1. Thepassingminimumforvalueaddedcourseis50marksoutof100marks.Therewillbetwotests,ofwhichonewill be class test covering 50% of syllabus for 50 marks and other for 50marks.

- 2. Credits for value added courses are not counted for computation of CGPA.
- 3. Interestedstudentscanoptoneselfstudycourseineighthsemesterfromopenelectives which willbereflected in the mark sheet only if he / shepasses

Programme Educational Objectives (PEO's)

1:Graduates will more conscious about their profession with social awareness and responsibility.

2:Graduates will be engineering experts, who would help solve industry's technological problems.

3:Graduates will be engineering professionals, consultants or entrepreneurs engaged in technology development.

4:Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.

Programme Outcomes (PO's)

1: Ability to apply knowledge of mathematics and science in solving engineering problems.

2: In-depth knowledge on the fundamental principles, construction and auxiliary systems of mechanical sciences.

3: To understand the principles involved in evaluating the structural, functional and safety requirements of mechanical systems.

4: Hands on knowledge to develop analytical skills for designing and analyzing various mechanical components and processes.

5: To understand and apply appropriate techniques and IT tools for the design and analysis of mechanical systems.

6: Understanding the mechanism of pollutant formation and its control techniques.

7: Understanding of human and ethical responsibilities towards the profession and society.

8: Ability to understand the economics and cost analysis in order to take economically sound decisions.

9: Ability to apply modem techniques and tools necessary for engineering practice with appropriate considerations for public health, safety, cultural and environmental limitations.

10: Understand the impact of engineering solutions in a societal context and to be able to respond effectively to the needs for sustainable development.

11: Function effectively as an individual, and as a member or a leader in diverse teams, and in multi-disciplinary situations.

12: To recognize the need for, and have the ability to engage in independent and lifelong learning.

ProgrammeSpecific Outcomes (PSO's)

13: Ability to design a mechanical system, component, or process to meet desired needs of the nation, industries, institutions within realistic constraints such as economic, environmental, social, political, ethical, health care, and safety, manufacturability, and sustainability.

14:Ability to develop and use of software tools and Information Technology for mechanical engineering domain.

15:Ability to perform effectively first level managerial responsibilities for large or medium engineering organizations.

SEMESTER I COMMUNICATIVEENGLISH

3003100

COURSE OBJECTIVES

- 1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
- 2. To make the students to meet the growing demand in the field of Globalcommunication.
- 3. To help students acquire their ability to speak effectively in real lifesituations.
- 4. To inculcate the habit of reading and to develop their effective readingskills.
- 5. To ensure that students use dictionary to improve their active and passivevocabulary.
- 6. To enable students to improve their lexical, grammatical and communicativecompetence.

COURSE OUTCOMES

Students undergoing this course will be able to

- 1. Use English language for communication: verbal & non –verbal.
- 2. Enrich comprehension and acquisition of speaking & writingability.
- 3. Ensure students proficiency in professional communication.
- 4. Developed their active and passivevocabulary.
- 5. Gain confidence in using English language in real lifesituations.
- 6. Improve word power: lexical, grammatical and communication competence

UNIT I

Listening – Types of listening - Listening to class reading - Video tapes/ Audio tapes. Speaking – Introduction on self - Introduction on one's friend. Reading - Reading for comprehension – Reading different kind of passages like descriptive, narrative,objective,conversationalandargumentative. Writing–FormalandInformalletters-Freewritingonanytopic –My favorite place, hobbies, dreams, goals, etc- - To fill in different application forms. Grammar – Articles- WH questions –Yes/No Question - Subject Verb agreement. Vocabulary - Word Formation – Word expansion (Root word) - Prefix and Suffix.

UNIT II

Listening – Understanding the passage in English –Pronunciation practice. Speaking – Asking and answering questions - Telephone etiquette. Reading – Critical reading – Finding key information in a given text (Skimming - Scanning). Writing– Coherence and cohesion in writing – Short paragraph writing – Writing short messages. Grammar – Parts of speech – Noun – Verb – Adjectives - Adverbs. Vocabulary – Compound Nouns/Adjectives – Irregular verbs.

UNIT III

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing – Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

UNIT IV

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) Letters to the Editor. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

UNITV

Listening -Listening to different accents, speeches/presentations. Speaking- Extemporetalk –Just-a-minute talk. Reading-Reading strategies–Intensive reading – Text analysis. Writing - Creative writing – Writing circulars andnotices – Writing proposal. Grammar – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. Vocabulary – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

COURSE OBJECTIVES

The objective of this course is

- 1. To familiarize the prospective engineers with techniques in calculus, and multivariate analysis.
- 2. To familiarize the prospective engineers with techniques in linear algebra.
- 3. To equip the students with standard concepts and tools at an intermediate to advanced level.
- 4. To equip the students will serve them to wards tackling more advanced level of mathematics.
- 5. To make the students will serve them to find the useful applications in their disciplines.
- 6. To make the students to solve the real time problems using standard concepts and tools.

COURSE OUTCOMES

The students will learn:

- 1. To apply differential and integral calculus to notions of curvature and to improper integrals.
- 2. Apart from some other applications they will have a basic understanding of Beta and Gammafunctions.
- 3. The tool of power series and Fourier series for learning advanced EngineeringMathematics.
- 4. To deal with functions of several variables that are essential in most branches of engineering.
- 5. The essential tool of matrices and linear algebra in a comprehensivemanner.
- 6. Students can solve real time problems using standard concepts and tools

UNITI MATRICES

Review of Matrix Algebra - Characteristic equation - Eigenvalues and Eigenvectors of a real matrix -Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNITII DIFFERENTIALCALCULUS

Overview of Derivatives - Curvature in Cartesian co-ordinates - Centre and radius of curvature - Circle of curvature - Evolutes - Envelopes- Evolutes as Envelope of normals - Maxima and Minima of functions of two or more Variables - Method of Lagrangian Multipliers

UNITIII DIFFERENTIALEQUATIONS

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations - Method of variation parameters.

UNITIV FUNCTIONS OFSEVERALVARIABLES

Partial derivatives - Euler's theorem for homogeneous functions - Total derivatives - Differentiation of implicit functions – Jacobians – Maxima and Minima of functions of two or more Variables - Method of Lagrangian multipliers.

UNITV SEQUENCES ANDSERIES

Sequences: Definition and examples – Series: Types and Convergence – Series of positive terms – Tests of convergence: Comparison test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

16BEPH103

COURSE OBJECTIVES

- 1. To introduce the basic physics concepts relevant to different branches of Engineering and Technology.
- 2. To acquire the knowledge of Electromagnetic field theory.
- 3. To make the student to learn scientific, mathematical and engineeringprinciples.
- 4. To make the students to understand the basics of vacuum science.
- 5. To make the students to understand the process of production and measurement.
- 6. To make the students to understand the working of Gauges like Pirani, McLeod and Penning

COURSE OUTCOMES

- 1. Formulate potential problems within electrostatics, magneto statics.
- 2. Formulate stationary current distributions in linear, isotropic media.
- Acquire knowledge on properties of matter, quantum physics. 3.
- Understand the basics of vacuum science. 4.
- Understand the process of production and measurement. 5.
- 6. Understand the working of Gauges like Pirani, McLeod and Penning

UNITI PROPERTIES OF MATTERANDTHERMODYNAMICS

Three types of modulus of elasticity - basic definitions, relation connecting the modulii (Derivation), poison ratio- Torsional pendulum- bending of beams- bending moment - basic assumption of moment - uniform and non uniform bending

Concept of entropy- change of entropy in reversible and irreversible processes - refrigeration.

LASER ANDFIBEROPTICS UNITH

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram)

UNITIII **QUANTUM PHYSICS**

Introduction to quantum theory - Black body radiation-Photo electric effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation - time dependent and time independent equations - particle in one dimensional box- scanning electronmicroscope.

UNITIV **CRYSTALPHYSICS**

Lattice - unit cell - Bravais lattice - lattice planes - Miller indices - calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects - point, line and surfacedefects

UNITV ULTRASONICS AND NUCLEARPHYSICS

Production of ultrasonics by piezoelectric method -Non Destructive Testing - pulse echo system through transmissionandreflectionmodes-A,BandC-scandisplays,Medicalapplications-SonogramIntroduction

- basics about nuclear fission and fusion, nuclear composition - Radiation detectors - semi conductor detector. Reactors - essentials of nuclear reactor- power reactor.

WEB REFERENCES

www.nptel.ac.in
 www.physicsclassroom.com
 www.oyc.yale.edu

COURSEOBJECTIVES

- 1. To understand the terminologies of atomic and molecularstructure
- 2. To study the basics of Periodic properties, Intermolecularforces
- 3. To study about spectroscopictechnique
- 4. To understand the working of electromagnetic spectrum and spectroscopictechniques
- 5. To understand the thermodynamic functions
- 6. To comprehend the basic organic chemistry and to synthesis simpledrug.

COURSEOUTCOMES

- 1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecularforces.
- 2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
- 3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
- 4. Understand the concept of various spectroscopictechniques.
- 5. Rationalise bulk properties and processes using thermodynamicconsiderations.
- 6. List major chemical reactions that are used in the synthesis of molecules

UNIT I WATERTECHNOLOGY

Sources-Characteristics – Specification for drinking water, BIS &WHO-Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation. UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination - Reverseosmosis.

UNIT II ELECTROCHEMISTRY AND STORAGEDEVICES

Electrochemical cells – EMF – Measurement of EMF – Single electrode potential – Nernst equation – Reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - $Fe^{2_+}vs$ dichromate) –Electrolytic conductance-application (conductometric titration)-Batteries- Primary batteries-Leclanche cell-Secondary batteries- Lead acid battery. An introduction to Fuel Cell- H₂-O₂ Fuel Cell.

UNIT III FUELSANDCOMBUSTION

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, Combustion of fuel-Introduction-GCV-NCV-Flue gas analysis.

UNIT IV CORROSIONSCIENCE

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control -Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings – Organic coatings-Paints - Constituents and functions –Inorganic coatings- Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating - Hotdipping.

UNIT V SURFACE CHEMISTRY ANDPHASERULE

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Role of adsorbents in industries (catalysis and water softening).

Phase Rule: Definition -Phase diagrams - one component water system, two component Ag-Pb system.

COURSE OBJECTIVES

16BEME104

- 1. To impart the basic knowledge of various basic fields of mechanicalengineering.
- 2. To Study about basic manufacturing and machiningprocesses.
- 3. To study about powerplants.
- 4. To study about automobileengineering
- 5. To study about boiler and hydraulic machines.
- 6. To study about Refrigeration and Airconditioning

COURSE OUTCOMES

- 1. Design different sheet metal working processes
- 2. Select appropriate Joining Processes to join Work piece.
- 3. Differentiate various metal forming processes such as Hot and Cold Working, Rolling, Forging, Extrusion and Drawing Processes.
- 4. Students will be able to apply these basics in the designing of the automotive components and engines.
- 5. Students will be able to get employed in Private Companies like Automotive Sector involving Manufacturing and Design as Graduate Trainees Engineer also in government firms like pollution control board.
- 6. Students should be able to calculate cooling load for air conditioning systems used for various applications

INTRODUCTION (Not included forexamination)

Engineering and Technology - History of Mechanical Engineering- Mechanics - Statics and dynamics - Broad areas in Mechanical Engineering.

UNIT I MANUFACTURINGPROCESSES

FOUNDRY - Principles - Patterns - Types, Molding Processes, Cupola and Induction Furnaces. METAL FORMING - Principles - Hot and cold working of metals - Forging, rolling, extrusion and wire drawing, sheet metal operations. WELDING - Principles - Oxy-Acetylene Welding and Manual Metal Arc Welding, Brazing and Soldering.

UNIT II MACHINETOOLS

Machining principles - Construction and working principles of basic machine tools - Lathe, Drilling, Shaper, Planer and Milling machine. Introduction to CNC machines.

UNIT III AUTOMOBILEENGINEERING

Working principle of petrol and diesel engines - Four stroke and two stroke cycles - Comparison between four stroke and two stroke engines - Working principle of simple carburetor - Lubrication system and coolingsystem.

UNIT IV ENERGY ENGINEERING & HYDRAULIC MACHINES

Introduction to Boilers - Working principle of Thermal, Hydro - Electric and Nuclear Power Plants - Merits and demerits. Solar – Wind power plants.

Turbines - Impulse turbine - Pelton wheel, Reaction turbines - Kaplan and Francis turbines - Pumps - Working principle of Reciprocating pumps and Centrifugal pumps.

UNIT V REFRIGERATION ANDAIR-CONDITIONING

Terminology of Refrigeration and Air Conditioning - Basic principles of Vapour Compression and Absorption Refrigeration System – Window and Split Room Air Conditioners.

16BEME105A BASIC ELECTRICAL AND ELECTRONICS ENGINEERING 3 0 0 3 100

COURSE OBJECTIVES

- 1. To impart the basic knowledge about the Electric circuits.
- 2. To understand the working of Electrical Machines and Transformers.
- 3. To understand the working of Power Converters and components of low-voltage electricalinstallations.
- 4. To understand and analyze basic electric and magnetic circuits.
- 5. To study the working principles of electrical machines and power converters.
- 6. To introduce the components of low-voltage electrical installations.

COURSE OUTCOMES

- 1. Gain the basic knowledge about the Electric circuits.
- 2. Understand the working of Electrical Machines and Transformers.
- 3. Understand the working of Power Converters and components of low-voltage electricalinstallations
- 4. Understand and analyze basic electric and magneticcircuits.
- 5. Acquire knowledge on the working principles of electrical machines and powerconverters.
- 6. Understand the components of low-voltage electricalinstallations

UNITI ELECTRIC CIRCUITS& MEASUREMENTS

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits WaveformsandRMSValue–PowerandPowerfactor–SinglePhaseandThreePhasebalancedCircuits.

UNITII ELECTRICALMACHINES

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNITIII MEASURINGINSTRUMENTS

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNITIV SEMICONDUCTOR DEVICESANDAPPLICATIONS

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNITV DIGITALELECTRONICS

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – A/D and D/A Conversion (single concepts).

16BEME105B

COURSE OBJECTIVES

- To know about different materials and their properties 1.
- 2.

3.

- To know about engineering aspects related tobuildings To know about importance of surveying and the transportationsystems To get exposed to the rudiments of engineering related to dams, water supply, and sewagedisposal 4.
- To know about importance of drawings
 To know about importance of electrical fittings.

COURSE OUTCOMES

- 1. Students are able to understand the property, use, advantage and disadvantage of different material used in construction
- Students are able to understand the component of building with their function 2.
- Students are able to understand construction procedure of different components 3.
- After completion of this students will able to understand basic principles of building design and planning. 4.
- They will explore building drawing as a way of discovering and developing ideas for designing residential, 5. commercial and public buildings.
- Students will identify suitable method of irrigation and drainage of waterlogged area. 6.

UNITI **BUILDINGMATERILAS**

Introduction - Civil Engineering - Materials: Bricks - composition - classifications - properties uses. Stone - classification of rocks - quarrying - dressing -properties -uses. Timber - properties -forms. Concrete – grade – properties –uses.

UNITII **BUILDINGCOMPONENTS**

Building - selection of site - classification - components. Foundations - functions - classifications bearing capacity. Flooring - requirements - types - cement concrete - marble - terrazzo floorings. Roof – types and requirement

UNITIII **SURVEYING**

Surveying - objectives - classification - principles of survey - survey instruments , their care and adjustments – Ranjing and Chaining .Compass – types –Prismatic Compass. Bearing – types. Levelling –Levels and staves – types. Contouring

UNITIV WATER SUPPLY AND SEWAGE DISPOSAL

Dams - purpose - selection of site - types -gravity dam (cross section only). Water supply objective - quantity of water - sources - standards of drinking water - distribution system. Sewage classification — septic tank – components and functions.

UNITV BUILDINGDRAWING

Types of drawing with appropriate scale & Uses of index map, key plan, village map, site plan, Layout plan – Types of Projection adopted in Building Drawing (Plan, Elevation and sections) – Scales for various types of Drawings- Working drawing, large scale drawing- Symbols, Conventions and Abbreviations for - Electrical fittings, water supply, sanitary fittings, materials of construction -Sizes of various standard papers.

COURSE OBJECTIVES

- 1. To learn the basic concepts in physics relevant to different branches of Engineering and Technology.
- 2. To study the concept of semiconductor and conductivity.
- 3. To learn the properties of materials.
- 4. To learn the basic concept of Numerical Aperture and acceptanceangle.
- 5. To make the students to determination of wavelength usinggrating.
- 6. To learn the basic concept about viscosity of liquids.

COURSE OUTCOMES

- 1. Understand the basic concepts in physics relevant to different branches of Engineering and Technology.
- 2. Understand the concept of semiconductor and conductivity.
- 3. Acquire knowledge on the properties of materials.
- 4. Understand the basic concept of Numerical Aperture and acceptanceangle.
- 5. Understand the students to determination of wavelength usinggrating.
- 6. Acquire knowledge on the basic concept about viscosity of liquids

LIST OF EXPERIMENTS

PHYSICS

- 1. Determination of velocity of sound and compressibility of liquid Ultrasonicinterferometer.
- 2. Determination of wavelength of mercury spectrum spectrometergrating.
- 3. Determination of Young's modulus of the material Non uniform bending (or) Uniformbending.
- 4. Determination of Viscosity of liquid Poiseuille'smethod.
- 5. Spectrometer Dispersive power of aprism.
- 6. Torsional pendulum Determination of Rigiditymodulus.
- 7. Particle size determination using DiodeLaser
- 8. Determination of Laser parameters Wavelength, and angle ofdivergence.
- 9. Determination of acceptance angle in an optical fiber.
- 10. Determination of thickness of a thin wire Air wedgemethod
- 11. Determination of Band Gap of a semiconductormaterial.
- 12. Determination of Specific resistance of a given coil of wire WheatstoneBridge

ENGINEERING CHEMISTRY LABORATORY

COURSEOBJECTIVES

- 1. To understand the terminologies of atomic and molecularstructure
- 2. To study the basics of Periodic properties, Intermolecularforces
- 3. To study about spectroscopictechnique
- 4. To understand the working of electromagnetic spectrum and spectroscopictechniques
- 5. To understand the thermodynamic functions
- 6. To comprehend the basic organic chemistry and to synthesis simpledrug.

COURSEOUTCOMES

- 1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecularforces.
- 2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
- 3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
- 4. Understand the concept of various spectroscopictechniques.
- 5. Rationalise bulk properties and processes using thermodynamicconsiderations.
- 6. List major chemical reactions that are used in the synthesis of molecules

LIST OF EXPERIMENTS

CHEMISTRY

- 1. Estimation of alkalinity of Watersample
- 2. Estimation of hardness of Water byEDTA
- 3. Estimation of Chloride in Water sample (Argentometricmethod)
- 4. Determination of corrosion rate by weight lossmethod.
- 5. Determination of molecular weight and degree of polymerization usingviscometry.
- 6. Conductometric Titration (Simple acidbase).
- 7. Conductometric Titration (Mixture of weak and strongacids).
- 8. Conduct metric Titration using BaCl₂ vs Na₂SO₄.
- 9. pH Titration (acid &base).
- 10. Potentiometric Titration (Fe²⁺ / KMnO₄ orK₂Cr₂O₇).
- 11. Determination of water of crystallization of a crystalline salt (Coppersulphate).
- 12. Estimation of Ferric ion byspectrophotometry.
- 13. Determination of Chemical OxygenDemand.

TOTAL

16BEME112

COURSE OBJECTIVES

- 1. To prepare the students to design a system, component, or process.
- 2. To meet desired needs within realistic constraints such as economic, environmental, social, and ethical.
- 3. To make the component with health and safety, manufacturability, and sustainability
- 4. To prepare the students to communicate effectively and to use the techniques, and skills.
- 5. To make the students to use modern engineering tools necessary for engineeringpractice.
- 6. To make the students to assemble different components.

COURSE OUTCOMES

Upon completion of this course,

- 1. The students will gain knowledge of the different manufacturing processes.
- 2. To fabricate components using differentmaterials.
- 3. Students will be able to fabricate components with their ownhands.
- They will also get practical knowledge of the dimensional accuracies and dimensionaltolerances 4.
- 5. By assembling different components with different processes.
- 6. They will be able to produce small devices of their interest

PART - A (CIVIL & MECHANICAL)

1.	WELDING	6
	i. Preparation of arc welding of butt joints, lap joints and teejoints.	
2.	BASICMACHINING	6
	i. Simple Turning and Taperturning	
	ii. Drilling and Tapping	
3.	SHEETMETALWORK	6
	i. Model making – Trays, funnels,etc.	
4.	DEMONSTRATIONON	4
	i. Smithyoperations	
	ii. Foundryoperations	
	iii. PlumbingWorks	
	iv. CarpentaryWorks	
PART	-B (ELECTRICAL & ELECTRONICS)	
5.	ELECTRICALENGINEERING	10
	i. Study of electrical symbols and electrical equipments.	
	ii. Construct the wiring diagram for Stair case wiring and Fluorescent lampwiring.	
	iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, and energymeter.	lamp
	iv. Measurement of electrical quantities – voltage, current, power & power factor in Rload.	
	v. Measurement of energy using single phase energymeter.	
6.	ELECTRONICSENGINEERING	13
	i. Study of Electronic components- Resistor (color coding), capacitors and inductors.	
	ii. Soldering practice – Components Devices and Circuits – Using general purposePCB.	
	iii. Study of logic gates AND, OR, NOT, NOR and NAND.	
	iv Study of HWR and FWR	

1V. Study of HWR and FWR.

COURSE OBJECTIVES

- 1. To make the students to design a system, component, or process to meet desired needs.
- 2. To prepare the students to design the components with realistic constraints.
- 3. To make the students to consider economic, environmental, ethical, health and safety when they design.
- 4. To make the students to design the components with considering manufacturability, and sustainability
- 5. To prepare the students to communicate effectively using the techniques, skills, and modern engineering tools.
- 6. To make the students to understand to use necessary for engineeringpractice.

COURSE OUTCOMES

The student will alsolearn:

- 1. Introduction to engineering design and its place insociety
- 2. Exposure to the visual aspects of engineering design and engineering graphicsstandards
- 3. Exposure to engineering communication effectively.
- 4. Exposure to 3D free hand sketching.
- 5. Acquired the knowledge of projections of points, lines and plane surfaces.
- 6. Understand the basic concept of projection of solids

UNITI INTRODUCTION

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNITII SCALES ANDPLANECURVES

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNITIII FREEHANDSKETCHING

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNITIV PROJECTION OF POINTS, LINES ANDPLANESURFACES

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNITV PROJECTIONOFSOLIDS

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

HUMAN VALUES

COURSE OBJECTIVES

- 1. To know the value of being a human being and the value of being a usefulcitizen
- 2. To develop a critical ability to distinguish between essence and form, or between what is of value and what is superficial, in life.
- 3. To move from discrimination to commitment.
- 4. To recognize and determine the role of engineers in the economic and social development of the society.
- 5. To develop social responsibility &human professional ethics.
- 6. To develop the knowledge of social impact of economic liberalization and technology.

COURSE OUTCOMES

- 1. Identify and analyze an ethical issue in the subject matter under investigation or in arelevant field
- 2. Identify the multiple ethical interests at stake in a real-world situation or practice
- 3. Articulate what makes a particular course of action ethically defensibleAssess their own ethical values and the social context of problems
- 4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of humansubjects
- 5. Demonstrate knowledge of ethical values in non-classroom activities, such as servicelearning, internships, and field work
- 6. Integrate, synthesize, and apply knowledge of ethical dilemmas and resolutions in academic settings, including focused and interdisciplinary research.

UNIT I

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values - Attitudes - types of attitudes

UNIT II

Self Development :Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III

Individual Qualities- Truthfulness - Constructivity - Sacrifice - Sincerity - Self Control - Altruism-

Tolerance - Scientific Vision - Regulating Desire

UNIT IV

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

16BECC201A

BUSINESS COMMUNICATION

COURSE OBJECTIVES

- 1. To help students comprehend the role of listening skills in effective communication
- 2. To familiarize students with verbal and non-verbalcommunication
- 3. To expose students to neutralaccent
- 4. To develop emotional intelligence skills in them for enhancing theirself-esteem
- 5. To assist them in setting goals and developing positiveattitude
- 6. To enable students to acquire decision making skills, problem solving skills and assertiveskills

COURSE OUTCOMES

- 1. CO1. To be familiar with the complete course outline/Course Objectives/Learning Outcomes/ Evaluation Pattern & Assignments
- 2. To participate in an online learning environment successfully by developing the implication-based understanding of Paraphrasing, deciphering instructions, interpreting guidelines, discussion boards & Referencing Styles.
- 3. To demonstrate his/her ability to write error free while making an optimum use of correct Business Vocabulary & Grammar.
- 4. To distinguish among various levels of organizational communication and communication barriers while developing an understanding of Communication as a process in an organization.
- 5. To draft effective business correspondence with brevity and clarity.
- 6. To stimulate their Critical thinking by designing and developing clean and lucid writing skills.

UNIT I

What is Business Communication? - Types of Communication – Formal and informal communication – Process of Communication- modes of Communication – Barriers to communication.

UNIT II

Written Business Communication – Style- word-usage- organisation of Ideas – mechanics of writing and fill up of forms - Cover Letter- Letter for Job Application- Letter of Complaint - Memos - Resumes - Email- Reports Revising and proofreading- Advertising slogans- jargons- Description of Graphics and visual aids - interpretation of graphs using expressions of comparison and contrast .

UNIT III

Reading and Understanding the news articles - Oral Business Communication - First Impressions - Attire – Effective Presentation strategies- Nuances of delivery – Controlling nervousness and stage fright- Visual aids Presentations- Capturing Audience - Tone - Behavior - Telephone Etiquette-Non - verbal communication - Eye contact - Facial expressions - Posture - Gestures - Body langage – Etiquette- Organization of presentation – brain storming-Negotiations.

UNIT IV

Difference between goals and dreams - SMART goal setting - 3 Ds of goal setting- Determination, Discipline and Direction - Developing the right attitude - Motivation - Intrinsic and Extrinsic motivation - Dealing with change - Dedication - Taking responsibilities - Decision making.

UNITV

Intrapersonal skills - Self-analysis - Thought process – Interpersonal skills - Confidence building - Resolving conflicts- Analytical skills - Team Building - Leadership skills - Planning/organizing - Ability to work independently - Professional ethics - Communicating via e-mail. Ethical perspectives and their implications for responsible communication - Proposal Presentation

16BECC201B

TECHNICAL ENGLISH

COURSE OBJECTIVES

- 1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
- 2. To make the students to meet the growing demand in the field of Globalcommunication.
- 3. To help students acquire their ability to speak effectively in real lifesituations.
- 4. To inculcate the habit of reading and to develop their effective readingskills.
- 5. To ensure that students use dictionary to improve their active and passivevocabulary.
- 6. To enable students to improve their lexical, grammatical and communicativecompetence.

COURSE OUTCOMES

Students undergoing this course will be able to

- 1. Use English language for communication: verbal & non -verbal.
- 2. Enrich comprehension and acquisition of speaking & writingability.
- 3. Ensure students proficiency in professional communication.
- 4. Developed their active and passivevocabulary.
- 5. Gain confidence in using English language in real lifesituations.
- 6. Improve word power: lexical, grammatical and communication competence

UNITI

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a Covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentence - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT II

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome Address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT III

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid Reading – Skimming, Scanning and Surveying. (SQ3R)**Writing**- Essay writing -Minutes of Meeting - Agenda – **Grammar** - Active and Passive voice - Purpose Expression. **Vocabulary** - Same words used as noun and verb - often misspelt and confusedwords.

UNIT IV

Listening – Listening to telephone conversation - Viewing model interviews. Speaking – Group Discussion - Correlation between verbal & non - verbal communication. Reading – Reading Comprehension (short & long text) - Reading job advertisements and profile of a company. Writing – Job Application - Resume Writing - Checklist Preparation. Grammar - Numerical Expressions – Collocations - Vocabulary - Singular and Plural(Nouns)

UNITV

Listening – Types of Listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - voice, quality, volume, pitch etc., **Reading** -Note Making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation Writing – Short Essays Writing-**Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabulary with their meanings.

TOTAL

Note:Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

16BECC202

COURSE OBJECTIVES

The objective of this course is

- 1. To familiarize the prospective engineers with techniques in Multivariate integration.
- 2. To familiarize the concept of ordinary and partial differential equations and complex variables.
- 3. To equip the students to deal with advanced level of mathematics and applications.
- 4. To make the students to formulate and solve problems involving random variables.
- 5. To equip the students to Understand the basic concepts of one- and two-dimensional random variables.
- 6. To understand the concept of testing of hypothesis for small and large samples in real life problems.

COURSE OUTCOMES

The students will learn:

- 1. The mathematical tools needed in evaluating multiple integrals and their usage.
- 2. The effective mathematical tools for the solutions of differential equations that model physicalprocesses.
- 3. The tools of differentiation and integration of functions of a complex variable that are used in various techniques dealing engineeringProblems.
- 4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
- 5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
- 6. Apply the concept of testing of hypothesis for small and large samples in real life problems

UNITI MULTIPLEINTEGRALS

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNITI VECTORCALCULUS

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelopipeds.

UNITIII PARTIALDIFFERENTIALEQUATIONS

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNITIV ANALYTIC FUNCTIONS

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: w = z+a, az, 1/z, and bilinear transformation.

UNITV COMPLEXINTEGRATION

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

16BECC204

COURSE OBJECTIVES

- 1. To create the awareness about environmental problems amongpeople.
- 2. To develop an attitude of concern for theenvironment.
- 3. To motivate public to participate in environment protection and improvement.
- 4. To demonstrate proficiency in quantitative methods, qualitative analysis, and critical thinking.
- 5. To develop writing and oral communication needed to conduct high-level work as interdisciplinary scholars and / orpractitioners.
- 6. To Learn about the systems concepts and methodologies to analyze and understand interactions.

COURSE OUTCOMES

- 1. Master core concepts and methods from ecological and physical sciences and their application in environmental problemsolving.
- 2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- 3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- 4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to globalscales.
- 5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- 6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnectedworld

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation-Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem-Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY

Introduction to biodiversity,Definition-Genetic diversity,Species diversityand Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes–Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUESAND ENVIRONMENT

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights-Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

16BEME212 COMPUTER PRACTICEANDPROGRAMMING LABORATORY

1043100

COURSE OBJECTIVES

- 1. To provide an awareness to Computing and CProgramming
- 2. To know the correct and efficient ways of solvingproblems
- 3. To learn to develop algorithm for simple problemsolving.
- 4. To Study, analyze and understand logical structure of a computer program
- 5. To be able to declare pointers of different types and use the mind defining self- referential structures.
- 6. To be able to create, read and write to and from simple textfiles.

COURSE OUTCOMES

- 1. To formulate the algorithms for simpleproblems
- 2. To translate given algorithms to a working and correctprogram
- 3. To be able to correct syntax errors as reported by the compilers
- 4. To be able to identify and correct logical errors encountered at runtime
- 5. To be able to write iterative as well as recursive programs
- 6. To be able to represent data in arrays, strings and structures and manipulate them through a program

THEORY:

What is computer- Computer Components- What is C- C Character set- Constants, Variables and Keywords-General form of C Program - Relational and Logical Operators - Selection Structures- If and nested if - Switch Case - Loops-Definition and types- Functions- Arrays- Introduction to Strings-Pointers.

PRACTICALS:

- 1. Working with word Processing, Spreadsheet and presentation software inLinux
- 2. Programming inScratch:

Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming

3. CProgramming:

Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function, implementation of pointers.

9

COURSE OBJECTIVES

- 1. To prepare the students to make section of solids like Prism, Cylinder, and Pyramid.
- 2. To prepare true shape of section.
- 3. To gain the knowledge on lateral surfaces.
- 4. To acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
- 5. To gain the knowledge on 2D drawing using CAD software.
- 6. To acquire the knowledge on basics of 3D modeling packages.

COURSE OUTCOMES

- 1. The students to draw section of solids like Prism, Cylinder, and Pyramid.
- 2. Students can prepare true shape of section.
- 3. Students gain the knowledge on lateral surfaces.
- 4. Students acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
- 5. Students gain the knowledge on 2D drawing using CAD software.
- 6. Students acquire the knowledge on basics of 3D modeling packages

UNITI SECTIONOFSOLIDS

Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.

UNITII DEVELOPMENTOFSURFACES

Developmentoflateralsurfacesofsimpleandtruncatedsolids–Prisms,pyramids,cylindersandcones– Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNITIII ISOMETRIC PROJECTIONS

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones.

UNITIV PERSPECTIVEPROJECTIONS

Perspective projection of prisms, pyramids, cylinders and cone by visual ray method and vanishing point method.

UNITV COMPUTERGRAPHICS

Introduction to 3D modeling packages. Drafting practices - modeling of simple engineering components, sections and extraction of 2D drawings.

APTITUDE TRAINING

COURSE OBJECTIVES

- 1. To understand the basic concepts of QUANTITATIVE ABILITY
- 2. To understand the basic concepts of LOGICAL REASONING Skills
- 3. To acquire satisfactory competency in use of VERBAL REASONING
- 4. To solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
- 5. To solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
- 6. To compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

COURSE OUTCOMES

- 1. Understand the basic concepts of QUANTITATIVE ABILITY
- 2. Understand the basic concepts of LOGICAL REASONING Skills
- 3. Acquire satisfactory competency in use of VERBAL REASONING
- 4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
- 5. Solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
- 6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc

UNIT I

Introduction, Speed Math's, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT II

Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT III

Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

SEMESTER III METHODS OF APPLIED MATHEMATICS

COURSE OBJECTIVES

- 1. To introduce the basic concepts of PDE for solving standard partial differentialequations
- 2. To acquaint the student with Fourier series techniques in solving heat flow problems used in varioussituations.
- 3. To provide an overview of probability and statistics to engineers
- 4. To introduce the basic concepts of two-dimensional randomvariables
- 5. To acquaint the knowledge of testing of hypothesis for small and large samples.
- 6. To apply testing of hypothesis in important role in real lifeproblems.

COURSE OUTCOMES

After successfully completing the course, the student will have a good understanding of the following topics and their applications

- 1. The fundamental concepts of partial differential equations and the various solution procedures for solving the first order nonlinear partial differential equations.
- 2. Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional waveequations.
- 3. Understand the basic concepts of one knowledge of the concepts of probability and have knowledge of standard distribution which can describe real life phenomenon.
- 4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
- 5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimentaldata
- 6. Apply the concept of testing of hypothesis for small and large samples in real lifeproblems

UNITI LAPLACETRANSFORM

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions.

UNITII FOURIERSERIES

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNITIII FOURIERTRANSFORM

Fourier integral theorem (Statement Only) – Fourier transform pair –Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation between Fourier and Laplace transforms

UNITIV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNITV Z -TRANSFORM ANDDIFFERENCEEQUATIONS

Z-transform - Elementary properties – Inverse Z- transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

COURSE OBJECTIVES

- 1. To develop capacity to predict the effect of force and motion.
- 2. To understand the importance of free body diagram for complex machine structure.
- 3. To perform force analysis using law of mechanics.
- 4. To introduce the concepts of static equilibrium condition for particles and rigid bodies
- 5. To Understand the concepts of kinematics of particles and friction.
- To make the students conversant to solve the problems using equation of motions. 6.

COURSE OUTCOMES

At the end of the course the students will be able to

- 1. Understand the basic concepts of force and laws of mechanics.
- 2. Develop free body diagram for complex machine structure and to perform force analysis.
- 3. Apply static equilibrium condition for particles and rigid bodies.
- 4. Locate the center of gravity and moment of inertia for planes and solids.
- 5. Understand the concepts of kinematics of particles and friction.
- 6. Solve the problems using equation of motions

UNIT I STATICSOFPARTICLES

Forces - system of forces - concurrent forces in plane and space- resultant - problems involving the equilibrium of a particle-free body diagram-equilibrium of particle in space.

UNIT II STATICS OF RIGID BODIES INTWODIMENSIONS

Rigid bodies-moment of force about an axis-moments and couples-equivalent system of coplanar forces-Rigid body in equilibrium-problems involving equilibrium of rigid body-types of supports-reactions of beams.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENTOFINERTIA

Centroids of areas, composite areas, determination of moment of inertia of plane figures, polar moment of inertia - radius of gyration - mass moment of inertia of simple solids.

UNIT IV KINEMATICS OFPARTICLES

Introduction – plane, rectilinear motion – time dependent motion – rectangular coordinates – projectilemotion.

UNIT V KINETICS OF PARTICLESANDFRICTION

KINETICS OF PARTICLES: Equations of motion-rectilinear motion-Newton's II law - D'Alembert's principle - Energy - potential energy-kinetic energy-conservation of energy-work done by a force - work energy method.

- 2. 3. 4.

COURSE OBJECTIVES

- 1. To familiarize the students to apply suitable molding and casting methods for producing components.
- 2. To develop anunderstanding of types of metal joining processes.
- 3. To explain types of deformation processes.
- 4. To understand the concept of sheet metal operations and metal forming processes.
- 5. To provide an overview of various plastic component manufacturing processes for various applications.
- 6. To Study and acquire knowledge of process variables to manufacture defect free products.

COURSE OUTCOMES

Upon completion of this course, the students can able to

- 1. Apply suitable molding and casting methods for producing components.
- 2. Decide the type of metal joining processes.
- 3. Select the type of deformation processes.
- 4. Work with various sheet metal operations and metal forming processes.
- 5. Select the various plastic component manufacturing processes for various applications.
- 6. Identify the effect of process variables to manufacture defect free products

UNITI METALCASTINGPROCESSES

Introduction to Sand casting – Sand moulds – Type of patterns – Pattern materials – Pattern allowances – Types of Moulding sand – Properties – Core making – Types – CO₂ process - Moulding machines – Types of moulding machines – Types of melting furnaces (cupola, induction) – Working principle of Special casting processes – Shell moulding, Investment casting, Pressure die casting, Centrifugal casting – Casting defects – Inspectionmethods.

UNITII JOININGPROCESSES

Fusion welding processes – Types of Gas welding – Equipments used – Flame characteristics – Filler and Flux materials and properties – Arc welding equipments – Electrodes – Coating and specifications – Principles of Resistance welding – Gas metal arc welding – Submerged arc welding – TIG, MIG welding – Friction Stir Welding – Weld defects – Brazing and soldering process.

UNITIII BULKDEFORMATIONPROCESSES

Hot working and cold working of metals – Ingots – Forging processes – Open, impression and closed die forging – Types of Forging Machines – Rolling of metals – Types of Rolling mills – Defects in rolled parts – Principle of rod and wire drawing – Tube drawing — Principles of Extrusion – Types of Extrusion – Hot and Cold extrusion — Equipments used.

UNITIV SHEETMETALPROCESSES

Sheet metal characteristics – Press – Types of press – Principle of punching, blanking, coining, piercing, notching, embossing – Typical shearing operations, bending, drawing and deep drawing operations – Metal spinning, Stretch forming operations – Formability of sheet metal – Test methods.

UNITV MANUFACTURING OFPLASTIC COMPONENTS

Types of plastics – Characteristics of the forming and shaping processes – Moulding of Thermoplastics – Working principles and typical applications of – Injection moulding – Plunger and screw machines – Compressionmoulding,Transfermoulding–Typicalindustrialapplications–IntroductiontoBlowmoulding – Rotational moulding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics.

3 2 0 4 100

COURSE OBJECTIVES

- 1. To enrich the understanding of fluid properties
- 2. To make the students conversant with types of flow and calculate Major and minor loses in pipes.
- 3. To acquaint the student with the concepts of Buckingham's π theorem.
- 4. To explain the working of different pumps
- 5. To explain the working of different turbines.
- 6. To equip students with skills to produce analytical solutions to various simple problems

COURSE OUTCOMES

Upon completion of this course, the students can able to

- 1. Demonstrate basic knowledge of fluid properties
- 2. Find types of flow and calculate Major and minor loses in pipes.
- 3. Apply Buckingham's π theorem for problem solving.
- 4. Understand the working of different pumps
- 5. Understand the working of different turbines.
- 6. produce analytical solutions to various simple problems

UNITI FLUID PROPERTIES ANDFLOW CHARACTERISTICS

Fluid properties: Mass density, weight density, specific gravity, viscosity, compressibility, surface tension and capillarity. Buoyancy and floatation-metacentre and metacentric height (definition only)

Flow characteristics: concepts of system and control volume, application of control volume to continuity equation, energy equation, momentum equation and moment of momentum equation.

UNITII FLOW THROUGHCIRCULARPIPES

Hydraulic and energy gradient – Types of fluid flow – Laminar flow through circular conduits – Boundary layer concepts – types of boundary layer thickness – Darcy Weisbach equation –friction factor – Moody diagram – commercial pipes – minor losses – Flow through pipes in series and parallel.

UNITIII DIMENSIONALANALYSIS

Dimension and units, dimensional homogeneity, applications of Buckingham's π theorem, model and similitude, similaritylaws.

UNITIV HYDRAULIC TURBINES

Classification of turbines – heads and efficiencies – velocity triangles. Axial, radial and mixed flow turbines. Pelton wheel, Francis turbine and Kaplan turbines- working principles - work done by water on the runner – draft tube. Specific speed - unit quantities – performance curves for turbines – governing of turbines.

UNITV HYDRAULICPUMPS

Classification of pumps – centrifugal pump–working principle–head, discharge, efficiencies and losses – performance curves – specific speed. Reciprocating pump–components and working–slip–indicator diagram – air vessel – Jet pump – Gear pump – Submersible pump.

16BEME305A

COURSE OBJECTIVES

- 1. To understand the basic concepts of different types of electrical machines and theirperformance.
- 2. To study the different methods of starting D.C motors and inductionmotors.
- 3. To study the conventional and solid-statedrives
- 4. To expose students to the operation, application and control of power conversion systems employing electric drive to cater to industrial needs.
- 5. To familiarize the operation principles, and design of starting, braking, and speed control arrangements for electric motors and their applications.
- 6. To provide strong foundation to asses performance of different industrial drives considering issues such as, energy efficiency, power quality, economic justification, environmental issues, and practical viabilities.

COURSE OUTCOMES

- 1. Examine various applications in industrial and domestic areas where use of electric drives isessential.
- 2. Classify types of electric drives systems based on nature of loads, control objectives, performance and reliability.
- 3. Combine concepts of previously learnt courses such as, electrical machines, Control and powerelectronics to cater to the need of automations in industries.
- 4. Select most suitable type and specification of motor drive combination for efficient conversionand control of electric power.
- 5. Identify the critical areas in application levels, and derive typical solutions.
- 6. Design and justify new control and power conversion schemes for implementing alternativesolutions considering the critical and contemporary issues.

UNITI INTRODUCTION

Basic Elements – Types of Electric Drives – factors influencing the choice of electrical drives – Loading conditions and classes of duty – Selection of power rating for drive motors with regard to thermal overloading and Load variation factors. Multi quadrant operation.

UNITII DRIVEMOTORCHARACTERISTICS

Mechanical and electrical characteristics of various types of load and drive motors – Braking of Electrical motors – DC Shunt, series Motors – Three phase induction motors.

UNITIII STARTINGMETHODS

Types of D.C Motor starters – Typical control circuits for shunt and series motors – Three phase squirrel cage and slip ring induction motors.

UNITIV SPEED CONTROLOFD.C.DRIVES

SpeedcontrolofDCseriesandshuntmotors–Armatureandfieldcontrol,Ward-Leonardcontrolsystem– Using controlled rectifiers and DC choppers –applications.

UNITV SPEED CONTROL OFA.C.DRIVES

Speed control of three phase induction motor – Voltage control, voltage / frequency control, Rotor resistance control –slip power recovery scheme

16BEME305B

COURSE OBJECTIVES

- 1. To provide an overview of various analogdevice
- 2. To provide an overview of Digitalconcepts
- 3. To learn working of amplifier and its application.
- 4. To understand the concept of RC-timing circuits.
- 5. To learn cellular concept and block diagram of GSM system.
- 6. To provide a review of communicationsystem

COURSE OUTCOMES

At the end of the course the students will be able to

- 1. Understand the principles of semiconductor devices and theirapplications.
- 2. Understand the concept of voltageregulators
- 3. Design an application using Operationalamplifier.
- 4. Understand the working of timing circuits andoscillators.
- 5. Understand logic gates, flip flop as a building block of digitalsystems.
- 6. Learn the basics of Electronic communicationsystem.

UNITI SEMICONDUCTORSANDRECTIFIERS

Classification of solids based on energy band theory-Intrinsic semiconductors-Extrinsic semiconductors-P type and N type-PN junction-Zenor effect-Zenor diode characteristicsHalf wave and full wave rectifiers -Voltage regulation

UNITII TRANSISTORSANDAMPLIFIERS

Bipolar junction transistor- CB, CE, CC configuration and characteristics-Biasing circuits Class A, B and C amplifiers- Field effect transistor-Configuration and characteristic of FET amplifier-SCR, Diac, Triac, UJT-Characteristics and simple applications.

UNITIII DIGITALELECTRONICS

Binary number system - AND, OR, NOT, NAND, NOR circuits-Boolean algebra Exclusive OR gate - Flip flops-Half and full adders-Registers-Counters-A/D and D/A conversion.

UNITIV 8085MICROPROCESSOR

Block diagram of microcomputer-Architecture of 8085-Pin configuration-Instruction setAddressing modes-Simple programs using arithmetic and logical operations.

UNITV INTERFACING AND APPLICATIONSOFMICROPROCESSOR

Basic interfacing concepts - Interfacing of Input and Output devices-Applications of microprocessor Temperature control, Stepper motor control, traffic light control.

16BEME311 FLUID MECHANICS AND MACHINERYLABORATORY

COURSE OBJECTIVES

- 1. To supplement the theoretical knowledge gained in Fluid Mechanics and Machinery with practical testing
- 2. To understand the concepts of coefficient of discharge for Orifice meter and Venturi meter.
- 3. To explain the Calibration of Rotameter.
- 4. To understand the importance of friction factor for flow through pipes.
- 5. To impart knowledge on the performance of various pumps.
- 6. To impart knowledge on the performance of turbines.

COURSE OUTCOMES

- 1. Calculate the coefficient of discharge for Orifice meter and Venturimeter.
- 2. Calibrate the Rotameter
- 3. Estimate the friction factor for flow through pipes.
- 4. Asses the performance of centrifugal pump and submergible pump.
- 5. Asses the performance of reciprocating pump and gear pump.
- 6. Asses the performance of turbines

LIST OF EXPERIMENTS

- 1. Determination of the Coefficient of discharge of given Orificemeter.
- 2. Determination of the Coefficient of discharge of givenVenturimeter.
- 3. Calculation of the rate of flow using Rotameter.
- 4. Determination of friction factor for a given set ofpipes.
- 5. Conducting experiments and drawing the characteristic curves of centrifugalpump
- 6. Conducting experiments and drawing the characteristic curves of submersible pump
- 7. Conducting experiments and drawing the characteristic curves of reciprocatingpump.
- 8. Conducting experiments and drawing the characteristic curves of Gearpump.
- 9. Conducting experiments and drawing the characteristic curves of Peltonwheel.
- 10. Conducting experiments and drawing the characteristics curves of Francisturbine.

15

15

COURSE OBJECTIVES

- 1. To explain the surfaces for sheet metal working applications.
- 2. To Understand the representation of details in machine drawing.
- 3. To introduce tolerances and fits of machine elements.
- 4. To equip them with skills to Construct an assembly drawing using part drawings of machine components.
- 5. To equip them with skills to Construct an assembly drawing of machine components using 2D drafting.
- 6. To equip them with skills to develop employability.

COURSEOUTCOMES

Learners should be ableto

- 1. Express the importance of machine drawing and GD&T.
- 2. Interpret drawings of machinecomponents.
- 3. Create assembled machinedrawings.
- 4. Make part drawings from an assemblydrawing.
- 5. Interpret the details of complex parts in cross sectionviews.
- 6. Sketch production drawing from assemblydrawing.

INTRODUCTION

Introduction to machine drawing. Importance of sectional views. Computer-aided drafting.

CONVENTIONS

Code of practice for engineering drawing-conventional representation of details- drilled and tapped holes, countersunk and counter bored holes, internal and external threads, undercuts, grooves, chamfers, fillet radii and keyways. Conventions to represent standard components-bolts, nuts, washers, screws, cotters, pins, circlips, bearings, gears, springs andflanges.

FITSANDTOLERANCES

Limits, fits and tolerances-need, types, representation of tolerances on drawing, calculation of minimum and maximum clearances and allowances. Geometric tolerance-uses, types of form and position tolerances, symbols, method of indicating geometric tolerances on part drawings.

ASSEMBLY DRAWINGPRACTICE

Making free hand sketches of typical subassemblies-flange coupling, stuffing box, journal bearings, rolling element bearings, keyed joints, cotter joints, C clamp.

ASSEMBLY USING2DDRAFTING

Assembly drawing with sectioning and bill of materials from given detailed drawings of assemblies: Lathe Tail stock, Machine vice, Pedestal bearing and Drill jigs and Milling fixture.

REFERENCES

COURSE OBJECTIVES

- 1. To provide students the creative application of scientific principles to design or develop structures, machines, apparatus or works.
- 2. To train students with good scientific and technical breadth so as to embody inventions and put his ideas in concrete terms and design something that promotes and helps in fulfilling the ever expanding energy requirements.
- **3.** To inculcate in students professional and ethical attitude, Communication Skills, teamwork Skills, computer programming skill and an ability to relate engineering issues to broader social context.
- 4. To provide the excellent learning environment, which can enhance the learning ability of student to generate awareness of surrounding, attentiveness to details, experimental analysis.
- 5. To impart knowledge on Performance of the fundamental control practices associated with AC and DC machines (starting, reversing, braking, plugging, etc.) using power electronics
- 6. To evaluate the use of computer-based analysis tools to review the major classes of machines and their physical basis for operation

COURSE OUTCOMES

- 1. Graduates will demonstrate an ability to identify, formulate, pinpoint and solve Electrical engineering problems keeping in view the present-day power and energy requirement and its future prospect.
- 2. Graduates will demonstrate an ability to design study and analyze the digital and analog systems and components that serve as the fundamental components of the power engineering methods being increasingly used with the new technological advances.
- **3.** Graduate will understand the impact of engineering solutions on the society and also be aware of contemporary issues relating to the exhausting resources and alternatives to continue uninterrupted power supply.
- 4. Graduate will be able to communicate effectively in both verbal and written form. They will develop a better presentation skill on academic and personal grounds that will enhance their personality in all aspects.
- 5. Graduates will demonstrate knowledge of professional and computer language skills that will eventually develop them into skilled researchers in an atmosphere that is technically advanced and conductive.

Graduates will demonstrate knowledge of advanced mathematics, science and electrical engineering with the ability to apply the theoretical knowledge and concepts to the disciplines of electrical engineering.

LIST OF EXPERIMENTS

ELECTRICAL MACHINES

- 1. Load Test on DC ShuntMotor
- 2. Load Test on DC SeriesMotor
- 3. Load Test on DC CompoundMotor
- 4. Speed control of D.C. motor. (Armature and Fieldcontrol)
- 5. Speed control of three phase Induction motor. (VoltageControl)
- 6. Speed control of three phase Induction motor. (Voltage / frequencyControl)
- 7. Load test on single phase InductionMotor.
- 8. Load test on three phase InductionMotor.
- 9. Speed control of three phase slip ring InductionMotor.

MICROPROCESSOR

- 1. Addition of two 8 bit numbers, sum of 8 bits and 16bits.
- 2. 8 bitsubtraction.
- 3. Additional of two 16 bit numbers, Sum: 16 bits ormore.
- 4. 8 bit Multiplication.
- 5. 8 bit Division.

TOTAL 45

SOFTSKILLS

4

3

4

4

COURSE OBJECTIVES

- 1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
- 2. To make the students to meet the growing demand in the field of Globalcommunication.
- 3. To help students acquire their ability to speak effectively in real lifesituations.
- 4. To inculcate the habit of reading and to develop their effective readingskills.
- 5. To ensure that students use dictionary to improve their active and passivevocabulary.
- 6. To enable students to improve their lexical, grammatical and communicativecompetence.

COURSE OUTCOMES

Students undergoing this course will be able to

- 1. Use English language for communication: verbal & non –verbal.
- 2. Enrich comprehension and acquisition of speaking & writingability.
- 3. Ensure students proficiency in professional communication.
- 4. Developed their active and passivevocabulary.
- 5. Gain confidence in using English language in real lifesituations.
- 6. Improve word power: lexical, grammatical and communication competence.

UNIT I

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III

Introduction to HRM – Questions - Do's and Don't's - Interview - Mock GD - Stress Management

UNIT IV

Personality Development - Presentation skills, Interpersonal skills, Critical thinking, Confidence building and Stress management.

TOTAL	15

STRENGTHOFMATERIALS

COURSE OBJECTIVES

16BEME401

- To understand the concepts of stress and strain on deformation of solids. 1.
- 2. To introduce the Concepts of safe working stresses and load carrying capacity of beams.
- 3. To enrich the understanding of deflection in beams and columns in engineering applications.
- 4. To understand the importance of the effect of torsion on shafts and springs.
- To provide knowledge on principal stresses and analyze thin cylinders and shells subjected to pressure forces. 5.
- 6. To provide knowledge on components subjected to various loadings with the help of various theories of failures.

COURSE OUTCOMES

Upon completion of this course, the students can able to

- Determine stress and strain on deformation of solids. 1.
- 2. Compute safe working stresses and load carrying capacity of beams.
- Estimate the deflection in beams and columns in engineering applications. 3.
- 4. Analyze the effect of torsion on shafts and springs.
- 5. Determine principal stresses and analyze thin cylinders and shells subjected to pressure forces.
- Design the components subjected to various loadings with the help of various theories of failures 6

STRESS, STRAIN AND DEFORMATIONOF SOLIDS UNIT I

Rigid and Deformable bodies - Strength, Stiffness and Stability - Stresses; Tensile, Compressive and Shear -Deformation of simple and compound bars under axial load - Thermal stress - Elastic constants - Strain energy and unit strain energy - Strain energy in uniaxialloads.

UNITII **BEAMS – LOADSAND STRESSES**

Types of beams: Supports and Loads - Shear force and Bending Moment in beams - Cantilever, Simply supported and Overhanging beams - Relationship between load, shear force and bending moment - Stresses in beams - Theory of simple bending – Stress variation along the length and in the beam section.

UNIT III **BEAMDEFLECTION**

Elastic curve of Neutral axis of the beam under normal loads - Evaluation of beam deflection and slope: Macaulay Method - Columns - End conditions - Equivalent length of a column - Euler equation - Slenderness ratio - Rankine's formula forcolumns

UNITIV TORSION

Analysis of torsion of circular bars – Torsional Shear stress – Bars of solid and hollow circular section – Stepped shaft – Torsional rigidity - Compound shafts - Fixed and simply supported shafts - Application to close-coiled helical springs -Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Design of helical coil springs - stresses in helical coil springs under torsion loads

UNITV ANALYSIS OF STRESSES INTWODIMENSIONS

Biaxial state of stresses – Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses.

COURSE OBJECTIVES

- 1. To Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
- 2. To understand the concept of constructional features of different types of lathe and their operations.
- 3. To provide knowledge on construction & working of shaping, milling & drilling machines and gear cutting & finishing process.
- 4. To expose students to various types of grinding machines and broaching machines.
- To Explain the construction features of different types of CNC machine and manual part programming for a given 5. component.
- 6. To Perform part programming for CNC machines.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids. 1.
- 2. Discuss about the constructional feature of different types of lathe and their operations.
- 3. Describe the construction & working of shaping, milling & drilling machines and gear cutting & finishing process.
- 4. Illustrate the various types of grinding machines and broaching machines.
- 5. Explain the construction feature of different types of CNC machine and manual part programming for a given component.
- 6. Perform part programming for CNC machines

UNIT I THEORY OF METAL CUTTING ANDCUTTING TOOLS

Introduction: material removal processes, types of machine tools - theory of metal cutting: chip formation, orthogonal cutting, oblique cutting - Cutting tool materials, tool wear, tool life, surface finish, cutting fluids, heat generation, Merchant circle.

UNITH **CENTRE LATHE AND SEMI AUTOMATICLATHES**

Centre lathe- constructional features, various operations, taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Capstan and turret lathes – automats – single spindle, Swiss type, automatic screw type, multi spindle - Tool layout for Capstan, Turret and Automats.

UNIT III **RECIPROCATING MACHINE TOOLS & MILLING MACHINES**

Shaper – construction, working, work and tool holding device, quick return mechanism, planer – construction, working, mechanism, operations. Slotter - construction, working.

Milling machine – constructions, types, Indexing mechanism, operations, milling cutter, gear hobbing – principle.

UNITIV **OTHER MACHINETOOLS**

Drilling – types, radial drilling machine, construction, operations, Boring, types, Jig boring machine – construction, operations, Broaching – types, construction, Grinding – grinding wheel, specifications and selection, cylindrical grinding, surface grinding, centreless grinding – honing, lapping, super finishing, polishing and buffing.

UNITV **CNC MACHINES**

CNC Machines - Construction - Types of control systems, Manual Part Programming - Computer assisted part programming – Computer aided part programming, Machining centers – principle, Turning centers – principle, CAD/CAM & Integration, Application of CNC Machines.

COURSE OBJECTIVES

- 1. To understand the Model of physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
- 2. To provide knowledge on entropy change in thermodynamic processes.
- 3. To Study and acquire knowledge on various thermodynamic properties of pure substances in real time problems.
- 4. To establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
- 5. To facilitate the understanding of properties of air using psychometric chart.
- 6. To acquaint the student with the concepts and applications of the thermodynamics to the various real-life systems.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Model the physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
- 2. Determine entropy change in thermodynamic processes.
- 3. Identify the various thermodynamic properties of pure substances in real time problems.
- 4. Establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
- 5. Calculate the properties of air using psychometric chart.
- 6. Explain the basic principles and applications of the thermodynamics to the various real life systems

UNIT I BASIC CONCEPTS ANDFIRSTLAW

Basic concepts - Classical and Statistical approaches - Thermodynamic systems - closed, open, isolated. Property – State - Process-adiabatic - Quasi-static process – Cycle - Point and Path function – Energy - Work transfer - Concept of temperature and heat- Zeroth law of thermodynamics - Concept of ideal gases - First law of thermodynamics –PMM1, internal energy, specific heat capacities, enthalpy, and its application to closed system and open system-steady flow energyequation.

UNITII SECOND LAWAND ENTROPY

Physical description of the second law - Kelvin-Planck and Clausius statements –Equivalence - Reversible processes and cycles- Carnot cycle – Corollaries - Absolute temperature scale – Clausius Theorem, inequality - Entropy- Principle, transfer, generation, balance - Third law of thermodynamics

UNIT III PROPERTIES OF PURE SUBSTANCE ANDGASMIXTURES

Puresubstance-Phasechangeprocess-Propertydiagrams-PVTsurface-Steam-types,drynessfraction-Avogadro's law - Ideal Gas - Equations of state-Vander Waal's equation - Real Gas - Compressibility and its chart - Mixtures of Gases - Properties.

UNITIV THERMODYNAMIC AVAILABILITYANDRELATIONS

Basics-Dead state, quality of energy, degradation of energy - Reversible processes – Maximum work - Exergy – Closed system - Steady flow system – Irreversibility - Exergy Balance - Second law efficiency – Exact differentials - Tds Relations - Maxwell's Relation – Clausius – Clapeyron Equation - Joule-Thompson Coefficient.

UNITV PSYCHROMETRY

Psychrometry - Psychrometric charts - Property calculations of air vapour mixtures- Psychrometric process-Adiabatic mixing - Evaporative cooling.

TOTAL 60

(Permitted to use standard thermodynamic table, Mollier diagram, and Psychometric chart in the examination)

16BEME404A

COURSE OBJECTIVES

- 1. To impart knowledge on metallurgical aspects ofmetals.
- 2. To understand heat treatment processes on different grades ofsteel.
- 3. To familiarize on selection of ferrous and non-ferrous materials for variousapplications.
- 4. To impart knowledge on non-metallicmaterials
- 5. To learn about the strengthening mechanisms for Non-ferrousalloys.
- 6. To comprehend the significance of Non-Destructive Testing (NDT)methods

COURSEOUTCOMES

Learners should be ableto

- 1. Identify the metallurgical aspects of metals.
- 2. Identify suitable heat treatment processes for variousapplications.
- 3. Select appropriate ferrous and non-ferrous materials for variousapplications.
- 4. Identify and select suitable non-metallicmaterials.
- 5. Identify suitable strengthening mechanisms for Non-ferrousalloys.
- 6. Work with non-destructive testingmethods

UNITI CONSTITUTION OF ALLOYS ANDPHASEDIAGRAMS

Constitution of alloys – Solid solutions, substitutional and interstitial – phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions, Iron – Iron carbide equilibrium diagram -Classification of steel and cast Iron, microstructure, properties and applications.

UNITII HEATTREATMENT

Definition – Full annealing, stress relief, recrystallisation and spheroidizing –normalising, hardening and tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on TTT diagram,CCT - Hardenability, Jominy end quench test – Austempering, martempering – case hardening - carburising, nitriding, cyaniding, carbonitriding – Flame and Induction hardening, Microstructure study and specimen preparation.

UNITIII FERROUS AND NONFERROUS METALS

Effect of alloying elements on steel (Mn, Si, Cr, Mo, V, Ti& W) - stainless and tool steels – HSLA - maraging steels – Gray, White malleable, Spheroidal Graphite irons - Copper and Copper alloys – Brass, Bronze and Cupronickel – Aluminum and Al-Cu – precipitation, strengthening treatment – Bearing alloys.

UNITIV NON-METALLIC MATERIALS

Polymers – types of polymer, commodity and engineering polymers – Properties and Applications of thermoplastics (PP, PVC, ABS, and PMMA) and thermosetting plastics (PF, UF, MF) – Engineering Ceramics.

UNITV TESTING OF MECHANICAL PROPERTIESANDINSPECTION

Mechanism of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and shear loads – Hardness tests (Brinell, Vickers and Rockwell), Impact test - Izod and Charpy, Fatigue and creep test, S-N curve.

To impart knowledge on non-metallicmaterials 4. To learn about the strengthening mechanisms for Non-ferrousalloys. 5.

To understand heat treatment processes on different grades ofsteel.

To impart knowledge on metallurgical aspects of metals.

To comprehend the significance of Non Destructive Testing (NDT)methods. 6.

To familiarize on selection of ferrous and non-ferrous materials for various applications.

COURSE OUTCOMES

COURSE OBJECTIVES

16BEME404B

1.

2.

3.

Learners should be ableto

- Identify the metallurgical aspects of metals. 1.
- Identify suitable heat treatment processes for variousapplications. 2.
- 3. Select appropriate ferrous and non-ferrous materials for variousapplications.
- Identify and select suitable non-metallicmaterials. 4.
- Identify suitable strengthening mechanisms for Non-ferrousalloys. 5.
- Work with non destructive testingmethods. 6.

UNITI INTRODUCTION TO ENGINEERINGMATERIALS

Atomic bonding and Crystal structure of engineering materials. Chemical and Physical properties of engineering materials. Mechanical Properties and Behaviours of Materials - Stress - Strain Relationships, Tensile Strength, Hardness, Impact Strength, Fatigue & Stress Rupture, Creep & Stress Rupture, Comparison of Material Properties

UNITH FERROUS METALS ANDTHEIR PROPERTIES

Iron - Carbon Equilibrium Diagram, Carbon Steel & AISI Numerical Identification Systems. Properties, processing and applications of Alloy Steel, Tool Steel, Stainless Steel. General characteristics of metal alloys, Fundamentals of heat treatment and the use of TTT diagrams. Production, forming, and joining of metals.

UNITIII NONFERROUSMETALS

Properties, processing and applications of Aluminum, Magnesium & Titanium, Copper and its Alloys, Low Melting Temperature Alloys. Production, forming, and joining of metals. The Chemistry and prevention of corrosion

UNITIV **CERAMICMATERIALS**

Microstructural features of ceramics and glasses - Mechanical properties of ceramics and glasses - Production, forming, and joining of ceramics

UNITV POLYMERS ANDCOMPOSITES

Microstructural features of polymers and composites - Mechanical behaviour of polymers and composites -Production, forming, and joining of polymers and composites.

WEB REFERENCES1.www.nptel.ac.in2.www.physicsclassroom.com3.www.oyc.yale.edu4.www.physics.org

COURSE OBJECTIVES

- 1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified outputmotions.
- 2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machinecomponents.
- 3. To understand the force-motion relationship in components subjected to external forces and analysis of standardmechanisms.
- 4. To understand the concept of inertia force and inertia torque.
- 5. To understand the undesirable effects of unbalances resulting from prescribed motions inmechanism.
- 6. To understand the effect of Dynamics of undesirablevibrations.

COURSE OUTCOMES

Upon completion f this course, the students can able to

- 1. Identify the type and mechanism and will be able to perform velocity and accelerationanalysis
- 2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
- 3. Specify the gear terminology and to select appropriate gear trains for engineeringapplications.
- 4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocatingmasses.
- 5. Describe the vibration phenomenon and its types along with the vibration terminologies.
- 6. Analyze the systems subjected tovibration

UNITI BASICSOFMECHANISMS

Terminology and Definitions–Degree of Freedom – Mobility–Kutzbach criterion–Grashoff's law–Kinematic Inversions of four bar chain and slider crank –Mechanical Advantage–Transmission angle –Single, double and offset slider mechanisms – Quick return mechanisms – Ratchets and escapements – Indexing Mechanisms – Straight line generators.

UNITII KINEMATICS

Displacement, velocity and acceleration – analysis in simple mechanisms – Graphical Method –velocity and acceleration polygons – Kinematic analysis by Complex Algebra methods–Vector Approach, Instantaneous center – Coriolis Acceleration.

UNITIII KINEMATICSOFCAM

Classifications – Displacement diagrams–parabolic, Simple harmonic and Cycloidal motions – Layout of plate cam profiles – Derivatives of Follower motion – High speed cams – circular arc and tangent cams – Standard cam motion – Pressure angle and undercutting.

UNITIV GEARS

Spur gear - Terminology and definitions–Fundamental Law of toothed gearing and involute gearing– Interchangeable gears–gear tooth action – Terminology – Interference and undercutting–Non standard gear teeth– Helical, Bevel, Worm, Rack and Pinion gears (Basics only)–Gear trains–Parallel axis gear trains– Epicyclic gear trains.

UNITV FRICTIONIN DRIVES

Surface contacts–Sliding and Rolling friction – Friction drives – Friction in screw threads – Friction clutches– Belt and rope drives, Friction aspects in Brakes.

3003100

COURSE OBJECTIVES

- 1. To Understand and apply the principles of science, technology, engineering, and math to solve industry-related problems.
- 2. To Understand the concepts and terminologies inIndustries
- 3. To Study and acquire knowledge in creating an industrial designlayout
- 4. To introduce the methods involved in materialshandling
- 5. To understand the knowledge in analysis of work processing happening inindustries
- 6. To equip them with skills to perform work measurement in anindustry

COURSE OUTCOMES

Upon completion of this course, the student can able to

- 1. Understand the concepts and terminologies inIndustries
- 2. apply their knowledge in creating an industrial designlayout
- 3. understand the methods involved in materialshandling
- 4. apply their knowledge in analysis of work processing happening inindustries
- 5. perform work measurement in anindustry
- 6. understand the role of human involvement in industrial work systemdesign

UNITI INTRODUCTION TOINDUSTRIALENGINEERING

for layout study – types of layout. Plant location analysis – factors, costs, location decisions – simple problems in single facility location models, network location problems.

UNITII LAYOUTDESIGN

Design cycle – SLP procedure manpower, machinery requirements – computer algorithms – ALDEP, CORELAP, CRAFT

UNITIII QUANTITATIVE METHODS ANDMATERIALS HANDLING

Group technology – Production Flow analysis (PFA), ROC (Rank Order Clustering) – Line balancing. Principles, unit load concept, material handling system design, handling equipment types, selection and specification, containers and packaging, Material Handling—Automatic Storage and Retrieval System (ASRS)

UNITIV OPERATIONS ANALYSIS ANDWORKMEASUREMENT

Productivity and living standards, Productivity measurement, work design and Productivity – processplanning – types. Total time for a job or operation, total work content and ineffective time, methods and motions, graphic tools.

UNITV HUMAN FACTORS IN WORKSYSTEM DESIGN

Human factors Engineering/Ergonomics, human performance in physical work, anthropometry, design of work station, design of displays and controls.

16BEME406A

3003100

COURSE OBJECTIVES

- 1. To provide knowledge on various Metrological equipments available to measure the dimension of the components.
- 2. To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.
- 3. To enrich the understanding of principles of measuring instruments and gauges
- 4. To give exposure to inspection of spur gear and thread elements.
- 5. To equip them with skills to linear measurements using various measuringinstruments
- 6. To give exposure toprocedures involved in erectingmachineries

COURSE OUTCOMES

Upon completion of this course, the students will able to

- 1. Understand the basics of measurements and qualitystandards.
- 2. Perform linear measurements using various measuringinstruments
- 3. Perform the geometrical measurements of various components
- 4. Measure the various dimensions of a screwthread
- 5. Measure the dimensions of the simple spurgear.
- 6. Know the procedures involved in erectingmachineries

UNITI CONCEPTOFMEASUREMENT

General concept – Generalised measurement systems – units and standards–measuring instruments– sensitivity, readability, range of accuracy, precision–static and dynamic response–repeatability–systematic and random errors – correction, calibration, interchangeability – Basics of Measurement SystemAnalysis.

UNITII LINEAR ANDANGULARMEASUREMENT

Definition of metrology–Linear measuring instruments: Vernier, micrometer, interval measurement, Slip gauges and classification, limit gauges– Comparators: Mechanical, pneumatic and electrical types, applications – Angular measurements: –Sine bar, auto-collimeter, angle Decker.

UNITIII FORMMEASUREMENT

Measurement of screw threads – Thread gauges, floating carriage micrometer-measurement of gears-tooth thickness – constant chord and base tangent method – Eccentricity Measurements – radius measurements- surface finish, straightness, flatness and roundness measurements.

UNITIV LASER AND ADVANCESINMETROLOGY

Precision instruments based on laser–Principles– laser interferometer–application in linear, angular measurements and machine tool metrology - Coordinate measuring machine (CMM) – computer aided inspection - Nano metrology, techniques and applications.

UNITV MEASUREMENT OF POWER, FLOW ANDTEMPERATURERELATED PROPERTIES

Force, torque, strain:-mechanical and electrical type – Flow measurement: Venturi, orifice, rotometer, – Electrical pressure transducers, Temperature: Thermocouples, Resistance temperature detectors, bimetallic strip thermometers, thermister, pyrometry

- 4. Measure the various dimensions of a screwthread
- 5. Measure the dimensions of the simple spurgear.
- 6. Know the procedures involved in erectingmachineries

UNITI BASICS OF MEASUREMENT, DEVICES ANDQUALITY STANDARDS

Definition of metrology, economics of measurement, measurement as a comparative process, dimensional properties, terminology and accuracy of measurement, measuring errors, Abbe's Principle, Principle of interferometry- flatness testing, optical interferometer, laser interferometer. Holography and speckle metrology.

General cares and rules in measurement, International standardization, SI units and quantities, BIS- NPL – advantages, ISO 9000 quality standards, QS 9000 standards, Environment standards, metrology room measuring standards room.

UNITII LINEARMEASUREMENTS

Material length standards –line and end measurement – calibration of end bars, datum and reference surfaces, surface plates, gauges – feeler gauges, micrometers, dial test indicator, slip gauges, care of gauge blocks, Comparators- mechanical, electrical, optical and pneumatic, optical projector.

UNITIII GEOMETRICALMEASUREMENT

Angular measurement – plain vernier and optical protractors, sine bar, optical instruments, flatness, parallelism and roundness measurement, need for limit gauge, design of plug gague, Taylor's principle, three basic types of limit gauges, surface texture, reasons for controlling surface texture, parameters used , specification of surface texture, drawing and symbols, Tomilson surface meter.CMM.

UNITIV METROLOGY OFMACHINEELEMENTS

Types of screw threads, terminology, proportions of ISO metric thread, measurement of major, minor and effective diameters. Gear terminology and standard proportions, spur gear measurement, checking of composite errors, base pitch measurement, clean roomenvironment.

UNITV MACHINE INSTALLATIONANDTESTING

Equipment erection, commissioning, testing procedure for lathe, milling, continuous process line. First aid, safety precautions in installation of equipment, protocol for repair and testing, inspection check list.

 www.lasermetrology.com/

COURSE OBJECTIVES

- 1. To perform different destructivetesting
- 2. To learn the characteristic materials.
- 3. To understand the stress and strain relationship.
- 4. To determine the shear force for various materials.
- 5. To determine the impact load for various materials.
- 6. To determine the hardness for various materials

COURSE OUTCOMES

- 1. Ability to perform different destructivetesting
- 2. Ability to characteristic materials
- 3. Understand the stress and strain relationship.
- 4. Determine the shear force for various materials.
- 5. Determine the impact load for various materials.
- 6. Determine the hardness for various materials

LIST OF EXPERIMENTS

- 1. Tensile test on metals–stress straincharacteristics
- 2. Cupping test on metal sheets-load deformation characteristics, cupping load, cuppingnumber.
- 3. Hardness test on metals–Brinell and Rockwell Hardnesstests.
- 4. Impact test on metals-Charpy, Izod impacttests.
- 5. Shear test on metals–direct shear strength, single shear, doubleshear.
- 6. Tests on helical springs–compression, tension springs–load deformation characteristics, stiffness, shear stress, modulus of rigidity, energy.
- 7. Torsion test on beams-torque and angle of twist characteristics, shear stress, modulus of rigidity, energy.
- 8. Microscopic examination of i) Hardened samples ii) Hardened and tempered samples.
- Tempering Improvement of Mechanical properties –Comparison for i) Unhardenedspecimen
 ii) Quenched specimen iii) Quenched and tempered specimen.
- 10. Study of low carbon steel and medium carbonsteel.

TOTAL 45

16BEME412 MANUFACTURING TECHNOLOGY LABORATORY

COURSE OBJECTIVES

- 1. To facilitate the understanding of shaping operation in shaper.
- 2. To provide practical knowledge on Preparing a flat and contour surface using milling machine.
- 3. To provide practical knowledge on Preparing holes with higher finish by Drilling / Tapping / Reaming.
- 4. To facilitate the understanding of surface and cylindrical grinding operations for surface finish.
- 5. To introduce single and multi point cutting tools.
- 6. To impart knowledge on the operations in Capstan and Turret Lathe.

COURSE OUTCOMES

- 1. Perform shaping operation in shaper.
- 2. Prepare a flat and contour surface using milling machine.
- 3. Prepare holes with higher finish by Drilling / Tapping / Reaming.
- 4. Perform surface and cylindrical grinding operations for surface finish.
- 5. Prepare the single and multi point cutting tools.
- 6. Perform operations in Capstan and Turret Lathe.

LIST OF EXERCISES

- 1. Exercises inshaping.
- 2. Exercises inMilling.
- 3. Exercises inslotting.
- 4. Exercises in Drilling / Tapping /Reaming.
- 5. Exercises in Surface grinding and cylindrical grindingprocess.
- 6. Exercises in Tool grinding single point and multi pointtools.
- 7. Exercises in Capstan and TurretLathe.

TOTAL

16BEME451 PRODUCTION DRAWING ANDCOSTESTIMATION

1 0 0 -100

COURSE OBJECTIVES

- 1. To gain knowledge in sequence of process planning and cost estimation of various products.
- 2. To introduce the concepts of dimensional and toleranceanalysis
- 3. To expose students to manufacturingdrawings
- 4. To equip them with skills to apply their knowledge in re-dimensioning and tolerancecharting
- 5. To understand the process chart for a given component
- 6. To Estimate the cost of a givencomponent

COURSE OUTCOMES

Upon completion of this course, the student can able to

- 1. Apply the various standards and conventions used in a drawingsheet
- 2. Perform dimensional and toleranceanalysis
- 3. Understand the manufacturingdrawings
- 4. Apply their knowledge in re-dimensioning and tolerancecharting
- 5. Prepare process chart for a givencomponent
- 6. Estimate the cost of a givencomponent

UNIT I

5

5

5

Geometric Dimensioning and Representation - Tolerancing, Tolerancing of form, orientation, location and run-outs, Datums and Datum Systems.

UNIT II

Surface texture indication on drawing. Welds - Symbolic representing ofdrawings. Preparation of process - Chart for a given component.

UNIT III

Cost Estimation of setting time and machining time - estimation of material cost, labour cost and overhead cost based on supplied data.

SEMESTER V

16BEME501

HEATPOWERENGINEERING

COURSE OBJECTIVES

- 1. To incorporate the concepts and laws in thermodynamic analysis of cyclicprocesses.
- 2. To impart the mechanisms of combustion offuels.
- 3. To apply the thermodynamic concepts in steam turbines andnozzles.
- 4. To learn about the performance of compressors.
- 5. To understand the concept of cogeneration and waste heat recovery in engineeringapplications.
- 6. To introduce concepts of refrigeration and air conditioning in engineeringapplications

COURSE OUTCOMES

Learners should be able to

- 1. Calculate the efficiency of various gas powercycles.
- 2. Calculate the performance characteristics of engines.
- 3. Analyze combustion mechanism in ICengines.
- 4. Evaluate the characteristic of steam turbines andnozzles.
- 5. Evaluate the performance characteristics of compressors.
- 6. Identify and utilize the concepts of refrigeration and air conditioning in engineeringapplications

UNITI GAS POWER CYCLES ANDICENGINES

Otto, Diesel, Dual, Brayton cycles – Calculation of mean effective pressure and air standard efficiency – actual and theoretical PV and TS diagrams of two stroke and four stroke engines–valve timing diagram and port timing diagram – calculation of engine performance, heat balance sheet, retardation – Morse test.

UNITII BOILER AND STEAMPOWERCYCLES

Generation of steam, Boiler–Classification, fire tube boiler, water tube boiler, comparison, boiler mountings and accessories, performance of steam boilers – dryness fraction, properties of steam, T–S diagram, Mollier diagram, steam tables, Rankine Cycle – incomplete evaporation – superheated steam –modified cycle.

UNITIII STEAM NOZZLES ANDSTEAM TURBINES

Steam nozzles – flow through steam nozzles, effect of friction, critical pressure ratio, super saturated flow – Steam turbines– impulse and reaction turbine, compounding, velocity diagram, condition for maximum efficiency – multi stage turbines, cycles with reheating and regenerating heating – reheat factor, degree of reaction - governing of turbines.

UNITIV AIR COMPRESSORS

Classifications of compressors – Reciprocating air compressor – performance characteristics, effect of clearance volume, free air delivery and displacement, intercooler, after cooler – Rotary compressor – vane type, centrifugal and axial, flow performance characteristics.

UNITV REFRIGERATION ANDAIR CONDITIONING

Fundamentals of refrigeration – COP – Vapour compression refrigeration system – cycle, p–h chart, Vapour absorption system – comparison, properties of refrigerants. Fundamentals of air conditioning system, cycle, controls, air handling and distribution, simple cooling and heat load estimation

TOTAL 45

(*Permitted to use standard thermodynamic table, Mollier diagram, Psychometric chart and Refrigeration property table in the examination*)

16BEME502

3 2 0 4 100

COURSE OBJECTIVES

- 1. To understand the various types of stresses induced in different machine members.
- 2. To Study and acquire knowledge on design shaft and couplings for effective transmission of power.
- 3. To study the features of welded joints and fasteners required for various industrial applications.
- 4. To give exposure to design springs and flywheels for various engineering applications.
- 5. To understand the importance design bearings and levers for engineering applications.
- 6. To make the students conversant to implement design procedure for designing a machine.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Determine various types of stresses induced in different machine members.
- 2. Design shaft and couplings for effective transmission of power.
- 3. Select the type of welded joints and fasteners required for various industrial applications.
- 4. Design springs and flywheels for various engineering applications.
- 5. Design bearings and levers for engineering applications.
- 6. Implement design procedure for designing a machine

UNITI STEADY STRESSES AND VARIABLE STRESSESIN MACHINE MEMBERS

Introduction to the design process – factors influencing machine design, selection of materials based on mechanical properties – Factor of safety. Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – Design of curved beams – crane hook and 'C' frame – theories of failure – stress concentration – design for variable loading – Soderberg, Goodman and Gerber relations.

UNITII DESIGN OF SHAFTS ANDCOUPLINGS

Design of solid and hollow shafts based on strength, rigidity and critical speed – Design of keys and keyways – Design of rigid and flexible couplings – Introduction to gear and shock absorbing couplings – design of knuckle joints.

UNITIII DESIGN OF FASTENERS ANDWELDEDJOINTS

Threaded fasteners – Design of bolted joints including eccentric loading – Design of welded joints for pressure vessels and structures – theory of bonded joints.

UNITIV DESIGN OF SPRINGS

Design of helical, leaf, disc and torsional springs under constant loads and varying loads – Concentric torsion springs – Belleville springs.

UNITV DESIGN OF BEARINGS

Selection of bearings – sliding contact and rolling contact types – Cubic mean load – Selection of journal bearings – McKees equation – Lubrication in journal bearings – calculation of bearing dimensions.

(Permitted to use PSG design data book in the examination)

16BEME503A

DYNAMICS OF MACHINERY

COURSE OBJECTIVES

- 1. To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism and cam mechanisms for specified outputmotions.
- 2. To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machinecomponents.
- 3. To understand the force-motion relationship in components subjected to external forces and analysis of standardmechanisms.
- 4. To understand the concept of inertia force and inertia torque.
- 5. To understand the undesirable effects of unbalances resulting from prescribed motions inmechanism.
- 6. To understand the effect of Dynamics of undesirablevibrations.

COURSE OUTCOMES

Upon completion f this course, the students can able to

- 1. Identify the type and mechanism and will be able to perform velocity and accelerationanalysis
- 2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
- 3. Specify the gear terminology and to select appropriate gear trains for engineeringapplications.
- 4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocatingmasses.
- 5. Describe the vibration phenomenon and its types along with the vibration terminologies.
- 6. Analyze the systems subjected tovibration

UNITI FORCEANALYSIS

Rigid Body dynamics in general plane motion – Equations of motion – Dynamic force analysis – Inertia force and Inertia torque – D'Alemberts principle – The principle of superposition – Dynamic Analysis in Reciprocating Engines – Gas Forces – Equivalent masses – Bearing loads – Crank shaft Torque – Turning moment diagrams – Fly wheels.

UNITII BALANCING

Static and dynamic balancing – Balancing of rotating masses – Balancing a single cylinder Engine – Balancing Multi–cylinder Engines – Partial balancing in locomotive Engines.

UNITIII FREEVIBRATION

Basic features of vibratory systems – idealized models – Basic elements and lumping of parameters – Degrees of freedom – Single degree of freedom – Free vibration – Equations of motion – natural frequency – Damping Types of Damping – Damped vibration, critical speeds of simple shaft.

UNITIV FORCED VIBRATION ANDTORSIONAL VIBRATION

Response to periodic forcing – Harmonic Forcing – Forcing caused by unbalance – Support motion – Force transmissibility and amplitude transmissibility – Vibration isolation.

UNITV MECHANISMSFOR CONTROL

Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.

Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

- 6. To understand the effect of Dynamics of undesirablevibrations.

COURSE OUTCOMES

Upon completion f this course, the students can able to

- 1. Identify the type and mechanism and will be able to perform velocity and accelerationanalysis
- 2. Classify the types of friction and understand the friction applications used in screw threads, clutches, brakes.
- 3. Specify the gear terminology and to select appropriate gear trains for engineeringapplications.
- 4. Perform force analysis of reciprocating engine and balancing of rotating & reciprocatingmasses.
- 5. Describe the vibration phenomenon and its types along with the vibration terminologies.
- 6. Analyze the systems subjected tovibration

UNITI KINEMATIC ANALYSIS

Introduction- General concepts, Introduction of Simple mechanism, Different types of Kinematics pair, Grublers rule for degree of freedom, Grashof's Criterion for mobility determination.

Kinematic Analysis- Concepts of vectorial analysis. Velocity and Acceleration Analysis of planar mechanisms

UNITII CAMS ANDGEARS

Cams- Classifications – Displacement diagrams-parabolic, Simple harmonic and Cycloidal motions – Layout of cam profiles – Knife and Roller followers.

Gears- Geometry of tooth profiles, Law of gearing, Involute profile, interference, helical, spiral and worm gears, simple, compound gear trains. Epicyclic gear trains

UNITIII DYNAMICANALYSIS

Dynamic Analysis of Slider-crank mechanisms, turning moment computations.

Balancing- Static and Dynamic balancing Balancing of revolving & reciprocating masses in single and multicylinder engines.

UNITIV VIBRATION

Vibration analysis of SDOF systems, Natural, damped forced vibrations, Based-excited vibrations, transmissibility ratio.

UNITV MECHANISMSFOR CONTROL

Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.

Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

16BEME5E--PROFESSIONAL ELECTIVEII 3 0 0 3 100

16BEME511 SCIENTIFICCOMPUTINGLABORATORY 2 0 2 3 100

COURSE OBJECTIVES

- 1. To introduce the scientific computing, covering some important aspects of solving algebraic equations, IVP, BVP.
- To implement the methods using the spread sheet inExcel. 2.
- To make students familiar with the concepts of programming and the get them accustomed with high-level languages like Matlab, 3. Mathematica, etc.
- To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical 4 and symbolic integration
- 5. To provide an overview of some of the issues and problems that arise in scientific computation, such as (non-)linear systems, numerical and differential equations and simulation.
- To make students to get knowledge about real-time problem-solving skill. 6.

COURSE OUTCOMES

- Apply numerical methods to find our solution of algebraic equations using different methods. 1.
- 2. Understand the different conditions, and numerical solution of system of algebraic equations.
- 3. Apply various interpolation methods and finite difference concepts.
- Can apply numerical differentiation and integration whenever and wherever routine methods are not applicable. 4.
- Work numerically on the ordinary differential equations using different methods through the theory of finite differences. 5.
- Work numerically on the partial differential equations using different methods through the theory of finite differences. 6.

LIST OF EXPERIMENTS

- 1. Finding solution of Transcendentalequation
 - i) Newton RaphsonMethod
 - ii) Bisectionmethod
 - iii) Iterative method by reducing the equation to the form x=f(x)
- 2. Finding the dominant eigenvalue and eigenvector by powermethod
- 3. Numericalintegration
 - i) Gauss 2 point and 3 pointformulae
 - ii) Trapezoidal method
 - iii) Simpson's 1/3rule
- 4. Solution of initial value problems governed byODE

 Runge Kutta 4th ordermethod

 - ii) Modified Euler'smethod
 - iii) Milne'smethod
 - iv) Adam Bashforthmethod
- 5. Solution of BVP governed byPDE
 - i) LaplaceEquation
 - ii) One dimensional heat equation
 - a) Explicit method : Bender Schmidt'smethod
 - b) Implicit method : Crank Nicolson'smethod
 - iii) One dimensional wave equation Implicitmethod

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

2	Steven C. Chapra, Raymond P. Canale	Numerical Methods for Engineers	McGraw - Hill Pub. Co. Ltd	2014

16BEME512 DYNAMICS AND METROLOGY LABORATORY

COURSE OBJECTIVE

- 1. To Understand the working of various governors.
- 2. To introduce jump speed and profile of the cam
- 3. To understand the importance of moment of inertia by oscillation method for connecting rod and flywheel.
- 4. To introduce the concepts to Characterize and calibrate measuring devices.
- 5. To expose students to measuring taper angle straightness, flatness, surface finfish and thread parameters.
- 6. To explain the limits of dimensional tolerances using comparators

COURSE OUTCOME

- 1. Understand the working of various governors.
- 2. Determine of jump speed and profile of the cam
- 3. Determine moment of inertia by oscillation method for connecting rod and flywheel.
- 4. Characterize and calibrate measuring devices.
- 5. Measure taper angle straightness, flatness, surface finfish and thread parameters
- 6. Examine the limits of dimensional tolerances using comparators

LIST OF EXPERIMENTS

DYNAMICS

- 1. Governors Determination of sensitivity, effort, etc. for Watt, Porter, Proell, and springcontrolled Governors
- 2. Cam Determination of jump speed and profile of thecam.
- 3. Motorized Gyroscope–Verification of laws –Determination of gyroscopiccouple.
- 4. Whirling of shaft–Determination of critical speed of shaft with concentratedloads.
- 5. Balancing of rotating and reciprocatingmasses.
- 6. Determination of moment of inertia by oscillation method for connecting rod and flywheel.
- 7. Vibrating system spring mass system Determination of damping co–efficient of single degree of freedomsystem
- 8. Determination of torsional frequencies for compound pendulumand flywheel system with lumped moment of inertia.
- 9. Transverse vibration –free– Beam. Determination of natural frequency and deflection ofbeam.
- 10. Strain gauge measurementsystem.

METROLOGY

- 1. Calibration of Vernier / Micrometer / Dialgauge
- 2. Checking dimensions of part using slipgauges
- 3. Measurement of gear tooth dimensions addendum, dedendum, pitch circle diameter and tooththickness
- 4. Measurement of taper angle using sine bar / tool makersmicroscope
- 5. Measurement of straightness and flatness
- 6. Measurement of threadparameters
- 7. Checking the limits of dimensional tolerances using comparators (Mechanical / Pneumatic /Electrical)
- 8. Surface finish measurement

TOTAL 45

16BEME513THERMAL ENGINEERINGLABORATORYI

COURSE OBJECTIVES

- 1. To impart knowledge on valve timing diagram and port timing diagram for single cylinder four stroke diesel engine and two stroke petrol engine.
- 2. To understand the importance of mechanical efficiency of four stroke SI engine by Morse test.
- 3. To provide an overview of performance of four stroke single cylinder CI engine.
- 4. To provide an overview of performance of steam generator and steam turbines.
- 5. To expose students to the flash and fire point of various fuel
- 6. To expose students to the flash and fire point of various lubricants

COURSE OUTCOMES

- 1. Sketch the valve timing diagram for four stroke diesel engine andpetrol engines.
- 2. Sketch the port timing diagramfor single cylinder two stroke diesel engine andpetrol engines.
- 3. Calculate the mechanical efficiency of four stroke SI engine by Morse test.
- 4. Evaluate the performance of four stroke single cylinder CI engine.
- 5. Evaluate the performance of steam generator and steam turbines.
- 6. Measure the flash and fire point of various fuel/lubricants.

LIST OF EXPERIMENTS

- 1. Valve Timing and Port TimingDiagrams.
- 2. Performance Test on 4–stroke DieselEngine.
- 3. Heat Balance Test on 4–stroke DieselEngine.
- 4. Load test on 4–stroke DieselEngine.
- 5. Morse Test on multicylinder PetrolEngine.
- 6. Retardation Test to find Frictional Power of a DieselEngine.
- 7. Determination of Viscosity Red WoodViscometer.
- 8. Determination of Flash Point and FirePoint.
- 9. Study of Steam Generators and Turbines.
- 10. Performance and energy balance test on a steamgenerator

TOTAL

16BEME551

COURSE OBJECTIVES

- 1. To expose students to problem definitions
- 2. To understand the Fabricate device/system/component (s) for problem solving.
- 3. To equip them subject knowledge to solve real world problems.
- 4. To acquaint the student to newer techniques to improve the performance of a device/system.
- 5. To develop the skill to prepare the project reports
- 6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

- 1. Formulate problem definitions
- 2. Fabricate device/system/component (s) for problem solving.
- 3. Apply subject knowledge to solve real world problems.
- 4. Implement newer techniques to improve the performance of a device/system.
- 5. Develop the skill to prepare the project reports
- 6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

Students will undergo industrial training for four weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department with in a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

16BEME552GEOMETRICAL DIMENSIONINGANDTOLERANCE1 0 0 -100

COURSE OBJECTIVES

- 1. To understand the concepts of geometrical dimensioning and Tolerancing
- 2. To study the physical importance of them in industrial point of view
- 3. To know the various types of Tolerancing, its measurement and design.
- 4. To translate geometric callouts into plain English with one meaning.
- 5. To explain the major rules found in ASME Y14.5-2009
- 6. To understand the hierarchy of geometric tolerancing.

COURSE OUTCOMES

- 1. Ability to learn and apply geometric dimensioning and tolerance standards to communicate designintent
- 2. Ability to Learn how the knowledge of certain processes can affect part design and documentation
- 3. Gain added insight on working in a team designenvironment.
- 4. Translate geometric callouts into plain English with one meaning.
- 5. Explain the major rules found in ASME Y14.5-2009
- 6. Understand the hierarchy of geometric tolerancing

UNITI INTRODUCTION TO GDANDT

Introduction to Geometric dimensioning and Tolerancing – working of geometric system – Terms and definitions – Common symbols and Terminology – Fundamental Rules (Drawing)– Feature definition – With Size and Without Size – Material Condition (Maximum, Least, Regard of Material Condition)– Limit Tolerancing – Dimension Origin –Limits of Size, Rule 1 or Envelope Principle – Go– No Go Gauges.

UNITII FORM ANDORIENTATIONTOLERANCE

and design considerations – Flatness and Circularity measurement concepts – Orientation tolerance specification and application design.

UNITIII POSITION ANDRUNOUTTOLERANCE

Profile of surface and line tolerance design and application – Location tolerance, Position, applied and material condition consideration – Coaxial controls and design – Concentricity, Symmetry – Measurement and

5

5

5

--- 100

application – Design considerations – Position, Composite tolerance concept, design and Measurement – Runout, Total Runout tolerances – Measurement and considerations.

OPERATIONSRESEARCH

COURSE OBJECTIVE

- 1. To Formulate and solve engineering and managerial situations as LPP.
- 2. To understand the Engineering and Managerial situations in Transportation.
- 3. To Study and acquire knowledge on engineering and Managerial solutions in Assignment and scheduling problems.
- 4. To give exposure to inventory in industry.
- 5. To make the student acquire sound knowledge on sequences to perform operation among various alternatives.
- 6. To provide an overview of various tools in various sections of industries like marketing, material handling etc.

COURSE OUTCOMES

At the end of the course, student will be able to understand the

- 1. Formulate and solve engineering and managerial situations as LPP.
- 2. Solve Engineering and Managerial situations in Transportation.
- 3. Give Engineering and Managerial solutions in Assignment and scheduling problems.
- 4. Manage inventory in industry.
- 5. Select better sequence to perform operation among various alternatives.
- 6. Apply the various tools in various sections of industries like marketing, material handling etc

UNITI INTRODUCTION TOOPERATIONS RESEARCH

Operations research and decision-making – types of mathematical models and constructing the model – Role of computers in operations research –Linear Programming Techniques: Formulation of linear programming problem, applications and limitations, graphical method, simplex method – The Big –M method – the two– phase method.

UNITII TRANSPORTATIONPROBLEMS

Least cost method, North west corner rule, Vogel's approximation method, modified distributionmethod, optimization models, unbalance and degeneracy in transportation model.

UNITIII ASSIGNMENT MODELSANDSCHEDULING

Assignment models - Hungarian algorithm, unbalanced assignment problems - maximization case in assignment problems, traveling salesman problem. Scheduling – processing n jobs through two machines, processing n jobs through three machines, processing two jobs through 'm' machines, processing n jobs through machines.

UNITIV INVENTORY CONTROL ANDQUEUINGTHEORY

Variables in inventory problems, inventory models with penalty, shortage and quantity discount, safety stock, multi item deterministic model.

Queuing Models: Queues – Notation of queues, performance measures, The M/M/1 queue, The M/M/m queue, batch arrival queuing system, queues with breakdowns.

UNITV PROJECT MANAGEMENT, GAME THEORY, REPLACEMENTMODELS

Basic terminologies, constructing a project network, network computations in CPM and PERT, cost crashing – Replacement Models: Replacement of Items due to deterioration with and without time value of Money, Group replacement policy, Staff replacement

DESIGN OF TRANSMISSION SYSTEMS

3003100

9

9

9

9

9

COURSE OBJECTIVES

- 1. To Study and acquire knowledge on design the power transmission components like belts, pulleys, ropes, chains and sprockets.
- 2. To Study and acquire knowledge on design spurs and parallel axis helical gears.
- 3. To give exposure to dimensions for bevel and worm gears.
- 4. To provide an overview of design procedures of gear boxes for industrial applications.
- 5. To provide an overview of clutches and brakes for engineering applications.
- 6. To make the student acquire sound knowledge of mechanical system

COURSE OUTCOMES

Upon completion of this course, the students will able to

- 1. Design the power transmission components like belts, pulleys, ropes, chains and sprockets.
- 2. Design spurs and parallel axis helical gears.
- 3. Estimate the dimensions for bevel and worm gears.
- 4. Practice the design procedures of gear boxes for industrial applications.
- 5. Design clutches and brakes for engineering applications.
- 6. Design a mechanical system

UNITI DESIGN OF TRANSMISSION SYSTEMS FORFLEXIBLEELEMENTS

Design of V belts and pulleys – Selection of Flat belts and pulleys – Wire ropes and pulleys – Selection of Transmission chains and Sprockets – Design of sprockets.

UNITII DESIGN OF SPUR ANDHELICALGEARS

Gear Terminology – Speed ratios and number of teeth–Force analysis – Tooth stresses – Dynamic effects – Fatigue strength – Factor of safety – Gear materials – Module and Face width–power rating calculations based on strength and wear considerations – Parallel axis Helical Gears – Pressure angle in the normal and transverse plane– Equivalent number of teeth–forces and stresses – Estimating the size of the helical gears.

UNITIII DESIGN OF BEVEL ANDWORMGEARS

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits– terminology– Thermal capacity, materials–forces and stresses, efficiency, estimating the size of the worm gear pair – Cross helical: Terminology–helix angles–Estimating the size of the pair of cross helical gears.

UNITIV DESIGN OFGEARBOXES

Geometric progression – Standard step ratio – Ray diagram, kinematics layout –Design of sliding mesh gear box –Constant mesh gear box. – Design of multi speed gear box.

UNITV DESIGN OF CLUTCHESANDBRAKES

Design of plate clutches –axial clutches–cone clutches–internal expanding rim clutches–internal and external shoe brakes.

16BEME603

COURSE OBJECTIVES

- 1. To Study and acquire knowledge on heat transfer for conduction.
- 2. To introduce the concepts of heat transfer coefficients for natural and forced convection for different fluid flows.
- 3. To understand the performance of heat exchanger.
- 4. To study the features of radiation heat transfer between the surfaces.
- 5. To give exposure to mass transfer.
- 6. To make the students conversant to solve complex problems where heat and mass transfer takes place.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Determine the rate of heat transfer for conduction.
- 2. Evaluate heat transfer coefficients for natural and forced convection for different fluid flows.
- 3. Analyze performance of heat exchanger.
- 4. Estimate the radiation heat transfer between the surfaces.
- 5. Calculate the coefficient of mass transfer.
- 6. Solve complex problems where heat and mass transfer takes place

UNITI CONDUCTION

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – General Differential equation of Heat Conduction – Fourier Law of Conduction – Cartesian and Cylindrical Coordinates – One Dimensional Steady State Heat Conduction – Conduction through Plane Wall, Cylinders and Spherical systems – Composite Systems – Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction – Lumped Analysis – Use of HeislersChart.

UNITII CONVECTION

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates, Cylinders and Spheres – Internal Flow – Laminar and Turbulent Flow – Combined Laminar and Turbulent – Flow over Bank of tubes – Free Convection – Dimensional Analysis – Flow over Vertical Plate, Horizontal Plate, Inclined Plate, Cylinders and Spheres.

UNITIII PHASE CHANGE HEAT TRANSFER ANDHEATEXCHANGERS

Nusselts theory of condensation–pool boiling, flow boiling, correlations in boiling and condensation. Types of Heat Exchangers – LMTD Method of heat Exchanger Analysis – Effectiveness – NTU method of Heat Exchanger Analysis – Overall Heat Transfer Coefficient – Fouling Factors.

UNITIV RADIATION

Basic Concepts, Laws of Radiation – Stefan Boltzman Law, Kirchoff Law –Black Body Radiation –Grey body radiation - Shape Factor Algebra – Electrical Analogy – Radiation Shields –Introduction to Gas Radiation.

UNITV MASS TRANSFER

Basic Concepts – Diffusion Mass Transfer – Fick's Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations

TOTAL 60

16BEME604

COURSE OBJECTIVES

- 1. To enable students to understand the fundamental economic concepts applicable to engineering
- 2. To learn the techniques of incorporating inflation factor in economic decision making.
- 3. To Understand the measures of national income, the functions of banks and concepts of globalization
- 4. To Apply the concepts of financial management for project appraisal
- 5. To Understand accounting systems and analyze financial statements using ratio analysis
- 6. To Understand Financial planning, economic basis for replacement.

COURSE OUTCOMES

- 1. Evaluate the economic theories, cost concepts and pricing policies.
- Understand the market structures and integration concepts 2.
- 3. Understand the measures of national income, the functions of banks and concepts of globalization
- 4. Apply the concepts of financial management for project appraisal
- Understand accounting systems and analyze financial statements using ratio analysis 5.
- Understand the impact of inflation, taxation, depreciation. Financial planning, economic basis for replacement, project 6. scheduling, and legal and regulatory issues are introduced and applied to economic investment and projectmanagement problems

UNIT1 FUNDAMENTALS OF ENGINEERINGECONOMICS

Introduction to Engineering Economics – Definition, Scope and Significance – Demand and supply analysis – Definition - Law of Demand - Elasticity of Demand - Demand Forecasting - Supply - Law of supply -Elasticity of Supply.

UNITII COMMERCIALBANKING

Law of contracts, negotiable instruments, its types and regulations there on - New Industrial Policy - MSME sector - Development financial institutions and their relevance - Export Promotion - DICGC, ECGCI, EXIM Bank - Import and export concepts - Letter of credit, forward contracts / hedging.

UNITIII CAPITALMARKET

Stock Exchanges - Functions - Listing of Companies - Role of SEBI - Capital Market Reforms. Money and banking - Money - Functions - Inflation and deflation - Commercial Bank and its functions - Central bank and its functions.

UNITIV **FINANCIALCONCEPTS**

Introduction, scope and objectives of basic financial concepts - time value of money - Interest - simple & compound interest, annuity and effective rate of interests. Appraisal of project for profitability, internal rate of return – payback period – net present value. NPV comparison – cost benefit analysis. Sources of finance – internal and external.

UNITV COST ANALYSIS AND BREAKEVENANALYSIS

Cost analysis - Basic cost concepts - Financial accounting, account posting rules, Trial balance, Profit and loss account and Balance sheet aspects – Cost output in the short and long run. Depreciation -meaning - Causes - Methods of computing Depreciation (simple problems in Straight Line Method, Written Down Vale Method). Meaning – Break Even Analysis - Managerial uses of BEA.

16BEME6E --

16BEME611COMPUTER AIDED MODELINGANDSIMULATION0032100LABORATORY

COURSE OBJECTIVE

- 1. To gain practical experience in handling 2D drafting and 3D modeling softwaresystems.
- 2. To impart training on SOLID WORKS for modelling
- 3. To provide knowledge on assembly of components
- 4. To facilitate the understanding of manufacturing drawings from the modelscreated
- 5. To understand the importance of MAT Lab for simulating different systems
- 6. To acquaint the student with the concepts of MAT lab for performing various mathematical operations

COURSE OUTCOME

Upon completion of this course, the students can able to

- 1. use computer and CAD software's for modeling of mechanical components
- 2. use various options in SolidWorks for modeling of givencomponents
- 3. create assembly of components
- 4. prepare manufacturing drawings from the modelscreated
- 5. Use MAT Lab for simulating different systems like hydraulic and pneumaticcircuits
- 6. Use mat lab for performing various mathematical operations

COMPUTER AIDED DESIGN

1. 3D modeling of various machine elements using various options like protrusion, cut, sweep,

draft, loft, blend, rib.

- 2. Assembly creating assembly from parts assemblyconstraints
- Conversion of 3D solid model to 2D drawing different views, sections, isometric view and dimensioning.
- 4. Introduction to SurfaceModeling.
- 5. Introduction to File Import, Export DXF, IGES, STL, STEP
- **Note:** Any one of the 3D MODELING software's like SOLIDWORKS, CREO, CATIA, NX Software, AutoCADetc.

COMPUTER AIDED SIMULATION

- 1. Simulation of Air conditioning system with condenser temperature and evaporator temperatures as input to get COP usingSoftware
- 2. Simulation of Hydraulic / Pneumatic cylinder usingSoftware
- 3. Simulation of cam and follower mechanism usingSoftware
- 4. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and twovariables
- 5. Use of MATLAB to solve simple problems invibration

16BEME612

COURSE OBJECTIVE

- 1. To impart knowledge on thermal conductivity of various engineering materials.
- 2. To acquaint the student with the concepts of heat transfer rate in free and forced convection environment.
- 3. To Study and acquire knowledge of grey surface.
- 4. To study the features of Stefan–Boltzmann constant.
- 5. To provide an overview of the effectiveness of parallel and counter flow heat exchanger.
- 6. To provide an overview of COP of refrigeration and air conditioning system and performance of air compressor and fluidized bed cooling tower

COURSE OUTCOME

- 1. Conduct a test to find thermal conductivity of various engineering materials.
- 2. Measure heat transfer rate in free and forced convection environment.
- 3. Measure emissivity of grey surface.
- 4. Determine Stefan–Boltzmann constant.
- 5. Measure the effectiveness of parallel and counter flow heat exchanger.
- 6. Measure COP of refrigeration and air conditioning system and performance of air compressor and fluidized bed cooling tower

LIST OF EXPERIMENTS

HEAT TRANSFER

- 1. Heat transfer through a composite wall
- 2. Thermal conductivity measurement by guarded platemethod
- 3. Natural convection heat transfer from a verticalcylinder
- 4. Heat transfer from pin–fin (natural and forced convectionmodes)
- 5. Effectiveness of Parallel/counter flow heat exchanger
- 6. Determination of Stefan–Boltzmannconstant
- 7. Determination of emissivity of a greysurface

REFRIGERATION AND AIR CONDITIONING

- 1. Performance test on single/two stage reciprocating aircompressor.
- 2. Determination of COP of a refrigerationsystem
- 3. Experiments on air–conditioningsystem

TOTAL 45

16BEME651 MINI PROJECT 0 0 1 -100

COURSE OBJECTIVE

- 1. To expose students to problem definitions
- 2. To understand the Fabricate device/system/component (s) for problem solving.
- 3. To equip them subject knowledge to solve real world problems.
- 4. To acquaint the student to newer techniques to improve the performance of a device/system.
- 5. To develop the skill to prepare the project reports
- 6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSEOUTCOMES

- *1.* Formulate problem definitions
- 2. Fabricate device/system/component (s) for problem solving.
- 3. Apply subject knowledge to solve real world problems.
- 4. Implement newer techniques to improve the performance of a device/system.

- 5. Develop the skill to prepare the project reports
- 6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students may be grouped into 2 to 4 and work under a project supervisor. The device/ system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

16BEME652 TECHNICALPRESENTATION

100-100

COURSE OBJECTIVES

- 1. To equip the students with effective technical presentation
- 2. To understand the barriers and bridges to communication
- 3. To improve the public speaking capabilities, body language and posture.
- 4. To improve the literature survey skill.
- 5. To develop presentation skill using power point presentation
- 6. To improve skill to face viva voce examination.

COURSE OUTCOMES

- 1. Develop the ability to fabrication skill.
- 2. Ability to make literature review till the successful solution.
- 3. Ability to identify specific problems.
- 4. Gain the knowledge about data collection and conducting experiments.
- 5. Develop the skill to prepare the project reports
- 6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination

During the seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models.

TOTAL 15

SEMESTER VII

16BECC701 PROFESSIONAL ETHICS, PRINCIPLESOFMANAGEMENT 3 0 0 3 100 AND ENTREPRENEURSHIPDEVELOPMENT

COURSE OBJECTIVE

- 1. To understand objectives, Strategies, Policies and Plan.
- 2. To introduce pans by directing and controlling.
- 3. To Understand the need of Engineering Ethics.
- 4. To Understand the forces that shape culture.
- 5. To develop the entrepreneurial skills.
- 6. To make the students conversant to execute an engineering plan with ethics

COURSE OUTCOME

- 1. Prepare objectives, Strategies, Policies and Plan.
- 2. Execute plans by directing and controlling.
- 3. Understand the need of Engineering Ethics.
- 4. Understand the forces that shape culture.
- 5. Show the entrepreneurial skills.
- 6. Execute an engineering plan with ethics

UNITI HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises– Forecasting – Decision–making – Formal and informal organization – Organization Chart –.

UNITII DIRECTINGANDCONTROLLING

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment –Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNITIII ENGINEERINGETHICS

Senses of 'Engineering Ethics' – variety of moral issued – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of ProfessionalRoles – theories about right action – Self–interest – customs and religion – uses of ethical theories.

UNITIV FACTORSOFCHANGES

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNITV ENTREPRENEURSHIPANDMOTIVATION

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth– Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

16BEME702

COURSE OBJECTIVE

- 1. To impart knowledge about the elements and techniques involved in Mechatronics systems which are very much essential to understand the emerging field ofautomation.
- 2. To understand the concepts of sensors andtransducers.
- 3. To provide an overview of actuation systems.
- 4. To expose students to controller model for electrical, mechanical and thermalsystems.
- 5. To provide knowledge about various types of controllers
- 6. To facilitate the understanding of PLC program using ladderlogic.

COURSE OUTCOME

Upon completion of this course, the students can able to

- 1. Implement the concepts of sensors andtransducers.
- 2. Design the actuation systems.
- 3. Develop the controller model for electrical, mechanical and thermalsystems.
- 4. Explain about various types of controllers
- 5. Create the PLC program using ladderlogic.
- 6. Design Mechatronicssystem.

UNITI MECHATRONICS SENSORSANDTRANSDUCERS

Introduction to Mechatronics – Systems – Measurement Systems – Control Systems – Traditional design – Microprocessor based Controllers. Introduction to sensors – Performance Terminology – Static and Dynamic characteristics – Displacement – Position and Proximity – Velocity and Motion – Fluid Pressure – Temperature Sensors – Light Sensors – Selection of Sensors – Signal processing – Servosystems.

UNITII ACTUATORS ANDSYSTEM MODELS

Pneumatic and Hydraulic Systems – Directional Control Valves – Rotary Actuators. Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings. Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – D.C Motors – A.C Motors – Stepper Motors.

Introduction to system models- Building block of Mechanical, Electrical, Fluid and Thermal Systems.

UNITIII MICROPROCESSORS INMECHATRONICS

Introduction – Architecture – pin configuration Instruction set – Programming of Microprocessors using 8085 instructions – Interfacing. Input and output devices – interfacing D/A converters and A/D converters – Application – Temperature control – Stepper motor <u>control</u>.

UNITIVCONTROLLERS

Introduction –Continuous and discrete process Controllers – Control Mode – Two – Step mode – Proportional Mode –Derivative Mode – Integral Mode – PID Controllers –Digital Controllers – Adaptive Control – Digital Logic Control – Micro Processors Control. Introduction to PLC – Basic Structure – Input / Output Processing – Programming – Mnemonics – Timers, Internal relays and counters – Data Handling – Analog Input / Output – Selection of aPLC.

UNIT V DESIGN OFMECHATRONICSYSTEMS

StagesindesigningMechatronicsSystems-TraditionalandMechatronicDesign-PossibleDesignSolutions - Case Studies of Mechatronics Systems, Pick and place robot - automatic Car Park Systems - Engine

16BEME711

CAE /CAMLABORATORY

OPENELECTIVE II

0 0 3 2 100

COURSE OBJECTIVE

- 1. To study the features of the software tools needed to analyze engineering problems.
- 2. To introduce the concepts of the different applications of simulation and analysis tools.
- 3. To familiarize the students to understand the features of CNC Machine Tool.
- 4. To make the student acquire sound knowledge on part programming for machining a work.
- 5. To make the students to perform operations in CNC lathe using Siemens
- 6. To make the students to perform operations in CNC Vertical Machining Centre using Fanuc

COURSE OUTCOME

- 1. Describe the software tools needed to analyze engineering problems.
- 2. Describe the different applications of simulation and analysis tools.
- 3. Understand the features of CNC Machine Tool.
- 4. Prepare part programming for machining a work.
- 5. Perform operations in CNC lathe using Siemens.
- 6. Perform operations in CNC Vertical Machining Centre using Fanuc

LIST OF EXPERIMENTS

COMPUTER AIDED ENGINEERING (Simple Analysis using ANSYS Tool)

- 1. Stress analysis of rectangular Lbracket
- 2. Stress analysis of beams (Cantilever, Simply supported, Fixedends)
- 3. Mode frequency analysis of beams (Cantilever, Simply supported, Fixedends)
- 4. Harmonic analysis of a 2Dcomponent
- 5. Thermal stress analysis of a 2Dcomponent
- 6. Modeling a 3D component. (Single point cutting tool, I beams,etc.,)

COMPUTER AIDED MANUFACTURING (CAM)

- 1. MANUAL PART PROGRAMMING (Using G and M Codes) in CNCMachine.
- 2. Part programming for Linear, Circular interpolation, and Contourmotions.
- 3. Part programming using standard canned cycles for Thread cutting, Drilling, Peck drilling, andBoring.
- 4. NC code generation using software's like Edge CAM, CREO, etc. CNC Controllers likeFANUC, Siemens, and Hiedenhain etc.

16BEME712

COURSE OBJECTIVE

- 1. To introduce the program for arithmetic functions and the program for sorting, code conversion functions.
- 2. To enrich the understanding of the program codes to interface with stepper motor.
- 3. To understand the importance of set speed with actual speed of DC motor by interfacing suitable speed sensors.
- 4. To introduce the concepts of all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
- 5. To understand the concept of displacement, force and temperature measurement.
- 6. To understand the concept of Computerized data logging system

COURSE OUTCOME

- 1. Create the program for arithmetic functions and the program for sorting, code conversion functions.
- 2. Formulate the program codes to interface with stepper motor.
- 3. Compare the set speed with actual speed of DC motor by interfacing suitable speed sensors.
- 4. Integrate all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
- 5. Perform the displacement, force and temperature measurement.
- 6. Perform the process like pressure and flow control using computerized data logging system

LIST OF EXPERIMENTS

- 1. Design and testing of fluid power circuits tocontrol
 - (i) Velocity (ii) direction and (iii) force of single and double actingactuators
- 2. Design of circuits with logic sequence using Electro pneumatic trainerkits.
- 3. Simulation of basic Hydraulic, Pneumatic and Electric circuits usingsoftware
- 4. Circuits with multiple cylinder sequences in Electro pneumatic usingPLC.
- 5. Servo controller interfacing for open loop
- 6. PID controllerinterfacing
- 7. Stepper motor interfacing with 8051 Microcontroller (i) Full step resolution (ii) Half stepresolution
- 8. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LABVIEW
- 9. Computerized data logging system with control for process variables like pressure, flow and temperature
- 10. Measurement of displace usingLVDT
- 11. Measurement of temperature using Thermocouples
- 12. Measurement of Force using StrainGage

TOTAL 45

16BEME791 PROJECT WORKPHASEI 0 0 8 4 100

COURSE OBJECTIVES

- 1. To expose students to problem definitions
- 2. To understand the Fabricate device/system/component (s) for problem solving.
- 3. To equip them subject knowledge to solve real world problems.
- 4. To acquaint the student to newer techniques to improve the performance of a device/system.
- 5. To develop the skill to prepare the project reports
- 6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

- *1.* Formulate problem definitions
- 2. Fabricate device/system/component (s) for problem solving.
- *3.* Apply subject knowledge to solve real world problems.
- 4. Implement newer techniques to improve the performance of a device/system.
- 5. Develop the skill to prepare the project reports
- 6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of theDepartment.

TOTAL 120

5

5

5

COURSE OBJECTIVES

- 1. To develop the student's knowledge in various robot structures and their workspace.
- 2. To develop student's skills in performing spatial transformations associated with rigid body motions.
- 3. To develop student's skills in perform kinematics analysis of robot systems.
- 4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
- 5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
- 6. To provide the student with some knowledge and skills associated with robot control.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Understand the fundamentals of therobots
- 2. Describe the robot celldesign
- 3. Know the safety considerations in roboticapplications.
- 4. The student with knowledge of the singularity issues associated with the operation of robotic systems.
- 5. The student with some knowledge and analysis skills associated with trajectory planning.
- 6. The student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALSOF ROBOT

Robot – Definition – Robot Anatomy – Co–ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications. Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features. End Effectors – Grippers. Requirements of a sensor, Principles and Applications of sensors – Position of sensors, Proximity Sensors, Touch Sensors – Camera, Frame Grabber, Sensing and DigitizingImage.

UNITII ROBOTCELLDESIGN

Robotcelldesign-simulationsoftware(RoboWave).Robotcelllayouts-Multiplerobotsandmachineinterference-robot cell planning - robot cycle time analysis for assembly, welding and painting shop.

UNIT III SAFETY CONSIDERATIONS

Safety Considerations for Robot Operations, Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method.

 MOTORS ANDPUMPS
 1 0 0 -100

COURSE OBJECTIVES

- 1. To understand the working principles of pumps
- 2. To understand the working principles andmotors

UNIT I SINGLE PHASEINDUCTIONMOTOR

Constructional details of single phase induction motor – Principle of operation – Types – Losses and Efficiency – Performance analysis – Starting methods of single–phase induction motors. – Design aspects of motors for usage in submersible pumps– Motors Rating and selection criteria.

UNITII THREE PHASE INDUCTION MOTOR

Constructional details – Types of rotors – Principle of operation – Need for starters – Types of starters – DOL, Stator resistance and reactance, rotor resistance, autotransformer and star–delta starters – Speed control – Change of voltage, torque, number of poles and slip – Losses and Efficiency – Performance analysis – Design aspects of motors for usage in submersible pumps – Motors Rating and selection criteria.

UNIT III PUMPS

Pumps: definition and classifications – Sewage, fire fighting and Pressure boosting pumps Classification, working principle, indicator diagram, work saved by air vessels and performance curves – cavitations in

TOTALQUALITYMANAGEMENT

9

9

Q

9

Q

COURSE OBJECTIVE

- 1. To introduce the concepts of essentiality of quality.
- 2. To understand the importance of various TQM principles.
- 3. To introduce the concepts of the various TQM principles.
- 4. To Understand the techniques for quality management.
- 5. To introduce the standard quality systems in industries.

6. To familiarize the students to understand the various techniques to improve the quality in industries.

COURSE OUTCOMES

At the end of the course the student would be able to

- 1. Understand the essentiality of quality.
- 2. Summarize various TQM principles.
- 3. Understand the various TQM principles.
- 4. Understand the techniques for quality management.
- 5. Implement standard quality systems in industries.

6. Apply various techniques to improve the quality in industries.

UNIT I ESSENTIALSOF TQM

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNITII TQMPRINCIPLES

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III TQMTOOLS

The new seven management tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma – APQP.

UNITIV TQMTECHNIQUES

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNITV QUALITY ANDENVIRONMENTSYSTEMS

Need for ISO 9000 and Other Quality Systems, ISO 9000:2002 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 and ISO 18001 – Concept, Requirements and Benefits.

16BEME891 PROJECT WORK - PHASE II&VIVA-VOCE 0 0 32 16 300

COURSE OBJECTIVE

- 1. To understand the concept and basics of thrust areas of Mechanical Engineering.
- 2. To explain the Review literature to identify gaps and define objectives & scope of the work.
- 3. To make the student appreciate the purpose of innovative ideas for social benefit.
- 4. To understand the importance of a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
- 5. To familiarize the students to understand the methods and materials to carry out experiments/develop code.
- 6. To Reorganize the procedures with a concern for society, environment and ethics

COURSE OUTCOME

- 1. Identify thrust areas of Mechanical Engineering.
- 2. Review literature to identify gaps and define objectives & scope of the work.
- 3. Generate and implement innovative ideas for social benefit.
- 4. Develop a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
- 5. Identify methods and materials to carry out experiments/develop code.
- 6. Reorganize the procedures with a concern for society, environment and ethics

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. DEPARTMENT ELECTIVES

16BEME5E01

MATERIAL ASPECTSINDESIGN

COURSE OBJECTIVES

- 1. To select Material Properties have to suit the purpose of an application.
- 2. To designing a machine or component, many factors have to be considered and optimised.
- 3. To covers most issues for mechanical designoptimisation.
- 4. To know about the selective assembly process
- 5. To know about the fracture mechanism.
- 6. To know about spring design.

COURSE OUTCOMES

- 1. Sudents able to select material properties have to suit the purpose of an application.
- 2. create designing a machine or component, many factors have to be considered and optimised.
- 3. Solve most issues for mechanical designoptimisation.
- 4. selective assembly process
- 5. Finding of fracture mechanism of given material
- 6. Create spring design for Absorption system.

UNITI MATERIAL SELECTIONIN DESIGN

Introduction – relation of materials selection to design – general criteria for selection – performance characteristics of materials – materials selection process – design process and materials selection – economics of materials – recycling and materials selection

UNITII MATERIALS PROCESSINGANDDESIGN

Role of Processing in Designing – classification of manufacturing processes – types of processing systems – factors determining process selection. Design for manufacturability, assembly, machining, casting, forging and welding

UNITIII MANUFACTURING CONSIDERATIONSINDESIGN

Surface finish – texture – dimensional tolerances in fitting – interchangeability – selective assembly – geometric tolerance. Selection of fits and tolerances

UNITIV MATERIALS PROPERTIESANDDESIGN

Stress – Strain diagram – design for strength, rigidity – design under static loading, variable loading, eccentric loading – stress concentration. Design examples with shaft design, spring design and C frames.

UNITV MATERIALS INDESIGN

Design for brittle fracture, fatigue failure, corrosion resistance. Designing with plastics, brittle materials

COURSE OBJECTIVE

- 1. To understand the application of computers in various aspects of Manufacturing viz., Design, proper planning, Manufacturing cost, Layout & Material Handlingsystem.
- 2. To know the application of principles of group technology in computer aided processplanning.
- 3. To impart knowledge on working of the shop floorcontrol
- 4. To Study and acquire knowledge on data collection system in FMS.
- 5. To familiarize the students to understand CIM architecture for practical application.
- 6. To expose students to generate database for computer integrated manufacturingprocesses.

COURSE OUTCOME

Upon completion of this course, the student can able to

- 1. Implement computer integrated manufacturing concepts inindustries.
- 2. Apply the principles of group technology in computer aided processplanning.
- 3. Understand the working of the shop floorcontrol
- 4. Implement automated data collection system in FMS.
- 5. Develop CIM architecture for practical application.
- 6. Generate database for computer integrated manufacturingprocesses

UNITI INTRODUCTION

The meaning and origin of CIM– the changing manufacturing and management scene – External communication – islands of automation and software–dedicated and open systems–manufacturing automation protocol – product related activities of a company– marketing engineering – production planning – plant operations – physical distribution– business and financial management.

UNITII GROUPTECHNOLOGY

Group technology– – part families – Classification and coding – Approaches to computer aided process planning –variant approach and generative approaches

UNITIII SHOP FLOOR CONTROL AND INTRODUCTIONOFFMS

Shop floor control-phases -factory data collection system -automatic identification methods- Bar code technology-automated data collection system. FMS-components of FMS - types -FMS workstation -material handling and storage systems- FMS layout -computer control systems-application and benefits.

UNITIV CIM IMPLEMENTATION ANDDATACOMMUNICATION

CIM and company strategy – system modeling tools –IDEF models – activity cycle diagram – CIM open system architecture (CIMOSA)– manufacturing enterprise wheel–CIM architecture – Product data management–CIM implementation software. Communication fundamentals– local area networks –topology – LAN implementations – network management and installations –MRP, ERP concepts

UNITV OPEN SYSTEM AND DATABASEFOR CIM

Open systems-open system inter connection – manufacturing automations protocol and technical office protocol (MAP /TOP).

Development of databases –database terminology– architecture of database systems–data modeling and data associations –relational data bases – database operators – advantages of data base and relational database.

16BEME5E03

3003100

COURSE OBJECTIVES

- 1. To make the student acquire sound knowledge on the types of vehicle structures, cooling and lubrication systems required.
- 2. To acquaint the student with the concepts of type of engines to be used for modern automobiles.
- 3. To familiarize the students to Distinguish between the manual transmissions systems with automatic transmission systems.
- 4. To provide knowledge on appropriate transmission systems for the optimal power transmission.
- 5. To provide knowledge on steering, brakes and suspension systems for effective functioning.
- 6. To acquaint the student with advanced technologies in automotive Engineering.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Identify the types of vehicle structures, cooling and lubrication systems required.
- 2. Determine the type of engines to be used for modern automobiles.
- 3. Distinguish between the manual transmissions systems with automatic transmission systems.
- 4. Select appropriate transmission systems for the optimal power transmission.
- 5. Select steering, brakes and suspension systems for effective functioning.
- 6. Implement the advanced technologies in automotive

UNITI AUTOMOBILE ARCHITECTUREANDPERFORMANCE

Automotive components, subsystems and their positions – Chassis, frame and body, front, rear and four wheel drives – Operation and performance – Traction force and traction resistance, Power required for automobile–Rolling, air and gradient resistance.

UNITII TYPES OFENGINES

Types of engines – multi valve engine – in–line engine, vee–engine, Petrol engine–direct – single point and multipoint injection, diesel engine–common rail diesel injection, supercharging and turbo charging.

UNITIII TRANSMISSIONSYSTEMS

Clutch : Types – coil spring and diaphragm type clutch, single and multi plate clutch, centrifugal clutch, Gear box : Types – constant mesh, sliding mesh and synchromesh gear box, layout of gear box, gear selector and shifting mechanism, overdrive, automatic transmission, Propeller shaft, universal joint, slip joint, differential and real axle arrangement, hydraulic coupling.

UNITIV WHEEL AND TYRES AND SUSPENSION SYSTEM

Types of wheels, construction, wired wheels, Tyres– construction, Radial, bias and belted bias, slip angle, Tread patterns, Tyre retreading - cold and hot, Tubeless tyres, Types–front and rear suspension, conventional and independent type suspension, leaf springs, coil springs, dampers, torsion bars, stabilizer bars, arms, air suspension systems – Balancing of Wheels.

UNITV STEERING SYSTEM ANDBRAKINGSYSTEM

Types of steering systems, Ackermann principle, Davis steering gear, steering gear boxes, steering linkages, power steering, wheel geometry–caster, camber, toe–in, toe out etc., wheel Alignment. Braking System – Forces on vehicles, tyre grip, load transfer, braking distribution between axles, stopping distance, Types of brakes, Mechanical, Hydraulic, Air brakes, Disc and Drum brakes, Engine brakes.

HYDRAULICS AND PNEUMATICS POWER CONTROL **16BEME5E04** 3003100

COURSE OBJECTIVES

- 1. To recognize symbols and fundamentals in fluid power generation and distribution.
- 2. To identify power source for hydraulic systems.
- 3. To select appropriate components used in various hydraulic systems.
- 4. To design hydraulic circuits for givenapplications
- 5. To distinguish the components used in pneumaticcircuits.
- 6. To create the logic circuits for controlling electro-hydraulic/ pneumaticsystems.

COURSE OUTCOMES

At the end of the course, the students will be able to

- 1. Recognize symbols and fundamentals in fluid power generation and distribution.
- 2. Identify power source for hydraulicsystems.
- 3. Select appropriate components used in various hydraulic systems.
- 4. Design hydraulic circuits for given applications
- 5. Distinguish the components used in pneumaticcircuits.
- 6. Create the logic circuits for controlling electro-hydraulic/ pneumaticsystems.

FLUID POWER SYSTEMSANDFUNDAMENTALS UNITI

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids - General types of fluids - Fluid power symbols. Basics of Hydraulics-Applications of Pascals Law- Laminar and Turbulent flow - Reynold's number - Darcy's equation - Losses in pipe, valves and fittings.

HYDRAULIC SYSTEMANDCOMPONENTS UNITII

Sources of Hydraulic Power: Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump, Pressure boosting pumps, construction and working of pumps - pump performance - Variable displacement pumps. Fluid Power Actuators: Linear hydraulic actuators - Types of hydraulic cylinders - Single acting, Double acting special cylinders like tanden, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder, Rotary actuators.

DESIGN OFHYDRAULICCIRCUITS UNITIII

Construction of Control Components : Direction control valve -3/2 way valve -4/2 way valve - Shuttlevalve - check valve - pressure control valve - pressure reducing valve, sequence valve, Flow control valve - Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram. Accumulators and Intensifiers: Types of accumulators – Accumulators circuits, sizing of accumulators, intensifier – Applications ofIntensifier - Intensifiercircuit.

UNITIV PNEUMATIC SYSTEMSANDCOMPONENTS

Pneumatic Components: Properties of air - Compressors - Filter, Regulator and Lubricator UNIT Air control valves, Quick exhaust valves, pneumatic actuators. Fluid Power Circuit Design, Speed control circuits, synchronizing circuit, Penumo hydraulic circuit, Sequential circuit design for simple applications using cascade method.

UNITV DESIGN OFPNEUMATICCIRCUITS

Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Fluidics – Introduction to fluidic devices, simple circuits, Introduction to Electro Hydraulic Pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control. TOTAL

16BEME5E05 DESIGN OF JIGS, FIXTURES AND PRESS TOOLS

COURSE OBJECTIVES

- 1. To impart knowledge on the principles of locating and clamping devices in machining process.
- 2. To familiarize the students to understand design of jigs for a given component.
- 3. To Study and acquire knowledge on design fixtures for a given component.
- 4. To make the student acquire sound knowledge on appropriate type of press tool for a given component.
- 5. To expose students to drawing die for a given component.
- 6. To give exposure to the use computer aids for sheet metal forming analysis

COURSE OUTCOMES

Upon the completion of this course the students will be able to

- 1. Summarize the principles of locating and clamping devices in machining process.
- 2. Design jigs for a given component.
- 3. Design fixtures for a given component.
- 4. Design an appropriate type of press tool for a given component.
- 5. Develop a drawing die for a given component.
- 6. Use computer aids for sheet metal forming analysis

UNITI PURPOSE TYPES AND FUNCTIONS OF JIGSAND FIXTURES

Tool design objective – Production devices – Inspection devices – Materials used in Jigs and Fixtures – Types of Jigs – Types of Fixtures–Mechanical actuation–pneumatic and hydraulic actuation.

UNITII JIGS

Drill bushes –different types of jigs–plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs–Automatic drill jigs–Rack and pinion operated. Air operated Jigs components. Design and development of Jigs for given components.

UNITIII FIXTURES

General principles of boring, lathe, milling and broaching fixtures– Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures– Modular fixtures, Quick change fixtures.

UNITIV PRESS WORKING TERMINOLOGIES AND ELEMENTS OFDIESAND STRIP LAY OUT

Press working terminology–Presses and press accessories–Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies:Die block–die shoe. Bolster plate– punch plate–punch holder–guide pins and bushes – strippers – knockouts–stops –pilots–Selection of standard die sets strip lay out–strip lay out calculations, SMEDtechnique.

UNIT V DESIGN AND DEVELOPMENTOFDIES

Design and development of progressive and compound dies for Blanking and piercing operations. Tool and DIE Materials, Bending dies – development of bending dies–forming and drawing dies.

RENEWABLE ENERGY SOURCES

COURSE OBJECTIVES

- 1. To explain importance of renewable energy resources.
- 2. To understand the importance of basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
- 3. To understand the importance of principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
- 4. To study the features of design principles of biogas plants.
- 5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
- 6. To give exposure to power plants working with non-conventional energy

COURSE OUTCOMES

- 1. Understand the importance of renewable energy resources.
- 2. Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
- 3. Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
- 4. Implement design principles of biogas plants.
- 5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
- 6. Get exposure on the power plants working with non-conventional energy

UNITI ENERGYANDENVIRONMENT

Primary energy sources – world energy resources–Indian energy scenario–energy cycle of the earth – environmental aspects of energy utilisation, CO_2 emissions and Global warming–renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy resources.

UNITII SOLARENERGY

Principles of solar energy collection – solar radiation – measurements – instruments – data and estimation– types of collectors – characteristics and design principles of different type of collectors – performance of collectors – testing of collectors.

UNITIII WIND, TIDAL AND GEOTHERMALENERGY

Energy from the wind – general theory of windmills – types of windmills – design aspects of horizontal axis windmills – applications. Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants – power from geothermal energy – principle of working of geothermal power plants.

UNITIV BIOENERGY

Energy from bio mass and bio gas plants –various types – design principles of biogas plants – applications. Energy from wastes – waste burning power plants – utilization of industrial and municipal wastes – energy from the agricultural wastes.

UNITV OTHER RENEWABLEENERGYSOURCES

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) – thermoelectric generators – thermionic generators – fuel cells – solar cells – types, Emf generated, power output, losses and efficiency and applications.

16BEME5E07

COURSE OBJECTIVES

- 1. To understand the anatomy, basic concepts and applications of robot.
- 2. To learn the drives and end effectors used inrobot.
- 3. To study the various types of sensors used inrobot.
- 4. To familiarize robot kinematics and robotprogramming
- 5. To provide knowledge on simple offline robot program
- 6. To impart knowledge on economic analysis ofrobots

COURSE OUTCOMES

Upon completion of this course, the students can able to

- 1. Identify the various types of robots.
- 2. Select appropriate drive systems and end effectors for industrial application.
- 3. Decide the types of sensors required according to the applications of robot.
- 4. To identify the different types of machine visiontechnologies
- 5. Develop simple offline robot program for different applications.
- 6. Calculate the economic analysis ofrobots

FUNDAMENTALS OFROBOT UNITI

Robot - Definition - Robot Anatomy - Co-ordinate Systems, Work Envelope, types and classification -Specifications - Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load - Robot Parts and Their Functions – Need for Robots – Different Applications

UNITII **ROBOT DRIVE SYSTEMS ANDENDEFFECTORS**

Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors - Salient Features, Applications and Comparison of all these Drives End Effectors – Grippers – Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers.

UNITIII SENSORS ANDMACHINEVISION

Requirements of a sensor, Principles and Applications of the following types of sensors - Position sensors (Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, Pneumatic Position Sensors), Range Sensors (Triangulation Principle, Structured, Lighting Approach, Time of Flight Range Finders, Laser Range Meters), Proximity Sensors (Inductive, Hall Effect, Capacitive, Ultrasonic and Optical Proximity Sensors), Touch Sensors, (Binary Sensors, Analog Sensors), Wrist Sensors, Compliance Sensors, Slip Sensors

Camera, Frame Grabber, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques. Image Processing and Analysis - Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms.

UNITIV **ROBOT KINEMATICS ANDROBOTPROGRAMMING**

Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional), Four Degrees of Freedom (In 3 Dimensional) – Deviations and Problems.

UNITV IMPLEMENTATION AND ROBOTECONOMICS

RGV, AGV; Implementation of Robots in Industries - Various Steps; Safety Considerations for Robot Operations; Economic Analysis of Robots - Pay back Method, EUAC Method, Rate of Return Method, Process application of Robots and Collaborativerobots.

16BEME5E08

COURSE OBJECTIVE

- 1. To provide foundations on design of experiments and statistical analysis of experimental data obtained from laboratory and/or industrialprocesses.
- 2. To understand the important concepts of single factorial designs
- 3. To Study and acquire knowledge on various methodologies involved in single factorial designs
- 4. To know the application of testing of factorial experiment
- 5. To enrich the understanding of special experimental designs
- 6. To impart knowledge on basic concepts of Taguchi method in parameter design

COURSE OUTCOMES

Upon successful completion of the course, students will be able to:

- 1. Understand the knowledge of various techniques for experimental planning
- 2. Understand the concepts of single factorialdesigns
- 3. List the various methodologies involved in single factorialdesigns
- 4. Apply the concept of testing of factorialexperiment
- 5. Solve the partial and ordinary differential equations special experimental designs
- 6. Apply the basic concepts of Taguchi method in parameterdesign

UNITI INTRODUCTION

Planning of experiments – Steps – Need - Terminology: Factors, levels, variables, experimental error, replication, Randomization, Blocking, Confounding.

UNITII SINGLEFACTOREXPERIMENTS

ANOVA rationale - Sum of squares – Completely randomized design, Randomized block design, effect of coding, Comparison of treatment means – Newman Kuel's test, Duncan's Multiple Range test, Latin Square Design, Graeco-Latin Square Design, Balanced incomplete design.

UNITIII FACTORIALEXPERIMENTS

Main and interaction effects –Two and three Factor full factorial Designs, 2 k deigns with Two and Three factors-Unreplicated design- Yate's Algorithm

UNITIV SPECIALEXPERIMENTALDESIGNS

Blocking in factorial design, Confounding of 2k design, nested design-Response Surface Methods.

UNITV TAGUCHI TECHNIQUES

Fundamentals of Taguchi methods, Quality Loss function, orthogonal designs, application to Process and Parameter design.

POWER PLANT ENGINEERING

COURSE OBJECTIVES

- 1. To give exposure to accessories and layout required for a steam power plant depending upon the requirements.
- 2. To study performance of steam power plant.
- 3. To make the student acquire sound knowledge of working of nuclear and hydel power plant.
- 4. To study the features of gas turbine power plant.
- 5. To make the student acquire sound knowledge of economics of the power plant.
- 6. To make the student acquire sound knowledge on renewable energy technologies and availability.

COURSE OUTCOMES

Upon completion of this course, the students can able to

- 1. Select the accessories and layout required for a steam power plant depending upon the requirements.
- 2. Compute performance of steam power plant.
- 3. Explain the working of nuclear and hydel power plant.
- 4. Compute performance of gas turbine power plant.
- 5. Calculate the economics of the power plant.
- 6. Apply appropriate type of renewable energy technologies depending upon the application and availability.

UNITI INTRODUCTION TO POWER PLANTSANDBOILERS

LayoutofSteam,Hydel,Diesel,MHD,NuclearandGasTurbinePowerPlants–CombinedPowerCycles– Comparison and Selection, Load Duration Curves.

Steam Boilers and Cycles – High Pressure and Super Critical Boilers – Fluidised Bed Boilers – Industrial Standards.

UNITII STEAM POWERPLANT

Fuel and Ash Handling, Combustion Equipment for burning coal, Mechanical Stokers, Pulveriser, Electrostatic Precipitator, Draught – different types, Surface Condenser Types, Cooling Towers

UNITIII NUCLEAR AND HYDELPOWERPLANTS

Nuclear Energy – Fission, Fusion Reaction, Types of Reactors, pressurized water reactor, Boiling Water Reactor, Waste Disposal and safety.

Hydel Power Plant – Essential Elements, Selection of Turbines, Governing of Turbines– Micro Hydel developments.

UNITIV DIESEL AND GAS TURBINEPOWERPLANT

Types of Diesel Plants, Components, Selection of Engine Type, Applications Gas Turbine Power Plant –Fuels – Gas Turbine Material – Open and Closed Cycles – Reheating – Regeneration and Intercooling – Combined Cycle.

UNITV OTHER POWER PLANTS AND ECONOMICS OF POWER PLANTS

Geo thermal –OTEC – Tidel – Pumped storage – Solar thermal central receiver system. Safety aspects and Cost of Electric Energy – Fixed and operating Costs – Energy Rates – Types of Tariffs – Economics of load sharing, comparison of economics of various power plants.

16BEME6E02

COURSE OBJECTIVE

- 1. To provide knowledge on different aspects of powder metallurgy parameters.
- 2. To understand the importance of principle of advanced welding processes and its application.
- 3. To understand the importance of advanced forming processes and its application.
- 4. To familiarize the students to advanced manufacturing process for processing of different materials.
- 5. To acquaint the student to apply the suitable rapid prototyping mechanism for industry need.
- 6. To provide knowledge on optimum parametric for advanced manufacturing process.

COURSE OUTCOME

Upon the completion of this course, the students will be able to

- 1. Understand different aspects of powder metallurgy parameters.
- 2. Understand basic principle of advanced welding processes and its application.
- 3. Understand basic principle of advanced forming processes and its application.
- 4. Select the best suitable advanced manufacturing process for processing of different materials.
- 5. Apply the suitable rapid prototyping mechanism for industry need.
- 6. Select the optimum parametric for advanced manufacturing process

UNITI POWDERMETALLURGYPROCESS

Introduction to powder metallurgy process – preparation of powders – types and functions of binders – green compaction – sintering process and its effect on the product.

UNITII ADVANCEDWELDINGPROCESSES

Percussion Welding– Electro Slag Welding, Plasma Arc Welding – Thermit Welding – Electron Beam Welding – Friction and Inertia Welding – Friction Stir Welding – Under Water WeldingProcess.

UNITIII SHEET METAL ANDFORMINGPROCESS

Sheet metal process –Laser welding and Cutting, Working principle and application of special forming process – Hydro Forming– Rubber Pad Forming– Explosive Forming – Magnetic Pulse Forming– Peen Forming – Super Plastic Forming – Deep Drawing Process.

UNITIV ADVANCEDMACHININGPROCESS

Modern machining process: Abrasive Jet Machining, Water Jet Machining, Abrasive Water Jet Machining, Ultrasonic Machining, Electro chemical Machining, Electro chemical Grinding, Electro Discharge Machining, wire cut EDM, Electron Beam Machining, plasma arc machining, Laser Beam Machining. Ultrasonic Machining, High speed machining process – deep hole drilling process

UNITV RAPIDPROTOTYPING

Introduction to Rapid Prototyping – Need for RPT– Stereo–lithography – Selective Laser Sintering, Fused Deposition Modeling, Laminated Object Manufacturing, Solid Ground Curing, Ballistic Particle Manufacturing

16BEME6E03

COMPUTATIONAL FLUID DYNAMICS

COURSE OBJECTIVES

- 1. To introduce Governing Equations of viscous fluidflows
- 2. To introduce numerical modeling and its role in the field of fluid flow and heattransfer
- 3. To enable the students to understand the various discretization methods, solution procedures and turbulencemodeling.
- To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high 4. speedcomputers.
- To equip them with skills to solve convection and diffusion problems 5.
- To understand the importance continuity and momentum equations for different types of fluidflow 6.

COURSE OUTCOMES

Upon completion of this course, the students can able

- 1. Identify, solve engineering problems by computational fluiddynamics.
- 2. Understand the importance of governing equations involved inCFD
- 3. Formulate and solve problems in the field of fluid flow and heattransfer.
- 4. Solve the heat conduction problems using finite differencemethod.
- 5. Analyze and provide solutions for convection and diffusion problems.
- Develop continuity and momentum equations for different types of fluidflow 6.

GOVERNING EQUATIONS ANDBOUNDARY CONDITIONS UNITI

Basics of computational fluid dynamics - Governing equations of fluid dynamics - Continuity, Momentum and Energy equations - Chemical species transport - Physical boundary conditions - Time-averaged equations for Turbulent flow.

UNITH DISCRETIZATIONMETHOD

MethodsofDerivingtheDiscretizationEquations-TaylorSeriesformulation-Finitedifferencemethod-Control volume Formulation - Spectral method.

HEATCONDUCTION UNITIII

Finite difference and finite volume formulation of steady/transient one-dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems

UNITIV **CONVECTIONANDDIFFUSION**

Finite volume formulation of steady one-dimensional convection and Diffusion problems, Central, upwind, hybrid and power-law schemes - Discretization equations for two dimensional convection and diffusion.

UNITV CALCULATION OFFLOWFIELD

Representation of the pressure - Gradient term and continuity equation - Staggered grid - Momentum equations - Pressure and velocity corrections - Pressure - Correction equation, SIMPLE algorithm and its variants. Turbulence models: mixing length model, two equation $(k-\varepsilon)$ models.

MANUFACTURE AND INSPECTION OF GEARS 3003100

COURSE OBJECTIVES

16BEME6E04

- 1. To gain knowledge in production, gear materialselection
- 2. To introduce the concepts of gear manufacturing
- 3. To Study and acquire knowledge on mechanism involve in conicalgears
- 4. To Study and acquire knowledge on the procedures that involves in gear materialselection
- 5. To expose students to detailed view of gear finishingmethods
- 6. To impart knowledge modern gear productionmethods

COURSE OUTCOMES

Upon the completion of this course the students will be able to

- 1. Understand the overview on classification of gears and itterminology
- 2. Explain the various methods of gear manufacturing
- 3. Understands the concepts and mechanism involve in conicalgears
- 4. Understand the procedures that involves in gear materialselection
- 5. Attain a detailed view of gear finishingmethods
- 6. Understanding the modern gear productionmethods

UNITI INTRODUCTIONTOGEARS

Types of gears-classification, application of gears, gearboxes, drawings for gears, gear production method an overview, types of blanks and blank preparation. Production Of Cylindrical Gears: Procedure of cutting gears and obtainable quality in hobbing and gear shaping, cutter selection and work holding methods, setting calculations. Rack type gear shaping machine description and application. Internal gear cutting methods, CNC gear hobbing and gear shapingmachines.

UNITII PRODUCTION OF CONICALGEARS

Production of straight bevel gears by bevel gear generator, duplex rotary cutter method, Gleason Reva cycle method, spiral and hybrid bevel gear generation. Description of machine, cutter and machine setting.

UNITIII GEAR MATERIAL SELECTION ANDHARDENINGMETHODS

Properties of gear materials-non-metallic, non-ferrous and plastic gears, selection of material for power transmission, high speed application. Selection of material for worm and wheel. Hardening by through hardening, case hardening, induction hardening, flame hardening, nitriding and tuftriding, hardening defects.

UNITIV GEARFINISHINGMETHODS

Gear finishing advantages, finishing of gears by grinding, shaving, lapping and honing methods, cold rolling of gears - description of process, machine, cutters and process parameters setting.

Gear Inspection: Type of gear errors-gear quality standards and allowable limits-tooth thickness, base tangent length measurement, pitch error, radial run out, involute profile error measurements methods and analysis, composite error measurement, computerized gear inspection, gear failure reasons and remedies.

UNITV MODERN GEARPRODUCTIONMETHODS

Gear production by stamping, die casting, powder metal process, injection and compression moulding of plastic gears, cold and hot rolling. Mass production methods, shear speed shaping, gear broaching, Gleayson G-TRAC – gear generation methods. Economical and Quality Production of Gears: Gear production systems – batch production, gear production cells, lean and agile production practices, automobile gear and gear boxes, heavy engineering gear production, gear for instruments and appliances, process and cutter selection for quantity, cost and qualitycriteria.

16BEME6E05

COURSE OBJECTIVES

- 1. To understand the importance of the DFM approach and guidelines
- 2. To enrich the understanding of the selective assembly and Datum systems
- 3. To introduce the concepts of demonstrate true Position tolerancing theory.
- 4. To develop an understanding of the standard techniques and redesigning cast members using weldments and plastic component manufacturing.
- 5. To equip them with skills on Tolerance Charting Technique.
- 6. To Study and acquire knowledge of the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

COURSE OUTCOMES

Upon completion of this course, the students will be able to,

- 1. Understand the DFM approach and guidelines
- 2. Understand the selective assembly and Datum systems
- 3. Demonstrate true Position tolerancing theory.
- 4. Understand redesigning cast members using weldments and plastic component manufacturing.
- 5. Demonstrate the Tolerance Charting Technique.
- 6. Know the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

UNITI DFM APPROACH, SELECTION AND SUBSTITUTION OFMATERIALSIN 9 INDUSTRY

DFM approach, DFM guidelines, standardisation, group technology, value engineering, comparison of materials on cost basis, design for assembly, DFA index, Poka – Yoke principle; 6σ concept; Tolerance Analysis: Process capability, process capability metrics, Cp, Cpk, cost aspects, feature tolerances, geometric tolerances, surface finish, review of relationship between attainable tolerance grades and different machining process, cumulative effect of tolerances, sure fit law, normal law and truncated normal law.

UNITII SELECTIVEASSEMBLY

Interchangeable and selective assembly, deciding the number of groups, Model–I: group tolerances of mating parts equal; Model–II: total and group tolerances of shaft, control of axial play.

Datum Systems: Grouped datum systems-different types, two and three mutually perpendicular grouped datum planes, grouped datum system with spigot and recess, pin and hole, and tongue-slot pair, computation of translational and rotational accuracy.

UNITIII TRUE POSITIONTOLERANCINGTHEORY

Comparison between co-ordinate and convention method of feature location tolerancing and true position tolerancing, zero true position tolerance, virtual size concept, floating and fixed fasteners, projected tolerance zone, functional gauges, paper layout gauging, compound assembly, examples.

UNITIV FORM DESIGN OF CASTINGSANDWELDMENTS

Redesign of castings based on parting line considerations, minimising core requirements, redesigning cast members using weldments, use of welding symbols – design considerations for plastic component manufacturing.

UNITV TOLERANCECHARTING

Tolerance Charting Technique: Operation sequence for typical shaft type of components, preparation of process drawings for different operations, tolerance worksheets and centrality analysis, examples, design features to facilitate machining. Datum features – functional and manufacturing, component design–machining considerations, redesign for manufacture, examples.

16BEME6E06

COURSE OBJECTIVES

- 1. To understand the basic difference between incompressible and compressibleflow.
- 2. To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and RocketPropulsion.
- 3. To introduce the concepts of various conditions of compressible fluidflows
- 4. To Study and acquire knowledge on performance analysis of subsonic and supersonicinlets, combustors, afterburners and exhaustnozzles
- 5. To understand the concept of working of various types of rocketengines
- 6. To study the features of thrust equation for rocket propulsionsystem

COURSE OUTCOMES

Upon completion of this course, the students can able to

- 1. Analyze various conditions of compressible fluidflows.
- 2. Calculate mass flow rate in flow through variable areaducts.
- 3. Carryout simple performance analysis of subsonic and supersonicinlets.
- 4. Perform performance analysis of combustors, afterburners and exhaustnozzles.
- 5. Understand the working of various types of rocketengines
- 6. Use thrust equation for rocket propulsionsystem

UNITI BASIC CONCEPTS ANDISENTROPICFLOWS

Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Machcone –Effect of Mach number on compressibility – Isentropic flow through variable area ducts – Nozzle and Diffusers –area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles. Use of Gas tables.

UNITII FLOW THROUGHDUCTS

Flow through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – Variation of flow properties – Isothermal flow with friction in constant area ducts –Use of tables and charts – Generalised gas dynamics.

UNITIII NORMAL ANDOBLIQUESHOCKS

Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl – Meyer relations – Use of table and charts – Applications.

UNITIV JETPROPULSION

Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operation principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines – Aircraft combustors.

UNITV ROCKETPROPULSION

Types of rocket engines – Propellants – Ignition and combustion – Theory of rocket propulsion – solid and liquid propellants, comparison of different propulsion systems .Performance study – Staging – Terminal and characteristic velocity – Applications – Space flights.

ADVANCED LC. ENGINES

COURSE OBJECTIVES

- To understand the underlying principles of operation of different IC Engines and components. 1.
- 2. To provide knowledge on pollutant formation, control, alternate fueletc.
- To Study and acquire knowledge to Identify parts, terminology and fuel supply system of internal 3. combustionengine
- To introduce the concepts of cooling and lubrication systems of ICengines 4.
- To make the student acquire sound knowledge on combustion, knocking and super charging of internal 5. combustionengines
- 6. To expose students to recent trends associated with ICengines

COURSE OUTCOMES

Upon completion of this course, the students can able to

- 1. Explain the construction and operation of internal combustionengine.
- 2. Identify parts, terminology and fuel supply system of internal combustionengine.
- 3. Recognize the component used in cooling and lubrication systems of ICengines.
- 4. Describe the function of combustion, knocking and super charging of internal combustionengines.
- 5. Implement strategies for pollution control.
- 6. Know about the recent trends associated with ICengines

SPARKIGNITIONENGINES UNITI

Mixture requirements - Fuel injection systems - Monopoint, Multipoint & Direct injection - Stages of combustion - Normal and Abnormal combustion - Knock - Factors affecting knock - Combustion chambers.

UNITH **COMPRESSIONIGNITIONENGINES**

Diesel Fuel Injection Systems - Stages of combustion - Knocking - Factors affecting knock - Direct and Indirect injection systems - Combustion chambers - Fuel Spray behaviour - Spray structure and spray penetration - Air motion - Introduction to Turbocharging.

UNITIII POLLUTANT FORMATIONANDCONTROL

Pollutant - Sources - Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter - Methods of controlling Emissions - Catalytic converters, Selective Catalytic Reduction and Particulate Traps – Methods of measurement – Emission norms and Drivingcycles.

ALTERNATIVEFUELS UNITIV

Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - EngineModifications.

UNITV RECENTTRENDS

Air assisted Combustion, Homogeneous charge compression ignition engines - Variable Geometry turbochargers - Common Rail Direct Injection Systems - Hybrid Electric Vehicles - NOx Adsorbers -OnboardDiagnostics.

16BEME6E08

COURSE OBJECTIVE

- 1. To explain the steps involved in FEA and also the types of weight residual methods
- 2. To impart knowledge to formulate and solve problems in one dimensional structures including trusses, beams and frames.
- 3. To enrich the understanding of two dimensional thermal and torsion problems.
- 4. To enrich the understanding of axisymmetric bodies, plate and shell.
- 5. To develop an understanding of the standard techniques on matrix solution techniques to dynamic problems.
- 6. To impart knowledge on FE equation for structural, heat transfer and vibration problems.

COURSE OUTCOME

- 1. Explain the steps involved in FEA and also the types of weight residual methods
- 2. Formulate and solve problems in one dimensional structures including trusses, beams and frames.
- 3. Predict finite element equations for two dimensional thermal and torsion problems.
- 4. Predict finite element equations for axisymmetric bodies, plate and shell.
- 5. Apply matrix solution techniques to dynamic problems.
- 6. Formulate FE equation for structural, heat transfer and vibration problems.

UNITI INTRODUCTION

Historicalbackground–Matrixapproach–Applicationtothecontinuum–Discretization–Matrixalgebra– Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritzmethod

UNITII ONEDIMENSIONALPROBLEMS

Finite element modeling – Coordinates and shape functions– Potential energy approach – Galerkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNITIII TWODIMENSIONALCONTINUUM

Introduction – Finite element modeling – Scalar valued problem – Poisson equation –Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galerkin approach – Stress calculation – Temperature effects

UNITIV AXISYMMETRIC CONTINUUM

Axisymmetric formulation – Element stiffness matrix and force vector – Galerkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – Applications to cylinders under internal or external pressures

UNITV ISOPARAMETRIC ELEMENTS FOR TWODIMENSIONALCONTINUUM

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration – Stiffness integration – Stress calculations – Four node quadrilateral element.

MACHINE TOOL DESIGN

COURSE OBJECTIVE

- 1. To gain knowledge in design and material selection of various machinetools.
- 2. To provide an overview of regulation of speeds and feeds
- 3. To study the features of machine toolstructures
- 4. To understand the importance of constructional features of machine toolstructures
- 5. To expose students to design in machine tool structures, guide ways, power screws and spindles
- 6. To expose students to design spindles and spindlesupports

COURSE OUTCOMES:

Upon the completion of this course the students will be able to

- 1. Discuss the basics machine tool drives and mechanisms
- 2. Get knowledge on regulation of speeds and feeds
- 3. Understand the importance of machine toolstructures
- 4. Explain the constructional features of machine toolstructures
- 5. Design in machine tool structures, guide ways, power screws and spindles
- 6. Design spindles and spindlesupports

UNITI INTRODUCTION TO MACHINE TOOL DRIVESANDMECHANISMS

Introduction to the course, Working and Auxiliary Motions in Machine Tools, Kinematics of Machine Tools, Motion Transmission

UNITII REGULATION OF SPEEDS ANDFEEDS

Aim of Speed and Feed Regulation, Stepped Regulation of Speeds, Multiple Speed Motors, Ray Diagrams and Design Considerations, Design of Speed Gear Boxes, Feed Drives, Feed Box Design

UNITIII DESIGN OF MACHINETOOLSTRUCTURES

Functions of Machine Tool Structures and their Requirements, Design for Strength, Design for Rigidity, Materials for Machine Tool Structures, Machine Tool Constructional Features, Beds and Housings, Columns and Tables, Saddles and Carriages

UNITIV DESIGN OF GUIDEWAYS, POWER SCREWSANDSPINDLES

Functions and Types of Guideways, Design of Guideways, Design of Aerostatic Slideways, Design of Anti-Friction Guideways, Combination Guideways, Design of Power Screws.

UNITV DESIGN OF SPINDLES AND SPINDLESUPPORTS

Functions of Spindles and Requirements, Effect of Machine Tool Compliance on Machining Accuracy, Design of Spindles, Antifriction Bearings. Dynamics of Machine Tools - Machine Tool Elastic System, Static and Dynamic Stiffness

COURSE OBJECTIVES

- 1. To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturingtechnologies
- 2. To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.
- 3. To introduce process involved in Additive manufacturingtechnology
- 4. To understand the importance of knowledge on software's used in additive manufacturingtechnology
- 5. To enrich the understanding of the working of SLS and othertechniques
- 6. To provide an overview of additive manufacturing technology in medicalfield and biostream

COURSE OUTCOMES

On completion of this course, students will be able to

- 1. Understand the need for additive manufacturingtechnology
- 2. Explain the process involved in Additive manufacturingtechnology
- 3. Get knowledge on software's used in additive manufacturingtechnology
- 4. Describe the working of SLS and othertechniques
- 5. Apply the additive manufacturing technology in medical field
- 6. Applications of additive manufacturing technology in biostream

UNITI INTRODUCTION

Overview – History - Need-Classification -Additive Manufacturing Technology in product development-Materials for Additive Manufacturing Technology – Tooling - Applications.

UNITII CAD & REVERSEENGINEERING

Basic Concept – Digitization techniques – Model Reconstruction – Data Processing for Additive Manufacturing Technology: CAD model preparation – Part Orientation and support generation – Model Slicing –Tool path Generation – Softwares for Additive Manufacturing Technology: MIMICS, MAGICS.

UNITIII LIQUID BASED AND SOLID BASED ADDITIVEMANUFACTURINGSYSTEMS 9

Classification – Liquid based system – Stereolithography Apparatus (SLA)- Principle, process, advantages and applications - Solid based system –Fused Deposition Modeling - Principle, process, advantages and applications, Laminated Object Manufacturing

UNITIV POWDER BASED ADDITIVEMANUFACTURINGSYSTEMS

Selective Laser Sintering – Principles of SLS process - Process, advantages and applications, Three Dimensional Printing - Principle, process, advantages and applications- Laser Engineered Net Shaping (LENS), Electron BeamMelting.

UNITV MEDICAL ANDBIO-ADDITIVEMANUFACTURING

Customized implants and prosthesis: Design and production. Bio-Additive Manufacturing- Computer Aided Tissue Engineering (CATE) – Case studies

COMPOSITE MATERIALS

COURSE OBJECTIVES

- 1. To understand the fundamentals of composite material strength and its mechanicalbehavior
- 2. Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of thefiber.
- 3. Thermo-mechanical behavior and study of residual stresses in Laminates duringprocessing.
- 4. Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronicchips.
- 5. To introduce the concepts of carbon-carbon composite for different industrial application
- 6. To impart knowledge on various advances incomposites

COURSE OUTCOMES

Learners should be able to

- 1. Select the various types of composite matrix required for anapplication.
- 2. Choose appropriate manufacturing process for polymer matrix composite.
- 3. Opt appropriate manufacturing process for metal matrixcomposite.
- 4. Use the concepts of ceramic composites and its productiontechniques.
- 5. Identify the type of carbon-carbon composite for different industrial application.
- 6. Explain the various advances incomposites

UNITI INTRODUCTION TOCOMPOSITES

Fundamentalsofcomposites-needforcomposites-Enhancementofproperties-classificationofcomposites

- Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) - Reinforcement - Particle reinforced composites, Fibre reinforced composites. Applications of various types of composites.

UNITII POLYMERMATRIX COMPOSITES

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non woven random mats – various types of fibres. PMC processes - Hand lay up processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass fibre reinforced plastics(GRP).

UNITIII METALMATRIX COMPOSITES

Characteristics of MMC, Various types of Metal matrix composites Alloys - MMC, Advantages of MMC, Limitations of MMC, Metal Matrix, Reinforcements – particles – fibres. Effect of reinforcement - Volume fraction – Rule of mixtures. Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeezecasting.

UNITIV CERAMICMATRIX COMPOSITES

Engineeringceramicmaterials-properties-advantages-limitations-Monolithicceramics-NeedforCMC

Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing(HIPing).

UNITV ADVANCESINCOMPOSITES

Carbon /carbon composites – Advantages of carbon matrix – limitations of carbon matrix Carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol gel technique. Composites for aerospace applications.

16BEME7E04 REFRIGERATION ANDAIRCONDITIONING

COURSE OBJECTIVES

- 1. To understand the underlying principles of operations in different Refrigeration & Air conditioning systems and components.
- 2. To provide knowledge on design aspects of Refrigeration & Air conditioningsystems
- 3. To introduce the concepts on use of unconventional refrigerant system for industrial application
- 4. To expose students to properties of air using psychrometricchart
- 5. To provide knowledge on cooling load for a givensystem
- 6. To know the application of air conditioning system for industrial and domestic purpose

COURSE OUTCOMES

Learners should be able to

- 1. Calculate COP of various refrigerationcycles.
- 2. Choose appropriate refrigerants for variousapplications.
- 3. Identify the use of unconventional refrigerant system for industrial application.
- 4. Calculate the properties of air using psychrometricchart.
- 5. Calculate cooling load for a givensystem
- 6. Select the appropriate air conditioning system for industrial and domesticapplications

UNIT I REFRIGERATIONCYCLE

Review of thermodynamic principles of refrigeration. Concept of refrigeration system. Vapour compression refrigeration cycle – use of P–H charts – multistage and multiple evaporator systems – cascade system – COP comparison. Vapor absorption refrigeration system. Ammonia water and Lithium Bromide water systems. Steam jet refrigeration system

UNIT II REFRIGERANTS, SYSTEM COMPONENTSANDBALANCING

Compressors – reciprocating and rotary (elementary treatment.) – Condensers – evaporators – cooling towers. Refrigerants – properties – selection of refrigerants, Alternate Refrigerants, Refrigeration plant controls – testing and charging of refrigeration units. Balancing of system components. Applications to refrigeration systems – ice plant – food storage plants – milk –chilling plants – refrigerated cargo ships.

UNITIII PSYCHROMETRY

Psychrometric processes– use of psychrometric charts – – Grand and Room Sensible Heat Factors – bypass factor – requirements of comfort air conditioning – comfort charts – factors governing optimum effective temperature, recommended design conditions and ventilation standards

UNITIV COOLINGLOADCALCULATIONS

Types of load – design of space cooling load – heat transmission through building. Solar radiation –infiltration – internalheatsources(sensibleandlatent)–outsideairandfreshairload–estimationoftotalload– Domestic, commercial and industrial systems – central air conditioning systems.

UNIT V AIRCONDITIONING

Air conditioning equipments – air cleaning and air filters – humidifiers – dehumidifiers – air washers – condenser – cooling tower and spray ponds – elementary treatment of duct design – air distribution system. Thermal insulation of air conditioning systems. – Applications: car, industry, stores, and public buildings

ENGINEERING

COURSE OBJECTIVES

- 1. To Understand the concept of SQC.
- 2. To enrich the understanding of control charts to analyze for improving the process quality.
- 3. To familiarize the students to understand different sampling plans
- 4. To Understand the importance of need and types of life testing.
- 5. To introduce the reliability of a system.
- 6. To introduce the concepts of quality control and reliability techniques in industries.

COURSE OUTCOMES

Upon the completion of this course the students will be able to

- 1. Understand the concept of SQC.
- 2. Use control charts to analyze for improving the process quality.
- 3. Describe different sampling plans
- 4. Understand the need and types of life testing.
- 5. Improve the reliability of a system.
- 6. Implement quality control and reliability techniques in industries

UNITI INTRODUCTION AND PROCESS CONTROLFORVARIABLES

Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost–Variation in process–factors – process capability – process capability studies and simple problems – Theory of control chart– uses of control chart – Control chart for variables – X chart, R chart and σ chart.

UNITII PROCESS CONTROLFOR ATTRIBUTES

Control chart for attributes –control chart for proportion or fraction defectives – P chart and NP chart – control chart for defects – C and U charts, State of control and process out of control identification in charts.

UNITIII ACCEPTANCESAMPLING

Lot by lot sampling – Types – probability of acceptance in single, double, multiple sampling techniques – O.C. curves – producer's Risk and consumer's Risk. AQL, LTPD, AOQL concepts–standard sampling plans for AQL and LTPD– uses of standard sampling plans.

UNITIV LIFE TESTING- RELIABILITY

Life testing – objective: – failure data analysis, Mean failure rate, mean time to failure, mean time between failure, hazard rate, system reliability, series, parallel and mixed configuration – simple problems. Maintainability and availability – simple problems. Acceptance sampling based on reliability test – O.C Curves.

UNITV QUALITYANDRELIABLITY

Reliability improvements – techniques– use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – Optimization in reliability – Product design – Product analysis – Product development – Product life cycles – Maintenance.

TOTAL

Note: Permitted to use approved statistical table in the examination.

16BEME8E02

3003100

COURSE OBJECTIVES

- 1. To impart knowledge of need for planning and control in various aspects.
- 2. To develop an understanding of the standard techniques in various work study methodologies.
- 3. To familiarize the students to understand the product and process plan.
- 4. To introduce the concepts of a production schedule based on different facets.
- 5. To enrich the understanding of the level of inventory
- 6. To understand the importance the recent advancements in production planning and control.

COURSE OUTCOMES

Student will be able to

- 1. Indicate the need for planning and control in various aspects.
- 2. Understand various work study methodologies.
- 3. Construct product and process plan.
- 4. Prepare a production schedule based on different facets.
- 5. Estimate the level of inventory
- 6. Understand the recent advancements in production planning and control

UNITI INTRODUCTION

Objectives: and benefits of planning and control–Functions of production control–Types of production–job– batch and continuous–Product development and design–Marketing aspect – Functional aspects–Operational aspect–Durability and dependability aspect–aesthetic aspect. Profit consideration–Standardization, Simplification and specialization–Break even analysis–Economics of a new design.

UNITII WORKSTUDY

Method study, basic procedure–Selection–Recording of process – Critical analysis, Development – Implementation – Micro motion and memo motion study – work measurement – Techniques of work measurement – Time study – Production study – Work sampling – Synthesis from standard data – Predetermined motion time standards.

UNITIII PRODUCT PLANNING ANDPROCESSPLANNING

Product planning–Extending the original product information–Value analysis–Problems in lack of product planning–Process planning and routing–Pre requisite information needed for process planning–Steps in process planning–Quantity determination in batch production–Machine capacity, balancing.

UNITIV PRODUCTIONSCHEDULING

Production Control Systems–Loading and scheduling–Master Scheduling–Scheduling rules–Gantt charts– Perpetual loading–Basic scheduling problems – Line of balance – Flow production scheduling–Batch production scheduling–Product sequencing – Production Control systems–Periodic batch control–Material requirement planning Kanban.

UNITV INVENTORY CONTROL AND RECENT TRENDSINPPC

Inventory control–Purpose of holding stock–Effect of demand on inventories–Ordering procedures.

Two bin system –Ordering cycle system–Determination of Economic order quantity and economic lot size– ABC analysis–Recorder procedure–Introduction to computer integrated production planning systems–elements of JIT Systems.

16BEME8E03 COGENERATION AND WASTE HEAT RECOVERY SYSTEMS 3003100

COURSE OBJECTIVES

- 1. To study the significance of waste heat recovery systems and carry out its economicanalysis
- 2. To know the concepts of cogeneration, its types and probable areas of applications
- 3. To enrich the understanding of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of thisemerging technology.
- 4. To impart knowledge on operational issues and challenges cogenerationtechnologies.
- 5. To Understand the impact of this technology in waste heat recoverysystems
- 6. To introduce the concepts of various systems involved in waste heat recoveryprocess

COURSE OUTCOMES

The student will be able to

- 1. Understand the various methods of cogeneration.
- 2. Apply knowledge of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of thisemerging technology.
- 3. Have thorough understanding, operational issues and challenges cogenerationtechnologies.
- 4. Understand the impact of this technology in waste heat recoverysystems
- 5. Get the knowledge over various systems involved in waste heat recoveryprocess
- 6. Begin a career as an engineer in an organization economicanalysis

INTRODUCTION UNITI

Introduction – principles of thermodynamics – cycles – topping - bottoming – combined cycle - organic rankine cycles – performance indices of cogeneration systems – waste heat recovery – sources and types – concept of trigeneration.

COGENERATIONTECHNOLOGIES UNITII

Configuration and thermodynamic performance - steam turbine cogeneration systems - gas turbine cogeneration systems - reciprocating IC engines cogeneration systems - combined cycles cogeneration systems - advanced cogeneration systems: fuel cell, Stirling enginesetc.,

UNITIII ISSUES AND APPLICATIONS OF COGENERATION TECHNOLOGIES

Cogeneration plants electrical interconnection issues - utility and cogeneration plant interconnection issues applications of cogeneration in utility sector - industrial sector - building sector - rural sector - impacts of cogeneration plants - fuel, electricity and environment

UNITIV WASTE HEATRECOVERYSYSTEMS

Election criteria for waste heat recovery technologies - recuperators - Regenerators - Economizers - plate heat exchangers - thermic fluid heaters - Waste heat boilers classification, location, service conditions, design Considerations - fluidized bed heat exchangers - heat pipe exchangers - heat pumps - sorption systems.

UNITV **ECONOMIC ANALYSIS**

Investment cost – economic concepts – measures of economic performance – procedure for economic analysis - examples - procedure for optimized system selection and design - load curves - sensitivity analysisregulatory and financial frame work for cogeneration and waste heat recovery systems.

ENERGY CONSERVATION METHODS AND ENERGY AUDIT **16BEME8E04** 3003100

COURSE OBJECTIVES

- 1. To understand and analyze the energy data of industries
- 2. To carryout energy accounting andbalancing
- 3. To conduct energy audit and suggest methodologies for energysavings
- 4. To utilize the available resources in optimalways
- 5. To make the students conversant with concepts of industrial furnaces
- 6. To equip them with skills to perform Energyaudit

COURSE OUTCOMES

At the end of the course, student will be able to

- 1. Understand the Environmental aspects of energyutilization
- 2. Perform combustionanalysis
- 3. Explain the concepts of industrialboiler
- 4. understand how to work with the steam generated from the boilers in the industrial point of view
- 5. Explain the concepts of industrial furnaces
- Perform Energyaudit 6.

UNITI **ENERGYSCENARIO**

Present status, rate of growth, energy utilization (sector wise), concept of energy conservation, energy economics.

COMBUSTION: Fuel analysis, combustion calculations, air requirements, theoretical and excess air requirements, excess air control, flue gas analysis and measurement, types of draught, draught calculations, chimney size calculations. F.D and I.D fan draught requirements and power requirements, furnace pressure requirements.

UNITH **INDUSTRIALBOILERS**

Types and characteristics of industrial boilers, heat balance in boilers, efficiency trials in boilers, energy conservation opportunities in boilers operation and maintenance, water treatment requirements, soot blowing requirements, super heaters and superheat controls, waste heat recovery systems.

STEAM: Distribution requirements of steam and streamlines, efficient utilization of steam, steam trapping and air venting, flash steam recovery, condensate recovery, thermal insulation for systems including HVAC, stream balancecalculations.

INDUSTRIALFURNACES UNITII

Furnace types and characteristics, heat balance in furnaces, furnace efficiency calculations, energy conservation opportunities in furnaces, refractories types and properties, waste heat recovery system, insulating refractories, ceramic fibers, heat loss reduction calculations, wall and stored heat loss reduction.

UNITIV DRYING

Principle of drying and types of driers, mass and heat balance in driers, energy conservation opportunities in drying operations.

EVAPORATION: Principle of evaporation and types of evaporations, mass and heat balance, single and multiple effect evaporation, capacity and steam economy calculations, vapour recompression system.

UNITV **ENERGY AUDITANDAPPLICATIONS**

Types, methodology, questionnaire development, specific energy consumption (unitwise/section wise), identification of energy conservation measures/ technologies, economic and cost benefit analysis, case studies, Energy rating for thermal equipment, Energy saving measurement – Star status – National awards.

OPEN ELECTIVES (COURSES OFFERED BY OTHER DEPARTMENTS) SCIENCE AND HUMANITIES

16BESHOE01 PROBABILITY ANDRANDOMPROCESS

3003100

COURSE OBJECTIVES

- 1. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- 2. To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- 3. To understand the basic concepts of random processes which are widely used in IT fields.
- 4. To understand the concept of correlation and spectral densities.
- 5. To understand the significance of linear systems with random inputs.
- 6. To understand the response of random inputs to linear time invariant systems.

COURSE OUTCOMES

- 1. Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- 2. The students will have an exposure of various distribution functions, correlation and spectral densities.
- 3. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- 4. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- 5. To apply the concept random processes in engineering disciplines.
- 6. To understand and apply the concept of correlation and spectral densities

UNITI MEASURES OF CENTRAL TENDENCY AND PROBABILITY

Measures of central tendency - Mean, Median, Mode - Standard Deviation Probability - Random variable -Axioms of probability - Conditional probability - Total probability - Baye's theorem.

STANDARDDISTRIBUTIONS UNITH

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties -Chebyshev'sinequality.

UNITIII TWO DIMENSIONAL RANDOM VARIABLES

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions - Covariance - Correlation and regression

UNITIV CLASSIFICATION OFRANDOM PROCESS

Definition and examples - first order, second order, strictly stationary, wide - sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNITV **CORRELATION ANDSPECTRALDENSITIES**

Autocorrelation-Crosscorrelation-Properties-Powerspectraldensity-Crossspectraldensity-Properties

- Wiener-Khintchine relation - Relationship between cross power spectrum and cross correlation function Linear time invariant system - System transfer function -Linear systems with random inputs - Auto correlation and cross correlation functions of input andoutput.

16BESHOE02

COURSE OBJECTIVES

- 1. Be able to understand basic knowledge of fuzzy sets
- 2. Be able to understand basic knowledge of fuzzy logic
- 3. Be able to apply basic knowledge of fuzzy operations.
- 4. To know the basic definitions of fuzzy relations
- 5. Be able to apply basic fuzzy inference and approximate reasoning
- 6. To know the applications of fuzzy Technology.

COURSE OUTCOMES

- 1. To gain the main subject of fuzzy sets.
- 2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- 3. To gain the methods of fuzzy logic.
- 4. To comprehend the concepts of fuzzy relations.
- 5. To analyze the application of fuzzy logic control to real time systems.
- 6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNITIFUZZYSETSFuzzy Sets:Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematicalrepresentations – Level Sets – F u z z y functions - Zadeh's Extension Principle	9
UNITII OPERATIONS ONFUZZYSETS Operations on Fuzzy Sets Operations on [0,1] – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations	9
UNITIII FUZZYRELATIONS Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations	9
UNITIV FUZZYMEASURES Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures	9
UNITV FUZZYINFERENCE Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical	9

LINEAR ALGEBRA

16BESHOE03

COURSE OBJECTIVES

- 1. To introduce the basic concepts of vector space
- 2. To introduce the fundamental concepts in their respective engineering fields
- 3. To know the fundamentals of linear Algebra
- 4. To solve system of linear equations
- 5. To study about the linear transformations
- 6. To introduce the concepts of inner product spaces

COURSE OUTCOMES

- 1. To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- 2. To describe the fundamental concepts of Eigen values and Eigen vectors by using Power method.
- 3. To apply the fundamental concepts in their respective engineering fields
- 4. To visualize linear transformations as matrix form
- 5. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- 6. To articulate the importance of Linear Algebra and its applications in branches of Mathematics.

UNITI VECTORSPACES

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space

UNITII EIGEN VALUES ANDEIGENVECTORS

Eigen values and Eigen vectors - diagonalization - Power method - QR decomposition

UNITIII SYSTEM OFLINEAR EQUATIONS

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNITIV LINEARTRANSFORMATIONS

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNITV INNERPRODUCTSPACES

The Dot Product on R^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

16BESHOE04

COURSE OBJECTIVES

- 1. To disseminate the fundamentals of acoustic waves.
- 2. To inculcate the characteristics of radiation and reception of acoustic waves.
- 3. To teach the concepts of radiation and reception of acoustic waves
- 4. To divulge knowledge on the basics of pipe resonators and filters.
- 5. To introduce the features of architectural acoustics.
- 6. To impart the basic knowledge of transducers and receivers.

COURSE OUTCOMES

- 1. Develop the idea of the fundamentals of acoustic waves.
- 2. Apply the concepts of radiation and reception of acoustic waves.
- 3. Explain the basic ideas of pipe resonators and filters.
- 4. Illusrate the basics of architectural acoustics.
- 5. Illustrate the transducers and receivers and its applications in various electronic devices.
- 6. Apply the knowledge inputs of the course for engineering applications.

UNITI INTRODUCTION

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves -Energy density – Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNITII RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance -Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNITIII PIPES RESONATORS ANDFILTERS

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combing band levels and tones – detecting signals in noise – detection threshold – the ear – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNITIV ARCHITECTURALACOUSTICS

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Weighted sound levels speech interference – highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNITV TRANSDUCTION

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker – loudspeaker cabinets – horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

16BESHOE05

COURSE OBJECTIVES:

- 1. To make the students conversant with basics of Solid wastes and its classification.
- 2. To make the student acquire sound knowledge of different treatments of solid wastes.
- 3. To acquaint the student with concepts of waste disposals.
- 4. To develop an understanding of the basic concepts of Hazardous waste managements.
- 5. To acquaint the students with the basics of energy generation from waste materials.
- 6. To get the information on energy conservation.

COURSE OUTCOMES:

- 1. Outline the basic principles of Solid waste and separation of wastes (K)
- 2. Identify the concepts of treatment of solid wastes (S)
- 3. Identify the methods of wastes disposals. (S)
- 4. Examine the level of Hazardousness and its management. (S)
- 5. Examine the possible of the energy production using waste materials. (S)
- 6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI SOLIDWASTE

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNITII WASTETREATMENT

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNITIII WASTEDISPOSAL

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classfication, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfillRemediation

UNITIV HAZARDOUS WASTEMANAGEMENT

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediaiton, riskassessment.

UNITV ENERGY GENERATION FROM WASTE

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, energy recovery systems. Biological & chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

GREEN CHEMISTRY

COURSE OBJECTIVES

- 1. To make the students conversant about the green chemistry
- 2. To make the student acquire sound knowledge of the atom efficient process
- 3. To make the student acquire sound knowledge of the synthesis elaborately.
- 4. To acquaint the student with concepts of green technology.
- 5. To develop an understanding of the basic concepts of renewable energy resources.
- 6. To acquaint the students with the basic's information on catalysis.

COURSE OUTCOMES

- 1. Outline the basic principles of green chemistry.
- 2. Examine the different atom efficient process and synthesis elaborately.
- 3. Apply the concepts combustion of green technology.
- 4. Identify and apply the concepts of renewable energy.
- 5. Apply the concepts of green catalysts in the synthesis.
- 6. Integrate the chemical principles in the projects undertaken in field of engineering and technology

UNITI INTRODUCTION TO GREENCHEMICALPRINCIPLES

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNITII ATOM EFFICIENTPROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis

UNITIII BIOTECHNOLOGY AND GREENCHEMISTRY

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNITIV RENEWABLERESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomassconversion

UNITV CATALYSIS INGREENCHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

- 6. To develop energy storage devices.

COURSE OUTCOMES

- 1. Outline the basic principles of chemistry in electrochemical material.
- 2. Examine the properties of conducting polymers.
- 3. Apply the concepts of electrochemistry in storage devices.
- 4. Identify the concepts of storage devices and its applications.
- 5. Apply the suitable materials for the manufacturing of storage devices.
- 6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNITI METALFINISHING

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning

UNITII CONDUCTING POLYMERSANDELECTROCHEMICALS

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers-poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNITIII BATTERIES ANDPOWERSOURCES-I

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNITIV BATTERIES ANDPOWERSOURCES-II

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells-Introduction, types of fuel cells, advantages.

UNITV ELECTROCHEMICALMATERIALSCIENCE

Solar cells- Preparation of CdS/Cu2S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

16BESHOE08

COURSE OBJECTIVES

- 1. To make the students conversant with cement and lime
- 2. To make the students to aware about uses of cement and lime.
- 3. To make the student acquire sound knowledge of abrasives and refractories.
- 4. To acquaint the student with concepts of inorganic chemicals.
- 5. To develop an understanding of the basic conceptsexplosives.
- 6. To acquaint the students with the basics of agriculture chemicals.

COURSE OUTCOMES

- 1. Outline the basic chemistry of cement and lime.
- 2. Examine the uses of abrasives and refractories.
- 3. Identify the usage of the inorganic chemicals.
- 4. Identify the concepts of explosives and smoke screens .
- 5. Identify the usage of the **agriculture** chemicals
- 6. Integrate the chemical principles in the projects undertaken in field of engineering and technology.

UNITI CEMENTANDLIME

Manufacture of Portland cement – settling of hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNITII ABRASIVES ANDREFRACTORIES

Abrasives-hardabrasives-siliceousabrasives-softabrasives-artificialabrasives-uses.Refractoriesdefinition - classification - acid refractories - basic refractories - neutral refractories - properties - uses.

UNITIII INORGANIC CHEMICALS

Common salt and soda ash – Manufacture – Different grades – products – alkalis – Na2CO3, Caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture–absorption–uses,Sulphurandsulphuricacid–extractionofsulphur–manufactureofH2SO4 – chamber – contact processes – industrialuses.

UNITIV EXPLOSIVES

Explosives–uses–properties and tests–explosives forwar–nitrocellulose–picric acid and T.N.T.– industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gasmask.

UNITV AGRICULTURECHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

16BECSOE01

INTERNETPROGRAMMING

COURSE OBJECTIVES:

- 1. To study concepts of Internet, IP addresses and protocols
- 2. To explain the concept of web page development through HTML
- 3. To introduce the PERL and explore its current strengths and Weaknesses
- 4. To write working Java code to demonstrate the use of applets for client side programming
- 5. To study Internet telephony and various multimedia applications
- 6. To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- 1. Learn the advanced concepts& techniques of Internet and Java.
- 2. Analyze the requirements for and create and implement the principles of web page development
- 3. Understand the concepts of PERL
- 4. Implement client side programming using java applets
- 5. Generate internet telephony based upon advanced concepts
- 6. Develop applications on internet programming based on java applets and scripts

UNITI INTRODUCTION

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing-Classful and Classless Addressing, Subnetting

UNITII HTML

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area-Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods

UNITIII PERL

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies-Definition of cookies, Create and Store a cookie with example. Java Applets-Container Class, Components, Applet Life Cycle, Update method, Applications

UNITIV CLIENT-SERVERPROGRAMMING

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques-Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNITV INTERNETTELEPHONY

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

MULTIMEDIA AND ANIMATION

COURSE OBJECTIVES:

- 1. 2. 3. 4. 5.

- To impart the fundamental concepts of Computer Animation and Multimedia To study the graphic techniques and algorithms using flash Explain various concepts available in 3D animation Explain various devices available for animation To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations 6.

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- 1. Develop their creativity using animation and multimedia
- 2. Understand the concepts of Flash and able to develop animation using it
- 3. Understand about various latest interactive 3D animation concepts
- 4. Know the various devices and software available in motion capture
- 5. Understand the concept development process
- 6. Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology

INTRODUCTION UNITI

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation - Types of Animation - Principles of Animation - Some Techniques of Animation - Animation on the WEB -3D Animation - Special Effects -Creating Animation.

UNITII CREATING ANIMATIONINFLASH

Introduction to Flash Animation - Introduction to Flash - Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

3D ANIMATION & ITSCONCEPTS UNITIII

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking - Applications & Software of 3D Animation

UNITIV **MOTIONCAPTION**

Formats - Methods - Usages - Expression - Motion Capture Software's - Script Animation Usage - Different Language of Script Animation Among the Software.

UNITV CONCEPTDEVELOPMENT

Story Developing –Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

PC HARDWARE AND TROUBLE SHOOTING **16BECSOE03** 3003100

COURSE OBJECTIVES:

- 1. To study the basic parts of computer in detail
- 2. Introduce various peripheral devices available for computer and its detailed working concepts
- 3. Overview of various interfaces and other hardware overview
- 4. Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- 5. To study basic concepts and methods in troubleshooting
- 6. To study the installation/connectionand maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM 1. and ROM devices and so on.
- 2. Identify various peripheral devices available and its working
- 3. Understand various concepts of hardware and its interface and control
- 4. Perform basic installation of PC. Importance of maintenance is understood
- 5. Understand Various faults and failures are identified and troubleshooting in detail
- 6. Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNITI **INTRODUCTION**

Introduction - Computer Organization - Number Systems and Codes - Memory - ALU - CU - Instruction prefetch - Interrupts - I/O Techniques - Device Controllers - Error Detection Techniques - Microprocessor -Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNITII PERIPHERALDEVICES

Introduction - Keyboard - CRT Display Monitor - Printer - Magnetic Storage Devices - FDD - HDD -Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNITIII **PCHARDWAREOVERVIEW**

Introduction - Hardware BIOS DOS Interaction - The PC family - PC hardware - Inside the System Box -Motherboard Logic - Memory Space - Peripheral Interfaces and Controllers - Keyboard Interface - CRT Display interface - FDC - HDC.

UNITIV INSTALLATION ANDPREVENTIVEMAINTENANCE

Introduction - system configuration - pre installation planning - Installation practice - routine checks - PC Assembling and integration – BIOS setup – Engineering versions and compatibility _ preventive maintenance - DOS - Virus - DataRecovery.

UNITV TROUBLESHOOTING

Introduction - computer faults - Nature of faults - Types of faults - Diagnostic programs and tools -Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting - Symptoms observation and analysis - fault diagnosis - fault rectification -Troubleshooting levels – FDD, HDD, CD ROMProblems.

JAVA PROGRAMMING

9

9

9

9

9

COURSE OBJECTIVES:

- 1. To understand Object Oriented Programming concepts and basic characteristics of Java
- 2. To know the principles of packages, inheritance and interfaces
- 3. To define exceptions and use I/O streams
- 4. To develop a java application with threads, generics classes and swings
- 5. To explain the need for generic programming
- 6. To design and build simple Graphical User Interfaces

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- 1. Develop Java programs using OOP principles
- 2. Develop Java programs with the concepts inheritance and interfaces
- 3. Build Java applications using exceptions and I/O streams
- 4. Develop Java applications with threads and generics classes and swings
- 5. Understand various aspects for motivation of generic programming
- 6. Develop various interactive Java programs using OOP concepts of Java

UNITI INTRODUCTION TOJAVA

Object oriented programming concepts – objects – classes – methods and messages –abstraction and encapsulation–inheritance–abstractclasses–polymorphism.-ObjectsandclassesinJava–definingclasses – methods - access specifiers – static members –constructors – finalizemethod

UNITII PACKAGES

Arrays – Strings - Packages – Java-Doc comments – Inheritance – class hierarchy –polymorphism – dynamic binding – final keyword – abstract classes

UNITIII I/OSTREAMS

The Object class – Reflection – interfaces – object cloning – inner classes – proxies - I/O Streams - Graphics programming – Frame – Components – working with 2D shapes

UNITIV EXCEPTIONHANDLING

Exceptions–Syntaxofexceptionhandlingcode–Multiplecatchstatements–Usingfinallystatements– Throwing our own exceptions – Using exceptions for debugging

UNITV THREADS

Introduction, Creating Threads, The Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads, Summary

ELECTRICAL AND ELECTRONICS ENGINEERING

16BEEEOE01

ELECTRICHYBRIDVEHICLES

COURSE OBJECTIVES

- To understand the basic concepts of electric hybrid vehicle. 1.
- 2. To gain the knowledge about electric propulsion unit.
- 3. To gain the concept of Hybrid Electric Drive-Trains.
- 4. To gain the different Energy Management Strategies.
- 5. To study about the efficiency manipulation in drives
- 6. To understand and gain the knowledge about various energy storage devices

COURSE OUTCOMES:

- 1. Summarize the basic concepts in bioprocess Engineering.
- 2. Explain the concept of Hybrid Electric Vehicles.
- 3. Understand the concept of Hybrid Electric Drive-Trains.
- 4. Identify the different Energy Management Strategies.
- 5. Understand the concept of different Energy Storage devices
- 6. Analyze the different motor drives used in Hybrid Electric Vehicles

UNITI **INTRODUCTION**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

HYBRID ELECTRIC DRIVE-TRAINS UNITII

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNITIII **ELECTRIC PROPULSIONUNIT**

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNITIV ENERGYSTORAGE

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNITV **ENERGYMANAGEMENTSTRATEGIES**

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

ENERGY MANAGEMENT & ENERGY AUDITING 3003100 **16BEEEOE02**

COURSE OBJECTIVES:

- 1. To gain the knowledge about energy management.
- 2. To understand the basic concepts in economic analysis in energy management.
- 3. To understand the basic principles of energy audit.
- 4. To gain the knowledge about the basic concept of types of Energy Audit
- 5. To gain and Evaluate the different energy efficient motors
- 6. Understand the concept of Energy conservation.

COURSE OUTCOMES:

At the end of this course, students will demonstrate the ability to

- 1. Understand the concept of Energy Management.
- 2. Analyze the different methods for economic analysis
- 3. Knowledge about the basic concept of Energy Audit and types.
- 4. Evaluate the different energy efficient motors
- 5. Understand the concept of Energy conservation.
- 6. Investigate the different methods to improve power factor

UNITI **ENERGYMANAGEMENT**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting -Energy Auditor and Energy Manager - Eligibility, Qualification and functions - Questionnaire and check list for top management.

ECONOMIC ASPECTSANDANALYSIS UNITII

Economics analysis - Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNITIII **BASIC PRINCIPLES OFENERGYAUDIT**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes - Energy audit of industries - energy saving potential, energy audit of process industry, thermal power station, building energy audit.

ENERGYEFFICIENTMOTORS UNITIV

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics voltage variation -over motoring - motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

POWER FACTOR IMPROVEMENT, LIGHTING ANDENERGY INSTRUMENTS 9 UNITV

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers -Energy efficient lighting system design and practice- lighting control-Measuring Instruments - wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

16BEEEOE03

COURSE OBJECTIVES

- 1. To understand the basic principles of PLC systems.
- 2. To gain the knowledge about data handling functions.
- 3. To gain the knowledge of storage techniques in PLC
- 4. To acquire the knowledge about how to handle the data and functions
- 5. To study about flow charts of ladder and spray process system
- 6. To understand the principles of PID.

COURSE OUTCOME

- At the end of the course the student will be able to understand the registers and functions in PLC and they are 1. able to do the program.
- 2. To acquire the knowledge of storage techniques in PLC
- 3. Students know how to handle the data and functions
- 4. Students known about advanced controller in PLC applications
- 5. Students gather real time industrial application of PLC
- 6. Students gathered and evaluate the flow charts of ladder and spray process system

UNITI **INTRODUCTION**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNITII **PLCPROGRAMMING**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNITIII **REGISTERS ANDPLCFUNCTIONS**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNITIV DATAHANDLINGFUNCTIONS

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNITV **PIDPRINCIPLES**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing, analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

RENEWABLE ENERGY RESOURCES

COURSE OBJECTIVES

- 1. To gain the knowledge about environmental aspects of energy utilization.
- 2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- 3. To study about solar energy collectors and its storages
- 4. To study about the inter connected system in wind power
- 5. To understand the basic principles fuel cell, Geo thermal power plants.
- 6. To gain the knowledge about hydro energy.

COURSE OUTCOMES

At the end of this course, students will demonstrate the ability to

- 1. Analyze the Energy Scenario in india
- 2. Understand the concept of Solar Energy
- 3. Understand the concept of Wind Energy
- 4. Understand the concept of Hydro Energy
- 5. Analyze the different energy sources
- 6. Students gathered the real time inter connected system modelling in wind power

UNITI INTRODUCTION

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNITII SOLARENERGY

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNITIII WINDENERGY

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNITIV HYDROENERGY

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNITV OTHERSOURCES

Bio energy and types -Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

ELECTRONICS AND COMMUNICATION ENGINEERING

16BEECOE01

REAL TIMEEMBEDDEDSYSTEMS

3003100

COURSE OBJECTIVES

- 1. To introduce students to the embedded systems, its hardware and software.
- 2. To introduce devices and buses used for embedded networking.
- 3. To study about task management
- 4. To learn about semaphore management and message passing
- 5. To study about memory management
- 6. To imparts knowledge on

COURSE OUTCOMES

At the end of the course the students will be able to

- Understand overview of embedded systems architecture 1.
- 2. Acquire knowledge on embedded system, its hardware and software.
- 3. Gain knowledge on overview of Operating system
- 4. Discuss about task Management
- 5. Gain knowledge about semaphore management and message passing.
- 6. Gain knowledge about memory management

UNITI INTRODUCTION TO EMBEDDEDSYSTEM

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection &tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning iterations and implementation - hardware software integration - product testing techniques - ARM 7

UNITII **OPERATINGSYSTEMOVERVIEW**

Introduction -Advantage and Disadvantage of Using RTOS - Multitasking - Tasks - Real Time Kernels -Scheduler - Non-preemptive Kernels - Preemptive Kernels - Reentrancy- Reentrant Functions - Round Robin Scheduling - Task Priorities - Static Priorities - Mutual Exclusion - Deadlock - Intertask Communication -Message Mailboxes - Message Queues - Interrupts - Task Management - Memory Management - Time Management - Clock Ticks.

UNITIII TASK MANAGEMENT

Introduction - µ C/OS-II Features - Goals of µ C/OS-II - Hardware and Software Architecture - Kernel Structures: Tasks - Task States - Task Scheduling - Idle Task - Statistics Task - Interrupts Under µ C/OS-II -Clock Tick - µ C/OS-II Initialization. Task Management: Creating Tasks - Task Stacks - Stack Checking -Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB waits List.

UNITIV SEMAPHORE MANAGEMENT ANDMESSAGEPASSING

Semaphore Management: Semaphore Management Overview - Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox - Deleting Mailbox - Waiting for a Message box - Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue

UNITV **MEMORYMANAGEMENT**

Memory Management: Memory Control Blocks - Creating Partition- Obtaining a Memor y Block - Returning a Memor y Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Anal yze the Multichannel ADC with help of µ C/OS-II

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Jean J. Labrosse	MicroC/OS – II The Real Time Kernel	CMP BOOKS	2009
2	David Seal	ARM Architecture Reference Manual.	Addison-Wesley	2008
3	Steve Furbe,	ARM System-on-Chip Architecture,	Addison-Wesley Professional, California	2000

16BEECOE02

COURSE OBJECTIVES

- 1. To study about various speakers and microphone
- 2. To learn the fundamental of television systems and standards
- 3. To learn the process of audio recording and reproduction
- 4. To study various telephone networks
- 5. To discuss about the working of home appliances
- 6. To familiarize with TV services like ISDN.

COURSE OUTCOMES

At the end of the course the students will be able to

- 1. Understand working of various type of loud speakers
- 2. Acquire knowledge on various types of picture tubes
- 3. Demonstrate the working of various optical recording systems
- 4. Distinguish various standards for color TV system
- 5. Acquire knowledge on various telecommunication networks
- 6. Demonstrate the working of various home appliances

UNITI LOUDSPEAKERS ANDMICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters -Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones

UNITII TELEVISION STANDARDSANDSYSTEMS

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a RemoteControl

UNITIII OPTICAL RECORDINGANDREPRODUCTION

AudioDisc–ProcessingoftheAudiosignal–readoutfromtheDisc–Reconstructionoftheaudiosignal– Video Disc – Video disc formats- recording systems – Playback Systems

UNITIV TELECOMMUNICATIONSYSTEMS

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellularmodems

UNITV HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

NEURAL NETWORKS AND ITS APPLICATIONS 16BEECOE03 3003100

COURSE OBJECTIVES

- To introduce the basic concepts of neural networks and its applications in various domain 1.
- 2. To educate how to use Soft Computing to solve real-world problems
- 3. To have a solid understanding of Basic Neural Network.
- 4. To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- 5. To gain exposure in the field of neural networks and relate the human neural system into the digital world
- 6. To provide knowledge of computation and dynamical systems using neural networks

COURSE OUTCOMES

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains 1.
- 2. Gain knowledge about learning process in Neural Networks
- 3. Apply perception concept in design
- 4. Design using ART phenomena
- 5. Gain knowledge on SOM concepts
- 6. Ability to develop the use of Soft Computing to solve real-world problems

UNITI **INTRODUCTION TO NEURALNETWORKS**

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNITH **LEARNINGPROCESS**

Error - correction learning - memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNITIII PERCEPTION

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNITIV ATTRACTOR NEURAL NETWORKANDART

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNITV SELFORGANIZATION

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

FUZZY LOGIC AND ITS APPLICATIONS

COURSE OBJECTIVES

- To introduce the basic concepts of Fuzzy logic and its applications in various domain 1.
- 2. To educate how to use Fuzzy computation to solve real-world problems
- 3. To have a solid understanding of Basic fuzzy models.
- 4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- 5. To learn about applications on Fuzzy based systems
- 6. To familiarize with fuzzy fiction and de fuzzy fiction procedures

COURSE OUTCOMES

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain 1.
- 2. Gain knowledge on theory of Reasoning
- 3. Develop fuzzy controllers
- 4. Understand concepts of adaptive fuzzy control
- 5. Ability to develop how to use Fuzzy computation to solve real- world problems
- 6. Design fuzzy based model for any application

UNITI **BASICS OFFUZZYLOGIC**

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNITII THEORY OF APPROXIMATEREASONING

Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNITIII FUZZY KNOWLEDGE BASEDCONTROLLERS(FKBC)

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures - Design of Fuzzy Logic Controller

UNITIV ADAPTIVEFUZZYCONTROL

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

FUZZYBASEDSYSTEMS UNITV

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications-Introduction to ANFIS.

BIOTECHNOLOGY

16BTBTOE01

BIOREACTORDESIGN

COURSE OBJECTIVES

- 1. To impart basic knowledge in bioprocessEngineering
- 2. To design the bioreactors for variousoperations.
- 3. To understand the principle and working of heat transferequipments.
- 4. To extend the knowledge in principle of heat transfer inside abioreactor
- 5. To construct the equipments used in mass transferoperations.
- 6. To learn the equipments used in separationprocess.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Summarize the basic concepts in bioprocessEngineering.
- 2. Design the bioreactors for various operations.
- 3. Understand the principle and working of heat transferequipments.
- 4. Develop the heat transfer equipments for BioprocessEngineering.
- 5. Construct the equipments used in mass transferoperations.
- 6. Categorize the equipments used in separationprocess.

UNITI ENGINEERING PROPERTIES ANDSTORAGETANK 9

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTORDESIGN

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFEREQUIPMENTS

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulationevaporator.

UNITIV MASS TRANSFEREQUIPMENTS

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPERATIONEQUIPMENTS

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

16BTBTOE02 FOOD PROCESSING AND PRESERVATION

COURSE OBJECTIVES

- 1. To learn the scope and importance of foodprocessing.
- 2. To impart basic knowledge in different food processing methods carried out in the food techcompanies.
- 3. To extend the brief knowledge in food conservationoperations.
- 4. To study the methods of food preservation bycooling.
- 5. To familiarize the students on the concepts of preservation methods forfruits.
- 6. To create deeper understanding on preservation methods forvegetables.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Describe the scope and importance of foodprocessing.
- 2. Outline the various processing methods forfoods.
- 3. Extend the knowledge in food conservationoperations.
- 4. Describe the methods of food preservation bycooling.
- 5. Summarize the preservation methods forfruits.
- 6. Demonstrate the preservation methods forvegetables.

UNITI SCOPE AND IMPORTANCE OFFOODPROCESSING

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNITII PROCESSINGMETHODS

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipmentused.

UNITIII FOODCONVERSIONOPERATIONS

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control wateractivity.

UNITV PRESERVATION METHODS FOR FRUITSANDVEGETABLES

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

1	M.A. Rao, Syed S.H. Rizvi, Ashim K. Datta	Engineering properties of foods	CRC Press	2005
2	B. Sivasankar	Food processing and preservation	PHI Learning Pvt. Ltd	2002

COURSE OBJECTIVES

- 1. To understand the available tools and databases for performing research inbioinformatics.
- 2. To expose students to sequence alignment tool inbioinformatics.
- 3. To construct the phylogenetic trees forevolution.
- 4. To get familiar with the 3D structure of protein and classification.
- 5. To acquire basic knowledge in protein secondary structureprediction.
- 6. To extend the brief knowledge in Micro array dataanalysis.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Summarize the basic concepts and importance of Bioinformatics in varioussectors.
- 2. Demonstrate the sequence alignment tool inbioinformatics.
- 3. Construct the phylogenetic trees forevolution.
- 4. Analyze the three dimensional protein structure and classification using varioustools.
- 5. Illustrate the protein secondary structure prediction by comparativemodeling.
- 6. Extend the knowledge in micro array technology and applications of bioinformatics in varioussectors.

UNITI OVERVIEW OFBIOINFORMATICS

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNITII RETRIEVAL OFBIOLOGICALDATA

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system).Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNITIII PHYLOGENETICS

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNITIV STRUCTURALBIOINFORMATICS

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction strategies.

UNITV MICROARRAYDATAANALYSIS

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Michael J. Korenberg	Microarray Data Analysis: Methods and Applications	Springer Science & Business Media	2007

COURSE OBJECTIVES

- 1. To impart the skills in the field of nano biotechnology and itsapplications.
- 2. To acquire knowledge in the nano particles and its significance in variousfields.
- 3. To extend the knowledge in types and application of nano particles insensors.
- 4. To define the concepts of biomaterials through molecular selfassembly.
- 5. To equip students with clinical applications of nanodevices.
- 6. To describe deeper understanding of the socio-economic issues innanobiotechnology.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- 1. Develop skills in the field of nano biotechnology and itsapplications.
- 2. Summarize the nanoparticles and its significance in variousfields.
- 3. Extend the knowledge in types and application of nano particles insensors.
- 4. Define the concepts of biomaterials through molecular selfassembly.
- 5. Outline the clinical applications of nanodevices.
- 6. Describe the socio-economic issues innanobiotechnology.

UNITIINTRODUCTION

Introduction, Scope and Overview, Length scales, Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT IINANOPARTICLES

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications-MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNITIII APPLICATIONS

Nanomedicine, Nanobiocensor and Nanofludics.Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems.Nano-Biodevices and Systems.Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNITIV NANOBIOTECHNOLOGY

Clinical applications of nanodevices.Artificialneurons.Real-time nanosensors- Applications in cancer biology.Nanomedicine.Synthetic retinyl chips based on bacteriorhodopsins.High throughput DNA sequencing with nanocarbon tubules.Nanosurgical devices.

UNITV ETHICAL ISSUESINNANOTECHNOLOGY

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

AUTOMOBILEENGINEERING

COURSE OBJECTIVES:

- 1. To impart knowledge on the constructional details and principle of operation of various automobile components.
- 2. To learn the function and working of various components in transmission and drive lines.
- 3. To study the concept and working of steering and suspension systems in an automobile.
- 4. To give knowledge on the wheels, tyres and brakes of automobiles.
- 5. To provide information on the current and future trends in automobiles.
- 6. Identify and explain the types of steering system.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- 1. Demonstrate the operating principles and constructional details of various automobile components.
- 2. Explain the function and working of components in transmission and drive lines.
- 3. Identify and explain the types of steering system.
- 4. Identify and explain the types of suspension system.
- 5. Classify and describe the types of wheels, tyres and brakes of automobiles.
- 6. Discuss the current and future trends in the automobiles

UNITI ENGINE AND FUELFEEDSYSTEMS

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNITII TRANSMISSIONSYSTEMS

Requirements of transmission system.Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propellar Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNITIII SUSPENSIONSYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension - Pneumatic suspension - Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNITIV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theoryBrake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNITV ELECTRICALSYSTEM

Principle and construction of lead acid battery.Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator.Starting System and charging system.

16BEAEOE02BASICS OF TWO AND THREE WHEELERS3 0 0 3 100

COURSE OBJECTIVES

- 1. The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- 2. Construct the frames of two and three wheelers of different layouts.
- 3. Demonstrate the constructional details and principle of operation of various engine components.
- 4. Identify and explain the types of transmission systems.
- 5. Identify and explain the types of steering and suspension systems.
- 6. Classify and describe the types of wheels, tyres and brakes for two and three wheelers

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- 1. Construct the frames of two and three wheelers of different layouts.
- 2. Demonstrate the constructional details and principle of operation of various engine components.
- 3. Identify and explain the types of transmission systems.
- 4. Identify and explain the types of steering and suspension systems.
- 5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- 6. Explain the servicing of two and three wheelers

UNITI INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNITII POWER UNITS, IGNITION SYSTEMS AND OTHERELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNITIII CLUTCHES ANDTRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNITIV FRAMES, SUSPENSION, WHEELS ANDTYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNITV THREEWHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment type types. Brakes and their operating mechanism.

16BEAEOE03

COURSE OBJECTIVES

- 1. The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems inAutomobile.
- 2. Describe and differentiate the types of maintenance.
- 3. List the procedure for dismantling, servicing and assembling of engine components.
- 4. Demonstrate the servicing of transmission and driveline components.
- 5. Discuss the procedure for steering and suspension
- 6. Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

- 1. Describe and differentiate the types of maintenance.
- 2. List the procedure for dismantling, servicing and assembling of engine components.
- 3. Demonstrate the servicing of transmission and driveline components.
- 4. Discuss the procedure for steering and suspension
- 5. Discuss the procedure for wheel and brake maintenance.
- 6. Explain the fault diagnosis in the electrical and air conditioner systems

UNITI MAINTENANCE OF RECORDSANDSCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNITII ENGINEMAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual anddimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNITIII CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheelbalancing.

UNITIV ELECTRICALSYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNITV MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION 9 SYSTEM AND VEHICLEBODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating systemmaintenance.

REFERENCE

1. Service Manuals from Different VehicleManufacturers
16BEAEOE04 INTRODUCTION TO MODERN VEHICLETECHNOLOGY 3 0 0 3 100

COURSE OBJECTIVES:

- 1. To impart knowledge on trends in the vehicle power plants.
- 2. To learn the various advanced driver assistance systems.
- 3. To study the working of advanced suspension and braking systems in an automobile.
- 4. To give information about motor vehicle emission and noise pollution control.
- 5. To provide knowledge of the vehicle telematics.
- 6. To give information about the noise control techniques

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

- 1. Distinguish and describe the various modern vehicle power plant systems.
- 2. List and explain the various driver assistant mechanisms.
- 3. Identify and describe the working of advanced suspension and braking systems.
- 4. Apply the knowledge of motor vehicle emission and noise pollution control.
- 5. Describe the noise control techniques
- 6. Describe the vehicle telematics and its applications

UNITI TRENDS INPOWERPLANTS

Hybrid vehicles - Stratified charged / learn burn engines - Hydrogen engines - battery vehicles - Electric propulsion with cables - Magnetic track vehicles.

UNITII DRIVERASSISTANCESYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNITIII SUSPENSION BRAKESANDSAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passengercomfort.

UNITIV NOISE&POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNITV TELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

CIVIL ENGINEERING

16BECEOE01 HOUSING, PLANANDMANAGEMENT

COURSE OBJECTIVES

- 1. To examine the role and tasks of basic housing policies and building bye laws
- 2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
- 3. Analyze the Innovative construction methods and Materials
- 4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
- 5. To know the Importance of basic housing policies and building bye laws
- 6. To use Housing Programmes and Schemes

COURSE OUTCOMES

The students will be able to

- 1. Know the Importance of basic housing policies and building bye laws.
- 2. Use Housing Programmes and Schemes.
- 3. Plan and Design of Housing projects.
- 4. Examine Innovative construction methods and Materials.
- 5. Know Housing finance and loan approval procedures.
- 6. Understand Construction as well as managing techniques.

UNITI INTRODUCTIONTOHOUSING

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNITII HOUSINGPROGRAMMES

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNITIII PLANNING AND DESIGN OFHOUSINGPROJECTS

Formulation of Housing Projects - Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNITIV CONSTRUCTION TECHNIQUES ANDCOST-EFFECTIVEMATERIALS

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNITV HOUSING FINANCE ANDPROJECTAPPRAISAL

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

16BECEOE02

BUILDING SERVICES

COURSE OBJECTIVES

- 1. Defining and identifying of engineering services systems in buildings.
- 2. The role of engineering services systems in providing comfort and facilitating life of users of the building.
- 3. The basic principles of asset management in a building & facilities maintenance environment
- 4. Importance of Fire safety and its installation techniques
- 5. To Know the principle of Refrigeration and application
- 6. To Understand Electrical system and its selection criteria

COURSE OUTCOMES

The students will be able to

- 1. Machineries involved in building construction
- 2. Understand Electrical system and its selection criteria
- 3. Use the Principles of illumination & design
- 4. Know the principle of Refrigeration and application
- 5. Importance of Fire safety and its installation techniques
- 6. Know the principle behind the installation of building services and to ensure safety in buildings

UNITI MACHINERIES

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNITII ELECTRICAL SYSTEMSIN BUILDINGS

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNITIII PRINCIPLES OF ILLUMINATION& DESIGN

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Lans of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in buildingtypes.

UNITIV REFRIGERATION PRINCIPLES& APPLICATIONS

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNITV FIRESAFETYINSTALLATION

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like noncombustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

16BECEOE03 MANAGEMENT OF IRRIGATION SYSTEMS

COURSE OBJECTIVES

- 1. To enable the students for a successful career as water management professionals.
- 2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
- 3. To expose the students the need for an interdisciplinary approach in irrigation water management
- 4. To providing a platform to work in an interdisciplinary team.
- 5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
- 6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

COURSE OUTCOMES

At the end of this the students will be in a capacity to

- 1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
- 2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
- 3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
- 4. Gain insight on local and global perceptions and approaches to participatory water resource management
- 5. Learn from successes and failures in the context of both rural and urban communities of water management.
- 6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNITI IRRIGATIONSYSTEMREQUIREMENTS

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNITII IRRIGATIONSCHEDULING

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNITIII MANAGEMENT

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNITIV OPERATION

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNITV INVOLVEMENT OF STAKEHOLDERS

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

16BECEOE04 ADVANCED CONSTRUCTION TECHNOLOGY

COURSE OBJECTIVES

- 1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
- 2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
- 3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
- 4. To study of construction equipment's, and temporary works required to facilitate the construction process
- 5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
- 6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

COURSE OUTCOMES

- 1. Implementation of new technology concepts which are applied in field of Advanced construction.
- 2. Different methods of construction to successfully achieve the structural design with recommended specifications.
- 3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
- 4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
- 5. Development to the students for the courses in sector of Advanced construction technology.
- 6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNITI MODERNCONSTRUCTIONMETHODS

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNITII CONSTRUCTION METHODS FORSPECIALSTRUCTURES

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNITIII MODERN CONSTRUCTION EQUIPEMENTS-I

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNITIV MODERN CONSTRUCTION EQUIPEMENTS-II

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNITV PRINCIPLES AND PRACTICES OFTEMPORARYSTRUCTURES

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

16BEMEOE01

COMPUTERAIDED DESIGN

3003100

COURSE OBJECTIVES

- 1. To apply basic concepts to develop construction (drawing) techniques.
- 2. To ability to manipulate drawings through editing and plotting techniques.
- 3. To understand geometric construction and Produce template drawings.
- 4. To understand and demonstrate dimensioning concepts and techniques.
- 5. To understand Section and Auxiliary Views.
- 6. To become familiar with Solid Modelling concepts and techniques.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- 1. Apply basic concepts to develop construction (drawing) techniques.
- 2. Ability to manipulate drawings through editing and plotting techniques.
- 3. Understand geometric construction and Produce template drawings.
- 4. Understand and demonstrate dimensioning concepts and techniques
- 5. Understand Section and Auxiliary Views
- 6. Become familiar with Solid Modelling concepts and techniques.

UNITI OVERVIEW OF CADSYSTEMS

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNITII INTERACTIVE COMPUTER GRAPHICS AND GRAPHICS TRANSFORMATIONS 9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transpformations, Visual Realism, Computer animation, customizing graphics software.

UNITIII GEOMETRIC MODELING

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNITIV PARAMETRIC DESIGN ANDOBJECTREPRESENTATION

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNITV PRODUCT DESIGNANDDEVELOPMENT

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

16BEMEOE02 INDUSTRIAL SAFETYANDENVIRONMENT

3003100

COURSE OBJECTIVES

- 1. To recognize and evaluate occupational safety and health hazards in the workplace.
- 2. To determine appropriate hazard controls following the hierarchy of controls.
- 3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- 4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- 5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- 6. To prevent or mitigate harm or damage to people, property, or the environment.

COURSE OUTCOMES

At the end of the course, student will be able to

- 1. Recognize and evaluate occupational safety and health hazards in the workplace.
- 2. Determine appropriate hazard controls following the hierarchy of controls.
- 3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
- 4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
- 5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
- 6. Prevent or mitigate harm or damage to people, property, or the environment.

UNITI INTRODUCTIONTOLOGISTICS

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNITII PHASES OF SUPPLYCHAIN

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNITIII EVOLUTION OF SUPPLY CHAINMODELS

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNITIV SUPPLYCHAIN ACTIVITIES

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNITV SCM ORGANISATION ANDINFORMATIONSYSTEM

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERPSoftware's

COURSE OBJECTIVES

- To generalized equations for mass, momentum and heat. 1.
- To understand the concepts of Reynolds and Gauss theorems. 2.
- 3. To learn combined diffusive and convective transport.
- 4. To apply Film- and penetration models for mass and heat transfer.
- 5. To apply Stefan-Maxwells equations for multi-component diffusion.
- To Solve the given set of equations either analytically or numerically. 6.

COURSE OUTCOMES

- Generalized equations for mass, momentum and heat. 1.
- 2. Understand the concepts of Reynolds and Gauss theorems.
- 3. Learn combined diffusive and convective transport.
- 4 Apply Film- and penetration models for mass and heat transfer.
- Apply Stefan-Maxwells equations for multi-component diffusion. 5.
- Solve the given set of equations either analytically or numerically. 6.

UNITI INTRODUCTION ANDBASICCONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNITII PROPERTIES, UNITS AND OTHERPHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNITIII MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNITIV **ENERGYTRANSPORT**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heattransfer

UNITV MASS TRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

16BEMEOE04 INTRODUCTION TO BIOMECHANICS

COURSE OBJECTIVES

- 1. To describe the principles of the study of human movement.
- 2. To describe the range of factors that influence the initiation, production and control of human movement.
- 3. To identify the body's lever systems and their relationship to basic joint movement and classification.
- 4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- 5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- 6. To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES

- 1. Describe the principles of the study of human movement.
- 2. Describe the range of factors that influence the initiation, production and control of human movement.
- 3. Identify the body's lever systems and their relationship to basic joint movement and classification.
- 4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
- 5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
- 6. Relate the different body systems necessary for human movement to occur.

UNITI INTRODUCTION

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNITII KEYMECHANICALCONCEPTS

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNITIII HUMAN ANATOMY AND SOMEBASICTERMINOLOGY

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNITIV ANATOMICALDESCRIPTION

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis -The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNITV MECHANICS OF THEMUSCULOSKELETALSYSTEM

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit -Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control
