<P>About Titan
br>It takes something special to stay in the hearts and minds of a country for over a quarter of a century. For starters, it takes a certain insight into what makes watch lovers tick. But that's just one of the many reasons why Titan is now the 5th largest watchmaker in the world, and we would rather have our creations speak for us. Take the razor-thin genius of the Edge (two time winner of the acclaimed Red Dot award), or the sinuous curves of the Raga. Consider the light-fuelled HTSE and a score of other

timepieces that hold their own. The one thing that they have in common is that they were each created for unique looks –sporty, classic, trend bender, formal, dressed-up... We hope you enjoy finding your favourites as much as we enjoyed making them.

<html>

<body>

VISUAL BASIC is a high level programming language which evolved from the earlier DOS version called BASIC. BASIC means Beginners' All-purpose Symbolic Instruction Code. It is a relatively easy programming language to learn. The code looks a lot like English Language. However, people prefer to use Microsoft Visual Basic today, as it is a well developed programming language and supporting resources are available everywhere. Now, there are many versions of VB exist in the market, the most popular one and still widely used by many VB programmers is none other than Visual Basic 6. Visual Basic 6 is quite easier than other programming languages such as C++, C#, Java etc. This is because Visual Basic enables you to work in a graphical user interface where you can just drag and drop controls.

Information technoly is new current trends
