the course the student will

1. Manufacture tablets.
 2. Understand the strict formulation considerations in parenteral and ophthalmic manufacturing.
 3. Demonstrate the evaluations of different packaging materials in pharmaceutical industry.
 4. Achieve skills in making a pharmaceutical product.
 5. Demonstrate the manufacturing of capsules.
 6. Exploit the formulation of various cosmetics.
-
1. Preformulation studies on paracetamol/asparin/or any other drug.
 2. Preparation and evaluation of Paracetamol tablets.
 3. Preparation and evaluation of Aspirin tablets.
 4. Coating of tablets- film coating of tables/granules.
 5. Preparation and evaluation of Tetracycline capsules.
 6. Preparation of Calcium Gluconate injection.
 7. Preparation of Ascorbic Acid injection.
 8. Qulaity control test of (as per IP) marketed tablets and capsules.
 9. Preparation of Eye drops/ and Eye ointments.
 10. Preparation of Creams (cold / vanishing cream).
 11. Evaluation of Glass containers (as per IP).

Suggested Readings:

1. Pharmaceutical dosage forms - Tablets, volume 1 -3 by H.A. Liberman, Leon Lachman &J.B.Schwartz.
2. Pharmaceutical dosage form - Parenteral medication vol- 1&2 by Liberman & Lachman.
3. Pharmaceutical dosage form disperse system VOL-1 b y Liberman & Lachman.

4. Modern Pharmaceutics by Gilbert S. Banker & C.T. Rhodes, 3rd Edition.
5. Remington: The Science and Practice of Pharmacy, 20th edition Pharmaceutical Science (RPS).
6. Theory and Practice of Industrial Pharmacy by Liberman & Lachman.
7. Pharmaceutics- The science of dosage form design by M.E.Aulton, Churchill livingstone, Latest edition.
8. Introduction to Pharmaceutical Dosage Forms by H. C.Ansel, Lea &Febiger, Philadelphia, 5th edition, 2005.
9. Drug stability - Principles and practice by Cartensen & C.J. Rhodes, 3rd Edition, Marcel Dekker Series, Vol 107.

18BP503T

SEMESTER V

PHARMACOLOGY-II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on different systems of body and in addition, emphasis on the basic concepts of bioassay.
- To demonstrate the Pharmacology of drugs acting on various cardio vascular disease.
- To explain the drug used in the therapy of shock, Pharmacology of coagulants, anticoagulants, Fibrinolytics, anti-platelet drugs, Diuretics and Anti-diuretics.
- To Illustrate the Pharmacology of Autocoids, Non-steroidal anti-inflammatory agents, Anti-gout drugs and Antirheumatic drugs.
- To know the Pharmacology of drugs acting on endocrine system.
- To describe the Principles, applications of bioassay and bioassay of various drugs.

Course Outcomes: On successful completion of the course the student will

1. Demonstrate the Pharmacology of drugs acting on various cardio vascular disease.
2. Explain the drug used in the therapy of shock, Pharmacology of coagulants, anticoagulants, Fibrinolytics, anti-platelet drugs, Diuretics and Anti-diuretics.
3. Illustrate the Pharmacology of Autocoids, Non-steroidal anti-inflammatory agents, Anti-gout drugs and Antirheumatic drugs.
4. Outline the Pharmacology of drugs acting on endocrine system.
5. Describe the Principles, applications of bioassay and bioassay of various drugs.
6. Summarize the drugs acting on the uterus and oral contraceptives.

Course Content:**UNIT-I****1. Pharmacology of drugs acting on cardio vascular system:**

- a. Introduction to hemodynamic and electrophysiology of heart.
- b. Drugs used in congestive heart failure.
- c. Anti-hypertensive drugs.
- d. Anti-anginal drugs.
- e. Anti-arrhythmic drugs.
- f. Anti-hyperlipidemic drugs.

UNIT-II**1. Pharmacology of drugs acting on cardio vascular system:**

- a. Drug used in the therapy of shock.
- b. Hematinics, coagulants and anticoagulants.
- c. Fibrinolytics and anti-platelet drugs.
- d. Plasma volume expanders.

2. Pharmacology of drugs acting on urinary system:

- a. Diuretics.
- b. Anti-diuretics.

UNIT-III**3. Autocoids and related drugs:**

- a. Introduction to autacoids and classification.
- b. Histamine, 5-HT and their antagonists.
- c. Prostaglandins, Thromboxanes and Leukotrienes.
- d. Angiotensin, Bradykinin and Substance P.
- e. Non-steroidal anti-inflammatory agents.
- f. Anti-gout drugs.
- g. Antirheumatic drugs.

UNIT-IV**5. Pharmacology of drugs acting on endocrine system**

- a. Basic concepts in endocrine pharmacology.
- b. Anterior Pituitary hormones- analogues and their inhibitors.
- c. Thyroid hormones- analogues and their inhibitors.
- d. Hormones regulating plasma calcium level- Parathormone, Calcitonin and Vitamin-D.
- d. Insulin, Oral Hypoglycemic agents and glucagon.
- e. ACTH and corticosteroids.

UNIT-V**5. Pharmacology of drugs acting on endocrine system**

- a. Androgens and Anabolic steroids.
- b. Estrogens, progesterone and oral contraceptives.
- c. Drugs acting on the uterus.

6. Bioassay

- a. Principles and applications of bioassay.
- b. Types of bioassay.
- c. Bioassay of insulin, oxytocin, vasopressin, ACTH, d-tubocurarine, digitalis, histamine and 5-HT.

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill.
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert.
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
10. Kulkarni SK. Handbook of experimental pharmacology. Vallabh Prakashan.

18BP507P

SEMESTER V

PHARMACOLOGY-II (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To explain the in-vitro pharmacology, PA₂ and PD₂ values.
- To Record the Effect of drugs on frog, dog heart and blood pressure.
- To Record the DRC of acetylcholine, estimate the Bioassay of histamine, oxytocin, serotonin by interpolation bioassay method.
- To Estimate the Bioassay of histamine, oxytocin, serotonin by matching bioassay.
- To demonstrate the Anti-inflammatory activity and Analgesic activity in animal models.
- To explain the three point and four-point bioassay

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the in-vitro pharmacology, PA₂ and PD₂ values.
 2. Record the Effect of drugs on frog, dog heart and blood pressure.
 3. Record the DRC of acetylcholine, estimate the Bioassay of histamine, oxytocin, serotonin by interpolation bioassay method.
 4. Estimate the Bioassay of histamine, oxytocin, serotonin by matching bioassay.
 5. Demonstrate the Anti-inflammatory activity and Analgesic activity in animal models.
 6. Explain the three point and four-point bioassay
-
1. Introduction to in-vitro pharmacology and physiological salt solutions.
 2. Effect of drugs on isolated frog heart.
 3. Effect of drugs on blood pressure and heart rate of dog.
 4. Study of diuretic activity of drugs using rats/mice.
 5. DRC of acetylcholine using frog rectus abdominis muscle.
 6. Effect of physostigmine and atropine on DRC of acetylcholine using frog rectus abdominis muscle and rat ileum respectively.
 7. Bioassay of histamine using guinea pig ileum by matching method.
 8. Bioassay of oxytocin using rat uterine horn by interpolation method.
 9. Bioassay of serotonin using rat fundus strip by three point bioassay.
 10. Bioassay of acetylcholine using rat ileum/colon by four point bioassay.
 11. Determination of PA₂ value of prazosin using rat anococcygeus muscle (by Schilds plot method).

12. Determination of PD₂ value using guinea pig ileum.
13. Effect of spasmogens and spasmolytics using rabbit jejunum.
14. Anti-inflammatory activity of drugs using carrageenan induced paw-edema model.
15. Analgesic activity of drug using central and peripheral methods.

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Living stone Elsevier.
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill.
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradle y R.W., Applied Therapeutics, The Clinical use of Drugs, The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher.
8. Modern Pharmacology with clinical Applications, by Charles R.Craig& Robert.
9. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
10. Kulkarni SK. Handbook of experimental pharmacology. Vallabh Prakashan.

18BP504T

SEMESTER - V

PHARMACOGNOSY AND PHYTOCHEMISTRY II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of subject is to impart the students the knowledge of how these secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially.
- Also this subject involves the study of producing the plants and phytochemicals through plant tissue culture, drug interactions and basic principles of traditional system of medicine
- To explain the modern extraction techniques, characterization and identification of the herbal drugs and Phytoconstituents
- To understand the preparation and development of herbal formulation.
- To understand the herbal drug interactions.
- To isolate and identify the Phytoconstituents.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the Composition, chemistry & chemical classes, biosources, therapeutic uses and commercial applications.
2. Metabolic pathways in higher plants and their determination
3. Explain the modern extraction techniques, characterization and identification of the herbal drugs and Phytoconstituents
4. Understand the preparation and development of herbal formulation.
5. Understand the herbal drug interactions.
6. Isolate and identify the Phytoconstituents.

Course Content:**UNIT-I**

Metabolic pathways in higher plants and their determination: a) Brief study of basic metabolic pathways and formation of different secondary metabolites through these pathways- Shikimic acid pathway, Acetate pathways and Amino acid pathway. b) Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

UNIT-II

General introduction, composition, chemistry & chemical classes, biosources, therapeutic uses and commercial applications of following secondary metabolites:

Alkaloids: Vinca, Rauwolfia, Belladonna, Opium,

Phenylpropanoids and Flavonoids: Lignans, Tea, Ruta

Steroids, Cardiac Glycosides & Triterpenoids: Liquorice, Dioscorea, Digitalis

Volatile oils: Mentha, Clove, Cinnamon, Fennel, Coriander,

Tannins: Catechu, Pterocarpus

Resins: Benzoin, Guggul, Ginger, Asafoetida, Myrrh, Colophony

Glycosides: Senna, Aloes, Bitter Almond

Iridoids, Other terpenoids & Naphthaquinones: Gentian, Artemisia, taxus, carotenoids

UNIT-III

Isolation, Identification and Analysis of Phytoconstituents

- a) Terpenoids: Menthol, Citral, Artemisin b) Glycosides: Glycyrrhetic acid & Rutin
c) Alkaloids: Atropine, Quinine, Reserpine, Caffeine d) Resins: Podophyllotoxin, Curcumin

UNIT-IV

Industrial production, estimation and utilization of the following phytoconstituents: Forskolin, Sennoside, Artemisinin, Diosgenin, Digoxin, Atropine, Podophyllotoxin, Caffeine, Taxol, Vincristine and Vinblastine

UNIT V

Basics of Phytochemistry: Modern methods of extraction, application of latest techniques like Spectroscopy.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.
2. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
3. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
4. Herbal drug industry by R.D. Choudhary (1996), 1st Edn, Eastern Publisher, New Delhi.
5. Essentials of Pharmacognosy, Dr.SH.Ansari, 1st edition, Birla publications, New Delhi, 2007
6. Herbal Cosmetics by H.Pande, Asia Pacific Business press, Inc, New Delhi.
7. A.N. Kalia, Textbook of Industrial Pharmacognosy, CBS Publishers, New Delhi, 2005.
8. R Endress, Plant cell Biotechnology, Springer-Verlag, Berlin, 1994.
9. Pharmacognosy & Pharmacobiotechnology. James Bobbers, Marilyn KS, VE Tylor.
10. The formulation and preparation of cosmetic, fragrances and flavours.
11. Remington's Pharmaceutical sciences.
12. Text Book of Biotechnology by Vyas and Dixit.
13. Text Book of Biotechnology by R.C. Dubey.

18BP508P

SEMESTER - V

PHARMACOGNOSY AND PHYTOCHEMISTRY II (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Perform the histology and powder characteristics & extraction & detection of Phytoconstituents.
- To Isolate and detect the active principles.
- To Separate the sugars by Paper chromatography.
- To Perform TLC of herbal extract
- To Distillate the volatile oils and detects the Phytoconstituents by TLC.
- To Analysis of crude drugs by chemical tests.

Course Outcomes (CO's): On successful completion of the course the student will

1. Perform the histology and powder characteristics & extraction & detection of Phytoconstituents.
 2. Isolate and detect the active principles.
 3. Separate the sugars by Paper chromatography.
 4. Perform TLC of herbal extract
 5. Distillate the volatile oils and detects the Phytoconstituents by TLC.
 6. Analysis of crude drugs by chemical tests.
-
1. Morphology, histology and powder characteristics & extraction & detection of: Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander.
 2. Exercise involving isolation & detection of active principles.
 - a. Caffeine - from tea dust.
 - b. Diosgenin from Dioscorea.
 - c. Atropine from Belladonna.
 - d. Sennosides from Senna.
 3. Separation of sugars by Paper chromatography.
 4. TLC of herbal extract.
 5. Distillation of volatile oils and detection of phytoconstituents by TLC.
 6. Analysis of crude drugs by chemical tests: (i) Asafoetida (ii) Benzoin (iii) Colophony (iv) Aloes (v) Myrrh.

Suggested Readings:

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Saunders & Co., London, 2009.
2. Mohammad Ali. Pharmacognosy and Phytochemistry, CBS Publishers & Distribution, New Delhi.
3. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
4. Herbal drug industry by R.D. Choudhary (1996), Ist Edn, Eastern Publisher, New Delhi.
5. Essentials of Pharmacognosy, Dr.SH.Ansari, IInd edition, Birla publications, New Delhi, 2007
6. Herbal Cosmetics by H.Pande, Asia Pacific Business press, Inc, New Delhi.
7. A.N. Kalia, Textbook of Industrial Pharmacognosy, CBS Publishers, New Delhi,2005.
8. R Endress, Plant cell Biotechnology, Springer-Verlag, Berlin, 1994.
9. Pharmacognosy & Pharmacobiotechnology. James Bobbers, Marilyn KS, VE Tylor.
10. The formulation and preparation of cosmetic, fragrances and flavours.
11. Remington's Pharmaceutical sciences.
12. Text Book of Biotechnology by Vyas and Dixit.
13. Text Book of Biotechnology by R.C. Dubey.

18BP505T

SEMESTER – V

PHARMACEUTICAL JURISPRUDENCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge on important legislations related to the profession of pharmacy in India.
- To demonstrate various Indian pharmaceutical Acts and Laws.
- To understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.
- To elicit the code of ethics during the pharmaceutical practice.
- To acquire clear idea on drug price control order and its implication in India.
- To acquire information regarding the licenses to be achieved for a new drug discovery process.

Course Outcomes (CO's): On successful completion of the course the student will

1. Exploit the Pharmaceutical legislations and their implications in the development and marketing of pharmaceuticals.
2. Demonstrate various Indian pharmaceutical Acts and Laws.
3. Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.
4. Elicit the code of ethics during the pharmaceutical practice.
5. Acquire clear idea on drug price control order and its implication in India.
6. Acquire information regarding the licenses to be achieved for a new drug discovery process.

1. The code of ethics during the pharmaceutical practice.

Course Content:**UNIT-I**

Drugs and Cosmetics Act, 1940 and its rules 1945: Objectives, Definitions, Legal definitions of schedules to the Act and Rules Import of drugs – Classes of drugs and cosmetics prohibited from import, Import under license or permit. Offences and penalties. Manufacture of drugs – Prohibition of manufacture and sale of certain drugs, Conditions for grant of license and conditions of license for manufacture of drugs, Manufacture of drugs for test, examination and analysis, manufacture of new drug, loan license and repacking license.

UNIT-II

Drugs and Cosmetics Act, 1940 and its rules 1945: Detailed study of Schedule G, H, M, N, P, T, U, V, X, Y, Part XII B, Sch F & DMR (OA) Sale of Drugs – Wholesale, Retail sale and Restricted license. Offences and penalties Labeling & Packing of drugs- General labeling requirements and specimen labels for drugs and cosmetics, List of permitted colors. Offences and penalties.

Administration of the Act and Rules – Drugs Technical Advisory Board, Central drugs Laboratory, Drugs Consultative Committee, Government drug analysts, Licensing authorities, controlling authorities, Drugs Inspectors.

UNIT-III

Pharmacy Act –1948: Objectives, Definitions, Pharmacy Council of India; its constitution and functions, Education Regulations, State and Joint state pharmacy councils; constitution and functions, Registration of Pharmacists, Offences and Penalties.

Medicinal and Toilet Preparation Act –1955: Objectives, Definitions, Licensing, Manufacture In bond and Outside bond, Export of alcoholic preparations, Manufacture of Ayurvedic, Homeopathic, Patent & Proprietary Preparations. Offences and Penalties.

Narcotic Drugs and Psychotropic substances Act-1985 and Rules: Objectives, Definitions, Authorities and Officers, Constitution and Functions of narcotic & Psychotropic Consultative Committee, National Fund for Controlling the Drug Abuse, Prohibition, Control and Regulation, opium poppy cultivation and production of poppy straw, manufacture, sale and export of opium, Offences and Penalties.

UNIT-IV

Study of Salient Features of Drugs and Magic Remedies Act and its rules: Objectives, Definitions, Prohibition of certain advertisements, Classes of Exempted advertisements, Offences and Penalties.

Prevention of Cruelty to animals Act-1960: Objectives, Definitions, Institutional Animal Ethics Committee, CPCSEA guidelines for Breeding and Stocking of Animals, Performance of Experiments, Transfer and acquisition of animals for experiment, Records, Power to suspend or revoke registration, Offences and Penalties.

National Pharmaceutical Pricing Authority: Drugs Price Control Order (DPCO)-2013. Objectives, Definitions, Sale prices of bulk drugs, Retail price of formulations, Retail price and ceiling price of scheduled formulations, National List of Essential Medicines (NLEM)

UNIT-V

Pharmaceutical Legislations – A brief review, Introduction, Study of drugs enquiry committee, Health survey and development committee, Hathi committee and Mudaliar committee.

Code of Pharmaceutical ethics Definition, Pharmacist in relation to his job, trade, medical profession and his profession, Pharmacist's oath.

Medical Termination of Pregnancy Act

Right to Information Act

Introduction to Intellectual Property Rights (IPR)

Suggested Readings:

1. Forensic Pharmacy by B. Suresh.
2. Text book of Forensic Pharmacy by B.M. Mithal.
3. Hand book of drug law-by M.L. Mehra.
4. A text book of Forensic Pharmacy by N.K. Jain.
5. Drugs and Cosmetics Act/Rules by Govt. of India publications.
6. Medicinal and Toilet preparations act 1955 by Govt. of India publications.
7. Narcotic drugs and psychotropic substances act by Govt. of India publications.
8. Drugs and Magic Remedies act by Govt. of India publication.
9. Bare Acts of the said laws published by Government. Reference books (Theory).

SEMESTER - VI

18BP601T

SEMESTER-VI

MEDICINAL CHEMISTRY – III (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasis on modern techniques of rational drug design like quantitative structure activity relationship (QSAR)
- To understand the prodrug concept, combinatorial chemistry and Computer aided drug design (CADD).
- The subject also emphasizes on the chemistry, mechanism of action, metabolism,
- To know adverse effects, Structure Activity Relationships (SAR) and therapeutic uses
- To synthesis of important drugs.

Course Outcomes(CO's): On successful completion of the course the student will

1. Illustrate the classification of drugs.
2. Explain the mechanism of action of drugs.
3. Understand the chemistry of drugs with respect to their biological activity.
4. Know the metabolism, adverse effects and therapeutic value of drugs.
5. Discuss the importance of SAR of drugs.
6. Understand the importance of drug design and different techniques of drug design.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted by (*)

UNIT – I

Antibiotics: Historical background, Nomenclature, Stereochemistry, Structure activity relationship, Chemical degradation classification and important products of the following classes.

β-Lactam antibiotics: Penicillin, Cephalosporins, β- Lactamase inhibitors, Monobactams
Aminoglycosides: Streptomycin, Neomycin, Kanamycin.

Tetracyclines: Tetracycline, Oxytetracycline, Chlortetracycline, Minocycline, Doxycycline

UNIT – II

Antibiotics: Historical background, Nomenclature, Stereochemistry, Structure activity relationship, Chemical degradation classification and important products of the following classes.

Miscellaneous: Pyrimethamine, Artesunate, Artemether, Atovaquone.

Sulfones: Dapsone*.

UNIT – V

Introduction to Drug Design: Various approaches used in drug design. Physicochemical parameters used in quantitative structure activity relationship (QSAR) such as partition coefficient, Hammett's electronic parameter, Taft's steric parameter and Hansch analysis. Pharmacophore modeling and docking techniques. Combinatorial Chemistry: Concept and applications chemistry: solid phase and solution phase synthesis.

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicher, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

18BP607P

SEMESTER-VI

MEDICINAL CHEMISTRY- III (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To prepare drugs and medicinally important compounds by traditional and microwave method.
- To prepare drug intermediates by traditional and microwave method.
- To perform assay of drug substances.
- To draw structures of chemicals using softwares.
- To determine physicochemical properties for drugs using software.
- To screen drug likeliness.

Course Outcomes(CO's): On successful completion of the course the student will

1. Prepare drugs and medicinally important compounds by traditional and microwave method.
2. Prepare drug intermediates by traditional and microwave method.
3. Perform assay of drug substances.
4. Draw structures of chemicals using softwares.
5. Determine physicochemical properties for drugs using software.
6. Screen drug likeliness.

I Preparation of drugs and intermediates:

- 1 Sulphanilamide
- 2 7-Hydroxy, 4-methyl coumarin
- 3 Chlorobutanol
- 4 Triphenyl imidazole
- 5 Tolbutamide
- 6 Hexamine

II Assay of drugs:

- 1 Isonicotinic acid hydrazide
- 2 Chloroquine
- 3 Metronidazole
- 4 Dapsone
- 5 Chlorpheniramine maleate
- 6 Benzyl penicillin

III. Preparation of medicinally important compounds or intermediates by Microwave irradiation technique.

IV. Drawing structures and reactions using chem draw®

V. Determination of physicochemical properties such as logP, clogP, MR, Molecular weight, Hydrogen bond donors and acceptors for class of drugs course content using drug design software Drug like lieness screening (Lipinskies RO5)

Suggested Readings:

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug S ynthesis by Lednicer, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

18BP602T

SEMESTER-VI

PHARMACOLOGY-III (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on respiratory and gastrointestinal system, infectious diseases, immuno-pharmacology and in addition, emphasis on the principles of toxicology and chronopharmacology.
- Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
- Comprehend the principles of toxicology and treatment of various poisonings.
- Appreciate correlation of pharmacology with related medical sciences.
- Enlight the chemotherapy of drugs on various Urinary tract infections and sexually transmitted diseases and Chemotherapy of malignancy.
- Explain about Immunopharmacology, Protein drugs, monoclonal antibodies, target drugs to antigen and biosimilars.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
2. Comprehend the principles of toxicology and treatment of various poisonings.
3. Appreciate correlation of pharmacology with related medical sciences.
4. Enlight the chemotherapy of drugs on various Urinary tract infections and sexually transmitted diseases and Chemotherapy of malignancy.
5. Explain about Immunopharmacology, Protein drugs, monoclonal antibodies, target drugs to antigen and biosimilars.
6. Describe Chronopharmacology, Biological clock and its significance.

Course Content:**UNIT-I****1. Pharmacology of drugs acting on Respiratory system:**

- a. Anti -asthmatic drugs
- b. Drugs used in the management of COPD
- c. Expectorants and antitussives
- d. Nasal decongestants
- e. Respiratory stimulants

2. Pharmacology of drugs acting on the Gastrointestinal Tract:

- a. Antiulcer agents.
- b. Drugs for constipation and diarrhoea.
- c. Appetite stimulants and suppressants.
- d. Digestants and carminatives.
- e. Emetics and anti-emetics.

UNIT-II

3. Chemotherapy:

- a. General principles of chemotherapy.
- b. Sulfonamides and cotrimoxazole.
- c. Antibiotics- Penicillins, cephalosporins, chloramphenicol, macrolides, quinolones and fluoroquinolones, tetracycline and aminoglycosides

UNIT-III

3. Chemotherapy:

- a. Antitubercular agents
- b. Antileprotic agents
- c. Antifungal agents
- d. Antiviral drugs
- e. Anthelmintics
- f. Antimalarial drugs
- g. Antiamoebic agents

UNIT-IV

3. Chemotherapy:

- l. Urinary tract infections and sexually transmitted diseases.
- m. Chemotherapy of malignancy.

4. Immunopharmacology:

- a. Immunostimulants
- b. Immunosuppressant Protein drugs, monoclonal antibodies, target drugs to antigen, biosimilars

UNIT-V

5. Principles of toxicology:

- a. Definition and basic knowledge of acute, subacute and chronic toxicity.
- b. Definition and basic knowledge of genotoxicity, carcinogenicity, teratogenicity and mutagenicity
- c. General principles of treatment of poisoning

- d. Clinical symptoms and management of barbiturates, morphine, organophosphorus compound and lead, mercury and arsenic poisoning.

6. Chronopharmacology:

- a. Definition of rhythm and cycles.
b. Biological clock and their significance leading to chronotherapy.

Suggested Readings:

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs. The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher
Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert.
8. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
9. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan,
10. N.Udupa and P.D. Gupta, Concepts in Chronopharmacology.

18BP608P

SEMESTER-VI

PHARMACOLOGY-III (Practical)**4H****4C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To Calculate the dose in pharmacological experiments.
- To Perform various pharmacological screening studies.
- To Demonstrate the toxicity studies in animal models.
- To know the student's t test, ANOVA, Chi square test, Wilcoxon Signed Rank test.
- To determine the pharmacokinetic parameters by using the data.
- To evaluate the acute skin irritation, acute eye irritation and corrosion of a test substance.

Course Outcomes (CO's): On successful completion of the course the student will

1. Calculate the dose in pharmacological experiments.
2. Perform various pharmacological screening studies.
3. Demonstrate the toxicity studies in animal models.
4. Describe the student's t test, ANOVA, Chi square test, Wilcoxon Signed Rank test.
5. Determine the pharmacokinetic parameters by using the data.
6. Evaluate the acute skin irritation, acute eye irritation and corrosion of a test substance.

1. Dose calculation in pharmacological experiments.
2. Antiallergic activity by mast cell stabilization assay.
3. Study of anti-ulcer activity of a drug using pyloruslig and (SHAY) rat model and NSAIDS induced ulcer model.
4. Study of effect of drugs on gastrointestinal motility.
5. Effect of agonist and antagonists on guinea pig ileum.
6. Estimation of serum biochemical parameters by using semi- auto analyser.
7. Effect of saline purgative on frog intestine.
8. Insulin hypoglycemic effect in rabbit.
9. Test for pyrogens (rabbit method).
10. Determination of acute oral toxicity (LD50) of a drug from a given data.
11. Determination of acute skin irritation / corrosion of a test substance.
12. Determination of acute eye irritation / corrosion of a test substance.
13. Calculation of pharmacokinetic parameters from a given data.
14. Biostatistics methods in experimental pharmacology(student's t test, ANOVA).
15. Biostatistics methods in experimental pharmacology (Chi square test, Wilcoxon Signed Rank test).

Experiments are demonstrated by simulated experiments/videos*Suggested Readings:**

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchill Livingstone Elsevier
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics.
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradle y R.W., Applied Therapeutics, The Clinical use of Drugs. The Point Lippincott Williams & Wilkins.
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology.
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher
Modern Pharmacology with clinical Applications, by Charles R.Craig & Robert.
8. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata.
9. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan,
- 10.N.Udupa and P.D. Gupta, Concepts in Chronopharmacology.

18BP603T

SEMESTER-VI

HERBAL DRUG TECHNOLOGY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject gives the student the knowledge of basic understanding of herbal drug industry, the quality of raw material, guidelines for quality of herbal drugs, herbal cosmetics, natural sweeteners, nutraceutical etc.
- The subject also emphasizes on Good Manufacturing Practices (GMP), patenting and regulatory issues of herbal drugs
- To elaborate the herbal cosmetics, natural sweeteners, Nutraceuticals
- To explain the patenting of herbal drugs, Herbal drugs industry.
- To demonstrate the GMP.
- To understand the study of Herbal cosmetics, excipients and formulations.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand raw material as source of herbal drugs from cultivation to herbal drug product.
2. Explain the WHO and ICH guidelines for evaluation of herbal drugs.
3. Elaborate the herbal cosmetics, natural sweeteners, Nutraceuticals
4. Explain the patenting of herbal drugs, Herbal drugs industry.
5. Demonstrate the GMP.
6. Understand the study of Herbal cosmetics, excipients and formulations.

Course content:**UNIT-I**

Herbs as raw materials: Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation Source of Herbs Selection, identification and authentication of herbal materials Processing of herbal raw material.

Biodynamic Agriculture: Good agricultural practices in cultivation of medicinal plants including Organic farming. Pest and Pest management in medicinal plants: Biopesticides / Bioinsecticides.

Indian Systems of Medicine:

- a) Basic principles involved in Ayurveda, Siddha, Unani and Homeopathy
- b) Preparation and standardization of Ayurvedic formulations viz Aristas and Asawas, Ghutika, Churna, Lehya and Bhasma.

UNIT-II

Nutraceuticals: General aspects, Market, growth, scope and types of products available in the market. Health benefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritable

bowel syndrome and various Gastro intestinal diseases. Study of following herbs as health food: Alfaalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, Spirulina.

Herbal-Drug and Herb-Food Interactions: General introduction to interaction and classification. Study of following drugs and their possible side effects and interactions: Hypercium, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper & Ephedra.

UNIT-III

Herbal Cosmetics: Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gums colours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin care, hair care and oral hygiene products.

Herbal excipients: Herbal Excipients – Significance of substances of natural origin as excipients – colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavors & perfumes.

Herbal formulations : Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage forms like phytosomes.

UNIT- IV

Evaluation of Drugs WHO & ICH guidelines for the assessment of herbal drugs
Stability testing of herbal drugs.

Patenting and Regulatory requirements of natural products:

- a) Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting and Biopiracy
- b) Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma & Neem.

Regulatory Issues - Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs & Cosmetics Act for ASU drugs.

UNIT-V

General Introduction to Herbal Industry: Herbal drugs industry: Present scope and future prospects. A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants in India.

Schedule T – Good Manufacturing Practice of Indian systems of medicine Components of GMP (Schedule – T) and its objectives Infrastructural requirements, working space, storage area,

machinery and equipments, standard operating procedures, health and hygiene, documentation and records.

Suggested Readings:

1. Text book of Pharmacognosy by Trease & Evans.
2. Text book of Pharmacognosy by Tyler, Brady & Robber.
3. Pharmacognosy by Kokate, Purohit and Gokhale.
4. Essential of Pharmacognosy by Dr.S.H.Ansari.
5. Pharmacognosy & Phytochemistry by V.D.Rangari.
6. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in Indian Medicine & Homeopathy)
7. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

18BP609P

SEMESTER-VI

HERBAL DRUG TECHNOLOGY (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To perform the preliminary phytochemical screening of crude drugs.
- To determine the alcohol content of Asava and Arista.
- To evaluate the excipients of natural origin.
- To prepare and standardize the creams, lotions and shampoos and syrup.
- To explain the Monograph analysis of herbal drugs.
- To determine the aldehyde content, Phenol content and total alkaloids.

Course Outcomes(CO's): On successful completion of the course the student will

1. Perform the preliminary phytochemical screening of crude drugs.
 2. Determine the alcohol content of Asava and Arista.
 3. Evaluate the excipients of natural origin.
 4. Prepare and standardize the creams, lotions and shampoos and syrup.
 5. Explain the Monograph analysis of herbal drugs.
 6. Determine the aldehyde content, Phenol content and total alkaloids.
-
1. To perform preliminary phytochemical screening of crude drugs.
 2. Determination of the alcohol content of Asava and Arista.
 3. Evaluation of excipients of natural origin.
 4. Incorporation of prepared and standardized extract in cosmetic formulations like creams, lotions and shampoos and their evaluation.
 5. Incorporation of prepared and standardized extract in formulations like syrups, mixtures and tablets and their evaluation as per Pharmacopoeial requirements.
 6. Monograph analysis of herbal drugs from recent Pharmacopoeias.
 7. Determination of Aldehyde content.
 8. Determination of Phenol content.
 9. Determination of total alkaloids.

Suggested Readings:

1. Text book of Pharmacognosy by Trease & Evans.
2. Text book of Pharmacognosy by Tyler, Brady & Robber.
3. Pharmacognosy by Kokate, Purohit and Gokhale.
4. Essential of Pharmacognosy by Dr.S.H.Ansari.
5. Pharmacognosy & Phytochemistry by V.D.Rangari.

6. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in Indian Medicine & Homeopathy)
7. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

BIOPHARMACEUTICS AND PHARMACOKINETICS (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen and in solving the problems arising therein.
- To explain the use of plasma drug concentration-time data to calculate the pharmacokinetic parameters.
- To understand the concepts of bioavailability and bioequivalence of drug products and their significance.
- To understand various pharmacokinetic parameters, their significance & applications.
- To demonstrate a clear information on compartmental models and methods to assess the models.
- To describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the basic concepts in biopharmaceutics and pharmacokinetics and their significance.
2. Explain the use of plasma drug concentration-time data to calculate the pharmacokinetic parameters.
3. Understand the concepts of bioavailability and bioequivalence of drug products and their significance.
4. Understand various pharmacokinetic parameters, their significance & applications.
5. Demonstrate a clear information on compartmental models and methods to assess the models.
6. Describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.

Course Content:**UNIT-I**

Introduction to Biopharmaceutics Absorption; Mechanisms of drug absorption through GIT, factors influencing drug absorption through GIT, absorption of drug from Non per oral extra-vascular routes, Distribution Tissue permeability of drugs, binding of drugs, apparent, volume of drug distribution, plasma and tissue protein binding of drugs, factors affecting protein-drug binding. Kinetics of protein binding, Clinical significance of protein binding of drugs.

UNIT- II

Elimination: Drug metabolism and basic understanding metabolic pathways renal excretion of drugs, factors affecting renal excretion of drugs, renal clearance, Non renal routes of drug excretion of drugs

Bioavailability and Bioequivalence: Definition and Objectives of bioavailability, absolute and relative bioavailability, measurement of bioavailability, in-vitro drug dissolution models, in-vitro-in-vivo correlations, bioequivalence studies, methods to enhance the dissolution rates and bioavailability of poorly soluble drugs.

UNIT- III

Pharmacokinetics: Definition and introduction to Pharmacokinetics, Compartment models, Non compartment models, physiological models, One compartment open model. (a). Intravenous Injection (Bolus) (b). Intravenous infusion and (c) Extra.

UNIT- IV

Multi compartment models: Two compartment open model. IV bolus Kinetics of multiple dosing, steady state drug levels, calculation of loading and maintenance doses and their significance in clinical settings.

UNIT- V

Nonlinear Pharmacokinetics:

- a. Introduction,
- b. Factors causing Non-linearity.
- c. Michaelis-menton method of estimating parameters, Explanation with example of drugs.

Suggested Readings:

1. Biopharmaceutics and Clinical Pharmacokinetics by, Milo Gibaldi.
2. Biopharmaceutics and Pharmacokinetics; By Robert F Notari.
3. Applied biopharmaceutics and pharmacokinetics, Leon Shargel and Andrew B.C.YU 4th edition, Prentice-Hall International edition. USA.
4. Bio pharmaceuticals and Pharmacokinetics-A Treatise, By D. M. Brahmkar and Sunil B. Jaiswal, Vallabh Prakashan Pitampura, Delhi.
5. Pharmacokinetics: By Milo Gibaldi Donald, R. Mercel Dekker Inc.
6. Hand Book of Clinical Pharmacokinetics, By Milo Gibaldi and Laurie Prescott by ADIS Health Science Press.
7. Biopharmaceutics; By Swarbrick.
8. Clinical Pharmacokinetics, Concepts and Applications: By Malcolm Rowland and
9. Thomas, N. Tozen, Lea and Febrger, Philadelphia, 1995.
10. Dissolution, Bioavailability and Bioequivalence, By Abdou H.M, Mack, Publishing Company, Pennsylvania 1989.
11. Biopharmaceutics and Clinical Pharmacokinetics-An introduction 4th edition Revised and expanded by Robert F Notari Marcel Dekker Inc, New York and Basel, 1987.
12. Remington's Pharmaceutical Sciences, By Mack Publishing Company, Pennsylvania

18BP605T

SEMESTER-VI

PHARMACEUTICAL BIOTECHNOLOGY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- ☐ Biotechnology has a long promise to revolutionize the biological sciences and technology.
- ☐ Scientific application of biotechnology in the field of genetic engineering, medicine and fermentation technology makes the subject interesting.
- ☐ Biotechnology is leading to new biological revolutions in diagnosis, prevention and cure of diseases, new and cheaper pharmaceutical drugs.
- ☐ Biotechnology has already produced transgenic crops and animals and the future promises lot more.
- ☐ It is basically a research-based subject.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understanding the importance of Immobilized enzymes in Pharmaceutical Industries.
2. Explain Genetic engineering applications in relation to production of pharmaceuticals.
3. Understand the Importance of Monoclonal antibodies in Industries.
4. Appreciate the use of microorganisms in fermentation technology.
5. Discover different blotting techniques in pharmaceutical biotechnology.
6. Acquire scientific application in the field of genetic engineering, medicine and fermentation technology.

UNIT -I

- a) Brief introduction to Biotechnology with reference to Pharmaceutical Sciences.
- b) Enzyme Biotechnology- Methods of enzyme immobilization and applications.
- c) Biosensors- Working and applications of biosensors in Pharmaceutical Industries.
- d) Brief introduction to Protein Engineering.
- e) Use of microbes in industry. Production of Enzymes- General consideration - Amylase, Catalase, Peroxidase, Lipase, Protease, Penicillinase.
- f) Basic principles of genetic engineering.

UNIT- II

- a) Study of cloning vectors, restriction endonucleases and DNA ligase.
- b) Recombinant DNA technology. Application of genetic engineering in medicine.
- c) Application of r DNA technology and genetic engineering in the production of: i) Interferon ii) Vaccines- hepatitis- B iii) Hormones-Insulin.
- d) Brief introduction to PCR.

UNIT- III**Types of immunity-** humoral immunity, cellular immunity

- a) Structure of Immunoglobulins.
- b) Structure and Function of MHC.
- c) Hypersensitivity reactions, Immune stimulation and Immune suppressions.
- d) General method of the preparation of bacterial vaccines, toxoids, viral vaccine, antitoxins, serum-immune blood derivatives and other products relative to immunity.
- e) Storage conditions and stability of official vaccines.
- f) Hybridoma technology- Production, Purification and Applications.
- g) Blood products and Plasma Substitutes.

UNIT -IV

- a) Immuno blotting techniques- ELISA, Western blotting, Southern blotting.
- b) Genetic organization of Eukaryotes and Prokaryotes.
- c) Microbial genetics including transformation, transduction, conjugation, plasmids and transposons.
- d) Introduction to Microbial biotransformation and applications.
- e) Mutation: Types of mutation/mutants.

UNIT -V

- a) Fermentation methods and general requirements, study of media, equipments, sterilization methods, aeration process, stirring.
- b) Large scale production fermenter design and its various controls.
- c) Study of the production of - penicillins, citric acid, Vitamin B12, Glutamic acid, Griseofulvin.
- d) Blood Products: Collection, Processing and Storage of whole human blood, dried human plasma, plasma Substitutes.

Suggested Readings:

1. B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of Recombinant DNA: ASM Press Washington D.C.Society of Chemistry.
2. Zaborsky: Immobilized Enzymes, CRC Press, Degrand, Ohio.
3. S.B. Primrose: Molecular Biotechnology (Second Edition) Blackwell Scientific Publication.
4. Stanbury F., P., Whitaker A., and Hall J., S., Principles of fermentation technology, 2nd edition, Aditya books Ltd., New Delhi.

18BP606T

SEMESTER –VI

PHARMACEUTICAL QUALITY ASSURANCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100
External Semester Exam: 3 Hours**Course Objectives:**

- This course deals with the various aspects of quality control and quality assurance aspects of pharmaceutical industries.
- It deals with the important aspects like cGMP, QC tests, documentation, quality certifications and regulatory affairs.
- To discuss the scope of quality certifications applicable to pharmaceutical industries.
- To elaborate the responsibilities of QA and QC departments.
- To understand the GLP and its importance
- To describe the warehouse and good warehouse practice.

Course Outcomes(CO's): On successful completion of the course the student will

1. Understanding the cGMP aspects in a pharmaceutical industry.
2. Explain the importance of documentation.
3. Discuss the scope of quality certifications applicable to pharmaceutical industries.
4. Elaborate the responsibilities of QA and QC departments.
5. Understand the GLP and its importance
6. Describe the warehouse and good warehouse practice.

Course content:**UNIT – I**

Quality Assurance and Quality Management concepts: Definition and concept of Quality control, Quality assurance and GMP. Total Quality Management (TQM): Definition, elements, philosophies
ICH Guidelines: purpose, participants, process of harmonization, Brief overview of QSEM, with special emphasis on Q-series guidelines, ICH stability testing guidelines. Quality by design (QbD): Definition, overview, elements of QbD program, tools ISO 9000 & ISO14000: Overview, Benefits, Elements, steps for registration NABL accreditation : Principles and procedures

UNIT - II

Organization and personnel: Personnel responsibilities, training, hygiene and personal records.
Premises: Design, construction and plant layout, maintenance, sanitation, environmental control, utilities and maintenance of sterile areas, control of contamination.
Equipments and raw materials: Equipment selection, purchase specifications, maintenance, purchase specifications and maintenance of stores for raw materials.

UNIT – III

Quality Control: Quality control test for containers, rubber closures and secondary packing materials.

Good Laboratory Practices: General Provisions, Organization and Personnel, Facilities, Equipment, Testing Facilities Operation, Test and Control Articles, Protocol for Conduct of a Nonclinical Laboratory Study, Records and Reports, Disqualification of Testing Facilities.

UNIT – IV

Complaints: Complaints and evaluation of complaints, Handling of return good, recalling and waste disposal.

Document maintenance in pharmaceutical industry: Batch Formula Record, Master Formula Record, SOP, Quality audit, Quality Review and Quality documentation, Reports and documents, distribution records.

UNIT – V

Calibration and Validation: Introduction, definition and general principles of calibration, qualification and validation, importance and scope of validation, types of validation, validation master plan.

Calibration of pH meter, Qualification of UV-Visible spectrophotometer, General principles of Analytical method Validation.

Warehousing: Good warehousing practice, materials management

Suggested Readings:

1. Quality Assurance Guide by organization of Pharmaceutical Products of India.
2. Good Laboratory Practice Regulations, 2nd Edition, Sandy Weinberg Vol. 69.
3. Quality Assurance of Pharmaceuticals- A compendium of Guide lines and Related materials Vol I WHO Publications.
4. A guide to Total Quality Management- Kushik Maitra and Sedhan K Ghosh.
5. How to Practice GMP's – P P Sharma.
6. ISO 9000 and Total Quality Management – Sadhank G Ghosh.
7. The International Pharmacopoeia – Vol I, II, III, IV- General Methods of Analysis and Quality specification for Pharmaceutical Substances, Excipients and Dosage forms.
8. Good laboratory Practices – Marcel Deckker Series.
9. ICH guidelines, ISO 9000 and 14000 guidelines.

SEMESTER VII

18BP701T

SEMESTER – VII

INSTRUMENTAL METHODS OF ANALYSIS (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs.
- This subject is designed to impart a fundamental knowledge on the principles and instrumentation of spectroscopic and chromatographic technique.
- This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.
- To discuss the applications of analytical techniques.
- To perform quantitative analysis of drugs using various analytical instruments.
- To perform qualitative analysis of drugs using various analytical instruments

Course Outcomes: On successful completion of the course the student will

1. Understand the interaction of matter with electromagnetic radiations and its applications in drug analysis.
2. Describe the instrumentation of spectroscopy techniques.
3. Understand the chromatographic separation and analysis of drugs.
4. Discuss the applications of analytical techniques.
5. Perform quantitative analysis of drugs using various analytical instruments.
6. Perform qualitative analysis of drugs using various analytical instruments.

Course Content:**UNIT –I**

UV Visible spectroscopy: Electronic transitions, chromophores, auxochromes, spectral shifts, solvent effect on absorption spectra, Beer and Lambert's law, Derivation and deviations. Instrumentation - Sources of radiation, wavelength selectors, sample cells, detectors- Photo tube, Photomultiplier tube, Photo voltaic cell, Silicon Photodiode. Applications - Spectrophotometric titrations, Single component and multi component analysis.

Fluorimetry: Theory, Concepts of singlet, doublet and triplet electronic states, internal and external conversions, factors affecting fluorescence, quenching, instrumentation and applications.

UNIT –II

IR spectroscopy: Introduction, fundamental modes of vibrations in poly atomic molecules, sample handling, factors affecting vibrations Instrumentation - Sources of radiation, wavelength selectors, detectors - Golay cell, Bolometer, Thermocouple, Thermister, Pyroelectric detector and applications.

Flame Photometry-Principle, interferences, instrumentation and applications

Atomic absorption spectroscopy- Principle, interferences, instrumentation and applications.

Nepheloturbidometry- Principle, instrumentation and applications.

UNIT –III

Introduction to chromatography:

Adsorption and partition column chromatography-Methodology, advantages, disadvantages and applications.

Thin layer chromatography- Introduction, Principle, Methodology, R_f values, advantages, disadvantages and applications.

Paper chromatography-Introduction, methodology, development techniques, advantages, disadvantages and applications.

Electrophoresis- Introduction, factors affecting electrophoretic mobility, Techniques of paper, gel, capillary electrophoresis, applications.

UNIT –IV

Gas chromatography - Introduction, theory, instrumentation, derivatization, temperature programming, advantages, disadvantages and applications.

High performance liquid chromatography (HPLC)-Introduction, theory, Instrumentation, advantages and applications.

UNIT –V

Ion exchange chromatography-Introduction, classification, ion exchange resins, properties, mechanism of ion exchange process, factors affecting ion exchange, methodology and applications.

Gel chromatography- Introduction, theory, instrumentation and applications.

Affinity chromatography- Introduction, theory, instrumentation and applications.

Suggested Readings:

1. Instrumental Methods of Chemical Analysis by B.K Sharma.
2. Organic spectroscopy by Y.R Sharma.
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors.
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel.
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake.
6. Organic Chemistry by I. L. Finar.
7. Organic spectroscopy by William Kemp.
8. Quantitative Analysis of Drugs by D. C. Garrett.
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi.
10. Spectrophotometric identification of Organic Compounds by Silverstein.

18BP705P

SEMESTER – VII

INSTRUMENTAL METHODS OF ANALYSIS (Practical)**4H****2C**

Instruction hours/ week : L: 0 T:0 P:4

Marks: Internal: 15 External: 35 Total:50

External Semester Exam: 4 Hours

Course Objectives:

- To estimate the samples using analytical instruments.
- To perform assay of drug samples using analytical instruments
- To determine the effect of solvents on absorption maxima.
- To separate the mixtures of sample using chromatographic techniques.
- To demonstrate HPLC.
- To demonstrate gas chromatography.

Course Outcomes (CO's): On successful completion of the course the student will

1. Estimate the samples using analytical instruments.
 2. Perform assay of drug samples using analytical instruments
 3. Determine the effect of solvents on absorption maxima.
 4. Separate the mixtures of sample using chromatographic techniques.
 5. Demonstrate HPLC.
 6. Demonstrate gas chromatography.
-
- 1 Determination of absorption maxima and effect of solvents on absorption maxima of organic compounds.
 - 2 Estimation of dextrose by colorimetry.
 - 3 Estimation of sulfanilamide by colorimetry.
 - 4 Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy.
 - 5 Assay of paracetamol by UV- Spectrophotometry.
 - 6 Estimation of quinine sulfate by fluorimetry.
 - 7 Study of quenching of fluorescence.
 - 8 Determination of sodium by flame photometry.
 - 9 Determination of potassium by flame photometry.
 - 10 Determination of chlorides and sulphates by nephelo turbidometry.
 - 11 Separation of amino acids by paper chromatography.
 - 12 Separation of sugars by thin layer chromatography.
 - 13 Separation of plant pigments by column chromatography.
 - 14 Demonstration experiment on HPLC.
 - 15 Demonstration experiment on Gas Chromatography.

Suggested Readings:

1. Instrumental Methods of Chemical Analysis by B.K Sharma.

2. Organic spectroscopy by Y.R Sharma.
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors.
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel.
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake.
6. Organic Chemistry by I. L. Finar.
7. Organic spectroscopy by William Kemp.
8. Quantitative Analysis of Drugs by D. C. Garrett.
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi.
10. Spectrophotometric identification of Organic Compounds by Silverstein.

18BP702T

SEMESTER –VII

INDUSTRIAL PHARMACY - II (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market
- To understand the process of technology transfer from lab scale to commercial batch.
- To elicit different Laws and Acts that regulate pharmaceutical industry.
- To understand the approval process and regulatory requirements for drug products.
- To detailed description on regulatory requirements followed in India.
- To exploit knowledge on pharmaceutical product development and translation from laboratory to market.

Course Outcomes (CO's): On successful completion of the course the student will

1. Identify the process of pilot plant and scale up of pharmaceutical dosage forms.
2. Understand the process of technology transfer from lab scale to commercial batch.
3. Elicit different Laws and Acts that regulate pharmaceutical industry.
4. Understand the approval process and regulatory requirements for drug products.
5. Detailed description on regulatory requirements followed in India.
6. Exploit knowledge on pharmaceutical product development and translation from laboratory to market.

Course Content:**UNIT-I**

Pilot plant scale up techniques: General considerations - including significance of personnel requirements, space requirements, raw materials, Pilot plant scale up considerations for solids, liquid orals, semi solids and relevant documentation, SUPAC guidelines, Introduction to platform technology.

UNIT-II

Technology development and transfer: WHO guidelines for Technology Transfer (TT): Terminology, Technology transfer protocol, Quality risk management, Transfer from R& D to production (Process, packaging and cleaning), Granularity of TT Process (API, excipients, finished products, packaging materials) Documentation, Premises and equipments, qualification and validation, quality control, analytical method transfer, Approved regulatory bodies and agencies, Commercialization - practical aspects and problems (case studies), TT agencies in India - APCTD, NRDC, TIFAC, BC IL, TBSE / SIDBI; TT related documentation - confidentiality agreement, licensing, MoUs, legal issues.

UNIT-III

Regulatory affairs: Introduction, Historical overview of Regulatory Affairs, Regulatory authorities, Role of Regulatory affairs department, Responsibility of Regulatory Affairs Professionals.

Regulatory requirements for drug approval: Drug Development Teams, Non-Clinical Drug Development, Pharmacology, Drug Metabolism and Toxicology, General considerations of Investigational New Drug (IND) Application, Investigator's Brochure (IB) and New Drug Application (NDA), Clinical research / BE studies, Clinical Research Protocols, Biostatistics in Pharmaceutical Product Development, Data Presentation for FDA Submissions, Management of Clinical Studies.

UNIT-IV

Quality management systems: Quality management & Certifications: Concept of Quality, Total Quality Management, Quality by Design (QbD), Six Sigma concept, Out of Specifications (OOS), Change control, Introduction to ISO 9000 series of quality systems standards, ISO 14000, NABL, GLP

UNIT-V

Indian Regulatory Requirements: Central Drug Standard Control Organization (CDSCO) and State Licensing Authority: Organization, Responsibilities, Certificate of Pharmaceutical Product (COPP), Regulatory requirements and approval procedures for New Drugs.

Suggested Readings:

1. Regulatory Affairs from Wikipedia, the free encyclopedia modified on 7th April available at http://en.wikipedia.org/wiki/Regulatory_Affairs.
2. International Regulatory Affairs Updates, 2005. available at <http://www.iraup.com/about.php>
3. Douglas J Pisano and David S. Mantus. Text book of FDA Regulatory Affairs A Guide for Prescription Drugs, Medical Devices, and Biologics' Second Edition.
4. Regulatory Affairs brought by learning plus, inc. available at <http://www.cgmp.com/ra.htm>.

18BP703T

SEMESTER -VII

PHARMACY PRACTICE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- In the changing scenario of pharmacy practice in India, for successful practice of Hospital Pharmacy, the students are required to learn various skills like drug distribution, drug information, and therapeutic drug monitoring for improved patient care.
- In community pharmacy, students will be learning various skills such as dispensing of drugs, responding to minor ailments by providing suitable safe medication, patient counselling for improved patient care in the community set up.
- Students will effectively apply principles of drug store management and inventory control to medication use.
- Students will provide patient-centered care to diverse patients using the best available evidence and monitor drug therapy of patient through medication chart review, obtain medication history interview and counsel the patients, identify drug related problems.
- Students will engage in innovative activities by making use of the knowledge of clinical trials
- Students will exhibit professional ethics by producing safe and appropriate medication use throughout society

Course Outcomes: On successful completion of the course the student will

1. Students will demonstrate knowledge and ability to use principles of therapeutics, health behavior, social and administrative aspects in the practice of pharmacy.
2. Students will use knowledge of drug distribution methods in hospital and apply it in the practice of pharmacy.
3. Students will effectively apply principles of drug store management and inventory control to medication use.
4. Students will provide patient-centered care to diverse patients using the best available evidence and monitor drug therapy of patient through medication chart review, obtain medication history interview and counsel the patients, identify drug related problems.
5. Students will engage in innovative activities by making use of the knowledge of clinical trials
6. Students will exhibit professional ethics by producing safe and appropriate medication use throughout society

UNIT- I

a) Hospital and it's organization: Definition, Classification of hospital- Primary, Secondary and Tertiary hospitals, Classification based on clinical and non- clinical basis, Organization Structure of a Hospital, and Medical staffs involved in the hospital and their functions.

b) Hospital pharmacy and its organization: Definition, functions of hospital pharmacy, Organization structure, Location, Layout and staff requirements, and Responsibilities and functions of hospital pharmacists.

c) Adverse drug reaction: Classifications - Excessive pharmacological effects, secondary pharmacological effects, idiosyncrasy, allergic drug reactions, genetically determined toxicity, toxicity following sudden withdrawal of drugs, Drug interaction- beneficial interactions, adverse interactions, and pharmacokinetic drug interactions, Methods for detecting drug interactions, spontaneous case reports and record linkage studies, and Adverse drug reaction reporting and management.

d) Community Pharmacy: Organization and structure of retail and wholesale drug store, types and design, Legal requirements for establishment and maintenance of a drug store, Dispensing of proprietary products, maintenance of records of retail and wholesale drug store.

UNIT- II

a) Drug distribution system in a hospital: Dispensing of drugs to inpatients, types of drug distribution systems, charging policy and labelling, Dispensing of drugs to ambulatory patients, and Dispensing of controlled drugs.

b) Hospital formulary: Definition, contents of hospital formulary, Differentiation of hospital formulary and Drug list, preparation and revision, and addition and deletion of drug from hospital formulary.

c) Therapeutic drug monitoring: Need for Therapeutic Drug Monitoring, Factors to be considered during the Therapeutic Drug Monitoring, and Indian scenario for Therapeutic Drug Monitoring.

d) Medication adherence: Causes of medication non-adherence, pharmacist role in the medication adherence, and monitoring of patient medication adherence.

e) Patient medication history interview: Need for the patient medication history interview, medication interview forms.

f) Community pharmacy management: Financial, materials, staff, and infrastructure requirements.

UNIT III

a) Pharmacy and therapeutic committee: Organization, functions, Policies of the pharmacy and therapeutic committee in including drugs into formulary, inpatient and outpatient prescription, automatic stop order, and emergency drug list preparation.

b) Drug information services: Drug and Poison information centre, Sources of drug information, Computerised services, and storage and retrieval of information.

c) Patient counseling: Definition of patient counseling; steps involved in patient counseling, and Special cases that require the pharmacist.

d) Education and training program in the hospital: Role of pharmacist in the education and training program, Internal and external training program, Services to the nursing homes/clinics, Code of ethics for community pharmacy, and Role of pharmacist in the interdepartmental communication and community health education.

e) Prescribed medication order and communication skills: Prescribed medication order-interpretation and legal requirements, and Communication skills- communication with prescribers and patients.

UNIT- IV

- a) Budget preparation and implementation:** Budget preparation and implementation
- b) Clinical Pharmacy:** Introduction to Clinical Pharmacy, Concept of clinical pharmacy, functions and responsibilities of clinical pharmacist, Drug therapy monitoring - medication chart review, clinical review, pharmacist intervention, Ward round participation, Medication history and Pharmaceutical care. Dosing pattern and drug therapy based on Pharmacokinetic & disease pattern.
- c) Over the counter (OTC) sales:** Introduction and sale of over the counter, and Rational use of common over the counter medications.

UNIT- V

- a) Drug store management and inventory control:** Organisation of drug store, types of materials stocked and storage conditions, Purchase and inventory control: principles, purchase procedure, purchase order, procurement and stocking, Economic order quantity, Reorder quantity level, and Methods used for the analysis of the drug expenditure.
- b) Investigational use of drugs:** Description, principles involved, classification, control, identification, role of hospital pharmacist, advisory committee.
- c) Interpretation of Clinical Laboratory Tests:** Blood chemistry, hematology, and urinalysis

Suggested Readings:

1. Merchant S.H. and Dr. J.S.Quadry. *A textbook of hospital pharmacy*, 4th ed. Ahmadabad: B.S. Shah Prakakshan; 2001.
2. Parthasarathi G, Karin Nyfort-Hansen, Milap C Nahata. *A textbook of Clinical Pharmacy Practice- essential concepts and skills*, 1st ed. Chennai: Orient Longman Private Limited; 2004.
3. William E. Hassan. *Hospital pharmacy*, 5th ed. Philadelphia: Lea & Febiger; 1986.
4. Tipnis Bajaj. *Hospital Pharmacy*, 1st ed. Maharashtra: Career Publications; 2008.
5. Scott LT. *Basic skills in interpreting laboratory data*, 4th ed. American Society of Health System Pharmacists Inc; 2009.
6. Parmar N.S. *Health Education and Community Pharmacy*, 18th ed. India: CBS Publishers & Distributors; 2008.

Suggesting Journals:

1. Therapeutic drug monitoring. ISSN: 0163-4356.
2. Journal of pharmacy practice. ISSN : 0974-8326.
3. American journal of health system pharmacy. ISSN: 1535-2900 (online).
4. Pharmacy times (Monthly magazine).

18BP704T

SEMESTER – VII

NOVEL DRUG DELIVERY SYSTEMS (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart basic knowledge on the area of novel drug delivery systems.
- To demonstrate the criteria for selection of drugs for the development of Novel drug delivery systems.
- To understand the criteria for selection of polymers for the development of Novel drug delivery systems.
- To express the Formulation characteristics of a new drug delivery systems.
- To explain the evaluation techniques followed in each drug delivery systems.
- To exploit new technologies to already existing drugs for enhancing the therapeutic effect.

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand various approaches for development of novel drug delivery systems.
2. Demonstrate the criteria for selection of drugs for the development of Novel drug delivery systems.
3. Understand the criteria for selection of polymers for the development of Novel drug delivery systems.
4. Express the Formulation characteristics of a new drug delivery systems.
5. Explain the evaluation techniques followed in each drug delivery systems.
6. Exploit new technologies to already existing drugs for enhancing the therapeutic effect.

Course content:**UNIT-I**

Controlled drug delivery systems: Introduction, terminology/definitions and rationale, advantages, disadvantages, selection of drug candidates. Approaches to design controlled release formulations based on diffusion, dissolution and ion exchange principles. Physicochemical and biological properties of drugs relevant to controlled release formulations.

Polymers: Introduction, classification, properties, advantages and application of polymers in formulation of controlled release drug delivery systems.

UNIT-II

Microencapsulation: Definition, advantages and disadvantages, microspheres /microcapsules, microparticles, methods of microencapsulation, applications.

Mucosal Drug Delivery system: Introduction, Principles of bioadhesion / mucoadhesion, concepts, advantages and disadvantages, transmucosal permeability and formulation considerations of buccal delivery systems.

Implantable Drug Delivery Systems: Introduction, advantages and disadvantages, concept of implants and osmotic pump.

UNIT-III

Transdermal Drug Delivery Systems: Introduction, Permeation through skin, factors affecting permeation, permeation enhancers, basic components of TDDS, formulation approaches.

Gastroretentive drug delivery systems: Introduction, advantages, disadvantages, approaches for GRDDS – Floating, high density systems, inflatable and gastroadhesive systems and their applications.

Nasopulmonary drug delivery systems: Introduction to Nasal and Pulmonary routes of drug delivery, Formulation of Inhalers (dry powder and metered dose), nasal sprays, nebulizers

UNIT-IV

Targeted drug Delivery: Concepts and approaches advantages and disadvantages, introduction to liposomes, niosomes, nanoparticles, monoclonal antibodies and their applications.

UNIT-V

Ocular Drug Delivery Systems: Introduction, intra ocular barriers and methods to overcome – Preliminary study, ocular formulations and ocuserts.

Intrauterine Drug Delivery Systems: Introduction, advantages and disadvantages, development of intra uterine devices (IUDs) and applications.

Suggested Readings:

1. Y W. Chien, Novel Drug Delivery Systems, 2nd edition, revised and expanded, Marcel Dekker, Inc., New York, 1992.
2. Robinson, J. R., Lee V. H. L, Controlled Drug Delivery Systems, Marcel Dekker, Inc., New York, 1992.
3. Encyclopedia of Controlled Delivery. Edith Mathiowitz, Published by Wiley Interscience Publication, John Wiley and Sons, Inc, New York. Chichester/Weinheim
4. N.K. Jain, Controlled and Novel Drug Delivery, CBS Publishers & Distributors, New Delhi, First edition 1997 (reprint in 2001).
5. S.P. Vyas and R.K. Khar, Controlled Drug Delivery -concepts and advances, Vallabhrakashan, New Delhi, First edition 2002.

Suggested Journals:

1. Indian Journal of Pharmaceutical Sciences (IPA).
2. Indian Drugs (IDMA).
3. Journal of Controlled Release (Elsevier Sciences).
4. Drug Development and Industrial Pharmacy (Marcel & Decker).
5. International Journal of Pharmaceutics (Elsevier Sciences).

SEMESTER VIII

18BP801T

SEMESTER-VIII

BIOSTATISTICS AND RESEARCH METHODOLOGY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To understand the applications of Biostatistics in Pharmacy.
- This subject deals with descriptive statistics, Graphics, Correlation, Regression and logistic regression Probability theory
- To know sampling technique, Parametric tests, Non Parametric tests and ANOVA
- To know Introduction to Design of Experiments, Phases of Clinical trials
- To understand observational and experimental studies, SPSS, R and MINITAB statistical software's,
- To analyse the statistical data using Excel.

Course Outcomes (CO's): On successful completion of the course the student will

1. Measure the central tendency, dispersion and correlation.
2. Calculate regression analyse and probability.
3. Perform parametric and non-parametric tests.
4. Design methodology for research and draw graphs.
5. Design and analyse experiments.
6. Know the operation of M.S. Excel, SPSS, R and MINITAB[®], DoE (Design of Experiment)

Course content:**UNIT-I****Introduction:** Statistics, Biostatistics, Frequency distribution.**Measures of central tendency:** Mean, Median, Mode- Pharmaceutical examples.**Measures of dispersion:** Dispersion, Range, standard deviation, Pharmaceutical problems.**Correlation:** Definition, Karl Pearson's coefficient of correlation, Multiple correlation - Pharmaceutical examples.**UNIT-II**

Regression: Curve fitting by the method of least squares, fitting the lines $y = a + bx$ and $x = a + by$, Multiple regression, standard error of regression– Pharmaceutical Examples **Probability:** Definition of probability, Binomial distribution, Normal distribution, Poisson's distribution, properties - problems Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM) - Pharmaceutical examples.

Parametric test: t-test(Sample, Pooled or Unpaired and Paired) , ANOVA, (One way and Two way), Least Significance difference.

UNIT-III

Non Parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, Kruskal-Wallis test, Friedman Test.

Introduction to Research: Need for research, Need for design of Experiments, Experimental Design Technique, plagiarism.

Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plot graph.

Designing the methodology: Sample size determination and Power of a study, Report writing and presentation of data, Protocol, Cohort studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

UNIT-IV

Blocking and confounding system for Two-level factorials

Regression modeling: Hypothesis testing in Simple and Multiple regression models **Introduction to Practical components of Industrial and Clinical Trials Problems:** Statistical Analysis Using Excel, SPSS, MINITAB[®], DESIGN OF EXPERIMENTS, R - Online Statistical Software's to Industrial and Clinical trial approach.

UNIT-V

Design and Analysis of experiments:

Factorial Design: Definition, 2^2 , 2^3 design. Advantage of factorial design

Response Surface methodology: Central composite design, Historical design, Optimization Techniques.

Suggested Readings:

1. Pharmaceutical statistics- Practical and clinical applications, Sanford Bolton, publisher Marcel Dekker Inc. New York.
2. Fundamental of Statistics – Himalaya Publishing House- S.C.Guptha.
3. Design and Analysis of Experiments –PHI Learning Private Limited, R. Pannarselvam.
4. Design and Analysis of Experiments – Wiley Students Edition, Douglas and C. Montgomery.

18BP 802T

SEMESTER-VIII

SOCIAL AND PREVENTIVE PHARMACY (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The purpose of this course is to introduce to students a number of health issues and their challenges.
- This course also introduced a number of national health programmes.
- The roles of the pharmacist in these contexts are also discussed.
- To evaluate alternative ways of solving problems related to health and pharmaceutical issues
- To understand general principles of prevention and control of diseases
- To Know the functions of Primary Health Centres.

Course Outcomes (CO's): On successful completion of the course the student will

1. Measure the central tendency, dispersion and correlation.
2. Acquire high consciousness/realization of current issues related to health and pharmaceutical problems within the country and worldwide.
3. Have a critical way of thinking based on current healthcare development.
4. Evaluate alternative ways of solving problems related to health and pharmaceutical issues
5. General principles of prevention and control of diseases
6. Know the functions of Primary Health Centres.

Course content:**UNIT I:****Concept of health and disease:** Definition, concepts and evaluation of public health.

Understanding the concept of prevention and control of disease, social causes of diseases and social problems of the sick.

Social and health education: Food in relation to nutrition and health, Balanced diet, Nutritional deficiencies, Vitamin deficiencies, Malnutrition and its prevention.**Sociology and health:** Socio cultural factors related to health and disease, Impact of urbanization on health and disease, Poverty and health.**Hygiene and health:** personal hygiene and health care; avoidable habits.**UNIT II:****Preventive medicine:** General principles of prevention and control of diseases such as cholera, SARS, Ebola virus, influenza, acute respiratory infections, malaria, chicken guinea, dengue, lymphatic filariasis, pneumonia, hypertension, diabetes mellitus, cancer, drug addiction-drug substance abuse.

UNIT III:

National health programs, its objectives, functioning and outcome of the following: HIV AND AIDS control programme, TB, Integrated disease surveillance program (IDSP), National leprosy control programme, National mental health program, National programme for prevention and control of deafness, Universal immunization programme, National programme for control of blindness, Pulse polio programme.

UNIT IV:

National health intervention programme for mother and child, National family welfare programme, National tobacco control programme, National Malaria Prevention Program, National programme for the health care for the elderly, Social health programme; role of WHO in Indian national program

UNIT V:

Community services in rural, urban and school health: Functions of PHC, Improvement in rural sanitation, national urban health mission, Health promotion and education in school.

Suggested Readings:

1. Short Textbook of Preventive and Social Medicine, Prabhakara GN, 2nd Edition, 2010, ISBN: 9789380704104, JAYPEE Publications
2. Textbook of Preventive and Social Medicine (Mahajan and Gupta), Edited by Ro y Rabindra Nath, Saha Indranil, 4th Edition, 2013, ISBN: 9789350901878, JAYPEE Publications
3. Review of Preventive and Social Medicine (Including Biostatistics), Jain Vivek, 6th Edition, 2014, ISBN: 9789351522331, JAYPEE Publications
4. Essentials of Community Medicine—A Practical Approach, Hiremath Lalita D, Hiremath Dhananjaya A, 2nd Edition, 2012, ISBN: 9789350250440, JAYPEE Publications
5. Park Textbook of Preventive and Social Medicine, K Park, 21st Edition, 2011, IS BN-14: 9788190128285, BANARSIDAS BHANOT PUBLISHERS.
6. Community Pharmacy Practice, Ramesh Adepu, BSP publishers, Hyderabad

Suggested Journals:

1. Research in Social and Administrative Pharmacy, Elsevier, Ireland

18BP803ET

SEMESTER-VIII

PHARMA MARKETING MANAGEMENT (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- The pharmaceutical industry not only needs highly qualified researchers, chemists and, technical people
- It also requires skilled managers who can take the industry forward by managing and taking the complex decisions which are imperative for the growth of the industry.
- The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.
- To demonstrate the new products decision like labeling, packaging etc.
- To discover promotion criteria's to be followed in Indian market.
- To exploit new technologies to already existing drugs for enhancing the therapeutic effect

Course Outcomes (CO's): On successful completion of the course the student will

1. Understand the market concepts.
2. Demonstrate the new products decision like labeling, packaging etc.
3. Discover promotion criteria's to be followed in Indian market.
4. Explain the role of professional sales representative.
5. Interpret the merging concepts in the ever-developing market.
6. Exploit new technologies to already existing drugs for enhancing the therapeutic effect

UNIT -I

Marketing: Definition, general concepts and scope of marketing; Distinction between marketing & selling; Marketing environment; Industry and competitive analysis; Analyzing consumer buying behavior; industrial buying behavior.

Pharmaceutical market: Quantitative and qualitative aspects; size and composition of the market; demographic descriptions and socio-psychological characteristics of the consumer; market segmentation & targeting. Consumer profile; Motivation and prescribing habits of the physician; patients' choice of physician and retail pharmacist. Analyzing the Market; Role of market research.

UNIT -II

Product decision: Classification, product line and product mix decisions, product life cycle, product portfolio analysis; product positioning; New product decisions; Product branding, packaging and labeling decisions, Product management in pharmaceutical industry.

UNIT- III

Promotion: Methods, determinants of promotional mix, promotional budget; An overview of personal selling, advertising, direct mail, journals, sampling, retailing, medical exhibition, public relations, online promotional techniques for OTC Products.

UNIT- IV

Pharmaceutical marketing channels: Designing channel, channel members, selecting the appropriate channel, conflict in channels, physical distribution management: Strategic importance, tasks in physical distribution management.

Professional sales representative (PSR): Duties of PSR, purpose of detailing, selection and training, supervising, norms for customer calls, motivating, evaluating, compensation and future prospects of the PSR.

UNIT- V

Pricing: Meaning, importance, objectives, determinants of price; pricing methods and strategies, issues in price management in pharmaceutical industry. An overview of DPCO (Drug Price Control Order) and NPPA (National Pharmaceutical Pricing Authority).

Emerging concepts in marketing: Vertical & Horizontal Marketing; Rural Marketing; Consumerism; Industrial Marketing; Global Marketing.

Suggested Readings:

1. Philip Kotler and Kevin Lane Keller: Marketing Management, Prentice Hall of India, New Delhi.
2. Walker, Boyd and Larreche : Marketing Strategy- Planning and Implementation, Tata MC GrawHill, New Delhi.
3. Dhruv Grewal and Michael Levy: Marketing, Tata MC Graw Hill.
4. Arun Kumar and N Menakshi: Marketing Management, Vikas Publishing, India.
5. Rajan Saxena: Marketing Management; Tata MC Graw-Hill (India Edition).
6. Ramaswamy, U.S & Nanakamari, S: Marketing Management: Global Perspective, Indian Context, Macmillan India, New Delhi.
7. Shanker, Ravi: Service Marketing, Excell Books, New Delhi
8. Subba Rao Changanti, Pharmaceutical Marketing in India (GIFT – Excel series) Excel Publications.

18BP804ET

SEMESTER-VIII

PHARMACEUTICAL REGULATORY SCIENCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart the fundamental knowledge on the regulatory requirements for approval of new drugs, and drug products in regulated markets of India & other countries like US, EU, Japan, Australia, UK etc.
- It prepares the students to learn in detail on the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products.
- To know the process of drug discovery, development and generic product development
- To understand the regulatory approval process and registration procedures for API and drug products in various countries
- To learn the basic understanding of regulations of India with other global regulated markets
- It gives basic understanding of developing clinical trial protocols

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the process of drug discovery, development and generic product development
2. Describe the regulatory approval process and registration procedures for API and drug products in various countries
3. Learn the basic understanding of regulations of India with other global regulated markets
4. Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
5. Explain basic understanding of developing clinical trial protocols
6. Understand the concept of pharmacovigilance and its significance

Course content:**UNIT I**

New Drug Discovery and development: Stages of drug discovery, Drug development process, pre-clinical studies, non-clinical activities, clinical studies, Innovator and generics, Concept of generics, Generic drug product development.

UNIT II

Regulatory Approval Process: Approval processes and timelines involved in Investigational New Drug (IND), New Drug Application (NDA), Abbreviated New Drug Application (ANDA). Changes to an approved NDA / ANDA.

Regulatory authorities and agencies: Overview of regulatory authorities of India, United States, European Union, Australia, Japan, Canada (Organization structure and types of applications)

UNIT III

Registration of Indian drug product in overseas market: Procedure for export of pharmaceutical products, Technical documentation, Drug Master Files (DMF), Common Technical Document (CTD),

electronic Common Technical Document (eCTD), ASEAN Common Technical Document (ACTD) research.

UNIT IV

Clinical trials: Developing clinical trial protocols, Institutional Review Board / Independent Ethics committee - formation and working procedures, Informed consent process and procedures, GCP obligations of Investigators, sponsors & Monitors, Managing and Monitoring clinical trials, Pharmacovigilance - safety monitoring in clinical trials.

UNIT V

Regulatory Concepts: Basic terminology, guidance, guidelines, regulations, Laws and Acts, Orange book, Federal Register, Code of Federal Regulatory, Purple book.

Suggested Readings:

1. Drug Regulatory Affairs by Sachin Itkar, Dr. N.S. Vyawahare, Nirali Prakashan.
2. The Pharmaceutical Regulatory Process, Second Edition Edited by Ira R. Berry and Robert P. Martin, Drugs and the Pharmaceutical Sciences, Vol.185. Informa Health care Publishers.
3. New Drug Approval Process: Accelerating Global Registrations By Richard A Guarino, MD, 5th edition, Drugs and the Pharmaceutical Sciences, Vol.190.
4. Guidebook for drug regulatory submissions / Sandy Weinberg. By John Wiley & Sons. Inc.
5. FDA Regulatory Affairs: a guide for prescription drugs, medical devices, and biologics /edited by Douglas J. Pisano, David Mantus.
6. Generic Drug Product Development, Solid Oral Dosage forms, Leon Shargel and Isader Kaufer, Marcel Dekker series, Vol.143.
7. Clinical Trials and Human Research: A Practical Guide to Regulatory Compliance By Fay A. Rozovsky and Rodney K. Adams.
8. Principles and Practices of Clinical Research, Second Edition Edited by John I. Gallin and Frederick P. Ognibene.
9. Drugs: From Discovery to Approval, Second Edition By Rick Ng.

18BP 805ET

SEMESTER-VIII

PHARMACOVIGILANCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This paper will provide an opportunity for the student to learn about development of pharmacovigilance as a science
- To know basic terminologies used in pharmacovigilance,
- To understand global scenario of Pharmacovigilance, train students on establishing pharmacovigilance programme in an organization
- To learn various methods that can be used to generate safety data and signal detection.
- This paper also develops the skills of classifying drugs, diseases.
- Learn to write effectively case narratives of adverse events and their quality

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the importance of safety monitoring.
 2. Discuss the History and development of pharmacovigilance, National and international scenario of pharmacovigilance, Dictionaries, coding and terminologies used in pharmacovigilance, Detection of new adverse drug reactions and their assessment, Adverse drug reaction reporting systems and communication in pharmacovigilance, Pharmacovigilance Program of India (PvPI) requirement for ADR reporting in India.
 3. Understand the International standards for classification of diseases and drugs
 4. Generate and describe the safety data during pre clinical, clinical and post approval phases of drugs' life cycle, Drug safety evaluation in paediatrics, geriatrics, pregnancy and lactation
 5. Elaborate the ICH guidelines for ICSR, PSUR, expedited reporting, pharmacovigilance planning, CIOMS requirements for ADR reporting
 6. Write effectively case narratives of adverse events and their quality.
- Why drug safety monitoring is important?
 - History and development of pharmacovigilance.
 - National and international scenario of pharmacovigilance.
 - Dictionaries, coding and terminologies used in pharmacovigilance.
 - Detection of new adverse drug reactions and their assessment.
 - International standards for classification of diseases and drugs.
 - Adverse drug reaction reporting systems and communication in pharmacovigilance.
 - Methods to generate safety data during pre clinical, clinical and post approval phases of drugs life cycle.
 - Drug safety evaluation in paediatrics, geriatrics, pregnancy and lactation.
 - Pharmacovigilance Program of India (PvPI) requirement for ADR reporting in India.

- ICH guidelines for ICSR, PSUR, expedited reporting, pharmacovigilance planning.
- CIOMS requirements for ADR reporting.
- Writing case narratives of adverse events and their quality.

Course Content

UNIT I

Introduction to Pharmacovigilance:

- History and development of Pharmacovigilance.
- Importance of safety monitoring of Medicine.
- WHO international drug monitoring programme.
- Pharmacovigilance Program of India(PvPI).

Introduction to adverse drug reactions:

- Definitions and classification of ADRs.
- Detection and reporting.
- Methods in Causality assessment.
- Severity and seriousness assessment.
- Predictability and preventability assessment.
- Management of adverse drug reactions.

Basic terminologies used in pharmacovigilance:

- Terminologies of adverse medication related events.
- Regulatory terminologies.

UNIT II

Drug and disease classification:

- Anatomical, therapeutic and chemical classification of drugs
- International classification of diseases
- Daily defined doses
- International Non proprietary Names for drugs

Drug dictionaries and coding in pharmacovigilance:

- WHO adverse reaction terminologies.
- MedDRA and Standardised MedDRA queries.
- WHO drug dictionary.
- Eudravigilance medicinal product dictionary.

Information resources in pharmacovigilance:

- Basic drug information resources.
- Specialised resources for ADRs.

Establishing pharmacovigilance programme:

- Establishing in a hospital.
- Establishment & operation of drug safety department in industry.
- Contract Research Organisations (CROs).
- Establishing a national programme.

UNIT III**Vaccine safety surveillance:**

- Vaccine Pharmacovigilance.
- Vaccination failure.
- Adverse events following immunization

Pharmacovigilance methods:

- Passive surveillance – Spontaneous reports and case series.
- Stimulated reporting.
- Active surveillance – Sentinel sites, drug event monitoring and registries.
- Comparative observational studies – Cross sectional study, case control study and cohort study.
- Targeted clinical investigations.

Communication in pharmacovigilance:

- Effective communication in Pharmacovigilance.
- Communication in Drug Safety Crisis management.
- Communicating with Regulatory Agencies, Business Partners, Healthcare facilities & Media.

UNIT IV**Safety data generation:**

- Pre clinical phase.
- Clinical phase.
- Post approval phase (PMS).

ICH Guidelines for Pharmacovigilance:

- Organization and objectives of ICH.
- Expedited reporting.
- Individual case safety reports.
- Periodic safety update reports.
- Post approval expedited reporting.
- Pharmacovigilance planning.
- Good clinical practice in pharmacovigilance studies.

UNIT V**Pharmacogenomics of adverse drug reactions:**

- Genetics related ADR with example focusing PK parameters.

Drug safety evaluation in special population:

- Paediatrics
- Pregnancy and lactation
- Geriatrics

CIOMS:

- CIOMS Working Groups
- CIOMS Form

CDSCO (India) and Pharmacovigilance:

- D&C Act and Schedule Y
- Differences in Indian and global pharmacovigilance requirements

Suggested Readings:

1. Textbook of Pharmacovigilance: S K Gupta, Jaypee Brothers, Medical Publishers.
2. Practical Drug Safety from A to Z By Barton Cobert, Pierre Biron, Jones and Bartlett Publishers.
3. Mann's Pharmacovigilance: Elizabeth B. Andrews, Nicholas, Wiley Publishers.
4. Stephens' Detection of New Adverse Drug Reactions: John Talbot, Patrick Walle, Wiley Publishers.
5. An Introduction to Pharmacovigilance: Patrick Waller, Wiley Publishers.
6. Cobert's Manual of Drug Safety and Pharmacovigilance: Barton Cobert, Jones & Bartlett Publishers.
7. Textbook of Pharmacoepidemiology edited by Brian L. Strom, Stephen E Kimmel, Sean Hennessy, Wiley Publishers.
8. A Textbook of Clinical Pharmacy Practice -Essential Concepts and Skills: G.
9. Text book of Pharmacovigilance: concept and practice by GP Mohanta and PK Manna.
10. <http://www.whoumc.org/DynPage.aspx?id=105825&mn1=7347&mn2=7259&mn3=7297>
11. <http://www.ich.org/>
12. <http://www.cioms.ch/>
13. <http://cdsco.nic.in/>

18BP806ET

SEMESTER-VIII

QUALITY CONTROL AND STANDARDIZATION OF HERBALS (Theory) 4H 4C

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- In this subject the student learns about the various methods
- To understand guidelines for evaluation and standardization of herbs and herbal drugs.
- The subject also provides an opportunity for the student to learn cGMP, GAP and GLP in traditional system of medicines.
- To know regulatory approval process and their registration in Indian and international markets.
- To understand Drugs and Cosmetic Act Provision for herbal drug preparation and marketing
- To learn basic tests for drugs to obtain dosage form for pharmaceutical substances and medicinal plants

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain basic tests for drugs to obtain dosage form for pharmaceutical substances and medicinal plants
2. Explain methods for evaluation of pharmaceutical substances, medicinal plants and commercial crude drugs along with WHO guidelines for quality control for herbal drugs
3. Describe guidelines for cGMP, GAP, GMP and GLP for quality assurance of herbal drugs in industry
4. Describe guidelines for quality control of herbal drugs and evaluation of safety and efficacy of herbal medicines.
5. Explain regulatory approval process and their registration in Indian and international markets.
6. Explain Drugs and Cosmetic Act Provision for herbal drug preparation and marketing

UNIT- I

Basic tests for drugs – Pharmaceutical substances, Medicinal plants materials and dosage forms WHO guidelines for quality control of herbal drugs. Evaluation of commercial crude drugs intended for use

UNIT- II

Quality assurance in herbal drug : industry of cGMP, GAP, GMP and GLP in traditional system of medicine. WHO Guidelines on current good manufacturing Practices (cGMP) for Herbal Medicines. WHO Guidelines on GACP for Medicinal Plants.

UNIT -III

EU and ICH guidelines for quality control of herbal drugs.

Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

UNIT- IV

Stability testing of herbal medicines. Application of various chromatographic techniques in standardization of herbal products.

Preparation of documents for new drug application and export registration
GMP requirements and Drugs & Cosmetics Act provisions.

UNIT-V

Regulatory requirements for herbal medicines. WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems Comparison of various Herbal Pharmacopoeias.
Role of chemical and biological markers in standardization of herbal products.

Suggested Readings:

1. Pharmacognosy by Trease and Evans
2. Pharmacognosy by Kokate, Purohit and Gokhale
3. Rangari, V.D., Text book of Pharmacognosy and Phytochemistry Vol. I, Carrier Pub., 2006.
4. Aggrawal, S.S., Herbal Drug Technology. Universities Press, 2002.
5. EMEA. Guidelines on Quality of Herbal Medicinal Products/Traditional Medicinal Products,
6. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.
7. Shinde M.V., Dhalwal K., Potdar K., Mahadik K. Application of quality control principles to herbal drugs. International Journal of Phytomedicine 1(2009); p. 4-8.
8. WHO. Quality Control Methods for Medicinal Plant Materials, World Health Organization, Geneva, 1998. WHO. Guidelines for the Appropriate Use of Herbal Medicines. WHO Regional Publications, Western Pacific Series No 3, WHO Regional office for the Western Pacific, Manila, 1998.
9. WHO. The International Pharmacopeia, Vol. 2: Quality Specifications, 3rd edn. World Health Organization, Geneva, 1981.
10. WHO. Quality Control Methods for Medicinal Plant Materials. World Health Organization, Geneva, 1999.
11. WHO. WHO Global Atlas of Traditional, Complementary and Alternative Medicine. 2 vol. set. Vol. 1 contains text and Vol. 2, maps. World Health Organization, Geneva, 2005.
12. WHO. Guidelines on Good Agricultural and Collection Practices (GACP) for Medicinal Plants. World Health Organization, Geneva, 2004.

18BP807ET

SEMESTER-VIII

COMPUTER AIDED DRUG DESIGN (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detailed knowledge of rational drug design process and various techniques used in rational drug design process.
- To know the various stages of drug discover
- To Learn the concept of bioisosterism and drug resistance
- To understand physicochemical Properties and the techniques involved in QSAR
- To Learn Bioinformatics and Cheminformatics
- To know methods in molecular and quantum mechanics

Course Outcomes(CO's): On successful completion of the course the student will

1. Explain the various stages of drug discover
2. Learn the concept of bioisosterism and drug resistance
3. Describe physicochemical Properties and the techniques involved in QSAR
4. Learn introduction to Bioinformatics and Cheminformatics
5. Learn methods in molecular and quantum mechanics
6. Explain various structure based drug design methods (Molecular docking, Denovo drug design)

Course Content:**UNIT-I****Introduction to Drug Discovery and Development:** Stages of drug discovery and development**Lead discovery and Analog Based Drug Design:** Rational approaches to lead discovery based on traditional medicine, Random screening, Non-random screening, serendipitous drug discovery, lead discovery based on drug metabolism, lead discovery based on clinical observation.**Analog Based Drug Design:** Bioisosterism, Classification, Bioisosteric replacement. Any three case studies.**UNIT-II****Quantitative Structure Activity Relationship (QSAR):** SAR versus QSAR, History and development of QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammett's substituent constant and Tafts steric constant. Hansch analysis, Free Wilson analysis, 3D-QSAR approaches like COMFA and COMSIA.**UNIT-III****Molecular Modeling and virtual screening techniques**

Virtual Screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore based Screening,

Molecular docking: Rigid docking, flexible docking, manual docking, Docking based screening. De novo drug design.

UNIT-IV

Informatics & Methods in drug design: Introduction to Bioinformatics, chemoinformatics. ADME databases, chemical, biochemical and pharmaceutical databases.

UNIT-V

Molecular Modeling: Introduction to molecular mechanics and quantum mechanics. Energy Minimization methods and Conformational Analysis, global conformational minima determination.

Suggested Readings:

1. Robert GCK, ed., "Drug Action at the Molecular Level" University Prak Press Baltimore.
2. Martin YC. "Quantitative Drug Design" Dekker, New York.
3. Delgado JN, Remers WA eds "Wilson & Gisvolds's Text Book of Organic Medicinal & Pharmaceutical Chemistry" Lippincott, New York.
4. Foye WO "Principles of Medicinal chemistry" Lea & Febiger.
5. Koro lkovas A, Burckhalter JH. "Essentials of Medicinal Chemistry" Wiley Interscience.
6. Wolf ME, ed "The Basis of Medicinal Chemistry, Burger's Medicinal Chemistry" John Wiley & Sons, New York.
7. Patrick Graham, L., An Introduction to Medicinal Chemistry, Oxford University Press.
8. Smith HJ, Williams H, eds, "Introduction to the principles of Drug Design" Wright Boston.
9. Silverman R.B. "The organic Chemistry of Drug Design and Drug Action" Academic Press New York.

18BP808ET

SEMESTER-VIII

CELL AND MOLECULAR BIOLOGY (Elective subject)

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To understand cell and molecular biology history environment, their life cycle, division, death and cell function.
- This is done both on a microscopic and molecular level.
- Cell biology research encompasses both the great diversity of single-celled organisms like bacteria and protozoa,
- To learn specialized cells in multi-cellular organisms such as humans, plants, and sponges.
- To know basic molecular genetic mechanisms
- To understand protein structure and functions

Course Outcomes(CO's): On successful completion of the course the student will

- Summarize cell and molecular biology history. Cellular functioning and composition, DNA properties of cell biology.
- Describe the chemical foundations of cell biology.
- Discuss protein structure and function.
- Explain cellular membrane structure and function.
- Describe basic molecular genetic mechanisms.
- Summarize the Cell Cycles.

Course content:**UNIT I**

- a) Cell and Molecular Biology: Definitions theory and basics and Applications.
- b) Cell and Molecular Biology: History and Summation.
- c) Properties of cells and cell membrane.
- d) Prokaryotic versus Eukaryotic.
- e) Cellular Reproduction.
- f) Chemical Foundations – an Introduction and Reactions (Types).

UNIT II

- a) DNA and the Flow of Molecular Information.
- b) DNA Functioning.
- c) DNA and RNA.
- d) Types of RNA.
- e) Transcription and Translation.

UNIT III

- a) Proteins: Defined and Amino Acids.
- b) Protein Structure.
- c) Regularities in Protein Pathways.
- d) Cellular Processes.
- e) Positive Control and significance of Protein Synthesis.

UNIT IV

- a) Science of Genetics.
- b) Transgenics and Genomic Analysis.
- c) Cell Cycle analysis.
- d) Mitosis and Meiosis.
- e) Cellular Activities and Checkpoints.

UNIT V

- a) Cell Signals: Introduction.
- b) Receptors for Cell Signals.
- c) Signaling Pathways: Overview.
- d) Misregulation of Signaling Pathways.
- e) Protein-Kinases: Functioning.

Suggested Readings:

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hill edn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. Edward: Fundamentals of Microbiology.
10. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi
11. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company
12. B.R.Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of RecombinantDNA: ASM Press Washington D.C.
13. RA Goldshy et. al., : Kuby Immunology.

18BP809ET

SEMESTER-VIII

COSMETIC SCIENCE (Theory)**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To know the cosmetics in day to day life.
- To understand the formulation characteristics of cosmetic preparations
- To understand the role of herbs in cosmetic science
- To Demonstrate the evaluation procedures in the formulation of cosmetics
- To Identify the problems encountered during the usage of cosmetics
- To illustrate the role of nutraceuticals in day to day life

Course Outcomes(CO's): On successful completion of the course the student will

1. Discover the cosmetics in day to day life.
2. Formulation characteristics of cosmetic preparations
3. Understand the role of herbs in cosmetic science
4. Demonstrate the evaluation procedures in the formulation of cosmetics
5. Identify the problems encountered during the usage of cosmetics
6. Illustrate the role of nutraceuticals in day to day life

UNIT I

Classification of cosmetic and cosmeceutical products definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs

Cosmetic excipients: Surfactants, rheology modifiers, humectants, emollients, preservatives. Classification and application.

Skin: Basic structure and function of skin.

Hair: Basic structure of hair. Hair growth cycle.

Oral Cavity: Common problem associated with teeth and gums.

UNIT II

Principles of formulation and building blocks of skin care products: Face wash, Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages. Application of these products in formulation of cosmeceuticals. **Antiperspirants & deodorants-** Actives & mechanism of action.

Principles of formulation and building blocks of Hair care products: Conditioning shampoo, Hair conditioner, anti-dandruff shampoo. Hair oils. Chemistry and formulation of Para-phenylene diamine based hair dye. Principles of formulation and building blocks of oral care products: Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

UNIT III

Sun protection, Classification of Sunscreens and SPF.

Role of herbs in cosmetics: Skin Care: Aloe and turmeric Hair care: Henna and amla. Oral care: Neem and clove

Analytical cosmetics: BIS specification and analytical methods for shampoo, skin- cream and toothpaste.

UNIT IV

Principles of Cosmetic Evaluation: Principles of sebumeter, corneometer. Measurement of TEWL, Skin Color, Hair tensile strength, Hair combing properties Soaps, and syndet bars. Evolution and skin benefits.

UNIT V

Oily and dry skin, causes leading to dry skin, skin moisturisation. Basic understanding of the terms Comedogenic, dermatitis. Cosmetic problems associated with Hair and scalp: Dandruff, Hair fall causes Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odor. Antiperspirants and Deodorants- Actives and mechanism of action

References:

- 1) Harry's Cosmeticology, Wilkinson, Moore, Seventh Edition, George Godwin.
- 2) Cosmetics – Formulations, Manufacturing and Quality Control, P.P. Sharma, 4th Edition, Vandana Publications Pvt. Ltd., Delhi.
- 3) Text book of cosmeticology by Sanju Nanda & Roop K. Khar, Tata Publishers.

18BP810ET

SEMESTER-VIII

PHARMACOLOGICAL SCREENING METHODS**4H****4C**

Instruction hours/ week : L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To study blood withdrawal techniques and drug administration in animals.
- To know dose, dose calculations grouping of animals, species selection, sex in conducting the animal experimentation.
- To understand the research Study of screening animal models for Diuretics, no-tropics, anti-Parkinson's, anti asthmatics.
- To learn screening methods of CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, anti parkinsonism, alzheimer's disease Explain screening methods of for CVS activity- anti hypertensives, diuretics, anti arrhythmic, anti dyslipidemic
- To know screening methods of Research methodology and Bio-statistics

Course Outcomes(CO's): On successful completion of the course the student will

1. Describe the applications of common laboratory animals, explain CPCSEA and OECD guidelines governing the for maintenance, breeding and conduct of experiments on laboratory animals.
2. Explain blood withdrawal techniques and drug administration in animals.
3. Explain dose, dose calculations grouping of animals, species selection, sex in conducting the animal experimentation.
4. Describe the research Study of screening animal models for Diuretics, no-tropics, anti-Parkinson's, anti asthmatics.
5. Explain screening methods of CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, anti parkinsonism, alzheimer's disease Explain screening methods of for CVS activity- anti hypertensives, diuretics, anti arrhythmic, anti dyslipidemic
6. Explain screening methods of Research methodology and Bio-statistics

UNIT –I

Laboratory Animals: Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals, Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. Techniques for collection of blood and common routes of drug administration in laboratory animals, Techniques of blood collection and euthanasia.

UNIT –II**Preclinical screening models:**

a. Introduction: Dose selection, calculation and conversions, preparation of drug solution/suspensions, grouping of animals and importance of sham negative and positive control groups. Rationale for selection of animal species and sex for the study.

b. Study of screening animal models: Diuretics, nootropics, anti-Parkinson's, antiasthmatics.

Preclinical screening models: for CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, antiparkinsonism, alzheimer's disease.

UNIT –III

Preclinical screening models: for ANS activity, sympathomimetics, sympatholytics, parasympathomimetics, parasympatholytics, skeletal muscle relaxants, drugs acting on eye, local anaesthetics.

UNIT –IV

Preclinical screening models: for CVS activity- antihypertensives, diuretics, antiarrhythmic, antidyslipidemic, anti aggregatory, coagulants, and anticoagulants. Preclinical screening models for other important drugs like antiulcer, antidiabetic, anticancer and antiasthmatics.

Research methodology and Bio-statistics: Selection of research topic, review of literature, research hypothesis and study design Pre-clinical data analysis and interpretation using Students 't' test and One-way ANOVA. Graphical representation of data.

Suggested Readings:

1. Fundamentals of experimental Pharmacology-by M.N.Ghosh
2. Hand book of Experimental Pharmacology-S.K.Kulakarni
3. CPCSEA guidelines for laboratory animal facility.
4. Drug discovery and Evaluation by Vogel H.G.
5. Drug Screening Methods by Suresh Kumar Gupta and S. K. Gupta
6. Introduction to biostatistics and research methods by PSS Sundar Rao and J Richard

18BP 811ET

SEMESTER-VIII

ADVANCED INSTRUMENTATION TECHNIQUES**4H****4C**

Instruction hours/ week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs.
- This subject is designed to impart advanced knowledge on the principles and instrumentation of spectroscopic and chromatographic hyphenated techniques.
- This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.
- To Learn basic principles and instrumentation of thermal analysis
- To know general principles and procedures involved in extraction techniques.
- To Learn basic instrumentation and applications of hyphenated techniques.

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain theoretical principles of, MASS and NMR spectroscopy.
2. Learn basic instrumentation of NMR and mass spectrometer.
3. Explain theoretical principles of x-rays, instrumentation and identification of organic compounds.
4. Learn basic principles and instrumentation of thermal analysis
5. Describe general principles and procedures involved in extraction techniques.
6. Learn basic instrumentation and applications of hyphenated techniques.

Course Content:**UNIT-I**

Nuclear Magnetic Resonance spectroscopy: Principles of H-NMR and C-NMR, chemical shift, factors affecting chemical shift, coupling constant, Spin - spin coupling, relaxation, instrumentation and applications.

Mass Spectrometry- Principles, Fragmentation, Ionization techniques – Electron impact, chemical ionization, MALDI, FAB, Analyzers-Time of flight and Quadrupole, instrumentation, applications

UNIT-II

Thermal Methods of Analysis: Principles, instrumentation and applications of Thermogravimetric Analysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC).

X-Ray Diffraction Methods: Origin of X-rays, basic aspects of crystals, X-ray Crystallography, rotating crystal technique, single crystal diffraction, powder diffraction, structural elucidation and applications.

UNIT-III

Calibration and validation-as per ICH and USFDA guidelines

Calibration of following Instruments: Electronic balance, UV-Visible spectrophotometer, IR spectrophotometer, Fluorimeter, Flame Photometer, HPLC and GC.

UNIT-IV

Radio immune assay: Importance, various components, Principle, different methods, Limitation and Applications of Radio immuno assay.

Extraction techniques: General principle and procedure involved in the solid phase extraction and liquid-liquid extraction.

UNIT-V

Hyphenated techniques-LC-MS/MS, GC-MS/MS, HPTLC-MS.

Suggested Readings:

1. Instrumental Methods of Chemical Analysis by B.K Sharma.
2. Organic spectroscopy by Y.R Sharma.
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors.
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel.
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake.
6. Organic Chemistry by I. L. Finar.
7. Organic spectroscopy by William Kemp.
8. Quantitative Analysis of Drugs by D. C. Garrett.
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi.
10. Spectrophotometric identification of Organic Compounds by Silverstein.

18BP 812 ET**SEMESTER-VIII****DIETARY SUPPLEMENTS AND NUTRACEUTICALS****4H****4C**

Instruction hours/ week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- This subject covers foundational topic that are important for understanding the need and requirements of dietary supplements among different groups in the population.
- To know about effect of nutrition to maintain healthy life of public included maternal and child health and effects of education about nutrition in community.
- To understand source, chemistry and uses of several natural nutraceuticals.
- To know occurrence, chemical nature and medicinal benefits of natural nutraceuticals belong to different phytochemical categories.
- To learn about different free radical which generate in body and their effects and different dietary fibres and complex carbohydrate as functional food ingredients.
- To understand the role of free radicals in development of different diseases and aging

Course Outcomes (CO's): On successful completion of the course the student will

1. Explain the definition, classification of nutraceuticals, functional foods and dietary supplements and role of nutraceuticals in prevention or cure various diseases.
2. Explain about effect of nutrition to maintain healthy life of public included maternal and child health and effects of education about nutrition in community.
3. Describe about source, chemistry and uses of several natural nutraceuticals.
4. Describe occurrence, chemical nature and medicinal benefits of natural nutraceuticals belong to different phytochemical categories.
5. Explain about different free radical which generate in body and their effects and different dietary fibres and complex carbohydrate as functional food ingredients.
6. Explain the role of free radicals in development of different diseases and aging

UNIT I**07 hours**

- a. Definitions of Functional foods, Nutraceuticals and Dietary supplements. Classification of Nutraceuticals, Health problems and diseases that can be prevented or cured by Nutraceuticals i.e. weight control, diabetes, cancer, heart disease, stress, osteoarthritis, hypertension etc.
- b. Public health nutrition, maternal and child nutrition, nutrition and ageing, nutrition education in community.
- c. Source, Name of marker compounds and their chemical nature, Medicinal uses and health benefits of following used as nutraceuticals/functional foods: Spirulina, Soyabean, Ginseng, Garlic, Broccoli, Ginkgo, Flaxseeds

UNIT II**15 hours**

Phytochemicals as nutraceuticals: Occurrence and characteristic features(chemical nature medicinal benefits) of following

- a) Carotenoids- α and β -Carotene, Lycopene, Xanthophylls, leutin
- b) Sulfides: Diallyl sulfides, Allyl trisulfide.
- c) Polyphenolics: Resveratrol
- d) Flavonoids- Rutin, Naringin, Quercetin, Anthocyanidins, catechins, Flavones
- e) Prebiotics / Probiotics.: Fructo oligosaccharides, Lacto bacillum
- f) Phyto estrogens : Isoflavones, daidzein, Genistein, lignans
- g) Tocopherols
- h) Proteins, vitamins, minerals, cereal, vegetables and beverages as functional foods: oats, wheat bran, rice bran, sea foods, coffee, tea and the like.

UNIT III**07 hours**

- a) Introduction to free radicals: Free radicals, reactive oxygen species, production of free radicals in cells, damaging reactions of free radicals on lipids, proteins, Carbohydrates, nucleic acid
- b) Dietary fibres and complex carbohydrates as functional food ingredients..

UNIT IV**10 hours**

- a) Free radicals in Diabetes mellitus, Inflammation, Ischemic reperfusion injury, Cancer, Atherosclerosis, Free radicals in brain metabolism and pathology, kidney damage, muscle damage. Free radicals involvement in other disorders. Free radicals theory of ageing.
- b) Antioxidants: Endogenous antioxidants – enzymatic and nonenzymatic antioxidant defence, Superoxide dismutase, catalase, Glutathione peroxidase, Glutathione Vitamin C, Vitamin E, α - Lipoic acid, melatonin

Synthetic antioxidants: Butylated hydroxy Toluene, Butylated hydroxy Anisole.

- c) Functional foods for chronic disease prevention

UNIT V**06 hours**

- a) Effect of processing, storage and interactions of various environmental factors on the potential of nutraceuticals.
- b) Regulatory Aspects; FSSAI, FDA, FPO, MPO, AGMARK. HACCP and GMPs on Food Safety. Adulteration of foods.
- c) Pharmacopoeial Specifications for dietary supplements and nutraceuticals.

SEMESTER-VIII

Elective course on Pharmaceutical Product Development (Theory)**4H****4C**

Instruction hours/ week: L: 3 T:1 P:0

Marks: Internal: 25 External: 75 Total:100

External Semester Exam: 3 Hours

Course Objectives:

- To Learn the regulatory principles and requirements of drug discovery and developments
- To Understand the concept of preformulation studies for various formulations
- To understand concept and designing of pilot plants and product scale up
- To Learn various pharmaceutical packaging systems and their quality testing
- To Learn the concept of technology transfer from R&D to production plant
- To Discuss on the new era opportunities and challenges in the pharmaceutical market

Course Outcomes (CO's): On successful completion of the course the student will

1. Learn the regulatory principles and requirements of drug discovery and developments
2. Understand the concept of preformulation studies for various formulations
3. Concept and designing of pilot plants and product scale up
4. Learn various pharmaceutical packaging systems and their quality testing
5. Learn the concept of technology transfer from R&D to production plant
6. Discuss on the new era opportunities and challenges in the pharmaceutical market

Course content**Unit I**

Introduction to pharmaceutical product development, objectives, regulations related to preformulation, formulation development, stability assessment, manufacturing and quality control testing of different types of dosage forms

Unit II

An advanced study of Pharmaceutical Excipients in pharmaceutical product development with a special reference to the following categories

- i. Solvents and solubilizers
- ii. Cyclodextrins and their applications
- iii. Non - ionic surfactants and their applications
- iv. Polyethylene glycols and sorbitols
- v. Suspending and emulsifying agents
- vi. Semi solid excipients

Unit-III

An advanced study of Pharmaceutical Excipients in pharmaceutical product development with a special reference to the following categories

- i. Tablet and capsule excipients

- ii. Directly compressible vehicles
- iii. Coat materials
- iv. Excipients in parenteral and aerosols products
- v. Excipients for formulation of NDDS

Selection and application of excipients in pharmaceutical formulations with specific industrial applications

Unit-IV

Optimization techniques in pharmaceutical product development. A study of various optimization techniques for pharmaceutical product development with specific examples. Optimization by factorial designs and their applications. A study of QbD and its application in pharmaceutical product development.

Unit-V

Selection and quality control testing of packaging materials for pharmaceutical product development- regulatory considerations.

PROJECT WORK

SEMESTER-VIII

12H 6C

Instruction hours/ week : L: 0 T:0 P:12

Marks: Internal: 0 External: 150 Total:150

External Semester Exam: 4 Hours

No. of hours: 12**Tutorial:0****Credit point: 6**

All the students shall undertake a project under the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subject opted by the student in semesterVIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages). The internal and external examiner appointed by the University shall evaluate the project at the time of the Practical examinations of other semester(s). Students shall be evaluated in groups for four hours (i.e., about half an hour for a group of five students).
